TV or Not TV: Home Banking Idea Rescreened

By BARTON CROCKETT

In a case of technological deja vu, bankers are once again being drawn to the TV set as the way to offer home banking services.

The catalyst for the change – a throwback to the first flurry of interest in home banking in the early 1980s – is the technology revolution gripping the cable TV industry.

Leaders like Time Warner Inc. are planning to spend billions of dollars over the next few years to build new, interactive entertainment and information systems, that among other services, offer home banking.

These plans are thrilling some bankers, including Barnett Banks Inc., which hopes to be a leader in making home banking available through these systems.

"I think financial institutions have a tremendous opportunity to work with the cable companies in bringing interactive media to the home," said Thomas P. Johnson, Barnett's chief retail banking executive.

NEWS ANALYSIS

Michael Laffman, a Time Warner spokesman, said it plans to spend $5 billion over the next five years building interactive cable TV systems, called Full Service Networks, across the country. Time Warner's cable empire now serves 7.1 million people in 36 states.

Jockeying for Position

Telecommunications companies are also jockeying for positions in the nascent market. US West joined the fray last month by agreeing to buy a 25%-stake in Time Warner's entertainment unit for $2.5 billion. $1 billion of which will go to build interactive TV networks.

The first Full Service Network is scheduled to be launched next April in Orlando.

It is expected to offer movies and games on demand, home shopping, classified ads, electronic encyclopedias, and home banking services to 4,000 cable subscribers in the Florida city.

Barnett Interested

Time Warner is asking leading Orlando banks to cooperate by offering home banking through the network.

One institution that plans to do so is Jacksonville-based Barnett.

"We've made initial contacts and plan to offer Desktop Banking on their network," said Catherine Corby, Barnett's di-

Midwest Rain Hits Hard at Farms, Banks

By ROBERT B. COX

Losses are likely to mount for farmers and their bankers in the wake of heavy rains in the upper Midwest.

The rains and subsequent floods could damage up to 35% of the $31 billion corn and soybean crop this year, by one estimate, with potentially serious repercussions for lenders.

"We're expecting some losses," said Robert Fishback, president of First National Bank in Brookings, S.D. "This is going to be very hard for the farmers and for the farm banks."

The wet weather has kept farmers from planting crops and has drowned major portions of planted fields in parts of Minnesota, Wisconsin, Iowa, and South Dakota.

Double Whammy

Though grain producers on the whole enjoyed bumper crops last year, the region lagged behind other parts of the country in last year's harvest because of inclement weather in the spring.

"In certain regions, things were already bad last year, and those are precisely the areas that got hit again now," said Edward Lotterman, agricultural economist at the Federal Reserve Bank of Minneapolis, who made the corn and soybean damage estimate.

"Farmers and bankers in some areas have a great deal to worry about," said Larry Wipf, regional economist at Norwest

Rate Drop Re-Ignites Boom in Refinancings

By CHRISTOPHER NOBLE

The recent drop in long-term interest rates has given a new lease on life to the mortgage refinancing boom.

"Refinance mania is in full gear," said Steve Norman of Cal Coast Mortgage Corp., San Diego. "It had started to subside, but now applications are picking up."

As the yield on 30-year Treasury bonds fell in June from 6.92% to an all-time low of 6.66%, mortgage rates matched the decline almost point for point.

The average interest rate on a 30-year, fixed-rate home loan has fallen to 7.37%, down 23 basis points from the end of May, according to HSH Associates, Butler, N.J.

The drop, in turn, has added fuel to a refinancing boom that already is stretching well into its

Chemical Hit with ATM Complaints In Midst of 'Expect More' Campaign

By KAREN GULLO

In the middle of a major ad campaign urging customers to "expect more" from it, Chemical Banking Corp. is experiencing service problems with its automated teller machines.

An internal report obtained by the *American Banker* found that customer complaints about ATM service at the company's 900 machines surged 70% from March to April.

Most of the problems related to the machines' failure to dispense cash, said the report, distributed in June by the bank's service management group.

"Chemical Bank is losing credibility with providing 24-hour banking through the ATM network," the report said.

Moreover, it warned that the bank's "systems and operations areas are scheduling significant amount of downtime for maintenance in the next few months" and have "no forms of action in place to produce less impact to customers.

The problems are occurring as

Chicago Is ABN Amro's Kind of Town

By JAMES R. KRAUS

The Second City has become a second home to Amsterdam's ABN Amro Holdings PLC.

Since 1988, the company has gone on a buying spree in Chicago, culminating with its acquisition last year of Talman Home Federal Savings and Loan Association.

ABN Amro now operates nine retail units in the metropolitan area, with a total of $16 billion in assets. And it has no intention of stopping. "Chicago is such a fragmented market, we have plenty of ways of strengthening our base right here," said Harrison F. Tempest, chief executive of LaSalle National Corp., ABN Amro's lead bank.

Presence in New York, Too

That's not to say the giant Dutch bank lacks a broader reach in the United States. Via its 10 U.S. branches, ABN Amro is a major force in American corporate banking. And it is a player in the New York City market through its ownership of European American Bank, with $5.6 billion in assets and 88 branches.

But since 1979, when ABN Amro entered retail banking in the United States by acquiring LaSalle, its biggest effort has gone into building a network of super community banks in Illinois.

In 1988, ABN Amro acquired W.N. Lane Inter-

NEWS *briefs*

B of A Completes Sale of Distressed Realty

SAN FRANCISCO — BankAmerica Corp. said Wednesday that, as expected, it had completed the sale of distressed real estate loans and assets acquired in its merger last year with Security Pacific Corp.

Kearny Street Real Estate Co., a collecting entity owned by Morgan Stanley Real Estate Fund, purchased distressed assets with balances totaling $1.6 billion as of July 1.

BankAmerica said it received approximately $700 million, or 43% of the book value, and will get $300 million in tax benefits.

Making up the purchase price was $200 million in collections on assets pending disposition and $500 million from the proceeds of Kearny Street debt and equity financings.

Morgan-Led Unit to Reinsure for Lloyd's

NEW YORK — J.P. Morgan & Co. has formed a joint venture with a unit of Marsh & McLennan Companies Inc. to provide reinsurance to syndicates managed by the Merrett Group, a major underwriting agency of Lloyd's of London.

The Bermuda-based venture, Underwriters Capital (Merrett) Ltd., will exclusively provide whole account quota share reinsurance to the nine Merrett syndicates for a five-year term. It is the first such effort since Lloyd's amended its bylaws to permit the use of corporate capital to increase the capacity of Lloyd's syndicates through quota share reinsurance.

Morgan and Marsh & McLennan Risk Capital Holdings Ltd. are each providing 10% of the venture's $70 million in capital, which was raised by Morgan from 30 other investors.

Big-Bank Trade Groups Complete Merger

WASHINGTON — The Association of Reserve City Bankers and the Association of Bank Holding Companies said their merger became official on Wednesday, as scheduled.

The merged group, under the Reserve City name, will represent large-bank interests. Membership consists of the highest-ranking executives from 125 major institutions. Anthony T. Cluff is executive director.

Fortune's Conversion Approved by OTS

CLEARWATER, Fla. — Fortune Bank said it has received approval from the Office of Thrift Supervision to convert to a state-chartered commercial bank with membership in the Federal Reserve System.

The conversion from a savings and loan charter also requires approval from the Fed and Florida regulators.

The thrift, with $2.7 billion of assets and 46 branches, is owned by Fortune Bancorp.

First Bank Acquires Republic Acceptance

MINNEAPOLIS — First Bank, the lead subsidiary of First Bank System Inc., said it has completed the previously announced acquisition of Republic Acceptance Corp. from Churchill Financial Services Co.

Republic, a Minneapolis-based commercial finance company, has $35 million of assets. It makes working-capital loans of $100,000 to $1 million, secured by accounts receivable and other assets, to companies with annual revenues of $1 million to $20 million.

The briefs were compiled from staff and wire reports.

Correction

Because of an editing error, an article on June 28 about Chemical Banking Corp.'s sale of a foreclosed Alabama shopping mall overstated the discount at which the property was sold. The price equaled 80% of the original loan amount, not 80% of book value.

HUD Plans an Overhaul To Focus on Loan Bias

By CLAUDIA CUMMINS

WASHINGTON — The Department of Housing and Urban Development is "working feverishly" to restructure its fair-housing programs to focus more on loan discrimination, HUD Assistant Secretary Roberta Achtenberg said Wednesday.

She said Housing and Urban Development Secretary Henry Cisneros is examining the department's budget, searching for ways to reallocate staff and resources.

The agency is hoping for a 60% increase in funding for its Fair Housing Initiatives Program next year, said Ms. Achtenberg, who is the HUD official responsible for fair housing and equal opportunity. One function of the fair-housing program will be to send testers into banks to search for lending discrimination.

Attitude Adjustment

"Clearly there's a problem, and the secretary and I intend to address it," Ms. Achtenberg said before to speaking at the annual conference of the National Fair Housing Alliance, a network of housing advocates. "It's one problem that has been put aside for too long."

The secretary has made it clear that lackadaisical attitudes in the agency will change "or else heads are going to roll," she said.

An initiative in Ms. Achtenberg's office to accelerate testing of lenders and enforcement of fair housing laws already has run into an obstacle: finding qualified staff. "We don't have people with sufficient expertise in this area," she said.

Ms. Achtenberg also said the industry can anticipate changes in the Federal Housing Administration. "The secretary has put the agency on notice that a whole host of fair-lending practices may be required of FHA lenders," she said.

The secretary plans to reallocate staff and resources.

HUD hopes to work cooperatively with the bank regulators to end lending discrimination, Ms. Achtenberg added. As a first step, HUD has formed a joint working group with the Office of the Comptroller of the Currency. A report on the group's progress should be ready by the end of the month.

'Vigorous Enforcement'

In her speech, Ms. Achtenberg outlined her plan for a more high-profile and responsive fair-housing office committed to "vigorous enforcement of the laws" as well as "workable and imaginative solutions."

She praised President Clinton's commitment to HUD's fair-housing initiatives. "The president has assured us he will stand with us and behind us as we do this work." □

Fed Warns Banks On Passing Along FDIC Premiums

By BARBARA A. REHM

SAN DIEGO — Banks passing deposit-insurance premiums on to retail customers risk a congressional backlash that could result in another layer of regulation, a Federal Reserve official said.

Leonard N. Chanin, managing counsel, warned of a repeat of the Truth-in-Savings Act of 1991, which cracked down on an increasingly widespread pricing practice. Congress prohibited banks from basing interest calculations on "investable balances," which excluded funds that had to be set aside as reserves.

Cases Seen as Similar

The FDIC fee "is very close to the investable balance, in terms of consumer perception," Mr. Chanin told bankers at the American Bankers Association's national regulatory compliance conference. "You're taking a percentage of the balance and you're deducting a fee based on something you have to pay to a government entity."

Mr. Chanin would not name any banks charging a retail FDIC fee, but did say that some in the South are doing so – and consumer groups are complaining.

He advised the bankers to pressure competitors to end the practice before the whole industry pays a price.

Picture Getting Brighter for TV As the Vehicle for Home Banking

Continued from *page 1*

rector of alternative delivery systems.

Desktop Banking is a home banking system Bartnett launched in May that supports banking through personal computers hooked into the Prodigy computer network, and prototype notebook computers from Apple Computer Inc. that double as speaker phones.

Time Warner isn't alone. Virtually all of the leading cable TV systems and telecommunications companies are planning or experimenting with new interactive systems that include home banking as one of several services. And software powerhouse Microsoft Corp. is reportedly in talks with various players.

NEWS ANALYSIS

These moves represent a remarkable turnabout for television as a vehicle for home banking.

Chemical Banking Corp., an early home banking pioneer, tested, then abandoned, a service called Pronto that initially

Thomas P. Johnson
"Tremendous opportunity"

enabled consumers to use the joysticks on their Atari Corp. video games to do basic banking transactions on their TV sets.

After that, banks focused, with mixed success, on developing home banking services for personal computers and touch-tone telephones. More recently, interest has risen in home banking from computerized phones with screen displays.

The entrance of the cable TV companies into the home banking market has reignited a debate over which of the many interactive-media technologies now under development will be the first to gain mass appeal.

"I think its going to come sooner on TVs than on screen phones," said Dave Lockton, president and chief executive officer of Interactive Network Inc., Mountain View, Calif., a start-up interactive TV company with major investors including Tele-communications Inc., National Broadcasting Co., and A.C. Nielsen Co.

He said his reasoning is that interactive video systems will be subsidized by deep-pocketed cable and telephone companies looking to sell more services. Screen phones will have less financial backing, he said.

Screen phone advocates, understandably, disagreed.

"I find it difficult to believe that people will use the TV for transaction services," said William M. Randle, the senior vice president leading Huntington Bancshares Inc.'s efforts to market screen phones and processing services.

Mr. Randle and other screen phone experts said consumers are unlikely to to give up watching MTV or Monday Night Football to electronically pay a credit card bill or check an account balance.

Ultimately, however, the interest of cable TV companies in home banking could help financial institutions.

"This is just one more way of reaching the consumer in the home," said Glenn Santmire, a senior vice president of remote banking for MasterCard International, in New York. □

Fed Should Just Sit Tight Until Trend Becomes Apparent

At its meeting this week, the Federal Open Market Committee will review its monetary targets and economic outlook for this year and will assess the prospects for 1994. Committee members should find conditions more problematic than they had thought.

At the beginning of this year, the committee took the view that the nation's output would probably grow by a little more than 3% and consumer price inflation by less than that.

On those assumptions, output growth would accelerate and inflation would decelerate from the year before.

Growth May Remain Sluggish

The outcome for a year is always uncertain this far in advance (only first-quarter figures for gross domestic product have been published to date), but at the moment it looks as if inflation will be more rapid and growth slower than the Fed originally anticipated.

While the differences are not likely to be large, it is quite possible that inflation could accelerate and output growth could decelerate, instead of vice versa.

The Fed is in the position of having to recognize that the balance of inflationary and deflationary forces may have tilted in an unexpected and uncomfortable way. Policymakers will have to determine where the greatest risk to the nation's well-being lies.

Little Evidence of Danger

With regard to inflation, from what I can see at present there is little or no market evidence that it is in danger of getting out of hand. Longer-term interest rates have been declining.

Measures of commodity price pressures have, on balance, been quiescent recently. The overall consumer and producer price indexes for May were reassuring, after four months when they gave unexpectedly strong inflationary signals.

In brief, though inflation is likely to creep up a bit this year, the economy is not threatened by cumulative upward price pressures that would result from widespread inflationary expectations embedded in the business cost structure.

Deflationary Forces

Clearly, the Fed's primary job over the longer run is to forestall such cumulative pressures. But at present the Fed also has to take account of the deflationary forces that are at large in the industrial world.

There are two primary sources of deflationary pressures. One is the budgetary package being negotiated in Washington. The second involves the extended slumps in Europe and Japan, which are partly the result of a prolonged battle against price and asset inflation.

For long-term economic health, the United States clearly needs a substantially deflationary budget package. The administration's original proposal was a step in that direction, but it begins to look as if we may get a fiscal program that has a somewhat greater deflationary impact than expected because fewer of the proposed expansionary offsets may be adopted.

Curbs on Spending

The small near-term stimulus package was earlier defeated. And the proposed new intermediate-term spending initiatives and tax incentives are very likely to be cut back severely.

I don't want to overdo the potentially restrictive effect of the current budgetary process. After all, recent history suggests that all budgetary restraint programs adopted by the Congress promise more than they in fact deliver.

Nonetheless, there is a risk to the United States and world economies that two potentially deflationary forces – a prolonged slump abroad and a larger-than-anticipated budgetary restraint package here – may coincide in time.

A Double Threat

The best scenario had always been that a deflationary budget package in the United States would be offset by a return to growth abroad. If that growth is delayed significantly further, we would have the unwelcome prospect that the deflationary impact of the U.S. budget program would be intensified, not offset, by external influences.

Such a double threat to growth may not actually occur, but the more the European and Japanese recoveries are delayed, the greater the risk. In that context, President Clinton has a strong case at the Tokyo summit for seeking a greater commitment to economic growth from the other industrial countries than they have thus far shown.

Federal Reserve policy probably should remain on hold for now in all these circumstances. The budget package is going to conference in the Congress, and it will be several weeks before we know the timing, not to mention the full dimensions, of tax increases and spending cuts that will emerge.

And it will also be a while before we can get a better fix on how committed the other industrial countries are to growth.

Patience has proved to be the Fed's strong suit over the past couple of years, and a little more is probably required. □

THE FED IS IN

the position of having to recognize that the balance of inflationary and deflationary forces may have tilted in an unexpected and uncomfortable way.

Mr. Axilrod is vice chairman of Nikko Securities Co., New York.

CEOs Must Take a Hands-On Approach To Their Banks' Credit Cultures

What is the chief executive officer's role in helping an institution achieve profitability? Part of the answer is obvious: Have the right people in place and support a strong, independent loan review function.

Unfortunately, it takes more than that. The right people can go wrong in a destructive credit culture.

CEOs must insert themselves in the process to ensure that the appropriate culture is developing. Their involvement in the commercial loan process is a function of their organization's size, their priorities, and the demands on their time. Nevertheless, there are seven key areas that CEOs ignore only at great peril:

How We Do Business'

• Credit culture. The CEO is responsible for the vision and values of an organization, and these ultimately drive the credit culture. The credit culture is a product of styles, styles, experience, and philosophy, or "how we do business around here." It is the glue that holds together the commercial loan process.

To influence the culture, CEOs should have a broad vision of the portfolio and agree with the portfolio philosophy developed by commercial loan management. CEOs should focus on target markets, diversification, profit and credit models, and the types of desired relationships.

Developing a broad vision and agreeing with the portfolio philosophy is not time consuming for CEOs. The issue is whether they really mean it.

Diversification

• Concentrations. A small unit with high concentrations may seem innocuous when one looks at the overall organization. Yet, it can produce extremely unpleasant surprises. High concentrations often signal laziness, for they are the quickest and easiest means of producing volume.

Concentration limits are usually the most controversial element of a portfolio philosophy, and they need the CEO's total support. The best strategy for producing earnings consistency in a commercial loan portfolio is to diversify, diversify, and, when in doubt, diversify some more.

• Watch list. Today's nonperforming assets and chargeoffs were predictable from the watch list of prior years. Therefore, CEOs should attend watch list meetings, occasionally if the portfolio is in good shape and frequently if it is not.

The meetings provide a good feel for reserve adequacy, the potential for surprise, and the general state of loan administration. They are also an excellent pulpit from which CEOs can ex-

Credit Cultures Need Strong Chief Execs

Continued from *page 4*

pand on their vision and enhance the credit culture.

An Eye on Credit

• Approval process. CEOs should not participate in every or any loan approval processes, but they must agree with the system.

At a minimum, they should ensure that responsibility for every credit is clearly fixed on a designated individual who is clearly recommending approval; that every credit is analyzed consistently; and, when possible, that objective standards such as interest or debt service coverage ratios are used as initial screens or to help confirm risk-ratings.

CEOs should not make loans themselves. If they insist on running their own loan portfolios, they should not commit without discussions with their lending staffs.

The line refers to these as "corner office loans" and waits for the CEO to stumble. CEOs are rarely the beneficiaries of frank discussion and the market intelligence that is part of the line lending process.

Rewards System

• Recognition. Recognition is a greatly underused tool for reinforcing positive behavior. It costs little or nothing but works wonders in building a credit culture. Insiders require little effort to search out people doing things right and then recognize them.

Promotions should be considered carefully, for they are powerful signals to the rest of the line on how to get ahead. Put simply, people who enhance the credit culture should be promoted, and those who don't shouldn't. Promotions are tangible proof of whether CEOs mean what they say. They are watched very closely.

Incentives are also powerful tools in building or destroying a credit culture. They should be totally consistent with the portfolio philosophy, or they should be scrapped.

All incentive models should contain a credit model heavily weighted to watch-list control. CEOs should approve any incentive plan before it is initiated.

The Communications Business

• Signals. Despite the isolation into which some CEOs have retreated, they are constantly emitting signals that are interpreted by their organizations.

These signals may be more important than the CEO's carefully worded written and oral communications, for they let people know if the CEO really means what he – or she – is saying.

A good barometer of how well a CEO communicates is how well he receives bad news. A CEO well versed in "open door" communications policy, but then shoot the messenger who announces a surprise. The CEO may even say the right things, but his body language suggests an execution in preparation.

Receiving bad news in a time for CEOs to listen. If CEOs may propriately handle what other individuals are saying, they will shut off critical information and guarantee worse surprises in the future. CEOs should ask people to communicate with them.

For example, they should have commercial loan managers

CHIEF EXECUTIVES *should have a broad vision of the portfolio.*

discuss with them the state of the portfolio and the people who run it.

CEOs should give managers an opportunity to prepare so that they hear what managers think and not what managers think CEOs want to hear.

• Growth. Historically, rapid growth has been an excellent predictor of credit problems. Many failed bankers believed that they were smarter than the competition or that the competition was stupid. In an overbanked environment, it is difficult to be significantly smarter than everyone else.

There are ways to increase income other than through volume; these include reduced provision and noninterest expense, and noninterest income. Watch the volume numbers in the budget, particularly in a recession.

Also watch the signals sent at budget time. Lenders can always produce volume, regardless of market conditions, but CEOs may regret it later. Growth cannot compound itself at a constant rate in perpetuity. Economic cycles are great equalizers.

Leading the Way

In summary, the leadership of CEOs must manifest a high level of energy. CEOs must change attitudes and create commitment. They must take people to where they have never been and create for them an environment in which they can reach their potential.

People will excel and sacrifice for such a vision. Leadership will make all the difference in fulfilling that vision. □

JUL 1 1993

1st Union's Georgia Boss Keeping the Pressure On

People in the News

By KENNETH CLINE

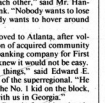
IT TOOK Harald R. Hansen seven years to build First Union National Bank of Georgia into a major power across the state. With retirement less than four years away, the veteran banker has no intention of giving up any ground.

First Union and its competitors "are going to fight like hell against each other," said Mr. Hansen, chairman of the bank. "Nobody wants to lose anything, and everybody wants to hover around whatever opportunities there are."

It was 1986 when Mr. Hansen moved to Atlanta, after volunteering to weld a motley collection of acquired community banks into a centralized statewide banking company for First Union Corp. of Charlotte, N.C. He knew it would not be easy.

"He volunteers for the toughest things," said Edward E. Crutchfield Jr., chairman and CEO of the superregional. "He goes into situations where he's not the No. 1 kid on the block, which has certainly been the case with us in Georgia."

First Union began assembling a Georgia franchise shortly before Mr. Hansen moved there, with the purchase of First Railroad and Banking Co., Augusta. The deal brought a decentralized assortment of banks across the Peach State with $4 billion assets but less than $3 billion in the core city of Atlanta.



Harald R. Hansen

Mr. Hansen helped make up that deficiency by aiding in the acquisition last year of two Atlanta-area thrifts with $7.2 billion of assets. That deal moved First Union from fourth place in deposit share to second place in the state capital.

Now Mr. Hansen must try to integrate the thrifts without cutting too deeply into profitability.

He acknowledges that the task is daunting. The thrifts hold many CDs offering above-market rates, but their assets are skewed toward low-margin residential mortgages.

Mr. Hansen said he will steer investors to mutual funds or other savings instruments when the CDs mature, while trying to boost commercial loans as a percentage of the portfolio.

Residential mortgageholders, he contends, also represent a great cross-selling opportunity. "The mortgage product is about the last relationship product in banking," he said. "It's where you focus first for service."

Mr. Hansen, 61, never intended to be a banker. After earning a political science degree from Duke University, the Durham, N.C., native served in the Marine Corps from 1956 to 1959. He retired from the reserves as a full colonel in 1986.

He was 38 when he joined First Union in 1969, after a business career spent mostly in factoring. But his leadership and management skills paved the way for a succession of top jobs: division head of credit cards, head of the trust department, city executive for Charlotte, regional executive for that city, and executive vice president of the international department.

"He is a leader first and a technician second," Mr. Crutchfield said. "He picks up what he needs to know along the way."

"First Union gave me more than I was capable of doing at the time," Mr. Hansen said. "At each step of the way, there was opportunity to immerse yourself in something that makes you grow."

First Commerce to Buy Acadiana, Enhancing Louisiana Dominance

By KENNETH CLINE

Buttressing its position as Louisiana's largest bank, First Commerce Corp. said Wednesday that it would acquire First Acadiana National Bancshares.

First Commerce, based in New Orleans, signed a letter of intent to buy the Opelousas-based bank for $32.7 million, or 1.8 times book value. First Acadiana operates 11 branches in south-central Louisiana and has $216 million in assets.

Buyer's Shares Decline

"It kind of cements First Commerce's position as the largest Louisiana bank in market share," said Peter W. Tuz, a bank analyst with Morgan Keegan Inc., Memphis.

First Commerce shares were changing hands at $37, down 62.5 cents, in afternoon trading.

With $6 billion in assets, First Commerce controls 13.3% of Louisiana bank and thrift deposits. Hibernia Corp., also based in New Orleans, is runner-up, with $4.7 billion in assets and a 10.5% market share.

Analysts said the deal indicates merger-and-acquisition activity in Louisiana may be heating up after several years of quiescence. Consolidation was halted by severe loan problems at all the major banks in the state except for First Commerce.

Attention is currently focused on New Orleans-based Oak Tree Savings Bank, a $1.7 billion-asset thrift that the government plans to auction later this year.

Privately held Alerion Bank, with $348 million of assets, is also reportedly on the block and engaged in discussions with Premier Bancorp in Baton Rouge.

"We have talked to them and we're open to further discussions," said R. Neil Williams, Premier's chief financial officer. "But there's nothing of a definitive nature imminent on that. As far as I know [Alerion] is pursuing other alternatives as well."

A spokesman for New Orleans-based Alerion could not be reached for comment.

Completion of the First Acadiana purchase is expected to take place by yearend, after approval from regulators and Acadiana shareholders, First Commerce said.

It plans to merge the bank into its Lafayette-based subsidiary, First National Bank of Lafayette, which has $436 million of assets. □

Chemical Hit with Complaints About ATMs

Continued from page 1

the nation's third-largest bank company is trying to prevent defections related to the recent conversion of the former Manufacturers Hanover Trust Co. branches to Chemical branches. The two companies merged at the end of 1992 and began the branch conversion in March.

Chemical officials linked the ATM problems to installation of touch-screen machines from NCR Corp., a process requiring some service interruptions.

The report also found numerous unscheduled outages and delays in transmitting account balance information as a result of attempts to integrate the two banks' systems.

"We're trying to schedule the downtime during the hours of 2 a.m. to 6 a.m. to minimize disruption to the customer," said John Stefans, a bank spokesman.

He argued that existence of the report reflected Chemical's attention to customer service.

Quick Turnaround Cited

"There's a great effort to quantify the problems and get them fixed," he said, noting that 99.6% of complaints were "addressed" within 24 hours.

The report focused on customer satisfaction results in April, the first month in which data were available for service at both Chemical and Manufacturers Hanover machines. The overall satisfaction result was 94.5% versus an industry standard – and "a Chemical goal" – of 98.3%, the report found.

Complaints surged 70% from March to April.

The report implied that the problems may be worse than indicated, since the service management group receives only those complaints that cannot be handled at the branch level. Branch employees "have been unable to help because the downtime has been sporadic and [they] are not always informed of when the network will be available," it said.

It also found that customers are waiting longer on lines in front of functional ATMs. "Customers have commented that Chemical Bank should develop a program giving $5 for seven minutes of wait time," it said, referring to an offer made to customers who wait on teller lines.

Mr. Stefans said the bank is considering extending the offer to ATM lines.

Although the number of complaints surged by 70%, Mr. Stefans said the ratio of complaints to transaction volume is small. Chemical processed 4.7 million requests for ATM cash in April – when volume is traditionally high because of tax season – and received 1,424 shortage complaints.

Funds transfer consultants said the service problems could have far-reaching implications.

"The value to customers of ATMs supersedes most other things that banks package in their checking account products," said David Dove, president of Dove & Associates, a Boston market research firm.

Mr. Stefans said Chemical has no indication that it has lost customers because of the ATM problems. □

Opportunity is Spelled LDC DEBT REPORT

Emerging Markets are risky, notoriously inefficient, known for changing rules and limited public disclosure. Knowing what's really going on spells the difference between opportunity and loss.

The *American Banker*'s weekly *LDC Debt Report* delivers the most accurate, objective, succinct information available on emerging-market debt. *LDC Debt Report* provides the astute investor with news, reviews, and strategic insights. The popular Market section summarizes each week's developments, quoting bid and offer prices for 26 developing-country loans and 18 emerging-market Eurobonds. It also tracks the performance of selected equity markets.

If you must know what's going on in key emerging markets, recent trading, economics and politics, the World Bank, and more, LDC DEBT REPORT is a must read every week.

How to Rekindle Interest in Your Stock After a Crisis

By LARRY PARNELL

Mr. Parnell, a vice president of corporate relations at People's Bank of Connecticut for six years, recently joined Ogilvy Adams & Rinehart, a public relations firm in New York, as a managing director specializing in financial institutions.

Over the past few years, investor relations practitioners in the financial industry have seen their carefully structured programs buffeted by a prolonged recession and the collapse of the real estate market.

Like victims of a natural disaster, these managers face the challenge of rebuilding their investor communications program after a storm has torn it apart.

Comment

In the banking field, this problem is especially severe. In Connecticut, 21 banks and thrifts closed in 1992.

As one might expect, the stock prices of banks and thrifts have been on a roller coaster in recent years. Between the failures, real or rumored, and a steady release of national studies and reports by unofficial rating agencies predicting more trouble for the industry, investors have stayed with their investment dollars in favor of other, presumably safer, investments.

Improving profit reports in recent quarters have ameliorated the problem. Nevertheless, the situation remains fragile and investor confidence can be shaken quickly by another failure or the latest rumor.

Stigma on Banks

These marketplace factors, plus the generally poor economic conditions all businesses are now facing, make it especially challenging to drum up investor interest in an industry that is viewed as declining rather than growing.

In such a situation, investor relations officers must position themselves with rebuilding the shareholder base, attracting new interest to the company, and timing a return to an active investor relations program. Considering the alternatives, such as inactivity and further declines in your stock price and market following, the choice is obvious.

Investor relations officers must remain active and make an effort to keep Wall Street informed of how the institution is bearing up, even during a crisis. Techniques include continuing to monitor investor mix, noting changes as they occur, and being aware of who sells off and why.

Since contacts and relationships are a cornerstone of our business, try to keep them current as well.

Target Market

Also, some time spent identifying "turnaround" investors can pay off when you are ready to resume an active program. As many financial institutions emerge from their crises, investor relations professionals must be prepared to rebuild investor confidence. Following are the steps that are essential to the process.

As in any disaster, the first order of business is to determine the nature and extent of the damage. This will allow you to develop a prioritized plan of action later.

First, general market research should be undertaken to determine the state of your industry and to assess current investor interest and outlook. Questions to be asked include:

Larry Parnell
Says situation is "fragile"

- How does your company measure up to key profit benchmarks?
- What are the experts – analysts, regulators, and industry leaders – saying about the future of the business lines your institution is involved with?
- How does your institution stack up against those perceived to be leaders?

What's the Mix?

Second, one should undertake company-specific market research to identify changes in the investor mix. For example, has the percentage of institutions versus retail holders shifted significantly? Of the institutions lost, which are likely to return and/or lead others back?

Third, along with the survey output, management's commitment is required to go forward with an active investor relations program.

This entails an honest assessment of all the internal and external factors that will support or hinder your progress. Before embarking on a program you need to determine that senior management will place a priority on this effort.

The composition of a company's shareholder base, as well as the community of sell-side and buy-side analysts following your industry, is likely to have changed materially during the long period of tough weather.

While major institutional investors (such as Fidelity) are readily identifiable and will obviously be interested in your sector, do not overlook smaller money managers who may be inclined to move quickly in response to a positive turn in the market. □

Midwest Rain Hits Hard At Farms and Farm Banks

Continued from page 1

Corp. in Minneapolis. "After two years of bad crops and low yields, this could be the final blow for some highly leveraged farmers."

Edward Lotterman
Sees high rate of crop damage

Federal Aid Sought

Though it is too early to assess the actual damage to this year's crops, the outlook is grim for farmers in southern Minnesota, northern Iowa, and eastern South Dakota.

Bankers are hoping for some relief from the federal government. In response to a letter from the agricultural commissioners of those states and Wisconsin, Secretary of Agriculture Mike Espy plans to visit the region this week.

A spokeswoman at the Minnesota Department of Agriculture said the state's farmers were asking for emergency federal grants as well as loans from the Farmers Home Administration.

But federal assistance will do little to stem banks' losses, according to industry analysts.

Low Prices Also Hurt

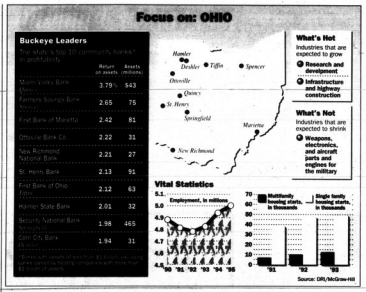
"It's still going to be trying," said Mr. Fishback, whose agricultural portfolio accounts for 60% of his $250 million-asset bank's loans.

Compounding the poor crop conditions has been relatively low prices for grain crops.

"Unless we get some strength in the marketplace, we'll break even at best," said Paul Pietz, agricultural loan officer at First American Bank Southwest, Marshall, Minn.

Though prices of grain futures contracts have risen recently at the Chicago Mercantile Exchange because of last year's record harvest, plenty of grain has been stockpiled, keeping prices low.

"That's the worst situation to be in – a poor crop while prices still are not good," said Mr. Lotterman at the Minneapolis Fed. □



Ohio Plans to Let Small Banks Jointly Form Trust Companies

By BILL ATKINSON

Ohio's tough bank regulator plans to draft legislation this summer that would permit community banks to form and run joint trust companies.

State law currently prohibits the formation of independent trust companies. The proposal would allow a group of community banks to capitalize an independent trust company to serve their customers. It would also permit nonbanks to form trust companies.

A 'Revenue Idea'

Many community banks don't offer trust services because they don't have the expertise or enough business to justify the overhead.

"I see it as something very positive," said Alison M. Meeks, Ohio's superintendent of banking. "It is another revenue idea that could make sense for the bankers."

Pamela Grandon, an attorney and examiner with the banking division, said a number of questions still have to be resolved. For example, is the investment allowable if banks don't control the trust company? Or, if banks are the owners, how many can hold a stake in the unit?

"What we don't want to have is a situation where the trust company is pulled by someone or some of the investors to favor their interest," she said.

Ms. Meeks said two community banks already have contacted the department about opening a trust unit, and she expects many more to follow if the legislation is adopted.

Jack Wither, senior trust officer with the $100 million-asset Orrville Savings Bank, said its management is not waiting. It filed an application with the state on Friday for trust powers.

"It would have been nice to have gone in with two or three other banks," Mr. Wither said.

Jeffrey Quayle, general counsel of the Ohio Bankers Association, said he has had conversations with a handful of community bankers who also are mulling the idea.

Mr. Quayle said the association has yet to endorse the plan, but it may take a position supporting it this summer.

"The association needs to make sure it has the support of the full industry," he said. "We haven't run it up the flagpole. It is premature to take the position."

'Safe Haven for Customers'

John L. Hoffer, a trust consultant and a founder of Chicago-based Association for Independent Trust Companies, said if community banks can fund the start-up of an affiliated trust company, they could retain customers who normally would take their trust business to larger institutions.

"It is a safe haven for their customers," he said. "It is never going to steal that customer for loans." □

West Coast's Suitor Targets Board

NEWPORT, Ore. — West Coast Bancorp said it will convene a shareholders meeting Aug. 11 to consider a shareholder resolution calling for removal of six of its seven directors.

The directors are being challenged for opposing a takeover bid by Western Bank of Coos Bay, Ore. Shareholders of record on July 2 will be eligible to vote.

West Coast said the resolution was submitted by Georges C. St. Laurent Jr., the would-be acquirer's controlling shareholder. He wants to remove all of the directors except James Reinmuth, who in April was the only dissenter from the view that Western Bank's offer was "significantly inadequate."

Fighting Letter

West Coast, parent of Bank of Newport, said that after Western withdrew its offer, Mr. St. Laurent wrote to the target company's shareholders saying he would call for a meeting.

According to West Coast, Mr. St. Laurent said that if the resolution is approved, "directors representing the shareholders' interests would be appointed by Mr. Reinmuth."

West Coast's chairman, J.F. Ouderkirk, said: "We urge all our shareholders to vote against this self-serving resolution."

Let Employees Know of Their Stake in Earning Profits

Thank you, Weekly Adviser readers: The letters keep coming in. I hope some of the suggestions printed in this space have helped community bankers in their constant battle to keep their customers, their employees, and their regulators happy.

Typical is the letter I received from Bill Watson, CEO of Cross Keys Bank, St. Joseph, La.

Mr. Watson writes:

"We want all our employees, not just officers, to think bottom line."

He then attached a note that has been displayed in the bank coffee shop:

"To all employees: 1993 Results of Profit-Sharing Plan Through April 30, 1993. Annualized rate of return: 11.46%.

"You might be interested in knowing that each of you own a piece of the following companies: American Brands, Schering Plough, Delta Air Line, Coca Cola, Coca Cola 'E', Pinacle Electric, Baxter International, Cross Keys Bank, Upjohn, Philip Morris, and Wrnmn. You may want to start looking at the financial pages to see how they are doing.

"Keep your fingers crossed and hope 1993 will be a good year for all of us.

"Incidentally, our bank expenses are running a little over budget through April, so let's all try to cut expenses every chance we get."

Personalize Profits

The conclusion that Mr. Watson has obviously reached: If you are going to have generous benefits for your employees under a profit-sharing program and you want these benefits to motivate their efforts, you at least have to tell your people what they are getting and what it means to them.

I received a letter from an old friend, Dick Doolittle, president of the graduate school of banking at Madison, Wis. He complemented the *American Banker* for starting the community banking page and this column.

I got in touch with Dick to see if there were ways in which his banking school, with its mid-America constituency and sponsorship by the Central States Conference of Bankers Associations, gives special attention to community banking.

With its heritage of unit bank-

Mr. Nadler is a contributing editor of *American Banker* and professor of finance at the Rutgers University Graduate School of Management.

Potential benefits should be used to motivate employees.

dents to our school, and in very small numbers continue to do so. But it is often because they want their people to see the business through the community bank lens.

"Our challenge is to keep our course offerings and teaching methods one-half-step ahead of the swiftly evolving needs of community bank managers. We don't need to concern ourselves with being all things to all people. Our niche is the community bank."

Offer to Leave Teaching

Finally, I received a letter sent to a list of teachers offering the opportunity to leave teaching and become a marketer with a financial service company.

The letter talked about the frustrations of teaching and the opportunities in financial marketing and then offered the recipient a chance to sit down and talk with the writer.

While I have absolutely no interest in giving up teaching, I thought the letter was attractive and would garner a number of responses. That is, until I saw how it was signed:

Sincerely yours,
Marilee H. Talley,
Management assistant

In my opinion, it would have been better had the letter not listed a title. I wondered how important the potential employees could be to the company if a management assistant is their first contact? If I'm reporting to an assistant, what does that say about my position?

The letter, and the way it was signed, justified in my mind the banking industry's practice of giving out titles freely.

If my business is handled by a vice president, it makes me feel a lot more important than if it is handled by an assistant. □

Responses will be printed in the column.

We'll save you money. We could save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division, to get every Monday the data you need to face the regulators.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... which agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 20% discount, so you'll be saving money even before you get the first issue. After that, how well you use the information before this year's exam could decide whether you're around next year.

Refinancing Revived by Drop in Rates

Continued from page 1

second year.

"There definitely has been a resurgence in refinances," said Richard Malloy, chief administration officer at Norwest Corp.'s mortgage unit.

An index of weekly refinancing applications rose about 10% from late May through mid-June, the latest reading.

The index, maintained by the Mortgage Bankers Association of America, stood at 819.3, having passed the 800 mark for the fourth time since early 1992.

The index, however, was still well below the 1993 peak of 1465.6 reached in mid-March. A reading of 100 correlates with application levels of March 1990.

The recent bounce in loan demand is eliciting outright glee from some lenders.

'It's Gravy'

"We really love it when it's like this," said Mr. Norman of Cal Coast. "It's gravy."

Ah with other lenders, the company's refinancing is up after a lull in early June, he said. Calls to Cal Coast's offices from consumers seeking refinancing are running 20% higher than in late May, Mr. Norman said.

> **"Refinance mania is in full gear."**
>
> **Steve Norman**
> *Cal Coast Mortgage Corp.*

Mr. Norman said his business is still booming, with total originations up 42% from this time last year.

Other lenders report similar results.

Bank of Mississippi in Tupelo "saw a lull" around June 1, said William G. Hardin, first vice president of the mortgage loan department. But since then, refinancing has "definitely picked up," he said.

"People are convinced that if they're going to do something, they'd better go ahead and do it now," Mr. Hardin added.

But mortgage lenders concede that the endless refinance boom has its downside, too. The industry is rife with stories of 20-hour workdays, weekend work, and backlogged county clerk's offices. One bank even went to the extreme length of turning away business.

"We've had to restrict refi activity to people we've funded before in order to keep our sanity," said Terry Snyder, senior vice president for residential lending at Centennial Bank in Olympia, Wash.

Added Mr. Hardin of Bank of Mississippi: "We're tired because we haven't been up in 24 months, but in this business you have to get it when it's there."

Cautious Confidence

David Lereah, chief economist at the Mortgage Bankers, takes a cautious approach to the shift. "I'm confident that things will pick up, but I'm not looking for us to take off to the races," he said.

Indeed, some lenders think a drop of at least 25 to 50 basis points in mortgage rates would be needed before refinances could spike up to the stratospheric levels of late 1992.

In the meantime, mortgage lenders around the country continue to be swamped with loan applications, and have little time to notice small changes in volume.

"When you're in a car going 100 miles per hour, it's hard to notice an increase in speed," said Jerold K. Hoerner, president of Metmor Financial Inc. in Overland Park, Kan. □

Divining the future is not all that hard when you have

THE REDEMPTION REPORT

Calls and prerefunded bonds are scheduled to drain the yields out of portfolios at a faster and faster pace in the third quarter. With ***The Bond Buyer Redemption Report,*** *you can anticipate redemptions well ahead of the actual events.*

If you want to know when your bonds will be called away, this report has the answer.

We published the first such book in history for the first quarter of 1993. Buyers received instant access to the entire universe of called and prerefunded bonds in one volume.

And now you can get the third-quarter volume, a 916-tome chock full of information on which, how much, and when. Here's a sample listing:

Peoples Heritage Hires 2 from Citi

PORTLAND, Maine — Peoples Heritage Bank has hired two executives from Citibank Maine to direct a major expansion in mortgage sales and servicing.

Glenn H. McAllister, a former president and chief executive of the Maine subsidiary of New York-based Citicorp, has been hired as an executive vice president. He will be president of a mortgage services company the bank intends to develop.

James A. Sellick, a former mortgage sales director for Citibank Maine, has been named a vice president and mortgage sales manager.

Aspirations for Growth

William J. Ryan, president and chief executive officer of Peoples Heritage, said: "We want to build on our position as Maine's leading provider of one- to four-family mortgages."

Mr. Ryan said that Peoples Heritage wrote $322 million of such mortgages in Maine in 1992, more than any other bank, and is on a strong pace again this year.

The new mortgage services company will operate outside Maine as well as in-state.

Peoples Heritage Financial Group Inc., the bank holding company that owns Peoples Heritage, also owns First Coastal Banks Inc., the parent company of the First National Bank of Portsmouth.

An Industry David Reloading Its Slingshot

By STEPHEN KLEEGE

After raising $16 million in a recent stock offering, an Arkansas bank may soon put its improbable credit card juggernaut back into gear.

Simmons First National Bank of Pine Bluff, which made a national name for itself by offering low-rate cards, stopped accepting out-of-state applicants a year ago because the demand had outstripped its capacity.

But president J. Thomas May said the bank is in good position to acquire an as-yet-unidentified Arkansas institution that would bring in the deposits Simmons needs to fund more card loans.

The bank, a subsidiary of the $700 million-asset Simmons First National Corp., has thrived despite a usury law likely to send most card issuers in search of a friendlier regulatory climate. It has succeeded by accepting the most creditworthy of those applicants calling in unsolicited and charging them a healthy $35 to $50 annual fee and a $10 penalty if they exceed their credit limits.

> **Simmons has thrived despite Arkansas' low interest rate cap.**

Simmons' acceptance rate is just 31%, about half the industry average.

The calls come in because Simmons perennially tops the low-interest-rate lists published by various consumer newsletters. Arkansas law caps the rate at five points over federal funds, currently 8%.

Because Simmons has a relatively small and selective portfolio, with $160 million in receivables, its loss rates are quarter the industry average.

The fall in the federal funds rate two years ago generated up to 9,000 incoming telephone calls an hour – although Simmons couldn't handle that many because its 23 phone lines were jammed.

Frank Anderson, a bank stock analyst with Stephens Inc., estimates the bank earns a healthy 15% on credit card assets, including the fee income.

Ranks 72d in Outstandings

Simmons ranks 72d in the nation in card outstandings and 170th in total bank assets, said Peter W. Tuz, banking analyst for Morgan Keegan & Co.

Knowing how most bankers deplore interest-rate regulation, Mr. May was almost apologetic about his bank's success.

"We believe the Arkansas usury law is counterproductive in that it tends to export capital," he said.

"The fact is, the usury law is a part of our everyday life and we have chosen to make the most of it."

In the mid-1980s, the bank decided to expand beyond its sleepy hometown base, emphasizing mortgage banking and deploying its student lending. But it is the credit card business that bank executives now refer to as "the franchise," Mr. May said.

Mr. May emphasized that he competes only for a narrow segment of the business because the state law leaves it no choice.

"With the usury ceiling we have in Arkansas, we could not have a profitable credit card portfolio if we had a delinquency rate of 5%," he said, citing Visa U.S.A.'s estimate of the average loss rate on bank credit cards.

"In 1992, our past-due ratio was 0.42% compared to industry average of 4.2%. Our loss ratio was 1.28% compared to an industry average 5.03%." □

Low-Rate Appeal

Annual credit card applications to Simmons First National Bank, in thousands

Union Planters Offers Card with 5.9% Rate

Union Planters National Bank of Memphis has set an interest rate of 10 basis points below prime for the credit card it is offering to the 400,000 subscribers of *Louis Rukeyser's Wall Street* newsletter. The effective rate of 5.9% is the lowest in the nation, according to MasterCard International, which announced the terms this week.

After six months, the rate on the no-fee gold card will adjust to 2.9 percentage points over the prime.

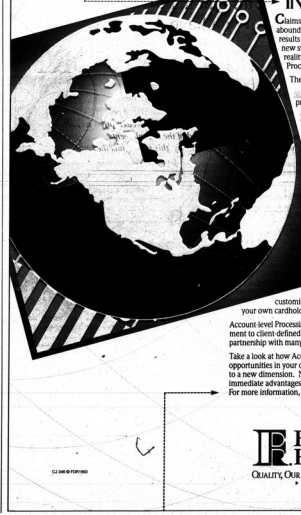
A.L.P.



THE KEY TO THE NEXT DIMENSION IN PROCESSING

Claims of increased functionality and flexibility abound in the transaction processing industry, but results are scarce. You've heard promises about new systems from others for years. Now see reality with First Data Resources' Account-level Processing.

The Account-level Processing concept is simple:

1 Let our clients dictate cardholder pricing parameters at the account level.

2+3 Give them online maintenance, easy customization and integrated support tables.

4th And don't sacrifice flexibility or functionality.

A.L.P. has been implemented and FDR clients are using this new dimension in transaction processing today!

This new dimension offers you an online, menu-driven system which guides you through linked applications to review, analyze and edit your processing options. A.L.P. gives you more control and flexibility, with less paperwork and reduced production time. This not only streamlines your portfolio management, but provides you with a high degree of customization throughout your system based on your own cardholders and circumstances.

Account-level Processing is an outgrowth of our continued commitment to client-defined processing because it has been developed in partnership with many of our clients, both large and small.

Take a look at how Account-level Processing can tap into new opportunities in your cardholder base and take your processing to a new dimension. No other processor can give you today the immediate advantages Account-level Processing offers. For more information, call 1-402-222-4022.

What's Selling in the Mutual Funds Marketplace

By DEIDRE SULLIVAN
Special to the American Banker

As bank customers swarm to mutual funds, they are consistently picking the most conservative, risk-averse types.

That often means fixed-income funds – but not always. As the following sample shows, fund suppliers are employing a broad range of investment strategies to meet the requirements of banks and their cautious customers.

Oppenheimer

New York-based Oppenheimer Fund Management Inc. has attracted conservative bank customers with a mutual fund that is based heavily on the concept of diversification.

The New York-based company's No. 1 seller through banks is the Strategic Income Fund. Fund manager Arthur Steinmetz pursues a three-pronged investment strategy, buying foreign fixed-income securities, U.S. Treasury bonds and mortgage-backed securities, and high-yield corporate bonds.

Company executives say the approach takes advantage of fluctuations in three distinct markets to maximize yield.

Hedging Strategy

"Even an unsophisticated buyer understands that diversification lowers risk," said Maryann Bruce, senior vice president for financial institution sales. "Our goal is to invest so that good performance in one sector offsets weak performance in another."

Last year the Strategic Income Fund posted a total return of more than 9%.

Since its inception in October 1989 the fund has grown to $2.7 billion. Last year, sales of the fund through banks hit $128 million, accounting for 44% of the fund's total sales.

Nuveen

Last year, bank customers plowed more than $100 million into the Nuveen Municipal Bond Fund – the flagship fund at John Nuveen & Co., which specializes in selling fixed-income, tax-exempt investments.

The fund, with $2.6 billion in assets, has become Nuveen's most popular with bank customers precisely because it is safe and conservative, according to Jerome Contro, a senior vice president at the company.

The portfolio boasts low volatility and strong credit quality. The securities in the fund carry an average investment rating of double-A.

Low-Yield Blues

Nuveen, which manages $62 billion in assets, has promoted the municipal bond fund as a good choice for customers who are unhappy with the low yields on bank certificates of deposit, Mr. Contro said.

"Making the transition from owning a CD, which in essence is a bond, to buying a mutual fund made up of bonds is a relatively simple psychological leap," he said.

Kemper

Plain vanilla is what sells at Kemper Financial Services Inc.

The Chicago-based company's best-sellers through banks are a municipal bond fund and a government securities fund, with total assets of $3.6 billion and $7 billion.

Banks accounted for about a third of each of the two funds' sales, according to Whitfield C. Wannamaker, senior vice president for financial institution sales at Kemper. The company manages $71 billion in mutual fund assets.

The government securities fund posted a 4.61% return in 1992 and a 17.25% return in 1991. The municipal bond fund had an 8.71% in 1992 and 12.78% in 1991.

Equity Funds More Popular

Though bank customers have been chiefly interested in fixed-income funds, Mr. Wannamaker said he sees growing interest in equity funds and in balanced portfolios, those that hold a mixture of stocks and bonds.

For example, he said, demand is growing for Kemper's Retirement Fund, which is invested half in equities and half in U.S. government zero-coupon bonds.

"It's a perfect stepping stone to a greater commitment to equities," Mr. Wannamaker said.

"Even an unsophisticated buyer understands that diversification lowers risk."

Massachusetts Financial Services

"I think the message of diversification is getting across."
Nishan Vartabedian
Fidelity Investments

Massachusetts Financial

Balance is the watchword at Boston-based Massachusetts Financial Services Co., which has had big success with the MFS Total Return Fund.

The fund, which emphasizes capital preservation while producing a steady income stream, invests in stocks, bonds, and money market funds. Bank customers account for 30% of the sales of the fund, which has $1.3 billion in assets.

"Bank customers demand predictability, and we found that a balanced fund meets their needs," said Jeremiah Potts, senior vice president at MFS.

20% to 60% in Stocks

Fund manager Richard Dahlberg invests between 20% and 60% of the fund's assets in equities, depending on how the market is performing.

He favors "value stocks," which he defines as securities that are priced low relative to book value and that pay steady dividends.

Last year the MFS Total Return Fund produced more than a 10% return. It has returned 13.3% annually on average over the past five years.

Fidelity

One of Fidelity Investments' top-selling funds through banks is a portfolio that isn't even targeted to bank customers: the Fidelity Contra Fund.

The fund seeks companies that are undergoing changes and are poised for a turnaround.

Customers seem to be asking for the Contra Fund in part because it has received favorable notices in financial publications, Fidelity executives said. In May, Lipper Analytical Services rated it No. 19 out of 313 growth funds on the market.

Boston-based Fidelity, the titan of the mutual fund industry with more than $200 billion in assets, also has several moneysellers in its Advisor lineup of funds. The Advisor funds are sold exclusively through financial intermediaries, such as banks and financial planners.

Companies with Potential

The Advisor Income and Growth Opportunities Fund is the leader. Typically, about 65% of the securities in the portfolio are invested in companies with long-term growth potential. Last year, the fund returned 15.15%, and it has averaged 15.96% over the past five years.

"Bank customers are interested in buying equity funds," said Nishan Vartabedian, executive vice president of Fidelity's Bank Services Division. "I think the message of diversification is getting across."

HIGH YIELD REPORT

lets you *hear the heartbeat and feel the pulse* of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt

IN AN AGE OF DRAMATICALLY declining long-term interest rates, the *American Banker*'s weekly *High Yield Report* delivers money-making tips on high-yield investment opportunities.

This newsletter keeps a close eye on major court proceedings, and legislative and regulatory developments. Each issue features barometers of market size, bellwether pricing tables, a forward calendar, reports on filings, and the results of new-issue sales.

No longer considered the arena of "junk bonds," the high-yield market is rapidly gaining respectability as it is closely tracked by this objective, succinct weekly letter.

If you must know what's "ticking" in the heart of the high-yield market, HIGH YIELD REPORT is a must read every week.

Read it free for 4 weeks!
Just fax your letterhead to 212-943-7852, or call Hans Winberg at 212-943-8351

Economic Growth Seen Spurring Loan Demand

By DEAN M. NIELSEN
Special to the American Banker

WASHINGTON — Higher inflation will push up interest rates, but a growing economy will fuel loan demand nonetheless, a panel of bank economists said on Wednesday.

"With inflation edging higher and economic growth close to 3%, short-term interest rates are expected to begin rising by the end of the year," said Stuart G. Hoffman, chairman of the American Bankers Association Economic Advisory Committee.

"Bond yields and mortgage rates will also edge higher, but to a somewhat lesser extent than short-term interest rates," he added.

Loan Demand Can Be Met

The committee said the industry's return to health will enable it to meet demand for credit that is expected as the economy continues to grow moderately.

Committee members pointed to the industry's improved earnings, large increases in bank capital, and the begin ning to outperforming loans as encouraging signs, but said heavy regulation hurts lending activity.

"Banks are ready, willing, and able to meet a higher credit demand," said Mr. Hoffman, who is senior vice president and chief economist of PNC Bank Corp. in Pittsburgh.

"Yet banks continue to face a high cost of regulation," he added. "A positive approach by the regulators and Congress could help alleviate unnecessary barriers to the lending process."

Inflation Prediction

The higher inflation rates will be brough on by higher taxes, costs to business, and limited price flexibility. However, Mr. Hoffman predicted that inflation will stay at or below 3.5% through 1994.

"The committee was impressed that there weren't any looming, dark clouds on the inflationary horizon," he said.

The panel said the economy is on track to post moderate economic growth through the end of 1994, projecting increases in real gross domestic product of 2.4% this year and 2.9% next year. That contrasts with an economy that was barely moving at all in the first quarter of this year.

ABA economists say the industry is in good shape to meet borrowers' needs.

"Three serious vulnerabilities are standing in the way of more robust economic growth," said Mr. Hoffman. "Higher taxes brought on by the budget bill, uncertainties associated with the cost to business of health care reform, and the risk that the poor economic performance of our trading partners will [hurt] U.S. exports."

On deficit cuts, the committee said that meaningful reductions are necessary to reassure the financial markets.

"We are concerned that a budget program that makes most of its spending cuts in the later years may fail to achieve the desired amount of deficit reduction," said Mr. Hoffman.

Mr. Nielsen is an intern at the Institute on Political Journalism.

Chase Manhattan Asks Poland For Permission to Open Bank

By JAMES R. KRAUS

Chase Manhattan Corp. has applied to Polish banking authorities for permission to open a bank in Warsaw, Chase officials disclosed Monday. The Polish bank is the second that Chase is attempting to set up in Eastern Europe. Last week, Chase and Citicorp confirmed that they have filed applications to open banks in Moscow.

Chase has had a representative office in Moscow since 1974 but has no branches in Warsaw. It also maintains a representative office in Prague.

"The primary focus of the [Warsaw] operation would be to serve Chase clients from the U.S. and Western Europe," said Charles Mierzejewski, London-based head of Chase's Eastern European operations.

Operations in Poland and Russia would include account services, money transfers, trade finance, and foreign exchange for large companies investing in those countries.

To Shy Away from Lending

The bank does not to be a major local lender. "I don't think there's an appetite among banks outside Russia for Russian risk," said Richard Lord, a London-based senior vice president for corporate finance in southern Europe at Chase.

The Chase officials noted that the company has room to develop full-service operations in Russia and Poland because both countries lack sophisticated banking systems. This contrasts with Western Europe, where Chase has gotten out of retail commercial banking.

The bank is also interested in underwriting securities issues for Polish companies on the United States and international markets, but only after Poland reaches an agreement on its debt to foreign commercial banks.

Dutch Giant ABN Amro Finds Chicago Is Its Kind of Town

Continued from page 1

financial Inc., a $1.6 billion-asset bank holding company. The following year, it acquired the $3 billion-asset Exchange Bankcorp. Then came the deal for Talman, with $5.8 billion in assets.

With $35 billion in U.S. assets at yearend – including syndicated corporate loans made out of Chicago – ABN Amro ranked as the nation's 20th-largest banking group, just after SunTrust Banks Inc., Atlanta, and just ahead of Republic New York Corp.

The bank's target for U.S. assets is $40 billion, though it has not set a deadline for getting that big.

Window of Opportunity

ABN Amro, which has $242 billion of assets worldwide, began its U.S. foray in the 1970s when its management realized that expansion opportunities in Europe were limited.

"The bank concluded there was a big market here and decided to make the U.S. its second home country," said Peter Cassey, executive vice president for ABN Amro North America Inc., the bank's U.S. and Canadian holding company.

Since its expansion was concentrated in Chicago, ABN Amro avoided the real estate and commercial lending losses suffered by banks in the Northeast and California.

"By concentrating on banking operations in the Midwest, they avoided the worst asset-quality problems, especially with the property market," noted Alan Broughton, a banking analyst with Morgan Stanley & Co. in London.

"LaSalle is essentially a community bank that never really got into cross-state business or large corporate business," added Robert Law, a banking analyst with Lehman Brothers in London.

"As a result, credit quality remained reasonably robust and profitability remained healthy."

Frank Johnson

BIG SHOULDERS: Harrison F. Tempest says ABN Amro has "plenty of ways" to strengthen its base in Chicago's fragmented market.

'An Independent Business'

Mr. Tempest said another reason ABN Amro avoided problems was that it let local managements run their own shows while imposing back-office operations to reduce costs – the two hallmarks of the super community bank structure.

"We manage each entity as an independent business," Mr. Tempest said. "Experience has taught me a person acts very differently when you call him a bank president than when you call him a regional manager."

A native of Illinois, the 56-year-old Mr. Tempest knows his market well and gives top priority to retaining good banking officers and customers.

"One thing companies hate is having to explain themselves all over again to new calling officers," Mr. Tempest said.

A Shifting Market

And that's especially important in Chicago, where companies can be quick to shift business to another institution if they think they can get better service elsewhere.

"A purist would say you need to merge everything to get economies of scale," Mr. Tempest said. "You might get economies of scale, but you won't have any customers and I'd rather have the customers."

"They're a very aggressive player in the Chicago market," said Rick Jacobus, an analyst with the Chicago Corp. "They've maintained strong local relationships and strong local image."

The Dutch bank's target for U.S. assets is $40 billion.

Strategy Questioned

Louis Gorbena, a partner and chief executive officer of Brooklyn Bagel Boys, a bagel supplier in the Chicago suburb of Franklin Park, noted: "We had three or four different banks come after our business, but none of the others were as creative, aggressive, and accommodating as LaSalle."

Matthew Czepliewicz, a London-based bank analyst with First Boston Corp., questioned the Dutch bank's super community banking strategy, however.

"What they are doing diversifies earnings, it's economically justifiable, but it doesn't seem to support any sort of coherent strategy," he said.

ABN Amro officials, however, see no lack of logic in their strategy.

They said ABN Amro's U.S. operations are prudently balanced, with roughly 40% of total U.S. assets in the retail and middle-market sectors and the rest in the large-corporate area.

"We're looking for both an indigenous presence and global relationships with U.S. corporations," said Mr. Casey.

Last year, U.S. profits totaled $253 million, or 32% of ABN Amro's worldwide net profits.

LaSalle National earned $92.6 million last year. Its return on equity of 15.81% ranked it eighth among U.S. banking companies having $10 billion to $20 billion in assets. Its 0.96% return on assets ranked 12th, according to data compiled by *American Banker*.

Intercontinental Hikes Its Dividend by 60%

MIAMI — The board of Intercontinental Bank has approved a quarterly dividend increase of 3 cents, or 60%, to 8 cents per common share, payable Sept. 30 to shareholders of record on Sept. 3.

William H. Allen Jr., chairman of the $876 million-asset Intercontinental, said the decision was based on continued improvement in financial results as well as expectations for future earnings growth.

THE MARKETS

Buyers Await Friday's Jobs Report

Buyers disappeared from the government securities market on Wednesday ahead of Friday's employment report.

In late trading in New York, the yield on the 30-year Treasury bond was unchanged at 6.67%. It had risen above 6.70% during the day. Ten-year notes yielded 5.78%, up from 5.76%, while two-year notes surged to 4.03%, up from 3.99%.

Short-term rates moved higher. The bond-equivalent yield on three-month Treasury bills rose to 3.09% from 3.08%.

Funds Rate at 3.5%

Federal funds were quoted at 3.50%, despite a reserve-adding operation by the Federal Reserve. The Fed's target for the funds rate is 3%.

Douglas Schindewolf, money market economist at Smith Barney, Harris Upham & Co., attributed the high funds rate to quarter-end balance-sheet maneuvering and to the fact that two-year and five-year Treasury notes sold last week were settled on Wednesday.

"The notes had to be paid for, and that set off a scramble for financing," he said.

John Canavan, market analyst for Stone & McCarthy Research Associates, Princeton, N.J., said trading was extremely thin.

"The lack of buyers caused the market to trend lower this close to the employment report on Friday," he said.

Economists think employment growth tailed off in June.

Mr. Canavan said the market was also depressed by a *Washington Post* report that Democrats wanting on deficit-reduction legislation are considering replacing the proposed new energy tax with higher corporate income taxes.

Rising commodity prices also put pressure on bonds. The Commodity Research Bureau index - measuring futures prices on 21 commodities – rose 1.98 points, or 1%, to 207.22.

Stocks declined on a government report that factory orders fell 1.4% in May. The Dow Jones industrial average lost 2.77 points to 3,516.08.

The dollar finished at 1.705 German marks and 106.9 yen, both up on the day.

– Bart Fraust

Bank Stock Table Explained: The table lists in alphabetical order the 225 largest publicly traded banks as measured by the market value of their outstanding stock as of June 30, 1993. It also lists the 25 largest publicly traded thrifts as measured by the market value of their outstanding stock as of June 30, 1993. Thus, a bank with a market value of $278.36 mil. and for thrifts $238.59 mil.) **52 Wk Hi** and **52 Wk Lo** are the highest and lowest closing prices for the stock. **PE** the price-earnings ratio. It is the current price of the stock divided by the bank's earnings per share for the past year, adjusted to take into account recent changes. The ratio is popular for companies with less than four quarters of data. **Mkt. to bk** is the ratio of the market value of the bank to the bank's book value, expressed as a percentage. **Bank value** is adjusted for recent changes in capitalization. **Chg.** and **Chg.** show the change in the bid price from the last trading day and from the last week, respectively. If no trades for the day, the latest bid. **All Bank Stocks Highlights** show largest percent gainers/loss in price and two volume leaders. Volume leaders are traded and today's volume as a percentage of average shares traded daily over the past year.

Libor Swap Yield Curve

Wednesday, June 30, 1993

Data source: Chemical Bank, New York

Description of tables: For lenders and borrowers in the interest rate swap market, the London interbank offered rate (Libor) yield curve is the benchmark rate by which investors determine the exchange of fixed- and floating-rate cash flow streams of different maturities. For example, a fixed-rate investor holding a one-year fixed rate loan and wishing to swap into floating would pay the one-year rate at the end of a year in exchange for a floating-rate payment stream, usually three-month Libor, paid and reset quarterly.

Boatmen's Gets Rave From Lehman Brothers

By GORDON MATTHEWS

Banking analyst Mark T. Lynch of Lehman Brothers initiated coverage of Boatmen's Bancshares Inc. on Wednesday with an "outperform" rating.

He called Wall Street's 1993 earnings estimates for the St. Louis superregional "way too low."

Mr. Lynch expects Boatmen's to earn $6.15 a share this year. In contrast, the Wall Street consensus estimate is $5.77 a share, according to First Call Corp.

Solid Growth
Earnings per share at Boatmen's Bancshares

In late trading, Boatmen's shares were up 50 cents to $60.375. Mr. Lynch believes they can reach $73 within 12 months, an upside potential of 20%.

Loss Provision Dropping

The analyst thinks falling quarterly loan-loss provisions will be the major short-term factor behind higher results at the St. Louis bank.

He noted that Boatmen's has a "huge" reserve of $308.4 million against losses. The reserve equaled 2.38% of loans on March 30. This compares with a 1.88% average ratio among large midwestern regional banks followed by Keefe, Bruyette & Woods Inc.

Chargeoffs in the first quarter were a minuscule 0.23% of loans. That was third best among the nation's 50 largest banks, according to Keefe Bruyette.

Positive Attributes

Nonperforming assets remain relatively high, at 2.49% of loans and foreclosed real estate, but the loan-loss reserve comfortably covered 170% of nonperforming assets.

Mr. Lynch also cited, loan growth, a stable net interest margin, and dominant market positions in Missouri and New Mexico as important factors in the bank's earnings outlook.

He also cited the bank's recent mergers as opportunistic deals that can add momentum to earnings.

Last year, Boatmen's acquired $3.3 billion-asset SunWest Financial Services, Albuquerque; $1.2 billion-asset First Interstate Banks (Iowa), Des Moines; and $320 million-asset Founders Bancorp., Oklahoma City.

The SunWest acquisition initially diluted earnings per share, but Boatmen's noted that the New Mexico bank earned over 1% on assets during the first quarter.

Second Quarter Looks Good

Mr. Lynch expects the fresh momentum to show up in the second-quarter results. He forecast earnings of $1.53 a share versus the consensus view of $1.46.

For 1994, he anticipates earnings of $6.65 a share, versus $6.27 expected by others on the Street.

Boatmen's also got a vote of confidence recently from analysts at Keefe Bruyette. On June 22, they raised their own 1993 earnings estimate for the bank significantly to $5.70 from $5.40 a share.

WEDNESDAY'S MARKET

Shares of Crestar Financial Corp. rose 50 cents to $41.625 after coverage of the Richmond bank was initiated with a "buy" rating by analyst Michael A. Plodwick of C.J. Lawrence Inc.

Other bank stocks also turned in strong performances in late trading on Wednesday, led by MBNA Corp.'s gain of $1.125 to $29.25.

Meridian Bancorp was up 87.5 cents to $32.375, Bank-America Corp. moved up 62.5 cents to $45.125, First Fidelity Bancorp. rose 62.5 cents to $49.125, and Marshall & Ilsley Corp. gained 75 cents to $25.

Also posting advances were PNC Bank Corp., up 75 cents to $32.625; Wells Fargo & Co., up 75 cents to $110.50; and Shawmut National Corp., up 50 cents to $23.875.

On the other side of the ledger, Mellon Bank Corp. slipped 50 cents to $56.50, First Chicago Corp. edged down 25 cents to $41.50, and Keycorp was off 37.5 cents to $41.75. □

Summit Offers $50 Million of Subordinated Debt

A $50 million issue of subordinated notes from Summit Bank, Charleston, N.J., was offered through Merrill Lynch & Co. The notes bear an interest rate of 6.75% and mature in June 2003. Summit Bank is a wholly owned subsidiary Summit Bancorp.

Prudential Mortgage Unit Gets $1.1 Billion Unsecured Revolver

By WILLIAM GOODWIN

Prudential Home Mortgage said it obtained its first bank credit line – a $1.1 billion revolver from a group of 20 domestic and foreign banks.

The 364-day credit will be used to fund the origination of residential mortgages.

Fleet Mortgage Group recently renewed a $1.75 billion credit line.

Mega-size credit lines, like the ones obtained by Prudential and Fleet, are likely to become increasingly common as a result of consolidation within the mortgage industry and the dramatic increase in origination volume.

Twice as Much Activity

Driven by refinancings, volume has more than doubled in the past few years to some $900 billion in 1992.

Virtually all of Prudential's mortgages are securitized for sale in the secondary market. As the loans are sold, proceeds will replenish the credit line.

Last year, Prudential originated $28.5 billion of mortgages, second only to Countrywide Credit Industries.

Parent Had Provided Funding

Until now, Prudential's short-term funding has come from its parent company, Prudential Insurance Company of America, and through repurchase agreements with Wall Street firms.

Unlike the repos, Prudential's new bank line was provided on an unsecured basis.

That sends an "important statement to the marketplace of our financial strength," said Larry Swedroe, head of treasury operations and risk management at Residential Services Corp. of America, the holding company for Prudential Home Mortgage.

Apart from diversifying Prudential's source of funds, the credit will also help the company make its case for a top-tier commercial paper rating, Mr. Swedroe said.

Ratings Are in the Works

Prudential has already begun talks to obtain a credit rating from the major rating agencies and hopes to enter the commercial paper market within a year.

Credit rating agencies require borrowers to have bank lines in place as a backstop for their commercial paper programs.

Prudential's bank line carries maximum pricing of 70 basis points over the London interbank offered rate and a commitment fee of 12.5 basis points.

The credit will be used to fund the origination of residential mortgages.

Members of Syndicate

Leading the credit were ABN Amro Bank, Bankers Trust Co., Barclays Bank, Chemical Bank, Credit Lyonnais, NationsBank, and Union Bank of Switzerland.

The loan was syndicated to 13 other foreign and domestic lenders.

While the credit line lessens the mortgage company's dependence on its parent for funds, it is not a prelude to a spinoff, Mr. Swedroe said.

"As far as I know, there are absolutely no plans for a spinnoff" in the foreseeable future, he said. □

IT'S GOOD TO BE FAST, BUT IT'S MORE IMPORTANT TO BE ACCURATE.

LEXIS Document Services

The Nationwide Filing & Searching Source

Don't get us wrong. When it comes to UCC document searches and filings, no one is faster. But at Lexis, we realize it's not enough to fill an order quickly. It has to be done correctly. Every time. It's for this reason that we have a centralized quality control system that is both fast and accurate. Our account executives have the most experience in their territories. And each understands individual jurisdictional requirements so your documents don't get held-up, misfiled or lost. Please call us at 1-800-634-9738. Because if anyone is faster or more accurate than we are, it'll be news to us.

AMERICAN BANKER
VOL. CLVIII NO. 126 Friday, July 2, 1993 158th year

Second Quarter Looks Like A Big Winner

By STEVE KLINKERMAN

U.S. banks are poised to deliver another round of stellar quarterly results in coming weeks, fueled by a familiar blend of wide net interest margins, credit quality improvements, and gains in fee income and efficiency.

The reports of second-quarter performance should soothe investor concerns that net interest margins are in for a precipitous decline, experts said.

"Episodes of shrinkage notwithstanding, margins will remain close to historical peaks, which makes running a bank like playing golf with the wind at your back," said Joseph Sieven, an analyst with Stifel, Nicolaus & Co. in St. Louis.

But while that sentiment may hearten short-term investors, many observers have longer-term vexations about bank profitability.

Some analysts expect to see a faint contraction of net interest margins in the second quarter. Absent meaningful loan demand, they said, banks appear destined to lose progressively more yield on their assets as securities investments mature and borrowers pay off loans.

"Without a resurgence of loan demand, the industry will find it increasingly difficult to offset falling margins," said Thomas Maier, an analyst at Kemper Securities in Chicago.

Years of Struggle Seen

While in no way portending another climate of doom, as in the early 1990s, the trend signifies that progress for the banking industry will remain an inch-by-inch struggle for years to come.

Most of the nation's banks are expected to report second-quarter results from July 12 to July 22. Here's a rundown of expectations from some of the larger banks, broken down by region.

Recovering banks in New England and the Mid-Atlantic area again show vast improvements over weak year-earlier results, according to Anthony Davis, an analyst with Dean Witter, Discover & Co. in New York.

Improvement in New England

Bank of Boston Corp. is expected to report a 40% year-over-year gain to 95 cents a share, he said, while Rhode Island-based Fleet Financial Group should soar 60% to 73 cents a share.

Shawmut National Corp., completing the trio of big New England banks, also is expected

Bankers Trust, First Fidelity Form Check-Processing Unit

By JEANNE IIDA

NEW YORK — Bankers Trust New York Corp. and First Fidelity Bancorp. on Thursday announced an unprecedented joint venture to process checks.

The partners hope to generate significant fee income by handling checks for other institutions. They also expect to slash their own processing costs by pooling computer resources.

The agreement is the latest wrinkle in an industry trend toward consolidation of back-office operations. And it could be a prelude to other such alliances.

Other Ventures Possible

A number of other giant banks – including BankAmerica Corp., Bank of New York Co., Chase Manhattan Corp., Chemical Banking Corp., and NationsBank Corp. – have discussed mergers of check operations over the past few years, according to Wall Street analysts and industry consultants.

The joint venture announced Thursday, to be called Global Processing Alliance Inc., will be equally owned by New York-based Bankers Trust 'and First Fidelity, of Lawrenceville, N.J. The partners declined to disclose their equity investments.

The unit will process retail and wholesale checks and provide 'other check-related services.

The two banks expect to process one billion checks annually after a full year of operation, which would make them the 10th-largest processor, according to estimates by Littlewood Shain & Co. They declined to reveal their current total volume. The largest player now, BankAmerica, processes 8 billion items a year, Littlewood says.

The Joint Venture At a Glance

The partners:	Bankers Trust First Fidelity
The venture:	Global Processing Alliance Inc.
Lines of business:	Check processing and other check services
CEO:	James G. Hamrick
Projected revenue:	More than $100 million in first year
Timetable:	Full conversion by early next year

Can Offer Low Fees

By joining forces, officials said, the partners will be able to make bigger investments in technology than either could do independently – allowing them to offer low processing fees and attract customers.

The unit plans to make use of image processing and other new

OCC Readies Consumer Protection Squadron

By BARBARA A. REHM

WASHINGTON — The Office of the Comptroller of the Currency is creating a class of examiners to enforce consumer protection laws.

The new examiners, numbering 100 to 150, will allow for more frequent compliance exams at national banks, according to Stephen M. Cross, deputy comptroller for compliance.

Most affected will be banks with less than $1 billion in assets. Once training is completed – it is expected to take about three years – these institutions will be examined every two years instead of every six years.

Banks with more than $1 billion in assets already get compliance exams every two years.

Fees Won't Rise

A spokeswoman for the Comptroller's office said banks' assessment fees will not increase.

Mr. Cross, speaking to a group of compliance officers in San Diego this month, also announced that it will be next year before the Comptroller's office deploys testers to root out lending bias at national banks.

Comptroller Eugene A. Lud-

U.S. Bank Loans To Latin America Up 9% Last Year

By JAMES R. KRAUS

U.S. bank loans to Latin America rose more than 9% last year, for the first increase in eight years, according to Federal Reserve Board data.

Total outstanding loans in the public and private sectors increased by $3.2 billion to $38.8 billion.

Bankers said the increase does not represent a return to the practices that led to the Third World debt crisis of the 1980s.

A Third of Former Level

For one thing, the total outstandings are much lower now – about one-third the level at the height of the debt crisis.

Several Latin American countries have lowered their debt loads through Brady plan restructurings, which should enhance their ability to repay the loans.

In addition, bankers said much of the increase consists of

Wells Revamps Branch Strategy, Reducing Power of Local Managers

By SAM ZUCKERMAN

Wells Fargo & Co. is rewriting the rules of branch banking.

After more than a year of study and sharp internal debate, the San Francisco-based company is jettisoning the traditional model in which a branch manager rules over a domain of tellers and platform officers.

Instead, the nation's 10th biggest bank company is reassigning the sales staff in its branches to outside product managers. At the same time it is relieving the sales force of customer service responsibilities.

The sales staff is being divided into four product areas, said William F. Aldinger, a vice chairman who heads retail banking. The areas are small business, mortgages, investment products, and upscale consumer banking.

'A Major Shift'

Salespeople will be moved among branches depending on the dictates of their product bosses.

Branch managers will see their authority radically diminished, supervising only tellers and a small staff of in-branch customer service specialists.

"We're reengineering the company," said Mr. Aldinger. "This is a major shift in the way we're doing business."

To be sure, putting product specialists in branches is not

See **WELLS** *page* **6**

A New Approach
Wells has decided to:

- **Put most platform officers under 'outside' product managers**
- **Make branch managers responsible mainly for tellers and customer service**
- **Cut the nontellier branch work force by 6%**
- **Separate the sales and customer service staffs at the company's 626 branches**

NEWS *briefs*

Bank Failures Down in First Six Months

WASHINGTON — Bank failures in the first half fell to 23 from 66 in the first six months of 1992, according to a Federal Deposit Insurance Corp. tally.

The 1993 failures to date had $2.7 billion of assets. During all of last year, 122 banks with $46.2 billion of assets failed.

California had the largest number of failures this year with 10, followed by Texas with five and Kansas with two. Connecticut, Iowa, New York, North Carolina, Vermont, and the District of Columbia had one each.

The FDIC last week revised its failure forecast, dropping the total amount of assets expected in failed banks this year to $10 billion from $25 billion. The number of failures is estimated at 40 to 50.

Synovus Unit to Promote Visa Check Cards

SAN FRANCISCO — Visa U.S.A. said it entered into a "marketing partnership" with Total System Services Inc. to promote Visa check cards, formerly called Visa Debit.

The effort is similar to one previously announced with First Data Corp., parent of the leading independent processor of bank cards.

Total System, the No. 2 processor, is 81% owned by Synovus Financial Corp. of Columbus, Ga. Its customers will have access to systems and programs designed to speed card issuance and usage.

Visa and Total System are planning workshops and seminars for Visa check card issuers. Such marketing pushes "have boosted Visa check-card activation and usage rates anywhere from 10% to 30%," said Rosalind Fisher, executive vice president, Visa U.S.A.

Continental Names O'Neill Finance Chief

CHICAGO — Continental Bank Corp. said Michael E. O'Neill will succeed Hollis W. Rademacher as chief financial officer.

Mr. Rademacher is retiring in October after 36 years at the bank.

Mr. O'Neill joined Continental in 1974, spent some time with First Interstate Capital Markets in the 1980s, and has been a managing director since 1989. Most recently, he supervised risk management and proprietary trading businesses and engineered the outsourcing of Continental's audit, information technology, and legal functions.

Amsouth to Buy FloridaBank for Stock

BIRMINGHAM, Ala. — Amsouth Bancorp. said it signed a definitive agreement to acquire FloridaBank, a thrift based in Jacksonville, Fla., for stock with an indicated value of $27.1 million.

Amsouth said it will exchange 0.4902 share of common stock for each share of FloridaBank, which has $272 million of assets and seven branches.

The briefs were compiled from staff and wire reports.

Corrections

A chart accompanying an article Wednesday about Shawmut National Corp. overstated its problem assets. The figures, on nonperforming commercial real estate loans, were mislabeled as percentages of the company's loans and foreclosed real estate. In fact, they were percentages of Shawmut's commercial real estate loans.

Two of the photographs that ran Thursday with a roundup of mutual fund executives' views were transposed. A photo of Jeremiah Potts, Massachusetts Financial Services, was identified as Whitfield C. Wannamaker, Kemper Financial Services, and vice versa.

FDIC Will Use Ombudsmen to Field Complaints at Liquidation Offices

By ROBERT M. GARSON

WASHINGTON — The acting chairman of the Federal Deposit Insurance Corp. told New England lawmakers on Thursday that he plans to place ombudsmen in each of the agency's liquidation offices to handle complaints from the public.

The first would be installed in New England, probably in Boston, Andrew C. Hove Jr. said.

In time, each of the agency's 18 offices will have an official charged with facilitating action on complaints and questions from borrowers, lenders, Congress members, and other public officials, added John Bovenzi, director of liquidations.

Where the Action Is

The effort will start in New England, "because that's where all the action is," Mr. Bovenzi said.

New England officials have long accused the bank regulatory agencies of worsening their region's recession by cracking down on bank lending.

In addition, the FDIC has come under sharp criticism for the way it has handled failed banks.

Mr. Bovenzi said the ombudsmen would have no authority on their own to make changes or to force action on any issue. But the ombudsman in each office would be "a senior-level person," who would "have direct access to the person in charge."

Andrew C. Hove Jr.
Taking pressure off lawmakers

Legislators attending the meeting seemed particularly pleased to have a designated official in charge of complaints.

Legacy of Keating Five

Several lawmakers said their colleagues had shied away from regualtory contacts in recent years because of the Keating Five episode, in which five Senators were accused of improperly intervening with regulators on behalf of thrift owner Charles Keating.

"There's absolutely no question it made it more difficult for legislators to deal with the credit crunch problem," said Rep. Nancy Johnson, R-Conn.

"Before that, everybody expected you to help your constituents," she added. Afterward, "a lot of people wouldn't think of intervening."

Ethical Risk Eliminated

Rep. Joseph P. Kennedy 2d, D-Mass., who chaired Thursday's meeting of the New England caucus, also hailed the new program.

"Of course it was Keating," he said of his colleagues' reluctance to confront regulators.

Mr. Bovenzi said the ombudsman would offer lawmakers a forum in which to voice their constituents' concerns without worrying about whether they were violating ethical standards.

A Far Cry from Lobbying

"There are certain kinds of communication that are perfectly acceptable," he said. "If you have a constituent with a concern, passing it along to someone is very different from lobbying for it."

Rep. Kennedy, who has played a key role in focusing attention on the New England credit contraction, said Thursday's meeting was useful in that it gave lawmakers a forum to vent "the tremendous pent-up frustration that every member feels."

That frustration, he said, has been fueled by the "sheer number of complaints that come into all our offices" about the bank regulatory agencies. □

BT, First Fidelity Joining in Check Processor

Continued from *page 1*

technologies that speed the handling of checks, such as electronic check presentment, in which payment data are sent between banks electronically.

The unit plans to set up a transportation network to send checks directly to client banks, bypassing the Federal Reserve System and its fees.

Facilities to Be Combined

The banks also plan to combine check facilities, producing significant cost savings that would be invested in technology, a spokesman for Bankers Trust said.

First Fidelity has check processing sites in Newark, N.J., and Chester, Pa., and Bankers Trust has sites in New York City and in Delaware. The banks did not say which sites would be retained.

Plans call for operations to be shifted to the new venture starting later this year and be up and running early in 1994.

In its first year of operation the joint venture expects to earn pre-tax revenues of more than $100 million and profits of at least $15 million to $25 million, according to consultants close to the project.

The banks expect to cut their combined check-processing expenses by at least $10 million, or 30%, in the first year and more than $20 million annually after two years.

The venture could have a market value of $150 million within several years, the sources said.

B.J. Kingdon, a managing director of global assets at Bankers Trust, said the agreement reflects pressures for consolidation in check processing and payments services.

He predicted that other alliances will be formed. "This will set a trend in the market that will be unstoppable," he said.

Talks among other banks have reportedly bogged down over competitive issues, but consultants said the announcement could renew interest.

Over the past several years, a number of banks have reduced operating expenses by hiring outside contractors to handle data processing operations, a practice known as outsourcing.

The shared approach by Bankers Trust and First Fidelity will allow them not only to reduce costs but also to generate revenues by acting as outsourcers themselves.

Bankers Trust officials said their check venture differed from others that have been discussed in that Bankers Trust and First Fidelity process different types of checks and do not compete in the same markets.

First Fidelity processes a large number of relatively small-dollar-value consumer checks, while Bankers Trust processes a relatively low volume of high-dollar-value wholesale checks.

"In bringing the two together, you end up with a very attractive operation with high-volume scale in terms of both items and dollar volume," said Lawrence A. Willis, a consultant with First Manhattan Consulting Co. who advised the banks on the deal. He said the mix will bring operational and clearing efficiencies.

The joint venture will be headed by James G. Hamrick, most recently president and chief executive of National Check Inc., McLean, Va.

The venture will be headquartered in Totowa, N.J. □

Sears to Install Receipt System

Sears, Roebuck and Co. of Chicago and Service Merchandise Co. of Nashville plan to install computer systems this year that record and store electronic copies of credit card receipts at the point of sale.

The merchants are believed to be the first to agree to install the technology at retail stores across the country.

Their supplier, MicroBilt Corp., is a unit of First Financial Management Corp., of Atlanta.

NCR Corp., of Dayton, Ohio, a unit of American Telephone and Telegraph Co., sells similar technology.

Easily Retrievable

The technology is supposed to slash the administrative cost of resolving charge disputes by making it possible to retrieve receipts from computer data bases, instead of from microfiche files.

A key component of the new technology is a so-called signature capture device – basically a computerized pad – on which the sales slip is placed and signed by the consumer. The signature, and the accompanying sales information, is then stored in a computer data base.

Sears plans to install the technology in all of its 809 stores by yearend.

The move will "allow us to provide additional security, create a paperless office, and enhance productivity," said Sears spokesman Perry Chlan.

A Study Guide for FDIC's Test Of How You Handle the Reins

During congressional consideration of what ultimately became the Federal Deposit Insurance Corporation Improvement Act of 1991, only an alert few focused serious attention on the section of the bill requiring new reports on internal controls.

This small section requires chief executive officers and chief financial officers to report annually on management's responsibilities for internal controls.

They must also provide their assessment of the effectiveness of these controls. The independent public accountants then attest to and report on management's assertions.

Test of Top Executives

When the proposed regulations were announced, the FDIC characterized them as a "conservative" response to this section of the bill. Today these regulations appear to be a critical test of senior management.

BANKERS WHO *respond casually do so at significant peril.*

They create one of the first opportunities for management to demonstrate its ability to manage regulatory risk, which is on a par with credit exposure risk, interest rate risk, and technology risk.

Understanding the new regulatory environment and implementing appropriate changes is now a critical senior management responsibility.

Second Nature to Some

Bankers' reactions to the new reporting requirements vary widely. Some have already made a serious commitment to evaluating the effectiveness of their institutions' internal controls and to strengthening controls where they find weaknesses.

Well-managed institutions typically have placed a high priority on controls, and the regulatory changes merely elevate their priority a notch or two. Also, senior managements recognize the downside risk of ignoring the significance of the new requirements.

Perhaps because the final regulations and accompanying guidelines are relatively recent, many well-run institutions have not focused significant attention on the issue. But they plan to focus significant senior manage-

Mr. Olson is a partner in the Washington office of Ernst & Young, and Mr. Kroeger is a partner in the financial services practice in New York.

ment attention now that the final requirements are known.

Some Will Try to Coast

At the other end of the spectrum are bankers who plan to make minimal preparation for the new requirements, or perhaps hope that their current controls will be deemed adequate with little documentation to support the "assessment" in their report.

At the close of this fiscal year, when asked to sign off on these controls, this group's typical reaction might be, "Where do I sign?" Bankers who respond casually do so at significant risk.

If a bank has enjoyed strong ratings under the regulators' Camel system, has had consistently solid Community Reinvestment Act experience, and has no other significant regulatory problems, an isolated internal control weakness (or marginally acceptable documentation supporting management's internal control evaluation) may not result in harsh regulatory treatment.

Not Good Enough

But institutions that successfully manage their regulatory risk and have earned high marks generally do not settle for marginal compliance.

If, however, a weakness in the internal controls and documentation of management's assessment is but one of a number of negatives uncovered in an examination, the result could mean a Camel 3 or 4 instead of a 1 or 2. With the much more specific regulatory treatment mandated by the 91 law, the cost to the bank could include the following:

An immediate impact of a reduced Camel rating could be an increased FDIC deposit insurance assessment. Using the formula that went into effect last January, the potential assessment increase could be $60,000 for each $100 million of eligible deposits.

Price of Neglect

An institution with deposits of $500 million could suffer a $300,000 increase in premiums by neglecting its exposure to regulatory risk.

Also, a reduced Camel rating may cause the regulators to effectively downgrade the institution by one capital category.

If the bank is now considered "adequately" capitalized, this could trigger mandatory requirements for submitting a new capital plan, and could result in restrictions on growth, lending, and compensation.

There are several steps that can be taken now to prepare for

THE REQUIREMENT *to report on internal controls has created one of the first opportunities for managers to demonstrate their ability to deal with regulatory risk.*

these new requirements. They include:

● **Consider a definition of internal controls.** Considerable controversy surrounds the fundamental definition of internal controls.

The General Accounting Office, FDIC, Committee of Sponsoring Organizations of the Treadway Commission, and American Institute of Certified Public Accountants have had considerable discussion about what the definition should be. Yet the final regulations do not specify a definition to be used.

The definition of internal controls is the foundation on which management's evaluation lies, so selecting an appropriate definition early is key. The definition will affect the form of management's final report as well as its assessment of controls.

Management should weigh this decision carefully, and select a definition acceptable to all parties involved, including the audit committee, management, independent auditors, and perhaps most important, the regulators.

WEAK CONTROLS *could result in a higher FDIC premium.*

● **Organize for the evaluation.** The manner in which institutions conduct the evaluation will vary. In some cases, a department within the organization may be responsible for conducting and documenting the evaluation.

Another approach we advocate is to assemble a team with representatives from various departments, including controllers, internal audit, information systems, legal, and compliance. Where there is a choice, establishing ground rules – such as responsibilities, documentation approach, and timing – is important to a successful project.

● **Develop guidelines to be used in documenting management's assessment of controls.** The FDIC guidelines for section 112 of FDICIA indicate management of insured depository institutions "... should maintain records of its determinations and assessments [of the institution's internal control structure] until the next federal safety and soundness examination, or such later date as specified by the FDIC or appropriate federal banking agency."

The importance the regulatory agencies are likely to place on documentation supporting management's assessment appears clear.

This documentation could be considered a "bridge" between much of banks' existing documentation (such as accounting manuals, codes of conduct, and flow charts) and the report signed by management.

Developing a format and approach to completing management's assessment will allow the assessment to be conducted in a more orderly fashion.

● **Identify and resolve any known documentation or internal control concerns early.** The final regulations require management's assessment of its controls at the end of the fiscal year, so early identification and resolution of documentation or control concerns is especially important.

In Ernst & Young's comment letter to the FDIC on the proposed regulations on section 112, we observed that "point in time" reporting is more constructive (rather than reporting weaknesses that existed during the year) because it encourages prompt correction of internal control weaknesses, rather than focusing on reporting weaknesses that have already been corrected.

● **Consider other opportunities to reduce costs while improving controls.** In conducting the evaluation, opportunities may be identified to simplify procedures, reduce costs, and improve already effective controls.

For example, some financial institutions may find that automating certain manual controls improves both efficiency and compliance with management's policies.

Others may find that certain procedures are no longer effective or necessary (for example, because of changes in the environment) or may duplicate other procedures. If skillfully planned, the evaluation can also provide an opportunity to improve operations and efficiency.

The lack of an aggressive plan to implement these new requirements may not have immediate negative consequences. However, institutions that best manage regulatory risk will not only achieve better compliance but will also reduce the costs of compliance.

Senior management's attention to this subject could separate the winners from the rest of the pack as the competition intensifies to be recognized by the "market" as one of the best. □

Citicorp: Profits on the Horizon for Its Japan Branches

Reuters

NEW YORK — Citicorp's Japanese consumer business should be profitable in the next two to three years, according to Masamoto Yashiro, the company's chief executive in Japan.

The only foreign bank with a retail branch network in Japan, Citicorp is looking to take advantage of weakness among domestic banks.

Offering Unique Products'

It already has done so in corporate banking, which is making profits, Mr. Yashiro said in a recent speech to the Japan Society in New York.

On the retail side, where "we are not trying to compete with Japanese banks," the Citicorp executive said, "we are trying to offer unique products like foreign currency deposits and other nontraditional products."

Japanese banks have been hurt by real estate loan losses and a general decline on the stock market. Their troubles have prompted more corporate customers to use Citicorp, Mr. Yashiro said.

A Total of 21 Branches

Structured and corporate finance are two areas that have grown as the Japanese banks have dealt with their problems.

Citicorp has 21 branches in Japan, two just opened. It has no plans to add branches until the retail operation is profitable, Mr. Yashiro said.

Citicorp also has no plans for acquisitions in Japan because they would cost too much, he added.

He said that the political instability in Japan will have little impact on Citicorp. Elections are scheduled for July 18, and Mr. Yashiro said uncertainty may persist for some time.

Political Turmoil

"I don't think we are concerned about who is in leadership. We are concerned

It is the only foreign bank with a retail branch network in Japan.

about our corporate and consumer customers," he said. So the turmoil "is of little importance to us."

He said a new political party being led be a former finance minister, Tsutomu Hata, "could get power, but it is not really obvious who really will be in power."

Regardless, there is likely to be a coalition government. Even if it has the appearance of stability, "I assure you, there will still be instability," Mr. Yashiro said.

Says a Two-Party System Is Possible

Major business decisions "will not be made until the dust settles," Mr. Yashiro said. "Usual business matters will continue, but anything requiring political solutions or involvement will not get done. Hopefully, out of this we will get a two-party system."

Mr. Yashiro said he sees Japanese deregulation as inevitable, "particularly with the political upheaval and the changes to be expected in the coming years."

Fewer Companies Changing Names

NEW YORK — In a sign of business uncertainty related to the slowdown in merger-activity, fewer banks and other corporations are changing their names.

Anspach Grossman Portugal Inc., the corporate identity firm that tracks name changes, said 451 major U.S. companies changed their name in the first six months of 1993, down 31% from 653 in the 1992 period.

Changes in financial services industry fell by 92, or 39%, to 143. But financial services — including banks, thrifts, insurers, and securities brokers – still accounted for the largest share of the total.

Up in the Air

"A sense of uncertainty" related to health care reform, taxes, and other political issues led businesses "to either delay plans or proceed quite cautiously," said Joel Portugal, a partner in the New York-based firm.

Banking changes included the consolidation of Central Trust Co. of Cincinnati, Citizens Fidelity Bank of Louisville, and other units of Pittsburgh-based PNC Bank Corp. under the PNC banner.

Also, Valley National Corp. of Phoenix adopted the name of its acquirer, Banc One Corp. of Columbus, Ohio.

Mr. Portugal noted a trend away from using family names. Of banks with "First" in their titles, 12 out of 13 dropped the number after a divestiture, acquisition, or merger.

For example, First American Bank of New York was bought by Keycorp and became Key Bank of New York, and Dubuque Corp. in Iowa became part of Hawkeye Bancorp.

St. Francis Capital on Nasdaq

MILWAUKEE — St. Francis Capital Corp., which its stock has begun trading on the Nasdaq system after the company's conversion from mutual ownership.

St. Francis Capital is the newly formed holding company for St. Francis Bank, a federal savings bank with about $675 million in assets.

The corporation issued 7.3 million shares at $10 each. Its trading symbol is STFR.

Wells Overhauls Branch Strategy, Curbing Managers

Continued from page 1

new. Wells, like many banks, already has mortgage, small business, and investment products salespeople in its offices.

The fundamental change lies in taking authority for sales away from branch managers and separating sales from customer service.

As the new system is put into effect over the next six months, Wells also will be slashing the branch work force. The bank expects to ax about 700 of 8,300 administrative and officer-level jobs in its 626-branch network.

Economy Focus

Wells enjoys a reputation for cutting-edge efficiency, but reducing costs by trimming staff is only part of what the bank hopes to accomplish. Mr. Aldinger predicted that the new system also will boost Wells' revenue and improve service.

Increase In Production Seen

The key is squeezing more volume out of the staff, he said. That should be possible because the sales force will no longer be distracted by customers asking for help reading a statement or tracking down a check.

"Through specialization, we can get more production," Mr. Aldinger contended.

In designing the plan, Wells executives had their eyes not so much on the retail systems of other banks, but on nonbank financial services providers, such as brokerage firms and mortgage companies.

These companies target sharply defined markets, an objective Wells officials say they can achieve through the use of sales specialists.

Fighting Nonbank Invasion

"The competition is nonbanks, which have been picking off our best customers," Mr. Aldinger said. "We can't compete with the old system of being-all things to all people."

Wells insiders say vice chairman William F. Zuendt, who is Mr. Aldinger's boss, has been the main champion of the new system.

Mr. Zuendt was trained as a mathematician and engineer, and is said to be fascinated by process-engineering techniques used at industrial companies.

He has been analyzing how work can be performed more efficiently and cheaply by breaking down job functions into small parts.

'It's Just Sell, Sell, Sell'

But the plan to reorganize Wells' retail management structure was not embraced unanimously. According to people familiar with internal discussions, some argued that Wells would be severing a branch's ties with its community.

"This is not a relationship strategy – it's just sell, sell, sell," said one person who knew about the debate.

The opposition collapsed, however, when the plan's most vocal critic, vice chairman Robert L. Joss, left early this year to become chief executive of Australia's Westpac Banking Corp.

Industry experts and rival bankers, meanwhile, say they respect Wells' reputation as a savvy cost cutter. And they believe the plan may succeed in boosting product sales.

Competitors See an Opening

But they question whether service will improve, and agree that customer relationships may

William F. Aldinger
"Reengineering the company"

suffer when sales and service are divorced.

Indeed, some competitors think they can woo customers away from Wells by building relationships and emphasizing service.

"This gives us opportunities," said Daniel R. Eitingon, retail banking chief of First Interstate Bancorp's California unit. "It suggests their orientation is to be a transaction bank."

But Mr. Aldinger insisted that Wells will provide better service to customers because branch managers "will be more focused on it."

Rivals warn, however, that instead of motivating managers, Wells' system could spur a mass exodus of branch chiefs.

The branch managers, who lost most of their lending authority years ago, will not easily accept this latest erosion of power, the competitors predict.

At least one sign of discontent has already emerged. The branch reorganization plan itself was disclosed in the *San Francisco Chronicle* several weeks ago. The source who leaked the story was a disgruntled branch manager. □

Banks Seen Poised to Deliver Stellar Reports on Quarter

Continued from page 1

to report a very strong quarter.

New Jersey's UJB Financial Corp., based in Princeton, is expected to show a 90% year-to-year gain, with earnings per share of 41 cents for the quarter, according to Mr. Davis.

NEWS ANALYSIS

New York's money-center banks should continue to exhibit strength through the diversity of wide spreads and continued cost cutting. However, results at some of the companies could be off from the first quarter of this year when J.P. Morgan & Co., Bankers Trust New York Corp., and some others realized vast trading gains.

Second-Quarter Earnings Preview

Figures are per share

	Consensus Estimate 2Q '93	Actual 2Q '92	Actual 1Q '93	2Q estimate vs. actual	2Q estimate vs. 1Q
Bank of New York	$1.29	$1.37	$1.05	-5.84%	22.86%
BankAmerica	1.17	1.19	0.63	-1.68	85.71
Barnett	0.91	0.88	0.67	3.41	35.82
Citicorp	0.57	0.67*	0.25	-14.93	128.00
First Interstate	1.39	1.38	0.75	0.72	85.33
Fleet Financial	0.71	0.66	0.45	7.58	57.78
PNC	0.68	0.78	0.59	-12.82	15.25
Wachovia	0.68	0.69	0.62	-1.45	9.68
Wells Fargo	1.88	1.72	1.31	9.30	43.51

*Before extraordinary gain

Source: First Call

Cricorp, the nation's biggest bank company, is 57 cents a share, according to First Call. That would be down 15% from its first-quarter net before extraordinary items, but more than double year-ago second-quarter results.

Citicorp is expected to report further progress in cutting problem assets, but balance sheet shrinkage will work against earnings growth, analysts said.

Loan Growth Seen in Southeast

Several southeastern banks will sport modest loan growth, analysts said, including First Union Corp. and NationsBank Corp., both based in Charlotte, N.C.

First Call has compiled a consensus forecast of $1.19 a share for First Union, up 32% from a year ago. It predicts NationsBank will earn $1.14 a share, up 16%.

North Carolina's other powerhouse bank company, Wachovia Corp., will come in at 68 cents a share, a 9.7% rise from the second quarter of 1992.

Barnett Banks Inc., based in Jacksonville, Fla., is meeting cost-cutting and loan-workout targets on its acquisition of First Florida, analysts said, though they expect little loan growth and mild shrinkage in net interest margin.

Boosted by its new acquisition, Barnett is expected to report a 35.82% earnings gain from 1992, to 91 cents a share, First Call said.

Gain Expected for SunTrust

Atlanta-based SunTrust Banks should come in at 92 cents, up 12%, according to the data collection company.

The Midwest is once again expected to host the strongest regional results, although some banks will fall a bit from their strong first-quarter reports.

Banc One is expected to report strong consumer loan growth but a slight margin contraction. The Columbus, Ohio-based company should earn $1.01 a share – up from 87 cents a year ago but down from $1.03 in the first quarter, according to Oppenheimer & Co. analysts.

Detroit-based Comerica Inc., which has conceded that it is behind schedule on reaching expense-cutting goals from its merger with Manufacturers National Corp., is expected to report 71 cents a share, versus 69 cents in the first quarter and a loss one year ago when the company took a major restructuring charge.

Help from Card Portfolio

First Chicago Corp. is expected to report further progress in shedding problem assets and should get a boost from its high-yielding credit card portfolio. Analysts see the company earning $1.07 a share, up 35.4% from the second quarter of 1992.

In Minnesota, Norwest Corp. will boast strong second-quarter results, said Steven R. Schroll, an analyst at Piper, Jaffray & Hopwood, because of an expanding net interest margin and solid fee income related to its proliferating mortgage business. Norwest is expected to earn $1.03 a share, up 17.6% from the second quarter of 1992.

Big Winner in California

On the West Coast, California's First Interstate Bancorp is expected to be a big winner, reflecting continued improvement in credit quality and loan growth in operations outside its home state. The company is predicted to earn $1.39 a share, an 85.33% jump from the year-earlier period.

BankAmerica Corp., reflecting further progress in assimilating the Security Pacific Corp., should see an 85.71% gain over 1992, coming in at $1.17 a share, according to First Call.

But continued loan contraction and the weak California economy has prompted some analysts to lower their forecasts for the nation's second-largest bank company in recent weeks. □

EXECUTIVE changes

Wachovia Taps Herbert Wayne As CRA Chief

Herbert M. Wayne Jr. has been named Community Reinvestment Act administrator for **Wachovia Corp.**, Winston-Salem, N.C.

Mr. Wayne, a senior vice president, will be responsible for coordinating the CRA programs for Wachovia's lead banks in North Carolina, South Carolina, and Georgia.

H.M. Wayne Jr.

William C. Mann, vice president and Forsyth County manager of community and economic development, succeeds Mr. Wayne as the CRA administrator for Wachovia Bank of North Carolina, Winston-Salem.

Mr. Wayne joined Wachovia in 1958 and has held positions in the Winston-Salem, Asheville, Asheboro, Salisbury, and Greensboro offices.

He transferred to Charlotte in 1977 as regional retail banking manager.

He was elected senior vice president in 1980 and assumed the post of CRA administrator in Winston-Salem in 1988.

William C. Mann

Mr. Mann joined Wachovia in 1974 and has held several retail banking positions in Winston-Salem. He became a corporate account officer for the Winston-Salem office in 1981 and was elected vice president in 1985. He was named Forsyth County corporate banking manager in 1988 and assumed his former position in 1991.

— **Franklin Smith**

MIDWEST

BOATMEN'S Bancshares, St. Louis, has elected **David L. Ahner** and **Robert W. Godwin** as senior vice presidents.

Mr. Ahner is the manager of corporate real estate and Mr. Godwin is director of taxation for the bank holding company.

MIDDLE ATLANTIC

PNC BANK, Pittsburgh, has named **Joseph M. Salvatore** to senior investment officer.

J.M. Salvatore

Mr. Salvatore will be responsible for originating and making investment decisions in the security and investment research, financial conditions, capital structures, and earning potentials of municipalities in an assigned area.

FLEET BANK, Melville, N.Y., has named **William McCahill**, formerly a senior vice president with **Chase Manhattan Bank**, New York, as head of its real estate department.

Mr. McCahill is responsible for managing the bank's real estate portfolio and for developing new business.

Reporting to Mr. McCahill is **Virginia Philpott**, senior vice president, government finance. She was formerly deputy manager of the real estate community development lending group at **Chemical Bank.**

Jack Insigna has joined Fleet's Long Island bank as a vice president and head of trade services.

Donald Trace also has joined as a vice president and head of cash management with responsibility for New York City and Long Island. Both were formerly with Chase Manhattan Bank.

Additions to Fleet's corporate lending teams include **Philip Davi** and **Michael Sabala** as vice presidents with responsibility for middle-market lending service in New York's Nassau and Suffolk counties.

Mr. Davis was formerly with **National Westminster Bank** and Mr. Sabala with **Barclays Bank**, New York.

John DeFranza, Raymond Saccani, and **William J. Quinn Jr.** are new members of Fleet's community lending team. They were formerly with Barclays Bank.

Diane Sferrazza has joined Fleet as assistant vice president, private banking, for the New York City region. She was formerly with Citibank.

Other officer-level appointments include **Dawn Jackson-Vendryes** as insurance officer in loan administration and **Linda Piacentini** as assistant vice president in human resources.

Ms. Jackson-Vendryes was formerly with Citicorp and Ms. Piacentini with **NationsBank.**

Fleet Investment Services, a subsidiary of Fleet Financial Group, named **Barbara Ann Lewis** vice president and personal asset management sales manager for the New York City region and **Richard Hoban** vice president for personal asset management for Nassau and Suffolk counties.

Ronald Sylvestri has become vice president for institutional sales.

Mr. Lewis was formerly with **Bank of New York**, Mr. Hoban with **Lincoln Savings Bank**, and Mr. Sylvestri with Barclays Bank.

WEST

FIRST INTERSTATE Bank of California, Los Angeles, has promoted **Bruce E. Wilson** to manager of strategic planning for the retail banking group.

Previously, he was a manager of the bank's credit review area.

UNION BANK, Los Angeles, said **Howard J. Isador** has joined the bank as a vice president in charge of executive services in the bank's trust and investments group.

He was a senior vice president and general manager for two years at **State Street Bank and Trust Co.** of California.

William A. Polkinghorn joins Union Bank as vice president and deputy general counsel in the bank's legal and government relations division. □

Limit on Insider Loans Pinches Few Small Banks

By CLAUDIA CUMMINS

Washington Watch

AFTER COMPLAINING THAT the Federal Reserve's limits on insider loans would devastate its members, the Independent Bankers Association of America has found that less than 1% of smaller banks are bumping up against the limit.

And only 6% of banks with deposits of less than $100 million have taken advantage of the Fed's temporary exception for small banks, according to the trade group.

The results of the IBAA's survey of 1,060 small banks appear to cast doubt on the impact of the Fed's Regulation O on small banks. But the trade group says that while the numbers may be small, comments received from bankers in conjunction with the survey showed great concern about the issue.

"Fewer banks are using it then we expected," said Diane M. Casey, the IBAA's executive director. "But the fear factor with regard to Regulation O has never been higher."

Bankers fear that any attention drawn to insider lending – even just notifying regulators that they are taking advantage of the special exemption – will bring retribution from examiners, Ms. Casey said.

Diane Casey

"Low-profile is the buzzword when it comes to loans to insiders," Ms. Casey said.

In May, the IBAA surveyed community banks with deposits less than $100 million, after several Fed governors expressed amazement that so few small banks had taken advantage of its generous exemption. Only 38 of the 8,643 eligible banks have notified the agency, as required, that they are using the exemption.

Under Regulation O, most bank's loans to executive officers, directors, and principal shareholders cannot exceed 100% of unimpaired capital. But for banks with deposits of less than $100 million, the Fed temporarily has ruled that insider lending can reach 200%, as long as banks notify both the Fed and their primary regulator.

The IBAA has lobbied heavily to make permanent the Fed's exception to the limits for small banks, saying that without it banks will lose their most qualified directors. But the group's survey found that insider lending at small banks totaled only 19% of capital – one-fifth of the general limit.

Only 14% of bankers reported that Regulation O has prevented them from making an insider loan. Nine percent said the rule has prevented them from appointing a director, while 5% said directors were forced to resign because of the rule.

And almost 40% of the small banks surveyed said they "intentionally declined" to take advantage of the higher limit. In explaining why, half said they had no need, and 13% said fear of regulator scrutiny had stopped them. Almost 7% said their bank had a policy of not lending to insiders.

The IBAA survey found that Regulation O has had a greater impact on the smallest banks, those with deposits under $50 million. The vast majority of those that were prevented from naming directors were this size.

"The smaller the town, the smaller the bank, the more of a problem it is," Ms. Casey said.

Hawaii's CB Bancshares Gaining A Prized Niche with Acquisition

By PHIL ZAHODIAKIN

Hawaii's CB Bancshares is about to make a deal that will hand its City Bank subsidiary a strong position in a very important market.

International Holding Capital Corp. on June 24 agreed to a buyout offer of $51.7 million in cash and stock from the $750 million-asset banking company – which, like International, is based in Honolulu on the island of Oahu.

International, the $450 million-asset parent of International Savings and Loan Association, will significantly expand CB's mortgage business. More important, it will make CB a very strong presence in Oahu's Filipino community, where International has many of its branches.

Fast-Growing Market

With 1.1 million residents, Oahu is by far the state's most populous island, and the Filipino market is Hawaii's fastest-growing market, said Richard Kelly, director of investment banking for M.A. Schapiro.

The New York firm handled both the stock offering and the acquisition for CB, whose president and chief executive officer, James M. Morita, wanted to move fast.

"Unless we made an effort promptly, we would have been in a situation where there were no more thrifts left to buy," Mr. Morita said, explaining that both Hawaii and mainland banks have been feasting on the institutions.

Thrifts Stayed Afloat

The Bank of Hawaii, First Hawaiian Bank, and the Bank of America are among the institutions buying the state's thrifts, which all stayed afloat during the statewide shakeout.

The deal will give CB strength in the Filipino community, a growing market.

"We've had no thrift or bank failures in Hawaii, and we have a climate for business that's much stronger than what you generally find on the mainland," Mr. Morita said.

And not just in this country. CB maintains strong relationships with Japanese correspondents that serve as, among other things, funnels for tourist, retiree and investment business. But it's Oahu's Filipino business where CB will benefit most over the near term.

"They're the fastest growing population group in Hawaii, and they're very big savers," said M.A. Schapiro's Mr. Kelly. "Most of International's 12 branches are west of Honolulu, where the Filipinos tend to live, and International has the best standing in that community."

He noted that CB has "staff who speak five Filipino dialects, so they communicate with them, but they also relate to these people. That's why CB will keep the International name."

By gaining Filipino market share, and International's mortgage business, CB has "maintained its competitive balance with the big players on the island," Mr. Kelly added.

Maintaining Profit Levels

CB last year posted a 1.18% return on assets, and a 14.13% return on equity. Mr. Morita says his goal is for CB to operate at those levels for several years, and to increase its market share to 8%. The International deal, which still must be approved by regulators, would give CB a 7% share. But Mr. Morita is concerned about the arrival of Bank of America.

"Now that they're here, it means we'll have to cultivate more business in the Orient and the mainland, and it means we'll have to try to keep our best customers – the ones we've had for the last 30 years." ❑

Credit Unions, While Enjoying a Tax-Free Ride, Grow into Behemoths that Muscle Aside Banks

By ROBERT B. COX

Washington Wealthbuilders

Because the nation's credit unions are exempt from some regulations, such as the Community Reinvestment Act, and do not pay corporate taxes, some bankers complain of unfair competition.

Following is an edited text of a letter on the subject to President Clinton:

What disturbs us are giant credit unions such as IBM, Northwest Airlines, and a flock of others swallowing up competition and growing to be a force in the financial services industry – at the same time paying no taxes.

At a time when you are attempting to reduce the deficit and asking for everyone's cooperation and willingness to sacrifice and pay their fair share, it seems ludicrous that these large credit unions should be given this competitive subsidy.

We can only look at your comments regarding the Airbus Industrie subsidy question as compared to Boeing. This is very similar except it is a lot closer to home.

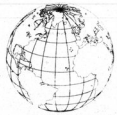
Small community chartered institutions attempting to serve consumers, farmers, and small businesses have to compete in what is now a very unlevel playing field because of the subsidies granted credit unions.

Isn't it time to tax credit unions?

Larry A. Sorenson
Executive vice president
Arlington (Minn.) State Bank

Opportunity is Spelled **LDC DEBT REPORT**

Emerging Markets are risky, notoriously inefficient, known for changing rules and limited public disclosure. Knowing what's really going on spells the difference between opportunity and loss.



The *American Banker*'s weekly *LDC Debt Report* delivers the most accurate, objective, succinct information available on emerging-market debt. *LDC Debt Report* provides the astute investor with news, reviews, and strategic insights. The popular Market section summarizes each week's developments, quoting bid and offer prices for 26 developing-country loans and 18 emerging-market Eurobonds. It also tracks the performance of selected equity markets.

If you must know what's going on in key emerging markets, recent trading, economics and politics, the World Bank, and more, LDC DEBT REPORT is a must read every week.

Read it free for 4 weeks! Just fax your letterhead to 212-943-7852, or call Hans Winberg at 212-943-8351

Mortgage Unit Drives an Upturn at Centerbank

By EDWARD KULKOSKY

Centerbank, based in Waterbury, Conn., stopped accumulating mortgages for its portfolio a few years ago. And no wonder.

With the slump in the New England real estate market and the stagnation of the region's economy, the bank lost money from 1989 through 1991 because of bad loans.

But the bank didn't leave the mortgage business. It just changed its focus.

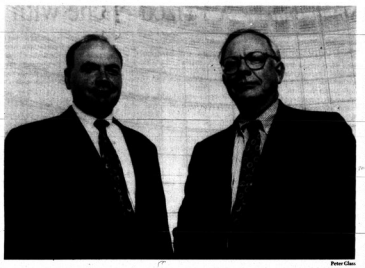
Eager to avoid risk from both credit and interest rates, the bank took to originating loans and selling them all on the secondary market, through its Centerbank Mortgage Co.

Going Forward

Nowadays, the mortgage unit is clearly on the move. Lending volume more than doubled last year, to $2 billion, and last month the unit agreed to buy the assets of Beneficial Mortgage Corp.

The package includes $1.6 billion of servicing rights, which will bring Centerbank's total servicing portfolio to $7.1 billion. Centerbank will also get a network of correspondent lenders that originated $800 million in loans last year.

Perhaps the most significant acquisition, though, came early in 1989 – and it entailed a person rather than a company. The mortgage unit hired Thomas C. Brown as president and chief executive. He had been an executive vice president of Goldome Realty Credit Corp., Buffalo.



Peter Glass

BACK INTO THE BLACK: Thomas C. Brown, left, president and chief executive of Centerbank Mortgage Co., and Robert J. Narkis, the bank company's chairman and chief executive, are behind the resurgence.

Earlier, Mr. Brown was managing director of the real estate finance group at Merrill Lynch & Co. and chairman of Merrill Lynch Mortgage Backed Securities Inc.

Strategic Shift

Starting from nearly zero, Mr. Brown has built Centerbank Mortgage into a national business servicing or originating loans in 40 states.

The bank has just this year begun to take a few mortgages into its portfolio when its asset-and-liability strategy permits. With nationwide originations, geographic diversification is readily available.

This strategic shift has helped Centerbank climb back into the black. It showed a profit of more than $7 million in 1992, partly on the strength of a surge in loan originations by the mortgage unit.

"Our strategy is to diversify our balance sheet in a way that better positions us into the year 2000 as a financial services business. Previously, we had been primarily a bank, but in 1986 we decided to diversify," says Robert J. Narkis, chairman and chief executive.

Developing a Presence

That strategy stayed on the back burner until a management change was made late in 1989 and Mr. Narkis, a lawyer, became chairman. He had been a board member for 22 years.

"At that point, we decided our strategy was correct, and we provided $34 million to grow the mortgage business – to acquire servicing and become a presence in mortgage banking."

The investment has paid off, with originations more than doubling in 1992. With the acquisition of Beneficial's origination capability, in addition to some ambitious marketing plans, Mr. Brown is looking for additional growth this year.

He is especially proud of the fact that the servicing portfolio grew last year because originations were strong enough to replace heavy runoff from refinancings.

Expansion Efforts

The national scope of the mortgage company has helped break Centerbank out of lockstep with the New England economy. Now, 80% of mortgage revenues come from outside Connecticut.

Part of Mr. Brown's expansion plan is the development of a large network of storefront loan offices called the Mortgage Corner, some of them in partnership with real estate brokers.

He is also pressing for new production from a joint venture established last year with the American Automobile Association. The venture markets mortgages to AAA members at a preferred rate.

"A lot of lenders are beginning to pursue affinity lending," says Mr. Brown. "We are looking for ways to have a more direct line to the customer. Our origination costs are lower in these arrangements because we can do centralized originations. But the market is competitive in terms of pricing. Since we process and underwrite centrally, it's easy business for us to do."

Nurturing a Hybrid

The success of the mortgage company has played neatly into Centerbank's overall strategy.

"We're small to mid-size, and we're almost the sole remaining independent bank in Connecticut," says Mr. Nakris. "But we compete head-on with Fleet, with Shawmut, and with community banks in our area."

Mr. Nakris now sees Centerbank as a hybrid: a supercommunity bank serving three separate areas of Connecticut – Meriden, Waterbury, and New Haven - and a diversified financial services company without geographic constraints. It acquired the assets of two failed thrifts in 1991.

The bank has also been developing a leasing business, which has shown rapid growth recently, and has its eyes on forming a trust operation.

Meanwhile, the success of the mortgage business is providing the bank with a lot of the momentum it needs to accomplish its transition into a new-age bank. □

Gonzalez Asks 22% Rise for Ginnie Mae

Dow Jones

WASHINGTON — Rep. Henry Gonzalez, chairman of the House Banking Committee, introduced a bill to increase by nearly $20 billion the fiscal 1993 commitment authority for the Government National Mortgage Association.

The Texas Democrat's bill would increase Ginnie Mae's authority for guarantees of mortgage-backed securities in the current fiscal year by about 22%, to $107.7 billion from $88 billion.

The measure would also increase the Federal Housing Administration's commitment authority for mortgage insurance to $92.1 billion in fiscal 1993, from $65.1 billion.

Empire of America Mortgage Bank Said to Be For Sale

By CHRISTOPHER NOBLE

Empire of America Realty Credit Corp., a sizable mortgage bank, is for sale by its owners, according to an industry source.

The Buffalo-based company is owned by Carbadon Corp., a joint venture of Cargill Inc., the commodities giant, Gordon Investments, a Canadian merchant banking firm, and a venture capital pool affiliated with Prudential Securities.

There are no known bidders for the company.

Empire of America is said to have originated $4 billion in home loans last year and has a servicing portfolio of $6.8 billion.

The source said that Cohane Rafferty Securities, acting as the broker for the sale, is asking about $100 million for Empire.

In 1991, Carbadon paid about $40 million for the company after its parent was seized by the Resolution Trust Corp., the source said.

Nationwide Originations

The home loans in the servicing portfolio have an average interest rate of "under 8%" and the delinquency rate is "in the 3% range," the source said.

Empire has 14 wholesale production branches that originate loans around the country.

The three large corporations are exiting the mortgage business in the hope of making a tidy profit in only two years, the source said.

"They've more than doubled their money," the source said.

Other industry experts said Cargill's exit indicated that Carbadon's principals decided that the mortgage market is at its peak. □

Chase Picks Dreyer To Head New Unit

Chase Manhattan Corp. has named Geoff Dreyer as president of Troy & Nichols, a mortgage unit in Monroe, La.

Chase announced the appointment on Thursday as part of a statement that it had completed its acquisition of the company.

Mr. Dreyer was formerly chief financial officer of Chase Home Mortgage Corp., Tampa, Fla., Chase Manhattan's main mortgage banking subsidiary.

$10 Billion Servicing Portfolio

Troy & Nichols services about $10 billion in residential home loans and plans to originate $2.5 billion in mortgages this year.

Chase announced on March 5 that it would acquire the company from First Gibraltar Mortgage Holdings.

Chase plans to operate the company as a separate subsidiary and will keep the Troy & Nichols name. The company operates 21 offices in seven southern states.

Chase Home Mortgage services $48 billion in home loans and says it expects to originate $14 billion in mortgages this year. — Christopher Noble

GMAC to Retain Its Home Loan Subsidiaries

By CHRISTOPHER NOBLE

Ending months of speculation, General Motors Acceptance Corp. said that it would not sell its mortgage subsidiaries.

"We're committed to these businesses, and we're going to promote their ongoing success," said Terry Sullivan, a spokesman for GMAC.

Since late last year, the mortgage industry has been rife with reports that GMAC was seeking to sell GMAC Mortgage Corp. – a major originator and servicer – and Residential Funding Corp., a packager of mortgage securities.

Industry sources said a number of major mortgage lenders looked at the companies, and GE Capital Corp. often was cited as a leading bidder for the servicing business. But both GMAC and GE had declined to comment.

In an interview late Wednesday, Mr. Sullivan acknowledged that GMAC had conducted "a strategic review" of the mortgage units as part of an effort to shore up its finances.

"I won't get into the specific details, but we did examine all our options, so to speak," he said.

Better Outlook

Since then, GMAC's financial picture has improved, he said, and any discussions of selling the units have been dropped.

"We're going to retain these companies," Mr. Sullivan said.

As of the end of May, GMAC Mortgage Corp. of Elkins Park, Pa., had a servicing portfolio of $41.1 billion, Mr. Sullivan said.

The company originated more than $1 billion in home loans in the first six months of the year.

Residential Funding Corp., the Minneapolis-based securitizer, expects to purchase about $10 billion in home loans this year, he said.

Executives at the units were clearly pleased by the parent's action to halt speculation of a sale.

Richard Gillespie, a spokesman for GMAC Mortgage, said that market rumors had been a distraction for the company. "At times it's been difficult," he said.

Now, he said, "We can give our full concentration to growing our business and improving our profitability."

House Call by Shawmut Opens Door to Critics

By MICHAEL O'D. MOORE

Shawmut National Corp. found out the hard way last week that marketing mutual funds to ordinary depositors can be a touchy business.

When two of the bank's mutual fund salesmen paid a visit to the home of a 93-year-old man who had $6,000 in maturing deposits, the story landed on the front page of *The Boston Globe* business section.

The article, which ran under the headline "When Your Bank Brings Risk to Your Door," warned consumers that banks are getting pushy in marketing their mutual funds.

"It's hard to find a doctor who makes house calls these days, but some bankers seem to think that house calls are worth a try," *The Globe* said.

The article was clearly a public relations setback for Shawmut. Though admitting it found no evidence of wrongdoing, *The Globe* singled out the Hartford, Conn.-based company for taking more of a hard-sell approach than most of its rivals.

Shawmut, for its part, played down the incident. Brent DiGiorgio, a bank spokesman, maintained that Shawmut employees made the house call only after the customer requested it.

"He invited us to his home," Mr. DiGiorgio told *American Banker*. "It is kind of quells their hot story that banks are foisting mutual funds on their clients."

Agreed to House Call

The article recounted how Shawmut tried to interest John Strickland, a retired executive from Roxbury, Mass., in the bank's mutual funds.

According to the report, a Shawmut employee working from a list of customers with maturing CDs phoned Mr. Strickland. The employee asked him if he would like to stop by the branch to discuss moving some of his $6,000 into a Shawmut mutual fund.

Mr. Strickland declined, because he had been ill, but he told *The Globe* that he accepted the bank's offer of a house call.

A day or two later, the paper reported, two bank employees appeared at Mr. Strickland's door.

While he said the employees were "very nice," he decided to stick with CDs. "At this point in my life, I don't need to get rich," he told *The Globe*.

National City Plans To Quadruple Force

National City Corp. is kicking its investment products program into high gear. The Cleveland company plans to quadruple its retail brokerage force to 200 within a year.

"Until recently, we've operated a modest program," said David Dunning, a vice president. "But we recognized the potential and made a strategic decision for dramatic expansion."

National City's 50 brokers cover 600 branches in Ohio, Indiana, and Kentucky. They sell the bank's six proprietary funds, plus mutual funds and annuities of outside companies.

In addition, the bank will soon apply to the Federal Reserve Board for so-called section 20 powers to expand its underwriting abilities.

National City recently reorganized its brokerage, institutional sales, venture capital, and finance units under the banner of National City Securities Corp.

Two to Expand Activity In Black Community

By STEPHEN KLEEGE and JEFFREY KUTLER

Two institutions with ties to the African-American community made credit card announcements this week.

United Bank, a black-owned institution in Philadelphia, is launching a nationwide advertising campaign for a secured credit card.

Meanwhile, Key Federal Savings Bank of Owings Mills, Md., one of the pioneers in the secured card business, expanded its relationship with a scholarship program for predominantly black colleges.

Secured cards are designed for people who have difficulty establishing credit. The lender takes a deposit as security for the credit line.

Attraction of Secured Cards

These efforts come at a time when several major banks and other card-marketing organizations are beginning to perceive the secured market as a growth opportunity – and for compliance purposes – as a way to demonstrate a commitment to underserved communities.

Key Federal, which has offered an affinity card on behalf of the America's Black Colleges Program since 1989, is adding to the product line with an unsecured Visa card.

The $189 million-asset thrift is not black-owned, but 49% of its cardholders are black. It promises to contribute up to $7 for each new card issued, plus a percentage of sales.

Another $1 will be given each time a Key Federal card is used for a MoneyGram, the money transmission product of American Express Co.

APRs of 18.9% and 19.8%

The annual percentage rate on the unsecured card is 16.9%, compared with 19.5% on the secured version.

Shirley Chisholm, the former New York congresswoman who is the national spokeswoman for the America's Black Colleges Program, said the unsecured card will increase support for "the educational institutions that help shape some of the best black minds of the future."

United Bank of Philadelphia will have chairman and chief executive Emma C. Chappell starring in TV spots just filmed in Los Angeles.

The minority-community bank finished last year, its first, with $23 million of assets. It says the Visa card for "people with bad credit or no credit" was a big success locally since its launch in December.

Ad Campaign Planned

United is going national with operating support from Applied Card Systems of Wilmington, Del., GMS Inc. of Los Angeles, and the advertising-public relations agency Wolfinger Cerminaro Communications.

TV and radio ads will air in Philadelphia, Atlanta, Baltimore, Chicago, Columbus, Detroit, Honolulu, Los Angeles, New York, Norfolk, Pittsburgh, St. Louis, and on the Black Entertainment Television cable network.

The card includes enhancements such as travel discounts. The minimum deposit security is $375 and applications are accepted via an 800 number. □

Citi Unit Helping to Launch Card for Clubs

By MICKEY MEECE

With the help of a Citicorp unit, a recently formed company is taking off this month into the private-label card market.

Selected American Golf Enterprises of Timonium, Md., is preparing a national rollout of a credit card for private clubs.

Citicorp Retail Services, Melville, N.Y., will issue the cards and process accounts.

Similar to Store Cards

The Citicorp Retail package is similar to that used by department and specialty stores.

"We've taken the structure used for private label credit cards [and adapted it for] private clubs," said William Hall, the golf venture's chief executive officer.

The program allows members to charge their club dues, initiation fees, and refundable bonds, as well as catering and other club-provided services, Mr. Hall said.

The repayment term for large-ticket items can be extended over four years.

Mr. Hall eyes a market consisting of 6,000 private golf clubs and 20,000 other private clubs nationwide. He anticipates signing up 150 clubs in 1993, with increases in following years.

Typically, private clubs run their own, relatively limited credit programs. To assure cash flow, Citicorp Retail Services is committed to settling club charges within three business days. □

STAY ALERT

Whether you're a trader in asset-backed securities, Third World bank loans, or a public financier, your success depends on your knowledge of every little change in the industry you're in.

Track the policies and patterns shaping your business with the online editions of the industry publications that alert you to events before they happen:

ASSET SALES REPORT
LDC DEBT REPORT
PUBLIC FINANCE WATCH

ALL THREE ARE NOW ONLINE WITH NEWSNET

Stay current with the people, institutions, and events that are shaping your industry with NewsNet. You can find the full text of the current issue and articles from all the issues back to the beginning of 1989 on NewsNet, the current awareness database. Using NewsNet's NewFlash service, you can monitor just those issues you need to track.

• ASSET SALES REPORT keeps you up-to-date on the latest developments in commercial loan participations and asset-backed issues. It's in FI 33 on NewsNet.

• LDC DEBT REPORT reports on how institutions are coping with their Third World Debt problems problem loans and provides comprehensive coverage of the secondary market for bank loans to 27 different LDCs. Now incorporating Latin American Markets, LDC Debt Report is in FI 42 on NewsNet.

• PUBLIC FINANCE WATCH provides early notice of pending changes in Washington policies or regulations on public finance. It's in FI 41 on NewsNet.

PROFESSIONAL EMPLOYMENT OPPORTUNITIES

RIYAD BANK
Saudi Arabia

Riyad Bank is Saudi Arabia's most prominent Bank with 170 branches and international offices in the USA and the UK.

As part of the unique and ambitious automation program, the Bank is now in the process of implementing state-of-the-art technical solutions based on an integrated multi-platform processing environment.

Applications are invited for the following newly created and critical line management positions.

MANAGER - PC/END USER COMPUTING

Key Responsibilities:
- Developing and managing an effective PC/EUC organization responsible for:
- Selection of software tools and utilities.
- Building and managing a comprehensive solution-oriented PC/EUC team including LAN Specialists and Information Center Analysts.
- Providing service and support to end users.
- Close interaction with application development teams.

Requirements:
- Excellent management skills.
- Hands-on technical experience of LAN technology, Query languages, report generators and test editors.
- Excellent interpersonal, communication and presentation skills.
- A minimum of 5 years' PC/End User Computing management experience gained within a banking or financial services environment.

MANAGER - AUTOMATED CUSTOMER SERVICES

Key Responsibilities:
- Managing the resources and processes involved in assuring user satisfaction with services provided by the Information Services Division.
- Developing Service Level Agreements (SLAs), monitoring services against these agreements, identification and resolution of service issues and problems.
- Interfacing with users (170 branch network) on a continuous basis.
- Development and administration of a solution-oriented "Help-Desk".
- Interfacing between Information Services and Branches to communicate new system requirements.
- Conducting user training for a series of major banking applications.

Requirements:
- Extensive information technology experience, preferably gained within a banking or financial services environment.
- Minimum of 3 years' managerial experience.
- Extensive user liaison skills, including development of SLAs and management of a professional solution-oriented "Help-Desk" function.
- Mainframe and PC technical skills.

Riyad Bank offers a competitive compensation package consisting of tax free salary, paid housing, medical coverage, paid annual air fare and a superb lifestyle (single or married status).

Qualified candidates with an interest in making a positive contribution to the continued development of this "green field" site should direct resumes with current salary to: Box 701, 12 West 37th Street, 10th Floor, New York, NY 10018.

LOAN EXAMINERS

American Express Bank has the following career opportunities for individuals with proven analytical abilities, outstanding written, oral and interpersonal skills plus a willingness to travel extensively overseas to 40 locations worldwide.

SENIOR/SUPERVISING LOAN EXAMINER
Serve as Examiner-in-Charge of network locations. You'll focus on early identification of exposures and pre-empting problems, train and supervise other examiners. **Qualified candidates** will possess 10-15 years of in-depth credit/examining experience with an international background. A thorough knowledge of commercial and private banking and F/X, money market and derivative products. A Bachelor's degree in business is required.

LOAN EXAMINERS
The selected candidates will evaluate risk assets (commercial loans) extended for credit quality and sound banking/loan administration and conformance with policy at branches with loan portfolios up to $150 million. **The ability** to prepare incisive reports and work effectively with Credit Officers, Relationship Managers and Branch Management personnel is essential. **Qualified candidates** will have 0-6 years examining/credit experience or a combination of both. A Bachelor's degree in business is required.

All positions offer competitive salaries, outstanding benefits and advancement opportunities. For immediate consideration, forward your resume and salary history indicating position desired to:

Fed Budget to Rise 3.2% Next Year

WASHINGTON — The Federal Reserve Board said it plans to increase its operating budget by 3.2% in 1994.

This will bring the Fed's 1994 operating budget to $141.3 million. Details of the budget, based on the levels approved by the governors, will be made final later in the year.

The projected increase for 1994 is considerably less than this year's 7.4%. A leveling of the costs to implement new banking laws, as well as the elimination of certain one-time expenses, enabled the board to keep the increase to a minimum, Fed staff said on Wednesday.

In voting to approve the guidelines, the governors said they intend to follow the spirit of President Clinton's government-wide cuts. And in setting its budget guidelines, the Fed relied on the inflation projection of 2.4% in President Clinton's proposed 1994 budget.
— Claudia Cummins

Crestar Financial Seeks Listing on Big Board

RICHMOND, Va. — Crestar Financial Corp. said it has filed an application to list its common shares on the New York Stock Exchange.

Richard G. Tilghman, chairman and chief executive officer, said he expects Big Board trading to begin in late July. The trading symbol would change to CF, from the current CRFC on the Nasdaq system.

Crestar has $12.2 billion in assets and 38 million shares outstanding. ❑

1st Colonial to Try Again on Deals

CHICAGO — Hoping to reverse a recent rejection by the Federal Reserve Board, First Colonial Bankshares Corp. has amended its agreement to acquire two banks north of Chicago.

The amendment extends until March 31, 1994, the deadline for completing the acquisitions of Hi-Bancorp and GNP.

Time to Improve a CRA Grade

The extension gives First Colonial time to improve compliance with the Community Reinvestment Act at Avenue Bank of Oak Park, one of the company's 16 subsidiaries. That deficiency stood in the way of Fed approval.

First Colonial's initial bid to buy the two banking companies was protested by a local activist group that complained of a poor mortgage-lending record at Avenue Bank.

C. Paul Johnson
"Confident" of Fed approval

As is standard on CRA-related protests, the application was referred by the Federal Reserve Bank of Chicago to the Fed's Board of Governors in Washington, which in May cited Avenue Bank's "needs to improve" CRA rating as the reason for denying the mergers.

C. Paul Johnson, the First Colonial chairman and chief executive officer who previously expressed bitterness about the Fed's action, said, "We are delighted to have reached agreement with the management and ownership of Hi-Bancorp and GNP Bancorp."

He added, "We are also confident that the Federal Reserve Board will approve the transaction [as] we have made significant progress on the CRA performance at Avenue Bank." The prospective acquisitions would add a combined $157 million of assets to Chicago-based First Colonial's $1.5 billion. ❑

OCC Creating Consumer Protection Squadron

Continued from *page 1*

wig said on May 5 that he intends to send pairs of whites and minorities with similar financial characteristics into national banks to test for discrimination. But Mr. Cross said the program is proving difficult to develop.

Contracting Out for Testers

He offered few details, but said the testing will not be done by bank examiners. To groans from the audience, Mr. Cross said the Comptroller's office will contract out for testers, possibly with civil rights groups.

"We believe testing is a very serious business – not to be done on a part-time basis," Mr. Cross said.

The focus, at least initially, will be on pre-application bias, according to Mr. Cross. But if legal hurdles can be cleared, he said, the agency might go on and test for post-application discrimination, too.

The consumer regulations enforced by the new examiners will include fair-lending laws, the Community Reinvestment Act, Truth-in-Savings, Truth-in-Lending, the Bank Secrecy Act, and the Real Estate Settlement Procedures Act, Mr. Cross said.

New Approach for Agency

In addition to the full-time examiners that the Comptroller's office will develop, about 20% of its 1,200 examiners-in-training will do stints as compliance cops. These less experienced examiners make up half of the agency's exam force.

Exams will be more frequent for smaller banks – every two years.

The Comptroller's office is the last banking agency to specially train and designate examiners, for consumer compliance. Mr. Cross said the office has abandoned its "generalist approach" because "compliance has become too complex and too challenging to do it part time."

The Federal Deposit Insurance Corp. is adding 100 examiners to its compliance team of 150, Janice M. Smith, consumer affairs director, said Wednesday in San Diego.

The FDIC also is hiring a fair-lending specialist for a senior staff position in Washington, she said, and each regional office is hiring its own specialist in that area of concern. The fair-lending staff members will, among other things, analyze data generated under the Home Mortgage Disclosure Act.

The FDIC already has community affairs specialists in each regional office.

The Federal Reserve Board employs about 200 compliance examiners. □

When it's this hot, you deserve extra scoops.

For many bankers, the thermometer is a lagging indicator of the heat they feel in handling current regulations and guessing the Clinton administration's next moves. But we've got a way to help you keep cool: *American Banker's Washington Watch.*

We broke the news about the plans by credit union trade associations to branch cross-country. We warned readers that the FDIC will crack down on banks and thrifts that aren't paying enough for insurance, and that the Fed was flirting with examination fees. We also uncovered plans that would let banks pay less for deposit insurance provided they set up certain special programs.

Those kinds of tasty scoops are the weekly fare at *American Banker's Washington Watch.* Within minutes, you get insights on regs and regulators—as well as your competitors—that could make the difference between profit and loss. We unconditionally guarantee it.

House Seeking To Limit Direct Student Lending

By ROBERT M. GARSSON

WASHINGTON — The House approved, 397 to 28, a call for limiting President Clinton's plan for direct lending to students to 4% of the market.

The nonbinding measure, sponsored by Rep. Burt Gordon, D-Texas, essentially instructs the House conferees who will negotiate with the Senate on a final deficit reduction package.

"It was a referendum on whether the House wants a broad direct-lending program," said Jay Harris, legislative representative for Savings and Community Bankers of America. "This shows they are not willing to just jump into it without a test."

Even if the conferees agree to limit the direct-lending program to 4%, they would almost certainly have to make other cuts in student lending that would affect banks and thrifts.

"I'll make no bones about it—with 40 cents of each hundred's dollars of institutions will leave the program," Mr. Harris said.

Cheshire to Merge More Subsidiaries

KEENE, N.H. — Cheshire Financial Corp. said it will merge two subsidiaries in a continuation of its consolidation plan.

Cheshire said Valley Bank of Hillsborough, N.H., which has $72 million in assets, would merge later this year into Cheshire County Savings Bank of Keene, the holding company's lead bank.

It was previously announced that the Monadnock Bank of Jaffrey, N.H., would merge into Cheshire County on July 12.

Cheshire County Savings, currently with a pro forma $569 million of assets, including Monadnock Bank, will be organized in three divisions: Keene, Monadnock, and Valley.

Benefits Cited

The mergers "will create a single, unified bank with a greater array of products and services," said Peter J. Baxter, president and chief executive officer of Cheshire Financial Corp.

Though administrative and operational functions will be consolidated, he said, each division will stay close to its market by having a divisional president and advisory board. □

Montana's Security Federal To Form Holding Company

BILLINGS, Mont. — Security Federal Savings Bank said its board has approved the formation of a savings and loan holding company.

Security Federal, which has $260 million in assets, would become a wholly owned subsidiary of the Montana-chartered holding company. — Reuters

STOCKS
Baltimore Bancorp Wins Endorsement

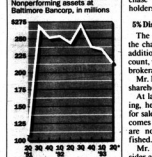
By GORDON MATTHEWS

Capping its recovery from financial difficulties, Baltimore Bancorp has received a "buy" rating on its stock from bank analyst Anthony J. Polini of Mabon Securities Corp.

He said the $2.4 billion-asset banking company is "a budding turnaround play trading well below book value." Its shares have upside price potential of 35% to 40% through next year, he added.

Baltimore Bancorp's stock was unchanged at $9 in late trading Thursday after a gain of 37.5 cents the previous day following Mr. Polini's action.

Continued Improvement



A Mabon analyst sees the bank as a "budding turnaround play."

The stock trades at around 90% of its March 30 book value of $9.81, one of a very few banks remaining at this depressed level. Regional banks on average trade at about 145% of book, the analyst noted.

Mr. Polini expects that the bank will announce strong second-quarter earnings, highlighted by an 8% to 12% decline in nonperforming assets and 31-basis-point improvement in net interest margin from the previous quarter.

He projects that earnings per share will increase at a compound rate of 24% through 1996, helped by a big decline in the loan-loss provision and other credit costs.

The analyst projected earnings of 90 cents a share this year and 85 cents next year. The dividend could be reinstated as early as the first quarter of 1994, he said.

Realty Problems Abating

Baltimore Bancorp has been recovering from bad real estate loans. Its problems peaked in 1991, when it lost $126.5 million. It earned $14.5 million last year.

The bank is among the few at which dissident shareholders, uphappy about the company's performance, were able to replace the board of directors. The new board installed fresh management in mid-1991.

Under chairman Edwin F. Hale Sr. and president Alan M. Leberknight, the bank has substantially reduced its problem loans and recapitalized itself at the behest of regulators.

By the end of July, Baltimore Bancorp expects to raise nearly $30 million by issuing 3.675 million shares under a stock-purchase plan for current shareholders.

5% Discount, No Commissions

The plan offers stockholders the chance to directly purchase additional shares at a 5% discount, with no service charges or brokerage commissions.

Mr. Hale has also been bluntly shareholder-oriented.

At last month's annual meeting, he declared: "The bank is for sale if a legitimate company comes in to acquire us. But we are not going to be bottom-fished."

Mr. Hale said he would consider a bid equal to 1.25 to 1.65 times the company's book value, which would still provide a premium.

The analyst's 12-month price target for the bank stock is $12, or 113% of projected book value. His yearend 1994 target is $13, or 118% of likely book value.

"The ongoing recovery at Baltimore Bancorp is solidly indicated by the steady improvement in net interest margin projected through 1993," Mr. Polini said.

He expects the average margin to be 4.50% this year, versus 3.15% last year and 2.44% in 1991. Longer term, he thinks the bank will be "well positioned to maintain a net interest margin in the 4.75%-to-4.85% range."

THURSDAY'S MARKET

Bank stocks were mostly higher again on Thursday despite a lower overall market.

The leaders were National City Corp., up $1.375 to $51.75, and CoreStates Financial Corp., ahead $1.125 to $58.875. Bankers Trust New York Corp. rose $1 to $75.125, while J.P. Morgan & Co. improved 75 cents to $68.625.

Citicorp was up 37.5 cents to $30.50, and Society Corp. rose 37.5 cents to $35.50 after both were named among 10 "uncommon values" by Lehman Brothers.

The biggest loser was MBNA Corp., down 87.5 cents to $28.375 after a big gain the previous day. □

U.S. Banks Increased Lending To Latin America 9% Last Year

Continued from *page 1*

short-term loans to private borrowers – a contrast to the long-term, high-rate lending to sovereign borrowers that made up the bulk of the loans on which Third World countries defaulted.

"I do not believe any of us are doing [longer-] term lending in any significant way," said Brian O'Neill, senior vice president for Western Hemisphere corporate finance at Chase Manhattan Corp.

Shorter Terms

According to the Fed, loans maturing in less than a year to Latin and Caribbean countries that produce no oil rose 26% to $18 billion last year. Loans with terms of one to five years rose 13% to $4.6 billion. Longer-term loans were unchanged.

But the new lending, particularly by regional banks, has Lawrence Cohn, an analyst at Paine-Webber Inc., worried.

"We think the fact that regional banks have expanded their activities in more distant markets a little ominous," Mr. Cohn said.

Regional banks, for example, he pointed out, increased outstanding loans to Brazil by 80%, from $718 million in 1991 to $1.293 billion last year.

Fresh Risks Cited

Mr. Cohn brushed aside bankers' statements that economic reform in the countries and short-term lending strategies protected them from new risk.

"I remember vividly talking to banks about their [Third World] exposure prior to the 1982 crisis," he recalled. "What was short term in nature suddenly became long term and what was private-sector debt suddenly became public-sector debt."

Most of last year's lending went to Mexico, Brazil, and Argentina, already the biggest borrowers.

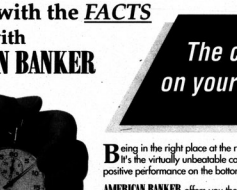
Total loans by U.S. banks to Mexican borrowers rose 5% to $14.5 billion, loans to Brazil increased 7% to nearly $7 billion, and loans to Argentina rose 36% to $4.7 billion.

Top Eight Take Lead

Nearly half of the $3.2 billion increase in Latin lending came from the eight biggest U.S. banks, which had around $31 billion in outstanding loans.

Citicorp remains the one of the largest lenders to Latin America.

Renewal of Confidence



The bank was one of the few U.S. financial institutions that agreed to advance new money to Latin borrowers as part of large financing packages with countries like Argentina, Venezuela, and Mexico.

At yearend, Citicorp had $3.4 billion in loans on its books to Mexican borrowers, up from $2.9 billion in 1991 and $2.4 billion in 1990. Its loans to Brazilian borrowers rose to $2.2 billion from $1.7 billion in 1991. The 1992 total was still below the $3.2 billion in 1990.

William Rhodes, Citicorp vice chairman, said the bank has further increased loans to Mexican borrowers since the start of the year by "a couple of a million," much of which was extended to finance trade.

He said Mexico has adopted stringent economic policies aimed at boosting investments, reducing the government's budget deficit, and maintaining a strong peso.

"The Mexicans have put their external debt problems behind them and opened the economy," Mr. Rhodes said.

Bank of Boston Active

Among large regional banks, Bank of Boston Corp. was the biggest lender.

The bank, with a large local network in Latin America, sharply increased outstanding loans to developing countries by $1 billion last year, to $2.2 billion, it said.

That included $940 million to Argentina, up from $535 million at yearend 1991; and $560 million to Brazil, up from $305 million. Lending to Chile doubled to around $400 million.

The bank however noted that about 40% of its loans to Argentina were funded in dollars. It added that the majority of its loans to Brazil were short term and trade related.

"Based on our operations and knowledge of large corporations, we're very comfortable with our cross-border and indigenous exposure and continue to grow them in 1993," said Constantin Boden, executive vice president at Bank of Boston.

Mr. Boden said that the bank's lending in Brazil has flattened out since the start of the year but has continued to increase in Argentina. He added that the bank is also concerned it would get frozen out of loan syndications in rapidly growing markets in Latin America if it did not participate now. □

THE MARKETS
Long Rates Up in Reaction to Commodity Price Rise

Long-term interest rates rose on Thursday, as rising commodity prices and some uneasiness about today's employment report offset news ordinarily favorable for Treasuries.

The yield on the 30-year bond rose to 6.69% from 6.67%. Ten-year notes yielded 5.78%, up from 5.77%. And two-year notes were unchanged at 3.99%.

But short-term rates fell. The bond-equivalent yield on three-month bills dropped to 3.04% from 3.06%. Federal funds were quoted at 3.18%, down from 3.50%.

Rumors Rattle Nerves

The short end had some early jitters on rumors that the Federal Reserve Board had called an "emergency" meeting for today. The central bank quickly issued a statement that it was simply holding its regular Monday meeting a day early because of the July 4 holiday.

On the long end, "there was some 'CRB-itis' in the market," said Alan Levenson, money market economist for UBS Securities.

He was referring to market reaction to a big increase in the Commodity Research Bureau's index, which measures 21 futures prices. The index rose 2.61 points, or 1.3%, to 209.73. A $8.80-an-ounce increase in the price of gold – a major barometer of inflation – helped push up the CRB index.

But higher commodity prices were the only indication of economic strength on Thursday.

Manufacturing Index Down

The National Association of Purchasing Management's index of manufacturing activity registered a weaker-than-expected 48.3 last month. A reading below 50 indicates a slowdown in manufacturing. In May, the index was 51.1.

Another positive factor for bonds was Germany's decision to cut interest rates today. The Bundesbank lowered the discount rate by half a point to 6.75% and the Lombard rate by a quarter point to 8.25%.

Stocks were down across the board. The Dow Jones industrial average lost 5.54 points to 3,510.54. The Standard & Poor's 500 index lost 1.51 to 449.02. The Nasdaq composite index fell 0.37 to 703.88.

The dollar rose to 107.33 yen but fell to 1.6943 German marks.

— Bart Frust

Fed Expected To End Bias For Rate Hike

By BART FRAUST

Federal Reserve policymakers are expected to back away from the current pro-tightening stance in light of the weak employment report released last Friday.

The Federal Open Market Committee, which meets today and tomorrow, is likely to return to a neutral stance on monetary policy, favoring neither a tightening nor an easing.

"The last thing we would want to do now is even talk about raising interest rates," said Sung Won Sohn, chief economist at Norwest Corp.

And the following FOMC meeting, on Aug. 17, may result

ECONOMIC OUTLOOK

in another switch, this time to a pro-easing bias.

"If the economic data between now and then show the economy as soft as the data of recent weeks, the FOMC will vote to favor an easing," said Eugene Sherman, economist for M.A. Schapiro & Co.

"Right now, we are more likely to see a Fed easing than a Fed tightening," said Moody's Investors Service economist John Lonski.

For Appearances' Sake

Gary Schlossberg, economist at Wells Fargo & Co., is less sure of a change in policy.

"The Fed may not want to appear to be flip-flopping, and it may make more political sense to keep the bias but still not do anything," he said.

The discount rate and the target for the federal funds rate are both now 3%.

Under the current pro-tightening stance, Federal Reserve Chairman Alan Greenspan has authority to nudge the target for the federal funds rate a half point higher.

A Complete Turnaround

A change to neutral would mean Mr. Greenspan could not ease or tighten without a telephone conference with other committee members.

Talk of lower rates marks a complete turnaround in psychology from just six weeks ago, when the committee adopted the pro-tightening bias amid fears that inflation was about to explode.

But inflation fears – still alive because of increases in the prices of gold and other commodities – have become subordinate to worries about stumbling economic growth.

The Labor Department said

Explosion in Offerings

Bank debt and equity offered to the public, in billions

Types of issues in the second quarter, in billions

Source: Securities Data Co.

Banks Break Another Record For Stock and Bond Offerings

By DAVID SIEGEL

Stock and debt issuance by banks went into overdrive in the second quarter, with a record $17.2 billion in offerings in the United States.

The heavy volume, up $2 billion from the record set in the previous quarter, was fueled once again by historically low interest rates.

Dozens of banks rushed to lock in the bargain rates, with many institutions refinancing higher-cost debt. Foreign banks were particularly active, issuing $4.8 billion in debt and equity.

'Bank Heavens'

With no upturn in rates in sight, conditions are expected to remain favorable for stock and debt issuance, providing one of a number of bright spots for the rebounding industry.

"This is bank heaven, because so many things are going well for the industry right now," said Tony Smith, bond analyst with First Boston Corp. "Credit quality is improving, investor receptivity is improving, and the regulatory environment is showing signs of improvement as well," he said.

Most of the securities issues were in the debt markets. Underwritten senior debt sales totaled a record $9.3 billion, and subordinated debt reached $4.8 billion, the second-highest quarterly total, according to Securities Data Co.

Preferred-stock issuance totaled $2.1 billion, just short of a record, and common stock added up to $1 billion.

Outstanding Bonds Replaced

Many of the bond offerings replaced outstanding debt. About $2.2 billion in subordinated debt was called in the second quarter, equal to almost half of the new subordinated issues.

Among the new issuers that called in debt during the quarter

Chemical And Chase Upgraded By Moody's

By BART FRAUST

Continuing its yearlong series of banking industry upgrades, Moody's Investors Service Inc. on Friday raised its ratings on Chemical Banking Corp. and Chase Manhattan Corp.

Chemical's senior debt was raised to A3 from Baa1, subordinated debt to Baa1 from Baa2, and preferred stock to A3 from Baa2.

Long-term deposits of subsidiary banks were increased to A1 from A2.

Besides improved asset quality, Moody's cited Chemical's stronger core earnings, particularly noninterest and trading income.

Ratios Could Be Higher

On the negative side, Moody's said Chemical's capital ratios are still somewhat low compared with those of other banking companies.

At March 31, the Tier 1 capital ratio stood at 7.46%. The average for banking companies with more than $25 billion in assets was 8.81%, according to Keefe, Bruyette & Woods Inc.

At Chase, senior debt was increased to Baa1 from Baa2 and subordinated debt and preferred stock to Baa2 from Ba3.

Long-term deposits of Chase Manhattan Bank were upgraded to A2 from A3, while short-term deposits were raised to Prime-1 from Prime-2.

The upgrades reflect Chase's

Bank Stocks Expected to Bounce Back

By RICHARD LAYNE

Despite a retreat on Friday, bank stocks are expected to resume their fast climb this week.

"I think bank stocks will move up 10% in the next three weeks," said Robert A. Bonelli, executive director of the Ernst Financial Group., which invests in banks.

Disappointing news that the economy gained a scant 13,000 jobs – rather than the 130,000 consensus forecast from economists – sparked a selloff in the broader market.

Vote of Confidence

Bank stocks did not fall as sharply as the overall market. Mr. Bonelli and other bullish money managers took the muted reaction as a sign of renewed support for the sector.

Only three major banks lost $1 or more: Wells Fargo & Co., which fell $1.875 to $108.25; Bankers Trust New York Co., which dropped $1.125 to $73.875; and First Union Corp., which gave up $1 to $46.75.

Wide Gap

Percentage change in indexes

* Weighted average of top 225 banks as ranked by market capitalization

Friday's figures as of 2 p.m.

Source: DNI, Securities

Some of the selling of bank shares represented profit taking, analysts said. Before Friday, for example, Bankers Trust had been up 5% last week. Society Corp., which lost 75 cents to $34.875, had gained 5.5% from Monday through Thursday.

A Good Week

Even with the downturn, bank stocks soared last week. As of 2 p.m. Friday, the *American Banker* index had gained 1.9%, versus a drop of 0.2% in the Dow Jones industrial average.

Meridian Bancorp had the gainers. Shares of the Reading, Pa., bank jumped 8.4%, partly on rumors that it was going to receive a takeover offer.

CoreStates Financial Corp., Philadelphia, has been frequently mentioned as a partner for Meridian.

NEWS *briefs*

First USA Plans to Offer 5 Million Shares

DALLAS — First USA Inc. said it had registered with the Security and Exchange Commission for a public offering of five million shares of common stock, with Merrill Lynch & Co. as lead manager.

First USA, the owner of a credit card bank in Delaware, resulted from a spinoff by Lomas Financial Corp. in 1989. Four million shares will be sold by existing First USA stockholders and one million will be issued by the company.

Four million shares will be offered in North America and the rest in other countries. The share price Friday afternoon was $40.50, down $2.25.

First USA, which has issued about four million cards, said it will use proceeds for general corporate purposes, which may include a reduction of debt and financing of expansion.

Glenfed Unit to Sell 23 Offices in Florida

GLENDALE, Calif. — Glendale Federal Bank said it will sell its 23 banking offices in the Tampa-St. Petersburg and Orlando markets to help meet the capital-raising requirements in a plan that was recently approved by the Office of Thrift Supervision.

The 23 offices have $1.1 billion of deposits.

The Glenfed Inc. subsidiary plans to retain 37 banking offices with $3 billion of deposits in southeast Florida, which Glendale considers a "primary market" along with California and Washington State.

Fifth Third Signs Deal to Buy Tristate

CINCINNATI — Fifth Third Bancorp said it signed a definitive agreement to acquire Tristate Bancorp for stock valued at about $67.8 million, or $20.78 per Tristate share.

Tristate owns the $200 million-asset Cottage Savings Association of Cincinnati. Its share price was up $3 early Friday afternoon, to a 52-week high of $19.25.

The merger is expected to be completed in the fourth quarter, pending shareholder and regulatory approval.

Comptroller Seizes Eagle Bank of Illinois

WASHINGTON — The Office of the Comptroller of the Currency closed Eagle Bank of Champaign County in Illinois and appointed the Federal Deposit Insurance Corp. as receiver.

Busey Bank of Urbana, Ill., assumed $16.6 million in about 2,500 insured deposit accounts and agreed to purchase $17.7 million of the failed bank's $20 million of assets.

The Rantoul-based bank was critically undercapitalized and failed to submit an acceptable capital restoration plan, the Comptroller's office said.

Centura in Pact for Thrift in Western N.C.

ROCKY MOUNT, N.C. — Centura Banks Inc. said it has an agreement to acquire Canton Savings Bank.

The Canton, N.C., thrift will convert from mutual to stock ownership and simultaneously merge into Centura's principal subsidiary, Centura Bank.

The briefs were compiled from staff and wire reports.

Correction

The number of municipal bond funds in NationsBank Corp.'s proprietary fund family was misstated in a June 29 article.

NationsBank has one national and eight single-state municipal funds. Each fund has multiple "classes of shares," each with a separate pricing structure that can affect performance results. The numbers in the article referred to the share-classes.

Watchdog Agency Criticizes The FDIC's Internal Controls

By BARBARA A. REHM

WASHINGTON — The General Accounting Office has approved the 1992 financial statements for the bank and thrift insurance funds, but has sounded a warning over internal controls.

In an 18-page report signed by Comptroller General Charles A. Bowsher, the GAO said last week that the Federal Deposit Insurance Corp., which administers both insurance funds, does not have adequate internal controls to ensure that:

- Assets inherited from failed banks are safeguarded against loss from unauthorized use.
- Unauthorized transactions are not executed.
- Transactions are properly recorded, processed, and summarized to permit the preparation of financial statements and maintain accountability for assets.

Charles A. Bowsher
Keeping up the pressure.

Gaps in Implementation

The congressional audit agency also criticized the FDIC's implementation of the FDIC Improvement Act.

"We are concerned that the very limited implementing regulations recently issued by FDIC . . . will not facilitate achieving the objectives of the Congress in enacting these reforms," the report stated. It did not specify which parts of the law were not being implemently sufficiently.

The GAO also repeated charges, first leveled in February, that the FDIC and the other federal regulators are not properly examining banks and thrifts.

The watchdog agency stopped short of recommending an overhaul but noted the overlap and inconsistencies in the four-agency system and said it should be "reexamined."

The report said the Bank Insurance Fund had net income of $6.9 billion in 1992, its first positive year since 1987. The fund's deficit fell to $101 million from $7 billion in 1991. Unaudited figures had the bank fund back in the black at the end of the first quarter at $1.2 billion.

The FDIC reduced its reserve for future possible losses to $10.8 billion at the end of 1992 from $16.3 billion in 1991. The GAO said the reserve could be reduced even further during 1993.

Today the bank fund has about 6 cents for every $100 it insures. In 1991, Congress instructed the FDIC to reach $1.25 per $100 by 2006.

Regarding internal controls, the GAO said the FDIC is not keeping a tight rein on outside companies contracted to manage and sell $11 billion in assets.

The GAO also faulted the FDIC's tracking of employee time in allocating overhead costs to each insurance fund, which could result in overcharges for the Savings Association Insurance Fund.

The FDIC also did not track fees owed to SAIF from thrifts that switched to the Bank Insurance Fund since 1990, the GAO said. As a result, the FDIC had to repay SAIF $146 million.

A day after the GAO released its report, the FDIC put out a press release detailing six changes designed to strengthen internal controls. The GAO said it will detail the FDIC's remedies in an upcoming report as well as evaluate accounting controls. □

The Private Market ...Revealed

Clues to the shadowy world of private placements come to light each week under the magnifying glass of *Private Placement Reporter*, an *American Banker* newsletter.

YOU'LL UNEARTH:
- Who is **buying** these deals— and why.
- What other banks and underwriters **charge to get the deals done**.
- The **best rates** in the traditional and Rule 144A markets, and **who can get them** for your company.
- The latest **flavor-of-the-month** deal structure innovation, and **who benefits**.

Private Placement Reporter answers these questions and more, and keeps you up to date on secondary-market trends, reg rights deal progress, and regulatory changes affecting the market.

If you want a leg up in private-market negotiations, you must read *Private Placement Reporter* — you can be sure your competitors are already on our subscription list.

First Union Makes Huge Systems Conversion

By BRIAN HELLAUER

Moving closer to its goal of creating a more unified branch network, First Union Corp. recently completed what officials said was the largest systems conversion in U.S. banking history.

The nation's ninth-largest banking company moved more than two million customer accounts at its First Union National Bank of Florida subsidiary to a new deposit accounting system during a single weekend in May.

First Union plans to have all of its approximately eight million deposit accounts converted to the deposit system by the end of the year.

"It's a significant challenge when thousands of people are involved in a project that takes place over a single weekend," said Austin A. Adams, a First Union executive vice president and head of operations and automation division, in a telephone interview.

The software will help standardize checking and savings products.

More than 2,000 employees were involved in the Florida conversion.

At the core of the deposit system, known as Emerald, is proprietary software that took more than four years and $25 million to develop.

Rather than purchase a commercially available software package, First Union developed its own software because "we simply didn't see any package within the marketplace with the size, flexibility, and features we were looking for," said Mr. Adams.

Seeking Better Performance

The largest software development project in the industry is believed to be the Strategic Banking System, a joint project of Banc One Corp., Columbus, Ohio, Norwest Corp. Minneapolis, and Electronic Data Systems Corp., Plano, Tex., a unit of General Motors.

That project, yet to be completed, includes deposit, lending, and demographic information systems, and has been more than six years and $100 million in the making.

Mr. Adams said the Emerald software, based on International Business Machines Corp. DB2 relational data base software, will help standardize First Union's checking and savings products, and deliver improved system performance.

Unrealized Advantage

If interstate banking laws are further relaxed, said Mr. Adams, First Union customers will be able to conduct transactions at any of the bank's branches.

Mr. Adams called that capability a competitive advantage, but "the laws don't allow us to do anything meaningful with that yet," he said.

Branch personnel can also make changes to customer accounts on-screen while the customer is present, rather than writing down the changes and forwarding them for processing, he said.

"This conversion offers substantive improvement of the capabilities within our branch network," said Mr. Adams.

He added that Emerald reduces the cycle time for developing and introducing new products, offers increased flexibility for product pricing, and includes components for tracking employee sales and incentives.

There are other issues besides common deposit systems. "Everybody who assembles banks gets multiple systems," said George P. DiNardo, a consultant with Coopers & Lybrand, New York. "The move to a single system can beget huge savings."

First Union began developing the new deposit system in 1988, in an effort to develop a standard set of products for a branch network pieced together through more than 30 acquisitions.

"It's a good, logical, economical, smart move to develop a common deposit system. It doesn't mean there was any technological wizardry involved," said Mr. DiNardo.

First Union has grown rapidly since the onset of interstate banking. It currently has nearly $72 billion of assets and 1,300 branches in seven states and the District of Columbia.

"A significant challenge"

WHEN PARENTS ARE LEARNING ABOUT COLLEGE, WILL THEY LEARN ABOUT YOUR BANK?

WHEN FAAs RECOMMEND PLUS LENDERS, YOUR NAME CAN BE AT THE TOP OF THE LIST.

Recent changes to government-backed education lending to parents will stimulate the demand for PLUS loans. But before parents make their decisions, you can expect many of them to confer in depth with campus Financial Aid Administrators. Today it's the FAA who is helping parents decide how, when, and *where* to borrow.

"Where" is important. FAAs want parents to choose the PLUS loans that are easiest to repay. And that means borrowing from lenders who work with Sallie Mae.

Sallie Mae's PLUS loans give parents more repayment options. There is a choice of level or graduated repayment accounts, as well as loan consolidation. And with the new SMART REWARDS™ program, parents who consolidate their loans can earn a 1% interest rate reduction simply by making their initial payments on time.

FAAs know these options can make all the difference as parents do their arithmetic and decide how to manage college costs.

When FAAs say to parents, "Here's who to talk to about PLUS loans," make sure you're at the top of the list. Your Sallie Mae Sales Representative can help you get there.

SallieMae

Your partner in success.

SMART REWARDS™ is a service mark of the Student Loan Marketing Association (Sallie Mae).

Banks Should Get Same Leeway The 'Parallel System' Enjoys

Jane D'Arista and Tom Schlesinger's paper on the "parallel banking system," summarized in a comment in the April 2 *American Banker*, does a special service for those of us who study the U.S. banking system and its regulation.

The authors have presented a useful comparison between traditional banking's performance over the past dozen years and that of finance companies, the commercial paper market, and money market mutual funds.

This parallel system has exploited certain natural advantages over the fully regulated banking system.

Equal Regulation Proposed

Ms. D'Arista and Mr. Schlesinger conclude that the parallel banking system should be regulated like commercial banking to eliminate the inequalities.

But I believe the conclusion should be the opposite. We should learn the lessons of efficiency taught by the parallel system and amend the regulation of bank holding companies to permit them to achieve some of the same efficiencies.

By freeing holding companies from limits on the types of business they can do, we could release significant creative financial energy.

The Parallel System

In the parallel banking system, finance companies (GE Capital, GMAC, etc.) make loans to business that banks otherwise might make. Their terms are more favorable than the banks are afford, in part because the finance companies and their funding sources bear a lesser regulatory burden.

The finance companies fund themselves by issuing commercial paper, much of which is bought by money market mutual funds. The banks assist in the process by providing backup lines of credit for the finance companies' commercial paper.

Neither the finance companies nor the mutual funds have to maintain reserves at the Fed, pay deposit insurance premiums, or comply with the Community Reinvestment Act or the full array of prudential bank regulatory requirements. They also do not have the expense of retail branches.

Ms. D'Arista and Mr. Schlesinger express a number of concerns about the parallel system, beginning with the Federal Reserve System's ability to conduct monetary policy.

If so much banking is done outside the "real" banking system, they ask, will the Fed have insufficient control over the flow of money to be able to conduct monetary policy?

Second, in the absence of supervision, surprise events could trigger a breakdown. The development of a "thickly tangled web" of bank guarantees ensures that a future "confidence-shaking crisis would precipitate systemic consequences," the report says.

This would lead to the third worrisome consequence: These unsupervised issuers of commercial paper would have access to the Fed's discount window through the back door of the bank lines of credit that support their commercial paper.

Finally, the parallel banking system is unfair competition in eroding the regular banking system. And ownership of finance companies by industrial companies leads to conflicts of interests and a tendency toward tying arrangements.

Spreading the Risk

To me, the D'Arista-Schlesinger analysis is flawed. A preferable system that has managed to spread formerly concentrated risks efficiently. Rather than more dangerous than the banking system, the parallel system seems to me to be safer.

Money market mutual funds' liabilities are significantly different from – and safer than – the banks' deposits. In fact, they are not liabilities at all; the shareholders' interest in money market mutual funds are, like the interests of all stockholders of mutual funds, equity interests.

Therefore, as long as there are liquidity mechanisms to support the money market mutual fund – though a fund theoretically might have to "break the buck," which no money fund has done in 20 years of existence – it would not fail, no matter what losses it sustained in its portfolio. Twenty years ago runs on money funds generically were theorized. Today, these seem unlikely.

Protected by Diversification

Also, the money market funds are quite diversified. Even those that should be perceived as riskiest – the ones that invest heavily in commercial paper – are, by law, diversified.

The failure of no single issue held in portfolio could cause

MONEY MARKET *mutual funds' liabilities are significantly different from – and safer than – the banks' deposits. In fact, they are not liabilities at all.*

more than a couple of percentage points of loss, and this potential loss is backed by banks' lines of credit to the issuers.

The fact that in most cases a failed finance company would be eligible for Chapter 11 treatment is a distinct advantage over the banking system because the assets stay out of the government's hands and the liquidation takes place in whatever way the private sector creditors believe will maximize the ultimate values.

Monetary Implications

To D'Arista and Schelsinger, the monetary policy implications of the parallel banking system present the most important reason to regulate that system.

From my humble position as a relatively innumerate noneconomist, it appears that the genie is out of the bottle. To regulate for the sake of monetary policy would merely push a new parallel banking system in some other direction, all at the cost of the U.S. institutions' place internationally and American companies' ability to obtain short-term financing.

In addition, the parallel banking system is far from unregulated. Several of the leading finance companies are supervised by the New York State Banking Department as Article 12 companies. The mutual funds are overseen by the SEC. And the banks that provide the backup lines are, of course, regulated.

Functional Regulation

Though it is the kind of catch phrase that should naturally suspect, functional regulation is a practical way to regulate financial markets in the interests of fair competition and competitive pricing.

Here I agree with D'Arista and Schlesinger: Regulate a pool of capital that is not to be public the same way (under the Investment Company Act), regardless of who sells it or who manages it. Regulate sales practices the same way, regardless of who is doing the selling. And carry out these examples wherever the principle works.

But bankline "prudential" rules need to be imposed only on enterprises that present themselves as safe repositories for the public's funds that in fact make their profits by taking risks with those funds.

Safeguarding the Public

Prudential regulation of banking is necessary because banks take deposits from the public. It is this public protection goal (coupled with the need to protect the deposit insurance fund) that leads to examination and supervision, capital requirement, and so forth. Banking is "special."

The public cannot evaluate the safety of a bank. And because banks have "other people's money," history shows that banks present terrible temptations.

Is issuing commercial paper special? No, it is not. Just as lending is not special and does not require particular regulation. Anyone can make a loan to anyone else without consequences to the system.

The issuer of commercial paper does not hold itself out as a safe repository of the public's funds. The issuer says, "I promise to repay." But that promise is subject to the same limitations as any other promise to pay that is made in the society.

Measures of Soundness

The purchaser is relying not on the status of the issuer or on the protections afforded by a regulatory system but on the issuer's financial strength, as determined either by direct observation of financial information or by the evaluation of the rating agencies. There is nothing "special" here.

We should be removing unnecessary barriers to bank competition, not erecting new ones. Regulate the disclosures required of all lenders the same. Regulate the community obligations of all lenders the same. Regulate the duties of all similarly situated fiduciaries the same.

But don't impose capital requirements and prudential restraints on entities that do not hold themselves out to the public as being a type of institution with which safety is automatically associated.

Banks, insurance companies, and pension funds hold themselves out as having a strength on which the public can rely, but the public has no means of determining whether the strength in fact exists. Therefore these entities need to be regulated so that the public trust will be justified.

Benefits of Specialization

But holding companies do not fall into this category. They really are more a part of the parallel banking system than a part of the banking system itself.

The new systems involve less

Letters to the Editor

Before Heeding Criticism of Fed's Pricing, Take a Look at Who Is Crying Foul

To the Editor:

Fairness is never an easy issue. This is particularly so when considering the role of the Federal Reserve as a provider of services to banking ["Fed's Decision on Pricing Raises Questions of Fairness," June 22, page 4].

Because of its role and structure, the Fed is constantly exposed to fairness questions. But the major complaints come from the large banks, usually members of the Association of Reserve City Bankers, who see the Fed infringing on their territory.

Consider, though, that the Fed's role as check-clearing agent ensures access to thousands of community banks that use the services directly or through a bankers' bank. The services are fairly priced and of the highest quality and innovation, and the Fed is not a competitor of those thousands of banks.

In years gone by, before jet couriers and high-speed electronics, before wide-area branching and virtually unlimited holding-company expansion, check clearing by the private sector worked very well.

The big banks in Federal Reserve cities had the capacity and

THE FED OFFERS *a competitive option to community banks.*

network for clearing; they also did not compete with their customer banks in local communities.

Looking Out for Themselves

Competition has changed banking. In many instances, the community bank, were it not for the availability of the Fed or a bank-owned bank, would purchase its vital clearing services from a competitor, often an across-the-street competitor. Is this fair?

In the June 22 commentary, Robert M. Fitzgerald and Ian W. Macoy wrote, respectively, as president of the Chicago Clearing House and as director of the National Organization of Clearing Houses. The ownership of most such clearing houses consists of large banks.

They often say the ownership is widespread, but in practice the votes and policies are with the large banks. Banks outside the major city are excluded from ownership and management.

Fairness is always a question of whose ox is being gored. Where the Fed is concerned, a relatively few private providers of clearing services are questioning the fairly priced services delivered to thousands of financial institutions.

Helge S. Christensen
President
Bankers' Bank of Wisconsin
Madison

Negative Yield on Treasuries in the 1930s Was Not a Case Of Investors Paying Uncle Sam to Hold Their Money

To the Editor:

I basically agree with the main points of Paul Nadler's June 9 column ["Given the Fed's Priorities, Look for It to Tighten Money"]. But it is a mistake to say that "people would pay the Treasury to take their money."

The short- and local tax effects appear to have caused some extremely small negative yields, on the order of minus 0.05%. The yields on the order of minus 1% to minus 2% that were mentioned were caused by the unique institutional environment in which Treasury securities were issued.

Payment for an Option Value

Essentially, the negative yields were the price investors paid for an option value in the securities.

During the 1930s, Treasury-issued securities with a coupon rate that implied the securities should sell above par, but they sold at par. The spread was a way of underwriting the issue.

With this fixed fee, the Treasury rationed the issue by exchanging these securities for maturing securities, giving the latter a greater value than that implied by their principal and interest.

No Long-Run Price Objective

(See Stephen G. Cecchetti, "The Case of the Negative Nominal Interest Rates: New Estimates of the Term Structure of Interest Rates During the Great Depression," *Journal of Political Economy*, December 1988, pages 1,114 through 1,141.

On the main point of Mr. Nadler's article, it is important to note that the problem of predicting Federal Reserve policy is complicated not by the presence of multiple objectives, but by the lack of commitment to a long-run price objective.

The crucial insight is that there is no long-term tradeoff between inflation and real growth. The attempt to stimulate real growth can be counterproductive when it leads to higher inflation expectations. Yet, such response is rational in the absence of commitment to a long-run price objective.

I have been arguing that monetary policy should be conducted with a long-term inflation objective, a particular price index that can make clear whether the policy is on track.

Such an explicit objective would not only concentrate inflation expectations and reduce an important source of macroeconomic uncertainty, it might make it unnecessary to write columns with the opening sentence, "How can you predict Federal Reserve policy in a world of stagflation?"

William T. Gavin
Assistant vice president and economist
Federal Reserve Bank of Cleveland

Banks Should Be Allowed Same Freedoms the 'Parallel System' Enjoys

Continued from *page 4*

risk and deliver services at lower cost not only because they have regulatory advantages, but also because they encourage functional specialization and spread risks broadly.

The banking system therefore should be freed to perform more like the parallel system. This means freeing holding companies to engage in other businesses, eliminating restrictions on holding companies' strength or activities that do not involve their banks, and freeing the banks to act as agents in a variety of types of businesses, including securities sales, mutual funds, and all types of insurance.

The parallel system has that freedom, with no apparent dangerous consequences despite the extreme financial pressures of the last dozen years.

Strength Above All

If the depository system shrinks and intermediates less, that may not be a bad thing – even for banks. The point is for banks to stay strong, not necessarily big or even at some set percentage of the country's financial assets.

If bank owners – holding companies – also participated in less regulated intermediation, that would hold promise for providing credit at the lowest possible cost.

We therefore should encourage bank holding companies to become part of the parallel banking system, not discourage them from doing so from continuing its innovative role in the financial marketplace. □

Charter Federal Firming Up Plan for Offering

BRISTOL, Va. — Charter Federal Savings Bank said it expects the record date for its rights offering to shareholders to be on or about July 9.

As reported on June 4, the thrift expects to issue rights to purchase 21,755,562 common shares, based on the 3,656,397 common shares outstanding June 1.

The 5.95 subscription rights per common share would permit new share purchases at $2 each. Charter said the rights allocated to each shareholder will be transferable, and each shareholder will have the opportunity to subscribe for additional common shares.

Texas Bankers Expect Trade Pact to Bring Jobs

By JOHN RACINE

From the Regions

IN TEXAS, WHERE OPTIMISTS once forecast $100-a-barrel oil, bankers and economists are talking big about the effects of the proposed free-trade pact with Mexico.

Shrugging off last week's delaying ruling by a federal judge that forces the U.S. government to study the environmental impact of the proposed North American Free Trade Agreement, Texans remain gung ho about the pact, which would join the United States, Canada, and Mexico into the world's largest trading bloc.

Texas, they say, is already reaping the benefits of the economic reforms Mexico put in place in the wake of its debilitating debt crisis of the early 1980s. They reject speculation that Nafta, as the trade pact is known, would cause U.S. jobs to be exported south of the border.

"The fact is that free trade is already here," said Robert S. McClane, president of Cullen/Frost Bankers Inc., a San Antonio-based company with $3.2 billion of assets. "The broader trend we expect to see is the development of new jobs in this area."

Robert W. Gilmer

Robert W. Gilmer, a senior economist with the Federal Reserve Bank of Dallas, said Texas and the Southwest in general are at the epicenter of a U.S.-Mexico trade flow that hit a record $65 billion in fiscal 1991, the last year for which statistics have been compiled. "Overall, there are more jobs that will be created in the U.S. than will be lost," he said.

Some Texas economists project a 50% growth in trade-related employment, to 304,000 jobs by the year 2000. Much of that would come from manufacturing plants that expand or relocate to areas near points of entry at the Mexican border. Mr. Gilmer also expects benefits for those in financial services, from accountants to bankers.

"I think Nafta is really going to be a services revolution," he said, but cautioned he has no hard data for his projection.

Banks expect to capitalize on Nafta by moving directly into Mexico or simply by bulking up their business lending – and eventually their retail presence – near the Mexican border.

John Welch, a senior economist and Latin American expert at the Dallas Fed, said Chemical Banking Corp's Texas Commerce Bank subsidiary and NationsBank Texas are planning to branch into Mexico. Even banks as far away as Bank of Boston, a big Latin American lender, are ready to pounce once Nafta kicks in. Smaller banks, however, are deterred by Mexico's requiring a relatively large capitalization for alien banks.

Among Texas banks, Mr. Welch said, "you'll mostly see an expansion of existing lines of business."

Foreign bank companies that already have oil-related offices in Houston would take advantage of trade financing opportunities, too. That, in turn could help Houston regain some of the luster it lost when global energy markets collapsed in 1986.

"Houston has really lost its niche in the bond industry because of the decline of oil and gas industries," said Mr. Gilmer, the Dallas Fed economist. "Trade finance could provide the banks with a niche to fill."

B of A Splitting Asia Operations Into Retail and Wholesale Units

By SAM ZUCKERMAN

SAN FRANCISCO — In its first significant return to international consumer banking in recent years, BankAmerica Corp. is setting up a special retail division for Asia.

BankAmerica said last week that it plans to split its Hong Kong-based Asia division into separate wholesale and retail divisions, effective Aug. 1.

The core of the retail division will be Bank of America (Asia) Ltd., a 22-branch bank in Hong Kong that BankAmerica inherited from Security Pacific Corp. With $2.3 billion of assets, it is Hong Kong's ninth-largest commercial bank.

Low Bids

BankAmerica, which is based in San Francisco, initially planned to sell the profitable Asian bank, but reversed the decision about six months ago. Bids for the unit were low, and BankAmerica judged it was

The core of the retail division will be Bank of America (Asia) in Hong Kong.

"worth more than potential buyers were willing to pay," a bank spokesman said.

The Hong Kong bank earned $42 million in 1992, for a return on assets of 2.02%.

The 81-year-old institution, founded as the Bank of Canton, operates mainly as a consumer bank, but also serves middle-market and small-business customers.

BankAmerica, the United State's second-largest bank company, shut or sold most of its overseas consumer banking businesses in the early and mid-1980s when it was going through a financial crisis. The original plan to sell Security Pacific's Hong Kong bank was in keeping with that strategy.

The Asia retail division will be run by James E. Hulihan, 50, who is currently the Hong Kong bank's chief executive.

New Wholesale Chief

The new chief of BankAmerica's wholesale operations in Asia will be Kai S. Nargolwala, 43, who is currently senior credit officer in the Asia division. He will oversee the bank's Asian trading, payments, corporate finance, and commercial banking businesses.

Both divisions will report to David A. Coulter, a BankAmerica vice chairman who is chief of wholesale and international banking operations.

The current Asia division head, group executive vice president John V. Rindlaub, assumes new responsibilities as chairman and chief executive officer of Seattle-First National Bank. BankAmerica's Washington State subsidiary, SeaFirst Bank. □

Loans to Small Firms Are Off, Poll Finds

By STEVE KLINKERMAN

Small businesses are asking for fewer bank loans than a year ago and getting rejected more often, according to a new survey conducted by Arthur Andersen Enterprise Group and National Small Business United.

The national survey of 687 small businesses found that 45% of respondents applied for a bank loan during the 12 months ended in April, compared with 49% in the year-earlier survey. The percentage of loan applications that were approved dropped to 75% from 77%.

The percentage of loan applicants who reported "problems obtaining loans" climbed to 68% from 52% in the 1992 survey.

'Tighter Regulations'

Twice as many loan applicants this year – 40% versus 20% – blamed "tighter regulations" over banks as the biggest obstacle to their gaining credit. Only thirty-two percent said they had not encountered any problems, down from 45% a year earlier.

The survey sponsor said the results underscore the link between tight bank regulation and a weak economy and strengthen the Clinton Administration's plan to encourage more character loans.

Northeast, Southeast Hit Hard

"Access to credit prevents owners of small and midsize businesses from having to lay off employees or slow down production [while] waiting for payments from previous sales," said John Galles, executive vice president of the NSBU, a nonprofit group representing small-business owners. "Ultimately, character loans can produce sales and jobs."

The survey found the most severe problems among businesses in the Northeast and Southeast, where 47% and 45% of respondents respectively reported unfulfilled capital needs. That contrasts with 31% of firms reporting similar problems in the Midwest and 26% on the West Coast.

Bank loan applications had an approval rate of 84% in the Midwest, 75% in the West, 70% in the South, and 67% in the Northeast, the survey found.

Despite complaints about credit access, most respondents claim their business are improving. Two-thirds forecast revenue gains over the next 12 months, while 59% said they expected higher profits. One out of every four respondents anticipated hiring at least one additional employee.

However, 52% of the firms surveyed warned that a "recessionary economy" is the biggest challenge to their survival and growth. □

Opportunity is Spelled LDC DEBT REPORT

Emerging Markets are risky, notoriously inefficient, known for changing rules and limited public disclosure. Knowing what's really going on spells the difference between opportunity and loss.

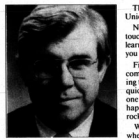
The *American Banker*'s weekly *LDC Debt Report* delivers the most accurate, objective, succinct information available on emerging-market debt. *LDC Debt Report* provides the astute investor with news, reviews, and strategic insights. The popular Market section summarizes each week's developments, quoting bid and offer prices for 26 developing-country loans and 18 emerging-market Eurobonds. It also tracks the performance of selected equity markets.

If you must know what's going on in key emerging markets, recent trading, economics and politics, the World Bank, and more, LDC DEBT REPORT is a must read every week.

Read it free for 4 weeks! Just fax your letterhead to 212-943-7852, or call Hans Winberg at 212-943-8351

From 1st Union's Chief, Tales of the Acquisition Trail

Edward E. Crutchfield Jr., chairman and chief executive of First Union Corp., recently spoke to a utilities industry group on "The Agony and the Ecstasy" of his bank's experience with acquisitions. His remarks are excerpted below.



Edward E. Crutchfield Jr.

We've had some highs and some lows since the advent of interBanc banking eight years – and 35 acquisitions – ago.

I will tell you candidly, It's been interesting and, at times, scary.

It's been a little like a scene from "Butch Cassidy and the Sundance Kid." After several days, Butch and Sundance come to a high cliff edge where they have to either jump over or surrender to the posse. They take one long look, scream and jump, hoping the water in the creek below is six feet deep instead of six inches deep.

That's what going into a merger and acquisition mode feels like – jumping over a high cliff.

The Rules Changed

It's been a tough adjustment for many bankers used to a safe, predictable, regulated world.

Historically we've been rewarded for predictability.

If your industry is on the same road traveled by banks, there's some anxiety to come. Of the banks that made up the nation's top 50 only seven years ago, 17 have disappeared – mostly through mergers.

There are simply too many companies chasing too little business in banking and in utilities.

At the same time, the barriers to entry in both industries are beginning to crumble. It's much easier for others to enter like services or to build a power plant, often with much less regulation and capital investment.

Lure of Cost Reduction

The opportunity to reduce expenses through consolidation has been one of the strongest motivations driving change in the banking industry.

Ten years ago, it was clear to us that the banking industry was about to undergo massive consolidation. We knew it was going to wash over us – whether we were ready or not – whether we wanted it or not.

First Union had three strategic options: buy, sell, or do nothing. First, we investigated selling our company to a handful of buyers. A second option, doing nothing – hoping somebody would later buy us out at a big price – seemed like a passive, myopic, and dangerous strategy.

Stuck in the Middle

We believed midsize banks were doomed. They would be too small to compete with the big banks on the basis of cost, and too large to compete with community banks.

We were one of those mid-size banks, with about $7 billion in assets, operating only in North Carolina. So we took a deep breath and decided to go for it.

That's a short version of First Union's journey since 1985.

Now I'd like to shift gears and touch on a few lessons we learned that might be helpful to you during your journey.

First, learn a lot about the company you're buying (or selling to), and be prepared to move quickly. Too often after mergers, one side or the other finds unhappy surprises. You turn over a rock and find a snake.

We want to know exactly how, when, and if we can consolidate operations and realize the expense savings needed to offset the acquisition cost.

Shortsighted Critics

I emphasize again . . . Wall Street and the financial press have little tolerance for mistakes and little patience for long-term payoffs to shareholders. That makes it tough.

It's important to keep your company's stock price high. That's the currency used for making acquisitions (or the basis for pricing your company to an acquirer).

A second lesson we learned was to pay close attention to the mood of your regulators. This may be old stuff for you, because utilities are probably the only companies more regulated than banks.

Regulators can stop plans for a nuclear power plant or a bank merger in their tracks. I personally learned that close communication with regulators is a must. We also learned not to expect consistency of behavior from regulators.

One last word about regulators and politicians: We don't depend on them to create a level playing field or to protect our industry or our company from competition outside the industry. We try to level the playing field – and protect our markets – with our own actions.

The Human Component

Finally, let me touch on the human side of our merger experience. How you communicate and treat employees can make or break a merger – just as quickly as the operational and financial issues.

Personnel experts say a 15% loss of productivity is typical in a merger, simply because of all the time employees spend worrying about how the new situation will affect them and their co-workers.

The lesson we've learned about employees is this: Never underestimate the traumatic effect of a merger on your employees. The psychological effect can be devastating.

Keep Workers Informed

Our first pledge to acquired employees is to communicate quickly and tell it straight. We give them information as soon as we know it – even when that information is negative.

Their No. 1 question is "Will I have a job?" We move quickly to answer that so they feel back in control of their own fate. It's tough to communicate candidly and build a team when at the same time you're eliminating jobs and most of your news to employees is negative.

We have 32,000 employees – over half of them from recently acquired banks. My most time-consuming task is communicating with employees in groups and staying in touch.

I've saved our most important "lesson learned" for last: Focus intently on listening to and serving the customer. □

Viewpoint

It's important to keep your company's stock price high.

Communication with regulators is a must.

TrustProcessor Can Keep Your Charitable Trusts From Becoming Non-Profit Business.

If your Planned Giving Department's success with CRUTS, CRATS, and Pooled Income Funds has resulted in increased management costs and problems with IRS reporting (5227, 1041A, K-2, 1099-R), you need TrustProcessor. N.J. City Rallied Round Its Only Black-Owned Bank

By FRANKLIN SMITH

NEWARK, N.J. — City National Bank of New Jersey is a community bank – literally.

New Jersey's only minority-owned bank, City National was on the brink of failure four years ago. It came back largely because the community rallied behind it.

"Virtually no one withdrew their money," said Louis E. Prezeau, president and chief executive.

Today, the bank is well on its way to a third consecutive profitable year, its recovery apparently assured. Assets grew by 22% last year, to $62 million, and have grown by another 10%, or $6 million, so far this year.

"We have basically solved all of our problems," said Mr. Prezeau, "and the bank is now focused on the future – on how to do better, and where do we go from here."

A Long Road

As he sees it, City National is a shining example of African-American enterprise and a potential participant in the community development banking program proposed by the Clinton administration.

"I feel we're already a community development bank," he said.

Mr. Prezeau traveled a long road to the point of thinking about City National's future.

At the height of the crisis, "I was very up-front in making sure everyone knew the condition of the bank, and we didn't have a run on deposits," said Mr. Prezeau, whose communications skills clearly had something to do with the customers' confidence level.

"Right now we are seeing a lot more customers coming into the bank," he said. "When you are successful, things seem to happen and the news spreads."

Message of Success

Mr. Prezeau became CEO of the bank and its parent, City National Bancshares, in 1989, when the Office of the Comptroller of the Currency had clamped a cease-and-desist order on the bank.

Before that, Mr. Prezeau was chief operating officer of Freedom National Bank of New York, a pioneering black-owned institution.

He was acting president in 1987, Freedom's peak earnings year. But when that $100 million bank failed in 1990 – after Mr. Prezeau had left for New Jersey – it dealt a high-profile setback to the minority banking community.

Mr. Prezeau, 50, sees an important message in City National's ability to succeed by being community-focused.

"We need need to be a strong and viable financial institution, an example for African-Americans to build better businesses," he said. "It doesn't work by failing."

Fresh Approach

The Newark bank's founder, Charles L. Whigham, a businessman and community leader, turned to Mr. Prezeau for a fresh approach to management and a strategy to overcome the problems cited by the Comptroller's office.

The regulator's cease-and-desist order identified major problems in record keeping, asset quality, capital, and various loans.

Losses from 1988 through 1990 had reduced capital to $2 million from $4.7 million.

Part of the regulatory order called for meeting the 5% Tier I capital-to-assets ratio, which City National achieved on in April 1992. City National closed last year at 5.42%. On March 31, capital was up to 5.78%.

Managed Growth

At $68 million of assets, the 20-year-old bank is moving back from its capital-enforced shrinkage toward the $73 million it had at yearend 1990, the year in which it lost $174,000. Excluding extraordinary items, City National earned $75,000 in 1991 and $361,000 last year. The 1992 returns on assets and equity were 0.64% and 12.48%, respectively.

"The bank's ability to grow has been tremendous, and I have been managing my growth because I want to make sure my capital ratios improves," Mr. Prezeau said. "Our objective is to get to a 6% Tier I ratio."

He said City National benefited from support of Newark's mayor, business leadership, board of education, and major corporations, including Prudential Insurance Co.

Strong Presence

"City National Bank is really a community bank," said Mr. Prezeau. "The fact we have 1,903 shareholders speaks for itself."

The bank has a large share of the African-American market and some of the Hispanic market, Mr. Prezeau said. Customer relationships total 12,000 to 13,000. Major customers include churches, small businesses, senior citizens, and blue-collar workers.

In a move to attract new business, City National has brought in Corby R. Ellis-Mare, a consultant and former Freedom National official, to head marketing and public relations.

Among current initiatives is Residential Express, a mortgage program offered jointly with a GE Capital Corp. unit that broadens City National's offerings and provides a channel into the secondary mortgage market.

'We're Here'

Other plans include renovation of City National's headquarters and potential branch

COMMUNITY BANKING

Urban Bankers Chief Issues a Call for Leadership

By FRANKLIN SMITH

The newly elected president of the National Association of Urban Bankers, the professional group for minorities in banking, thinks it can do better.

Speaking during the association's recent annual conference in San Diego, Paul R. Wiggins said it will emphasize the professional development and job stability of its 3,000 members, and general economic development in minority communities.

Providing Opportunity

"We must continue to search for avenues to provide educational, leadership, networking, and growth opportunity for our members," said Mr. Wiggins, who also is vice president of SunBank of Tampa Bay, Fla.

On the urban bankers' educational agenda will be a computerized bank simulation program to help members learn to deal with day-to-day decision-making problems.

"Leadership development is critical to our success," said Mr. Wiggins. "We'll communicate with the various banking schools with the intent of increasing urban banker enrollment."

In the interest of upward mobility, the association operates a job bank and assists members seeking to advance.

"Urban bankers across this country are able, willing, and ready to drink from the cup of opportunity, and when given the opportunity, we will succeed," Mr. Wiggins said.

Paul R. Wiggins
"We will succeed"

'Ahead of the Curve'

Mr. Wiggins has a recruitment project of his own: He plans to seek a full-time executive director to run the association's administrative staff.

"I certainly believe that it is critical that NAUB strive to be ahead of the curve" of financial industry change, he said.

At SunBank, Mr. Wiggins is responsible for management reporting and review. He joined the SunTrust Banks Inc. affiliate in Tampa in 1985, and has served in many positions, including credit analyst, commercial lender, branch manager, and loan review officer.

Other Posts

As president of NAUB for 1993-94, Mr. Wiggins succeeds Herbert W. Whiteman Jr., vice president of the Federal Reserve Bank of New York.

Lloyd Griffin is president-elect of the association. Mr. Griffin is vice president of Western Trust Services in San Diego.

Reelected treasurer was Richard Holmes, assistant vice president of Bank of America, San Diego.

Beverly Brown, vice president, lending compliance, D&N Bank, Flint, Mich., is the newly elected secretary of the association. Mr. Whiteman will be chairman of the advisory board.

At City National, Community Helps Stage a Comeback

Continued from *page* 8

acquisitions in the near future.

"Hopefully, with the Clinton administration's plans for community development banks, City National Bank will be able to benefit," said Mr. Prezeau.

"The Resolution Trust Corp. has branches in minority communities, which tend to close when a major institution acquires the bank. We're saying,

The mayor, business leaders, and corporations offered support.

'We're here and we'll take those branches.' We understand and are committed to the minority communities."

Working Together

City National's impact on Newark is seen in its assistance to minority-owned start-up businesses and in $10 million of financing for African-American churches, which have been able to build new churches, provide day care, feed the homeless, and help individuals get credit.

"When we're not financing anyone, we educate them in where to go for financing," Mr. Prezeau said. "Some projects might be too big, and so we refer them to another institution – one institution working with another in the community to help provide financing for a customer."

The bank currently has some 200 commercial loans in its portfolio. It also provides Small Business Administration loans between $30,000 and $100,000. □

Pact to Buy Pioneer

ROCKY MOUNT, N.C. — Pioneer Bancorp said it has completed a definitive agreement to be acquired by First Citizens Bancshares for about $3.6 million. □

NEED BANKING INFORMATION FAST?

AMERICAN BANKER ONLINE

For more information, including details on special direct data delivery options and redistribution rights, call:
Peter Leach, Database Licensing, American Banker • Bond Buyer, at 1-800-356-4763 or 1-212-943-6304.

Now there's a way to stay abreast of that vital information or to find any articles you may have missed by using your own PC with a modem to call up the American Banker Online on the information service of your choice.

American Banker Online is a full-text news service providing instant access to all the information appearing in the only daily banking newspaper. It enhances the value of the newspaper's daily information by giving you the ability to recall all the stories on a bank, or a banker, or legislation, or indeed anything you need to know about banking.

With the power of the computer, you can locate the information that's vital to your business. American Banker Online is a full-text database that provides direct, easy access to the daily news, statistics, surveys, speeches, commentary, and special editions of the print newspaper. And you can access this information each morning even before that day's paper is delivered!

In addition to being a daily information tool, American Banker Online is also an archive. Many users rely on our information to piece together the background on events that impact their business. Along with today's news, American Banker's historical online records include more than 80,000 articles dating back to 1979. These can be searched by headline, key words, bank name, or any other search terms.

Put American Banker Online to work for you. It is accessible with any PC and modem through the following information retrieval services:

HUD to Revisit Fees for Electronic Referrals

By PETER SCHOENKE
Special to the American Banker

WASHINGTON — Following widespread criticism from the mortage industry, the Department of Housing and Urban Development last week decided to revisit referral fee rules put in place last November.

The rules were intended primarily to combat kickbacks, but opponents feel they would effectively lock out smaller lenders from realty offices and thus limit choices available to consumers.

HUD's announcement that it will begin hearings Aug. 6 took the steam out of a House Small Business Committee hearing to consider legislation remedying complaints about the rules.

Deep Divisions Evident

However, the announcement may well have been welcome to the committee members. The deep divisions evident at last week's hearing indicated it would be extraordinarily difficult to write a new law without offending some influential group.

The panel decided to postpone any action on the regulations until the HUD hearings are over.

That may take some time, as the agency said it would continue the hearings until everybody has been heard.

HUD originally drafted the rules several years ago in keeping with the Real Estate Settlement Practices Act of 1974.

The rules spell out what payments are permissible as well as those that are forbidden.

Supporters at the House hearing argued they would ensure the development of computer-based shopping systems – called CLOs, for computerized loan origination – that would bring loans into rural and low-income neighborhoods.

Ray Sims, senior vice president of GE Capital Mortgage Services Corp. in Concord, Calif., described his company's successful placement of a system in a small minority-owned bank in Newark, N.J.

The bank, he said, has made 25 loans in four months with the GE computer system, against only three in all of 1992 before the system was installed.

"We believe that the speed, convenience, and cost savings associated with computerized loan origination are too important to be lost in an intramural turf battle among settlement service providers," said Mr. Sims.

Rep. John J. LaFalce
Raises a warning flag

Herbert B. Tasker
Wants rules amended

But opponents argued that the rules would limit consumers' borrowing options by effectively locking out smaller lenders.

Vows to Press for Action

Herbert B. Tasker, representing the Mortgage Bankers Association of America, said the new rules were "a thinly veiled excuse for paying a referral fee."

He said that if HUD did not change the ruling, the trade group would continue to press for congressional action.

Committee members agreed on the need for new computer technology in the mortgage business.

But the panel's chairman, Rep. John J. LaFalce, D-NY, questioned whether the rules ensured that such systems would not be abused. He pointed out that the rules did not require that any other company's mortgage quotations be on a computer system.

Rep. Jan Meyers, R-Kan, asked if laws in Kansas and Minnesota limiting the percentage of loans a lender can receive through referrals would be acceptable to supporters of the computer systems.

Paul Spera, representing the National Association of Realtors, said such limits would make it unprofitable for lenders to develop the computer systems.

Mr. Schoenke writes for the Medill News Service.

Fortis Financial Aiming To Boost Sales at Banks

By KAREN TALLEY

Fortis Financial Group, a mutual fund and annuity marketing firm in St. Paul, is preparing to take a stab at the bank market.

The company has earmarked $1 million for new staffing and marketing efforts during the next year, and is actively searching for an executive to lead the charge.

But Fortis is quickly finding that it's not the only company on the hunt for such talent.

Scramble for Talent

"The two recruiting firms we're working with said five other fund organizations are looking to fill sirpilar positions," said Dean Kopperud, president of the firm's brokerage and money management units.

In fact, Fortis itself recently lost marketing manager Joseph Techar to First Bank System in Minneapolis.

In addition to recruiting a national sales manager, Mr. Kopperud plans to create a sales force dedicated exclusively to financial institutions.

By establishing a greater presence in banks, he believes Fortis can dramatically boost sales. In 1991 and 1992, the company sold $100 million of mutual funds and variable annuities through financial institutions.

Sales via Insurers, Brokers

Though the company serves some banks, the major outlets for its 12 mutual funds and two variable annuities have been insurance agents and regional brokerage firms.

Among banks, Mr. Kopperud said, the most popular fund offering is the Fortis U.S. Government Securities Fund.

The government fund is also Fortis' largest, with $625.7 million under management as of March 31, according to Lipper Analytical Services. It returned 4.51% through the first five months of this year, ranking 62nd out of 128 general U.S. government funds tracked by the Summit, N.J., research firm.

Fortis' largest equity fund, the Fortis Growth Fund, with $550.2 million in assets, returned 2.88% through the first five months of 1993. This places it 92nd out of 139 similar funds tracked by Lipper.

A Top Priority

Penetrating the bank sales market has been a top priority for Mr. Kopperud since he was promoted to president of the brokerage and money management units in May.

Mr. Kopperud joined Fortis as a sales and marketing senior vice president in 1989, from Integrated Resources, where he held a similar position.

Fortis Financial Group is a unit of Fortis International, a Dutch financial services company with $45 billion in assets. □

Dean Kopperud
Aims to hike sales dramatically

PENDING LEGISLATION

Issue	Principal Bills	Status and Outlook
Interstate branching	Measures introduced in the Senate (S 371 by Christopher J. Dodd, D-Conn.) and in the House (HR 256 by Rep. Stephen L. Neal, D-N.C., and HR 256 by Rep. Bruce Vento, D-Minn.) would permit interstate branching by adequately capitalized institutions within two years of enactment.	Interstate could pass Rep. Neal's financial institutions subcommittee, a relatively friendly forum. But few observers think it will move much farther than that in this Congress.
Community development banks	Republicans, led by Rep. Jim Leach of Iowa and Sen. Alfonse M. D'Amato, are pressing an approach that would give commercial banks an incentive to invest in community development institutions. Democrats are waiting for President Clinton's plan.	The president is expected to unveil his plan within the next several weeks, and it could move quickly through the House and Senate.
Resolution Trust Corp.	Later this summer, the House is expected to take up a scaled-back funding measure that would provide up to $18.3 billion for the RTC and $16 billion for the Savings Association Insurance Fund, the same amounts provided by the Senate.	A leadership vote count showed the measure far short of a majority. But RTC supporters were encouraged by the relatively few lawmakers who said they are firmly against it. Still, the measure faces a tough, uphill fight.
Fair Credit Reporting Act amendments	HR 1015, introduced Feb. 18 by Rep. Esteban Torres, D-Calif., would make it easier for consumers to obtain copies of their credit reports and to correct errors. It would also set penalties for banks and others that fail to correct mistakes in credit information. A similar bill, S 783, was introduced in the Senate by Sen. Richard Bryan, D-Nev., and Sen. Christopher S. Bond, R-Mo.	A similar bill was withdrawn last year in the final days of Congress; but many observers believe Rep. Torres and his supporters, including Rep. Gonzalez, will triumph this year. Hearings began in the Senate last month and could begin in the House soon.
Secondary market for small-business loans	HR 660, introduced Jan. 27 by Rep. John J. LaFalce, D-N.Y., would create a federal agency, nicknamed Velda Sue, to sponsor a secondary market for small-business loans. A companion bill was introduced in the Senate by Sen. John Kerry, D-Mass., on March 4. S 384, introduced Feb. 17 by Sen. Alfonse M. D'Amato, R-N.Y., takes a different approach. His bill would reduce a number of regulatory impediments to securitization, making it easier for the private sector to pool small-business loans. A companion bill was introduced in the House on Feb. 24 by Rep. Richard H. Baker, R-La., and Rep. Leach.	Secondary-market bills have been kicking around for nearly a decade, but there appears to be more interest on Capitol Hill this year than ever before.
Regulatory relief	HR 59, introduced Jan. 15 by Rep. Doug Bereuter, R-Neb., takes a two-tier approach to bank regulation. Well-capitalized institutions would be given more favorable treatment, including exemption from some regulations and authority to file "short-form" call reports. HR 269, introduced Jan. 6 by Rep. Bill McCollum, R-Fla., would reduce record-keeping requirements under the Community Reinvestment Act. In addition, banks that invest in community development institutions would be deemed to have met their CRA requirements. S 265, introduced Feb. 28 by Sen. Richard C. Shelby, D-Ala., would repeal or modify some of the congressionally mandated regulations bankers despise most, including the operational and auditing standards required in the 1991 banking law. A companion bill, HR 962, was introduced in the House on Feb. 18 by Rep. Bereuter and is now being co-sponsored by a majority of House members. In the Senate, Sen. D'Amato on June 18 introduced S 1124, a broad regulatory-relief bill that would also limit lender liability for environmental cleanup.	The chairmen of the House and Senate banking committees are at best skeptical about the industry's agenda for regulatory relief, and at worst openly hostile. The Clinton administration, though more sympathetic, appears to have backed away from proposing relief legislation. As a result, legislation is unlikely this year. The best chance for legislative relief may come after the regulatory agencies release their recommendations.
Agency consolidation	Two major bills are pending in the House. HR 1214, the Regulatory Consolidation Act of 1993, was introduced by Rep. Gonzalez on March 4. His bill would consolidate all thrift and bank regulation in a single, independent Federal Banking Commission. HR 1227, the Bank Regulatory Consolidation and Reform Act of 1993, was introduced by Rep. Leach on the same day. His measure would combine the Office of the Comptroller of the Currency and the Office of Thrift Supervision into an independent Federal Banking Agency. In the Senate, Banking Committee Chairman Donald W. Riegle, D-Mich., has said agency consolidation could be a major step toward easing the regulatory burden on banks. He has indicated that such legislation would be a major priority.	Although consolidation has been a quagmire in the past, interest is high this year — in large part because it promises cost savings. A kind word from the President might be enough to do it.
Bankruptcy reform	Sen. Howell Heflin, D-Ala., introduced S 540 on March 10. The bill would make it more difficult for individuals and businesses in bankruptcy proceedings to avoid repaying debts. Rep. Mike Synar, D-Okla., introduced a similar bill in the House, HR 2326.	Similar legislation died in the final hours of the last Congress because of a parliamentary maneuver involving an unrelated bill. Bankruptcy reform appears to have a good chance of passing in this Congress.
Insurance regulation	Rep. Joseph P. Kennedy 2d, D-Mass., introduced the Federal Insurance Administration Act, HR 1257, on March 9. His bill would expand the powers of the Federal Insurance Administration and give the insurance industry easier access to the Federal Reserve's discount window, a step most banks oppose. Rep. John D. Dingell, D-Mich., chairman of the House Energy and Commerce Committee, introduced HR 1290, a bill providing for federal regulation of the insurance industry, on March 10.	Though the outlook for both bills is uncertain, they set the stage for the next round in the continuing jurisdictional battle between the House Banking Committee and the House Energy and Commerce Committee. Members of the banking panel would like to expand their say over insurance, a product of increasing importance to banks.
Federal Home Loan Bank System	Reps. Baker and Neal introduced HR 1085 on Feb. 24. The measure would ease some of the pressure on the Home Loan Bank System by reducing its contribution to the savings and loan cleanup to the lesser of $300 million or 20% of the system's profits. Currently, the system pays the larger of the two sums. The bill would also equalize membership requirements for banks and thrifts.	Rep. Baker offered a similar bill last year in the face of opposition from the Bush administration and resistance from the chairman of the House Banking Committee. It is unclear whether he will fare any better this year.
Credit cards	Rep. Charles E. Schumer, D-N.Y., introduced legislation that would increase disclosure requirements for credit cards, particularly in solicitations for new customers. HR 1872 would require, among other things, that envelopes containing solicitations bear information about rates, grace periods, and fees. The bill drops a requirement considered earlier by Rep. Schumer that the government study whether rates are too high.	Rep. Schumer tried to move similar legislation in the past without success. With rates generally declining, support for such measures may be on the decline.
Basic banking	Rep. Cleo Fields, D-La., and Rep. Albert Wynn, D-Md., are sponsoring legislation to regulate check-cashing facilities. The bill, HR 1448, would also require banks to cash government checks for free. In the Senate, Howard Metzenbaum, D-Ohio, introduced a similar bill, the Financial Services Access Act, on Jan. 21.	Government check cashing has come close to winning congressional approval in the past and could hitch a ride should a banking bill begin to move.

REGULATORY ROUNDUP: A summary of rules of major interest to bankers

Proposal	Agency	Status
Change appraisal regulations to exempt all loans under $250,000 and all business loans under $1 million that do not count on real estate as primary repayment means. Published June 4.	Fed, FDIC, OCC, OTS	Comments are being accepted until July 19 at the agencies.
Establish sweeping operational and managerial standards for banks.	Fed, FDIC, OCC	The Fed and the FDIC have publicly proposed regulations, but none of the agencies published its plans or set a comment deadline. Plans take effect Dec. 1.
Add an interest rate risk component to the risk-based capital standards. First draft published Aug. 10.	Fed, FDIC, OCC	Narrow proposal was approved in March by the FDIC followed suit on June 9. The OCC has not commented, but the plan has not been published. No comment deadline has been set.
Simplify public notice requirements under the Bank Merger Act. Published June 15.	FDIC	Comments are due Aug. 16.
Revise home mortgage reporting by national banks to include reasons why applications were rejected and require monthly, rather than annual, reports.	OCC	Comments are due July 9.
Allow corporate credit unions more options in purchasing fidelity bond coverage. Published May 27.	NCUA	Deadline extended four days. Comments are due July 30.
Specify where the earnings held by a farm credit bank and allocated to a direct lender may be counted as permanent capital. Published June 23.	Farm Credit Administration	Comments are due July 22.
Make permanent the Fed's small-bank exemption from insider-lending rules. Banks with deposits less than $100 million would be able to have insider loans of up to 200% of unimpaired capital, instead of the usual 100%.	Fed	Comments are due July 15.
Revise international supervisory treatment of netting arrangements, market risk, and interest rate risk, as proposed by the Bank for International Settlements.	Fed	Comments are due Dec. 31.

EXECUTIVE *changes*

Former BT Exec Robert Stuart Joins Canadian Imperial Bank

Robert W. Stuart, a former **Bankers Trust New York Corp.** executive, has joined **Canadian Imperial Bank of Commerce** as managing director of a new telecommunications group in the company's technology-driven industries sector.

He was a senior banker and division head of the utilities-telecom group at Bankers Trust.

Robert W. Stuart

In the newly created post at Canadian Imperial, Mr. Stuart will manage the delivery of corporate and investment banking services to regional and long-distance telephone companies, as well as to independent cellular and paging companies throughout the United States.

Previously, Canadian Imperial's relationships with these companies had been managed by the bank's utilities group in Chicago and media group in New York. — **Franklin Smith**

MIDWEST

ABN AMRO North America Inc., Chicago, a subsidiary of the Amterdam-based **ABN Amro Bank,** said **Ronald Holzer** has joined its ABN Amro USA branch network as group senior vice president of foreign exchange. Mr. Holzer is responsible for all trading and sales of foreign exchange products.

Ronald Holzer

He had headed foreign exchange trading at **Harris Trust and Savings Bank,** Chicago.

MIDDLE ATLANTIC

CHASE MANHATTAN Bank, New York, said **Paul L.M. Beckwith,** managing director, has been appointed to head its new global chemicals industry group.

Paul L.M. Beckwith

He will be responsible for consolidating Chase's activities with the chemical industry worldwide.

Those activities include banking relationships with chemical industry clients in North Ameria, Europe, Asia, and Latin America, as well as corporate finance, mergers and acquisitions, and merchant banking.

In another announcement, **Chase Futures Management Inc.** said that **Steven B. Crandall** has been retained as chief investment strategist for **Chase Futures Advisors Inc.** products.

Chase Futures Management designs, markets, and manages derivative-based investment products aimed at the institutional investment market.

Chase Futures Advisors acts as asset allocator and trading manager for Chase Futures Management fund products.

PRICE WATERHOUSE, New York, has named **Jeffrey G. Rutishauser** as managing director of real estate advisory services for its New York metropolitan real estate industry services group.

He was formerly with **GE Capital's** commercial real estate group.

MASTERCARD International, New York, has named **William P. Binzel** as director of government relations, Washington.

Mr. Binzel formerly was the Republican counsel of the House Banking subcommittee on consumer credit and insurance.

In another announcement, Mastercard said **Charles W.B. Wardell 3d** has resigned as senior vice president, member relations.

NEW ENGLAND

BANKNORTH Mortgage Co., West Brattleboro, Vt., has appointed **Steven J. Ryder** as assistant vice president, correspondent lending.

He was formerly vice president, mortgage lending, at **Granite Bank** in Keene, N.H., for four years.

STATE STREET BANK and Trust Co., Boston, has promoted **Joseph W. Cadigan, Richard W. Dinsmore Jr.,** and **Robert M. Quinn** in the personal trust division of the commercial banking services area and **Joseph F. Sousa** in the computer operations division of corporate staff to vice president.

New assistant vice presidents are **Karen R. Beard** in the corporate services division of the securities services area; **Rhonda L. Berchuck** in the marketing services division of corporate staff; **Cecilia Chin** in the Asia financial services division of Hong Kong in the global financial asset services area; **Jane R. Capp** in **State Street Global Advisors,** and **Christine A. Donovan** in the global securities division of global financial asset services.

Also, **Marie A. Hattinger** in the corporate services division of the securities service area; **Jacqueline A. Heyer** in the international operations division of the securities operations area, and **Patricia A. Parcellin** in the U.S. mutual fund services division of the global financial asset services area.

WEST

PRIMERIT BANK, Las Vegas, Nev., has named **Bernadette M. Mashas** to chief financial officer and treasurer.

B.M. Mashas

Ms. Mashas joined the bank in 1987 as vice president and controller and was named senior vice president and treasurer in 1990.

As chief financial officer, she is responsible for Primerit's treasury and accounting departments. □

When it's this hot, you deserve extra scoops.

For many bankers, the thermometer is a lagging indicator of the heat they feel in handling current regulations and guessing the Clinton administration's next moves. But we've got a way to help you keep cool: *American Banker's Washington Watch.*

We broke the news about the plans by credit union trade associations to branch cross-country. We warned readers that the FDIC will crack down on banks and thrifts that aren't paying enough for insurance, and that the Fed was flirting with examination fees. We also uncovered plans that would let banks pay less for deposit insurance provided they set up certain special programs.

Those kinds of tasty scoops are the weekly fare at *American Banker's Washington Watch.* Within minutes, you get insights on regs and regulators—as well as your competitors—that could make the difference between profit and loss. We unconditionally guarantee it.

PROFESSIONAL EMPLOYMENT OPPORTUNITIES

RIYAD BANK
Saudi Arabia

Riyad Bank is Saudi Arabia's most prominent Bank with 170 branches and international offices in the USA and the UK.

As part of the unique and ambitious automation program, the Bank is now in the process of implementing state-of-the-art technical solutions based on an integrated multi-platform processing environment.

Applications are invited for the following newly created and critical line management positions.

MANAGER - PC/END USER COMPUTING

Key Responsibilities:
- Developing and managing an effective PC/EUC organization responsible for:
- Selection of software tools and utilities.
- Building and managing a comprehensive solution-oriented PC/EUC team including LAN Specialists and Information Center Analysts.
- Providing service and support to end users.
- Close interaction with application development teams.

Requirements:
- Excellent management skills.
- Hands-on technical experience of LAN technology, Query languages, report generators and test editors.
- Excellent interpersonal, communication and presentation skills.
- A minimum of 5 years' PC/End User Computing management experience gained within a banking or financial services environment.

MANAGER - AUTOMATED CUSTOMER SERVICES

Key Responsibilities:
- Managing the resources and processes involved in assuring user satisfaction with services provided by the Information Services Division.
- Developing Service Level Agreements (SLAs), monitoring services against these agreements, identification and resolution of service issues and problems.
- Interfacing with users (370 branch network) on a continuous basis.
- Development and administration of a solution-oriented "Help-Desk".
- Interfacing between Information Services Division and branches to evaluate new system requirements.
- Conducting user training for a series of major banking applications.

Requirements:
- Extensive information technology experience, preferably gained within a banking or financial services environment.
- Minimum of 3 years' management experience.
- Extensive user liaison skills including development of SLAs and management of a professional solution-oriented "Help-Desk" function.
- Mainframe and PC technical skills.

Riyad Bank offers a competitive compensation package consisting of tax free salary, paid housing, medical insurance, annual airfare and a fully furnished, spacious (single or married status).

Qualified candidates with an interest in making a positive contribution to the continued development of the Riyad Bank" effort" she should direct resumes with current salary to: Box 701, 12 West 37th Street, 10th Floor, New York, NY 10018.

JUNIOR EQUITY RESEARCH ANALYST

Midwestern investment firm specializing in banks and thrifts seeks a highly motivated individual with strong PC skills and at least one to two years experience working with bank and/or thrift financial statements. The ideal candidate will have analytical analysis and some writing. Individual will assist two senior analysts and operate in a team environment.

Send resume and salary expectations to:

Box 693
c/o American Banker
One State Street Plaza
New York, New York 10004

Equal Opportunity Employer

Upstate New York financial institution is seeking to fill the following positions:

- **SVP Trust and Investments**
- **VP Trust Officer**
- **Commercial Real Estate Officer**
- **Assistant Credit Officer**

Competitive compensation and comprehensive benefits compliment these positions. Please forward resume and salary history to

First National Bank of Glens Falls

CREDIT RATINGS

Chemical and Chase Win Upgrades from Moody's

Continued from page 1

recent $750 million equity offering and strong reserves against loan losses.

However, Moody's said it will continue to monitor Chase's efforts to improve asset quality, particularly its program to sell nonperforming real estate assets in bulk.

Future upgrades will depend on Chase's identifying and developing its businesses, Moody's said.

The two money-center upgrades got the third quarter off to a good start in terms of bank ratings.

No Downgrades in 1st Quarter

U.S. banks in the second quarter failed to match the record set in the first quarter when Moody's did not downgrade a single one.

Moody's, which upgraded 14 banks or holding companies in the first quarter, upgraded eight and downgraded two in the second quarter.

The two downgrades were Riggs National Corp., Washington, and Bancal Tri-State Corp., San Francisco.

Riggs, whose subordinated debt was cut to Caa from B3, was rocked by losses at its London bank.

Moody's cut Bancal Tri-State's senior debt to A3 from A1, citing low margins, heavy reliance on purchased funds, and asset-quality problems at its parent, Mitsubishi Bank.

S&P Hands Out 7 Upgrades

For the second consecutive quarter, Standard & Poor's Corp. upgraded seven banking companies and downgraded one.

And Thomson BankWatch, which announced 27 upgrades and six downgrades in the first quarter, upgraded 23 and downgraded five in the second quarter.

The two downgrades were Riggs National Corp., Washington, and Bancal Tri-State Corp., San Francisco.

Riggs, whose subordinated debt was cut to Caa from B3, was rocked by losses at its London bank.

Moody's cut Bancal Tri-State's senior debt to A3 from A1, citing low margins, heavy reliance on purchased funds, and asset-quality problems at its parent, Mitsubishi Bank.

S&P Hands Out 7 Upgrades

For the second consecutive quarter, Standard & Poor's Corp. upgraded seven banking companies and downgraded one.

And Thomson BankWatch, which announced 27 upgrades and six downgrades in the first quarter, upgraded 23 and downgraded five in the second quarter. Four of the five downgrades were of smaller California banks.

Analysts warned not to read too much into the smattering of downgrades in the second quarter.

"We believe that the health of the U.S. banking industry today is better than it has been in a long time," BankWatch said.

Tougher Sell Next Time

But future upgrades may become tougher as bank ratings settle at the low-A and BBB levels.

Christopher T. Mahoney, associate director of the financial institutions group at Moody's, said his agency is increasingly looking beyond financial ratios and toward more predictive analytical approaches.

"There has been a huge focus on Tier 1 capital, but some notorious banks have high Tier 1 ratios," he said.

One key area Moody's is looking at is "franchise value." He described this as "the ability of an institution to make money in the future because of its competitive position and the defensibility of that position."

How B of A Weathered Storm

For example, BankAmerica Corp., because of its dominant California consumer banking operations, was able to survive serious financial problems in the late 1980s.

Another major rating issue that is developing is whether any banks will be upgraded to the double-A category.

The current double-A bank holding companies include, according to Moody's, include J.P. Morgan & Co., rated Aa1, and Republic New York Corp., rated Aa3. Wachovia Corp. and NBD Bancorp have implied double-A grades.

None in the Pipeline

Moody's currently has no A1-rated banks on review for upgrade into double-A territory. The A1 companies include Bankers Trust New York Corp., Banc One Corp., Norwest Corp., and SunTrust Banks Inc.

"The prospects for upgrade to double-A are the highest since the LDC debt crisis," Mr. Mahoney said.

However, he conceded that many think bank debt is too cyclical a business to merit such a high rating.

The rating agencies took the following other actions last week:

Bancomer SA: Duff & Phelps assigned a Duff-1-plus rating to short-term pesos-denominated obligations of this Mexican bank and a AA-minus rating to peso-denominated long-term obligations.

Short-term dollar-denominated obligations were rated Duff-2, while longer-term dollar issues were assigned a BBB-plus. Duff & Phelps said the company has solid fundamentals and excellent access to peso-denominated funding. The bank has the largest branch network in Mexico.

Bank of Boston Corp.: Thomson BankWatch affirmed senior debt at BBB-plus, subordinated debt at BBB, and pcgferred stock

Moody's cited Chemical's strong noninterest and trading income.

at BBB-minus. The ratings followed the bank's issuance last week of $150 million in subordinated notes and $70 million in preferred stock. Bank of Boston agreed to raise the capital in connection with gaining Federal Reserve Board approval for its acquisition of Multibank Financial Corp., Dedham, Mass.

CoreStates Financial Corp.: Moody's assigned ratings of Aa3 for long-term deposits and Prime-1 for short-term deposits to CoreStates Bank of Delaware and to New Jersey National Bank, affiliates of CoreStates Financial. Moody's said the ratings are based on the holding company's strong franchise in the greater Philadelphia region, strong asset quality, and good capitalization.

First American Metro Corp.: Standard & Poor's raised ratings on the uninsured certificates of three former subsidiaries. First American Bank of Virginia, McLean, First American Bank of Maryland, Silver Springs, and First American Bank, Washington, were boosted to A/A1 from B-minus/B. The upgrades reflect the purchase of the banks by First Union Corp. last month.

First Hawaiian Inc.: Standard & Poor's downgraded the company's commercial paper to A2 from A1, citing weakness the state's economy and its impact on the bank's credit quality and growth prospects. However, the A/A1 ratings on unsecured certificates of deposit of the subsidiary First Hawaiian Bank were affirmed.

The agency described the outlook as "stable." Howard Karr, executive vice president and treasurer of First Hawaiian, said the impact on the company will be nil. "We don't have much commercial paper anyway," he said.

Mark Twain Bancshares: Standard & Poor's assigned a BBB rating to the St. Louis holding company's senior debt and a BBB-minus grade to its subordinated debt.

Thomson & Disley Corp.: Thomson BankWatch assigned an AA grade to senior debt and a AA-minus grade to deposits. BankWatch described profitability as consistently strong.

MBNA Corp.: IBCA, the European rating agency, assigned A-plus long-term and A1 short-term ratings to the Delaware-based credit card bank. The subsidiary MBNA America Bank was assigned AA-minus longterm and A1-plus short-term ratings. IBCA cited the company's dominance in the affinity card sector, solid profitability with 3,000

Data: Ted Bridis of AP-Dow Jones Publishing Co., Princeton, N.J. Includes all publicly traded U.S. commercial banks and thrifts with equity capital exceeding $100 million and assets of $1 billion or more. Ranked by size of the 225 largest publicly traded thrifts as measured by the market value of common shares outstanding as of last night's close. Market value could be higher than assets $75.09 mil. and for thrifts with negative net worth. **PE:** Price/earnings ratio, the latest closing price of a stock for the stock. **PE:** the

CAPITAL

Banks Raised $17.2 Billion in the Second Quarter

Continued from *page 1*

were Citicorp, BankAmerica Corp., Chemical Banking Corp., and Mellon Bank.

Since the beginning of last year, banks' stampede to the stock and debt markets was aimed primarily at bolstering regulatory capital. Now capital generally far exceeds requirements. Even before the latest binge of issues, total capital ratios at 40 large banking companies averaged 12.96% at the end of the first quarter, up from 11.10% at the end of 1991, according to First Boston Corp.

Shift to Senior Debt Seen

In the next few quarters, banks are likely to reduce their offerings of subordinated debt, which counts as capital, and instead to turn to less expensive senior debt as a source of funding, experts said.

Cost savings from refinancings will help banks bolster their bottom lines.

"Until asset growth prospects improve, it appears that the banks have now achieved capital targets and will deemphasize capital-building efforts," said Jay Weintraub, a Merrill Lynch bank analyst, in a recent report.

Cost savings from refinancings will help banks bolster their bottom lines. For example, Citicorp expects to save about $13 million on an annualized basis from some $1.1 billion in refinancings so far this year, an executive said, adding that further refinancings this year should double that figure.

In the equity market last quarter, Chase Manhattan Bank's $750 million issue in the United States and overseas was the largest offering.

Top Underwriters Of Bank Debt

Second-quarter data; full credit to lead manager

	Proceeds ($Mil)	Market Share (%)
Merrill Lynch	$3,798	27.0%
Lehman Brothers	2,073	14.7
Goldman Sachs	2,056	14.6
J.P. Morgan	2,048	14.5
First Boston	1,672	11.9
Morgan Stanley	849	6.0
Salomon Brothers	622	4.4
Donaldson, Lufkin & Jenrette	498	3.5
Kidder Peabody	244	1.7
Bear Stearns	149	1.1
Top 10 total	$14,007	99.4
Industry total	$14,091	100.0

There was also a resurgence in common stock issues by community banks, with six issues of $10 million or less in the quarter.

Except for banks involved in acquisitions, industry observers do not foresee large common stock sales in the second half of the year. "We are expecting most banks to generate capital internally more quickly than they need to deploy it," said John Leonard, a stock analyst with Salomon Brothers Inc.

Benchmark Yield Drops

The quarter saw ideal conditions for new issues of intermediate-term debt. Not only did interest rates fall, but the spread narrowed between the yields on U.S. Treasury securities and new offerings – meaning that investor demand for bank issues was especially strong.

The yield on the 10-year Treasury note fell about 30 basis points in the quarter to 5.78%. The average yield spread for a group of major bank subordinated bonds tracked by Keefe, Bruyette & Woods Inc. tightened by 4 basis points, to 84 basis points.

Investors were buoyed by improving credit ratings. In the first half of the year, for instance, Standard & Poor's Corp. upgraded 13 U.S. banks while downgrading only four. And on Monday, Moody's Investor Service upgraded both Chemical Banking Corp. and Chase Manhattan Corp. (See related story on page 1.)

Foreign Institutions

Banks' aggressive refinancing of debt also contributed to the bank bond sector's good performance by reducing the net new supply of bonds available.

Foreign banks accounted for a substantial portion of debt and equity issuance in the quarter. More than half of the $2.1 billion in preferred stock issues were by Spanish and British banks attracted by low long-term rates.

Three foreign banks accounted for $232 million of the total $1 billion of common stock sold in the second quarter.

In the subordinated debt market, ABN Amro, Bank of Nova Scotia, and Westdeutsche Landesbank Girozentrale issued a total of $1 billion.

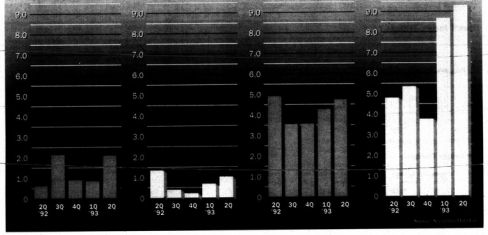
Securities Issuance Continues to Explode

Bank sales of securities, in billions of dollars



The 'Yankee' Bonds

Industry observers expect foreign banks to remain active. "I think you will see Yankee bank issuance pick up in the remainder of 1993 and into 1994," said Joseph Labriola, bond analyst with Kidder, Peabody & Co.

Foreign banks are generally faced with weak domestic economies and would like to raise capital to offset deteriorating credit quality. At the same time, "Yankee," or foreign, issues can offer better yields to investors, compared with similar-quality domestic issues.

Credit Lyonnais is readying the sale of $100 million to $150 million of preferred stock through a private placement qualifying under rule 144A, and is likely to launch the sale after it is taken off rating watch from Standard & Poor's, as early as this week, according to market sources.

Another European bank is aiming to tap the preferred market within the next two weeks, said a market source.

An Italian bank is reportedly mulling a placement of more than $250 million of subordinated debt in the U.S., Sudwestdeutsche Landesbank of Germany has filed for a $250 million registration to issue debt in this country, and Kansallis-Osake Pankki of Finland is also mulling a U.S. capital markets issue, say market sources. □

MANAGEMENT STRATEGIES

USING INFORMATION TO INCREASE PROFITS

Retrenched Marine Midland Builds Globally, Acts Locally

BY BRIAN HELLAUER

FROM THEIR headquarters on the shore of Lake Erie, top executives at Buffalo's Marine Midland Banks Inc. spent a good part of the 1980s dreaming of how they could soon join the ranks of money-center banks clustered downstate.

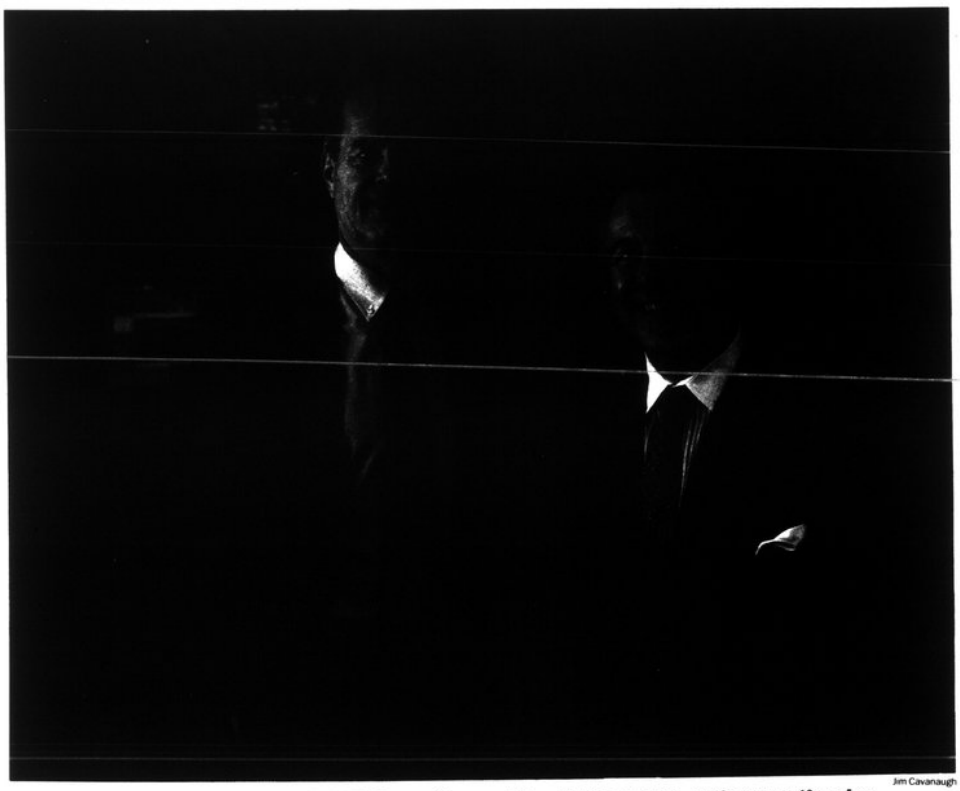
But huge losses in 1990 and 1991 totaling almost $500 million, along with nearly $2 billion in loan chargeoffs between 1988 and 1991, instead forced Marine to trim its sails, shedding assets and employees to concentrate on a handful of businesses.

THE BACK OFFICE: SYSTEMS

The bank's management and operations have also been tethered more closely to those of its corporate parent, HSBC Holdings PLC. The London-based holding company, with nearly $260 billion in assets, has had an interest in Marine for more than a decade, and full ownership since 1987.

HSBC"s other companies include Hongkong and Shanghai Banking Corp., Midland Bank PLC, and numerous other banking, finance, brokerage, and insurance concerns. Since Marine's troubles became apparent in 1989, HBSC has added $500 million to the bank's reserves to meet regulatory requirements.

In addition, many of Marine's senior executive officers are actually employees of the group – company parlance for the holding company – who were put in place soon after HSBC was given approval to do so by U.S. regulators in 1990.



Jim Cavanaugh

NEW DIRECTION: James H. Cleave, left, chief executive, and Ronald P. Lawrence, senior executive vice president of information technology, are aiming to make Marine a stronger regional presence.

Leading those executives was John Bond, who was Marine's chief executive for 18 months before being promoted to group chief executive last year. Other group managers took over control functions such as audit and human resources, moving quickly to slash expenses and address problem areas within the bank.

"The management that took Marine into a money-center mode is gone. The management that is here now is committed to making Marine a strong regional bank," said James H. Cleave, Marine's president and chief executive since November 1992.

That approach is consistent with HSBC operations in other parts of the world, said Mr. Cleave, who previously headed Hongkong Bank of Canada. He noted that while the group does maintain substantial wholesale operations worldwide, retail finance remains its stock in trade.

"It's clearly [a change in] the

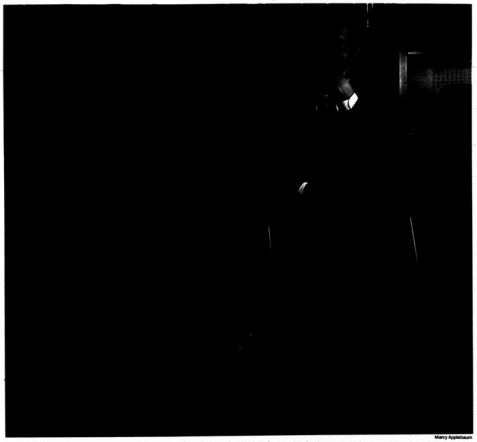
Consumer Banking: Customer Service

New Software Lets AT&T Reach In and Touch Its Cardmembers

BY WILLIAM PESEK JR.



Marcy Applebaum

BUILT FOR SPEED: VP James A. Kutsch Jr., foreground, says Universal Windows enables customer service reps at AT&T's credit card unit "to do more things and do it faster than ever in one sitting."

IT'S A FACT OF LIFE: consumers are demanding higher levels of service from the companies with which they do business.

Just ask the American Telephone & Telegraph Co.

When it entered the credit card wars three years ago, AT&T knew it had to find an angle to take on the reigning giants of the industry.

At the time, recalls James A. Kutsch Jr., speedy customer service seemed to be the road less traveled.

"Service wasn't a big priority," said Mr. Kutsch, vice president of Universal Card Services Inc., AT&T's Jacksonville, Fla.-based credit card unit. "We wanted to deliver a level of service that exceeded the expectations of customers when they called."

But AT&T quickly realized that its existing technology could not support its expectations of customer service quality or the anticipated growth of its credit card business, which today ranks sixth in the nation in dollar volume of outstandings with $6.6 billion.

The customer service platform fell short, both at the information level and in terms of the actual human interface with the system.

It was up to AT&T's 35-member computer software development team to come up with a solution. The result was Universal Windows, a Unix-based service delivery platform that improves the way customer service reps deal with customers by allowing faster access to pertinent information.

It establishes a standard interface with the company's other data bases, allowing the employee to consolidate the data on a single screen. The platform is used by every customer-service associate for quick access – in consistent, easy-to-use graphic fashion – to information on prospects, applicants, and cardmembers.

Customer service reps once needed to view at least seven screens to obtain the information they now get on one.

"With a single window that allows access to multiple mainframes, the new system lets customer service associates concentrate on the customer and not on the computer in front of them," said Mr. Kutsch, who relies on special technology in doing his job.

Mr. Kutsch is blind. To meet his unique needs, AT&T reconfigured his work space with braille keyboards and synthesizers that vocalize work he is doing on a computer screen.

The customer service improvements are helping AT&T cement long-term relationships with cardholders.

"Service is more important in retaining customers than it is in getting new customers," said Stephen M. Szekely, vice president of credit card research at Payment Systems Inc., in Tampa. "Each time you handle an inquiry to a customer's satisfaction you're sustaining the decision by the customer to get the card in the first place."

The system works like a relational data base. AT&T has integrated an automatic number identification function so that the system can determine – from an embedded telephone number – the identity of the caller. The result is instantaneous, on-screen information for the customer service associate, including customer name and key facts like social security and account numbers.

AT&T's proprietary software then takes over and determines which mainframe computer contains the needed information. With the touch of a key, the customer service rep instructs the system to pluck that information from the mainframe and display it on the screen.

The real benefit to the customer is faster service. Because Universal Windows grants employees greater access to information about a customer, all questions and concerns can be cleared up in one call. "Our associate can do more things and do it faster than ever in one sitting," Mr. Kutsch said.

AT&T gets greater efficiency from an operations standpoint, and can hold staffing levels down. "We can handle more calls with the same amount of representatives without growing the staff," he said.

"It's helped me be more productive and efficient and I'm handling more calls that ever before," said Eric Irizarry, who as a customer service associate handles between 170 to 200 telephone inquiries each day. "It allows me to bring up windows and information I need without all the clutter we had with the old system."

Before the installation of Universal Windows, employees used standard computer terminals to communicate with AT&T's mainframe. Now, employees use powerful workstations by Sun Microstations Inc., which not only enable them to view information in a user-friendly format, but also put a powerful processor at their fingertips.

Most customers, according to Mr. Kutsch, use AT&T's automated voice response function for simple requests like account balances and credit lines. But when it comes to problems such as lost or stolen cards, balance disputes or complaints, AT&T has found that there's no substitute for the personal touch.

A key advantage of using a workstation, according to Mr. Irizarry, is that it can do complicated account calculations and algorithms.

According to Mr. Irizarry, about 80% of customer calls are for basic account information, such as balance availability or requests for credit line increases. The other 20% of the calls run the gamut from account disputes to detailed questions about how the Universal Card operates.

Given that breakdown, a customer service representative can customize the screen to the tasks at hand. This is helpful at the end of the month when the mailing of balance statements normally prompts a barrage of calls.

Mr. Kutsch said the fact that the system is relatively easy to upgrade should translate into further cost savings down the road. Because most changes take place on the workstations and not in the mainframe, AT&T can add enhancements without spending a bundle.

Universal Windows has even gained the 2,500-employee card unit some national exposure. Last year AT&T's customer service platform was a finalist for the Rochester Institute of Technology/USA Today Quality Cup – awarded annualy to companies that radically improve the quality of their products and services.

"We've found a tool to make life simpler for our employees and benefit the customer at the same time," Mr. Kutsch said, showing that at AT&T, technology has made serving card members easier. □

SMALL WORLD: Bob Ford says Citibanking's advantage over the competition is the ability to "roll everything into one package."

Citicorp's New System Puts the World at Client's Fingertips

BY WILLIAM PESEK JR.

CITICORP IS capitalizing on its technological reach to make the world a smaller place for multinational corporations.

The banking giant is offering a new electronic access system that will give its wholesale banking clients access to account information and the ability to initiate transactions on a global basis.

The system, which updates the Citibanking service, will allow corporate clients in the areas of cash management, trade finance, and securities trading to compete more effectively around the globe.

"Our customer's needs are changing over time and many are moving into new geographic and product areas," said Bob Ford, director of client focus marketing. "Clients these days like [banking] products that roll everything into one package."

The Citibanking system is meant to build fee income by making it easier for companies to manage their cash, make funds transfers, and execute securities trades through Citicorp units worldwide. Clients get a single computerized point of entry into the bank for all the services and products they use.

For the New York-based institution, offering these services to clients is, in itself, a sign of the times. The bank realized that for many large clients, it's no longer good enough to have a single terminal in New York. Clients with offices abroad want access to information on their accounts in Asia and Europe as well.

"Our customers have undergone a basic evolution in the way that they deal with us," said R.C. Leander Jr., vice president of global finance technology development. "Clients are making decisions all over the world and they really need a process to deal with Citibank that reflects the way they are structuring themselves."

"Technology is no longer a barrier when dealing with Citibank's various centers around the world," said Mike Pavey, associate director of operations at Legal and General Investments, a London-based investment firm with $40 billion in assets under management.

Citibank's payoff comes from increases in cash-management and securities processing fees and reductions in operating costs through the elimination of a multitude of older electronic access products for wholesale banking services.

"Clients get all their information from anywhere in the world in one place," Mr. Ford said. "If you can give the customer a cheaper, faster, better way of doing any of his transactions," transaction business is likely to increase.

Industry observers hold the view that for global-minded banks, offering such electronic access services has become the rule rather than the exception.

"Global customers are a main target area for all of the money center banks,", said Donald E. McNees, director of New York financial services consulting -at Towers Perrin. "But because everyone's after them, global cash management systems have become a commodity business."

What makes Citibanking different, Mr. Ford said, is the ability to group and collect vital information from anywhere in the world at any time.

"It's the same stuff you've been able to find in other electronic banking systems but they tended to be focused on individual areas or geographies," he said. "We've taken all that functionality and put it on one platform that delivers all of it."

Mr. Pavey said Citibanking has armed Legal and General with a more efficient way to communicate information on trade instructions, reconciliations, and dividends payments.

Getting a tighter grasp on its customer base is certainly crucial to Citicorp, which returned to the black last year after some heavy losses. The bank reported net income of $722 million for 1992 compared with a $457 million loss in 1991.

Citibanking's update, under development for two years, still has a long way to go. Currently it provides access only to cash management functions, including such garden variety services as reports on transactions and account balances. Mr. Ford expects the securities trading and trade finance modules to be rolled out after the third quarter of this year.

At the foundation of this new component to Citibanking is a message data base that contains all of a customer's transactions. Messages are sent to the data base by the client, by Citicorp, or by third parties over the bank's telecommunications network.

The sum of those parts allows clients to shape data for their own needs for information, transaction initiation, and system access. The reporting functions let users gather and consolidate information from their operations anywhere in the world. Citibanking currently gets information from Citicorp units in 90 countries.

Citicorp is not targeting just the big guys with the latest installment of Citibanking. The service provides customers with a different set of options depending on volume and data security needs and the types of systems they use.

Citicorp designed a personal computer workstation for individual operators, a PC network for multi-users, and a mainframe version for larger companies. The PC systems are based in Microsoft Corp.'s Windows operating system.

Officials at Citicorp would not talk about the cost of developing the latest version of Citibanking. However, analysts agree that the simple fact that the bank has invested time and money in the product is enough to make them think that the expenses were justified.

"Because it's a terrific area of focus for the bank, you have to expect it will generate revenue," said Merrill Lynch analyst Judah S. Kraushaar.

When the 81,000-employee bank put out the word three years ago that it would only concern itself with no-nonsense projects that seemed crucial to its financial success, it dropped some of its more ambitious technology projects.

Citibanking not only survived that initiative, but also got the nod to expand.

"Citibank is one of the major cash management firms in the world and they're looking to protect and defend their market share," Mr. Kraushaar said. "Services for global clients are part of that."

Mr. Ford said that if things go as planned, about 800 clients around the world will be using Citibanking's new electronic access by the end of the year. "The key is creating an environment where it doesn't matter where you are in the world, you can do your banking," he said. □

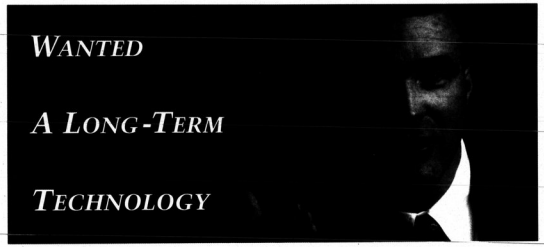
"WE WANT A LONG-TERM TECHNOLOGY PARTNER."



Jay C. Lent
Exec. Vice President & Chief Financial Officer
The New Milford Bank & Trust Company
New Milford, Connecticut

"There's more to selecting a software system than how well it computes interest rates. We put our trust in a company with financial superiority and a proven commitment to the highest standards of service.

"Systematics' Horizon software, specifically designed for the IBM AS/400 platform, certainly gets the job done, but we were more interested in where they were taking the system. There is no limit to the products we can offer today, and we know that Systematics will grow along with us.

"You expect the salespeople to be good, but we found everyone on the Systematics team to be first-rate.

"I wanted this technology decision to take us into the next century. With Systematics, I know we made the right choice."

Trust and Investments: Quality Assurance

Services Monitor Helps Amsouth Lend an Ear to Its Customers

BY WILLIAM PESEX JR.

WITH NONBANK institutions steadily making inroads, banks no longer have a corner on the trust and investment management market.

That customer erosion has led a number of big trust banks to look for ways to hang on to those clients.

Amsouth Bancorp., Birmingham, Ala., is one institution that faced disintermediation early, and moved to distinguish itself from the competition with customer service before those dollars could be redistributed.

Amsouth's decision two years ago to beef up its trust and upscale-banking area seems to have paid off handsomely. This line of business generated 32% of the bank's noninterest revenues for 1992. Overall, Amsouth posted net income of $102 million in 1992 compared with $80 million in the previous year.

"Wealthy clients have many alternatives for their managed funds and they expect superior service quality," said Lee Weathers, executive vice president of the $9.8 billion-asset bank's trust division. "We needed a way to find out how we were doing from our customers' point of view."

As Mr. Weathers recalled, the choices were either to develop a proprietary method of measuring service quality or to outsource the process. After an extensive cost/benefit analysis, the bank decided to take the outside route.

Amsouth uses a new survey system called the Trust and Investment Management Services Monitor, a joint development of Brittain Associates and SourceOne Consulting Group, both based in Atlanta.

Using a brief questionnaire which is based on previous surveys and focus groups, Brittain Associates feeds the customer evaluations into a data base to compare the responses to industry averages.

The survey, which is tabulated on standard marketing research software, evaluates issues such as frequency of client contact; accessibility to personnel by phone or in person; staff listening and communication skills; investment officers' skills and knowledge; understanding of the client's goals and objectives; value perceptions; clarity of forms, reports, and statements; and convenience.

Specifically, the program evaluates the performance of administrative officers, investment officers, and individual departments.

"It helped us make sure that we were moving in the right direction," Mr. Weathers said.

Industry observers agree that with brokerage firms, private investment management companies, and mutual fund managers all competing for the same market segment, banks are becoming more aggressive in satisfying customers.

"Banks are taking a more defensive stance with firms taking their customers away," said William M. Arnold, a principal and manager of financial institutions consulting at Towers Perrin, Atlanta. "Banks are beginning to ask their customers what they want to buy, why they buy it, and who they want to buy it from."

With the help of the monitor, banks can retain and grow their market share, Mr. Arnold added. Aside from giving institutions the inside track on improving service quality, it can help banks to prop up their image, he said, noting that the survey sends the message that the bank is interested in more than just the client's dollars.

"Banks are trying to make it clear that what their customers have to say is important," Mr. Arnold said.

For Amsouth, the real benefit of the program is candid client feedback. All questionnaires are mailed back directly to Brittain Associates, so clients are more likely to speak their minds in the safe confines of anonymity.

"We're very interested in what the customers really think about us and that we're making the right decisions in our trust area," Mr. Weathers said.

The survey's findings were both good and bad, according to Kathryn W. Miree, vice president of the trust department.

"We found out that what we do well is respond to customer needs and requests," she said. "But what we also found out was that we didn't give customers enough proactive contact. They want to know more about our products and they want us to take a more active role in finding out their needs."

Brittain Associates provides all the necessary draft documents as well as the questionnaires and response envelopes. Banks personalize and mail the survey packet, send out reminder cards a few days later. Once the survey is tabulated, the bank receives clear assessments and recommendations in a written report as well as a personal presentation.

Once all the returns are in, Brittain Associates and SourceOne feed the scores into a data base and compare them with industry averages – thus picking out strengths and weaknesses and laying out recommendations for the bank.

A key selling point for Amsouth was the way the information in the report is presented, Mr. Weathers said.

The report included an executive summary with recommendations, he said. Also included was a clarification of data indicators and best uses of the data along with instructions for further analysis of the survey's findings about Amsouth.

Armed with the results from the survey, Amsouth looked to the Washington-based Advisory Company for help in mapping out its future.

In early May the bank sponsored a one-day forum to come up with strategic plans for the department.

"We took the data and put it into context and practical use," Ms. Miree said.

Looking ahead, Amsouth plans to use the monitor as an annual tracking study to provide management with a periodic report card alerting it to the status of, and achievements in, service quality areas.

"We're going to use this survey as a benchmark for the future so that we can see the progression," Mr. Weathers said.

The program costs include a set annual base fee of $11,500 and a $3.35 charge per contacted client. For example, a department mailing to 500 clients would invest a total of $13,175.

Some inside information on i Series ATMs that has everyone talking.

What's inside this ATM has everyone talking. Talking electronically, that is. That's because i Series™ ATMs are available with a variety of processors, providing an open system for flexible, self-service solutions.

You can select one of our OS/2 processors that allows you to integrate i Series ATMs into any system that supports OS/2 work stations.

Integrating i Series ATMs with your existing ATM network, branch platform and host system can genuinely impact your bottom line.

By offering traditional transactions on self-service terminals, tellers are free to market other revenue-producing products and services.

Customers appreciate the convenience of using self-service terminals. Plus, by offering a variety of products and services on your ATM network, you can increase ATM usage and generate additional fee-based revenues.

You also will reduce operating expenses by consolidating line costs and sharing data.

Only InterBold® has the resources and expertise to provide total systems integration, including security. All from one supplier. And all serviced by one organization.

Call InterBold at 1-800-999-3000 and ask for more information on our total systems integration solutions. We can really give you something to talk about.

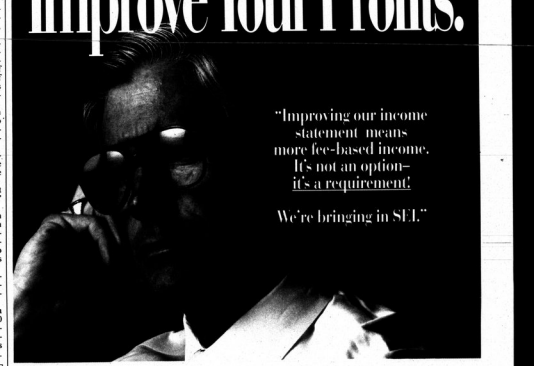
Improve Your Profits.



"Improving our income statement means more fee-based income. It's not an option– it's a requirement.

We're bringing in SEI."

It's very basic. To keep your profits growing, you need more fee-based income. And to stem the outflow of your depositors' money, you need investment programs.

And you need those programs now!

SEI can deliver a variety of investment programs and services for your individual and corporate customers. Through your branches, brokerage, private banking, and trust departments. One or all.

And we'll help you with all the program components – the products, the marketing, the distribution, and the technology you need to support these programs cost-effectively.

We'd like to be your partner in building your fee-based income. Because we both have the same objective for your bottom line: Improve Your Profits!

About SEI

SEI has been dedicated to creating comprehensive investment programs for over two decades, focusing on the following areas:

– **Investment Products and Programs ($35 billion in assets):** mutual funds, proprietary funds, annuities, and bank-wide investment programs.

Full Planning and Consultation Services: marketing planning, program definition and implementation, as well as full training and sales support.

Investment Management Technology: trust accounting, defined contribution recordkeeping, mutual fund accounting, and retail support systems.

For more information, call 1-800-DIAL-SEI (342-5734).

The Back Office: Systems

Retrenched Marine Midland Builds Globally, Acts Locally

Continued from page 1A

way the management of Marine Midland is approaching the business," Mr. Cleave added.

Since the change in management, Marine has shrunk dramatically. Assets were down to $17.1 billion at the end of 1992 from a high of $27 billion in 1988 and full-time employees to less than 9,500 from 13,000. Nonperforming loans fell to 1.6% of the portfolio in 1992, from 3.5% in 1991.

Accordingly, Marine returned to the black in 1992, posting a $109.2 million profit, and had an additional $34 million gain in the first quarter. But its 1992 return on average assets of 0.48% and return on equity of 7.04%, placed it near the bottom of its peer group, according to recent *American Banker* rankings.

While analysts view Marine's restructuring as almost complete, its near-term profit picture remains hazy. "The banking company is poised to rebuild its presence in New York State. However, earnings growth may be restricted somewhat by strong competition and limited product offerings in the company's primary markets," a recent Fitch Investors Service Inc. report stated.

The changes have reached to the bank's information technology function as well. Ronald F. Lawrence, senior executive vice president of information technology and a 12-year veteran of the department, remained in charge. But the size and mission of his group has changed considerably.

Mr. Lawrence said the previous management structure at Marine called for vertically integrated lines of business.

"We had 22 businesses, and they were all going to have their own human resources, and their own data processing, and their own finance departments. We weren't big enough to do that. So we went through an enormous amount of pain to get to where we are now," he said.

The information technology group, which includes all office automation and telecommunications, once had nearly 1,100 employees and an annual budget of $140 million. Today the budget is $95 million and the head count is 660, and it will eventually dwindle to about 500.

"We're letting attrition take us where we want to go," said Mr. Lawrence. "The downside is, I have an organization which on average is 38 years old. I have no bright, shiny-faced 22-year-olds," he added.

The employees that remain haven't been left adrift, though. At the behest of the group, in 1991 Marine embarked on a five-year plan to reshape the group. That plan includes more than 300 separate projects designed to consolidate and simplify the organization and move all of the operating units within HSBC to common systems.

Some of the steps in that plan were relatively simple. Operations that had been located throughout New York State were moved to Marine's headquarters in Buffalo, leading to what Mr. Lawrence calls a highly centralized organization. Systems that had been developed for businesses that Marine was exiting, such as auto lending and some wholesale lines, were simply shelved.

The bank's telecommunications networks were also merged with those of other HSBC units operating in the United States. That reengineering project, combined with the closing of regional offices that supported businesses that Marine was getting out of, led to Marine's single largest cost savings.

Marine's telecommunications budget has dropped from $36.6 million in 1988 to an estimated $20.5 million this year.

"Nothing makes the cost of geographic diversification clearer to me than telecommunications costs," noted Mr. Lawrence.

His next belt-tightening step was to move what he calls "artificial intelligence, esoteric research, and development types of things" to the back burner. Those resources instead went to actual development work on existing systems. That "enabled us to keep these projects going while we were downsizing," said Mr. Lawrence.

The future status of development efforts was a major concern for the executive. Marine had begun a number projects in the late 1980s, particularly in the areas of branch automation and computer-aided software engineering (CASE), which were considered particularly innovative.

Most of that work was salvaged. "There's very little we started that we threw away, except for the businesses we exited," Mr. Lawrence said.

The CASE project was particularly worth saving because it allows programmers to work more efficiently as the computer itself takes over more the drudgery of organizing and editing thousands of line of programming code.

"What makes this stuff work is the programmers, which is a euphemism for hard-core technologists," he continued. Remaining Marine staff was retrained in the latest CASE and other software development techniques.

Marine's systems development efforts were eventually integrated with those of both Hongkong and Midland Bank. "We have systems that are 20 years old. So do our colleagues," said Mr. Lawrence. The joint development was the most significant component of the five-year plan. "We're taking a leadership role in some of these projects. That's had a positive impact on morale," he added.

The company decided to keep up its computer-aided software development.

The project management role for each application is handed to one of the three banks, but developers at each bank contribute to the design. The groups communicate primarily by electronic mail and video teleconferencing.

All three banks have begun using an existing Digital Equipment Corp.-based money transfer system developed by Marine in the 1980s. Marine is also leading the creation of a new trust and securities processing system, which will run on International Business Machines Corp. AS/400 midrange computers.

Work has also begun on a mainframe-based core banking system, which will eventually encompass most retail deposit and credit products.

Although there is a great deal of systems development going on within the group, Mr. Lawrence said "there's nothing revolutionary here. The real economies of scale are that we are going to build in-house applications that are going to be used in three different parts of the world."

Buying software, he added, was out of the question. "We belong to an organization that believes you must control your own destiny," Mr. Lawrence said. "You don't subcontract to a vendor things that are critical to your success.

"We have the resources to build," he continued. "We're part of a very successful global giant. If there was only Marine Midland, we would be doing some things differently."

The template for future development within the group is probably a cash management product known as Hexagon, which was a joint project of the Hongkong and Midland Banks in the late 1980s. Hexagon facilitates global funds transfers, creation of letters of credit, portfolio management, and a variety of other services from PCs anywhere in the world.

"There's no way we'd have an application like this if we weren't part of a global giant. We'd be buying it from Chase or Chemical or somebody," said Mr. Lawrence.

Mr. Lawrence also said that Marine is benefiting from a focus that it might not have had in the past. "We've been on a steady track for a couple of years. We never had that luxury before."

Although Marine is recommitted to what remains a strong New York retail franchise, the bank is still not totally in the clear. "The economy has helped us contain our credit problems, but they're not completely behind us," Mr. Cleave said. "There are severe credit problems in the bank, from Third World lending to real estate lending to a national automotive finance fiasco."

Nevertheless, Marine is looking to grow through acquisition. Mr. Cleave oversees a due-diligence team that includes other senior management, and is evaluating a number of possible deals within New York State.

"We're looking for market fill-in opportunities across the state. The first acquisition we do will be in New York State," said Mr. Cleave.

Marine also continues to court the small to middle-market companies that have been its traditional commercial lending base. Those companies are driving the bulk of the economic growth within New York, said Mr. Cleave.

Expanding that business won't be easy, however. In addition to strong local competition like Manufacturers and Traders Trust Co., giants like Citicorp and Chemical Banking Corp. are pursuing the middle market with renewed fervor. So, even with increased capital and lowered expectations, Marine Midland will find itself butting heads with many of the same players it saw when it dreamed of being a money-center in the '80s. □

WHAT TYPES OF BANKING TASKS can now successfully be moved off mainframes and onto personal computers?

JOHN BRECHT
President
First of America Services
Kalamazoo, Mich.

FIRST OF AMERICA HAS TAKEN A business rather than a technically-oriented approach to determine the appropriate platforms for our existing and emerging applications. The major benefit of PC technology, we feel, will be in our ability to provide business applications that could be time constrained or functionally impractical to deliver using mainframe processes.

First of America uses PC technology for new applications as well as for right-sizing applications that currently run on our mainframe.

An example of a new application is our platform automation system, which provides current, comprehensive information about customers and products to our branch personnel.

An example of an application that we recently right-sized to a PC environment is our Farm Management System. This is a financial management system based on present and future agricultural assets of our farming customers. ■

JACK L. WAGNER
Chief information officer
Dime Savings Bank of New York

WE'RE PROBABLY TAKING A different approach from other banks. We're moving all of our processing off the mainframe and onto personal computers in a client-server environment.

Many banks still say big number crunching must be done on a mainframe, but we disagree. It may be because of our size. We're $8 to $9 billion in assets, with about 2,000 employees.

Right now we do have two big Unisys machines that we'll be replacing with PCs over the next few years. Because we're a savings bank, we are already very PC-oriented. All of our tellers and platform personnel already use PCs. We also use PCs in our asset resolution area, where we do foreclosure management. And we just recently signed an agreement to do loan originations in a client-server environment. General ledger and batch overnight processing are the last things that we'll move to the PC, over the next two years. ■

BARRY FRANKLIN
Vice president/general manager
BankAmerica Corp.
San Francisco

WE'RE LOOKING AT MOVING ANY task that looks to be more efficient and cost-effective in a PC environment, rather than on the host.

A lot of our teller operations have already been moved on to PC LANs. We have 1,200 LANs at about 1,000 sites throughout California. Our tellers and branch employees use what we call COIN, for customer on-line information network.

In the loan area, we use a number of purchased packages that run on the mainframe. While we will continue to have these packages running on the host, we want to give the personnel in our loan offices portability and flexibility. So we will be adding functionality at the PC end.

In our portfolio management area, we are setting up worldwide access to a client-server data base, which will help us compete, since it will allow us to update our portfolio on a daily basis and improve accessibility of information. ■

CRAIG GOLDMAN
Chief information officer
Chase Manhattan Corp.
New York

A LOT OF CONVENTIONAL BANKING applications can be moved to client-server technology. But not every application is ready for distributed computing because of the reengineering needed to make it work.

Also, a lot of high-volume applications aren't quite ready yet.

The challenge is to pick and choose applications carefully and to understand the difference in the computing environments and make sure the move to PCs makes business sense.

We've moved a lot of our customer-information and customer-service applications to PCs to take advantage of the capabilities inherent in the PC environment, which give our customer-service representatives the flexibility to address customer queries quickly and efficiently. ■

MICHAEL SIMMONS
Executive vice president
Bank of Boston

TECHNICALLY, YOU COULD MOVE everything to personal computers in a client-server environment. But that would be dumb. The exciting part is deciding which applications are best moved to PCs.

Many of the customer service applications that were written in the 1960s and 1970s for retail service can now very successfully move to PCs. As financial service companies get more integrated products and customers get more sophisticated about what they want, we can move more and more customer-initiated transactions to PCs.

I think we can now realize the dream because distributed processing can be successful in the client-server world. I think it's a very exciting time. ■

JEFFREY S. GRIFFIE
Executive vice president
Midlantic Corp.
Edison, N.J.

THE AREA WHERE TECHNOLOGY IS migrating off host computers to personal computers is the branches. Branch employees need customer information at their fingertips. They need additional information in order to give better service. That's true of many, many banks.

We also offer customers the option of banking from their home, through their own PCs.

Our audit group has a very sophisticated PC network. They also have laptop computers with dial-up capability so they can access the bank even when they're on the road.

We also use PCs for general office needs. We've got 1,200 PCs and our managers are using them more and more. ■

TOM JAGODZINSKI
First vice president
People's Bank
Bridgeport, Conn.

WE MADE THE DECISION TO SHIFT some applications from mainframes to PC networks in 1989. Mainframes continue to be our primary resource for high volume transactions like check processing, but even these systems are being front-ended by PCs.

Since the late 1980s, human resources, budgeting, real estate owned, and profit and loss forecasting have been moved from the mainframe to PCs. The first conversion, human resources, pinpointed the advantages of PC usage. A large backlog of software change requests existed and it was difficult to find programmers with the right expertise. Today this system is managed by non-technical people. ■

THOMAS J. CARDINALE
Senior vice president
Green Point Savings Bank
Brooklyn, N.Y.

OUR MAINFRAME HOUSES THE MAJOR informational data base for the bank.

In the savings area, we've installed local computers at branches that do marketing and cross-selling as well as new-accounts opening. These terminals are linked to the mainframe.

In the loan origination departments, we have installed local systems to handle a loan from the point of application to the loan closing. Upon closing, it is uploaded to our mainframe for the loan servicing process.

If the loan goes into arrears, the information is downloaded to local PCs in our collections area where the collections personnel can call up a screen and get the information they need. ■

Client Server Is Brightest Spot on the Technological Horizon

EXECUTIVE VIEW

By Diogo Teixeira

OF ALL THE NEW technologies available today, the client server is very likely to have the highest impact. This is because the client server is a paradigm, a way of doing things, and not just a new "technology." Paradigms tend to have more impact, because they affect what goes on around them and generally enable new businesses or strategies and disable – or eliminate – old ones.

However, paradigms can also be confusing. There is no exact definition of "client server" or universal agreement on using the phrase at all. (Concepts like "distributed computing" or "network computing" have just as much validity. Many professionals draw distinctions between these concepts, but again, there is no universal agreement.)

Client-server computing is a style of computing in which applications and data reside on multiple computers. There is no host, which in the traditional style of computing would contain the data, the application processing, and the presentation control, with the workstation or terminal responsible only for the display.

Instead, the host would now be called a server, and it would have only some of the data and some of the processing. The workstation or terminal would now be called the client and it would be responsible for the display, the presentation control, some of the processing, and some of the data.

This new paradigm has come about, like most things, because of the economics of hardware. Smaller computers are more cost effective than larger ones by at least two orders of magnitude, but they hold less than larger computers. So instead of cramming everything onto a large computer, where the volumes will fit, and suffer the cost disadvantages, the new paradigm is to break up the work so that it can fit on the smaller computers. Since the "work" consists of applications and data, breaking up the work means breaking up the applications and data.

It is worth noting that this is a fundamental, one-time paradigm shift. We are now in the very early stages of the total development of the computer. With the passage of time, today's mainframe-based architectures will look decidedly archaic, just as the early years of the industrial era look today.

Two hundred years ago, for example, machines were incredibly expensive and big. Early textile factories had thousands of belts running off one large power source just to reach different looms. Cable car technology was for a brief period exactly the same in many American cities: The cars had no power themselves but were pulled by miles of cables run off one huge power source. But the paradigm changed; motors became efficient and tiny, and today the average American home has numerous motors, or sources of power, in it.

It is not hard to see an analogous progression in banking. Microcomputers have penetrated the industry extensively already. Further penetration will occur, and the unit cost of micros will continue to drop faster than the unit cost of large machines. The costs of conversion, and the added infrastructural and overhead costs of the client-server paradigm are high but will not change much. Over time, the cost disadvantage of the large machine paradigm will grow relative to these conversion and new infrastructural costs.

So it is inevitable that the new paradigm will become the rule. The only questions are:

- When?
- What will be the sequence in which work will move from one paradigm to the next?
- What parts of today's large machine infrastructure will continue to exist?
- Will the nightly batch cycle exist forever?
- What will be the impact on the business of banking?

Although the new paradigm is driven by ever-cheaper small computers, there are unlikely to be any net cost savings for banks. Justifying the new paradigm with expected budget reductions would be like chasing a will-o'-the-wisp. The fact is,

The Back Office: Systems Development

Wachovia Puts Its Money on Automated Software Development

BY KENNETH CLINE

WACHOVIA CORP. makes it a rule to avoid what is often called "bleeding edge" technology.

But the North Carolina-based bank doesn't mind running a little bit ahead of the pack when it believes the potential gain is worth the investment.

That is certainly true of Wachovia's commitment to computer-aided software engineering, known as CASE, which promises huge gains in software development productivity.

Wachovia has spent more than $3 million on CASE technology since 1991, confident that it will provide a competitive edge in the design and maintenance of new banking products.

"If CASE delivers even a fraction of what we feel comfortable it will do, this is a very important thing for us over the long haul," said Walter E. Leonard Jr., president of Wachovia Operational Services Inc., the bank's technology subsidiary.

Most major banks, including First Chicago Corp., Norwest Corp., and Banc One Corp., have at least experimented with limited applications of CASE, which was introduced in the mid-1980s.

But Wachovia is one of the few to apply CASE as an across-the-board technical tool, intended to speed up software development and make that software easier to maintain.

The main aspect of CASE technology is the code generator, which automates the writing of computer code.

By simplifying the code-writing process, CASE allows a company to spend more time designing its software and figuring out appropriate business processes.

"You use the power of the personal computer to translate that vision into well-defined, executable code," Mr. Leonard said.

"Most of the effort put into systems development is maintaining old systems," he said. "So when a system is built under a CASE environment, that maintenance cycle is far easier because it is self-documented in terms of how it works. The work flows are visually apparent to a new person looking at that system, and it makes that system much easier to maintain."

Jay Lenton-Atlanta

NO QUICK FIX: Walter E. Leonard Jr., president of Wachovia's technology unit, is well aware that CASE is a long-term effort. But he fully expects a payback in the form of low-cost, competitive products.

Wachovia has spent more than $3 million on CASE since 1991, one of the few banks to use it as an across-the-board tool

Judy Martin-Mitchell, a vice president at First Chicago, said CASE delivers "significant" productivity gains if the user understands its limitations.

"It's certainly not a silver bullet," Ms. Mitchell said. "It's a very difficult way to do systems work. It takes a real commitment to make it work."

First Chicago, which began experimenting with CASE in 1988, is using a version produced by Dallas-based Texas Instruments Inc.

Cecil O. Smith Jr., head of Wachovia's Information Services unit, estimates that building a system from the ground up using CASE produces a 25% productivity gain, though he can't prove that empirically. The real payback, he said, occurs over the entire life cycle of a product, which can be 10 years or more.

The beauty of CASE is that it generates unusually error-free code, which reduces the need for debugging, the bane of most other software development techniques

Wachovia is using the CASE workbench in a major joint development effort with New York-based Financial Technologies International Inc. to enhance its trust system.

An in-house CASE effort will develop a new system for supporting charitable tax-trust funds.

"Developer's workbench" is what Wachovia calls the process of using CASE tools to maintain existing software.

Mr. Smith calculates that this use of CASE, which is actually the most common in the banking industry, produces a lesser productivity boost of 10% to 15%.

Wachovia believes CASE will do more than just make life easier for its applications programmers.

Ultimately, the technology is supposed to enhance the level of service offered by bankers.

"Hopefully, they'll see an ability on Wachovia's part to produce new products more easily and quickly, and have a more competitive product line at lower cost," Mr. Leonard said.

"The quality of our software is the bedrock upon which our product line is built," he said. "Our ability to develop cost-effective, reliable, flexible software will, over the long haul, define our ability to compete in this marketplace. We think CASE is one of the tools that we'll have to use to do that." □

Client Server Is Brightest Spot on the Technological Horizon

Continued from page 11A

client-server technology is extremely complicated. It is more difficult to build and support than the old paradigm. Moreover, many of the component technologies that must be pieced together are youngish and more risky.

It would be hard even starting from scratch to build a banking technology infrastructure based on the new paradigm. To change from the existing fully featured and highly functional mainframe-concentric paradigm, with which we are all familiar, while never missing a penny on anybody's account, is six times as hard.

Thus, it's no wonder that progress has been slow. For example, most new client-server implementations, in fact, run on LANs, with a desktop machine serving as the client and a powerful workstation or minicomputer serving as the server.

Yet, according to last year's *American Banker*/Ernst & Young survey, only 4% of the industry have even one relatively high volume monetary processing application with a component that runs on a LAN.

Thus, if banks' key applications, which do involve monetary transactions, aren't trusted on LANs, they generally don't run on client-server architecture either.

Another issue intimately related to the new paradigm is open systems. Again, while this phrase has no precise definition, it generally means that each of the many different pieces of the infrastructure, both hardware and software, can be bought from different vendors and still work together. When all the work is done on one box by one system, only one vendor, with a proprietary approach, must do. But when the work is broken up, many different pieces, bought from many different sources, must all work together.

The older, proprietary operating systems (like IBM's mainframe operating system, MVS), which most of the banking industry is currently using, are not "open." A more acceptable definition of an open operating system is Unix.

In my consulting practice, I have found that a very small percentage of today's banking mainframe applications are Unix based. (An estimated less than 10% of the mainframe applications are Unix based.) While some growth in this statistic is expected, the message is that open systems, a necessary corollary to client-server architectures, are not here yet.

Two interesting questions for bankers: Will the high-is-volume transaction processing systems will ever convert to the new paradigm? Will the nightly batch cycle ever be changed? They probably won't be answered in the foreseeable future.

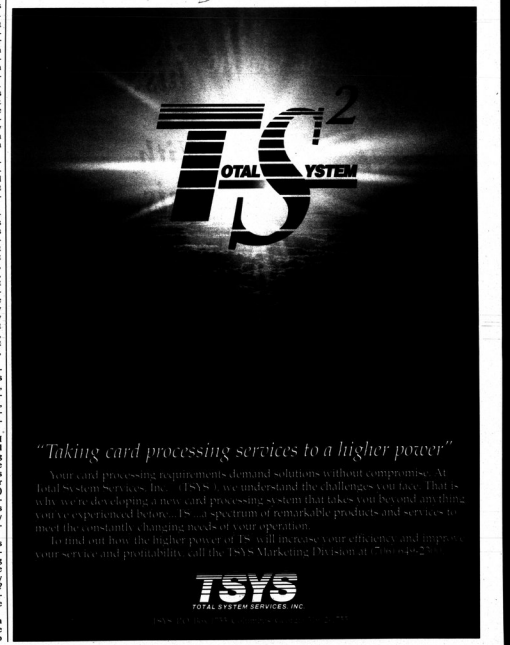
Almost by definition, high volumes dictate use of a large computer. Desktops can't do the job, even if they do have a 50 MIPS rating (more than many mainframes). They are "I-O bound," meaning they can't get data in and out of the data base fast enough to handle the volumes. In essence, having a high transaction volume becomes a business requirement that dictates a computer paradigm of higher-than-minimal cost.

Can these high-volume transaction systems be broken up into many smaller transaction systems? The answer again is, probably not. Like it or not, the costs of computing platforms are only a small part of the overall costs of banking and financial transaction processing – less than 3% at best. Financial, operational, marketing, and risk costs dominate the business of banking. And there is ample evidence that economies of scale do pertain in these areas.

Processing millions of checking accounts per night, hundreds of thousands of automated clearing house transactions, or tens of thousands of money transfers is always going to be done in bulk because of the economics of collecting and controlling the transactions, the advantages in controlling the customers who create those transactions, and managing the associated financial and credit risk. In truth, it's more like the opposite: industry consolidation will create ever larger customer groups, data bases, and even higher volume transaction systems.

In conclusion, major change is always slow, and the banking industry's existing technological infrastructure is no exception. But in those banking areas where new investment is being made, where the cutting edge is, the new paradigm is fully in evidence.

The bottom line is: Employ the new paradigm aggressively on the margin. Bet on the declining costs of this paradigm. But don't go too far ahead. Keep the old paradigm alive and well maintained for the rest of the decade – at least. □



New Products

NCR System Offers Tools For Modeling, Managing

NCR Corp., Dayton, Ohio, introduced software that helps users design, implement, execute, and manage business processes in a client/server environment.

Called the ProcessIT: the system provides a suite of Windows-based tools to model and manage the workflow. It automatically routes work based upon an organization's policies and procedures.

The software is available as a stand-alone package that can then be integrated with any new or existing Windows or Unix application. Applications can be performed locally or launched on existing mainframe systems. A typical 30-user configuration is priced at about $1,245 per user.

Leasing Software From Stockholder

Stockholder Systems Inc. has introduced LeasTrac 2000 lease accounting software.

The LeasTrac 2000 employs client/server architecture. It automates all leasing functions.

Stockholder has headquarters in Norcross, Ga.

First Data Sells Pricing System

First Data Resources, a provider of transaction card processing, introduced a credit card processing system called account-level processing. Clients can change the pricing on an individual account based on its performance, allowing them to set different pricing structures for marginal and high-risk customers. Users can also track profitability trends for their portfolios.

First Data Resources is based in Omaha.

SQN System Gets Signatures via Fax

A system from SQN Inc., Raticocas, N.J., allows bank tellers to access signatures from a central location using an existing fax machine.

By using a touch-tone telephone and keying the customer's account number, a teller can access a central signature file and have any signature printed on the bank's fax machine automatically. As an option, the bank may store and print the entire signature card.

The system is priced at approximately $7,000, plus $750 per branch, for a 30,000 card system. Price includes PC, hard disk, fax server, and software.

Verifone Product Speeds POS Tasks

Verifone Inc., a Redwood City, Calif.-based provider of transaction automation systems, introduced a system for retail point-of-sale applications, such as electronic debit and credit card authorization, draft capture, and settlement.

The OMNI 390 system features a menu-driven interface and color-coded function keys. Like an ATM, the system walks the user through each operation. Merchants can use split dialing, which permits them to directly access both card payment networks from a single system for lower transaction fees and faster settlement times. Until recently, merchants who wanted to use a single system and processor for multiple cards needed to pay the processor additional fees to route the transaction to other card networks.

The system sells from $321 to $402, depending on the quantity ordered and memory options. The 390 system is compatible with other Verifone products, so users can upgrade their transaction systems without making additional investments in other hardware.

AS/400 Platform By Image Network

An imaging system for the AS/400 platform by Image Network Technology Corp. provides check processing, signature verification, and loan document management.

Dubbed the BankFlow 400, the check processing subsystem allows banks to generate a number of reduced-size check images per page. During the scanning process, the magnetic ink character recognition data is read, indexed, and entered into a relational data base.

The product also stores images of customer signatures, driver's licenses, or other information, which can be retrieved by tellers in seconds. Relational codes may be used to link signature cards to other documents pertaining to the customer's accounts.

Security and data codes define which individuals may access a given document at any point.

Prices for the imaging system typically range from $100,000 to $500,000, depending on the customer-specific requirements as well as existing data volumes.

Image Network Technology Corp. is headquartered in El Monte, Calif. □

Contracts

M&I Unit Signs Contract With Wisconsin Bank

M&I Data Sérvices Inc. landed a six-year contract to handle the data processing for Johnson International Inc., a $977 million, six-bank holding company in Racine, Wis. Currently a Mellon service bureau customer, Johnson will convert to M&I's system in November.

M&I will provide Johnson with all core data processing services. Additionally, M&I will support Johnson's Bunker Ramo Aladdin branch automation and teller equipment.

M&I will process four of Johnson's six affiliate banks, including Heritage Bank & Trust, Racine; Heritage Bank Rock County, Janesville; Biltmore Investors Bank, Milwaukee; and Biltmore Investors Bank, Lake Forest, Ill.

M&I Data Servers is a wholly owned affiliate of the Marshall & Ilsley Corp., a $7.8 billion holding company. Both have headquarters in Milwaukee.

S.C. Bank to Use Check Imaging

The Anchor Bank of Myrtle Beach, S.C., will use imaging technology to automate the storage, processing, and retrieval of checks with a system from NCR Corp., Dayton, Ohio, and Document Solutions Inc., Birmingham, Ala.

Customers will receive reduced images of cleared checks printed in sequence on a standard size sheet of paper.

The new system is expected to be implemented in the fourth quarter.

U.S. Bancorp Picks Tandem Package

U.S. Bancorp, a $20 billion bank holding company based in Portland, Ore., has selected a retail banking information system from Tandem Computers Inc.

The company will run a system from Electronic Data Systems Corp. on Tandem online transaction processing computers to manage customer account information, enhance customer service, and market new products and services.

Tandem Computers is located in Cupertino, Calif. EDS has headquarters in Plano, Tex.

Kennsco Acquires Automation Firm

Kennsco Inc., Minneapolis, has acquired Altech Inc., St. Louis. The terms of the deal were undisclosed.

Altech is a provider of automation products for the financial services industry. Kennsco provides a full range of computer products and services. The merged company will be called Kennsco Financial Solutions.

Kennsco first entered the financial market in the late 1980s as a maintenance organization for banking teller terminals. Today, it services more than 50,000 pieces of equipment nationwide.

In addition, the company is a certified reseller, lessor, and service provider for most major brands of hardware and software, including NCR, IBM, Compaq, Hewlett-Packard, Epson, Citus, OnLine Financial, and Novell.

Avdata Satellite At Trans Financial

Trans Financial Bancorp Inc., a Bowling Green, Ky.-based bank holding company, will link 27 branches together via a satellite network from AvData Systems Inc.

The network will eliminate the need for all long-distance lease lines in the bank's network. The full network should be in place and operational in the summer.

Trans Financial Bancorp has $1.2 billion in assets.

Atlanta-based AvData Systems is a full-service data communications company.

Southern Finishes Canadian Project

Southern Computer Systems Inc. of Birmingham, Ala., has completed the development and implementation of a merchant sales draft processing system for the Bank of Nova Scotia in Toronto to process Visa sales drafts.

The bank processes an average of 100,000 transactions per day.

First Chicago Gets Risk Cutting Tool

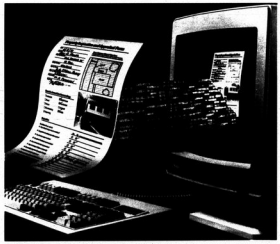
First National Bank of Chicago is using a deposit risk minimization system from Cincinnati Bell Information Systems Inc. The system will allow the bank to fax high-risk deposit items from remote branches to a centralized team for verification and account review.

The new system features an open system, a client/server environment with Unix-based servers, and intelligent workstations.

First National Bank of Chicago is a subsidiary of First Chicago Corporation. □

If an image is worth a thousand words, imagine what imaging is worth to you.

Your strategic picture. Like the strategic pictures of businesses and governments around the world, it's what Unisys had in mind when we designed our InfoImage family of imaging solutions.



The benefits go beyond savings from enhanced productivity. For InfoImage solutions not only enable you to capture documents electronically, move them throughout your enterprise, and gain simultaneous access to them. Whatever your business and whatever it's built on—checks or claims, correspondence or blueprints or signed authorizations—InfoImage solutions also help you create marketable, revenue-generating new services.

As a leader in imaging technology, we know that advanced solutions do not consist of technology for technology's sake. We begin with a careful understanding of the customer's needs and objectives. And our InfoImage Professional Services recognize that an imaging solution isn't a solution unless it's integrated into the customer's existing systems.

Whether you're in finance, government, travel, telecommunications or any other service industry, call us at 1-800-448-1424, ext. 139. Ask how our imaging solutions can help improve your business picture today.

AMERICAN BANKER

VOL. CLVIII NO. 128 Wednesday, July 7, 1993 158th year

In Dim Quarter For Bank Stocks, A Handful Shone

By RICHARD LAYNE

Amid a fall in the overall bank stock market in the second quarter, a handful of issues soared.

Leading the gainers was First-tier Financial Corp., Omaha. Its shares ran up 28.3% on news in April that it had accepted a takeover offer from Banc One Corp.

The other stocks with strong showings were MBNA Corp., Huntington Bancshares Inc., Norwest Corp., and Signet Banking Corp. – all of which had answers to investors' questions about the industry's ability to improve earnings. Their shares gained at least 9% in the quarter.

NEWS ANALYSIS

Analysts said other banks have also shown they can boost earnings in the face of weak loan demand and tough competition. But their shares did not rise sharply because of high trading multiples or other factors.

The *American Banker* index – a weighted average of 225 bank stocks – lost 2.9% during the period, according to SNL Securities.

Leading the plunge were shares of Union Bank, which plummeted 30.1%. Other decliners were State Street Boston Corp., Zions Bancorp., Northern Trust Corp., and Bancorp Hawaii.

In the Cards for MBNA, Signet

Late last year, analysts and money managers predicted that this year would be a "stock pickers" market, in which the sector's shares were not likely to outperform the general market. From the second-quarter performance, it appears that banks showing revenue growth are attracting attention.

Both MBNA, whose shares rose 19.4%, and Signet, up 9.3%, have shown dramatic growth in credit-card-related assets.

"Signet is catching a lot of imagination and interest with its asset growth, stemming from credit cards," said Robert Albertson, an analyst with Goldman, Sachs & Co. "They can show growth where others fear to tread."

Outstandings Up 40%

In 1992, Signet's outstanding credit card loans rose 40%. Mr. Albertson estimated that outstanding credit card loans may have reached $2 billion in the second quarter, nearly a third of the bank's assets.

Practically all of MBNA's assets come from credit cards,

Chemical Buying Texas Trust Firm for $130 Million

By YVETTE D. KANTROW

Seeking to broaden its fee-based revenues, Texas Commerce Bancshares said Tuesday that it will buy a Dallas-based trust company from Cleveland's Society Corp. for about $130 million.

Under the deal, Texas Commerce, a subsidiary of Chemical Banking Corp., will add $5.5 billion of assets under management to its own portfolio of $8.5 billion of trust assets under management.

It also will inherit 11 offices and 590 employees of the unit, Ameritrust Texas Corp.

Texas Commerce officials said they expect Ameritrust's emphasis on personal trust services to mesh well with their own trust efforts. "We believe in the future of the trust business as an important portion of fee revenue," said Marc J. Shapiro, Texas Commerce's chief executive. Ameritrust Texas "is a very significant institution in this business with a long history."

Was Owned by MCorp

Ameritrust Texas was formerly owned by MCorp, a Dallas-based bank company that sold its trust assets to Cleveland's Ameritrust Corp. in 1990 as it was struggling to avoid takeover. When Society, also based in Cleveland, bought Ameritrust in March 1992, the Texas trust unit joined its fold.

Society became a major trust bank through the purchase, with about $67 billion of trust assets and $27 billion under active management. But the company said Tuesday that it had no other major units in the Lone Star State to justify keeping the Ameritrust operation.

"We tried to find a local commercial banking franchise to complement the trust business in Texas but failed to do so," a Society spokesman said.

Society will retain 40 of the Texas unit's 630 employees on its payroll to oversee a few business lines, including shareholder services.

Gain for Society Corp.

The Cleveland-based company, which has $26 billion in assets, said it expects to record a $10.1 million after-tax gain on the sale, which is expected to close before yearend. The transaction will also remove $100 million of intangible assets from Society's balance sheet.

The purchase price will be supplemented by the net equity value of Ameritrust Texas when the deal closes, an amount ana-

ABN Amro to Purchase Chicago's Cragin Federal

By JAMES R. KRAUS

Continuing its aggressive expansion in Chicago, ABN Amro Bank said on Tuesday that it has signed an agreement to acquire Cragin Federal Bank for Savings for about $500 million.

ABN Amro will pay $38 in cash for each of Cragin's roughly 13 million outstanding shares.

The price equals about 1.6 times Cragin's book value as of March 31, analysts said.

ABN Amro "has a reputation for buying high-quality merchandise at relatively high prices, and Cragin fits that bill," said Joseph Stieven, director of financial institutions research for Stifel, Nicolaus, & Co., St. Louis.

Stock Skyrockets

Cragin's shares surged on the news. In late trading Tuesday afternoon, they were up $10.25, or 29%, to $35.125.

The proposed acquisition is the latest in a series of Chicago-area purchases by the Dutch bank. The Cragin buyout would be ABN Amro's seventh bank or thrift deal in the area since 1977. Its most recent acquisition took place last year, when it bought Talman Home Federal Savings, now known as LaSalle Talman Bank.

Acquisitions of the Past

ABN Amro's major U.S. acquisitions

		Amount (millions)
'79	LaSalle National Chicago	$0.9
'88	Lease Interfinancial Chicago	1.6
'90	European American New York	0.2
'90	Exchange Bancorp Chicago	3.0
'92	Talman Home Federal Chicago	0.8
'93	Cragin Federal* Chicago	2.8

*Pending

Outside Chicago, ABN Amro owns European American Bancorp in New York and conducts corporate banking activities out of 10 direct U.S. branches of the Dutch bank.

Hitting the Target

The acquisition will boost ABN Amro's U.S. assets to around $40 billion, including $18 billion in the Chicago area. The company has said that $40

Community Banks Are Selling Out To Big Rivals in Growing Numbers

By ROBERT B. COX

Community bankers are increasingly selling out to larger players.

In the first half of the year, 92 acquisitions were announced, up from 59 in the same period a year ago.

And the amount of assets acquired soared to $29 billion from $19 billion, according to data compiled for the *American Banker* by SNL Securities, Charlottesville, Va.

Why the selling binge? Community bankers cite a host of reasons, including heightened competition and growing frustration with regulatory red tape.

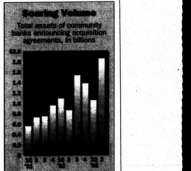
Attractive Bids the Key

But the top factor, most players agree, is extremely attractive bids. Buyers, taking advantage of their lofty stock prices, paid a whopping 1.8 times book value on average in the second quarter, the highest premium in almost four years.

When Pennsylvania giant PNC Bank Corp. offered to pay 1.6 times book, United Federal Savings Bank found the deal too good to pass up, said Charles C. Pearson Jr., chief executive of

Seasonal Variation

Total number of community banks announcing acquisition agreements



the $800 million-asset thrift based in State College, Pa.

For their part, buyers are primarily making in-market acquisitions, so-called fill-in deals. "Banks are building market share in markets already served rather than extending service to new markets," said David Berry, director of research at Keefe, Bruyette & Woods, New York.

While community bankers throughout the nation fell into

Culture Shock

Bank of Boston Corp. is taking a lesson from its corporate customers by climbing on the "reengineering" bandwagon.

Promising a corporate-wide cultural change, the New England giant is planning to adopt a Total Quality-type management training process to change the way its 16,000 employees approach their jobs. The aim, needless to say, is to focus better on customer service while increasing efficiency.

The idea came from the top after chief executive Ira Stepanian heard high-tech customers, such as Data General and Teradyne, extol Total Quality Management for "reengerizing" their companies, said Ira Jackson, the bank's head of external affairs.

Ira Stepanian

Top Bank of Boston executives are now attending TQM seminars and visiting corporations that have adopted similar programs. Charles K. Gifford, president of the $32 billion-asset company, has already paid a visit to General Electric Co.

Bank of Boston will use some consultants, but the project won't be led by outsiders. "This is a CEO-driven process," Mr. Jackson said.

Chemical's Solreos

Chemical Banking Corp. is treating its retail customers to wine, shrimp cakes, and cocktail music this summer.

The New York giant recently began hosting early-evening receptions for customers who are being forced to change branches because of closings related to the Chemical-Manufacturers Hanover Corp. merger.

"We don't want customers to feel alienated," said Barbara Sulkis, a manager who hosted a reception in her midtown Manhattan branch last week. "It's very informal, and there's no proselytizing."

About 200 of 1,200 invitees showed up to meet her employer, listen to a violinist, and leave with a gift umbrella emblazoned with Chemical's logo.

The bank has held about 20 receptions, and plans another 57 before the first quarter of 1994, when the bulk of the 80 branch closings will be complete.

* * *

Glenfed Shuffle

Glenfed Inc. raised some eyebrows on Wall Street when it began circulating details of its capital-raising plan to potential investors last month.

It wasn't the terms of the transaction but the name on the prospectus that drew attention. First Boston Corp., not Goldman, Sachs & Co., is lead manager for the recap. Goldman had been the ailing thrift's chief adviser for much of the past year as it searched for investors.

None of the parties would publicly comment. But people familiar with Glenfed's situation said Goldman, more comfortable with traditional financing methods, pulled out when the thrift opted for a high-wire recapitalization.

First Boston, by contrast, has a restructuring department and knows the ins and outs of financial institution recaps. And officials of Glenfed – which could be seized if the recap fails – no doubt noticed that First Boston pulled off a similar deal for California Federal Bank earlier this year.

— Sam Zuckerman

Bench Strength

Some hearts skipped a beat at the Bank Administration Institute last month.

The Chicago-based institute abruptly lost the services of Robert B. Hedges, a consultant who was point man on a landmark study of consumer banking. Mr. Hedges recently became an executive vice president of Shawmut National Corp.

But the BAI says the project has kept to its tight schedule, thanks to some fancy substitution work by Mr. Hedges' former firm, First Manhattan Consulting Group. H. Eugene Lockhart, executive vice president of First Manhattan, took charge to ensure that the study is ready for a high-profile release at the BAI's retail delivery systems conference in November.

Mr. Lockhart returned to First Manhattan last year after five years at Midland Bank in London, where he engineered major changes in branches and other delivery channels – the very subjects of the BAI study.

Mr. Hedges will keep a hand in the project because Shawmut will be among the banks providing data to First Manhattan.

— Jeffrey Kutler

Bank of New York Cuts Estimate Of Layoffs in New Jersey Merger

Reuters

NEW YORK — Bank of New York Co. will lay off "substantially" fewer people than the 500 to 700 that it originally estimated when it announced the purchase of New Jersey's National Community Banks.

A Bank of New York spokesman said the company will still attain its projected cost savings of $40 million from the merger in the first year after the acquisition.

The company said it will still attain its projected savings of $40 million in the first year after the acquisition.

Reduction of 25% Seen

He declined to specify the new size of the layoffs. But one source said it could be about 25% lower than the original estimate, or 375 to 525 jobs.

Some layoff notices were handed out last week to National Community employees.

The Bank of New York spokesman said that Bank of New York does not yet have a final number for how many people will lose their jobs in the merger.

He said that the company will experience the same cost savings despite laying off fewer employees because of unforced resignations and retirements at National Community.

Job Openings by Attrition

As jobs open up due to natural attrition, Bank of New York is filling them with people who otherwise might have been laid off, he said.

The merger, which awaits approval from the New York State Banking Department, is likely to be completed in the third quarter.

Shareholders of National Community will receive 0.96 shares of Bank of New York common stock for each of their common shares.

At the time the merger was announced in January, the value of the deal was $650 million. □

American Banker Opens Denver Bureau with The Bond Buyer

American Banker and its sister publication, *The Bond Buyer*, yesterday opened the newspapers' first joint bureau, in Denver.

The new bureau will be headed by Keith Dubay, a business and finance reporter for *The Rocky Mountain News*. Mr. DuBay, a Detroit native, was a business reporter and columnist with the *News* since 1989. Before that, he was a reporter for the *El Paso Herald-Post* and the *Dallas Morning News* in Texas.

"We have long wanted to open a bureau in the Rockies. There is nothing like having a reporter on the scene," said Joe Mysak, editor of both newspapers. "With the opening of the Denver bureau, our expansion plans are almost complete," he said.

The new bureau will be in the landmark century-old Equitable Building in downtown Denver, at 730 17th Street, Suite 712. The telephone number there is 303-446-0625. The facsimile number is 303-446-0619.

The newspaper also announced that John Racine, Southwest bureau chief of *The Bond Buyer*, has joined *American Banker* as Southwest bureau chief. Mr. Racine has been with *The Bond Buyer* since 1990.

A Texas Bank to Use PCs for Its Core System

By MATT BARTHEL

Departing from the strategy used by most institutions its size, a $377 million-asset Texas bank has purchased a core banking system that runs on personal computers.

Southside State Bank, based in Tyler, will use software from Perot Systems to run a local area network of personal computers, replacing its current system that operates on an NCR Corp. mid-range computer.

The new system is designed to give customer service representatives a comprehensive picture of customers' banking relationships. Bank officials said that added flexibility was the software's most attractive feature.

"The system will allow us to get products to market a lot quicker than we could in the past," said Lee R. Gibson, executive vice president at Southside.

An Expanded Line

Mr. Gibson said the system will enable Southside to expand its range of services. The current system limits the number and complexity of products, such as certificates of deposit and money market accounts, that the bank can offer, Mr. Gibson said.

Despite the performance improvements that Mr. Gibson attributes to personal computer technology, most smaller institutions have yet to move completely to PCs for core banking applications.

According to the American Bankers Association's annual survey of banking automation, banks with between $300 million and $500 million in assets still favor mainframe software for their on-line retail applications.

In fact, despite the rising power of the personal computer, about 60% of financial institutions with less than $1 billion in assets still use a mainframe or midrange to drive "dumb" terminals at the branch.

Complex Setup

The reason: Converting from a host computer LAN can be complex, and many smaller banks have been unable or unwilling to go through the trouble. But there are signs that is changing.

"Southside is a good candidate for the first installation of this software because they already had PC LANs in place when we got there," said a spokesman for Perot Systems, which is based in Dallas.

Southside expects the Perot system to bolster cross-selling and speed responses to customer inquiries.

Opportunities to cross-sell products will grow because of the broader range of customer information available to branch employees.

Relevant Data at Hand

For example, a customer with a large balance in a savings account might be a perfect candidate for a certificate of deposit or money market account.

Quicker responses are possible because the system enables bank employees to view on a single screen demand deposit accounts, CD and individual retirement accounts, loan relationships, and credit history.

Mr. Gibson indicated that the open-systems architecture of the Perot software makes these benefits easy to achieve.

"It's refreshing to find a system that provides product flexibility as a result of its design rather than by retrofitting features, as found in legacy systems," he said.

The system at Southside Bank consists of an NCR server, which supports two 486 personal computers acting as processors. Eventually, 150 terminals will be connected to this nerve center.

Imaging Capability

In addition to the applications from the Perot system, Southside Bank will also expect the branch PCs to handle images of signature verification cards and of actual certificates of deposit. The idea, again, is to speed customer service inquiries.

The Perot system is expected to be up and running by the end of September.

Perot declined to comment on the cost of the system, except to say that charges are based on the number of connected terminals. Banks with 100 or more users are considered the target customers. □

How Community Banks Handle Retail Processing

Systems used by banks with less than $1 billion in assets

Divining the future is not all that hard when you have

THE REDEMPTION REPORT

Calls and prerefunded bonds are scheduled to drain the yields out of portfolios at a faster and faster pace in the third quarter. With ***The Bond Buyer Redemption Report****, you can anticipate redemptions well ahead of the actual events.*
If you want to know when your bonds will be called away, this report has the answer.

We published the first such book in history for the first quarter of 1993.
Buyers received instant access to the entire universe of called and prerefunded bonds in one volume.

And now you can get the third-quarter volume, a 916-tome chock full of information on which, how much, and when. Here's a sample listing:

AK ANCHORAGE ALASKA TEL REV
TEL REV BDS
Series: 1993
Sale Date: 08/24/83
Total Amount Redeemed : $8.465,000.00
Issue Amount: 9,000,000
Dated Date: 09/01/83

Cusip	Coupon	Maturity	Redeemed Amount	Type	Date	Price
033267B53	10.250	09/01/99	$1,050,000	Prerefunded	09/01/93	102.00
033267JZ7	9.700	09/01/94	$260,000	Prerefunded	09/01/93	102.00

Ignore the Doomsday Books! Deficits Won't Bankrupt U.S.

Some observers feel that America's 217th birthday will be one of its last happy ones for a while.

Why? They say our budget deficits are so out of hand that we will soon be bankrupt, unable to pay our debts, and unable to keep foreigners from taking all their money out of the country.

I find this analysis untenable – sheer fiction, a scare tactic that sells doomsday books and attracts listeners to TV shows on the topic.

Now, I hold no great love for the lawmakers who have given us a deficit that will soon reach $4 trillion dollars. The irresponsibility of various administrations and Congresses in allowing government spending to so exceed tax collections that we have reached a deficit of $300 billion a year is unconscionable.

Deficit Feeds on Itself

The financing of this deficit is now the government's third-biggest expenditure – after entitlements and the military – and it will soon be No. 2.

The deficit has led to a crowding out of private borrowing and spending that could have helped the economy recover. And it feeds upon itself by forcing the government to go deeper and deeper into the hole in order to pay the interest on the deficits already on the books.

This may be pretty bad, but it is so terrible that our nation's future is threatened?

Our first evidence that the deficit is not life-threatening comes from the fact that despite 12 years of soaring deficits, we still have the lowest interest rates in two decades and an investing public that trusts U.S. government obligations.

Why is this possible? Don't the huge deficits drain money from the economy, making credit scarce and boosting money rates?

Just a Movement of Deposits

No. For the money has to be somewhere. Dollars just don't leave the country. They are American bank deposits, basically the bulk of the liabilities of our banking system.

All that deficit finance does is move deposits from the banks of the new investors in government securities to the accounts of those who already own government securities and are entitled to interest payments on them.

Sure, heavy inflation would occur if the Federal Reserve financed the huge deficits by creating new reserves and thus allowing the banks to create new deposit money.

THE FINANCING OF *the budget deficit is now the U.S. government's third-biggest expenditure, after entitlements and the military, and it will soon be No. 2.*

But the Fed is not given to creating inflation. Rather it keeps as its goal protecting the value of the dollar. So most of the deficit finance involves this moving of funds from the new buyers of bonds to the holders of previously issued securities on which interest payments are due.

Now, who owns these bonds? More than $300 billion worth are owned by the Fed itself. What does it do with the interest it earns on them? Once it has funded its own operations, the central bank sends the vast bulk of its income right back to the Treasury as a direct transfer. That certainly doesn't hurt the nation.

Keeping the Flow Going

As for the rest of the bonds held domestically, they too are a part of a loop that keeps money here. The bondholders receive interest, pay taxes on it, spend or invest the rest, and thus keep the interest payments they receive flowing through the economy.

Sure there is a transfer of funds from all the taxpayers and those who bought new bonds as interest is paid to holders of outstanding obligations.

But these banks, insurance companies, and all other investors – both individuals and institutions – have sacrificed earlier consumption to buy the bonds. They are entitled to their interest. If they didn't receive it they would be unlikely to invest in U.S. securities again, in which case our economy would really be in a mess.

So domestically paid interest breeds transfer of funds but no actual disaster. The higher the deficit, the more the transfer, but the money stays in the loop.

Nowhere to Run

Even foreign owned dollars do not leave the loop. They can't. They are also merely U.S. bank deposits. As with domestic holdings, foreigners must either spend the interest they earn on American goods and services or reinvest it in other bonds or acquire stock issued by real estate and movie companies. None of these choices should make us unhappy.

The alarmists say "they will take their money and run." Where? When Iran's deposits were unblocked and it pulled billions out of Chase Manhattan Corp., it moved the money down the street to J. P. Morgan & Co.

Sure the budget deficits hurt. But by itself, the deficit will not bankrupt our country unless the Federal Reserve is willing to allow it – a very unlikely prospect. Deficits can squeeze our interest rates but they can't bankrupt us. So despite all the doomsday books that sell so well at airports, we can wish America a happy birthday and expect to be around for many more. □

Do as Secured Lenders Do: Split Up Responsibilities for All Bank Lending

Secured lending areas in many banks are viewed with a mixture of distrust and disdain by the unsecured lenders.

The traditional banker sometimes sees the secured lender as a "bottom fisher," someone dealing with credits that are not bankworthy. Further, the business system for secured lending – that is, how the job is segmented into functional responsibilities – goes against the grain of many bankers.

Nonetheless, the organizational model employed by secured lenders can provide some tips on reengineering the entire bank. The secured lenders' segmented approach may offer banks a way to tighten their marketing focus and increase the cross-selling of products.

Three Distinct Processes

Almost without exception, secured lenders in banks across the United States break up their job into three distinct processes: loan origination, credit underwriting, and account maintenance.

The starting point is the business development officer, who focuses almost exclusively on generating new loans. These officers are constantly in contact with brokers, accountants, investment bankers, and other intermediaries.

Depending on the bank, business development officers also work closely with unsecured lenders, who should be a key source of referrals. Compensation is largely driven by performance – 25% or more is incentive-based.

When the transaction is identified, credit specialists then underwrite and structure the secured loans. Typically, business development officers have no credit authority. What they do possess, however, is a knowledge of what makes a deal acceptable to the market and to their own organizations. Therefore, they act as the first credit screen. They may, of course, write up an initial credit presentation, but after that point, the decision rests with the credit experts.

DUTIES *can be divided into three areas: origination, credit underwriting, and account maintenance.*

Contact Person for Borrower

Account maintenance and monitoring of secured loans is handled by another group of focused professionals. These account executives or account officers make certain that the monitoring procedures are working and that the customers' needs are being met. Once the loan is signed, the account exec-

Split Up Lending Responsibilities

Continued from *page 4*

sive becomes the main contact person for the borrower.

Contrast this infrastructure with banking's standard approach to unsecured lending.

At most banks, line officers perform multiple tasks: marketing, credit analysis, maintenance, and cross-selling. Tradition has more to do with this arrangement than customer needs.

Additionally, bankers express concern that borrowers will not accept the switch from a business development officer to an account executive. In some bankers' view, the only reason that this trade-off approach to account management works for secured lenders is that they are selling only one product, and it is to clients who may have few options.

Sits Well with Customers

In fact, customers are relatively at ease about their accounts being managed by someone other than the line officer. Customers are primarily interested in seeing that their companies get good service from a lender. They also overwhelmingly prefer one focal point for problem resolution. As long as that contact person performs, the customer is happy.

Line bankers, not customers, offer the greatest resistance to this organizational change. The genuine concern that the client will feel alienated by a hand off of the relationship from the business development officer to the account executive can be prevented by introducing the account executive to the target early in the marketing cycle.

The resistance generated by line bankers who want substantial input into the credit process needs to be resolved within the bank. When the requirements for the banker to produce high return on equity and higher productivity in an increasingly competitive environment are linked directly to incentive compensation, very few lenders will continue to volunteer to be all things to all people.

Too Much for One Person

Expecting one person to juggle multiple roles and manage different internal and external constituencies may result in suboptimal bank performance in all areas of marketing, credit, and account maintenance. Building a high-yielding relationship, which should be every bank officer's primary concern, can become buried under the avalanche of phone calls and document processing.

Indications are that the loan market for the unsecured lender will be either flat or continue to decline. Improved productivity by the banker, higher account retention, and increased cross-selling will all be key factors in maintaining strong profits.

Adopting a tri-part account management approach with the business development officer, the account executive, and the credit specialist working together as a team offers the best chance to enhance productivity in a slow or no growth market.

Given that responsibility for an account is shared, increased productivity may, at first, appear to be an unlikely by-product.

Retaining Accounts

In fact, better productivity can result from a higher degree of job focus and match-up of individual expertise to responsibilities. Similarly, this organizational structure enhances the probability of account retention. Those who maintain the accounts understand how the bank works and, assisted by an administrator, can get issues resolved quickly and with reduced hassle for the customer.

The account executive serves a dual role in this structure. First, that executive can assure that the credit remains strong and the customer stays satisfied with the service provided. Second, the account executive can coordinate the cross-selling effort. The focus is on developing a deeper relationship with the customer.

Contributing to the productivity increase will be a change in personnel requirements.

Linking Compensation

A substantial portion of the business development officer's compensation, for example, can be linked to account profitability. The account executive can handle a significantly increased account load with the assistance of a lower-cost administrator. On an all-in basis, costs per account relationship should decline.

In some ways, it is ironic that a "break the mold" approach to account management has been developed by secured lenders often viewed as outsiders within their own banks.

Nonetheless, the managers of unsecured lending areas should review what their brethren have done for secured lending and weigh its relevance to what they are also trying to accomplish – namely, productivity and profit growth. □

IN CONTRAST *to what traditional bankers assume, customers accept having their accounts managed by someone other than the originator.*

Fed Is Keeping Close Eye On Prices, Phillips Says

WASHINGTON — Federal Reserve Board Governor Susan Phillips said the recent firming of prices is being "carefully monitored" by the Fed "to see if they will stick."

In comments before the National Association of College and University Business Officers, Ms. Phillips said she believes further progress in reducing inflation is "feasible" this year, citing a commitment by businesses to improve efficiency and keep costs down.

But at the same time, Ms. Phillips acknowledged that the Fed is keeping a close eye on recent inflation reports.

Susan Phillips
Says more progress is feasible

Sees Growth Ahead

She said the Fed is "spending a great deal of time trying to assess whether commodity price run-ups are specific or likely to spread throughout the economy."

Ms. Phillips said she believes the economy is still positioned for a period of sustained non-inflationary growth. But she added that "we still have to work through some of these imbalances and drags on the economy" stemming from the 1980s and early 1990s.

Ms. Phillips called the May reports on inflation "encouraging." She said the housing sector remains surprisingly weak despite such strong fundamentals as low mortgage rates and she predicted a pickup in that sector.

She said sales of autos and light trucks remain one of the bright spots in the economy. □

Executive Pay, Performance Compared in Study

CHARLOTTESVILLE, Va. — SNL Securities has published studies comparing executive compensation with the financial performance of banks and thrifts.

The two studies cover the nation's 400 publicly traded commercial banks and thrifts and are based on the companies' 1993 proxy statements.

The studies, based on new disclosures required by the Securities and Exchange Commission, rank the compensation and benefits of top executives according to institutions' asset size, location, and financial performance. SNL is based in Charlottesville. □

This announcement is neither an offer to sell nor a solicitation of an offer to buy these securities. The offer is made only by the Prospectus

NEWS briefs

Key Bank Acquires Emerald City Assets

TACOMA, Wash.— Key Bank of Washington said it has acquired certain loans and insured deposits of Seattle-based Emerald City Bank. The Tacoma-based banking subsidiary of Keycorp said it will convert an Emerald City office in Seattle into a branch.

Terms of the deal, which Key said was accepted by the Federal Deposit Insurance Corp. on July 2, were not disclosed.

The purchase follows an earlier announcement that Washington State's supervisor of banking had taken possession of Emerald City Bank and had appointed the FDIC as receiver to handle Emerald City's assets.

Key, based in Albany, N.Y., recently dismissed the chief executive of its Tacoma-based banking subsidiary, citing dissatisfaction with its returns. The unit has grown fast through acquisition but has not been embraced by local communities.

Marquette Offers Loans to Flood Victims

MINNEAPOLIS — The 13 Marquette Banks in Minnesota are offering low-interest loans to people whose property was damaged in the recent rains and flooding.

The loans, at one to two percentage points below regular interest rates, are available through July 31. To qualify, individuals must meet the bank's standard underwriting criteria and use the funds specifically to repair damages caused by the rains.

Marquette is a holding company with $1 billion of assets.

NationsBank's McColl to Raise Arts Money

CHARLOTTE, N.C. — The Arts and Science Council, a local fund-raising organization, said NationsBank Corp. chairman Hugh L. McColl Jr. will be chairman of an endowment campaign.

The council said Mr. McColl had not previously headed a major fund-raising campaign in Charlotte, the headquarters of NationsBank.

The goal has not been set, but the council is considering a range of $20 million to $30 million to ensure the long-term health of arts and science organizations, including the N.C. Blumenthal Performing Arts Center, Charlotte Symphony Orchestra, N.C. Dance Theatre, Afro-American Cultural Center, and Charlotte Repertory Theatre.

First Security Creates Small-Business Unit

SALT LAKE CITY — First Security Corp. has formed a subsidiary through which it plans to make direct investments in small businesses.

The subsidiary, First Security Business Investment Corp., is awaiting Small Business Administration designation as a small-business investment company.

The unit was incorporated in First Security's home state of Utah. It will take equity positions in emerging and later-stage small businesses. It will also provide some financing to businesses that do not qualify for traditional bank debt.

Louis O. Alder will be vice president and general manager of the subsidiary.

The briefs were compiled from staff and wire reports.

ABN Amro to Acquire Cragin

Continued from *page 1*

billion is its target for the United States.

Cragin, with $2.8 billion of assets, is the second-largest independent savings bank in Illinois. Its 27 branches are situated mainly on Chicago's northwest side and in the western and northwestern suburbs. The staff totals 600.

The acquisition will give ABN Amro 90 branches in the Chicago metropolitan area. That would be second only to the 102-branch network of First Chicago Corp.

Building market share in Chicago, though, is only part of ABN Amro's motivation in seeking to buy Cragin, according to Harrison F. Tempest, chairman and chief executive officer of ABN Amro North America Inc., the Dutch bank's U.S. holding company. Cost reduction is the other major factor, he said.

Saving of 20% Seen

Mr. Tempest estimated that the merger will reduce Cragin's operating expenses by at least 20%.

Kenneth Puglisi, a banking analyst with the Chicago Corp., noted, "It's an in-market merger, and those kinds make the most sense" in terms of cost savings.

ABN Amro said it has reached agreement with several minority shareholders of Cragin on terms of the offer.

It said the acquisition will be funded partly by an offering of preferred shares by its Chicago commercial banking unit, La-Salle National Corp.

The proposed sale of Cragin represents a bonanza for depositors and investors who bought shares of the thrift when it was taken public in June 1991.

"It's been a tremendous investment for anybody who was able to buy it," Mr. Stieven said.

The shares were sold initially at $10 apiece. A subsequent stock split made the per-share value of that sale $6.67, analysts said. Thus, the purchase price represents about 4.6 times the initial investment.

Person to Person

The proposed acquisition culminates several years of talks between Theodore H. Roberts, chairman of LaSalle Talman Bank, and Adam A. Jahns, chairman and chief executive of Cragin.

"Ted and Adam were talking to each other long before we bought Talman, and this is really one of those people-to-people transactions," Mr. Tempest said.

Cragin and Talman will continue to operate separately, he added.

Mr. Tempest said ABN Amro is not planning any more significant U.S. acquisitions "for the time being." □

Bank of Boston Names Griebel to Head Its Connecticut Bank

By YVETTE D. KANTROW

Bank of Boston has appointed R. Nelson "Oze" Griebel as chairman, president, and chief executive officer of its Connecticut bank.

Mr. Griebel will replace James J. Pearl, who is credited with spearheading Bank of Boston's pending acquisition of Connecticut's Society for Savings. Mr. Pearl is returning to Boston as director of mergers and acquisitions.

Mr. Griebel, 44, has been running Bank of Boston's core domestic operations. He has been responsible for check and electronic funds processing, lockbox operations, deposit account management activities, treasury operations, and consumer loan processing and documentation.

A 17-year veteran of the Boston bank, Mr. Griebel will assume his new role on July 9 – the day the Society for Savings acquisition is set to close. Bank of Boston Connecticut will then become a $4.8 billion-asset institution, with 39 retail branches.

In Boston, Mr. Pearl will report to Peter Manning, executive vice president for mergers, acquisitions, and risk review. □

"Please find out about this structured finance deal and get back to me."

EXECUTIVE changes

Bank of California Investment Unit Names Mazur to Additional Post

Lake C. Mazur, a managing director of **Merus Capital Management**, has assumed additional responsibilities as chief investment officer for Merus, the investment management division of the **Bank of California**, San Francisco.

He succeeds **Harold C. Warner**, who has left the unit to join an independent investment firm.

Lake C. Mazur

Mr. Mazur has been chief operating officer for Merus, which manages more than $6.2 billion of assets for individuals and businesses.

He came to Bank of California in 1990 as Merus managing director from an equivalent position at Northern Trust Corp., a subsidiary of Northern Trust Co. Mr. Mazur had spent 25 years with Northern Trust in a variety of positions.

Mr. Mazur is a member of the Financial Analysts Federation, the Investment Analysts Society, and the Institute for Quantitative Research in Finance.

— **Franklin Smith**

NEW ENGLAND

FLEET FINANCIAL Group Inc., Providence, R.I., announced the following the appointments:

David L. Potts was named senior vice president and manager of commercial loan services at Fleet Services Corp., the data processing and bank operations subsidiary; **Stephen R. Taylor** was named director of corporate accounting and appointed a senior vice president in the corporate accounting division of Fleet Corporate Administration, the service unit; and **Joanne Hadfield Comeau** was named senior vice president, corporate marketing at Fleet Corporate Administration.

Also, **Patrick J. Wiater** was appointed a vice president in the corporate accounting division; **Gail J. Robinson** was appointed vice president and counsel in the legal division; **Joseph Xavier Jr.** was appointed vice president, corporate accounting operations; and **Alan B. Stewart** was appointed vice president and audit manager in the audit division, Fleet Corporate Administration.

Named at Fleet Bank, Providence, were **Kyle A. Macdonald** to vice president in the managed assets division; **Ronald S. Ohberg** to vice president in the accounting area of the bank's commercial real estate department; **Kevin Tracy** to vice president in the community banking division, and **Donald C. McQueen** to vice president in the corporate banking division.

MIDDLE ATLANTIC

KEYCORP, Albany, N.Y., has appointed **Frederick E. Wolfert** chairman, president, and chief executive of its Key Bank USA unit.

Mr. Wolfert also will retain his presidency of Keycorp Leasing Ltd., Keycorp's equipment leasing company.

He joined Keycorp in 1988 as senior vice president of Key Financial Services Inc.

THE FEDERAL RESERVE Bank of New York has promoted **Howard J. Howe** and **Eli M. Remolona**. Both were named research officer and senior economist.

Mr. Howe will continue in the international research department. He is responsible for research on European economic and monetary union, the independence of U.S. monetary policy, international comparisons of interest rates and profits, and industrial economies outlook.

Mr. Remolona will continue his assignment in the international finance department. His responsibilities include research on financial policy issues and credit policy briefings.

WILMINGTON TRUST Co., Wilmington, Del., said **Donald A. Corkran** will retire at the end of the month after 30 years with the bank.

Mr. Corkran has been a member of the bank's senior management committee since 1979, and since 1991 has managed the Trust Operations and Systems Development Department and oversees the initial phases of the development of trust systems.

SOUTHEAST

WACHOVIA Bank of North Carolina, Greenville, a subsidiary of **Wachovia Corp.**, Winston-Salem, has elected **Charles D. Bryant Jr.** and **Bruce A. Ledwith** senior vice presidents.

Mr. Bryant is regional loan administration manager for the eastern region and Mr. Ledwith is manager of the sales finance center.

In another announcement, **Wachovia Corp.** said **Harry W. Rolison** has retired from Wachovia Trust Services Inc. after a 37-year career in the trust division.

Mr. Rolison, who had been a senior vice president, managed the corporate trust department. He was responsible for stock transfer, bond trustee, registrar, dividend disbursing, and dividend reinvestment services for corporations and governmental units.

WEST

THE FEDERAL RESERVE Bank of San Francisco said **S. Jean Hinrichs** has joined the audit division of the bank as an assistant vice president.

In the newly created position, Ms. Hinrichs will be responsible for overseeing nonelectronic data processing audit activities for operations in the home office of the 12th Federal Reserve District, which serves the nine western states. She reports to General Auditor Robert Gatchell.

Ms. Hinrichs has more than 12 years of audit experience. □

Top Rating a Team Effort For Bank of Commerce

By DEAN M. NIELSEN
Special to the American Banker

CRA

EVERY EMPLOYEE AT tiny Bank of Commerce knows the Community Reinvestment Act inside and out – even the janitors.

In August 1990, after receiving regulators' second lowest CRA rating, the Auburn, Calif.-based bank set out to turn itself around. In just nine months, the $56 million-asset bank with three branches won an "outstanding" rating after improving in 21 areas.

"This was a massive effort," said John Briner, president and chief executive. "I wasn't surprised at the turnaround – I was gratified."

Mr. Briner didn't hire a consultant to guide him through the turnaround. Rather, he appointed himself as the CRA officer.

"We started with intensive training," he said. "There isn't anybody in this bank who doesn't know what CRA is."

The bank moved quickly to establish a written CRA program with goals and objectives. It also increased its outreach efforts among community leaders, directly and through radio and direct mail advertising.

"Everyone had to take the test," he said. "Everybody – even the janitors."

John Briner

Mr. Briner said every employee was tested because of the bank's corporate commitment to the regulation. "I don't think any program is worthwhile unless everyone is on board," he said.

And the tests are extensive.

The training regimen begins with viewing a training videotape. After employees watch the video, they are tested and have to score a minimum of 75%. They are also required to review the CRA public file, a 21 page report that details the bank's CRA activities, its CRA policies and goals for the year, and the board of directors' CRA committee minutes – all 12 months' worth.

"We don't mess around with this thing," Mr. Briner said. "It's not very meaningful if only one or two people in the bank know what this is about."

Mr. Briner said employees sit down with a supervisor to read the material so questions can be answered quickly.

Commerce originally received a "needs to improve" rating, largely because of documentation shortfalls. Mr. Briner said the bank was, indeed, making loans in low-income and moderate-income areas but never kept a log. He said it spent about $50,000 to overhaul the program.

"It's been a profitable program for the bank," he said. "I can't quantify it, but . . . it's a factor when we loan any dollar."

Kenneth H. Thomas, a Miami-based banking consultant, was so impressed he included the bank's story in his recently published book, "Community Reinvestment Performance."

"They truly did what they set out to do," Mr. Thomas said. "The most important factor was that they really cared, from the top down. These were not just token efforts."

Mr. Thomas said the bank disproved the notion that banks have to be big, and spend a lot of money, to comply.

Mr. Nielsen is an intern at the Institute on Political Journalism.

Community Banks, Lured by Bids, Are Selling Out to Larger Rivals

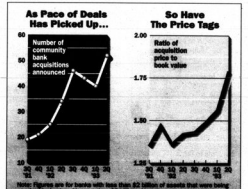
Continued from *page 1*

the arms of acquisitive rivals, the Southeast and Midwest accounted for about two-thirds of the 92 deals announced in the first two quarters.

Eleven banks in Florida alone were snatched up, while seven Oklahoma banks and a half-dozen Pennsylvania banks also sold out.

"Interstate and intrastate banking laws continue to become more and more liberalized – that encourages these transactions," said Joseph A. Stieven, banking analyst at Stifel, Nicolaus & Co., St. Louis.

Kansas, for example, saw six of its community banks sold to regional heavies less than a year after the state was opened to interstate acquisitions.



'Handwriting Is on the Wall'

Tougher competition from larger players and rising costs are common motivations for selling.

"The handwriting is on the wall: If you want the whole customer you have to be able to offer all services," said Elbert R. Strain, chief executive of First Bancorp Indiana, Lafayette.

His $290 million-asset thrift signed an agreement to be acquired by Huntington Bancshares this month. "We just weren't getting there on our own."

"More [community bankers] are questioning the challenging economic and business climate they are going to have to operate in," said Les Biller, executive vice president and head of mergers and acquisitions at Norwest Corp.

"We are having many more conversations" with bankers willing to sell, he added.

Compliance a Full-Time Task

Indeed, many community bankers complain that coping with regulations has become a full-time task that detracts from their ability to make loans.

"We wait on customers as well as deal with regulators," said Russell Lawson, chief executive of Central Banking Group, Oklahoma City. "It is just not possible to be current in all those phases and still do a good job."

Mr. Lawson sold his bank to Banc One Corp. for two times book value in late May. The acquisition was the Columbus, Ohio-based behemoth's first in the Sooner State.

Another sore point for community bankers: paperwork requirements.

In the first half, 92 acquisitions were announced.

"Smaller banks have had it up to their neck and beyond with the regulatory burden," said Kenneth Guenther, executive vice president of the Independent Bankers Association of America. "More are saying the hell with it."

Typically, the superregional banking companies employ full-time compliance officers, freeing up bank officers to drum up business.

"Large companies can create a staff function to deal with these kinds of issues and get on with life," said Mr. Berry of Keefe, Bruyette & Woods.

By joining larger organizations, community banks can also offer products and technology to customers that might have been too costly to provide as an independent bank.

'A Lot of Competition'

"We can allocate our technological innovations over many locations so the cost to us . . . is a lot cheaper than it is for a small community bank," said Mr. Biller of Norwest, which has signed three merger deals for community banks just this year.

Community bankers say that to remain competitive they need to extend products and services such as check imaging and trust that larger banks routinely offer.

"We have a lot of competition here," said Mr. Strain of First Bancorp Indiana. "To get away from strictly thrift services we needed to bring in some expertise."

Bullish Market an Incentive

The bullish market for bank stocks has also coaxed community bankers into joining with regional powerhouses. With their currencies soaring, acquisitive regional bankers are also making it hard for community bankers to rebuff their overtures.

"Because bank stock prices

North Dakota Company Makes Small Acquisitions Pay

Don Mengedoth knows where he and Community First Bankshares have been and, more important, where they are going.

The Fargo, N.D., company was created in 1986 by a group of investors who bought several banks spun off by First Bank System Inc. The founders conducted an initial public offering

Super Community Banking

By ANAT BIRD

and used the capital to launch a unique and successful acquisition program.

"We took acquisition planning seriously and spent a lot of time figuring out what do we want to acquire and how," said Mr. Mengedoth, chief executive of Community First.

A Firm Strategy

The plan was aggressive and specific, in a way that might not be expected of a $1.2 billion-asset super community organization.

Mr. Mengedoth and his people figured out the number of community banks – 3,000 – in the 10-state region anchored by North Dakota.

"The healthy and solid small community bank is our ideal acquisition candidate," Mr. Mengedoth said. "We were not looking for RTC deals or turnaround situations. We do look for companies with solid performance records and good market shares in very small towns."

Tapping a Forgotten Market

The result: Community First doubled its size in the last four years. Return on equity climbed steadily and now exceeds 20%.

Community First, in short, went after the forgotten market of small banks that many people assume cannot be acquired efficiently. This is an acquirer that figured out a way to absorb $20 million to $50 million banks cost effectively, while fostering the locally focused autonomy that distinguishes a super community bank.

Community First Bankshares doubled its size in the last four years. Return on equity has climbed steadily and now exceeds 20%.

The acquisition staff consists only of Mr. Mengedoth and chief financial officer Mark Anderson.

Careful Examination

They delegate due diligence to executives with particular expertise in a given area, because they run that function at Community First.

The North Dakota bank's asset-quality team is the first to examine an acquisition candidate, making a quick assessment of the loan portfolio. If it measures up, the rest of the staff moves in to examine the retail franchise and back-office operations, and develop an integration plan.

Mr. Mengedoth says the super community structure makes sense for the owners of target banks. They can cash in their stock in the buyout but do not necessarily have to step aside or retire. In fact, the minority interests they get are expected to keep them dedicated.

A Win-Win Situation

Community First's process is rigorous, but it clearly defines whether a potential acquisition makes sense financially and strategically. There is a lot of give-and-take in negotiations, but in the end the transaction is friendly and is structured so that both sides are satisfied.

This is a tall order for any bank, and Community First's ability to carry it out sets it apart from its super community peers. □

J.I. Kislak Agrees to a Merger with Farragut Mortgage

By EDWARD KULKOSKY

J.I. Kislak & Co., a major mortgage bank based in Miami Lakes, Fla., said Tuesday that it has agreed to merge with Farragut Mortgage Co., Mansfield, Mass.

The combined companies will have a mortgage-servicing portfolio of more than $12 billion and origination capability of $5 billion a year, the companies said.

Company Rankings

The new company, which will operate under a variation of the Kislak name, could be within striking distance of becoming one of the nation's 25 largest servicers.

According to the most recent ranking of mortgage companies by the *American Banker*, Kislak was the nation's 38th largest servicer as of June 1992, and Farragut ranked No. 164.

Shares of Farragut, traded on the American Stock Exchange, fell 25 cents Tuesday, to $5.875 a share, following the merger announcement. At that price, Farragut has a market value of about $25 million.

Last year, Farragut acquired Alta Mortgage Co., Martinez, Calif., for $10 million in a deal

With a mortgage-servicing portfolio of more than $12 billion, the merged company will rank near the top 25 of the largest U.S. servicers.

that nearly doubled its servicing portfolio.

Kislak, which has subsidiaries in the mortgage business, real estate brokerage, and insurance, is privately held. It has about 1,200 employees, while Farragut has about 150.

Shareholders of Farragut will own about 11% of Kislak after the deal. One Farragut director will be added to the present board of Kislak.

Approval of stockholders of both companies is still required. A group that holds about 40% of Farragut already has agreed to vote in favor of the deal, as has Jay I. Kislak, the principal stockholder of J.I. Kislak Inc.

Mr. Kislak will continue as chairman of the combined companies. William P. Soper 2d, Kislak's president, will also continue in that capacity.

The companies said the deal was expected to close by the fall.

Farragut operates origination offices in the Northeast, West, and Northwest. Kislak's mortgage business is mainly in Florida, New Jersey, Illinois, and California. ☐

Mortgage-Backed Paper Issued for Low-Cost Homes

By CHRISTOPHER NOBLE

National Cooperative Bank has issued a new kind of mortgage security in an effort to attract capital to the low-income housing market.

The issue, backed by multifamily mortgages, is the first involving low-income projects to be sponsored privately in a market dominated by the government-sponsored housing agencies, said Grace Huebscher, president of the bank's National Cooperative Bank Mortgage Corp.

The securities are being called mortgage investments in low-income communities, or MILC.

The Federal National Mortgage Association and the Federal Home Loan Mortgage Corp. package billions of dollars of securities each year for sale to investors. The securities, backed by the government, are virtually risk-free.

National Cooperative hopes its security will be the start of an additional multibillion-dollar market for affordable-housing loans, said Ms. Huebscher.

William H. Apfel, vice president of United States Trust Co. in Boston, one of the primary investors in the security, said the new bond would introduce "the advantages of the huge and sophisticated institutional investor market for mortgage-backed securities to the generally neglected area of private-market affordable housing financing."

While National Cooperative's $26 million security is not guaranteed, 68% of it -- the top tranche -- is triple-A rated. The other 32%, in five lower-rated tranches, will be the first to absorb portfolio losses.

Investors in the security were Cigna Insurance; UST Co., the investment manager for Calvert Social Investment Fund, and the issuing bank. Standard & Poor's rated the security and National Cooperative was the issuer and responsible for placement. ☐

We'll save you money. We could save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division, to get every Monday the data you need to face the regulators.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... which agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 20% discount, so you'll be saving money even before you get the first issue. After that, how well you use the information before this year's exam could decide whether you're around next year.

LOW-COST PROVIDERS: Arthur J. Lucey, left, and W. Robert Alexander charge half the industry average for Alps' mutual fund services.

Alps Securities Prospers by Thinking Small

By KEITH DuBAY

When W. Robert Alexander and Arthur J. Lucey quit First National Bank of Denver in 1986 to set up a mutual fund distribution company called Alps Securities, the competition scoffed.

To big rivals like Lazard Freres & Co., the mid-level bank executives were just "two guys from Denver operating from the trunk of their car," Mr. Alexander, chairman and president of Alps, recalls with relish.

A Pair of Fund Families

Alps has moved up in the world since those days. Today, it brings in $3 million a year by providing servicing and marketing support to mutual funds managed by banks.

Alps serves only two bank mutual fund families: the Westcore Funds, which have $2 billion in assets and are managed by First National's successor, First Interstate Bank of Denver; and Marine Midland Bank's Mariner Funds, with $1.1 billion in assets.

In fact, the business is so small that Alps doesn't even show up on a ranking of the top 15 distributors of bank-related mutual funds compiled by Lipper Analytical Services Inc. Mr. Alexander says that's exactly in keeping with his strategy.

"We think we're small and creative," Mr. Alexander said in an interview. "We want a limited number of relationships."

One of the company's sales pitches to banks is that it will not work for their rivals.

"If Bank of America called and wanted us to distribute their funds, we'd have to say no," Mr. Alexander said. "We don't distribute two banks in the same territory."

The company also emphasizes that it doesn't act as investment adviser to any of the funds it distributes. That role is left to the banks.

By staying small and operating leanly, Alps has been able to position itself as a low-cost provider of mutual fund distribution services.

Half the Usual Fee

Alps' client banks pay fees equal to 0.05% to 0.10% of their mutual fund assets to the distribution company; the industry norm, Mr. Alexander said, is 0.20%.

As a distributor, Alps is responsible for organizing, registering, capitalizing, and promoting mutual funds. Its tasks include preparing prospectuses and annual reports, and managing fund accounting and general administration.

The company employs 31 people in Denver and four sales and support representatives in New York.

Cultural Ties

The focus is on distribution and sales support. Alps doesn't sell mutual funds directly to bank customers; instead, it helps the banks train their sales employees, and supports the sales force by keeping them informed about fund performance, new products, and market trends.

Because the firm's founders came from the banking culture, they believe they have an edge in helping bankers sell mutual funds.

"We have a consultative approach to banks," said Mr. Lucey, marketing director at Alps. "Other competitors come from different backgrounds than banking."

In 1981, when they worked for First National Bank of Denver, Mr. Alexander and Mr. Lucey helped launched the Westcore funds, one of the first bank proprietary mutual funds in the nation.

When they left the bank in 1986 to set up Alps, they took the Westcore account with them. They snared Marine Midland's Mariner Funds as a client in 1992.

Back-Office Development

Recently, Alps has been building its back-office capabilities through strategic alignments with other firms.

It works with Boston-based State Street Bank and Trust Co. to provide mutual fund transfer agency and custody services for Alps clients. And it has formed a joint venture with American Data Services, a New York-based company, to establish a Denver office for the provision of fund accounting services.

These days, Alps is emphasizing ways to help its bank clients expand their sales outlets.

Alps recently picked up a contract with Golden Banks of Colorado, a $275 million-asset holding company with five locations in Jefferson County, just west of Denver.

Under the agreement, Golden Banks is offering First Interstate's Westcore family of mutual funds.

Longtime Relationship

The two banks have longstanding connections to one another. Until recently, Golden was part of the First Interstate of Denver franchise. And First Interstate and its predecessor, First National Bank, had been Golden's lead correspondent banks since 1937, said G. Scott Gagon, Golden's chairman.

"We had a good acquaintance with them and the Westcore funds for a number of years," Mr. Gagon said. "We've known

Chemical Unit to Purchase Ameritrust Texas

Continued from page 1

lysts said would be small. In total, Texas Commerce said it will pay about 3.25 times the $40 million of revenue recorded by the trust unit last year.

That would represent a slight premium over the market valuation of some trust companies, according to an official at Texas Commerce. For example, she said, Northern Trust Co., a major provider of trust services, trades at about 2.76 times last year's revenues.

Early Tuesday afternoon Society's stock was down 37.5 cents, trading at $34.50 a share. Chemical's shares were changing hands at $40.125, up 25 cents.

Texas Commerce's $8.5 billion of trust assets under management includes $2.5 billion from its acquisition in February of several bank subsidiaries of First City Bancorporation of Texas.

The First City deals transformed the Chemical unit into a major personal trust banker in Texas. Texas Commerce, which has $21 billion of assets, was recently forced to divest some small First City banks to satisfy antitrust objections, but the trust business will not be a problem, a Texas Commerce spokeswoman said.

High Hopes

Mr. Shapiro said he expects the trust area to generate $100 million of revenue for Texas Commerce this year – producing 25% of his company's fee income.

The company is being purchased for $130 million plus net tangible equity.

He added that the new unit complements Texas Commerce's trust strategy by strongly emphasizing personal trust products and services. Ameritrust derives about 60% of its revenues from personal trust, he said, with the remainder split between corporate trust and employee-benefit accounts.

Texas Commerce gets about 50% of its trust revenues from personal accounts, 30% from corporate, and 20% from employee-benefit services.

Susan L. Roth, an analyst at Kidder Peabody & Co., said personal trust is a major focus of most market participants today.

"Right now, the institutional business is so competitive as to be less attractive," Ms. Roth said. "There is less price-sensitivity in the personal business, which is becoming more and more relationship-oriented and generally more lucrative." □

Republic National Seeking Brokers To Boost Sales

NEW YORK — Republic National Bank of New York is looking for brokers to boost its sales of mutual funds and annuities in the highly competitive New York market.

A recent advertisement in *The New York Times* said the bank was seeking 10 representatives with insurance licenses and Series 6 or Series 7 licenses to sell mutual funds.

In addition, Republic is looking for a back-office manager to oversee compliance reviews, customer service, and trade processing.

Essex Corp., a New York-based investment products marketing firm that runs the Republic program, placed the advertisement. Bank executives declined to comment.

Last year, Republic beefed up its retail investment offerings by adding a range of Dreyfus mutual funds.

Republic National, a unit of Republic New York Corp., has $30 billion of assets and more than 30 branches in the New York metropolitan area.

Alps Securities Keeps Tight Focus

Continued from page 12

the people for a long time and think they have a pretty good product."

Mr. Gagon says his employees "really don't sell" Westcore funds; they just give out literature and refer customers to Alps. The program has been up and running just six weeks, so he says it's too early to tell what the results will be.

Mr. Alexander and Mr. Lucey believe there is room for growth in the industry, noting that bank-advised assets total around $180 billion.

They are also looking to service and distribute so-called affinity funds. These funds are created by major corporations for their employees or a common bond group, such as a religious organization. □

Demand The Best.

"Any mutual funds we offer must have top-quality investment management. It's important to our customers and to us.

We're bringing in SEI."

You want top-performing mutual funds that will grow assets and profits for you – and your customers.

When it comes to SEI's mutual funds, only top-quality investment management will do. That's because top-quality investment management leads to consistently strong results.

As the owner of the world's largest investment performance data base, SEI is uniquely able to choose from among the best investment managers. We draw from our universe of over 1000 of the country's top performers, responsible for more than $450 billion in assets. And because we use independent managers, we can hold them strictly accountable for their performance to SEI and our clients.

We'd like to be your partner. Sharing the same ideals. Building profits. Demanding The Best!

About SEI

SEI has been dedicated to creating comprehensive investment programs for over two decades, focusing on the following areas:

Investment Products and Programs ($35 billion in assets): mutual funds, proprietary funds, annuities, and bank-wide investment programs.

Full Planning and Consultation Services: marketing planning, program definition and implementation, as well as full training and sales support.

Investment Management Technology: trust accounting, defined contribution recordkeeping, mutual fund accounting, and retail support systems.

As Trust Conversions Dry Up, What's Next?

By MICHAEL O'D. MOORE

Many bankers point with pride to the phenomenal growth of proprietary mutual fund families. But do the numbers really mean that banks are snaring hordes of new customers?

In March, bank proprietary funds had grown to $181 billion, from $79.9 billion at the end of 1990, according to Lipper Analytical Services. However, the majority of the increase may have come from conversions of trust assets rather than sales to new customers.

Just how much of the fund assets came from conversions is hard to gauge. Mark Adorian, a managing partner with Micropal, a mutual fund tracking firm based in London, maintains the figure could be as high as 75%.

Clouding the Issue

Others guess that it could be closer to 50%, but no one knows for sure because many banks are reluctant to disclose the details.

NationsBank, for instance, last week trumpeted in a news release that its Nations Funds have passed the $10 billion-asset mark. But company officials could not be reached for comment on how much came from trust sources.

In a trust conversion, a bank that administers collective trust funds or employee benefit plans exchanges those assets for shares in a mutual fund.

Something to Prove

While most believe that using trust money to build proprietary funds leads to profitability, it clouds the issue of how well banks are doing.

"Banks still have not demonstrated a strong growth potential," said Geoff Bobroff, a Lipper analyst.

As trust sources for asset growth dwindle, bankers and consultants are beginning to consider what level of sales will keep a fund family healthy. "That's the $64,000 question right now," said Rolland Johannsen, senior partner with Furash & Co., a Washington based consulting firm.

To Mr. Johannsen, the first task is to build enough assets so that management fees bring profitability. "You'd like to have it all from trust," he said.

Banks are usually counseled against starting mutual funds unless they have at least $1 billion in trust assets to convert.

Topping $100 Million the Key

"If you can get above $100 million in each fund you're looking at breaking even," said Kurt Cerulli of Cerulli Associates, a Boston consulting firm specializing in mutual funds. "You've essentially gotten through the dangerous phase and as an entity you can survive."

"In this environment if you're not growing sales by 15% or 20% a year, it probably shows that you're not getting the attention of your client base that you should," he added.

Without that sort of growth bank officers may wonder why the bank converted assets and got into the business in the first place, Mr. Cerulli said.

How long a grace period does a bank have before sales need to start growing?

Grace Period of 1-5 Years

Bankers and consultants involved with mutual funds cite periods from one to five years.

Rolland Johannsen
Sees asset base as key

"It should start to happen within the first 15 months," said R. Gregory Knopf, who heads Union Bank's proprietary Union Investor's Funds.

The San Francisco-based subsidiary of the Bank of Tokyo rolled out its funds about a year ago. The bank plowed a total $800 million of trust money into its eight funds, then grew the funds to $1.4 billion through sales. Funds eligible for conversion have been depleted, so sales will have to fuel any future growth, Mr. Knopf said.

"You have to plan how you're going to grow your family or you'll stagnate," he said. "It's business by plan."

Liberty National Corp., in Louisville, Ky., has a blueprint to sell that includes intensive sales training for its employees.

In February, the bank converted $160 million of trust money – most of it from employee benefit accounts – into its four Trademark funds.

Since then, the bank has succeeded in adding an additional $105 million in assets through retail sales. With sales kicking in strongly, the bank has no plans for more block trust conversions, a spokesman said.

W. Christopher Maxwell
Sounds a warning

Shortage of Results Hurts

One impediment to achieving strong retail sales quickly is investors' desire to analyze long-term performance records. Most bank proprietary funds have records that are shorter than five years, whereas many mutual fund companies can show lengthy records.

One of the more established bank fund families is Chase Manhattan Corp.'s Vista funds, which also produced strong performance results. However, retail sales are just now heating up, bank officers said.

That can be a warning to those whose record doesn't sparkle as brightly.

"I would submit that if it takes Chase to develop a good track record in five years, it's going to take the rest of us a lot longer," said W. Christopher Maxwell, executive vice president of Keycorp, Albany, N.Y. □

Pioneer Offers A New York Tax-Free Fund

By KAREN TALLEY

Expanding its tax-exempt offerings the Pioneer Group has introduced a New York triple tax-free mutual fund.

The Boston mutual fund company, which counts banks among its distribution channels, said the fund will invest in bonds with maturities of 15 to 20 years. These include essential-service bonds, such as power and sewer bonds, as well as revenue bonds.

The bonds will have maturities of 10 to 15 years.

Single-state municipal funds are generally exempt from federal, state, and local taxes. That makes them attractive to investors who are worrying about rising tax rates, said Pioneer portfolio manager Kathleen McCluskey.

So far this year, industry-wide sales of single-state muni funds are running 55% higher than last year, Ms. McCluskey said.

IBAA Blasts Idea of Letting Advertising Replace Prospectuses

By MICHAEL O'D. MOORE

The Independent Bankers Association of America said a proposal to allow investors to buy mutual funds as described in advertisements without first being sent a prospectus would not adequately protect investors' interests.

In a letter to the Securities and Exchange Commission, which proposed the change and is now reviewing comments, IBAA president James R. Lauffer said the change would not serve consumers well and would increase the flow of funds from community banks to mutual funds.

"Permitting the use of off-the-page prospectuses will not ensure that consumers have adequate information to understand their investment choice," Mr. Lauffer wrote.

But Erick Kanter, a spokesman for the Investment Company Institute, which strongly supports the change, said all the key information that consumers use would be in the advertisements.

He likened the situation to buying a car. You don't need to see the owner's manual when you're looking at a car, he said.

The SEC said the proposed change would lower the marketing costs for some funds. It would also level the disparity between direct-marketed funds, which must now send a prospectus before selling shares to an investor, and brokers who may sell without providing a prospectus in advance.

The IBAA doesn't see a disparity because customers can ask questions of brokers before buying a fund, Mr. Lauffer said. But, he added, "The better way to achieve parity between directly marketed and broker-sold funds is to require both to provide a prospectus before the investment is made."

The proposal would increase the flow of funds from community banks to mutual funds, which would hurt small businesses seeking loans, Mr. Lauffer said. □

Mutual Funds Pose as Many Risks as Opportunities

By MARTIN H. BARNES
IICA Interest Rate Forecast
Montreal

The current investor stampede into mutual funds qualifies as one of the great asset manias of the past 30 years.

Unfortunately, all asset manias end in cataclysmic bear markets. The format is always the same. Greed overcomes prudence as increasing numbers of investors are tempted by the prospect of larger and quick capital gains. The risks associated with deteriorating market value are ignored.

Viewpoint

Eventually, the fundamental forces that started the mania begin to reverse and long-term value reasserts itself. Prices collapse as investors rush for the exit and demand dries up.

Money is pouring into mutual funds at an unprecedented rate. Close to 600 new funds have opened in the past 18 months and incredibly, there are now more mutual funds in existence than there are companies listed on the New York Stock Exchange.

Deposits Drain Off

Net sales of equity and bond mutual funds reached a staggering $87 billion in the first four months of 1993 following record sales of $197 billion in the whole of 1992.

Customers may blame their bank if they lose money in a market correction.

By comparison, the level of savings and time deposits at commercial banks and thrifts dropped by $45 billion in the first four months and by $118 billion during 1992. That represented the first annual decline in bank deposits in the postwar period.

The pressure on banks to get into the mutual fund business are immense. Deposit rates have appeared increasingly unattractive in a world of low short-term interest rates and rising equity and bond markets.

Currently, the move into mutual funds seems like a win-win situation for both investors and banks. Investors have received returns far in excess of the paltry 3% or less available on deposits.

The banks, for their part, are holding on to their customer base, are earning good fee income, and have found another way to diversify away from their traditional but slow-growing and highly regulated business of making loans.

Faulty Logic

Many investors who have switched from deposits into mutual funds probably do not fully understand the increased capital risks that they assumed.

There is a tendency to invest using a rear-view mirror. People typically assume that good past performance will guarantee similar performance in the future.

The stock market has delivered average total returns of about 18% a year in the past 11 years. Annual returns have averaged 12% in the past three years despite a generally gloomy economic backdrop. It is perhaps only natural that investors expect such returns to be maintained or even exceeded in an environment of economic recovery.

A Pricey Market

Investors are in for a rude awakening, because stock market returns will not be maintained at double-digit rates. Worse, a major correction in equity prices is likely during the next 12 months.

Martin H. Barnes

Profit growth is slowing relative to expectations, and interest rates are likely to rise later this year. Meanwhile, the stock market is expensive by most valuation criteria, with prices trading at more than 20 times prospective 1994 earnings.

The increased participation of normally risk-averse investors in the stock market increases the chance that the next correction could be unusually severe.

A low tolerance for capital loss is likely to cause more panic selling than normal when market expectations change for the worse.

Returns from bond mutual funds may also disappoint investors. Currently, the unusually steep yield curve provides a powerful incentive to invest in bonds or bond mutual funds rather than in money market assets.

However, interest rates will face upward pressure when the economic recovery gradually strengthens, and bond prices will fall. In the case of a five-year bond, yields would need to rise by only 60 basis points for total 12-month returns to fall short of the 3% available from a bank deposit.

New entrants into the stock and bond markets will get a shock the first time their quar-

Chameleons change color in response to their environment. Likewise, your customers require flexible investment options that can adapt to changing markets and financial goals. At Federated Investors, responding to changing needs is one of our strengths.

We also recognize that it's not easy to assess your customers' risk tolerance and make the right investment recommendations. But, what if you had a tool that would satisfy your customers, while increasing your institution's efficiency and profitability?

Adapting To The Environment Is Our Strength

Through account classification/asset allocation, you can put the power of Federated's full range of institutional stock, bond, and money market mutual funds to work for you and your customers. The simple, effective investment process enables you to confidently classify your customers' accounts and efficiently invest their assets.

To learn how Federated will help you implement an account classification/asset allocation program, call us toll free at 1-800-221-6057.

Meeting investment goals--it's our natural instinct.

FEDERATED INVESTORS

Funds Pose Risks Along with New Opportunities

Continued from page 15

terly mutual fund reports show a large drop in asset values. At that point, 3% interest income with no capital risk may not seem like such a bad deal.

The rush into the mutual fund business poses risk for the banks as well as for investors. Many banks perhaps do not realize the cyclical nature of the mutual fund business.

Indeed, too few professionals in the investment community at large have ever experienced a full-fledged bear market in stocks or bonds.

Investors and money managers have become conditioned to believe that price declines represent buying opportunities rather than a cause for concern.

At a recent meeting of the Investment Company Institute, the trade organization of the mutual fund industry, one industry expert expressed concern that bank mutual fund sales volume was too heavily weighted toward fixed-income funds.

He feared that rising interest rates would reduce the value of bond funds and said that "a big challenge for banks is to move investors into equity funds before rates rise."

This is an example of the kind of misleading advice that could get banks into trouble. An adviser who believes that interest rates are going to rise should recommend money market funds, not equity funds. Increased interest rates pose at least as great a threat to the stock market as to the bond market.

There is a danger that many banks are entering the mutual fund business with a lack of seasoned investment personnel that fully comprehend the market risks inherent in mutual fund investing.

In the wake of a stock or bond market decline, many investors may decide to return to the safety of a bank deposit. However, they are unlikely to stay with an institution that failed to warn them about financial market volatility and risks. □

Comment

By Robert M. Fitzgerald and Ian W. Macoy

Check-Processing Rule Means Efficiency, Competition

In September 1992, the Federal Reserve Board adopted long-debated amendments to Regulation CC, making same-day settlement for checks the law of the land.

For the first time, any depository institution will be able to present checks drawn on any other depository institution, provided the items arrive before 8 a.m. (local time of the paying bank), and demand settlement in same-day funds without having to pay presentment fees.

The same-day settlement regulation followed a couple of proposals and the cooperative effort of an industry task force convened by the Fed to impose a reality check on the rulemaking process.

In fact, the development of the same-day regulation – which has the potential to affect virtually every depository institution and check-processing organization in the country – is a good example of how a law should be written.

Confusion Looms

There may be winners and losers under the regulation, as there usually are with a new law, but the result is a fair law that will result in a more efficient and competitive check-processing environment.

Before we get to this promising conclusion however, much confusion in the banking industry is likely to result.

Depository institutions could begin to receive substantial volumes of "on us" items for payment from institutions with which they have no relationship.

The operational implications could be significant, particularly if the items begin winding up, almost literally, on the paying bank's doorstep.

Built-In Flexibility

The keys to the operational success of same-day settlement will be an open line of communication between paying and presenting banks, flexibility in terms of presentment location, and the ability to negotiate terms of presentment based on the paying and presenting banks' respective business scenarios.

Rather than amending Regulation CC to universally micromanage presentments, the Federal Reserve, in large part because it listened to the banking industry, has accommodated the need for flexibility by permitting individual players to negotiate most of the terms of same-day settlement (including changes to some of the terms imposed by the regulation).

The Fed also listened when the industry demanded that paying banks be permitted to designate their processors as their presentment locations, provided such locations are in the same

Mr. Fitzgerald is president of the Chicago Clearing House. Mr. Macoy is director of the National Organization of Clearing Houses.

NEGOTIATION *and communication among depository institutions will be vital to making same-day settlement work.*

check-processing region as that in which the items are drawn (paying banks can negotiate for alternative locations outside the applicable region).

Where the regulation is silent, or at least whispers, is on the issue of operational requirements. Short of encouraging (but not requiring) presenting banks to contact paying banks in advance of beginning deliveries of cash letters qualifying for same-day settlement, the Fed relies on adherence to "reasonable commercial standards of fair dealing" to enforce fair play in the delivery of same-day settlement cash letters, the handling of resulting adjustments, etc.

Under this umbrella of reasonability, the paying bank may establish "reasonable delivery requirements" to safeguard presentments, and the Uniform Commercial Code's "good faith" standards shall apply to both parties.

Nonetheless, the question remains: What is "reasonable"?

In the highly cost-conscious world of check processing, spending much time and effort chasing down a bank that may be skirting along the edges of good faith would, unless the action were terribly egregious, be entirely uneconomical.

And in most cases where behavior may be in the grey area of Regulation CC and the commercial code, the players will probably not be cognizant that their behavior offends, while such offenses, individually, may be minimal.

Added up however, the efficiencies promised by same-day settlement and the smooth running of check operations by depository institutions would be compromised to a degree.

Toward Guidelines

In response to the highly subjective nature of the term "reasonable," at least so far as it applies to check processing, the banking industry has again come together to hammer out a framework of acceptable behavior under same-day settlement.

Initiated by the National Organization of Clearing Houses, a Same-Day Settlement Task Force of representatives of a diverse group of depository institutions met and reported its recommendations.

Included in the task force's recommendations is an "advanced notification period" of at least 20 business days. During this period, negotiations and the sharing of information necessary to the smooth operation of the presentment relationship are expected to take place.

The task force focused many of its recommendations in the area of adjustments. Taking adjustment procedures as an example, paying and presenting institutions should agree to such procedures in advance.

Timely processing is the goal; the task force recommended that a best effort be made to process adjustments within three business days, if the request is received within five days from forward presentment, and within 20 days if the request is from an older presentment.

Much of the potential confusion from same-day settlement will be alleviated if the banking industry takes to heart the guidelines it has developed for itself. □

"Hmm...Confucius say, 'person with Berger 101 Fund and Berger 100 Fund wears happy face and sleeps like baby.'"

The prudent investor doesn't need to learn from his fortune cookie. The **Berger 101 Fund** for growth and income and the **Berger 100 Fund** for long-term growth have both achieved impressive records for over 18 years and are worth consideration for your portfolio. For the investment philosophy behind these funds and a prospectus, please call us toll-free. Study the prospectus carefully before investing.

PROFESSIONAL EMPLOYMENT OPPORTUNITIES

RIYAD BANK
Saudi Arabia

Riyad Bank is Saudi Arabia's most prominent Bank with 170 branches and international offices in the USA and the UK.

As part of the unique and ambitious automation program, the Bank is now in the process of implementing state-of-the-art technical solutions based on an integrated multi-platform processing environment.

Applications are invited for the following newly created and critical line management positions.

MANAGER - PC/END USER COMPUTING

Key Responsibilities:
- Developing and managing an effective PC/EUC organization responsible for:
- Selection of software tools and utilities.
- Building and managing a comprehensive solution-oriented PC/EUC team including LAN Specialists and Information Center Analysts.
- Providing service and support to end users.
- Close interaction with application development teams.

Requirements:
- Excellent management skills.
- Hands-on technical experience of LAN technology, Query languages, report generators and text editors.
- Excellent interpersonal, communication and presentation skills.
- A minimum of 5 years' PC/End User Computing management experience gained within a banking or financial services environment.

MANAGER - AUTOMATED CUSTOMER SERVICES

Key Responsibilities:
- Managing the resources and processes involved in assuring user satisfaction with services provided by the Information Services Division.
- Developing Service Level Agreements (SLAs), monitoring services against these agreements, identification and resolution of service issues and problems.
- Interfacing with users (170 branch network) on a continuous basis.
- Development and administration of a solution-oriented "Help-Desk".
- Interfacing between Information Services and Branches to communicate new system requirements.
- Conducting user training for a series of major banking applications.

Requirements:
- Extensive information technology experience, preferably gained within a banking or financial services environment.
- Minimum of 3 years' managerial experience.
- Extensive user liaison skills, including development of SLAs and management of a professional solution-oriented "Help-Desk" function.
- Mainframe and PC technical skills.

Riyad Bank offers a competitive compensation package consisting of tax free salary, paid housing, medical coverage, paid annual air fare and a superb lifestyle (single or married status).

Qualified candidates with an interest in making a positive contribution to the continued development of this "green field" site should submit resumes with salary history by Box 701, 12 West 57th Street, 10th Floor, New York, NY 10018.

Union of Switzerland in Envirotest Credit

TUCSON, Ariz. — Envirotest Systems Corp. said it has signed a commitment letter for a $100 million, three-year revolving credit facility from Union Bank of Switzerland.

The facility is to replace a $30 million credit. On the third year after the closing date, the new credit will be convertible, under certain conditions, into a term loan maturing on the sixth anniversary of the closing.

Envirotest now tests car emissions in eight states.

THE CHICAGO CORPORATION

THE MARKETS
Rates Up as Commodity Prices Soar

There was a particularly sharp rise on the short end, amid rumors that the Fed had voted to tighten credit to stop the price rises.

Interest rates rose on Tuesday as a surge in commodity prices pounded government securities.

The increase was particularly sharp on the short end, amid rumors that Federal Reserve policymakers had voted to tighten credit to stop the price rises.

The bond-equivalent yield on one-year Treasury bills rose to 3.40% from 3.31% last Friday. The yield on the two-year note rose to 4.01% from 3.91%.

The yield on the 30-year Treasury bond went up to 6.68% from 6.67% and that on the 10-year note rose to 5.79% from 5.74%.

The bond market initially opened on a strong note, propelled by Japanese buying on last Friday's worse-than-expected employment report for June.

But there was little follow-through demand for Treasuries in the United States.

"The bond market lost some support because of the sharp rise in commodity prices," said William Sullivan, money market economist for Dean Witter Reynolds Inc.

Driven by weather-related increases in soybean and other grain prices, the Commodity Research Bureau's index shot up 5.29 points, or 2.5%, to 217.30. The index measures 21 commodity futures prices.

Gold Rallies

But bad weather in the Midwest was not the only reason for the rise in the index. The price of gold surged $6.80 to $393.50 on the New York Commodity Exchange.

The rise in prices came at an inopportune time for economists and others hoping for a change in Federal Reserve policy.

The Federal Open Market Committee is scheduled today to continue its two-day meeting on monetary policy. On the heels of last week's grim employment news, the panel was widely expected to switch from the pro-tightening stance adopted in May to a neutral stance.

"My inclination is that Alan Greenspan would like to have a neutral policy," said Astrid Adolfson, an economist at MCM MoneyWatch. "But the rise in commodity prices makes that difficult."

Stocks were hammered by the interest rate fears. The Dow Jones industrial average lost 34.04 points to 3,449.93.

But the rumors of a Fed tightening helped the dollar. It finished at 1.7042 German marks and 108.80 yen, up from 1.6965 marks and 108.58 yen on Friday.

At its regular weekly auction, the Treasury sold a total of $24 billion of three- and six-month bills. The average rates were 3.01% and 3.10%, respectively, down from 3.05% and 3.14% the week before. — Bart Fraust

CREDIT RATINGS
Moody's Considers Upgrading Barnett

Moody's Investors Service Inc. said Tuesday it may upgrade Barnett Banks Inc., citing stronger capital and asset quality.

Moody's said it will review Barnett's strength and future profitability as well as its prospects for improved efficiency in light of the company's in-market acquisition of First Florida Banks.

Under review are the Jacksonville, Fla.-based company's Baa1 senior debt grade and Baa2 subordinated debt and preferred stock ratings.

The A2 long-term deposit ratings of Barnett's bank subsidiaries are also being reviewed. But their short-term deposit ratings were confirmed at Prime-1. □

SouthTrust to Acquire BMR Financial Group

ATLANTA — BMR Financial Group Inc. said it completed a definitive agreement to be acquired by SouthTrust Corp. of Birmingham, Ala.

SouthTrust agreed to pay $6.30 in cash for each outstanding BMR common share, or $16 million.

After selling other subsidiaries, BMR is left with Ameribank in Clearwater, Fla., and Community Bank of Central Florida, Winter Garden, with combined assets of $97.4 million and shareholders' equity of $14.5 million.

BMR and SouthTrust, which has $13.4 billion in assets and banking operations in six states, said they expect the transaction to close by yearend. □

Stock Table Explained: The table lists in alphabetical order daily comments since prices of 225 banks and 25 thrifts. Names otherwise noted for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts. Ranked according to the market value of all common shares outstanding as of June 30, 1993, the banks are listed in the following order: Bank of New York, $244.2B mil; Bank of Boston, $22.9B mil; Bankers Trust, $4.2B mil. The closing prices for the stock, PE, the price-earnings ratio. It is the current stock price divided by the trailing four-quarter earnings per share adjusted for latest announced earnings. The ratio is annualized for companies reporting quarterly earnings. Mkt to bk, the ratio of the current day's closing price to the stock's book value, expressed as a percentage. **Book value** is adjusted for announced earnings and dividends. **Last:** The price at which the stock last traded. If no trades for the day, the latest bid. **Bill Bank and Thrift Indices:** A weighted average of the top 225 banks in market value and the top 25 thrifts in market value, respectively. **Weighting:** Each bank's or thrift's contribution to the index is in proportion to its market capitalization. Small banks and thrifts have a percentage of average shares traded daily over the past year.

mostly with upscale affinity groups.

Thomas P. Facciola, an analyst with S.G. Warburg, said the bank added 1.1 million accounts in the second quarter after bringing on 600,000 new customers in the first quarter.

NEWS ANALYSIS

When investors' fears about rising rates subsided in early June, MBNA's stock looked attractively priced at 11.5 times earnings, Mr. Facciola said. He predicted the bank will increase annual earnings 15% in each of the next two years.

The Word Is Out

Norwest and Huntington, analysts said, are good earnings stories that have gotten out.

Huntington earned 1.41% on assets in the first quarter, versus 1.04% a year before. Operating expenses as a percentage of revenues – the efficiency ratio – fell to 60% from 65%. And asset quality improved, with nonperforming loans falling to 0.88% of total loans from 1.65% a year earlier. The shares gained 11.3% last quarter.

"The market is beginning to recognize that the performance has improved," said Kenneth F. Puglisi, an analyst with the Chicago Corp.

Norwest a Fast Grower

Investors have come to recognize that Norwest is a fast-growing company. The bank predicts 13% to 15% annual earnings growth for the next three years. At the end of the second quarter, shares were trading at $27.375, a 9.8% gain in three months, and about 17 times trailing earnings – one of the industry's highest multiples.

The sharp decline in Union Bank's share price came after a disappointing first quarter and a stock offering, which doubled the number of outstanding shares and put pressure on the stock price, said analysts. □

St. John Leaves Bankers Trust

By WILLIAM GOODWIN

Morgan St. John, who recently stepped down as head of Bankers Trust's loan syndication department, resigned last week after the bank was unable to find a new post to his liking.

Bankers Trust spokesman Thomas Parisi described the parting as "extremely amicable."

Mr. St. John had been running loan syndications for less than a year when he quit the post in May for personal reasons.

Old Job Was a Possibility

There had been speculation within the bank that Mr. St. John would return to his former job as co-head of structured finance in Bankers Trust's Los Angeles office.

Mr. St. John could not be reached for comment. His resignation is effective July 31.

The 39-year-old executive was well regarded within the bank. He was a member of an elite group of about 70 officers, informally known as partners, who receive a substantial part of their compensation in the form of Bankers Trust stock.

Under the bank's partnership equity plan, annual stock awards are made in January and vest at the end of the year, so Mr. St. John will forfeit his stock payment for this year.

Bankers Trust, meanwhile, still has not picked a replacement for Mr. St. John in syndications. The department is being run on an interim basis by three managing directors who had been Mr. St. John's key subordinates.

Citi's Motive To Join NYCE: Point of Sale

By MATT BARTHEL

Why, after years of holding out, is Citicorp close to joining the NYCE electronic banking network?

The answer: to be a big player in point-of-sale transactions, Citi has no other choice.

Indeed, the factors in its decision are far different from those involved eight year ago, when a group of regional banks formed NYCE in order to share automated teller machines.

Then Citicorp defiantly decided to go it alone, concluding that its massive fleet of ATMs would only provide effective service but also differentiate the giant bank in the marketplace. And many observers think that rationale has been proved right.

NEWS ANALYSIS

But now consumers are expected to increasingly use their ATM cards for purchases at grocery stores and gas stations. For Citicorp's cardholders to participate, it seems clear the bank must join NYCE, which promises to be the dominant point-of-sale network in the Northeast.

"One of the reasons that Citi is reputed to be joining NYCE is because they want to have access" to NYCE's point-of-sale network, said David Dove, president of Dove & Associates, an electronic banking consultancy based in Boston.

The Debit Route

Citicorp does have alternatives, namely the two national debit-card networks – Visa U.S.A.'s Internet and MasterCard International's Maestro. "But neither of these is a particularly strong brand in the Northeast," Mr. Dove noted.

The *American Banker* reported last month that Citicorp is in the final stages of negotiations to take a stake in NYCE, a decision that would be interesting for a number of reasons.

First, it would be the capitulation of the last of the go-it-alone players in the ATM business.

Vast Majority in Networks

In the past few years, every other large bank that had once tried to operate a proprietary ATM network – including Bank-America Corp. and NBD Bancorp – has joined a regional network.

But even if Citicorp has some things in common with NBD and BankAmerica, it is also a unique case.

By most accounts, Citicorp

MasterCard Hailing Taxis With Pilot Program in N.Y.

By MICKEY MEECE

NEW YORK — If MasterCard International has its way, some taxi riders here will soon be able to pay their fares with the swipe of a credit card.

The giant card organization, searching for new markets, hopes to piggyback on a six-month test that will put mobile phones in several hundred cabs.

Starting this month, passengers will be able to charge phone calls on all major credit cards. By September, they should be able to pay fares via point-of-sale devices attached to the cellular phones.

A Billion-Dollar Business

The attraction for MasterCard is obvious: Passengers pay about $7 billion in cab fares a year. Ultimately, credit cards might capture 15%, or $1 billion, of those payments, MasterCard believes.

"It is a cash market that has an excellent opportunity to be a card market," said Scott Carter, manager of small-ticket items at MasterCard.

Indeed, taxi payments are just one of many types of cash transactions being lured by credit card companies. Other targets: supermarkets, fast-food outlets, and post offices.

Authorization Problem

Credit cards have already made some inroads into the taxi market, but their use has been held back by the absence of a way to authorize transactions immediately.

Cardholders typically have received authorization from a dispatcher when calling for the cab. Drivers then imprint the card

Amid Battling, S&L Bailout Bill Slips Through

By ROBERT M. GARSON

WASHINGTON — While the House Banking Committee's plan to fund the thrift bailout remains mired in controversy, the full House has quietly approved legislation to provide $2.7 billion or more for the cleanup effort.

An appropriations bill, which passed last week without a murmur of dissent, would authorize the Treasury Department to disburse "such sums as may be necessary" for the fledgling Savings Association Insurance Fund, or SAIF, under authority from the 1989 thrift bailout law. The money would be available after Oct. 1.

For budget purposes, the House Appropriations Committee estimated that the funding would amount to about $2.7 billion.

Hanson May Refinance $6.5 Billion Of Its Debt

By WILLIAM GOODWIN

In what could be one of the biggest loan syndications this year, the U.S. arm of Britain's Hanson PLC is expected to refinance as much as $6.5 billion of debt in the bank loan market, sources said.

Included in that amount is $2.5 billion of nonbank debt that will be assumed by Hanson as part of its planned acquisition of New York-based Quantum Chemical Corp., a loss-plagued maker of plastics.

Chemical Led Credit

The U.S. unit, known as Hanson Industries, also has some $4 billion of existing debt under a 1991 credit agreement with a group of banks led by Chemical Bank and five co-agents – ABN Amro Bank, Citibank, Hongkong and Shanghai Bank, Swiss Bank, and Toronto-Dominion Bank.

National Westminster Bank is the lead bank for a separate 1991 credit for the parent company in London.

While Hanson has not spelled out its plans yet, banking sources said it is likely that much of the combined debt will be refinanced under a new credit agreement. That has been Hanson's practice in past acquisi-

Boston Bank Exits Public Finance, Trims Commercial Loan Servicing

By JED HOROWITZ

Bank of Boston Corp. has sold a large part of its commercial mortgage servicing portfolio and closed its public finance unit, saying it will divest businesses where it does not have expertise.

New England's second-largest bank company confirmed Wednesday that it had sold approximately half of the commercial mortgage servicing rights of Bancp-Boston Mortgage Corp., its Jacksonville, Fla.-based servicing subsidiary, to a mortgage company owned by Legg Mason Inc., a Baltimore-based investment bank.

REGIONAL BANKING

Legg Mason said Wednesday that the transaction closed on July 2.

Neither party disclosed the purchase price for the $830 million commercial servicing portfolio.

Constance Hubbell, a spokeswoman for Bank of Boston, said the transaction "will not have a material impact on us."

'Break-Even Business'

Servicing commercial mortgages for institutional investors was a "break-even type of business," Ms. Hubbell said, adding, "It is part of our strategic planning process to exit businesses which we are not in for the long haul and where we are not experts."

Ms. Hubbell also said that Bank of Boston decided in mid-June to close its small public-finance unit, which included about five professionals.

"We will no longer pursue opportunities to serve as senior manager on tax-exempt bond issues," she said, citing increasing competition, declining fees, and "the dominant role played by large investment banking firms in public finance."

She said the bank will honor

NEWS *briefs*

Shawmut Names Berger to Mergers Post

HARTFORD — Shawmut National Corp., signaling more consolidation in New England, has appointed John R. Berger to a new position as director of mergers and acquisitions.

The company, which has $25 billion of assets and is New England's third-largest bank, said Mr. Berger will focus on strategic opportunities for growth, including alliances and asset purchases as well as consolidation opportunities.

Mr. Berger, 49, is an executive vice president who has been with Shawmut for 20 years, most recently as head of bank investments and funds management. He will report to Bharat Bhatt, the bank's chief financial officer. Thomas D. Wren, 41, will assume Mr. Berger's duties as head of bank investments and funds management, reporting to Shawmut chairman Joel Alvord.

Charter's Net Surged Fourfold Last Quarter

WASHINGTON — Charter Federal Savings Bank announced earnings of $2.2 million for the quarter ending June 30, up from a net income of $513,000 a year earlier.

The Bristol, Va.-based thrift is attempting to raise its capital levels by offering stockholders the right to buy $18 million in new stock. The thrift hopes to begin the offering later this month.

BankAmerica Unit Leads Lechmere Loan

NEW YORK — BankAmerica Business Credit, a unit of BankAmerica Corp., said it is the agent and lead lender on a new $140 million revolving credit facility for Lechmere Inc., a retailer based in Woburn, Mass.

The co-agents, Fleet Bank of Massachusetts and BayBank, are participants in the credit facility, BankAmerica said.

Lechmere operates 23 stores in New England and upstate New York. "The credit facility was structured to meet working capital requirements as well as growth objectives of [Lechmere], which includes establishing new stores," BankAmerica said.

Plaza Home Mortgage Sets Loan Record

SANTA ANA, Calif. — Plaza Home Mortgage Corp. reported June loan originations rose to a record $798 million, compared with $750 million in May and $404 million in June a year ago.

Plaza cited production growth at its loan offices outside California.

New loan applications in June improved to $1.1 billion from $1 billion in May and $541 million a year earlier. The month-end pipeline of loans in progress decreased to $1 billion from $1.1 billion a month earlier and $473 million a year ago.

"Our record June results are directly attributable to our loan offices outside California doing an excellent job gaining market share, which has been pushing our overall production to new levels," said chairman Jack French.

In June, Plaza loan offices outside California contributed 32% of loan originations, up from 28% in May and 17% in January.

2 Brokerages Downgrade Cragin to 'Hold'

NEW YORK — Advest Inc. and Chicago Corp. lowered their investment ratings on Cragin Financial Corp. to "hold" from "buy."

As reported Wednesday, ABN Amro Holding said it intends to acquire Cragin for $38 a share, or an aggregate $510 million.

Cragin was trading at $35.125 Wednesday morning, and both Advest and Chicago Corp. said it was likely the acquisition would be approved by regulators. Therefore, they recommended holding the stock for the remaining 2% points.

The briefs were compiled from staff and wire reports.

Corrections

In a June 30 listing of the top 100 banks in managed trust assets in 1992, the figures listed for Society Corp. were incorrect. Although *American Banker* restated the 1991 data to account for Society's acquisition of Ameritrust Corp., Ameritrust had misreported its 1991 assets. As a result, Society appeared erroneously on a list of banks with large losses in managed assets. For 1991, Society's restated managed trust assets were $27.7 billion and its total trust assets were $62.6 billion. The company's percentage decline in managed assets in 1992 was 0.9%.

* * *

A July 2 article previewing second-quarter earnings results incorrectly reported the per-share projection made for Bank of Boston Corp. by Anthony Davis, an analyst with Dean Witter Reynolds Inc. He predicted a 40% earnings rise to 68.5 cents a share for the bank.

Gonzalez Urges Speedy Disclosure To Thwart Leaks of Fed Policy

By ROBERT M. GARSON

WASHINGTON — Legislation requiring the Federal Reserve to disclose monetary policy changes more quickly may be necessary to stem the flow of leaked information to "a chosen few" by the central bank, a key lawmaker said this week.

House Banking Committee chairman Henry B. Gonzalez, D-Tex., charged in a letter to Fed chairman Alan Greenspan that such leaks "cause instability in the financial markets and general economic uncertainty that reduces real investment."

Citing a number of examples in which he said journalists were leaked information about decisions of the Federal Open Market Committee's deliberations, Rep. Gonzalez said legislation "would be justified" if the leaks aren't halted.

"Besides the possible financial gain for those who benefit from these leaks there is also the issue of equity," Rep. Gonzalez said.

"I find it unfair and indeed undemocratic that the Federal

Henry B. Gonzalez
Says leaks cause "instability"

Reserve, through leaks and statements by Federal Reserve officials, favors its friends while the American public is officially told, 'wait six weeks before you hear anything — and then only in truncated form.'"

The banking committee chairman has introduced legislation that would require the Fed to release the minutes of FOMC meetings within 60 days.

Rep. Gonzalez said the House Banking Committee had received a complaint that U.S. traders are often at a disadvantage when the Fed leaks information to newspapers with overseas editions.

The result is that traders in other countries can take advantage of the difference in time zones to trade before U.S. markets open.

Examples Cited

In his letter to Mr. Greenspan, Rep. Gonzalez cited a number of examples he said support his charges.

The *Wall Street Journal*, for example, reported on May 21 that Fed policy makers had decided that week against any immediate cut in interest rates. The story cited "people familiar with the Fed's deliberations."

Similarly, the May 31 issue of *Barrons* said the Fed had made its intentions known "merely by leaking its intentions, in this column and elsewhere."

Joseph Coyne, a spokesman for the Federal Reserve, said the Fed "would have a response in due course." □

House Passes Funding Bill for Thrift Bailout

Continued from *page 1*

tion for fiscal 1994, which begins on Oct. 1. However, the 1989 bailout law appears to permit larger borrowings — perhaps as much as $4 billion – for the year.

Two-Step Process

The federal government provides money in a two-step process of authorization and appropriation. The 1989 law authorized up to $32 billion in two separate pools, subject to annual limits. How those limits are interpreted would determine how much money SAIF could receive if the House-passed appropriation is enacted into law.

The Senate has not yet taken up the appropriations bill.

Although the funding provided by the appropriation is less than the amount approved by the banking committee, it would come without any of the tough restrictions imposed by the banking panel. As a result, it could provide more money that would actually be available under the banking committee version.

It is unclear, however, what would happen if both bills are enacted into law. If the appropriations bill is signed first, the money it provides could be made available without regard to the restrictions in the banking committee bill, said Paul A. Schoberg, president of the Savings and Community Bankers of America.

Looking for Votes

But the Clinton administration is still searching for the votes it will need to pass the banking committee bill on the House floor, and many observers think a vote on the bill could be delayed until late July or even September.

In that case, the appropriations bill approved last week could be the only funding mechanism available when the new fiscal year starts.

Ironically, the SAIF measure could provide funds for institutions managed by the Resolution Trust Corp., according to one congressional source.

"The big question is whether the SAIF money could be used for RTC conservatorships, since they are paying SAIF premiums," said a Republican congressional source, who asked not to be named.

The funding measure passed by the House Banking Committee provides $18.3 billion for the RTC, and permits the agency to transfer unused amounts to SAIF.

The appropriation, if enacted into law, could take pressure off efforts to pass the RTC funding measure. Some thrifts, bitterly disappointed by the restrictions on SAIF funding, are opposing the bill, according to congressional and industry sources. □

TECHNOLOGY/OPERATIONS

Citi May Have to Join NYCE

Continued from *page 1*

made the automated teller machine.

The nation's largest financial institution was not the first to install the self-service banking terminals. But in the 1980s, it embraced the technology like no other financial institution, saturating the New York market with sophisticated touch-sensitive screen terminals that are still the envy of many competitors.

Once the ATMs were deployed, the bank proved more adept than any other financial institution at persuading customers to use them. More than 80% of Citicorp's basic banking transactions are now handled by ATMs, versus the industry average of less than 40%.

NEWS ANALYSIS

Inspiration for NYCE

In fact, Citicorp's ATM program was so successful that the other banks in the region banded together and formed NYCE as a way to compete.

But while the ATM continues to be an innovative delivery mechanism, the two most common ways to increase ATM revenue – adding new machines and increasing transaction fees – are slowly becoming obsolete.

Fewer banks are increasing the size of their ATM fleets because the machines have almost saturated the U.S. market. And many banks are hesitant to raise transaction fees any further.

Therefore, most bankers view the nascent debit point-of-sale business as the best source of transaction-based revenue growth in the next decade.

Transactions Mushrooming

There are currently almost 100,000 point-of-sale terminals in the United States that accept ATM cards for purchases, and the number of POS debit transactions has grown steadily from three million in 1987 to more than 23 million in 1992.

Most experts agree that if Citicorp expects to catch the wave of POS transactions while it is still breaking, the bank must join NYCE soon.

Not surprisingly, the sticking point in the negotiations between Citicorp and the seven financial institutions that own NYCE appears to be the price Citi will pay for a stake.

"The real problem is that if Citi has an 18% to 20% share of the New York [electronic banking] market, it would probably want a share of the company that's comparable to that," said Richard Speer, chairman of Speer & Associates an electronic banking consulting firm based in Atlanta.

Expensive Share

"Twenty percent of NYCE can be pretty expensive right now – particularly if the other owners don't want to give it up in the first place."

Mr. Speer noted that NYCE has appreciated significantly in value since Bipin Shah, a former CoreStates Financial Corp. executive and one of the architects of the MAC network, offered to buy NYCE for $125 million almost two years ago.

Thus Mr. Speer estimates that an equity position could cost Citibank up to $50 million.

Complicating the Citi-NYCE negotiations are overtures from the Electronic Payments Services Inc., the Delaware-based network whose MAC ATM brand competes with NYCE in several northeast states.

Some experts believe Citicorp is unlikely to join that network because MAC's POS mark is never likely to be much of a presence in New York as long as NYCE is around. Still, NYCE must still take the threat of having Citi go to MAC seriously.

As one ATM network boss put it, a Citi-EPS deal would "parachute the enemy into a strong position right in NYCE's backyard." Citi operates almost 2,000 ATMs, which represents about 15% of NYCE's total ATMs. □

Small Firms Won't Be Helped By Securitizing Lending

One of the big ideas being batted around in Washington to stimulate small-business lending is securitization.

The assumption is that banks are reluctant to lend, as reflected in low loan-to-deposit ratios, and that one way to resolve this is to securitize the loans. Proponents seem to think that the risk attendant to small-business lending is what makes banks reluctant, and that getting the loans off the books would rectify the situation.

But the bankers I know are looking for loans, not trying to sell them.

Top Priority

They realize that their business is to serve as intermediaries in risk - first and foremost credit risk. Extending credit is a top priority. Many banks, of all sizes and stripes, are looking for quality small-business credits.

Ms. Bird is national director of the financial institutions consulting group at BDO Seidman, New York.

These loans are the highest objective for super community banks that emphasize relationship-oriented lending, and for many other banks attracted to the loans' profitability.

Owners of small businesses are not as sensitive to prices as are larger corporate borrowers. They value the time and effort that bankers take to build a relationship and to understand the ins and outs of their business. And since small businesses do not have ready access to capital markets, they are willing and prepared to pay a premium for bank credit.

Banks continue to view small-business lending as a primary activity. If they have not extended enough credit to small businesses, then it may have more to do with the examination process and the weakness of demand.

Securitizing small-business loans is not going to answer the banks' needs. They do not want to offload credit; they want to keep it.

Securitization may actually have the opposite impact than

BANKS VIEW *small-business lending as a primary activity. If they have not extended enough credit, it may have more to do with the examination process and the weakness of demand.*

what proponents intend. Examining the securitization market for mortgages, one observes that the spreads in that business have narrowed sharply.

Government Competition

Many thrifts have complained about having to compete with the government-sponsored secondary-market agencies, which have implicit guarantees and economies of scale that the individual thrifts lack. The profitability of mortgages - the thrifts' core product - has declined to the point where many institutions are seeking another strategic anchor for their business.

This scenario may repeat itself in small-business lending if securitization proceeds along the lines being proposed. Margins will shrink and banks will search for other places to extend credit.

If President Clinton is right in suggesting that banks are withholding credit from worthy small businesses, then the securitization solution may be appropriate.

But if the reasons for the perceived credit crunch are different, small-business loan securitization may be a disaster for commercial banks and for the many thrifts moving into community banking, without conferring a significant benefit on the borrowers.

Let relationship banking continue and let the free market determine the best path for meeting borrowers' needs. This is not an appropriate time or place for government intervention. □

No Need to Reinvent the Wheel For a Community Reinvestment Bank

Numerous politicians and banking theorists have recently tried and failed to say what a "community development bank" is supposed to be and how it's supposed to work. They ran into the following problems:

The organizations envisioned will probably not be profitable enough to attract equity capital.

If these organizations are to be banks, not welfare programs, they must engage in credit, not grants. The earnings on the loan portfolios must cover all losses and expenses if the institution is to be a sustainable entity.

Self-help is the best kind of help. But the question remains of how to combine this with productive public support.

Rediscovering Mutuality

Also, such organizations should be owned and managed by local people. Yet at the same time, the federal government is to be involved.

Mr. Pollock is president and chief executive officer of the Federal Home Loan Bank of Chicago.

All these problems can be successfully addressed by the rediscovery of a very old financial idea – mutuality. This concept was historically considered inseparable from local thrift institutions, and reflected the community ideals of cooperation and self-help.

The mutual savings and loan association, which enjoyed decades of growth and success, had key characteristics.

It was an association, not a stock corporation, and it's purpose was not maximum profits, but the mutual financial progress of its members. It was considered by contemporary supporters as part of a movement for individual and social improvement, and as "a great character-building and community-building business."

It was a local organization, often started as a neighborhood club. It was also, as one historian put it, "generally patronized by persons in what we now call low income categories."

It gathered and cared for the savings of the local community, and its mission, according to a

THE MUTUAL *savings and loan association, which enjoyed decades of success, provides a perfect blueprint for a community development bank.*

backer, was to promote "thrift, self-denial, temperance, simple living, success and independence." These federal associations were especially to be organized in communities that lacked a local thrift institution.

Its credits were to be sound, always based on first liens on property close to the association and thus known to its management and board. It was to be a self-sustaining economic organization. A confirmation of the theory comes from a recent Office of Thrift Supervision research report, which concludes that during the 1980s, mutual institutions were significantly less risky than those in stock form.

It was a commitment of the local community to help itself. Funds invested in the association were equity or "shares," not debt and not deposits (a surprising notion to us now).

Each Member a Part Owner

Savings shares were equity investment in the creditworthiness of local people. Although the idea subsequently became blurred and then lost, the historic and ideal thrift must mutuality was very clear on this point.

A classic text stated: "The building and loan association pays all the profits to its members. Each member is part owner of the business, assuming an ownership risk. In building and loan associations, the risk is negligible, it is true, but no emphasis on this fact should be allowed to cloud the issue. The building and loan member is an owner of the business."

Also, its management was lo-

Model Exists for Community Banks

Continued from *page 4*

cal. Training and development of local management was a key requirement in the 1930s and would be again today.

Government Investment

It could be helped by the federal government investing on a matching basis by the purchase of preferred shares in an amount up to the investment mined locally. These shares had to be retired beginning five years later. Such matching preferred investments were made in sizable amounts (a total of $225 million, which is equal to about $2.3 billion today) and with notable success. After deducting the losses that inevitably occurred, in total the Treasury recovered its entire principal plus a yield of 3%.

Finally, the institution was exempt from federal taxes.

These points provide an excellent outline of a coherent design for a community development bank.

Blueprint for Success

That this design worked is amply demonstrated by history. The notorious class of savings and loans of the 1980s, which

THE INSTITUTIONS *reflected the community ideals of cooperation and self-help.*

have made the very term suspicious to us of short memory, bore little or no relation to the successful social design of preceding decades. To return to the original concept, we need to return to something very like the original form of the Home Owners' Loan Act of 1933.

This law created the charter of federal savings and loan associations.

Here, in excerpts quoted from the original 1933 Act, is an attractive structure that could be used for community development banks. (To correct for the depreciation of the currency, the amounts specified should be multiplied by 10.)

• "The purpose is to provide local mutual thrift institutions in which people may invest their funds."

• "Such associations shall raise their capital only in the form of payments on such shares as are authorized in their charter. No deposits shall be accepted and no certificates of indebtedness shall be issued."

• "Such associations shall lend their funds only on the security of first shares or on the security of first liens upon homes or combination of homes and business property within 50 miles of their home office. Not more than $20,000 shall be loaned on the security of a first lien upon, any one such property."

• "The board shall have full power to provide for the reorganization, consolidation, merger, or liquidation of such associations, including the power to appoint a conservator or a receiver."

• "No charter shall be granted except to persons of good character and responsibility, nor unless necessity exists for such an institution in the community to be served."

• "Each such association shall become a member of the Federal Home Loan Bank of the district in which it is located."

• "The secretary of the Treasury is authorized on behalf of the United States to subscribe for preferred shares in such associations which shall be preferred as to the assets of the association and which shall be entitled to a dividend, if earned, to the same extent as other shareholders.

"Subscription to the preferred shares of any one association shall not exceed $100,000, and no such subscription shall be called for unless the funds are necessary for the encouragement of financing in the community to be served. The amount paid in by the secretary of the Treasury shall at no time exceed the amount paid in by all other shareholders.

"To enable the secretary of the Treasury to make such subscriptions there is hereby authorized to be appropriated the sum of $100 million."

• "Such associations, including their franchises, capital, reserves, and surplus, and their loans and income, shall be exempt from all taxation now or hereafter imposed by the United States."

In Current Dollars

When we adjust the amounts from 1933 to current dollars, we find that the lending limit against any individual property is $200,000; the matching preferred stock investment available from the Treasury is up to $1 million per association; and the total appropriation for such matching investments is $1 billion.

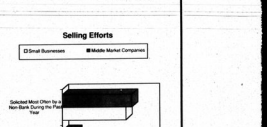
Note that this would result in enough appropriation for 1,000 associations.

A number of implications and variations on the theme, of course, need consideration. Membership in the Federal Home Loan Bank System might be voluntary, not mandatory. An appropriate regulatory design is required. Government-guaranteed loans, such as Small Business Administration loans, might be allowable assets. All detailed issues can be settled when there is a framework.

We suggest the basic framework to create what could be called "federal community development banking associations," is logically articulated in the original 1933 version of the Home Owners' Loan Act and is available to reenact, mutatis mutandis. □

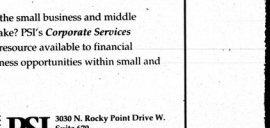
How Much More Corporate Business Will You Lose to Non-Banks?

Small businesses use many services in addition to credit, particularly depository and investment products. The business potential is significant and taking these companies' business for granted would be a mistake.



Non-banks now market aggressively to small businesses and middle market companies. And their products and services often are rated as superior to or better priced than those offered by banks.

In fact, 80% of middle market companies that chose a new provider last year selected a non-bank.



Do you know how to successfully compete in the small business and middle corporate market segments? And, what's at stake? PSI's *Corporate Services Research Program* is the premier information resource available to financial services organizations for understanding business opportunities within small and mid-sized business markets.

Binkley, 2 Ex-Bof A Colleagues Form Own Venture Capital Fund

By SAM ZUCKERMAN

SAN FRANCISCO — Former BankAmerica Corp. vice chairman Nicholas B. Binkley and two of his associates at the San Francisco company have gone into the venture capital business.

Mr. Binkley's partners are Gregory J. Forrest, 45, who was chairman and president of BankAmerica's venture capital subsidiary before resigning last month, and Jeffrey J. Brown, 32, a senior vice president in the unit. The three, who will operate out of Newport Beach, Calif., worked for Security Pacific Corp. before BankAmerica acquired it in 1992.

Nicholas B. Binkley
Left after losing board seat

Bass brothers was not disclosed.

The fund will specialize in Small Business Administration investment programs, financing growth companies in financial services and other industries.

Forrest Binkley & Brown, as the firm is known, said it will have more than $100 million to invest, including funding from the SBA, once it is licensed to operate a small-business investment limited partnership.

At Security Pacific, Mr. Binkley 47, was a vice chairman and head of nonbanking subsidiaries. He retained those roles after the merger and was one of three Security Pacific executives given seats on BankAmerica's board.

Reportedly Taken off Board

But chairman and chief executive Richard M. Rosenberg removed him from the board earlier this year, people familiar with the situation said.

Mr. Binkley resigned abruptly from the company, although he had been named only weeks earlier to run California commercial banking and commercial real estate activities. He collected a separation package valued at an estimated $2 million.

BankAmerica and a Binkley spokeswoman declined to comment on the circumstances of his departure. □

SBA Investments

The partners said in a statement Wednesday they will manage a venture capital fund, with Sid R. and Lee M. Bass of Fort Worth as limited partners. The amount to be contributed by the

Bank of Boston Corp. Exits Public Finance

Continued from page 1

existing contractual relations, which are expected to run out within 12 months.

Bank of Boston, which has not been a major player in the municipal market for years, will continue to serve some local clients by underwriting general obligation bonds but will abstain from pursuing more lucrative revenue bond business, Ms. Hubbell said.

Most of the commercial mortgage servicing rights the unit is selling were inherited from Stockton Whatley & Davin, a commercial mortgage company Bank of Boston bought in 1983. Ms. Hubbell said the bank will continue to service commercial mortgages that it originates for its own customers. It currently has about $1 billion of such servicing rights on its books.

Servicing involves recordkeeping on mortgages and funneling payments from the borrower to the lender and to buyers of commercial mortgage-backed securities.

Legg Mason said that its Latimer & Buck subsidiary will consolidate the BancBoston portfolio into its Franklin operation, which, with the new purchase, services about $2.37 billion of commercial mortgages.

The company will divest where it does not have expertise.

Small Group to Move

William G. Loving, a senior vice president and manager of BancBoston Mortgage's commercial unit, is moving to Latimer & Buck as an executive vice president in charge of the newly acquired regional mortgage banking office in Jacksonville. Five other Bank of Boston employees will join him.

Bank of Boston, which has $32 billion of assets, continues to be active in the residential mortgage market. It services $22 billion of home mortgages, ranking it as the 18th-largest service company in the nation, Ms. Hubbell said. □

Get MOHR information about profitable banking in the 90's.

Two years ago, breakthrough research by MOHR Development, the recognized leader in sales, service and leadership training for banks, defined five key issues for profitable consumer banking in the '90s. Now follow-up research—conducted jointly with the *ABA Banking Journal*—examines consumer banking's progress in addressing those issues, including:

- creating a high performance sales culture
- integrating sales and service
- translating market segmentation into front-line action

MOHR Development's all-new report highlights critical gaps between the industry's acknowledged priorities and its actual practices. It also draws important conclusions about how to close these gaps, and points the way to more profitable banking.

Chemical's N.J. Chief Waiting for Right Deal

By KAREN GULLO

People in the News

New Jersey is awash with discount outlet malls, and William H. Turner likes to shop.

But after almost a year of intensive searching, the chairman and chief executive of Chemical New Jersey Holdings has yet to find the bargain he seeks.

Mr. Turner, a senior vice president of Chemical Banking Corp., has a mandate to catapult the nation's third-largest bank from an also-run to a competitor in the Garden State. The New York-based company entered the neighboring state in 1989 by purchasing Horizon Bancorp, but has been stuck with a fifth-place market share ever since.

"We don't have as many branches as we'd like to have," Mr. Turner acknowledged in a recent interview. "The right deal just hasn't come along for us." But Mr. Turner, 53, continues to assert that he wants to double the bank's New Jersey assets of $5.6 billion in three to five years.

The New Jersey native, who started his banking career at Chemical 31 years ago, has done a credible job with profits at the 130-branch New Jersey operation in recent months.

Chemical does not break out its New Jersey results. But the subsidiary earned $71.2 million in 1992, after losing $9.7 million in 1991 and $79.8 million in 1990, according to Ferguson & Co.

With return on average common equity at 22% and return on assets of 1.37%, it is now one of the most profitable banks in the state.

William H. Turner

But the executive knows that his bosses want more.

John McGillicuddy, Chemical's chairman and chief executive, has said that Chemical should rank among the top three in each of its banking markets.

In New Jersey, Chemical lags behind First Fidelity Bancorp., UJB Financial Corp., Midlantic Corp., and National Westminster Bancorp Inc.

But Mr. Turner also has the confidence of his bosses. He was put in charge of Chemical's branch banking network in 1982, after stints in consumer, corporate, and international banking.

Later in the decade, he ran the bank's Middle East and Africa group out of Beirut.

He returned to New Jersey with the Horizon purchase in 1989, but it mostly served a small part of his empire. Mr. Turner also oversees Chemical's large and highly profitable middle-market business, its New York retail business, and private banking, which includes a trust bank in Princeton, N.J.

Mr. Turner, noting that experience has given him the discipline to wait, said that he walked from a few small acquisitions in northern New Jersey that were priced too high.

And he adds that he has no regrets about losing some deals. Sources said he was referring to Howard Savings Bank, which was acquired by First Fidelity for $73.5 million.

Mr. Turner declines to talk about specific banks. But a year ago an internal memo listed about a dozen New Jersey banks as potential acquisition targets. They ranged in size from the state's largest, such as First Fidelity, to small savings banks.

He said the ultimate decision – whether to make fill-in acquisitions or join forces with a regional bank to become a northeastern giant well beyond New York City – has not been made.

"If you're looking predominantly at New Jersey, that would have a lot of appeal because you get the cost savings of overlapping branches," said Mr. Turner.

"On the other hand, you don't want to spend all your efforts on New Jersey if there's something that would give you coverage in a few states."

Meanwhile, Mr. Turner isn't standing still. Chemical has opened 11 branches from scratch since 1989, including one last month in affluent Bergen County. "If the right thing doesn't come along, we're looking at opening three to five de novo branches a year," he says.

Glenfed Asks Holders to Back Restructuring

GLENDALE, Calif. — Glenfed Inc. said it has started stockholder solicitation for approval of a reorganization plan that has been recommended by its board.

The proposal, unveiled last month, includes a plan to merge Glenfed into an existing wholly owned unit of Glendale Federal Bank.

— Don Jones

For Chase's Community Development Chief, a Balancing Act

By FRANKLIN SMITH

Running a community development corporation can be like preparing a volatile mixture: One misstep and a banker can end up with a disaster.

Mark A. Willis, president of Chase Manhattan Corp.'s community lending effort, said that communicating frequently with the myriad parties involved in a bank's inner-city lending effort is a vital part of the mix.

Among those who must constantly be updated and consulted – and occasionally reassured – are community residents, politicians, the media, and people inside the bank.

Role of 'Mediator'

"In addition to being a partner, you also act as a mediator and arbitrator when things fall apart and assist in negotiating a deal," said Mr. Willis, who set up the Chase Community Development Corp. in 1989.

For example, he said, if even one of the parties involved in a project does not have a full understanding of the many government programs affecting the deal, there can be trouble.

Communicating with the myriad parties involved is a vital part of the mix.

Mark A. Willis
"We do a range of things"

and with the South Bronx Overall Economic Development Corp.

Serafin Mariel, the president and chief executive of New York National, praised Mr. Willis for overcoming inertia at Chase about such ventures.

A Turnaround

"A few years ago, Chase, like a lot of the other giant banks that were closing branches, seemed to have written off the South Bronx," he said. "That's changed. We probably won't see many branches reopening, but Chase seems to be leading the way in recognizing that this South Bronx community needs the financing and capital resources of the giant banks in much the same as the developing countries."

Lloyd Williams, president of the Greater Harlem Chamber of Commerce, had a similar view.

Chase had been ineffective in the community for a number of years, Mr. Williams said. Now, through the community development corporation under Mr. Willis, things have begun to change, he said.

Mr. Williams described Mr. Willis, who serves on the board of directors of the chamber of commerce, as a "bottom-line, practical person, who comes to you with a business attitude and concern for all parties involved. He is concerned with who benefits, who manages, and who are the developers." □

Sheshunoff Offers Help With Complex New Rules

Compliance

By PHIL ZAHODIAKIN

FOUR VENDORS HAVE banded together to develop products aimed at helping banks comply with complex new regulatory and accounting rules.

Under the changes, banks will be required to determine the market value of their assets and liabilities, as well as calculate how interest rate swings would affect capital levels.

The vendors, led by Sheshunoff Information Services Inc., said they have come up with two low-cost tools tailored to help community banks navigate their way through the regulations, which are to be phased in over the next few years.

"These rules will be a sea change for banks," said Con A. Rusling, president of Sheshunoff. "The old ways of managing the balance sheet aren't going to fly anymore."

Similar services are likely to spring up, said Ed Furash, president of Furash & Co., a consulting firm in Washington. The rules will make life "infinitely more complicated for banks that don't have the expertise and resources to deal with them," he said. "Many small banks won't be able to comply with the new rules if they don't have help with the mechanics involved."

Information Analyzed

Here's how the Sheshunoff products work: Customers supply information about loans, securities, and deposits each quarter on a diskette to Sheshunoff, which analyzes the data and supplies printed reports containing the figures needed for regulatory filings.

One product, the Sheshunoff Market Volatility Service, determines how changes in interest rates would affect capital levels and analyzes the market value of investment portfolios.

The other one, Sheshunoff FAS 107 "Fair Value" Service, calculates the current value of all assets and liabilities.

Sheshunoff will charge $3,000 a year for either service or $4,000 for both. It plans to market the products primarily to banks with assets of less than $1 billion, but said larger banks have also been interest. Mr. Rusling said the relatively low prices reflect that fact that Sheshunoff and its partners think there will be heavy demand for the services.

The other participants, which will help analyze the data, are RAF Financial Corp. of Denver, an analytical firm; Trepp & Co., which is based in New York and specializes in asset-backed financing; and Asset Backed Securities Group, a New York unit of Thomson Financial Services.

Sheshunoff, based in Austin, Tex., and Asset Backed Securities Group are affiliates of the *American Banker*.

The revisions to bank accounting rules were required by the Financial Accounting Standards Board and the Federal Deposit Insurance Corp. Improvement Act of 1991.

Fair-Value Requirement

Financial Accounting Standard (FAS) 107 requires banks to disclose in financial statements an estimate of the fair value of all assets, liabilities, and off-balance-sheet items. Banks with assets of more than $150 million must comply with the rule by Dec. 15; others have until Dec. 1, 1995.

Regulations implementing the '91 law are expected to require banks to report most, and possibly all, of the FAS 107 information in call reports.

A second accounting rule, FAS 115, requires banks to put securities in one of three accounts: available for sale, trading, and held to maturity. Securities in the first two accounts must be marked to market value. The rule applies to all banks and is effective for fiscal years starting after Dec. 15.

The law also will require banks to project in call reports the impact of interest rate swings on earnings and equity value. The provision is slated to take effect on Dec. 31, but implementing regulations have not yet been adopted.

FDICIA also requires all banks to establish operational and managerial standards relating to interest rate risk. Banks are required to determine the minimum amount of earnings needed to absorb losses without impairing capital, and a minimum ratio of market to book value. The implementing regulations must be issued by the end of the year.

Mr. Furash, the consultant, said that "there's a pervasive fear among bankers at the smaller institutions that they will be guilty of technical violations because they overlooked a detail or turned in inappropriate calculations."

However, he warned that chief executives should not assume they are off the hook just because outside firms are performing the required calculations. "No bank should rely on the assurances of a third-party vendor, because none will assume responsibility for a bank being in error," he said.

Community Banks in New Mexico Thrive Despite the Influx of Out-of-State Rivals

By ROBERT B. COX

New Mexicans are loyal to their community banks.

Though out-of-state banks have staked out widespread territory there, the state's 80 community banks are thriving.

Witness the arrival of BankAmerica Corp., which picked up two failed Albuquerque thrifts with combined assets of $1.872 billion from the Resolution Trust Corp. in March 1991.

Although it is common for a bank buying failed thrifts to lose some deposits, Bank America's deposits at the two thrifts declined a whopping 60%, to only $749 million at the end of the first quarter of 1993.

To avoid a similar fate, St. Louis-based Boatmen's Bancshares broke with tradition following last year's acquisition of Sunwest Financial Services. Instead of putting up Boatmen's signs, the company preserved the Sunwest name.

Profiting from Runoffs

"I don't think the population in general likes the big-time banking operations," says Dick Bailie, senior vice president of Ranchers State Bank of Belen.

Ranchers has grown its assets by 58% in the past three years, to $73 million, largely due to runoff from BankAmerica branches in four common towns. That compares with 16% growth for all U.S. community banks, according to data supplied by W.C. Ferguson & Co., Irving, Tex.

Outside banks are attracted by New Mexico's strong economy. In addition to incursions by BankAmerica and Boatmen's, First National Bank in Albuquerque recently agreed to be acquired by Salt Lake City-based First Security Corp.

Problem Loans Above National Average

Still, New Mexico community banks are not trouble free. As of March 31, problem loans represented 3.63% of gross loans, higher than the average of 3.38% for all U.S. community banks.

That kept returns on average assets for the state's banks at 1.15%, compared to 1.26% for all U.S community banks.

However, the state's agricultural bankers are expecting stronger returns in 1993, as cattle prices have buoyed earnings for livestock producers.

"Generally speaking the economic climate is fairly good throughout New Mexico," said Kent Carruthers, CEO at the Citizens Bank of Clovis. □

EXECUTIVE *changes*

Independence of Pennsylvania Taps Spratt as Bucks County CEO

T. Alexander Spratt has been named president and chief executive of **Bucks County Bank**, Doylestown, Pa., a unit of the Perkasie-based **Independence Bancorp.**

Mr. Spratt is currently group executive vice president, chief credit officer, and head of strategic planning for the parent company.

He succeeds **John C. Spier,** who has assumed full-time duties as group vice president at Independence Bancorp, overseeing marketing, mergers and acquisitions, and retail banking strategy.

T. Alexander Spratt

Mr. Spratt, who joined Independence in 1992, is a former senior vice president at CoreStates Financial Corp. He later founded Ardmore Capital Advisors. He has 26 years of commercial lending experience.

— Franklin Smith

IROQUOIS BANCORP, Auburn, N.Y., said **Richard J. Notebaert Jr.,** president and chief executive of its Homestead Savings of Utica unit, has been elected vice president of the parent company.

JOHNSTOWN SAVINGS Bank, Johnstown, Pa., said **Kevin J. O'Neil** has been appointed executive vice president and chief operating officer of its **Standard Mortgage Corp. of Georgia** subsidiary.

Mr. O'Neil was formerly president and chief executive of Embanque Capital Corp., New York.

He previously was president and chief executive of Goldome Realty Credit Corp., Buffalo, and NVR Mortgage, McLean, Va.

INDEPENDENCE Bank of New Jersey has named **Stephen C. Novak** assistant vice president of commercial lending in the bank's Ramsey headquarters. Mr. Novak, who joined the bank in 1983 as a part-time teller, was most recently assistant secretary of commercial lending in Ramsey.

Stephen C. Novak

NEW ENGLAND

MID MAINE Savings Bank, Auburn, Maine, has promoted **JoAnne P. Campbell** to assistant treasurer, commercial loan officer.

MIDWEST

BANK OF Bloomfield Hills, Mich., has appointed **Kimberly D. Nancarrow** a mortgage specialist.

Ms. Nancarrow will originate mortgages and direct the bank's marketing efforts to real estate agents and financial planners.

NBD BANK, Fort Wayne, Ind., has named **Lori Benninghoff Chokenes** mortgage loan originator in the mortgage banking division. She is responsible for generating new mortgage loans.

Jill Winebrenner was named mortgage loan officer, mortgage banking division.

MIDDLE ATLANTIC

S&T BANK, Indiana, Pa., said **Leonard Knell** and **John Schuster** have joined the bank's commercial lending group as vice presidents of asset-based lending.

S&T's asset-based lending division specializes in lending primarily to mid-size businesses in western Pennsylvania.

Mr. Knell, who is responsible for overseeing the asset-based lending group, specializes in business development.

He was most recently employed by Westinghouse Credit Corp., Pittsburgh, as vice president, credit policy and administration.

Mr. Schuster is responsible for credit and operations in the asset-based lending group.

Mr. Schuster, who also was most recently employed by Westinghouse Credit Corp., was a senior investment manager, corporate finance.

WEST

SILICON VALLEY BANK, San Jose, Calif., has promoted **Allyn C. Woodward Jr.** to chief operating officer.

Mr. Woodward is responsible for managing all of the bank's lending divisions, including technology, commercial, real estate, and factoring.

He brings 29 years of banking experience, primarily in technology banking, to the position.

Mr. Woodward has been with Silicon Valley Bank for three years as executive vice president and manager of the bank's loan production office in Wellesley, Mass.

BANK OF THE WEST, Walnut Creek, Calif., said **Katherine Holtzapple** has joined the bank as vice president, mortgage operations manager.

Ms. Holtzapple was formerly vice president, mortgage operations at American Savings Bank.

Also joining the bank is **Richard D. Arendt** as vice president, chief loan examiner, and **William N. Ogden** as vice president, regional commercial loan officer in the East Bay region.

Mr. Arendt was formerly credit examiner for national banks at the Office of the Comptroller of the Currency in San Francisco.

Mr. Ogden was previously vice president, treasurer of a subsidiary of United States Leasing International in San Francisco.

Promoted were **Peggy S. Turney,** to vice president, employment manager, human resources department, and **Donna M. Woodson,** to vice president, facilities manager, bank properties department. □

American Residential Looks to the Midwest

By EDWARD KULKOSKY

The best place to buy a home is also a pretty good place to make home loans. So reasons American Residential Mortgage Corp. of La Jolla, Calif.

The mortgage bank has announced it is opening a Midwest division to take advantage of what it expects to be a robust housing market in the region.

The company points to figures from the National Association of Home Builders of America showing that 20 of the 25 metro areas with the most affordable housing are in the Midwest.

California dominates the list of least-affordable metro areas.

Cincinnati Headquarters

The company already operates in five western states, eight states in the Northeast, and in Ohio. The new division will be based in Cincinnati and will also do business in Indiana, Illinois, and Missouri.

"Our recent branch openings in this region are part of our ongoing strategy to expand into new geographic markets," said James Gilcrest, an executive vice president. "It's clear that consumer confidence is stable in these areas. Housing starts have risen by 10.2% in the Midwest."

The division will be headed by Anthony C. Neal, senior vice president. Earlier, he was a senior vice president with Cincinnati's Star Banc Corp. and with PNC/Central Banc Corp. He will report to Mr. Gilcrest.

Most Affordable

American Residential originated $5.5 billion in home loans in 1992 and had a servicing portfolio of $9.7 billion.

A report from the builders' group, covering the fourth quarter of 1992, listed the Saginaw-Bay City-Midland area of Michigan as No. 1 in affordability. Others in the top 10 were Peoria, Ill.; Muskegon, Mich.; Lincoln, Neb.; Rockford, Ill.; Jackson, Mich.; and Springfield, Ill.

Outside the Midwest, Beaxoria and Amarillo in Texas were in the top 10, as was Manchester, N.H. The only other areas outside the Midwest in the top 25 were Binghamton, N.Y., and Nashua, N.H.

The California-based mortgage bank wants to take advantage of what it expects to be a robust housing market in the region.

New Lending Unit

The rankings are based on the percentage of houses sold in the area that could have been purchased by families earning the area's median income.

In a separate development, American Residential has announced formation of a multifamily lending division and named an executive to run it.

The move opens a new market for American Residential, which had previously restricted itself to single-family loans.

The new division will offer loan financing to apartment owners who want to refinance and to apartment-complex buyers seeking acquisition financing. All the loans will be sold into the secondary market on a non-recourse basis, the company said.

Tony Scholl, named vice president of multifamily lending, will run the division. Mr. Scholl came to American Residential from Southwest Capital Corp. in San Diego, a real estate syndication and consulting firm. □

Washington State Fights To Save Loan Program

Officials of Washington State are mounting a campaign to save a program that has financed 21,000 low-interest mortgages over the past 10 years.

The U.S. House of Representatives has reauthorized the mortgage revenue bond program as part of the budget bill, but the Senate has not. The final decision is up to a Senate-House committee.

"We're going to move heaven and earth to save the MRB program," said Skip Chilberg, chairman of the Washington State Housing Finance Commission.

For First-Time Buyers

The state's plan requires congressional approval because interest paid to investors buying the bonds, which finance loans for first-time homebuyers, is exempt from federal income tax.

Congress voted last year to permanently extend the program as part of the tax bill President Bush vetoed. This year, President Clinton proposed making the program permanent. The House again voted in favor, but the Senate decided to use the money for other programs.

— Christopher Noble

Marching Orders Pay Off for Mitchell & Co.

By DEBRA COPE

To hear James K. Mitchell describe it, you'd think he runs a boot camp instead of an investment products marketing firm.

Job applicants have to endure a battery of psychological tests and clear 11 reference checks just to get a second look from his San Diego-based firm, James Mitchell & Co.

And once on board, employees must adhere to a strict dress code and check in with their supervisors by phone at appointed times throughout the day.

"Growing up, I went to a Baptist military school," Mr. Mitchell said. "I think it stuck."

Healthy Market Share

Mr. Mitchell's highly regimented approach to marketing mutual funds and annuities is unusual, but it certainly seems to get the job done.

Last year, his firm booked $584 million in annuity sales at five banks and thrifts. That's a healthy chunk of the market: $12 billion in annuities were sold through hundreds of banks in 1992, according to Kehrer Associates, a Princeton, N.J., firm that tracks the business.

This year, Mr. Mitchell says, his company's annuity sales are on track to reach $800 million. A new mutual fund program at Central Fidelity Bank in Richmond, Va., should bring in another $70 million in sales.

Mr. Mitchell, who entered the annuities business in his native Texas in 1965, launched the company in 1984.

Since 1988, the company had been part of Spear Financial Services, San Diego. But last month, after selling off discount and full-service brokerage units to focus on Mitchell & Co.'s marketing activities, Spear renamed the slimmed-down company JMC Group Inc.

Mr. Mitchell struck out on his own at a time when most states prohibited banks from getting into the insurance business. Because the ban included annuities – which are insurance contracts that invest in a portfolio of securities to provide a steady stream of income to owners – he had to find some innovative ways to sell them through banks.

James K. Mitchell
Runs a taut ship

Skirting the Ban

To get around the ban, he hit upon the idea of creating trusts to hold the annuities, with banks as trustees. "A bank has every right in the world to promote a trust account," Mr. Mitchell said. Under the arrangement, Mitchell & Co. pays trust fees rather than commissions to institutions using its services.

"I went to a Baptist military school."
James K. Mitchell

Today that group numbers six. Last month, Mitchell & Co. signed up San Francisco-based Sumitomo Bank of California as a client. Its roster also includes Central Fidelity, First Tennessee Bank, Barnett Banks, and two California thrifts, Sacramento Federal Savings and Hemet Savings.

"We're talking to about 15 banks now, but we will only add one or two a year," he said.

The company employs nearly 300 people, 150 of whom are sales representatives. By administering the psychological tests, Mr. Mitchell says, he can screen out pushy salespeople.

Riding Shotgun Once a Week

The company also has 30 regional vice presidents, each supervising five salespeople.

"They ride shotgun with them once a week," Mr. Mitchell said. Spending a full day with each of their charges helps the vice presidents ensure that compliance is up to snuff, he added.

"Mystery shoppers" are sent out to make sure customers are treated courteously and aren't urged to consider investments that may be unsuitable.

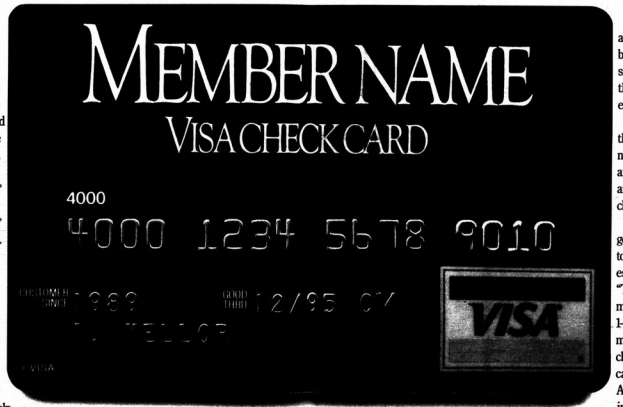
Mr. Mitchell says his salespeople booked 110,000 appointments last year and received only 34 consumer complaints.

The company also keeps close tabs on the six insurance companies that underwrite the annuities it sells. Due diligence is performed every 90 days, and detailed reports are sent to its bank clients. "We're in a fishbowl with these banks," Mr. Mitchell said. "We can't afford to take a risk." □

Your customers will soon be convinced that this is a checkbook.

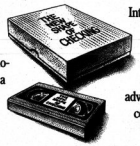
Let us explain. You see, while the banking industry has recognized the potential of debit cards, your customers are not necessarily familiar with their benefits. So to make sure they fully understand what debit cards offer them, we've taken a couple of important steps.

First, we've changed the name of the Visa® debit card to the Visa® check card. Now, from the name alone, consumers will have a better idea of what the card is and how it works at the point of sale.



And second, we're introducing "The New Shape of Checking" a comprehensive nationwide consumer education initiative. Simply put, this program is designed to help you educate your customers about the what, where, why and how of the Visa check card and Interlink® service.

A blend of public relations and promotional efforts, the program will feature a consumer handbook on responsible use of the Visa check card and Interlink, new modules of our Choices and Decisions educational materials which focus on Visa check card and Interlink, and consumer advocacy forums to advance consumers' awareness and understanding of how these services work.



We're also helping members educate their customers on a local level.

To achieve that goal, we've created "The New Shape of Checking" member kit.

Included in the kit are an 18-month marketing support schedule, sample consumer advertising materials, a program brochure, in-branch promotional support and a video explaining the Visa check card and Interlink educational programs.

When your customers discover through this program how convenient Visa check card and Interlink are to use, they will seem as simple and indispensable as the common checkbook.

So, to help get your customers interested, order "The New Shape of Checking" member kit today—just call 1-800-VISA-311. Or, for more information on how to become a Visa check card or Interlink issuer, call your Visa Member Relations Account Executive at 703-827-8404 in McLean, Virginia, or at 415-570-2120 in San Mateo, California.

Either way, take advantage of "The New Shape of Checking" program. Both you and your customers will find it very convincing.

INTERLINK

VISA

MasterCard Reaches for Taxi Fares with Test in N.Y.

Continued from page 1

and give customers a receipt. Cabbies sometimes accept cards without authorization at their own risk.

Some recent tests have used FM radio bands and two-way radios as links into the card authorization systems. But MasterCard thinks the availability of

Cellular phones will facilitate authorizations.

mobile phones could provide a breakthrough.

Easy Linkup

"What's nice about cellular," Mr. Carter said, "is it has its own function as a car-based pay phone. Bringing a dial tone to the cab makes it easy to attach fairly standard point-of-sale equipment."

The pilot is being run by New York City Taxi and Limousine Commission. The vendors include Nynex Corp., Cellular Pay Phones Inc., and other phone providers, and MasterCard will do the marketing.

To accept cards, cab owners must go through a standard application process with a bank and arrange through Cellular Pay Phones for point-of-sale equipment to be installed.

Cabdriver's Costs

But there are possible drawbacks. Cab owners must pay for the point-of-sale equipment – about $300 per taxi. What's more, they have to surrender 1.3% of each fare to cover processing charges. Those charges may leave some drivers balking.

"The cab owner will incur some expense," Mr. Carter acknowledged. "But we feel that is more than compensated for by larger tips and longer rides."

MasterCard is also developing card-swiper applications with some Chicago taxicab companies.

Amex Gets a Jump

While the major card players do not yet use on-line authorizations for cab fares in the United States, they have dipped their toes in the taxi market.

Almost 1,000 New York cabs have accepted the American Express card for a year and a half, according to Marcos Rada, director of public affairs at American Express Travel Related Services Co.

American Express captures transaction data on a magnetic stripe attached to the cab's meter. Mr. Rada said taxicabs in Chicago, London, and Stockholm are accepting Amex cards as well.

Visa Sees Growth

Visa U.S.A. said cabs across the country have been accepting its cards for years, using dispatchers to obtain authorization for cardholders. Visa uses on-line authorizations in Japan and Singapore via cellular phones.

Bruce Schaller, director of policy development for the New York City Taxi and Limousine Commission, said a number of taxi fleets should have a total of several hundred cellular phones installed by next month.

"If it works out well, you could easily see a majority" of the city's 11,787 cabs equipped with phones eventually, Mr. Schaller said.

Free Phone Installation

As an incentive, phone installation will be free. And cab owners will receive a monthly stipend from the phone provider based on the number of calls made each month.

Starting this month, passengers will be able to charge phone calls.

Will that be enough motivation? "I don't think the drivers are going to go for it," said Willie Bly, managing director of the League of Mutual Taxi Owners, an association of 5,000 cab owners that encompasses New York's five boroughs.

"It's going to be up to the individual if he wants it," Mr. Bly said. "These drivers like to do a cash business." And, they will resent paying the transaction fees, he added.

But Mr. Schaller thinks the cabbies can be won over. Card users tend to ride farther and tip more, he pointed out. And the phones will have a distress button for emergencies calls, an attractive feature for crime-wary drivers.

Although the point-of-sale equipment will accommodate any credit card, MasterCard will be promoted by the use of its logo on the phones, Mr. Carter said. MasterCard is working with Nynex to develop a cone-shaped antenna for the cab's roof that can be recognized by riders looking for a phone and the option to pay by credit card.

New York "will be the proving ground," Mr. Carter said. "If it works here, it will work anywhere." □

The New Frontier for Cards

Seven card markets targeted by credit cards. Figures and estimates supplied by MasterCard. Dollars in billions

Market	Annual volume	Potential card volume	Potential share
Supermarket	$300	5%	$15
Government	300	10	30
Fast food	45	3	1.5
Post office	24	10	2
Parking	13	10	2
Taxicab	7	14	1
Movie theater	6	8	0.5
Total	695	8%	53

Credit cards might capture $1 billion of cab fares annually.

Last year, passengers paid $70 million in taxi and limousine fares with Visa cards, said Gregory Holmes, a Visa spokesman, and another $19 million in this year's first quarter. "It's a market that's growing," he said.

MasterCard, using off-line authorizations, reported volume of $31 million last year and $10 million in the first quarter of this year.

The biggest potential new markets for credit cards are government and supermarket payments, which could eventually bring $45 billion in transaction volume, MasterCard estimated. Taxicabs, at $1 billion, and fast food outlets, at $1.5 billion, hold less promise.

Still, with the growth of cardholders slowing and new issuers entering the market every day, the card organizations are eager to entice customers to use their cards more frequently. That's why they are trying to make any inroads they can into transactions normally made by cash.

Ad Blitz Planned

To introduce its taxi program, MasterCard will launch a marketing and advertising campaign with Nynex and the other phone companies this summer, Mr. Carter said. □

NEW ISSUE July 8, 1993

FannieMae

$500,000,000

6.20% Debentures

Dated July 12, 1993 Due July 10, 2003

Interest payable on January 10, 1994 and semiannually thereafter.

Series SM-2003-E Cusip No. 313586 7X1

Callable on or after July 10, 1998

Price 99.9375%

The debentures of July 10, 2003 are redeemable on or after July 10, 1998. The debentures are redeemable in whole or in part at the option of the Corporation at any time (and from time to time) on or after the initial redemption date at a redemption price of 100% of the principal amount redeemed, plus accrued interest thereon to the date of redemption.

The debentures are the obligations of the Federal National Mortgage Association, a corporation organized and existing under the laws of the United States, and are issued under the authority contained in Section 304(b) of the Federal National Mortgage Association Charter Act (12 U.S.C. 1716 et seq.).

The debentures, together with any interest thereon, are not guaranteed by the United States and do not constitute a debt or obligation of the United States or of any agency or instrumentality thereof other than Fannie Mae.

The offering is made by the Federal National Mortgage Association through its Senior Vice President and Treasurer with the assistance of a nationwide Selling Group of recognized dealers in securities.

Debentures will be available in Book-Entry form only. There will be no definitive securities offered.

Linda K. Knight
Senior Vice President and Treasurer

3900 Wisconsin Avenue, N.W., Washington, D.C. 20016

This announcement appears as a matter of record only. This announcement is neither an offer to sell nor a solicitation of an offer to buy any of the Debentures.

Courier Corner

American Banker welcomes San Antonio, TX to its list of courier cities. Call 800-221-1809 ext. 23 for a list of specific locations.

Visa Says It's Gaining on Counterfeiters

By STEPHEN KLEEGE

Amid skepticism, Visa International is claiming progress in the battle against credit card counterfeiters.

The San Francisco-based bank card association said its card verification value program, rolled out worldwide in April after a test in Asia, stopped $3.4 million of fraudulent credit card sales in its first two months.

The initiative, known as the CVV program, will prevent $20 million in fraud losses this year, Visa estimated.

Skeptics Have Their Doubts

Visa officials said these statistics represent only a fraction of the actual impact of the program because they include only the transactions being rejected. Additional purchases a criminal might make if his card were not shut off by CVV were not included in the totals, they said.

Jerome Svigals
Skeptical of Visa's claim

But skeptics noted that the program addresses only a small corner of the industry's fraud problem. Besides, they said, criminals inevitably adjust to new technology.

"Fighting fraud is like punching on a balloon. You push in one place and it pops out someplace else," said Jerome Svigals, an electronic banking consultant in Redwood City, Calif.

Special Number Encoded

The CVV is an individual code number on the magnetic stripe on the back of a card. More than 230 million of the 304 million Visa cards now carry the numbers.

And special terminals enabling merchants to fulfill the CVV requirements have been placed at 10,000 locations such as jewelers, electronics stores, and cash machines, where counterfeiters are considered likely to attempt to use their cards.

"As our merchants bolts all over the world move toward fully electronic payment services, we will see even greater counterfeit reductions," said Robert Heller, president of Visa U.S.A.

MasterCard International has a similar program called CVC, for card verification code.

The code number encodes the issuer to verify that the piece of plastic being used in a store is the same one that was issued to the legitimate cardholder.

If not, the transaction is rejected.

Mr. Heller said the program would eventually wipe out counterfeiting.

Visa estimated that its members lost $125 million to counterfeiters last year, or about 2.7 cents per $100 of sales.

Overall, fraud has cost issuers 16 cents for every $100 in sales, with different types of fraud predominating at any given time, said H. Spencer Nilson, who publishes *The Nilson Report*.

"Fraud as a percent of volume isn't high enough to justify most of the systems being developed to deter it," Mr. Nilson said. "You can't crack it on all fronts at the same time. There's never going to be a point where [the card associations] have control of all types of fraud."

As for CVV and CVC, Mr. Svigals said crooks already may be one step ahead of the game. The systems will stop so-called shoulder surfers and dumpster divers from eavesdropping at checkout counters and sifting through trash for legitimate account numbers and expiration dates to place on fake cards.

The company cites success with a program to verify card authenticity.

But Mr. Svigals said the new systems do not prevent an increasingly popular practice known as skimming. Criminals use easily obtained electronic devices to copy the magnetic stripes -- including the secret code -- from legitimate cards.

In one widely publicized case, he pointed out, skimmers were able to collect electronic stripe information on ATM cards by installing a cash machine fitted with a copying device at a Connecticut mall.

Mr. Heller shrugged off the criticism, saying that with CVV crooks will now have to collude with merchants in order to copy the magnetic stripes. That, he argued, will make it easier to zero in on counterfeiting centers. □

AT&T Unveils Moves To Guard Calling Card

BASKING RIDGE, N.J.— In a strong move to bolster its corporate calling card, American Telephone and Telegraph Co. announced a raft of new antifraud benefits.

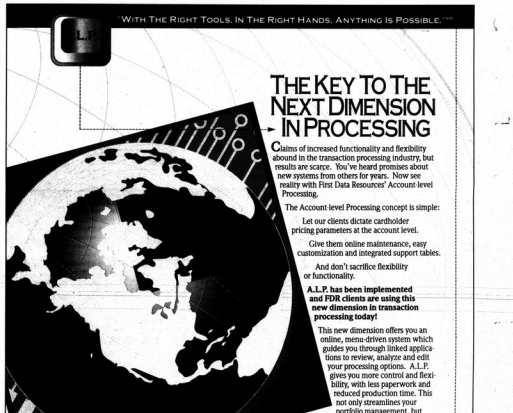
The package includes a written guarantee that businesses will not pay for calls by people they do not know.

AT&T also lets companies set limits on the use of the cards by employees, and to monitor calls more closely.

AT&T appears to be responding to competition, said Robert B. McKinley of Ram Research Corp.

— Stephen Kleege

WITH THE RIGHT TOOLS, IN THE RIGHT HANDS, ANYTHING IS POSSIBLE.™



THE KEY TO THE NEXT DIMENSION IN PROCESSING

Claims of increased functionality and flexibility abound in the transaction processing industry, but results are scarce. You've heard promises about new systems from others for years. Now see reality with First Data Resources' Account-level Processing.

The Account-level Processing concept is simple:

Let our clients dictate cardholder pricing parameters at the account level.

Give them online maintenance, easy customization and integrated support tables.

And don't sacrifice flexibility or functionality.

A.L.P. has been implemented and FDR clients are using this new dimension in transaction processing today!

This new dimension offers you an online, menu-driven system which guides you through linked applications to review, analyze and edit your processing options. A.L.P. gives you more control and flexibility, with less paperwork and reduced production time. This not only streamlines your portfolio management, but provides you with a high degree of customization throughout your system based on your own cardholders and circumstances.

Account-level Processing is an outgrowth of our continued commitment to client-defined processing because it has been developed in partnership with many of our clients, both large and small.

Take a look at how Account-level Processing can tap into new opportunities in your cardholder base and take your processing to a new dimension. No other processor can give you today the immediate advantages Account-level Processing offers.

For more information, call 1-402-222-4622.

FIRST DATA RESOURCES.
QUALITY, OUR COMMITMENT TO EXCELLENCE.

1st Annual Bank Mutual Fund Conference

sponsored by

AMERICAN BANKER

Essex House
Sept. 30 & Oct. 1, 1993
New York City

Day 1

PRELIMINARY PROGRAM

8:00 – 9:00 Registration

8:00 – 9:00 Continental Breakfast
Sponsored by: **BHC Securities Inc.**

9:00 – 9:15 1993 Conference Chair
Debra McGinty-Poteet, *Senior Vice President and Director, Bank of America*

9:15 – 9:45 The Role Banks Are Playing in the Mutual Fund Explosion
A. Michael Lipper, *President Lipper Analytical Services*

9:45 – 10:45 How Banks Can Build a Profitable Mutual Fund Business
PROPRIETARY: Paul Klug, *Vice President Vista Capital Management*
NON-PROPRIETARY: J. Edward Diamond, *Senior Vice President Dime Savings Bank*

10:45 – 11:00 Coffee Break
Sponsored by: **Fidelity Investments**

11:00 – 11:45 Banks and Mutual Funds: Risks and Opportunites
Matthew P. Fink, *President Investment Company Institute*

11:45 – 1:00 Lunch

1:15 – 2:30 Your Funds or Mine: The Advantages and Disadvantages of Starting Your Own Fund, Working with a Third Party Provider or Entering into a Private Label Agreement
Moderator: Joy P. Montgomery, *President Money Marketing Initiatives*
W. Christopher Maxwell, *Executive Vice President, KeyTrust*

2:30 – 2:45 Coffee Break
Sponsored by: **GE Investments**

2:45 – 3:15 Taking the Plunge: What Do Customers Want? A Look at Customer Attitudes
Marcia Selz, *President & CEO Marketing Matrix*

Rainey Gray, *Senior Vice President Boatmen's National Bank*

11:00 – 11:45 Banks and Mutual Funds: The Next Generation
L. William Seidman *Chairman of the Board, Com Mac Former Chairman, FDIC*

11:45 Conference Adjourns

Space is extremely limited, please register early!

GENERAL ★ INFORMATION

REGISTER IN WRITING OR BY PHONE
To register by phone, call Nancy Nikolic at (212) 943 – 2221, or by fax (212) 943 – 4842.

REGISTRATION FEE
- Regular fee: $695.00
- Subscriber fee: $645.00 (*The Bond Buyer*, the *American Banker*, or any American Banker • Bond Buyer newsletter)
- Special banker rate: $595.00

Please make checks payable to American Banker • Bond Buyer Conferences and include the name of the attendee(s) on the face of the check.

We also accept Visa, MasterCard and American Express.

Payments must be received two weeks prior to the conference.

CANCELLATION POLICY
You may send a replacement at any time at no additional charge. Cancellations must be in writing. We regret that no cancellations will be accepted within 14 days of the conference.

DISCLAIMER
We reserve the right to change or replace speakers without notice.

FOR FURTHER INFORMATION
Please contact Brendan Doran at (212) 943 – 8633 or fax (212) 943 – 7852.

TRAVEL AGENCY
Garber Travel
1001 East Touhy St.
Des Plaines, IL 60018
Phone: (800) 447 – 4166
Or fax: (708) 827 – 8239

For your convenience, Garber Travel has been designated as the official travel agency for this conference. Attendees are responsible for their own hotel arrangements.

HOTEL ACCOMMODATIONS
We have reserved rooms at the Essex House at the discounted rate of $185 per night. Please call the hotel on or before Sept. 2 to receive this special rate. Be sure to identify yourself as an American Banker conference attendee. If you book your air reservations through Garber Travel, they can make your hotel reservations at the same time.

Essex House
160 Central Park South
New York, N.Y. 10019

PROFESSIONAL EMPLOYMENT OPPORTUNITIES

RIYAD BANK
Saudi Arabia

Riyad Bank is Saudi Arabia's most prominent Bank with 170 branches and international offices in the USA and the UK.

As part of the unique and ambitious automation program, the Bank is now in the process of implementing state-of-the-art technical solutions based on an integrated multi-platform processing environment.

Applications are invited for the following newly created and critical line management positions.

MANAGER - PC/END USER COMPUTING

Key Responsibilities:
- Developing and managing an effective PC/EUC organization responsible for:
- Selection of software tools and utilities.
- Building and managing a comprehensive solution-oriented PC/EUC team including LAN Specialists and Information Center Analysts.
- Providing service and support to end users.
- Close interaction with application development teams.

Requirements:
- Excellent management skills.
- Hands-on technical experience of LAN technology, Query languages, report generation and test editors.
- Excellent interpersonal, communication and presentation skills.
- A minimum of 8 years' PC/End User Computing management experience gained within a banking or financial services environment.

MANAGER - AUTOMATED CUSTOMER SERVICES

Key Responsibilities:
- Managing the resources and processes involved in assuring user satisfaction with services provided by the Information Services Division.
- Developing Service Level Agreements and then monitoring performance against these agreements, identification and resolution of service issues and problems.
- Interfacing with users (370 branch network) on a continuous basis.
- Development and administration of a solution-oriented "Help-Desk".
- Interfacing between Information Services and Branches to communicate new system requirements.
- Conducting user training for a series of major banking applications.

Requirements:
- Extensive information technology experience, preferably gained within a banking or financial services environment.
- A minimum of 5 years' managerial experience.
- Extensive user liaison skills, including development of SLAs and management of a professional solution-oriented "Help-Desk".
- Mainframe and PC technical skills.

Riyad Bank offers a competitive compensation package consisting of tax free salary, housing, medical coverage, paid annual air fare and a superb lifestyle (single or married status).

Qualified candidates with an interest in making a positive contribution to the continued development of this "green field" site should direct resumes with current salary to: Box 701, 12 West 37th Street, 10th Floor, New York, NY 10018.

JUNIOR EQUITY RESEARCH ANALYST

Midwestern investment firm specializing in banks and thrifts seeks a highly motivated individual with strong PC skills and at least one to two years experience working with bank and/or thrift financial statements. This support position involves financial analysis and some writing. Position will assist two senior analysts and operate in a team environment.

Send resume and salary expectations to:

Box 699
c/o American Banker
One State Street Plaza
New York, New York 10004
Equal Opportunity Employer

Upstate New York financial institution is seeking to fill the following positions:

- **SVP Trust and Investments**
- **VP Trust Officer**
- **Commercial Real Estate Officer**
- **Assistant Credit Officer**

Competitive compensation and comprehensive benefits compliment these positions. Please forward resume and salary history to:

First National Bank of Glens Falls
237 Glen Street
Glens Falls, NY 12801
Attn: Human Resources
Equal Opportunity Employer AA/M/F/V/H

PARTNERSHIP NOTICES

CONCORD HOLDING CORP., the No. 1 administrator and distributor of bank-related mutual funds, has over $36 billion in assets under administration. We seek top-notch professionals to fill the following newly created positions:

SENIOR VP, ADMINISTRATION AND OPERATIONS: Will manage the Special Projects/Conversions Group, Systems, and General Administration and Fund Operations areas, including Institutional Services and Project Management groups. Will implement new products and services from development to daily operations implementation, including legal, compliance, operational and marketing perspectives. To qualify, you must have demonstrated expertise in relevant fields; banking and systems orientation preferred. You must also have demonstrated management ability and excellent project management and communication skills.

AVP/MANAGER, SPECIAL PROJECTS AND CONVERSIONS MANAGEMENT: Will manage the implementation of special products and services, including conversions of existing products. Coordinate legal and marketing components. You must have demonstrated broad-based industry expertise and relevant experience; banking exposure preferred. You must also possess excellent project-planning skills and communication.

We provide an excellent package of salary and benefits with ample opportunity for professional development and growth. Send your resume with salary history/requirements to:

Concord Holding Corp.
Human Resources Department
125 West 55th Street
New York, N.Y. 10019

Bank Stock Table Explained: The table lists in alphabetical order daily composite stock prices at 4:30 p.m. (unless otherwise noted) for the 225 largest publicly traded commercial banking firms and 25 of the largest thrifts. Banks are ranked according to the dollar value of all common shares outstanding. As of June 15, 1993, the market value cutoff for banks was $75.09 mil. and for thrifts $244.20 mil.**52 Wk Hi** (or **Lo**) the moving 52-week high and low closing prices for the stock. **PE** the price-earnings ratio. It is the current stock price divided by the trailing four-quarter earnings per share adjusted for recent announced earnings. The ratio is annualized for companies reporting quarterly earnings. **Mkt Cap.** (or **Capitalization**) the total value of the current day's closing price for the stock times the number of shares outstanding. **Bank Index** is adjusted for changes in capitalization and dividends. **Last** the price at which the stock last traded. If no trades for the day, the latest bid. **AB Bank Index** and **AB Thrift Index** are weighted averages of the top 225 banks and top 25 thrifts in market value. **Dow Jones Industrial Average** highlights show largest percent gainslosses in price and two-volume stocks. Unless otherwise noted, shares traded and today's volume are a percentage of average shares traded daily over the past year.

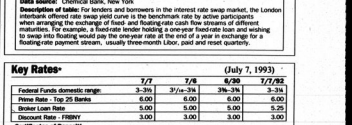
Libor Swap Yield Curve — **Wednesday, July 7, 1993**



Data source: Chemical Bank, New York

Description of table: For lenders and borrowers in the interest rate swap market, the London interbank offered rate swap yield curve is the benchmark rate by active participants when arranging the exchange of fixed and floating-rate cash flow streams of different maturities. For example, a fixed-rate lender holding a one-year fixed-rate loan and wishing to swap into floating would pay the one-year rate at the end of a year in exchange for a floating-rate payment stream, usually three-month Libor, paid and reset quarterly.

THE MARKETS

Short Rates Rise on Fears That Fed Will Tighten

Short-term interest rates rose Wednesday on concerns about high commodity prices and a Federal Reserve tightening.

At 4 p.m., the bond-equivalent yield on three-month Treasury bills was up to 3.11% from 3.02% on Tuesday.

"Bills are trading as if the Fed left the pro-tightening bias intact," said Astrid Adolfson, economist at MCM MoneyWatch, said.

The Federal Open Market Committee on Wednesday concluded a two-day meeting to set policy for the next six weeks.

Leeway of 50 Basis Points

The FOMC does not divulge the results of its talks until six weeks after the meeting, but market analysts think a sharp run-up in commodity prices convinced the panel to maintain the current pro-tightening bist.

Under this policy directive, Federal Reserve Board Chairman Alan Greenspan can raise the target for the federal funds rate 50 basis points higher without further consultation with the other FOMC members. The target is currently 3%.

Many economists had expected the Fed to change to a neutral stance after the government's report last Friday that only 13,000 jobs were added in June.

A sharp rise in commodity prices was related in large part to floods in the Midwest wiping out crops. The government estimated $1 billion in crop losser and damage from the flooding.

The Commodity Research Bureau's index, a gauge of 21 futures prices, rose 5.29 points to 217.30 on Tuesday, the biggest rise since 1988. Coupled with a big rise in gold, the CRB jump re-ignited inflation fears and sparked a selloff in the government securities market.

Commodities prices settled down Wednesday, with the CRB falling 0.07 point to 217.23.

The yield on the 30-year Treasury bond rose to 6.68% from 6.67%.

Stocks rose in what market analysts described as a technical rebound after five days of losses. The Dow Jones industrial average gained 25.74 points to 3,475.67.

The dollar was mixed. It finished New York trading at 1.7060 German marks, up from 1.7050, and at 107.55 yen, down from 108.84. — **Bart Fraust**

STOCKS: Bank of N.Y. Rated 'Hold'

By GORDON MATTHEWS

Sanford C. Bernstein & Co. initiated coverage of Bank of New York Co. on Wednesday but rated the stock neutral in the wake of its recent upswing.

Analyst Ronald I. Mandle said he is impressed by the bank's "significant growth potential in credit cards, processing, and capital markets."

Problems from commercial real estate loans and highly leveraged transactions are down sharply, he said, and credit quality and capital adequacy ratios are better "by a wide margin" than most New York banks.

Bank of New York shares, which have gained 13% in the past month, were off 62.5 cents to $59 late Wednesday.

Mr. Mandle said the stock is 11% below his target, on a relative price-to-earnings basis, but its recent strength made it less attractive than some other bank stocks now. This prompted his "market-perform" rating — Bernstein's version of a "neutral" rating.

"Bank of New York has remade itself in the past three to four years, thanks to its acquisition of Irving Bank Corp. and the workout of credit problems," the analyst said.

"It has strong its earnings mix considerably more in the direction of transaction processing and other fee-based revenues and away from traditional corporate lending," he said.

In addition, the balance sheet has been enhanced "by asset shrinkage, retained earnings, and a common stock offering last year," Mr. Mandle noted.

He added that the bank has the dominant branch network in the suburbs of New York City, with 254 branches versus 140 for Chemical Banking Corp. in the same counties.

The pending acquisition of the $4 billion-asset National Community Banks Inc., Maywood, N.J., "will be the first, but probably not last," venture for Bank of New York in that neighboring state, he said.

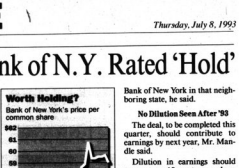
No Dilution Seen After '93

The deal, to be completed this quarter, should contribute to earnings by next year, Mr. Mandle said.

Dilution in earnings should amount to 10 cents per share this year, he added.

Bank of New York is paying a hefty $652 million in stock for the New Jersey bank, but Mr. Mandle said he expects no dilution after this year because Bank of New York will likely be able to cut more than 35% of National Community's expenses.

The bank "has experience in boosting productivity from the Irving deal of 1989 and from the yearend 1992 acquisition of Barclays Bank [branches] in New York City and its suburbs," he said. The Barclays transaction, he noted, added to earnings "almost from day one."



WEDNESDAY'S MARKET

Most major bank stocks gained as the stock market overall enjoyed a broad rebound.

The leaders in late trading were First Union Corp., up $1 to $48.125; J.P. Morgan & Co., ahead $1.125 to $69.125; and Bankers Trust New York Corp., up $1 to $75. □

Hanson May Refinance Debt

Continued from page 1

tions, sources noted.

Some funds for debt repayment could also come from the parent company in London, sources suggested.

Robert Brier, treasurer of Hanson Industries, did not return phone calls for comment.

Hanson's parent company in London last week agreed to buy Quantum in a stock swap valued at $720 million.

The deal is the latest in a string of acquisitions Hanson has made in the United States and the United Kingdom.

In recent years, Hanson has purchased Consolidated Goldfields, Peabody Coal Co., and Beazer PLC.

Quantum's debt consists of fixed-rate obligations and public and privately placed junk bonds, with coupons running as high as 13% on a series of senior subordinated debentures. The blended rate on the debt is over 10%.

Hanson's U.S. arm pays less than half that rate in the bank loan market, as Hanson stands to reap substantial cost savings by refinancing the Quantum debt. Last week, Hanson reportedly said it could pare Quantum's debt costs by at least $125 million.

Under the 1991 credit agreement, Hanson pays 75 basis points over the London interbank offered rate. At current Libor rates, that works out to around 4%.

Though Hanson PLC has almost as much cash as debt on its balance sheet, the U.S. unit is highly leveraged. For that reason, the terms of the 1991 credit were viewed as being highly favorable to Hanson.

Banking sources declined to speculate about the pricing of any new deal. □

Credit Lyonnais Issues $100 Million in Stock

Credit Lyonnais on Wednesday launched a $100 million issue of perpetual preferred stock in the private placement market.

The issue by the French bank will carry a high dividend because only a limited number of investors can purchase the securities in the private market.

The offering is registered under Securities and Exchange Commission Rule 144-a, which lets the securities be traded among large investors. A Lyonnais official declined to comment. — **David Siegel**

Bank of Montreal Feels Heat from Chicago Merger

By STEVE KLINKERMAN

Just two weeks after Bank of Montreal Corp. unveiled a 10-year plan to bolster Harris Bankcorp, its flagging Chicago affiliate, it received notice that the timetable may require dramatic acceleration.

In a single thrust, ABN Amro Holding this week grabbed a big chunk of the Chicago market when it agreed to buy Cragin Financial Corp., parent of Illinois' second-largest independent thrift.

The $500 million price tag equals two-thirds of what Bank of Montreal said it would invest in Harris over a decade.

And Amro, which will control $18.2 billion of assets in the suburban Chicago, is but one of several competitors muscling in on the vast Chicago-area market. First Chicago Corp. is aiming to bolster its already dominant market share, and interstate rivals such as NBD Bancorp and Banc One Corp. are hungry to expand there.

"Bank of Montreal doesn't have 10 years to get the job done," said Michael Sammon, a banking analyst at Howe Barnes Investments Inc., a Chicago brokerage firm.

The Pressure Is On

The heightened competition intensifies the challenge facing Alan G. McNally, the Bank of Montreal vice chairman who is being dispatched to revamp the company's U.S. operation.

But Mr. McNally, who will arrive in September from Toronto, said Tuesday he is unperturbed by ABN Amro's purchase of Cragin, and sees no reason to change his strategy.

"Big purchases may be the best option for others, but they certainly are not the best for us," said Mr. McNally, who said Harris could build a franchise far larger than Cragin's for the $500 million being spent by ABN Amro.

Goal: Triple Earnings

Mr. McNally will succeed B. Kenneth West as chief executive of Harris, which has $17.4 billion of assets. His mandate: to triple both earnings and branches at Harris, which has performed inconsistently since Bank of Montreal purchased it in 1984.

Though Harris sports the nation's 18th-largest trust operation, administering $160 billion

Sears Seen Set to Accept Bank Cards

By BARTON CROCKETT

Sears, Roebuck and Co. appears to be getting ready to accept bank cards at all of its stores.

The giant retailer has reportedly picked a unit of First Financial Management Corp. to process Visa and MasterCard transactions.

The unit, National Bank Card Corp., or Nabanco, is the nation's largest merchant processor.

Donald Y. Sharp, a senior vice president of Atlanta-based First Financial, confirmed that a tentative agreement had been reached, but stressed that details remain to be worked out. "We have an agreement, not a contract," Mr. Sharp said.

Test in Progress

Sears has been testing acceptance of Visa and MasterCard since November at 140 general-purpose and specialty retail stores in California, Florida, New York, Ohio, and Texas, but has not announced plans for a nationwide rollout.

Mr. Sharp declined to comment on whether the Nabanco agreement involved all 809 Sears stores. He said Sears will soon make an announcement about the acceptance of bank cards, but declined to elaborate.

Separately, a leading stock analyst, Patrick Barton of the Minneapolis investment firm Piper

FDIC Staff Sees Cut In Premiums by 1998

By BARBARA A. REHM

WASHINGTON — Deposit insurance premiums could be cut in 1998, four years earlier than previously expected, according to new projections by the Federal Deposit Insurance Corp. staff.

An internal document, obtained by the *American Banker*, forecasts the average bank premium will fall by 15%, to 21 cents for every $100 of deposits, in 1998. The rate would plunge another 48%, to 11 cents, the next year. The current average is 24.6 cents.

A 'Turning Point'

The projection is not official. But Roger Watson, the FDIC's research director, said that, if anything, the new estimate is too conservative. The FDIC might well be able to reduce the premium even sooner, he said in an interview Thursday.

"We're at a turning point," Mr. Watson said. "There doesn't seem to be that much risk in the system right now, and that will probably last for a few years."

In March, when the last official projection was issued, the FDIC said the current premium would hold until 2002, when it would fall to 13.5 cents.

Mr. Watson presented the new forecast Wednesday to a private-sector group that advises the Savings Association Insurance Fund.

If it holds, the projection will be a bonanza for banks. But thrifts, whose separate insurance fund is in worse shape, are not likely to see a premium cut.

Differential Seen

Mr. Watson said concern over that prompted the SAIF Advisory Board to ask for a briefing on the Bank Insurance Fund. He predicted that down the road the premium rate for thrifts will be at least 12 cents higher than for banks.

"I think people have to start to realize that there is this potential for a big differential," he continued. "Whether it is fair or not is arguable, but it is going to have a lot of disruption" in the thrift industry.

The FDIC gave a peek at these new projections in late June

Microsoft Eyes Banks for Next Big Battle

By BRIAN TRACEY
Part of a Series

After fomenting revolution in the computer world, Bill Gates is now setting his sights on the banking industry.

Mr. Gates thinks his software juggernaut, Microsoft Corp., is well positioned to shake up how banks operate, and he's not the only one.

It now dominates the PC industry the way International Business Machines Corp. controlled the mainframe computer business in the 1960s.

Second, recent quantum-leap improvements in PC technology have forced bankers to rethink their dependence on mainframe systems for most computing chores. That creates an opening for upstarts like Microsoft.

By one measure, Microsoft already dominates

NETWORK ANCHORMAN: Bill Gates hopes to gain the upper hand in linked PCs at banks.

NEWS *briefs*

First Empire State's Profits Down 9.3%

BUFFALO — First Empire State Corp. said Thursday its earnings fell 9.3% to $25.2 million, or $3.42 per common share, in this year's second quarter from $27.8 million, or $3.85, a year earlier.

The year-earlier results included a one-time after-tax gain from securities sales of $7.6 million. Excluding that gain, the company's second-quarter earnings rose 25%. First Empire, which has $10.5 billion of assets, realized no significant gains from investment securities transactions in this year's second quarter.

Net interest income rose 15% from the year-earlier period, reflecting earning assets absorbed from First Empire's purchases last July of Central Trust Company of Rochester, N.Y., and Endicott Trust Co. of Endicott, N.Y.

Return on average assets was 0.96%, and return on average equity 15.74% during the quarter.

Broker Must Return Profits on B of A Stock

WASHINGTON — A federal judge in Manhattan has ordered Connecticut broker Martin Byron Sloate to return $161,186 in alleged insider trading profits on BankAmerica Corp. and Shearson Loeb Rhoades stock, the Securities and Exchange Commission said.

Judge Milton Pollack's order stemmed from an SEC civil suit accusing Sloate of buying stock of BankAmerica in 1986 and Shearson in 1981 on the basis of nonpublic information.

The SEC said Sloate was tipped by a doctor, who got his information from one of his patients, the wife of Wall Street executive Sanford Weill.

Bank of Boston Deals Win State Approval

BOSTON — Massachusetts state regulators approved Bank of Boston Corp.'s petition to acquire Society for Savings Bancorp Inc. and Multibank Financial Corp.

The acquisition proposals were scrutinized last month by federal regulators, who had expressed concerns about whether Bank of Boston's capital was adequate to handle the almost simultaneous acquisitions for a total of about $443 million in stock.

The Federal Reserve Board initially rejected the proposal, but later approved the purchases after Bank of Boston pledged to raise more capital. In an unprecedented move, three of the Fed's seven governors abstained from the vote and expressed dissatisfaction with the way the decision was reached.

The Massachusetts Board of Bank Incorporation said that it approved the plan because the purchases will not unreasonably affect competition among banking institutions and that public convenience and advantage will be promoted.

Western Union Sets Up Link to Thailand

UPPER SADDLE RIVER, N.J. — Western Union Financial Services International said it has begun money transfer service between the United States and Thailand.

Western Union Financial Services International, a unit of New Valley Corp., said it now has money transfer services in 61 countries.

Chase Places Loan for City of Barcelona

MADRID — Chase Manhattan Corp. said it placed privately a $100 million loan for the City of Barcelona among a limited group of U.S. investors.

Chase said this was the first private placement in the U.S. market for a European municipality, and was done through its Madrid and New York offices.

There are two parts: a $20 million tranche over seven years at 6.73% and a tranche of $80 million over 10 years at 7.20%. Interest payments are quarterly, and the loan will be repaid in full at maturity.

U S West to Exit Financial Services Arena

DENVER — U S West Inc. said it will completely eliminate its financial services businesses, which the telecommunications company calls its capital assets segment.

This group includes Financial Security Assurance, U S West Financial Services Inc., and U S West Real Estate. The company previously announced plans to sell the real estate and financial services units.

"This will enable us to redeploy capital for investment in expanding growth opportunities in our core [telecommunications] business," said Richard D. McCormick, U S West chairman and chief executive officer.

Republic Completes Horizon Acquisition

ANN ARBOR, Mich. — Republic Bancorp said it completed the acquisition of Horizon Financial Services Inc.

Horizon, based in Beachwood, Ohio, is the parent of Horizon Savings Bank. Its $400 million of assets brings Republic to $1.2 billion, with banking and mortgage offices in 13 states.

The briefs were compiled from staff and wire reports.

SBA Gives Go-Ahead for Banks To Again Take Loan Applications

By ROBERT M. GARSSON

WASHINGTON — Armed with $3.2 billion in new loan-guarantee authority, the Small Business Administration this week invited banks to begin taking new applications from customers who need the subsidized credit.

And some bankers, including loan officers at First National Bank of Stillwell, Okla., said they will begin responding right away.

"We have about a half-million dollars in applications in the pipeline, and another half-million dollars in applications that have just been waiting," said Susan Kerns, the bank's vice president for government-guaranteed lending.

Supplemental Appropriation

The pipeline represents loans that the bank forwarded to the SBA for approval, but which could not be funded after the agency's loan-guarantee program ran out of money in April. The applications represent loan requests taken after April and held until the SBA received a cash infusion.

On Saturday, President Clinton signed into law a supplemental appropriations bill that included $175 million for the SBA's main loan-guarantee program. The appropriation is enough to provide guarantees for $3.2 billion in new loans, and is expected to last until Oct. 1., when the new fiscal year begins.

A spokesman for the SBA said the agency began sending authorization letters out to banks this week telling them they could close loans that had been in the pipeline since April. All told, 3,340 loans worth $755 million have been on hold.

"We also told them that they could start taking new loan applications right away," said SBA spokesman Mike Stamler.

Warm Welcome Expected

Ms. Kerns said the new authority would be welcomed by the bank's customers, particularly those trying to start new businesses.

"A lot of them have left their previous employment to start up their business. And they can't keep going just on their own funds," she said.

Without the SBA's 7(a) program, she said, "we'd have to tell them to wait a couple of years and get their business on more solid ground before we could lend to them."

SBA administrator Erskin Bowles said the new lending authority "will be a big shot in the arm" for the nation's small businesses and for the economy.

"Simply put, it means more jobs," he added.

Uncertainties Cited

However, one banker said that uncertainties surrounding President Clinton's economic program could limit the effectiveness of the SBA guarantees.

"Small business is waiting to see what happens with the tax bill before making decisions" on whether to expand and borrow more, said James R. Lauffer, president of the Independent Bankers Association of America.

Mr. Lauffer, who is chairman of First National Bank of Herminie in Herminie, Pa., said concerns over the costs involved in the health care package will also limit credit demand. □

N.Y. Tables Interest-Rate Deregulation Bill

By STEPHEN KLEEGE

The New York State Legislature adjourned Thursday morning without granting a permanent extension of interest rate deregulation sought by bankers.

Legislators, in an all-night session, instead extended the current law through the end of January. They tabled the permanent-extension bill to allow further debate over a package of consumer protection amendments.

"With additional time, we can end this thing and move forward," said Michael P. Smith, executive vice president of the New York State Bankers Association.

New York lifted an 18% interest rate ceiling in 1980 in an attempt to stem the flight of credit card operations to more lenient states. Chemical Banking Corp. and Keycorp run major credit card operations in the state.

Bankers argue a permanent extension will end the uncertainty over the law, which legislators have been forced to reconsider three times. That will make it easier for banks to develop business plans and help keep jobs in the state, Mr. Smith said.

Sidetracked by Other Issues

The move for a permanent extension was sidetracked as legislators debated other controversial issues, including the state's rent control law.

Mr. Smith said the permanent extension enjoys broad-based support, however.

Although the measure ultimately ran out of time in the Assembly, the state Senate overwhelmingly passed a permanent extension. And, Mr. Smith added, Gov. Mario Cuomo has recently spoken out in favor of it.

Mr. Smith said the permanent extension was likely to include some provisions acceptable to the association, such as a small business lending program, a requirement to provide checking services to the poor, and the establishment of a toll-free telephone number at the State Banking Department enabling consumers to obtain information about credit card rates and fees.

"We feel the momentum is to put it all together," he said. But "there are those who would try to put in restriction and regulation not acceptable with us."

One such proposal was a floating interest rate ceiling at eight percentage points above the discount rate for three month Treasury bills, or just over 11% at today's rates. □

Sears Seen Ready to Accept Bank Cards

Continued from page 1

Jaffray Inc., said he had been told by knowledgeable officials that Sears was planning a national rollout.

Talk Called 'Speculation'

Perry Cohan, a Sears spokesman, declined to comment on the compan, s plans. He also said that talk of an agreement with Nabanco was "speculation" and declined to comment on it.

Most Sears stores accept only its own proprietary charge card and the Discover card, which it founded.

The acceptance of bank cards could boost sales. But it could also cut into Sears' profitable charge card business – a bright spot in the company's troubled merchandise group.

Sears Card Used by 57%

Mr. Chlan said that in 1992, consumers made 57% of their purchases at Sears stores with the Sears charge card.

The retailer has been testing acceptance of Visa and MasterCard.

That year, the corporation lost $3.9 billion on revenues of $52.3 billion. But the charge card operation turned a $408 million profit, compared to a $175 million loss at Sears' U.S. stores.

In the first quarter of this year, Sears' U.S. stores lost $49.6 million, while the charge card made $119.8 million. Profits for the company in the quarter were a record $435 million on sales of $11.3 billion.

The first public indication that Nabanco had won an agreement to settle Visa and Master-Card transactions for Sears came about a month ago, when executives at SPS Transaction Services Inc., Riverwoods, Ill., disclosed that the company had bid for the business, and lost to Nabanco.

Banks High in Field

Nabanco is the country's largest merchant processor, measured by the volume of charges made by merchants contracting with the company, according to *The Nilson Report*, an industry newsletter in Oxnard, Calif.

The newsletter ranks SPS as the country's fifth-largest processor of so-called electronic draft capture transactions, which are transactions made by merchants contracting with other merchant processors. Nabanco ranks seventh on this list.

Has Ties with Sears

SPS has been processing Visa and MasterCard transactions for the test that Sears started in November. SPS has subcontracted the settlement of transactions to National Processing Co. of Louisville, Ky., a unit of National City Corp.

More Technology News
Pages 12 and 13

Mr. Burton said SPS officials said they lost partly because the company does not have a bank through which to settle Visa and MasterCard transactions and resolve charge disputes.

This turned out be the only merchant processing business that Sears had not. Sears formed out.

Ms. Fargo said Sears plans to do most of the computer processing of Visa and MasterCard transactions in-house, using telecommunication services from Advantis, a joint venture of Sears and International Business Machines Corp.

Nabanco had an edge over SPS because it can settle transactions through a bank controlled by First Financial, Mr. Burton said. □

Divining the future is not all that hard when you have

THE REDEMPTION REPORT

Calls and prerefunded bonds are scheduled to drain the yields out of portfolios at a faster and faster pace in the third quarter. With ***The Bond Buyer Redemption Report,*** *you can anticipate redemptions well ahead of the actual events.*
If you want to know when your bonds will be called away, this report has the answer.

We published the first such book in history for the first quarter of 1993. Buyers received instant access to the entire universe of called and prerefunded bonds in one volume.

And now you can get the third-quarter volume, a 916-tome chock full of information on which, how much, and when. Here's a sample listing:

AK ANCHORAGE ALASKA TEL REV — *Total Amount Redeemed :* $8,465,000.00
TEL REV BDS
Series: 1983 — *Issue Amount:* 9,000,000
Sale Date: 08/24/83 — *Dated Date:* 09/01/83

Cusip	Coupon	Maturity	Redeemed Amount	Type	Date	Price
033267B53	10.250	09/01/99	$1,050,000	Prerefunded	09/01/93	102.00
033267J37	9.700	09/01/94	$260,000	Prerefunded	09/01/93	102.00
033267J64	9.900	09/01/95	$280,000	Prerefunded	09/01/93	102.00
033267J72	9.700	09/01/96	$315,000	Prerefunded	09/01/93	102.00
033267JM0	10.100	09/01/97	$740,000	Prerefunded	09/01/93	102.00

Some electronic services charge you $1 or more every time you log on to look up a Cusip. Compare those exponential costs to the one-stop shopping, fixed-cost of ***The Redemption Report,*** *and you'll be looking at substantial savings. After all, this volume gives you more than 11,000 cusips for $975. And you never have to log on.*

By Kenneth F. Hall

Toward a Cease-Fire In the Banker-Lawyer War

I don't want a lawyer to tell me what I cannot do. I hire him to tell me how to do what I want to do."

With these words, J. Pierpont Morgan captured the essence of what bankers have for decades wanted from lawyers.

Given the high level of expectations his words embody, it should not be surprising that these expectations have been repeatedly stymied over the years, for even the finest lawyers cannot make laws and regulations disappear nor alter their provisions at will.

Yet Morgan's statement continues to represent the core of what bankers desire from lawyers. The principal source of bankers' antipathy is lawyers' repeated confounding – with each proviso or negative opinion or excessive bill – of bankers' expectations.

What to Expect

My purpose is to suggest what bankers can reasonably expect from lawyers and what steps than clarity of the solutions.

- Lawyers cannot produce realistic budgets (especially to fit alternative scenarios), manage them properly, or adhere to them.
- Lawyers' contribution to corporate operations and profits is too often difficult to measure, and lawyers take insufficient initiative in suggesting either what tools can be used to improve such measurements or what additional ways lawyers could contribute revenue or better support banks' revenue-producing units.
- When faced with a glut obstacle to business objectives, lawyers too often confine themselves to explaining in excess detail why something cannot be done without also (as J. P. Morgan would have demanded) suggesting solutions or offering alternatives that might make the banker's objective possible.
- Lawyers are too hard to control, both in terms of preventing unnecessary work (thus excessive billings) and determining where legal services and related costs can be trimmed.

A Few Proposals

These shortcomings leave bankers with only two basic choices: accept as inevitable that dealings with lawyers will frequently be an unsatisfactory and frustrating experience; or take the necessary steps to obtain more effective and economical legal services.

It is surprising, given the positive impact that better use of legal services can have on profitability and problem-solving, how many bankers adopt the former response.

In subsequent articles, I will explore how bankers might make better use of lawyers, communicate more effectively with them, and get more satisfactory responses and results from them.

For those who cannot wait, here are some immediate suggestions:

- Reduce the need for lawyers' services by determining what steps the bank can take internally to prevent problems from arising.

Areas for prime consideration include customer complaints and compliance-sensitive operations. Bankers should insist that units most vulnerable to legal problems have up-to-date policies and procedures and staffs that are appropriately trained in them.

- Regularly – monthly, bimonthly, or at most quarterly – conduct reviews of the legal expenses incurred by each unit of the bank.
- Have the bank's principal lawyers, whether external or internal, periodically report to management on what steps can be taken to minimize the need for their services on the matters on which they spend the bulk of their time, and how their services can be used or provided more effectively so as to reduce overall expense.
- Involve lawyers early in the planning stages for new products and services and proposed business activities. This will greatly reduce the need for costly rewrites and changes further in the development stage.
- Develop a more realistic set of expectations than evinced by J. P. Morgan of what can be required of lawyers, and communicate these expectations to the lawyers that serve the bank.

The latter point, of course, raises one of the principal issues bankers have in dealing with lawyers: specifically, just what can bankers reasonably and legitimately request of lawyers? In my view, bankers can rightfully demand that lawyers:

- Understand that their principal function is to further the interests of their client, the bank, and the lawyers' own interests must be subsumed accordingly.

A BANKER'S *list of lawyers' major shortcomings is long.*

- Gain a thorough understanding of how the client bank operates. This means going beyond a generic understanding of how banks function to gain an understanding of what are the particular client's needs and objectives, in both the legal and business sense.
- Always emphasize the practice of preventive law. This requires the bank's lawyers to learn where possible problem areas exist within the bank's operations and to suggest solutions.
- Communicate using terms that bank clients understand, rather than using legalese. Ideally, lawyers should eliminate the use of legalese in all their communications and documents, whether or not these involve a bank client.
- Keep the bank abreast of current developments of relevance to the bank's operations, preferably in a way that provides value as opposed to in a manner that is calculated principally to generate further business for the lawyers.
- Attend key management and staff meetings at which important business plans and decisions are discussed. This is particularly important for lawyers who are members of a bank's in-house legal department.
- Always explain clearly and in terms that are relevant to a bank's decision-makers the basis for any legal conclusion they have reached, and the risks of any transaction as to which the lawyers' advice has been requested.
- Communicate regularly on the progress and cost of significant matters, including advising whether alternative courses of action may better serve the bank (on a cost or other basis).
- Decline to make decisions that the bank's managers should be making, instead recognizing and communicating when additional input from the bank is appropriate or desirable.
- Will, when a proposed bank activity raises legal issues, seek solutions that permit the bank to proceed with the substance of the activity rather than merely stating why the specific proposal is not permissible and leaving it to bank management to try to come up with another way of accomplishing the objective.
- Hold to the highest standards of integrity. A lawyer who "winks" at or ignores a seemingly minor transgression to please the bank manager who hired him or her does the bank itself a tremendous disservice.
- Identify to the bank any situation in which an interest of the lawyers affects the lawyers' ability to respond in the manner most favorable to the bank.

For example, a law firm's concern with possible malpractice liability might lead the firm to be more conservative in rendering an opinion than is necessary, thereby depriving the bank of the best legal advice because of the firm's own pecuniary interest.

Always identify, as to any significant matter, alternative courses of action and alternative possible scenarios, contemplated by applicable budgets.

- Use the minimal resources needed to provide legal services properly and well, and refrain from spending the bank's money without prior (and periodic, where appropriate) approval.

Lawyers should exercise the same care with a bank's money that they would with their own. □

GIVEN THE HIGH level of expectations that bankers place on their lawyers, it should not be surprising that these expectations have been stymied repeatedly over the years.

Mr. Hall, formerly general counsel for Citibank's consumer banking business, is an attorney and author who lives in Alexandria, Va.

Don't Shut Banks Out of Student Lending

As a community banker, I am proud of the role that my bank plays in our town's economic well-being. Part of our job, as I see it, is helping maintain that economic health and growth for future generations.

That's one of the reasons why my bank – and thousands of other community banks throughout the country – make loans to students under the 20-year-old, public-private partnership of the Federal Family Education Loan Program.

But, as a banker, I am also deeply concerned about the economics of making loans to students. Recent proposals by the Senate may change the economics of this privately funded program substantially – with the unintended (I assume) consequence of curtailing students' access to loans in the future.

Diminished Role

The Senate has approved a bill that would significantly decrease the role of the private sector in making student loans by providing for a direct federal loan program.

The bill says that 50% of all loans for higher education would be government-funded by 1997. A similar bill passed by the House would make 100% of all loans federally funded by 1997.

Of even greater immediate concern to me is that the Senate proposal, through the imposition of a number of fees and other yield reductions – particularly on smaller lenders and their principal source of liquidity, Sallie Mae – would make many such lenders' participation in the program uneconomic enough to drive them out of the business altogether.

Crucial Liquidity

As a result, access to credit for tomorrow's students could be limited. Here's why.

Like most small lenders in the student loan business, my bank makes the initial loan and services it while the borrower is in school, before payments are due. When the loans come due, we sell them into the secondary market.

Institutions like Sallie Mae, state secondary agencies, and other banks buy these loans and collect on them. By selling the loans, my bank obtains funds to make more loans. Without this liquidity, it would be difficult to continue to make student loans.

As it now stands, the Senate bill would make lending a lot harder. It would impose a loan origination fee on lenders, transfer fees on secondary markets for loans they purchase, and a unique user fee on Sallie Mae.

It would reduce the up-front yield (the return the bank receives while the student is still in school and repayment has not yet begun) on these loans. For the big banks that can afford to hold loans through repayment, this is a good deal. Yet these institutions are constantly revaluating their participation in the program, based on a variety of internal and external factors.

Incentives Dry Up

For small banks like mine, which rely on Sallie Mae or other secondary markets – and which typically have a long-term commitment to education lending – the bill would devastate the economics of the business.

As Senate and House conferees meet to resolve the differences, I hope they think long and hard about the impact of what they are doing on all of the participants in the program – and, ultimately, the beneficiaries of the program: students.

From a public policy perspective, we can all agree that making more funds available to more students is a desirable goal. Achieving that goal by making it more difficult for small lenders to stay in the business is counterproductive.

Make Bill More Equitable

Community bankers believe it is in the public's best interest to keep the private-sector-based program viable. The House-Senate conferees should consider ways to make the current bill more equitable.

Substituting a life-of-the-loan reduction in yield for the up-front reduction, eliminating loan origination fees, and not secondary market transfer fees, and deleting from the legislation user fees on Sallie Mae would make for a more equitable program.

Smaller lenders need to know that participating in the student loan program can be economically viable, and we encourage Congress to take that into consideration as it makes a final decision on the student loan program. □

SMALL BANKS *enhance their communities' economic health by helping to fund college educations.*

Just for the record, GMAC Mortgage and GMAC Residential Funding Corporation are not being sold.

We're still GMAC. And as one of the nation's largest mortgage providers, that means we service the loans of over 480,000 customers, totaling more than $41 billion.

But that's not all. We're pleased to announce that through June of this year, $3.4 billion in new loans has been funded through our nationwide network of 100 branch offices.

What's more, GMAC Residential Funding Corporation continues to be one of the leading firms in the private mortgage securities market, purchasing residential mortgage loans from hundreds of correspondents nationwide. So far, over $6 billion in mortgage securities has been issued this year. And RFC's warehouse lending commitments now exceed $2 billion.

Most important, we're proud to be part of the GM organization. It's a family we feel very much at home with.

Bank of Montreal Feels Heat from Chicago Deal

Continued from page 1

Community Focus

of assets, it lags behind many Midwest banks in profitability.

Its return on average assets in the past four years has significantly trailed that of 29 of its midwestern peers, according to Keefe, Bruyette & Woods Inc. In the first quarter Harris' ROA of 0.90% contrasted with 1.25% for its rivals, widening from a 24-basis-point differential for all of 1992.

Bank of Montreal also has endured some frustrating years of waiting on the acquisition sidelines as a result of poor ratings that Harris received from regulators on compliance with the Community Reinvestment Act. The delay forced the company to cancel two purchases of small banks in the Chicago area in the past three years.

"Harris is a good resource that has been underutilized," said Roy Palmer, an analyst at Bunting, Warburg Inc. of Toronto. "Changes were overdue."

In a recent interview, Mr. McNally said growth is the cure for what ails Harris. His top priorities are retail and small-business lending – areas that depend on a much larger grass-roots presence in Chicago.

Mr. McNally said he is intent on expanding Harris from 40 branches to 120. He also said that he must instill an aggressive marketing culture at the bank to get the job done.

But even in the best of circumstances, Bank of Montreal acknowledges it has a severe growth handicap – Canadian banking laws that prohibit pooling-of-interest mergers in which a bank's stock is used as currency to buy another company.

Paying cash for purchases is costly because the goodwill – the premium over book value a bank pays – eats into Tier 1 capital and cuts reported earnings as it is amortized.

Nevertheless, Bank of Montreal will consider purchases in Chicago, said R.F. Adams, manager of investor relations. Ideally, he added, the burden of cash purchases will be eased by the cost-cutting and productivity gains Mr. McNally will achieve.

In the meantime, Mr. McNally is talking about building new branches from scratch – an expensive and lengthy process.

Many analysts who follow Bank of Montreal support its midwestern ambitions, despite the downturn. The company has few growth opportunities left in the highly consolidated Canadian markets.

Chase Taps 3 Execs to Track Risks in Rate-Sensitive Areas

By KAREN GULLO

Chase Manhattan Corp. has formed a three-person senior management team to monitor risk exposure in its burgeoning swaps business and other interest-rate-sensitive activities.

The team will be headed by James Garnett Jr., a vice president who was named Chase's global market risk executive, the company said Thursday.

Chase, following the lead of some senior bank regulators who have publicly worried about risks in the largely unregulated swaps markets, said it is dividing its risk-monitoring committee into three areas.

James Garnett Jr.
Will focus on market risk

Assessing Market Risk

Mr. Garnett, who had been in charge of risk management for interest rate derivative products in North America, will specifically focus on market risk in products related to interest rates, foreign exchange, bullion, commodities, and equities.

The other two team members are Michael Davis, a senior vice president, who will oversee transaction and counterparty risk, and Rupinder Puri, a senior vice president who will handle operations risk.

All three executives report to Mark Grier, executive vice president in charge of the Chase's global risk management unit.

Until now, risk management was handled on a product-by-product basis in Chase's three primary markets – North America, Europe, and Asia-Pacific.

Consolidated View

"We take positions in various markets that net and offset each other," said Mr. Garnett. "If we're going to move our capital efficiently, we must look at it on a consolidated basis."

Chase, whose senior debt ratings were raised one notch to Baa1 by Moody's last week, has been increasing its derivative markets activities.

Other leaders in the market have similarly consolidated risk-management functions to get a bigger picture of their overall corporate exposures. □

Treasury Dept. to Give Texas Police Access to Cash Transaction Records

By JOHN RACINE

DALLAS — U.S. Treasury officials on Thursday said they plan to open their computerized records of currency transactions filed by banks to Texas law enforcement officers.

The unprecedented move is aimed at cracking down on money laundering, according to officials speaking at a House Banking Committee hearing in San Antonio.

Currently, local police must file time-consuming requests for information with the Internal Revenue Service, impeding their ability to efficiently track the flow of cash through the banking system.

Assistant Treasury Secretary Ronald K. Noble said his agency would give Texas law officers the new level of access beginning Sept. 1, according to remarks prepared for presentation.

Program Could Spread

Called Project Gateway, the pilot program could eventually be extended to police in all 50 states. He said. Under the experimental program, Texas police would have access to records of about 50 million transactions that banks must file with the IRS whenever $10,000 or more in cash is deposited.

The program could eventually be extended to police in all 50 states.

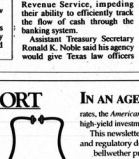
"Quick and complete access to this data base will prove a boon to state and local law enforcement officials seeking a paper trail to lead them to the money launderers," said House Banking Committee chairman Henry B. Gonzalez, a Democrat from San Antonio.

The initiative does not address requests from bankers for relief from the cash-reporting paperwork required by the federal Bank Secrecy Act. Banks file about 9 million currency-transaction reports annually, but say most concern routine transactions.

Mr. Gonzalez said in late May he would consider regulatory relief for banks as part of any new anti-money-laundering legislation. No specific proposal has yet been made public.

HIGH YIELD REPORT

lets you *hear the heartbeat and feel the pulse* of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt



IN AN AGE OF DRAMATICALLY declining long-term interest rates, the *American Banker*'s weekly *High Yield Report* delivers money-making tips on high-yield investment opportunities.

This newsletter keeps a close eye on major court proceedings, and legislative and regulatory developments. Each issue features barometers of market size, bellwether pricing tables, a forward calendar, reports on filings, and the results of new-issue sales.

No longer considered the arena of "junk bonds," the high-yield market is rapidly gaining respectability as it is closely tracked by this objective, succinct weekly letter.

If you must know what's "ticking" in the heart of the high-yield market, HIGH YIELD REPORT is a must read every week.

EXECUTIVE *changes*

Natwest Promotes DeCandido, Felicetti, and Smith to Senior VP

National Westminster Bancorp, Jersey City, has promoted **Joseph P. DeCandido, John Fe-**

Joseph DeCandido

Brett K. Smith

to senior vice president. The $22 billion-asset subsidiary of the British giant operates 260 branches in New York and New Jersey through **National Westminster Bank USA** and **National Westminster Bank NJ.**

Mr. DeCandido runs the wholesale banking operations division, which includes funds transfer, trade services, custody services, and commercial loan operations. He joined Natwest in 1987 and had previously been responsible for its funds transfer department.

Mr. Felicetti heads the operations and systems division of the financial markets group and is responsible for the processing and settlement of the group's transactions. He joined Natwest in 1989. Before that, he had been a managing director of County Natwest Government Securities.

John Felicetti

Mr. Smith will head strategy and operations in the wholesale banking sector, which markets to companies with more than $15 million in annual sales. He joined Natwest in 1991 after working for Crestar Bank.

Brett K. Smith

National Westminster Bancorp is a subsidiary of **National Westminster Bank PLC**, London.

— **Franklin Smith**

NEW ENGLAND

FLEET FINANCIAL Group, Providence, R.I., named **Simon Tahan** a vice president in the consumer banking group at **Fleet Bank, Providence.**

Mr. Tahan is an area manager of the six branches in the East Bay area, which infcludes the East Providence and Bristol County branches.

Michael J. Mahoney has joined **Fleet Investment Services,** a subsidiary, as a vice president in the institutional sales department.

MIDWEST

MERCANTILE BANK of St. Louis, principal subsidiary of **Mercantile Bancorp,** said four people have been promoted to assistant vice president.

They are **Jon L. Middendorf** and **Laura L. Ogilvie** of the consumer banking department, **Allen W. Strother** of the trust investment trading department, and **Maurice E. Taylor Jr.** of the consumer banking department.

Judy A. Niebrugge has been named an accounting officer of Mercantile Bancorp in the controller's department.

THE FEDERAL HOME Loan Bank of Des Moines named **Jerry Ferguson** first vice president in the finance department. Mr. Ferguson is responsible for loans to member financial organizations and for the credit marketing function.

New assistant vice presidents are **David Hibbs,** who will assist in the supervision of the bank's credit function in the finance department; **Steve DeVenney,** director of member investments; and **David White,** director of corporate planning for the bank.

SOUTHEAST

SOUTHTRUST BANK of Alabama, Birmingham, has promoted **Carol H. Tiarsmith** to controller, management accounting-controller department; **Daniel D. Goff** to vice president, bank card center administration; **Stephen F. Vickery** to vice president, metropolitan lending administration; **J. Denny Ragland** to vice president, direct loan centralization; **Rachel L. Popwell** to assistant vice president, funds management group; **Phillip E. Brannon** to assistant vice president, branch administration support; **John T. Norman** to consumer leasing officer; **Anthony W. Grafals** to compliance officer, and **Lajoana S. Bradford** to branch officer, Southside.

SOUTHWEST

HIBERNIA National Bank, New Orleans, a subsidiary of **Hibernia Corp.,** has added three officers to its private bank.

They are **Chandler R. Craig Jr.** and **Guy P. Brierre,** who were named vice presidents, and **Jack G. Legendre,** named an assistant vice president.

Mr. Craig, co-manager of the New Orleans private banking department, had been a vice president and section manager in private banking at First National Bank of Commerce.

Mr. Brierre also was associated with First National's private bank.

Mr. Legendre will manage the executive and professional section of Hibernia's private banking department. He formerly was associated with First National's private banking operation.

Russell S. Hoadley has been named senior vice president of public affairs and marketing.

Russell S. Hoadley

Mr. Hoadley previously was director of corporate communications at Barnett Banks Inc.

In addition to public affairs and marketing, Mr. Hoadley's group will also include the corporate communications functions. □

When it's this hot, you deserve extra scoops.

For many bankers, the thermometer is a lagging indicator of the heat they feel in handling current regulations and guessing the Clinton administration's next moves. But we've got a way to help you keep cool: *American Banker's Washington Watch.*

We broke the news about the plans by credit union trade associations to branch cross-country. We warned readers that the FDIC will crack down on banks and thrifts that aren't paying enough for insurance, and that the Fed was flirting with examination fees. We also uncovered plans that would let banks pay less for deposit insurance provided they set up certain special programs.

Those kinds of tasty scoops are the weekly fare at *American Banker's Washington Watch.* Within minutes, you get insights on regs and regulators—as well as your competitors—that could make the difference between profit and loss. We unconditionally guarantee it.

How to Avoid Being Stuck With a Laundering Bill

Washington Watch

CHARLES H. MORLEY, a consultant specializing in fighting financial crime, says community bank executives must confront even their best customer if they suspect an unusual transaction.

The president of the Arlington, Va.-based Morley Group says there's much at stake. The government can revoke a bank's charter and seize property, and executives can face stiff jail terms.

A former special agent with the Internal Revenue Service, and a chief investigator with the Senate permanent subcommittee on investigations, Mr. Morley formed his firm in 1985. It offers advice on financial crimes to banks, U.S. government agencies, and foreign governments. It also produces videos detailing how crooks launder money. He had this to say to American Banker *reporter Bill Atkinson.*

Q.: Do community banks have to worry about money laundering?

MORLEY: The answer to that is yes. I think they are extremely vulnerable. They don't realize the dangers they face.

Q.: Who should they keep an eye on?

MORLEY: The bad guy could be a local car dealer. They have to worry about a local businessman bribing a zoning commissioner and manipulating a bank account to free up the money. We are talking about the average person.

Charles H. Morley

Q.: What can small banks do to keep the crooks out?

MORLEY: Obviously, you have to follow government regulations exactly. If it becomes known that your financial institution knows what the laws are . . . that goes a long way to keeping [unscrupulous] people out of your bank, especially the professional bad guy.

Q.: What else?

MORLEY: Knowing your customer is obviously something banks have always had to do. Any type of unusual transaction, even though you know them, should draw your attention. It is extremely difficult to question them . . . you just have no choice.

Q.: What should a bank do if the government begins a money laundering probe?

MORLEY: The first thing you do is get excellent legal advice. Get criminal counsel who has experience in these areas because these are fairly recent laws.

Q.: What else?

MORLEY: Obviously, you have to cooperate with the government fully. You have to bend over backwards. Don't give the government anything without making a photocopy of it. Your best defense up front is to have a very complete, thorough compliance system in place long ago. Sure it costs money . . . but it is chump change compared to what you are going to have to spend if you have to defend yourself.

Q.: What is the government going to want?

MORLEY: When the government comes in, simply bury them with paperwork. It is extremely important to have a corporate memory of all of the things you have done. That to me is one of the best defenses you could have.

Indiana's Super-Profitable Irwin Doesn't Fear End of Refinancings

By ROBERT B. COX

CHICAGO — Irwin Financial Corp. officials assured investors this week that the Columbus, Ind., banking company would remain profitable should the current boom in mortgage refinancings go bust.

"We are much less exposed to a jump in interest rates than the industry as a whole," president John A. Nash told analysts and investors in Chicago.

Irwin's community banking unit has been somewhat eclipsed by the stellar performance of its Indianapolis-based mortgage subsidiary – an uncommon line of business for community bankers. Inland Mortgage Corp., with a $5.5 billion servicing portfolio, accounted for roughly 80% of the banking company's earnings in 1992.

ROE Was 26.5% Last Year

Last year Irwin Financial earned a whopping 26.5% return on equity, or $4.46 per share, ranking it among the most profitable community banking companies in the Midwest.

In addition to Inland, Irwin is the parent company of $439 million-asset Irwin Union Bank & Trust Co., Irwin Union Investor

The mortgage unit accounted for roughly 80% of Irwin Financial's earnings in 1992.

Services, and Affiliated Capital Corp., an equipment leasing firm in Northbrook, Ill.

Irwin is hedging against a future slowdown in mortgage refinancings by holding mortgage servicing rights off its balance sheet.

By doing so, the company said, it can sell the servicing rights at a later date – presumably when refinancing income tapers off in a high interest rate environment.

A Common Strategy

The strategy is commonly embraced by large mortgage banks such as Fleet Financial Group's mortgage unit and Countrywide Credit .

"By doing this, they have the ability to continue to report strong profitability even in a high interest rate environment," said Dan Coughlin, a community bank analyst at Howe Barnes Investments, Chicago.

Had Irwin sold its servicing rights in 1992, Mr. Coughlin estimated, it would have added $7.19 per share, for total earnings of $11.65 per share.

Still, Irwin's stock trades at a low multiple of nine times earnings, hovering at about $44 this week.

The shares are thinly traded, as much of the stock is controlled by the family of Will Miller, the company's chief executive. □

A $250,000 Threshold for Real Estate Appraisals Would Cut Costs for Banks and Their Customers

By BILL ATKINSON

Legislative Mailbag

Federal banking regulators are backing a proposal to boost the threshold at which a bank would need an appraisal for a real estate loan. If regulators have their way, the threshold will be lifted to $250,000 from the current $100,000 mark.

Bankers are behind the move. They say the threshold is too low and drives up loan costs. The appraisal industry begs to differ.

The following are excerpts from comment letters sent by bankers to the Federal Deposit Insurance Corp.:

I would like to applaud the FDIC for its concern about high appraisal cost to the borrower. In our rural area, there are only two certified appraisers. Their fees increased 200% when appraisals were required by law. Please continue your efforts to decrease unnecessary regulations.

Tyrol Q. Carson
President
Merchants and Planters Bank
Sparkman, Ark.

The proposal is a positive step. This writer strongly supports these changes and believes that the benefits to consumers and the economy will far outweigh any adverse potentials.

John J. Jenkins
President
Tri-County Community Bank
Lehigh Acres, Fla.

I want to go on record opposing the new real estate appraisal regulations. . . . I am completely disappointed with the continued changing or watering down [of] the high appraisal standards we have worked hard to achieve. Don't change anything that is now in place.

Alvin J. Prosser
Certified state general appraiser
Great Bend, Kan.

Raising the appraisal threshold from $100,000 to $250,000 will help by speeding up loan approvals and reducing the cost both for ourselves and our borrowers on small loans. We feel the appraisals we get are practically worthless.

James D. Bennett
President
First Citizens Bank
Billings, Mont.

Margaretten's Chief Laying Groundwork for the Future

By EDWARD KULKOSKY

Felix Beck, chairman of Margaretten Financial Corp., is a happy man these days. And small wonder.

No longer hostage to the quarterly earnings demands of a parent company, he is master of his own destiny and can run the mortgage banking company by his own lights.

So far, those lights have been shining brightly. Since being spun off by Primerica Corp. in February of last year after almost seven years as a subsidiary, Margaretten has grown rapidly. For 1992, it reported earnings of $25.8 million, up from $17.1 million in 1991 and $4.3 million in 1990.

High Hopes For June

Mortgage originations have grown from $3.1 billion in 1990 to $7.8 billion in 1992. And a big June is expected to put the company well ahead of its lending pace of last year.

"In this business, you can see dynamic changes taking place every minute. You don't have to wait a long time to start seeing the changes," he says. "We can watch the market grow and see our company growing by the minute."

To keep that growth on track for the long haul, Mr. Beck, 67, has been carefully grooming a successor, David A. Frank, 46, who is now president and chief operating officer.

The company has enjoyed rapid growth since going solo last year.

Mr. Beck says of the Margaretten president: "He's a very good manager and a superb leader." He is also Mr. Beck's occasional doubles partner at tennis.

A major strategic change instituted by Mr. Beck is the retention of most servicing rights. Under Primerica, a large percentage of servicing had been sold. Now, Margaretten is building its portfolio not only through originations but also with purchases.

In September 1992, the company bought $7.6 billion of servicing rights from NationsBank. As of June 30, it had about $15 billion of mortgages under its wing, a level that could put it among the top 25 servicers in the midyear rankings.

Margaretten has been well up in the top 25 as an originator, but it had been a minor player in servicing because of its sales of the rights.

"The servicing portfolio is important to us because it makes us less vulnerable to interest rates and to the housing cycle," Mr. Beck explains.

Profits from servicing can vary widely according to the composition of the portfolio and prepayment experience. A $15 billion holding could, under favorable conditions, bring as much as $15 million a year to the bottom line, analysts suggest.

Mr. Beck isn't content merely building a long stream of profits from servicing. He wants Margaretten to become a bigger force. "In recent years, we had less than 1% of the originations market," he says. "Now we are headed toward about 1.25%, and I'd like to be at 2% by 1995."

Edward Stamelman

DAVID FRANK, left, is Felix Beck's choice to succeed him as chairman of Margaretten. Outside the office, they are tennis partners.

That market share could mean $16 billion or more in originations in 1995, about double what Margaretten did last year and almost four times its 1991 score.

About the only negative for Margaretten these days is the price of its stock. The company went public in February 1992 at $20 a share but has traded as low as $13.50 this year.

Price Under Pressure

More recently, the stock, well-regarded by analysts, has been trading at about $17.50, about 10 times 1972 earnings. Uncertainties over the durability of the refinancing boom may be holding the price down.

Will the economy and interest rates cooperate with Mr. Beck's ambitions for Margaretten? He thinks so. And in fact, he thinks an end to the refinancing wave could help the company.

"Things are good now. But we can see an even better cycle than we have now: a moderate rise in interest rates – say 100 basis points – because of economic gains," he says. "Purchase activity would be even stronger."

Should such a scenario come to pass in the next few years, the runoff from the servicing portfolio would also slow. And, Mr. Beck says, moderate appreciation in housing values would help people to trade up to costlier homes.

The only negative scenario, he says, would be a very rapid increase in rates in a short time – say 200 basis points in nine months – that would not give lenders time to adjust.

Mr. Beck is clearly giving David Frank plenty of time to adjust to the idea of running Margaretten one day.

Mr. Frank has been the company's president and chief operating officer since 1991. Before joining Margaretten in 1989, Mr. Frank was an executive with Primerica, and according to a company biography, was instrumental in restructuring American Can Co. into Primerica, a financial services company.

He will clearly play a leading role in Margaretten's future, but how soon he will take the helm is unclear. Mr. Beck appears to be having such a good time running the company that he has no immediate plans to retire in favor of Mr. Frank.

"When I was the younger guy working with one of the founders of Margaretten, I used to look on it as old elegance and new style," he says. "Now that the tables are turned, I look on it as seasoned elegance and new style."

His words seem to fit his working relationship with Mr. Frank. "David brings to the table strength in technology, in budgeting, in mergers and acquisitons, and in all aspects of cost control," he says.

Working on Relationships

For his part, Mr. Beck personally spends "a significant amount of time on relationships with all of our customers because I have known them over many years, and in secondary marketing and in M&A as well."

The NationsBank deal that Mr. Beck engineered is now looming large in the company's growth plans because it included a servicing operation in Richmond. That facility has increased Margaretten's servicing capacity and enabled it to cut costs by closing its Perth Amboy, N.J., servicing center.

The company is also building its wholesale business – purchases from brokers – which it started in 1990. The division expanded into Texas and Washington State last year. A correspondent division, which acquires mortgages through smaller banks and thrifts, was also begun last year. □

Banks Add Global Funds to Equity Menu

By KEITH DuBAY

In the name of diversity, banks are rushing to add international mutual funds to their equity buffet tables.

And while international funds are not exactly the most coveted of menu items, bankers say the funds would take off if overseas markets become hot and U.S. stocks slow down.

Those banks already in the international business believe they are best positioned to take advantage of such events.

It hasn't gone unnoticed in the banking community that foreign stock markets account for two-thirds of the trading volume in the world.

"There's a tremendous interest on all investors' part in diversifying globally. Banks are just trying to get in front of that," said George Mullen, senior vice president of marketing for Fiduciary Trust Co. in New York.

Assets of $114 Million

Fiduciary manages two FT Series funds, International Equity Class A and C for the Federated fund group in Pittsburgh. The

Hot overseas markets could make the funds popular.

funds have $114 million in assets combined.

Of the 43 bank-related international equity funds tracked by Lipper Analytical Services Inc., 32 have been introduced since 1990. Recent offerings by La-Salle National Trust, which wheeled out four international Rembrandt funds this year, and the Boston Co.'s Institutional fund are but a few examples of the trend.

Total assets in these funds are relatively small – $2.5 billion. And not all of these funds are managed or sold by banks. Seven of the names on the Lipper list have tangential relationships to banks.

For example, Lipper lists any fund associated with a bank in any way, such as the $943 million Vanguard World: International Growth fund. Vanguard is a no-load fund group that doesn't sell through banks, but the fund's advisor, Shroder Capital Management International Inc., is a bank.

'A Nice Balance'

Bankers aren't claiming that offering international funds will be big business.

"We're not suggesting people go crazy. It just adds a nice balance to a person's portfolio," said LaSalle's senior vice president of marketing, Paul Kampner.

"To ignore international markets is to ignore a large portion of the world's capital and I don't think investors can afford to do that. Our view is a world view and a properly structured portfolio should have international exposure," Mr. Kampner added.

Most of the bank-owned or managed funds grew out of foreign operations of large banks. To wit: LaSalle is owned by ABN Ambro, the $242 billion Dutch bank with 1,800 offices worldwide. The 16 Rembrandt funds debuted this year with $1 billion from ABN's trust operations. Because the bank has been managing assets worldwide for 125 years, Mr. Kampner said it was simple to "clone" an existing fund-management system.

Mr. Kampner said "most banks will admit" they don't have the ability to manage foreign stock funds, and therefore must hire someone else.

Getting Started

Banks without worldwide presences may find it hard to convince trust customers to invest in a new international fund. Getting started and establishing a track record are the biggest obstacles.

The challenge for smaller banks, Mr. Kampner said, "is to get money to fund it. Typically, they get it from their own pension fund."

And, he added, investing in international funds is novel idea for many investors. "People don't understand the foreign markets and it's never going to be a big seller. The investor is not going to walk into a bank and say 'I'm going to invest internationally.' Excuse the pun, but it's foreign to them."

NationsBank manages its $104 million International Equity fund through its London subsidiary, Panmure Investment Management Ltd., which oversees $1 billion in assets. In 1991, NationsBank took apart an international common trust fund, combined it with bank pension funds and had a $60 million head start.

Expensive Operation

It's more expensive to run a foreign mutual fund, too. Custodial arrangements have to be set up in many countries. Different currencies necessitate larger accounting staffs to value the fund. And qualified managers have to be found.

"It takes a pretty good slug of money to put together a staff

Microsoft Corp. Eyes Banks for Its Next Big Battle

Continued from *page 1*

the bank PC market: Of the 305,000 personal computers at banks, 88% run on Microsoft operating systems, according to an *American Banker*/Ernst & Young survey.

But the next battleground – and the more crucial one – is over the operating systems that will link PCs into networks, a process known as "client-server" computing. The goal: to enhance the power of low-cost PCs while reducing reliance on multimillion-dollar mainframes.

"Take this from a former bigiron bigot, there is absolutely a move to client-server" computing in banks, said George DiNardo, a technology consultant at Coopers & Lybrand who was formerly Mellon Bank Corp.'s systems chief. "And in this area, everybody's watching Microsoft."

But Microsoft is a long way from having a lock on this fledgling market. Over the next decade, it faces stiff competition from other software giants, like Novell Inc., Lotus Development Corp., and Oracle Corp., all of which are fighting for a share of the business. The *American Banker* will profile these firms in future installments of this series.

Alan Levenson

MICROSOFT BEGAN targeting financial firms in 1991, after years of developing mass-market software. "It's a big market," says Bill Gates.

'A Big Market'

Microsoft decided to start targeting financial firms in 1991, after years of developing mass-market software that was sold through the broadest of distribution channels.

When asked recently why banking was chosen for Microsoft's first foray into industry-customized software, Mr. Gates replied in his trademark no-nonsense style: "It's a big market."

But then Microsoft's chief executive became more contemplative. "Actually, it's more complicated than that," he said. "Banking has a lot of unique requirements and specialized systems, more so than other industries. We wanted to make sure we were giving bankers the right tools."

Operating System Leader

Technologists say Microsoft's influence lies in its expertise in operating systems, the programs that control a computer's basic functions. MS-DOS, the Microsoft PC operating system that started the company on its meteoric rise, is now being supplanted by Windows, designed to be easier for PC users to understand because it relies on graphic symbols to initiate commands, rather than DOS' often bewildering codes.

Gains by Windows

Like DOS, Windows has become a major money-maker for Microsoft, and the operating system has seen swift adoption in the normally conservative banking industry. Nearly a quarter of a million PCs in financial institutions now run Windows, according to the *American Banker*/Ernst & Young survey.

There's anecdotal evidence regarding the growing presence of Windows, as well. At Chemical Banking Corp., executives recently set up an technology exhibition to show employees the bank's latest systems projects. About half of the demonstrations – from branch systems to sophisticated workstations that control the bank's huge data centers – used Windows.

"Windows really improves the productivity of the PC and it makes it easy to integrate applications," said Alfred S. Dominick Jr., executive vice president of retail banking at Boatmen's Bancshares in St. Louis.

Boatmen's is currently using a DOS-based branch automation system from Ampersand Corp., and Mr. Dominick said he is "anxious" to install the software package's new Windows-based product.

Making Up

It's noteworthy that Microsoft's focus on banking followed its high-profile divorce from IBM in 1990, when Mr. Gates pulled back from his support of IBM's successor to DOS, called OS/2, in favor of Windows. Some bankers who had made significant investments in OS/2 were angered by Microsoft's turnaround.

"I think Bill Gates realized he owed the industry an explanation, and that we had to communicate an architecture so they could plan for the future," said Bill Anderson, head of Microsoft's industry marketing group, who was hired in 1991 to help patch things up with banks.

But it was more than just dollars. "We put a lot of our hard-core technical types to work on banking," Mr. Gates said.

The result was a number of enhancements to Windows designed to help integrate banking-specific hardware like passbook printers and cash dispensers, as well as providing better data communications in which Windows workstations could be easily linked with banks' IBM systems.

'Market Power'

Microsoft officials say these moves helped make it easy for banking software developers to work with Windows. At the American Bankers Association annual technology conference in May, more than 100 software firms demonstrated Windows-based products, according to Michael Rawding, Microsoft's financial industry marketing manager.

But some bankers question that rationale. "I don't think Microsoft necessarily leads from a technology standpoint, but they're shrewd businesspeople," said Peter Purcell, senior vice president of application development at First of America Bank Corp., a $17 billion-asset institution based in Kalamazoo, Mich. "They lead through market power."

Mr. Purcell said he also thinks some one-upmanship in the OS/2-Windows rivalry is involved. He notes that when IBM last year canceled a high-profile project to create a commercial lending system based on OS/2, Microsoft quickly signed up two of project's third-party developers to move their software to Windows. "I think Gates wants to succeed when IBM has failed," he said.

The NT Factor

While it appears Microsoft has won the battle for the desktop, that addresses only part of the client-server equation. Many bankers are still undecided about what kind of operating systems to use on computer servers, the machines that will hold much of the critical data and process transactions for the PC "clients."

Microsoft hopes to tackle this market with Windows NT, which is expected to be delivered this summer after five years of development at a cost of more than $150 million, by far the company's most ambitious project to date.

Windows NT has been called an "industrial strength" operating system, because it offers system and network management capabilities as well as data security features that previously existed only on software for mainframes or midrange systems.

Broad Applicability

The system also has the advantage of running on a wide range of hardware, including PCs using Intel Corp. microprocessors, Digital Equipment Corp. workstations equipped with its new Alpha chip, and even a mainframe-class machine from NCR Corp.

To provide all these capabilities, Windows NT contains 4 million lines of code and requires at least 12 megabytes of a computer's main memory to run, much more than DOS or the original Windows.

Microsoft officials said that while a few desktop PCs in banks may migrate to Windows NT, such as for trader workstations, most installations will be on the more powerful servers.

Many banks are feverishly testing NT, including Citicorp, Bankers Trust New York Corp., and Barclays Bank, although most bankers are loath to talk about what they want to do with it for competitive reasons.

First of America is looking at client-server systems using Windows NT, OS/2, and the Unix operating system, Mr. Purcell said.

See next page

Continued from *page 12*

said.

"I may be in the minority as to why we need NT," he said, adding that OS/2 may have a leg up when networking with IBM mainframes is involved. "You don't have to be a rocket scientist to figure out that no one talks to IBM better than IBM."

But he was quick to add that Windows will succeed if banking software developers move to it. "If a great application comes along that runs only on NT, then I'll use it."

Need for Vendors

Microsoft officials say they are acutely aware of the need to sign up application software vendors. To meet that goal, Mr. Gates put his Windows NT product manager, Dwayne Walker, in charge of the company's third-party software organization last month.

"We could hire an army of people to write banking applications, but we'd prefer to find the experts already out there and work with them," Mr. Walker said.

He added that while the biggest banks, like Citicorp and Bankers Trust, which write their own applications, will get individualized treatment, Microsoft prefers to let its third-party developers provide most of the technical support for smaller banks.

The crucial fight is over the operating systems that will create networks.

"If we tried to support everybody ourselves, we'd end up like IBM with tremendous headcount, and nobody, including IBM, can afford to do that anymore."

Microsoft is actively courting banking systems vendors that have software running on midrange and mainframe systems to convert to Windows NT, and officials said they expect a number of major announcements in that area later this year.

Mr. Gates also revealed that his company is involved in talks with some financial institutions regarding the use of the Microsoft Money personal finance program for home banking systems, although he declined to be more specific.

The company, based in Redmond, Wash., is also making improvements to its own PC application software, such as its popular Excel spreadsheet program, so banks can customize the software for specific banking tasks using what is known as "object-oriented" programming.

This technique lets software developers break up programs into pieces that can be rearranged as the need arises, vastly reducing the time it takes to develop new systems.

While bankers appreciate all the whiz-bang technology that Microsoft is bringing to the table, they also seem equally thankful that the company is trying to apply a sense of order to the increasingly chaotic world of computing. "It all boils down to this: How many promised lands are we being led to?" Mr. Purcell said. □

Swedbank Buys Fax Unit for Sensitive Data

By WILLIAM PISEK JR.

Swedbank New York has purchased a new facsimile machine that provides security for confidential documents and saves money now spent on courier services.

The machine, developed by Seal System, Greenwich, Conn., can encrypt fax signals and provide special handling of fax printouts. It collects all the pages of a fax transmission and seals them securely in a plastic envelope. The envelope then can be delivered to the intended person without the risk of unauthorized access to its contents.

The envelope is deposited in a strongbox below the machine that can be opened only by authorized personnel.

"We use the machine to receive and send sensitive documents between our offices in Europe and in New York," said Kaj Norberg, general manager of Swedbank's New York operation.

The system, called SealFax, allows Mr. Norberg to transmit messages between the bank's offices in Stockholm, London, Brussels and Luxembourg, as well as to important clients.

Risk of Tampering

Traditional fax transmission, he noted, runs the risk of being tampered with. For this reason, the use of registered letters or courier mail has become a norm at the bank. However, this mode of delivery proved to be time-consuming and very costly.

"The growing expense and reliance on courier services at our bank was a reason to find another way to move important papers," Mr. Norberg said.

"Before, you could fax something but you could never know for sure who had seen it. With this new machine, I feel more comfortable about security."

Seal System's encryption feature ensures that transmissions are not intercepted.

At the receiving end, the message is automatically decrypted. Users are assigned a smart card and a PIN-number.

Swedbank has begun using the fax system in such areas as funds transfer, contracts and agreements, credit reports, and other confidential documents.

The brain of the machine is a sophisticated microprocessor. SealFax can also be interfaced with a personal computer and printer.

How Important Is Service To Your Institution?

How can you spread, instill and improve service today? Developed specifically for financial institutions, you'll learn how to build and implement a successful service program with hundreds of examples of successful programs from other banks. **Create the service culture you want by–**

- Developing quality-service standards
- Attracting and retaining customers
- Improving internal service
- Being an employee-focused organization

"...a wealth of ready-to-use ideas..." —Manufacturers Hanover

Start putting the hundreds of ready-to-use ideas contained in this book to work for you. Order TODAY!

FIVE-STAR SERVICE SOLUTIONS
Barbara Sanfilippo
288 pp., hardcover—$39.95 Order #007A

Help Your Employees Sharpen Their Service Skills!

Based on actual work in training staffs at financial institutions, this short, insightful workbook will help all of your employees **deliver the type of service that will successfully differentiate your institution.** Some issues discussed are—

- Key steps in a professional greeting
- Turning complaints into opportunities
- Maintaining a positive attitude
- Defusing angry customers
- Key steps in telephone courtesy

A must for every employee in your institution!

FIVE-STAR SERVICE DELIVERY
Barbara Sanfilippo and Bob Romano

PROFESSIONAL EMPLOYMENT OPPORTUNITIES

RIYAD BANK
Saudi Arabia

Riyad Bank is Saudi Arabia's most prominent Bank with 170 branches and international offices in the USA and the UK.

As part of the unique and ambitious automation program, the Bank is now in the process of implementing state-of-the-art technical solutions based on an integrated multi-platform processing environment.

Applications are invited for the following newly created and critical line management positions.

MANAGER - PC/END USER COMPUTING

Key Responsibilities:
- Developing and managing an effective PC/EUC organization responsible for:
- Selection of software tools and utilities.
- Building and managing a comprehensive solution-oriented PC/EUC team including LAN Specialists and Information Center Analysts.
- Providing service and support to end users.
- Close interaction with application development teams.

Requirements:
- Excellent management skills.
- Hands-on technical experience of LAN technology, Query languages, report generators and text editors.
- Excellent interpersonal, communication and presentation skills.
- A minimum of 5 years' PC/End User Computing management experience gained within a banking or financial services environment.

MANAGER - AUTOMATED CUSTOMER SERVICES

Key Responsibilities:
- Managing the resources and processes involved in assuring user satisfaction with services provided by the Information Services Division.
- Developing Service Level Agreements (SLAs), monitoring services against these agreements, identification and resolution of service issues and problems.
- Interfacing with users (370 branch network) on a continuous basis.
- Development and administration of a solution-oriented "Help-Desk".
- Interfacing between Information Services and Branches to communicate new system requirements.
- Conducting user training for a series of major banking applications.

Requirements:
- Extensive information technology experience, preferably gained within a banking or financial services environment.
- Minimum of 3 years' managerial experience.
- Extensive user liaison skills, including development of SLAs and management of a professional solution-oriented "Help-Desk" function.
- Mainframe and PC technical skills.

Riyad Bank offers a competitive compensation package consisting of tax free salary, paid housing, medical coverage, paid annual air fare and a superb lifestyle (single or married status).

Qualified candidates with an interest in making a positive contribution to the continued development of this "green field" site should direct resumes with current salary to: Box 701, casablanca 15 West 37th Street, 10th Floor, New York, NY 10018.

GREAT FINANCIAL FEDERAL

VICE PRESIDENT - MARKETING

Are you a motivated, resourceful individual with experience in the senior level management of marketing, advertising and public relations? If so, we may have the right opportunity for you!

Great Financial Federal, Kentucky's largest thrift institution, has an opening for Vice President-Marketing. This individual will independently plan and develop an overall marketing strategy for the company as well as conduct a sophisticated market research program. Qualified applicants must have senior level experience in marketing division budgeting, management of staff and coordination of external advertising agencies. At least 12 years of progressive experience in a marketing financial services industry is necessary.

We offer a competitive compensation package with outstanding benefits. If you are interested in applying for this position, please send your resume, salary requirements and related details to :

Human Resources Department, Great Financial Federal, 326 West Main Street, Waterfront Plaza, Louisville, KY 40202-4280.

An Equal Opportunity Employer

JUNIOR EQUITY RESEARCH ANALYST

Midwestern investment firm specializing in banks and thrifts seeks a highly motivated individual with strong PC skills and at least one to two years experience working with bank and/or thrift financial statements. This support position involves financial analysis and some writing. Individual will assist two senior analysts and operate in a team environment.

Send resume and salary expectations to:

Box 692
c/o American Banker
One State Street Plaza
New York, New York 10004

Equal Opportunity Employer

Upstate New York financial institution is seeking to fill the following positions:

•SVP Trust and Investments
•VP Trust Officer
•Commercial Real Estate Officer
•Assistant Credit Officer

Competitive compensation and comprehensive benefits compliment these positions. Please forward resume and salary history to:

First National Bank of Glens Falls
237 Glen Street
Glens Falls, NY 12801
Attn: Human Resources

Equal Opportunity Employer AA/M/F/V/H

Banks Add Global Funds To Their Equity Menus

Continued from page 11 ·

along those lines," said Nations-Bank's senior vice president, Steven Duff.

The yearly expense ratio for the Nation's equity fund is 1.30%, on top of a load that ranges from 4% to 5%, depending, on whether it is a front or back-loaded class of the fund. The non-advisory expense part of the yearly fee is 0.45%, compared to an average 0.25% on other NationsBank funds, Mr. Duff said.

"There's more risk in putting together an international fund

Foreign stock markets account for two-thirds of the trading volume in the world.

and not having the expertise and running operating costs so high it's a burden to shareholders," Mr. Duff warned.

Henry Franzen, chief investment officer for international securities for Brown Brothers Harriman & Co. in New York, says regional banks "should be left us run it," but he expects regionals to play a bigger role in international equity funds.

Brown Brothers has a bank charter, but operates more like an investment management and trust company. It manages eight mutual funds, called 59 Wall Street (the bank's address) with $52.5 million in assets. The company manages $19 billion overall.

Though international funds have lagged U.S. funds in the 1990s, bankers expect that to change, and they want to be prepared. Says NationsBank's Mr. Duff: "These things run in cycles and we would like to have an established product." □

FDIC Staff Sees Cut In Premiums by 1998

Continued from page 1

when it slashed the forecast for failed bank assets for both 1993 and 1994.

On June 24, the FDIC lowered its estimate of the assets in failed banks for this year to $10 billion from $25 billion and to $20 billion from $45 billion for 1994.

Estimates Slashed Further

But the FDIC told only part of its story.

According to the internal figures, the FDIC slashed another $30 billion off estimates for failed bank assets between 1995 through 1998.

The bulk of that total, $20 billion, was dropped off the forecast for 1995, when the FDIC expects to inherit $30 billion in assets failed banks for this year to $10 billion from $25 billion and to $20 billion from $45 billion for 1994.

The forecast for failed bank assets is $25 billion in 1996, down from $32 billion; for 1997, it's $20 billion, down from $22 billion; and for 1998, it's $20 billion, up from $19 billion. The estimates for all years from 1999 through 2006 remain unchanged from the March forecast and range between $19 billion and $23 billion a year.

Hitting the Target

Under these conditions, the FDIC expects the Bank Insurance Fund to reach its mandated size of $1.25 for every $100 in domestic deposits in 1998 – four years earlier than the agency predicted in March.

In 1991, Congress told the FDIC to rebuild the bank fund to 1.25% by 2006. Under the FDIC's latest internal calculations, the fund will reach that target eight years ahead of schedule.

Even with the average premium falling to 11 cents in 1999, the FDIC is projecting that it will hit 1.32% in 2006. In the March forecast, the FDIC said the fund would grow to 1.25% in 2002 and remain that size through 2006. □

Period Extended For Deposit Claims

WASHINGTON — President Clinton has signed into law legislation that will help customers at failed banks and thrifts up to 10 years to claim their funds.

Previously, depositors at federally insured financial institutions were given 18 months.

The legislation, sponsored by Sen. Donald Riegle, D-Mich., and Sen. Alfonse D'Amato, R-N.Y., requires the Federal Deposit Insurance Corp. and Resolution Trust Corp. to mail notices to all insured depositors within 30 days after beginning payouts.

Deposits not claimed after 18 months would be transferred to the state of a depositor's last known address. For people residing outside the United States, the funds would go to the state of the bank or thrift's headquarters.

The state is to retain the deposits for 10 years. If unclaimed, the money reverts to the deposit insurance funds. — Reuters

Librarians Tap BT Officer

Carol L. Ginsburg, vice president of Bankers Trust Co., New York, has been elected chairwoman of the business and finance division of the Special Libraries Association.

The Washington-based association has 12,000members, including 3,000 in the business and finance division. □

Chase Comes to Market With $150 Million Issue

By DAVID SIEGEL

Three banking companies tapped the capital markets on Thursday for $750 million in senior and subordinated debt.

A $150 million issue of Chase Manhattan Corp. floating-rate subordinated notes was priced at a substantially lower yield than a fixed-rate offering.

Chase also took advantage of a recent upgrade by Moody's Investors Service.

Floor of 4.35%

The 10-year note has a coupon of 12.5 basis points over the London interbank offered rate, with a 4.35% minimum rate, known as a "floor."

Investment bankers said Chase saved 10 to 20 basis points by issuing floating-rate debt with a floor instead of offering fixed-rate debt and swapping into a floating-rate payment stream.

Demand for floating debt with floors has increased recently because banks have called substantial amounts of these securities – issued in the 1980s at high interest rates.

Officials at Bear, Stearns & Co., the sole manager, declined to comment. Chase officials could not be reached by press time.

Chase debt securities have rallied in the secondary market this year on improving earnings and expectations of rising credit ratings.

Its 10-year subordinated debt was bid Wednesday at a yield equal to 93 basis points over the 10-year Treasury note. This compared to 97 basis points at the end of May and 102 basis points at the end of April, according to First Boston Corp.

Last Friday, Moody's upgraded Chase's subordinated debt to Baa2 from Baa3 and senior debt to Baa1 from Baa2.

Elsewhere in the market, Marshall & Ilsley Corp., Milwaukee, issued $100 million of 10-year subordinated notes. The noncallable notes were priced to yield 6.46%, 68 basis points over the 10-year Treasury note. Goldman, Sachs & Co. was lead manager.

PNC Bank issued $500 million of one-year bank notes. The notes were priced initially to yield 3.55% by underwriters led by Goldman Sachs. □

THE MARKETS

Rates Fall as Commodities Drop; 30-Year Bond Yield Slips to 6.66%

Interest rates fell on Thursday on a decline in commodity prices.

Late in New York, the yield on the 30-year Treasury bond eased to 6.66%, down from 6.67%. The yield on the 10-year note fell to 5.76% from 5.78%, while the two-year note fell to 3.98% from 3.99%.

Gold Price Slips

Commodity prices, on the rise earlier in the week on the effects of Midwest flooding on crops, have settled down. The Commodity Research Bureau's index of 21 futures fell 1.15 point to 216.08.

The price of gold, another inflation indicator that had been rising earlier in the week, fell $2 to $395.80 an ounce on the New York Commodity Exchange.

"Now, with the negative influence of commodities out of the way, the fundamental message of a sluggish economy is returning to the bond market," said William Sullivan, money market economist at Dean Witter Reynolds Inc.

The improvement in commodity prices and an upbeat labor report boosted stocks. The Dow Jones industrial average gained 38.75 points to 3,514.42.

The government said that initial claims for unemployment insurance fell 12,000 to 327,000 last week. This was the biggest drop since February.

The dollar rose to 108.54 yen from 107.65 on Wednesday. A Japanese official rescinded his statement of the previous day that a further rise in the yen would not eat into profits of Japanese exporters. — **Bart Fraust**

STOCKS

2 Chicago Thrifts Get Thumbs Up In Wake of Amro's Deal for Cragin

By GORDON MATTHEWS

Kemper Securities Inc. has issued "strong buy" recommendations on two Illinois thrifts following the high-premium acquisition of Chicago's Cragin Financial Corp. announced earlier this week.

In response to the recommendations, the shares of MAF Bancorp in the Chicago suburb of Clarendon Hills surged $1.75 to $29.75, while those of Chicago's St. Paul Bancorp lost 37.5 cents to $27 in late trading.

MAF shares have risen about 12% since ABN Amro Holding agreed to buy Cragin on Tuesday. St. Paul's stock is up about 6% in the period.

Seen Appetite for Thrifts

"I had planned to put "buys" on all three of them, but Cragin has already been taken," said Thomas J. Maier, who joined Kemper as an analyst two weeks ago from the Chicago Co.

Cragin, with assets of $2.8 billion, is selling out to the Dutch company for $540 million. That is about 1.6 times its book value, regarded as a healthy premium for a thrift.

Mr. Maier thinks the deal underscores a strong appetite by banks for such transactions.

'Acceleration of Activity'

"After a comparative lull in merger activity in the Midwest since the first quarter of 1992, we may be seeing another acceleration of activity," he said. "More significantly, it appears new pricing levels may be emerging in acquisitions of thrifts."

Takeover Fever

Price per common share

Shares of MAF and St. Paul rose after the Cragin deal.

St. Paul, with assets of $3.8 billion and 48 offices around Chicago – 14 of them in supermarkets – is Illinois' largest independent thrift.

The thrift strengthened its position in the fast-growing western suburban area earlier this year by acquiring Elm Financial Services Inc., Elmhurst. Mr. Maier said St. Paul's branch network is "the most attractive independent retail banking franchise in the Chicago metropolitan area."

California Realty a Worry

The analyst attached a "high-risk" label to his rating, however, because of St. Paul's exposure to California real estate. Its loan portfolio includes a $1.1 billion portfolio of "nationwide" multifamily real estate loans, of which $700 million are in California.

While saying that reserves are adequate, he added that he is awaiting "more life" in California's economy.

Mr. Maier set a 12-month price target of $35 for St. Paul. In an acquisition, he "would expect a takeover price in the vicinity of $40 to $44 per share."

Mortgage Banking a Strength

MAF Bancorp, he said, has an attractive 13-branch franchise centered in rapidly developing DuPage County. It has $1.5 billion of assets.

The thrift has developed a sizable mortgage banking operation. Each year, it sells half its new loans into the secondary market, receiving gains on the sales while creating a valuable loan servicing portfolio.

"Any number of larger financial institutions with an expressed desire to enter or expand their presence in the metropolitan Chicago retail market would consider MAF a very worthwhile merger partner," Mr. Maier said.

THURSDAY'S MARKET

Major bank stocks gained again on Thursday as the stock market enjoyed another winning session.

J.P. Morgan & Co. rose $2.75 to $71.875, while Bankers Trust New York Corp. advanced $2.875 to $77.875. □

Mississippi Valley IPO Raises $10.6 Million

NEW YORK — Mississippi Valley Bancshares Inc., St. Louis, raised $10.6 million through an initial public offering of 800,000 common shares.

The offer, priced at $13.25 a share, was done through underwriters led by Stifel, Nicholaus & Co.

Mississippi Valley, with $579 million in assets at yearend, had expected the shares to be offered between $11.50 and $13.50 each.

Of the total, 560,000 shares are being offered by the company and 240,000 by shareholders.

The company said proceeds from the offering are expected to be used to reduce short-term debt. — **Dow Jones**

Fed Is Unlikely To Raise Rates In Weak Recovery

By BART FRAUST

A Fed-engineered increase in short-term interest rates is out of the question for now, regardless of whether policymakers switched last week from a pro-tightening to a neutral stance.

The most recent batch of economic data show weakness in employment growth, manufacturing activity, and home sales – a very difficult environment in which to justify a rate hike.

Except in the brief period in the 1980s when the economy suffered from a combination of slow growth and high inflation, the Federal Reserve "has never in history tightened in a weak economy," said Alan Sinai, president of Economic Advisers Inc., a unit of Lehman Brothers.

ECONOMIC OUTLOOK

And June's producer and consumer price data due out this week should show low inflation and reinforce this no-tightening view.

Economists predicted that the producer price index, due out Tuesday, and the consumer price index, due out Wednesday, were flat to slightly up.

Lower Tobacco Prices

"With the decline in tobacco prices, the chance of a big rise" in the producer price index and the consumer price index "are between slim and none," said Hugh Johnson, chief market strategist for First Albany Corp.

Richard Peterson, chief economist for Continental Bank Corp., told the Senate Banking Committee on President Clinton's deficit-reduction legislation begins this week – "not the time to make a move on monetary policy."

The Fed on Friday released minutes of the Federal Open Market Committee meeting on May 18. The minutes confirmed that the central bankers, on a 10-to-2 vote, adopted a pro-tightening tilt at that meeting. The dissents were from Wayne Angell, who favored an immediate tightening, and Edward G. Boehne, president of the Federal Reserve Bank of Philadelphia, who favored a neutral policy.

The minutes of last week's FOMC meeting will not be released for six weeks.

Dismal Jobs Data

Some economists think that the meager 13,000 increase in June employment convinced the Fed to switch to a neutral stance.

"It was an inflation scare that was unfounded," said Steve Ric-

Mortgage Loans By Top Players Surge by 35%

By CHRISTOPHER NORBLE

The nation's top five mortgage lenders, thriving on the refinancing boom, posted spectacular originations during the first half of the year.

An *American Banker* survey found that loan production at the top five surged by an average of 35% from a year earlier, more than double the gain of the mortgage industry as a whole.

The leaders' hefty increase was the latest sign of a major consolidation in the businesses of writing and servicing home loans.

Countrywide in Lead

The top five lenders accounted for about 16% of all new mortgages in the first half of 1993, up from 14% a year earlier.

The ranking of the top four

Chemical in Talks to Buy Shell's Card Portfolio

By KAREN GULLO

Chemical Banking Co. is in discussions to buy Shell Oil Co.'s private-label credit card portfolio, a deal that would double the bank's cardholder account base.

Well-placed sources said that Chemical plans to acquire some four million accounts from Shell, converting its cardholders into full-blown credit card users by issuing a Visa card or MasterCard.

The Shell card is used for buying gas and other products at the company's service stations.

Boost to Sixth Place

The deal would double Chemical's portfolio of credit card accounts to eight million, boosting the bank three notches to make it the sixth-largest bank card issuer, as measured by number of accounts. Shell does not disclose its card receivables, making it difficult to assess the transaction's value by that measurement.

The cards would be issued by Chemical and carry Chemical and Shell logos.

Chemical officials would not comment specifically about the plan, but said the bank has talked to a range of oil companies, auto manufacturers, and airlines about ventures to cobrand their private label charge cards.

"We're looking at all kinds of cobranding," said Charles Walsh, executive vice president in charge of Chemical's retail card services group. But he added: "We have nothing to announce, nothing in the next quarter."

New Chemical World Rank After Deal
Based on total credit-card accounts at yearend 1992. Figures in millions

1	Citibank	59.7
2	AT&T Universal	36.0
3	Chase	9.0
4	Bank of America	8.8
5	First Chicago	8.0
6	Chemical*	8.0

*Including Shell acquisition; Chemical has 4.0 million accounts at yearend 1992
Source: The Wilson Report

A spokesman for Shell declined to comment.

But the plan, dubbed Operation Cobra inside Chemical, is believed to be well-advanced. The deal is expected to close in October, sources said.

Potential Risks

Purchase of the Shell accounts would require the nation's third-largest bank company to add several hundred staffers to its card operations center on Long Island, according to sources. In addition to increasing overhead, the plan carries other risks.

Several institutions, including BankAmerica Corp., passed on buying the portfolio after investigating potential profitability. The Houston-based oil compa-

BayBanks CEO Atop Coveted Franchise

By YVETTE D. KANTROW

The way William M. Crozier Jr. sees it, he is sitting in the catbird seat.

As head of BayBanks Inc., Boston's most visible consumer bank, Mr. Crozier is calling the shots at a company loss of other banks would love to own.

The colorful executive, who in the past has taken swipes at regulators and competitors, is doing little these days to quash talk of a potential sale. In fact, he seems ready to fuel it. But he makes clear that any deal would be done on his terms.

Down-to-Earth Attitude

"Our aim in life is not necessarily to stay independent like some sort of bunch of bluebirds somewhere forever wild," the 61-year-old chairman and chief executive said during a recent interview from BayBanks' gleaming new technology center in Waltham, Mass.

"Our aim in life is to govern our own destiny."

Indeed, bankers who have scouted New England say Mr. Crozier would drive a hard bargain before selling out. The company is dead set on maintaining "the right to choose" the way it relinquishes its independence, Mr. Crozier said. "We want to retain our freedom of choice."

Some analysts believe it will be three to five

HOLDING COURSE: William Crozier, chief of BayBanks, plans to handpick any merger partner.

NEWS *briefs*

NationsBank Hires Barnett Card Exec

JACKSONVILLE, Fla. — NationsBank Corp. has hired a key official at Barnett Banks Inc. to head its credit card marketing effort, an industry source said.

The appointment of Robert E. Stock, who was credited with improving Barnett's retention of credit card accounts as senior vice president there, will be announced today, according to the source who declined to be identified.

Mr. Stock, who has worked in the credit card division at First Chicago Corp., is expected to form a formidable team with Eileen Friars, who heads NationBank's innovative card division.

NationsBank, based in Charlotte, N.C., is the 11th-largest issuer of bank cards in the nation, with $4.4 billion of card loans outstanding at year end.

Barnett, in Jacksonville Fla., ranked 29th, with just over $1 billion.

Eastbrook Purchase Wins Fed Approval

WASHINGTON — Over the opposition of community groups, the Federal Reserve Board last week gave Eastbrook State Bank, Brookfield, Wis., permission to acquire a branch of North Shore Savings Bank, also of Brookfield.

The purchase was opposed by the Fair Lending Coalition in nearby Milwaukee, which argued that the banks owned by Eastbrook's parent, State Financial Services Corp., Hales Corner, Wis., do not adequately serve Milwaukee's minority community.

The Fed said it approved the acquisition because all of State Financial's banks earned "satisfactory" ratings under the Community Reinvestment Act. The Fed added that State Financial had properly defined and served its market.

State Financial, the 20th-largest banking company in Wisconsin, holds $192 million in deposits, including the $8.9 million in deposits acquired from North Shore Savings.

Colo. Closes Bank in Wake of Fraud Case

DENVER — A Colorado bank failed after losing its appeal of a federal court order to return $45.2 million to an investment trust whose adviser was convicted of fraud.

Jefferson Bank and Trust of Lakewood was closed by state regulators July 2 because the amount owed to the Iowa Trust far exceeded the bank's $9 million in capital. Jefferson Bank's deposits of $109.4 million were sold to another Colorado institution.

The funds in dispute were transferred to the bank in 1991 through a series of elaborate transactions handled by Steven Wymer, the Iowa Trust's investment adviser. In May, Mr. Wymer was sentenced to 14½ years in federal prison after pleading guilty to nine felony counts, including securities fraud.

Bank of Boston Completes Acquisition

BOSTON — Bank of Boston Corp. said it completed its acquisition of Society for Savings Bancorp.

Under terms of the agreement, Bank of Boston exchanged 0.80 common shares for each Society for Savings common share.

Pennsylvania's Jefferson to Buy Chester

PHILADELPHIA — Jefferson Bank signed an agreement to acquire Bank of Chester County.

The proposed merger should permit Bank of Chester County to comply with regulatory orders to boost its capital, the banks said.

Holders of Bank of Chester shares will receive one share of Jefferson Bank stock for each two shares of Bank of Chester common stock owned.

The briefs were compiled from staff and wire reports.

Federal Reserve Unlikely To Raise Interest Rates

Continued from *page 1*

chiuto, an economist at Barclays de Zoete Wedd. "The one-month change was adopted only to achieve credibility."

Under a pro-tightening policy, Fed Chairman Alan Greenspan has authority raise the target rate for federal funds by as much as a half a point from the current 3%. If policy was switched to neutral, he would be required to consult by phone with the other FOMC members before acting to tighten or ease credit.

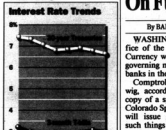
ECONOMIC OUTLOOK

Gary Schlossberg, senior economist for Wells Fargo & Co., doubts the Fed switched. "The Fed would not want to give the impression of flip-flopping," he said.

A sharp rise in gold and other commodity prices last week bolstered the argument of those who believe the Fed should stay on inflation alert.

Edward Yardeni, economist for C.J. Lawrence Inc., said he thinks the Fed will tighten if the price of gold rises above $400 and soybean and grain prices continue to rise. Gold was quoted at $394.50 an ounce on Friday afternoon.

Interest Rate Trends



Half-Point Rise Seen

Mr. Yardeni – among the best rate forecasters in the *Wall Street Journal's* most recent economic survey – thinks short-term rates will be a half point higher by the end of summer.

But John Lonski, senior economist for Moody's Investors Service Inc., said the rise in commodity prices relates largely to the temporary effects of midwestern flooding on crop production, rather than long-term inflationary trends.

"Even the hawks on the Fed realize that a tightening is not going to lower the level of the Mississippi River," he quipped.

The rise in gold prices is more troubling, he said, and may reflect investor uneasiness that the Fed and other central banks have the resolve to maintain a strong anti-inflation stand and continuing economic weakness.

Mr. Sinai noted that much of the rise in gold prices relates to special factors, including intense buying by China and some large investors. □

OCC to Issue Guidelines On Fund Sales

By BARBARA A. REHM

WASHINGTON — The Office of the Comptroller of the Currency will release new rules governing mutual fund sales by banks in the next two weeks.

Comptroller Eugene A. Ludwig, according to an advance copy of a speech to bankers in Colorado Springs, said the OCC will issue guidelines covering such things as what disclosures banks should make to customers, how the banks may name their funds, and what sales training bank employees need.

The policy statement is still being completed, but is likely to be released this week or next.

Mr. Ludwig said in the speech, which was to be delivered Sunday, that he is concerned whether banks are explaining clearly to their customers that deposits in mutual funds are not insured by the Federal Deposit Insurance Corp.

He said banks not explicitly disclosing this fact risk losing the public's trust.

"Bankers bring more than services to the marketplace. They bring their reputations," he said.

Mr. Ludwig, who was to speak to leaders of the American Bankers Association gathered for their summer meeting, said senior management should take "a major and active role in any investment product sales program." □

M&I Data To Acquire Florida Firm

By DEIDRE SULLIVAN
Special to the American Banker

Strengthening its presence in the Southeast, M&I Data Services Inc. has agreed to acquire the correspondent bank processing operations of Financial Processors Inc. in Tampa.

Financial Processors is an affiliate of Barnett Technologies Inc., the information technologies subsidiary of Barnett Banks Inc., Jacksonville, Fla.

As part of the agreement, Milwaukee-based M&I will assume responsibility for all Financial Processors' current contracts, associated equipment, and 160 employees.

M&I will also take over the operation of Financial Processors item processing centers in Tampa and Miami.

Major Outsourcer

M&I Data Services, a wholly owned subsidiary of the Marshall & Ilsley Corp., provides advanced software and outsourcing to about 400 financial institutions.

M&I senior vice president Donald Layden predicted that in the coming years, opportunities will open up in the Southeast market. He noted that in 1992, M&I stepped up activity in both Florida and Georgia, converting more than 18 banks in Georgia alone.

Mr. Layden also said that M&I was attracted to Financial Processors because the company had been operating M&I software as a licensee for years.

"The staff knows our systems. They know how we operate, so it's an exceptional fit," he said.

Executives at Barnett Technologies anticipate an added benefit for Barnett Banks' correspondent clients.

"Financial Processors' clients will now have access to M&I's industry expertise and a greater number of service options. The acquisition represents a winning situation for all involved," said Jonathan I. Palmer, chief executive of Barnett Technologies.

M&I Data Services has been in the information processing business for about 29 years, and Mr. Layden said this recent acquisition has marked a significant shift in the way the company looks at itself.

"In the past, our growth strategy was never acquisition driven. We have preferred to focus on building our customer base," he said. "But this deal marks a commitment to look at other acquisition possibilities."

Barnett to Market Services to Medical Industry

By JEANNE IDA

Barnett Banks Inc. and Cooperative Healthcare Network will begin jointly marketing to physicians later this month services that automate claims, card processing, and balance reporting.

Each company will market two products: Cooperative Healthcare Network's StatLink, which automates the forms process, including claims, submissions, claims status, and eligibility, and Barnett's on-line banking and card processing services.

Many banks are looking to the health care industry's payments system as a lucrative source of fees. "It remains to be seen" whether the product will be a significant source of fee income, said Wade Nield, health care segment manager for Barnett, a $38 billion-asset bank based in Jacksonville, Fla.

The bank's partner is Cooperative Healthcare.

The products aim to speed the flow and posting of physicians' accounts receivable, which now are often delayed by administrative inefficiencies, the bank says. The service will allow physicians to verify receipt of payment before updating receivables.

Barnett will begin testing the marketing effort on July 27 in its branches in Highlands and Pinellas counties in late July.

Cooperative Healthcare, a subsidiary of Atlanta-based BellSouth, has agreed to market with Barnett exclusively in the state of Florida. Barnett also plans to market the product in Georgia.

In a separate move aimed at the medical industry, Barnett and MasterCard are co-sponsoring seminars on managing a medical practice. □

NCR Financial Enterprise Architecture

The Advantages Of Massively Parallel Computing In The Financial Enterprise.

NCR's Financial Enterprise Architecture (FEA) offers a visionary blueprint for financial institutions to create a flow of information and solutions across the enterprise. One of the key technology enablers within FEA is NCR's massively parallel processing (MPP) solutions.

Parallel processing machines use hundreds of microprocessors to break down tasks into smaller pieces that can be processed simultaneously (at performance in excess of 10,000 MIPS), dramatically speeding up transaction times and complex queries.

On-Line Complex Transaction Processing (OLCP)

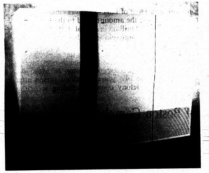
Most banks already have such an overwhelming amount of data that it is difficult to access selective information that supports decision-making. Plus, that data is usually isolated in disparate systems and software across the enterprise.

However, with MPP, On-Line Complex Transaction Processing applications are possible. OLCP combines high volume transaction processing with larger, data intensive applications to dramatically improve real-time analysis of enterprise business data. OLCP environments are characterized by concurrent OLTP, decision support, complex processing and ad hoc query processing.

OLCP applications can provide bankers with actionable information for competitive benefits, including:

• **Real-time transaction analysis,** to help determine appropriate action for customers with complex investment, CD or loan decisions that require rate and options analysis.

• **Real-time availability of transaction/ household data,** versus summary data, to create new products or services. For example, a marketing program query asking for all single income



NCR's System 3600 and DBC/1012 have helped NCR gain an 80% share of the commercial parallel processing market.

households with $50,000+ incomes, savings of $10,000+, and specific transaction parameters.

• **High volume credit card transaction analysis,** to identify customer patterns and other criteria that can minimize fraudulent use.

• **Real-time availability of credit history reports,** to support risk management analysis.

• **Strategic decision support,** to help banks evaluate the most profitable directions to pursue, which areas of business to move into or leave, where to locate branches, and what level of service and automation is needed in each location.

There are more ways the sheer computing power of parallel processing can help you create answers out of your mountains of data. Phone 1 800 CALL-NCR today, or talk to your NCR representative.

Opinion

Front Row on Washington

By Jim McTague

Treasury's Newman Spurns Idea Of Sweeping Bank Legislation

Frank Newman, the Treasury's under secretary for domestic finance, said the Clinton administration is unlikely to endorse any package of sweeping banking legislation.

The disastrous fate of the Bush administration's omnibus bank bill in 1991 (Congress turned it into the onerous FDIC Improvement Act of 1991) is the reason no sweeping package of reforms will be supported by the new administration.

"We want to try to keep focused," Mr. Newman told me last week when I visited his high-ceilinged, wood-floored office the size of half a basketball court to talk about banking issues.

The former B of A bigwig cautiously offered me scraps of information on topics ranging from interstate branching to the regulation of parallel banks.

Keeps His Cool

My first impression of Mr. Newman was that he's not an off-the-rack kind of guy. On a day when both the temperature and the humidity hovered near 100 and everyone else appeared as if they had slept for days in their business suits, he looked like a stand-in for the Duke of Windsor.

He's also not an off-the-cuff sort of guy. Although the interview was "on the record," he declined to let me tape it, despite my objection that Skippy the chimp's penmanship is more legible than mine.

Even then, with guaranteed deniability of everything he was about to say (owing to the inadmissibility of my handwriting as evidence), he was more cautious than most of the politicos I have encountered here in Gossip Central. But then again, he's new to this town.

Dancing the Dance

His response to my question about interstate branching was typical. I asked him whether the administration was for it or against it.

"Interstate branching needs to be addressed," he said. "One bill has been introduced. We're going to need to comment on it."

And what, I asked, is the official opinion?

"There is no official administration position on the need for the bill. My own inclination is to ask, 'Why not?' "

Why, he asked rhetorically, does this country alone have such restrictions?

He said big banks and small banks "do well" side by side in his home state of California, and he saw no reason it would not happen elsewhere.

He quickly added that community banks have an important role in the community and that he would not want to promote a scheme that would "put them off the face of the earth."

He envisions a world where big banks achieve economies of scale through branching and small banks serve their communities, which he says would be analogous to supermarkets and local groceries (which I didn't get because there are no small groceries where I live).

AN ILL-FATED 1991

Bush administration omnibus bank measure is the reason no sweeping package of reforms will be supported by the new administration.

Interstate Compromise?

In my book, all of the tap dancing above equates to YES, WE SUPPORT INTERSTATE BRANCHING. But in the world of politicspeak, it means they are thinking about it and nothing more.

I asked him how he will handle Ken Guenther and the Independent Bankers of America, both strongly opposed to interstate branching.

"I'll the sole purpose in opposing interstate is to protect a narrow interest, I can't support that argument. If there's a genuine issue that local communities won't be served by lending institutions, then it's legitimate."

To me that sounds like a compromise might be in the offing.

We talked about securities powers for banks and Glass-Stegall. Mr. Newman said the Securities Industry Association's proposal to 1.1 security firms own banks if banks can deal in securities "seems reasonable if there are appropriate protections."

I asked if the administration would introduce legislation to roll back some of the banking industry's regulatory load. He said no.

But he said the administration would try to suggest some modifications. That's a lot less than was hinted at right after the election. As I recall, a council of regulators was supposed to propose specific rollback legislation.

Smooth Exit

I also asked Mr. Newman about statements in *The New York Times* a couple of weeks ago, attributed to him, that the administration might be inclined to make nonbank banks subject to the same fair-lending laws that apply to banks.

He said there is no formal plan, but that it is something he'd like to think about. (His press aide said *The Times* had misinterpreted his remarks somewhat.)

He said it would be impossible to apply the laws to money-market mutual funds, but that something might be required of other mutual funds if it appeared that savers were going to make them the long-term resting places for their funds.

At the end of an hour of my pecking and scratching, his secretary came in with a piece of paper. He looked at it, excused himself, and said it was something he had to see to right away.

"Pretty smooth," I thought to myself. I returned to the office and began the arduous task of translating Skippy the Chimp's notes into English. □

Comment

By Kenneth Lewis Tepper

RTC's Curbing of Bulk Asset Sales Is Good for the Little Guy and the U.S.

In an effort to attract more investors and generate greater yields from the liquidation of failed savings and loan assets, Roger Altman, the acting chief executive of the Resolution Trust Corp., has established new size limits for asset portfolios sold by the RTC.

It is not surprising that those who once benefited from the virtual absence of competition at the bargaining table would criticize this bold move. Much less explicable is the indictment of the current administration and Mr. Altman by critics who suggest that the moves further pork-barrel practices.

The critics have argued that, by responding to the "little guys" who seem to be willing to pay more for S&L assets that are offered in smaller packages, the RTC is "providing political favors to a vocal special interest." What the critics call "political favors," however, is rather a prudent and overdue government response to the growing concerns of constituents.

Taxpayer Losses

As a community-based financial institution, we are one of these "little guys" that have for some time witnessed a feeding frenzy of RTC "product" by investment bankers. Applying a purely Wall Street mentality, this frenzy is based on buying artificially low to assure sizable profits.

Accordingly, the laws of probability and statistics have become the surrogate for prudent underwriting and risk management. It is the taxpayer who loses when assets are hastily sold for far less than their market value because of a lack of financial discipline.

And now, those who were content to let the biggest and baddest rule the sty are squealing "foul!"

In 1992, $11 billion in assets were sold via bulk sales in excess of $50 million dollars each. Almost half of these assets were sold to the same four purchasers – General Electric Capital Corp., Goldman Sachs & Co., Kidder, Peabody & Co., and Merrill Lynch & Co.. The average purchase price was roughly 49 cents on the dollar.

More Competition

In the past, the majority of investors could not partake in these portfolio sales due to the prohibitive size of each offering. The fear now is that the trough will suddenly become overcrowded with buyers who, as a result of smaller packages, will be able to compete. As a result, little guy may well drive the price up – and increase recoveries for both the RTC and the taxpayer.

More competition? Higher recoveries? Is this the point of it all in the first place?

Breaking the packages into smaller pieces may theoretically slow the liquidation process. But the RTC's mandate is not simply to make assets go away; it's to make them go away at the highest possible price.

The suggestion that the RTC is catering to special interests is an insult to the entire financial community and a slap in the face to the RTC's outstanding senior management staff. □

Home Loan Banks Lauded, but Risks Noted

E. Gerald Corrigan
Stepping down from Fed

By ROBYN MEREDITH

WASHINGTON — The Federal Home Loan Bank system is not a dinosaur, as some have charged, but it is taking on additional risks as it moves away from its traditional purpose of supporting home lending, the Congressional Budget Office concluded.

Some have questioned whether the bank system is still needed. The budget office said in a report released Friday that because a secondary market for home mortgages has been developed, thrifts no longer face the liquidity crunch they did when the system was created in 1932.

'Only Source' of Funds

However, the budget office noted that the bank system is "practically the only source" of depository institutions have for medium-term and long-term funds. By providing such loans to member thrifts and banks, the system helps them "manage their interest rate risks, which can reduce the costs of such risks to the deposit insurance funds," the budget office concluded.

"These activities arguably provide the strongest justification for the system's continued existence," it said.

Risks Seen as Well-Controlled

The bank system, which consists of 12 regional banks that make low-cost loans to home lenders, contributes $300 million annually to the cost of the thrift bailout, which has caused the system to increase its investment portfolio of mortgage-backed securities. That trend has added risks to the system.

Mike Wilson, research director of the Federal Housing Finance Board, the bank system's regulator, said: "On the one hand, it is true that the system's risk profile may have changed over the years." However, he said, "The system is not by any means a risky enterprise," because there are tight controls on the system's investments.

"The Federal Home Loan Bank system is by far the least risky" of the government-sponsored enterprises, said Bert Ely, an Alexandria, Va.-based bank and thrift consultant.

"Their advances are well-collateralized, but on top of that, the Federal Home Loan banks have a much higher capital ratio than Fannie and Freddie." □

Corrigan Is Named To Head Russia Fund

TOKYO — New York Federal Reserve Bank President E. Gerald Corrigan was named by President Clinton as chairman of a planned U.S.-backed fund to support private-sector development in Russia.

Mr. Corrigan, who is stepping down from his Fed post, will be joined on the board of the Russian-American Enterprise Fund by a number of prominent names in U.S. business and politics, including Lehman Brothers managing director Robert M. Brown, former Colorado Sen. Gary Hart, and former U.S. Ambassador to Russia Robert Strauss.

Mr. Clinton unveiled plans for the fund in April at his Vancouver summit with Russian President Boris Yeltsin.

The fund, which is designed to complement other U.S. assistance programs for Russia, is expected to be capitalized at more than $300 million over a three-to four-year period, the White House said.

Promoting Development

Under the fund's plan, the board will guide its equity investments and loans, along with technical assistance programs, to promote private-sector development in the former Soviet republic.

The Clinton administration is currently seeking funds from Congress to expand the fund's operations into Russia's Asian regions, according to a statement from the White House.

Initial capital for the fund is incorporated in a $1.8 billion foreign aid measure for Russia and other former Soviet republics. The measure has won House approval, but is still pending action by the Senate. □

Ohio's FirstFederal in Deal

WOOSTER, Ohio — FirstFederal Financial Services Corp. said it signed an agreement to acquire the Ontario, Ohio, branch of Equitable Savings.

Terms weren't disclosed.

The Equitable Savings branch had about $18.5 million in deposits at the end of March. At March 31, FirstFederal had $572 million in assets.

The acquisition is subject to regulatory approval. □

Just for the record, GMAC Mortgage and GMAC Residential Funding Corporation are not being sold.

We're still GMAC. And as one of the nation's largest mortgage providers, that means we service the loans of over 480,000 customers, totaling more than $41 billion.

But that's not all. We're pleased to announce that through June of this year, $3.4 billion in new loans has been funded through our nationwide network of 100 branch offices.

What's more, GMAC Residential Funding Corporation continues to be one of the leading firms in the private mortgage securities market, purchasing residential mortgage loans from hundreds of correspondents nationwide. So far, over $6 billion in mortgage securities has been issued this year. And RFC's warehouse lending commitments now exceed $2 billion.

Most important, we're proud to be part of the GM organization. It's a family we feel very much at home with.

GMAC Mortgage

BayBanks' Captain Has a Firm Grip on the Tiller

Continued from page 1

years before Mr. Crozier actually sells the organization he joined nearly 30 years ago. By that time, he might be ready to retire.

"I don't think Bill is diametrically opposed to selling the bank," said Thomas Theurkauf, an analyst at Keefe, Bruyette, & Woods Inc. "But both he and his management team have an agenda for the next few years to return the bank to top-notch profitability."

What makes BayBanks so attractive is its stellar retail franchise. In Boston and its environs, BayBanks' green-and-white logo is, as Mr. Crozier puts it, as ubiquitous as McDonald's golden arches.

The 65-year-old company boasts more than 200 branches, 1,004 automated teller machines, and a primary banking relationship with 18% of all Massachusetts' households, according to data compiled by the bank and this newspaper.

Such market penetration ranks BayBanks, which has $9.6 billion of assets, well ahead of larger competitors, including Fleet Financial Group, which became its arch rival when it bought the former Bank of New England franchise. Fleet ranks second in primary household relationships, with 8% of the Boston market.

Real Estate Angst

Like many other companies, BayBanks struggled with the New England economy in the early part of the decade. In 1990, it posted a loss of $69.8 million, as its real-estate-dominated credit costs – loan-loss provisions, writedowns, and foreclosed property expenses – reached $304.5 million.

By the end of last year, the company was on the rebound. Expenses related to problem assets had declined to $152.3 million, permitting the company to report a profit of $59.2 million. BayBanks earned $12.8 million, or 68 cents a share, in the first quarter and is expected to weigh in with a strong 72 cents a share when it reports second-quarter earnings this week.

Mr. Crozier said he is confident that credit costs are going to continue their steady decline this year. And that could mean more money to pour into BayBanks' retail business, the chief engine of its growth and profitability.

BayBanks has a formidable retail franchise in Boston.

BayBanks has a history of wooing customers with a unique mix of technology and marketing smarts. In a recent marriage of the two, it mailed customers a glossy catalogue of its products, allowing them to shop for banking services via a toll-free telephone number, 24-hours a day.

"They are easily among one of the top three retail banks in the U.S.," said Thomas D. McCandless, an analyst at PaineWebber Inc.

BayBanks' own ATM network, dubbed X-Press 24, allows customers to perform all standard banking transactions – and then some. Cardholders can obtain mini-statements of their accounts, find out if checks have cleared, and at some locations purchase U.S. postage stamps.

Keeping It Simple

The machines even boast a customized feature that allows a cardholder to receive a predetermined amount of money when a "fast cash" key is pressed.

"The ATM is sort of symbolic of what makes us different," said

Mr. Crozier expects credit costs to keep dropping.

Lindsey C. Lawrence, president of BayBank Systems Inc., the company's technology arm. "We make it simple for customers. We really understand what they need and then use technology to give it to them."

As Mr. Crozier will tell you, that is no easy feat for a banking company that has just 6,300 employees. He also readily admits that BayBanks' small size relative to its competitors puts a strain on monetary and human resources.

Ms. Lawrence's group, for example, is close to unveiling a new ATM feature that allows customers to move money among their own accounts and those of other members of their households with a single card. But the "XPress-link" service, a version of which has been introduced by Citibank, works better with touch screens than with the keypad technology that BayBanks has, Ms. Lawrence said.

Citicorp developed its touch-screens machines in-house, a luxury that BayBanks cannot afford. That makes it reliant on outside ATM vendors who are currently working on some projects with the company.

Some Close Calls

"We do live a life here that is a little more hair-raising than some," Mr. Crozier said. "In many, many things we have done, we get the car across the tracks right before the train comes."

The latest example was the introduction in March of BayFunds, a proprietary family of six mutual funds. Fleet beat BayBanks to the punch by selling its family of funds through its branches 18 months ago, and Shawmut National Corp. introduced its fund family in February. Bank of Boston entered the fray in June.

BayBanks is not charging any sales fees on its funds. It is also including mutual fund transactions on its regular bank statements, and is developing a system that will allow customers to access their funds via ATMs.

Mr. Crozier points to the development of SmugAttitudes, which cost the bank $5 million, as evidence of how the company invests even in the face of New England's enduring economic downturn.

"The retail side of the business rings the cash register," he said. "It's great stuff, and I just love it." □

Failure to Communicate with Shareholders Can Be Costly

By GEORGE FREIBERT
President
Professional Bank Services Inc., Louisville

Viewpoint

Banks have seen heightened interest from their shareholders in recent years. Unfortunately for bank boards and chief executives, this interest sometimes manifests itself in a move for their replacement or for the sale of the institution against the board's wishes.

Shareholders can be motivated to act because of performance or regulatory problems, or both. However, more commonly, problems come from a simple failure to communicate. This failure is often rooted in the unfounded belief that shareholders will always concur with the board's wishes.

Issues to Consider

Following are several issues directors and chief executives should consider in their relationships with shareholders, depending on ownership structure.

First, let us consider an institution in which the board holds control.

It is not unusual for community banks and some regional institutions to be controlled by the board of a one-bank holding company. Often the bank board and the holding company board are virtually identical.

A Fiduciary Obligation

However, it is incumbent upon the board to protect the interest of minority shareholders who may not be represented on the board. A board has a fiduciary obligation to protect the interests of all shareholders, regardless of where stock control rests.

Minority shareholders should be kept well advised about the company's performance through shareholder meetings and other communications. Shareholders should feel they are part of the team and "in the know" regarding corporate matters about which they have a legitimate right to know.

Beware of Smug Attitudes

Problems in this type of situation often stem from a smug attitude by members of a controlling board who feel minority shareholders pose no threat to their positions. If these minority shareholders feel disenfranchised, they will be easy prey for a suitor unwanted by the sitting board who underestands his ability to cause it trouble. It is far better to spend some time and money keeping these shareholders in the fold rather than risking adversity.

Boards should approach disgruntled or seemingly uninterested shareholders with the view of buying their shares back, instead of leaving them as a chink in the corporate armor.

Shareholder Base Aging

At widely held institutions, there's a different set of issues.

It is quite common for board members to collectively hold only a small percentage of the institution's stock. In such cases, shareholder relations are particularly important.

The shareholder base of many banks has aged significantly in the last decade, and heirs of former shareholders have relocated out of the community. These two factors have resulted in a significantly increased desire for liquidity and decreased loyalty to the bank.

Increased Dividends a Help

Bank boards and management are often made up of older and financially secure individuals whose personal financial situations do not always parallel those of the shareholder base. As a consequence, board members mistakenly believe the shareholder base does not have a strong interest in the ordinary income received through dividends.

Payment of a realistic and yearly increased dividend is one of the most effective tools of communication available to the board.

Definitive Plan Needed

While hostile takeovers and creeping tender offers are generally associated with large, publicly traded organizations, similar scenarios are often played out in smaller, privately held companies. These institutions are tempting targets when shareholders believe they are not being treated fairly by the board and management, or when there has simply been a lack of attention to shareholders.

Boards of widely held banks that wish to maintain their ownership structure and direction should have definitive plans for working with shareholders.

An essential element in this planning process is the establishment of a bank holding company, a vehicle for making a market for the institution's shares and redeeming the stock of shareholders who may wish to cash out.

If the board owns control of the institution, the holding company is still an extremely valuable tool for making a market in minority shareholders' stock and, possibly, providing other financial benefits to shareholders. □

George Freibert

UNDERSTANDING RISK IS KNOWING THE NATURE OF THE BEAST.

It takes a special breed to be comfortable in situations that others perceive as dangerous.

It means not only having experience and deep resources, but the understanding that some transactions are going to be risky. After all, this is business. But the reluctance of many financial institutions to underwrite a high-risk proposition makes you wonder what business they're in. You don't just need someone with money to lend; you need someone who will lend it.

That's what you get from The CIT Group. America's most experienced asset-based lender. We transcend the limitations of conventional financing and develop customized financial solutions for virtually any situation. In other words, we go in when others are getting out.

The CIT Group/Credit Finance can help with refinancing, reorganizations, working capital, debt restructuring, Chapter 11 financing, LBO's, and more. To find out what we can do for you, call David Grende, Executive Vice President, at 1-800-245-0500.

Amsouth Moves North In Its Florida Campaign

By PHIL ZAHODIAKIN

Mergers

FLORIDABANK, A JACKSONVILLE-based thrift, last week became Amsouth Bancorp's latest takeover target in Florida.

The state's healthy growth has been fueling takeovers of small banks for several years, but the buyout offer by Amsouth, a $10.9 billion banking company based in Birmingham, Ala., is its fifth in Florida this year.

Other Alabama regionals already have set up shop in Florida, and the invasion makes sense to J. Malcolm Jones Jr., chief executive of $270 million-asset FloridaBank.

"Florida is one of the country's top five growth states, and Alabama's at the middle of the scale, so we've had a lot of the larger Alabama banks entering our market."

Mr. Jones adds that Amsouth's offer for FloridaBank, which is not publicly traded, was a strong one – 1.81 times adjusted book value.

Amsouth's offer is in line with most of its other Florida bids – 1.5 to 1.9 times adjusted book – though the offer for First National Bank of Clearwater was 2.25 times book.

However, "Clearwater has a very large trust department," Fred Meinke, an analyst at Raymond James & Associates, St. Petersburg, He added that other regional banks also have been paying for Florida assets with about the same premium that Amsouth has been offering.

J. Malcolm Jones Jr.

"Like any community banker, I was aware that I would eventually have to consider an offer," said Mr. Jones, a banker for the last 20 years. "We're not very closely held – I'm the largest shareholder with 6% of the shares – and I have a responsibility to entertain strong offers.

"On the other hand, Amsouth has a great reputation, and they'll provide our customers with more services than we ever could because we're limited by our capital resources."

Amsouth, Mr. Jones adds, "has the largest trust and retail banking operation in Alabama, and they're very strong in mortgage lending – which is our main business."

FloridaBank is returning 0.79% on assets and a robust 15.26% on equity, but its service area was Amsouth's real interest.

Its seven branches in the Jacksonville area would serve as a "fill-in to enable us to have a viable northern Florida franchise," said Harvey E. Campbell, Amsouth's director of investor relations.

Amsouth's other Florida deals, also pending, would position the banking company in Orlando, in the middle of the state; in Ocala, north of Orlando; and St. Petersburg, on the West Coast.

By virtue of purchases in the late 1980s, it already has a presence in Destin and Panama City, in the panhandle.

Mr. Campbell said Alabama banks, thanks to the state's stable economy, are among the most profitable in the nation.

"However," he adds, "in looking for opportunities to participate in more growth, Florida is very attractive to us – especially because the demographic projections show the growth will continue."

Mr. Meinke says many large banks – Barnett Banks Inc, First Union Corp., NationsBank Corp. and SunTrust Banks Inc.– already have set up shop on the Florida's west coast – where Amsouth is about to take over St. Petersburg's First Gulf Bank and the Clearwater bank.

'Room for Everybody'

"But there's plenty of room for everybody," Mr. Meinke adds, noting that most people in the sprawling area drive to work – and that none of the large banks has "overbranched."

Mr. Campbell says Amsouth always makes a strong commitment to communities when entering a new market. David Cates, chairman of the Washington bank rating and data firm Ferguson & Co., agrees.

However, he maintains that there is another side to Amsouth's takeover effort.

"I would think that sheer size does matter in the survival game," he said, "and Amsouth, in order to remain independent for as long as possible, needs to get as big as possible. Their stated goal is subtle – observing shareholder value, and so forth – but the latent goal of expansion minded banks is to keep expanding."

Q: Would you consider selling your bank?

BILL MONDAY
Chief executive
O'Bannon Banking Co.
Buffalo, Mo.

That's a loaded question! I mean everything has it's price, doesn't it?

Many community banks would probably say no because of their heritage and the need to continue to serve the community.

In our case here I would also say "no," because our bank is owned by individuals in the community. Our stockholders are part of the community, and we like the idea of the institution remaining a community bank that is owned and operated by local people. □

STANLEY N. PONTIUS
President and chief executive
First Financial Bancorp
Hamilton, Ohio

If a big bank came in and offered us a lot of money for the bank my sense is the board and shareholders would say we want to stay independent, thank you.

If our performance wasn't there and if our service to our communities wasn't at a high level, we don't deserve to remain independent.

We don't believe there is a need to sell our organization, in fact we are seeing market opportunities emerge for community banks because of other mergers taking place in the industry. □

SKIP MARTIN
President and chief executive
Pocahontas Federal Savings
Pocahontas, Ark.

The answer is no. I would not. I love this business I have grown up in it.

I guess everybody has a price for things that aren't moral and ethical, sentimentality even has a price.

But . . . I want to be the big cheese.

I've never seen a period of time that we were not griping or complaining.

Things are better right now than they have been since 1979. The regulators are leaning more toward generalization; they don't pick me to death like they used to. □

Rich Bids Are Fueling the Rush to Sell Out

By ROBERT B. COX

For all their talk about independence, community bankers have been selling their banks in droves.

The past 12 months have seen 181 community bankers joining with banks that have over $2 billion of assets, according to SNL Securities, Charlottesville, Va.

This acquisition boomlet has translated into a transfer of more than $58 million of assets from small to large and superregional banks.

"Bankers are getting good offers for their banks" from larger rivals, said Kenneth Guenther executive vice president of the Independent Bankers Association of America.

Acquiring community banks "remains the avenue of access to new markets – you are buying a market franchise that can't be duplicated by going de novo," said Mr. Guenther.

Marriage of Necessity

Indeed, the weighted price-to-book average paid by large banks for their smaller cousins reached 1.8% in the second quarter, according to the SNL data.

Many bankers say that in order to remain profitable in the face of increased regulations and competition, they need to join forces with larger banks.

Most larger institutions employ specialists to deal with new regulations and are able to cost-efficiently spread technology over larger organizations.

"We can have good products and ideas, but the regulatory requirements make it extra difficult to provide those services," said Russell Lawson, chief executive of Central Banking Group, Oklahoma City. □

Lawyers as Directors: Maybe a Good Idea After All

Weekly Adviser

By PAUL NADLER

The issue of who should serve on a bank's board hit a nerve with readers. There have been several communications on this topic, the subject of several recent columns.

I received a letter from Richard B. Foster Jr., president of Banconsult Inc. of Okemos, Mich., who disagreed with the suggestion in a column of June 14 that lawyers be bypassed for membership on bank boards.

Mr. Foster writes:

"I could not help but be amused by the number of bankers who commented to you that they would never put a lawyer on their boards of directors.

"I am sure that some bank directors, including some lawyers who are directors, use their bank board positions to look for business for their own firms.

"This type of director, whether a lawyer, insurance agent, or businessman, is not the kind of person a bank should have on its board of directors."

A Bum Rap?

"But perhaps lawyers are getting a bum rap. Maybe there are reasons bankers should ask lawyers to serve as directors of their banks.

"Many bankers want their attorneys to serve as directors because of prestige, contacts, experience, and judgment and their belief that the lawyer will do what is "right" – in other words, lawful.

"To put it cynically, this may be because the lawyer wants protection from liability. Here is what one president told his lawyer about why he wanted the lawyer to serve on his board of directors.

Worrying for the Right Reasons

" 'I would like you to go on our board because I know that if you are on the board you are going to worry about liability – your own liability as well as liability. And if you are worried about your own liability, I know that you will try to get us to do the right thing. So I want you on our board, worrying.'

"Some bankers believe that a lawyer is trained by his profession to help the board carry out one of its principal functions – to monitor the performance of the bank.

Mr. Nadler is a contributing editor of *American Banker* and professor of finance at the Rutgers University Graduate School of Management.

As one reader points out, a lawyer can help a bank avoid liability problems.

"Finally, some lawyers believe that banks ask them to serve as directors in order to avoid paying the higher rates a lawyer would charge to participate in board meetings as a lawyer. For the price of a director the bank gets a lawyer too!"

An Accountant on the Board

We have received similar comments on the issue of placing accountants on the board.

Some CEOs hold that a good CPA on the bank board is a must.

Accountants can see the full implications of the bank's statements, can point out to other members on the board the weaknesses and strengths in the data, can look at the statements of potential borrowers with a more careful approach than the bank's own lending people might have, and can generally be as useful as Mr. Foster feels that lawyers can be.

On the audit committee, a CPA can be worth his weight in gold.

Another correspondent talked about the business people who join the board in the expectation that they will get the contracts for any bank construction or supplies the bank may need. They must be disabused of this idea.

One CEO in particular reported that he had a board member whose company lost out three times in a row in bidding on bank business; the company simply was not the lowest bidder.

To award business because the bidding company's chief is on your board is as illegal as making loans below the rates charged everyone else.

And finally several correspondents felt that the bank should go out of its way to make sure that doing business with the bank does not disqualify anyone from serving on the bank's board.

These are the people who have supported the bank and to deny them access to board seats would be like robbing yourself of your greatest opportunities for profit.

The key, though, is that these customers must know the ground rules of board membership. □

WHEN PARENTS ARE LEARNING ABOUT COLLEGE, WILL THEY LEARN ABOUT YOUR BANK?

WHEN FAAs RECOMMEND PLUS LENDERS, YOUR NAME CAN BE AT THE TOP OF THE LIST.

Recent changes to government-backed education lending to parents will stimulate the demand for PLUS loans. But before parents make their decisions, you can expect many of them to confer in depth with campus Financial Aid Administrators. Today it's the FAA who is helping parents decide how, when, and where to borrow.

"Where" is important. FAAs want parents to choose the PLUS loans that are easiest to repay. And that means borrowing from lenders who work with Sallie Mae.

Sallie Mae's PLUS loans give parents more repayment options. There is a choice of level or graduated repayment accounts, as well as loan consolidation. And with the new SMART REWARDS℠ program, parents who consolidate their loans can earn a 1% interest rate reduction simply by making their initial payments on time.

FAAs know these options can make all the difference as parents do their arithmetic and decide how to manage college costs.

When FAAs say to parents, "Here's who to talk to about PLUS loans," make sure you're at the top of the list. Your Sallie Mae Sales Representative can help you get there.

Sallie Mae

Your partner in success.

SMART REWARDS℠ is a service mark of the Student Loan Marketing Association(Sallie Mae)

Louisiana Bank Opts for Exclusivity

By MICHAEL O'D. MOORE

A Louisiana bank is pinning its mutual fund hopes on a fledgling Seattle supplier.

First American Bank and Trust, a $275 million-asset bank in Monroe, La., decided to get its products from Bennington Capital Management largely because it was impressed by the firm's investment advisers.

What's more, Bennington has agreed not to make its funds available to competing banks, and consumers cannot buy the products directly.

"When you're a smaller bank and you are out there competing with larger banks, you need to distinguish yourself in some way," said William W. Keith, executive vice president of First American. "Exclusivity of product was very important to us."

Backed by Top Firms

Bennington's equity, bond, and money market funds, called the Accessor Portfolios, are just a year old and have only $150 million in assets.

But the funds do boast a heavy-hitting cast of advisers, including State Street Bank and Trust Co., Bankers Trust Co., and Wells Fargo-Nikko Investment Advisors.

"We were looking for a product that would offer a consistent and disciplined approach to investment management," Mr. Keith said.

In the end, First American picked Bennington over two firmly established suppliers: Federated Investors and Frank Russell Group.

Greater Influence

As a client of a smaller company, it is easier to bend an ear to give suggestions about new products and services, Mr. Keith said. "We'd rather be a large fish in a small pond."

Banks have been accounting for 50% of Bennington's sales. In addition to First American, Bennington serves Zions Bancorp. in Salt Lake City and Bank South in Atlanta.

Until 1994, the bank will sell the funds to trust customers only. Mr. Keith expects $30 million in sales in the first year of operation. The bank gets 100 basis points in fees for each sale of the no load funds.

Focus on Fee Income

"We feel the future of the trust business and the future of the retail business rests on the ability of banks to create noninterest fee income," he said.

The bank hopes Bennington can give it an edge.

For example, Bennington's asset allocation program, "Allocator," is a distinguishing characteristic that should boost sales, Mr. Keith said. The computer program shows investors how different mixes of Accessor funds will perform under various economic conditions.

J. Anthony Whatley, who founded Bennington in 1990 after 15 years at Frank Russell said he wants his company to provide unique services to smaller banks.

The firm's investment advisers, all of whom are subcontracted from other companies, are compensated exclusively on a performance-based fee schedule.

Measured Against Benchmarks

Using market indexes, managers are compensated based on how well their fund performs relative to the benchmark. By contrast, most fund managers receive the bulk of their pay regardless of performance.

"Performance-based fees were extremely important," Mr. Keith said. "We found the managers were willing to stake their reputation and put their money where their mouth is."

Performance-based fees are most often used by large foundations and companies who hire money managers for their pension funds, Mr. Whatley said. The goal is to bring performance-based fees, and institutional management, to the local level, he said. □

Chemical in Talks to Buy Shell's Credit Card Portfolio

Continued from page 1

ny has been hawking the card portfolio, which also includes about three million nonactive accounts that would not be in the Chemical package, for more than a year, according to people familiar with the Shell program.

Gas-card programs typically operate close to, or in, the red because charge volumes are low, use is sporadic, and balances tend not to revolve, experts said.

"In many cases those programs do not make money, but the oil companies offer them as a courtesy and to promote customer loyalty," said Robert B. McKinley, president of RAM Research Corp., Frederick, Md.

Large Market

Credit criteria for gas cards also tend to be lower than those used by issuers of bank cards, according to experts. It also may be difficult to get gas-card holders to use an affinity card for general purchases, since many probably already hold other credit cards, experts said.

The deal would double Chemical's portfolio of credit card accounts to eight million.

But Shell has a large card constituency to offer Chemical, which became a significant market player after its merger with Manufacturers Hanover Corp. 18 months ago. In 1991, Shell recorded $3.79 billion of sales on its gas cards, larger than any other oil company program, according to the *Nilson Report*, an industry newsletter. Figures for 1992 are not yet available.

Though the verdict is out on how well Chemical would do with a cobranded card, there is precedent. Last month, Bank of Montreal acquired a portfolio of several hundred thousand cobranded Shell Mastercards from Royal Trust Company of Canada. The bank plans to offer to the Shell customers a new cobranded card that earns mileage credit on several participating airlines.

If Chemical succeeds in converting private-label cards to general-purpose plastic, it could reap significant charge volume and income from interchange fees.

The bank had $5.78 billion in receivables last year, ranking it sixth among all bank issuers, according to the *Nilson Report*, and is eager to expand. Like most issuers, Chemical has been squeezed by nonbank companies entering the business. Receivables grew just 2% last year, and total accounts grew 1%, according to Nilson.

Consultants say Chemical must offer competitive rates, low fees and other perks to entice Shell's cardholders to actively use a cobranded card. The task is all the harder at a time when consumers are being inundated with low-rate, no-fee offers from other bank issuers and new competitors such as General Motors Co. and American Telephone & Telegraph.

First Financial Offers SurePay Card System

FORT LAUDERDALE — First Financial Management Corp.'s unit, National Bancard Corp., has begun to market its SurePay credit card processing system to retailers nationally.

In a press release, the company said the SurePay access terminal has the ability to read both tracks of a card's magnetic stripe as well as the card's embossed account numbers.

The accompanying SurePay printer captures the entire transaction at the point of sale, including the cardholder's signature, and sends it to National Bancard for storage, where it can be retrieved anytime.

The company said the SurePay system can also interface with an electronic cash register via a new Multi-Reader device, which can read the MICR encoding on checks, the embossed account numbers, and both tracks of the magnetic stripe on credit cards. — **Dow Jones**

American Pacific Portfolio

PORTLAND, Ore.— American Pacific Bank said its secured and guaranteed credit card portfolio has grown to more than $20 million for the first time since its inception in August 1991.

The company reported 49,300 active credit card accounts. For the first six months of 1993, operating income reached $508,000, an increase of 29% over the year-earlier period. □

Originations by Top Mortgage Lenders Surged in First Half

Continued from *page 1*

lenders was unchanged from the middle of last year, with Countrywide Credit Industries leading the way, the survey found. Countrywide, based in Pasadena, Calif., produced $17.2 billion of loans, up 41% from the first half of 1992.

Meanwhile, North America Mortgage Co. of Santa Rosa, Calif., rocketed to the No. 5 post, dislodging Chemical Banking Corp.

North American, emblematic of a group of mortgage companies that went public last year, boosted its originations 39% in the first six months of this year, to $7.05 billion. North American made its initial public offering stock last July.

"We are entering the second half of 1993 in the strongest position, both operationally and financially, in the company's history," said John F. Farrell, North American's chief executive.

Spurred by Low Rates

Industrywide, originations have been surging as a result of low interest rates. The rates have unleashed a torrent of refinancings and boosted home purchases.

Loan production at the top five rose by an average of 35%

Originations for the first half of the year totaled $412 billion, up 17% from a year earlier, according to estimates by the Federal National Mortgage Association.

The leading lenders are clearly operating in class of their own.

Countrywide, which nearly doubled the industry record last year with originations of $31 billion, could approach $45 billion for all of 1993, analysts say.

The company finished June with a staggering $8 billion "pipeline" of loans in process. Mortgage banks typically close between 50% and 60% of their pipeline each month.

Close on Countrywide's heels, Prudential Home Mortgage Co. Inc., Clayton, Mo, produced $15.8 billion of loans in the first half, up 43% from 1992's six-month tally. Prudential said two-thirds of the loans it had produced so far in 1993 were refinancings.

With mortgage interest rates at the lowest levels in more than two decades, Prudential set a one-month company record in June, with $3.8 billion of production.

Norwest Mortgage Inc., Des Moines, Iowa, posted a 36% increase for the first half of the year, bringing its originations to $13.7 billion. Pete Wissinger, head of production for the eastern region, said that 40% of the bank's retail loans were refinancings.

Fleet Mortgage Group Inc., Columbia, S.C., estimated that its originations for the first half would end up between $10.4 billion and $10.6 billion. That would be a 15% increase over the first half of 1992.

Problems in Refinancings

Kevin Race, Fleet's chief financial officer, said his company was expecting another strong year in originations, but noted that the high level of refinancing also poses problems. Fleet and other companies with big mortgage-servicing businesses lose some existing business as consumers reach for refinancing deals from other lenders.

"The refi activity is kind of a good news-bad news situation," Mr. Race said.

Chase Manhattan Corp. apparently took the No. 6 position. It originated $6.6 billion of mortgages, up 25% from a year earlier. A company spokeswoman said 70% of the loans produced were refinances.

Chemical followed close behind with $6.4 billion, up a modest 5% from the first half of 1992.

At least one major lender actually posted a decline. Sears Mortgage Corp., which is being sold to PNC Bank Corp., saw its originations fall 8% in the first half of the year, to $4.99 billion. □

MGIC, Fannie to Share Risk on Loans to Poor

Mortgage Guaranty Insurance Corp. unveiled what it called a model program for boosting homeownership among poor and moderate-income families.

The $10 million initiative, aimed at about 200 families in Milwaukee, calls for the insurer to share default risk with the Federal National Mortgage Association and the Wisconsin Housing and Economic Development Authority.

The program entails unusually flexible underwriting, MGIC said. For example, a borrower's entire down payment can come from a gift or a grant. And borrowers save on closing costs because of a reduced first-year mortgage insurance premium.

"We expect this shared-risk partnership to serve as a model to be duplicated nationwide," said Gordon Steinbach, executive vice president at MGIC. □

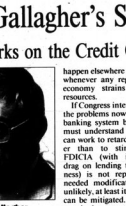
What Dimmed Gallagher's Star

FDIC Contender's Remarks on the Credit Crunch

Veritas

In May, President Clinton practically anointed New Hampshire lawyer Christopher Gallagher as his Federal Deposit Insurance Corp. chairman. Today, Mr. Gallagher seems to be out of the running, in large part because of his outspoken criticism of the FDIC Improvement Act of 1991. Here are some of his remarks before a House Banking subcommittee on May 11.



Christopher Gallagher

In January 1991, a group of New England businessmen met in Washington with the full New England congressional delegation. We explained that the New England credit crunch was real, that it had definable and predictable stages and progressions, that the ongoing, post-S&L bank examination process had curtailed lending to small business, and that its repressive format would stand in the way of lending to bank-dependent small business when loan demand returned to the marketplace.

We explained that the regulatory agencies understood the repressive impact of their new approach, but that they were responding to pressure from Congress to build capital in the banking system in order to relieve pressure on the Bank Insurance Fund. Until Congress advised otherwise, it was clear the carnage would continue.

Complaints Aired

The New England delegation, which by then had begun to speak up, turned up the volume and slight changes began to occur, but the crackdown in New England continued. Worse, its processes became institutionalized for the entire country in the from of FDICIA.

FDICIA constitutes the statutory version of the repressive format that preceded it. The regulatory approach now built into FDICIA can cause what happened in New England to happen elsewhere in the country whenever any region's cyclical economy strains its banking resources.

If Congress intends to address the problems now built into our banking system by FDICIA, it must understand how FDICIA can work to retard lending rather than to stimulate it. If FDICIA (with its continued drag on lending to small business) is not repealed, and if needed modifications are still unlikely, at least its worst feature can be mitigated. Its worst feature is the uncertainty it brings to the process of lending.

Pressure from Lawmakers

FDICIA gives wide discretion to regulators who, in turn, appear to be reacting to congressional pressure. This impression alone can be damaging.

As long as bankers believe that regulatory discretion can be influenced by politics, FDICIA tells themn not to assume the risk of business lending. Thus the price of FDICIA, which is loans not being made, is jobs not being created. If FDICIA cannot be repealed or even modified, lenders must be convinced that the Washington regulators have returned to a system of balanced regulation, designed to encourage sound lending. □

Bankers Took Copious Notes At ABA Compliance Meeting

The people responsible for making sure that banks comply with all of Washington's edicts met in sunny San Diego June 27-30. Beleaguered by Reg O and bewildered by Respa, 450 compliance officers turned out – the biggest crowd ever for the conference sponsored by the American Bankers Association.

Like most of their colleagues, compliance officers think there are too many rules.

"They ought to plant a forest every time a new regulation is issued," moaned one banker.

The Inside Line

"It's obvious Congress doesn't understand progress," said another. "The opposite of 'pro' is 'con,' so the opposite of progress must be Congress."

But most of the participants came to learn, not complain. The sessions were full through the last day. No golf – well, not much golf – was played.

They were warned to double-check their Truth-in-Savings disclosures. If a periodic statement promises one interest rate and the bank advertises another, then the bank is opening itself up to a class action, warned Leonard Chanin, a managing counsel at the Fed.

Mr. Chanin said that enforcement of Truth-in-Savings has begun, but hinted that regulators will hold off on penalities until banks learn the ropes.

The Fed will further explain what's expected of banks when it publishes its staff "commentary" on the regulation in November, he said.

On the last day, representatives of all three agencies fielded questions. Steve Cross, the OCC's deputy comptroller for compliance management, got the hottest grilling. His boss, Eugene Ludwig, is seen as the leading bank regulator since he is the only one appointed by President Clinton so far.

Mr. Cross told the bankers to start making more CRA loans and stop whining about the paperwork. He suggested that they quit documenting every meeting with a community group and every ad targeted to minorities.

But bankers countered that their examiners discount such detail. "If it isn't documented, it isn't done," one banker said his examiner told him.

The audience applauded.

"If there is any examiner who says that right now, then that examiner is not operating according to policy," Mr. Cross said.

The audience laughed.

— **Barbara A. Rehm**

THE WEEK *ahead*

THURSDAY, JULY 8

Confirmation Hearings: Richard S. Carnell appears before his old boss, Sen. Donald W. Riegle Jr., D-Mich., when the Senate Banking Committee takes up his nomination to be assistant Treasury Secretary for financial institutions. Mr. Carnell, former counsel to the committee, should breeze through. His nomination could go to the full Senate later in the week. Dirksen Building, room 532, at 10 a.m. Call 202-224-7391.

TUESDAY, JULY 13

More Confirmations: Arthur Levitt, the administration's choice to head the Securities and Exchange Commission, appears before the Senate Banking Committee. Also scheduled for confirmation hearings are Joseph Stiglitz and Alan Blinder, who have been nominated for seats on the Council of Economic Advisers. Dirksen Building, room 532, at 10 a.m. Call 202-224-7391.

WEDNESDAY, JULY 14

Fed Wire: The Federal Reserve Board meets to consider expanding Fed Wire's operating hours, moving the opening time to 6:30 a.m. eastern standard time on Oct. 4 in order to reduce risk in derivatives markets and support financial globalization. Eccles Building, 20th and C Streets NW, 10 a.m. Call Joe Coyne at 202-452-3204.

Speak Now: Comments are due at the Federal Reserve on a plan to make permanent a small-bank exemption from insider-lending rules. Banks with deposits less than $100 million would be able to make insider loans of up to 200% of unimpaired capital, instead of the current 100%. Comments should be filed with the Fed at 20th and C Streets NW., Washington, D.C. 20551.

THURSDAY, JULY 15

CRA Explained: Comptroller of the Currency Eugene A. Ludwig testifies before the Senate Banking Committee on President Clinton's plan to change compliance with the Community Reinvestment Act. Dirksen Building, room 532, at 10 a.m. Call 202-224-7391.

Credit Unions: The National Credit Union Administration holds an open meeting in Denver to consider changing its field-of-membership rules and requiring large credit unions to get outside independent audits. Call Bob Loftus 202-682-9650.

Ag News: Farm Credit regulators meet on a number of items, including how large banks and associations can terminate their status as Farm Credit System lenders. 10 a.m. at the agency's offices in McLean, Va. Call Curtis Anderson 703-883-4003. □

Japan Bank's Aide to Lead Women's Group

Carol Van Cleef, a lawyer with Skadden, Arps, stepped down July 1 as president of Women in Housing and Finance. Her successor at the helm of the professional organization is **Nancy W. Hunt,** a vice president in the Washington representative office of Industrial Bank of Japan.

Under Ms. Hunt, the organization doubled its membership to 400 and organized a number of task forces – including one on working parents and another that lobbied to place women in the Clinton administration.

Ms. Hunt said she plans to continue those task forces and add a few new programs aimed at professional development, including the establishment of a speakers bureau. "One component of professional development is public speaking," she noted.

Ms. Hunt previously worked for Bankers Trust Co. and pulled a stint on the staff of Rep. **Bill Green** when the New York Republican served on the House Banking Committee. In 1974, she ran unsuccessfully as a Republican candidate for the New York City Council.

* * *

Bank lobbyists drew a heavy sigh of relief when Sen. Howard Metzenbaum, D-Ohio, announced he would not seek re-election next year.

Sen. Howard Metzenbaum
His influence may linger

The liberal Democrat is best known to many bankers for his dogged sponsorship of legislation that would require banks to offer low-cost services to the poor.

But Sen. Metzenbaum's decision raises two questions, lobbyist say. The first is whether his Senate colleagues will try to give him a retirement gift by finally enacting his government-check cashing and lifeline checking bills. Both have passed the Senate before, only to die in negotiations with the House.

The second is who will take his place on consumer banking issues. Most of the betting so far is on Sen. **Paul Wellstone,** D-Minn., and Sen. **Russ Feingold,** a liberal Wisconsin Democrat who had been expected to seek a banking committee seat this year.

* * *

R. Matthew Neff, deputy to the chairman of the Federal Housing Finance Board, announced that he was resigning to return to Baker & Daniels, the Indianapolis-based law firm where he left to join the finance board.

Mr. Neff, who has also started an investment group called Circle Investors LLC, will work part time as a partner at the firm while getting his business off the ground.

Circle is looking to invest in insurance companies with diversified portfolios and in other financial services firms.

* * *

Endangered species: The U.S. Supreme Court decision attacking oddly shaped minority congressional districts was aimed squarely at one House Banking Committee member and could ultimately affect three others.

The subject of the suit was the district inhabited by Rep. **Mel Watt,** D-N.C., a new member of the banking panel who has generally drawn strong praise from banking lobbyists. Other banking committee members from oddly shaped districts include Rep. **Luis V. Gutierrez,** D-Ill., Rep. **Nydia Velazquez,** D-N.Y., and Rep. **Cleo Fields,** D-La. □

EXECUTIVE *changes*

First Virginia Names Dalton To Two Posts

Patricia A. Dalton has been promoted to senior vice president of First Virginia Bank and vice president of its parent company, First Virginia Banks Inc., Falls Church, Va. Ms. Dalton will be responsible for all trust operations for First Virginia Bank as well as the other 19 First Virginia member banks and related corporate departments.

Patricia A. Dalton

She joined First Virginia in 1979 as a management trainee. She became saving operations supervisor later that same year, operations officer in 1981, assistant vice president in 1984, trust operations manager in 1985, and vice president in 1987.

— **Franklin Smith**

MIDDLE ATLANTIC

HUGHES HUBBARD & Reed, New York, has promoted **Carolyn B. Levine** to banking counsel in its New York office.

NATWEST MARKETS, New York, has appointed **Gary R. Rotenberg,** managing director, and **B. Scott Hollingsworth,** vice president, to head its utilities corporate finance effort in investment banking.

Mr. Rotenberg and Mr. Hollingsworth join Natwest Markets from Smith Barney, Harris Upham, where they specialized in utility financing.

Natwest Markets is the corporate and investment banking subsidiary of London-based **National Westminster Bank PLC.**

KNIGHT-RIDDER Financial Inc., New York, said **Patrice M. O'Grady** has been appointed managing director of Knight-Ridder Financial/Americas.

She was formerly with Chase Manhattan Bank, New York, where she served as vice president, global cash management relationship executive for the United States, Europe, and Asia.

UNITED JERSEY BANK, Hackensack, N.J., has promoted **Donald W. Blum** to senior vice president and manager, commercial mortgage department, wholesale banking division; **Felice Nelson** to vice president and manager, Glen Rock Branch, retail division; **Timothy J. Smith** to vice president, asset-based lending, wholesale banking division; **Frances M. Tendali** to vice president and regional manager, investments, investment management division, and **William C. Kringe** to vice president, trust investments, investment management division.

SOUTHEAST

THE NORTH CAROLINA Bankers Association has elected **Kelly S. King** president. Mr. King is president of Bankers Trust Co., Raleigh, N.C.

Mr. King succeeds **Robert F. Lowe,** who is chairman, president, and chief executive officer of Lexington State Bank.

James B. Hyler Jr., president of First Citizens Bank in Raleigh, succeeds Mr. King as NCBA president-elect.

The new vice president is **Lawrence M. Kimbrough,** president and chief executive of First Charter National Bank in Concord.

The association reelected **John H. Ketner Jr.,** president and chief executive of the **Bank of Mecklenburg** in Charlotte, to another year as treasurer.

The association also reelected the following staff officers at its headquarters in Raleigh: **A.D. Fuqua Jr.,** executive vice president; **Dianne L. Williams,** vice president-administration, and **Edmund D. Aycock,** vice president and general counsel.

THE TENNESSEE Bankers Association, Nashville, has elected **Waymon L. Hickman** as its president for 1993-94.

He is president of First Farmers and Merchants National Bank, Columbia.

Mr. Hickman succeeds **Robert H. Owen,** president of the Bank of Gleason. Mr. Owen will continue to serve for three years as an ex-officio member of the board of directors.

President-elect of the association is **Fred R. Lawson,** president, First Heritage Bank, Knoxville.

Molitor Ford has been elected first vice president of the association. Mr. Ford is chairman, president, and chief executive of Commercial Bank and Trust Co., Paris.

SOUTHWEST

THE NEW MEXICO Bankers Association, Albuquerque, has elected **Larry D. Willard** president for a one-year term.

Mr. Willard is president and chief operating officer of United New Mexico Financial Corp., which is part of the newly incorporated First United Bank Group Inc.

Larry D. Willard

He is vice chairman and chief administrative officer of First United.

Mr. Willard is also chairman of the board and chief executive officer of United New Mexico's lead bank in Albuquerque and serves on the board of directors of all the United New Mexico banks in the state.

WEST

ADVANTA MORTGAGE Corp. USA, San Diego, an affiliate of **Colonial National Bank USA,** has promoted **William P. Garland** to senior vice president of the San Diego-based company.

Mr. Garland will oversee loan servicing, specializing in providing nationwide servicing for nonconforming first and second mortgage loans. Reporting to him will be the asset and property management, customer service, and collections departments.

William P. Garland

Announcing... A Landmark Event For the US Banking Industry

U.S. BANKER FORUM 93

The National Exposition For The Banking Industry

October 19-21, 1993

McCormick Place East, Chicago, Illinois

Discover strategies for profitability in the 90's and beyond!

U.S. Banker Forum presents a unique opportunity for executives from America's banks and financial institutions to gather the information they need to chart a course for a secure and profitable future. The open exchange of ideas, in an atmosphere free from association business or politics, provides a broad perspective from which to evaluate the critical issues facing the U.S. financial industry and develop solutions for the future.

Get expert answers to tough questions.

U.S. Banker Forum's groundbreaking conference program features the nation's top bankers including Wachovia's John Medlin and Bank One's John McCoy, plus top government officials and regulators. Sessions focus on the industry's big issues and vital concerns, including mergers & acquisitions; expense control; government regulations; new sources of revenue; automation; outsourcing and more.

Discover a wealth of innovative solutions.

A comprehensive exhibit of products, equipment and services complements the U.S. Banker Forum conference. From ATM's to zero coupon bonds, you'll find everything you need to increase efficiency and enhance the bottom line.

Located in the heart of a thriving financial center.

More than half of the nation's banks and thrifts are located within a 500 mile radius of Chicago—many of which are reporting record profits. Chicago's central location and O'Hare International Airport make it easily accessible from all points.

Make U.S. Banker Forum part of your plans for the future!

Whether you are a bank executive or a supplier to the banking industry, U.S. Banker Forum is your best investment. For more information, call Scott Temple, Sales Manager at (203) 852-0500, ext. 106 or return the coupon below.

High Performance Banking

UNDERWRITING
J.P. Morgan Leads Note Offer by Hertz

By WILLIAM GOODWIN

For the second time in three months, J.P. Morgan Securities Corp. on Friday led a note offering for Hertz Corp., the world's largest rental car company.

Hertz is a longtime client of Morgan's commercial banking arm, Morgan Guaranty Trust Co.

Morgan has been building up its securities underwriting business on the strength of corporate client relationships forged through its commercial banking activities.

In the first half of this year, Morgan ranked seventh among lead underwriters of nonconvertible domestic corporate bonds, according to Securities Data Co., an *American Banker* affiliate.

To Repay 1997 Loan

Proceeds from Friday's $400 million offering will be used to repay a Morgan-led bank loan for Hertz's parent, Park Ridge Corp. The loan was made in 1987.

Park Ridge, which is being merged into Hertz, is owned by Ford Motor Co., Volvo, Hertz management, and Commerzbank.

Friday's offering of junior subordinated notes was in two parts: a $150 million issue of 6.625% notes due July 15, 2000, and a $250 million issue of 7% notes due July 15, 2003. The seven-note notes were priced at 99.94 to yield 6.64% and the 10-year notes were priced at 99.88 to yield 7.02%.

In April, Morgan led an offering of $100 million of 6.5% notes for Hertz. □

CREDIT RATINGS

The rating agencies took the following actions last week:

Barnett Banks Inc.: Moody's Investors Service Inc. said it may upgrade the Jacksonville, Fla., company, citing stronger capital and asset quality. Moody's said it will review Barnett's strength and future profitability as well as its prospects for improved efficiency in light of the company's in-market acquisition of First Florida Banks.

Under review are the Baa1 senior debt grade and Baa2 subordinated debt and preferred stock ratings. The A2 long-term deposit ratings of Barnett's bank subsidiaries are also being reviewed. But their short-term deposit ratings were confirmed at Prime-1.

Chase Manhattan Corp.: Fitch Investors Service Inc. assigned a BBB-plus rating to the bank's new $150 million issue of subordinated floating-rate notes due July 15, 2003. It described the company's credit trend as improving. Duff & Phelps also rated the notes BBB-plus.

Credit Lyonnais: Standard & Poor's lowered long-term debt to A from AA-minus. Short-term debt was cut to A1 from A1-plus. S&P attributed the downgrades to the high cost of carrying nonperforming assets, the French bank's large portfolio of equity holdings in industrial companies, and a big increase in loan-loss provisions.

"The Credit Lyonnais group's significant European expansion and increase in high-yield activities in recent years renders the group more sensitive to the economic cycle at a time when the downturn in Europe itself looks worse than expected even six months ago," Standard & Poor's said.

National Westminster Bank: Fitch Investors Service gave an A-plus grade to the company's new senior medium-term notes and an A rating to subordinated medium-term notes. The agency said proceeds from the notes will fund the NationsCredit consumer finance subsidiary, whose operations and earnings base were bolstered by the recent acquisition of Chrysler First Inc. NationsBank's broad base of core retail banking was a major factor in the ratings, Fitch said.

Schroders PLC: IBCA, the British ratings agency, upgraded the bank's issuer rating to B from B/C. It attributed the upgrade to sustained profit growth over the past two years. □

Niagara Asset Corporation
Loan Sale Opportunity

STOCKS: Bank Shares Continue to Outstrip the Market

By RICHARD LAYNE

Bank shares continued to outperform the overall stock market last week, and money managers saw no sign of the rally flagging.

Bank stocks, as measured by the *American Banker* index, rose 2% in the five trading days ended last Thursday, versus a flat Dow Jones industrial average.

In the 21 trading days ended Thursday, bank stocks gained about 12%, compared with only a fractional gain for the blue-chip index.

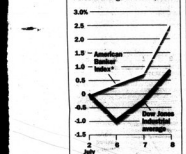
Some bank stocks gained more than 5% in the past five trading days.

Sees Confidence in Industry

"The recent rally reflects what people think the banks will earn as well as confidence in the industry," said James P. Croft, an analyst with Janus Capital Corp. in Denver.

Topping the Blue Chips

Percent change in stock prices



*Weighted average of top 225 banks as ranked by market capitalization

Source: ONE Securities

He predicted record earnings for the industry in the second quarter.

The confidence is new, money managers said. It was lack of confidence in the industry's ability to improve earnings as interest rates rise that ignited a selloff in mid-April. Bank shares fell about 15% before starting to climb again in early June.

Trading is one area where banks have proven they have power to generate earnings, and J.P. Morgan & Co. and Bankers Trust New York Corp., two banks with good track records in this area, gained last week.

Morgan's shares rose 6% in the past five trading days, to close Friday at $71.875. Bankers Trust gained 4.2%, to close at $77.

Turnaround stories, where declining nonperforming loans and foreclosed real estate can boost earnings, also did well.

Citicorp's shares continued their steady climb, rising 3.7%, to close at $31.25.

The New York bank's recent runup has caused one of its biggest Wall Street boosters to change his tune.

Francis X. Suozzo, an analyst with S. G. Warburg & Co., on Friday downgraded his long-time "buy" on the stock to "add." Mr. Suozzo noted that the stock had jumped 42% this year, versus a 13% rise for the other banks he follows.

Another big gainer in the past five trading days was Comerica Inc. Its shares rose 6.4% last week, to $31.

Index Up 10.2%

As of last Thursday's market close, the *American Banker* index is up 10.2% for the year. In the past four weeks, it has gained most of the ground lost during the selloff that began in mid-April. Bank shares for the most part remain below their 52-week highs.

Money managers and analysts attributed the recent jump in bank shares to several factors.

Investor fears of surging inflation, rising rates, and the erosion of bank profits have abated.

Equally important, while other industries, particularly those tied to consumer spending, are expecting disappointing earnings, banks are poised to report record earnings, said money managers.

Even if rates rise, many money managers said that growth in bank earnings will continue.

"I think the financials going forward look good in any scenario you want to paint," said Robert Bissell, a senior vice president and investment manager at Wells Fargo & Co.

Mr. Bissell said that for the banks he follows, a rise in short-term rates of 200 basis points would not have a material impact on earnings.

Analysts said that even though second-quarter earnings are expected to be outstanding, some banks may provide positive surprises.

Last Thursday, analysts at Merrill Lynch & Co. predicted stronger than expected second-quarter earnings at First Interstate Bancorp, Wells Fargo, Mellon Bank Corp., National City Corp., and First Union Corp. □

Huntley Holders Back Merger with Suburban

PALATINE, Ill. — Stockholders of Huntley Bancshares have voted to approve its merger into Suburban Bancorp.

The companies have received regulatory approvals and expect to complete the merger this month.

Huntley Bancshares' subsidiary, State Bank of Huntley, will become the 13th community bank in Suburban's network and bring it to $1.25 billion in assets.

AMERICAN BANKER
VOL. CLVIII NO. 132 Tuesday, July 13, 1993 158th year

Now the Worry Is that Reserves Are Too High

By DAVID SIEGEL and BILL ATKINSON

Loan-loss reserves may represent too much of a good thing at many banks.

Since 1990, banks have built up huge reserves for loan losses – in some instances equaling four times the sizes of bad loans.

Regulators, skittish after congressional criticism of the handling of the thrift crisis, ordered the heavy reserving at some banks in the face of growing real estate lending problems.

But the reserves may now need to come down after two years of strong performance by the nation's banks. If banks don't cut reserving, they may understate earnings and book value.

NEWS ANALYSIS

"I think [falling reserves] will have a huge impact on 1994 and 1995 earnings," said Thomas Hanley, banking analyst at First Boston Corp.

He said that 29 of the 35 large banks he tracks were overreserved by a total of $9.9 billion at the end of the first quarter.

At these 29 banks, net income could rise a total of $6 billion next year and in 1995 if quarterly provisions fall to bring reserve coverage of loans to 80% of nonperforming loans from 180% at March 31.

Book Value Seen Rising 6.7%

And the book value of these 29 institutions would increase an average 6.7% from the first quarter.

Some large banks may even be able to take money out of reserves in future quarters, Mr. Hanley added.

He said regulators are starting to reassess their previous insistence on heavy reserving and have asked banks to lower their reserves in the next year.

Where Reserves Are Highest

Mr. Hanley said some of the banks with the biggest surplus reserves are J.P. Morgan & Co., First American Corp., Nashville; Norwest Corp., Minneapolis; First Chicago Corp.; Fleet Financial Group, Providence, R.I.; and First Interstate Bancorp, Los Angeles.

Donald Coonley, chief national bank examiner at the Office of the Comptroller of the Currency, said examiners have been issued no new marching orders regarding loan-loss reserve levels.

Mr. Coonley acknowledged that he has received more questions lately from field examiners

Pace of Mergers Off 19% in Quarter As Prices of Bank Stocks Dipped

By GORDON MATTHEWS

Bank merger activity plunged in the second quarter in reaction to the retreat in bank stocks.

The pace of industry consolidation slipped 19% when measured by the value of announced deals.

Deals totaled only $3.3 billion, versus $4 billion in the first quarter, according to SNL Securities, Charlottesville, Va.

The tempo slowed a more dramatic 36% when gauged by aggregate assets sold, which tumbled to $26.3 billion from $41 billion in the previous quarter.

The average price paid for acquisitions dropped slightly, to 162.9% of the acquired banks' book value from 164.7% in the first quarter. However, it stayed well ahead of the average price of 139.7% of book value paid a year earlier.

The largest deal unveiled during the quarter was Banc One Corp.'s proposed $707 million acquisition of Firstier Financial Corp., Lincoln, Neb., which has $3 billion of assets.

Stock Drop Blamed

The pall over mergers and acquisitions is widely seen as a consequence of the reversal in bank stocks.

The *American Banker* index, a weighted average of 225 bank stocks, lost 2.9% during the quarter, according to SNL Securities. Some bank stocks fell more sharply than the index.

Banks finance acquisitions mainly with stock. When share prices fall, investors become concerned about earnings-per-share dilution.

That prompts caution by managers of acquiring banks and can put the brakes on dealmaking when "target banks" think they are not being offered

Community Development Plan Excludes Banks, S&Ls

By ROBERT M. GARSSON

WASHINGTON — President Clinton has scheduled a Rose Garden ceremony Thursday to unveil a community development bank plan that apparently would not provide incentives for existing financial institutions to participate.

The most recent draft of the President's legislative proposal would provide $382 million over four years, but only for institutions primarily engaged in community-development lending – a category that would exclude most banks and thrifts.

President Clinton is also expected to direct the bank and thrift regulatory agencies on Thursday to come up with a new approach to the Community Reinvestment Act stressing "performance over paperwork."

Criticism from Bankers

A number of bank groups invited to the ceremony criticized the White House plan for excluding their members from the financial incentives.

"We're very concerned that they will not work through existing commercial banks," said Kenneth L. Guenther, executive vice president of the Independent Bankers Association of America.

Mr. Guenther said his group

Five Southeast Banks Weigh In With Big Profits

By KENNETH CLINE

ATLANTA — The earnings season eased smoothly into gear on Monday as five southeastern bank companies reported record quarterly gains while a sixth had its best quarter in more than two years.

Barnett Banks Inc., the nation's 18th-largest bank company, reported a 66% second-quarter gain over the year-earlier period to $104.2 million, or 99 cents a share.

Stock Gets a Boost

Propelled by cost cutting and improved credit quality, the Florida company bettered analysts' consensus estimate by 6 cents a share, according to First Call.

In afternoon trading, Bar-

Former B of A Exec Cooper Targets A Florida Thrift; Would Oust Gray

By ROBYN MEREDITH

Thomas A. Cooper, the former BankAmerica Corp. president known for aggressive cost-cutting, is plotting his return to the banking industry by engineering a $65 million takeover of Chase Federal Savings Bank of Miami.

Likely to lose his job in the deal is Edwin J. Gray, the former Federal Home Loan Bank Board chairman, who has been Chase Federal's president and chief operating officer since 1987.

Edwin J. Gray
Could be out of a job

Blue-Collar Aspirations

Leading a group of a dozen investors, Mr. Cooper plans to convert the mutual thrift into a publicly held company and install himself as president and chief executive officer. Among those leaving along with Mr. Gray would be the current CEO, Charles L. Clements Jr., whose father founded the $1.1 billion-asset thrift in 1934.

Mr. Cooper said he wants Chase Federal to be a "blue-collar" bank, concentrating on basic deposit and loan products for people who earn less than $50,000 a year.

He hopes to complete the transaction in August, pending

NEWS *briefs*

Banc One Wins FDIC Servicing Contract

WASHINGTON — The Federal Deposit Insurance Corp. has awarded a Banc One Corp. subsidiary a three-year contract to provide commercial mortgage loan servicing for performing and subperforming mortgage loans inherited from failed banks.

About 5,000 commercial mortgage loans, with a book value of $1.7 billion, will be transferred to Banc One Management and Consulting Corp., a Dallas-based unit of the Columbus, Ohio, banking company.

Banc One Management and affiliates currently manage and service more than 15,000 assets consisting of loans and foreclosed real estate with a book value in excess of $3 billion.

A Treasury Nominee Vows to Spur Lending

WASHINGTON — Richard S. Carnell told the Senate Banking Committee on Monday that he will work to remove regulatory impediments to increased lending if confirmed as assistant Treasury secretary for financial institutions.

Appearing before the committee he once served as counsel, Mr. Carnell saluted the panel for its work in dealing with the thrift bailout and recapitalizing the Bank Insurance Fund.

"Although the job isn't finished, the progress is real: The taxpayers are safer, banks and thrifts are sounder, and the financial system is more resilient," he said.

If confirmed, Mr. Carnell said, he will work "to reduce the total cost of regulations and to remove impediments that prevent credit from flowing to creditworthy borrowers, whether those impediments involve outdated rules, inefficient practices, or invidious discrimination."

Mr. Carnell's nomination is expected to move quickly to the Senate floor. He is not expected to face any difficulty in winning confirmation.

Citicorp to Redeem $262 Million of Debt

Citicorp said it will redeem three debt issues totaling $262.3 million next month.

Most of the notes to be redeemed will be Citicorp Person-to-Person Plus guaranteed subordinated capital notes due March 1, 1998. The notes will be redeemed at par plus interest accrued to Aug. 9. The bulk of Citicorp Person-to-Person's activities were folded into Citicorp Mortgage Inc.

Citicorp is also redeeming its extendible notes due Aug. 15, 1998, at par plus accrued interest to Aug. 15, and the 5¾% convertible subordinated notes due June 30, 2000, at par plus accrued interest to Aug. 16.

Budget Office in Warning on Fannie, Freddie

WASHINGTON — The dominance of Fannie Mae and Freddie Mac in the fixed-rate mortgage market "raises some public policy concerns that this market may not be fully competitive," the Congressional Budget Office said Monday.

The office also said the two government-sponsored enterprises "could be capturing some of the benefits of their GSE status for their shareholders instead of delivering most of those benefits to mortgage borrowers."

The CBO said that during the past five years Fannie Mae, the Federal National Mortgage Association, had a 29% rate of return on equity and that Freddie Mac, the Federal Home Loan Mortgage Corp., had a 23% rate of return on equity.

"In the early 1980s, these two GSEs securitized about 20% of all newly originated conventional conforming mortgages for one- to four-family residences; by 1989, they securitized roughly 70% of the market," the CBO said.

Citing a 1992 Federal Reserve study, the CBO report said: "Some empirical evidence suggests that the GSEs may not have priced their services at fully competitive levels in the 1980s. Certainly, the firms have been able to provide high returns to their shareholders."

The briefs were compiled from staff and wire reports.

Correction

Because of erroneous information supplied by Union Bank, its discretionary trust assets were overstated in a June 30 listing of the top 100 banks by that measure. Union, majority owned by Bank of Tokyo, actually ranked 63d in the nation by discretionary trust assets late last year, with $4.13 billion.

Union's total trust assets – discretionary plus nondiscretionary – were also overstated; they actually equaled $10.8 billion, 6.8% more than a year earlier. Therefore, San Francisco-based Union should not have appeared on a list of banks with large increases in managed assets.

The tables also misstated the trend for trust assets at Bankers Trust New York Corp. Because the company had revised its 1991 total downward, to $353.0 billion, last year's total represented a 14.2% increase, not a decline.

Clinton's Development Bank Plan Lacks Incentives for Banks, Thrifts

Continued from *page 1*

won't oppose the plan, though.

"Right now, the name of the game is to try to change the administration's position," he said. After Thursday, he added, the effort will shift to Capitol Hill where lawmakers may be more sympathetic.

Invitations to Industry

The White House has invited a number of industry groups to attend Thursday's announcement, including the American Bankers Association, the IBAA, and the Savings and Community Bankers of America. Although the White House had previously scheduled other tentative dates for the announcement, industry sources said they expect this one to hold firm.

Edward L. Yingling, director of government relations for the ABA, also expressed dismay that most commercial banks would be ineligible for financial incentives. But he applauded the administration for agreeing to work through existing financial institutions, rather than try to

President Clinton
To unveil proposal Thursday

build a new network of development banks.

In his campaign, President Clinton had talked about creating a network of 100 community development banks along the lines of Chicago's South Shore Bank.

"We're very pleased that their approach is built on the existing system," said Mr. Yingling.

Some congressional aides said the development bill could move very quickly through the House. One senior aide who works on banking issues said the bill would likely be taken up by the full House Banking Committee, rather than any of the three subcommittees that have shared jurisdiction.

The Senate is a different story. Sen. Alfonse M. D'Amato, R-N.Y., has advocated an approach that would give commercial banks CRA credit for investing in a development banks. Because of Senate rules, the Democratic majority may be forced to give some consideration to Sen. D'Amato.

However, interest groups involved in community development are staunchly opposed to the idea of giving commercial banks any kind of financial incentives to participate.

"The money should go where resources are scarce, and banks have access to other resources," said Deepak Bhargava, banking lobbyist for the Association of Community Organizations for Reform Now. □

B of A Alumnus Takes Aim at Chase Federal

Continued from *page 1*

approval from the Office of Thrift Supervision and settlement of a lawsuit stemming from Chase Federal's purchase of $40 million of mortgages from General Development Corp., whose managers were convicted of fraud.

"There will be no recapitalization from TAC Bancshares if there is not a resolution of that class-action suit," said Mr. Cooper, referring to the holding company that would make the deal.

Supervisory Conversion

Chase Federal agreed to the buyout as a solution for its capital deficiency. In what is known as a supervisory conversion, TAC Bancshares will recapitalize the thrift in exchange for OTS' rice of Thrift Supervision permission to take it public without the customary participation of its depositors.

A supervisory conversion, which can involve dismissal of current management, is usually allowed when a thrift's core capital is less than 4% of assets, risk-based capital is less than 8%, and when it might otherwise face seizure. Chase's capital levels are currently 2.67% and 7.6% and it lost $877,000 in the quarter ended June 30.

Mr. Cooper's group has agreed to raise core capital to 4% and risk-based capital to 8% – the estimated $65 million infusion.

Mr. Clements, 64, said he is pleased to have found new capital but has "sweet and sour" feelings about retiring after 40 years.

Mr. Gray declined to comment. As the nation's top thrift regulator from 1983 to 1987, he became embroiled in controversy over the industry's burgeoning crisis.

Mr. Cooper called the 17-branch Chase Federal "a bread-and-butter, straightforward, blue-collar banking institution. That's exactly the type of business we like to focus on." It will eschew investment management, commercial lending, and other services that will tend to raise operating costs, Mr. Cooper said.

Former Minister

Mr. Cooper, 56, a former Methodist minister, will be adding to a resume that includes the presidencies of BankAmerica (1986-87), Invest Financial Corp. (1987-89), and Goldome Federal Savings Bank from 1989 until its seizure in 1991.

He has since been involved in consulting and investment management.

He plans to bring to Chase Federal Richard Hessinger, former Goldome treasurer, Lawrence Trapp, who ran Goldome's investment portfolio, and Donald Baker, formerly of Bank of New England Corp. □

Correction

Because of erroneous information supplied by Union Bank, its discretionary trust assets were overstated in a June 30 listing of the top 100 banks by that measure. Union, majority owned by Bank of Tokyo, actually ranked 63d in the nation by discretionary trust assets late last year, with $4.13 billion.

Union's total trust assets – discretionary plus nondiscretionary – were also overstated; they actually equaled $10.8 billion, 6.8% more than a year earlier. Therefore, San Francisco-based Union should not have appeared on a list of banks with large increases in managed assets.

The tables also misstated the trend for trust assets at Bankers Trust New York Corp. Because the company had revised its 1991 total downward, to $353.0 billion, last year's total represented a 14.2% increase, not a decline.

NCR Clinches Deals with Signet and CoreStates

By MATT BARTHEL

Signet Banking Corp. and CoreStates Financial Corp. have each struck million-dollar check processing agreements with NCR Corp.

Signet, based in Richmond, sold a check processing business consisting of 35 clients to NCR for $1.7 million.

A CoreStates' unit, CashFlex, based in Langhorne, Pa., contracted Monday to buy a $1.5 million check processing system equipped with imaging capabilities for use in its remittance processing services business. Remittance processing is a cash management service that involves the handling of payments made to companies.

Double Threat

The deals, while unrelated, are noteworthy steps for NCR, an American Telephone and Telegraph Co. subsidiary based in Dayton, Ohio.

It is one of a handful of vendors, including International Business Machines Corp. and Unisys Corp., that both manufacture check processing equipment and provide related services to banks.

The Signet deal is significant, NCR officials said, because it represents the first time that a nonbank data processor and a financial institution will jointly market each other's services.

Virginia, Maryland Targeted

According to the Signet/NCR agreement slated to be announced today, Signet will help NCR promote and sell item processing and data preservation services to financial institutions in Virginia and Maryland. NCR's sales force will then market Signet's other correspondent processing services.

The item processing business picked up by NCR will be moved to one of the company's check processing centers in Columbia, Md. NCR currently has six facilities dedicated to check processing in the United States.

Big Role as Correspondent

The 35 former Signet customers currently generate about 355,000 checks per month.

Signet sold NCR a check-processing business with 35 clients. CoreStates is buying a check system.

"Signet's strength lies in its array of correspondent services, which include all types of cash management products," said Ed Nolley, senior vice president. "NCR brings industry leadership in item processing, and combining these strengths enables us to provide comprehensive services to our customers."

While the 35 bank clients are moving to NCR, Signet will continue to run its own check processing operation in-house, using Unisys systems.

Meanwhile, CashFlex believes the installation of new image-capable check processing equipment will deliver a wide range of benefits to its remittance processing customers. These benefits include faster deposit of funds and quicker responses to customer inquiries. □

Continental Joins Ecchо Clearing Group

Continental Bank Corp. has joined a nationwide organization designed to speed check clearing.

The organization, called Ecchо, for Electronic Check Clearing House Organization, was formed in 1990 by 13 large banks, partly in response to federal regulations requiring banks to speed up the availability of deposited checks.

Continental is the 38th member of the group. Members transmit check payment data by computer to other banks before the paper item is delivered. That enables them to receive payment sooner. Large processors can also increase fee income by offering other banks settlement services that bypass those of the Federal Reserve System.

Lenders Face Double Threat From Lead-Paint Litigation

Already dubbed "asbestos II" by lawyers for some plaintiffs, litigation over injuries caused by lead paint is growing rapidly. Residential landlords are the prime targets, but mortgage lenders are close behind.

To them, this litigation is a double threat. The expense will cause many landlords to default on their mortgage loans. And lenders themselves may be sued after their borrowers default.

Lead paint has not been used in residences since the late 1970s, but it remains in millions of public and private housing units. When ingested by young children, mainly by eating chips of peeling paint, lead can cause permanent injuries, including loss of intelligence.

Several million children, most from lower-income families, are thought to have lead levels in the blood higher than the Centers for Disease Control think safe. Hundreds of these children have sued their landlords; thousands more probably will.

What Constitutes Liability

In most states a landlord is liable if he knew or should have known there was a lead-paint hazard in the building yet did nothing about it, and if the child was injured by ingesting the lead.

In practice, landlords have lost most of the cases tried against them. A few have persuaded the jury that the child was not really injured by lead paint, but once the child proves he was injured, he is usually able to prove the landlord had reason to know there was dangerous lead paint on his property.

And the verdicts against landlords have not been small. They average over $500,000 per child, with out-of-court settlements in the same range.

Landlords might fare better with some fellow defendants in these cases, but in most cases they won't have any. Rarely can a landlord identify the specific company that made the lead paint used in its property.

Going It Alone

So far courts have rejected "market share" or "enterprise" theories of liability that would allow a landlord to sue several paint companies without proving whose paint was used on its walls. Some landlords have tried to sue the parents of the injured child for their own negligence in letting the child eat paint chips. Some states permit this, but most do not. So most landlords will face these claims alone.

Even the landlords' own insurers may soon be out of the picture. Most landlords carry liability insurance to protect them from claims for "bodily injury."

SEVERAL MILLION *children are thought to have more lead in their blood than is deemed safe. Hundreds of these children have sued their landlords; thousands more probably will.*

But these policies also exclude coverage for "pollution." Many insurers argue that lead is a pollutant and lead poisoning is pollution, so there is no coverage under these policies.

The highest court of Massachusetts has rejected the insurers' argument, but a lower court in New York has just accepted it. In any case, many insurers are expressly excluding lead-paint cases from new policies, even if lead poisoning is not "pollution" under the old ones.

No Choice but to Default

Especially for landlords without insurance, the cost of defending and paying these claims will be prohibitive, causing many of them to give up their properties and default on their mortgages.

But where a landlord's exposure may end with default, his lender's exposure is just beginning. And the lender's exposure may not be for just the defaulted loan, nor for any lead poisoning that occurs after the default, but for the very claim that drove the landlord to default in the first place.

A recent case in New York illustrates this risk.

The child plaintiff began to ingest paint chips when a leak in the roof of the building caused peeling of the paint in her family's top-floor apartment. Complaints to the landlord had no effect. Four months later the City of New York took title to the building under a tax foreclosure. The child continued to ingest the paint chips, and the tenant continued to complain, now to the city.

Costly Delay

Three months later the city de-leaded the apartment. The jury awarded damages of $1,700,000, for which the landlord was 80% responsible and the city 20%. The landlord was insolvent, of course, so under the rule of "joint and several" liability, the city had to pay the entire verdict.

A foreclosing lender will likely be in the same spot used because it did not completely de-lead a residence immediately upon default, and forced to pay the insolvent landlord's much larger share of the damages. □

Superfund Liability Rulings Give Lenders Cause for Optimism

Several recent court decisions provide cause for optimism in the high-stakes area of environmental liability. They uphold Environmental Protection Agency regulations adopted to protect secured creditors from liability under the Comprehensive Environmental Response, Compensation, and Liability Act, or Superfund law.

In a significant 1992 decision, a federal district court in Minnesota declared that the EPA's lender liability rules (published April 29, 1992) were consistent with language exempting from the law's broad "owner and operator" liability provisions persons who, without participating in the management of a business, hold an indicia of ownership primarily to protect a security interest.

'Participation' Question

The case, Ashland Oil Inc. v. Sanford Products Corp. et al., involved a lawsuit filed by Ashland Oil to recover environmental response costs from two former tenants engaged in wood preserving operations and their lender.

In early 1983, the lender, Industry Financial Corp., foreclosed on and took title to the assets and equipment of its bankrupt borrower, including drums of hazardous substances which allegedly were leaking.

THE DECISIONS *uphold Environmental Protection Agency regulations adopted to protect secured creditors from liability.*

It was undisputed that Industry Financial "owned" and controlled the assets and equipment, including the leaking drums, for approximately one month before selling them to a third party. Industry Financial never foreclosed on or acquired title to the real estate.

Ashland asserted that Industry Financial was an "owner and operator" for purposes of the law's liability provisions based on its one-month "ownership" of the leaking drums and its "participation in the management" of both the initial borrower's and third-party purchaser's business.

Claim Rejected

In reviewing Ashland's claims, the court first upheld EPA's lender liability regulations as a reasonable interpretation of the secured creditor exception to Superfund law liability, finding that the regulations were entitled to deference as an "authoritative interpretation and application of" the law.

The court then rejected Ash-

Rulings Give Lenders Cause for Optimism

Continued from page 4

land's arguments that Industry Financial had improperly participated in the management of its borrowers, or otherwise "arranged" for the disposal of the hazardous substances by acquiring title to, and then selling, the leaking drums.

In the second case, Kelley et al. v. Tiscornia et al. and Manufacturers National Bank of Detroit, the state of Michigan sued the former owners of Auto Specialties Manufacturing Co. and its lender, Manufacturers National, for contamination at two sites owned and operated by Auto Specialties.

The state sought to hold the bank liable as an owner and operator of the two sites based on the bank's alleged "participation in the management" of Auto Specialties during the time of contamination.

Significantly, the state never alleged bank participation in Auto Specialties' day-to-day management of environmental compliance matters.

WHILE THE RECENT *cases provide some comfort, EPA lender liability regulations still face direct challenges.*

The court found that the bank's close monitoring of Auto Specialties' activities, "encouraging" of Auto Specialties to follow a consolidation plan, and imposing conditions on continued financing (including the bank's instituting new management) were activities well within the EPA's lender liability rule protections.

Insufficient Link Seen

In a related development, a federal district court judge in Massachusetts issued a bench ruling in November 1992 that there was insufficient evidence to link a bank to contamination at a former solvent reclamation site operated by a defaulting borrower.

In Grantors of the Silresim Site Trust v. State Street Bank and Trust Co., a private cost-recovery action was filed by the customers of the former solvent recovery business against a bank which held first, second, and third mortgages on the property.

The customers sought recovery from the bank as an "owner and operator" of the site even though the bank never foreclosed on its security interests. Indeed, it was only the bank's failure to take action to put the site operator out of business through foreclosure which caused the plaintiffs claimed gave rise to the bank's liability.

The customers claimed that the bank allowed the operator to continue in business for years, even though the site operator was in default under the loan agreements.

According to the customers, because the bank suspected that site contamination rendered the bank's security interest in the property worthless, the bank put the business "on . . . artificial life support," occasionally advancing additional cash to the site operator to allow it to accept additional drums of solvent, in order to obtain additional revenues for payment on the loans.

These actions, according to the customers, evidenced a "participation in the management" of the borrower's business, thus subjecting the bank to the full range of liability.

Without, apparently, passing on the validity of EPA's new lender liability regulations, the court dismissed the customers' complaint, finding that the bank's actions did not amount to "participation in the management" of the borrower.

Another Reprieve

A Maine lender also received a reprieve from Superfund law "owner and operator" liability under a February 1993 ruling by the United States Court of Appeals for the First Circuit.

In Waterville Industries Inc. v. Maine Finance Authority, the appeals court reversed a district court holding that the Finance Authority of Maine was a "past owner" of contaminated property (at the time the property became contaminated) and, thus, liable for response costs assessed against the current property owner by the EPA.

In so doing, the appeals court determined that the finance authority, a mortgage guarantor which in bailing out a defaulting mortgagor had accepted a deed in lieu of foreclosure, was a nominal owner merely acting to protect its security interest.

The appeals court gave weight to two particular factors. First, the fact that the finance authority had, at the time it accepted the deed in lieu, immediately leased the facility back to the original mortgagor and gave the mortgagor a first option to purchase the property back for $1; and second, after the former mortgagor filed for bankruptcy and discontinued operations, the finance authority had taken prompt action to sell the property to recoup its loan (within six months).

Breathing Room

While these decisions should provide some comfort to lenders, the EPA lender liability regulations still face direct challenges in other jurisdictions.

To be sure, the area of lender liability still has its pitfalls, and the margin of profit on most commercial loans generally does not reflect the increased risk of suit lenders face when accepting security in sites with known or potential environmental problems.

These recent court decisions provide some room for optimism for lenders holding security interests in companies which face a high risk of environmental liability. □

Shawmut, Bank of Boston Gear Up for Acquisitions

By YVETTE D. KANTROW

From the Regions

TWO OF NEW ENGLAND'S largest bank companies appointed senior merger-and-acquisition strategists in the past two weeks, testifying to the inevitable consolidation that is coming to the struggling region's bank universe.

Shawmut National Corp. last week appointed John R. Berger, an executive vice president, to a new position as director of its merger and acquisition team. A few days earlier, Bank of Boston transferred James J. Pearl, who was chairman and chief executive of its Connecticut bank subsidiary, to sit full time on its four-person acquisition committee.

Bank of Boston and Shawmut – along with Providence, R.I.-based Fleet Financial Group – are preparing to feast on the scores of small and medium-size institutions that have been crippled by the New England economy.

For several years, Fleet has had an open field in New England as its chief competitors were trying to unravel their own problems. But the new M&A appointments at Bank of Boston and Shawmut "obviously show that they have willed their way back to health," said J. Christopher Flowers, a partner who runs the banking M&A practice at Goldman, Sachs & Co.

He and the bankers themselves said that the next few years will be crucial in determining the reach of the larger banks in their home region.

"For Bank of Boston, mergers and acquisitions is a line of business," said Peter Manning, chief financial officer of the $35 billion-asset company.

Bank of Boston, which formed its merger group a year ago, recently bought Hartford's Society for Savings Bancorp and has approval to buy Multibank Financial Corp. in Dedham, Mass. Mr. Manning said his company continues to search for banks, thrifts, trust companies, consumer finance companies, and loan portfolios inside and outside New England.

Northeastern Consolidation

Some major acquisitions by New England banks since the beginning of 1992

Acquirer	Seller	Assets in billions
Bank of Boston	Society for Savings	$2.4
	Multibank*	$2.5
Shawmut National	New Dartmouth Bank*	$1.7
Citizens Financial	Boston Five Bancorp*	$1.8
	New England Savings Bank*	$0.9

*Pending

Honing Takeover Strategy

At Shawmut, Mr. Berger's appointment is viewed as significant evidence of the company's desire to fine-tune its acquisition strategy. Mr. Berger, a 20-year veteran of the bank, most recently headed bank investments and funds management.

Shawmut executives have said that over the next two to five years, consolidation in the Boston area in particular and New England in general, is bound to accelerate. The company, which has $25.3 billion of assets, has a deal pending to enter New Hampshire by purchasing New Dartmouth Bank.

Fleet, which emerged as New England's largest banking company when it swallowed the failed Bank of New England in 1991, has had a 10-member merger and acquisition team in place since 1982.

Barnett, SouthTrust, Amsouth, 1st Virginia, And Synovus Post Record 2d-Quarter Gains

Continued from page 1

nett's stock rose 62.5 cents a share to $50.375.

Several smaller companies also reported strong quarters as credit costs and overhead shrank, compensating for commercial loan demand that remained sluggish.

SouthTrust Corp., the Birmingham, Ala.-based company with $13.7 billion of assets, said net income soared 36% to $37.2 million during the second quarter. Its Birmingham neighbor, $11.1 billion-asset Amsouth Bancorp., earned $35 million, up 41% from the second quarter of 1992.

First Virginia Banks Inc., a Falls Church-based company with $6.9 billion of assets, earned $29.2 million in the quarter, up 22% from 12 months earlier.

18% Rise for Synovus

Synovus Financial Corp., a Columbus, Ga.-based community-bank holding company with $5.4 billion of assets, reported an 18% jump to $17.9 million.

In New Orleans, Hibernia Corp. said it restored its earnings to a level last seen in 1990. The company, which has $4.7 billion of assets, reported a profit of $11.5 million, up from a slim $587,000 a year earlier.

Shares of SouthTrust rose 12.5 cents to$22.125, while Amsouth lost 87.5 cents to $35.875 a share.

First Virginia jumped 50 cents to $40 a share, while Synovus gained 12.5 cents to $18.625 a share in late afternoon trading.

BARNETT BANKS INC.

The Jacksonville, Fla.-based company has been preaching an expense-control story, and more than fulfilled its promise. Noninterest expense fell 9% to $378.5 million, from $418 million in last year's second quarter, mostly due to staff reductions and fewer writedowns of foreclosed commercial real estate.

Cost cutting and better credit quality helped Barnett.

including 331 positions since March. It now has 19,006 employees.

Barnett also cut the two banks' branch system to 633 outposts from 742 at the time of merger.

The company's credit quality also continues to rebound. Barnett's loan-loss provision of $34.5 million was 20% lower than the $43.2 million set-aside in the first quarter, while net chargeoffs dropped 32% from the first quarter, to $34.5 million.

Prices Slashed

An aggressive markdown of nonperforming real estate allowed Barnett to sell $48 million of foreclosed properties during the second quarter, up from sales of $27 million during the first quarter.

Nonperforming assets fell 13% to $684 million during the second quarter.

Net interest and noninterest income remained healthy. Barnett's net yield on earning assets rose to 5.10% from 5.02% a year earlier. Noninterest income inched up 4% to $153 million.

Loans and deposits, however, continued to erode. Loans fell 3% to $26.2 billion from $27 billion in the year-ago quarter, while deposits fell a seasonal 2% to $32.4 billion, reflecting the summertime migration of many Florida residents to their homes in the north.

Barnett is pursuing a a "deliberate strategy" of repricing commercial credits and deemphasizing commercial realty lending, said the company's controller, Pat McCann, in explaining the loan drop.

Small Business, Consumers

He added that Barnett's strategy is to focus more on higher-margin small-business and consumer loans.

"We're focusing on trying to profitably price the relationships that we already have and that we're entering into," Mr. McCann said.

Barnett said its small-business lending initiative, begun last year, produced $80 million in loans in the first half.

But it has not been enough to replace runoff elsewhere in the commercial portfolio, Mr. McCann said.

"Corporate customers are either paying down debt or able to find cheaper sources of funding," Mr. McCann said. ☐

Northeast Loses $9.4 Million; to Shed Realty

Northeast Federal Corp., parent of one of New England's biggest thrifts, said Monday that it lost $9.4 million in the second quarter as a result of an $18 million provision for future loan losses and for writeoffs related to foreclosed real estate that it plans to sell.

The Hartford, Conn.-based company, whose Northeast Savings subsidiary has 53 branches and several nationwide mortgage lending offices, also said that it planned to file a rights offering proposal that could raise up to $60 million.

Big Property Sale

The quarterly loss compares with a gain of $158,000, or 21 cents a share, for the second quarter of 1992.

Although Northeast meets regulatory capital requirements, it has struggled with loan problems.

The thrift said it plans to sell up to half of its foreclosed residential real estate soon in a single transaction. A company spokesman said about $30 million to $40 million of foreclosed property – which already has been marked down about 10% – is to be sold at about 45% of its carrying value.

In a prepared statement, Northeast chairman and chief executive George Rutle said the "accelerated disposition of nonearning assets and a capital infusion through the rights offering should dramatically speed up the return to profitability."

The company, which has $4 billion of assets, took a $6 million provision during the quarter to facilitate the bulk sale.

Shares Drop

Northeast set aside $12 million for potential loan losses during the second quarter versus $2.5 million a year earlier.

Its total allowance on June 30 was $28 million, up from $18 million a year earlier.

Its total nonperforming assets fell 9% from the end of the first quarter to $178.3 million.

In early afternoon trading on the New York Stock Exchange, Northeast shares had lost 37.5 cents, changing hands at $4.375 a share.

— Jed Horowitz

Harris Bankcorp's Incoming Chief Aims to Triple Earnings

Alan G. McNally will succeed B. Kenneth West as chief executive of Harris Bankcorp, the Chicago-based subsidiary of Bank of Montreal Corp., in September.

A vice chairman of Bank of Montreal, Mr. McNally, 47, holds an undergraduate degree from Cornell University and an MBA from York University. The native of Quebec City also is chairman of MasterCard International Inc.

Chicago bureau chief Steve Klinkerman recently interviewed Mr. McNally about his new assignment.

Over a decade, we want to build a bank with annual earnings on the order of $300 million, versus $100 million today. That entails tripling the distribution system in Chicago.

Alan G. McNally
Outlines growth plans

Q.: What is your mandate?

McNALLY: The objective is to build a bigger asset. Over a decade, we want to build a bank with annual earnings on the order of $300 million, versus $100 million today.

That entails tripling the distribution system in Chicago, and it implies investment on the order of $600 million or $700 million.

Priority No. 1 is greater Chicago, but we will be looking more broadly in the Midwest as we evolve.

Q&A

Q.: Are major acquisitions in the offing?

McNALLY: Nothing dramatic is in the cards. It is a matter of executing a set of marketing priorities and, a year at a time, expanding the distribution system through small acquisitions and de novos.

Q.: What is your analysis of Harris as it stands?

McNALLY: I see a bank that has strong capital and liquidity – and a parent that stands ready to invest further in it – but has lagged in the-pack productivity, profitability, and asset quality.

Growth in comparison with peers has not been strong. And, in fact, it is this growth that is the missing variable.

Q.: What opportunities do you perceive?

McNALLY: Retail banking and small business lending are two prime opportunities in this market – which goes back to the need for a larger branch network. But we also want to expand the existing strong businesses in the portfolio – corporate banking, foreign exchange, cash management, corporate and institutional trust, and personal banking, trust, and asset management.

Q.: Is there any one key to making progress on so many fronts?

McNALLY: One thing I value enormously is marketing, using the full range of elements in the marketing mix to achieve differentiation and competitive advantage – from product, price, and promotion to market segmentation, distribution, teamwork, and after-sales service.

Q.: You obviously are going to need quite a bit of support from the more than 5,000 employees of the bank. Could you talk a bit about your management style and how you hope to rally the troops?

McNALLY: The most important characteristic of success and leadership is teamwork, and I believe in it absolutely.

Serving customers well obviously is a prerequisite to success, and the key to outdoing the competition is having a team of skilled, trained, motivated, committed employees. You can't have customer satisfaction without employee satisfaction.

It also is terribly important to have strong, clear goals. Goal orientation implies a commitment to results, and it also implies the need for a strong commitment to measurement.

Q.: Coming to Harris marks a major inflection point not only for the bank, but for your career. What are your feelings about the upcoming move to Chicago from Canada?

McNALLY: I've been dealt a wonderful deck. This is a chance to be at the top of the list in terms of the flow of reinvestment monies.

I have a clear understanding of how to access the experience, expertise, and resources required to facilitate and support Harris in its evolution into new businesses – and the bank has a fine complement of executives.

There is so much to be excited about that I am simply that: excited. ☐

New Dartmouth Sale May Alter Landscape In New Hampshire

By PHIL ZAHODAKIN

Now that Robert P. Keller is selling New Dartmouth Bank, which he built out of S&L failures in and around Manchester, N.H., a shadow has fallen over the state's small banks.

Back on Oct. 10, 1991 – when Mr. Keller unveiled his deal to establish New Dartmouth out of three savings banks – seven of the state's banks were shut; 23 others eventually would disappear in consolidations.

That leaves 58 banks, almost all of them small, in the state of New Hampshire.

Selling to Shawmut

Since the failures, New Hampshire banking has regained a measure of respect – thanks, in part, to the salvage effort led by Mr. Keller.

But his agreement to sell $1.7 billion-asset New Dartmouth – the state's fourth largest bank – to superregional Shawmut National Corp. might mean a new round of consolidations.

"New Hampshire is rapidly heading for the oligopoly structure you see elsewhere in the country, where you have four entities in control of the market," said Ed Furash, president of Furash & Co., Washington.

The other three players in a four-bank monopoly would be the $963 million-asset Bank of New Hampshire, $1.7 billion-asset Fleet Bank New Hampshire, and $3.4 billion-asset First New Hampshire.

Community Banks Strong

According to Sheshunoff Information Services Inc. data for the fourth quarter of 1992, First New Hampshire held 19.1% of all deposits at the state's banks, thrifts, and credit unions; New Dartmouth, 10.2%; Fleet, 9.6%, and Bank of New Hampshire, 5.9%. Community banks as a group held 46.5% of the deposits.

Spokesman Robert Guenther says that to establish its identity, Shawmut will, among other things, promote a small-business lending operation unveiled in April.

"We'll also offer trust department services and commercial lending, which New Dartmouth wasn't offering."

Wariness of Big Banks

However "banks are losing their share of the financial services market, and the first step in surviving is ensuring depth in the share you have – and taking over banks in the tough initial period helps you deepen your share of wallets and households," Mr. Furash says.

Shawmut might also have to surmountt a wariness of big banks based largely on the failures of 1991.

But Doug O'Brien, president and chief executive of First New Hampshire, views Shawmut's arrival as an opportunity. "Even though we have theBank of Ireland behind us, we'll be seen even more as the hometown guys. We're an amalgamation of 24 banks, and the branches make the lending decisions.

When Shawmut does arrive, which probably will be late in the third quarter or early in the fourth, "we'll have locally oriented TV, print, and radio marketing ready to run," Mr. O'Brien adds.

Litany of Failures

High profile ads notwithstanding, the rate of deposit growth lately has been strongest among the state's small banks, according to Jerry Little, president of the New Hampshire Bankers Association.

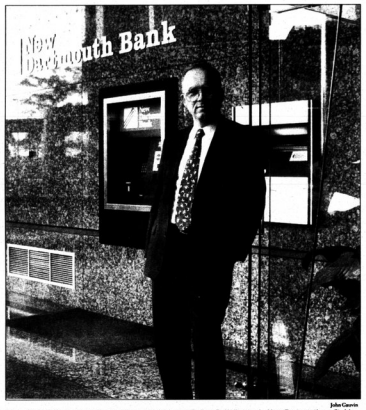
Mr. Little says it's too early to tell if this is a trend. But the litany of failures on Oct. 10, 1991, showed that most of the state's largest institutions were in a shambles.

The failed institutions, with assets as of December 1990: $950 million-asset Dartmouth Bank; $636 million-asset Numerica Savings FSB; $1 billion New Hampshire Savings Bank; $985 million Amoskeag Bank; $847 million BankEast; $441 billion Nashua Trust Co.; and $118 million Bank Meridian.

Dartmouth, for one, had been grossly mismanaged, says Mr. Keller, who had signed on as president – at the bank's urgent request – at the end of 1989.

Before taking over, he served as chief operating officer at American Federal Bank, a resolution bank in Texas made up of 12 failed thrifts. It didn't take him long to determine that his new bank was headed for the same fate as the Texas thrifts.

"Dartmouth had been making commercial real estate loans like they were going out of style, and the assets were turning bad," Mr. Keller said.



John Gauvin

SALVAGE JOB: By cleaning up a "deplorable" mess, Robert P. Keller made New Dartmouth profitable.

He eventually proposed a deal that regulators had never before allowed – merging a group of its affiliated, failing banks and starting a new one with public guarantees and public and private investment.

"We told the FDIC that a combination makes sense, and they said, 'No, we've never done it that way.'

FDIC Was Won Over

"Later on, they said, 'A combination makes sense. Two would be nice, three would be better.'"

Given a green light, Mr. Keller, and investment bankers at Kidder, Peabody & Co. started pitching a deal that would allow the newly established institution to "put" to the Federal Deposit Insurance Corp. any failing assets for up to three years. That, and an airtight business plan, enabled the team to raise $41 million.

"The guarantee was very important, but we wouldn't have persuaded anyone if we didn't have a sophisticated business plan," Mr. Keller said.

"Dennis Ballieu, our CFO, developed a series of computer models for every eventuality. Whenever we presented our plan, people would ask, 'What if interest rates did this, at this point in time?' We'd just pull the relevant model out of a briefcase," Mr. Keller said.

With the $41 million raised by the team, and the $37 million

Continued from page 8

kicked in by the FDIC, Mr. Keller bought the assets of New Hampshire Savings, Dartmouth, and Numerica and reopened the banks as New Dartmouth on Oct. 11, 1991.

His methods have yielded "plain vanilla" bank returning 1.27% on assets. But he also has drawn a number of criticisms, with the most serious being a Community Reinvestment Act rating – "needs to improve" – which was issued in March.

To some, like New Hampshire Gov. Stephen Merrill, a Republican, the rating was proof positive that New Dartmouth was founded solely for a "flip."

First Things First

Mr. Keller, a soft-spoken, nonsense individual, bristles at the allegation.

"I think CRA is important – but, when you're on your way to put out a fire, you don't stop to help an elderly person across the street. You take care of the business at hand."

The first "fire" to put out was "the deplorable state of recordkeeping at the three banks," Mr. Keller said. "So we had to clean up, rebuild, and merge the back offices before we put lending in top gear."

Mr. Keller adds, "We identified 72 community groups that we planned to work with, and we had started working with 26 of them at the time of our CRA exam. We're now in touch with all 72 groups, and we've got two full-time CRA staffers."

The sale to Shawmut could mean a new round of consolidations.

He also notes that New Dartmouth bought back from the FDIC about five hundred loans "because we knew the businessmen involved were good people, and our workout committee helped some of them. Regulators. Isn't that community reinvestment?"

Shawmut, which has a "satisfactory" CRA rating, is being investigated by the Justice Department and Federal Trade Commission for alleged lending bias in 1990.

John Taylor, who heads the Washington-based National Community Reinvestment Coalition, says "allowing the New Dartmouth deal to go through when New Dartmouth has a poor CRA rating, and before the Justice and FTC investigations are completed, would show a lack of seriousness about the Community Reinvestment Act."

Mr. Guenther said Shawmut "is committed to improving New Dartmouth's rating, and making [its own] rating 'outstanding.'"

Assailed for Slashing Staff

Mr. Keller also has been assailed for slashing staff at the merged bank from 1,100 down to its present 605. But he is "not a believer in all the bureaucracy I see at banks.

"When I got here," Mr. Keller adds, "there were five tiers of management between the branch managers and the CEO. Now there's one."

In fact, Dartmouth's staffing levels are "par, or a bit over par," says Bob Warren, a Ferguson & Co. analyst. "They've got 0.33 employees for every billion in assets, and their peer group works out to 0.32."

Mr. Keller also drew fire for repricing deposits and renegotiating or breaking leases, but those activities are allowed by the' Financial Institutions Reform, Recovery, and Enforcement Act of 1989, notes FDIC spokesman David Barr.

Growing Rapidly of Late

Repricing the deposits "chased out a lot of hot money," says Mr. Keller, pointing out that the merged bank started out with $2.2 billion in assets.

But the bank lately has enjoyed rapid growth. "We did $31 million in lending in April, and $35 million in May.

The rate of deposit growth lately has been strongest among the state's small banks.

"We're now the No. 1 lender in the state's Capital Access Program (which offers state lending guarantees), the No. 2 Small Business Administration lender, and the No. 1 student lender," Mr. Keller said.

Ahead of Schedule

Mr. Keller said the implementation of New Dartmouth's three-year business plan ran well ahead of schedule, largely because of the drop in costs for deposits. It was planned that, at the end of the three-year period, the bank would affiliate with a larger institution, Mr. Keller said.

With the acceptance of Shawmut's offer, that point was reached in just 18 months, and the price offered by Shawmut – $140 million, or 187% of book value – represents a 310% profit for the investors.

"You would have made more than that if you had just bought Shawmut or Bank of Boston stock [in 1991]."

House Up for Sale

He adds, "The FDIC is earning 7.2% on the preferred New Dartmouth stock it holds."

For Mr. Keller, who spent most of his 28-year banking career at Indian Head, now Fleet Bank New Hampshire, the future is uncertain. "I've got two years left on my contract, that's all I know."

Mr. Keller's house on Sunapee Lake is up for sale because, he says, he is tiring of the commute to Manchester. Clearly, however, working deals, and making deals, and cleaning up troubled banks, are his favorite pursuits.

For Shawmut, the future also holds uncertainties.

Manchester, which once had the world's largest textile industry, is showing signs of recovery – especially with the many small businesses leasing space in the mills.

But the region still is depressed – and Gov. Merrill says he will be watching to make sure, as his spokesman Jim Rivers put it, "that Shawmut isn't coming here just to take our deposits."

Divining the future is not all that hard when you have

THE REDEMPTION REPORT

Calls and prerefunded bonds are scheduled to drain the yields out of portfolios at a faster and faster pace in the third quarter. With ***The Bond Buyer Redemption Report****, you can anticipate redemptions well ahead of the actual events. If you want to know when your bonds will be called away, this report has the answer.*

We published the first such book in history for the first quarter of 1993. Buyers received instant access to the entire universe of called and prerefunded bonds in one volume.

And now you can get the third-quarter volume, a 916-tome chock full of information on which, how much, and when. Here's a sample listing:

AK ANCHORAGE ALASKA TEL REV
TEL REV BDS
Series: 1983 *Sale Date: 08/24/83*
Total Amount Redeemed : $8,465,000.00

Banks Looking to Flat-Fee 'Wrap' Accounts

By KAREN TALLEY

The wrap account, a popular money-management product at brokerage houses, is starting to find its way into banks' investment arsenals.

Chase Manhattan Corp. is steadily building its wrap business, targeting upscale executives and professionals. And Chemical Banking Corp. is preparing to come on line with a wrap product. Other banks, meanwhile, are believed to be eyeing the market closely.

Wrap accounts take their name from the fact that charges for investment advice, money management, and trades are all "wrapped" together in a flat fee. The package appeals to investors who prefer predictable costs to fees that vary with trading volume.

Recommends Money Managers

In the Chase program, believed to be the the first at a commercial bank, the consumer pays 3% annually on assets under management.

Chase itself does not manage the investments. Instead, it recommends any of 16 money management firms and shares the fees. Chase would not specify its portion of the fees, but it clearly likes the product.

"There are profits to be made, and we're bringing another dimension to the Chase organization," said Barry Westerland, chief administrative officer of Chase Manhattan Investment Services, the unit offering wraps.

Wrap providers like Chase say these products make professional money management available to more investors. That's because in return for the volume wrap providers can generate, money management firms often agree to reduce investment minimums.

Minimum Investment $100,000

Still, the price of entry isn't cheap. Chase, for example, requires a minimum investment of $100,000 per customer.

Chase has been slowly building its wrap program for the last three years.

The bank had over 400 account holders and $125 million under management at the end of April, according to Cerulli Associates, a Boston-based consulting firm.

This makes Chase a flea on the back of such elephants as Shearson Lehman Brothers, which has over $20 billion in wrap account assets.

Stepping It Up

But Chase is stepping up its activity through its investment services division, which offers wrap products and other financial services to upper income professionals and entrepreneurs.

The division operates 14 retail offices, including a recently-opened office in the heart of Manhattan. Two suburban centers – on Long Island and in White Plains – are to open later this year.

Chase recognizes that the centers serve a strategic role. In part, they act as a safety net for middle-to-upper-income customers that might be missed by Chase's other investment programs.

Others Likely to Follow

For lower-end retail customers, Chase offers mutual funds and annuities through an in-branch program with third party marketer GNA Corp.

Chase also has private banking and trust services for very high-end customers.

Exactly how many other banks will jump into the wraps market is unclear. But Chemical confirms that it is preparing a product.

According to Cerulli Associates, Banc One Corp. also is planning one. Officials at the Columbus, Ohio-based company declined to comment.

Experts say it's just a matter of time before other financial institutions follow suit.

The growing interest in the wrap business may also spur regulators to move on measures that would more closely monitor all wrap programs, said Eli Neusner of Cerulli Associates.

"There are a number of gray areas in terms of performance measurements and accountability when it comes to these products," Mr. Neusner said. □

Eli Neusner
"A number of gray areas"

Courts Need to Resolve Right to Sell Insurance

By DAVID W. RODERER
Partner
Winston & Strawn, New York

Viewpoint

THE U.S. Supreme Court's recent decision to reverse the U.S. Court of Appeals for the District of Columbia regarding the statutory authority for national banks to sell insurance in small towns hit much yet undone.

In a unanimous 24-page opinion penned by Justice Souter in U.S. National Bank of Oregon v. Independent Insurance Agents of America, the court reached back over 75 years to "repunctuate" a 1916 act of Congress so as to preserve that provision, commonly known as Section 92, in the federal statutes.

Section 92, among other things, authorizes national banks located in communities with populations of less than 5,000 to act as agents for insurance companies.

Enacted in 1916, the provision, formerly codified as Section 92 of the Title 12 of the United States Code, has been omitted since 1952 by the codifiers. The Congress, the Office of the Comptroller of the Currency, and most courts have, however, continued to presume the validity of the provision.

In 1992, the U.S. Court of Appeals for the District of Columbia in the USNB case ruled that Section 92 had been inadvertently repealed in 1918.

American Land Title Case

Subsequently, the U.S. Court of Appeals for the Second Circuit disagreed in American Land Title Association v. Clarke.

Unfortunately, the second circuit also found that, inasmuch as Section 92 is an explicit grant of statutory insurance authority to national banks, no other implied or incidental authority exists for national banks to engage in such activities.

The appeals court in the latter case ruled against the proposed sale of the insurance by Chase Manhattan Bank as being incidental to its mortgage lending activities.

The Supreme Court has delayed acting upon the petition for review in the American Land Title case, presumably pending resolution of the predicate question presented in the now-decided USNB case.

Consequences Uncertain

The new decision in the USNB case dealt only with the existence and continued validity of Section 92. Justice Souter gave no indication about the consequences of the Supreme Court's ruling as to the authority of national banks to export insurance products to nonresidents of the small communities. Nor did he give any indication as to the asserted additional statutory authority for national banks to offer insurance and insurance-related products as "incidental" to the business of banking under Section 24 (seventh).

In resolving only the conflict between the two appeals courts over the existence of Section 92, the Supreme Court left looming the threat of the second half of the second circuit's opinion: that no other statutory basis exists for national banks to offer insurance products.

The essential flexibility given to national banks by the incidental powers provision of the National Bank Act to develop and offer innovative financial products and services is at risk in the American Land Title case.

New York Court Ruling

In contrast to that restrictive federal appeals court decision is the wisdom ably articulated last month by Judge Crew of the New York Supreme Court Appelate Division, in New York State Association of Life Underwriters, Inc. v. Considine.

Judge Crew stated "that the 'incidental powers' clause was intended to permit banks to expand their banking services over the time consistent with evolving practices and their customers' needs."

The state court thus unanimously ruled that New York chartered banks possess "incidental" authority to sell annuities under state law that is essentially identical to the federal statute.

The justices' refusal to take note of that wisdom, by accepting the Chase petition and dispatching the faulty legal reasoning of the second circuit in the American Land Title case leaves the job begun in the USNB case only half done.

Litigation elsewhere is likely to entail these same issues as bank and insurance interests continue to struggle to redefine financial services. With no congressional resolution likely to be forthcoming, the lower courts are again left to redefine the future of financial services with seemingly little or no consideration of the benefits to consumers of expanded competition. Maybe next time up, the Supreme Court will get it right. □

David W. Roderer

Mr. Roderer represents six regional banks that have filed friend-of-the-court briefs in the American Land Title Association case.

Foreclosures Climb Sharply in California

By EDWARD KULKOSKY

Mortgage foreclosures surged in California during the first five months of this year, according to figures from TRW Redi Property Data, Riverside, Calif.

And no letup is in sight, as delinquencies also climbed sharply.

Southern California was hit hardest, with the number of foreclosures reaching 18,750, up about 79% from 9,968 through May of last year. The foreclosures involved $4.4 billion of loans.

Los Angeles

While the figures include commercial foreclosures, the TRW unit estimated that 85% involved owner-occupied residences.

Los Angeles was hit especially hard. Foreclosures in the county almost doubled, climbing 98.3% to 8,703, from 4,388.

Most northern counties were also hit. A total of 2,670 residential and commercial foreclosures was recorded in the Bay Area, a 45% increase from 1,840 a year earlier. The value of the defaults was put at $755 million.

In San Francisco, foreclosures jumped 68.9%, but the numbers were small. This year, 277 properties were foreclosed, as against 164 last year.

Southern California and the Bay Area together showed an increase in foreclosures of 74%. They account for more than 90% of the state's mortgages.

At the other end of the scale, Marin, Alameda, and San Diego counties have experienced relatively small increases in foreclosures.

Courthouse Filings

The figures from TRW are considered especially accurate as they represent actual courthouse filings of trustee deeds.

Meanwhile, a report by Mortgage Information Corp., San Francisco, says serious delinquencies in the Los Angeles area – three or more missed payments – jumped by 69% in the first quarter from the year-earlier level. Serious delinquencies doubled in the Santa Rose-Valejo area and rose 48% in the San Francisco area.

Los Angeles was hit especially hard, as foreclosures there almost doubled.

Almost all of the big increases in delinquencies were in California, but the worst rise in the country was in Honolulu, where delinquencies jumped 114%.

Nationally, the three areas with the highest rates of serious delinquencies were all in New Jersey: Monmouth and Ocean counties, the city of Newark, and Bergen and Passaic counties.

New York City was in fourth place, and Nassau and Suffolk counties in New York ranked fifth.

The delinquency rates for those areas of New Jersey and New York, however, were little changed since last year.

A few areas in the country – especially in the Northeast – showed sharp drops in serious delinquencies. Those areas included New Haven, Hartford, and Fairfield County in Connecticut, and Boston. Others were New Orleans; Oklahoma City and Tulsa; Tucson, Ariz.; and Austin, Tex. □

Refinancers Cut Average of 2 Points, Fannie Mae Says

By EDWARD KULKOSKY

Homeowners who refinanced their mortgages in the first quarter cut their average interest rate by almost two percentage points and reduced their loan terms by an average of four years, according to the Federal National Mortgage Association.

Last year, borrowers saved some $16 billion on their mortgage payments, the Mortgage Bankers Association estimated. The group is expecting a further reduction of $7 billion this year.

New information for May also showed that the flow of adjustable-rate mortgages into the secondary market declined to the lowest level in many years, accounting for just 2.8% of Fannie Mae's purchases. In January 1991, 10% of the company's purchases were adjustable loans.

However, a relatively small percentage of adjustables find their way to the investment market. Portfolio lenders such as thrifts are major adjustable-rate lenders and prefer holding the loans to selling them.

Fannie Mae's numbers also showed that intermediate-term mortgages, such as 15-year loans, accounted for one-third of its business. Overall, 30-year fixed-rate loans represented 54.6% of the company's loan volume. □

We'll save you money. We could save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division, to get every Monday the data you need to face the regulators.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... which agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 20% discount, so you'll be saving money even before you get the first issue. After that, how well you use the information before this year's exam could decide whether you're around next year.

Equifax Unit to Offer Bankruptcy Notification Service

By STEPHEN KLEEGE

A unit of Equifax Inc., a leading credit reporting agency, is planning to announce today that it has signed a three-year contract to provide a bankruptcy notification service to MasterCard International and Visa U.S.A. member banks.

The program, to begin in September, is seen as a significant enhancement of the Issuers Clearinghouse Service, which the card associations jointly set up in 1988 to combat fraud in credit card applications.

Bankruptcy fraud, including card applications from people who have filed for bankruptcy protection, is believed to cost the credit card industry more than $1 billion a year.

The program is designed to help combat fraud.

In addition to ferreting out applicants who have filed with a bankruptcy court, the Equifax service is designed to speed notification to card issuers when a cardholder files for protection.

Atlanta-based Equifax Financial Information Services will take bankruptcy court data gathered for Visa and MasterCard by other vendors, and match it against information in account files and applications. Bankruptcy notifications will then automatically go to MasterCard and Visa issuers via the Issuers Clearinghouse Service.

Equifax officials said they beat out TRW Information Services of Orange, Calif., and Trans Union Corp. of Chicago to win the contract.

Focus on Prevention

Brian G. Olsen, vice president of member profitability at MasterCard, estimated that as many as 35% of bankruptcy filings may be fraudulent or abusive. Card issuers prefer to focus on bankruptcy prevention, because the debt-collection process on card accounts is costly and time-consuming.

Once the new system is up and running, issuers will receive notification of bankruptcy filings by cardholders within 72 hours, said Jeffrey Dodge, senior vice president of Equifax.

Currently, it can take weeks for such word to reach a card issuer, and errors in court documents often prevent lenders from ever learning of a filing, he said. □

Chase Testing Gold Card with 'Teaser' Rate

By MICKEY MERCE

A Chase Manhattan Corp. unit is test-marketing a gold card with a low "teaser" rate, joining other banks that are trying to lure customers away from high-rate programs.

At a rate of prime plus 3.4% – currently 9.4% and adjustable monthly – the pricing is the lowest of any major credit card issuer, Chase Manhattan Bank U.S.A. claims.

Effective Sept. 1, 1994, the rate under Chase's preferred pricing plan jumps to prime plus 9.4%, which would now be 15.4%. Customers in good standing receive the preferred rate. The non-preferred rate is a fixed 19.8%.

Fee Waived for Some

Customers who qualify for preferred pricing pay no annual fee, while those who do not pay $50.

A Chase spokeswoman said the bank does not comment on market tests, which it runs throughout the year.

Chase Gold Visa cardholders can accrue Chase bonus dollars, defer two payments each year, and pick the day of the month they want for billing as part of the card's enhancements. The invitation to take advantage of the card expires on Aug. 13.

Citi Offers 9.9%

Other major card issuers hit the market this spring with a variety of teaser offers. Citicorp set a 9.9% rate on balances transferred to Citibank MasterCard or Visa cards. That rate jumps to 15.4% on Sept. 30.

Associates National Bank, an affiliate of Ford Motor Co., enticed customers to its GTE MasterCard with a 6% rate. After Oct. 31, that rises to prime plus 10.4%, or 16.6%.

Fleet National Bank offered new MasterCard or Visa customers a 9.9% annual rate, which holds until customers pay off their balances.

CAPITAL: Huge Reserves Raise Worries

Continued from *page 1*

about how to judge whether a bank's reserve is excessive or not.

But he said the overall number of inquiries is still small – less than 10 requests in the past two months, mainly involving banks in the Southeast.

"Two years ago, we were getting comments from examiners – they don't have enough reserves," Mr. Cooney said. "Now we are getting the question, Do they have too much reserves?"

He has plans to talk to OCC district managers to ensure that the issue is addressed properly.

"You want to be sure you have a fair balance-sheet presentation, and when times get bad you don't want reserves currently at hand to be used to mask deterioration," he said.

He declined to comment on individual banks.

Orders to Cut Provisions

But executives at small banks said the Comptroller's office has already begun ordering their institutions to cut quarterly provisions or take money out of reserves.

Ron Edwards, president and chief executive officer of First National Bank and Trust Co. of Ardmore, Okla., said that OCC examiners last summer ordered his bank to put $180,000 from the reserve back into income.

"When I heard about it, it blew my hat into the creek," he said. "We wish we didn't have to do it. It flies in the face of everything we've seen in Oklahoma."

Threat of a Suit

Michaux Nash Jr., chairman and chief executive officer of EastPark National Bank in Dallas, said he reduced the bank's provision after examiners said they could sue his bank's directors.

"We said we can't believe this," Mr. Nash said. "Three or four years ago they came blasting in here and said we were underreserved. Then they come in and say we are overreserved. We said it is pointless for us to be a little overreserved. We have been taught all our lives to save for a rainy day."

Off the Record

Big banks, too, have started to notice a change among regulators.

"It's interesting that we in the industry are starting to hear the regulators change their tune a little bit, not exactly on the record, but a little bit in conversation," said Malcolm Murray, chief credit officer at First Union Corp.

Mr. Murray said regulators started to get "itchy" when reserves that are not allocated to specific loans hit 20% of loans at First Union. However, he said that regulators have not specifically told the bank to reduce its reserves.

"They are raising the issue, and I think they are feeling a little funny suggesting that reserves may be high," he said.

First Union's reserves equaled 98% of nonperforming loans on March 31.

Slow Loan Growth

Mr. Murray said that in past economic recoveries, loan growth "essentially absorbed any excess reserves."

If banks don't cut reserving, they may understate earnings and book value.

In the current recovery, weak loan growth means it will take longer to absorb reserves, he said.

Lower provisions in the industry will reflect both the lower levels of nonperforming loans and decreasing chargeoffs.

"I think we should see banks will see provisions declining over the next four to six quarters," he said. □

Chase Is Both Adviser and Lender In Harsco Purchase of Multiserv

By WILLIAM GOODWIN

Chase Manhattan Bank is playing multiple roles as financial adviser and lender in Harsco Corp.'s planned purchase of Britain's MultiServ International for about $30 million.

The acquisition agreement, disclosed Friday, provides further evidence that merger-related financing activity is picking up.

Hanson PLC's pending purchase of Quantum Chemical Corp. is expected to result in a multibillion-dollar refinancing of both companies' debt in the bank loan market, while banks are also backing Corning Inc.'s recent winning bid for Damon Corp.

Funding Source

In a statement Friday, Harsco said up to 28% of the MultiServ purchase would be financed internally, while the rest would come from "various committed sources."

Harsco later identified Chase as the funding source.

On Monday, Chase officials confirmed that the bank had underwritten $400 million in financing. Of that amount, it is expected that $100 million will be available as working capital for MultiServ, once the acquisition is completed.

MultiServ provides metal reclamation and other steel mill services in Europe, Latin America, and other markets outside of North America.

Final terms haven't been worked out, but the loan probably will be priced at 50 to 75 basis points over the London interbank offered rate, depending on whether Harsco's debt rating is downgraded.

Rating Outlook

Following the acquisition announcement, Standard & Poor's Corp. affirmed its A rating on Harsco's senior debt but changed the rating outlook to "negative."

Moody's Investors Service went a step further and placed its rating under review for possible downgrade.

As a result of the acquisition, Harsco's ratio of debt to total capitalization will increase to 44%. But that ratio is expected to fall back within a few years to a level that is consistent with an A-rated company, said Martin Kaboolian, an S&P analyst.

The uncertainty about Harsco's credit rating is one reason the company turned first to bank loans as a funding source.

"Depending on the outcome of the rating review, some of the bank debt may later be refinanced in the public debt markets.

Chase is still working on its syndication strategy, but the bank is expected to approach Harsco's other relationship banks and some foreign lenders. □

THE MARKETS

Rates Steady as Good Inflation News Seen

Long-term interest rates held steady Monday in anticipation of good news on inflation.

The yield on the 30-year Treasury bond was unchanged at 6.63%, a record closing low. Ten-year notes yielded 5.73%, also unchanged on the day.

The government today will announce its Producer Price Index for June. Economists are expecting that the index was flat or fell as much as 0.3% because of tobacco price cuts. The Consumer Price Index is due out Wednesday. — **Bart Fraust**

STOCKS: Bank Mergers Fell in Quarter

Continued from page 1

the price they are worth.

"Acquiring managements are sensitive to the market's response to dilutive pricing," said bank analyst Thomas H. Hanley of First Boston Corp.

At the same time, selling managements are concerned about maximizing value received, he added.

Upturn Seen

But most observers believe the dropoff is only temporary.

"My guess is that we'll see more activity in the second half of the year," said Francis X. Suszco of S.G. Warburg & Co.

"Acquisition activity will pick up, perhaps substantially," said Mr. Hanley, who expects bank stock prices to rise over the next three to six months. The second quarter stock price pullback "will enable both sides to come to a more realistic assessment of value."

Most observers think the overriding reason that dealmaking will pick up again soon is that banks must continue merging to maintain growth of profits.

With loan growth slow, Mr. Hanley said the banking industry remains under pressure to consolidate "to ensure earnings momentum" by "acquiring assets and originating capability."

A Trend Toward Thrifts

Duplication of facilities and functions in general and overlapping branch networks in particular also provide enormous opportunities "to rationalize costs," he said.

Analysts at Salomon Brothers Inc. agree that many capital-rich banks will look toward acquisitions as a viable alternative to increase profits.

Besides the slowdown in deals, another notable aspect of the second quarter was the number of acquisitions of healthy thrift institutions by banks.

This trend got off to a fast start in the third quarter -- with ABN Amro Bank's announcement of plans to buy Cragin Federal Bank for Savings in Chicago and Fifth Third Bancorp's deal to buy Tristate Bancorp in Cincinnati.

First Fidelity Deal

The second-largest deal of the second quarter was the pending purchase of Peoples Westchester Savings Bank, Hawthorne, N.Y., by First Fidelity Bancorp, Lawrenceville, N.J.

The New Jersey superregional is paying $233 million, half in cash and half in stock, or 1.4 times Peoples' book value. It likely will have to spend some more to boost the thrift's loan loss provision.

Nevertheless, the thrift's stock price fell on the disappointment of some investors, notably arbitragers, that the purchase price was not higher.

Other Purchases

Also announcing thrift-buying plans during the quarter were PNC Bank Corp., Pittsburgh; First Alabama Bancshares, Birmingham; Amouth Bancorp., Birmingham; Huntington Bancshares, Columbus, Ohio; Keycorp, Albany, N.Y., and Bancorp Hawaii, Honolulu.

PNC will pay $166 million in stock, a healthy 16.3% of book value, for United Federal Bancorp., State College, Pa.

First Alabama won a bidding contest, apparently with Amsouth, to acquire Secor Bank, the state's largest thrift, for $139 million, or 123% of Secor's estimated book value. Amsouth, meanwhile, is buying Midstate Federal Savings, Ocala, Fla.

Huntington unveiled the two most expensive thrift purchases of the quarter. It is buying Railroadmen's Federal Savings and Loan, Indianapolis, for $87 million, or twice the thrift's book value. And it is acquiring First Bancorp Indiana Inc., Lafayette, for $48 million, or 169.5% of book.

"While the prices of these transactions still lag behind bank acquisition pricing, the gap appears to have narrowed," said Thomas J. Maier of Kemper Securities Inc., Chicago. □

AMERICAN BANKER
VOL. CLVIII NO. 133 Wednesday, July 14, 1993 158th year

Bankers' Hopes For Clinton Take a Beating

By ROBERT M. GARSON

When Bill Clinton was elected President, bankers thought they had found a champion to lead them in their fight for regulatory relief.

At the economic conference in Little Rock last December, the President-elect sounded as enthusiastic as a bank president about the industry's agenda for cutting red tape. And in March, he added action to his words by announcing a package of reforms aimed at spurring lending.

Today, however, with Mr. Clinton attempting to repair his damaged presidency, some sense a different tone taking hold within the White House -- one less receptive to the industry's arguments.

NEWS ANALYSIS

The administration is developing new rules on mutual fund sales, and it apparently has decided against proposing legislation aimed at curbing the burden of regulation. Moreover, its aggressive stance on fair lending gives some industry leaders the willies.

Heavier Burden Seen

And with the last of the bbbs-era regulations beginning to take effect, bankers have begun to wonder if the compliance burden is not actually on the rise.

"The combination of what they are doing on fair lending -- plus regulations still coming down the pike -- is putting much more regulatory burden on banks than was taken away" by the March initiatives, said Kenneth A. Guenther, head of the Independent Bankers Association of America.

"It's a mixed bag," added Marty Farmer, a lobbyist for Barnett Banks Inc.

"They did what they did in the name of easing the credit crunch," he said, referring to the March initiative. "But the mutual fund package they are coming out with is a tightening up of regulations, and the lending discrimination stuff is worrisome."

Disappointment Widespread

Though Mr. Guenther doesn't hold the Clinton administration responsible for the regulatory actions mandated during the Bush era, there is considerable disappointment among bankers that the White House will not propose legislation to undo those rules.

The Federal Financial Institutions Examination Council had begun examining bank regulations

RTC Choice Named

President Clinton nominated Stanley G. Tate as president and chief executive officer of the Resolution Trust Corp. on Tuesday.

Mr. Tate, 65, is president of Stanley Tate Enterprises, a real estate company, in North Miami, Fla. Since 1989 when the thrift bailout agency was created, Mr. Tate has been chairman of a regional group of citizens that advises the RTC.

The RTC has been run by Deputy Treasury Secretary Roger Altman since March 15, when former RTC president Albert Casey resigned.

Turmoil Sends Omaha S&L's Stock Soaring

By RICHARD LAYNE

Speculators smell blood at Commercial Federal Corp. in Omaha.

Its stock has soared 30% since mid-June, when the $4.8 billion-asset thrift's biggest shareholder began an attempt to force a recalcitrant management to find a buyer.

CAI Corp., a private investment company in Dallas that owns 9.9% of the outstanding shares, sent a letter on June 14 to management, requesting that shareholders vote at the annual meeting in November on a proposal to sell the company.

CAI filed a report of its intention with the Securities and Exchange Commission on June 15.

"We don't think management is looking out for the interests of the shareholders," said Steven M. Ellis, a partner with CAI. "The way you get the maximum value is to sell the company."

Firing Back

Management has counterpunched. It sent shareholders a letter on June 30 saying that a sale did not serve their best interest. It said it hired Merrill Lynch & Co. to find alternatives to a buyout.

"It makes better sense for the stockholders to operate under

Bank of N.Y. Net Up 49%, 1st Fidelity 28%

SunTrust, Society, Boatmen's Gain

An American Banker News Roundup

Bank of New York Co. raised its dividend 18% and reported a 49% jump in second-quarter earnings, leading seven large regional companies that reported strong results Tuesday.

The New York bank company, the nation's 17th largest, netted $130 million in the quarter, or $1.42 a share. The profit exceeded analysts' consensus estimate by about 5 cents, according to Zacks Investment Research.

Despite the strong report and a dividend hike to 45 cents, the company's stock fell 50 cents to close at $59.375 a share. Analysts said many investors who bought bank stocks in recent weeks in anticipation of strong earnings were bailing out, fearing that long-term gains won't be sustained.

First Fidelity Up 28%

Also weighing in with a hefty gain was New Jersey-based First Fidelity Bancorp., which netted $97.9 million in the second quarter, up 28% from a year ago. The earnings translated into $1.13 a share, a penny higher than the consensus estimate compiled by Zacks.

Shares of First Fidelity, which has $32.3 billion of assets, lost $1 to $48.25.

Profit Scorecard

Second-quarter net income, in millions, versus year-earlier period

	Net income	Percent gain
Bank of New York	$130.0	49.4%
Boatmen's	76.2	38.8
First Fidelity	97.9	28.3
Society	66.6	18.8
State Street Boston	43.2	12.0
Star	28.3	29.3
SunTrust	118.7	12.3

Georgia-based SunTrust Banks Inc., the nation's 19th-largest bank company, reported net income of $118.7 million, or 94 cents a share, driven by strong trust fees and improving credit quality. The 12.1% increase over the 1992 quarter was slightly above analysts' consensus expectations. The company's stock fell $1.25 a share to $46.50 on Tuesday.

Improved Credit Quality

In the Midwest, Cleveland-based Society Corp. attributed

As Funds Boom, Trade Group Chief Worries

By DEBRA COPE

When the Investment Company Institute staged its annual convention recently, chairman Matthew P. Fink was introduced to the assembled mutual fund executives as "the consummate worrier."

He doesn't quarrel with the description.

Though the industry is riding high as consumers bring billions of dollars into stock and bond funds, Mr. Fink acknowledges that he can't help thinking about the dark side of all that success.

"I tend to wear my sleeve and to vocalize it a lot," he said in a recent interview.

Lately, one of Mr. Fink's biggest worries is that someone in the mutual fund business -- perhaps a bank -- will stumble, tainting the entire industry.

He is also concerned that the industry, in its euphoria, may be overestimating its growth potential. This may be particularly true of banks, he maintains.

'It Isn't a Revolution'

According to the institute's research, he said, the proportion of U.S. households that invest in mutual funds has grown only slightly in the last few years, to 27% from 25%. So the bulk of the new money invested in funds has come from current shareholders, not new ones.

In the case of the banks, Mr. Fink thinks there is a simple explanation for the much-ballyhooed mutual fund explosion.

"I talk to bankers and they tell me that the vast majority of assets are trust or custody funds that they've moved," he said. Actual sales account for a relatively small portion of the growth in bank

Walter P. Calahan

MATTHEW FINK frets that the explosion in bank mutual funds isn't all it is cracked up to be.

proprietary funds, he maintained.

"I'm not saying something isn't going on," Mr. Fink said. "But clearly, it isn't a revolution."

Mr. Fink has developed his reluctance over

GE Eyes Shearson Unit

General Electric Capital Corp. is poised to buy the mortgage banking unit of Shearson Lehman Brothers, according to industry sources.

The acquisition of Shearson Lehman Mortgage would make GE one of the nation's five largest mortgage servicers, processing monthly payments on some $56 billion of home loans.

As of March, GE ranked No. 9, according to the newsletter *Inside Mortgage Finance.* Shearson Mortgage ranked No. 25, servicing $17 billion of home mortgages.

Spokesmen for GE and Shearson declined to comment, but an announcement is believed to be imminent. GE, the sources said, recently topped a handful of other bidders and is now in final talks with Shearson.

The Wall Street giant, which recently agreed to divest its retail brokerage unit, has been trying to sell the mortgage unit for more than two years.

Sources say the effort was intensified this year by Harvey Golub, who in February became chief executive of Shearson's parent, American Express Co.

Terms of the proposed deal could not be learned. But in 1991, Shearson had tentatively agreed to sell the unit to a group of Arabian and U.S. investors for $238 million. That deal ultimately collapsed over terms.

S.F. on $250 a Day

BankAmerica Corp. is giving its work force a $25 million pat on the back as thanks for pulling off one of the biggest bank mergers in history.

Employees were informed last week that they would each receive a $250 bonus and an extra vacation day for their role in the 1992 merger of BankAmerica and Security Pacific Corp. "The idea was to have a day off and the money to do something fun with it," said Pat Lindh, a BankAmerica spokeswoman.

Richard Rosenberg

All employees below the rank of senior vice president – 93,000 worldwide – will get the bonus, provided they were on BankAmerica's payroll on April 23, 1993, the anniversary of the merger.

The bank will pay social security taxes on the bonuses, lifting the price tag to about $25 million, Ms. Lindh said.

Bank sources said the awards were the idea of BankAmerica chairman Richard M. Rosenberg – who himself pocketed a 32% wage and bonus increase in 1992 – and retail banking chief Thomas E. Peterson.

Mr. Rosenberg announced the bonuses last Thursday in a letter to employees.

The show of goodwill could help share up morale, which has flagged since the merger because of job and benefit cuts.

The Private BayBanks

There's gold in BayBanks' customer base, and Jack Arena plans to mine it.

The president of BayBanks Investment Management Inc. is gearing up to aggressively sell private banking services to some 20,000 customers of the bank company.

The targeted group – which represents 3% of BayBanks' 750,000 depositors – comprises customers with at least $750,000 to invest.

"We have close to 4,000 private banking clients right now," Mr. Arena said. "But where are the other 16,000? Why aren't they doing business with us?"

One reason may be that the Boston-based company never heavily promoted its private banking services, which Mr. Arena termed traditional.

To change that, he is shifting the unit's focus to investment management, and says he's hiring the staff he needs to make the change.

"The real issue is to marshal a real good number of people to make a real good effort at tapping into the customer base BayBanks has," Mr. Arena said.

"Most of them view us as their primary bank, and we'd like to take advantage of that." □

Clinton's Nominee for SEC Vows Cooperation with Other Agencies

By CLAUDIA CUMMINS

WASHINGTON — The Clinton administration's nominee to head the Securities and Exchange Commission on Tuesday pledged closer coordination with bank and futures regulators to avoid inefficient and duplicative oversight and to prevent panic in the financial markets.

At his Senate confirmation hearing, Arthur Levitt Jr. said he is not "overly sanguine" about regulators' ability to work together as closely as Congress would like.

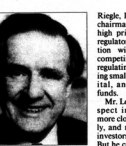
But Mr. Levitt said he would set up meetings with the Federal Reserve, the Office of the Comptroller of the Currency, and the Commodities Futures Trading Commission to discuss closer cooperation in regulating financial markets.

'Clearly Is Duplication'

"There clearly is duplication in terms of regulation of our financial markets," he said. "In the best of all possible worlds, I would say that should not be."

But the former chairman of the American Stock Exchange rebuffed calls to merge the agencies into a single financial "supervregulator," saying he preferred a less drastic "step-by-step" approach.

Nonetheless, he urged Congress to continue pushing regulators to work together.



Barbara Rios

Sen. Donald W. Riegle
Lists priorities for agency

"You as an overseer have got to nudge us," he said.

At the hearing, members of the Senate Banking Committee repeatedly called for a more cordial relationship among the agencies.

Sen. Christopher J. Dodd, D-Conn., called the previous administration's record of financial coordination "an abysmal failure," recalling instances of regulators' "publicly bickering with one another" at congressional hearings.

"The SEC cannot do its job in isolation," he said.

A Warm Reception

Mr. Levitt received high praise from the senators, who promised swift approval of his nomination. Sen. Donald W. Riegle, D-Mich., the committee chairman, outlined five areas of high priority for securities regulator: reducing fragmentation within stock exchanges; competing with foreign markets; regulating derivatives; improving small business' access to capital, and overseeing mutual funds.

Mr. Levitt said he wants to inspect investment managers more closely and more frequently, and make sure mutual fund investors understand their risks. But he cautioned against requiring so much disclosure that the information becomes useless to consumers.

The nominee also pledged to scrutinize explosive growth in derivatives and to work with other regulators in overseeing it.

Maintaining 'Fire Walls'

When asked about the involvement of commercial banks in the securities market, the nominee responded that their involvement so far "has been handled with reasonable discretion."

"We've adjusted to that circumstance reasonably well," Mr. Levitt said. "I don't have a problem with what I've seen so far."

He did caution, though, that the "fire walls" between bank/traditional activities and their securities business need to be "high and strong and firm." □

Wells Installing System to Combat Fraud

By JEANNE IIDA

Wells Fargo plans to install a sophisticated computer system that uses artificial intelligence software to detect credit card fraud.

Wells, the 12th-largest card issuer, with $3.7 billion in credit card loans outstanding, according to a 1992 study by *American Banker*, plans to have the system operational for its entire card portfolio in the fourth quarter of 1993.

Wells declined to say whether fraud at the institution had risen significantly in recent years.

$2 Billion in Losses in '92

Industry observers say bank losses worldwide from credit card fraud in 1992 were at least $2 billion, and are expected to reach at least $2.4 billion in 1993.

The software Wells is installing is called a neural network, a type of artificial intelligence programming designed to discern patterns in large amounts of data in a way that mimics the human brain's nervous system.

The software, which is produced by HNC Inc., San Diego, can change the weights it assigns to variables automatically, as if learning from experience.

Up to $2 Million to Install

Few banks have installed these systems, which some bankers consider costly and unproven. Such systems cost between $250,000 and $2 million to install, according to HNC.

HNC says that Wells should be able to reduce fraud by 15% to 20% in the first year of operation.

A handful of banks have installed such systems, including Mellon Bank Corp., which has installed software from another vendor, Nestor Inc. in Providence, R.I.

Companies that have installed the HNC software, which is called Falcon, include: First USA Inc., Dallas; Colonial National Bank USA, Wilmington, Del.; and the issuer of the General Motors card, Household Credit Services, a unit of Household International, Prospect Heights, Ill.

'False Positives' a Problem

Critics of neural network technology say that it is difficult for operators of the system to understand how the system reaches a conclusion, making it difficult to evaluate and adjust the system's decisions.

Others say that neural networks are more accurate than other kinds of fraud detection systems, because they can discern patterns in data that are not linked in a logical fashion.

Bankers say the biggest problem with fraud detection systems generally is that they frequently identify fraud where none has occurred. Depending on how a bank handles the information, cardholders could be inconvenienced if a suspect card is deactivated.

Ken Jones, marketing manager of HNC, says that most bankers are comfortable with 50 misidentifications of fraud for every real fraud that is identified. But the software can be customized to make a greater or fewer number of "false positives," Mr. Jones said.

Mr. Jones said that one institution, which he declined to identify, was saving $3,000 a day in averted fraud using the software.

Wells, like most of the other banks, will update the software every night. The software can also be updated during the day in order to give credit officers the opportunity to issue stops on transactions during the course of the day.

The software that Wells is installing is programmed with two types of data: data on fraudulent transactions culled from the general population, and purchase patterns of individual accounts. The system can theoretically learn how a given cardholder normally behaves, and can pinpoint behavior that deviates from that norm. □

Centura Sets Up Service Company

Centura Banks Inc. and Independent Fiduciary Services Inc. has formed Midsouth Financial Services, based in Charlotte, N.C.

Midsouth officials said it formed the service company after receiving approval from the Federal Reserve Board last Friday.

Support Services

Centura Banks is based in Rocky Mount, N.C., and has $2.7 billion in assets.

Centura officials said Midsouth Financial will provide data processing as well as operational and administrative support to banks and other entities that offer trust and other fiduciary services.

Radio Ads Can Speak Volumes About a Bank's Character

The ads that banks and thrifts place on the radio tell a lot about the character and tone of the individual bank and leave an impression about the industry as a whole.

Television ads are expensive to prepare and to run, so most institutions take a lot of time in developing them. But radio is easier. It has far more stations than television, so the commercials can be used to target a small area at a reasonable price per potential customer. So the radio airwaves are saturated with bank ads, many of which are intended just to get the bank's name ahead of those of its competitors.

I have often mentioned the meeting of the Savings Institution Marketing Society at which I heard a professional state, "If you have nothing to say, sing it."

A Discordant Note

And I can truly say that every bank marketing commercial has left me with the feeling that the bank being advertised was pretty inefficient, since it had nothing worth talking about.

Mr. Nadler is a contributing editor of *the American Banker* and professor of finance at the Rutgers University Graduate School of Management.

Banks are serious places – they hold our money. And sensible people do not want to have their money in a place whose only message seems to be "We are friendly, la, la, la."

But while companies often use radio just to keep their names in people's minds, they also risk harming their image while trying to build it.

I am thinking in particular of the major airline whose ad – which I heard several times in mid-April – touted an offer of a free domestic ticket to anyone who bought one international ticket by April 1, 1993. If an airline can be so sloppy, one wonders if it has the same standards in maintaining planes.

All Talk, No Action

Banks have another problem. Their ads and their actions must have some semblance of similarity. New Yorkers, for example, constantly complain that while radio ads boast of the wonderful service a certain bank offers city residents, but when they walk into a branch at 9 a.m. they find one teller window open and long lines of people waiting.

One must wonder, "What other lies are they telling me?"

What can banks talk about? New laws and regulations on Truth-in-Lending, Truth-in-Savings, and the like make it hard to talk about rates unless you have a good law firm go over your material several times.

Courting Disaster

Gone are the days when savings banks would advertise: "When you need money, don't pull it out of your Schmidlap account, which is earning you a full 4%; borrow what you need at Schmidlap Savings Bank's low 3% discount rate – only $3 per hundred per year."

Any banker who tried to put that one over today would end up in court or at least get a stern lecture from the regulators.

If a bank really has a lower rate than others, it can crow about this. But most don't have such discounts. If you really have longer hours than most other banks, let it be promoted.

A Little Too Cute

Some banks are stressing their entry into annuities and mutual funds – all to the good. It takes time to get the public to realize that such products are now available at banks. Others push their ties to the middle market. But again, ads must be backed up by actions to win over this previously neglected group of potential borrowers.

But sometimes bank radio ads are a little too cute, with dangerous overtones.

I am thinking in particular of a New York bank's skit in which a couple talk about not having enough money to pay their bills. One then mentions that the bank in question has a home equity loan program to provide the needed money, and "it may even be tax deductible."

The husband ends the skit saying, "Wow, we even can get enough money to build a pool."

Over Their Heads

We know that many people are going over their heads into home equity loans without thinking of the earning power that will be needed to pay them off. And I worry that when defaults on these loans start sprouting, the media will scream about the "dirty banks" that threw people out of their homes.

And just as Chapter 12 of the bankruptcy act now protects farmers from having to meet their full debt obligations, I fear we will see a similar chapter to protect those who used home equity lines for nonessential purchases because unscrupulous bankers made them feel this was the easy route to solving financial problems and satisfying wishes to boot.

Lender liability suits all protest that the banker almost forced the debtor to borrow and thus should be denied a return and be assessed damages – for it should have known the debtor would be unable to repay."

So ads like the "build a pool" skit may be cute and may offer something for the bank to promote. But using radio advertising in this manner can have consequences that harm both the individual bank and the entire financial services industry. □

Markets Emerging for Bank Loans, Whether They're Distressed or Triple-A

In a drastic departure from prior practice, when banks retained and worked out their own problem loans, more and more have engaged in or are planning bulk sales of problem-loan portfolios to nonbanks. Such efforts have been well received in the marketplace.

A second trend, not yet widespread, involves the securitization of commercial loan products. Securitization has been very well accepted and, in fact, is the predominant mode of investment in the residential first-mortgage market.

Efforts are under way to design and introduce to the market the concept of securitization of commercial loans, whereby banks would retain their historical role of origination and servicing but would seek secondary market placement of these securitized commercial loan portfolios.

Wall Street Sees Bargains

Fueling the bulk-sale trend has been Wall Street's tremendous appetite for distressed bank loans, which can be purchased at a discount to book value.

Both institutional investors and special funds that did a number of transactions with the Resolution Trust Corp. appear enthusiastic about continuing to buy troubled loans in the bank market.

Bulk loan sales allow banks to write down troubled assets, take a one-time writeoff against profits, and achieve a balance sheet goal.

In many cases in New England, such writeoffs may have already occurred so that the loan portfolios may be offered to the market at a discount without any negative present balance sheet effect.

And once the investment community perceives that a bank has put its problem loans behind it, the bank's stock price has improved. The bank also is free to pursue its traditional business of making loans and investing in businesses.

Structuring Loan Pools

These portfolios usually are structured by pooling large groups of bank loans. Depending on the viability of the loans, different segments of the pools are assigned different values.

For the borrowing community in general, bulk loan sales introduce a whole new ball game. Borrowers will see their loans sold to third-party strangers, who have bought the loans at a discount.

Whether these buyers are institutional investors or special funds, they have the right to collect 100% of the loans, plus interest. They will take many different approaches to getting the returns they need to justify purchasing the loans in the first place.

New Secondary Market

At the same time that banks are selling off their troubled loans, they also are anticipating the securitization of their commercial loan products. Just as Fannie Mae and Freddie Mac demonstrated a secondary market for residential mortgages, banks are actively looking for a means to standardize commercial loans so that they, too, can be repackaged and sold.

Unlike bulk loan sales, commercial loan securitization will not be distressed products and will be intended to sell at par. Since the key to securitization is uniformity, criteria for this new product will include solid collateral and cash flow ratios.

Banks will conduct extensive appraisals and submit detailed financial statements before their loans will be securitized. Underwriters will be vigilant in enforcing these tough commercial loan securitization guidelines. □

Senate Plan for Student Loans Is Lesser of the Two Evils

As congressional conferees face the choice between the Senate and House versions of legislation creating a direct student loan program, the Consumer Bankers Association is supporting the Senate proposal.

The Senate bill caps the volume of direct government loans at 50% of the total, as opposed to the House's 100%.

We prefer the Senate version not only because we abhor having the government in the banking business, but because a significant number of lenders associated with our group have concluded that the Senate bill represents a viable – albeit leaner – future for the student loan program.

Some in Opposition

However, the Student Loan Marketing Association and some lenders oppose the Senate bill [See Comment in the July 9 *American Banker*, page 5, by David V. Noshkin, president of Durand (Ill.) State Bank.] Certainly, it includes some changes to the student loan program that are onerous to most lenders.

Some changes, however, are more onerous to some lenders than others. These include the lender-paid loan origination fee and a loan-transfer fee, which fall much heavier on those that make and sell loans into a secondary market rather than hold them to term.

The CBA agrees that some adjustment in these provisions is called for. But the reality is that this is a budget bill that will necessarily force some lenders and guarantee agencies out of the student loan program. This is the outcome, despite warnings from CBA and others that the budget savings estimates are wildly unrealistic.

Opportunities Remain

CBA believes the extent of the disruption to lenders has been overstated. A number of financial institutions have concluded that some opportunities for medium-size and smaller lenders, including those who sell to a secondary market, will remain.

Secondary markets, especially the not-for-profit state markets utilizing tax-exempt funds, will alter loan purchase policies and adjust them to maintain opportunities for these lenders to participate in the program.

The CBA also hopes that the most detrimental provisions will be altered in the House-Senate conference. For example, the loan transfer fee should be struck from the legislation and replaced with a loan conversion fee that would affect all holders, regardless of business strategy.

It May Not Fly

Most important, lenders are confident that after two years, the Department of Education, Congress, and the public will revisit the issue of financing student loans and determine direct lending to be unworkable.

Faced with the possibility of tacitly endorsing a federalized student loan program or continuing the current private-sector-based program, CBA is endorsing the Senate legislation.

Opponents like Sallie Mae or smaller banks have an obligation to offer a workable alternative that meets the budget-savings requirements of the reconciliation bill.

Otherwise, they should support continuation of the current program on the principle that it is inappropriate for the government to make direct loans, and on the hope that at some point the program will be modified to permit participation by a broader array of financial institutions. □

THE SENATE BILL *represents a viable – albeit leaner – future for the student loan program.*

Letters to the Editor

Society Corp. Upbeat On Indiana Market

To the Editor:

The June 28 article "Indiana: Proving Ground for Consolidation" [page 1] appears to create the impression of large out-of-state banks struggling with their affiliates in Indiana.

A paraphrased statement by me seems to reflect a sense of despair and was highlighted so as to imply that a sale of Society Corp.'s Indiana banks was uppermost in my mind.

That interpretation is just not correct.

The management and employees of Society Indiana Bank have had much success at shrinking problem credits and building new business. Also, our bank's performance is ahead of plan – as confirmed by its 1.1% return on assets in the first quarter, compared with 0.77% for yearend 1992.

I am proud of both the progress and trend in this Society affiliate is producing.

Society will always maintain high performance standards for affiliates, including the Indiana franchise, and will continue to look for opportunities to grow and prosper in that state.

Hunter Harper 3d
Vice chairman
Society Corp.
Cleveland

NEED BANKING INFORMATION FAST?

AMERICAN BANKER ONLINE

For more information, including details on special direct data delivery options and redistribution rights, call:

Peter Leach, Database Licensing, American Banker • Bond Buyer, at 1-800-356-4763 or 1-212-943-6304.

Now there's a way to stay abreast of that vital information or to find any articles you may have missed by using your own PC with a modem to the up-to-the-minute American Banker Online on the information service of your choice.

American Banker Online is a full-text news service providing instant access to all the information appearing in the only daily banking newspaper. It enhances the value of the newspaper's daily information by giving you the ability to recall all the stories on a bank, or a banker, or legislation, or indeed anything you need to know about banking.

With the power of the computer, you can locate the information that's vital to your business. American Banker Online is a full-text database that provides direct, easy access to the daily news, statistics, surveys, speeches, commentary, and special editions of the print newspaper. And you can access this information each morning even before that day's paper is delivered!

In addition to being a daily information tool, American Banker Online is also an archive. Many users rely on our information to piece together the background on events that impact their business. Along with today's news, American Banker's historical online records include more than 80,000 articles dating back to 1979. These can be searched by headline, key words, bank name, or any other search terms.

Put American Banker Online to work for you. It is accessible with any PC and modem through the following information retrieval services:

Bank of N.Y. Leads Regionals Reporting Strong 2d-Quarter Earnings

Continued from page 1

its $96.9 million quarter – a 10.5% gain over 1992 – to a sharp improvement in credit quality. Shares of the company, which has $25.9 million of assets, rose 12.5 cents to $35.125.

Boatmen's Bancshares Inc. notched a 28.8% gain over the year-earlier quarter, reporting a record profit of $76.2 million, or $1.55 a share. The St. Louis-based company said improved asset quality and a wide net interest margin continued to spur profits. Boatmen's shares gained 25 cents to $61.50.

Star Banc Corp. recorded profits of $25.3 million, up 29.3% from a year ago. The Cincinnati-based company cited increased efficiency and higher fee revenues as major factors in the improved performance. Star's shares were unchanged at $36.75.

In New England, State Street Boston Corp. reported net income of $43.2 million, or 56 cents a share – a 12% gain over the second quarter of 1992. Highlighting the report was an 18% surge in revenues. The company's shares dropped 25 cents to $32.375 on Tuesday.

BANK OF NEW YORK CO.

The company said it accelerated its earnings release by one day to correspond with the announcement of its dividend hike. The dividend change was the bank's first since April 1991, when the payout was cut 15% to 38 cents a share.

"It's a very big increase," said David Berry, an analyst at Keefe, Bruyette & Woods Inc.

Profits at the New York company were driven by interest spreads that continued to widen and fees from credit card operations, securities transactions, and other processing businesses.

The bank also booked a pretax gain of $24 million during the quarter related to the sale of 20% of its interest in Hong Kong's Wing Hang Bank.

On the credit quality side, nonperforming assets fell for the eighth consecutive quarter to $717 million, down 17% from the end of the first quarter. The company's loan-loss provision fell to $70 million from $85 million three months earlier.

"They are reaching a level where [credit expenses] are not an enormously significant issue for them," said Mr. Berry.

The company's net interest income of $341 million inched up $7 million from the previous quarter, while its net yield climbed 7 basis points to 3.76%. Analysts said they expect Bank of New York's net interest income to remain high throughout the year.

"It's sustainable because there's a better asset mix and lower credit costs," said John Leonard, an analyst at Salomon Brothers Inc.

Noninterest income rose 19% to $326 million over the year-earlier quarter – led by a 14% gain in processing fees to $112 million.

— Kenneth Cline

FIRST FIDELITY BANCORP.

Rising interest income, along with improved fee revenue and tight expense control, continued to drive profits at New Jersey's biggest bank company. First Fidelity also shaved its loan-loss provision to $41 million from $45 million in the first quarter and $59 million a year earlier.

Noninterest expense grew $15 million over the first quarter to $253.8 million, primarily because of the purchase of Connecticut's Northeast Bancorp. But overhead costs would otherwise have been flat during the quarter, the company said.

"Expense management is definitely a strength of this company," said Jeff Naschek, an analyst at Salomon Brothers.

Fidelity's chairman and chief executive, Anthony Terracciano, said in a prepared statement that profits from Northeast's Union Trust Co. bank are "looking somewhat better than our original estimates."

The company's nonperforming assets increased 3.8% during the quarter to $665.9 million at June 30, but were down 17% from a year ago. Without Northeast, nonperforming assets would have fallen to $598.9 million.

Net interest income rose to $348.3 million from $334.6 million in the first quarter because of an increase in earning assets from the Northeast acquisition. But the average yields declined as the company found it difficult to reinvest maturing or prepaid securities at comparable rates.

Noninterest income, excluding securities gains, was up 12% to $94.8 million.

— Karen Gullo

SOCIETY CORP.

The Cleveland-based company said problem assets fell by 26% since the end of the first quarter to $335.7 million, making up 1.96% of gross loans at June 30. The ratio was 3.89% a year earlier. The company's loss provision of $18 million fell from $24 million in the first quarter and from $46 million one year earlier.

Robert Gillespie, the company's chairman and chief executive, predicted further improvements in credit quality as the year progresses.

Society's net interest margin widened by 3 basis points to a hefty 5.35% during the second quarter. But treasurer Martin Walker said he expected a mild and gradual compression of the margin over the next few months as higher-yielding loans and securities investments mature.

Loan demand remains flat in the midwestern markets served by Society, Mr. Walker said. Henry Dickson, an analyst with Smith Barney, Harris Upham & Co., said he expects the question of revenue growth to become an issue for Society in 1994.

— Steve Klinkerman

BOATMEN'S BANCSHARES

The Missouri-based company said it earned $146.5 million for the first six months of this year, a 28% gain over last year.

In the second quarter, the company gave investors a stellar return on assets of 1.28% – up from 1.05% a year ago – and a return on equity of 16.19%, up from 13.92%.

In a prepared statement, Andrew Craig 3d, Boatmen's chairman and chief executive, predicted that "results for the full year should exceed the current consensus earnings estimate of approximately $5.75 per share."

Boatmen's, which has $24.6 billion of assets, said nonperforming assets fell 9% during the quarter to $310.8 million, or 2.23% of total loans and foreclosed property. Chargeoffs decreased 64.3% to $6.9 million from $19.4 million the year before.

"Essentially they've run out of things to charge off," said Mark T. Lynch, an analyst at Lehman Brothers, who recently initiated coverage of Boatmen's with an "outperform" recommendation. "When you don't have anything to charge off, you make more money."

Noninterest expense jumped 10.5% almost half of which was attributed to acquisitions. But for the ninth consecutive quarter, Boatmen's net interest margin improved, hitting 4.62%, versus 4.40% a year ago. Mr. Craig predicted "no significant change" in the margin for the rest of the year. — John Racine

STATE STREET BOSTON

The company, which disappointed Wall Street in the first quarter with slow revenue growth and climbing expenses, reassured investors with Tuesday's earnings report. Assets under custody at the Boston-based company grew 22% to $1.4 trillion while assets under management increased 23% to $128 billion.

Fee revenue hit $205.3 million, a 21% increase over the same period in 1992.

"Revenues have come back across the board," said Livia S. Asher, an analyst at Merrill Lynch & Co. "They are back on track."

— Yvette D. Kantrow

STAR BANC CORP.

Sustaining an earnings surge that started in the first quarter, the Ohio regional reported returns equaling 1.36% on average assets and 16.11% on average equity – up from 1.16% and 13.76% respectively one year earlier.

The results largely stem from an aggressive overhaul that got under way in earnest after Star Banc last year rejected an unsolicited takeover offer from rival Fifth Third Bancorp.

The company's ratio of operating expenses to operating income dropped to 56.66% from 59.96% a year ago. Noninterest income increased by 20.9% from a year ago, with revenues from mortgage loan servicing and trust operations leading the way.

— Steve Klinkerman

REGIONAL BANKING

EXECUTIVE changes

Banc One Names Donald Winkler To Head Consumer Finance Unit

Donald A. Winkler has become president and chief executive officer of **Finance One Corp.**, a newly formed affiliate of **Banc One Corp.**

Finance One, a direct subsidiary of **Banc One Diversified Services Corp.**, was created as a national consumer finance company with multiple lines of businesses.

Mr. Winkler had been with Citicorp since 1976. He served in a number of executive positions there in operations, consumer finance and corporate banking.

Donald A. Winkler

Since 1990, he had been Citicorp's division executive of global funds transfer and financial information businesses.

— Franklin Smith

MIDDLE ATLANTIC

CORESTATES Financial Corp., Philadelphia, has named **Migdalia R. O'Leary** as corporate secretary.

Ms. O'Leary was vice president and chief corporate exchange manager at CoreStates Bank.

Migdalia R. O'Leary

She succeeds **Clinton S. R. Gibson Jr.**, who requested a change of assignment after a community affairs role for the corporation.

UNITED STATES TRUST Co., New York, has promoted **Marion R. Scida** to vice president.

She is a senior project manager in the unit investment trust division.

THE FEDERAL RESERVE Bank of New York has named **Jane W. Hayward** an officer with the title of manager.

Ms. Thomas is responsible for the bank supervision resource support area.

SOUTHEAST

MERIDIAN Capital Markets announced that **Elliot Jacobs** and **Barry Lewis** have been appointed vice presidents in its mortgage finance group.

Fort Lauderdale, Fla.-based Meridian Capital Markets is a division of Meridian Bank, Reading, Pa., whose parent is **Meridian Bancorp.**

Mr. Jacobs will be involved with the origination, acquisition, and disposition of mortgages and mortgage servicing rights. He most recently was president and chief executive officer of Home Investors Mortgage Corp., a residential mortgage banking firm in New Jersey.

He also has been a senior vice president at United Jersey Mortgage, where he was responsible for the residential mortgage lending group.

Mr. Lewis will be involved with the evaluation and disposition of whole loans and mortgage servicing.

He previously was a senior vice president of Barnett Bank of Broward County, where he managed the retail residential production.

Earlier, he was with Southeast Bank, Miami, as senior president of secondary marketing and wholesale lending.

SUNBANK of Tampa Bay, Tampa, Fla., a unit of **SunBanks Inc.**, Orlando, has promoted **Kevin H. Kilgannon** to executive vice president in charge of the corporate banking division.

Kevin H. Kilgannon

Mr. Kilgannon has been with SunBank since 1988. He previously spent six years with NCNB, now NationsBank.

SunBanks Inc. is part of **SunTrust**, Atlanta, a $37.5 billion-asset superregional bank holding company serving Florida, Georgia, and Tennessee.

HIBERNIA NATIONAL BANK, New Orleans, has promoted **Judy S. Dawson** and **Charlyn A. Myers** to vice president rank.

The bank is a subsidiary of **Hibernia Corp.**

Ms. Dawson, named a vice president in customer service, manages the statewide customer service and research operation in Louisiana.

Ms. Myers, named vice president-special services, manages Hibernia's automated teller machine operation and its branch balancing, adjustments, and domestic collection functions systemwide.

In addition, **Karen T. Braun** was promoted to assistant vice president in retail banking in St. Tammany Parish.

She is manager of the bank's Mandeville, Madisonville, and Lacombe banking offices in the parish.

And **Drew Kall** and **Lawrence J. Montz** have joined the bank as assistant vice presidents in real estate appraisal.

Mr. Kall orders and reviews real estate appraisals, performs residential appraisals, and has other statewide responsibilities in the real estate appraisal department.

Mr. Montz has statewide responsibility for real estate appraisal and provides assistance in real estate management.

WEST

FIRST INTERSTATE Bank of California, Los Angeles, has promoted **Dennis Shirley** to senior vice president.

He is manager of the marketing department.

The bank is the principal subsidiary of **First Interstate Bancorp.**

CENFED Financial Corp., Pasadena, Calif., has appointed **Lawrence J. Winslow** as executive vice president of lending and administration for its subsidiary bank, **Cenfed Bank.** □

We'll save you money.
We could save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division, to get every Monday the data you need to face the regulators.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... which agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 20% discount, so you'll be saving money even before you get the first issue. After that, how well you use the information before this year's exam could decide whether you're around next year.

Centerpoint of N.H. Not Afraid of Giants

Small Business

By PHILZAHODAKIN

TINY CENTERPOINT BANK has just opened its first branch, and it's all geared up for a real fight with the giants.

Centerpoint, based in Bedford, N.H., has made small business lending its top priority since day one, which was back on May 30, 1990.

Since then, the de novo has grown rapidly; it now holds $34 million in assets. But its new branch in nearby Manchester – strictly for small businesses – is just a couple of blocks away from an office building that soon will house the New Hampshire operation of Shawmut National Corp.

But that doesn't worry Centerpoint's chairman and president, Philip M. Stone. For one thing, he has a technological innovation going for him. And, like most community bankers, he feels his knowledge of the community gives him an edge.

The high tech gimmick is new software, known as the MAC Icon System, for the bank's automatic teller machines. It will enable businessmen to, among other things, exchange coins for currency, deposit checks without using envelopes, pull daily transaction statements of up to 75 lines in length, and cash checks to the penny.

Philip M. Stone

"We're the first bank in New England with this technology," says Mr. Stone, who has spent most of his professional life as a consultant to banks. Now, having started his own bank, he's about to mix it up with Shawmut and the state's other big players.

The new office has been set up in the lobby of City Hall Plaza, a gingerbread skyscraper built last year which happens to be New Hampshire's tallest building.

Across the street is the main office of $3.4 billion-asset First New Hampshire. The $963 million-asset Bank of New Hampshire also has a major downtown presence, as does $1.7 billion Fleet Bank New Hampshire. Shawmut will gain entry by taking over 37-branch, $1.7 billion New Dartmouth Bank.

Shawmut in April unveiled a small-business lending unit. Aimed at businesses with less than $2.5 million in sales, it features speedy servicing using simplified forms and procedures.

"That'll work for some of the market," says Mr. Stone, "but our main positioning will be personally working with the businessman, and a system to make turnaround time as fast as possible. We will have a lending structure for the larger loans, but our commercial lenders [in City Hall Plaza] are all very experienced, and we'll deliver answers as fast as possible."

As fast as Shawmut?

"That's impossible to say, but their approach is totally different than ours," Mr. Stone says of Shawmut's plan to distribute 40 specially trained "community business bankers" – at the superregional puts it – throughout its three-state branch network. "They're taking an overview approach."

Thus, Centerpoint isn't "frightened of them, or First N.H., which will be our main competitors."

Mr. Stone's efforts to attract small businesses seem to be working. "We have twice the demand deposits – $12 million – banks our size would normally have. That's because we deal with businesses, and we develop full relationships with them."

The Personal-Service Advantage

"It's the classic Walmart story," says Kevin Tynan, president of Tynan Associates, Chicago. "What do you do when Walmart moves in? Sam Walton said in his book that the best way to beat Walmart, or live with them as neighbors, is finding out what they don't offer.

"Where businesses have done that, they've survived. But you can't beat Walmart on price, or on clothes. And you can't beat Shawmut on price or sophistication or technology. But the Achilles' heel for any large bank is paperwork.

"Any large bank achieves economies through structure – and they're locked into certain formalities. The small bank has an advantage with personal service, which allows them to delve into a customer's needs."

Frank J. Barkocy, managing director of Advest New York, says Mr. Stone and other community bankers trying to carve out a small business-lending niche have a solid shot at success as long as "they stick to their niche and their service areas. The danger is overreaching.

Inmates' Money Order Scam Stinging Banks Around the U.S.

By BILL ATKINSON

The U.S. Postal Service is warning banks of a money order scam being run from the Mississippi State Penitentiary.

Last year, banks lost nearly $2 million by cashing altered money orders from inmates in the Parchman, Miss., prison.

"It's virtually a cottage industry," said David Higginbotham, a postal inspector based in Memphis. "Banks in all 50 states have been victimized by it."

How It Works

Mr. Higginbotham said the scam has been in operation for years, but last fall the number of bogus money orders entering banks surged to 500 a month. The pace has since dropped to 100 a month.

Here's how a convict can loot a bank: A visitor gives an inmate a money order worth $1 to $5.

The face value of the money order is then altered using bleach, a simple cut-and-paste technique, or word processors and dot matrix printers available in the penitentiary.

The inmate then persuades an unsuspecting pen pal to deposit the money orders in his bank account.

People are duped into depositing bogus orders, then withdrawing cash.

Days later, the inmate asks the pen pal to withdraw the funds from the account and mail them to a friend on the outside.

Seniors Targeted

Mr. Higginbotham said inmates typically target elderly women and make up stories that they have been unjustly convicted.

They also say the funds are urgently needed to pay attorneys' fees.

"The bank has no reason to question her," Mr. Higginbotham said. "She has been a loyal customer."

Once the funds are withdrawn the banks have little recourse except to sue the customer. But cracking down on an elderly woman duped by a convict doesn't play well in the local media, Mr. Higginbotham said.

Too Little, Too Late

To stop the flow of bogus money orders from entering banks, Mr. Higginbotham travels to institutions to teach tellers how to recognize the altered paper.

But "banks don't request us to come out until they are victimized," he said. □

Adams National in D.C. Finding Bargains By Shopping for Loans at Failed Local Banks

By BILL ATKINSON

WASHINGTON — Adams National Bank is hunting for good loans at failed community banks.

The $72 million-asset bank snapped up $6.6 million in loans July 12 from failed City National Bank for 96.2 cents on the dollar.

The deal follows last year's acquisition of Metropolitan Bank, another failed local institution. In that deal, Adams picked up $9.1 million in loans and $24.3 million in deposits.

'Not Taking Advantage'

"People are not taking advantage of small bank closings," said Barbara D. Blum, chairwoman and chief executive of Adams National, which is owned by women.

"It is very hard to get good loans in this market," she said. "If you can cherry-pick loans . . . then you are further ahead."

Ms. Blum said the bank acquired about half of City National's loan portfolio, which included small business and real estate loans.

"By and large, what we picked up were good performing loans," she said. "We for sure got a good deal."

Failures Not Unusual

City National's $22.2 million in deposits were acquired by Crestar Bank for $614,000.

The one-office bank had $24.5 million in assets, and was closed by federal bank regulators on June 25.

Such failures are not uncommon in Washington, where institutions are still suffering from

Barbara D. Blum
"Got a good deal"

the region's real estate bust. Collectively, the city's banks eked out a mere $511,000 profit in 1992 following a $454 million loss the prior year.

Adams National earned $633,000 in 1992, after a $1.4 million loss in 1991. The Washington-based bank earned $255,000 for the first six months this year and had a return on average assets of 0.72%.

Bankers have had a hard time finding borrowers who are good credit risks. Commercial and industrial loans at all Washington banks plunged in the first quarter by 25.3%, according to the Federal Deposit Insurance Corp.

To compound problems, many banks are still working out bad real estate credits. According to the FDIC, 19.55% of Washington real estate loans in the first quarter were troubled.

Ms. Blum said growth will continue to be slow, but the bank will keep looking for more acquisitions. □

Mood Is Sunny at Western Bankers' Meeting

By CHRISTOPHER NOBLE

SAN FRANCISCO — As the industry gathers here this week for the 21st annual western secondary mortgage market conference, it is clear that the mortgage business is in high gear.

Attendance at this year's meeting is up 20% from last year, with registrations hitting 1,200, according to the California League of Savings Institutions, the conference's sponsor. Many people will come purely to do business – to buy and sell mortgages.

"I think there will probably be a lot of deals made," said Mario Antoci, chairman of the league and chief executive of American Savings Bank, Stockton, Calif.

Concern for the Future

Others will be using the conference as an opportunity to take the industry's pulse.

While a long refinancing boom is producing spectacular mortgage originations nationwide, many lenders are beginning to fret about what will happen when interest rates eventually rise and refinancings cool off.

Industry leaders predict a significant consolidation in the mortgage business as lenders, accustomed to sharing an apparently endless supply of loans, are forced to fight each other for smaller slices of a seriously diminished mortgage pie.

The resulting war over loan pricing will hurt smaller lenders, says Muir Atherton, who heads La Jolla, Calif.-based American Residential Mortgage Corp.'s secondary marketing division.

A Few Dominant Players

Mr. Atherton predicts that 10 to 20 mortgage lenders will emerge as gigantic national players that dominate the origination and servicing businesses.

Richard T. Pratt, chief administration officer for Norwest Mortgage Co. in Des Moines, adds a wrinkle about the shrinking-pie theory.

As refinancings become less important, Mr. Malloy says, the mortgage industry will have to depend on increased home buying to boost revenue. That, in turn, will depend on homes becoming affordable to more people, he says.

In a related issue, he and others say, lenders and secondary market agencies must redouble efforts to eliminate racial discrimination in mortgage lending. Analyses of loan data collected under the Home Mortgage Disclosure Act have suggested that bias may be widespread.

Efforts in the area by the Federal National Mortgage Association and the Federal Home Loan Mortgage Corp. are sure to be a topic of discussion at the conference. The chief executives of both agencies are slated to give speeches.

Since the secondary market agencies were created to increase opportunities for home ownership, it makes sense that they should play a central role in ending racial barriers to home-ownership, industry experts say.

Perhaps in recognition of that, both Fannie Mae and Freddie Mac are under congressional mandate to increase the share of their loan portfolios devoted to low-income mortgages.

Another likely subject of interest this week is regulatory changes that face the industry.

For example, many mortgage lenders say that nonbank mortgage companies could soon be faced with regulations similar to the Community Reinvestment Act. These regulations could mirror Fannie and Freddie's regulations, which specify that 30% of the loans purchased by the agencies support low-to-moderate-income housing. □

More Lenders Offering Fixed Rate Around 7%

More and more lenders are offering 30-year fixed mortgages at 7% or lower, according to HSH Associates, Butler, N.J.

The research firm last week found 425 lenders offering the loans at or below 7%, up from 380 lenders the week before. The findings were based on surveys of more than 2,000 lenders nationwide.

Last week, the average 30-year fixed mortgage was offered at 7.24%, down two basis points from the previous week, HSH said. That was the fifth week in row that the rate declined. — Phil Bouvard

Walter P. Calahan

WHAT IF? Matthew Fink of the Investment Company Institute worries about the fallout if a bank or some other seller should stumble.

Funds Group Chief Frets Amid Boom

Continued from *page 1*

22 years in the mutual fund industry. A graduate of Brown University and Harvard Law School, he joined the Washington-based institute's legal staff in 1971, and was named general counsel in 1977. In 1991, he succeeded David Silver as chairman.

Now 52, he oversees a 130-person organization, spread out over several floors in a terraced building owned by the National Geographic Society.

Mr. Fink's roomy office is stocked with model ships, old photographs, an antique dealer's sign, and other paraphernalia from New Bedford, Mass., where he has summered since boyhood.

In his tenure at the institute, he has witnessed immense change. When he began, mutual fund assets totaled $55 billion. Money market mutual funds and tax-exempt bond funds hadn't even been invented.

Today, industry assets total more than $1.7 trillion, and are on course to pass the $2 trillion mark within a year. In fact, mutual funds could soon hold more consumer savings than commercial banks do.

Mr. Fink sees some of this change in personal terms. Once, in the mid-1980s, he and his wife, Elanor, threw an impromptu, post-convention bash at their Connecticut Avenue apartment. Fifty mutual fund executives – fully a third of the convention's attendees – crowded into the Finks' living room.

"It was everybody in the industry," Mr. Fink recalled. "What would you need now? You'd need the Taj Mahal."

Low interest rates and the entry of banks into the mutual fund area explain only some of the industry's growth, Mr. Fink said.

Equally important, he said, are the rise of 401(k) retirement plans; the decline of direct stock and bond investing; and the booming interest in international investing.

Little growth in fund assets is coming from new investors, the group says.

"The bank thing is not of a greater magnitude than any of them," Mr. Fink said.

Nevertheless, he has made special efforts to recruit bank mutual fund organizations into the Investment Company Institute. Today, 90 banks are members of the institute, and several bankers serve on the board of directors. A few years ago, there were no bank members at all.

"We are very welcoming toward the banks," Mr. Fink said. "We want everybody in the industry to be involved in industry affairs."

Embracing Regulation

Banks that join the institute may be in for a bit of culture shock, however. "We seem to be the one financial industry that asks for and wants tighter regulation," Mr. Fink said. That, he said, is because "the only thing we have going for us is strong public confidence."

Currently, the institute is working with its bank members to develop comprehensive guidelines for mutual fund sales. The standards would be proposed to regulators as a model.

The problem, Mr. Fink said, is. that the banking regulators have been issuing a patchwork of regulations. "They're absolutely inconsistent with one another. It's a total mess."

Though the institute is extending a hand to its bank members, it hasn't always been so eager to court them. Bankers say they used to be so unwelcome at the institute that they practically had to sneak into meetings.

Assimilating Banks

Mr. Fink expressed confidence that the mutual fund industry will be able to assimilate banks into its culture. In fact, he said, the industry has plenty of experience along these lines.

"When the modern industry started in 1940, almost all the players were mutual fund-only firms. But over the years, we've had waves of new industries entering," Mr. Fink said.

In the late 1960s, he noted, about a third of all mutual fund management firms were acquired by insurance companies. In the mid-1970s, brokerage houses began launching mutual funds.

Though the mutual fund industry's old rivalries with the banks run deep, Mr. Fink said he is doing his best to overcome them.

Four years ago, during the institute's annual membership meeting, he organized a panel on bank mutual funds. It wasn't a popular idea with the institute's rank-and-file members, Mr. Fink recalls.

One of the panel members was James Hoolahan, then a Chase Manhattan Bank executive. Mr. Hoolahan, now with Signature Financial Group, recalls that Mr. Fink gave each participant a present at the end of the session, and asked them to open it in front of the audience.

The gift was an intriguing 1933 photograph of Franklin Delano Roosevelt signing the Glass-Steagall Act into law.

Was it a reminder that the banks shouldn't get too far into the securities industry, or just a momento of a bygone era?

Mr. Hoolahan said he still isn't sure, but "everyone got a good laugh out of it."

Mr. Fink took a stab at an explanation. "I suppose what it was is, we've come full cycle. The world has reversed itself." □

Fiserv Studies Feasibility of Offering Funds to Clients

By KEITH DuBAY

Fiserv Inc., a leading supplier of technology services for banks, is considering providing mutual funds to its huge customer base.

Fiserv and its Denver-based subsidiary, First Trust Corp., are analyzing whether it would be feasible to enter the so-called third-party marketing and account servicing businesses.

Third-party marketers normally set up agreements to sell mutual funds between fund families and.banks. Some train bank employees to sell securities, while others act as broker-dealers and place their own brokers in banks.

Fiserv's primary business is supplying data processing services to about 5,000 banks.

"Our situation is, we'll do it if our clients want us to," said Fiserv chairman George Dalton. "We're in a very exploratory stage. We've had people [customers] inquire about it, but nobody has said go do it yet."

Observers said Fiserv could be a significant factor in the growing third-party distribution market.

"Strong companies coming into the industry indicate the importance of this market," said Michael Maher, a spokesman

One option is to sell an established fund family.

for Portland, Ore.-based Marketing One, a leading third-party marketer of investment products to banks.

When asked if Fiserv could succeed, Jeff Cathie, a marketing vice president with Liberty Financial Co.'s bank products section, said, "I don't see a reason why not."

Decision by Yearend

Gordon Rockafellow, president of Fiserv subsidiary First Trust, is leading the investment products project for Fiserv. Mr. Rockafellow said the project is his first priority and he hopes to come up with an answer before year's end.

First Trust is a Denver-based individual retirement account and benefit contribution servicer with $10.2 billion under administration, including $570 million in FDIC-insured deposits.

First Trust operates under a Colorado state banking charter, offering money market funds and servicing for self-directed IRAs and other accounts brought to it by brokers and financial planners.

Community Bank Clientele

Fiserv provides a range of services mainly to community banks, from automated teller machine servicing to item processing (check handling), to asset and liability software management systems.

The company and its five subsidiaries had $332 million in sales last year. Fiserv has offices in 44 cities.

Mr. Rockafellow said his objective is to make the idea work profitably at the community bank level.

The initial thinking, according to Fiserv executives, is to sell an established fund family, using First Trust's computer systems for servicing and possibly training bank employees to sell securities or have the banks hire experienced brokers. A relationship with an established broker-dealer is another option.

Among Mr. Rockafellow's concerns:

● "How do we get enough money to banks to make it worthwhile to them? How do we protect the banks to make sure the client list is secure and doesn't fall into the hands of the mutual fund companies?"

● "How do you make sure there's a balance between an aggressive sales force needed to get

Fiserv supplies data processing services to about 5,000 banks. Observers said the company could be a significant factor in the growing third-party distribution market.

the job done and the culture of the community bank, to make sure the two don't get out of balance?

● "I'm not so sure you need a broker-dealer [or bank premises]. If someone walks into your bank and says, I want to buy 100 shares of IBM, you don't want him to walk out the door to Merrill Lynch. It would require a broker-dealer affiliation somewhere, even though you may wish there not be. The relationship [with the customer] has to be salvaged," Mr. Rockafellow said.

Well-Known Brand

Mr. Rockafellow's immediate superior, Fiserv executive vice president Ken Jensen, said he doesn't want to look "foolish" by unveiling any plans. He added that hooking up with an established fund family would be the most logical way to start.

"We know that banks are selling [investment products], and is there a feasible way for us to do it?" Mr. Jensen said.

For his part, Mr. Dalton says he is viewing the boom in bank investment sales with caution. He has been in banking 40 years and has seen investment products come and go with interest rate fluctuations.

"Fifteen or 20 years ago they were extremely popular for a while and then they fell out of popularity," Mr. Dalton reflected. "Higher-yielding things like CDs amid double-digit inflation came back." □

Choose The Best.

"For our proprietary mutual fund program to succeed, we've got to choose the best partner – one who can help us grow our assets.

We're bringing in SEI."

It's a partnership. And it goes way beyond just administering your proprietary funds.

At SEI, our number one goal is growing your assets. We do this through our superior marketing and distribution expertise and our integrated technology solutions. Backed by our proven legal, accounting, and operations capabilities.

But our support doesn't end there. We'll develop customized plans and programs for you. Our investment experts will help structure products that meet your customers' needs. We'll even provide direct sales support — if you need it.

SEI administers and distributes more than 100 portfolios for major proprietary fund complexes. We're partners to BANC ONE (Helmsman Fund), SunTrust Banks (STI Classic Funds), Union Bank (Union Investors Fund), and many other industry leaders.

Growing your assets and improving your profits is what our partnership is all about. Which is why your goal should be: Choose The Best!

About SEI

SEI has been dedicated to creating comprehensive investment programs for over two decades, focusing on the following areas:

Investment Products and Programs ($35 billion in assets): mutual funds; proprietary funds, annuities, and bank-wide investment programs.

Full Planning and Consultation Services: marketing planning, program definition and implementation, as well as full training and sales support.

Investment Management Technology: trust accounting, defined contribution recordkeeping, mutual fund accounting, and retail support systems.

Variable Annuities Add a Steady Flow To Bank Brokerages' Revenue Streams

By KURT CERULLI and DAVE NADIG
Cerulli Associates, Boston

Perhaps the most significant challenge facing established retail bank brokerage operations is how to broaden the relationships and revenue stream from a finite deposit base.

One response is to reduce dependence on transaction-based commissions and move toward more asset-based investment products. To this end, trail payments on mutual funds and even wrap account fee structures are getting increased interest in the bank environment. (The latter is slightly ironic, since the great-grandparent of all wrap accounts is the bank trust department relationship.)

Another approach, however, is for the brokerage group to bring its existing mutual fund investor base slightly further up the sophistication ladder through variable annuities.

Our research shows that mutual funds account for approximately 32% of bank brokerage sales activity industrywide, while annuities (both fixed and variable) represent around 7%. The annuity sales component further divides into roughly two-thirds fixed annuities and one-third variable annuities.

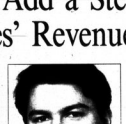
This 2-to-1 mix of fixed to variable annuities sales is similar to the profile in many of the more traditional life insurance sales forces. However, other distribution channels have a radically different mix to their annuity activity. Independent representative financial planning firms, for example, often have variable annuity sales levels that outweigh fixed annuities sales.

A Growth Spurt

Variable annuities are in a phase of tremendous growth and change, much like mutual funds in the early 1980s. Currently, there are some $90 billion in variable annuities, and we expect this number to double in the next few years.

Variable annuities are attractive to a bank brokerage group not only for their commission potential, but because they provide an opportunity for anadditional product relationship with existing customers.

Kurt Cerulli



Dave Nadig

Attractive Features

From a bank investor's perspective, a variable annuity is attractive for the following reasons:

- Variable annuities provide the potential for tax-deferred asset growth unavailable in retail mutual funds.
- Variable annuities have increasingly diverse money management alternatives, with relatively flexible tax-free switching capabilities.
- Asset management fees in variable annuities subaccounts are slightly lower than similar portfolios of mutual funds. (Realistically, this lower asset charge is more than offset by higher contract-level charges that provide the insurance component of a variable annuity.)
- Most variable annuities carry no front-end load or commission charge to the customer.

Profit Potential

From the bank registered representative's perspective, the product is attractive for these reasons:

- The potential payout is significant. Gross commissions on variable annuities average over 5%, while mutual funds average 4% or less.
- The product lends itself to asset retention. As retirement planning vehicles, these are inherently long-term investments.
- Once an initial investment is made, subsequent additions are likely.
- Compensation structures are attractive. Registered representatives often receive a combination of an up-front payout and a trail on assets. These trails can create substantial long-term revenue for a high-producing sales force.
- Selling variable annuities is as much an educational process as a sales process.

Once a client understands the product, the sale is often a matter of suitability. This is a strong fit with the traditional bank/client relationship.

No two bank brokerages are alike. but there are a few common characteristics in those successfully selling variable annuities. Virtually all are full service, not discount brokerages. Creative active-equity pursue relationship selling, often acting as a financial planner to their clients. Their focus is similar to low-end trust services: capital preservation, retirement planning, college planning, rudimentary real estate planning.

In many ways, the easiest environment in which to convince a client of the value of paying a commission. It is precisely this relationship that has resulted in the impressive sales of load mutual funds through banks.

We have observed a pattern in more aggressive bank brokerage operations. Initially, fixed annuities predominate, gradually giving way to a more even balance, and finally shifting to favor the variable version. Boatmen's Bancshares in St. Louis is a classic example of this evolution. which is perhaps one reason for Boatmen's Investment Services' having an average annual commission revenue per registered representative of nearly double the industry average.

With intense press attention and increased coverage from data houses such as Morningstar and VARDS. customers are becoming more sophisticated. Our work with bank customers, as well as bank brokers. suggests that the following product features are crucial for a competitive variable annuity offering:

- Manager Recognition. The investment manager is often the primary indicator of quality in variable annuities. Name recognition has allowed companies such as Putnam to expand rapidly, and leverage off the awareness of well-known mutual funds.
- Stepped-Up Death Benefits. Varying levels of guaranteed death benefit exist in the market. Cutting-edge products that offer some form of market-based fallback are achieving good results. Variations available in some products include guaranteed market percentages or index-tied minimum increases. The estate planning feature seems particularly appropriate in bank sales.
- Fixed Account Guarantees. In the last 18 months, this provision has become an important sales point. With money market rates at or below 3%, and the S&P 500 relatively volatile, investors view these guaranteed rates of 3% to 4% for the life of the contract as more attractive.

Fleet Financial's joint venture with American Skandia Life Assurance Co. established it as the first bank to offer a proprietary variable annuity. The Galaxy variable annuity uses four no-load portfolios mirroring their Galaxy mutual funds.

Beyond the novelty of being bank sold, the structure of the annuity bears mention. The mortality and expense charges (which cover the cost of the insurance rather than the investment components of the product) are only .55%.

This is less than half the typical "M&E" charge. However, this savings is offset mostly by the relatively high investment management fees charged by Fleet (greater than 100 bps on average). At this level of M&E expenses, Skandia is obviously taking a long-term position in the profitability of its participation in the venture.

The most noteworthy feature of the Fleet annuity is that it has no surrender charges. Most variable annuities contracts have no front-end loads, but rather substantial surrender charges on amounts withdrawn. Starting as high as 8% in the first year. these charges often decrease over time and eventually disappear after the eighth year or so. Also, many variable annuities allow for some modest amount, say 10%, to be withdrawn without incurring the surrender charge. Fleet's Galaxy has none of these surrender tolls. allowing the investor to "try on" the product and transfer out early if dissatisfied.

While Fleet does not yet disclose sales levels, and the product is too new to appear in the traditional tracking sources, industry estimates are that approximately $20 million had been raised as of the end of May. The initial roll-out to a partial distribution channel makes it much too early to assess market response, but it is reasonable to expect that the full ongoing introduction to Fleet's retail customer base will increase substantially the asset base of this variable annuity.

Staying Tuned

The entrance of banks into variable annuities is a development worth watching. Great Western recently announced that it will follow Fleet's lead, and is rolling out a proprietary variable annuity in conjunction with American General Life of Houston. Like Fleet, it hopes to leverage off the success of its proprietary mutual fund group, Sierra Trust. Signet Bank and First of America Bank have also announced plans to roll out a proprietary product, although little additional detail has emerged.

In our opinion, efforts to increase the profitability and diversity of a bank brokerage operation without careful consideration of a variable annuity program would be woefully deficient. □

The products are attractive not only for their commission potential, but because they provide an opportunity for an additional relationship with existing fund investors.

NBD Bancorp Chopping 'Preferred List' Of Nonproprietary Fund Families in Half

By MICHAEL O'D MOORE

NBD Bancorp is trimming the number of outside mutual fund families on its list of "preferred" products – the ones it recommends to customers – from four to two.

The shift, set for next month, was decided upon in anticipation of guidelines from the Office of the Comptroller of the Currency for selection and marketing of mutual funds, said Russ Browne, first vice president in charge of retail investments and the insurance group.

In two sessions, a committee of sales and investment employees reviewed sales patterns and product offerings at the Detroit-based bank, Mr. Browne said. The committee decided to strike three families – Alliance Capital Management, Dreyfus Corp., and Kemper Financial Services – from the list and add one, Putnam Investments.

Franklin Resources Inc., which will remain on the roster, now offers two funds, making recently acquired Templeton Funds.

More Funds per Family

Mr. Browne sidestepped questions on the selections but said the changes will help the bank meet its own needs and those of his customers better. "The big difference is that we have a significantly larger number of funds in each family."

With more fund offerings, NBD expects that sales of its proprietary mutual funds, the Woodward Funds, might slow somewhat over the short run, Mr. Browne added. The 13 Woodward Funds have $5.3 billion in assets.

The guidelines from the Comptroller's office are expected within two weeks. NBD expects them to aim at keeping proprietary funds from having any unreasonable advantage over outside funds, and to require a fund selection process that ensures quality offerings.

The fund families NBD is dropping from its preferred list will still be available at its offices, through Essex Corp., which the bank uses to market and sell investment products.

* * *

SEI Corp. Introduces Flexible Sweep Account

SEI Corp. has introduced a system to let banks sweep cash into their own proprietary mutual funds or SEI's mutual funds.

The company's cash management investment service automatically invests excess cash from bank checking accounts into money market mutual funds. It also allows instant access to balances in money market funds to cover checks.

The program runs on a bank's own hardware.

Corporate customers typically keep four times as much cash in money markets as in checking accounts, according to SEI. If said its system lets banks recapture the money and help customers grow assets faster.

SEI, based in Wayne, Pa., has more than $36 billion under management.

* * *

Mass. Financial Services Offers New Living Trust

Massachusetts Financial Services is offering a revocable living trust product to banks and other clients.

Smaller banks without trust departments are a target market for the MFS Entrust Wealth Preservation Plan. The Bostonbased mutual fund company also expects financial planners to be interested.

MFS requires a $100,000 investment in securities and mutual funds. At least $50,000 must be invested in MFS funds.

In addition to receiving ordinary fees for the sale of funds, banks will receive an additional 10 basis points on assets in the second year, said Walter G. Kenyon, MFS vice president.

A living trust allows an investor to put assets into a special account managed for heirs. Unlike most trusts, however, it becomes effective when the investor is alive.

Entrust is administered by Boston Safe Deposit and Trust Co. The product offers investors three plans, with different levels of personal control. Using models and a packaged sale process allows MFS to offer the product to investors who have less than $200,000 in assets to invest.

That amount would hardly get investors in the door at many trust departments, Mr. Kenyon said. "We are not really trying to go head to head with banks with established trust products."

MFS, which manages $32 billion in assets, has rolled out the program in five northeastern states. □

A Strategic Alliance With The #1 Mortgage Fund*

Trust & Private Bankers: Complement your investment services with a specialty you may not have in house - intermediate duration mortgages.

The **Managers Intermediate Mortgage Fund** can give your clients the benefits of high income and AAA quality consistent with preservation of capital and long term total return.

For more information, please contact our Financial Institutions Division at 1-800-835-3879

THE MANAGERS FUNDS

200 Connecticut Avenue, Norwalk, CT 06854

*The Managers Intermediate Mortgage Fund, according to Lipper Analytical Services, was the #1 performing U.S. mortgage fund for one and five years through 12/31/92. A prospectus provides more complete information, including fees and other charges and expenses. Read it carefully before you invest.

"Dear, it's time to pay the piper again."

Life is full of surprises. The prudent investor knows the value of being prepared and there are few things more comforting than a solid investment portfolio.

The **Berger 100 Fund** for long-term growth and the **Berger 101 Fund** for growth and income have both achieved impressive records for over 18 years and are worth consideration for your portfolio. For the investment philosophy behind these funds, please call for a prospectus and study it carefully before investing.

PROFESSIONAL EMPLOYMENT OPPORTUNITIES

Advertising Manager

Bank of America Texas corporation with 19 billion dollars in assets is seeking a highly motivated, experienced advertising manager to develop and implement comprehensive advertising programs supported by a multi-million dollar budget, several specialized agencies and a wide array of programs to build awareness and increase market share. It takes a creative mind, tremendous motivation, and an absolute passion for effective marketing programs.

The successful candidate will direct advertising efforts for all marketing initiatives; manage and motivate advertising with four agencies and all related ad budgets; act as a liaison with BofA California advertising department; develop strategic advertising plans to support product promotions; monitor competitive activity and analyze results.

You must have a minimum of five years' advertising experience at a major financial institution or five years' account supervisory experience at a major agency; detailed understanding of media buying, production, talent, and residuals, and estimate approval; strong interpersonal and communication skills, and the ability to work effectively with an experienced marketing team.

Bank of America Texas offers competitive pay and a full benefits package. Please mail your resume, including salary history, to: Bank of America Texas, N.A., Dept. AM, 1925 Frese Boulevard, Bryte Tower, Irving, Texas 75063. Bank of America is an equal opportunity employer.

BANKING ON AMERICA™

Bank of America

Banking Opportunities

First Union Corporation has immediate opportunities for technical, accounting and finance professionals in its Charlotte-based businesses.

Internal Reporting Analyst
Successful candidates must have 4-5 years of experience with strong financial background, preferably with a bank holding company. CPA required.

Corporate Accountant
Several positions available serving as liaisons between Corporate Accounting and various divisions of First Union Corporation. Qualified candidates must have 2-5 years of experience in "Big 6" corporate public accounting/financial institution accounting. Requires strong knowledge of GAAP required. CPA or CPA candidates preferred.

First Union offers a competitive salary and benefits package. Interested qualified candidates should send resume and salary requirements to: **First Union Corporation, Human Resources, 1000 One First Union Center (MB5), Charlotte, NC 28288-0953.** First Union offers drug testing as a condition of employment.

VICE PRESIDENT - MARKETING

Are you a motivated, resourceful individual with experience in the senior level management of marketing, advertising and public relations? If so, we may have the right opportunity for you!

Great Financial Federal, Kentucky's largest thrift institution, has an opening for this "can do" position in Louisville. This individual will develop, plan and develop an overall marketing strategy for the company as well as conduct a sophisticated consumer education program. Qualified applicants must have senior level experience in marketing division budgeting, management of staff and coordination of external advertising agencies. At least 10 years of progressive experience in a marketing financial services industry is necessary.

We offer a competitive compensation package with outstanding benefits. If you are interested in applying for this position, please send your resume, salary requirements and related details to:

Human Resources Manager, Great Financial Federal, 325 West Main Street, Waterfront Plaza, Louisville, KY 40202-4280.

An Equal Opportunity Employer

Join the world's leading developer of decision support systems for the consumer credit industry.

Product Marketing Managers

You will assume primary responsibility for the marketing of our Credit Bureau/Solicitation Products. Ideal candidates will have:

- Extensive knowledge/experience w/consumer credit, credit scoring, credit bureau data, prescreen solicitations, marketing and credit risk management, direct mail process
- Documented track record in developing and implementing successful marketing strategies
- Experience w/data processing and data management
- High level of technical competency in analyzing data
- Proven skills in creating advertising and sales/marketing materials
- Successful experience in supervising technical or marketing staff
- Strong oral and written communication skills
- Advanced college degree

We offer a competitive salary, comprehensive benefits package incl. relocation assistance, and a beautiful work environment in Marin County. Please send resume to:

Mick Wets, Fair Isaac, 120 North Redwood Drive, San Rafael, CA 94903.

Public Relations

DIRECTOR OF CORPORATE RELATIONS

Colorado National Bank, one of Colorado's largest and most progressive banking organizations, is seeking qualified candidates for the position of Director of Corporate Relations.

Applicants will demonstrate a strong executive-level public relations background in a corporate setting, along with previous experience in media relations. Will be responsible for the management of philanthropic foundation budget; the planning, writing and presentation of internal communications, as well as strategic communications for community relations campaigns; government relations; planning and coordination of volunteer programs; and management of the Corporate Contributions Fund. Strong organization and management skills are critical.

For considerations, please send your resume with salary requirements in confidence to: **Colorado National Bank, Attn: Karen Smith, Human Resources, CNDT0230, P.O. Box 5168, Denver, CO 80217.**

For information about additional openings call Equal Opportunity Job Line at (303) 820-6248 and for the hearing impaired (303) 820-6178 TDD.

Our organization is an equal opportunity employer, dedicated to Affirmative Action and a diverse workforce. EOE M/F/D/V.

BANK ATTORNEY

We are an independent, wholesale commercial bank with a key position available for an Assistant General to our Legal Department.

The successful candidate must possess at least 5 years' experience in a banking environment, with expertise in regulatory/transactional matters and liquidity. Familiarity with corporate securities and bankruptcy law useful; outstanding writing skills and an independent working style is expected.

We offer an excellent salary and compensation package to the qualified individual. Please send resume, including salary history and writing samples to:

Box CB00115, 71 5th Avenue, 5th Flr, New York, NY 10003.

CITATION NOTICE

File No. 3376-1991

CITATION

THE PEOPLE OF THE STATE OF NEW YORK,
BY THE GRACE OF GOD,
FREE AND INDEPENDENT

TO Fabian Guevara Diaz;
Fausto Guevara, on behalf of Fabian Guevara Diaz
Elvira Diaz, if living, and, if dead, her executors, administrators, successors and assigns, whose names and post office addresses are unknown and cannot, after diligent inquiry, be ascertained by the petitioner hereinafter mentioned;
Victor Guevara;
And to the distributees of Rufino Guevara, deceased, whose names and post office addresses are unknown and cannot after diligent inquiry be ascertained by the petitioner hereto, being the persons interested as creditors, legatees devisees, beneficiaries, distributees or otherwise in the estate of Rufino Guevara, deceased, who at the time of his death was a resident of 325 West 71st Street, New York, N.Y.

Send Greeting:

Upon the petition of the Public Administrator of the County of New York, having her office in Room 311, in the Surrogate's Court Building, 31 Chambers Street, New York City, N.Y.

You and each of you are hereby cited to show cause before the Surrogate's Court of New York County, 31 Chambers Street, in the County of New York, on AUGUST 11, 1993, at 9:30 a.m., why the account of proceedings of the Public Administrator of the County of New York, as administrator of the goods, chattels and credits of said deceased, should not be judicially settled, why a hearing should not be held to determine the identity of the distributees of decedent, why the entire proceeds from the settlement and acceptance of the estate by action should not be allocated to the cause of action for the decedent's wrongful death and why the fee of Philip Bekerman, P.C. in the sum of $4,500.00, of which $2,700.00 has been paid, should not be approved and a reasonable additional fee be fixed and allowed for Philip Bekerman, P.C. for any services to be hereafter rendered by Philip Bekerman, P.C., in connection with proceedings on kinship, claims, etc., prior to the entry of a final Decree of this accounting.

Dated, Attested and Sealed, June 16, 1993.

Creditors Agree To 'Rebalance' Brazil's Options

Dow Jones

BRASILIA — A majority of creditors have agreed to consider options on how to restructure Brazil's medium-term and long-term commercial bank debt, Citibank said.

The government of Brazil and Citibank, as closing agent, said they received enough responses to Brazil's request for a "rebalancing of options" to determine that there is room for agreement, Citibank Victor Guevara;

Puerto Rico's 1st Federal Boosts Earnings by 34%

SAN JUAN — First Federal Savings Bank, the largest thrift in Puerto Rico, said it increased its second-quarter earnings by 34%, to $4.9 million, or 55 cents a share.

First Federal also more than doubled its earnings for the first half, to $16.4 million, from $6.9 million in the year-earlier half.

Contributing to the increase, 87 cents a share, to the 1993 first-half result was implementation of Financial Accounting Standard 109, which covers reporting of deferred tax assets.

The second-quarter operating earnings were fueled by a $3.4 million increase in net interest income, to $21 million. The $1.9 billion-asset thrift also gained $1.6 million on the sale of mortgages in May through collateralized mortgage obligations, which were offset by $2.5 million in additional loan-loss provisions. □

Bush Subpoenaed in Lavoro-Iraq Case

Associated Press

WASHINGTON — Former President George Bush has been called to testify in the trial of a banker accused of making $5.5 billion of unauthorized loans to Iraq through an Italian bank, a lawyer said.

Mr. Bush has been asked to submit documents and to appear in the trial of Christopher Drogoul, former director of the Atlanta branch of the Italian government's Banca Nazionale del Lavoro, said Robert Simels, the defense attorney.

Trial Set for Sept. 8

The case stirred a great deal of controversy last year, tainting Mr. Bush's reelection campaign because of its revelations about U.S. policy toward Iraq.

Mr. Drogoul pleaded guilty to some of the charges but withdrew the plea last summer. The federal judge in Atlanta, who said he suspected a government cover-up in the case, accepted his plea withdrawal, and the government ordered a new trial. The trial is scheduled for Sept. 8.

By subpoenaing Mr. Bush, the defense hopes to prove that Mr. Drogoul was a tool in a far larger U.S.-Italian, British, and German government scheme to help Iraqi President Saddam Hussein defeat Iran during the Inter eight-year war between the two Persian Gulf neighbors.

Cover-Up Efforts Claimed

Mr. Simels said that among the 37 documents he had subpoenaed were records of conversations that Mr. Bush held with Giulio Andreotti, who was Italy's prime minister at the time, and with Boyden Gray, then Mr. Bush's White House counsel.

Mr. Simels argues that these conversations will point to an active damage-control operation mounted by the White House and designed to cover up the administration's illegal role in the lending to Iraq between 1985 and 1989.

Iraq used the loans to buy weapons and build up its nuclear weapons program. □

Niagara Asset Corporation
Loan Sale Opportunity

Niagara Asset Corporation, a service corporation managing and selling loans for the FDIC, as Receiver of Goldome, intends to offer the following performing commercial mortgage loans for bid through a Bulk Loan Sale:

Commercial Mortgage Loans	Approximate Principal Balance	Bid Date
Package #000196	$5.2MM	August 18, 1993
Strip Plaza/Shopping Center	$3.5MM	August 18, 1993
Multi-family	$.3MM	August 18, 1993
Office Building		

Properties located in TX, OH, OK, MI, and FL.

Each loan must be bid upon separately. There are 8 loans ranging in size from $.3MM to $2.3MM.

For details regarding this sale and bid packages, please contact:

Joanne M. Campagna, Vice President
at (800) 846-6164 or write to:
Niagara Asset Corporation
Waterfront Village Center
60 Lakefront Blvd., Suite 316
Buffalo, New York 14202-4392

Please respond by August 5, 1993.

This announcement is neither an offer to sell nor a solicitation of an offer to buy any of these securities. The offering is made only by the Offering Circular.

Bankers' Optimism About Clinton Fades

Continued from page 1

tion in the last year of the Bush administration, and was expected to make legislative recommendations this year.

"I had expected legislative proposals to come out by early summer, and that would imply administration support," Mr. Guenther said. "That would have gotten the ball rolling."

However, he said, Comptroller of the Currency Eugene Ludwig recently told the bank trade group that the administration does not intend to propose legislation now.

"Of even greater concern is the administration's approach to fair lending," he said. "The agency is moving more aggressively to investigate complaints of lending discrimination, and Mr. Ludwig plans to send testers into banks to see if minorities are treated on the same footing as white applicants.

"The ground rules are changing," said Mr. Guenther. "They are no longer looking at overt discrimination, but at more subtle forms," such as how much help white and minority borrowers receive with their applications.

Criticism Seen as Premature

Karen Shaw, president of the Institute for Strategy Development, thinks banks' disappointment with the administration is premature. In the long run, she said, its performance on fair lending will be a credibility test on regulatory relief.

The administration should husband its political resources

The struggling President seems less like a champion of regulatory relief.

"and then come back later with a 'competitive relief' package, rather than a regulatory relief package," she said.

In particular, she said, bankers should give the President a chance to make good on his promise to rewrite the Community Reinvestment Act to stress performance over paperwork – a goal many bankers have endorsed.

Directive to Regulators

A draft of a letter President Clinton is expected to sign this week directs regulators to rewrite the Community Reinvestment Act.

The draft, a copy of which was obtained by *American Banker*, **says "banks rightly complain about excessive paperwork and inconsistent implementation of the law."**

The letter, addressed to the four bank and thrift regulatory agencies, asks them to overhaul the system of CRA enforcement by next Jan. 1.

"I ask that, in undertaking this effort, you work to promote consistency and evenhandedness, and develop and set forth clear, measurable performance-based CRA assessment standards that reduce the compliance burden on financial institutions while stimulating improved CRA performance," the letter adds.

Ms. Shaw concedes that banks have been burdened with new guidelines under the reinvestment act, even if paperwork is reduced.

Bankers, she said, "have realized that the big stick of 'performance over paperwork' is qualitative performance standards that are easier to administer, but which smack of credit allocation."

Consumer Groups Dismayed

Still, the Clinton administration has managed to disappoint groups on all sides of the issue. As unhappy as bankers may be with the President's performance, consumer and minority organizations are equally dismayed.

"We are not pleased with the direction that things seem to be heading," said Chris Lewis, the banking lobbyist for the Consumer Federation of America.

One reason both sides are unhappy could be that administration's wants to please too many people, Mr. Lewis said.

Mr. Ludwig, he said, "is saying the right things, but he suffers from the same fault as the President – he thinks we can all be happy in the big family.

"Sometimes you have to lead and take the risk of making some people unhappy." □

Takeover Struggle Sends Shares Of a Nebraska Thrift Soaring

Continued from page 1

our business plan than under the proposal by the CAI Corp.," said William A. Fitzgerald, chief executive of the thrift.

Shareholders in banks and thrifts rarely resort to proxy fights to motivate managements to sell.

But in the case of Commercial Federal, Mr. Ellis' appetite has been whetted by the high price that Banc One Corp. agreed to pay for Omaha rival Firstier Financial Corp.: $707 million, more than 2.5 times book value.

'Window of Opportunity'

"We feel there is a window of opportunity to sell," said Mr. Ellis. "When you look at the prices being paid, we think Commercial Federal is worth more than it is being traded at."

Of course, Firstier is a better performer than Commercial Federal. Firstier earned 1.6% on assets in the first quarter; Commercial Federal earned 0.71%.

Mr. Ellis and other shareholders do not expect the same premium, but nevertheless they think Commercial Federal could fetch from $35 to $42 a share, based on the strength of the thrift's potential earnings growth.

That would represent 1.6 to 1.9 times the thrift's stated book value on March 31. Commercial Federal shares traded at $26.75 on Tuesday.

"The time to sell is when the premiums are the highest and the business is best," said Mark T. Boyer, a shareholder and partner in ROI Partners. San Francisco investment managers that support a sale.

But Joseph A. Jolson, an analyst with Montgomery Securities in San Francisco, thinks Commercial Federal would wait at least 18 months before electing to sell.

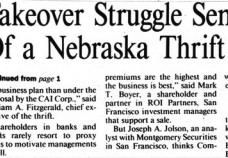
Several Suitors

Potential acquirers for the thrift, which operates in Nebraska and Colorado, include Norwest Corp., Banc One, First Bank System, and Boatmen's Bancshares.

Commercial Federal lost money in 1990, but it has largely recovered from bad loans. Last quarter, return on equity was 13.2%. Analysts said the bank could earn $95 million in calendar 1993, or $2.28 a share.

The thrift is the largest independent in Nebraska, where it has 6% of deposits.

In addition, it has $1 billion of deposits in Colorado, concentrated in Denver, where it has 4% of the market, analysts said.



TUESDAY'S MARKET

Bank stocks fell Tuesday for the second straight day.

J.P. Morgan & Co.'s shares fell $1.375 to $71.375. Banc One Corp.'s shares lost an equal amount, to $56.125. SunTrust Banks dropped $1.25 to $46.25.

Fifth Third Bancorp's shares bucked the trend, gaining 87.5 cents to $54.25. Henry Dickson, an analyst at Smith Barney, Harris Upham & Co., upgraded Fifth Third to "outperform" from "neutral," citing an attractive valuation and compelling performance. □

CAPITAL

Lyonnais Triples the Size Of Its Preferred Offering

By DAVID SIEGEL

A preferred stock offering from France's Credit Lyonnais was more than tripled in size to $350 million amid strong demand from yield-hungry institutional investors.

The issue was sold in the private placement market and qualifies under Securities and Exchange Commission Rule 144-a, which permits large investors to trade the securities.

Agents Merrill Lynch & Co. and Goldman, Sachs & Co. increased the issue from $100 million and lowered the dividend to 9.50% from the originally proposed 9.75%-10%.

Good Grade, Good Yield

The Credit Lyonnais issue offered the rare combination of an investment-grade rating and a yield topping 9%.

Standard & Poor's Corp. downgraded Credit Lyonnais just prior to the offering. Senior debt was cut to A from A+ minus.

Preferred stock, which had been rated triple-B-minus, was assigned a BBB grade. Moody's Investors Service rates the preferred stock Baa1.

The bank paid a much higher rate than other banks for recent preferred issues.

Last month, Bank of Boston Corp. issued preferred stock in

The issue combined an investment-grade rating and a yield topping 9%.

the public markets with a 7¾% dividend. The rate was lower than Credit Lyonnais' despite carrying a junk rating from Standard & Poor's.

Retail investors are the typical buyers of preferred stock in the public market. Rates for public offerings are lower than for private deals, which depend on institutional investors.

That is because there are more potential buyers of public offerings and because institutional investors are more price-sensitive than retail buyers, market sources said. □

Pricing of BB&T Issue Is Led by Merrill Lynch

A $100 million issue of Branch Banking and Trust Co. notes due May 15, 1996, was priced through underwriters led by Merrill Lynch & Co.

The notes, rated A2 by Moody's Investors Service and A by Standard & Poor's Corp., were priced to yield 4.81%, 50 basis points above comparable Treasuries.

Branch Banking and Trust is a subsidiary of BB&T Financial Corp., Wilson, N.C.

THE MARKETS

Most Yields Rise Despite Good Inflation Report

Yields on most government securities moved higher Tuesday despite a government report showing the steepest drop in wholesale prices in two years.

The 30-year Treasury bond was the exception. In late trading, the yield on the long bond was unchanged at 6.62%.

But 10-year notes yielded 5.75%, up 3 basis points, and two-year notes yielded 4.02%, up 7 basis points. The bond-equivalent yield on three-month Treasury bills was 3.11%, up 5 basis points.

Dow Falls Slightly

Stocks were mixed, as investors registered caution about the June consumer price index, to be announced today. The Dow Jones industrial average lost 8.94 to 3,515.44. The Standard & Poor's 500 index fell 0.89 to 448.09. But the Nasdaq composite index rose 0.8 point to 708.47.

The dollar, which had risen sharply Monday on talk of a cut in European rate cuts, lost ground on Tuesday, as the good news on inflation seemed to preclude a tightening of credit by the Federal Reserve. Late in New York, the dollar was quoted at 1.7187 German marks, down from 1.7305, and at 108.10 yen, down from 109.40.

Rise Laid to Profit Taking

The Commerce Department said the producer price index fell 0.3% in June, aided by a 5.9% cut in tobacco prices. The last time the index fell that much was in March 1991. The index was unchanged in May.

Market analysts attributed the rise in interest rates to profit taking. The market has rallied in recent days – driving the yield on 30-year Treasuries to record lows – on anticipation of good news on inflation.

"We've just seen some ringing of the cash register," said Kevin Flanagan, money market economist for Dean Witter Reynolds Inc.

Astrid Adolfson, economist for MCM MoneyWatch, noted that investors were also nervous about today's consumer price and retail sales reports.

— Bart Fraust

Guaranteed Results!

When you choose Dearborn's Securities Exam Training, you can be sure of the results you'll get, because they're guaranteed!*

Look at some of these advantages:

Flexible schedules. Every month Dearborn offers more than 200 classes at more than 30 locations. We can even arrange special classes in your office if you've got at least 15 students.

Professional instruction. No one can teach the ins and outs of the securities industry like a true professional, and Dearborn's instructors are bona fide pros with years of securities industry experience.

To get your results, guaranteed, give us a call at (800) 521-3395 and we'll rush your schedule of products, services and classes nationwide.

Securities and Insurance training nationally

Dearborn Financial Publishing, Inc.
520 North Dearborn Street, Chicago, Illinois 60610

Poor Training, Outdated ATMs Beset Chemical

By MATT BARTHEL

Chemical Banking Corp.'s recent automated teller machine troubles have their root in hardware failures and poor controls over ATM card issuance, according to the bank's executives.

But Chemical officials declined to say when they thought the service problems would subside, angering some cash-starved customers.

"I called the customer service line to ask if these troubles would last long, and they said they don't know," said one Chemical customer as she waited in line for help at the 55 Water St. branch in Manhattan. "If they don't know, who does?"

NEWS ANALYSIS

As reported recently in this newspaper, Chemical's customers have become more common at Chemical since its merger with the Manufacturers Hanover.

Chemical's ATMs, which usually function more than 98% of the time, have been working at an average "uptime" rate of 95% in recent months, according to internal reports.

While it might not appear to be a big problem having 5% of the bank's nearly 1,000 machines down at any one time, in densely populated New York City, that performance level is not acceptable, Chemical officials admitted.

At Odds with Ad Campaign

The service lapses also represent a marketing nightmare for a bank that is touting service quality as the centerpiece of its current advertising campaign.

In a larger context, Chemical's ATM problems also highlight how difficult it is to keep merger-related operational changes from affecting customers.

"We try to minimize the amount of [merger-related] change [to customers]," said Ronald A. Bracco, vice president and director of electronic banking at Chemical. "The ATMs are not currently meeting our internal service standards, but we're working hard to fix that."

Card Issuance Problems

The problem most commonly cited in an informal sampling of Chemical's ATM users was the inability to get cash from the machines. Chemical executives said this problem is being caused by poor management controls over issuing ATM cards.

Specifically, employees at about 215 branches of the bank – the old Chemical branches – have been trained to issue cards only to customers who have been approved by a credit analyst.

Other branches, however, have been issuing cards to customers who have not been approved by a credit analyst, Chemical executives said.

Chemical is now training employees at all branches to issue cards only to customers who have been approved by a credit analyst, said Mr. Bracco.

Chemical officials declined to say how many customers have been affected by the problems. □

Market Value of Top 100 Fell 2.6% in Second Quarter

By RICHARD LAYNE

The market value of the 100 top banks fell $7.1 billion, or 2.6%, in the second quarter, the first such drop since the third quarter of 1992.

First Boston Corp. said the decline is the steepest since the $11 billion drop in the last quarter of 1987, when the stock market crashed.

The market value of the 100 largest banks totaled $271.1 billion, versus $278.1 billion in the first quarter, according to SNL Securities. The 100 banks were ranked by market value.

Reliable Gauge

Market value is a company's stock price multiplied by its shares outstanding. It represents a reliable gauge of a company's market strength and ability to acquire others.

The drop in the second quarter reflects the fall in bank stock prices in the last few weeks of the quarter.

The dearth of new common stock offerings was another factor in the decline. Among the major institutions, only Chase Manhattan Corp. issued common stock in the period. Chase's market value increased 7.3%, to $5.9 billion, because of the offering.

Investors began to worry about rising inflation in mid-April and immediately began to sell off bank stocks. They thought rising inflation would cause higher short-term interest rates, which would drive up banks' costs of funds and hurt earnings. By early June, bank shares had fallen an average 15% during the quarter.

The fears abated in mid-June, and the stocks rallied about 12% in three weeks. Thus, the seesaw in share prices resulted in only a slight drop in market value by the quarter's end.

B of A, NationsBank Lost Big

A sizable portion of the drop came from losses at BankAmerica Corp. and NationsBank Corp.

BankAmerica, which has the

Dime Savings Tells FDIC It May Bid On Crossland

By BARBARA A. REHM

WASHINGTON — Dime Savings Bank of New York has emerged as a last-minute suitor for Crossland Federal Savings Bank, complicating regulators' plans to sell the Brooklyn-based thrift to institutional investors.

The Federal Deposit Insurance Corp. had already lined up investors and was planning to announce details next week, according to people familiar with the deal.

But Dime's interest, which was confirmed by industry sources, is now holding up the process. Under federal law, the FDIC must explore all options and pick the least expensive option for resolving failed banks.

The FDIC announced in mid-May that it expected to get a better price for the $5.7 billion-asset Crossland by selling it to institutional investors, rather than to another financial institution.

Sale to Investors Seen Likely

That unusual strategy is being pushed hard by FDIC resolutions director Harrison Young, and most observers think the agency will still take that route.

But Dime's interest, at a mini-

IRS to Review Conversions By Mutual S&Ls

By ROBYN MEREDITH

WASHINGTON — Dealing a blow to some thrifts, the Internal Revenue Service plans to review the tax liability associated with a popular procedure used by mutual savings and loans to raise capital.

Thrift lawyers and accountants said the review will indefinitely delay use of the technique, which allows depositor-owned thrifts to sell minority stakes to the public.

What's more, an unfavorable IRS ruling could significantly boost the tax bills or reduce the capital levels of the 15 thrifts that converted to public ownership using this technique over the past two years.

Auditor Piqued IRS Interest

The issue first arose last December when KPMG Peat Marwick asked the IRS to confirm that thrifts converting to public

Shares Fall Despite New Round Of Strong Bank Earnings Reports

An American Banker News Roundup

Regional bank companies continued to report robust second-quarter earnings on Wednesday, but investors were not impressed.

Five companies reported double- or triple-digit growth in net income over the second quarter of 1992, but all but one saw their stocks lose ground on a day that the Dow Jones industrial average rose strongly.

The *American Banker* index, a weighted average of 225 banks, fell 1.29% on Wednesday while the Dow climbed 0.77%, or 27.11 points.

Selloff Pattern

Analysts said investors were repeating a pattern began after first-quarter results were reported of buying bank stocks on expectations of strong earnings and then dumping them when the results came in. They said the selling showed a lack of confidence in banks' ability to sustain earnings at a time when revenues continued weak.

"You can't live off declining loan-loss provisions forever," said George Salem, an analyst at Prudential-Bache Securities. "I think the investor wants to see loan growth."

Joel B. Alvord, the chairman and chief executive of Shawmut

NEWS *briefs*

OTS to Ease Red Tape in Flooded Midwest

CHICAGO — The Office of Thrift Supervision offered some regulatory relief Wednesday to thrifts in flood-ravaged areas of the Midwest.

In a move expected to be followed by other regulators, the OTS said it would waive a rule requiring thrifts to keep 65% of their assets in housing loans. The easing of the thrift-lender test is designed to encourage rebuilding of small businesses.

Institutions with ballooning deposits from insurance benefits and government aid can also apply for temporary relief from leverage-capital requirements.

Through a statement by Jack Downey, deputy director for regional operations, the OTS promised "to cut through red tape and adjust our supervision" to help thrifts contribute to the recovery.

The guidelines were distributed to savings and loans in Illinois, Iowa, Kansas, Minnesota, Missouri, Nebraska, South Dakota, and Wisconsin.

Stutz Quits Homefed to Make a Bid for It

SAN DIEGO — Homefed Bank of San Diego said James E. Stutz has resigned as managing director of its retail banking group to lead a group of investors who will make a bid to acquire the thrift from the Resolution Trust Corp.

In a press release, Mr. Stutz said he will be "coordinating the activities of the investment banker, the San Diego Economic Development Corp., and our community leaders to ensure that a successful offer is prepared and accepted."

Anchor Meets Its Capital Requirements

HEWLETT, N.Y. — Anchor Bancorp said it raised $67.8 million in a stock offering, adding enough capital to free its thrift unit from regulatory restraints after four years of uncertainty.

"It is an exciting day for Anchor shareholders, both old and new," said James M. Large Jr., chairman and chief executive of the thrift, which has $5.6 billion of deposits.

The additional capital allowed the thrift to meet the 5% leverage capital ratio to satisfy the requirements for a well-capitalized thrift under the 1989 thrift-reform act.

Mr. Large said the thrift also completed a transaction with the Federal Deposit Insurance Corp. that improved Anchor's holding company capital structure by increasing the common equity portion of total capitalization.

In that deal, Anchor exchanged $71 million of senior notes for $157 million of preferred stock, held by a fund managed by the FDIC.

The fund acquired the preferred stock in the early 1980s when Anchor acquired some troubled institutions with assistance from the old Federal Savings and Loan Insurance Corp.

Gonzalez Wants Investment Assurances

WASHINGTON — Out-of-state banks have promised to invest almost $1 billion as the price for entering the District of Columbia, and House Banking Committee chairman Henry B. Gonzalez wants to be sure those promises are kept.

"Unfortunately, these promises are liable to fall by the wayside once the bank gets what it wants," the Texas Democrat said.

Rep. Gonzalez said he has written to the bank regulators asking them to explain how they judge a bank's current and future commitment to community investment.

Despite the commitment by out-of-state banks to lend in low and moderate-income neighborhoods in Washington, "critics say these commitments have not always been kept and that the federal regulator responsible for supervising D.C. banks does little to enforce these promises," Rep. Gonzalez said.

The banking committee chairman has tentatively decided to hold hearings on fair-lending practices toward the end of July.

The briefs were compiled from staff and wire reports.

Truth-in-Savings: Fed Mulls Changes to Fledgling Rules

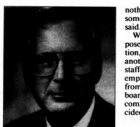
By CLAUDIA CUMMINS

WASHINGTON — The new Truth-in-Savings rule has been in effect just three weeks, and the Federal Reserve has begun tinkering with it.

The Fed's board of governors on Wednesday proposed changing the way banks calculate annual percentage yields for some certificates of deposits. While the proposed change is relatively minor, revising the rules in any form so soon after implementation raised eyebrows even among the governors.

"I have no taste for changing a regulation that's only been in effect for three weeks," said Fed Governor Edward W. Kelley. "With the ink barely dry, we're finding flaws in it."

Despite this concern, the board decided that making the formula as accurate as possible justified the added burden on the industry the change will generate.



Edward W. Kelley
"No taste" for changing rule

posed change came in response to complaints from both bankers and the securities industry that the existing formula could confuse investors considering these kinds of accounts.

In proposing to change the calculation, the Fed offered two alternatives.

A more simple revision recommended by the Fed's staff would substitute the interest rate for yield on these accounts. A more complex, more precise calculation preferred by the governors would factor in when interest payments are made.

Third Alernative: Inaction

And Fed chairman Alan Greenspan suggested a third alternative: make no change. "When this stuff comes back, we do have the alternative of doing nothing and we should give some consideration to that," he said.

While it was willing to propose changing the yield calculation, the board refused to act on another change proposed by the staff. The staff had wanted to exempt certain bonus programs from advertising rules. But the board, noting that no bank had complained about the rule, decided against the exemption.

Fed Wire

Also at the meeting, the Fed voted to postpone indefinitely its proposal to extend the operating hours of the Fed Wire funds transfer service. Last October, the Fed proposed opening the wire at 6:30 a.m., two hours earlier, in order to facilitate risk-reduction in settlement activity for futures markets.

Many in the financial industry asked the Fed not to adopt the plan, saying the small change would provide little benefit without broader changes in the Fed's entire payments system. The Fed heeded these concerns, and is planning an in-depth study to explore a more comprehensive plan for expanding Fed Wire hours.

"There is no backing away from our long-run plans to move in the 24-hour direction," Governor Wayne Angell said. "The notion is that the board is somewhat impatient to move forward." □

Poor Training, Old ATMs Beset Chemical

Continued from *page 1*

were recently empowered to issue ATM cards on the spot. But the training in card issuance procedures did not prepare these employees to handle the volume of requests for new and temporary cards they were required to process.

As a result, some cards have been inadvertently deactivated, frustrating customers who tried to use them. Other customers received multiple cards, which created confusion as to which card was usable.

NEWS ANALYSIS

Special Requests

Chemical Bank executives admit that training procedures could have been better. But they point out that the issuance troubles were exacerbated by an unexpectedly large jump in the number of requests for temporary cards and personal identification number changes.

In May, Chemical handled about 30,000 such requests. In June, when its branches received card issuance capabilities, the requests for "status changes" more than doubled to 67,000.

The ATM network is less reliable than it was.

"The floodgate opened, and frankly, we weren't prepared for it," Chemical's Mr. Braco said.

Chemical Bank is working hard to remedy the problems stemming from inexperience with branch-based card issuance. Over the past few weeks, representatives from all 411 Chemical branches were retrained on issuance procedures.

An Aging Fleet

But the troubles with Chemical's ATM services do not end with card issuance. The bank also said that the aging cash machines manufactured by Omron Systems of America Inc. that make up about a third of the bank's 950 ATMs have been experiencing a much higher number of outages than its newer terminals from NCR Corp.

Chemical has already begun to address this problem. So far this year, it has discarded 100 Omrons in favor of new NCR machines with touch-sensitive screens. Bank officials said the plan is to replace every Omron ATM with a new NCR unit by the end of 1994.

The NCR terminals carry a guarantee of 99% availability, and Chemical executives indicated that the machines they have installed so far have exceeded that performance level. □

First Financial Signs Deal to Buy Telecheck of Kan.

By JEFFREY KUTLER

First Financial Management Corp., further consolidating its check-guarantee activities, said Wednesday that it has signed a definitive agreement to acquire Telecheck of Kansas Inc., which does business as Telecheck Mid-America.

The Mid-America unit has 4,500 customers in Kansas, Missouri, Nebraska, and part of Tennessee. They will bring to 47 the number of states with First Financial Telecheck franchisees.

Including Mid-America and three other recent Telecheck purchases, "FFMC owns 91% of the total Telecheck U.S. network," said Patrick H. Thomas, chairman, president, and CEO of the Atlanta-based processor.

Quick Growth

First Financial has undergone rapid expansion, fueled in part by the sales skills of Georgia Federal Bank and an outsourcing unit, to concentrate on processing businesses. The check-acceptance service supplements the business of FFMC's Nabanco unit, which processes card transactions for merchants.

Telecheck operations are coordinated by Telecheck Services Inc., a Houston company that First Financial acquired last year. Through the franchisees, Telecheck serves 100,000 retailers and financial institutions in the United States, Canada, Australia, and New Zealand.

The First Financial-Telecheck tie was one of three that reshaped the U.S. check guarantee market.

Equifax Inc., the Atlanta-based credit bureau, acquired Telecredit Inc. of Los Angeles at the end of 1990, and National City Corp., the Cleveland-based banking company, acquired JBS Associates of Ringwood, N.J., last February. A National City subsidiary, National Processing Co., competes against Nabanco in the merchant processing business.

When it's this hot, you deserve extra scoops.

For many bankers, the thermometer is a lagging indicator of the heat they feel in handling current regulations and guessing the Clinton administration's next moves. But we've got a way to help you keep cool: *American Banker's Washington Watch.*

We broke the news about the plans by credit union trade associations to branch cross-country. We warned readers that the FDIC will crack down on banks and thrifts that aren't paying enough for insurance, and that the Fed was flirting with examination fees. We also uncovered plans that would let banks pay less for deposit insurance provided they set up certain special programs.

Those kinds of tasty scoops are the weekly fare at *American Banker's Washington Watch.* Within minutes, you get insights on regs and regulators—as well as your competitors—that could make the difference between profit and loss. We unconditionally guarantee it.

Comment

By William M. Isaac

A Time to Show Leadership In Ending Discrimination

Before being appointed to the board of the Federal Deposit Insurance Corp., I was a young officer at the largest bank in Kentucky.

Having been reared in a small Ohio town, I'd had little experience with race discrimination.

One of the most prestigious clubs in downtown Louisville had a "whites only" rule. A young black man, a graduate of Dartmouth and Harvard who had joined one of Louisville's largest law firms, was denied entrance to the club as a guest to play squash.

When I arrived at the FDIC, I decided I would do what I could to change what I had come to regard as a deplorable and degrading practice. I believed that private clubs discriminating on the basis of race, religion, or gender should not be supported by the business community.

I encouraged the FDIC board to adopt a policy statement "discouraging" banks from paying dues to clubs with discriminatory membership practices. We had no legal authority to enforce the policy statement.

We were simply taking a stand, trying to exert a little moral leadership.

Disappointing Reaction

Soon after the policy statement was issued, I appeared on a "meet the regulators" panel at a bankers convention. Many of the bankers in the audience were enraged about the FDIC policy statement.

One banker received an ovation when he called me a "goddamned bureaucrat who ought to have something better to do."

The episode made me angry, to be sure. But mostly I was disappointed.

I had worked with bankers for a lot of years. They were good, decent people, pillars of their communities.

They had an opportunity to put something right that was terribly wrong. Not many private clubs would be able to maintain their discriminatory practices in the face of bank resistance.

I had hoped that banking's leaders would speak out in favor of what we had done. Had the industry's leaders done this – in short, had they led – banking would not only have done the right thing, it would have scored huge public relations and political coups.

Instead of leading, the industry's captains allowed a few noisy reactionaries to be the industry's voice. The results were some angry and disappointed regulators and some very bad publicity.

INSTEAD *of complaining futilely about being singled out, bankers should take the initiative, stressing that they will not tolerate discriminatory lending, whether intentional or unwitting.*

A Choice to Make

The industry has a similar choice before it today. The regulators, the Clinton administration, Congress, and the media are all focused on community reinvestment and discriminatory lending practices.

Indeed, Gene Ludwig, the new comptroller of the currency and an old friend of the President's, has made the issue of eliminating discriminatory lending practices is one of his highest priorities.

Federal Reserve Governor Larry Lindsey, from a different political camp, has been equally outspoken on the subject.

The industry's leaders can remain silent. If they do, a void will be created – and it will inevitably be filled by the reactionaries.

The Real Issue

No bank of any consequence would knowingly engage in discriminatory lending practices. That's not the issue. The issue is whether the banks are doing enough to help identify and overcome the subtle forms of discrimination that exist throughout our society.

Bankers can complain that they are being singled out unfairly and that banks' competitors should be forced to do their part. Banks will not gain any relief through this strategy, though they might acquire companions in misery.

I think it makes a lot more sense for the industry to take the initiative in understanding and addressing the concerns of the community groups.

The industry's leaders should get out front and make it clear that bankers care deeply about their communities and will not tolerate discriminatory lending practices, whether intentional or unwitting. □

With Fair Lending in the Spotlight, Banks Need to Focus on Compliance

Recently, the issue of fair lending compliance has taken on a new priority that financial institutions must take seriously.

The new Federal Deposit Insurance Corp. and Office of the Comptroller of the Currency examination guidelines, a series of congressional hearings on fair-lending violations, and the Clinton administration's emphasis on adequate lending opportunities for minority and low-income individuals have combined to highlight the increased awareness and importance of fair-lending compliance.

Now more than ever, actual or perceived equal credit violations, as determined by the "effects test," may result in costly and time-consuming examinations, regulatory penalties, and potential referrals to the Justice Department.

Therefore, it is essential for every depository institution to analyze and reevaluate its lending activities and compliance programs in order to determine not only its actual compliance with the laws, but the effectiveness of its programs.

New Examination Guidelines

Specifically, the OCC intends that its new guidelines answer two questions:

▪ Do equally qualified applicants receive equal treatment without regard to race or national origin?

▪ Do banks give the same amount of assistance to minority versus nonminority candidates?

THE EMPHASIS *on regulatory compliance is not limited to large banks or those in urban areas.*

dates throughout the loan process.

The FDIC, in its guidelines, has suggested that its examiners will be asking the same questions. Although the Federal Reserve Board has not yet issued its guidelines, the board appears to be using essentially the same criteria as the other agencies in evaluating suspect lending practices.

Among the initiatives that the OCC, and potentially the other agencies, will use in order to help determine whether a bank is violating the fair-lending laws are:

▪ The use of "testers" to identify potential pre-loan steering.

▪ The elimination of the prohibitions on banks' recording information about the race and national origin of business and general consumer loan applicants in order to allow institutions to better monitor their compliance.

▪ The development of statistical analyses to augment current examination procedures.

Further, the agencies' examination efforts will be far-reaching. For example, of the estimated 900 institutions that are said to hold the bulk of national bank assets and deposits, Comptroller of the Currency Eugene A. Ludwig estimated that by the end of this year the OCC will have completed examinations in approximately 250.

Compliance Examinations

The emphasis on regulatory compliance is not limited to large banks or those in urban areas. As Mr. Ludwig explained, the new examination procedures are designed to be effective in reviewing banks with as few as five mortgage loan denials for minority applicants and emphasized that the procedures can be "adapted to detect other forms of discrimination in national

Banks Should Focus on Compliance Plans

Continued from *page 4*

banks that do not make a significant number of mortgage loans."

Fair-lending compliance issues and regulatory investigations thus will be an important and immediate consideration for banks and thrifts involved in housing finance activities. There are several important trends that can be identified:

▪ Regulators are aggressively targeting banks for investigations in accordance with their February announcement and the current administration's acknowledged goals in this area.

▪ The methods and information used by the government in the Decatur Federal test case brought by the Justice Department in 1992 are instructive for banks undergoing compliance examinations. A statistical analysis combined with comment and canvassing seems to be viewed as a predictive blueprint by the banking community.

▪ It is tempting, but unwise, for a bank to concentrate its loan ratios to those of its competitors

PREVENTING *an investigation is always preferable to defensive action.*

using "peer group" data and to believe that as long as it is not at the bottom of the pack, it is safe. Regulators are increasingly seeking the worst offender in a region, but are independently evaluating a bank based on a predetermined ideal.

▪ Even if a bank has not recently been notified of a pending examination, the institution may not be out of trouble. Investigations are slated to continue for approximately the next nine months, and even those examinations that have been initiated, but have not been concluded, may now be incorporated into the current regulatory push for compliance.

▪ Banks should be aware that their HMDA data for a number of years may be used in current investigations for comparisons in order to illustrate a "pattern or practice" satisfying the effects test under the law, and leading to a referral to the Justice Department.

▪ Generally, the bank regulators are likely to make referrals to the Justice Department to pursue instances of discrimination. If they have "reason to believe" that there may be a pattern or lending discrimination by an institution, referrals are mandatory.

Self-Evaluation Program

Preventing an investigation is always preferable to defensive action. Frequent self-evaluations are helpful in creating an effective compliance program that will satisfy agency regulators.

There are several steps that banks can use on a continuing basis to review their practices. These methods of analysis will become even more critical upon notification of a pending investigation or examination:

▪ Review the bank's raw HMDA data from an objective standpoint. The regulators will be using these statistics in comparison to the bank's defined community as a regulatory shorthand. Even if the reasons behind each of the denials seem sound, statistical evidence may indicate an initial problem to the regulators.

▪ It is important to carefully review not only the minority loan rejections but to scrutinize the bank's files for nonminority loans that have been approved.

In determining whether disparate treatment may have taken place, regulators look for the "thick file" syndrome, where a greater number of documents in nonminority files leads to the assumption of "coaching" white applicants to explain away their deficiencies while allowing those deficiencies to lead to the rejection of minority candidates.

The bank must understand what the differences in treatment are and why they exist.

▪ Review the flexibility in the bank's lending policies. Consider how much discretion individual loan officers are given in the institution and review the factors included in the policy manual as automatic loan disqualifiers.

Make sure that factors leading to automatic rejection are available to the public and that they are consistently applied.

▪ Advertising should be designed to penetrate all of the relevant neighborhoods within the designated community. Determine whether the bank is taking advantage of a multimedia approach and whether that approach includes publications that are read by and available to low-income and minority applicants.

▪ Even if the bank is advertising to a wide range of people and does not currently show significant discrepancies in its loan approval/rejection ratios, a bank may continue to have low penetration into minority communities if it does not offer a product designed to meet the needs of the low-income and minority applicant.

As a result, it is advisable to determine the types of lending or home mortgage products that will adequately suit the minority community and to make those products available. Make sure that the credit standards used are both acceptable to the bank from a safety-and-soundness perspective and that they are clearly articulated in the relevant policies.

It is important to recognize that older, urban-based areas that are under redevelopment or that contain a significant minority and low-income population may require a different type of loan package than a newer, expanding suburb.

Positive Approach

While the examination process will undoubtedly lead to some degree of anxiety for an institution, it is critical that the bank use this opportunity to influence examiner conclusions and to create a positive "case" for the institution.

Banks should actively participate in the examination and monitor problem areas as they develop so that they can respond by bringing favorable information to the examiners' attention.

Quick and decisive responses to the examiners' inquiries and concerns during the examination may help to forestall a final, negative conclusion.

Following the examination, the regulators will usually conduct an exit interview with bank personnel. This should be used as an additional opportunity to clarify the institution's positions and practices and to address any concerns that have surfaced during the examination.

It is important to remember that the current administration considers compliance with the fair-lending laws a high priority. At present, the regulatory agencies and the Justice Department appear to be reevaluating the meaning of compliance with the fair-lending laws and their respective roles in enforcing those laws.

The banking community must realize that compliance considerations will be an important part of the regulatory landscape for the foreseeable future. □

Bank Shares Fall Despite New Round Of Robust 2d-Quarter Earnings Reports

Continued from page 1

National Corp., conceded that investors need more evidence of health. "Loan demand is not robust." he said. "One of the challenges [for banks] will be on the revenue side."

Margins Under Pressure

Sandra J. Flannigan, an analyst at Merrill Lynch & Co., noted as well that interest margins are under pressure. About half the banks she covers reported larger-than-expected decreases in the margin, she said. "We're seeing it even though loans are picking up," she said. "You have to be worried about the spread on some of the loans being booked."

PNC BANK CORP.

The Pittsburgh-based bank company, the nation's 11th largest, said second-quarter earnings climbed 32.5% to $169.1 million, without the heavy reliance of recent quarters on special gains.

PNC posted a modest $6.6 million of gains from sales of debt securities, down from $105 million in the first quarter and $47 million a year ago.

It attributed the strong showing to shrinking credit costs and reduced expenses. The company's loss provision fell 12.4% from $61.4 million in the first quarter, while nonperforming assets were cut another $65 million to $675 million, or 2.63% of gross loans.

PNC's noninterest expenses, primarily from salaries and occupancy costs, dropped to $345 million from $387 million in the first quarter.

But PNC's net interest margin fell 18 basis points since the first quarter to 3.96% because of lower loan fees and prepayments of mortgage-backed securities. And its outstanding loans grew a scant 1.22% during the quarter, despite an acquisition-fueled rise in assets of 2.27%.

The bank's stock fell $1.875 to $30 a share in late trading Wednesday afternoon.

— Steve Klinkerman

FIRST CHICAGO CORP.

Gains in credit card revenue and trading sustained profits at the nation's 13th-largest bank company. Quarterly earnings spiraled to $168.5 million from $34.5 million one year earlier.

First Chicago's stock price rose 25 cents to $42.75 a share in late trading Wednesday.

The company's burgeoning credit card portfolio yielded $164.2 million of fee revenue, up 12% from the first quarter and 41% from the year-ago period. Trading gains of $91.6 million were up 68% from the first quarter and 148% from a year ago.

Venture capital gains of $19 million after-tax contributed strongly to profits, but were down from $57 million in the first quarter.

Chicago Corp. analyst Kenneth Puglisi cautioned that trading and venture capital gains probably will trend downward later this year.

But Robert Albertson, who follows the company for Goldman, Sachs & Co. was upbeat.

"The results are not fully sustainable because of the special gains, but First Chicago's core businesses still are ahead of where we thought," he said.

Indicating that it is still battling real estate problems, First Chicago recorded a $47 million increase in problem commercial realty loans in the second quarter despite completing the previously announced sale of $500 million of problem assets to GE Capital Corp. Nonperforming assets at the company grew 10% to $415 million.

— Steve Klinkerman

WACHOVIA CORP.

The North Carolina company earned $123.1 million in the second quarter, largely on the strength of improved noninterest income, tight expense controls, and fewer credit problems.

Earnings of 70 cents a share were in line with analyst consensus estimates, as compiled by First Call. But Wachovia's shares fell 87.5 cents to $34.125 a share in late afternoon trading.

Strong gains in trust fees, service charges, and bond trading profits helped total fee income rise 16% to $149.8 million from $129.7 million one year earlier.

Wachovia's nonperforming assets fell 18% to $227 million from $275 million in the first quarter. Chief financial officer Robert S. McCoy Jr. attributed this to "some good work in selling foreclosed properties."

The company's loan-loss provision of $26.1 million rose slightly from $25.1 million in the first quarter, but was 7% below the year-ago quarter. Chargeoffs, reflecting losses from the bank's aggressive marketing of credit cards, rose $3.2 million from the first quarter to $17.2 million. But card chargeoffs, combined with a boost in consumer installment lending, led to a 9.5% increase in loans to $21.7 billion from a year ago.

"We are booking a very large number of loans, but we've also had very large paydowns," Mr. McCoy cautioned. "Large companies have access to alternative credit markets and are using the proceeds to pay down bank debt. It takes booking a lot of loans to offset that."

— Kenneth Cline

SHAWMUT NATIONAL CORP.

New England's third-largest bank company earned $56.3 million in the second quarter – more than six times its year-earlier gain. A dramatic decline in nonperforming assets and a jump in net interest income caused the gain.

"Core earnings will continue to be very strong," Mr. Alvord, the company's chairman, said in an interview. "Credit quality [problems] are pretty much a thing of the past, and we're in the midst of a cost management program that should improve our operating ratios."

Shawmut's stock, which was down as much as $1.125 Wednesday afternoon, bounced back to close down 25 cents at $23.25 a share.

Shawmut – which completed two bulk sales of real estate during the quarter – said its nonperforming assets fell 34% in the quarter to $513.1 million.

"They still have a lot of foreclosed real estate," said Lawrence Cohn, an analyst at Paine-Webber Inc. "But that will continue to go down and help their earnings."

Shawmut reaped a 9-basis-point gain in its net interest margin during the quarter to 4.10%, reflecting its across-the-board lowering of deposit rates in March by 20 to 50 basis points. Bank officials and analysts said the move has not led depositors to withdraw funds.

"They've had lower pricing for four months now, with no negative impact," said Michael Mayo, an analyst at UBS Securities who raised his 1993 estimate for Shawmut to $2 a share from $1.85 on Wednesday.

— Yvette D. Kantrow

FIRST OF AMERICA

The Kalamazoo, Mich.-based company earned $59.6 million in the second quarter, up 1.71% from the first period and more than double the year-ago results. Its return to investors translated into a strong 1.17% on average assets and 17.16% on average equity.

But the bank's net interest margin of 4.92% was down 4 ba-

Get MOHR information about profitable banking in the 90's.

Two years ago, breakthrough research by MOHR Development, the recognized leader in sales, service and leadership training for banks, defined five key issues for profitable consumer banking in the '90s. Now follow-up research—conducted jointly with the ABA Banking Journal—examines consumer banking's progress in addressing those issues, including:

- creating a high performance sales culture
- integrating sales and service
- translating market segmentation into front-line action

MOHR Development's all-new report highlights critical gaps between the industry's acknowledged priorities and its actual practices. It also draws important conclusions about how to close these gaps, and points the way to more profitable banking.

For a free copy of *Sales, Service and Leadership in Banking: The Gap Between Vision and Reality*, call 1-800-222-1349.

Robust Earnings Fail to Sway Investors

Continued from page 8

sis points from the first quarter.

First of America Bank Corp.'s loss provision of $20 million inched down from $23.8 million in the first quarter. The bank finished the second quarter with $173.6 million of problem assets, or a slender 1.25% of gross loans.

Commercial loan demand in Michigan remains weak, said Daniel P. Smith, First of America's chairman and chief executive. But he noted that consumer loans are growing.

The company's stock lost 12.5 cents to $38 a share in late trading Wednesday.

— Steve Klinkerman

FIRST BANK SYSTEM INC.

A big charge related to the company's termination of Lokorado Nation Bancshares during the quarter skewed results at the Minneapolis-based company. First Bank earned $33.5 million, down 42.74% from the second quarter of 1992.

The company booked a pretax charge of $72.2 million for the purchase of the Denver bank in May.

However, First Bank reported improved fundamentals. Absent the charge, it would have earned $83.5 million, or $1.08 on an assets of 1.32% – up from 1.25% in the first quarter and 1% one year ago. Prior results were restated to reflect the pooling acquisitions of two western banks.

The company's problem assets fell by $46 million during the second quarter to $328.5 million, or 1.82% of gross loans.

Surges in residential mortgages and commercial credits sparked a 3.82% expansion of First Bank's net loans during the second quarter to $16.84 billion.

First Bank's shares lost $1.125 to $29.75 in late trading Wednesday.

— Steve Klinkerman

HUNTINGTON BANCSHARES

The Columbus, Ohio-based company reported net income of $53.2 million for the second quarter, an increase of 48.8% from $35.7 million in the same period last year.

Huntington matched its peak profitability figures of the first quarter, earning $53.2 million for an ROA of 1.4% and an ROE of 19.87%.

The company's second-quarter net interest margin of 5.34% fell from 5.47% in the first quarter, while its loss provision of $24.4 million inched up from $22.3 million in the first quarter.

But Huntington chairman and chief executive Frank Wobst said in a prepared statement that loan growth and sharply increased mortgage origination fees sustained profitability.

— Steve Klinkerman

SIGNET BANKING CORP.

The Richmond-based company, which has $12 billion of assets, reported a 51% second-quarter gain of $40.4 million.

Signet's net interest income rose 22% to $129.8 million, primarily because of robust growth in credit card loans. Credit card servicing income helped boost noninterest income by 16% to $81.2 million from 1992's second quarter.

But shares of Signet tumbled $3.75 in trading Wednesday as analysts expressed concern about a 32-basis-point drop in the net interest margin to 5.03% during the quarter.

"The margin contraction was very much unexpected on Wall Street, and anytime you have a surprise of that magnitude there is a tendency to think the worst," said Ms. Flannigan, the Merrill Lynch analyst.

Anthony Davis, who follows Signet for Dean Witter Reynolds Inc., said the company's chief problem was the maturation of about $450 million of interest rate swaps that had been insulating it from high interest costs on $2.5 billion of certificates of deposit. Signet has been using CDs to fund its aggressive credit card marketing program.

But he and some other analysts said investors were overreacting to the margin squeeze.

— Kenneth Cline
and Stephen Kleege

OTHER RESULTS

Another Richmond-based company, **Central Fidelity Banks Inc.**, said Wednesday it earned $26.3 million in the second quarter, up 33% from the year-ago period. Central Fidelity, which has $9.1 billion in assets, reported growth in both interest and noninterest income.

First Alabama Bancshares Inc., Birmingham, earned $27.9 million, up 21% from $23.1 million 12 months earlier. First Alabama, which has $8 billion in assets, cited "good loan growth" as contributing to its results.

— Kenneth Cline

U.S. Trust Corp. in New York reported a 22% gain over the previous year's second quarter to $9.8 million, or 99 cents a share. Net interest income rose 10% to $28.8 million from a year ago while fiduciary and other fees rose 11% to $65 million.

Average loans increased nearly 15% to $137 million – a jump the bank attributed entirely to its private banking business. It said residential real estate mortgages accounted for more than 75% of the gains.

Nonperforming assets fell during the quarter, but expenses rose 7.6% to $76.5 million compared with a year ago. Salaries and employee benefit expenses were up 15% to $6.2 million.

— Karen Gullo

Riggs National Corp., the troubled Washington, D.C., bank, posted a second-quarter loss of $73.2 million, versus a year-earlier loss of $2 million. The company took a $61 million restructuring charge during the quarter to reorganize its operations in the United Kingdom.

David Siegel contributed to this story.

NationsBank CRA Stake Helps an Alabama Bank

By PHIL ZAHODIAKIN

CRA

EVER SINCE NationsBank Corp. invested $350,000 in Commonwealth National Bank of Mobile, Ala., business at the minority-owned bank has been booming.

"We've added a million in assets since the end of June, and I don't know when it's going to stop," said Alpha Johnson, the bank's chief executive.

NationsBank, based in Charlotte, N.C., agreed to invest the $350,000 in exchange for nonvoting, nonconvertible preferred stock.

It said an agreement with Commonwealth sets a cap of 50% on its ownership share of the bank, if NationsBank later puts more money into the $10 million-asset Commonwealth.

But NationsBank, which has been promoting itself as the country's top Community Reinvestment Act bank, said it never was interested in taking over the tiny Alabama institution.

"We felt it was a natural fit," said Julie Turner, a NationsBank spokeswoman.

"We got a correspondent banking relationship with them. And the best part of it is, we'll be helping a good, sound minority bank remain successful," she said.

Alpha Johnson

Mr. Johnson, formerly vice president of Bank South Corp.'s commercial division in Atlanta, said the bank has 900 shareholders. "Takes a lot of folks in a minority community to start a bank."

It turned out that the largest shareholder knew NationsBank chairman Hugh McColl through the military, and that's what led to talks about an investment.

Commonwealth, founded in 1976, had been in trouble. Mr. Johnson was recruited to turn the bank around, and "we easily could have been out of business" if he had failed to upgrade management and restructure failing assets, he said.

He did not fail. "I thank the community. They really supported us, and the regulators supported us, too."

Thanks in part to NationsBank's investment, Commonwealth "presently far exceeds our capital requirements, and people are really responding. We've grown 20% since the first of the year, and we're really growing now."

Mr. Johnson said the $350,000 investment is helping, but he added that Commonwealth still needs stronger capital to help the minority-owned businesses in his service area.

Despite ties to the community that Mr. Johnson describes as extremely close, the bank has only a "satisfactory" CRA rating. Mr. Johnson said he does not know why the grade is not higher. "I haven't been worried about CRA, because we were overly generous before I got here. I don't even know when the exam was. I've had other things to worry about."

John Taylor, who heads the National Community Reinvestment Coalition, said NationsBank "has put it in their heads that they're going to be the national community bank. By no means is Nations that but, so their credit, they've got it out front that they think community reinvestment makes sense."

Mr. Taylor said NationsBank's investment would earn points during an exam if it helps Commonwealth serve a portion of an area targeted for CRA lending.

Boston's Smaller Banks Struggle To Overcome Lingering Problems

By PHIL ZAHODIAKIN

The performance of community banks in the Boston area reflects the asset problems the region is still suffering.

According to data from Sheshunoff Information Services Inc., only one of the region's top 30 small banks is returning more than 1% on assets.

"They still have not come back to their peak performance levels due to the lingering effects of problem assets," says Gerard Cassidy, senior vice president of equity research at Tucker Anthony, Portland, Maine.

"The small banks are working through their problems, and doing a good job, but they're just not as fast as Fleet or Shawmut because they don't have the resources."

Vanishing Act

Many of them disappeared in consolidations and were not replaced by new banks. "We had a de novo boom in the mid-1980s, and many that survived are struggling," Mr. Cassidy said. One de novo that is doing well is Lowell's Enterprise Bank and Trust. Its chief executive, George Duncan, says net earnings have grown 70% over the last four years.

He also believes there are many opportunities available to small banks because of the consolidations.

"The traditional business of small commercial loans is very flat, but we're not standing still. We started a trust department last year, and it's already up to $90 million. It's very gratifying."

Jim Dwinell, chief executive of Cambridge Bank and Trust, says about 30% of the area's small banks and thrifts have disappeared over the last four years.

But he says his feeling is that "there'll always be a niche for small banks in Boston."

One particularly notable success story is $326 million-asset East Boston Savings Bank, which actually managed to drive away Bank of Boston.

"They said in the paper that they couldn't match our tradition," said chief executive Robert F. Verdonck.

His institution, seeing an influx of Hispanics and, to a lesser extent, Vietnamese into his largely Italian service area "is still reaching out to the community, because we've hired staff who are fluent in Spanish and Portugese and Vietnamese as well as Italian. We're holding seminars for first-time homebuyers in those languages."

"We've done $23 million in loans the first six months of the year, and that's $3 million ahead of last year's pace. We're also opening a new branch in August, and I think that's unusual for small banks up here." □

EXECUTIVE *changes*

Magna Names Lou Ann Poynter President, Chief Operating Officer

Lou Ann Poynter has been promoted to president and chief operating officer of **Magna Bancorp** and its principal subsidiary, **Magnolia Federal Bank for Savings**, Hattiesburg, Miss.

She succeeds **David M. Thomas**, who retired at the end of June. Mr. Thomas had been president since 1988.

Robert S. Duncan continues as chairman and chief executive officer of Magna Bancorp.

Ms. Poynter has been executive vice president and treasurer of Magnolia Federal since 1991, with responsibility for finance and administrative operations.

Lou Ann Poynter

She is a member of the bank's board of directors and has served in various capacities since she joined the company in 1972.

Ms. Poynter has also served as treasurer and director of Magna Bancorp since 1991.

She is a member of the government affairs council and the tax and accounting committee of the **Savings and Community Bankers of America**.

She also is active in various other industry organizations, including the Mississippi League of Savings Associations, Financial Managers Society Inc., Mississippi Society of Certified Public Accountants, and the American Institute of Certified Public Accountants.

She also has served on the Thrift Industry Accounting Committee and the Mississippi State Board of Public Accountancy. — **Franklin Smith**

SOUTHEAST

UNITED NATIONAL Bank, Parkersburg, W.Va., has promoted **Merrel O'Shea** to senior vice president.

Merrel O'Shea

Ms. O'Shea is responsible for a loan and deposit portfolio that includes commercial business throughout West Virginia, Kentucky, and Ohio.

NORTHERN TRUST Bank/Naples, Fla., said **George M. Walters Jr.** has joined the bank as second vice president in trust/new business.

G.M. Walters Jr.

Mr. Walters comes to the bank with 29 years of experience in the estate and financial planning fields.

He formerly was an estate and financial planner and insurance consultant with James L. Martin Inc. in Naples.

MIDDLE ATLANTIC

PENNSYLVANIA National Bank, Pottsville, Pa., has promoted **James E. Kirkpatrick** to vice president.

Mr. Kirkpatrick is a commercial loan officer with responsibility for the management and development of the bank's corporate loan portfolio in the Reading/Berks region.

PENN FEDERAL Savings Bank, Newark, N.J., said **Joan C. Gross** has joined the bank as manager of its Caldwell branch and **Robert J. Peluso** has joined as manager of its Upper Montclair branch.

WEST

CHINO VALLEY BANK, Ontario, Calif., has made the following appointments:

James Apodaca to vice president and lending officer of the bank's construction loan department; **Robert D. Aikin** to assistant vice president and banking officer of the bank's Ontario office, and **William Dye** to assistant vice president and banking officer of the Fontana office.

Also, **Howard V. Shores** to investment sales manager, Tri-City office in Riverside; **Gwendolyn L. Sifuentes** to agri-business officer in the bank's agri-business department, and **Linda Borba** to vice president and investment officer with responsibility for managing annuities and mutual funds.

FAR EAST NATIONAL Bank, Los Angeles, named **Alex Garby** executive vice president and chief operations officer responsible for data processing, international banking, bank facilities, credit card operations, and human resources.

Glenn H. Yee was named executive vice president and chief administrative officer responsible for the administration of a new mortgage banking division, a small-business loan division, and all other new products and services.

Karen Au has been promoted to senior vice president-credit administration responsible for all loan administration other than origination.

Nan Nan Xu has been promoted to senior vice president for marketing, international banking division, and is responsible for the bank's Pacific Basin activities, especially with China.

MIDWEST

PARK NATIONAL BANK, Newark, Ohio, has promoted **Kim Last** to banking officer.

VALLEY BANK, Janesville, Wis., an affiliate of **Valley Bancorp.**, has named **Patty W. Amundson** president and chief operating officer.

Ms. Amundson has been executive vice president of the bank since September 1992, with responsibility for overall day-to-day operations.

She succeeds **Ronald K. Ochs**, who has become chief executive.

Mr. Ochs replaces **Rowland J. McClellan**, who remains chairman of the board of directors. □

NEED BANKING INFORMATION FAST?

AMERICAN BANKER ONLINE

For more information, including details on special direct data delivery options and redistribution rights, call:
Peter Leach, Database Licensing, American Banker • Bond Buyer, at 1-800-356-4763 or 1-212-943-6304.

Now there's a way to stay abreast of that vital information or to find any articles you may have missed by using your own PC with a modem to call up the American Banker Online on the information service of your choice.

American Banker Online is a full-text news service providing instant access to all the information appearing in the only daily banking newspaper. It enhances the value of the newspaper's daily information by giving you the ability to recall all the stories on a bank, or a banker, or legislation, or indeed anything you need to know about banking.

With the power of the computer, you can locate the information that's vital to your business. American Banker Online is a full-text database that provides direct, easy access to the daily news, statistics, surveys, speeches, commentary, and special editions of the print newspaper. And you can access this information each morning even before that day's paper is delivered!

In addition to being a daily information tool, American Banker Online is also an archive. Many users rely on our information to piece together the background on events that impact their business. Along with today's news, American Banker's historical online records include more than 80,000 articles dating back to 1979. These can be searched by headline, key words, bank name, or any other search terms.

Put American Banker Online to work for you. It is accessible with any PC and modem through the following information retrieval services:

MasterCard Gives Gold Card A Boost with Travel Benefits

By STEPHEN KLEGGE

MasterCard International is beefing up its gold card program with an array of travel services and discounts.

The enhancements, available in September, represent the first major upgrade of Gold MasterCard benefits in three years. They could herald a series of actions by MasterCard and its rival, Visa U.S.A., to solidify bank members' relationships with their most affluent and profitable customers.

Gold cards are geared to the growing number of households earning at least $35,000 a year – currently 48% of the total.

Important Distinction

MasterCard's marketing initiative is intended to underscore the distinction between the gold and standard cards at a time when standard cards carry increasingly attractive rebates and enhancements.

That distinction is important in the competitive marketplace because it enables a bank to reward and retain its best customers, said Daniel T. Murray, MasterCard's senior vice president of marketing.

The new program, MasterGuest Vacation Planning Service, also is an attempt by MasterCard to assert itself in the travel and entertainment area, where Visa and American Express Travel Related Services Co. are particularly strong.

Discount on Cruise

One promotional flier being sent to bankers touts a possible $650 discount on a seven-night Caribbean cruise – provided the gold card is used to pay for it.

"The motivation was the need to differentiate the Gold MasterCard product not only from standard cards but also other gold cards," said Julian Romeo, vice president of Gold MasterCard.

MasterCard had nearly 20 million gold cards outstanding at the end of the first quarter, an increase of 18% in a year. Visa says 30 million of its gold cards are in circulation, up from 20 million in 1991.

Still, some analysts believe an upgrade of gold cards is long overdue. They note that a growing number of banks are increasing credit lines on standard cards to levels previously considered appropriate only for gold cards. And many gold cards come with no annual fee.

"You cut the price and eliminate distinguishing features, and what have you got?" said William O. Adcock, chairman of Synergistics Research Corp., Atlanta. "We've been saying for three years that something has to be done to revive the [gold] product."

Daniel T. Murray
Rewarding the best customers

The Gold MasterCard's benefits have remained basically unchanged since the spring of 1990, when a road assistance service was introduced. That offering was matched by Visa.

The company wants to set gold cards further apart from ordinary cards.

Visa considers the latest MasterCard program one of limited promotional scope.

Recent Enhancements

Although Visa is not announcing any new enhancements, it has been active during the past two years, said Wesley C. Tallman, executive vice president of product development.

In addition to a global customer assistance service, Visa introduced calling card benefits that gold-card holders receive for free. Visa also has participated in travel promotions, with the City of San Francisco and Busch Gardens, among others, Mr. Tallman said.

But he said the Visa Gold strategy is based on market research that shows travel promotions are less important to consumers than the credit limit, the accessibility of credit, and customer service.

"All of that builds to prestige, and if you get right down to it that's what a gold card is," the Visa official said.

Issuers to Set Pricing

Mr. Romeu said the minimum credit line on Gold MasterCard will remain $5,000, and decisions on pricing will be left up to each bank issuer.

The vacation benefits package, being offered in an arrangement with National Leisure Group of Boston, was selected from a list of proposals pitched MasterCard thought it could roll out quickly.

After testing travel ideas in consumer focus groups, MasterCard rejected such options as restaurant discounts and money transfer services.

"I think it's excellent," John Delany, director of marketing at Bank of New York Delaware, said of the the travel package. He said the service will help banks to differentiate between their gold and standard cards and is consistent with MasterCard's "smart money" advertising theme.

"We stepped back and reviewed all our products and made sure they stood for value," Mr. Murray said. The gold card program is positioned as "something that is useful, something that enables the gold-card holder to save money," he said.

Mr. Tallman argued that Visa's program offers more practical benefits. But he agreed that gold cards must continue to adjust if bankers are to build stronger customer relationships.

"Anything necessary to cater to them with products that are gold or beyond gold will be there," he said, "because that is the business of tomorrow." □

Burger King in Pact to Accept Cards

Boatmen's National Bank of St. Louis signed an agreement with MasterCard International to bring debit and credit card acceptance to 18 Kansas City-area Burger King restaurants.

Cards that the stores will accept include Maestro, MasterCard's on-line point-of-sale debit card; BankMate, the regional electronic banking card, and MasterCard and Visa cards.

The processing is being handled by the MasterCard Automated Point-of-Sale Program, known as MAPP.

Ram Mobile Data will use its wireless network to connect restaurant terminals to Banknet, MasterCard's global processing network. Authorizations are expected to take less than 10 seconds.

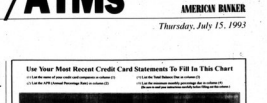
Other Deals

MasterCard also announced a similar agreement with merchants in Osage Beach, Mo. Central Bank of Lake of the Ozarks will handle the relationships.

The merchants – McDonald's, Captain D's, Hardees, Benetton, and Baskin-Robbins – are the first U.S. resort-area retailers to go live on Maestro.

— Lisa Fickenscher

Use Your Most Recent Credit Card Statements To Fill In This Chart



(1) How much EXTRA MONEY ... in addition to your regular monthly payments ... can you afford to pay each month on your two monthly credit card bills, to pay them off more quickly?

$ ____.00

(2) How many months would it take you to pay off your two credit card balances if you paid this extra amount each month? (Use the table below to find the number of months.)

_____ months

(3) PLEASE provide your phone number, in case we have a question about your CREDIT CARPER Financing Form: (_____) _____

(4) Check the name and address label on the back of this page and correct any inaccurate information.

Complete this form, cut at the dotted line (top of this page) and return this entire form in the postage-free envelope provided. You may expect to receive your CREDIT CARPER Financing Form in the mail within 10 days.

HOW MUCH DO YOU OWE? Consumers who fill out this form are told how they can cut interest costs by accelerating card payments.

Plan Prods Consumers To Pay Off Their Debts

By LISA FICKENSCHER

Hoping to capitalize on the perception that consumer borrowers are overextended, Bankcard Holders of America is offering a service that encourages credit card customers to accelerate their debt payments.

For $10, the Herndon, Va., advocacy group is offering Debt Zapper, which tells cardholders how much money they will save by increasing their monthly installments, and how much those higher payments will shorten their repayment terms.

The report, delivered by mail, is based on software called Zilch, developed by Practical Applications of Laurel Bay, S.C.

Bankcard Holders of America is offering cardholders the service for $10.

"We are providing a service to people who don't own computers," said Gerri Detweiler, executive director of Bankcard Holders.

The 75,000-member group tested the offering at the beginning of this year. The official release came on Monday.

Revolving Debt on the Rise

The offering comes at a time when revolving debt, which includes credit cards, has been growing steadily, even as overall consumer debt has been leveling off.

Federal Reserve data show that revolving credit at the end of May was $264 billion, up from $247 billion last May.

A survey recently conducted for American Express Travel Related Services Co. showed 11% of cardholders make only that the minimum payment each month, and 32% sometimes pay the minimum.

The American Banker's consumer surveys in the past two years have shown a growing disenchantment with debt. Increasing numbers of consumers said that they believed debt levels are generally too high and that they were trying to save more.

Rep. Charles Schumer, D-N.Y., introduced legislation in April that would increase disclosure requirements. It would require, among other things, that issuers tell cardholders on monthly statements how long it will take them to pay off their debt by paying the minimum.

Observers Are Skeptical

Most bankers and analysts do not believe Debt Zapper and other such products will have much of an impact.

"We see that consumers are fairly sophisticated about paying their debt," said Cynthia Graham, president and chairman of card services at Barnett Banks Inc. "Our customers, according to in-house studies, only pay the minimum balance when they have temporary cash-flow problems, usually around holidays."

Frederick A. White, president of First Annapolis Consulting, which advises financial institutions on credit cards, added, "Credit cards have gone from being the highest-priced] form of debt to being very competitive, so there are actually more opportunities for consumers to lower their rate rather than pay down a high-rate card."

Advisory Service

Some banks, including the Bank of Lancaster County, Greenfield, Pa., and Colonial National U.S.A. of Bloomington, Del., have bought Zilch, and are looking at ways to use it as consumer advisory tool.

The Bank of Lancaster is considering the software as part of a budget counseling program, aimed at low- to middle-income customers who were either rejected for a loan or anticipate such a problem.

The counseling program is being developed, in part, to help the bank meet its Community Reinvestment Act requirements.

Fifth Third and Kroger Plan a Cobranded Card

By LISA FICKENSCHER

Fifth Third Bancorp of Cincinnati is planning a joint credit card marketing venture with Kroger Co., the nation's biggest supermarket chain.

Moving outside its midwestern base, Fifth Third will initially issue the cobranded Master-Card in Texas.

The program could eventually spread to all 32 states where Cincinnati-based Kroger has outlets and could result in a dramatic expansion of Fifth Third's $145 million card portfolio. The bank currently solicits cardholders only in Kentucky, Indiana, and Ohio.

Building Card Usage

"It will be the best credit card in the United States in terms of interest rates, rebates, and coupons," said George Landry, executive vice president of Fifth Third Bank. He declined to disclose the terms.

Cobranded programs are seen as a way to build card usage and balances. Frequent cardholders can earn benefits offered by the bank's partner each time they make a purchase.

The Kroger-Fifth Third card is expected to offer bonus points toward gifts from a catalog, among other benefits, said Darrell Robertson, president of *The Nilson Report*, a newsletter published in Oxnard, Calif.

The bank's card portfolio could expand enormously.

Nilson currently ranks Fifth Third 68th among bank card issuers in active accounts, but 84th in outstanding loans, which indicates why it may want to build balances.

Earning Points

The offering also will test a novel way to build customer loyalty to Kroger, which led the supermarket industry with $22 billion in sales last year.

A bar code printed on the Fifth Third card will enable cardholders to accumulate bonus points at Kroger even if they pay with cash.

After each purchase is tallied at the checkout counter, the card would be passed over a scanner to credit the customer's account.

Customers could earn points by using the card elsewhere, but could not use the bar code.

The program plays into the food marketing industry's experimentation with frequent-shopper incentives. Kroger is one of several chains that has tested the Shopper's Club, a point-scoring and micromarketing system developed by Advanced Promotion Technologies of Pompano Beach, Fla.

Two other Ohio banks have ties to that company – a unit of PNC Bank Corp. owns a minority stake, and Banc One Corp. signed an agreement last year to issue a cobranded card.

Kroger's choice of Fifth Third as its MasterCard issuer "was a logical move, said Kroger spokesman Paul Bernish. "We already had a merchant relationship with the bank."

Enhancing the bank's appeal to Kroger was its ability to process transactions. Fifth Third owns Midwest Payment Systems, a leading processor of electronic funds transfers, serving 43 states, Midwest Payment currently handles Kroger's Visa and MasterCard sales.

The card will be offered in Texas first because Kroger has run a promotional store-card program there. □

"WITH THE RIGHT TOOLS, IN THE RIGHT HANDS, ANYTHING IS POSSIBLE."

THE KEY TO THE NEXT DIMENSION IN PROCESSING

Claims of increased functionality and flexibility abound in the transaction processing industry, but results are scarce. You've heard promises about new systems from others for years. Now see reality with First Data Resources' Account level Processing.

The Account-level Processing concept is simple:

- Let our clients dictate cardholder pricing parameters at the account level.
- Give them online maintenance, easy customized reporting and integrated support tables.
- And don't sacrifice flexibility or functionality.

A.I.P. has been implemented and PDR clients are using this new dimension in transaction processing today!

This new dimension offers you an customized transaction system which guides you through linked applications to review, analyze and edit your processing options. A.I.P. gives you more control and flexibility, with less paperwork and greater transaction time. This not only streamlines your portfolio management, but provides you with a high degree of customization throughout your system based on your own cardholders and circumstances.

Account-level Processing is an outgrowth of our continued commitment to client-defined processing because it has been developed in partnership with many of our clients, both large and small.

Take a look at how Account-level Processing can tap into new opportunities in your cardholder base and take your processing to a new dimension. No other processor can give you today the immediate advantages Account-level Processing offers.

Countrywide Sees Its Surge Continuing

By EDWARD KULKOSKY

Mortgage originations by Countrywide Credit Industries should reach $47 billion in the company's present fiscal year, according to Sy Jacobs, an analyst at Baltimore-based Alex. Brown & Sons.

That would be almost 50% more than in fiscal 1993, which ended Feb. 28. Mr. Jacobs' previous estimate was $41 billion.

Countrywide reported originations in its first quarter of $11.5 billion. Most analysts had expected less lending industrywide for the rest of the year.

In view of late June's rate decline, Mr. Jacobs writes in a new report, "we are raising our pipeline and originations assumptions for the next several months to show the pipeline rising by $250 million to $500 million in each of the next two months."

Countrywide reported a pipeline – mortgage applications being processed – of $8.2 billion in June, and record originations of

A nearly 50% surge is predicted for the current fiscal year.

$4.4 billion. If Mr. Marcus' projections are correct, the company will soon be topping $5 billion in monthly originations.

Last year, $5 billion in annual originations was enough to qualify a lender for top-25 status.

Mr. Jacobs now rates Countrywide a strong "buy."

The stock dropped by $2 a share on June 3, to $28, after another analyst, Jonathan Gray of Sanford C. Bernstein & Co., canceled his "buy" rating. The stock has since recovered.

Norwest Unit Adjusts To Des Moines Flood

The flooding in Des Moines shut down Norwest Mortgage's headquarters there, but company officials say the business is running without a hitch.

"They've been doing fine," Les Biller, executive vice president for parent Norwest Corp., said. "They had anticipated the problem by about 36 hours and moved all essential files out of the building."

Norwest Mortgage, the nation's third-largest mortgage originator, is headquartered in a sizable building in a low-lying Des Moines neighborhood.

Key operations have been moved temporarily to a building used by Norwest's credit card business in West Des Moines, Mr. Biller said. Meanwhile, customer phone calls are being routed automatically to Ohio.

* * *

Freddie Mac Veteran Moves to Chemical

Debra Vick, a veteran of the Federal Home Loan Mortgage Corp., has joined Chemical Banking Corp. as credit policy officer in the mortgage division.

Ms. Vick is charged with helping Chemical develop and follow uniform credit policies in its nationwide mortgage business.

In the first half of this year, the New York giant ranked No. 7 among all U.S. originators, producing $6.4 billion of mortgages.

Ms. Vick is a well-known executive in the mortgage industry, having headed Freddie Mac's western regional office from 1988 through 1990. She then moved to the agency's Washington headquarters to serve as senior vice president of credit compliance.

Next, she went to work for Equifax, the Atlanta-based credit bureau, developing credit-risk analysis tools for lenders.

* * *

Fannie Mae Stock Gets a Downgrade

S.G. Warburg Securities has downgraded Fannie Mae's stock to "hold" from "buy."

Tuesday's report by analyst Francis X. Suozzo cited perceptions among investors of increased political risk to Fannie.

Mr. Suozzo said investors fear that plans to impose regulation on the Student Loan Marketing Association, known as Sallie Mae, might serve as a precedent for changes at Fannie Mae, formally the Federal National Mortgage Association.

Other analysts disagree.

"In general, I don't see the linkage" between Sallie and Fannie, said Peter Treadway, a managing director at Smith Barney & Co. He continues to advise investors to buy Fannie.

And Bruce Harting of Salomon Brothers, who is also maintaining a "buy" rating on Fannie, says the political risk has already affected Fannie Mae's shares and is unlikely to cause further damage.

On Tuesday, Fannie Mae reported second-quarter earnings of $458.8 million, up from $402 million in the quarter last year.

Marketer: Personal Service Key to Growth

By KAREN TALLEY

Denis Kaplan, president of Independent Financial Marketing Group, goes the extra mile for his bank clients – literally.

Mr. Kaplan recently traveled from the company's White Plains, N.Y., headquarters to London to give a client a behind-the-scenes look at how financial institutions in Britain have marketed life insurance.

Mr. Kaplan, a native of South Africa, was able to arrange the access to British banks by calling on old contacts from his days as managing director of Sage Holdings, a large South African financial services group.

No Time Lost

Just a day after returning to the United States, Mr. Kaplan was in Richmond, Va., talking to executives at Crestar Bank about their company's joining the small but growing list of financial institutions that have launched proprietary variable annuities.

Crestar is among the 76 financial institutions that Independent Financial counts among its clients.

As a third-party marketer, Independent Financial distributes other companies' mutual funds and annuities to banks. It does not manage investment products of its own.

Like most third-party marketing firms, Independent stresses that personalized service is its hallmark. But the company backs up this rhetoric with numbers. It has added 14 clients so far this year, bringing its roster to 76 banks. About two additional banks are signing up each month, Mr. Kaplan said.

The growth has helped make Independent the ninth-largest distributor of mutual funds and annuities through banks, with $550 million placed in 1992, according to Kenneth Kehrer & Associates, a consulting firm in Summit, N.J.

Independent boasts that it has never lost a client to a competitor, but the company is not above wooing banks away from rivals. In 1992, Independent picked up American Savings Bank of Florida, a $3 billion-asset thrift that had been served by Marketing One, a rival marketing firm in Portland, Ore.

Thomas Chen, American's senior vice president, said he liked Independent's responsiveness and flexibility. Pricing was also a factor in making the switch, but not a major one, he added.

Shopping Around

"It's always prudent to shop around and see what else is out there," said Mr. Chen, who began overseeing American's investment program a year and a half ago.

Mr. Kaplan said Independent's momentum will continue as it enters its second decade. The company was set up in 1983 as a financial planning firm and experienced ups and downs while going through a number of incarnations and owners.

Today, four senior managers, including Mr. Kaplan, own 75% of the firm. They acquired their stake through a management buyout in 1990.

The other 25% is owned by Coverdell & Co., an Atlanta financial services firm. The business has ties to the family of Sen. Paul Coverdell, R.-Ga., who won his seat last November in a highly publicized runoff election. ☐

Firm has never lost a client

Trade Group Names Stevens as Counsel

The Investment Company Institute, filling a position that had been vacant for a year, has picked Paul S. Stevens as general counsel.

Mr. Stevens is a partner in the law firm of Dickstein, Shapiro & Morin in Washington. During the Reagan administration, he was special assistant for national security affairs. He is to join the trade group in September.

Mr. Stevens succeeds Lawrence A. Rogers, who left last July to join the New York law firm of Shereff, Friedman, Hoffman & Goodman.

As general counsel, Mr. Stevens will advise the trade group on a range of legal issues. He will oversee departments that specialize in securities, tax, and pension issues, a spokesman said.

He is a graduate of Yale University and the University of Virginia School of Law.

— Phil Roosevelt

IRS to Review Conversion Tactic Used by Mutual S&Ls

Continued from *page 1*

ownership through the creation of mutual holding companies would not lose a tax break associated with so-called base-year reserve levels.

Last week, the IRS informed thrift lawyers and accountants that it planned a much broader review of how to treat bad-debt reserves – the main tax break for S&Ls – in such transactions.

"It is not a good development," said Raymond J. Custini, a Washington-based partner who specializes in financial institutions at Kelley, Drye & Warren, a New York law firm.

"People were hoping that the meeting at the IRS would answer – not raise – questions."

After the December request for an opinion, a dozen S&Ls put their conversion plans on hold, awaiting a signal from the IRS. The larger-scale IRS review is likely to halt those deals and any others until the IRS makes a final decision, thrift accountants and lawyers said.

Liberty Savings Bank in Liberty, Mo., had completed its $5 million stock offering one week before the IRS met on the issue. Although the deal was oversubscribed, it has not closed because of the pending review.

"That threw a monkey wrench in the works," said Michael A. Gilmore, Liberty's chief financial officer. "That's definitely a potential tax liability to us of about $1.4 million."

Liberty, which has $110 million in assets, must rescind the offer, disclose the potential consequences to its would-be stockholders, and hope they are still interested in buying. It also must again ask the OTS for approval to let the deal go forward.

On Hold
Mutual holding company conversions

Conversion value in billions	Number converted
1991 $0.15	1
1992 4.99*	12
1993 to date 0.60	2
Pending:	12

*Excludes two conversions for which assets were unavailable

Some Deals Completed

Other thrifts have already completed the conversion to mutual holding companies. They include the $363 million-asset Guaranty Bank in Milwaukee, $1 billion-asset Home Savings Bank in Hollywood, Fla., and $944 million-asset First Federal Savings Bank of Colorado, Lakewood.

Malcolm "Bud" Collier, First Federal's chairman, said an adverse IRS decision could force the thrift to adjust its capital downward by $4 million.

How much of a hit – in taxes or in capital levels – thrifts would take if the IRS reaches an unfavorable decision changes depending on how much each institution has in its bad-debt reserves.

Stock conversions using mutual holding company structures have been permitted since 1991. While not as common as standard mutual-to-stock conversions, they have grown in popularity because they allow management to retain control after the transaction.

In mutual holding company conversions, the ownership of a depositor-owned saving and loan is split. The larger piece, providing majority control for the thrift's management, is retained by depositors. The smaller piece is broken into shares and sold to the public.

Even if the IRS review is favorable for thrifts – and the agency has given no indication of which way it is leaning – it comes at a bad time.

S&Ls that want to raise capital by going public are more likely to do so in the current strong market for thrift stocks.

"We are still in limbo," said Charles H. Meacham, chairman and president of Commonwealth Federal Savings Bank in Valley Forge, Pa. With several million dollars at stake, the $1.2 billion-asset thrift is "hesitant to proceed" with its planned conversion.

The complicated tax issue revolves around the key tax shelter for savings and loans.

Since 1986, thrifts have been allowed annually to set aside 8% of taxable income in a tax-free account called a bad-debt reserve. A component of that account – called a base-year reserve – contains the reserves the thrift had built up over the previous years.

For most mutual thrifts, base-year reserves account for a significant part of bad-debt reserves.

Carryover Allowed

In a 1981 private-letter ruling, the IRS had said that thrifts that converted to mutual holding companies could carry over their bad debt reserves tax-free to the new company.

But the IRS had never addressed whether the base-year reserve also could be carried over tax-free. Peter Marwick asked for a ruling because of a recent change in accounting rules for deferred tax assets.

Some experts expect the OTS to put a hold on all deals in the pipeline, reasoning that a thrift's board of directors should consider doing standard mutual-to-stock conversions instead.

The OTS will "take into account" the tax consequences of the IRS ruling when it occurs, said Carolyn B. Lieberman, the agency's acting chief counsel. She said the OTS will consider "what the financial impact will be on a particular institution" that wants to transform into a mutual holding company.

IRS assistant chief counsel James Malley declined elaboration on last week's meeting. "We're aware of the issue, we're working on it, and we've made no decision." he said. □

Data source: **SNL Securities**, Charlottesville, Va. **Description of the table:** A listing of 100 banking companies with the largest market capitalization **Mkt. Cap.** = Market capitalization, which is computed by multiplying a bank's common shares outstanding by the closing market price of the bank's stock on June 30, 1993. For most banks in the list, shares outstanding are as of March 31. Whenever possible, *SNL or American Banker* have adjusted shares outstanding for common stock issued during the second quarter. **% Chg 3/93:** Percentage change in market capitalization from March 31, 1993 to June 30, 1993. **Mkt. Cap./Shares:** Is market capitalization as of March 31 expressed as a percentage of total assets on March 31, 1993. (*)—Shares outstanding have been adjusted by American Banker to account for common stock issued during the second quarter.

STOCKS: Market Value of Top 100 Banks Fell 2.6% in Quarter

Continued from *page 1*

biggest market value in the industry, lost $1.7 billion, or 10%, of its value.

To put its loss in perspective, the value wiped out is more than the market value of Integra Financial Corp., Pittsburgh, at the end of last quarter.

NationsBank's market value plunged $1.27 billion, or 9.2%, to $12.6 billion.

The loss pulled the bank down two notches to fourth place in the market-capitalization rankings. Banc One Corp. moved up one notch to second, while J.P. Morgan & Co. rose one notch to third.

Analysts said they were not worried about the size of the fall in market values at individual banks.

"To gain or lose $1 billion in market cap for the biggest banks is not significant," said Dennis Shea, an analyst with Morgan Stanley & Co.

Over the past six quarters, the market value of the top 100 banks has fallen into a pattern of rising significantly for two quarters, then dropping slightly for a quarter. This trend of two steps forward, one step back, is largely

BankAmerica Corp. and NationsBank Corp. were the big losers.

a product of share prices, which never rise in a straight line, analysts said.

"A one-quarter dip doesn't mean much," said Ronald I. Mandle, an analyst with Sanford C. Bernstein & Co.

Analysts said the important point is the gain in market value during the past 18 months.

In that time, the market value of the top 100 banks has risen $100 billion, or 58%.

The biggest gains have come for the biggest banks.

"Over time, the market value of the top 25 banks has increased significantly," said Mr. Shea. "The big keep getting bigger."

In the two previous quarters combined, market capitalization for the top 100 banks rose 34%. Some of that increase came from banks issuing shares to raise assets, the rest came from soaring share prices. □

THE MARKETS

Rates Drop, Bonds Surge on Inflation News

Interest rates plunged on Wednesday, as government bonds rallied on more good news on inflation.

The yield on 30-year Treasury bonds sank to a record low of 6.56%, from 6.61% on Tuesday.

Intermediate Treasuries also got support from buying by municipalities, which back future refundings with U.S. government issues – a practice known as defeasance.

The yield on 10-year Treasuries fell to 5.71% from 5.77%. Two-year notes yielded 3.97%, down from 3.99%.

Stocks rallied on the lower interest rates. The Dow Jones industrial average jumped 27.11, to 3,542.53. The Standard & Poor's 500 index gained 1.99, to 450.08. The Nasdaq composite index jumped 4.02, to a record 712.49.

The dollar fell, because low inflation in the United States makes a tightening by the Federal Reserve unlikely. Late Wednesday afternoon in New York, the dollar was at 1.7155 German marks and 107.05 Japanese yen, down from 1.7185 marks and 108.02 yen.

Consumer Prices Flat

The government report indicated the consumer price index in June was unchanged for the second consecutive month. Economists estimated that the index rose 0.1% last month.

This followed Tuesday's report that wholesale prices fell 0.3% last month – the steepest drop in two years.

In addition, the government reported that retail sales rose 0.4% in June, below the 0.5% rise predicted by economists.

Matthew Akey, market strategist at First Boston Corp., said the latest information that the economy is growing slowly and that inflation is low – an ideal environment for bonds.

He predicted, though, that the yield on the long bond may start to hit technical resistance as it nears 6.50%.

Alan Levenson, money market economist at UBS Securities, thinks the economy is stronger than it seems, and sees room for a half percentage point by yearend.

— Bart Fraust

Dime May Try to Buy Crossland from FDIC

Continued from *page 1*

mum, throws a wrench in the works. The thrift, which has $8.8 billion in assets, competes in the New York metropolitan area with Crossland and could boost its market share and generate significant cost savings through an acquisition.

It is unclear whether Dime has presented a formal offer or just expressed an interest in bidding. Dime and the FDIC declined to comment.

Regulators seized Crossland in January 1992 and, in a highly unusual move, decided to operate it themselves for up to two years rather than sell it immediately or liquidate it.

Offers Rejected

The regulators, who concluded they would fetch a higher price for Crossland down the road, rejected as inadequate offers from Chase Manhattan Corp. and Republic New York Corp. The FDIC pumped in $1.2 billion to recapitalize the institution.

Now the agency is under pressure to prove the wisdom of its plan by fetching the highest possible price for Crossland. The FDIC originally predicted it would eventually get 1.5 times the thrift's book value in a sale.

The agency has shopped the general outlines of its proposed sale to investment advisers. One adviser said he thought Crossland would sell for 70% of book value -- or about $322 million. However, the FDIC could take a piece of the deal, which would reduce the amount of money raised from investors.

Investment advisers also confirmed that the FDIC plans to absorb some of the losses embedded in Crossland's $1.2 billion portfolio of bad assets.

"With the right pricing, it could be a good deal," a potential investor said. "Our risk is limited through loss sharing."

Crossland has been slimmed down for sale by FDIC-appointed chief executive Richard A.

The FDIC was ready to sell to a group of investors.

Kraemer, who is expected to stay on if the bank is bought by investors. He has cut Crossland's size, expenses, and personnel. The savings bank has earned $22.3 million over the past year and a half.

Crossland has shrunk its assets by $1.7 billion, to $5.7 billion, paring 32 branches and selling subsidiaries. Nonperforming assets have been whittled to $1.2 billion from $4.4 billion. Crossland had $548.2 million in capital on March 31.

The market for thrift stocks is hot, but crowded.

Dime raised $200 million in capital recently, while two mutual thrifts are planning to raise a total of $1 billion through initial public offerings.

A second Wall Street source said these deals could crowd Crossland, but insisted that "there is a lot of money out there to recap the banking industry.

"It's a big appetite, but it's being sated."

FDIC officials are privately hailing their deal as a home run. One Wall Street source who has seen the offering called it "impressive."

The agency had planned to file a prospectus for the deal next

Harrison Young
Wants to sell to investors

week with the Office of Thrift Supervision. Dime's maneuvering will now delay that.

Low interest rates have helped the FDIC in its gamble to operate Crossland, but many people still question whether it made the right move in preserving an ailing bank when the industry has so much overcapacity.

Six months after the seizure, House Banking Committee Chairman Henry B. Gonzalez said the "FDIC resembles the bleary-eyed gambler at midnight in Las Vegas, throwing another wad of money on the table in hopes that earlier losses can be recovered."

The Texas Democrat ordered an investigation of the FDIC's decision, and the General Accounting Office lambasted the agency in a July 1992 report, concluding that $440 million in reported savings were not documented adequately.

And the scrutiny is not over. When FDIC confirmed in May that it might sell Crossland to institutional investors, Mr. Gonzalez said he will ask the GAO to evaluate the deal "to make sure that FDIC gets the best deal for the taxpayer."

Excess Capacity Cited

Bert Ely, a consultant who tracks the FDIC closely, criticized the agency too. He said Crossland should be merged into an existing institution to wring out excess capacity.

"They are keeping alive . . . an institution for which there is no need," Mr. Ely said, noting that Crossland was the first -- and last -- patient in the FDIC's trumpeted "hospital" program that was supposed to to nurse sick banks back to health.

"They have to put the best spin they can on a deal that if they had it to do over again, they wouldn't have done it." □

DEALS

Bankers Trust Group Refinancing Fruit of the Loom on Easier Terms

By WILLIAM GOODWIN

Fruit of the Loom Inc. is refinancing $800 million of bank debt on better terms, bankers said.

The Chicago-based underwear manufacturer is taking advantage of generally lower lending rates as well as its own improved operating performance and balance sheet.

Other borrowers are taking similar steps. Burlington Industries, for example, is refinancing a year-old bank loan with a $900 million credit priced 150 basis points below the existing deal.

Vote of Confidence

In a sign of the banks' increased confidence in Fruit of the Loom, the new three-year revolving credit is being granted on an unsecured basis.

Led by Bankers Trust Co. and four other co-agents, the credit replaces secured loans of the company's Union Underwear subsidiary.

The co-agents are Chemical Bank, NationsBank Corp., Bank of New York, and Bank of Nova Scotia.

35 Basis Points over Libor

Based on Fruit of the Loom's current debt rating, the borrowing rate on its new credit would start out at 35 basis points over the London interbank offered rate, according to a banker familiar with the deal.

The pricing, already far below the rate on the existing facility, is negotiable, would fall further if Fruit of the Loom's debt is upgraded.

More Flexibility for Borrower

A bank meeting for potential syndicate members was set to be held Wednesday night in Charlotte, N.C., where Fruit of the Loom has a number of factories.

Bankers are scheduled to tour the plants today.

Providing the loan on an unsecured basis gives Fruit of the Loom more financial flexibility because it frees up assets that were previously pledged as collateral, noted Adele Archer, an analyst at Standard & Poor's Corp.

"In general, it's probably not an immediate benefit, but it could be later" if the company wanted to sell or releverage some of those assets, Ms. Archer added.

Upgrade Possible

Largely as a result of the new unsecured bank deal, Standard & Poor's Corp. is reviewing its rating on Fruit of the Loom's $250 million senior unsecured notes for a possible upgrade.

The notes, currently rated BBB by S&P, will

The $800 million credit is unsecured and priced below the manufacturer's existing bank debt.

now be of equal standing with the bank debt, because both are senior unsecured debt.

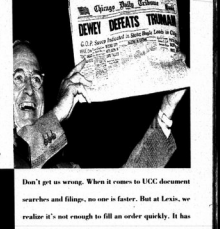
Fruit of the Loom had been stigmatized by the financial excesses of its chairman, William Farley, who last year was forced to relinquish control of textile concern West Point-Pepperell.

Debt Sharply Reduced

But through a combination of strong cash flow and proceeds from a stock offering, Fruit of the Loom has sharply pared its debt over the past few years.

The company's debt-to-capital ratio was about 53% on March 31, compared with nearly 75% at the end of 1990, Standard & Poor's noted. □

IT'S GOOD TO BE FAST, BUT IT'S MORE IMPORTANT TO BE ACCURATE.



Don't get us wrong. When it comes to UCC document searches and filings, no one is faster. But at Lexis, we realize it's not enough to fill an order quickly. It has to be done correctly. Every time. It's for this reason that we have a centralized quality control system that is both fast and accurate. Our account executives have the most experience in their territories. And each understands individual jurisdictional requirements so your documents don't get held-up, misfiled or lost. Please call us at 1-800-634-9738. Because if anyone is faster or more accurate than we are, it'll be news to us.

Immigrants Seen Growth Market For Home Loans

By CHRISTOPHER NOBLE

The mortgage industry, like the country, is at a cultural crossroads.

As the millennium approaches, the rapid growth of minority and foreign-born populations is changing the face of the nation -- and of the typical homebuyer.

Up to now, mortgage lenders have been stepping up their efforts at minority lending largely in response to political and regulatory pressure.

But many in the industry are starting to view new immigrants and other members of minority groups as a business opportunity that simply cannot be overlooked. As a result, they are scrambling to adjust their lending policies.

NEWS ANALYSIS

Stephen B. Ashley, president-elect of the Mortgage Bankers Association of America, says: "It's been numbers that indicate that as much as 40% of the business in the next decade will be minority based. I don't know any industry that wants a 40% segment of the market as a significant opportunity."

Strong Prospects

In fact, the 7.1 million immigrants accounted for 40% of the decade's population increase. And they tended to be in the prime of life as well as better educated and more hopeful than native-born minorities, according to a report published by Harvard University.

"There's an enormous market out there, and those who find it first will prosper," says William C. Apgar Jr., executive director of Harvard's Joint Center for Housing Studies, which annually publishes a report called *State of the Nation's Housing*.

The report shows a country of increasing and irreversible diversity. The Asian-American population more than doubled in the last decade. Hispanics increased their numbers by more than 50%, and the African-American population grew by 12%.

In comparison, the non-Hispanic white population increased by a mere 4%. By the end of the century, 30% of the population will be from other groups.

Challenge to Lenders

Howard J. Levine, chief executive of Bank of New York's Co.'s mortgage unit, says the surge in immigration holds great promise for mortgage lenders

Floodwaters in Midwest Swamp Banks

By MATT BARTHEL and BARTON CROCKETT

The midwestern floodwaters are wreaking havoc on banks unlucky enough to be in low-lying areas.

Though no banking institution has been driven out of business, thousands of bank employees have had to vacate offices threatened or submerged by the surging Mississippi River system.

In one extreme case, Buffalo Saving Bank of Buffalo, Iowa, had to vacate its building as water lapped up against sandbags outside. The $25 million-asset bank has been operating out of a nearby school, according cashier Mike Matthys.

Sandbags are the only reason

the main office of Farmers and Merchants Bank in La Grange, Mo., has kept dry. "If the only way you can get there is by boat," said Patrick Curry, a legislative assistant with the Missouri Bankers Association, who spoke with Farmers and Merchants executives on Thursday.

The flooding hit Iowa units of Minneapolis-based Norwest Corp. particularly hard. Some 1,400 employees were displaced from offices in Des Moines.

"We've been trying to keep people out -- there's gasoline floating in the water from God knows where," said Mark Oman, president of Norwest Mortgage, the nation's third-largest mortgage originator.

Last weekend, water filled a campus of four one-story build-

Clinton Unveils Plan For Community Loans

By ROBERT M. GARSSON and CLAUDIA CUMMINS

WASHINGTON — President Clinton unveiled his community development lending program Thursday with a show of political strength that suggested banks may have trouble gaining regulatory relief through the legislation.

Surrounded by Vice President Al Gore, Cabinet secretaries, a large congressional delegation, regulators, bankers, and community activists, the President called for a $382 million fund for community development lenders over the next four years.

Mr. Clinton also asked the four bank and thrift regulatory agencies to review the Community Reinvestment Act, with an eye toward reducing paperwork and increasing lending in low-income communities.

President Clinton
White House show of force

By involving the regulators in CRA, the President may have preempted industry efforts to have Congress ease CRA and other regulatory requirements

Morgan Up 33% on Trading Gains; Earnings at First Union Soar 80%

An American Banker Roundup

Big trading and investment gains, soaring fee income, and generally improved credit quality combined to boost earnings at large banks that unveiled second-quarter results Thursday.

Despite market jitters about pressure on interest rate spreads, several companies also continued to enjoy interest-related gains.

J.P. Morgan & Co., the largest bank reporting on Thursday, booked spectacular trading revenues of $520 million between April 1 and June 30 en route to a $431 million quarterly gain.

First Union Corp., the nation's ninth-largest bank company, with $72 billion of assets, said profits soared 80% to $221 million on big profits from its

Novell Girds to Defend PC Network Turf

By BARTON CROCKETT
Second of a Series

It's a safe bet that to bankers, Novell Inc. is not the most glamorous of technology suppliers.

Yet in its niche -- software that ties personal computers into networks -- the Provo, Utah-based company is a force to be reckoned with.

Novell already is the dominant PC network vendor to banks, running more than two-thirds of these systems installed in financial institutions.

What's more, Novell is girding for battle with other industry heavyweights, such as Microsoft Corp. and International Business Machines Corp., for control of a nascent technology called client-server computing.

Experts say client-server systems will radically change the banks operate because the technology allows tens or hundreds of low-cost PCs to be tightly linked together to perform the work that once demanded a multimillion-dollar mainframe computer.

Beyond Simple Networks

The banking community "probably thinks of Novell as the guys who hook the PCs together," said Louis Giglio, a vice president and stock analyst at Bear, Stearns & Co. in New York. "That was true three years ago, but it goes way beyond that now."

Novell's current generation of PC networking software, called Netware, gives PCs basic communications capabilities, such as linking many desktop computers to a single printer, sending electronic mail, and sharing basic of-

NEWS *briefs*

Freddie Mac Reports a 9% Income Gain

McLEAN, Va. — The Federal Home Loan Mortgage Corp. reported on Thursday second-quarter income of $180 million, a 9% increase over year-earlier results. Earnings per share were 94 cents, up from 88 cents.

For the first six months of 1993, earnings per common share were $2, compared with $1.66 per common share for the first six months of 1992.

John Gibbons, acting chief financial officer, said the company had a $24 million increase in net interest margin as management and guarantee fees rose. He said income from retained mortgages also climbed as the average balance of the portfolio grew 6%. The resulting gain in income, however, was partially offset by higher funding costs.

2 Household Execs Joining Fair, Isaac & Co.

CHICAGO — Two key executives are leaving the credit card unit of Household International at the end of the month to form a business unit for Fair, Isaac & Co.

Warren Wilcox, executive vice president of new business products at Household Credit Services, and John Gerbino, senior vice president of risk management, will try to expand Fair Isaac's business outside the traditional consumer credit market.

Fair Isaac, based in San Rafael, Calif., provides credit scoring and other risk-management systems. It may be seeking customers in the mutual fund or telecommunications industries.

A successor to Mr. Wilcox, who helped develop the successful General Motors card that Household issues, has not been named.

Morgan Elects Martin Feldstein a Director

NEW YORK — Former White House economic adviser Martin Feldstein has been elected a director of J.P. Morgan & Co. and its principal subsidiary, Morgan Guaranty Trust Co. of New York.

Mr. Feldstein, 53, is president of the National Bureau of Economic Research and is George F. Baker professor of economics at Harvard University. He was chairman of the Council of Economic Advisers from 1982 to 1984.

A New York native and graduate of Harvard College and Oxford University, Mr. Feldstein is a member of the American Philosophical Society, the Trilateral Commission, and the Council on Foreign Relations, among other affiliations.

1st Alabama to Buy FDIC's Secor Warrants

BIRMINGHAM, Ala. — The Federal Deposit Insurance Corp. board has voted to allow First Alabama Bancshares to purchase warrants that the agency holds in Secor Bank.

The warrants, held by the FDIC in its role as manager of the Federal Savings and Loan Insurance Corporation Resolution Fund, would have given the government 25% of Secor common stock, if exercised.

Under terms of First Alabama's pending acquisition of Secor, the warrants would be canceled when the deal closes.

Foothill Forming Thrift Holding Company

LOS ANGELES — Foothill Group Inc. said its board has approved the formation of a thrift holding company that will be spun off to shareholders.

The subsidiary, Foothill Thrift and Loan, currently has $16.2 million in equity. Foothill Group said the holding company should raise $10 million to $15 million in new equity, much of which would go toward improving capital ratios.

After the spinoff, the holding company would have no further connection with Foothill Group, which has diversified financial interests. Foothill Thrift specializes in commercial real estate financing for small businesses and entrepreneurs.

The briefs were compiled from staff and wire reports.

Citicorp's Rhodes Insists Brazil Pact Hinges on an Accord with the IMF

Reuters

BRASILIA — William Rhodes, the Citicorp vice chairman who heads the steering committee of Brazil's creditor banks, has reaffirmed that an accord with the International Monetary Fund is essential to a conclusion of Brazil's debt restructuring with commercial banks.

Mr. Rhodes denied a Brazilian newspaper report that said the commercial debt agreement could take effect without an IMF accord.

William Rhodes
Rejected newspaper report

Accord 'Always Contemplated'

The newspaper, *O Estado de Sao Paulo*, said Mr. Rhodes told Economy Minister Fernando Henrique Cardoso that Brazil did not need an IMF accord to finish the agreement on repayment of the $40 billion foreign bank debt.

"We have always contemplated that an IMF program would form part of the restructuring plan," Mr. Rhodes said in a telephone interview.

"That is what I discussed with the minister, Central Bank President Paulo Cesar Ximenes, and chief debt negotiator Pedro Malan during the visit to the ministry" on Tuesday, the banker said.

Agreement on Par Bonds

Brazil wants to conclude an IMF accord and obtain a total of $1.6 billion from the IMF, the World Bank, and the Inter-American Development Bank as a guarantee to help clinch the commercial debt repayment deal.

It was announced Tuesday that the banks had largely agreed to Brazil's request for a maximum of 40% repayment in par bonds and a minimum of 35% in discount bonds. The limit on par bonds means substantial savings for Brazil.

"We wanted to rebalance" the mix of repayment options, "and that is what this whole exercise was," Mr. Rhodes said.

Brazil and the banks begin talks on repayment contracts and documentation next week in New York. The negotiations are expected to run at least several weeks.

Asked when the debt agreement could be signed, Mr. Rhodes said, "We have to have our discussions on the documentation, and Brazil has to work out its arrangement with the fund so we can have a signing by the end of September."

Brazil then could begin repayments in November, he said, adding, "It's a tight schedule." □

Citicorp Names Michaelson to Post at Investment Management Unit

NEW YORK — Citicorp said Bob Michaelson has been named global chief investment officer at Citibank Global Asset Management.

Mr. Michaelson, 46, will join Citibank's investment management arm at the end of August. He was previously with Mercury Asset Management Group PLC in London.

He will report to W. Neville Bowen, chief executive of the asset management unit.

Citicorp also named Ian Corbett country corporate officer for the United Kingdom. He will remain European managing director for the financial institutions and transaction services group. □

Floodwaters in Midwest Swamping Banks

Continued from *page 1*

ings to depths of 2½ to four feet, Mr. Oman said.

The offices are in the Riverpoint complex, near the confluence of the Raccoon and Des Moines rivers. Some 700 people worked there in executive offices and finance, accounting and mortgage servicing units.

Mr. Oman said operations were moved to other locations with minimal disruption to customers. Through Wednesday of this week, loan processing volume was normal, with the mortgage company taking applications for $600 million of mortgages and funding $360 million, he said.

About a third of the employees we c moved to a Norwest credit card facility in West Des Moines, away from the flooding.

Mortgage servicing operations were moved to servicing centers in Minneapolis and Springfield, Ohio. Processing of mortgage applications are handled for the unit by Computer Power Inc. in Florida, and were unaffected.

No Water for Sprinklers

At its 25-story bank building in downtown Des Moines, Norwest had to relocate 700 employees – not because of floods, but because the city's water purification system was contaminated, and the water was turned off. With sprinkler systems disabled, the entire downtown was unsafe to work in.

Lynn Horack, president and chief executive of Norwest Bank Iowa, said it activated a longstanding contingency plan that entailed moving employees and equipment to West Des Moines, and other locations.

The million checks processed daily by the bank are being flown to Minneapolis, Mr. Horack said.

Bankers Trust Co., a $580 million-asset bank in Des Moines, was forced to scatter some 140 employees from its 34-story headquarters building among eight offices elsewhere in the metropolitan area.

Late Opening

The bank uses a service bureau, Newtrend, for computer processing, which was unaffected. But the move forced the bank to open two hours late on Monday morning, according to chief executive Mike Earley.

Fortunately, business has been slow.

"People aren't borrowing for homes or cars right now," Mr. Earley said. "They're more focused on other matters."

Pumping Out the Vault

Other banks that had to close downtown Des Moines offices included Boatmen's Banshares, which has its headquarters downriver in St. Louis, and Firstar Corp. of Milwaukee.

Employees at Mercantile Bank of Illinois, Alton, have been pumping "seepage" from the vault in the bank's main branch for the last eight days.

"It's a 24-hour job, so we've been switching off. Officers work the night shift [on the pumps], other staffers work the day shift," said David E. Hagard, an executive vice president in administration at the subsidiary of St. Louis-based Mercantile Bancorp.

The main branch of Omni Bank in Hull, Ill., which houses all data processing and item processing operations, is situated only a few hundred yards from the town's levee.

Fearing the worst, president Ivan E. Wharton, who has been sleeping in the main branch for the last eight days, had most of the contents of the main branch moved to another office on higher ground.

Since Omni's backup computer processing site, a data center run by Bank of Calhoun County in Hardin, Ill., is already flooded, Omni was forced to move its operations elsewhere.

Making Do

Omni is currently using a 30-foot trailer as a loan office. Check and data processing equipment are at a branch 75 miles from the main office. The bank's three automated teller machines were taken out of service, gutted of their computer innards in anticipation of the levee breaking.

Canton State Bank, Canton, Mo., evacuated its main branch and is operating out of a local college.

Relief may be days away. According to the National Weather Service, the Mississippi crest is moving south at a rate of only three to five miles an hour, its progress slowed by continual rainfall.

The crest is expected to reach St. Louis on Monday at a record 45.5 feet. □

By Alfredo Harp Helu

Mexico's Banks Are Equal To the Trade Pact's Challenges

Though some observers are quick to question the competitiveness of Mexico's banks when talking of the proposed North American Free Trade Agreement, a closer analysis of the Mexican banking system reveals otherwise.

Considering what Mexican banks have been through in the past decade, it's a wonder they managed to survive. In the 1980s, the average annual inflation rate was nearly 80%. Banks were nationalized, then reprivatized. Regulations constantly changed.

Now, with Mexico's banks back on their feet and thriving, many wonder if they will be able to survive the impending onslaught of competition from U.S. and Canadian subsidiaries under the trade agreement.

Untapped Opportunities

Not only will they survive, they should prosper.

Conventional wisdom has it that Mexican banks lack the innovative, entrepreneurial spirit of their U.S. and Canadian counterparts.

Mr. Helu is chairman of the board of Grupo Financiero Banamex-Accival, Mexico's largest private bank.

But Mexican financial institutions haven't even scratched the surface of their own market's potential, compared with banks in industrialized countries. Mexican banks currently finance about 27% of the country's gross domestic product, less than one-third the figure for the United States or even Spain.

Only about 8% of Mexicans have a checking account. Less than 1% of homeowners have a mortgage.

Playing Catch-Up

While we are increasingly becoming technologically sophisticated, we still have some catching up to do. So, some might argue, this all must translate into competitive weakness on the eve of Nafta. Not necessarily.

Mexican banks couldn't possibly have been expected to expand and offer innovative financial products and services during the economically turbulent 1980s. Facing hyperinflation, plummeting real incomes, and a devalued peso, the banks did well enough to hold their own.

They managed to finance about 25% of Mexico's GDP, only 3% less than today. They adapted their financial products and services to the highly unstable environment of those years.

Growing Economy

Now that the macroeconomic situation has dramatically stabilized and improved, it will be much easier for Mexican banks to offer innovative financial products and services as real incomes and savings grow.

Economic growth and stability will, in addition, allow the banks to increase their base of customers, both commercial and individual. This trend is already taking place.

Individual retirement accounts, for example, are now being offered by many Mexican banks. More than 13 million IRAs have recently been opened. And many of these customers never had a bank account before.

As the banks attract more customers, they will be able to reduce costs and offer a wider array of services. For example, many banks are now offering their customers more widespread access to automated teller machines.

Latest Technology

It is true that to be competitive, Mexican banks will have to invest in technology. Their current lack of cutting-edge technology has a benefit, however. The banks can learn from the experiences of others, particularly in the United States and Canada, avoiding their pitfalls and faulty technology.

In other words, Mexican banks will immediately get on the highway to modernization, bypassing the bumpy road.

For example, Mexican banks are now offering customers debit and credit cards as an alternative to the traditional checking account, soon to be a financial dinosaur. In this way, Mexican banks will catch up quickly and penetrate their own market more fully.

To prosper in an increasingly competitive marketplace, businesses must constantly offer products and services tailored to the markets they serve. Banking is no different. Mexico's banks have demonstrated their ability to tailor their products and services to market conditions.

Faced with imminent competition from the north, Mexican banks are indeed rising to the challenge. They are modernizing, offering new products and services, and building their customer base. They will be ready for Nafta. □

In Mongolia, a Banking System Arises With Help from U.S. Volunteers

RELIABLE *information is not available, and financial concepts are not well understood.*

Mongolia is not the end of the world – but you can see it from there."

With these encouraging words, John Walker, president of the Financial Services Volunteer Corps, and Tim Frost, the corps' program director, invited the Soviet-American Banking Law Working Group to field five volunteers as the latest off team for the corps' Mongolian Banking and Finance Training Project.

Originally scheduled to start in Ulan Bator, elevation 4,000 feet, in October, a deferment to February had us running for our long johns, down parkas, and Patagonia catalogues. February temperatures range from plus 10 to minus 40 degrees Fahrenheit.

As in the former republics of the late Soviet empire, Mongolia's banking system is coming in from the cold. Prior to 1990, there was only one bank, the Bank of Mongolia, providing all nationwide banking functions in a command economy.

In addition to managing the government's debt and issuing currency, this one bank also almost exclusively with state enterprises in a command economy, essentially balancing the national accounts.

There was no payment system, no intermediation of deposits into housing or commercial ventures, and no form of consumer banking as we know it. Mongolia was then and continues to be essentially a cash economy.

A Foundation

Today, a two-tier system has been established. The old Bank of Mongolia has become the Central Bank. There are now 11 commercial banks, four of the largest being spinoffs of the old Bank of Mongolia. Most of these commercial banks are joint stock companies still government controlled through companies in the process of being privatized.

Mongolia's banking law gives commercial banks broad powers, barring them only from production, insurance, and land development activities. Licensing would appear to be straightforward.

Hyperinflation has thrown into a cocked hat the minimum capital requirement of 50 million tugriks (about $140,000 at the 350-to-1 exchange rate), resulting in proposed legislation for an increase to 150 million tugriks, which would cause compliance problems for several banks. No provision has yet been made for foreign bank ownership or branches.

Good News, Bad News

The good news is that all the Mongolian commercial banks have been initially profitable through continued strong demand for short-term credit (the only kind available) on the part of corporations in the process of privatization, cheap government funding from the Central Bank, and a high rate of inflation.

Some banks are actually paying dividends semiannually. Deposits, including some personal savings accounts, are being attracted at competitive interest rates.

Float is tremendous, since

Mongolian Banking: In from the Cold

Continued from *page 4*

poor internal communications and the absence of a payment system mean that transferring funds can take two months. And the legal and corporate framework is progressing as Mongolia moves from being a centralized command economy to a more market-oriented economy.

The bad news is that a legal and business infrastructure, let alone an understanding of the basics of commercial contract law and lending, is a long way from where it must be in order to support creditworthy lending. Bank facilities are rudimentary, reliable financial information is not available, and financial concepts are not well understood.

Moreover, transactions still require substantial paper shuffling and rubber stamping, and periodic limitations on cash withdrawals as an anti-inflationary measure have eroded public confidence in the banks and led to cash hoarding and dollar-based activities among small businesses outside the banking system.

Finally, bank capital at the minimum levels is woefully augmented by paper profits, is woefully inadequate to support real

A LEGAL *and business infrastructure is far from where it must be.*

growth in a hyperinflationary environment.

On top of this, there is a severe shortage of skilled bankers, which brings me to the Financial Services Volunteer Corps.

A private, nonprofit organization, it has provided technical assistance from the United States since 1990 to support the economic transformation in emerging market economies.

For a year, the corps' Richard Currie, a Mongoliaphile and former U.S. banker, has focused on Mongolian banking needs and opportunities, building on the corps' experience in assisting the conceptualization and development of a voucher privatization program and stock exchange.

He offered 30 managers with basic English skills the opportunity to participate in the corps' training project.

Valuable Lessons

Our Soviet-American Banking Law Working Group volunteers were drafted by the corps to give the Mongolian bankers the first wave of basic training in banking in a market economy with a series of interactive presentations.

Organized as a group of American volunteer bankers, academics, and attorneys, we joined the Russians in developing a business and commercial law infrastructure to underpin a banking system, banking law volunteers have prepared a 182-page book on banking basics that includes a 34-page glossary.

ONCE *before, Mongolia was a microcosm for an important banking lesson.*

A high point of our program was a Socratic discussion of financial statements led by Dick Howe of Sullivan & Cromwell, who put a simple blank balance sheet and income statement on the blackboard, asked the Mongolians what kind of business they would like to discuss, and then filled in the blanks.

ONCE *before, Mongolia was a microcosm for an important banking lesson.*

We were impressed with how quickly the Mongolians arrived at the right analysis and judgment regarding the "bankability" of various hypothetical borrowers. From the questions and the intensity of our discussions, we could tell that the corps has identified a group of future leaders who are clearly enthusiastic and eager to learn and make progress – realistically.

For American bankers, the lesson of the Mongolian training project is that we have a valuable export in technical assistance. One hopes the payoff will be the development of a safe and sound Mongolian banking system that facilitates a successful transition to a functioning market economy and friendly trading partner.

While it may be too early to make a case for opening representative offices or branches in Mongolia, American bankers should keep an eye on developments there. It may become a prototype for fast-track development of banking systems in other emerging economies.

Curiously, Mongolia was once before a microcosm for an important banking lesson. At its peak, Genghis Khan's empire stretched from the Pacific across Asia all the way to Hungary, introducing the concept of paper money inherited from the Sung dynasty, which had collapsed in ruinous inflation.

So, too, did the finances of the great khans ultimately collapse. There is hope that today's Mongolia may offer a more positive example for development of a workable banking system in emerging market economies. □

Divining the future is not all that hard when you have

THE REDEMPTION REPORT

Calls and prerefunded bonds are scheduled to drain the yields out of portfolios at a faster and faster pace in the third quarter. With ***The Bond Buyer Redemption Report,*** *you can anticipate redemptions well ahead of the actual events.*
If you want to know when your bonds will be called away, this report has the answer.

We published the first such book in history for the first quarter of 1993. Buyers received instant access to the entire universe of called and prerefunded bonds in one volume.

And now you can get the third-quarter volume, a 916-tome chock full of information on which, how much, and when. Here's a sample listing:

Keycorp, Midlantic, UJB, and Natwest Among Regionals Posting Strong Gains

Continued from page 1

venture capital investments.

Minnesota-based Norwest Corp., the nation's 14th-biggest bank company, pocketed $132 million of mortgage banking revenues and had overall income of $311.3 million to boost its quarter.

In recession-weary New Jersey, Midlantic Corp. relied on rising interest margins, declining credit costs, and new accounting rules to report a 400% jump in profits to $40.9 million.

NORTHEAST

Exceptional trading profits fueled J.P. Morgan & Co., which reported net income of $431 million in its second quarter, up 33% from $325 million last year.

The results, which translated into $2.12 a share, far exceeded Wall Street's expectations. A consensus of 21 analysts reporting to First Call Corp. had forecast profits of $1.53 a share for the nation's fourth-largest bank company.

In afternoon trading Thursday, Morgan's stock rose $1.50 to $71.625 a share.

Analysts said investors remain concerned about Morgan's ability to sustain strong trading results. Its trading profits jumped 82% from a year earlier.

"The skeptics would say the monster trading result means volatile earnings," said Judah S. Kraushaar, an analyst at Merrill Lynch & Co. "But it's more of a reflection of getting a payback on significant investments made over the past couple of years."

Morgan took $98 million of investment securities gains during the quarter. But, excluding the one-time profit and the trading results, revenue rose 9% over the year-earlier period, according to Mr. Kraushaar.

Investment management fees and operational services fees soared 23% over the year-earlier period while credit-related fees jumped 16%. Morgan said almost half of its $115 million in corporate finance fees came from underwriting securities.

Expenses - a persistent source of criticism from analysts - remained high at $866 million, up 17% from the year-earlier quarter. But analysts seem unperturbed in the wake of the strong earnings.

"With revenues up 21%, I'm not concerned," said Raphael Soifer, an analyst at Brown Brothers Harriman & Co., who raised his 1993 estimate for Morgan after the earnings report to $7.00 a share from $6.35. "Most expenses relate to the cost of doing more business."

For the second consecutive quarter, Morgan did not make a provision for credit losses.

— Yvette D. Kantrow

Keycorp, based in Albany, N.Y., said profits rose 31.9% to $99.9 million, or 95 cents a share. Though loan growth was modest, strong fee income and improved credit quality spurred profits.

Results were roughly in line with analysts' estimates. In late trading Thursday, the company's stock rose 62.5 cents to $40.375.

Keycorp said that loans, excluding acquisitions, rose 5.5% from a year ago.

"We still expect internal growth for Keycorp as a whole to approximate 5% for all of 1993," said William H. Dougherty, the chief financial officer and group executive vice president of Keycorp, adding that loan growth could hit 14% through acquisitions.

Keycorp's net yield on average earning assets dropped to 5.34% from 5.38% in the first quarter. Fee income - led by $28.7 million of mortgage banking revenues - soared 23% from the first three months of 1993.

— Karen Gullo

Edison, N.J.-based **Midlantic** Corp. surprised analysts with its strong report.

Vastly improved credit quality, wider interest spreads, and gains related to tax accounting spurred profits. Midlantic's earnings of 78 cents a share almost tripled the consensus estimate of 28 cents compiled by Zacks Investment Research Co., Chicago.

"No one expected them to be this far along" in resolving credit problems, said Jerome Baron, an analyst at Sherwood Securities. "They [could] begin to look like a normal bank in a few quarters."

Total nonperforming assets at Midlantic, which $13.8 billion of assets, fell 11% during the quarter as the company accelerated its bulk sales of nonperforming loans.

The company, which also recognized a $17 million tax-related gain, widened the spreads between its cost of funding and investments as its net interest margin rose 36 basis points to 4.12%.

Midlantic shares rose 12.5 cents to $21.625.

Elsewhere in New Jersey, **UJB Financial Corp.** recorded a 118% rise in profits to $22.4 million, or 43 cents a share, on target with analysts' expectations. The company's stock gained 25 cents to $25.25.

National Westminster Bancorp said profits rose 96% to $69.8 million. The Jersey City-based subsidiary of the giant British bank company said $14.5 million of the gain came from adoption of new accounting rules.

Officials at UJB, which has $13.8 billion of assets, said they continued to reduce nonperforming loans while enjoying a moderate improvement in spread and fee income. "We expect the negative effect on earnings from nonperforming loans and other owned real estate will continue to diminish," said T. Joseph Semrod, chairman and chief executive officer of New Jersey's third-largest bank.

— Karen Gullo

SOUTHEAST

Southeastern banks issued another round of strong earnings reports, citing strengthened credit quality, higher fee income, and tight expense control. But most banks suffered slight declines in their net interest margins in the first quarter.

Merchant banking income helped **First Union** report earnings of $1.32 a share, well above analysts' expectations. The company had previously forecast gains of $1.15 to $1.20 a share, but on Thursday it said that gains from its equity investments in companies added $44 million, or 16 cents a share.

The Charlotte-based company saw its stock price rise 62.5 cents on Thursday afternoon to $46 a share.

First Union recorded a 15% gain in noninterest income from 12 months earlier to $305.4 million. Its loan-loss provision fell 48% to $61 million.

Although the company's net interest income rose 12% during the quarter, but its net interest margin fell 8 basis points from three months earlier to 4.92%.

Despite a recent flurry of acquisitions, which added more than $20 billion in assets during the past year, First Union's noninterest expenses rose a modest 5% to $591 million from the year-earlier quarter.

The company also is experiencing an uptick in loan demand. Excluding acquisition-related assets, First Union added about $750 million in new loans during the second quarter. Malcolm T. Murray Jr., the bank's chief credit officer, said demand has been strong even in North Carolina, Florida, and Atlanta.

Elsewhere in the southeast, **Crestar Financial** Corp. said it doubled its quarterly earnings to $33.7 million over the year-earlier quarter. The Richmond-based company has $13.2 billion of assets. Its shares fell $1.25 to $42.125.

First Tennessee National Corp., which has $9 billion of assets, reported $30.3 million in net income, up 16.4% from the second quarter of 1992. In New Orleans, **First Commerce** Corp., with assets of $6.1 billion, saw earnings crest 40% to $24.7 million from the previous year. And Birmingham, Ala.-based **Central Bancshares of the South** netted $22.2 million, an 18% for the company, which has $7 billion of assets.

All the companies but Crestar experienced a slight shrinkage in their net interest margin.

— Kenneth Cline

MIDWEST

Norwest Corp., the nation's 14th-largest bank company, boasted record quarterly gains while taking several nonrecurring charges to clean up its balance sheet.

The company's profit of $161.1 million, or 52 cents a share, slightly exceeded analysts' estimates. Norwest's shares rose 25 cents to $26.75 in late trading Thursday.

Norwest, which has $47.8 billion of assets, said all its business units performed "at or above expectations," led by very strong mortgage banking profits of $23 million. Noninterest income rose 38.6% from the year-earlier quarter and almost 22% from the first three months of the year.

The company's core bank earnings rose 16.2% over 1992's second quarter.

The midwestern giant accelerated amortization of credit card premiums and mortgage servicing rights during the quarter while boosting writeoffs of acquisition-related goodwill.

"They have the capacity to absorb these charges and still report strong earnings," said Henry C. Dickson, an analyst at Smith Barney, Harris Upham & Co.

Norwest's net interest margin dipped slightly since the first quarter because of lower yields on earning assets.

Credit quality remained strong. The company's loss provision inched up to $39.4 million from $37.2 million in the first quarter, but nonperforming assets declined.

In Cleveland, **National City Corp.** attributed its healthy quarter to strong progress in improving asset quality, expanding net interest margin and loan demand, and higher fee income.

The company shaved its nonperforming assets by $61 million during the quarter to $268 million - its ninth quarterly decline. The decline included a $38 million decrease in foreclosed real

Norwest, NBD, and National City Gain

Continued from page 6

estate assets.

Loans increased 5% from the year-earlier period. "They have demonstrated they are a good solid performer, and hopefully people will recognize it," said Mr. Dickson.

National City's profit of $102.5 million, or $1.22 a share, was in line with analysts' expectations. Its stock closed unchanged at $53 a share.

In Michigan, **NBD Bancorp** reported a 35% jump in earnings that translated into 76 cents a share, above analysts' expectations. In the year-earlier period, the Detroit company took a $12 million charge related to its purchase of Indiana's Summerbank and a $37 million special charge for an accounting change.

Nevertheless, NBD defied the trend of declining margins. Its net income jumped 5% from last year to $203.2 million, while its interest margin widened 17 basis points from one year earlier and 5 basis points from the first quarter.

NBD, the nation's 16th-largest bank, with $40.4 billion of assets, reduced its provision to $35.1 million from $40 million in the first quarter and $49.9 million one year earlier. Chargeoffs fell to $32.6 million from $38.7 million in the first three months of 1993 and $44.6 million one year earlier.

Several companies also continued to post interest-related gains.

The company's shares fell 25 cents to $32.875 on Thursday.

Also, in Michigan, **Old Kent Financial** Corp. said earnings rose 18% to $33.4 million, citing strong interest margins, growing mortgage lending, and improved asset quality.

In Chicago **Continental Bank** Corp. exceeded analysts' expectations with its second-quarter profit of $61 million, or 95 cents a share. The company were up 20% from the year-earlier period.

The company boosted profits with a fivefold increase in trading gains, the sale of investment securities, and a credit for income taxes of $7 million. Total revenues at Continental, which focuses on business and corporate banking, fell slightly from the first quarter, but credit quality generally improved.

The company's stock lost 25 cents to $23.125 Thursday.

"You'd like to see revenues a little stronger, but they're going in the right direction," said Mr. Dickson.

Continental, which has $22.4 billion of assets, said nonperforming assets fell $106 million during the quarter to $768 million.

However, it said about 45% of its residential real estate assets - including almost three-quarters of its $500 million portfolio in California - were nonperforming. Continental's provision against future loan losses rose to $35 million from $25 million in the year-earlier period but declined from $56 million in the first quarter. Chargeoffs soared to $67 million from $21 million in the first quarter.

— Jed Horowitz

WEST

Oregon's U.S. Bancorp and Idaho's **West One Bancorp** reported solid earnings for the second quarter on Thursday. And in Southern California, **City National Corp.** returned to profitability.

U.S. Bancorp earned $63.6 million, up 19.3% from a year ago. West One Bancorp, based in Boise, netted $20.8 million, a 36% increase over last year's second quarter.

City National Corp. reported net income of $10.9 million, or 30 cents a share, compared with a $62.6 million loss for the same period last year. The most recent quarter was boosted by a $7.1 million gain from the sale of the company's data processing unit and a $3 million addition from sale of $74 million in equity loans. Earnings from continuing operations equaled $800,000.

Shares of U.S. Bancorp rose 50 cents to $25.875. West One gained 25 cents to $50.

U.S. Bancorp, which has $20.8 billion of assets, signaled its results to analysts several weeks ago but came in about 9% higher than the analysts' consensus forecast. The company's net interest margin widened by 13 basis points to 5.33%, due mainly to lower rates on consumer deposits.

Its earnings translated into a return on assets of 1.24% and a return on equity of 15.81%.

West One's second-quarter ROA was 1.15% and its ROE was 16.16%. It and U.S. Bancorp benefited from loan growth and gains in noninterest income.

U.S. Bancorp said it reaped large gains in deposit fees and income from venture capital investments. But mortgage income was down sharply as the company wrote down the value of mortgage servicing rights to reflect high refinancing levels.

Expense levels remained high due partly to the cost of branch acquisitions in Northern California.

West One's record profits reflected a 39% jump in loan volume from a year ago, due mainly to the acquisition of some $837 million in loans from Bank-America Corp. Excluding the effect of that transaction, loans still grew a snappy 15% in the year. At the end of June, West One had $7.5 billion of assets.

City National continued to write off and sell problem credits. Nonperforming assets and assets held for sale totaled $184.4 million, down 6.4% in the quarter and 29.12% for the year. The company's assets fell to $2.9 billion, down 28.7% from a year ago.

IBAA Lends a Hand To Victims of Flooding

By BILL ATKINSON

Washington Watch

THE INDEPENDENT BANKERS Association of America and five affiliated state banking trade groups are recruiting members to bail out flood victims in the Midwest.

The bankers are helping farmers, business owners, and homeowners whose property has been damaged by the flood fill out complicated government forms to get federal disaster relief.

"We decided we should move ahead and do something to help out," said IBAA president James R. Lauffer, chairman and chief executive of First National Bank of Herminie, Irwin, Pa. "This is a case of neighbor helping neighbor."

The effort, dubbed "Operation Good Neighbor," began a week ago when the Washington-based trade group started working with its Wisconsin affiliate. From there the effort expanded to Illinois, Iowa, Minnesota, and Missouri.

The IBAA is supplying its affiliates with phone numbers of disaster field offices set up by the government and the names of the people running the offices. It has also provided the Federal Emergency Management Agency and the Small Business Administration with the names and phone numbers of its affiliates.

Jim Judkis

James R. Lauffer

"What we are trying to do is get our people in the field as much information as possible," said Herb Spira, the IBAA's tax specialist.

In Wisconsin, about a dozen bankers have signed on to help, said Heidi Sabel, spokeswoman for the Independent Community Bankers Association of Wisconsin.

Ms. Sabel said the trade group sent out facsimile messages to members last week, notifying them that the SBA was looking for bankers to process loans.

"It's more of a service to them [government officials], so they don't have to go out knocking on doors," she said.

Ms. Sabel said more bankers are likely to join the effort, and more may have already been recruited by government officials. The affiliates are looking for bankers who can quickly help flood victims fill out federal loan applications to get funds to the hardest-hit areas.

There are several kinds of loans available to flood victims, including low-interest SBA loans to repair houses, rebuild and restart businesses, and repair public facilities.

Alternatives for Family Farmers

Family farmers can also apply for low-interest Farmers Home Loan Administration emergency farm loans, 20-year farm loans at 4.5% interest to cover crop losses, and for loan forgiveness up to $300,000.

Ronald Ence, the IBAA's director of agricultural finance, who spends about 25% of his time on the project, said filling out the forms is a daunting task. And answers from the government can take weeks or months when there are mistakes.

"If you are not used to dealing with federal red tape and federal requirements, it [filling out the forms] can really be a scary situation," he said. "The bankers are able to cut through mistakes and get the application completed."

Banks Pitch In with Loans And Aid for Swamped Clients

By ROBERT B. COX

CHICAGO — From sandbagging to small-business lending, midwestern community bankers are furiously coping with the floods that have engulfed their customers and, in some cases, even bank buildings and branches.

Up and down the swollen Mississippi, bankers have been rolling up their sleeves to do the most direct type of community service, bailing out borrowers' basements, moving furniture, and distributing food and water to the needy.

"Everyone at the bank has had to leave their duties at one time or another to shovel sand, haul bails of hay, and reinforce the levees," said Paul Pogue, president of North Adams State Bank of Ursa, Ill.

Billions in Damage

Losses from the torrential rains and flooding are estimated to top $2 billion and may go as high as $5 billion, most related to lost or unplanted crops. President Clinton asked Congress to appropriate $2.5 billion in aid.

Regulators are encouraging lenders to assist in rebuilding their communities. The Office of Thrift Supervision issued a forbearance order Wednesday for thrifts in eight states, and the other regulatory agencies are drafting similar relief guidelines.

In the meantime, many bankers are offering emergency low-interest loans to help customers cope.

The Iowa Bankers Association has set up a referral program to help connect borrowers with low-interest loans and other assistance. In that disaster-stricken state, more than 36 banks have crafted emergency flood-relief loans with interest rates as low as 4%.

Larger regionals, from the Marquette Banks of Minnesota to Boatmen's National in St. Louis, have developed well-publicized aid programs. Boatmen's on Thursday announced a plan that includes expedited processing of loan applications, discounted rates, and deferred repayments on many consumer and commercial loans.

"Banks are trying to loosen up loans to give people some cash in their pockets," said Richard Goodson, president of the Iowa League of Savings Institutions.

Five-Year Loans at 5%

In addition to running sump pumps and shoveling, Daryl Barklow, president of East Dubuque (Ill.) Savings Bank, has been offering 5% five-year loans to residents of his river town. So far he's had five applications and 20 inquiries.

"A lot of people have water in their basements and have lost their furnaces, heaters, washers, and dryers," said Mr. Barklow.

All Wet

Some of the areas hit hard by flooding

Other banks are allowing more time for loan repayments and waiving some service fees.

"On a case-by-case basis we will exercise leniency and eliminate service charges until borrowers get back on their feet," said Dick Schroeder, a vice president at Iowa State Savings Bank, Clinton.

Calls for Volunteers

State banking groups affiliated with the Independent Bankers Association of America are encouraging lenders in areas unaffected by the floods to volunteer their services. The bankers are asked to help victims fill out Small Business Administration paperwork at relief centers. After less than a day's notice, the Community Bankers Association of Illinois signed up three volunteers, and more are expected.

"Everybody in town is helping out in whatever way they can," said Louie McLelland, executive vice president of Town and Country Bank of Quincy, Ill.

Quincy is one of several towns along the Mississippi that depends on workers from Missouri and lives about the possibility that the remaining bridge outside of St. Louis that connects the two states will be closed down.

New Meaning to 'Full Service'

Many bankers have had to lend more than just their underwriting skills to soggy citizens.

In Hannibal, Mo., MCM Savings has been functioning more like a restaurant than a bank. The thrift has been preparing 150 lunches for national guardsmen and volunteers, and its employees baked 180 bags of cookies for hungry relief workers.

Palmyra Savings and Building Association used its parking lot to fill sandbags to bolster a levee in the nearby village of Canton. Employees pitched in to fill more than 2,000 bags.

Banks further from the front lines have launched fund-raising and relief drives to help their waterlogged cousins. In fact, the Illinois Bankers Association said it received calls from a bank in Homestead, Fla. – which was hit hard by Hurricane Andrew – offering advice on how to handle the disaster.

Home Federal Savings Association in St. Louis is allowing employees to dress casually – if they pay a $5 fee, which the bank will match and donate to relief efforts.

The lobby of First Federal Savings and Loan of Kansas City is crowded with piles of blankets, canned corn, and other supplies donated by employees. □

Immigrants Seen As Growth Market For Home Loans

Continued from *page 1*

who adapt to the country's changing ethnic face.

And those that don't? "The ship's going to pass them by," says Mr. Levine, whose company is based near Los Angeles.

He and other lenders in major metropolitan areas – the so-called gateway cities where new immigrants cluster – say that lending to minorities is not inherently risky.

NEWS ANALYSIS

All that is needed, these lenders say, is a willingness to understand some different approaches to money and credit.

For instance, immigrants are willing to sacrifice more to own a home, Mr. Levine says, and in fact devote more of their income to homeownership. This flies in the face of long-standing rules used by banks to determine how much of a home a family can afford.

Reaching the Customer

Some simple things, like advertising in Spanish or Chinese or hiring people from new immigrants' ethnic groups as credit analysts and loan officers, can dramatically improve a lenders' ability to make mortgages.

"The more you can do in a person's native language, the more comfortable the customer is," says Tammy Rivera, who is in charge of marketing to minorities at Home Savings of America, the country's largest thrift.

Currently, 10% of business at the Irwindale, Calif.-based thrift is generated by Hispanics, and nearly the same amount by Asians.

Down-Payment Problem

Ms. Rivera says the usual advertising is often not cannot reach recent immigrants. News of Home Savings' multilingual ability, for example, spread throughout immigrant communities by word of mouth, not advertising.

Another major barrier to minority and immigrant homebuying is cash requirements.

The industry is virtually unanimous in acknowledging that down payment and closing costs are an enormous hurdle for many young homebuyers from minority groups.

Efforts to lower this barrier have shown mixed results. A low down payment can be an invitation to default – after all, the buyer has little or no equity at stake. But default badly tarnishes the buyer's credit and leaves little hope of another chance to buy a home.

Closing costs such as insurance and attorneys' fees are also difficult to lower, though some progress has recently been made on this front.

The Bias Issue

But many believe the most difficult problem facing immigrants and native-born minorities trying to get mortgages is bias in lending.

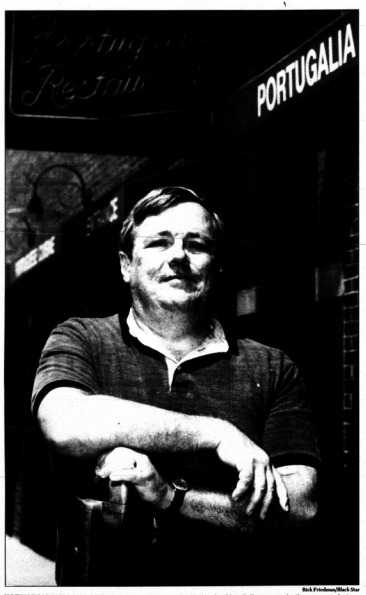
"It is the system's greatest failure," says David Jeffers, a spokesman for the Federal National Mortgage Association. "No democracy can sustain itself if one side of the population is consistently denied credit."

Prof. Apgar agrees. "The banking industry has to make itself minority-friendly," he says.

Minorities, especially immigrants, perceive banks as unfriendly, intimidating places, he says. He adds that whether the perception is based on fact is irrelevant – the end effect is discriminatory.

"A lot of people get 'turned down' before they even apply – because they think they will be badly treated, so they don't even bother to apply," Prof. Apgar says.

Banks must address this problem aggressively if they are want to open up this market, observers say. And fighting the perception of ill will may be the most difficult part of the battle.



Rich Friedman/Black Star

HARVARD'S WILLIAM APGAR says banks must be "minority friendly" to serve in the new market.

"Telling your loan officer to lend fairly isn't going to hack it," Prof. Apgar says.

Mr. Ashley of the Mortgage Bankers Association agrees. Minority and immigrant lending is the industry's great challenge, he says, but also its greatest opportunity. □

HIGH YIELD REPORT

lets you *hear the heartbeat and feel the pulse* of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt

IN AN AGE OF DRAMATICALLY declining long-term interest rates, the *American Banker*'s weekly *High Yield Report* delivers money-making tips on high-yield investment opportunities.

This newsletter keeps a close eye on major court proceedings, and legislative and regulatory developments. Each issue features barometers of market size, bellwether pricing tables, a forward calendar, reports on filings, and the results of new-issue sales.

No longer considered the arena of "junk bonds," the high-yield market is rapidly gaining respectability as it is closely tracked by this objective, succinct weekly letter.

If you must know what's "ticking" in the heart of the high-yield market, HIGH YIELD REPORT is a must read every week.

Read it free for 4 weeks!

2 to Share Clout at Norwest Brokerage Unit

By KEITH DuBAY

Amid rapid growth in its mutual fund business, Norwest Corp. is reorganizing the management of its brokerage unit and rolling out some new products.

In a key change prompted by the recent departure of mutual fund chief Mary K. Stern, two executives will split responsibilities for the Minneapolis bank's Norwest Investment Services unit.

Executives say the bank is also implementing several changes initiated during Ms. Stern's tenure. Specifically:

- Norwest's proprietary mutual funds – which have been marketed under the Prime Value Funds label – are to be renamed the Norwest Funds on Aug. 2 if shareholders approve the move in a July 30 vote.
- The Prime Value Funds currently have assets of $4 billion, up from $3 billion in October 1992.
- Two new portfolios have been added to the fund lineup, bringing the total to 13, and several others are in the works.
- Customers will be offered the option of paying sales fees when they redeem mutual funds, instead of the traditional up-front charges, or "loads."

Under the new management structure, Lee Chase will oversee investment management and trust funds, and Dean Jarnow will continue to manage the proprietary mutual fund business, according to Jay Kiedrowski, a Norwest executive vice president.

Moved to Society National

Ms. Chase joined Norwest this month from IDS Financial Services, Minneapolis, where she was manager of new business development.

Ms. Stern, who formerly oversaw both areas, jumped ship in May to run Society National Corp.'s mutual fund business.

In a telephone interview, Mr. Kiedrowski said the restructuring should enable the bank to target "resources to distribution channels more effectively."

Vote Set on Back-End Loads

In another vote on July 30, shareholders will decide whether back-end sales loads should be added to Norwest's mutual fund lineup.

Back-end loads are gaining ground in banks. A frequently cited reason is that bank customers aren't used to paying commissions for services, but they are familiar with penalties for early withdrawal.

Norwest is also considering combining its $3 billion Advantage Funds for employee benefit programs into the Norwest Funds, and offering them as a special no-load class of shares, Mr. Kiedrowski said.

3 Funds on Drawing Board

Scott Spiker, a senior vice president in charge of institutional trust services at the bank, heads the Advantage Funds.

Finally, Norwest is adding several portfolios to its fund lineup.

In June, Norwest added an income-stock fund and a Colorado tax-free fund. Three more products – an Arizona tax-free fund, a high-yield bond fund, and a balanced fund – are on the drawing board.

Portfolio manager Jeff Lund runs the income stock fund in Minneapolis. It invests primarily in blue-chip stocks with strong dividends and appreciation potential.

Norwest launched the Colorado tax-free municipal bond fund to fill a gap that was created in its product lineup last year.

Norwest had served as investment adviser to another Colorado tax-free fund, having inherited the account through its acquisition of United Bank of Denver. But the tax-free fund's distributor, Aquila Management, New York, reassigned the account to Kirkpatrick, Pettis Inc., a municipal bond underwriting unit of Mutual of Omaha.

Norwest uses Forum Financial Services Inc. as its distributor.

'Good Time to Buy Munis'

Marjorie Grace, who recently moved from Minneapolis to Denver to manage the new Colorado fund, said that its assets now total $20 million, including $1 million in seed money from Norwest Investment Services and $1 million transferred from trust accounts.

"We're very pleased with the response from customers," Ms. Grace said. "It's money Norwest didn't have under management before. Right now it's a very good time to buy munis overall, when you can get a tax-free yield over 5%"

Ms. Grace said she will also manage the planned Arizona fund, at least initially.

The Arizona fund will be introduced upon completion of Norwest's purchase of $2.1 billion-asset Citibank in Phoenix, which is expected late this year. □

Novell Inc. Girds To Defend Niche in Bank PC Networks

Continued from page 1

fice-automation software like word processing or spreadsheet programs.

In this area of banking, the market share of Novell's PC network dwarfs that of rivals IBM, privately held Banyan Systems Inc., and Microsoft, according to the *American Banker*/Ernst & Young 1993 Survey of Technology in Banking.

Novell is the dominant PC network vendor to banks.

The shift to client-server computing is widely seen as holding great promise for slashing computing costs and boosting productivity.

Nevertheless, bankers have been reluctant to move very fast in this direction because of the technical limitations of PCs and the software operating systems that control their basic functions.

Microsoft and IBM covet Novell's leadership role in the PC networking market. And both are working hard to overtake Novell with the newest operating systems technology.

The biggest splash is being made by Microsoft, which is actively promoting its new Windows NT software, a sophisticated version of Microsoft's popular Windows operating system, due for official release in a few weeks.

Not surprisingly, a version of Windows NT called Advanced Server is targeted directly at Netware users. And Microsoft officials are crowing that Advanced Server will make Netware obsolete.

"You don't need a buggy whip if you have a car," said Michael Nash, Windows NT product manager, when asked how Netware stacks up against NT Advanced Server.

While seeking to replace Netware, Windows NT also competes with other operating systems seeking to control the computer "servers" that will do most of the number-crunching for the PC "clients."

These include the Unix operating system that Novell acquired from American Telephone and Telegraph Co. last month in a stock swap worth $332 million, and IBM's OS/2, which is already being used by many banks.

Evaluating Time for Clients

Bankers are still trying to figure out which of the new server operating systems they will hang their hats on.

"We're essentially in the early stages of evaluating what is going to be standard," said Rusty Transou, technology research manager for First Union Corp., in Charlotte, N.C.

Mr. Transou said that Netware is the bank's standard network operating system for more than 3,000 PCs the institution has hooked into dozens of networks.

Mr. Transou added that, as a result, the bank counts Novell as one of three "strategic" technology suppliers, along with IBM and Microsoft. But Novell's enviable status could change if Novell's rivals are able to overtake the company with the newer technology.

Fight for Market Share

"I think for the next three or four years Novell is very much going to be part of our organization," Mr. Transou said. "But I have a bit of trepidation over Novell's ability to withstand an IBM and Microsoft onslaught over the long term."

In the face of this intense competition, Novell, which expects to break a billion dollars in revenues this year for the first time, is working hard on two fronts.

On one hand, Novell is upgrading Netware to compete with the newest networking software in ways that are important to banks.

PC Backing Up Pc

In March, for example, Novell started shipping new software that enables PCs running Netware to back each other up with the same level of fault tolerance historically found only on sophisticated "fault tolerant" computers sold by such companies as Stratus Computer Inc. and Tandem Computers Inc.

Gerry Machi, a Novell vice president and general manager of communications products, said that this software will make it possible for banks for the first time to use networks of PCs to handle electronic funds transfers chores normally handled on Stratus and Tandem machines, without sacrificing security.

Mr. Machi added that the benefit of using PC networks is that they would cost thousands of dollars less than Stratus or Tandem hardware.

This week, Novell also an-

Novell Girds to Defend Its Niche in Bank PC Networks

Continued from page 12

nounced that it was leading a team of major technology companies, including software firm Computer Associates International Inc. and AT&T Co., to develop a new set of technologies, called Trusted Network Computing Environment.

The technology is intended to make networks of PCs running Netware as secure as mainframes. Poor data security over PC networks has been a common complaint of bank technologists.

One banker that endorsed the move was Stash Jarecki, vice president and audit director at Citibank, who said the bank's management is committed to "standardizing on Netware." But he added that if Novell did not offer better data security in the future, the bank would be forced to back off its commitment to Netware.

Teaming Up with Unix

The other part of Novell's strategy is to become a client-server leader with Unix, now mostly popular in engineering and academic circles.

The Unix operating system already has many of the technical features that Microsoft spent $150 million building into Windows NT, and that IBM has put into OS/2. But the difference is that Unix historically has been difficult for most computer users to master, and criticized for its security holes.

And while Unix runs on a variety of computers, from mainframes to powerful workstations, it has not been widely used on PCs equipped with the Intel Corp. microprocessor – the dominant make of PC around and the one in which Microsoft's DOS operating system dominates.

The battleground will be so-called client-server systems, which experts say will radically change how banks operate. The technology links together tens or hundreds of PCs, thereby replacing expensive mainframes.

Seen as Key to Firm's Future

While Unix has not yet been widely embraced by banks, Raymond Noorda, Novell's chairman, sees his purchase of the operating system from AT&T as key to his company's future.

"We are bringing Novell into a strengthened position in banks and other enterprises," he said.

Now that it owns Unix, Novell plans to incorporate some of the best features of the operating system into Netware, Mr. Noorda said. The deal will also give Novell sole control of a bold new effort to bring Unix into the mainstream of PC networks.

This venture, a company called Univel Inc. of San Jose, Calif., started selling a version of the Unix operating system this year that runs on Intel-based PCs, and that sports many of the ease-of-use features now found in most PC software.

Bankers said the Univel venture appeared to be a competitive necessity for Novell.

"Ray Noorda can't just wait for [Microsoft chairman] Bill Gates and IBM to build an operating system" that makes Netware obsolete, said Robert H. Spicer 2d, senior vice president and chief information officer at Chevy Chase Federal Savings Bank, in Maryland. "He needs to compete at the server level, and now he can, with Unix."

Next week: After helping to revolutionize bankers' professional lives with the PC spreadsheet, Lotus Development Corp. vies for leadership in workgroup computing.

Nynex Completes Sale of BIS Group To British Vendor

By WILLIAM PESEK JR.

Nynex Corp. yesterday announced the long-awaited completion of the sale of BIS Group Ltd. to ACT Group PLC.

ACT, a Birmingham, England-based maker of software for financial companies, paid $140 million for BIS after winning the approval of its shareholders and the British Office of Fair Trade last week.

The transaction includes BIS Banking Systems, BIS Information Systems, and Brass Direct Marketing.

Offers Midas System

BIS Banking System's principal product is the Midas international banking system. The unit also provides information technology consulting, software solutions, and services to finance, government, and utility sectors.

According to spokesman Glen Brandow, the sale is part of Nynex's strategy to concentrate its efforts on key lines of business which focus on its core competencies in telecommunications.

Nynex is expecting to recognize a material gain from the sale, since the 1987 purchase of BIS was accounted for as a pooling of interests. However, the Nynex spokesman said the sale's net effect on earnings is uncertain at this time.

CITATION
THE PEOPLE OF THE STATE OF NEW YORK,
BY THE GRACE OF GOD,
FREE AND INDEPENDENT.
TO Gary Rawls;
Tanaka Rawls,
Barbara Lee as guardian of
Benjamin F. Rawls III;
Benjamin Rawls, Sr.

And to the distributees of Benjamin F. Rawls, Jr., also known as Benjamin Rawls, Jr., deceased, whose names and post office addresses are unknown and cannot after diligent inquiry be ascertained by the petitioner herein, being the persons interested as creditors, legatees, next of kin, beneficiaries, distributees or otherwise in the estate of Benjamin F. Rawls, Jr., also known as Benjamin Rawls, Jr., deceased, who at the time of his death was a resident of 630 Lenox Avenue, New York, N.Y.

Send Greeting:

Upon the petition of the Public Administrator of the County of New York, having her office at Room 311, in the Surrogate's Court Building, 31 Chambers Street, New York, N.Y.,

You and each of you are hereby cited to show cause before the Surrogate's Court of New York County, 31 Chambers Street, in the County of New York, on AUGUST 23, 1993, at 9:30 a.m., why the account of proceedings of the Public Administrator of the County of New York as administrator of the goods, chattels and credits of said decedent, should not be judicially settled, why a hearing should not be held to determine the identity of the distributees of decedent and why the fee of Philip Bekerman, P.C., in the sum of $4,125.00, which has been paid, should not be approved and reasonable additional fee be fixed and allowed for Philip Bekerman, P.C., for any services to be hereafter rendered by Philip Bekerman, P.C., in connection with proceedings to kinship, claims, etc., prior to the entry of a final Decree on this accounting.

Dated, Attested and Sealed, June 24, 1993.

(L.S.) HON. EVE PREMINGER

- Successful experience in supervising technical or marketing staff
- Strong oral and written communication skills
- Advanced college degree

Please send resume to:

Mick Wets, Fair Isaac, 120 North Redwood Drive, San Rafael, CA 94903.

Fair Isaac
EQUAL OPPORTUNITY EMPLOYER

DIRECT MARKETING MANAGER

Wachovia Corporation is a major southeastern financial institution with over $53 billion in assets. Currently, we have an immediate opening for a Direct Marketing Manager.

This talented individual will play a key role in expanding sales to retail customer segments. Specifically, this includes managing a direct marketing department that will be charged with developing proactive direct mail programs within a multi-state area. These programs will be an integral part of ongoing customer acquisition, retention and relationship building strategies.

In addition to a Bachelor's degree in Marketing or Business Administration, this individual must have a minimum of 5-7 years experience in direct mail and database marketing. Excellent managerial, organizational and communication skills are essential.

Wachovia offers an excellent compensation package and the opportunity for continued growth in a professional environment. For confidential consideration, forward resume and salary requirements only resumes with salary requirements will be considered to: **Wachovia Corporation, 191 Peachtree Street, NE - 12008W Personnel Dept., Atlanta, GA 30303.**

A negative drug test is a requirement for employment. Information about other essential functions of this position is available at the above address.

WACHOVIA
Pinpoint Only
An Equal Opportunity Employer M/F/D/V

WANTED TO BUY

MORTGAGE COMPANY WANTED

Extremely profitable and well capitalized West Coast Bank seeks to buy multi-branch mortgage brokerage or mortgage banking company. We prefer retail originations, but will consider wholesale or a combination.

Preferred profile: annual originating $100-300 million. Will consider companies somewhat smaller or somewhat larger. Prefer Western states, but will consider all areas. Our financial strength and mortgage banking orientation make us an ideal acquirer and partner. Please respond to:

Glenfed Seeks Approval To Reclassify Preferred

Dave Jones

GLENDALE, Calif. — Glendale Federal Bank said it has started soliciting the consents needed to approve the reclassification of its 12% noncumulative perpetual preferred stock into a new series D noncumulative convertible preferred.

Each 100 shares of the Glenfed Inc. unit's series B and series C perpetual preferred would be converted into 24 shares of series D. The par value will be $1 and the liquidation preference $25 a share.

As a result, 13.8 million existing preferred shares will be reclassified into 3.3 million of series D. At the effective date of the transaction, existing holders will get about 6.5 million rights to purchase common shares at the rate of 47 rights for each 100 preferred shares.

Part of Recapitalization

The transaction is part of a previously announced recapitalization that involves the merger of Glenfed Inc. into a subsidiary of Glendale Federal Bank, along with other financing moves.

The series B and C reclassification is subject to an approval vote by at least two-thirds of those outstanding shares.

The purchase of $125 million of additional convertible preferred stock and of $150 million of standby purchase commitments would be completed before or concurrently with completion of the merger, the exchange offer, and the reclassification, Glendale Federal said.

Holders Approve

Members of an informal steering committee of series B and series C preferred-stock holders, which have 75% of the outstanding preferred shares, have informed the thrift that they are prepared to recommend approval of the reclassification.

Dividends on the series D convertible preferred stock will be noncumulative and payable, if declared, quarterly on the first day of January, April, July, and October, beginning Oct. 1, 1994.

Dividends will be payable at an annual rate, expressed as a percentage of the per-share liquidation preference of the series D convertible preferred stock, that will be equal to the dividend rate on the noncumulative convertible preferred stock to be issued and sold in the additional offering.

The deadline for the consents by series B and series C holders is midnight eastern time on Aug. 4, unless extended by Glendale Federal. Preferred holders will have the right to revoke their consents and waivers at any time before the deadline. ❑

Ford Mortgage Subsidiary to Buy Servicing Rights from U.S. Bancorp

By EDWARD KULKOSKY

DALLAS — Associates National Mortgage Corp. has agreed to buy $2.5 billion of servicing rights from U.S. Bancorp Mortgage Co.

The servicing portfolio of Associates, which is part of a finance company owned by Ford Motor Co., will reach $10 billion at the completion of the sale, expected in August. Terms were not disclosed.

Malgum E. Whitt, executive vice president, said the deal is one of Associates' "more significant acquisitions" and "fits with our strategy of acquiring high-quality portfolios from other financial institutions."

$7.9 Billion Portfolio to Be Retained

U.S. Bancorp Mortgage will be giving up 26,000 conventional mortgages, primarily in Oregon, Washington, and Northern California. The unit of Portland, Ore.-based U.S. Bancorp will be left with more than 115,000 mortgages, valued at $7.9 billion, in 50 states.

U.S. Bancorp Mortgage is projecting $4.5 billion of loan originations this year, having grown from less than $100 million in 1985, said Richard Eichhorn, president.

The rapid growth in originations has the company continuously assessing "our product mix and servicing to assure a consistently strong portfolio that will support earnings objectives," he said.

B of A Considers a Branch in Northern China

GUANGZHOU, China — Bank of America is interested in opening a branch in northern China, chief executive Richard Rosenberg said.

"At the appropriate time, we would be very interested in a full-service branch in the northern part of China," he said at a news conference after opening the BankAmerica Corp. unit's second branch in China, in the southern city of Guangzhou.

The bank's area general manager, Harry Garschagen, said that Dalian or Tianjin were "cities that come to mind."

— Reuters

Community Loan Plan Unveiled

Continued from page 1

through amendments to community development legislation.

Congress members "have indicated to us that they are looking for a vehicle for regulatory relief, and this could be it," said Edward L. Yingling, executive vice president of the American Bankers Association.

Quick Action Indicated

However, the sheer magnitude of the ceremony on the White House's south lawn, which ran for nearly an hour, indicated the administration and congressional leaders want to move the package through quickly and without amendments.

"In all the years I've been lobbying, I've never seen so much horsepower behind a banking bill," said Jim Butera, who represents several financial institutions.

The Senate Banking Committee began work on the bill Thursday afternoon, little more than an hour after President Clinton finished speaking. Rep. Henry B. Gonzalez, D-Tex., chairman of the House Banking Committee, said he would hold hearings July 21 and 28.

Speeding the Process

The chairmen of the three House subcommittees that would have jurisdiction over the bill agreed to permit consideration by the full committee – a step that will expedite the process considerably.

The most significant challenge to the Clinton plan could come in the Senate, where Republicans have more leverage.

Alfonse M. D'Amato of New York, the Senate Banking Committee's ranking Republican, argued that unless commercial banks are given incentives to participate, the President's plan "is only a pipe dream."

Not What He Promised

The program announced Thursday is considerably different from Mr. Clinton's campaign promise to create a network of 100 community development banks.

In a brief interview after his speech, Mr. Clinton said he had learned since the election "that there is a whole, huge network of people out there interested in doing this work, and we didn't want to reinvent the wheel in every community.

"So we will be creating some new community development banks in some areas, and we may even have some big banks wanting to use some of their community reinvestment funds to provide funding," he said.

"But if you've got a bank that's operating, you got a credit union, you got some other eligible institution that you can dramatically increase the capacity of, it might be better to expand the capacity of an existing institution than create a new one."

President Clinton thus sided with community groups that had argued against giving banks financial incentives to participate in the program.

Lightening the Load

"With a year of record profits, banks don't need a bribe," said Deepak Bhargava, bank lobbyist for the Association of Community Organizations for Reform Now, or Acorn.

The Clinton program promises some relief from the paperwork burden of CRA, though neither the administration nor the regulatory agencies have said specifically how the "performance over paperwork" goal might be met.

In testimony before the Senate Banking Committee Thurs-

Hugh McColl
Supports Clinton plan

day, Comptroller of the Currency Eugene F. Ludwig said performance-based standards would not be tied to rigid numerical targets.

"But between a rigid system of numerical targets and the system we have today, there is considerable room for improvement," he said.

Concern over the Tone

Although bankers attended Mr. Clinton's announcement and at least one commercial banker spoke, a number of industry representatives expressed concern over the tone of the event, particularly over criticisms of bank lending practices. "There was a pretty good air of bank bashing," said Joe Belew, president of the Consumer Bankers Association.

NationsBank Corp. chairman Hugh McColl delivered a strong endorsement for the program. He said the CRA reform would leave "no excuses" for banks failing to provide credit to low-income areas. "The plan sets tougher, more objective, more quantifiable standards would send the clear message to banks that we will be measured by our results, he said.

'Research Is Critical'

Kenneth A. Guenther, executive vice president of the Independent Bankers Association of America, also strongly criticized Mr. McColl after the ceremony, saying his endorsement gave away the industry's bargaining power.

"We are just sitting down to negotiations," said Mr. Guenther, noting that many banks still hope the bill can be reshaped to include funds for commercial banks and more measure of regulatory relief. "Hugh McColl should know by now that you don't give away the banking industry's negotiating position in advance. I don't know how he can say he speaks for the banking industry."

Mr. McColl declined to comment on the criticism.

President Clinton's legislative package would create a fund to provide assistance to community development financial institutions. Money would be available to all kinds of community development lenders that meet the vast majority of commercial banks, thrifts, and credit unions and engaged primarily in community development lending.

The money will be available if matched with a dollar with private sector contributions up to a maximum of $5 million for insured institutions and $2 million for other lenders.

Although the program provides only $382 million over four years, Treasury estimated that leverage will result in up to $2.5 billion in new credit for low-income communities. □

NEW ISSUE July 16, 1993

FannieMae

$500,000,000

5.10% Debentures

Dated July 22, 1993 Due July 22, 1998
Interest payable on January 22, 1994 and semiannually thereafter.

Series 5A-1998-D Cusip No. 313586 7Y9
Callable on or after July 22, 1996

Price 99.953125%

The debentures of July 22, 1998 are redeemable on or after July 22, 1996. The debentures are redeemable in whole or in part at the option of the Corporation at any time (and from time to time) on or after the initial redemption date at a redemption price of 100% of the principal amount redeemed, plus accrued interest thereon to the date of redemption.

The debentures are the obligations of the Federal National Mortgage Association, a corporation organized and existing under the laws of the United States, and are issued under the authority contained in Section 304(b) of the Federal National Mortgage Association Charter Act (12 U.S.C. 1716 et seq.).

The debentures, together with any interest thereon, are not guaranteed by the United States and do not constitute a debt or obligation of the United States or of any agency or instrumentality thereof other than Fannie Mae.

The offering is made by the Federal National Mortgage Association through its Senior Vice President and Treasurer with the assistance of a nationwide Selling Group of recognized dealers in securities.

Debentures will be available in Book-Entry form only.
There will be no definitive securities offered.

Linda K. Knight
Senior Vice President
and Treasurer

3900 Wisconsin Avenue, N.W., Washington, D.C. 20016

This announcement appears as a matter of record only. This announcement is neither an offer to sell nor a solicitation of an offer to buy any of the Debentures.

Bank Stock Table Explained: The table lists in alphabetical order the most actively traded bank and thrift stocks. Prices are as of the close for the 225 largest publicly traded commercial banking firms and 25 of the largest thrifts. Banks are ranked according to the dollar value of all common shares outstanding as of June 30, 1993, the market value cutoff for banks was $73.09 mil. and for thrifts was $52.96 mil. **52 Wk Hi** is the highest price paid during the trading year for each stock listed. **52 Wk Lo** is the lowest price paid during the trading year for each stock listed. Prices are adjusted for latest announced stock splits. The ratio is annualized earnings per share divided by the stock price. **PE** is the price to earnings ratio. **Mkt Cap.** is the total dollar value of the stock trading price to the stock's book value, expressed as a percentage. **Book value** is adjusted for latest announced stock splits. **Chg.** is the change in price of a stock since last traded. If no trades for the day, the latest bid. **Chg. in 1993** is the change in price of a stock since the last trading day of 1992. Data source: Bloomberg Financial Markets. **Highlights** show largest percent gainers/losers in price and two volume leaders. **Most Shared Traded** lists the most shares traded. **Volume as % of Average** shares traded today over the past year.

Data source: Bloomberg Financial Markets. Charlottesville, Va. 804/977-1600, produced the tables. Financial News Network, Vienna, Va. provides DK with the daily prices.

Niagara Asset Corporation
Loan Sale Opportunity

Niagara Asset Corporation, a service corporation managing and selling loans for the FDIC, as Receiver of Goldome, intends to offer the following performing commercial mortgage loans for bid through a Bulk Loan Sale:

Commercial Mortgage Loans Package #000196	Approximate Principal Balance	Bid Date
Strip Plaza/Shopping Center	$5.2MM	August 18, 1993
Multi-family	$1.3MM	August 18, 1993
Office Building	$ .3MM	August 18, 1993

Properties located in TX, OH, OK, MI, and FL.

Each loan must be bid upon separately. There are 8 loans ranging in size from $.3MM to $2.3MM.

For details regarding this sale and packages, please contact:

Joanne M. Campagna, Vice President
at (800) 846-6164 or write to:
Niagara Asset Corporation
Waterfront Village Center
60 Lakefront Blvd., Suite 316
Buffalo, New York 14202-4392

Please respond by August 5, 1993.

STOCKS
First Chicago Rises On Profit Forecast

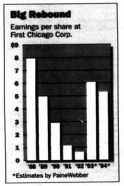
By GORDON MATTHEWS

First Chicago Corp. shares advanced on brisk volume Thursday after analyst Lawrence W. Cohn of PaineWebber Inc. raised his earnings estimate for the bank this year by 12%.

In late trading, First Chicago shares were up $1.125, or 2.6%, to $43.625.

Mr. Cohn, who has a "neutral" rating on the stock, cited strong second-quarter results as the reason he expects earnings of $6.05 a share this year instead of $5.40.

But the analyst said his 12-month price target of $45 a share does not provide enough upside potential to support a "buy" recommendation.



High of $50 Possible

Mr. Cohn said that the stock could trade as high as $50 if the market pushes up the [price-earnings] multiple based on the company's efforts to become more of a regional bank.

At present, he regards First Chicago as a money-center bank. As such, its stock should and does trade at about eight times core earnings, which he estimated at $5.60 a share.

He said he was raising his estimate for this year to reflect much better than expected trading and venture-capital results. They were reported earlier this week when the bank unveiled its second-quarter results.

First Chicago said it earned $1.72 per fully diluted share in the quarter, up from 32 cents a year earlier and far ahead of Mr. Cohn's estimate of $1.15.

Mr. Cohn said second-quarter trading results "were exceptional at $92 million," compared with $37 million a year earlier and $54 million in the first quarter.

"The company has changed the management of its trading operation and adopted a somewhat more aggressive philosophy," he said.

The analyst said he "suspects trading results have moved to a new, higher plateau," but will await further results.

Mr. Cohn also said he was raising his estimate for First Chicago's 1994 earnings to $5.30 from $5 "to reflect a higher estimate of credit card fee income and lower loan-loss provisioning."

Credit card income improved to $164 million in the second quarter, he noted, up 40.2% from $117 million a year ago and up 11.6% from $147 million during the first quarter.

Aggressive Program

Increased securitization as well as higher merchant discount and interchange revenues helped card results, he said, and the bank has been running "an aggressive credit card solicitation program in recent months."

Nonperforming assets actually rose to 1.9% of loans from 1.7% in the first quarter, but the analyst said he was "not concerned with this modest uptick."

First Chicago, he said, "is significantly overreserved," covering 222% of nonperforming assets.

Moreover, he noted, the bank is in the midst of a major program for selling off lackluster real-estate-related assets.

THURSDAY'S MARKET

J.P. Morgan & Co., Bankers Trust New York Corp., along with First Chicago Corp., were the top gainers on Thursday as banks staged a partial recovery from their recent price weakness.

Morgan was up $1.625 to $71.75 and Bankers was ahead $1.875 to $77 in late trading.

Others enjoying strong outings were Chemical Banking Corp., up 75 cents to $39.75, First Interstate Bancorp, up $1 cents to $64.625 and First Bank System Inc., up 62.5 cents to $30.375.

Crestar Financial Corp. surrendered the most ground, falling $1.25 to $42.125. □

Cash America Lines Up $125 Million Credit

FORT WORTH — Cash America International Inc. has obtained a three-year unsecured credit facility for up to $125 million from a syndicate of five banks led by NationsBank Texas.

Terms of the financing are essentially the same as those for Cash America's previous credit line of $65 million, which had been in place since April 1990, the company said.

The credit line strengthens its ability "to finance future expansion and take advantage of new acquisition opportunities," the company said. □

CAPITAL
PNC Joins Home Loan Bank System

By DAVID SIEGEL

PNC Bank on Thursday became the largest commercial bank in the Federal Home Loan Bank System.

Joe Irwin, executive vice president and chief investment officer of PNC, said his institution joined the Federal Home Loan Bank of Pittsburgh to gain access to potentially cheaper funding available through the system.

The system makes low-rate loans to its members, which use the funds to support home lending.

Expanding in Home Loans

The bank and its parent, PNC Bank Corp., are expanding mortgage lending. The holding company has announced plans to buy the mortgage banking operations of Sears, Roebuck and Co.

Mr. Irwin said PNC is a big borrower of short-term funds. It has met this need in the past two years largely by issuing bank notes maturing between one year and 15 months.

PNC Bank will purchase $94 million of Home Loan bank stock, Mr. Irwin said.

Norwest Belongs

Other PNC banks are applying for membership with the Federal Home Loan Bank of Cincinnati, Mr. Irwin said.

The largest commercial bank members after PNC are Norwest Bank in Minneapolis and First Tennessee Bank.

First Tennessee earlier this week joined the Home Loan Bank of Cincinnati. The bank was attracted by the "potential source of liquidity" available to members, said List Underwood, senior vice president and treasurer at First Tennessee National Corp.

Comprising 12 regional Federal banks, the system was set up in the 1930s for the thrift industry. Since 1989, the regional banks have served a growing number of commercial banks, credit unions, and insurance companies. □

Citicorp Wins Higher Ratings from Moody's

By RICHARD LAYNE

Citicorp was rewarded Thursday for improving financial results with an upgrade by Moody's Investors Service.

Moody's said it boosted Citicorp's ratings because it expects that the bank's improving earnings will lead to higher capital.

The agency upgraded senior debt one notch, to Baa1 from Baa2. Subordinated debt was boosted to Baa2 from Baa3.

In addition, commercial paper was raised to Prime-2 from Prime-3, and noncumulative preferred stock was raised to Baa3 from Ba2.

Sustained Growth Seen

Moody's expects Citicorp to sustain earnings growth by substantially lowering loan losses and loan-loss provisions. Citicorp has a relatively low level of provisions – 77% at the end of the first quarter – compared with other banks, but Moody's said the bank will need lower provisions.

Citicorp earned $670 million in the first quarter, nearly equaling the $722 million earned in all of 1992. Second-quarter results are due out Tuesday.

At March 31, Tier 1 capital ratio was 5.23%, more than the regulatory minimum but by a much smaller cushion than any other major bank. Moody's expects that cushion to widen, but predicts Citicorp's capital ratios will not surpass many banks'.

Standard & Poor's Corp. rates Citicorp one notch higher than Moody's on senior and subordinated debt. Standard & Poor's rates those A-minus and BBB-plus, respectively. □

Foreclosure Hangover Seen For Northeast

By EDWARD KULKOSKY

Mortgage lenders in the Northeast may be saddled with abnormally high loan foreclosures through 1997, reflecting persistent weakness in the regional economy.

An analysis by Fitch Investors Service Inc. says the highest average foreclosure rates on residential mortgages will be in New Jersey, Connecticut, and the New York area.

For example, foreclosure rates will average 1.44% in Connecticut, nearly double the projected national average of 0.74%, according to Fitch.

"Although there are signs of economic improvement, Connecticut will continue to lag the nation in terms of job growth," the report says. One of the biggest problems: fewer manufacturing jobs because of cutbacks in defense spending.

ECONOMIC OUTLOOK

Despite the weak outlook for the Northeast, the report contains some encouraging predictions. Fitch says foreclosures will reach the national average in California, where they have skyrocketed this year.

Bright Spots

The best areas for mortgage credit quality will be the nation's capital, Delaware, and Baltimore. In the Midwest, mild default rates are likely to continue, Fitch says.

Overall, Fitch expects a national five-year average of about 74 foreclosures for each 10,000 mortgages – about three-quarters of 1%. The national rate has not been that low since 1974, when it was one-half of 1%.

"We are expecting some economic improvement, and the national average we're projecting is below what it's been recently," said James D. Nadler, a Fitch managing director and co-head of its residential mortgage group.

"The important thing is that the change isn't uniform across the country – and we are focusing on regions because of this."

Forecasting Model

New York-based Fitch derived its foreclosure forecast from a model it has just developed to help buyers of mortgage-backed securities anticipate defaults in specific regions of the country. But the findings have broad significance to mortgage lenders and servicers.

"A lender can look at regions and use expected defaults to ra-

NationsBank Fights to End Regional Pact

By KENNETH CLINE

Only a month after scoring an interstate banking victory in North Carolina, NationsBank Corp. has extended the battlefront to Florida, Georgia, and Virginia.

The Charlotte-based bank company, the nation's fifth largest, is pushing for piecemeal dissolution of the so-called Southeast compact – a series of reciprocal banking agreements among nine states that limits acquisitions by outsiders.

The pacts, put together in the mid-1980s, were originally aimed at protecting the regional banks from then-threatening banks in New York City. But the compact contains an "80-20" rule that says 80% of deposits must remain in the Southeast – a stricture that has now become limiting to NationsBank and some of its regional brethren with national ambitions for growth.

May Hinder Further Expansion

An interstate banking law engineered by NationsBank passed the North Carolina legislature on June 16 by a margin of 84 to 12. It will allow full interstate banking in the state by July 1, 1996.

But NationsBank also has operations in Georgia, Florida,

Banks Win Big Victory In Fight to Sell Insurance

By BARBARA A. REHM

WASHINGTON — National banks have won what could be the final round in a seven-year legal battle against the insurance industry, securing the right to sell insurance nationwide from small towns.

"This court case may well have the impact of blowing the insurance sales area wide open," said Edward Yingling, executive director of government relations at the American Bankers Association.

The U.S. Court of Appeals for the District of Columbia decided Friday that no law bars the Office of the Comptroller of the Currency from allowing national banks in towns with fewer than 5,000 people to market insurance nationwide.

No High Court Action Seen

The Independent Insurance Agents of America, the industry trade group that sued the comptroller in 1986, is expected to appeal the case to the Supreme Court. But lawyers – who usually shy away from predicting the court's actions – expressed confidence Friday that the high court would refuse the appeal.

Asked if he thought the Supreme Court would take the case, Robert Griffin, the director of litigation for the Comptroller's office, said: "I would be very shocked."

Most lawyers said the Supreme Court would not take the case because the appeals court's decision relied on a widely accepted principal that courts defer to regulators when there is no law on the books for the judges to interpret.

The bank at the center of the case is U.S. National Bank of Oregon, Portland. Jeff Grubb is president of U.S. Bank Insurance Agency, the affiliate that has been selling insurance since 1986 from Banks, Ore., a town of 500 people about 20 miles

Syndicated Loans Rebounded in 2d Quarter

By WILLIAM GOODWIN

After a first-quarter drop-off, the syndicated loan market staged a comeback in the second quarter, driven by multibillion-dollar refinancings for investment-grade corporations.

The volume of domestically syndicated loans surged 36% to $135 billion from $99 billion in the second quarter of last year, according to Loan Pricing Corp.

First-half volume rose nearly 13% to $201 billion from $178 billion in the first six months of 1992.

In the second half of the year, bankers expect to see more leveraged financings for non-investment-grade clients, including an increase in demand for buyout loans.

More and Bigger Deals Seen

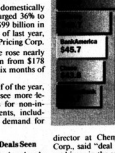
"Our sense here is that there's a pickup in M&A activity and that acquisition-related financing volume will pick up in the second half," said Timothy Conway, head of private placements and bank loan underwriting and structuring at Citicorp.

James Lee, senior managing director at Chemical Banking Corp., said "deal sizes will also get bigger in the second half."

While high valuations in the public equity markets continue to put a damper on buyout activity, financing is now available from both banks and the junk bond market.

Leveraged lending generally is riskier but also more lucrative than the credits banks provide to their investment-grade clients, which are often just backup lines for commercial paper.

"Assuming there is more non-investment-grade business in the second half, I think the syndication business will be more profitable," Mr. Conway said.



Giant GM Financing

Chemical Bank, which shepherded an $18 billion refinancing for General Motors Corp. through the domestic loan market, held on to first place among loan syndicators in the quarter.

Chemical was agent or co-agent on $61 billion worth of syndicated loans, more than twice its first-quarter volume of $25 billion.

Citicorp ranked second, followed by BankAmerica Corp., Chase Manhattan Corp., and NationsBank Corp.

After a February reorganization of its North American corporate finance business, Citicorp has regained some of the momentum it lost in recent years as it grappled with losses

NEWS *briefs*

Keycorp Gives Evergreen Second Extension

ALBANY, N.Y. — Keycorp said that for the second time, it has extended the expiration date on its offer to acquire Evergreen Bancorp of Glens Falls, N.Y.

The deadline now stands at midnight Aug. 5, which marks a three-week extension. Terms of the offer, which have not been disclosed, remain unchanged from those made on June 22.

Keycorp chairman Victor J. Riley Jr. said, "Representatives have contacted me to say that they need still more time to evaluate Evergreen's true worth and, until that process is finalized, they are not prepared to respond to our offer."

OCC Seeks to Raise CRA Investment Caps

WASHINGTON — The Office of the Comptroller of the Currency is considering a plan to smooth its approval process for banks that want to invest more money in their community development bank units. The plan, which also covers individual community development projects, was published Friday for public comment.

If the plan is adopted, banks with less than $100 million in assets could invest up to 5% of their unimpaired capital in community development banks or projects without regulatory approval. The capital limit for larger banks would be 2%. When OCC approval is necessary, the agency's plan promises that requests will be processed within 30 days.

First American Increased Profits by 165%

NASHVILLE — First American Corp. said it earned $26 million, or $1.01 a share, in the second quarter, an increase of 165% from $9.8 million in the 1992 quarter. The company, which has $6.7 billion of assets, said its return on average assets and return on average equity were 1.55% and 20.96%, respectively.

Net loan chargeoffs fell 63% from the year-earlier period and nonperforming assets were down 38%, permitting the company to draw down its loan-loss allowance through a $10 million "negative provision." The company said the drawdown was worth 25 cents a share to investors.

First American's stock was up $1.125 to $29.50 a share early Friday afternoon. The earnings report was released Thursday afternoon.

CB Bancshares' Deal for Thrift Advances

HONOLULU — CB Bancshares Inc. said it completed a definitive agreement to acquire International Holding Capital Corp. for $51.7 million.

Ohio's FirstFederal Rebuffed on Takeover

WOOSTER, Ohio — FirstFederal Financial Services Corp. said First Federal Savings Bank of Dover, Ohio, has decided to reject a proposed acquisition.

The briefs were compiled from staff and wire reports.

Correction

An article and accompanying table on July 13 about second-quarter bank mergers and acquisitions misidentified the headquarters city of Firstier Financial Corp. The company is based in Omaha.

* * *

Because of an editing error, an article on July 16 about second-quarter earnings incorrectly said that U.S. Bancorp's results were stronger than analysts had expected. In fact, U.S. Bancorp was in line with projections; it was West One Bancorp that came in 9% above predictions.

McDonough, N.Y. Fed's New Boss, Seen as Much Like His Predecessor

By KAREN GULLO

In naming William J. McDonough as the new president of the Federal Reserve Bank of New York, the bank's search committee picked a banker very much in the mold of his predecessor, E. Gerald Corrigan.

The appointment of Mr. McDonough, 59, to the second-most-powerful position in the Federal Reserve System, was announced on Friday.

Mr. McDonough, who assumes the post today, spent most of his career at First Chicago Corp., where he rose to the level of vice chairman. After leaving the bank, he was recruited by Mr. Corrigan to join the New York Fed. He arrived in January 1992 as executive vice president in charge of the foreign desk, which oversees the Treasury Department's foreign exchange trading operations.

William J. McDonough
Veteran of First Chicago

Field of 50 Candidates

Mr. McDonough was one of 50 candidates considered by the bank's search committee, said Ellen V. Futter, chairman of the New York Fed board of directors. He was chosen for his "broad-based knowledge of the workings of financial institutions and financial markets, both nationally and internationally," said Ms. Futter at a new conference.

Mr. McDonough is expected to follow Mr. Corrigan's views on monetary policy. Though somewhat more centrist on inflation, he would make preemptive strikes if inflation were to rise, said David G. Jones, a Fed watcher at Aubrey G. Lanston & Co.

Not an Inflation Hawk

Mr. McDonough said he will push for sustained economic growth through price stability and low levels of inflation, but added that he is not a hawk.

"A hawk is someone who says zero inflation is necessary," said Mr. McDonough at a news conference. "The data are not so precise that there is a magic number."

Mr. McDonough, whose appointment was announced two days after the Clinton administration unveiled an effort to encourage community development loans, said economic growth in the inner city will be one of his priorities at the New York Fed.

"We all need sustained growth and financial stability, but many of the people in the urban centers need it more," said Mr. McDonough, a native of Chicago. "I hope to have this institution work at it very actively."

International Experience

Mr. McDonough was handed additional Fed responsibility last year when the bank merged the foreign desk with its influential open market group, which conducts reserve operations and implements the monetary policy of the Federal Open Market Committee.

"He's exactly the kind of person that Alan Greenspan wants in a Fed president," said Mr. Jones. "He's a strong international banker and a strong leader."

Mr. McDonough, however, is untested in the operational areas where Mr. Corrigan proved himself.

"He can easily step into Corrigan's shoes," said Mr. Jones. "The only places where Corrigan will be hard to replace is in crisis management and the payment systems. No one knew the nuts and bolts of the payment system like Corrigan." □

Point of Sale Devices Seen Outpacing ATMs

By MATT BARTHEL

The rate of deployment of point of sale terminals that accept debit cards will far outstrip new automated teller machine installations over the next four years, a Cleveland-based analyst projects.

The prediction, by Freedonia Group Inc., supports assertions by electronic banking executives that debit point of sale – in which a consumer makes retail purchases using an ATM card – will soon be a lucrative source of revenue for financial institutions.

"You've heard a lot of talk over the years about the cashless society, and now we're seeing the cornerstone of that vision – namely the POS terminal – being installed on a widespread basis," said Stephen Cole, president of Chicago's dominant electronic banking network, Cash Station.

Fast Growth Expected

According to Freedonia Group, retail merchants in the United States have currently installed about 320,000 POS terminals that accept debit cards, including about 25,000 terminals that can authorize both debit and credit transactions.

By 1997, the number of debit POS terminals is expected to grow by more than 300% to 1.1 million.

The terminals have thus far been installed mainly at supermarkets, gas stations, and convenience stores. But as consumers begin to use their cards at these locations, observers feel that POS debit will soon make inroads into other types of retail businesses, including department stores.

Yet despite the fact that debit POS is accepted as the most promising electronic banking product of the '90s, ATMs still clearly have their place.

Room for Expansion

According to Freedonia Group, the number of ATMs will grow over 20% in the next four years from the current 87,000 terminals to over 110,000 in 1997. This prediction is surprising, given that many experts feel the U.S. market is already almost saturated with ATMs.

However, Freedonia Group said that banks are increasingly looking to install ATMs away from their branch offices. This is supported by American Bankers Association figures. According to a 1992 ABA automation survey, about 14% of banks that do not currently operate off-premises ATMs plan to begin doing so by the end of 1994.

In addition to new ATM installations, Freedonia sees a healthy market for replacement machines over the next few years. In the past two years alone, two of the nation's largest financial institutions, Bank-America Corp. and Chemical Banking Corp., have announced plans to replace almost 2,500 older ATMs with new models.

Point of Sale Boom?
Projected growth in automated teller machines and point of sale terminals, in thousands

	1993	1997
ATMs	87	110
Debit card terminals	295	950
Debit and credit card terminals	25	175

Source: Freedonia Group Inc.

Brisk Sales Expected

"We think the combination of replacement machines and additions to new locations will keep ATM sales at a consistently high level over the next few years," said Edward Hester, an analyst with Freedonia Group.

Mr. Hester emphasized, however, that the rise of point of sale will force banks to be creative about where they place the ATMs in the future. He said that debit POS will probably begin to reduce consumers' need for cash at shopping malls and other retail-oriented locations.

Thus, banks should begin installing their ATMs in places where it will not have to compete with POS terminals for transactions. Such locations include workplaces and college campuses. □

Cirrus Signs 30 Foreign Institutions

The Cirrus System Inc. automated teller machine network, owned and operated by MasterCard International, has added 30 international financial institutions as new members.

Eight of the institutions are principal members – banks that are authorized by Cirrus to resell the network's ATM services to other institutions.

The new principal members are: Europay Belgium, Asociacion Red Multicolor and Corporacion Colombiana de Ahorro y Vivienda from Colombia, Unicredit Ecuador, Bank Bali Jakarta in Indonesia, Jordan National Bank of Amman, Redtef SA in Panama, and Gota Bank in Sweden.

The new members will add more than 700 ATMs to Cirrus' existing international network of about 129,000 terminals.

Fiserv Selling Software to Two Latin Banks

Deals in Mexico and Honduras Part of Vendor's Plans to Sell Globally

By DEIDRE SULLIVAN
Special to the American Banker

As part of a long-term plan to expand globally, Fiserv Inc. has signed agreements to install Spanish-language versions of its commercial banking software in two Latin American banks.

Grupo Financiero Margen in Monterey, Mexico, and Bancahsa, in Tegucigalpa, Honduras, will both be installing Fiserv's International Comprehensive Banking System software. The system runs on AS/400 midrange computers from International Business Machines Corp.

From North to South

These institutions represent Milwaukee-based Fiserv's third and fourth forays into Latin America. Last year, the company signed software deals with Finalvez and Valin Bank in Caracas, Venezuela, and Provensa in Bogota, Columbia.

"Our plan is to target the northern tier of this region, countries like Mexico, Columbia, Venezuela, and Honduras," said Rick Durant, Fiserv managing director. "Then we hope to expand south."

Mr. Durant said that Fiserv seeks to establish "anchor" clients in these regions much in the same way it did in Europe and in the Far East. "We first moved into the United Kingdom in 1988, working with banks we viewed as anchors and then expanded into Europe from there," he said. "In 1990, we began operating in Singapore in the same fashion. Now our next steps are in Latin America."

At Bancahsa, which has $170 million of assets and is the second largest bank in Honduras, the Fiserv installation is the technology component of a bankwide reengineering effort.

Technologically in the Lead

According to Mr. Durant, Bancahsa is already using an AS/400 but had trouble programming the system to do little more than automate manual tasks.

With the Fiserv system, Bancahsa will be able to provide deposit and loan accounting, as well as financial accounting and reporting. "Bancahsa is looked at as a leader in Honduras," said Mr. Durant, adding that the new system will give the bank capabilities never before seen in that country.

For the first time, Bancahsa customers will be able to get all their various account information in one statement and bank employees will begin using an integrated customer data base to determine the total bank relationship with a particular client.

Mr. Durant also said that Bancahsa plans to launch a series of cash management products for small businesses and wealthy individuals.

Discord in the Kingdom: A Banking Allegory

PARTICULARLY egregious behavior by one small group of merchants led the enraged king to impose a set of new accounting rules on the entire merchant community.

A recent archeological finding tells a story that should be of some interest to the banking community.

During the reign of a particular king, three powerful groups found themselves in political and economic conflict. The merchants, who from the earliest days had enjoyed a somewhat rough-and-tumble, laissez faire existence, were reined in by a royal decree.

The decree circumscribed their operating freedom at the time of an especially severe famine that was blamed partially on some of their excessive practices.

The sorcerers and magicians, longtime foes of the merchants, enjoyed particularly strong influence in the king's court. Over the years, they used this influence to have laws and traditions established to prevent the merchants from selling virtually any commodity that could be used as an ingredient in the practice of magic or in support of the casting of spells.

A Fight for Influence

However, the merchants enjoyed some influence in the court, too, although it was diminished by squabbling among their various groups (large vs. small, cash vs. guilds, country vs. city, etc.). This influence allowed them to maintain certain small exceptions to the general prohibition against their sale of tools of sorcery.

But, as can be imagined, courtesans who were friends of the magicians continually strove to influence the king to close off those few exemptions.

Mr. Heller is research director of Veribanc Inc., a bank rating firm based in Wakefield, Mass.

Following the limitations placed on the merchants, and the establishment of detailed rules defining a merchant as both a buyer and seller of various broad categories of merchandise, another group began to amass large amounts of commercial and political influence.

This third group, the importers, had earlier operated mostly in a wholesaling role. They would sell to merchants large lots of goods brought by ship from other lands.

The importers also bulk-purchased manufactured goods from the merchants to export to foreign buyers. As the importers were able to identify and participate in certain highly profitable retail enterprises that fell outside the classifications that would have counted them among the merchants, their wealth, power, and prestige — as well as their arrogance — grew immensely.

Merchants' Woes Grow

Meanwhile, the merchants, as they squabbled among themselves, found the king who, on more than one occasion, was heard to express frustration at the babble of their conflicting requests.

To add to their woes, other groups exerted influence which

THE WEALTH, power, and prestige of the importer class grew,

resulted in decrees that further increased the merchants' burdens.

The police were able to have the merchants assigned some of the kingdom's law enforcement duties (with no payment, of course; the new duties were simply regarded as an appropriate tail enterprises grew.

As the situation began to worsen, a respite came in the form of several successive devaluations of the kingdom's currency. Each of these left the merchants, by virtue of their relatively large commodity stocks, well ahead of most of the rest of the country, which was then going through hard economic times.

But even this blessing was a mixed one, because pleadings from the merchants for relief typically met with a skeptical response.

Nonetheless, the wise men of the kingdom grew increasingly worried about the unsustainable burden on the merchants and the toll that burden would exact once the successive devaluations ceased.

Deepening Plight

In particular, they worried about the vast areas of discretion that the importers could not or would not serve.

Others in the court also recognized the merchants' plight. Some encouraged the merchants to abandon all of their internecine rivalry so they and their courtesans could speak with the king in unison; others advised the merchants to forge whatever alliances they could with the magicians; still others urged them to try to encourage the king to equalize the competition with the importers.

Many of the merchants themselves took up their own cause, while others believed it better to simply enjoy their current prosperity and bear up under the persecution as best they could.

Moral of the Story

At this point, there is a break in the historical record. We do not know what happened to the merchants or whether the problems contributed to the ultimate fall of the kingdom.

However, it is interesting to observe that, from our 20th century vantage, the merchants' only hope was clear – follow all of the advice to act in concert, build out-of-industry alliances, seek to compete on equal terms with the importers, and make whatever sacrifices were necessary to achieve the political clout needed to halt their decline. □

service to the crown); the tax collectors similarly prevailed to conscript the merchants' help in gathering in a portion of the king's levy; the artists and musicians were able to require the merchants to allot them rent-free space for their exhibits and concerts; the clergy obtained a decree requiring all prices and quantities to be posted in each of the measures and languages used throughout the land.

Stiff Penalties

Following particularly egregious behavior by one small group of merchants, the enraged king enacted a set of new accounting rules on the entire merchant community. These rules required very detailed tracking and reporting of virtually every part of every transaction that each merchant engaged in, and applied penalties for transgressions that in many cases exceeded those exacted for violent crimes.

The penalties even included forcing a merchant to forfeit all of his or her possessions in certain instances when a customer failed to pay for purchases.

A Mixed Blessing

While the merchants groaned under their persecution, the importers' ability to increase the size and effectiveness of their re-

Letters to the Editor

Bank Ethics Vital, but Not Because of Shady Bankers

To the Editor:

In his commentary on June 17, "Strong Ethical Standards Crucial for Banks to Survive," Keith Darcy correctly concluded that ethical management and strong organizational values are crucial in the 1990s.

While we most certainly agree, we cannot go along with some of the assumptions on which the article seems to be based.

Unfair Assumptions

By his tone, Mr. Darcy apparently assumes that the majority of bankers are naturally unethical and, if left alone, would defraud and destroy just like the highly publicized S&L looters.

While there have certainly been some shady operators, most bankers, including many thrift leaders we have met, are solid and community-sensitive professionals.

It is a tremendous mistake to feel that one must dangle financial carrots in bankers' faces to make them ethical.

Our assumption is that bankers, in general decent people, often are unknowingly given conflicting messages within the organization.

Training Helps

Add community pressures, regulations, shareholder expectations, and differing cultural and regional expectations, and we often have a recipe for disaster.

Training programs can help bankers recognize ethical problems and dilemmas and can teach useful, principled problem-solving techniques.

Yes, ethical banking is crucial in a purely bottom-line sense, but the many intangible benefits – better decisions that incorporate personal and social concerns – are just as important.

Thrifts Seen Paying Twice What Banks Pay for Insurance

The report by a congressional advisory committee could strengthen the thrift industry's argument for funding.

By ROBERT M. GARSSON

WASHINGTON — Thrifts could find themselves paying twice as much as banks for deposit insurance in three or four years, according to a panel created by Congress to monitor the industry.

The report, by the Savings Association Insurance Fund Industry Advisory Committee, was delivered to lawmakers last week at a time in which the House leadership is trying to move legislation that would provide funding for the insurance fund and the Resolution Trust Corp.

There was a possibility that the House Rules Committee could take up the RTC legislation on Tuesday, paving the way for floor action on Wednesday.

However, the thrift cleanup legislation has been tentatively scheduled for a floor vote at least twice before, only to be postponed. Further delays are likely.

The report, with its warning of a bleak future for the savings and loan industry, could help thrifts make the argument for funding. Although House and Senate bills provide funding for the insurance fund, each includes conditions that might be difficult to meet.

"It really cuts to the heart of the matter," said Robert Schmermund, a spokesman for the Savings and Community Bankers of America, the main thrift trade group.

"The industry has significant concerns about what this kind of competitive disadvantage could do."

As previously reported, Federal Deposit Insurance Corp. officials told the advisory committee on July 1 that the Bank Insurance Fund would be recapitalized by 1998, and possibly as soon as 1996.

Recapitalization in 2012

Once the Bank Insurance Fund's reserves reach $1.25 for each $100 of insured deposits, bank premiums would drop, probably to about 11 cents for each $100 of deposits.

By contrast, the thrift fund will probably not be recapitalized until 2012 and it is "not unrealistic" to believe that a premium of 35 basis points – the FDIC's pessimistic scenario – will be needed.

The report said panel members "were staggered" by the realization that the bank fund was so near recapitalization and that the looming disparity in premium rates could be as high as 24 basis points.

"We do not believe the industry can survive under a disparity even approaching that level," the report argued.

"More important, we are certain that the public in general and the housing markets, which are largely dependent on thrift institutions for financing, have no conception of the severity of the crisis facing the SAIF and SAIF-insured institutions," the report added.

Industry observers said the report could help thrifts on capital hill.

"I hope it alerts the congressional leadership to the collision course that BIF and SAIF are headed toward," said Rick Hohlt, a financial industry consultant.

Still, it is hard to know how the report might affect votes. The Senate has completed action on a bill which sets conditions that must be met before the thrift fund can receive federal monies.

The House Banking Committee has adopted an even tougher bill, and it is unlikely that any member of Congress will try to weaken the measure.

It is possible that House and Senate negotiators could produce legislation more acceptable to thrifts, but it is more likely that they will try to find a middle ground between the two bills.

"There is a feeling that both bills are unworkable," said Alfred Pollard, a lobbyist for the Savings and Community Bankers. □

Disposing of foreclosed property requires a commitment of both time and staff. But no one says they have to be yours.

In fact, we recommend they not be. Because Prudential Asset Recovery is willing and able to do it for you. Reducing not only administrative involvement but costs as well.

All of our REO managers (your single point of contact) are salaried, full-time professionals with extensive sales and marketing backgrounds in residential real estate. They'll use this experience and expertise to help you get the best possible price for your property. Combine this with reduced administrative costs, and you end up maximizing your net proceeds. And what could be better than that?

We're also highly automated. And with our on-line computer system (CLASS™), you'll be able to check on the current status of your properties whenever you need to.

As you know, managing and disposing of foreclosed property is a full-time job, so call us at 1-800-356-6834. We'll help you to not only regain your mortgage investment, but your staff as well.

OTS Forms Panel To Handle Gripes

By ROBYN MEREDITH

WASHINGTON — The Office of Thrift Supervision has appointed five senior staff members to hear complaints about examinations.

The OTS announced its appeals policy on Friday. It followed similar announcements from the Office of the Comptroller of the Currency and Federal Reserve Board and is part of the Clinton administration's attempt to ease the credit crunch by telling regulators to lighten up.

Reviewing Bank Exams

The new examination oversight managers will review reports of examinations for content, perspective, tone, uniformity, and conformance with national policy and guidelines, the OTS said.

They will visit thrifts regularly to discuss exam procedures and solicit ideas for improving the process, the OTS said.

The oversight managers for the different regions are: Ralph Gridley, Northeast; Timothy T. Ward, Southeast; Jerry W. Stewart and John T. Lawrence, Central; James W. Smith and Dorothy Van Cleve, Midwest; and Ron Lake, West.

NationsBank Extending Battle Against Interstate Restrictions

Continued from page 1

Virginia, and South Carolina – states where the compact is still in force. Laws on their books could hinder an effort by the company to branch into, say, California, where company officials are known to be searching.

William T. Graham, the commissioner of banks in North Carolina, said there was little organized opposition to the bill. But the effort may encounter more resistance in Georgia and Florida, where banking laws have been more restrictive and community banking groups are more politically active.

NationsBank has begun talking with bank trade association groups in Florida, Georgia, and Virginia about opening those states to full nationwide interstate banking.

The "80-20" rule has become limiting to banks with national ambitions.

The company "will be working with other banks," said Ellison Clary, a NationsBank spokesman. "Now we have banks in a position to compete nationwide outside the compact and they need a chance to do so.

"The compact served well, but its time has passed," added Mr. Graham, the North Carolina bank commissioner.

Michael M. Fields, NationsBank's regional executive for northern Florida, is trying to influence bankers and legislators in the state to introduce an interstate bill in the next legislative session beginning in January, banking sources in Florida said.

'A Very Clear Interest'

Mr. Fields, who is based in Tallahassee, confirmed that his company has "a very clear interest" in such legislation. But timing and strategy are not yet fixed, he added.

An executive committee of the Florida Bankers Association plans to discuss interstate banking on Sept. 9 and recommend a position for the association's full membership, according to executive director John Milstead. He said NationsBank has informed him that an interstate proposal would "likely be very similar" to the North Carolina statute.

James R. Lientz Jr., president of NationsBank of Georgia, briefed bankers in his state two weeks ago on "the probability" of introducing a similar bill being introduced in the state Legislature in January , said J. Joseph Brannen, president of the Georgia Bankers Association.

"We have not been asked to take a position at this point," Mr. Brannen said.

Mr. Lientz could not be reached for comment Friday.

Looking for Consensus

The Virginia Bankers Association, meanwhile, plans to put together atask force to study the interstate banking issue, with hopes that its full board can reach a decision by September, according to vice president Bruce Whitehurst.

"The first approach will be to look for consensus," Mr. Whitehurst said.

In Florida, at least, some original proponents of the Southeast compact support its demise. "It was always designed as a way station so that banks in the South would have the opportunity to do their own growing," said John Edward Smith, a Miami attorney who helped draft Florida's reciprocal banking law in 1984. "Things have changed dramatically over the years."

In addition to the interstate banking bill, North Carolina passed an interstate branching bill last month that allows Tarheel State banks to branch into any other state with similar legislation.

The effect of this legislation, which becomes Oct. 1, is likely to be more limited than interstate banking since only New York has similar legislation. Also, NationsBank is not encouraging other states to emulate North Carolina's branching law. □

"Now that every Tom, Dick & Harry is in the card business, maybe it's time to talk to us about increasing your market share."

After 26 banks, 39 million cardholders, 164,000 merchants, 2.3 billion annual card transactions, and 7 foreign countries we've learned a few short cuts to increasing your market share.

Comerica Bank
THE SPORTS-OBSESSED Dallas-Fort Worth market is the target of this campaign by the Detroit-based superregional.

Comerica Aims Texas Ad Blitz At Middle Market

By JOHN RACINE

Company Focus

THOUGH IT IS STILL digesting three acquisitions in Texas, Comerica Inc. has launched a widespread advertising campaign in the Lone Star State promoting itself as an up-and-coming business bank.

The Detroit-based company, which has $26.3 billion of assets, is using print, radio, and billboard advertising to boast of its new branches in Austin, Houston, and San Antonio. In the sports-obsessed Dallas-Fort Worth market, a highly visible campaign promotes Comerica as the area's "newest expansion team."

In Dallas, in particular, the bank is hoping to attract middle-market customers. "Our vision is to be the business bank of choice here," said Charles L. Gummer, president of Comerica Bank Texas. "We look to be the entrepreneurial bank, the one that takes a consulting approach with our customers."

Comerica has been on an acquisition binge in Texas, nearly doubling its branch network and more than doubling its assets to $3 billion in the past 18 months.

It now has 51 branches statewide, including 39 in the Dallas-Fort Worth region. The bank plans to close four overlapping Dallas branches later this summer.

Charles L. Gummer

Comerica recently consolidated its biggest acquisition – the $800 million Historic National Bank of Texas – and is now absorbing Sugar Creek National Bank in Sugar Land and NorthPark National Bank in Dallas. Both are single-office banks.

Comerica ranked ninth in terms of Texas market share one year ago, with 2.57% of statewide deposits, according to Ferguson & Co. More recent estimates are not available.

The bank's "limited budget" marketing campaign, which began June 20, is aimed primarily at building name recognition among small businesses.

Comerica also is developing a farther-reaching corporate identity campaign, she said, but "the point of the campaign now is to say that Comerica has really expanded."

Comerica is carving different marketing strategies for different states. In Michigan and Illinois, it sells itself as a full-service bank serving retail, business, and corporate customers. Private banking and personal trust services are the focuses in Florida, while Comerica California tilts toward corporate lending.

But business is the calling card in Texas.

Mr. Gummer said the bank will soon launch a direct-mail campaign and a personal-call blitz to owner-managed companies with annual revenues of up to $100 million. The company Comerica has identified "several thousand" middle-market companies, he says.

Comerica thinks it can compete in the Southwest against smaller community banks as well as with such giants as Texas Commerce Bancshares, the Chemical Banking Corp. subsidiary that is Texas' top corporate lender.

"We don't see any banks that are focused on owner-managed businesses as we are," Mr. Gummer said.

Business lending is potentially more lucrative than consumer or corporate banking, but it is also riskier. Owner-managed businesses are likelier to fail than mature corporations. But Mr. Gummer says chargeoffs for business loans have been minimal since Comerica entered the Texas market in 1988.

"Owner-managed businesses are better run today then they have ever been," he said. "We thought they were good four or five years ago, and we still think they are today." □

EXECUTIVE *changes*

Tokai Names Inouchi a Director And General Manager of N.Y. Unit

Takashi Inouchi has been elected a director and promoted to general manager of the **Tokai Bank Ltd.**'s New York branch.

Mr. Inouchi had been president of Tokai Bank of California, Los Angeles. Before that, he was general manager of the London branch of the parent company, which is based in Nagoya, Japan.

Takashi Inouchi

He joined the parent, the 14th-largest bank in the world, in 1963. He has over 13 years of overseas banking experience, predominantly in Britain and the United States.

— **Franklin Smith**

MIDWEST

NATIONAL CITY BANK Northwest, Toledo, Ohio, has promoted **Maureen G. Brown, Christopher E. Macino,** and **Robert S. Ruhlin** to vice president. Ms. Brown and Mr. Macino work in private banking, and Mr. Ruhlin is a corporate banker.

Promoted to assistant vice president were **Randolph J. Chavez,** who works in commercial real estate; **Deborah A. Erustinzen,** a manager of specialty sales; **Matthew J. Swart,** a secured credit manager; and **Diane E. Varner,** a marketing manager.

Also promoted, to bank officer, were **Susan K. Hughes,** a commercial loan manager; **David W. Olenik,** a commercial real estate representative; and **Jeffrey S. Smith,** a bond trust administrator.

MARSHALL & ILSLEY Corp., Milwaukee, said **Michael J. Roman** was elected chairman this year as president of **Marshall & Ilsley Trust Co.** and as vice president of the parent firm.

Mr. Revane will remain in his positions until a replacement is named.

BANK ONE Indianapolis has promoted **Corinne C. Rhea** to vice president in the loan review division and **Patricia J. Bratton** to assistant vice president in the consumer services group. Also, **Tacy B. Swinehart** has been appointed trust officer in the trust group.

HUNTINGTON Bancshares, Columbus, Ohio, has promoted **Clifford E. Ford** to vice president, private banking division; **Terri F. Austin** to audit officer, investment compliance department; and **Patricia A. Case** to financial control officer in the corporate tax department of the bank holding company.

Mark G. Palazzo has been promoted to assistant vice president, corporate banking division, **Huntington National Bank,** Cincinnati.

Also, **Lee A. Blanks,** operations manager in the secondary marketing department, was promoted to staff officer, **Huntington Mortgage Co;** **Eric J. Wiegandt,** sales representative in the institutional investment department, was promoted to assistant vice president at **Huntington Capital Corp.**

Promoted to investment officers at the **Huntington Investment Co.** were **Michael T. Necamp, Robert J. Willer, Kenneth J. Weinstein,** and **Dennis L. Adams.**

MIDDLE ATLANTIC

THE NEW JERSEY SAVINGS League has elected **Edward C. Gibney** as its chairman.

Mr. Gibney is president of **Boiling Springs Savings Bank,** Rutherford, N.J., a post he assumed in 1980. He has been a mortgage officer, platform officer, and branch manager.

He was elected to the New Jersey Savings League's board of governors in 1989 and is a past president of the Bergen County Savings League.

UNITED JERSEY BANK Central, Moorestown, N.J., said **Peter D. Halstead** has been named a senior executive vice president of the bank.

He previously was executive vice president of this unit of **UJB Financial.**

SOUTHEAST

HIBERNIA NATIONAL Bank, New Orleans, a subsidiary of **Hibernia Corp.,** announced several promotions and new hires.

Those promoted are: **Darrell C. Dragon** to vice president, account services; **Kay B. Hughes** to assistant vice president, loan administration; **Trudy W. Nelson** to vice president, private banking; **W. Pete Scharf** to assistant vice president, retail credit systems; and **Karen R. Tipton** to assistant vice president, loan review.

New hires at Hibernia are: **David A. D'Antoni,** assistant vice president, Baton Rouge small-business banking; **S. John Castellano,** assistant vice president, New Orleans commercial banking; **G. Ivan Hinderer,** vice president, commercial loan administration; **Raymond W. Sprung,** vice president, asset-based services; and **Scott A. Umberger,** assistant vice president, lending unit.

WEST

THE FEDERAL RESERVE Bank of San Francisco said **S. Jean Hinrichs** has joined the audit division of the San Francisco

S. Jean Hinrichs

Fed as an assistant vice president after relocating to the Bay Area from Southern California.

In the newly created position, Ms. Hinrichs will oversee nonelectronic data processing audit activities in the home office of the 12th Federal Reserve District. The 12th serves the nine western states, including Alaska and Hawaii. □

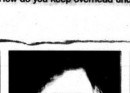
Q: How do you keep overhead under control?

H. LEE SWANSON
President, chief executive
State Bank of Cross Plains, Wis.

One of the more important things that we do is that all expense items must go through a process where two people review them.

Another priority is to have a damn good budget – so what you're spending is in a planned format. If you are doing that, staying within budget and monitoring peer numbers, you have a pretty good handle on the basics.

Besides that, we are always looking for technology that reduces cost, especially anything that reduces paperwork, so that we have a long-term view on spending. □



JAY F. MORROW
President, chief executive
Marathon National Bank
Los Angeles

For us, it's a constant battle. The two main things that we do are constantly evaluating and re-evaluating both our employees and the vendors we use to make sure that we get the best price and value for each dollar we spend.

We also make vendors rebid every year, even if we've used the same vendor for many years, to make sure we get the best price.

Also, we do local checks of other similar-size institutions to make sure we don't expect too much or too little of both employees and vendors. □

DAVID BALLWEG
President
Community State Bank
Union Grove, Wis.

The key would be to keep staff at a manageable level and at an efficient level. That is the biggest factor that is controllable.

If we have an employee leaving the bank, we look at opportunities to consolidate duties.

We also believe very much in automation. We have our own in-house computer system. It initially increased our data processing costs but . . . we have been able to grow significantly without increasing those costs.

You have to keep at it all the time. You really have to have a process that puts checks and balances in place. □

Discover The Future Of Banking Where Fantasy Reigns.

Join us September 12-14 at Walt Disney World® Resort, where banks will be *all ears* at our first PFA users conference.

Don't Miss This Unique Opportunity

If your bank or credit union has strategic plans to offer alternative delivery solutions, you need to see what is taking place on the cutting edge of the industry. This is your chance to meet the leaders driving this movement in advanced banking, which will not only save you thousands of dollars in research and development, but also save you valuable time.

When you attend our conference at Disney's Yacht Club Resort, you'll learn about issues ranging from PFA technology to customer support, marketing, and training. And the best thing about it, you'll hear from banks that are actively using the PFA System, and realizing the impact it has on their bottom line. If you believe self-service is the future of banking, come meet the visionaries from PNC Bank, Seafirst, and Bethpage FCU that know it's true.

Get on the guest list for our conference at the Walt Disney World Resort today by calling **1-800-356-1201**. And prepare to experience the future of banking via a simple-to-use, computer-based retail delivery system.

Because even in a place where fantasy reigns, the reality of competition prevails.

Smaller Banks Shine At Reducing Costs

By ROBERT B. COX

Community bankers continue to demonstrate the cost-cutting edge they have over their larger rivals.

At the end of the first quarter, noninterest expense as a percentage of average assets at community banks stood at 3.52%, compared with 3.94% for all U.S. banks, according to W.C. Ferguson & Co., Irving, Tex.

For community banks the first-quarter figure represented a slight drop from the yearend expense ratio of 3.55%, while the figure for all U.S. banks actually spiked up from 3.82%.

"Business as a whole in America has been on a cost-containment, cost-efficiency kick for a number of years, and banks are no exception," said Thomas J. Maier, analyst at Kemper Securities Inc., Chicago.

By bringing down their expense ratios, community bankers have managed to improve their net interest margins – and their earnings.

In fact, partly because of community banks' lower expenditures, their net interest margin stood at 4.67% at the end of the first quarter – compared with 4.38% for all banks.

Because small banks have lower loan-to-deposit ratios – and therefore fewer interest-earning assets – every penny counts. Loans accounted for just 65% of deposits at the nation's community banks, while large banks had a 76% loan to deposit ratio at the end of the first quarter.

'Looking for Other Ways'

"It gets tougher and tougher to do loan business," said Mr. Maier. "Banks are looking for other ways of driving their earnings up."

Because employee costs account for most bank expenditures, many community bankers have been trimming their workforces in much the same manner as larger banks.

At some banks, increased use of automation has freed up employees to perform other functions. Other banks have slashed the costs of health insurance and other benefits by employing more part-timers.

"That's where most of the costs are coming from," said Dan Coughlin, community banking analyst at Howe Barnes Investments, Chicago.

Holding companies with more than one community bank have taken to consolidating boards of directors and functions such as data processing and accounting.

Chicago's Heritage Financial Services, for example, cut costs by merging the back office functions of seven subsidiary banks over the past two years. □

CU Bancorp Works to Build A 'Fortress' Balance Sheet

By PHIL ZAHODIAKIN

Earnings

OF THE MANY small California banks that have struggled in recent years, one dramatic turnaround is Encino-based CU Bancorp.

"We're trying to build a 'fortress' balance sheet' with solid capital, solid reserves, and high loan loss provisions," says CEO Stephen G. Carpenter.

CU, parent of California United Bank, last year returned a minus 1.89% on assets and minus 26.06% on equity. This year, the assets returned 0.60% and the equity 7.5%

Mr. Carpenter picked up the "fortress" term during his days at Wells Fargo & Co., San Francisco. When $331 million-asset CU Bancorp recruited him, he was vice chairman of Security Pacific Bank in Los Angeles. He took CU's helm in June 1992.

His specialty at Security was private banking and middle-market lending. Now that Mr. Carpenter has jettisoned $100 million worth of problem assets, and built up reserves, "he's strengthened his balance sheet to where he's now in a position to take put his [middle-market] expertise into play," says Campbell Chaney, bank analyst for Dakin Securities, San Francisco.

In the past, the bank largely pursued business lending tied indirectly to real estate, and "when the realtors' business dried up, you had your defaults," Mr. Chaney says.

"What's unique," he adds, "is that the nonperformers are still increasing. He's cut out a cancer and it turned out it be benign."

'Tremendous Opportunities'

In Southern California, "there are tremendous opportunities," Mr. Carpenter said. He agreed that environmental regulation and economic weakness are impeding a rebound, but said, "In a 60-mile radius around Los Angeles you've got the 11th largest GNP in the world.

"I want to be in position to take advantage of that when the economy turns, so we did everything in our power to get rid of the bad assets. We're also turning away from transaction banking and turning toward relationship banking with manufacturers and distributors."

Mr. Chaney says "many California banks are . . . not providing for any future strategies. Those that do will survive." □

Bankers and Regulators Need to Hold Regular Powwows

J. Knox McConnell, CEO of the First National Bank of Keystone, W.Va., has been written up recently in the community banking pages because of his bank's 38% return on equity.

He runs a $110 million bank with such a loyal staff that one employee even paid to put a spot in the roof that was causing a leak over her desk.

What bothers Knox most is excessive government regulation.

"The Lord's Prayer is 120 words, the Gettysburg Address was 128 words, and Regulation DD is 30,000 words," he notes.

Specifically, he reports that First National was No. 4 in profitability among all American banks in 1991. Yet, he says, the Comptroller's office made him spend $500,000 on equipment to match asset and liability maturities.

"We spent $35,000 last year on meetings to comply with regulations," Knox adds.

Sit-Downs with Regulators

Apropos this problem, he recently wrote me to offer a suggestion: "A group of bankers, say, 10 chief executive officers from the smallest banks to the largest should meet with the comptroller of the currency, or the appropriate regulators, and talk about excessive regulations.

"We should not be in an adversarial role with regulators. We are due an examination next week. The examiners will come into this bank like the Texas Rangers – and I do not mean the baseball team. This is wrong!"

I wondered if regulators liked Knox's idea, so I contacted Mark Sniderman, a friend who's an associate director of research at the Federal Reserve Bank of Cleveland. He replied:

Advisory Panel in Place at Fed

"Our bank already has a small-bank advisory council, currently consisting of 11 members. The council meets at our bank four times a year over an 18-month period, and then a new group is impaneled.

"Council meetings, which last roughly half a day, are attended by the Cleveland Fed's president, first vice president, and a few other bank officers.

"Generally, we present infor-

by PAUL NADLER

Regulatory micromanagement is in no one's interest.

mation to the council members about economic conditions, monetary policy, and regulatory developments. They, in turn, inform us about economic conditions in their communities and provide feedback about banking conditions and the regulatory process at work in the field.

Hearing It from Bankers

"Council members can talk with us face-to-face about regulatory proposals that are out for comment. We can get a feel for how the examination process operates at their institutions and where the red tape is thickest.

"And for purposes of monetary policy, a first-hand account of what their customers are saying helps us to get behind all the statistics we look at.

"Not all Federal Reserve banks have what we call a small-bank advisory council, but each Fed bank attempts to have a relationship with community-oriented financial institutions in its own way.

"In addition to getting input from small banks through advisory councils, most (if not all) Federal Reserve banks have representatives of small banks on their boards of directors."

My only thought would be that if acute bankers like Knox McConnell do not already know about the Fed's advisory councils, then someone is not doing a good job of publicizing these programs.

Micromanagement

I do know that every regulator I talk to is worried about the problem of "micromanagement" of the banking system.

Some low-level examiners may love telling bankers what to do, but the higher you get in the regulatory structure, the more the officials worry that the new laws have given them too much authority and pressure to micromanage.

When bankers ask, "Why don't you tell Congress to back off in the creation of this legislation?" many regulators respond: "After the S&L mess, we have no credibility with Congress. It is you bankers who have to get Congress to back off."

Maybe the advisory councils that Knox McConnell suggests and that some, like the Fed of Cleveland, already operate can be an important step in getting control over bank operations and policies away from the regulators and back in the hands of the banks. □

Foreclosure Woes for Northeast

Continued from *page 1*

tionally price a loan. If there's more risk in an area, you need to put that risk into your pricing," Mr. Nadler said. "Also, you can decide how to allocate resources. You need more attention to workouts and counseling in a higher-foreclosure area."

ECONOMIC OUTLOOK

The Fitch model, developed with the WEFA Group of Bala Cynwyd, Pa., looks at employment, personal income, population trends, housing starts, industry diversification, and sales of existing homes in each region. It then projects foreclosure rates from these data.

"The interplay between the indicators, as well as the amount of change in each indicator, plays an important role in the outlook for each region," says Mr. Nadler.

Appreciation Projected

Home prices play a significant role in the Fitch analysis. The company's report includes projections of price appreciation by region through the fourth quarter of 1995.

Parts of the Northeast are expected to have the highest total appreciation in the period, with the Boston area leading the way, at about 27%. The rest of Massachusetts is expected to show a gain of just under 20%, as are Nassau and Suffolk counties in New York.

Such gains would constitute recovery from a flat housing market, but they would not be enough to restore default rates to normal if the economy remained sluggish. □

Fannie Mae Urges Borrower Relief In Flood Areas

By SNIGDHA PRAKASH

Fannie Mae told its mortgage lenders on Friday to help flood-hit homeowners who have trouble keeping up with their mortgage payments.

The company advised lenders to apply existing mortgage-relief procedures for homeowners whose properties have been damaged or whose livelihoods have been affected by the floods.

"We are reminding our lenders that these guidelines exist. We want them to use them," said Bonnie O'Dell, director of consumer information at the Federal National Mortgage Association, known as Fannie Mae.

Most lenders continue to service loans they originated after the mortgages have been sold to the housing agencies.

Waiving Late-Payment Fees

Under Fannie's guidelines, lenders can help homeowners whose mortgages were sold to Fannie in several ways. They can waive late-payment fees and withhold reports of late payments to credit bureaus.

They can also negotiate longer-term agreements with borrowers who need to suspend their mortgage payments for up to 18 months.

Freddie Mac has similar disaster guidelines, but has not sent out a special advisory to lenders, said Albert LeQuang, that agency's national policy administrator.

The guidelines were formulated last May, in response to the string of disasters – the East Coast storms, Oakland's fire, the Los Angeles riots and California's earthquake, Mr. LeQuang said.

Freddie Mac has financed 800,000 mortgages in the five states thus far declared disaster areas – Illinois, Iowa, Minnesota, Missouri, and Wisconsin – and in Kansas and Nebraska, which have also suffered serious flood damage. Fannie Mae has financed mortgages on 965,000 units in the five states declared disaster areas.

Both Fannie and Freddie said any aid to homeowners would not affect payments to holders of mortgage-backed securities. □

Banks Win Long Fight on Insurance Sales

Continued from *page 1*

from Portland.

"It's been a good, profitable business," Mr. Grubb said. "We plan to continue, in fact expand, our marketing of insurance products."

Banks that have been waiting for the legal questions to be settled will get into the business now, industry experts said.

"I don't think too many banks will wait too long; there is no reason to," said David Roderer, a partner with Winston & Strawn , a Washington law firm.

"I would not hold back on any business plans."

State Banks Also Win

The decision also is a boon to state banks in 21 states that allow their state banks to exercise the same powers as national banks.

The banking industry's legal quest for insurance powers goes far beyond this case; there are a number of court cases on bank insurance powers going on around the country.

But banking lawyers said Friday that those cases are overshadowed by the Oregon case because it establishes the legal authority of banks to sell insurance from small towns.

National banks in small towns may market insurance nationwide.

"It really eclipses all these other cases on bank insurance powers," said Richard M. Whiting, general counsel at the Association of Reserve City Bankers. "If this case stands, there's statutory authority to sell the product no matter what."

Insurers to Lobby Lawmakers

Paul Equale, senior vice president of government affairs at the Independent Insurance Agents, is not giving up the fight. He said Friday that the agents will ask Congress to clamp down on insurance sales by banks.

He said the agents will lobby lawmakers to pass restrictions on banks allowing them to sell insurance only in their small towns rather than from the small towns to other locations.

"People who know us know we have no qualms about going back to the legislature when necessary," Mr. Equale said. "We have never been known as shrinking violets either in going to Congress or the courts."

'It Is Up to Congress'

Even though the agents lost the case, the court opinion does give them some ammunition.

In a 10-page opinion, Judge James L. Buckley concluded that without any law to rely on, the court had to defer to the Comptroller's office. Mr. Buckley wrote: When "time and technology open up a loophole, it is up to Congress to decide whether it should be plugged, and how.". □

Your customers will soon be convinced that this is a checkbook.

Let us explain. You see, while the banking industry has recognized the potential of debit cards, your customers are not necessarily familiar with their benefits. So to make sure they fully understand what debit cards offer them, we've taken a couple of important steps.

First, we've changed the name of the Visa® debit card to the Visa® check card. Now, from the name alone, consumers will have a better idea of what the card is and how it works at the point of sale.

Visa Check Card gains momentum

And second, we're introducing "The New Shape of Checking," a comprehensive nationwide consumer education initiative. Simply put, this program is designed to help you educate your customers about the what, where, why and how of the Visa check card and Interlink® service.

A blend of public relations and promotional efforts, the program will feature a consumer handbook on responsible use of the Visa check card and Interlink, new modules of our Choices and Decisions educational materials which focus on Visa check card and Interlink, and consumer advocacy forums to advance consumers' awareness and understanding of how these services work.

We're also helping members educate their customers on a local level.

To achieve that goal, we've created "The New Shape of Checking" member kit.

Included in the kit are an 18-month marketing support schedule, sample consumer advertising materials, a program brochure, in-branch promotional support and a video explaining the Visa check card and Interlink educational programs.

When your customers discover through this program how convenient Visa check card and Interlink are to use, they will seem as simple and indispensable as the common checkbook.

So, to help get your customers interested, order "The New Shape of Checking" member kit today—just call 1-800-VISA-311. Or, for more information on how to become a Visa check card or Interlink issuer, call your Visa Member Relations Account Executive at 703-827-8404 in McLean, Virginia, or at 415-570-2120 in San Mateo, California.

Either way, take advantage of "The New Shape of Checking" program. Both you and your customers will find it very convincing.

Concord Elevates Three Executives

Concord Financial Group Inc., the leading distributor of bank-managed mutual funds, has promoted three executives, chief executive Richard E. Sierwalt announced.

Susan L. West, Concord's executive vice president since 1992, was named chief operating officer. She joined Concord in 1987 from the Vanguard Group, a mutual fund company in Valley Forge, Pa.

J. Christopher Klutch was named senior executive vice president of sales and business development. He had been executive vice president since 1992. He worked at Shearson Lehman Hutton, leaving to help set up Concord in 1987.

Dennis R. Sheehan was named executive vice president and chief financial officer. He joined Concord in 1992 as a senior vice president. Previously, he was president of Equinox Securities, a unit of Equitable Life Assurance Society.

"These promotions recognize the important contributions these executives have made to the growth and success of Concord Financial Group," Mr. Sierwalt said. — **Debra Cope**

Concord has $35.5 billion in bank mutual fund assets under administration. Its eight bank clients, including BankAmerica Corp., Chase Manhattan Corp., and Barnett Banks Inc., offer more than 100 proprietary mutual funds.

New rules on real estate appraisal are good news for bankers.

Now it's up to you to review an appraisal's assumptions and conclusions, and you can take the income-producing potential of the property into account. Which gives you more leeway to make commercial loans.

A proposal to make appraisals on 1–4 family homes conform to FHLMC and FNMA standards can reduce your paperwork and help you make more mortgage loans.

This more open approach to regulation could be the start of a better era for bankers. To make the most of it, and encourage more easing of the regulatory burden you and your staff have got to know where the new lines are drawn so you don't cross them. The **Sheshunoff... Banker's Real Estate Appraisal Compliance Manual** will guide you through today's rules, and keep you up to speed with changes through periodic Updates.

Our authors know this topic inside out. One helped write the new regulations, the other owns an appraisal firm. Both are active in the Appraisal Institute, and work with banks to develop real estate appraisal procedures that pass regulatory scrutiny.

Appraisal compliance is simple when you do it by the book. Especially when the book is from Sheshunoff Information Services Inc., the number one source for authoritative compliance information.

Call 1-800-456-2340 today to get yours.

Trade Groups Mine FDIC Talent

Three Chief Economists Did Research for Agency

Call it coincidence, kismet, or just plain weird, but the chief economists at three major banking trade groups used to work in the research department at the Federal Deposit Insurance Corp.

Jim Chessen at the American Bankers Association, David Lereah at the Mortgage Bankers Association of America, and Bob Davis at the Savings and Community Banks Association were all financial economists at the FDIC. "There are former FDIC research people everywhere," Mr. Davis says.

The Inside Line

Take Marty Regalia, another ex-FDIC economist. He was Mr. Davis's predecessor at the community bankers' group and is now chief economist for the U.S. Chamber of Commerce.

Policy plus Economics

In fact, the FDIC's current research director, Roger Watson, can rattle off a list of prominent – even infamous – alums. From Paul Horvitz, who as a professor at the University of Houston is one of the industry's big thinkers, to Bill Gibson, who is serving time in a Texas prison for plane ticket fraud.

Jim Chessen

The FDIC is a good training ground for trade association work because it blends policy-making with economics.

"The whole orientation of the FDIC's research department is economics with policymaking, and I think that is a very good combination for the kind of work we do for trade associations," Mr. Chessen says.

Mr. Lereah adds, "the best thing we learned there at the FDIC is how to write memos. You learn to write concisely and get to the point."

Mr. Chessen, 40, and Mr. Lereah, 40, overlapped at the FDIC, working there during the mid-1980s. Mr. Davis, 44, was at the agency in the late 1970s.

When Mr. Davis joined the Savings and Community Bankers this month, Mr. Chessen and Mr. Lereah decided to welcome him to the world of trade associations by taking him to lunch.

"I think it struck us as somewhat remarkable," Mr. Chessen says of their common careers.

"We have lots of common friends and experiences," Mr. Davis says.

Putting in a Good Word

From the FDIC Mr. Lereah went to work in Richmond for Sovran Bank. While there, he got a call from then-ABA chief economist Rob Dugger, who was looking for a second-in-command. Mr. Lereah recommended Mr. Chessen, who was still at the FDIC.

Mr. Davis also joined a bank, moving to Chicago with Harris Bank. After five years, he returned to Washington, working briefly for the Joint Economic Committee before becoming a commissioner at the Commodity Futures Trading Commission. He was consulting in New York when the SCBA job came up.

The FDIC gives the economists something in common. But it's because they all face the same issues at their respective trade groups that they plan to continue lunching together.

— **Barbara A. Rehm**

McColl's Pitch for Creating A CRA Program that Works

NationsBank Corp. chairman Hugh L. McColl Jr. is emerging as the White House's liaison of choice to the banking industry. Last Thursday, he was on hand to speak for the industry when President Clinton announced his community development lending program.

Toward the end of the ceremony, Mr. Clinton highlighted his regard for the bank chairman, noting that he had "stayed up half the night" with the President, talking about the Community Reinvestment Act "and how we could make it work." Here's some of what Mr. McColl had to say at the ceremony:

Verbatim

It's an honor to speak today on behalf of the banking industry – especially when the agenda is how political leaders and the banking community can work together to achieve greater prosperity for all Americans.

Banks and their communities depend on each other. Banks have a responsibility to meet the needs of their communities by making loans in every neighborhood, rich and poor.

But it goes beyond responsibility. The fact is, a bank that limits the economic opportunity of a certain neighborhood or a certain category of borrowers ultimately limits its own opportunity.

An 'Expectation Gap'

Our communities in turn have a right to expect their banks to provide the credit that primes the economic pump.

NationsBank and others have advocated a results-oriented CRA because there is an enormous gap between the intent of the law and what it actually does. That, in turn, creates an expectation gap.

A small-business owner in Baltimore, hungry for operating capital, won't succeed if her banker is buried in regulatory reports.

Seeking New Standards

A new law – one that bridges that gap between expectations and reality – can make better partners of banks and communities grow. A new law – one that sets tougher, more objective, more quantifiable standards – would send the clear message to banks that we will be measured by our results. No excuses.

Mr. President, I think you will find NationsBank and other banking companies are eager to work with regulators and community groups in the formation of policy that sets measurable, objective standards – and makes true partners of all involved. □

THE WEEK *ahead*

MONDAY, JULY 19

Bias Update: The Office of the Comptroller of the Currency and the Housing and Urban Development Department announce the results of their working group on mortgage discrimination. Call 202-874-1700.

Mutual Rules: The Comptroller's office plans to release its guidelines on bank sales of mutual funds. Call 202-874-1700.

Deadline: Comments are due at all the regulatory agencies on a plan to exempt from appraisal requirements all loans under $250,000 and all business loans under $1 million for which real estate is not the principal collateral.

RTC Oversight: The Thrift Depositor Protection Oversight Board meets in open session at 2 p.m. on the fifth floor of the FDIC Building, 550 17th St. Call 202-786-9672

TUESDAY, JULY 20

Fed Talk: Federal Reserve Board Chairman Alan Greenspan delivers his semiannual monetary policy report to Congress. He testifies before House Banking's economic growth and credit formation subcommittee. 10 a.m. in room 2128 of the Rayburn House Office Building. Call 202-225-4247.

WEDNESDAY, JULY 21

Eyeing CDBs: The House Banking Committee holds the first of two planned hearings on President Clinton's plan for community development lending. 10 a.m. in room 2128, Rayburn House Office Building. Call 202-225-4247.

THURSDAY, JULY 22

Fair Lending: The House Banking subcommittee on financial institutions holds a hearing to find out how well the bank regulatory agencies are enforcing fair lending laws. Comptroller of the Currency Eugene A. Ludwig, Fed Governor Lawrence B. Lindsey, and Justice Department officials will testify. 10 a.m. in room 2128, Rayburn House Office Building. Call 202-225-4247.

Speak Now: Comments are due at the Farm Credit Administration on a proposal to allow earnings held by a farm credit bank and allocated to a direct lender to be counted as permanent capital.

Fed Redux: Mr. Greenspan returns to Capitol Hill to repeat his monetary policy report, this time before the Senate Banking Committee. 10 a.m. in room 538, Dirksen Building. Call 202-224-7391. □

PEOPLE

Republicans: Spur Lending for Flood Relief

Republicans began work last week on their own relief bill for the flood-stricken Midwest, and their approach would use regulatory relief to spur bank lending in that region.

Rep. **Doug Bereuter,** R-Neb., planned to introduce legislation that would permit bank and thrift regulatory agencies to waive regulations that might inhibit lending in the flood area.

The waivers would apply to any insured institutions in or adjacent to the disaster area, and would expire three years after the declaration of a disaster area.

Joining Rep. Bereuter are Rep. **Jim Leach** of Iowa, the banking committee's ranking Republican; Rep. **Rod Grams,** R-Minn., and one Democrat, Rep. **Neal Smith** of Iowa.

Similar legislation was adopted last year to help with widespread hurricane damage along the Florida coast.

* * *

The **William Taylor** Memorial Fund has topped $50,000, according to a recent letter to contributors from **Paul A. Volcker,** the former Federal Reserve Board chairman who is now working Wall Street with James D. Wolfensohn Inc.

Mr. Volcker helped set up the fund after Mr. Taylor died unexpectedly in August.

Mr. Taylor, who spent 20 years at the Fed, was chairman of the Federal Deposit Insurance Corp. 10 months before he died.

The memorial fund will sponsor a lecture on banking policy on Sept. 30 in New York. **Gerald Corrigan,** the retiring president of the Federal Reserve Bank of New York, is slated as the first speaker.

Rep. Doug Bereuter
To introduce measure

Mr. Volcker intends to make the lecture the first of a series.

The Group of Thirty, a financial industry research group, is co-sponsoring the lecture.

"Lectures of this kind are a very suitable way of marking Bill's memory by encouraging the same kind of prudent but creative thinking about banking policy that characterized his contribution in this area of public policy," Mr. Volcker's letter reads.

He stressed that the lectures will not be fund-raisers, but noted that contributions to the fund are being accepted.

Contributions can be sent to Mr. Volcker's office at 599 Lexington Ave., New York, N.Y. 10022.

* * *

Members of the Mortgage Bankers Association of America took a hands-on approach to home building last week in hurricane country.

Several volunteers from the association traveled to Dade County, Fla., and donors chipped in $70,000 to build two houses with Habitat for Humanity.

Robert L. Bonnet, senior vice president at Miami's ConsumerSavings Bank, is representing the association in Florida for the Habitat project.

The association will help build the three-bedroom, single-family houses in an area that was hit hard by Hurricane Andrew.

"The devastation that this area of Florida has endured is difficult to imagine," Mr. Bonnet said.

"The road back is one house at a time, and I am proud that we can play some part in the rebuilding effort." □

1st Annual Bank Mutual Fund Conference

sponsored by

AMERICAN BANKER

Essex House
Sept. 30 & Oct. 1, 1993
New York City

Day 1

PRELIMINARY PROGRAM

CREDIT RATINGS
Attention Turning To Banking Units

By BART FRAUST

Bank-level ratings are becoming increasingly important to investors, the rating agencies say.

In the past few years, billions of dollars of debt securities have been issued at the bank level instead of the holding-company level.

"This has given banks the opportunity to save on FDIC insurance premiums and borrow at slightly lower rates," said Glen Grabelski, an analyst for Standard & Poor's Corp.

Typically, banks are rated one notch higher than their holding companies, and this enables the former to borrow at cheaper rates. The banks raised are not insured, so no premiums have to be paid on them.

Michael Starr, vice president at Duff & Phelps/MCM Investment Research Co., said the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 has also increased the need for investors to be aware of bank-level ratings.

Cross Guarantees

The statute mandates "cross guarantees" – that is, the holding company must provide financial support to all of its bank subsidiaries. Thus, regulators have access to all of a bank holding company's assets if a bank fails.

Mr. Starr said this has caused holding companies to retain some of their operating units to the bank level.

"Regulations have made the holding company an ineffective institution," he added. "Investors see little strength in the holding company. They want to be close to the cash."

An emerging issue at the ratings agencies is whether to assign separate ratings to different bank subsidiaries.

At present, Standard & Poor's rates all of a holding company's

The funds raised from debt securities are not insured.

banks the same. Mr. Grabelski said the agency is looking at the issue of separate ratings.

Mr. Starr said Duff & Phelps already assigns different ratings to units of NationsBank Corp. and First Interstate Bancorp.

"Generally, where there is a meaningful difference in financial strength, we will differentiate between subsidiaries," he said.

The rating agencies took the following actions last week:

Anchor Bancorp: Moody's Investors Service Inc. assigned a Ba3 rating to senior notes issued to the Federal Deposit Insurance Corp. in partial exchange for outstanding preferred stock.

Moody's said the rating reflects concerns about the company's relatively short history of core earnings and its undeveloped lending business.

Moody's said asset quality is good, a result of the thrift's large investment in high-quality mortgage-backed securities. Capital was strengthened through the recent sale of $72 million in common stock.

BankSouth Corp.: Moody's upgraded subordinated debt from B2 to Ba3 and assigned Baa2 to long-term deposits and Prime-2 to short-term deposits issued by the subsidiary Bank South.

Moody's said the upgrade reflects the lifting of regulatory agreements with the Office of the Comptroller of the Currency

Typically, banks are rated one notch higher than their holding companies.

and the Federal Reserve Bank of Atlanta. The agency said Bank South has improved asset quality, earnings, capital levels, and liquidity.

Moody's analysts expressed concern about Bank South's ability to compete with superregional banks in Georgia but added that a recent agreement to acquire the Atlanta banks of Barnett Banks in exchange for Bank South's Pensacola, Fla., operations will enhance its competitive position.

Barnett Banks Inc.: Standard & Poor's revised the company's rating outlook to "stable" from "negative." It added, "Investors see little strength in the holding company. They want to be close to the cash."

Comerica Earns $84 Million, Raises Its Dividend by 9.8%

Comerica Inc. said it earned $84 million in the second quarter, or 70 cents a share, virtually even with its earnings for the first three months of the year and well ahead of its results one year earlier.

The Detroit-based company lost $12 million in the second quarter of 1992 because of a $92 million after-tax restructuring charge related to its merger with Manufacturers National Corp. The profits reported Friday were directly in line with analysts' expectations. Comerica's shares fell 25 cents to $30.125 in late trading Friday afternoon.

The company, which has $27.4 billion of assets, has been under the gun because of its failure to realize expense savings from its 1992 merger with Manufacturers National. Expenses "still seem to be lagging," said Mark Lynch, an analyst at Lehman Brothers. But he added that Comerica, like many midwestern banks, is in the second quarter, experienced fairly strong loan growth.

Comerica's outstanding loans grew 2.6% since the end of the first quarter, or more than 10% annualized. Net interest income grew 1% from the year-earlier quarter, reflecting "improved net interest margins," the company said.

The company's return on average assets rose from negative territory one year ago to 1.25% for the quarter, while return on equity rebounded to 15.68%. Comerica also announced that it increased its quarterly cash dividend by 9.8% to 28 cents a share. The dividend was last increased to 25.5 cents in the fourth quarter of 1992.

Mr. Lynch said the dividend rise was unexpected.

Two Chemical Units Playing Roles In Sterling's Buyout of Purina Mills

By DAVID SIEGEL

Chemical Banking Corp. is playing dual roles in the financing of the Sterling Group's $425 million purchase of Purina Mills.

Chemical's Texas subsidiary, Texas Commerce Bank, has won a leading role in a $188 million loan that will support the acquisition, while Chemical's securities underwriting subsidiary will comanage a $200 million junk bond offering planned by Purina, market sources said.

The Sterling Group is a Houston-based buyout firm. Sterling in late June agreed to buy Purina Mills from British Petroleum Co.

British Petroleum acquired Purina Mills, a St. Louis-based producer of feed for farm and other animals, from Ralston Purina Co. in 1986.

Texas Commerce has jointly underwritten the $188 million acquisition loan with the CIT Group, it will manage syndication. CIT is 40% owned by Chemical and 60% owned by Dai-Ichi Kangyo Bank of Japan.

The financing comprises a $138 million, seven-year term loan and a $50 million, four-year revolving credit. The borrowing rate starts at about 275 basis points over the London interbank offered rate but can change based on the company's debt coverage.

Participants Sought

About 20 banks have been invited to participate in the loan.

They are being asked for commitments of $10 million to $25 million and being offered upfront fees of roughly 1% to 1.375% of the committed amount, a banker said.

Details of the financing package will be sent this week to invited banks with a bank meeting to follow shortly. The loan is set to close by the end of next month.

Purina also plans to issue $200 million of 10-year senior subordinated debt. The lead manager will be Kidder, Peabody & Co., with Chemical Securities Inc. as a co-manager. This would be Chemical's fourth corporate bond underwriting since the Federal Reserve Board approved its application to enter the business in May. □

THE MARKETS

Long Rates Seen at 6.25% or Lower

By BART FRAUST

How low can long-term rates go?

At least another quarter percentage point lower, some economists and bond traders think.

The government's 30-year bond has lost more than a quarter percentage point since the beginning of June and stood at 6.54% late Friday, a record low.

David Blitzer, chief economist at Standard & Poor's Corp., predicted that the yield on the long bond will bottom out at 6.25% later in the year.

Rally Seen Continuing

"The four-year-old rally among U.S. Treasury bonds has further to go," Mr. Blitzer wrote in the current edition of the agency's *CreditWeek* publication.

Mark Grant, managing director for capital markets at Chicago-based Rodman & Renshaw, thinks rates can go even lower. He predicted a 6.25% yield by the summer's end and 5.85% by yearend.

Those predicting lower rates cited a number of factors, including a persistently sluggish economy, low inflation, and the prospect of new federal taxes and spending cuts.

In the latest signs of economic slowdown, the government reported on Friday that industrial production fell 0.2% in June and the reading for May was revised to "unchanged" from the originally reported 0.2% gain.

Consumers Less Confident

In addition, a closely watched consumer sentiment index from the University of Michigan registered a decline to 76.9 from 81.5 in June.

Weak economic data contribute to low interest rates by indicating to investors that inflation will remain low. Inflation erodes the value of bonds.

Last week's data also confirmed the view that inflation is not a major problem. A sharp rise in commodity prices prompted an inflation scare earlier this month. The rise in prices was related largely to the effect of midwestern flooding on grain prices.

Government reports that wholesale prices fell 0.3% and consumer prices were unchanged in June have pretty much eliminated the scare.

Atmosphere of Uncertainty

President Clinton's economic plan and the current congressional debate about it are both suspect as factors in the rally.

"The economy is stalled," said Donald Fine, market strategist at Nations Bank in Charlotte. "Uncertainty about the Clinton economic plan is causing an orderly slowdown [in manufacturing] and a hiring freeze."

On the other hand, once the bill is signed, it will include spending cuts and tax hikes that are likely to curb growth.

Mr. Grant said that despite the rate cuts, the Treasury securities market remains an attractive place to invest funds.

'Monetary Compression'

He described the process as "monetary compression," in which funds from other fixed-income investments fall into Treasuries. "There are gigantic amounts of money that have to go someplace," Mr. Grant said.

For example, a rush of corporate bond calls is redirecting funds into Treasuries, he said.

Municipalities will continue to buy Treasuries to support future re-fundings, a process known as defeasance. This activity has been a boon to the Treasury market all year.

In addition, lower interest rates cause mortgage-backed securities to shorten, prompting another source of funds for the Treasury market.

David Fine, an economist at First Union Corp., believes the overall trend is for lower interest rates. "We do not believe the trend will be an even one. He expects the yield on the 30-year bond to fall to as low as 6.40% but turn upward by the end of the year or fall.

"The second-half economic numbers will be better than expected," he said. "That will change the psychology, and rates will back up some."

By the end of summer, the inventory correction in the manufacturing sector should end and hiring resume, Mr. Orr said.

At that point, rates will move below 6%, he added.

Mr. Fine of Chase thinks rates will be frozen in the near term. Besides uncertainty created by the big unknown of the Clinton economic plan, the market will be weighed down by the prospect of the sale of 30-year bonds at next month's Treasury refunding. □

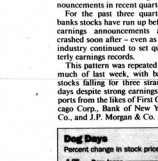
Banks Seen Breaking Their Selloff Cycle

By RICHARD LAYNE

Bank stocks are expected to rise this week, breaking the boom-and-bust pattern that has surrounded their earnings announcements in recent quarters.

For the past three quarters, banks stocks have run up before earnings announcements and crashed soon after – even as the industry continued to set quarterly earnings records.

This pattern was repeated for much of last week, with bank stocks falling for three straight days despite strong earnings reports from the likes of First Chicago Corp., Bank of New York Co., and J.P. Morgan & Co.



The *American Banker* index lost 2.2% in the five trading days ended Thursday, versus a 1% gain in the Dow Jones industrial average.

Results Due for Big N.Y. Banks

But the shares showed some signs of life late in the week, giving hope that this week's scheduled earnings releases from big New York banks and some of the top superregionals will spark further recovery in the shares.

"I think the selloff has subsided and share prices are stabilizing," said Sam A. Marchese, director of Sife Trust Fund, Walnut Creek, Calif. "I believe they can start to move higher this week."

Money managers and analysts breathed a sigh of relief as what started out as another rout of bank stocks was quickly reversed.

"Our sense is that the market has firmed, both for money-center and superregional banks," said Thomas H. Hanley, an analyst with First Boston Corp.

Gains for Industry Leaders

Six of the 10 biggest banks were up slightly on Friday, a sign of returning strength for the sector. BankAmerica Corp. gained 37.5 cents to $44.875, and Citicorp's shares rose 37.5 cents to $31.75.

Among the biggest losers on the week were First Union Corp., which dropped 4.8% from $49.25 to $45.625, and Mellon Bank Corp., which fell 3.9% from $57.875 to $55.625.

Analysts said last week's selloff stemmed mostly from profit taking. Bank shares had risen about 10% in the previous month, giving investors the chance to sell holdings. Trading volume was light early in the week, indicating that there was not a wholesale rush to sell.

But stocks of some banks sold off sharply when their earnings reports fueled investor concerns about whether they could sustain earnings growth.

Shares of Signet Plunge

Signet Banking Corp., for example, reported last Wednesday that net interest margin narrowed by 32 basis points, to 5.03%. The stock lost $4, to $50.75 on the day. The stock dropped even though Signet reported that net income rose 41% to $40.4 million in the period.

Two factors cut short last week's bank stock downturn, analysts said. Inflation worries, which crushed bank shares last quarter, dissipated with last week's announcement that wholesale prices fell 0.3% in June and consumer prices were unchanged that month.

The Good News

In addition, there have been some pleasant surprises among the earnings announcements. They provide evidence of a modest revival in loan demand, excellent trading revenues, sharp declines in nonperforming assets, and expense control.

Good reports from some banks have pushed Wall Street to raise earnings estimates. For example, PaineWebber analyst Lawrence Cohn said Friday that he raised his 1993 earnings estimate for J.P. Morgan to $7.45 a share from $6.15.

Last week's positive surprises have set the stage for share prices to rise this week. Following in the footsteps of J.P. Morgan and First Chicago, the New York banks reporting earnings this week are expected to show substantial gains in trading income. The group includes Chase Manhattan, Chemical, Citicorp, and Bankers Trust.

"The strong trading revenue reported by other banks holds out the prospect for material earnings surprises that haven't been anticipated," said Judah Kraushaar, an analyst with Merrill Lynch & Co.

Mr. Kraushaar said Bankers Trust's second-quarter trading revenues may yield the biggest surprise.

For the superregionals that will announce earnings this week – including NationsBank, Wells Fargo, and First Interstate – Mr. Kraushaar is not concerned about a shrinkage in net interest margins. □

Syndications Stage Comeback

Continued from *page 1*

on commercial real estate loans.

All of the top 10 banks in the ranking were among the 17 so-called global arrangers of the GM refinancing, and each got full credit for the $18 billion portion syndicated in the United States.

Since most of these banks usually rank among the top 10 syndicators, the GM deal did not have much of an effect on banks' second-quarter standings, which are closely followed by banks and their clients.

A few normally high-profile banks, though, dropped out of sight in the second quarter because they did not participate in arranging the GM credit.

Landmark Syndication

First Chicago Corp., after ranking third in the first quarter, was not even among the top 20

More demand for buyout loans is expected.

syndicators in the second quarter.

The GM syndication was the largest ever undertaken in the corporate loan market, and it also marked the automaker's first syndicated deal.

International Business Machines Corp. also completed its first syndicated bank line in the second quarter – a $4.6 billion credit led by Credit Suisse.

GM and IBM were once able to dictate the terms of their credit lines in one-on-one dealings with their banks.

Other weakened corporate giants may also find themselves turning to the syndication market for help in refinancing bilateral credit lines.

Refinancings for both investment and non-investment-grade clients are expected to continue unabated in the second half, as borrowers take advantage of low interest rates.

Pricing Has Come Down

Banks have responded to falling interest rates in the public debt markets by cutting their own pricing.

The downward pressure on pricing is compounded by fierce competition among banks themselves, as more asset-hungry lenders reenter the market.

"Everyone who wasn't in the market [before] is back in the market now," said Thomas Bunn, head of syndications at NationsBank in Charlotte, N.C. □

First Union Issues $150 Million in Ten-Year Notes

By DAVID SIEGEL

First Union Corp. on Friday issued $150 million of floating-rate subordinated notes.

The 10-year issue floats quarterly at 12.5 basis points above the three-month London interbank offered rate, with a 4.125% minimum rate known as a "floor."

The three-month Libor is now 3.25%.

Refinancing Use Seen

One market source speculated that the issue would be used for refinancing rather than additional capital, because First Union's capital ratios far exceed regulatory minimums.

The bank's total capital ratio was 14.58% at the end of the second quarter, up from 12.27% at March 31.

First Union officials were not available for comment.

The noncallable issue is rated A3 by Moody's Investors Service Inc. and BBB-plus by Standard & Poor's Corp.

Goldman, Sachs & Co. was the lead underwriter.

N.Y. Bancorp Splits Its Stock, Raises Payout

DOUGLASTON, N.Y. — New York Bancorp, the holding company for Home Federal Savings Bank, said its board has declared a three-for-two stock split and will increase by 20% its quarterly dividend.

The next quarterly dividend is scheduled to be declared in September and paid to shareholders in October.

The stock split distribution is payable on July 29, to shareholders of record on July 19. Before the stock split, the company had 4,430,646 common shares outstanding. □

AMERICAN BANKER'S

MANAGEMENT STRATEGIES

July 19, 1993

USING INFORMATION TO INCREASE PROFITS

Industry Picks Up Technology Spending as Outlook Improves

BY BRIAN HELLAUER

THE BACK OFFICE: SYSTEMS

AFTER THREE LEAN years, bankers are mustering a modest technology spending spree.

According to the *American Banker*/Ernst & Young 1993 Survey of Technology in Banking, financial institutions are expected to consume $15.3 billion worth of information technology in 1993, an increase of more than 6% over 1992.

The increase marks the first time since 1990 that technology spending growth outpaces the inflation rate.

In addition, the employment decline in this sector of the industry has abated, with the number of technology jobs expected to increase slightly over the next three years, according to the study, which was conducted by the Tower Group, a Dover, Mass.-based consulting firm. Total employment should rise from 86,000 this year to nearly 87,000 by 1996, still down from a high of 90,000 in 1991.

More robust spending coincides with the end of the industry's extended convalescence in the wake of the recession and credit problems.

Spending allocations look much the same as they did in 1992. Roughly 63% of banks' technology dollars fund centralized data processing applications, 28% information technology in other departments, and 9% outsourcing of one or more business lines.

But the bulk of the additional dollars included in this year's budgets are not being spent on the maintenance of existing mainframe-based applications.

Instead of spending more on these so-called legacy systems, bankers are betting on the development and installation of new types of technology, using improved telecommunications, personal computer networks, and imaging systems.

There is also a flip side to the restructurings and reorganizations that many banks have undergone. For example, Fred Gronbacher, senior vice president of operations at PNC Bank Corp., Pittsburgh, said that many of the development projects he oversees are a direct result of a change in the bank's operational philosophy since the late 1980s.

Jim Judkis

FRED GRONBACHER, head of operations at PNC Bank Corp., says data processing led sweeping changes that permitted the company to fold eight data centers into a new 90,000-square-foot facility.

Personnel remains the single biggest line item in most technology departments

The $51.1 billion-asset bank consolidated its independent banking units on a single, identical product set. The change allowed the bank to consolidate eight data centers in a new 90,000-square-foot facility, said Mr. Gronbacher.

"Data processing led the process of change within the corporation to centralized lines of business and a local sales force," he added.

The savings incurred through the consolidation, along with the company's continued merger and acquisition activity, provided some justification for the new data center, which was recently completed at a cost of $30 million.

PNC's nerve center is equipped with the latest support systems and fiber-optic telecommunications facilities, which maximize system availability, according to Mr. Gronbacher.

"Now that we have created something new, we can build from that, rather than try to support the old infrastructure," Mr. Gronbacher said.

He also said that PNC's 1993 spending on hardware and software will be about 15% higher than in 1992. He attributed the jump to the data center project

APPLICATIONS DEVELOPMENT IS NO LONGER BUSINESS AS USUAL

Personal Computers Helping Branches Make a Comeback

BY WILLIAM PESEK JR.

TEN YEARS AGO, THE smart money said that bank branches were going the way of the dinosaur.

But, just like millions of pre-history-loving moviegoers this summer, bank customers aren't ready to render the branch extinct, either.

U.S. banks spent hundreds of millions of dollars in the 1980s on automated teller machines and other self-service devices. Nevertheless, bank branches today are making something of a comeback.

Although technology has provided a smorgasbord of delivery alternatives for consumers, bankers say the branch system is still a critical part of the business.

"The branch is not going to go away, because there is a large segment of the marketplace that still desires a high-personal-touch environment," said Waino H. Pihl, a partner at Andersen Consulting Co. in Chicago. "There is, however, a fundamental shift in the way customers use banks."

Branches are rapidly changing from transaction centers to souped-up sales hubs

The *American Banker*/Ernst & Young 1993 Survey of Technology in Banking supports that view. According to the survey, banks are refocusing attention on the branch and searching for ways to maximize brick-and-mortar investments. And they are depending heavily on automation to do it.

The survey of the top 300 banks showed that "dumb" terminals relying on a central mainframe or minicomputer for processing power are on the way out, replaced by networks of personal computers. The branch with no technology support at all is becoming a rarity: just 13% of banks' teller stations have no automation, and only 8% of platform desks are without a computer.

The survey paints a bright picture for the future of branch automation. By 1996, 86% of teller stations will have PCs and 94% of platform workers will use desktop computers.

The transition to PCs accompanies a shift in the branch's function. Branches are rapidly being transformed from transaction centers to souped-up sales and service hubs.

Once this transition has run its full course, customers will conduct routine transactions and services over the telephone and purchase the full gamut of bank products in the branch, or so goes the thinking.

This change is driven more by an attempt to meet the needs of time-conscious customers than an effort to improve operational efficiencies, bankers say.

"If the 1990s have taught banks anything, it's that consumers want to bank the way they want to and not the way the bank dictates," said Tim Meier, senior vice president and manager of information services at U.S. Bancorp, Portland, Ore.

Given this environment, bankers agree that automation is the wave of the future and the key to more efficient and profitable branch networks.

"Banks are putting a lot of money into platform and teller technology to improve productivity and get the most out of their brick-and-mortar investments," Mr. Meier said.

"The emphasis these days is on continuing to make it easier for platform people to do their jobs and support the sales process."

The $20 billion-asset bank has taken pains to retool its branches. U.S. Bancorp has already installed intelligent workstations for its customer service representatives and is currently building a proprietary platform system that uses Microsoft Corp.'s Windows operating environment.

U.S. Bancorp is not alone. Albany, N.Y.-based Keycorp is also going the intelligent-automation route. The $30 billion-asset holding company replaced all of its dumb-terminal branch automation systems with a more modern, personal-computer-based arrangement. This project, which involved installing new software from Ampersand Corp., York, Pa., was completed in the early part of 1992.

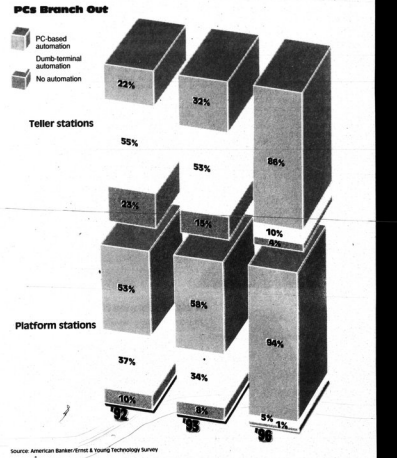
"Given customer demand and the need to improve functionality, we've got 100% of PCs in the branches," said Jay Ward, executive vice president at Keycorp.

Mr. Ward added that the new system not only boosts efficiency, but it also provides a platform for further automation efforts. Those efforts include Vision 2001, in which Keycorp plans to install new loan processing software in its branches and operations centers. Components of this software that will run on the personal computers installed for the branch automation project will help branch workers complete loans faster and more accurately.

With automation budgets currently on the rise after several years of stagnation, bank technology vendors are also experimenting with new ways to invigorate branches.

"Our view is that there's still a very real use for the brick-and-mortar branch and that banks will expand the branch into virtual-branch networks," said Craig M. Grant, general manager of retail delivery systems at Unisys Corp., Blue Bell, Pa.

Unisys is at the drawing board trying to come up with systems for areas such as imaging, customer information technology, and videoconferencing.



Ampersand, a long-time provider of PC-based branch automation, is now making inroads with systems implementing a graphical user interface, namely Windows.

Looking ahead, the physical bank will be more important than ever, and banks are tailoring the branches to better match the customer base each serves.

"Banks are designing branches to meet the individual needs of consumer groups and to relay the message that they know who the customers are and what they want," said Curtis Wayne, president of Wayne Architects, a Greenwich, Conn.-based firm that designs branches. Mr. Wayne's clients include Citicorp and Fleet Financial Group.

One of the best examples of this strategy is PNC Bank Corp.'s airport branch. The bank built a fully automated branch in Pittsburgh International Airport to meet the demands of busy travelers. A number of industry observers have dubbed it "the bank of the future."

PNC has stocked the outlet with several automated teller machines for simple transactions like making withdrawals, deposits, and cashing checks. There also are several video-conferencing kiosks where customers can apply for loans and purchase investment products.

The study projects that by 1996, 86% of teller stations will have personal computers

"If an executive has 40 minutes or so between flights, he can use the facility to do anything: cash checks, apply for a loan, or purchase securities," said John Alden, director of marketing at the $51.1 billion-asset bank.

Another example is a highly automated Banc One Corp. branch in the Sawmill Shopping and Financial Center, Columbus, Ohio. Sort of a banking hypermarket, the branch offers 10 different business lines to customers, with a minimum of staff and space. Industry observers often cite the branch as one of the best examples of optimal branch automation and customer convenience.

"Platform automation lets us take care of bank services as close to the point of contact as possible, and that's exactly what the Sawmill branch is about," said John Russell, chief communications officer and a member of the team that helped design the branch for the $70 billion-asset bank.

As bankers see it, such efforts to reshape and invigorate the branch environment are consistent with the industry's needs.

"I envision that automation will help banks become more like retail stores in the future," said Mr. Meier of U.S. Bank. "But you have to get people into the store to get them to buy anything." □

Consumer Banking: Delivery Systems

Bankers Warming to Cash Machines with Advanced Functions

BY MATT BARTHEL

"BELLS AND WHISTLES," bankers' typical term for advanced automated teller machine functions, connotes a certain amount of excessiveness.

But results from the *American Banker*/Ernst & Young Survey of Technology in Banking indicate that bankers may soon need a more favorable-sounding characterization for ATM features such as touch-sensitive screens and automated bill payment.

After years of relying on ATMs to handle mainly the basics of automated banking – cash withdrawals, account balance inquiries, and, in some cases, deposits – many banks are now looking to include more complex functions.

At the same time, there is also a contingent of bankers who believe these functions belong on a separate terminal so they will not interfere with the desire of most ATM users to accomplish basic transactions quickly.

Clearly, both camps believe that these more complex ATM functions – the bells and whistles, if you will – will be more necessary than excessive in the future.

This year's survey affords a look into which of the advanced functions will be most prominent in the upcoming years.

"It's only natural that we are seeing a demand for a wider range of functions for both cash-dispensing and non-cash terminals," said John Buschmann, senior product manager in the self-service and financial systems division of Dayton, Ohio-based NCR Corp.

"Expanding what can be accomplished through self-service is a natural evolution that builds on the ATM's success."

The *American Banker*/Ernst & Young 1993 technology survey, conducted by the Tower Group, incorporates data from 174 financial institutions whose combined noninterest expense accounts for about half of the industry's total.

The advanced feature that bankers expect to make the most use of in the coming years is touch-sensitive screens

Since this expense is a good indicator of technology spending, the survey is, in effect, based on the American banks that are most influential in technology terms.

The survey found that there currently are about 89,000 functioning ATMs in the United States. Bankers expect that number to reach 100,000 by 1996.

Touch-sensitive screens head the list of advanced features that bankers expect to make the most use of in coming years. According to the survey, nearly one in 10 of the ATMs operating in 1996 are likely to have this feature. It enables customers to conduct their business by touching the screen on which information is displayed.

This technology was pioneered by Citicorp, which manufactures its proprietary machines through a subsidiary called Transaction Technologies Inc., Santa Monica, Calif.

Citi's ATMs are widely recognized as among the industry's best cash-dispensing terminals with regards to ergonomics and ease of use. And the bank has effectively used its proprietary machines to differentiate itself from competitors.

But now several other institutions, including Chemical Banking Corp., appear ready to install large numbers of touch screen ATMs.

The technology has its benefits, experts said. Consumer surveys indicate that bank customers prefer touch-screen ATMs to ordinary terminals that operate with keypads.

Although this feature is no guarantee of increased transaction volume, many bankers feel it is a step in the right direction.

However, touch-screen ATMs also present some problems. Under the Americans with Disabilities Act, banks are required to make their ATMs accessible to people with a wide range of physical handicaps, including vision impairments.

Unless touch-screen ATMs are equipped with special software, they are next to impossible for a visually impaired person to operate. As such, an ATM site that features only touch-screen terminals might be found in violation of the law and expose a bank to federal fines.

And pure touch-screens of the type offered by Citicorp are not readily available to other banks in the United States.

Of the country's three top ATM vendors – NCR, Dallas-based Fujitsu ICL Systems, and Interbold, a joint venture of Diebold Inc. and International Business Machines Corp. based in North Canton, Ohio – only NCR offers touch screen ATMs, and its terminals still make some use of a conventional keypad during every transaction.

For these and other reasons, several institutions wishing to incorporate touch-screen technology into their self-service banking have chosen to use machines that do not dispense cash. One of these is Fleet Financial Group, based in Providence, R.I.

Like many institutions, Fleet embraces the idea of expanding upon the basic self-service banking functions that an ATM provides. But the bank's officials indicated that they felt the touch-screen ATMs currently available did not put the technology to use as well as non-cash terminals.

"Touch screen, at this point, is more useful for the types of transactions we want to do at non-cash terminals," said Chris Fredrick, senior vice president in corporate administration at Fleet.

Mr. Fredrick said that non-cash terminals, which provide services such as stop payments on checks, product information, and check reorders, are typically 80% cheaper to support than an ATM, which must be replenished with cash periodically.

Because of this, Fleet is trying to keep all of its more complex self-service transactions on the non-cash terminals. The idea is to make sure that transactions that take a minute or two to complete, such as check reorders, do not delay people who want to withdraw cash – a transaction that typically takes only 30 seconds.

"We have resisted the temptation to load up our ATMs with a lot of time-consuming functions," Mr. Fredrick said.

But not all institutions agree with Fleet's strategy.

According to the survey, almost 7% of the ATMs installed in 1996 will allow customers to open new accounts.

In addition, bankers responding to the survey indicated that in 1996 about 2.6% of ATMs will have video conferencing capabilities, which allow an ATM user to interact with customer service representatives through the screen.

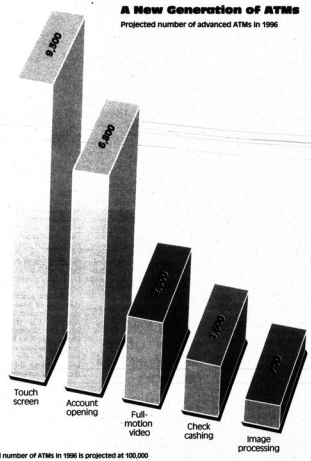
Several institutions have chosen to limit the touch-screen feature to machines that do not dispense cash

Several institutions, including Huntington Bancshares, Columbus, Ohio, are piloting this feature, which is available from both NCR and Interbold.

In addition to these functions, 1.6% of the 100,000 ATMs in 1996 are expected to feature check cashing capabilities.

Fewer than 1% will be able to display images of deposited checks. Many experts find this number surprising, because banks have expressed an interest in increasing the number of deposits handled through ATMs, and displaying a picture of the check after the terminal accepts it seems an ideal way to help consumers overcome any inherent discomfort.

PNC Bank Corp., based in Pittsburgh, has installed about 30 terminals with imaging capabilities. The ATMs, from Interbold, are also capable of reading bar codes – a feature that would be useful in making automated bill payments. □



*Total number of ATMs in 1996 is projected at 100,000

The Back Office: Systems

Shift to Personal Computer Networks Is Solidly Under Way

By BARTON CROCKETT

TECHNOLOGY GURUS have predicted for years that networks of personal computers eventually will replace mainframe and midrange machines as the dominant computing engine in corporate America.

In banking, this transition is slowly but surely taking hold. And even bankers who work outside data processing areas are getting excited about it.

"This is the direction of the business, and the way of the future," said William H. Berls, a group vice president in Chemical Banking Corp.'s corporate trust unit.

The 1993 *American Banker*/Ernst & Young Survey of Technology in Banking illustrates that the transition to distributed computing is under way.

Among other findings, 4% of the "on-line" production software in the industry runs on so-called distributed computing systems in which networks of PCs work in tandem with larger machines.

In three years, bankers expect to run 12% of their business-specific "production" software on distributed networks. In that time, bankers also expect to boost from 0% to 13% the proportion of production software running on PCs.

By contrast, 89% of the banking-specific software in the industry now runs on mainframe or midrange computers, down from 92% last year. The total is expected to drop to 75% by 1996.

Mainframe and midrange computers dominate mainly because they have been around longer than PCs. Also, they are traditionally the only machines powerful enough to crunch the tomes of data generated by such bank products as checking accounts, consumer loans, credit cards, and automated teller machines.

But PCs are growing more powerful, and, when hooked into networks, can rival the much larger machines for much less cost.

"At the highest level, the [price/performance] benefit of PCs over mainframes is literally 10 to 1," said Todd Rulon-Miller, chief executive of Software Alliance Corp., Berkeley, Calif.

PCs are also benefiting from a whole new class of easy-to-program software that lets programmers design software applications in weeks, rather than the months or years it can take using mainframes.

The result: Many bankers, including Citicorp chairman John Reed, think the time has come to start shifting to distributed computing.

In a speech last month at a computer conference in Boston, Mr. Reed glumly spoke of flat revenue growth and a global economy "in a refrigerator." He perked up, though, when describing how Citicorp can boost profits by "reengineering" the way people work using "on-line, distributed technology."

These "modern systems" could eventually cut Citicorp's annual operating costs in half, Mr. Reed said.

And he isn't alone. Now, nearly 60% of the banks in the country are either testing or running at least one new production application on a distributed computing network, according to the survey. In three years, 96% of the country's banks are expected to run at least one production application on a distributed network.

These ambitions are affecting bank purchasing plans.

There are now 805,000 PCs in banks, according to the survey. Bankers expect to have more than 1.2 million PCs by 1996. By contrast, there are 2,920 mainframes, a total expected to drop to 2,650 in three years. Similarly, there are 2,220 midrange computers, a total expected to drop to 1,860 over the same period.

In terms of computing power, PCs already dominate. One standard measure of this is based on the millions of instructions a machine can execute in a second, or MIPS.

There are now 64,000 mainframe MIPS in banks, 10,000 midrange computer MIPS, and five million personal computer MIPS, according to the study.

But even though PCs have the bulk of computing power, mainframes store most of the data. Banks now have the ability to store 2,920 terabytes of data. That's roughly two million pieces of information — such as a Social Security number or street address – for each man, woman, and child in the United States.

Ninety-six percent of this data storage capacity is on mainframes, the study indicates.

Distributed networks let banks leverage the best features of each type of computer by making it possible to use PCs to retrieve data over a network from central mainframe repositories.

Among the banks building such computing systems is Chase Manhattan Corp., in New York.

"We've been extremely active for about 14 months" with a brand of distributed computing called client-server," said Eugene Friedman, a Chase vice president.

Client-server is a type of computer system where so-called PC clients run software that retrieves data from powerful server computers over a network.

The servers can be powerful PCs, midrange computers, or mainframes.

Virtually every division in Chase has at least one client-server application, Mr. Friedman said. One of the most ambitious client-server applications was installed last year in the bank's credit card unit.

This software, which Chase designed itself, runs on networks of personal computers used by about 700 customer service representatives in telephone centers in Arizona, Delaware, Florida, and Long Island, N.Y.

Representatives punch buttons on their personal computers, and, over a network, get account information from mainframe computers on Long Island.

The PCs display the information on easy-to-read screens, and speed calls by "queuing" up data in anticipation of the next question a customer will ask.

Mr. Friedman said a boost in worker productivity and a reduction in data-entry errors will pay for the multimillion-dollar computer system in about 20 months.

To accelerate the use of client-server applications, Chase has also created a committee of computer specialists to set standards for the type of client-server technology that divisions should buy or design.

Banks around the country have formed similar committees. And this standard-setting activity is a potential source of controversy.

On the one hand, standards are needed to ensure that bankers buy good computer systems, at a fair price, and don't expose the bank to security risks.

But the problem is that setting standards impinges on the freedom that departments have traditionally enjoyed to choose their own PCs and PC software.

"There's a conflict because users want more control over their destiny," said Jeffrey Rocchio, a computer planning analyst at National City Corp., Cleveland. Mr. Rocchio works on a client-server standards committee recently established by the bank.

Most people, including bankers, use PCs to run so-called personal productivity software, like spreadsheets and word processing applications. Many people also play computer games.

But as client-server banking software starts to run on these PCs, technologists are wondering if they will have to tell users not to run their favorite personal software.

The problem is that personal software could eat up so much memory on a PC that the banking applications can't run. Or the personal software could have strange attributes that interfere with banking applications.

There is also the danger that users might bring in software with computer viruses, and infect an entire bank.

So far, banks like National City haven't clamped down on personal software. But this could change.

"There are differences of opinion over how far we should go with standardization," Mr. Rocchio said.

The distributed software that banks are installing usually does not replace mainframe or midrange computer software.

This change, called downsizing has only happened for 300 mainframe applications over the past three years, according to the study. There are now more than 200,000 mainframe banking applications in the country.

In the next three years, another 1,100 mainframe applications are expected to be downsized.

Instead, most of the new, distributed computing software is either giving bank employees and customers better access to data on mainframe or midrange computers, or automating tasks that have never before been computerized.

In fact, there are very few core banking applications that run only on PCs. Instead, almost all of the core banking software in the industry runs on mainframe or midrange computers, with PC access available as an option.

But, over time, this could change, as vendors try to take greater advantage of the cheap computing power available on PCs.

"I think it's a matter of when, rather than whether," said Charles Kight, executive vice president at Michigan National Corp., Farmington Hills.

One vendor that is trying to be a leader in the shift is Savings and Loan Data Corp., Cincinnati.

Since 1978, this not-for-profit service bureau has used mainframe computers to run core banking software for its owners – some 170 thrifts and banks, based mainly in the Midwest.

Last year, the company, which goes by the name S&L Data, decided to diversify by buying a struggling start-up vendor that had built a core accounting, general ledger, and teller software package, called Anthem, for PC networks.

Jack Kuntz, an S&L corporate vice president, said S&L bought the company to prepare for "platform migration" of computing operations from mainframes to PC networks.

"That's the wave of the future," Mr. Kuntz said. "That's where the leaps are going to be made in technology."

Six banks, each with less than $100 million of assets, now use Anthem to run their core banking software.

One customer is Founders Bank of Arizona, Scottsdale, which bought the Anthem software in 1991. "We spent a lot of time studying it," conceded Jan McDowell, senior vice president and cashier.

But despite the hassles of dealing with "bleeding edge" technology, Ms. McDowell said the bank has been happy with its move. The software cut data processing costs 24%. □

How the Survey Was Conducted

THE ARTICLES IN this publication analyze and report the results of the *American Banker*/Ernst & Young 1993 Survey of Technology in Banking, conducted by the Tower Group. The survey, containing many detailed questions on banking technology, was delivered to the chief technology executives at every bank holding company in the United States with over $1 billion in assets (275 banks) and to the chief executive officers at 1,200 selected bank holding companies with under $1 billion in assets.

One hundred and seventy-four surveys were returned, allowing the survey to incorporate data from just over 50% of the industry, as measured by noninterest expense. Noninterest expense was chosen as a measurement because, of all publicly known figures, it best correlates with technology spending.

Ninety-six of the respondents were from banks with over $1 billion in assets, including more than 70% of the top 25 banking companies and over 50% of the top 100.

In calculating the industry projections, each bank's responses were weighted according to the percentage of the industry, as measured by noninterest expense, that they represent. Both quantitative and qualitative responses were used to develop industry projections.

The weighting ensures that, for example, if a large money-center bank were strongly committed to imaging, it would be considered proportionately more significant for establishing an industry trend than a similar response from a smaller bank.

All data represent estimates for the U.S. commercial banking industry as a whole. For a large variety of questions on this survey, the statistical validity of the results will vary based on the number of respondents who answered that particular question, the degree to which their interpretation of the question was consistent with others, the structure of the particular question, and the degree to which the distribution of the respondents answering the question is representative of the distribution of the population at large. □

The one secure investment more than 60% of U.S. financial institutions agree on.

Most U.S. financial institutions agree that an ATM isn't just a purchase, it's an investment. That's why more than 60 percent of those that have ATMs have invested in ours.

At InterBold® we've always built our ATMs to last. But since we're continually developing new technologies, we made them adaptable, too. Years ago we created the industry's first and only modular ATMs that could be upgraded without changing the housing. Today these ATMs are still yielding dividends for their original investors. And our latest line of modular ATMs, the i Series™, also promises unsurpassed growth potential.

But we do much more than protect your investment. With more than 130 years of security expertise, we make sure your ATM is secure, too. Our service organization responds 24 hours a day, 365 days a year. And all of our service engineers are trained to maintain everything from electronic components to security features. So you can make one call for all of your maintenance needs.

It's no wonder the majority of U.S. financial institutions use our ATMs. They know their money's in a secure investment.

The Back Office: Systems

Image Processing Rolls On as Banks Reap Benefits

BY JEANNE IIDA

IMAGE PROCESSING, a technology that promises to level the mountains of paper bankers have to cope with daily, has only just begun to pay off for a few of the banks that have installed it.

Viewed as costly and time-consuming to install, image processing is nevertheless slowly gaining ground in paper-intensive areas such as check processing, mortgage origination, and consumer and commercial lending.

Banks are using image capture technologies to perform one of two basic functions: high volume transactions such as check processing, where thousands of items must be handled quickly, or storage and retrieval in areas such as mortgage applications, consumer loans, or letters of credit.

According to the 1993 *American Banker*/Ernst & Young Survey of Technology in Banking, more check imaging projects have been completed, and more are in progress, this year than in 1992.

Bankers believe that besides slashing costs, imaging will lead to increased fee income and improved service

Thirteen percent of those questioned said they had completed projects to install check image processing systems in 1993, compared with just 4% in 1992. More banks, 27%, said they had imaging projects in progress in 1993 than in 1992, when 20% said they had such projects under way.

All banks said they were at least considering installing image processing. In 1992, 2% said they were not.

1991 was actually the breakthrough year for check image processing. Huntington Bancshares Inc., Columbus, Ohio; Comerica Inc., Detroit; and Signet Banking Corp., Richmond, Va., began processing high volumes of checks through systems that use check images for the purpose of proofing and encoding them.

Others, including First Chicago Corp., Fleet Financial Group of Providence, R.I., and First Tennessee Bank, of Memphis, produce statements for consumer and corporate customers that contain the images of checks rather than paper checks themselves.

Even BankAmerica, which alone of the biggest banks had decided not to rush into check image processing, said earlier this year that it would continue a check image processing pilot started by Security Pacific Corp., with which BankAmerica merged in 1991.

Bankers believe that image processing will not only cut expenses dramatically, but also help them generate fee income and improve customer service.

"The real payoff in image is not the expense cut, but the additional product development that it makes possible," said Rick Sellers, president of Huntington Treasury Management, the processing arm of Huntington Bancshares.

Check processing, the more complicated and costly image technology, has garnered the most attention over the past year. Bankers believe they can save millions of dollars using image processing to speed the check sorting, proofing, and encoding processes.

But the technology is limited to the highest-volume facilities of the biggest banks. Smaller banks have the option of outsourcing their check processing to service bureaus, several of which already offer or plan to offer image processing services. So far, however, there have been few takers.

Banks that have actually taken the image processing plunge say now that they are capturing images, the technology is starting to change their business in unexpected ways.

The banks say that the potential for new products and improved customer service based on faster processing is the real boon, although they are reluctant to discuss the nature of the new products.

Consultants say imaging also could make it easier for banks to share check processing facilities, because accelerating the work flow it can get the work out the door faster.

The technology for high-speed check image processing is still new. The first machines able to decipher handwritten amounts were installed at banks in 1992.

More advances in technology are expected next year. International Business Machines Corp., which hit numerous snags in developing its image processing platform, has begun to deliver crucial pieces of software. Its leading test bank, Mellon Bank Corp., Pittsburgh, expects to be operational by early next year.

Unisys Corp. plans to introduce new products that will enable banks to put check images onto a CD-ROM, a high-capacity data disk, making them easier to transfer.

Huntington, Comerica, and Signet say that image processing has cut their check processing costs, improved processing time, and given them better funds availability.

Huntington says it has met its goals for imaging, and has cut the encoding staff in its main Columbus processing center by 20%.

Comerica and Signet have found it easier to consolidate check processing centers as a result of their imaging systems. Signet has eliminated three of its five centers since 1991, and expects to save $6 million to $7 million in check processing costs over a five-year period ending in 1995.

But converting to an image-capture system is a time-consuming process, and banks have had to iron out kinks.

"You learn a new class of exceptions that tend to make you inefficient or cost you money," said one check processing executive, who asked not to be identified. "In the old check world, we had them down to a science, but now we're trying to find new tools to understand the process."

The use of file folder technology is also on the rise. Advocates of the technology say that such systems could be used to eliminate paper throughout an organization. But to date, most of those banks using the technology are still testing it in small, self-contained areas. Wachovia Corp., Winston-Salem, N.C.; and PNC Bank Corp., Pittsburgh, are among the leading banks installing file folder systems.

Until recently, "banks haven't known how to get involved in imaging," says Frank L. Zaubi, a group executive in the operations division of Wachovia. "They've had to buy huge processing systems. We've searched for smaller ways to get involved."

Wachovia has three imaging projects under way: one to develop an advanced wholesale lockbox system, one in retail banking, and one in check processing.

"Imaging allows you to look at all the processes you go through and really redo the process," Mr. Zaubi says. Wachovia will create electronic images of the thousands of checks received daily at its wholesale lockbox sites, using the images instead of paper for work flow, storing, transmission, and retrieval of information.

The project, still in test phases, will go into production late this year, Mr. Zaubi said.

Wachovia also has an ambitious project to install what will eventually be a central repository of images for its retail bank. In July, the bank plans to roll out the image system to a handful of branches.

There are currently 250 separate applications of file folder technology in banks, according to this year's survey, 50 more than the 1992 survey reported.

But it seems that banks are not installing file folder image systems as rapidly as they expected. The 1992 projection indicated 1,200 systems would be installed by 1995, a target unlikely to be reached at current rates of installation.

Of banks questioned, 47% said they had already installed, or planned to install, imaging systems in the consumer loan area; 30% said they would install imaging in the credit card area; 29% in mortgage loans; 29% in trust; and 23% in commercial loans. □

They should get to know our name.

We're Fiserv. The fastest-growing independent data processing company serving the financial industry, serving over 5,000 financial institutions worldwide. We specialize in multiple solutions, ranging from in-house, service bureau, resource or facilities management to performance analysis, electronic banking, item processing, business forms and card management.

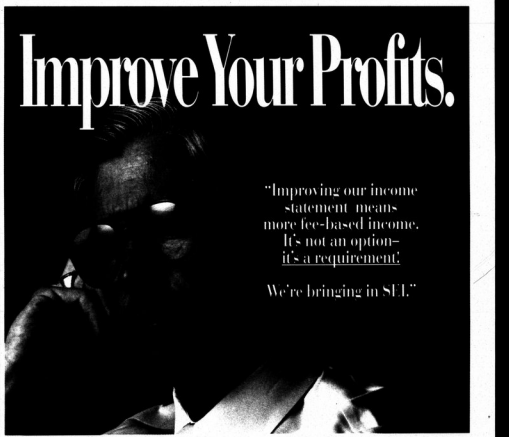
And with over 5,100 dedicated employees, Fiserv has earned one of the highest client retention rates in the industry.

We're big enough to handle all of your data processing needs, or handle only those you need. For more information, call 800-872-7882.

Fiserv

The people behind the processing.

Improve Your Profits.



"Improving our income statement means more fee-based income. It's not an option– it's a requirement."

We're bringing in SEI."

It's very basic. To keep your profits growing, you need more fee-based income. And to stem the outflow of your depositors' money, you need investment programs.

And you need those programs now!

SEI can deliver a variety of investment programs and services for your individual and corporate customers. Through your branches, brokerage, private banking, and trust departments. One or all.

And we'll help you with all the program components – the products, the marketing, the distribution, and the technology you need to support these programs cost-effectively.

We'd like to be your partner in building your fee-based income. Because we both have the same objective for your bottom line: Improve Your Profits!

About SEI

SEI has been dedicated to creating comprehensive investment programs for over two decades, focusing on the following areas:

Investment Products and Programs ($35 billion in assets): mutual funds, proprietary funds, annuities, and bank-wide investment programs.

Full Planning and Consultation Services: marketing planning, program definition and implementation, as well as full training and sales support.

Investment Management Technology: trust accounting, defined contribution recordkeeping, mutual fund accounting, and retail support systems.

For more information, call 1-800-DIAL-SEI (342-5734).

Consumer Banking: Delivery Systems

Home Banking, Once a Stepchild, Now a Favorite Son

BY WILLIAM PESEK JR.

CONSUMERS MAY finally be inviting banks into their homes.

Until now, home banking has never really got its foot in the door. But 10 years after the first remote access system was introduced, banking from home is on the rebound, according to the latest *American Banker*/Ernst & Young Survey of Technology in Banking.

Well over half of the industry currently enables its customers to bank from home – a fundamental shift from last year's reading, when half of the industry gave home banking a thumbs-down, according to the survey.

"We're seeing a fundamental shift in bank delivery," said Sean W. Kennedy, president of the Electronic Funds Transfer Association, Reston, Va. "There's no doubt that the industry is experiencing a redefinition of distribution services that are sure to take hold this time around."

Why the sudden pickup in home banking experiments?

The answer has much to do with the current climate of the industry. More than ever, banks are dead set on offering the newest in customer convenience, while at the same time stripping operational expenses to the bone. For the first time, home banking is becoming a viable alternative to staffing existing branches or breaking ground for new ones.

"It's the riddle of the sphinx," said Chris Armstrong, executive vice president at Maryland National Corp., Baltimore. "The riddle is that consumers want time/place convenience and banks want to do transactions cheaper. The industry is realizing that offering services from remote locations is in fact the way to do that."

There are many reasons why home banking has had such a checkered past. Technologists are quick to blame high production costs and the inability to penetrate the consumer banking market.

"There was no real plan to effect a change in delivery strategies, and banks didn't make the kinds of investments needed to break into the market," said William M. Randle, executive vice president at Columbus, Ohio-based Huntington Bancshares Inc.

Perhaps the highest profile pairing – and failure – of late was Huntington's partnership with American Telegraph and Telephone Co. to develop the Smart Phone. The much-ballyhooed project bit the dust earlier in the year – yet another setback for home banking.

Despite the dismal track record, home banking experiments are again moving to the fore, even at Huntington.

According to Mr. Randle, the $14 billion-asset bank is still very much in the game.

"We're moving forward with discussions with outside firms and fully expect to bring a project to market before the end of the year," he said, adding that the effort would be phone based.

However, PC-based access systems are still the medium of choice for most banks, according to the survey.

The survey found that the bulk of the home banking projects already completed were geared toward PC users because of the dwindling costs of the machines and their increasing ease of use – not to mention that 26 million Americans own and use PCs in their homes.

Thus, PCs have generally been an attractive medium for banks to work with.

The most common type of PC link for home banking is still via networking services such as Prodigy. Of the banks currently offering PC access to bank products and services, about 66% use services like Prodigy or Compuserve, while 55% provide direct access to the bank.

Now that PCs have clearly been established as banking tools, technologists agree that the telephone is the next frontier.

"It makes sense for the telephone to be the next target for banks, given that everyone knows how to use it and everyone is willing to use it for other functions," Mr. Kennedy said.

New banks are marketing more affordable home banking phones than ever before.

The $16 billion-asset Maryland National, for example, offers its Online Home Banking Service, which consists of a special phone that sells for $68.95 and $6.95 monthly fee to access the service. The phone displays information on a four-line screen.

Other banks involved in home banking by telephone include Banc One, Boatman's Bank of Tennessee, and Bank of Boston.

Although some telephone banking projects have failed in the past, bankers are more excited about the prospects now. The reason? Developing intelligent telephone banking systems should be easier this time around because the systems will be largely based on research derived from earlier, failed efforts.

"The industry has learned from the mistakes of the past and is building a base" on which to grow, said Huntington's Mr. Randle.

Much of the research and development for both hardware and software has already been done, and the costs amortized. Thus, many of the home banking phone units currently being offered are much less expensive than their predecessors.

"The industry has found a way to ride some existing rails," Mr. Armstrong said. "The ATM switch, for example, is a set of electronic railroad tracks that banks don't have to create now. The technology was already there. It was just a matter of refining it."

The biggest question mark looms over the future of television banking. The survey respondents were lukewarm about the idea. Just 2% of them indicated that such projects were in progress, and a scant 9% placed a high priority on them for the future. More importantly, a whopping 68% said they were not considering this medium at all.

Bankers say part of the problem is that television banking units – such as one marketed by TV Answer Inc. – require consumers to embrace a new technology.

"Because some of the television-based offerings out there require users to put another box on top of their TV, many consumers may be unwilling to go for it," said Greg Schmergel, vice president of the Tower Group, which analyzed the 1993 technology survey results.

Meridian Bancorp, Reading, Pa., is one of a handful of institutions experimenting with television banking. The bank was the first to sign up with TV Answer to provide bill payment, funds transfer, account balance, and other banking services over the system.

"There's been a change in the way people bank," said Michael Ritter, assistant vice president of electronic banking at the $11.8 billion-asset bank. "Historically the bank has told the customer how to bank. Customers are starting to tell us they want to bank by phone and by TV."

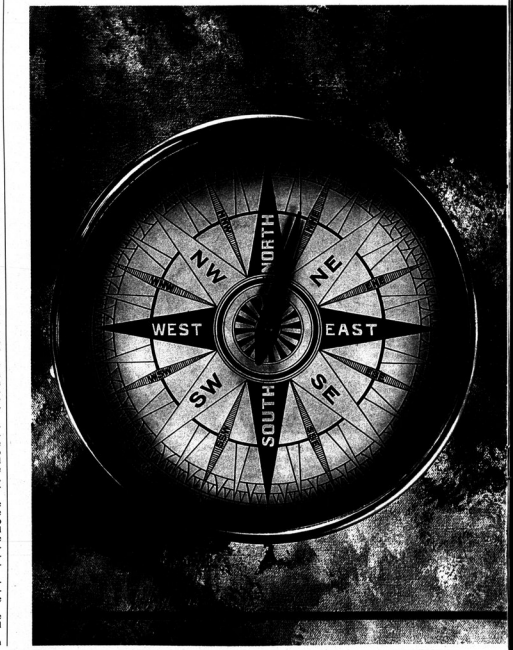
What makes Meridian's television access system different is that information and transactions are relayed over a radio network, rather than over a cable television system.

"We're offering TV banking to provide our customers with yet another way to do business with us," Mr. Ritter said. "It allows us to target people who do not subscribe to cable and who do not wish to pay a large premium every month just to do their banking."

According to the National Cable Television Association, 60% of Americans subscribe to cable systems. As Meridian sees it, that leaves a sizable chunk of the market to target with its wireless television banking system.

Bankers agree that there are still bumpy roads ahead. One problem that is sure to come up again is market penetration. "We still haven't gotten over the penetration hurdle. A big issue is people still don't want to pay a lot for these systems," said Mr. Armstrong of Maryland National.

But like most bankers, Mr. Armstrong philosophizes that cheaper units and the customers' never-ending quest for convenience will make banking at home a logical choice. After a number of high-profile fits and starts in recent years, it looks like home banking may be here to stay. □



Home Banking Gets a Foot in the Door

Percent of industry with options for consumers to bank from home

Introducing FBA Navigator.

At last, retail delivery can point revenue in the right direction.

Enhanced customer service can steer your bank towards an enhanced bottom line. And that's the inspiration behind the Unisys FBA Navigator solution.

The FBA Navigator solution is the first truly comprehensive approach to retail delivery improvement at every level—improvement through business consulting, information technology consulting, planning, new application development tools, and new open platform flexibility.

Experienced Unisys banking experts will help provide solutions promoting the rapid introduction of competitive new offerings at the branch level—revenue-generating offerings responsive to customer needs for accurate, timely information. It all reflects decades of service to banking and our pioneering initiative for business—CUSTOMERIZE. By helping CUSTOMERIZE your organization, Unisys fully extends your information capabilities out to the points of customer contact, turning customer service into a strategic advantage.

What's more, the FBA Navigator solution accommodates a variety of development environments and supports open hardware and software, including DOS/Windows, UNIX, and CTOS platforms. This provides your bank with unsurpassed flexibility to create and deploy CUSTOMERIZED products and services matched to your requirements and existing investments—products and services easy to maintain through advanced, object-oriented programming.

Call us at 1-800-874-8647, ext. 18. Ask us to help you guide relationship banking to revenue-generating territory at the retail level.

UNISYS
We make it happen.

Outsourcers Are Getting More Action, Picking Their Spots

BY WILLIAM PESEK JR.

WITH ONE EYE ON cost cutting and the other on the latest technology, bankers are increasingly looking to outside firms to handle at least some portion of their information processing burden.

While many banks have tapped the resources of outside vendors to augment areas that are not strategic to their core businesses or where internal capabilities are lacking, there are indications that the nature of outsourcing may be changing.

Statistics from the *American Banker*/Ernst & Young 1993 Survey of Technology in Banking indicate that banks increasingly favor partial outsourcing, rather than the all-encompassing agreements that were in vogue a few years ago.

"Banks have realized that by outsourcing certain functions or lines of business they can get economies of scale without outsourcing everything and giving up control over their operations or their ability to differentiate themselves to customers," said William T. Gregor, senior vice president, financial services practice, Gemini Consulting Inc., Cambridge, Mass.

The argument in favor of outsourcing remains clear. A bank involved in a number of different lines of business faces the arduous task of developing software and expertise to support each one. Instead, many banks have found they can achieve significant economies of scale by hiring outside firms to handle these tasks for them.

Staying current is another concern. Staffing each operation and stocking it with the latest in technology can be a hefty drag on a bank's bottom line.

Survey results, which cover the 300 largest banks, show that 15% are currently outsourcing all data center operations, a scant increase over 1991.

Outsourcing by line of business, meanwhile, showed stronger growth, including credit cards, mortgages, trust, and automated teller machine support.

This shift in strategy may have to do with the tough lessons of the recent past, when many banks signed long-term contracts with vendors and later regretted it.

"With a lot of outsourcers you get the plain-vanilla version," said Fred Gronbacher, senior vice president of operations at Pittsburgh-based PNC Bank Corp. "Your flexibility is restricted when you outsource anything."

Given that perspective, a bank may be reluctant to sign away control of its data center, even with the prospect of large cost savings. Instead, banks are outsourcing bits and pieces.

One institution that maintains such a mix-and-match strategy is Republic New York Corp.

"For a major financial institution outsourcing everything would be a mistake and would create an uncomfortable situation," said John M. Scopaz, president of Republic Information and Communication Services, the bank's technology arm.

The $37 billion-asset bank is no stranger to outsourcing. Republic has been outsourcing data processing of its retail banking area to Systematics Information Services Inc., Little Rock, Ark., since 1982.

More recently, the bank enlisted Electronic Data Services, Plano, Tex., to operate its national telecommunications and network management services.

PNC has blazed a similar trail with regard to outsourcing. The $51.1 billion-asset bank has turned over its mortgage processing tasks to Computer Power Inc., Jacksonville, Fla.

"We will only outsource areas we consider to be nonstrategic and noncritical components of the bank," Mr. Gronbacher said.

Customer satisfaction also is a hurdle that some vendors have traditionally had trouble clearing.

While bankers are generally loath to call an outsourcing decision a mistake, they are equally unwilling to express complete satisfaction with their vendor arrangements.

"We're moderately satisfied with our agreements," Mr. Gronbacher said.

The survey indicates that just 10% of those outsourcing were "very satisfied" with the cost savings realized from their agreements, while 7% were "very dissatisfied."

In the area of new enhancements, slightly more banks were dissatisfied than satisfied, with 6% "very dissatisfied" and 5% "very satisfied."

Republic places itself in the satisfied group. While the bank has no immediate plans to hire out other processing functions, Mr. Scopaz said it would probably stick with Systematics and EDS.

"We're not looking to expand the scope of companies in the future," he said.

With a cooler business climate, vendors have had to pay closer attention to the diverse needs of their clients.

"In the last couple of years we've been pretty flexible in making contracts," said Coley Clark, corporate vice president and group executive at EDS. "We've done a lot of readjusting on the fly."

Systematics has taken a similar tack. "We're positioning ourselves to be able to offer a variety of services, from complete to one application at a time," said Doris Krain, a vice president.

Computer Power Inc. also is on the bandwagon. According to Linda Simmons, executive vice president, the vendor has come up with systems that provide for continuous updating, to take advantage of future hardware and software innovations.

There also are banks which have paid little heed to outsourcing's naysayers. Perhaps the best example is Continental Bank Corp., Chicago, which raised eyebrows three years ago when it outsourced all of its information technology processing to Integrated Systems Solutions Corp., a subsidiary of International Business Machines Corp.

Prior to that arrangement, the $22 billion-asset bank outsourced its legal operations, internal auditing, warehouse, courier service, building administration, and cafeteria.

Continental seems to have no problem entering into long-term agreements with vendors either. The bank's contract with ISSC is for 10 years.

"Our search for outsourcing has been for efficiency, better quality of service, and to save money," said Richard L. Huber, vice chairman. "We know that concerns have been raised about the loss of control when you outsource everything but we looked for a firm who could do the job. We matched up cultures and figured out who could do the job."

Hibernia Corp., New Orleans, is another institution which has found reasons to go the outsourcing route. Hard times in 1991 put the bank on the lookout for ways to cut costs and improve efficiency.

The $4.6 billion-asset bank hired ISSC to manage its mainframe systems and handle deposit-account and loan processing. M&I Data Services handles trust processing.

"For us it's a cost issue but the question is do you have the faith that the deliverer of the products will keep it current and deliver you the service that's going to enhance your services or damage your services? We're comfortable," said Kirk Domingos, executive vice president.

There also are banks looking to get in on the outsourcing action. Survey results indicate that 75% of banks offer some type of outsourcing service.

Los Angeles' First Interstate Bancorp, for example, offers corporate cash management and treasury services to other banks. "We offer these services as a full service bank to our downstream correspondents," said Jan Cloyde, executive vice president.

Also offering cash management services to other banks are Citicorp, Chase Manhattan, CoreStates Financial Corp., and Mellon Bank Corp.

With lean and mean looking increasingly like the shape for the 1990s, banks are likely to continue to tap the skills of third party providers.

"With outsourcing becoming a more attractive means to do what banks need to do, banks should increasingly look for it," said Mr. Gregor. □

The Back Office: Systems

WHAT TECHNOLOGY project will you spend the most on this year?

CHARLES L. PEDERSEN
Executive vice president
Union Bank
San Francisco

UNION BANK'S TECHNOLOGY
spending plans are consistent with those of previous years and reflect increased employment of technology to produce cost, product, service, and risk management benefits. Our consistent strategy is to find increased central and end-user efficiencies to fund technology investments. Increasingly, end-user efficiencies are justifying investments.

Specific investment areas in the next 12 to 18 months include reengineering commercial and consumer loans and deposit-related servicing, using PC/LAN technology; employment of image technologies; and greater investments in telecommunications services, digital telephone services, and a standard customer interface. ■

TED PETERS
Chief executive officer
National Bank of the Main Line
Wayne, Pa.

WE'RE INVESTIGATING A CASH
management system. We've just begun the investigation process, so I don't yet know what the price tag will be.

We're doing this because it's another way to serve our small-business customers. We want to offer sweep accounts and other cash management services that up until now have been available only to larger corporate customers. We perceived a need for this service among small businesses with sales of up to $5 million, and we intend to fulfill that need. ■

GORDON S. CRIMMINS
Senior vice president
NBD Bancorp
Detroit

NBD BANCORP'S LARGEST
technology expenditure in the next year will be upgrading our mainframes. We're just powering up to provide better response time and to anticipate an increase in volume. This will affect the retail areas the most, as we consolidate the primarily retail-oriented banks we acquired last year and standardize our product lines throughout the NBD franchise. ■

How ArgentBank is exceeding customer expecta

EDS

"EDS helps us give our customers services they might not expect from a small community bank," says Randall E. Howard, president and CEO of ArgentBank, formerly First Interstate Bank of Southern Louisiana. "Our customers are delighted. And so are our shareholders. Our stock soared from $48 to $89 per share in its first nine months on the NASDAQ.

"With EDS, we can offer services that customers frequently expect to find only at much larger banks. Services such as overdraft protection, automated deposit validation and a preapproved credit line activated by simply writing a check. EDS has also helped us better manage rapid growth due to mergers, without disrupting customer service. And they continue to help us better manage costs. For example, in one of our departments they provided us with a way to cut labor costs by more than 200 percent.

"Information technology from EDS is definitely one of the most important tools we have."

Information technology can be a powerful tool for your business, too. EDS is the world leader in applying information technology. To learn how we can help you, write to EDS, Financial Industry Group, Marketing, 5400 Legacy Drive, B5-2B-15, Plano, TX 75024. Or call us at (800) 433-4055.

EDS is a registered trademark of Electronic Data Systems Corporation. © 1993 EDS.

RICHARD C. TUCKER
Chairman
Tri-State Bank
Denver

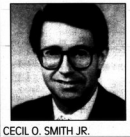
WE'RE PUTTING PERSONAL
computers at all our teller stations so that the branch employees can call up customer files directly from the mainframe. We're also upgrading our mainframe.

Our technology expenses for the bank this year, including software, will be around $200,000, which is about 7.4% of our entire budget. ■

AL GULA
Executive vice president
Society Corp.
Cleveland

OUR BIGGEST PROJECT THAT WILL BE
completed this year is the automation of our customer service area. We've been developing a customer service system that supports voice response, but also provides the customer service representatives with the historical account information they need to answer customer queries.

All of this is being rolled out under our new "quality" banner. The initial rollout will be on the retail side, but by next year this system will also support trust, commercial, and all our other lines of business. ■



CECIL O. SMITH JR.
Senior vice president
Wachovia Operational Services
Winston-Salem, N.C.

IN 1993, WE'RE CONTINUING OUR
normal trend in making investments in our technology infrastructure and delivery of our technology. Our biggest investment will be in systems development.

These investments, including client-server systems and imaging applications, will be used across all lines of business: trust, corporate, retail, mortgages, bank cards, and operations. ■

PETE DYKEMA
Senior vice president
Norwest Technology Services
Minneapolis

OUR BIGGEST TECHNOLOGY
spending project is platform and branch automation. We are putting more power and more information on the personal computers our tellers, branch employees, personal bankers, and customer service representatives use. We are rolling out new software and getting rid of our old dumb terminals and instead using PCs linked to the mainframe.

The new system will be friendly and helpful to the users. It will assist our branch personnel in increasing sales, because with the information they will have in front of them, they will be able to play what-if games and help the customer figure out what he or she needs. ■

"EDS helps our small town bank

tions and carving out a profitable market niche.

offer customers big city services."

Make the Vendor Your Partner to Succeed with Outsourcing

BY RICHARD K. CRONE

IN AN EFFORT to reduce costs and improve use of technology, many banks are turning to outsourcing – contracting with an external firm to assist with daily data processing activities. While outsourcing can be of substantial benefit and convenience to a bank, it does not relieve a financial institution of its innate responsibility to manage its information technology.

Successful outsourcing involves a partnership between the bank and the contractor organization. The arrangement should meet the long-term information needs of the bank, but not at the expense of letting the outsourcer dictate the bank's technological direction.

To achieve this balance, the bank's senior management – as well as the operations management responsible for the actual outsourcing conversion – must be committed to a new set of individual performance standards and evaluation criteria.

These should focus on three areas:

- Prerequisites for successfully converting to outsourcing.
- Service level requirements for meeting the bank's data processing needs.
- Development of technological plans that support the strategic business direction of the bank.

Outsourcing is an inherently risky strategy. To mitigate this risk, banks should develop detailed project plans outlining the entire conversion process. Such plans should detail the tasks, resources, work effort, time frame, dependencies, and milestones required to successfully convert to outsourcing.

A product of the conversion planning process should be standard documentation that includes such items as:

- Detailed tasks – duration, work effort, resources, and dependencies.
- Start and stop times for the major phases or functional categories of the conversion.
- Tasks by week – activities that must be started or finished in a given week to keep the conversion on schedule.
- Milestones – benchmarks identified by responsible individuals, including the completion date.

Savvy negotiators develop the detailed project plans before entering contract negotiations, and also insist on linking the conversion plan and its into individual performance plans.

This action will not only motivate staff to complete critical conversion activities, but also provide management with ownership of the conversion inside the bank.

Conversion plan items that would typically be incorporated into the operation manager's individual performance plan include:

- Gaining agreement from the user departments, vendor, and other parties as to the resource requirements, time commitments, and milestones specified in the conversion plan. Adherence to the conversion plan's milestones and critical completion dates can provide measurable criteria for the operations manager's performance plan.
- Collecting from each department an idea of what it expects from the vendor and facilitating the agreement of those capabilities in the contract between the bank and the vendor.
- Reviewing, documenting, and gaining user department agreement on operational changes needed to take full advantage of new system features.

Use of an outsourcing firm does not eliminate the bank's responsibility to meet its service level requirements

critical milestones to tough penalties for inadequate performance. This provides the vendor with a monetary incentive for a successful conversion.

Management should also offer incentives to key members of the bank's conversion team by incorporating those same critical conversion activities

Richard K. Crone

If productivity improvements are anticipated, the quantitative improvements should be specified in the user department and operations manager's individual performance plans.

- Developing training programs for the operational changes necessitated by outsourcing and planning a training schedule. To quantify performance in this area, the measurable items can be the training schedule itself, attendance records for the training sessions, and policy and procedural changes to the organization's set of user documentation.
- Developing and using test scripts, bank control records, and software acceptance tests. These tests are needed to verify system integrity before, during, and after the outsourcing conversion. Again, to quantify performance in this area, the measurable criteria can consist of the published test scripts and audited use of these materials during the development and implementation phase.

The most important measurement, however, is successful completion of the outsourcing conversion.

Achievement of this criterion should be rewarded by a significant bonus for the operations manager, as well as for the staff responsible for the conversion.

The riskiest part of outsourcing is the uncertainty that surrounds meeting the bank's data processing service levels. Outsourcing, by its very nature, implies reliance on the outside supplier. However, use of the outsourcing strategy does not eliminate the bank's responsibility to meet its service level requirements. Management cannot simply point a finger and blame the outsourcer for nonperformance.

As noted earlier, the most successful outsourcing relationships are approached as partnerships. As with any partnership, incentives for performance should be applied to all parties involved in the outsourcing relationship.

Once again, savvy negotiators develop a detailed list of service level requirements and insist that the vendor's preprinted contracts be modified to include them. This same list of requirements can be used to enhance motivation inside the bank, by incorporating major items into the performance evaluation plan of the operations manager.

Elements to be incorporated into the operations manager's individual performance plan include:

- Delivery to the user departments the functional commitments they specified.
- Tracking of such key measures as system up-time, terminal response time, and related matters to ensure fulfillment of contractual service levels.
- Tracking problems and solutions to those problems: keeping a log of problem notification, steps taken to address the problem, and date the problem was solved.
- Responsibility for developing, scheduling, and ensuring attendance at training programs. (As with the conversion, training is important in maintaining operational proficiency for the line staff with the new system.)
- Report production and on-time distribution of reports. This includes the many standard daily reports that the bank relies on for operation, as well as the specification, development, and turnaround time needed to deliver custom ad hoc reports requested by management.

Because successful outsourcing is a partnership, the bank must continually work with its outsourcing vendor in charting the bank's technological future. The best way to accomplish this is to make the operations managers responsible for jointly developing the technology plan with the outsourcing partner.

Examples of observable criteria that senior management can apply to the operations manager's individual performance plan include:

- Scheduling, conducting, and documenting annual technology assessments with the outsourcing vendor. This assessment should be a department-by-department review. The objective is a functional-capabilities audit to determine the level of proficiency with the

The bank must continually work with its outsourcing vendor in charting its technological future

current system, enhancements needed to improve productivity or customer service, and future training requirements. Including the operations manager in the loop will ensure that the audit is completed in a high-quality fashion.

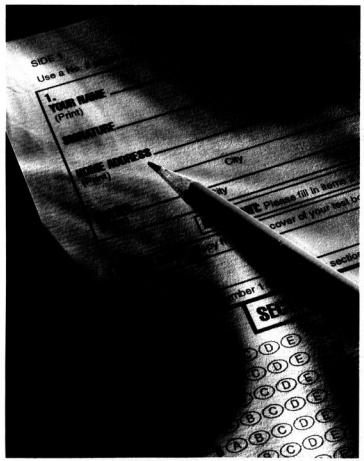
- Conducting an annual user-satisfaction survey. Completing such a survey and reporting the results to senior management is an easy, verifiable way to gauge the operations manager's performance. After all, the ultimate measure of how well the outsourcing vendor is managed is the perception by end-users of the system's worth.

Outsourcing a company's data processing functions requires the same vigorous effort and continued management of any critical outside supplier relationship.

Too often, however, banks will outsource with the intent of fully delegating the responsibility of information technology to an outsider, and will wash their hands of any data processing responsibility. This is a very risky approach that can put the bank at a competitive disadvantage.

The best way to ensure effective use of an outsourcing vendor is to incorporate key performance evaluation criteria into your operations manager's personal annual performance evaluation and review. When operations managers have some skin in the game, they are more likely to act as a motivating partner with the outsourcing vendor. □

Mr. Crone is a senior manager in KPMG Peat Marwick's financial institutions group, in Los Angeles. He specializes in evaluating, selecting, and implementing information systems and outsourcing services for banks, thrifts, and credit unions.



How Did Your Software Vendors Do On Their SATs?

*[*Service After The Sale]*

Is your software vendor there for you after the contract is signed? What if you run into a problem — can you make a phone call and get the *right answer right away*? What about after 5:00 p.m. and over the weekend? And what about two years down the road when you want to enhance your system to meet new corporate goals?

If you answered "yes" to these questions, you're probably one of the thousands of professionals using an SSI system for electronic funds transfer, securities recordkeeping, retail loan recovery, safe box accounting, mortgage lending, lease accounting, imaging, check processing, scoring or cash management.

For more than 22 years, institutions of higher earnings, just like yours, have chosen SSI as their software vendor. And for good reason. Our more than 40 software solutions for multiple platforms and client-server environments have routinely accomplished, and often exceeded, the expectations of our customers.

Our company motto, "You that would be greatest, let him be servant to all," (Matthew 20:26), serves as the backbone to all we do. Whether it's designing and documenting software or training and supporting customers, we're committed to our customer's complete satisfaction.

Put us to the test. Call (404) 840-1616 today and ask to see the scores on our SATs.

The Back Office: Systems

Industry Picks Up Technology Spending as Outlook Improves

Continued from page 1A

and a number of other systems development efforts, including branch automation, "file folder" imaging systems, and the implementation of artificial intelligence in the lending area.

"All expenses other than equipment are flat to down," said Mr. Gronbacher. "The investment in automation pushed us beyond our normal growth pattern."

Still, personnel remains the single biggest line item in most technology departments. According to the study, 37% of the typical bank technology budget pays employee salaries and benefits, 28% is allocated to hardware, 11% goes to voice and data communications, 10% to software, and 7% to external services.

However, consolidation within the industry may soon change those ratios. That is occuring at Banc One Corp., the Columbus, Ohio-based holding company that is often viewed as the model of the acquisitive institution, taking over banks and converting them to common products and systems.

Reports of the demise of the mainframe, if not greatly exaggerated, were at least premature

"Our central computing resources, CPUs and related storage, are growing at a 20% to 30% annual rate. But there is less staff required as we convert to common systems," said Dale Terrell, senior vice president of information services at Banc One Services Corp., the technology arm of the $70 billion-asset bank.

The demand for both mainframe and desktop computing power continues to grow at financially sound larger banks such as PNC and Banc One. It seems that reports of the demise of the mainframe, if not greatly exaggerated, were at least premature. "Our legacy systems will be around for quite some time," said Mr. Gronbacher of PNC.

Mainframe costs are being mitigated somewhat by changes in the fees that International Business Machines Corp. charges for its mainframe operating systems. Previously, the annual cost of a given operating system license was based on the size of the computer on which it ran.

"IBM has reversed that trend. The pricing is much less onerous and has resulted in a substantial cost reduction," said Mr. Gronbacher.

Personal computers are another story. Prices on PCs, software, and peripherals continue to drop, and banks are adding such equipment at a substantial rate. PNC, with about 7,000 PCs installed, will probably add 2,000 or 3,000 PCs this year, according to Mr. Gronbacher.

At Banc One, the deployment of PCs is often driven by projects within the various business units. Mr. Terrell said PCs and local area networks are currently being added in lending operations, finance operations, and mortgage origination.

"Personal computers and local area networks are almost a hidden cost, because they are not as centrally controlled," said Mr. Terrell of Banc One. He estimates the PC and LAN count within Banc One is growing at a 25% annual clip.

This year, for the first time since 1990, technology spending will outpace inflation

"There is a realization that we need to manage and control that growth," Mr. Terrell added.

As part of that effort, Banc One has begun negotiating enterprise licenses for PC software. Instead of buying hundreds of individual copies of Microsoft Windows or Lotus 1-2-3 through retail channels, the bank pays a single fee directly to the vendor for the use of a given software program.

"You're going to see a lot more of those," predicts Mr. Terrell.

Even with tighter controls, the industry has a problem identifying exactly where its dollars are being spent. The study shows that on a line-of-business basis, 21% of the technology dollars fund retail deposit gathering and accounting.

This year's survey added a new line item, "shared infrastructure/unallocatable." That was the second-most-popular response to the spending by line-of-business question, at 16%, followed by consumer lending, trust, capital markets/treasury, corporate lending, and cash management.

"That figure shows how difficult it is to allocate expenses accurately," noted Greg Schmergel, a Tower Group vice president who worked on the study.

"On a given project, of course, there is an effort to determine who is the sponsor, where the ownership lies," said Mr. Terrell. "In situations where that isn't possible, those expenditures have to be approved by the executive committee and the CEO."

Bankers are also trying to get a better handle on product profitability. More than 40% of all banks surveyed can measure profitability by line of business, 37% measure branch profitability, 32% measure by product, and 24% can measure customer profits.

PNC, for example, has been involved in a joint development effort with one of its applications software vendors, Hogan Systems Inc. of Addison, Tex., to develop profitability analysis system.

"We can analyze the data in a number of ways – by product, by market, by customer – moving it around like a Rubik's Cube," said Mr. Gronbacher. "We can move around our markets and look at them differently."

Another new technology attracting attention is file-folder imaging. Bankers have been discussing the use of imaging for more than a decade, and there are a handful of banks using image-based check processing systems.

But file-folder imaging takes another step closer to the mythical "paperless office." PNC plans to test the concept in one or more lending applications.

"With file-folder imaging, the thinking is, don't create it [paper] in the first place, do everything electronically," said Mr. Gronbacher. "If paper is created, it should only be handled once, to be scanned into the system."

With all signs pointing to a resurgence in bank technology spending and development projects, there are some who feel banks might have loosened the purse strings a bit too quickly.

"I think the crux of the issue is that the pace of change within the industry has been slowed by the narcotic effect of the highest net interest margins in recent history," said Z. Christopher Mercer, president of Mercer Capital Management, a Memphis-based firm that specializes in valuing financial institutions and an author of a book on the subject.

Mr. Mercer recently published an analysis of the financial results of all commercial banks. His findings: Personnel expenses and noninterest operating expenses continue to rise within the industry, meaning that expected gains in efficiency from mergers and "re-engineering" projects have not yet been realized. In addition, most banks have failed to implement what Mr. Mercer calls "an across-the-board focus on profitability."

As a result, he concludes, the fundamental position of the industry has not improved markedly since 1989.

"When I put it all together, I was really surprised at the state of the industry," Mr. Mercer concluded. "I thought it had made more progress."

With spending and employment back on the rise, the bank technologists may be feeling more sanguine after the back-office bloodletting that marked the early part of the 1990s. But it may also be a brief respite if the industry is whacked again by a slumping economy. □

Turnaround: Technology Spending And Jobs Picture Healthier

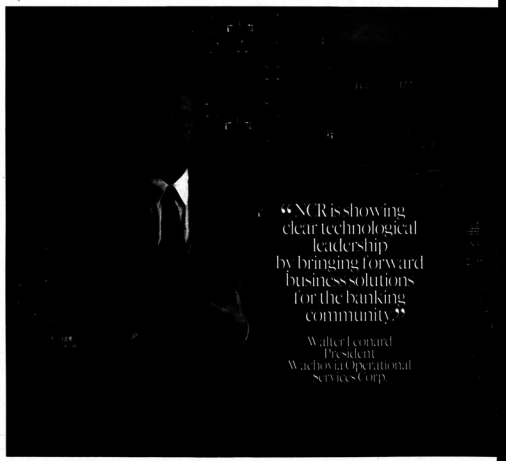
NCR's Financial Enterprise Architecture.



"NCR is showing clear technological leadership by bringing forward business solutions for the banking community."

Walter Lomard
President
Wachovia Operational Services Corp.

Delivering Business Solutions Across The Enterprise.

Look out across your widespread operations, and consider the benefits of bringing it all together into one fluid, enterprise-wide business solution.

A solution where information – in text, audio, video and image form – flows freely to those that need it. Where customers get instant answers, convenient access and uncompromised service.

A solution where products can be developed and deployed quickly. Where your systems can easily evolve and respond to your business plan. And where real time information from across the enterprise is delivered to you in decisionable form.

NCR's Financial Enterprise Architecture (FEA) is a flexible blueprint that can make this vision real by incorporating the products, expertise and guidance necessary to plan and build your enterprise solutions.

If you would like to learn more about the benefits of having NCR as your strategic partner, contact your NCR representative, or phone 1-800 CALL NCR for a copy of our extensive Financial Enterprise Architecture brochure.

AT&T | NCR An AT&T Company

©Copyright 1993 NCR Corporation

NCR System Automates Delinquent-Loan Process

NCR's Data Services Division introduced a Windows-based software system to automate and simplify the collection of delinquent loans for financial institutions.

Designed for community banks, credit unions, and collection agencies, the PC-based system has a one-time license fee ranging from $4,500 for one user to $12,000 for six to nine concurrent users.

Users log all telephone contracts, promises made, and actions into the system. It provides a follow-up mechanism that automatically flags all delinquent customers. For users with modems, the system will automatically dial telephone numbers and indicate in the message area that the collector has attempted a call.

NCR has its headquarters in Dayton, Ohio.

Encryption Unit For Homes Tested

Ised Corp. is currently testing a security encryption device that allows consumers to perform credit, debit, and other transactions from existing home telephones.

The compact unit is designed with a key pad and card swipe. By attaching it to a telephone, consumers can transact business from their homes by swiping the credit, debit, or speciality card through the device and entering a personal indentification number. It can also be used from personal computers.

Initial applications include home banking services such as bill payment, funds transfer, balance inquiry, and credit payments. Eventually, the company expects to incorporate the device into screen-phones and interactive television equipment.

The product is scheduled to be released by the third quarter and will be priced less than $50. Design and engineering are being done for Ised by Nisobrara Research and Development Corp., a Joplin, Mo.-based company that specializes in encryption systems.

Electronic Financial and Information Services, a Clifton, N.J.-based division of Electronic Data Systems Corp., is currently establishing processing standards and procedures. The company will be the initial processor, using open industry architecture.

Based in Howell, N.J., Ised Corp. is active in on-line banking, audiotex, videotex, and telecommunications.

Claims Module By Stockholder

Stockholder Systems Inc., a Nynex company based in Norcross, Ga., released QuickClaim, an electronic data interchange module for its mortgage foreclosure claims software. The program helps lenders prepare, submit, and collect Department of Housing and Urban Development claims electronically.

Brandt Unit Finds Counterfeit Bills

Brandt Inc. introduced a new currency counter that counts and verifies bills in one high-speed pass. The unit uses a combination of adaptive inspection and magnetic ink sensing to identify counterfeit bills.

The Model 8643 currency counter operates as a stand-alone unit or interfaced to Brandt's cash settlement system. It is priced between $2,270 and $2,635.

Brandt Inc., is located in Bensalem, Pa.

Cash Management Aid from BankLink

BankLink Inc., a service bureau subsidiary of Chemical Banking Corp., released a cash management customer support system. The PC-based system provides a bank's back office staff with access to critical customer and service performance data. Representatives can handle customer setup and reporting; support for depository transfers, automated clearing house transactions, stop payments, and internal transfers; customer communications including electronic mail, surveys, and mailing list generation; management information reporting; and customer invoicing.

Software Checks Loan Compliance

RCG Information Technology has released Clouds – a comprehensive loan origination, underwriting, and determination system. Using artificial intelligence, the software can apply thousands of rules to a mortgage application to determine if mortgages are meeting federal and state policies. The key lies in the single point of entry for all data, which can then be manipulated against thousands of set rules and regulations. The system will support more than 600 standard forms and can generate custom reports.

The front end runs on any Windows-based personal computer. On the back end, the software runs on multiple platforms from Netware, Windows NT, Unix, and OS/2.

The automatic credit interface is priced at $30,000; for the artificial intelligence determination system, the price is $75,000.

RCG Information Technology, a $500,000-asset software consulting firm, is a wholly owned subsidiary of RCG International Inc., New York.

Module Measures Profitability

Treasury Services Corp., a consulting and software firm based in Santa Monica, Calif., released a reporting module for its Treasury Services Evaluation and Reporting software system designed to measure the profitability of business units, products, and customer segments. For financial managers, the module combines reporting functions with cost allocation capabilities to link general ledger, statistical, and customer account-level data.

The module is available under Windows and is being adapted for the Windows NT environment and client/server configurations.

Lockbox System's Images Enhanced

ImageScan Inc. has enhanced the image quality of documents used in its wholesale lockbox processing system. The company's Image Optimizer uses gray scale processing, which upgrades the readability of check images, especially ones that use colored ink or graphic backgrounds.

The system operates on Unisys check transports and a network of personal computers. The price starts at $7,500.

ImageScan is based in Lanham, Md.

ACT Digs Software For Workstations

ACT Financial Systems has released a version of its analytical software for traders, asset liability managers, and treasurers that can be used on Unix platforms run on the Sparcstation 10 workstation from Sun Microsystems Inc., Mountain View, Calif. The software had been available only for personal computers.

ACT Financial Systems Inc., a division of ACT Group, is based in London, with U.S. headquarters in New York.

Cash Management Link For Customers

Learned-Mahn Inc., Boise, Idaho, introduced a product that allows bankers to electronically deliver cash management services to customers. Called Bank-on-It, the software system is PC-based. It links banks directly with customers, who can perform a variety of tasks from their personal computers. The modular system includes such services as balance and statement reporting; automated clearing house, wire transfer, and electronic tax payment; and automated account reconciliation. Businesses can choose either a Windows or DOS-based system.

Capture-and-Fax Press Continental

Chicago-based Continental Bank, one of the country's leading treasury management banks, has teamed up with Data Management Products Inc. of Omaha to develop an image-based check capture and fax system.

The system, called Check-Fax, uses a personal computer and an NCR image processor. It automatically scans checks and drafts into the computer, validates the magnetic ink character recognition line, stores both the MICR line and check images, creates a data base of the images, and formats them for display and faxing.

Using Microsoft Windows and a mouse, bankers can call up the stored images on the PC and highlight the ones they want to fax. The system then dials the client's fax number and sends both a cover page and the images.

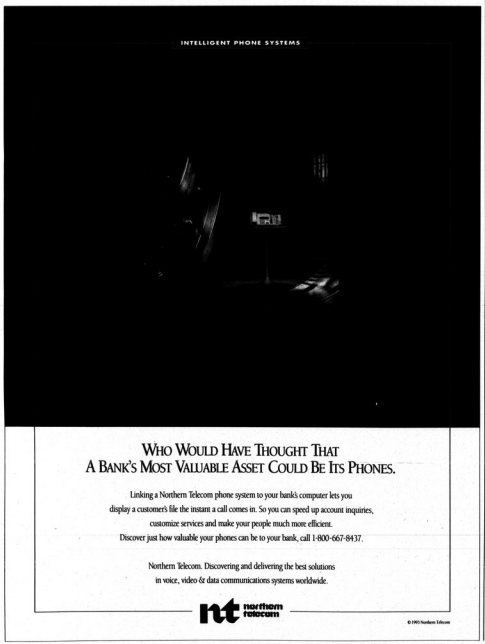
Data Management Products is a subsidiary of First National of Nebraska Inc., a bank holding company with more than $3 billion in assets.

Voice Automation For Credit Unions

Intervoice Inc. of Dallas introduced a turnkey voice automation system specifically designed for credit unions. The system automates member inquiries – for share, money market, CDs, IRAs, loans, and bank card accounts – that are more typically answered by a customer service representative.

Members can obtain account information such as balances, direct and nondirect deposit status, ATM transactions, withdrawals, dividends paid, automatic payments, interest paid to the account and accumulated on overdraft balances. Members can also calculate payments for loans.

Features such as a hearing impaired capability, speech recognition, and fax may be added to the standard system. Pricing for the basic system begins at $30,000. □



WHO WOULD HAVE THOUGHT THAT
A BANK'S MOST VALUABLE ASSET COULD BE ITS PHONES.

Contracts

Mellon Chooses System From Worth Information

Pittsburgh-based Mellon Bank has selected customer data base software from Worth Information Inc.

Terms of the agreement were not disclosed.

Using the new system, customer information can be distributed bankwide at $31 billion-asset Mellon. The system does not replace the main customer information files. It combines customer and account data from all of the bank's existing application systems to provide specific information about customer relationships, profiles, and profitability.

The system runs on standalone DOS PCs and on Unix and Novell servers in a distributed network environment.

Worth Information Inc. is based in Minneapolis.

Warwick Savings Going with Bisys

Bisys Group Inc. of Houston signed a multiyear outsourcing agreement with the Warwick Savings Bank, Warwick, N.Y. Bisys will provide data processing services for Warwick, which has $215 million of assets.

Scheduled for conversion this summer, Warwick will install management systems for finance, marketing, sales, reporting, and commercial lending. The bank also plans to implement the Bisys PC-based branch automation system.

Pacific Western, Redwood Ink Pact

Redwood Empire Bancorp signed an agreement to license electronic banking software to Pacific Western Bank, a $1.1 billion-asset institution based in San Jose, Calif.

Under terms of the agreement, Pacific Western Bank will market the software to its corporate customers and Redwood will receive a percentage of the monthly revenue. The software is a cash management tool that allows corporate cash managers or small-business owners to make inquiries about the status of their loans and deposits and transfer funds through their own personal computers.

The software was developed by Redwood Empire Datacorp. Redwood has been using the software in-house for eight years. Redwood Empire Bancorp is the holding company for National Bank of the Redwoods and Allied Savings Bank FSB. The company, based in Santa Rosa, operates throughout Northern California.

Virginia Bankers Give Mellon Boost

The Virginia Association of Community Banks endorsed Mellon Bank's Network Services Group as the ATM processor of choice. Mellon expects the endorsement to triple the size of its customer base in Virginia, where the company currently provides processing for more than 40 community banks, savings institutions, and credit unions.

The association, based in Richmond, will endorse Mellon to any of its 100 members who are evaluating processors for new or existing ATM programs. Mellon already serves 20 banks in the association.

The bankers' group is a lobbying organization and provides educational programs on behalf of its members.

Mellon Network Services Group provides ATM and merchant card processing to more than 700 financial institutions in 30 states. It is a subsidiary of Mellon Bank Corp., Pittsburgh.

Guardian Buys System from SSI

Guardian Mortgage Inc., Richardson, Tex. and Dale Mortgage Bankers Corp., Garden City, N.Y. have purchased optical disk systems from Stockholder Systems Inc. to automate their computerized report facilities. The systems will replace microfiche and computer-generated report distribution, archiving, and retrieval.

Different departments will be able to access centralized reports. Reports that would normally be output to paper or microfiche are instead electronically loaded into a server PC, stored on magnetic or optical disk, and retrieved on the PC screen.

SSI is a Nynex company based in Norcross, Ga.

Arkansas Bank Taps Affiliated

Commercial National Bank, Texarkana, Ark., signed a multiyear electronic funds transfer agreement with Affiliated Computer Services Inc., Dallas.

Commercial National Bank, with assets of $93 million, serves both Texas and Arkansas customers. ACT will provide ATM driving, electronic

funds transfer, and card services.

Newtrend Wins Service Contracts

Newtrend, a provider of outsourcing and software licenses based in Orlando, signed a handful of service contracts.

A $1.9 million licensing agreement for Newtrend's Infopoint data processing system was signed by Abank Financial Corp., a $3 billion-asset savings bank in Albany, N.Y. The bank will build a data center based on the IBM 9000 series mainframes.

The $175 million-asset First Federal Savings and Loan Association of Thibodaux, La., signed a $1.2 million data processing contract.

Sunburst Bank, a $1.7 billion-asset bank based in Grenada, Miss., signed an in-house contract for the Infopoint collection and professional services system.

Duluth Teachers Credit Union in Minnesota, with $28 million in assets and 8,000 members, signed a software agreement.

Milwaukee-based Aurora Credit Union, with $8 million in assets and 6,000 members, signed a software agreement for the Credit Union Business Environment client-server-based program and a five-year maintenance contract.

2 Missouri Banks Turn to Outsourcer

Outsource Technology L.C. assumes the data processing services of two Missouri institutions: Bank of Jacomo, Blue Springs, and First Missouri Federal Savings and Loan Association, Brookfield. The company will support all deposit, lending, customer information, and financial management functions at both banks.

Outsource Technology, based in West Des Moines, Iowa, is a subsidiary of Financial Information Trust, which sells software for in-house use.

Diebold to Buy Mexican ATM Firm

Diebold Inc. reached an agreement in principle to purchase the majority interest in a Mexican ATM distributor, Hidromex, SA de CV. Terms were not disclosed.

Hidromex, which sells and services ATMs for Interbold, the joint venture between Diebold and International Business Machines Corp., has been Diebold's ATM distributor in Mexico since 1987. The related businesses being acquired also distribute physical and electronic security equipment and Compaq computers.

Diebold said it expects Mexican government approval for the purchase, which should be completed later this year.

Hidromex, based in Mexico City, has annual revenues from ATM sales and services of about $25 million. Over the past three years, the company has sold 3,200 Diebold ATMs in Mexico, capturing more than 80% of that country's total market.

Diebold, based in Canton, Ohio, had revenues of $543.8 million in 1992 and earnings of $41.1 million.

Fleet Installing NCR Line of ATMs

Fleet Financial Group signed a $5 million contract with NCR Corp. for 125 automated teller machines. Fleet is in the process of installing NCR's 5600 series of ATMs in its Massachusetts, Connecticut, and Rhode Island branches. Within the next three months, these ATMs will be installed in Fleet's Maine, New Hampshire, and New York branches.

NCR is based in Dayton, Ohio.

Bank South Picks Brock Activity

Bank South Corp. selected the Brock Activity Manager series to automate its new Teleservices division.

Initially, the system will be used to manage the accounts of the bank's inbound and outbound teleservices. Eventually, applications will include telemarketing and sales modules, which run under the Unix operating system on a 486 processor.

Bank South, based in Atlanta, has assets of $4 billion.

Also headquartered in Atlanta, Brock develops, markets, and supports software products for sales, marketing, and customer service.

CLS Corp. Acquires LeMans Group

CLS Corp., Blue Bell, Pa., has acquired LeMans Group Ltd., King of Prussia, Pa.

CLS is a provider of consumer loan outsourcing and servicing to financial institutions, government agencies, and institutional investors.

The LeMans Group provides leasing software and servicing. LeMans's software products include LeaseMaster II for the processing of consumer vehicle leases and LeasePro II for the management of equipment leasing portfolios.

The merged company will provide outsourcing and servicing, with an emphasis on facilitating the packaging, securitization, and servicing of consumer financial assets. The new corporate headquarters will be in King of Prussia. □

How To Skip Skip Tracing

And Improve Collections From Missing And Delinquent Accounts.

Today, you don't need a skip tracer to track down skipped, missing or delinquent accounts. You don't even have to page through a directory to locate or verify an address or phone number.

Trans Union can do the job for you automatically . . . to increase your "find" rate, improve the quality of your credit accounts and speed collections.

Through one of Trans Union's high-speed, high-tech search systems, for instance, you can locate a person's address by just giving us his social security number. Another advanced Trans Union product will expand your search to the 72 million people who moved within the last 3 years, including those who didn't leave a forwarding address.

Mail the coupon today. Get the facts about the system with the features and options that are exactly right for your tracking or verification needs.

CRA Overhaul Will Add Bite To Rules' Bark

By CLAUDIA CUMMINS

Reform of the Community Reinvestment Act will create a dramatically different set of rules for banks next year, including a tough new enforcement plan that expands CRA penalties to all banks.

Regulators are preparing to make changes in Community Reinvestment Act enforcement, including one that will make all banks subject to penalties for noncompliance.

As it works now, CRA scrutiny occurs only when a financial institution seeks permission to expand. Regulators – and community activists protesting the application – can delay approval until CRA performance improves.

NEWS ANALYSIS

Speaking to a congressional panel last week, Comptroller of the Currency Eugene Ludwig conceded that this pattern of enforcement has been unfair and uneven.

"Institutions that are not planning to make any corporate applications have, until now, faced almost no consequences for unsatisfactory CRA performance, aside from the public relations," Mr. Ludwig said.

Policy Clarification

To remedy this, new CRA rules will enable regulators to take "credible enforcement action against institutions that have had persistently poor CRA performance," he said.

President Clinton, in conjunction with the release of his community development bank initiative, directed the four bank and thrift regulators last week to reform CRA so that it gives clearer guidance on how institutions will be evaluated, while cutting their paperwork burden.

Three Factors Emphasized

Mr. Clinton asked that examiners put more emphasis on three factors: the volume and geographical distribution of consumer and small-business loans for low-income customers and neighborhoods; the size of investments in community development projects in poorer neighborhoods, and the variety of services and products like counseling and basic banking available to underserved groups.

Mr. Ludwig said he wants the reform process to be a cooperative effort that includes both the banking industry and community groups, in addition to all the regulatory agencies. But the

Chase Posts 53% Increase In Earnings

By KAREN GULLO

Chase Manhattan Corp. reported a 53% jump in second-quarter profits on Monday, offering additional evidence of a turnaround in the fortunes of the banking industry.

The New York-based bank company, the nation's sixth largest, said it earned $233 million between April 1 and June 30, its most profitable quarter in 4½ years.

Chase, like many U.S. banks reporting in the past week, attributed the gains to improved asset quality and strong trading profits.

Credit Quality 'Best' News

Nonperforming assets fell $485 million during the first quarter while the bank's provision for possible credit losses was slimmed to $225 million

OCC Issues Guidelines On Selling Investments

By BARBARA A. REHM

WASHINGTON — The Office of the Comptroller of the Currency on Monday became the second federal regulator to issue guidelines for bank sales of uninsured investment products such as mutual funds and annuities.

The guidelines, though not carrying the weight of regulations, call on national banks to disclose "conspicuously" that mutual funds are not covered by deposit insurance, that the funds are not guaranteed, and that their principal is at risk.

Like Fed's Instructions

The statement is similar to the instructions that the Federal Reserve Board issued to its regional banks June 17. However, the Office of the Comptroller's guidelines, running to seven pages, go into greater detail yet are more lenient about some aspects of investment product sales.

The agencies have a common goal that banking representatives endorse: to make sure bank customers know what they are buying.

"Banks don't want to jeopardize customer relationships," said Joe Belew, president of the Consumer Bankers Association. "They really want to do this right. The key is making sure people understand what's insured and what's not insured."

The OCC is sending its policy statement to all examiners and the heads of national banks.

The Fed labeled its four pages of guidelines as "interim" and noted that a common policy statement from all the agencies was being developed. It is unclear why the agencies did not wait until they had arrived at a common position. The FDIC has said nothing about its approach to mutual fund sales.

The Fed takes a harder line than the Comptroller's office on which bank employees may sell investment products. Both agencies would bar tellers from giving investment advice, but the Fed said employees who open insured deposit accounts may not sell mutual funds.

The OCC policy permits an overlap but stresses that every bank employee who sells mutual funds must be properly trained and "should disclose this dual

First Alabama on the Prowl under Mackin

By KENNETH CLINE

J. Stanley Mackin hasn't quite started a revolution, but he has lit a fire under one of the South's most conservative banks.

Since taking over as chairman and chief executive of First Alabama Bancshares Inc. three years ago, Mr. Mackin has coordinated an acquisition binge such as the company hasn't seen since the 1970s. Since 1990, six deals have been consummated, increasing First Alabama's size 45% to $8.1 billion of assets.

Five more deals are pending, including the purchase of a $2 billion-asset thrift that will make First Alabama the largest bank organization – as measured by deposits – in the state.

Growth by Acquisition 'a Line of Business'

"Growth through acquisition is a line of business in this company," Mr. Mackin said.

The Mackin culture reminds some bankers of the company during the 1970s, when it expanded rapidly through acquisitions under the leadership of Frank A. Plummer. Mr. Plummer's successor, Willard L. "Jack" Hurley, slowed the deal flow to a trickle in the 1980s when the bank's data processing systems proved unable to keep up with the pace of expansion.

Mr. Mackin's hard-charging, goal-oriented style

ONCE STAID First Alabama has experienced 45% asset growth since J. Stanley Mackin took over.

NEWS *briefs*

Electronic Food Stamps Cut Bank Costs

WASHINGTON — Replacing food stamps with an electronic payment system can cut banks' costs substantially, according to results of a two-state test.

The U.S. Department of Agriculture said Monday that the net cost of participating in the food stamp program dropped by $3.17 for each $1,000 of benefits in New Mexico and $5.48 for each $1,000 of benefits in Ramsey County, Minn.

Bank representatives interviewed for the study unanimously said they preferred the automated card-based alternative, known as electronic benefits transfer, or EBT.

"We print more than 2.5 billion food stamp coupons a year," said Agriculture Secretary Mike Espy. "When we move to EBT, we cut down on printing all those coupons, counting all those coupons, and destroying all those coupons. It costs more than $22 million to count, shred, and burn them."

Ahmanson Finishes Selloff of Bad Loans

IRWINDALE, Calif. — H.F. Ahmanson & Co. said it has completed a yearlong effort to clean up its balance sheet by selling $1.2 billion of delinquent and nonaccruing single-family real estate loans.

The parent of Home Savings of America, the nation's largest thrift, said the sale and a $163 million provision for certain real estate development projects will result in a loss of about $290 million for the second quarter.

Richard H. Deihl, chairman and chief executive officer, said Ahmanson will be profitable in the third and fourth quarters and plans to raise $200 million of capital in preparation for future expansion.

After the bulk sale, the $50 billion-asset company's nonperforming assets will equal about 2.04% of total assets, down from a peak of 3.02% in the fall.

Standard Federal to Buy Michigan's Interfirst

TROY, Mich. — Standard Federal Bank said it has completed a definitive agreement to purchase Interfirst Bankcorp of Ann Arbor for $13.65 a share in cash, or $31.2 million.

Interfirst, a thrift company active as a wholesale mortgage bank, has $128 million in deposits and five banking offices.

The $9.8 billion-asset Standard Federal will use Interfirst to expand loan servicing "and enable us to enter into the wholesale mortgage banking business in 25 states," said Thomas R. Ricketts, chairman, president, and chief executive officer.

OTS Approves Capital Plan for Unionfed

BREA, Calif. — Unionfed Financial Corp. said the Office of Thrift Supervision has approved its capital plan and issued a directive that requires recapitalization by Sept. 23.

The directive terminated a cease-and-desist order in place since April 1991 and superseded a capital plan approved by the OTS in September 1992.

Unionfed, parent of the $1.2 billion-asset Union Federal Bank, said it filed a registration statement with the Securities and Exchange Commission to offer up to $45 million of common stock, including a rights offer to current shareholders.

Centerbank Mortgage Buys a Portfolio

WATERBURY, Conn. — Centerbank Mortgage Co. has completed its purchase of the assets of a Beneficial Corp. mortgage unit. Terms were not disclosed.

The Waterbury-based company, a unit of Centerbank, said it acquired a servicing portfolio of 20,000 loans and $1.7 billion, bringing its servicing total to $7.1 billion.

Included in the acquisition was Beneficial Mortgage's correspondent network, which originated $722 million in 1992 and had $108 million in warehoused loans slated for sale in the secondary market.

The briefs were compiled from staff and wire reports.

Gonzalez Urges Vice President To Push for Single Bank Agency

By ROBERT M. GARSSON

WASHINGTON — Rep. Henry B. Gonzalez, chairman of the House Banking Committee, is urging Vice President Al Gore to consider combining the bank regulatory agencies as part of his effort to streamline the federal bureaucracy.

"The current federal bank regulatory system fits right into Vice President Gore's definition of a duplicative, inefficient, and expensive system," said Rep. Gonzalez, a Texas Democrat.

Although Rep. Gonzalez and the chairman of the Senate Banking Committee, Donald W. Riegle Jr., D-Mich., are strong advocates of regulatory consolidation, it is widely assumed that legislation in this area is unlikely to move this year.

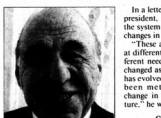
Improving the System

Rep. Gonzalez introduced a bill March 14 that would consolidate the regulation and supervision of banks and thrifts in a single agency.

That contrasts with the current system, in which bank regulation is shared among the Federal Reserve, the Federal Deposit Insurance Corp., and the Office of the Comptroller of the Currency. Savings and loan supervision is handled by the Office of the Thrift Supervision.

Sen. Riegle also has been giving the issue a close look. Earlier this year, he said regulatory consolidation might be the best way to meet the bank industry's objective of regulatory relief. He has not introduced legislation.

Both committee chairmen say they believe that agency consolidation would be more efficient and less costly for banks and thrifts.



Louise Kraft

Rep. Henry B. Gonzalez
Cites greater efficiency

Doubts Remain

Bankers are less sure, however.

"I don't think there are many efficiencies to be gained," said Stephen J. Verdier, a lobbyist for the Independent Bankers Association of America.

Mr. Verdier said the independent bankers group prefers the existing system of multiple regulators, which he said provides "a system of checks and balances."

In a letter Monday to the vice president, Rep. Gonzalez said the system has not kept up with changes in the market.

"These agencies were created at different periods to serve different needs, needs which have changed as the financial system has evolved, but which have not been met with comparable change in the regulatory structure," he wrote.

Cutting Costs

With a single agency, he said, regulators would no longer duplicate each other's efforts or engage in unproductive interagency rivalries.

The result, he said, would be lower paperwork costs for the regulated institutions and more effective enforcement.

Rep. Gonzalez said consolidation also would reduce the administrative costs of regulation, which would save insured institutions money as well.

Common Goal

Rep. Gonzalez told the vice president that his bill, the Regulatory Consolidation Act, has the same broad goal as the administration's National Performance Review.

The common aim, he said, is "cutting the fat out of a bloated bureaucracy and reducing the cost of regulation while also increasing the effectiveness of regulatory administration and enforcement." □

MasterCard to Buy Chemical Home Bank Unit

By BARTON CROCKETT

Chemical Banking Corp. said it has decided to sell its home-banking processing business, the country's largest, to MasterCard International for an undisclosed sum.

For MasterCard, the deal is a boon, since it will bolster the association's recently announced bid to become a home banking powerhouse through a joint venture with Checkfree Corp. of Westerville, Ohio, called MasterBanking. The aim is to provide back-office processing for bill payments and banking transactions initiated by computer or telephone.

"It's a big move for us," said Glenn F. Santmire, MasterCard's senior vice president of remote banking, who explained that the association wants to build up economies of scale in its MasterBanking service bureau.

And the deal enables Chemical to exit a long-standing business that has failed to bring in acceptable returns, officials said.

"The business was not meeting our return targets," said Ronald A. Braco, Chemical's vice president of electronic banking.

The home banking service bureau that Chemical is selling was started by Manufacturers Hanover Trust Co. in 1985. That year, the bank started marketing to other banks the computer system it had used to support its own personal computer home banking service, called Excel.

MAC Was First to Sign

The first client was the MAC automated teller machine network, now owned by Electronic Payment Systems Inc. of Wilmington, Del., a joint venture of CoreStates Financial Corp., Banc One Corp., PNC Bank Corp., and Society Corp.

MAC markets the Chemical service to banks on the MAC network that want to offer home banking but don't want to run the back-office systems.

Banks that use the service include CoreStates, PNC, Midlantic Corp., and Wilmington Trust Co., according to Jack Small, a director of client relations and sales at MAC.

Manufacturers Hanover later struck a deal to do bill payment processing for BillPay USA, an electronic bill payment service available on the Prodigy computer network, which is used by two million personal computer owners.

Manufacturers Hanover also became Prodigy's recommended service bureau for banks that offer home banking through Prodigy, including Chevy Chase Federal Savings Bank, Comerica Inc., First Interstate Bank of Denver, and Wells Fargo & Co.

The Prodigy network is run by Prodigy Services Co., of White Plains, N.Y., a joint venture of International Business Machines Corp. and Sears, Roebuck and Co.

Mr. Santmire said that the Chemical unit provides back-office processing for home banking transactions made by nearly 70,000 consumers. Nearly half of these people are users of the Excel service developed by Manufacturers Hanover, according to Jupiter Communications Co., a market researcher in New York.

Clients of the processing business are expected to be moved to the MasterBanking systems by yearend.

Bill Payment Services

Additionally, MasterCard will handle back-office processing of bill payment services for Chemical customers. Chemical will continue to process other home banking services for its own retail customers.

Mr. Braco said Chemical will benefit by being able to focus on more strategic home banking areas, namely, the development of new "front-end" technologies, including computerized telephone systems with display screens.

Mr. Braco declined to comment when asked if the service bureau was losing money. But he said that Chemical would have needed to invest large sums of money to keep it technologically competitive.

The fewer than 100 full-time Chemical staffers in the home banking unit will either continue to support Chemical's surviving operation or be transferred to other areas, Mr. Braco said. □

By L. Garrett Dutton Jr. and J. Bradley Boericke

Revised OTS Rules Open Door To Cut-Rate Acquisitions

In late 1992, the Office of Thrift Supervision adopted revisions to its regulations governing "voluntary supervisory conversions" from mutual to stock form.

The changes substantially increased the number of institutions that qualify for voluntary supervisory conversion and reduced the burden associated with such transactions.

The thrift agency regulations apply to federal savings associations and, subject to applicable state law, state savings associations.

Under these regulations, a mutual thrift can convert to stock form without seeking the approval of the members (customers) and in many cases without offering stock subscription rights to these members.

In Combination with a Merger

A voluntary supervisory conversion can be effected in conjunction with a merger into an

AN ACQUIRER *need not pay consideration to the acquisition target or its members.*

other institution or an acquisition by a holding company. This combination of elements offers an enticing opportunity to acquire institutions without the payment of any out-of-pocket consideration.

An example was the recent acquisition of New Jersey Savings and Loan Association, a mutual in Asco, N.J., by Covenant Bank, a stock savings bank in Haddonfield.

Covenant added strategically placed offices to its branch network, gained entree to the deposits and loan demand of a community it did not formerly serve, and realized a significant increase in its retail loan portfolio—all without the payment of cash or stock consideration.

Savings on Expansion Costs

By virtue of the merger, Covenant assumed liabilities roughly equal to the assets acquired, on a book value basis, but it expanded by over 30% without incurring the costs of de novo branching or even the payment of consideration to the acquisition target or its shareholders, as would usually be required for a branch acquisition or merger.

Mr. Dutton is a partner and Mr. Boericke an associate at the law firm of Pepper, Hamilton & Scheetz, Philadelphia. They represented Covenant Bank in the transaction mentioned in the article. Charles E. Sena Jr., chief financial officer of Covenant, assisted in preparing the article.

The keys to the transaction were the revised regulations regarding voluntary supervisory conversions and related provisions of New Jersey law.

The principal benefit of the supervisory conversion is that no approval by the members of the converting association is required.

In addition, a conversion combined with an acquisition can often be accomplished without offering to the members of the converting association any rights to purchase the acquirer's stock. Thus, the voluntary supervisory conversion mechanism enables a quicker and less costly acquisition.

To Qualify

Under the revised regulations, any mutual association that is significantly undercapitalized and would be a viable entity following the conversion qualifies for a voluntary supervisory conversion.

If an association is undercapitalized but not significantly undercapitalized, it can undertake a voluntary supervisory conversion if it can demonstrate that a standard conversion – one that would raise enough capital to enable the association to be adequately capitalized – is not feasible, and that it would be a viable entity following a voluntary supervisory conversion.

Prior to the recent revision to the regulations, the voluntary supervisory conversion mechanism was only available if the association's financial condition or its assets, calculated in accordance with generally accepted accounting principles on a going concern basis.

Much More Widely Available

Thus, the revisions to the regulations have made the supervisory conversion mechanism available to a much wider class of institutions.

Furthermore, other developments in the law have opened the door to cross-industry acquisitions, so that the opportunities for conversions of mutual savings associations presented by the supervisory conversion procedures are potentially available to banks and savings banks as well as to other savings associations.

The Federal Deposit Insurance Corporation Improvement Act of 1991 expanded the so-called Oakar amendment to permit virtually any cross-industry combination, notwithstanding the general moratorium that exists on transactions resulting in a movement of deposits from one deposit insurance fund to the other.

The Oakar amendment avoids that moratorium in a

THE PRINCIPAL *benefit of the revised regulations regarding voluntary supervisory conversions is that no approval by the members of the converting association is required.*

case like the acquisition of New Jersey Savings and Loan – an institution insured by the Savings Association Insurance Fund – by Covenant – an institution insured by the Bank Insurance Fund – by providing for the continued treatment of deposits attributable to New Jersey Savings as SAIF-insured deposits.

Cross-Industry Mergers

The 1991 banking reform law specifically provided for the power and authority of federal savings associations to merge with or otherwise be acquired by any insured depository institution. Previously, federal savings associations could generally only enter into such transactions with other savings associations.

A bank interested in acquiring a thrift should be aware, however, of the tax consequences potentially implicated by such a transaction. Loan-loss deductions may be subject to recapture if the surviving institution,

THE OPTION *is now available to a much wider class of institutions.*

as successor to the acquired thrift institution, is not a qualified thrift lender.

The voluntary supervisory conversion regulations specifically contemplate that a conversion might be undertaken in conjunction with an acquisition of the converting institution by merger with another institution or by issuance of stock to an acquiring holding company.

If Stock Is Issued

The conversion and acquisition transactions occur simultaneously in such cases. If stock is to be issued in such cases to the members of the converting association or to the public, it would be the stock of the acquiring institution or holding company.

For regulatory purposes, the conversion and the acquisition transactions are distinct, and separate application and approval requirements must be met with respect to the acquisition aspect of the transaction.

For instance, in the Covenant acquisition of New Jersey Savings, Covenant was required to file a Bank Merger Act application with the FDIC, and a "transfer" application was required with the Office of Thrift Supervision in addition to the application for approval of the conversion.

Under proposed revisions to regulations, the thrift agency would no longer require a separate "transfer" application to be filed with it for acquisitions of thrifts by entities not regulated by the thrift agency. Rather, the agency will require only that it receive a copy of the Bank Merger Application submitted to the appropriate federal banking agency.

Applicable State Law

When state-chartered institutions are involved in the transaction, applicable state law must also be consulted to determine the ability of the institutions to enter into the proposed transaction.

In the case of Covenant's acquisition of New Jersey Savings, state law provided a convenient mechanism for effecting the transaction, available where an institution has less than 2% capital.

These provisions of New Jersey law, like the Office of Thrift Supervision's supervisory conversion regulations, authorize conversion mergers without approval by the members of the mutual to be acquired and without the issuance to such members of subscription rights to the acquirer's stock.

This provision of New Jersey law also authorizes combinations among depository institutions otherwise authorized to combine, such as savings banks and savings associations.

Liquidation Accounts

In connection with conversions from mutual to stock form, a liquidation account generally is required.

The liquidation account provides members of the converting association with priority rights to any distribution in the case of a complete liquidation of the converted institution. Where the converted institution is merged into another institution, the liquidation account carries over to the surviving entity.

The Office of Thrift Supervision regulations regarding voluntary supervisory conversions authorize the waiver of the liquidation account requirement where the converting institution has a negative net worth. However, the liquidation account is necessary in a solvent situation, to meet the "continuity of interest" requirement for treatment of the transaction as a tax-free reorganization.

It is our understanding that the thrift agency has not yet processed a transaction in which the liquidation account was waived.

To sum up, a voluntary supervisory conversion provides a mechanism for troubled thrifts to find a buyer. And as a result of developments in the law, these acquisition opportunities are increasingly available to banks as well as to savings associations. □

By Eugene J. Sherman

Community Development Plan Is Redundant

President Clinton's proposals to expand bank lending and community investment are to be applauded for the steps they take to reduce the regulatory burden on banks. That will free the banks' resources to serve and make actual loans to low-income and moderate-income communities.

But the President's proposal to establish a new fund to support community development banks, while well-meaning, would represent unnecessary duplication of facilities that already exist and are working well.

One of these entities is the Federal Home Loan Bank System, which consists of an oversight agency in Washington, 12 regional Home Loan Banks, and 3,905 financial institutions – thrifts, commercial banks, insurance companies, and credit unions – that own stock in the Home Loan banks.

Source of Liquidity

The Federal Home Loan banks are wholesale lenders, providing liquidity and intermediate-term and long-term funds on short notice at competitive interest rates.

THE FEDERAL HOME *Loan System and community development corporations are already providing the local lending that the President's plan would promote.*

Member institutions, which average $332 million in assets, must meet demanding criteria, the most important of which is engaging in residential mortgage lending and holding mortgage-related assets.

By virtue of size, geographical dispersion, and lending activity, these institutions clearly satisfy anyone's criteria for community banks. What can be more "community" than residential mortgage lending?

The story doesn't end here. The Home Loan banks and their members actively engage in two programs that support housing and community – the Affordable Housing Program and the Community Investment Program.

Portion Reserved for the Poor

The affordable housing subsidies are used to finance home ownership by families with incomes at or below 80% of their area's median income, with at least 20% of the housing targeted for very low income households.

The Community Investment Program provides funding for community-oriented mortgage lending. This is defined as making loans to meet the housing needs of families with incomes at or below 115% of the area median as well as to finance economic and commercial development in low-income and moderate-income neighborhoods.

Affordable housing funds are limited in size and availability because they represent subsidies that are charged against the Home Loan banks' earnings. Community Investment Program funds are lent at a mere 5 basis points over Home Loan bank costs and are, therefore, available at any time in much larger amounts.

The Federal Home Loan banks and their customer institutions are making these loans profitably, in the spirit of entrepreneurship as well as community. The delivery system is in place and working.

High Level of Commitment

The projects originate with community groups working together with banks. They are housing and commercial projects that are based on a threshold of some individual or group within the community, not a government bureaucrat. So the ultimate borrowers believe in these projects and are highly motivated to make them work.

Some of the Federal Home Loan banks have segmented their districts and organized regional lending consortiums. The local trade associations cooperate and help coordinate.

The genius of this approach is its reliance on local knowledge and local initiatives. Community banks need to join their district Federal Home Loan bank to access the affordable housing subsidies and low-cost funds under the Community Investment Program.

A second, existing community lending facility is the network of community development corporations, authorized for banks and holding companies in 1971 as a means of promoting joint action and diversifying risk.

Forms of Investment

Financial organizations can make equity and debt investments, provided they are designed primarily to promote community welfare in the form of housing and job opportunities for people with low and moderate incomes, assist small and minority businesses, or provide important community services.

A variation is the consortium – a multibank or nonbank development corporation. Such entities are sponsored by a number of financial institutions and invest in large-scale community development projects in order to spread the risks and broaden participation.

These consortiums generally are organized on a regional basis and are particularly attractive to institutions that do not yet have the expertise or resources to engage in this kind of lending, especially on a large scale.

The consortium approach gives wholesale banks a way to participate in loans originated by community banks. This is a major step forward in community lending since it addresses so many problems that have arisen from both the regulatory and lending standpoints.

In summary, new federal programs are not needed. The tools for solving community investment problems already exist, and they work best at the local level. They simply need to be better used, or freed from overregulation. □

REASONS TO SMILE: Along with an appetite for acquisitions, First Alabama chief executive J. Stanley Mackin has brought a renewed enthusiasm to the company.

Once Staid First Alabama on the Prowl with Mackin

Continued from page 1

has been welcomed by many First Alabama old-timers, who felt the bank had become complacent during the 1980s.

"The biggest thing Stan has brought is a renewed enthusiasm about the company," said Robert P. Houston, First Alabama's comptroller.

Independent Course

When Mr. Mackin took over in August 1990, many insiders were expecting the company to be sold. In 1987, Mr. Hurley had told analysts and investors he would explore any option that might benefit shareholders. Now retired, Mr. Hurley says he never had any "serious" negotiations with a potential acquirer.

But when Mr. Mackin arrived, he was determined to let his employees know that he would steer the bank on an independent expansionist course. An experienced commercial lender, he had served since 1983 as chief executive of First Alabama Bank Birmingham, the company's largest subsidiary. By the time he moved up to the parent company, he had built the unit from about $300 million up to $786 million of assets.

Five-Year Growth Plan

Once there, Mr. Mackin immediately shut the door on any takeover talk. "We saw no reason to consider disposing of this company," he said.

He quickly developed a five-year strategic plan that raised profitability goals for nearly every department. And he outlined a master growth plan.

Using acquisitions of savings and loans as his chief strategy, he focused on building market share in Alabama and in the Florida Panhandle. He also made incursions into other neighboring states, buying a thrift and two community banks in middle Tennessee.

Over the Top with Secor Deal

In May, his expansion program culminated with an agreement to buy Birmingham-based Secor Bank, Alabama's biggest thrift, which has more deposits in Louisiana than in Alabama.

But the deal, scheduled to close later this year, will help First Alabama edge out Amsouth Bancorp. for the number one share of deposits in Alabama.

It also will satisfy one of the major goals of Mr. Mackin's five-year plan – reaching $10 billion of assets by 1995. But now

Expansion slowed in the 1980s as data processing was unable to keep pace.

that he's about there, he has upped the ante, telling analysts he wants to hit $12 billion.

'A Prime Example'

"Under Stan Mackin, the bank has been more aggressive in expanding, and the Secor deal is a prime example," said Richard L. Stiffinger, a Keefe, Bruyette & Woods Inc. analyst. "I think it's been done in a measured fashion, without sacrificing the basic quality of the company."

Ready for a Breather

Mr. Hurley said he approves of his successor's strategy, though he wonders whether the company is being too optimistic about the benefits it can extract from Secor. The thrift's wide interest margins, like those of most companies in the banking and thrift industries, are likely to shrink, he said.

Mr. Mackin says First Alabama is ready to take a merger breather, at least through the end of 1994. "We have to have a handle on all we've acquired before we go branching out on additional acquisitions," he said.

But he has already used his acquisitions to achieve a major profitability goal of the five-year plan – attainment of a return on equity of 15%. First Alabama has long struggled with putting its high levels of equity to work. Through most of the late 1980s, the company's ROE hovered around 13% – a level that Mr. Mackin deemed mediocre.

The company's fortress-like capital position was the main culprit. Last year, First Alabama's Tier 1 capital ratio of 11.68% was the 21st strongest among the nation's top 100 bank holding companies, according to *American Banker*.

Ahead of Schedule

Mr. Mackin decided early on that strong capital was no excuse for a low ROE, so he developed the acquisition plan hand in hand with his goal of using equity productively. By the end of 1992 – two years ahead of schedule – the company had lifted its ROE to 15.64%, up from 14.27% at yearend 1991. In this year's second quarter, shareholders received a sterling 16.6% return on their investments.

The major factor behind the rise was the addition of $1.3 billion of new assets without a commensurate rise in equity. Most of the growth came through the purchase of insolvent thrifts, which did not require the issuance of additional shares. As a result, average shareholders' equity to average total assets declined to 8.59% last year, from 9.03% in 1990.

As measured by return on assets, First Alabama has long been a strong performer. ROA reached 1.34% at yearend 1992 and climbed to 1.44% in the second quarter this year.

Loans Limited to $25 Million

The numbers reflect a conservative credit culture and the bank's strategic focus on small-business and consumer lending.

The house limit for a loan to a single borrower at First Alabama is $25 million – one-fourth the company's legal lending limit – and fewer than two dozen credits are at the limit, said E.C. "Chris" Stone, an executive vice president in charge of corporate lending.

The strategy focused on thrifts in Alabama and the Florida Panhandle.

Though Mr. Mackin has absorbed the company's conservative culture in his 27 years at First Alabama, he now has a chance to implement some of his own ideas.

Real Estate Background

A Birmingham native, Mr. Mackin graduated from Auburn University and then spent 10 years in the real estate business in Birmingham and Huntsville. He joined First Alabama as a commercial lender in 1966.

Coming from a far more aggressive industry than banking, he said, has helped him reshape the company.

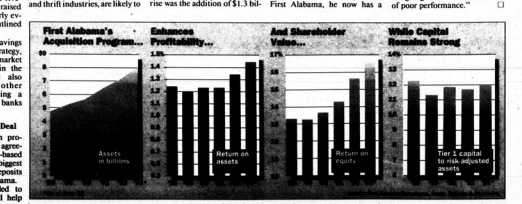
At 60, however, Mr. Mackin is fairly traditional about his personal plans. Though First Alabama has no mandatory retirement requirement, the executive said he fully expects to leave by age 65, devoting time to his eight grandchildren and getting in some deer hunting and fly fishing on the side.

Straight and Steady Course

His company, in the meantime, is likely to pursue a straight and steady course, according to analysts.

With a market capitalization exceeding $1 billion and stock trading at a 184% market-to-book valuation, it is not seen as vulnerable to takeover by even the largest of supercregionals.

"We don't know if anybody's bulletproof in the real long term," said Michael L. Granger of Fox-Pitt Kelton Inc. "But everything First Alabama has demonstrated suggests they're not going to have to sell because of poor performance." □



Strike Risk a Wild Card in Midwest Economic Prospects

By DIANE C. SWONK
Senior Regional Economist
First Chicago Corp.

After a brief pause in the second quarter, the Midwest economy is expected to accelerate again in the second half of 1993.

A combination of strong profits in the manufacturing sector, a moderate recovery in consumption, continued strength in exports, and a deterioration in the value of the dollar against the yen all point to the same thing – gains in Midwest manufacturing.

A pickup in vehicle production is the primary reason behind the slightly more bullish national outlook in the second half of 1993. The auto industry alone is expected to add almost 1% to real gross domestic product growth in the third quarter.

On net, real disposable income is forecast to rise 1.2% in the second quarter and 2.6% in the third quarter, still 0.2% ahead of the national average for the two quarters combined.

Comment

A Question Mark

The forecast for more robust Midwest growth, however, is not without its risks. Current contracts between the United Auto Workers and the Big Three automakers expire in September. Any contract-related strikes would derail much of the momentum expected for the second half of this year.

The steelworkers' unions are also in negotiations. If contracts with three of the remaining top four steelmakers are not settled by July 31, thousands of steelworkers could go on strike. This would disrupt supplier and user production throughout the Midwest.

But barring widespread strikes, the Midwest is positioned to be the fastest-growing region in the country in the second half of 1993.

Autos and Light Trucks

Pent-up demand, a pickup in trade-in values, lucrative incentives, fleet sales, and the delayed gains associated with poor weather conditions in the first quarter pushed auto and light truck sales to their highest level in almost four years in the second quarter.

Moreover, most of those gains were made by the Big Three. In a sharp reversal of the 1980s, aggressive price hikes on the part of the Japanese have given market share back to the Big Three.

Some reduction in record highs is expected for the third quarter, but the underlying trend in sales should remain positive.

Momentum in Production

The slowdown in total sales will not stop the upward momentum in domestic production.

A combination of low inventories, market share gains by the Big Three, and strike-hedging on the part of the Big Three have all contributed to third-quarter gains.

The problem is the fourth quarter. The bet is that the risk of a UAW strike will place an upward bias on production in the third quarter. The Big Three are likely to build inventories, even if sales soften somewhat, to hedge against a possible strike.

Even if a strike is averted, those inventories will have to be drained in the fourth quarter.

The Strike Factor

The largest risk to the forecast in the second half of 1993 is strike risk. The UAW negotiations pose a greater threat to the overall economy than the steelworkers' talks.

In December, First Chicago argued that the risk of a wide-spread UAW strike, particularly against General Motors Corp., was high.

Diane C. Swonk

Strike-hedging on the part of the Big Three, in particular, would produce a pattern in production that would mimic that of a strike in the fourth quarter, even if a strike were averted.

Nothing has changed since December to change that view. If anything, the UAW is digging in deeper than expected. The UAW has vowed to protect health-care benefits – a critical issue for the Big Three – by striking. Other demands already on the table include job security, a ban on plant closures, and an 18% wage hike from Ford Motor Co.

The wage-hike request is of particular concern to the Federal Reserve. An 18% increase in UAW wages over the next three years would be inflationary.

Summing It Up

The Midwest economy will accelerate in the third quarter. The risk of a UAW strike virtually ensures it. The prospects for the fourth quarter are not as good. Strike or not, inventories will need to be drained, which will be a drag on production at the Big Three.

Even with that correction, however, the underlying trend in production will remain positive in the second half. The Midwest will end the year substantially better than it started it. □

NEED BANKING INFORMATION FAST?

Now there's a way to stay abreast of that vital information or to find any articles you may have missed by using your own PC with a modem to call up the American Banker Online on the information service of your choice.

American Banker Online is a full-text news service providing instant access to all the information appearing in the only daily banking newspaper. It enhances the value of the newspaper's daily information by giving you the ability to recall all the stories on a bank, or a banker, or legislation, or indeed anything you need to know about banking.

With the power of the computer, you can locate the information that's vital to your business. American Banker Online is a full-text database that provides direct, easy access to the daily news, statistics, surveys, speeches, commentary, and special editions of the print newspaper. And you can access this information each morning even before that day's paper is delivered!

In addition to being a daily information tool, American Banker Online is also an archive. Many users rely on our information to piece together the background on events that impact their business. Along with today's news, American Banker's historical online records include more than 80,000 articles dating back to 1979. These can be searched by headline, key words, bank name, or any other search terms.

Put American Banker Online to work for you. It is accessible with any PC and modem through the following information retrieval services:

- DataTimes
- Data-Star
- Dialog Information Services
- Dow Jones News/Retrieval
- FT Profile
- Lexis/Nexis
- NewsNet
- Reuters Textline

Western Banks on Brink Of Long-Sought Merger

By TERRENCE O'HARA

Mergers

AFTER 3½ YEARS OF community reinvestment tie-ups, a group of commonly controlled community banks in Wyoming and Montana plans to merge under one holding company in September.

First Interstate Bancsystem of Montana Inc., Billings, received federal approval in May to acquire Commerce Bankshares of Wyoming Inc., across the state line in Sheridan, Wyo., ending several years of wrangling with community groups over its lending history in the nearby Northern Cheyenne Indian Reservation.

"It's turned out positively for all groups, I think," said William Wilson, senior vice president of First Interstate. "The only complaints we have ever had are about the confusion and length of time it took to get us here."

Both First Interstate and Commerce are about 80% owned by the Scotts of Billings, a prominent ranching and banking family. First Interstate, not related to the First Interstate Bancorp of Los Angeles, has $711 million in assets and is the third-largest bank holding company in Montana. After the merger, First Interstate will have $1.13 billion of assets.

Gail Small

The merger of the holding companies was first proposed in January 1990. But the Federal Reserve rejected the application in October 1991 on the ground that First Interstate's Bank of Colstrip was rated "needs to improve" in its Community Reinvestment Act exam.

Native Action, an American Indian community action group in Lame Deer, Mont., lobbied against the merger in its comments to the Fed.

It was the first time the Fed had rejected a merger application solely on the grounds of CRA problems.

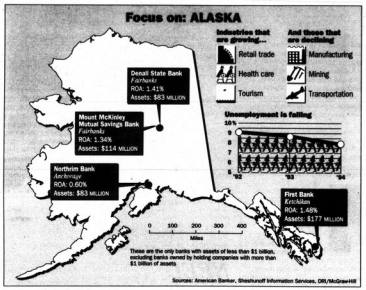
In its order rejecting the holding company merger application, the board of governors found that despite commitments to improve its CRA rating at the Bank of Colstrip, the bank had "deficiencies" in its lending efforts on the reservation and had improperly excluded the entire reservation from its delineated market area.

Native Action again filed a complaint when First Interstate applied to merge its seven Billings-area banks into its flagship First Interstate Bank of Billings.

Dan Hanger, manager of applications at the Minneapolis Fed, said the group's objections were "substantive." But First Interstate's commitment to enhance its CRA efforts at the Bank of Colstrip, including a pledge to make $4 million in loans to reservation residents, led to a compromise that will bring full banking services on the reservation.

Gail Small, director of Native Action, said the bank has already lent more than $1 million inside the reservation, and is discussing the possibility of opening a branch in Lame Deer. She added that what started out as an adversarial relationship has turned into one of mutual trust.

"It's turned out fairly positive because we've sensitized one another to the economic and racial barriers that have separated our two organizations in the past," Ms. Small said.



Survivors of Alaska's Meltdown: 4 Battle-Hardened Small Banks

By TERRENCE O'HARA

Seven years ago, Alaska was one of the hottest community banking markets in the country.

That was when oil prices peaked above $30 a barrel, pumping huge amounts of money into the state's economy.

But today, only four community banks remain.

"It's been sad," said Willis Kirkpatrick, director of the Division of Banking and Securities at the Alaska Department of Commerce. "I wish I was a younger man, because I've seen about every cycle there can be in banking in my last years of service."

Between 1986 and 1992, 16 banks and savings and loans were either closed by regulators or bought up when they ran into trouble. Today, about 90 percent of the state's banking market is controlled by three large institutions.

The only community banks left in Alaska are Denali State Bank, Mt. McKinley Mutual Savings Bank, First Bank, and Northrim Bank. Together they have $457 million in-assets. The banks survived and even prospered by "finding their niche and sticking to their knitting," Mr. Kirkpatrick said.

William Moran, chief executive of the 70-year-old First Bank in Ketchikan, said his bank survived because it dropped out of the lending market altogether in the mid-1980s.

"We sat back and watched the party at the height of its craziness," Mr. Moran said. "Our loan-to-deposit ratio at one point was 25 percent."

First Bank's loan-to-deposit ratio is now at just over 40%, and Mr. Moran said loan demand is slowly rising.

Northrim Bank in Anchorage was founded in 1990 at the end of the state's banking crisis. It lost $1 million in its first year, but was profitable in its second year and now has a 0.60% return on its $83 million in assets.

"Our strategy was to gain market share from the bigger banks," said chief executive Chris Knudson. "When we started, we assumed a flat economy for the first five to seven years of our existence, but it's turned out a little better than that."

The "bigger banks" Mr. Knudson is trying to get business from are the ones that benefited most from the 1986-89 banking consolidation wave after the state's economy plunged, and all of which bought the franchises of failed institutions: Security Pacific Bank (since acquired by BankAmerica Corp.), Keycorp, of New York, National Bank of Alaska, and First National Bank of Anchorage.

First Bank's Mr. Moran said that the consolidation of the state's biggest banks and the entrance of vastly larger out-of-state bank holding companies hasn't hurt his business. □

1st Virginia Prospers In Auto Loan Niche

By ANAT BIRD

Robert H. Zalokar is smiling, and for good reason.

First Virginia Banks Inc., of which he is chairman and chief executive officer, has turned in yet another stellar performance.

Income in the first six months rose 29% to $58.3 million. The returns on assets and equity improved to 1.72% and 18.55% from 1.42% and 16.33% in the comparable period last year.

It is a triumph of super community banking, as Falls Church-based First Virginia manages a growing empire of 20 banks with 319 offices and $7 billion of assets in Virginia, Maryland, and Tennessee.

Super Community Banking

By ANAT BIRD

Not only are its fundamentals excellent, but First Virginia has excelled in the business of indirect automobile lending. Few bankers have done well in this business, which relies on car dealerships as the lending channel. First Virginia has been doing it since the early 1950s.

"We've trained our dealers well," Mr. Zalokar says when asked about the secrets of his success. "We will not take junk, and they know it.

"We are committed to competing effectively with car manufacturers' captive finance companies and with anyone else who will enter a market, but we will not sacrifice quality," Mr. Zalokar adds.

The people who buy auto dealers' paper have an average 17 years with our company. The manager of the unit was a car dealer for several years. He knows both sides of the business very well."

Entering Rival's Turf

First Virginia does business with more than 100 dealers, providing valuable financing as well as floor planning.

The rates are competitive with those of General Motors Acceptance Corp., Ford Motor Credit Corp., and NationsBank Corp. – three leading forces in the business.

Even after the much bigger NationsBank, First Virginia is opening a car-lending subsidiary in North Carolina.

If NationsBank can be up here, "then we can go down there," says Mr. Zalokar.

First Virginia has developed a loyal dealer network because "we're here to stay," he says. The emphasis is on the relationship.

"Even when times get tight, we will not touch indirect buying," the bank CEO says. "We will curb other loans."

Aside from knowing the automobile business as well as the dealers do," Mr. Zalokar boasts of a solid audit process,

Robert H. Zalokar
"We will not take junk"

collateral monitoring system for floor-plan loans, and a rigorous collection program.

One rule of thumb: If a borrower misses the first payment, the car is taken.

Indirect auto lending is the icing on the cake for a company that "knows who we are, and we are not ashamed of it," says Mr. Zalokar.

Spreading the Risks

"We are a small loan company. We like the retail business and find it diversified and risk effectively."

Net loan chargeoffs are consistently low – they fell to an annualized 0.15% in the second quarter from 0.41% a year earlier.

The performance demonstrates once again the effectiveness of strategic focus and clear product orientation typical of a strong super community organization. □

Merchants N.Y. Becomes Holding Company

NEW YORK — Merchants New York Bancorp said its conversion to a one-bank holding company was effective July 1.

Merchants said the holding company will allow it to own banking institutions across state lines and sell a variety of financial products and services.

Its principal subsidiary, Merchants Bank of New York, has $250 million available for lending to small and midsize businesses and plans to continue lending to quality middle-market borrowers in the region.

— Dow Jones

First Union Buying Bank in Orlando Suburb

JACKSONVILLE, Fla. — First Union Corp. said its Florida subsidiary has entered into an agreement to acquire Enterprise Bank of Winter Park, Fla., for $8.8 million in cash.

Enterprise has one office and $40 million of assets. The acquisition, which requires approval by regulators and Enterprise shareholders, is expected to be completed by yearend. □

Chicago's Indecorp Puts Itself Up for Sale; South Shore Emerges as a Possible Suitor

By ROBERT B. COX
