CHICAGO — The nation's largest black-owned banking company, Indecorp, has put itself on the block, with South Shore Bank, the community development lender, emerging as a possible suitor.

The merger, which would create a $500 million-asset institution headquartered on the city's South Side, has sparked debate inside and outside Indecorp over how best to serve the community.

Some Indecorp officials, sources said, are reluctant to sell out to a nonminority-owned institution.

While South Shore's parent, Shorebank Corp., has operated in predominately black neighborhoods of the South Side since its inception, the majority of the bank's management and ownership is not African-American.

Lagging Behind in Loans

"We have had a debate about the direction of the company," said Alvin J. Boutte, Indecorp's chairman and chief executive.

Though Indecorp's remaining a black-owned institution offers a source of pride, there is some feeling that the bank's community might be better off with South Shore's lending expertise.

Indeed, Indecorp's lending record has lagged behind that of its city cousins.

The company's two subsidiary banks had unusually low loan-to-deposit ratios at the end of the first quarter.

Indecorp would cease to be black-owned.

Drexel National Bank had a loan-to-deposit ratio of just 28%, and Independence Bank of Chicago had a ratio of 31%, according to data from Ferguson & Co.

The loan-to-deposit ratio for all Chicago banks under $500 million of assets was 60%.

South Shore, the $244 million-asset institution that President Clinton has pointed to as a model for community development lending, had a roughly 75% loan-to-deposit ratio, and made more than $17 million of multi-family housing loans last year.

By contrast, Indecorp's two banks, with combined assets of $267 million, made only $2.3 million of such loans last year, according to data compiled by the Woodstock Institute, a non-profit Chicago group that tracks lending patterns.

Shopping for a Buyer

Mr. Boutte said Indecorp's board was looking for a suitor that would meet community credit needs, while offering shareholders a hefty premium.

The bank has hired investment bankers William Blair & Co. to assist them in finding a buyer.

South Shore completed a private placement of stock earlier this year, raising close to $9 million from a group of six Chicago banks and three private individuals.

Also in merger talks with Indecorp are two consortiums of African-American private investors, and Seaway National Bank, a black-owned, $202 million-asset Chicago bank. □

Fannie Encourages Loans for Less Affluent

By CHRISTOPHER NOBLE

Fannie Mae, scrambling to meet congressionally imposed goals, has announced new guidelines that make it easier for lenders to make home loans to families with low and moderate incomes.

The changes, announced last week at the Western Secondary Mortgage Market Conference in San Francisco, involve more lenient eligibility requirements and loan underwriting guidelines, Fannie Mae said.

"These changes will give people who live in central cities more opportunity to own a home and make it easier for mortgage lenders to make more home loans in city neighborhoods," said Larry Dale, executive director of Fannie Mae's national housing impact division.

Pilot Program in Oakland, Calif.

At the same time, Fannie unveiled a new program in Oakland, Calif., to finance $1 billion in affordable housing over the next five years. The program will serve as a pilot for a "broader effort for central city lending" that Fannie intends to carry out over the next few years, according to a Fannie Mae release.

The agency is reacting to a congressional mandate.

The program, called Housing Oakland, brings together all of Fannie Mae's affordable lending programs, and some new ones tailored to Oakland, under one umbrella for residents of three to six specific neighborhoods in the city. The neighborhoods will be chosen by city officials.

The changes come as the agency strives to meet the so-called 30/30 goals imposed last year by Congress.

Under that law, Fannie must seek to ensure that 30% of the loans it purchases are for low- and moderate-income housing. In addition, 30% of the loans should be for housing in central cities.

There are 544 areas defined as central cities by the federal Office of Management and Budget, based on population, employment, and income criteria.

Both Fannie Mae and Freddie Mac have said they expect to meet the goals but Freddie has lobbied for more time.

The most significant change among those announced by Fannie is the inclusion of entire cities as areas eligible for the Community Home Buyers program. Previously, the program was limited to individual census tracts identified as low- and moderate-income neighborhoods within large cities.

This change makes a vastly larger number of people eligible for the program, Fannie Mae's chief executive said.

"It's a growing of the pie of eligible homebuyers," said James Johnson, Fannie Mae's chief executive, in a speech before the conferees.

Fannie Mae also reduced the maximum income borrowers may have and still participate in its 3/2 Option plan. The new ceiling is 100% of the area median, down from 120%. The plan allows borrowers to put only 3% of their own cash down and use gifts or loans to make up the rest of the 5% minimum down payment.

While that lower ceiling makes the plan more restrictive,

James Johnson
Sees bigger pool of borrowers

a spokesman said it was another part of Fannie's efforts to focus its low-income lending programs on people specified by Congress.

Meeting CRA Requirements

Fannie Mae pointed out that the changes would help lenders meet Community Reinvestment Act requirements.

For borrowers, the changes allow people to establish creditworthiness outside of the usual credit-history reporting system. Potential borrowers may use rent receipts, phone bills, and tax payments instead. Mr. Johnson said the changes acknowledge different lifestyles and savings patterns in minority populations and should make more minorities eligible for home loans.

The new changes also include a "second look" policy under which problem loans are reviewed before a lender is asked to repurchase a loan Fannie Mae has bought.

Homebuyer education for borrowers in the neighborhood lending programs is waived if the family has owned a home before, has 5% of its own cash as a down payment, and has a two-month reserve of all mortgage, insurance, and tax payments.

Mortgage insurance fees were reduced for some buyers and all borrowers living in central cities, regardless of their income, will be allowed to have only a 5% down payment. □

Divining the future is not all that hard when you have

THE REDEMPTION REPORT

Calls and prerefunded bonds are scheduled to drain the yields out of portfolios at a faster and faster pace in the third quarter. With ***The Bond Buyer Redemption Report,*** *you can anticipate redemptions well ahead of the actual events. If you want to know when your bonds will be called away, this report has the answer.*

We published the first such book in history for the first quarter of 1993. Buyers received instant access to the entire universe of called and prerefunded bonds in one volume.

And now you can get the third-quarter volume, a 916-tome chock full of information on which, how much, and when. Here's a sample listing:

AK ANCHORAGE ALASKA TEL REV — *Total Amount Redeemed :* $8,465,000.00
TEL REV BDS
Series: 1983 — *Issue Amount:* 9,000,000
Sale Date: 08/24/83 — *Dated Date:* 09/01/83

Cusip	Coupon	Maturity	Redeemed Amount	Type	Date	Price
033267BS3	10.250	09/01/99	$1,050,000	Prerefunded	09/01/93	102.00
033267Z27	9.700	09/01/94	$260,000	Prerefunded	09/01/93	102.00
033267Z k4	9.900	09/01/95	$280,000	Prerefunded	09/01/93	102.00
033267ZL2	9.700	09/01/96	$315,000	Prerefunded	09/01/93	102.00
033267ZM0	10.100	09/01/97	$740,000	Prerefunded	09/01/93	102.00

Some electronic services charge you $1 or more every time you log on to look up a Cusip. Compare those exponential costs to the one-stop shopping, fixed-cost of ***The Redemption Report,*** *and you'll be looking at substantial savings. After all, this volume gives you more than 111,000 cusips for $975. And you never have to log on.*

OCC Issues Guidelines on Investment Sales

Continued from *page 1*

role to customers.

The Fed also said it wants mutual funds sales people to work in areas physically separate from those where insured deposits are taken. The OCC, noting that some banks have limited space and few employees, merely encourages banks to "take steps to separate" retail deposit-taking from nondeposit product sales.

Analyze Customer Needs

The Comptroller said employees selling mutual funds should assess whether the investment suits a particular customer. Employees should ask customers about their investment goals and their financial status.

The regulator also said a national bank may not name mutual funds after itself. But similar names are being permitted. For example, NationsBank may call its mutual fund Nations Fund.

If a bank sells mutual funds to customers through a third party, then bank management should make sure the outside company follows the guidelines, OCC said. Examiners require access to documents kept by these vendors, OCC noted.

The OCC also said bank directors must keep on top of the risks posed of selling uninsured investments.

Self-Regulatory Policies

"Bank directors are responsible for evaluating the risks posed by bank-related nondeposit investment sales," the policy reads. "Bank directors must adopt self-regulatory policies and procedures to ensure compliance."

"The OCC is saying very specifically that this is an area that should receive the attention of bank management and directors," said Robert M. Kurucza, a Washington partner at the Morrison & Foerster law firm.

Susan Krause, senior deputy comptroller for bank supervision, said the policy's elements should be viewed as parts that add up to a whole. For example, if a bank chooses to give a fund a name similar to its own, then disclosures may need to be more deliberate to ensure customers are not confused.

She said she does not believe the guidelines will cause "any significant change" in the way banks do business.

"We are worried here about preventing any kind of competition-driven deterioration in the standards that those banks that have started to offer these products have already imposed on themselves," said William Dehnke, an OCC lawyer who helped write the policy.

"A lot of what they are suggesting here is what banks are already doing," said James D. McLaughlin, head of agency relations at the American Bankers Association.

Ms. Krause said the OCC has uncovered no abuses in the banking industry. The policy was developed in response to the recent big and growing involvement of banks in the mutual fund business.

She admitted that the OCC does not know how many banks sell mutual funds either directly or through a third party, but she said it is clear that banks are increasing their share of the business.

"In the not too distant future, banks could easily account for half the mutual fund sales," said Ed Yingling, the ABA's top lobbyist. □

Susan Krause
Policy's parts make a whole

Dime Pegs Account To the 3-Month T-Bill

The Dime Savings Bank of New York has introduced a money market account with returns pegged to the current yield of three-month Treasury bills. Money market yields are most commonly determined by bank money managers, the Dime noted.

The account, Dimevest, pays investors 100% of the T-Bill's 91-day yield on balances of $25,000 or more, 90% on balances of $10,000 to $25,000, and 570% on balances of less than $10,000. It is insured by the Federal Deposit Insurance Corp.

The account reacts more quickly to market changes because it is tied directly to T-bill yields, said David J. Totaro, the Dime's chief marketing officer.

— Michael O'D. Moore

Chase Profits Rise 53%; Northern Trust Gains 12%

Continued from *page 1*

from $295 million in the first quarter and $360 million in the year-earlier period.

"The earnings were quite good, and the single best piece of news was the credit quality," said Diane Glossman, an analyst at Salomon Brothers Inc.

Net income, which translated to 83 cents a share, slightly bettered analysts' consensus estimate of 81 cents, according to Zacks Investment Research Co., Chicago.

Several analysts boosted their estimates following release of the earnings. Rafael Soifer, of Brown Brothers Harriman & Co., doubled his 1993 earnings estimate to $340 million from $170 million and boosted his 1994 projection to $930 million from $800 million.

In afternoon trading Monday, Chase's stock rose 25 cents to $32.75 a share.

Trading Results Improved

E. Michel Kruse, Chase's chief financial officer, said $54 million of the bank's total trading profits of $187 million came from derivatives trading and $35 million from trading developing country debt.

Overall trading results rose 7% from the first quarter and 87% from the second quarter of 1992.

Analysts said Chase's trading results the rest of the year are unlikely to match the record second quarter, but noted that the company has made significant progress in a historically weak area.

Nonperformers Down

However, they agreed with Ms. Glossman that Chase's apparent mastery over its drawn-out loan problems was the most significant aspect of the company's report.

Chase's nonperforming real estate loans dropped 10.7%, or $114 million, during the quarter to $947 million. The company separately sold $109 million from its "held for sale" realty portfolio, which dropped to $884 million on June 30. Chase also booked a $26 million gain from repayment of assets in the portfolio.

The company, however, lowered the carrying value of the assets in its "held for sale" portfolio to 37% of original loan value from 45% last quarter.

'Pattern of Migration'

"We are seeing a reduction in the drain on our earnings from real estate problems," Mr. Kruse said Monday at a briefing on the earnings report. But he cautioned that the "pattern of migration" of loans from performing to nonperforming status, though slowing, is still "significant."

Foreclosures rose $25 million during the quarter to $763 million, Chase said.

Mr. Kruse separately noted that Chase may be close to selling its Arizona bank subsidiary, an asset that it has long been eager to shed.

Nonperforming assets at Chase fell $485 million.

'In Preliminary Talks'

"We're in preliminary talks with a number of parties, which has given us a sense" of the sale price, Mr. Kruse said in explaining an unspecified charge taken to reflect a writedown of the Arizona bank.

The company's net interest margin fell 84 basis points since March 30 to 4.10% -- a pattern that Mr. Kruse said he expects to continue for the rest of the year.

Fee revenues from trust and fiduciary activities rose 9% to $111 million over the same period last year.

Chase booked a one-time pretax gain during the quarter of $32 million from intended and completed business restructurings and sales. It offset some of the gain with a $34 million charge from writedowns of mortgage servicing assets, reflecting a sharp increase in prepayments related to mortgage refinancing.

NORTHERN TRUST CORP.

The Chicago-based company said its profits jumped 12% from the year-earlier second quarter to $41.6 million. But profitability, as measured by return on assets, suffered a mild decline as net interest margin narrowed.

Its annualized return on assets of 1.06% eased from 1.07% in the first quarter and 1.11% a year ago.

Credit quality improved sharply, as Northern's nonperforming assets fell 20% to $65 million, or a slender 0.88% of gross loans.

Northern's trust assets under administration rose 18% to $448 billion since June 30, 1992.

The company's stock fell $1 to $41 a share in afternoon trading Monday. — **Steve Klinkerman**

EXECUTIVE *changes*

Earnings Performance Group Inc. Names Barry W. Blank a Principal

Barry W. Blank has been appointed a principal of **Earnings Performance Group Inc.**, Short Hills, N.J., which provides productivity and profitability improvement services for banks and thrifts.

Mr. Blank was formerly senior vice president in the business banking division for Citizens First National Bank, Glen Rock, N.J.

Before that, he held various senior management positions for First American Bankshares, Washington, Southeast Bank, Miami, Fidelity Union Bancorp., Newark, N.J., and several community banks in Washington.

In his role of regional marketing executive, Mr. Blank will work closely with **Charles S. Forbes**, a principal and marketing director for the company.

S.C. Bankers Add Post For Sally E. Tibshrany

Sally E. Tibshrany, director of communications for the **South Carolina Bankers Association**, Columbia, has been named to the additional post of assistant vice president.

Sally E. Tibshrany

Ms. Tibshrany joined the association in 1992 as director of communications. In her new capacity, she will continue to be responsible for communications, including media, public, and government relations.

She also will coordinate the editing and publishing of the association's magazine, the *Palmetto Banker*.

Ms. Tibshrany previously was a speech writer and press aide to Lt. Gov. Nick Theodore. She also worked for Sen. Ernest F. Hollings on the Senate Commerce Committee.

— **Franklin Smith**

WEST

INTERNATIONAL Savings Bank, San Diego, said **Bill N. Kinter** has joined the bank as vice president and marketing director.

Bill N. Kinter

Mr. Kinter oversees all aspects of the bank's marketing, including public relations, sales, and product management.

He comes to the bank from Homefed Bank of San Diego, where he was chief marketing officer.

MEYER INTEREST RATE Survey, Calabasas, Calif., has hired Barbara A. Saltzberg as assistant director of loan operations.

Ms. Saltzberg will assist in the generation of loan reports that Meyer provides to financial institutions. She was formerly with Gibraltar Savings and the Resolution Trust Corp.

Also, **Marilyn C. Adler** has been hired as a research assistant in the promotional accounts department. **Rosie Berdichevsky** and **Jeffrey Math** have been hired as research assistants in the deposit reports department.

Also, **Dana Bartnicki, Jeffrey Royston, and Victoria Hall** have been hired as research assistants in the loan reports department.

Additionally, **Stephany J. Leonard** has been promoted to director of loan operations.

THE NEVADA BANKERS Association, Reno, has elected **Edwin Skonicki** as president of the association for 1993-94. He is president and chief executive of **Citibank Nevada.**

He succeeds **William E. Martin**, president and chief executive of **Pioneer Citizens Bank** of Nevada.

President-elect of the association is **Andrew,P. Studdert,** area president for southern Nevada of **First Interstate Bank of Nevada, Reno.**

Leo V. Seevers has been elected treasurer of the association. He is executive vice president and senior lending officer of **Pioneer Citizens Bank.**

WHITE & CASE, an international law firm, said **Neal S. Millard** has joined its Los Angeles office as a partner.

Mr. Millard was previously with Jones, Day, Reavis & Pogue and was that firm's national coordinator of the corporate group's lending practice.

At White & Case, Mr. Millard will continue to specialize in financial transactions for foreign and domestic clients.

White & Case is headquartered in New York.

NEW ENGLAND

FRAMINGHAM SAVINGS Bank, Framingham, Mass., has named **James Petkewich** assistant vice president-branch administration.

MIDDLE ATLANTIC

ATLANTIC Stewardship Bank, Midland Park, N.J., has appointed **Cynthia A. Perrotta** a commercial lending officer.

She has 15 years' experience in commercial lending with banks in the Bergen-Passaic county area of New Jersey.

SOUTHEAST

FRANKLIN STREET Partners Inc., an investment firm in Chapel Hill, N.C., said **G. Mackay Salley** has joined it as an equities portfolio manager.

He was formerly a senior vice president and manager of special investment products at Wachovia Trust Services Inc., a unit of Wachovia Corp., Winston-Salem, N.C.

MIDWEST

NORWEST BANK Fort Wayne in Indiana has promoted **Sue Ellen Landadio** to assistant vice president in the private banking department. ☐

CRA Enforcement Will Get Tougher

Continued from page 1

compliance examiners may have a clear set of goals in mind and is eager to quickly move forward, focusing on five areas:

- Developing performance-based standards that are more quantitative and objective, but still leave room for flexibility.
- Rewriting all of the agencies' examination procedures to make greater use of these quantifiable measures and reduce paperwork.
- Involving the public by meeting regularly with community groups and streamlining the process by which CRA records are made public.
- Developing expanded training programs for examiners; the OCC until now has not had specialized consumer compliance examiners.
- Strengthening enforcement, moving it beyond the application review process.

"The shift in emphasis will benefit everyone," Mr. Ludwig said, adding that the changes will "bring a much closer tie to the original intent of the Community Reinvestment Act."

The comptroller, Federal Reserve Board, Federal Deposit Insurance Corp., and Office of Thrift Supervision will formally begin working together this week to rewrite the regulations. The agencies have until Jan. 1 to finalize the new policies.

Competing Interests

Both industry officials and public advocates have applauded the President's desire to reform CRA. Nonetheless, both sides remain wary. Bankers don't want guidelines that are too rigid, and community groups don't want banks to be let off the hook completely in documenting their work.

"No one is in favor of leaving this law the way it is," said American Bankers Association president William H. Brandon. "We're pleased the President recognizes the problem and has targeted it for reform."

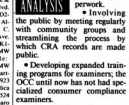
But "gauging performance is very difficult," the association head added. "If they're not careful, they could end up on the road to credit allocation."

Irvin Henderson, chairman of the Community Reinvestment Coalition, said: "Our only concern is the suggestion that reducing the alleged paperwork burden now required of lenders might be beneficial."

"How will the public, regulators, and others be able to accurately measure the true commitment of any lender in a given area without the necessary documentation?"

Concerns About Enforcement

And despite a new tenor among bank regulators on community issues, some activists remain concerned about the agencies' willingness to enforce CRA vigorously.



William H. Brandon
Against credit allocation

"Improving regulatory enforcement of CRA will not be easy, given the poor track record of the banking agencies in this area," said Allen Fishbein, general counsel of the Center for Community Change.

In revamping CRA standards, the regulators face the challenge of adding objectivity while recognizing the variety of lenders and communities that exist. Some industry officials question whether this will be possible.

"Lending varies today community by community, and trying to establish consistent standards for community lending wouldn't work," said the ABA's Mr. Brandon. The association has better things to do than trying to determine the credit needs of every community in the country."

Need for Flexibility

Mr. Ludwig said the regulators are fully aware of that issue and will be sufficiently flexible to accommodate area differences.

"How any particular institution meets its CRA obligations will depend on a variety of factors, including its overall business strategy, its financial resources, corporate structure, location, and the needs of the community in which it operates," he said.

Lenders and their critics agree that the announcement that CRA reform brings them together more frequently on specific terms – as opposed to fostering only adversarial exchanges during bank application reviews – the regulatory reform will most certainly make the law more effective.

"One of the principal goals of the President's reform initiative is to achieve a CRA rating system that commands respect from all parties," Mr. Ludwig said.

Eugene Ludwig
Aiming for cooperative effort

Regulators Still Awarding High CRA Exam Scores

By CLAUDIA CUMMINS

WASHINGTON — Banks and thrift regulators seem to be tougher talkers than graders when it comes to Community Reinvestment Act examinations.

During the first half of this year, 93% of CRA ratings released by the four federal regulators were "outstanding" or "satisfactory" – the top two of the four grades.

Only 10 of the 2,606 lenders, or 0.4%, got the lowest score, "substantial noncompliance."

1% Receive Lowest Rating

In 1992, 90% were outstanding or satisfactory, and 58 of 5,602 institutions examined, about 1%, got the worst rating. The compilation was done by *CRA/HMDA Update*, a Bethesda, Md., newsletter.

Each agency's CRA ratings improved in the first six months of 1993. The FDIC gave out the highest grades, awarding "outstandings" or "satisfactories" to 95% of the banks it examined.

Also in those categories were 92% of banks examined by the Federal Reserve and 90% of those regulated by the Office of the Comptroller of the Currency.

The Office of Thrift Supervision gave the top two grades to 87% of the 358 thrifts it examined, and none was in "substantial noncompliance."

Ratings were highest in Wisconsin and Iowa, with 99% of lenders in the top two groups. The lowest were in Maryland, where 33% received one of the two lowest CRA grades, and New Jersey, with 27% in those categories.

Citibank New Zealand Issuing Bonds

Reuters

WELLINGTON, New Zealand — Citibank New Zealand said it is funding an expansion of mortgage lending through three issues of retail bonds.

Bonds with one-year and three-year maturities are paying 6.75% annually, while a five-year bond offers 7%. Interest is payable quarterly.

The one-year bond will be limited to $5.5 million, while the other issues will be open, Citibank said.

Into the Mainstream

A $27.5 million wholesale component of the issue was tendered last week to institutions and was oversubscribed, the Citicorp affiliate said. The lead manager of the issue is CS First Boston.

Citibank New Zealand is seeking to broaden what has been a niche market into a mass business. "This should take us into the mainstream of New Zealand banking," said Brian Clayton, chairman of Citibank Australia.

Citibank's mortgage business in New Zealand has grown 300% over the past 2½ years, said New Zealand chief executive Richard Wilks. He said the bank expects to continue relying on an agent network and will not be using the new funds to open retail branches. □

Niagara Asset Corporation
Loan Sale Opportunity

Niagara Asset Corporation, a service corporation managing and selling loans for the FDIC, as Receiver of Goldome, intends to offer the following performing commercial mortgage loans for bid through a Bulk Loan Sale:

Commercial Mortgage Loans	Approximate Principal Balance	Bid Date

60 Lakefront Blvd., Suite 316
Buffalo, New York 14202-4392

Please respond by August 5, 1993.

FINANCE

BANK BONDS
Debt Upgrades, Strong Earnings, And Scarcity Fuel Rise in Prices

By DAVID SIEGEL

Bank bonds are rallying, supported by debt upgrades, strong earnings, and a scarcity of new issues.

Yield spreads to Treasury securities on banks' 10-year subordinated debt have come in by two to five basis points in the last week.

In addition, the average yield spread of the Keefe, Bruyette & Woods bank bond index has tightened by four basis points this month, to 80 basis points over the 10-year U.S. Treasury note on July 16, the tightest spread ever, said Brian Furbish, a Keefe vice president.

Forces Work to Tighten Spreads

"The expectations that earnings would be strong, that asset quality would improve, and that the broad trend in ratings would be toward upgrades have all worked to tighten spreads," said Allerton Smith, bank debt analyst with First Boston Corp.

In addition, there has been a lack of new supply of bonds while demand remains strong, said Michael Leit, bond analyst with Bear, Stearns & Co.

Citicorp and Shawmut National Corp. have been the star performers this month.

The spread on Citicorp's 10-year subordinated debt has tightened 15 basis points since July 1 to 95 basis points, said Catharine R. Brady, analyst with Salomon Brothers.

Moody's Investors Service last week upgraded Citicorp's subordinated debt to Baa2 from Baa3, senior debt to Baa1 from Baa2, and cumulative preferred stock to an investment grade Baa2 from a junk Ba1 rating.

Ms. Brady noted that the upgrades surprised the market because Citicorp's long-term debt had not been on review for upgrade.

"I think in general the market had not expected the debt upgrade that soon, which is why the bonds moved," she said.

Shawmut subordinated debt tightened 112 basis points from 120 at the start of the month, according to First Boston.

Ms. Brady said the bank's bonds rallied on news of its successful bulk sale of real estate assets and reduction of nonperforming assets.

The bank in the second quarter completed the sale of two packages of real estate assets with a carrying value of $309.8 million.

Split on Strategy

Analysts differ over whether spreads are so tight that investors should trim their holdings.

"We've talked to a number of investors lately, and no one's selling, but everyone questions whether [spreads] can get any tighter," said William Kyle, analyst with Merrill Lynch & Co. "One reason the selloff hasn't happened is that investors don't have that many alternatives in terms of spread over Treasuries that bank bonds provide."

Bear Stearns has been recommending a slight underweighting of the bank sector since mid-June because of the "all-time tightness in spreads," Mr. Leit said.

Bank Stock Table Explanation: The table lists the 225 largest publicly traded commercial bank stocks and the 25 largest publicly traded thrifts as measured by the market value of outstanding common stock as of July 16, 1993. The market value (cutoff for banks was $175.09 mil. and for thrifts was $86.4 mil.) is listed in the Mkt Cap. column. The change in price for the week is in the Chg. column. PE is the price-to-earnings ratio. The 52-week stock price divided by the trailing four-quarter earnings per share. Earnings per share are primary earnings per share, except for companies with less than four quarters of data. MM, for bank, the ratio of the most recent bank's closing price to the stock's book value, expressed as a percentage. The data is adjusted for stock splits and dividends. Footnotes: (a) — Stock traded on the over-the-counter market. (b) — Stock traded on the Amex. (c) — Stock traded on the Nasdaq National Market System. West One Takes to High Road On 'Buy' Ratings from Wall St.

By GORDON MATTHEWS

West One Bancorp shares are gaining on the strength of good second-quarter earnings and analysts' "buy" ratings.

The latest nod was from Piper Jaffray Inc., the Minneapolis securities firm.

The Boise, Idaho, bank "is in the fastest-growing region of the country," noted Steven Schroll, a Piper Jaffray analyst.

That has meant "very high loan demand, which is helping West One maintain its net interest margin and increase its asset base."

The growth trends also "have a positive impact on credit quality and core noninterest income," he said.

Earnings Estimates Raised

Mr. Schroll raised his investment rating to "buy" from "accumulate" and raised his 1993 earnings estimate to $4.70 a share from $4.35. He lifted his 1994 earnings forecast to $5.15 a share from $4.85.

West One shares were up 37.5 cents to $51.50 in late trading Monday after a gain of $1.125 on Friday. Volume on Monday was about double the average daily pace of 56,400 shares.

In the second quarter, the bank earned $1.20 a share, up from $1 a year earlier. It also announced a 2-for-1 stock split, effective Aug. 13.

Mr. Schroll's endorsement is the latest of several recent ones from Wall Street.

Last month, Joseph K. Morford of Seattle, Bruyette & Woods Inc. noted that the region where West One operates is "in the midst of a residential real estate construction boom, and there is no evidence yet of supply exceeding demand."

Idaho and Utah, he said, continue to experience "a steady immigration of families and businesses, primarily Californians attracted to the lower cost of living and high quality of life."

Mr. Morford said economists are "optimistic about the outlook for future growth in the region, especially considering that the economy is much more diversified than in the past."

Solid Track Record

The analyst said West One "has a proven track record of re-

Piper Jaffray cited "very high loan demand" in a fast-growing region.

warding its shareholders with above-average returns."

He expects earnings per share to increase more than 10% in each of the the next two years.

Mr. Morford projected that the stock would hit $60 in 12 to 18 months.

West One has assets of $7.1 billion. While centered in Idaho, the bank operates in Utah, Oregon, and Washington State.

The bank strengthened its Washington operations last September by acquiring, at a modest premium, assets from Bank-America Corp. after its acquisition of Security Pacific Corp.

Possible Takeover Target

Analysts also view West One as a likely takeover target. The growing region is attractive to large superregional banks, but there are few banks left to buy.

West One's "attractiveness as a takeover candidate will grow," said Norman Jaffe of Fox-Pitt Kelton Inc. He has a "purchase" recommendation on the shares.

Mr. Morford suggested that West One would be particularly attractive to such potential buyers as Banc One Corp., First Bank System Inc., or Keycorp. □

MONDAY'S MARKET

Citicorp was the most active bank stock on Monday, rising 25 cents to $32 on volume of 2.5 million shares in advance of second-quarter earnings being reported today.

The stock also got a nod from Stephen Berman of Natwest Securities Corp. He upgraded the stock to "buy" from "accumulate," saying he expects "a surprising earnings breakout" in the next six to nine months.

Chase Manhattan Corp. gained 25 cents to $32.75 on volume of 1.3 million shares. It reported better-than-expected second-quarter results.

Other major bank stocks were mostly mixed in relatively quiet trading on Monday as the overall stock market appeared to be searching for direction.

THE MARKETS

Jump in Oil Prices Causes Bond Yields to Edge Up

A rise in oil prices unsettled the government securities market on Monday.

In late trading, the yield on the 30-year Treasury bond was at 6.54%, up from 6.53% on Friday. Ten-year notes rose 1 basis point in yield to 5.69%. Two-year notes increased 4 basis points to 3.99%.

The Organization of Petroleum Exporting Countries said it will hold an emergency meeting at the end of this month. The cartel then is expected to increase oil prices.

Below $16 a Barrel

Until that announcement, the price of oil had fallen below $16 — the lowest level since the Persian Gulf War – in anticipation that the United Nations will temporarily lift the embargo on Iraqi oil sales.

On Monday, the price of oil surged to $17.36 a barrel.

An increase in commodity prices also fed the selloff in the Treasury market.

The Commodity Research Bureau index, measuring 21 futures prices, rose 2.83 points, or 1.3%, to 218.01.

Soybean Prices Rise

The rise was attributed mainly to higher soybean prices, spurred by flooding in the Midwest.

The bond market is today expected to focus on the first part of Federal Reserve Board Chairman Alan Greenspan's semiannual Humphrey-Hawkins testimony to Congress.

"What's the best way to deal with the real estate that we have – and will have?"

That's a question we were asked recently by a major bank. Many financial institutions have found that real estate is becoming an increasingly larger part of their portfolio. As a result, they face growing numbers of loan write-offs, greater volume of Other Real Estate Owned (OREO) and the scrutiny of regulators, securities analysts and rating agencies.

Dick Behrens

Based on Price Waterhouse's experience with numerous financial institutions, our top professionals – Dick Behrens, Debbie Rogers and Mordy Soloff – have identified several approaches to meeting the demands and opportunities of the high-profile real estate portfolio.

Four Ways to Optimize Your Real Estate Assets

1. Manage your risk by portfolio diagnosis. Your attention should be focused on stabilizing the assets with the most risk while you leverage those with the greatest upside potential. It's also essential to diagnose the status of risks inherent in a real estate loan and/or OREO portfolio.

Begin the diagnosis by classifying the portfolio's properties by existing risk ratings, property types, location and credit type. This will provide a rapid, independent assessment of the status of the overall portfolio. You should also analyze the effectiveness of existing management strategies, procedures and policies in light of the condition of the assets in the portfolio.

2. Protect your interests by servicing the loan. Often, the first point of contact you'll be able is a breakdown in timely communication, followed by a late or missed payment. You must develop proactive approaches to loan monitoring and administration, and then utilize borrower request for forbearance as opportunities for:

- Strengthen collateral positions,
- Perfect agreements, and
- Secure direct access to cash flow.

Based on your best interests and your ability to protect those interests, your institution must implement the most appropriate actions relating to negotiations, forbearance or foreclosures and ultimately, asset management.

3. Utilize information systems for efficient portfolio management. Developing effective management systems is critical to the success of problem real estate management. At the macro level, those systems should provide you with early warning. At the micro level, they should ensure appropriate monitoring of on-site property management functions in addition to revenue and expense control.

4. Consider securitization of your real estate assets. Public securitization is becoming an increasingly important and desirable means for ensuring a consistent supply of capital to the real estate market. It provides investors with liquidity, opportunity for diversity, efficient

Mordy Soloff

methods for reducing risk and consistent performance measurement. Your approach should take into consideration innovative design of new entities, structuring of complex transactions and due diligence of specific assets as well as entire portfolios. You should assess the benefits of securitization for your real estate assets.

Work with Experienced Professionals

If managing the real estate you have – and will have – is a growing concern, you should talk with one of the real estate professionals at Price Waterhouse. Based on our experience with numerous financial institutions and our knowledge of real estate markets across the country, we have developed an array of focused real estate services to assist financial institutions with the challenges of their increasing responsibilities.

Bankruptcies A Big Problem Despite Falloff

By MICKEY MEECE

On the face of it, the recent decline in bankruptcy filings is good news for bankers. Bankruptcies cost banks billions of dollars a year in chargeoffs by credit card operations.

Even though the news is encouraging – filings fell to $71,919 for the 12-month period ended March 31, from $93,259 the previous year – the numbers are still very big.

Bank card issuers lose an estimated $3.5 billion a year from bankruptcies, with much of the loss attributed to fraud or abuse of the legal system. While banks and credit card associations have launched campaigns to discourage unwarranted filings, results have been slow to materialize.

Perhaps the best news is that annual filings never reached the 1.4 million mark, to which they seemed to be moving inexorably through the 1980s.

The recent decline is encouraging, said Philip Corwin, director of retail banking for the American Bankers Association. "But the average annual rates are still running at very high levels."

Not Necessarily a Trend

James A. Comiskey, president of the Bank of Louisiana, had a typical experience. Louisiana's coming back strong. We took the hit back in the late 1980s when a decrease. That would be good news to us. But the fact that it's small may not signal a trend."

People in the industry say bankers deserve some credit for the decline in bankruptcies.

"Bankers, for the first time, are recognizing the problem and abusing the system," said Kenneth Crone, who spearheaded a bankruptcy committee for the Visa U.S.A., where he is vice president of issuer risk.

Tougher Standards

"Consumer credit grantors in general have been toughening up their credit standards because they have been burned by bankruptcies," added Mr. Corwin of the ABA.

Robert W. Johnson, senior research associate at the Credit Research Center at Purdue University, said "savvy creditors are learning how to weed out potential bankruptcies through their scoring systems."

Mr. Johnson was referring to systems such as those developed by MDS of Atlanta and Fair

Citicorp Profits Up 212% In Quarter to $446 Million

An American Banker News Roundup

Fueled by fat trading gains at big New York banks, strong loan growth at several companies in the Southeast and the Midwest, and signs of a credit rebound in the West, banks released another round of strong second-quarter earnings Tuesday.

Citicorp, the nation's biggest company, netted $446 million in its second quarter, a 212% jump from the year-earlier period, on spectacular trading revenue of almost $575 million and improved credit quality. Chemical Banking Corp.'s profits surged 59% on similarly strong trading results to $381 million.

In North Carolina, Nations-Bank Corp. earned $306 million in the second quarter, up 22%, reflecting largely the strong loan growth and improved asset quality.

Loans Up at Banc One

Ohio-based Banc One Corp. reported $281.9 million of second-quarter earnings, off only slightly from first-quarter results but up 16.06% from 1992's second period. Net loans grew 2.28% during the second quarter, reversing the trend at most other banks.

Pittsburgh's Mellon Bank Corp. boosted second-quarter earnings by $10 million, reflecting some big interest-margin gains from its purchase of the Boston Co.

Earnings at a Glance

Second-quarter net income, in millions, versus year-earlier period

	Net income	Percent gain
Banc One	$282	16%
Chemical	381	59
Citicorp	446	212
First Interstate	136	113
Mellon	99	10
NationsBank	306	22
Wells Fargo	149	82

Two major California bank companies issued one of the strongest signals yet of a banking recovery in the recession-bound state. Wells Fargo & Co. said earnings climbed 82% from a year ago, to $149 million, thanks mainly to a sharply lower loan-loss provision.

At First Interstate Bancorp, net income rocketed up 11% to $136 million, fueled by a combination of reduced credit costs, lower expenses, and modest revenue gains.

Despite the good earnings news, most bank stocks fell moderately on Tuesday after comments made to Congress by Federal Reserve Board Chair-

IBAA Chooses Boston Firm For Fund Sales

By MICHAEL O'D. MOORE

Massachusetts Financial Services has clinched a coveted deal to market mutual funds through more than 5,800 community banks.

The Boston-based mutual fund company beat its rivals to snare the three-year partnership with the Independent Bankers Association of America, a Washington-based trade association.

For the small banks that make up the IBAA, the deal will provide a solid toehold in the booming business of selling mutual funds.

New Frontier

Community banks are widely seen in the mutual fund industry as the next frontier for sales growth. With customers shunning low-yielding bank deposits, hundreds of bigger banks have paved the way into the fund business.

Massachusetts Financial topped some of the mutual fund

Greenspan: Efforts to End Credit Crunch Not Working

Fed Expects Inflation To Be 3% This Year

By CLAUDIA CUMMINS

WASHINGTON — Federal Reserve Chairman Alan Greenspan said Tuesday that despite some indications of renewed small-business lending, tight bank credit continues to constrict the economy.

In his semiannual monetary policy report to Congress, Mr. Greenspan said overall lending remains flat even though regulators have "pushed and pushed" banks to loosen up.

"I would accurately argue that the so-called credit crunch phenomenon is over," he said. "It is not."

Senate Appearance Next

"Some of [what the regulators have done] has been helpful, but fundamentally this is a psychological problem," Mr. Greenspan told the House Banking Committee in the first of two congressional appearances mandated by the Humphrey-Hawkins Act.

Mr. Greenspan will go before the Senate Banking Committee

Riskier Equity Funds Led Pack Of Bank Mutual Funds in Quarter

By DEBRA COPE

Banks that manage aggressive equity mutual funds had something to brag about in the second quarter of 1993.

Mutual funds that invest for maximum capital gain in small companies and international stocks turned in the best performance among bank-run funds during the second quarter, according to a survey for the *American Banker.*

The returns notched by the top three funds ranged from 7.14% to 9.82%, easily beating the 0.4% average return on stocks that make up the Standard & Poor's 500 index.

Against the Grain

The results could help counter the image of bank funds as stodgy underperformers. But as a practical matter, they may not have much impact on banks' efforts to market aggressive funds because bank customers consistently favor conservative investments.

For instance, the top-performing fund – Bank of Oklahoma's American Performance Aggressive Growth Fund – had just $13.3 million in assets on June 30, making it tiny even by bank standards.

"It has done well for us, but

GRAPEVINE/*Edited by Karen Gullo*

Changes at Chase

Wholesale banking executives at Chase Manhattan Corp. should be buzzing this morning about a major restructuring of their units.

Sources say Chase president Arthur Ryan was set to convene a previously delayed meeting of senior managers on Tuesday to explain the effects of Chase's corporate-wide "segmentation" program in corporate finance, trading, and other global banking businesses.

Arthur Ryan

A year in the making, the segmentation strategy centers on a small group of managers who coordinate sales and marketing specific groups of customers, cutting across product lines.

They wield power because they have profit and loss responsibility, which had previously been with managers who oversee geographic regions.

The first wave of segment executives was announced in Chase's consumer banking sector last month.

The politically sensitive wholesale strategy, originally scheduled to be unveiled last month, was delayed to allow Mr. Ryan time to fine-tune the structure, sources said.

In the Money

Never let it be said that mortgage banking is a stepchild of commercial banking.

The two co-founders and top executives of Countrywide Credit Industries each earned $2.5 million in cash compensation last year, outpacing the lofty salaries of banking kings such as J.P. Morgan & Co. chairman Dennis Weatherstone and Bankers Trust New York Corp. chairman Charles Sanford.

Angelo R. Mozilo, vice chairman of Countrywide, took home a cash bonus of $1.8 million to supplement his salary of $720,371 in fiscal 1993, according to a proxy statement released last month by Countrywide. That represented a 3.3% increase from his previous year's take.

Angelo R. Mozilo

The company's fiscal year ended Feb. 28.

Mr. Mozilo's partner – chairman and president David S. Loeb – pocketed a bonus and salary worth $2.7 million, up 47% from his $1.8 million cash compensation the previous year.

The California-based mortgage firm, the nation's biggest home lender, reported net income of $140.1 million, up 133% on big refinancing volume, in fiscal '93.

Bankers Trust's Mr. Sanford and Morgan's Mr. Weatherstone each made $2.4 million in cash compensation last year, while their second-in-commands took home $2.1 million.

Flood Foibles

For more than a week, a skeleton crew at the Iowa Bankers Association has been struggling to provide services amid the devastating flooding affecting their state.

Though the trade group's downtown Des Moines offices – like others in the city – have been declared a fire hazard, the staff has been skirting the law in an attempt to help their constituents.

Surging floodwaters contaminated a municipal water plant, forcing Des Moines to shut off running water, including fire sprinklers, in downtown buildings.

But several association staffers have been sneaking into their offices, avoiding eviction by dimming the lights, and keeping a low profile.

"If we use too much electricity, they'll kick us out," said Vicki Steward, editor of the association's biweekly newsletter.

Ms. Steward said six of the trade group's staff of 35 people have made it in to work.

She said the crew is running a toll-free number established by the association to tell flood victims where they can obtain emergency, low-interest loans.

Production of the association's newsletter is also continuing on schedule.

But the ordeal is severely testing the staff's internal fortitude. The nearest bathroom is a portable outdoor model four flights down from the office and two blocks away.

Running water was expected to return to Des Moines this week, though drinking water may not be turned on until later this month.

— Barton Crockett

Tougher Rules on Flood Insurance Sought by Midwest Congressman

By ROBERT M. GARSSON

WASHINGTON — In the wake of Mississippi River flooding, lawmakers are taking renewed interest in legislation intended to increase lender compliance with flood insurance laws.

Legislation introduced in the House by Rep. Doug Bereuter, R-Neb., would require flood insurance on all new mortgages on properties in a floodplain and would permit lenders to "force-place" the insurance when borrowers let policies lapse.

It also would set fines of up to $100,000 a year for lenders with a "pattern and practice" of failing to require flood insurance.

Rep. Doug Bereuter
Would let lenders "force-place"

Some Checking Required

The Bereuter bill does not require lenders to comb through their portfolios to ensure that all affected mortgages have policies in force, an approach included in a bill the Nebraska lawmaker sponsored last year.

But it does require lenders to check the status on properties whose mortgages are sold, extended, or modified five years after origination.

File Search 'Very Expensive'

Rep. Joseph Kennedy 2d, D-Mass., shares Rep. Bereuter's concerns and plans to consider legislation in his House Banking subcommittee on consumer credit and insurance. In the Senate, John Kerry, D-Mass., is working on legislation.

Bankers are particularly concerned about the prospect of being required to go back through their portfolios to check flood insurance coverage.

"Going back through files to retroactively determine who should have insurance is very expensive," said Edward L. Yingling, director of government relations for the American Bankers Association.

"The system for determining who must have it is incredibly complex. The maps are out of date, they change constantly, and they are difficult to read."

Could Leave Loophole

Other bank industry representatives complained that utilizing lenders to increase flood insurance use was shortsighted.

"Only 60% of all property is mortgaged, so at best it's a 60% solution," said Stephen J. Verdier, a lobbyist for the Independent Bankers Association of America.

The Bereuter bill might also leave a loophole that would make it possible for some property owners with mortgages to drop flood insurance after the loan closes. The bill would require lenders to set up a monthly escrow for flood insurance payments, but only if they escrow funds for another purpose.

However, about 22% of new mortgages do not require that funds be escrowed for insurance and taxes, according to Sharon Canavan, a lobbyist for the Mortgage Bankers Association.

'More Legislative Muscle'

Although mortgage brokers are not directly covered by the law, most of that industry is already in compliance, Ms. Canavan said.

All loans sold to U.S. government agencies such as the Federal National Mortgage Association must have flood insurance, she said, and virtually all the loans originated by brokers are sold to one of the secondary-market agencies.

Still, Ms. Canavan said, prospects for legislation may have improved. "There's a lot more legislative muscle because of the flood," she said. □

Fifth Third Network Adds Provident Bank

By MATT BARTHEL

Fifth Third Bancorp's regional automated teller machine network, combating speculation that it is an acquisition target, has added a bank member and will possibly expand its ownership.

The network, whose 1,100 ATMs are in Ohio, Kentucky, Indiana, West Virginia, and Tennessee, will add Provident Bank of Cincinnati to its roll of about 200 members.

In addition, Provident, the lead bank of the $4-billion-asset Provident Bancorp, retains the option of owning a piece of the network.

George Schaeffer
"Strategic alliance"

Michael Snyder

Region's 'Premier Network'

Executives of the network, known as Jeanie, indicated that a partnership with Provident in an important step to help preserve the network's dominance in the face of ATM network consolidation in the Midwest.

"Through the strategic alliance with Provident Bank, Jeanie is now assured to be the premier network in this region for years to come," said George A. Schaefer Jr., president and chief executive of Cincinnati-based Fifth Third, currently Jeanie's only owner.

By most measures, Jeanie ranks among the top 20 ATM networks in the country. It is run by Midwest Payment Systems, a subsidiary of the $11-billion-asset Fifth Third.

But observers said that, despite Mr. Schaefer's comment, Jeanie is unlikely to be the dominant force in the Midwest. Indeed, some experts question whether the network will exist at all in a few years.

The 200-member system has 1,100 ATMs in five states.

Their reasoning is based on the fact that Jeanie's home market is shaping up to be a battleground between two electronic banking powerhouses, one or the other of which is likely to absorb the network eventually.

Major Players

The first of these technology companies, Electronic Payment Systems Inc., based in Wilmington, Del., operates under the MAC logo and is looking to add Midwest banks to its membership.

Jeanie's major Midwest competition could come from a group of 15 of the region's largest banks, now negotiating to form Electronic Transactions Inc. Jeanie's members would be hard-pressed to resist joining.

Provident is among the 15 institutions involved in the Midwest joint venture talks. Until Sept. 1, when the Jeanie agreement takes effect, Provident belongs to the Owl network, which is owned by Electronic Payment Services.

Gaining a Stake

Provident officials said their main motivation in joining Jeanie was to own a piece of the network in which they participate. Provident is at a negotiating disadvantage in the Midwest group's talks, bank officials said, because it is the only institution in the Midwest group that does not have an equity stake in a ATM network.

The bank has not disclosed what share of Jeanie it is entitled to under the recent agreement.

Industry observers said another reason for Provident's joining Jeanie was to avoid becoming part of Electronic Payment Systems, which is in the process of changing the logo on all Owl network ATMs to the MAC trademark.

Seen as Preferable to MAC

Electronic Transactions joint venture "is still four to five months away, so if Provident wanted to avoid putting MAC on all its cards, it had to find someplace to go in the interim," said Richard Speer, chairman of Speer & Associates, an electronic banking consulting firm based in Atlanta.

Provident officials indicated that a network the size of Jeanie was preferable to MAC membership.

Provident Bank will add 91 ATMs to Jeanie. The bank's relationship with the network may also encompass debit card point of sale, telephone banking, and automated bill payment services in the future.

Provident's 100,000 ATM cardholders will receive new cards with the Jeanie logo.

Meanwhile, the Electronic Transactions group, which in addition to Provident includes First National Bank of Chicago, Comerica Inc., NBD Bancorp, Norwest Corp., and Huntington National Bank of Columbus, Ohio, has been talking with other institutions about joining the formal merger talks.

These prospective members include Harris Bankcorp, Chicago; Boatmen's Bancshares, St. Louis, and Old Kent Financial Corp., Grand Rapids, Mich. □

Chase Taps Siriano to Head New Group

Unit's Goal Is Speeding Up the Development of a Range of Products

By JEANNE IIDA

Chase Manhattan Bank has appointed Albert Siriano, the former technology chief of Xerox Corp., to head a new information-technologies group for its fee-based services business.

The unit Mr. Siriano will head at Chase is designed to speed the development of products and systems based on new technologies, such as "client-server" computing, where networks of PCs take over tasks previously handled by mainframes.

The new organization consolidates resources that previously were divided among business line at the fee-services unit, called Infoserv, Chase officials said.

$70 Million for Upgrading

Chase invests about $70 million annually in upgrading systems in Infoserv. One of the unit's biggest projects over the past year has been the roll-out to corporate customers of a new workstation, called Infostation, that uses Microsoft Corp.'s Windows PC operating system.

The new unit "is meant to streamline the organization to make it more responsive to customized solutions," said Craig Goldman, senior vice president of information technology at Chase.

Infoserv includes businesses such as cash management, global securities services, institutional trust, investment banking, and insurance services.

Many banks are upgrading the systems underlying their fee-based services in an attempt to make more timely information available to customers. Northern Trust has committed $100 million to upgrading its trust and global custody systems.

Staff of 230

Bankers Trust recently established a separate unit to develop software applications based on client-server technology.

At Chase, Mr. Siriano, will head a staff of about 230, and report directly to Michael Urkowitz, executive vice president and chief executive of Infoserv, and to Mr. Goldman.

Mr. Siriano will also be responsible for standardizing Chase's often incompatible computer systems. Among the standards Chase is moving toward are the Microsoft's new advanced operating systems, called Windows NT, and "workgroup" software from Lotus Development Corp., Cambridge, Mass., called Notes.

Mr. Siriano spent four years at Xerox prior to joining Chase in June. Before that, he was chief information officer of Tenneco Oil Co., Houston.

At Xerox, Mr. Siriano put in place a program, beginning in 1990, to move from mainframe-based computing to one based on networks of PCs. □

Is your software vendor there for you after the contract is signed? What if you run into a problem — can you make a phone call and get the right answer right away? What about after 5:00 p.m. and over the weekend? And what about two years down the road when you want to enhance your system to meet new corporate goals?

If you answered "yes" to these questions, you're probably one of the thousands of professionals using an SSI system for electronic funds transfer, securities recordkeeping, retail loan recovery, sale box accounting, mortgage lending, lease accounting, imaging, check processing or cash management.

For more than 22 years, institutions of higher earnings, just like yours, have chosen SSI as their software vendor. And for good reason. Our more than 80 software solutions for multiple platforms and client-server environments have routinely accomplished, and often exceeded, the expectations of our customers.

Our company motto, "You that would be greatest, let him be servant to all," (Matthew 20:26), serves as the backbone to all we do. Whether it's designing and documenting software or training and supporting customers, we're committed to our customer's complete satisfaction.

Put us to the test. Call (404) 840-1616 today and ask to see the scores on our SATs.

By Paul S. Nadler

Tougher Capital Standards Require a Hard Look at Growth

One significant repercussion of the higher capital standards for banks has been a reevaluation of the worth of growth.

There was a time when growth was everything. You would ask a banker his "footings" and he would tell you the morning's figure to the last dollar. But if you asked how much the bank earned, he would say, "Ask the accountant. He comes in in August."

Now banks have to meet much more rigorous capital standards, so growth must be backed by capital funds immediately.

Justifying Growth

This is a far cry from the days when a bank's capital position was negotiable. During those times, a bank would go as long as it could, growing nicely and keeping the regulators at bay by sweet talk or at least glib explanations of where the capital needed to back this growth would be coming from.

Among the results of this new capital standard requirement has been the recognition among bankers that each service, each branch, and each loan has to be justified as to its profitability since it will require the commitment of capital to back it.

Do we want a branch? If it does not have the potential to earn enough for us in undivided profits to justify the capital we are placing to work in establishing it, then what do we need the branch for?

If a loan will provide profits, but at a lower rate of return than the bank earns on its overall operation, then what do we need the credit expansion for? What this basically means is that banking has had to switch from being a high-volume, low markup industry to being a low-volume, high mark-up operation.

Loss Leaders by Competitors

This also gives us an answer to the old question of, "What do I do if the competition is giving away the bank?"

This has long been the banker's dilemma.

A solid bank may feel that some service, such as checking accounts, must earn a set return to justify offering it, but the bank across the street offers the service at a far lower cost.

What do we do? Do we compete even if we know we are going to lose money on the service? Or do we let the customers move across the street?

Bankers are of two minds on this. Some feel that if we lose this unprofitable business, we will lose profitable business too, so we must offer it as a loss leader.

'Let Em' Go'

Others hold that the loss leader will never be accompanied by a "profit follower."

"Let 'em go," they say. These bankers contend that the aggressive institution soon realizes that it is losing money on each transaction and goes back to the original price level, thereby losing many of the customers back to the first bank and producing some strong ill will to boot.

And in today's market, where capital strength is so important, the number of bankers who refuse to employ a loss-leader strategy is steadily growing.

Favor Today's Shareholders

Of course, the real question is whether your bank serves today's shareholders or tomorrow's. Many bankers feel they must give up profits now to position the bank for future earnings. Others hold that today's shareholders should not be sacrificed on the altar of future profits.

And while no one can offer a definitive answer, we do know that the new capital requirements have, in effect, forced banks to favor today's shareholders. What good are plans for future profits when the regulators want the bank to develop undivided profits and new capital today? □

A High-Profit Strategy for Banks: Find the Top Customers and Keep Them

If you can improve your level of customer retention by just 5%, and sustain that improvement over five years, you can improve operating earnings by as much as 100%.

This astounding leverage is possible because of the lower costs of loyal customers as opposed to new customers. And added to this equation is the fact that loyal customers are the richest source of new customers and own more accounts per household than new customers.

Employee loyalty also contributes to the 100% operating-profit improvement. Customers are induced to continue dealing with loyal employees, and vice versa. I call this entire dynamic "the customer-retention cycle."

Getting Started

Once a bank ventures into this cycle, the phenomenon becomes self-perpetuating. It is the single most profitable strategy lever a manager can pull.

Once the bank is positioned as one that keeps good customers, only the unprofitable customers are left for competitors. As long as the strong bank doesn't falter, the competition cannot counter its strategy.

This sounds easy enough, but how can your bank actually break into the cycle?

Start by making it the centerpiece of a marketing strategy. Customer retention becomes a way of life, not just the current season's most fashionable program.

Next, profile the loyal loan and deposit customers who will be the focus of the retention strategy. Regrettably, not all of your customers will be worth trying to retain – not all have a capacity for loyalty.

You cannot retain customers who will switch banks over two basis points.

UNDER TODAY'S *rules, each added service, branch, or loan must first be justified as profitable enough to offset the commitment of capital that would be required to back it.*

LOYAL CUSTOMERS *have the most accounts per household and are the richest source of new customers.*

The best approach to identifying who is worth the effort is to take a look at the customer data base and see who has stayed with you for several years.

Next, measure the gap between the present level of customer retention and your objective for the next one to five years. Remember, this leverage is potent: Sustain it for five years and double your annual operating profits.

Once the loyal-customer profile is established, survey a number of loyal customers who have recently left your bank and ask why. Conversely, survey a number of continuing customers to determine what kept them loyal.

Inevitably, one reason for customer retention will be attachment to loyal employees, so talk with them to find out why they have stayed with you.

Discussions, Not Interviews

The most useful way to learn about both loyal and fickle customers and employees is to bring groups of each together for discussions. Unlike traditional focus groups, these should be focused on the task at hand, emphasizing that a retention-improvement team is listening.

The session moderator converses with the customers and employees instead of interviewing them, using a mixture of metaphorical and literal questions.

For example, if you ask customers to describe their relationship with your bank as a friendship, or to describe your competitors as animals in the wild, you will discover far richer insights than are obtainable from standard focus-group questions.

Immediately following the discovery phase of each exploratory session, you can debrief the retention team on what they have learned about customer loyalty. Then, in a first step to close the retention gap, hold a session to generate ideas and next steps for improvement. □

Runs on Deposits Will Rise if FDIC Is First at the Table in Bank Liquidations

The proposal now before Congress to give a preference to the Federal Deposit Insurance Corp. in bank liquidations is extremely misguided for a number of reasons.

Most important, the proposal is wrong from a systemic point of view. Few people seem to realize that recent changes in the banking laws have made the banking system rather brittle. That's because these changes have taken away the sources of liquidity that weaker banks have used to fund outflows.

Currently, a run on a bank by uninsured depositors is distinctly possible if the bank reports a few adverse events.

The major changes that have taken place can be catalogued as follows:

- The brokered deposits rule now prevents less-than-well-capitalized banks from paying up to attract insured deposits in an emergency.
- The new deposit insurance pass-through rules make pension funds and similar pooled funds vulnerable once a bank is not well capitalized.
- The new requirements that force the FDIC not to pay off uninsured deposits in many cases already threaten uninsured depositors.
- The prompt corrective action rules threaten uninsured depositors much earlier in a bank's trouble cycle, making it likely that sophisticated depositors will withdraw their money much earlier.
- The new restrictions on the Federal Reserve banks' ability to lend to troubled institutions make depositors more worried still. In practice, these new rules may make it more difficult for the Federal Reserve Board and the FDIC to deal with runs.

Liquidity Problems

The new laws have made it more certain that the Continental Illinois experience will be repeated. Banks will fail because of liquidity problems before they are able to balance sheet insolvency.

This phenomenon is intended by the theorists of the 1991 banking law. It puts depositor discipline into the system and thereby discourages the taking of risk by banks.

It also results in early closure and thereby, it is said, reduces the risk to the deposit insurance fund.

Cost of Bank Failures

The first problem with this approach is that it fails to take account of the natural cost of bank failures. That is, based on experience, it appears that a failure depreciates all but the most liquid assets on a bank's balance sheet by something like 20%.

A failure, therefore, should be avoided where possible not just to preserve an institution that may have been valuable to its community, but also because failure is inherently wasteful.

Some observers would advocate that the elimination of excess capacity is beneficial. There are, however, better ways.

The second problem with the depositor discipline approach is that it threatens to change the nature of banking by making banks overly risk-averse.

This phenomenon has contributed to the credit crunch and may continue to cause credit to be unavailable to some types of borrowers who relied on bank credit in the past.

The new volatility also may place U.S. banks at a competitive disadvantage in competition with foreign banks.

Invitation to Runs

Foreign banks do not live under such strict rules and they do not have to disclose as much about their operations. They therefore may appear to be stronger than similarly situated U.S. banks.

Adding a preference for the FDIC to the already substantial tendency of the new rules to create runs would not be a good idea.

Today a large depositor knows that if it gets caught when the music stops, it will suffer a loss of some percentage of its deposit.

If the large depositor knows that it will lose its entire deposit, the flight to safety will take place at a very early stage indeed, and the system will become both more concentrated and more prone to general runs when cataclysmic events occur.

And make no mistake about it, such cataclysmic events, while infrequent, will occur. Neither law nor technology has repealed the basic cyclicality of capitalist economies. □

Chemical, NationsBank, and Banc One Report Profit Gains for Second Quarter

Continued from page 5

man Alan Greenspan raised the specter of higher short-term interest rates.

NORTHEAST

Analysts cheered Citicorp's report, saying it demonstrated that the nation's largest bank company is finally seeing a real diminution in credit problems and reaping profits from its core businesses.

For the first time in many quarters, Citicorp did not record any unusual one-time gains from the sale of assets.

"The general trend of earnings is sustainable," said Diane B. Glossman, an analyst at Salomon Brothers Inc. "There is nothing in this quarter that we're going to extract out as a nonrecurable item."

Citicorp's results, which translated into 82 cents a share, far exceeded Wall Street's expectations of 59 cents a share, according to Zacks Investment Research.

On Tuesday, shares of the nation's biggest bank company lost 50 cents to $31.50.

Citicorp's trading revenue of $572 million – sparked by $352 million of foreign exchange profits -- even surpassed the $520 million reported last week by J.P. Morgan & Co., one of the preeminent trading banks. Analysts predicted that the company will be able to reap quarterly gains of at least $300 million from trading activities in more normal periods.

Investors also took heart from a more fundamental statistic – the recovering company's sixth consecutive quarterly decline in commercial credit costs. The total, which includes net writeoffs, net carrying costs, and expenses for maintaining foreclosed real estate assets, plummeted to $297 million from $380 million during the first three months of this year.

Commercial real estate writeoffs declined 18.6% since the first quarter to $172 million, though consumer writeoffs climbed slightly to $367 million from $336 million.

Citicorp, unlike many competitors that have been drawing down reserves as credit quality improves, redeployed some of its revenues into its loan-loss allowance. It took a provision of $176 million, up from $127 million in the first quarter. Its allowance for credit losses covered 3.94% of total loans at the end of the quarter, up from 2.92% on March 31.

Citicorp said expenses rose 4% from the second quarter of 1992, noting that the company increased its spending for domestic advertising and consumer banking. The expenditures indicate that the company "is beginning to lift up its head a bit," said Arthur P. Soter, an analyst at Morgan Stanley & Co.

— Yvette D. Kantrow

Chemical Banking Corp.'s second quarter repeated the pattern of its money-center peers – hefty trading profits and improved credit quality.

The nation's third-largest bank company also bulked up in quarter with $118 million of venture capital gains a $44 million nonrecurring boost in Brazilian bond payments.

Chemical's profits of $1.35 a share exceeded analysts' consensus estimate by 32 cents. The company's stock was unchanged at $30.75 on Tuesday.

Though some analysts dismissed the bank's trading profits and venture capital gains as unsustainable, they were impressed with the trend in credit quality at Chemical.

The company's nonperforming assets have decreased 19% since the end of last quarter to $4.9 billion. About half of the nonperformers, excluding $900 million of developing-country debt, involve commercial real estate assets.

However, Chemical's loan-loss provision – which had declined over the previous seven quarters – rose 16% from the first-quarter level to $363 million. The company said it added $55 million to its reserves to accelerate the sale of $162 million of problem residential mortgage loans and foreclosed properties. The loans were several years ago under a "reduced documentation" program.

On the revenue side, Chemical's trading gain of $298 million was up 18% from the first quarter and 75% better than one year earlier. Fee revenue rose, too, driven by an 18% gain in corporate finance and syndication fees since the end of quarter.

Although net interest income rose, Chemical's interest margin slipped six basis points since the first quarter to 3.76%.

Noninterest expenses climbed 10% from the year-earlier quarter to $1.3 billion, reflecting "significantly" higher incentive compensation, Chemical said.

— Karen Gullo

SOUTHEAST

NationsBank Corp. recorded unexpected securities gains of $22 million to help it exceed analysts' consensus expectations of $1.16 a share by 3 cents. But analysts were still impressed by fundamentals at the nation's fifth-biggest bank company, one of the few to experience robust revenue growth.

"The quality of earnings was very good," said Moshe Orenbuch, who follows NationsBank for Sanford C. Bernstein & Co.

The company continued to enjoy a wide gap between its funding and lending costs, even as many of its southeastern competitors experienced compressed margins. Its net interest margin inched up 11 basis point since the first quarter to 4.17% and 16 basis points from the year-earlier second quarter. Net interest income climbed 11% since last year to $1.1 billion.

Analysts were particularly heartened by a surge in loans in May and June – primarily in the bank's consumer and factoring portfolios – predicting that growth has continued into this quarter. NationsBank's loan balances surged by $2.8 billion, representing a 16% annualized growth rate, between March 30 and June 30.

Improving credit quality also boosted the bottom line. The company's loan-loss provision of $110 million fell 9% from the first-quarter level, while chargeoffs of $93 million declined 10.7% from three months earlier. Both the provision and chargeoffs improved substantially from the second quarter of 1992.

Noninterest expense rose by 5% from the year-earlier quarter, reflecting the company's recent acquisition of Chrysler Corp.'s consumer loan subsidiary. Excluding that purchase, expenses inched up by only 2%. Analysts, however, noted that the expansion ist company's efficiency ratio – which measures expenses as a percent of operating revenue – remains high at 63%.

"NationsBank had revenue growth, which is something most banks are killing for, but it's the efficiencies that are missing," said analyst Susan Leadem, an analyst at Robinson-Humphrey Co. "Ideally, you'd like to see both."

NationsBank, which is expected to close on its deal to acquire Baltimore-based MNC Financial Inc. this quarter, should get a quick earnings boost from the purchase, analysts said.

MIDWEST

George Meiling, treasurer of **Banc One Corp.**, said that gains in mortgage and consumer loans accounted for most of the company's portfolio expansion, with the strongest growth coming in Arizona, Indiana, Kentucky, West Virginia, and Wisconsin. Colorado and Texas units grew at about half the consolidated pace, he said, and the Ohio portfolio mildly shrank as the annual flood of tax refund loans ran off the books.

The company's net interest margin is 6.3%, one of the highest in the banking industry. It fell from 6.57% in the first quarter when tax refund loans lifted the number. Mr. Meiling said he believed the margin would hold fairly steady for the rest of the year.

Kenneth Puglisi, an analyst with Chicago Corp., said Banc One's earnings of $1.01 a share were slightly ahead of his expectations, mostly because of the high net interest margin. "Prudence dictates that we remain wary about margin deterioration, but so far it hasn't shown

Wells Fargo, First Interstate Show Strength

Continued from page 7

up," he said.

Shares of the Columbus, Ohio-based bank company, the nation's eighth largest, lost $1 to $54.50 on Tuesday. Banc One declared a 5-for-4 common stock split and increased its cash dividend by 10.7% Tuesday morning.

A sharp credit quality improvement also contributed heavily to second-quarter results, as nonperformers fell 12% to fell by 10.6% to $738.5 million, or a modest 1.48% of gross loans. The company's loan-loss provision of $58.4 million was down 52.3% from the first quarter.

— Steve Klinkerman

Mellon Bank Corp. said the Boston Co. contributed $11.2 million of net income during the six weeks it owned the company in the second quarter. The amount was ahead of expectations, indicating that it took chargeoffs of $93 million declined 10.7% from three months earlier. Both the provision and chargeoffs improved substantially from the second quarter of 1992.

Noninterest expense rose by 5% from the year-earlier quarter, reflecting the company's recent acquisition of Chrysler Corp.'s consumer loan subsidiary. Excluding that purchase, expenses inched up by only 2%. Analysts, however, noted that the expansion ist company's efficiency ratio – which measures expenses as a percent of operating revenue – remains high at 63%.

"NationsBank had revenue growth, which is something most banks are killing for, but it's the efficiencies that are missing," said analyst Susan Leadem, an analyst at Robinson-Humphrey Co. "Ideally, you'd like to see both."

NationsBank, which is expected to close on its deal to acquire Baltimore-based MNC Financial Inc. this quarter, should get a quick earnings boost from the purchase, analysts said.

MIDWEST

George Meiling, treasurer of **Banc One Corp.**, said that gains in mortgage and consumer loans accounted for most of the company's portfolio expansion, with the strongest growth coming in Arizona, Indiana, Kentucky, West Virginia, and Wisconsin. Colorado and Texas units grew at about half the consolidated pace, he said, and the Ohio portfolio mildly shrank as the annual flood of tax refund loans ran off the books.

The company's net interest margin is 6.3%, one of the highest in the banking industry. It fell from 6.57% in the first quarter when tax refund loans lifted the number. Mr. Meiling said he believed the margin would hold fairly steady for the rest of the year.

Kenneth Puglisi, an analyst with Chicago Corp., said Banc One's earnings of $1.01 a share were slightly ahead of his expectations, mostly because of the high net interest margin. "Prudence dictates that we remain wary about margin deterioration, but so far it hasn't shown

Dean Witter Reynolds Inc., New York.

In late trading Tuesday, Mellon's shares lost 50 cents to $55.75.

The Pittsburgh-based company completed the $1.45 billion purchase of the mutual management and trust giant, which has $6.3 billion of assets, on May 21. Without the deal, Mellon's 1.2% gain in net interest income would have been 7%, while its 39% increase in fee revenues would have fallen to 20%.

But Mellon said it incurred $457 million of goodwill and other intangible assets in the form of the premium paid for the Boston Co. The goodwill will be amortized over a number of years.

Excluding some special charges related to the purchase and tax breaks in the year-earlier quarter, Mellon's second-quarter income was up 6.45% from $93 million in the first quarter and up 54.7% from $64 million a year ago.

Also in Pittsburgh, **Integra Financial Corp.** posted second-quarter earnings of $38.5 million, up 48% from year-ago results as restated for the acquisition of Equimark Corp.

The company's shares gained 25 cents to $47.125 on Tuesday.

— Steve Klinkerman

WEST

Wells Fargo & Co., the nation's 11th-largest bank company, significantly exceeded analysts expectations as it recorded its best performance since the first quarter of 1991.

The San Francisco-based company said nonperforming assets fell for the third consecutive quarter, ending at $2.319 billion, or 4.52% of assets, on June 30.

Wells' ability to boost profits sharply despite a continued high level of problem loans "is a testament to [its] enormous earnings power," said Campbell K. Chaney, an analyst with Dakin Securities in San Francisco.

The company's stock rose $2 to $109.25 on Tuesday.

Despite the strong credit trends, Wells said it remains cautious about future provision levels because of California's weak economy. Indeed, new nonaccrual loans tallied $264 million, up from $249 million in the March period, representing the first quarterly increase in nonperformers in 12 months.

Wells trimmed its addition to loan-loss reserves to $140 million by 33% from the 1993 first quarter. Net chargeoffs of $138 million about equaled the company's provision.

The California economy, however, is not robust. Wells reported that loans dropped 14.9% from the second quarter of 1992 and 2.3% from the end of March. Net interest income fell 2% from a year ago, despite a fat 5.71% net interest margin.

In Los Angeles, **First Interstate** surpassed analysts forecasts as it reported its sixth consecutive operating earnings increase and seventh consecutive drop in nonperforming assets. For the first time in years, First Interstate's results also reflected gains in revenue.

Nonperformers fell 15.1% from this year's first quarter and 53.3% from the second period of 1992 to $567 million, or a slim 1.15% of total assets.

Results at two other California institutions showed that the economic turnaround remains uneven.

San Francisco-based **Union Bank** said quarterly profits slipped 21% from a year ago to $26.1 million. And **Great Western Financial Corp.**, Chatsworth, reported second-quarter earnings of $52.6 million, down 24% from a year ago.

In Utah, **First Security Corp.** reported second-quarter net income of $26.2 million, a 26% increase over the same period a year ago. The result equaled a return on assets of 1.33%.

A Clear View of the World

This view of the earth is actually a composite of more than 2,000 cloudless images, collected by several orbiting satellites, and carefully assembled by a hand-picked team of experts.

One of today's most respected global money managers, G.T. Global, uses a similar system to produce a clear view of world markets for investment decision-making.

Instead of satellites, G.T. Global relies on investment teams located in London, Hong Kong, Tokyo, Singapore, Sydney, and San Francisco.

Team members speak the local languages and understand the local business and accounting practices, so they have a strong advantage when interviewing local executives on company visits.

Each regional team also has a unique perspective on the world economy, which G.T. Global assembles into a single, clear view of global economic trends.

Because of this clear view of the world, G.T. Global can make uniquely informed investment decisions on six continents–from infrastructure projects in South China, to newly privatized telephone utilities in Latin America, to export-oriented technology firms in the U.S., or the bond markets in France, Spain, and the U.K.

If you would like more complete information about G.T. Global's mutual funds, please call the number below.

You will be sent free information for the funds of interest to you, including charges, expenses and the risks associated with global investing. Please read the prospectuses carefully before you invest.

RTC Mulls Forming Development Banks From Failed Thrifts

By PHIL ZAHODIAKIN

CRA

A PROPOSAL TO TURN FAILED THRIFTS into community development banks will be studied by the Resolution Trust Corp.

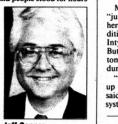
The plan was developed by New Jersey Banking Commissioner Jeff Connor, who unveiled it at a community lending seminar held by the Woodrow Wilson School of Public and International Affairs at Princeton University.

Last week, he outlined the idea to Ross Ford, deputy vice president of the RTC's Norristown, Pa., office.

"It's something we'll investigate and explore with our Washington resolutions group," said Mr. Ford. "If there's a way to help communities with a new way of offering branches to the marketplace, we're always interested."

Under Mr. Connor's proposal, failed thrifts for which bids are not submitted would be reopened as community development banks with private and RTC funding. Mr. Connor devised his plan in the wake of a 1990 bank failure in Paterson, one of the state's largest cities.

"It was a week before Christmas, and people stood for hours to withdraw their deposits at [United Savings Bank of Paterson]. Translators tried to explain [in Spanish] that their money wasn't lost forever. It was like a scene from the Great Depression."



Jeff Connor

What was lost, Mr. Connor said, was the opportunity to turn United Savings into a community development bank. The main office was brought to market as part of a branch package, and its assets were sold to an out-of-town bank.

"Bidders shun the offices in urban areas," he said. "They'd rather buy the deposits and take them to a suburban office."

United Savings is now a just a boarded-up eyesore in downtown Paterson, and Mr. Connor believes that the RTC at least should donate the parcel, and others like it, to start-up community development banks or community credit unions.

Otherwise, the RTC should help start a development bank by providing half the $6 million in capital New Jersey requires to start a bank, Mr. Connor said, adding that community groups would be given 90 days to raise the rest.

The development banks would be chartered as mutual savings banks and would, among other things, tap into federal programs like Fannie Mae's below-market mortgage programs, for example, or the SBA."

Hopes Matching-Fund Legislation Will Pass

Mr. Connor also is hopeful that a proposal by Sen. Bill Bradley, D-N.J., to match the savings deposited by the poor, up to $2,000, will be enacted.

"It's astonishing, but the average poor person has just $88 in assets because they turn their checks into money orders, to pay their bills, and the rest into cash," Mr. Connor said.

Building up their savings eventually would enable the poor to qualify for a mortgage.

Mr. Connor said the RTC should retain any bad assets held by the original institution and replace them with performers in its portfolio.

New Jersey has eight failed thrifts awaiting resolution. "As we evaluate their disposition," said Mr. Ford, "we should explore the opportunity for minority or other kinds of acquisition, and we will ask our people to assess these opportunities."

Trade Group Expresses Concern, Support

Bob Schmermund, spokesman for Savings and Community Bankers of America, said the idea raises "obvious concerns over the amount of capital the failed thrift would really need to be viable. But we would support the thrust of the idea – especially since it enables you to salvage what's left of the franchise value of the name and community good will."

Mr. Schmermund adds that "there will be a lot more flexibility for a plan like [Mr. Connor's] if Congress provides full funding for the RTC. The RTC needs money to be creative, and programs like the Accelerator Resolution Program, where thrifts were marketed before they were put in conservatorship, allowed it to cut its average resolution cost in half."

Low-Tech Thrift Stayed Open As Water Rose and Power Failed

By ROBYN MEREDITH

For nearly two weeks, the lights were out and the air conditioner was still. The computers were down and water filled the basement of Savanna Savings Building-and Loan Association in Savanna, Ill.

Each of these problems might close a highly automated bank branch in a large American city. But try as it might, the muddy Mississippi could not close $9 million-asset Savanna Savings, situated on Main Street 75 yards from the river bank.

The 106-year-old S&L is so old-fashioned that it continues to use handwritten entries on loan cards, passbooks, and ledgers to keep track of its customers' accounts, and that enabled it to stay open under those primitive conditions.

In the Dark

Most of the thrift's customers "just couldn't believe we were in here in the dark, with no air conditioning," said Steven M. McIntyre, chief executive officer. But he wanted to make sure customers could get their money during the disaster.

"Chalk one up for not being up with the computer age," he said. "We've kept a lot of the old systems – the manual ledgers and loan cards." Handwritten account records are later typed into the S&L's computer.

Savanna Savings lost its electricity from June 30 until July 10 after the river flooded its basement and forced electric service to be shut off to the thrift and several other waterlogged businesses on low-lying areas of Main Street.

A Wealth of Competitors

There are plenty of financial institutions in Savanna, a town of just 4,500 people three hours drive west of Chicago. Although Savanna Savings was the only one affected by the flood, there are also three banks and two credit unions in town.

The S&L continues to use handwritten entries to keep track of accounts.

Some customers were especially surprised to find out that Savanna Savings had managed to stay open. Like one man who was delinquent on his loan.

"He said he was down to make a loan payment and we were closed." Mr. McIntyre said. "Nice try."

A New Water Line

This flood was nothing compared with the one Mr. McIntyre remembers from when he was in the fifth grade. "In 1965 we had a heck of a flood here, and this was about a foot and a half beneath it." He knows because you can still see the water mark in the basement.

Now there is a new water line. "Today I roarked it with a marker for the 1993 flood," Mr. McIntyre said, after spending the day in the S&L's basement cleaning up.

Is Mr. McIntyre ready for the next flood?

'Everyone Just Adapts'

"You are just never prepared for it," he said. Savanna Savings's four employees – treasurer Esther Phalmier, assistant treasurer June Bimm, and tellers/clerks Bobbi Harrel and Cindy Williams – were troopers through the disaster, he said. When something like this happens, "Everyone just adapts."

Of course, the rest of the town gives Savanna Savings a lot of credit.

"The most amazement was from the other financial institutions," Mr. McIntyre said. □

Alaska, Oregon Adopt Interstate Branching Without Opposition from Smaller Banks

By TERRENCE O'HARA

Oregon and Alaska this year passed the first interstate branching laws in the West – without opposition from community bankers.

Four states – New York and North Carolina are the others – now will allow unfettered branching across state lines with states that have similar laws.

Oregon's reciprocal interstate branching act became law on July 1. Alaska's law takes effect in January, according to Willis Kirkpatrick, director of banking and securities at the Alaska Department of Commerce.

Lack of Opposition

Banking regulatory officials in both Oregon and Alaska said there was no formal objection to the laws from community banking groups.

"Community bankers we talk to don't really care about interstate branching," said Cecil Monroe, administrator of Oregon's Division of Finance and Corporate Securities. "They feel they can compete with a local branch of a big bank."

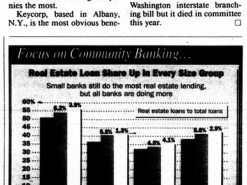
The laws, modeled after New York's year-old statute, are designed both to allow cross-border branching and to preempt federal legislation.

"The idea is that the states will move far enough so that the federal government won't have to act," said Ellen Lamb, spokeswoman for the Conference of State Bank Supervisors.

Mr. Monroe said Oregon had wanted to act before less-appetizing standards were forced upon it by the federal government.

The laws are set up to benefit interstate bank holding companies the most.

Keycorp, based in Albany, N.Y., is the most obvious beneficiary of the Oregon and Alaska laws. Its Key Bank of Oregon in Portland is the state's fourth-largest bank, and the $25 billion holding company has banks in Washington, Idaho, and Alaska.



Washington Effort Fails

Until Washington and Idaho pass similar reciprocal branching laws, Key Bank can't merge its banks in the Northwest. A Washington interstate branching bill but it died in committee this year. □

Mood Was Buoyant at Western Conference

By CHRISTOPHER NOBLE

The refinancing boom will never end. The unusual stretch of perfect weather in the Bay Area will last forever. And the annual western secondary mortgage market conference is a version of heaven.

That was the heady mood in San Francisco last week as the nation's mortgage bankers, 1,500 strong, gathered to listen to speeches and make deals.

The attendance was the biggest in years, said Kathy Wedeking of the California League of Savings Institutions, which sponsored the conference. She said the long list of attendees reflected the mortgage boom of the past few years.

The conference, while decidedly upbeat, also addressed some of the thornier issues facing the industry. Two of the big ones seemed to be everybody's mind: discrimination in mortgage lending and technology's increasing role in the industry. There was also a lot of chat about life after the refinancing boom, but not much in the way of concrete plans.

Bias in mortgage lending was on everyone's mind.

In his opening address to the conference, James Johnson, chief executive of the Federal National Mortgage Association, referred to "a pattern of economic and racial segregation" in the mortgage industry.

"Every single survey and every single study reflects the fact that a lot of Americans are not getting housing credit. The industry certainly needs to put its heads together to solve this problem," he said.

Affordable Housing Efforts

Later in the speech, Mr. Johnson announced changes to Fannie Mae's affordable housing programs, which he said were designed to make mortgages available to minorities and low-income people.

Since Fannie Mae and the Federal Home Loan Mortgage Corp. make up most of the secondary mortgage market, their loan underwriting guidelines set the standard for the industry. It is up to them, said several attendees, to make it possible for lenders to make mortgages to low-income borrowers.

"The agencies have got to loosen their guidelines so we can lend to more people," said one lender.

* * *

On other subjects, the mood at the conference remained stubbornly positive. The California League of Savings Institutions released a survey that it said showed the seeds of a resurgence in that state's housing markets.

Modeled after Fannie Mae's annual national housing survey, the survey showed that many Californians think it is a good time to buy a house and that even more actually want to.

The survey's results were consistent across all age, ethnic, and economic groups, and officials of the league said the report made them hopeful that the state's economy would rebound. They said pent-up demand after the long recession would boost new home purchases and take up the slack in the industry when interest rates go up and refinancings ease.

What was not clear from the survey was how, in the midst of California's severe economic slump, residents would be able to afford new homes.

* * *

As usual, the real action was more in the hallways and nearby restaurants than in the conference rooms.

Fannie Mae's chief announced policy changes to ease the flow of home loans.

"I schedule 10 meetings a day when I come to these things," said Judy Berry, chief financial officer of American Residential Holding Corp., La Jolla, Calif.

The wood-paneled lobby of the Westin St. Francis was often more crowded than any of the conference sessions. In groups of two and three, somberly dressed mortgage professionals huddled over calculators, spreadsheets, and documents as they bought and sold mortgages – or at least talked about them.

* * *

Countrywide Credit Industries was at the conference in full force, showing off its highly developed technological prowess.

Jeffrey Butler, chief information officer at Countrywide, predicted that within the next several years, technology would lead to standardization of the process of selling a loan into the secondary market and eventually would do the same for mortgage applications.

But some remain skeptical. "It's nice to think about those things, and technology certainly helps," said Thomas Hamilton, senior vice president with the California league. "But you still have to sign all that paper." □

NEED A BANKING INFORMATION FAST?

AMERICAN BANKER ONLINE

For more information, including details on special direct data delivery options and redistribution rights, call:
Peter Leach, Database Licensing, American Banker • Bond Buyer, at 1-800-356-4763 or 1-212-943-6304.

Now there's a way to stay abreast of that vital information or to find any articles you may have missed by using your own PC with a modem to call up the American Banker Online on the information service of your choice.

American Banker Online is a full-text news service providing instant access to all the information appearing in the only daily banking newspaper. It enhances the value of the newspaper's daily information by giving you the ability to recall all the stories on a bank, or a banker, or legislation, or indeed anything you need to know about banking.

With the power of the computer, you can locate the information that's vital to your business. American Banker Online is a full-text database that provides direct, easy access to the daily news, statistics, surveys, speeches, commentary, and special editions of the print newspaper. And you can access this information each morning even before that day's paper is delivered!

In addition to being a daily information tool, American Banker Online is also an archive. Many users rely on our information to piece together the background on events that impact their business. Along with today's news, American Banker's historical online records include more than 80,000 articles dating back to 1979. These can be searched by headline, key words, bank name, or any other search terms.

Put American Banker Online to work for you. It is accessible with any PC and modem through the following information retrieval services:

Data Source: The data were provided by IDA/Wisenberger, Rockville, Md., from its mutual funds data base. A proprietary fund is a fund that was formed or founded by a bank and /or over which the bank exercises management discretion. Excluded are private-label funds and all other third-party funds that are sold through banks.

Equity Funds Led the Pack in 2d Quarter

Continued from page 1

we know in the back of our mind that it's never going to be a $1.5 billion fund," said Mike Mantle, a client services manager with the Wisenberger unit. Bank of Oklahoma's mutual fund distributor.

In fact, he noted, the fund's assets fell below $11 million in July because an institutional investor redeemed shares.

9.82% over Three Months

The fund, which invests in small but promising companies, returned 9.82% in the three months from April 1 to June 30, according to the survey by CDA/Weisenberger, a mutual fund tracking service in Rockville, Md.

First of American, Kalamazoo, Mich., neared the No. 2 position with its Parkstone Small Capitalization Growth Fund. The fund returned 7.63% during the quarter.

Great Western Financial Corp. of Los Angeles grabbed third place with its Sierra Strategic International Growth Fund, which returned 7.14%.

The fund, with $43.5 million in assets, has attracted quite a few individual investors, said F. Brian Cerini, chief executive of Great Western Investment Management.

The returns notched by the top three funds ranged from 7.14% to 9.82%.

"We feel people can actually reduce their risk by diversifying and including some international shares in a mutual fund," he said.

Group Generally Under Par

On the whole, bank-managed equity funds turned in a subpar performance during the second quarter. The 168 bank-managed equity funds eked out a scant 1.0% average total return -- well below the 2.9% averaged by all equity mutual funds.

One explanation is that the long-term growth funds favored by bank customers have been "the laggards among equity funds this year, by a good 1% or 2%," said Jay S. Nadler, who is general manager for CDA/Weisenberger.

"Certainly, it's been a roller-coaster year for blue-chip stocks," he added.

Even more popular among bank customers are fixed-income funds. But those funds, too, produced unspectacular results during the quarter.

On average, the 240 bank-managed fixed-income funds returned 2.4%, compared with 2.9% for all fixed-income funds. That's shy of the 3% return posted by a bond index calculated by Lehman Brothers.

First Interstate Bank's Westcore Long-Term Bond Fund took the No. 1 spot for taxable fixed-income funds, returning 4.50% in the second quarter.

Among tax-exempt fixed-income funds, the leader was Barnett Banks' Emerald Florida Tax-Exempt Fund, which returned 4.33%.

While high-risk stock funds are a still a rarity in the banking industry, Mr. Nadler thinks that is beginning to change.

"Going forward, I think we'll see some more aggressive equity funds being introduced in the banking community," he said.

The demand for such funds will come from bank customers, as they "start to diversify their portfolios and take a little bit more of an aggressive posture," he added.

The results could help counter the image of bank funds as underperformers.

One area of expansion for banks has been international equity funds. Of the 43 international equity funds managed by banks, 32 have been launched since 1990, according to a recent report by Lipper Analytical Services Inc.

Funds that invest abroad took five of the top 10 spots in the bank mutual fund performance stakes for the second quarter.

The international funds have proved particularly popular with institutional and trust clients, said Catherine Gordon, senior investment officer at Wilmington Trust Co., Wilmington, Del.

"International, along with small-capitalization stocks, is the best place to be long term," Ms. Gordon said. "It's clear to us that foreign economies as a group are likely to grow faster than the U.S. economy." The bank's Rodney Square International Fund came in No. 6 in the second-quarter rankings, with a 5.95% return.

The survey also showed that bank-run equity funds are, for the most part, quite small. Among the top 10 performers, only two had more than $100 million in assets, an amount that is commonly cited as a minimum needed to operate a mutual fund efficiently and profitably. □

Improve Your Profits.

"Improving our income statement means more fee-based income. It's not an option– it's a requirement."

We're bringing in SEI."

It's very basic. To keep your profits growing, you need more fee-based income. And to stem the outflow of your depositors' money, you need investment programs.

And you need those programs now!

SEI can deliver a variety of investment programs and services for your individual and corporate customers. Through your branches, brokerage, private banking, and trust departments. One or all.

And we'll help you with all the program components -- the products, the marketing, the distribution, and the technology you need to support these programs cost-effectively.

We'd like to be your partner in building your fee-based income. Because we both have the same objective for your bottom line: Improve Your Profits!

About SEI

SEI has been dedicated to creating comprehensive investment programs for over two decades, focusing on the following areas:

Investment Products and Programs ($35 billion in assets): mutual funds, proprietary funds, annuities, and bank-wide investment programs.

Full Planning and Consultation Services: marketing planning, program definition and implementation, as well as full training and sales support.

Investment Management Technology: trust accounting, defined contribution recordkeeping, mutual fund accounting, and retail support systems.

For more information, call 1-800-DIAL-SEI (342-5734).

Insight

SMALL COMPANY INVESTING

Small cap companies can provide your trust clients with unique opportunities. And unique risks. T. Rowe Price has been investing in emerging growth companies since 1960. Today we are one of the nation's largest emerging growth company managers, handling $3.8 billion in small company assets. Our broad exposure to small, growing companies—both public and private—gives us special insight into this potentially profitable field. So we can provide you with investments that make the most sense for your clients' portfolios. For more information, please contact our Financial Institutions Division at 1-800-638-7890.

IBAA, Massachusetts Financial Sign Marketing Pact

Continued from page 1

industry's heavy hitters, reportedly including Fidelity Investments and Putnam Financial Services, in a contest that began last November.

Founded in 1924, Massachusetts Financial is the nation's oldest mutual fund company. It manages $32 billion in assets, and offers a wide array of mutual funds.

Conservative and Consistent

The IBAA cited the company's long-established reputation for conservative management and consistent performance.

In addition, the IBAA was convinced that Massachusetts Financial won't poach customers from the banks it serves, said Gary Teagno, president of the IBAA Community Banking Network, a holding company for various service affiliates developed by the group.

The deal comes on the heels of a similar move by the American Bankers Association.

The ABA, which has a broader membership base, endorsed a program by Wall Street Investor Services, a New York company that sets up sales programs in banks.

The IBAA is taking a more active role by establishing a broker/dealer subsidiary to serve its member banks.

Long-Term Goals

A prime consideration for the IBAA was to develop a program to build customer assets over the long-term and not lose those bank customers to a fund company partner, Mr. Teagno said.

The program will be launched in three to six months, after the IBAA Financial Services Corp. receives a charter and begins getting regulatory approval from the states in which it plans to operate, Mr. Teagno said.

Though he was reluctant to estimate how many banks would participate in the program, Mr. Teagno said it was likely that at least 250 would sign up "within three years."

Jeremiah Potts
Sees sales of $100 million

Jeremiah Potts, who heads Massachusetts Financial's financial institution division, said it could take a year for sales to start chugging along.

Mr. Potts said he expects first year sales of only $100 million – not much for a company that sold $2.8 billion in mutual funds in 1992. But Mr. Potts said he expects sales to pick up dramatically in the second year.

To allow banks to tailor mutual fund programs to their own needs, the new venture will offer three levels of service.

In the simplest setup, banks would distribute marketing materials to their customers and direct prospective investors to a toll-free number staffed by IBAA employees.

For banks that want a higher profile, the IBAA would provide a software package to help customers identify their own investment goals before calling the toll-free number for assistance.

At the highest level, banks would have their own licensed investment-sales representative on site to counsel customers and execute trades.

The IBAA considered allowing banks to put their own name on funds, but decided against it. In the end, Mr. Teagno said, it was more important for customers to be able to look up fund results in daily newspaper listings. □

Wrap Account Managers Form Trade Group

The wrap-fee industry now has its own trade group: the St. Regis Association.

The fledgling group, named after the New York hotel where the founders met, will educate the general investing public about the wrap-fee industry, which now has $50 billion in assets under management, said Jamie Waller, acting president of the organization.

Mr. Waller is a vice president at Security AFP, in Jersey City, N.J.

The group is so new that it has no official definition for "wrap fee."

"We're still working on that," Mr. Waller said.

His working definition is an investment account of no less than $100,000 that is individually managed.

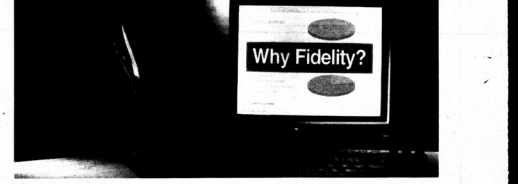
A financial consultant manages the account, monitoring for correct asset allocation, investment performance, investment suitability, and other considerations.

The consultant is paid one fee, a wrap fee, for the service. He then pays all the administrative costs for money managers, transaction fees, and other charges related to the account.

The new association will hold its first meeting sometime in the fall to hammer out the definition and to consider a new name, Mr. Waller said. He said St. Regis Association could prove confusing.

Some banks, like Chase Manhattan, are big players in the industry, he said.

— Michael O'D. Moore



It isn't a question. It's an answer to your customers' asset allocation needs.

There isn't one thing that makes Fidelity's asset allocation program different than any other in the industry. There are many.

First and foremost, it's an ***instant asset.*** Our turnkey program can help put you in business today by providing you with investment solutions, not just investment products.

Second, Fidelity's ***full service*** approach combines the best we have to offer investment management, marketing support and superior technology.

Third, Fidelity offers the kind of ***flexibility*** that's demanded by today's full service bank. Backed by extensive resources, Fidelity can provide you with an asset allocation program that can meet the demands of your diverse client base.

And finally, Fidelity can offer you a working relationship based on leadership. Our ***name recognition*** and your quality of service can provide not only the strength of two, but an investment team second to none.

To put the power of Fidelity to work for you, call ***1-800-345-5033,*** extension 5921. We'll answer your needs, no question.

Banks Must Heed Anti-Tying Rules in Fund Sales

By MELANIE FEIN and LINDA B. COE
Arnold & Porter, Washington

As mutual funds become a standard banking product, banks are packaging them with other products and services to provide efficiencies and cost savings to customers.

Packaged arrangements involving mutual funds may raise issues under the anti-tying prohibitions of the Bank Holding Company Act, as well as federal and state antitrust laws, and must be carefully structured in order to comply with the law.

The anti-tying prohibitions of the Bank Holding Company Act are complex and their applicability in the context of bank mutual fund activities is uncertain. Little or no case law or guidance from the federal banking regulators exists.

Comment

Bank tying arrangements in other contexts recently have come under active scrutiny from Congress, the Department of Justice, and private litigants, and will be a focus in the mutual fund context as well.

The anti-tying rules apply differently depending upon which type of entity in a banking organization is providing mutual fund services – whether it is the bank or an affiliate.

The decision as to which entity should serve as the investment adviser and which entity should act as broker can significantly affect the marketing plans for mutual fund products.

Rule on Price-Cutting

The anti-tying prohibitions are broader than is commonly realized. They prohibit a bank or bank holding company subsidiary from requiring that a customer purchase some additional service in order to obtain a service. They also prohibit the bank or bank holding company subsidiary from lowering the price of the service if the customer purchases an additional service.

The rules are broader than is commonly realized.

Banks also are prohibited from making the availability or price of products conditional on the customer obtaining a service from an affiliate.

An exemption is provided in certain cases for the tying of a loan, discount, deposit, or trust service. The "banking-product exception" applies only when, both products are banking products and are offered by the same entity. The exception does not apply when one of the products is offered by an affiliate.

Applicability Unclear

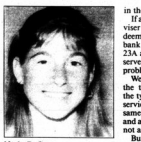
Moreover, banks are prohibited from tying the availability or price of products on the condition that the customer not obtain some other product or service from a competitor of the bank or its bank holding company or a subsidiary of its bank holding company.

The applicability of the anti-tying laws to bank mutual fund activities is not clear. For example, is a mutual fund investment a service of the bank? Is it a service of an affiliate, or of some unrelated entity?

We would argue that the fund is not an entity of the type to which the anti-tying prohibitions are applicable, because it is neither a bank nor a subsidiary of a bank holding company.

But the bank nevertheless is performing a service when it sells mutual fund shares to customers. The service is probably a brokerage service. Is that a trust service for purposes of the banking product exemption?

Melanie Fein



Linda B. Coe

We would argue yes, because brokerage is a type of service customarily performed by a bank trust department and is specifically authorized as an incidental power of national banks in the National Bank Act.

If a bank is the investment adviser to a mutual fund, it is deemed to be an affiliate of the bank for purposes of sections 23A and 23B of the Federal Reserve Act. In that case, is there a problem?

We would argue no, because the tying restrictions apply to the tying of a bank product to a service of a subsidiary of the same bank holding company, and a proprietary mutual fund is not a subsidiary.

But if the bank is the investment adviser, can't it be argued that the bank is providing a service? Yes, but the service being

Banks Must Heed Anti-Tying Rules When Packaging Mutual Funds

"It's called fire... it recycles wood."

The investment environment has changed! When you're ready to recycle your investments, consider the returns of the two Berger Funds.

The **Berger 100 Fund** for long-term growth and the **Berger 101 Fund** for growth and income have both achieved impressive records for over 18 years and are worth consideration for your portfolio. For the investment philosophy behind these funds, please call for a prospectus and study it carefully before investing.

THE BERGER FUNDS • (800) 333-1001

Continued from *page 17*

provided is the bank's investment advice on a collective basis – namely, a trust service – and the banking product exemption should apply.

If an affiliate of the bank is the investment adviser, however, the banking product exemption would not apply.

None of these questions appears to have been addressed by the federal banking regulators, and thus there is little formal guidance at present. The uncertainty of the law in this area is particularly hazardous. The penalty for violating the anti-tying rules is severe.

In addition to the potential for civil enforcement actions by the federal banking agencies and criminal action by the Department of Justice, the anti-tying provisions establish a private right of action with a potential for treble damages.

In addition, certain forms of tying may violate state and federal antitrust laws which also provide private rights of action.

Guidance from federal banking regulators on the scope of the anti-tying rules thus is essential in order for banking organizations to offer packaged mutual fund services.

The packaging and discounting of mutual fund and bank products provides obvious benefits to consumers. Nonbank securities firms are permitted to package and offer discounts on their mutual fund and other securities products unfettered by the anti-tying prohibitions of the Bank Holding Company Act.

Similar arrangements by banks should not be discouraged

Banking regulators are providing little or no guidance.

by an overly restrictive reading of the law by banking regulators.

Some Examples

The following examples illustrate how the anti-tying prohibitions might apply in practice to specific arrangements involving mutual funds.

• Suppose a bank offers free checking and discounts on loans to customers who invest in a mutual fund for which the bank acts as investment adviser. If the mutual fund is viewed as an unaffiliated entity, the arrangement would not be subject to the anti-tying provisions.

If the mutual fund investment is viewed as a service offered by the bank, it can be argued that the service is brokerage and/or investment advisory service, which falls into the category of trust services. If the service is not viewed as a trust service, the arrangement likely would violate the anti-tying rules.

• The situation is the same, but the mutual fund shares are sold by a brokerage subsidiary of the bank's holding company, rather than by the bank. The arrangement might be prohibited because the bank product exemption applies only when the tied services are offered by the same entity.

• Again, the situation is the same, but the bank's own brokerage subsidiary acts as the broker. The arrangement probably is okay because the subsidiary likely would be treated as part of the bank.

• Same situation, but a brokerage subsidiary of an affiliated bank acts as the broker. The arrangement would pose a problem because the banking product exemption applies only when the tied services are provided by the same bank, or by a direct subsidiary.

• Same situation, but the bank gives the customer the telephone number of the distributor to call to buy fund shares. In that case, the bank might be viewed as not tying its own brokerage services and the tying restrictions should not apply.

• Suppose the mutual fund distributor reduces the sales load on the mutual fund if the customer maintains a checking account or loan with the bank that serves as the fund's adviser.

This arrangement should not be prohibited since the tying restrictions apply only to ties between banks and bank holding companies or their subsidiaries. Tying arrangements between a bank and other companies – such as the distributor – are not prohibited.

These are only a few examples of the many different ways in which the anti-tying prohibitions might apply to packaged bank mutual fund services.

Banks must carefully consider these laws in structuring their mutual fund activities in order to avoid potentially costly litigation. The law is complex, and guidance from bank counsel is essential. □

Bankruptcies a Big Problem Despite Falloff

Continued from *page 1*

Isaac & Co. of San Rafael, Calif., that help bankers predict potential bankruptcies and high losses.

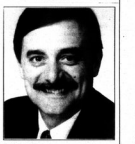
"If you cut credit lines or don't issue new cards," Mr. Johnson said, "they are less likely to file for bankruptcy."

NEWS ANALYSIS

The actual chargeoff rate on credit cards has fallen by 0.1 percentage point so far this year, to 4.9%, said Robert Hammer, chairman and chief executive officer of R.K. Hammer Investment Bankers, Newbury Park, Calif.

"We know that 45% of net credit loss can be attributable to bankruptcy," he said. "If bankruptcies fall, then chargeoffs will fall."

Visa and MasterCard have been encouraging issuers to refer



Robert Hammer
Predicts fall in card chargeoffs

customers to credit counseling agencies if a problem is detected. And the program seems to be working.

Help for the Overextended

Last year, 906,000 sought help from affiliates of the National Foundation for Consumer Credit Counseling, an increase of 26% over 1991, said Don Badders, president and chief executive of the nonprofit group.

Mr. Badders said his typical client is 35 years old, makes $24,000 a year, owes $22,000, and has an average of 10 credit cards.

Of the people who come in, 9% are referred to legal aid because they have debt that cannot be repaid within 48 months. This proportion is down from 12% in 1991.

Avoiding the Courts

Lower interest rates also have made it possible for consumers, who otherwise might have opted for bankruptcy, to take debt-reducing steps instead. Many used home equity loans, with lower rates and installment payments, to pay off credit card debt.

"Consumers are coming in to get a plan to pay their cards off, not to file for bankruptcy," said Gerri Detweiler, director of Bankcard Holders of America, an advocacy group based in Herndon, Va.

Despite the apparent turn for the better, experts caution against complacency.

A recent survey of Visa issuers, for example, showed the average outstanding on a bankrupt's bank-card account has increased to $3,100 in 1993 from $2,900 last year. The average chargeoff for non-bank-card bankruptcies, meanwhile, rose to $2,800 this year from $2,500.

"I don't think we'll ever get back to levels of pre-1979 [when the bankruptcy law changed]," said Mr. Johnson of the Credit Research Center.

"It seems like bankruptcy was a hot topic three years ago," said Suzanne Vesely, vice president of MDS. "Recently, it's not been given much attention. It seems like creditors have almost learned to live with it at the high level it's at." □

Gerri Detweiler
Sees consumers as better off

SPS Transaction Posts 71% Rise in Net Income

RIVERWOODS, Ill. — A 30% increase in transaction volume fueled a 71% increase in net income at SPS Transaction Services Inc.

The company earned a record $7 million, or .52 cents a share, in the second quarter, up from $4.1 million, or .31 cents per share a year earlier. The 1992 result was restated for an accounting change.

The quarterly point-of-sale volume rose to 75.5 million from 57.9 million. Robert L. Wiesneck, president of the former Sears subsidiary, said the company added three merchant clients and expanded in private label credit cards and in support of the Prodigy computer network.

ng reports. Good communication, presentation and
nagement skills also needed. Individual must possess
ed-oriented track record.

tion offers a competitive salary and benefits package.
ntial consideration, disaster recovery and POS merchant
ment (mandatory) to: *First Union National Bank of*
Carolina, 1400 One Hanes City Center (8202), Charlotte,
NC 28255. First Union utilizes drug testing as a condition of
ment.

FIRST UNION®

First Union National Bank of North Carolina

MANAGER

EFT SYSTEMS AND POS MERCHANT SERVICES

Midwest's largest EFT network seeks an experienced individual to manage current and developing technologies that support EFT, telecommunications, disaster recovery, and POS merchant systems and programs. This position will manage outsourced data processing resources, implementations of new ATM and POS processors and significant involvement in the strategic planning process of the network. Bachelor's degree along with experience with bank operations and current EFT payment systems, telecommunications, disaster recovery, and technical 'trouble shooting' is required. Familiarity with retail/merchant payment programs and services is desirable. This individual must have a proven track record of experience and success, and possess a strong knowledge of emerging regional and national EFT trends, coupled with superior interpersonal and communication skills. Respond with resume, references and salary history to:

P.O. Box 604
c/o American Banker
One State Street Plaza
New York, NY 10004
(E.O.E)

INTERNATIONAL BANK EXAMINER

Nationally known consulting firm is seeking a bank examiner with a minimum of two years' experience examining U.S. operations of foreign banks. Please submit resumé in confidence Box #6133, c/o American Banker, One State Street Plaza, New York N.Y. 10004.

Equal Opportunity Employer

...Advance To Citizens

We are a growing financial service corporation with headquarters in Providence, Rhode Island. In continuing our reputation for quality, we are inviting an energetic, hands-on professional to join our team.

PRODUCT MANAGER - RETAIL LOAN PRODUCTS

We are seeking a highly motivated Product Manager to be responsible for the development, implementation and management of our retail loan product strategies. In this fast-paced environment, you will ensure the profitability of the product line as well as participate in pricing decisions, and develop internal product forecasts. Additional responsibilities include determining product promotions, managing product enhancements, integrating the products at acquired institutions; and developing, implementing and monitoring all direct mail campaigns.

Qualified candidates will have a minimum of 5 years' direct experience, extensive knowledge of retail product lines (credit cards, equity lines and lines, residential mortgages, installment loans), and direct mail campaign experience.

We offer career potential and flexible benefits. Please forward your resume with salary requirements to: Human Resources Department, Citizens Bank, One Citizens Plaza, Providence, RI 02903-1339. An Equal Opportunity/Affirmative Action Employer and we do not discriminate on the basis of disability. Minorities and women are encouraged to apply.

CITIZENS BANK

DIRECT MARKETING MANAGER

Wachovia Corporation is a major southeastern financial institution with over $35 billion in assets. Currently, we have an immediate opening for a Direct Marketing Manager.

The successful individual will play a key role in expanding sales to retail customer segments. Specifically, this includes managing a direct marketing department that will be charged with developing proactive direct mail programs within a multi-state area. These programs will be an integral part of ongoing customer acquisition, customer retention and relationship building strategies.

In addition to a Bachelor's degree in Marketing or Business Administration, this individual must have a minimum of 5-7 years experience in direct mail and database marketing. Excellent managerial, organizational and communication skills are essential.

Wachovia offers an excellent compensation package and the opportunity for continued growth in a professional environment. For confidential consideration, forward resume and salary requirements (with resumes with salary requirements will be considered) to: **Wachovia Corporation, 191 Peachtree Street, NE-12008W Personnel Dept., Atlanta, GA 30303.**

A negative drug test is a requirement for employment.
Information about other essential functions of this position is available at the above address.

WACHOVIA

Public Continues to Fear Upswing In Inflation, Fed's Jordan Says

Reuters

MEXICO CITY — Since expectations of inflation still linger, the United States has not completely vanquished the problem, said Jerry Jordan, president of the Federal Reserve Bank of Cleveland.

"We have yet not reached an environment where households believe that the rate of inflation in the future will be lower than it is today," Mr. Jordan said at a press conference.

He cited surveys and statistics on refinancing of home mortgages that reveal expectations of rising inflation.

"We would like people to think about the U.S. dollar in the same way as they think about the number of feet in a mile or ounces in a pound. We do not yet have that," Mr. Jordan said while in Mexico for a conference sponsored by the Ludwig Von Mises Cultural Institute.

He said the Federal Reserve must convince households and businesses that "future inflation will be lower than it is today."

U.S. consumer prices are rising 3.1% on an annual basis versus 2.9% in calendar 1992.

The independence of a central bank does not alone ensure control of inflation, he said, referring to recent Mexican legislation creating an independent bank.

"It is a question of having political support to achieve price stability," Mr. Jordan said. "Independence is not the critical factor."

He noted that despite its independence, the U.S. Federal Reserve could not prevent the Depression of the 1930s nor the high inflation of the 1970s.

He added that globalization of markets helps central banks in their efforts toward price stability. "Anyone who gets out of step in this global financial market will get a clear message," he said.

Mr. Jordan added that as Mexico benefits from a big inflow of foreign capital and repatriated cash, maintenance of investor confidence is crucial.

"As long as [confidence] is there, that makes the central bank's job easier," Mr. Jordan said.

He said pegging the currencies of the United States, Mexico, and Canada is not a workable idea. Central banks of the three countries should, however, keep in close contact about their respective currencies, he said. □

Wants to change expectations

Agencies Miss Bias Study Deadline

By BARBARA A. REHM

WASHINGTON — An interagency working group studying mortgage discrimination has missed its deadline for action because the issue is more complicated than anticipated, government officials said Tuesday.

The joint effort by the Office of the Comptroller of the Currency and the Department of Housing and Urban Development was announced on May 18 by Comptroller Eugene A. Ludwig. He said a report on how to eradicate loan bias would be delivered within 60 days.

On Tuesday, the agencies in a joint press release acknowledged that the deadline had come and gone and nothing firm had been decided.

The statement said "a joint working group has begun crafting a policy statement on lending discrimination."

'Could Not Be Completed'

Steve Cross, deputy comptroller for compliance management, said that despite earlier expectations, "this is a job that, once we got our hands around it, could not be completed within 60 days."

The policy statement is to define lending discrimination and cover such things as what to do with banks that uncover their own bias problems.

"What do we do if someone turns themself in?" Mr. Cross asked. The policy statement provides some answers, he said, but before making it public, the OCC and HUD are running it by the other banking agencies.

Call for Coordination

"We need to get other agencies to buy in," he said. "It won't do much good for OCC and HUD to go off by themselves."

Added Jonathan Fiechter, another might take, he said, "I'm not sure if it will come out this year."

Larry Pearl, a director in HUD's office of fair housing, said some standards need to be established against which lenders can be judged. "The banks and their attorneys need to know the rules of the road," he said.

Chief U.S. Prosecutor in Lavoro Case Replaced by White-Collar Crime Expert

By KENNETH CLINE

ATLANTA — The lead U.S. prosecutor in the politically charged Banca Nazionale del Lavoro case has been replaced by a veteran white-collar crime investigator from New York.

Howard Heiss, chief of the Justice Department's securities and commodities fraud unit for the southern district of New York, has replaced assistant U.S. attorney Gale McKenzie in the case against Christopher P. Drogoul, the Italian bank's former Atlanta branch manager in Atlanta.

Mr. Drogoul has been charged with making more than $4 billion in illegal loans to Iraq during the late 1980s.

Advisory Role Retained

Ms. McKenzie, who could not be reached for comment, remains an adviser on the case, Mr. Heiss said. Also on the task force are Reid Figel, another New York prosecutor, and John Michelich, who represents the agency's fraud section in Washington.

Gerrilyn Brill, another Atlanta prosecutor who assisted Ms. McKenzie, is "no longer involved" in the case, according to Mr. Heiss.

Ms. McKenzie, an Atlanta prosecutor since 1972, came under widespread press and congressional criticism. Democrats in Congress have accused the Atlanta investigators of covering up alleged involvement by the Bush administration and Lavoro itself in Mr. Drogoul's lending activities. □

National Community's Robert Kossick Dies

WEST PATERSON, N.J. — National Community Banks Inc. said Tuesday that its chairman and chief executive officer, Robert M. Kossick, died at his home after suffering a heart attack. He was 53.

Earlier this year, Mr. Kossick concluded negotiations to sell National Community to Bank of New York Co. The deal, with an indicated value of $543 million, is expected to close this summer.

"We grieve for our friend and his family," said James Peters, president of the $4 billion-asset company's lead bank, National Community Bank of New Jersey. "The banking industry lost one of its most successful and colorful leaders."

Mr. Kossick became a vocal promoter of New Jersey banking and business after joining National Community in 1979. □

Efforts to End the Credit Crunch Aren't Working, Greenspan Says

Continued from page 1
on Thursday.

His testimony included an unexpectedly pessimistic assessment of the inflation outlook and an apparent warning of higher interest rates, which depressed bond and bank stock prices on Tuesday.

"Despite disinflationary forces and continued slack, the rate of inflation has at best stabilized, rather than easing further as past relationships would have suggested," the Fed chairman said.

Mr. Greenspan said the Fed is sustaining inflation this year of between 3% and 3.25%, which he termed "disappointing," amid real economic growth of between 2% and 3.5%.

M2 Growth Target Lowered

He vowed that regulators will continue to work together on initiatives to stimulate bank lending "until this issue is finally and fundamentally resolved."

Mr. Greenspan said the continued flight of bank deposits to mutual funds and other investments made current money-supply measures unreliable, leading the Fed to lower its M2 growth target for the rest of 1993 and 1994.

Cites 'Structural Changes'

The new target will be between 1% and 5%, down from 2% and 6% during the first half of the year.

"To an important degree, the behavior of M2 has reflected structural changes in the financial sector," the Fed chairman said.

AP/Wide World

Alan Greenspan
Testifies in House

"The thrift industry has downsized by necessity and commercial banks have pulled back as well, largely reflecting the lingering loan losses that followed the lax lending of earlier years.

No New Variable Identified

"Inflows to bond and stock mutual funds have reached record levels, and, to the extent that these inflows have come at the expense of growth in deposits or money market mutual funds, the broad monetary aggregates have been depressed," he said.

The Fed chairman also conceded that "at least for the time being, M2 has been downgraded as a reliable indicator of financial conditions in the economy, and no single variable has yet been identified to take its place."

Mr. Greenspan said flat lending reflects a "psychological problem."

'Stiff Headwinds'

He again invoked the image of an economy "facing stiff headwinds," the most critical being "the combined efforts of households, businesses, and financial institutions to repair and to rebuild their balance sheets following the damage inflicted in recent years as weakening asset values exposed excessive debt burdens."

Much of Tuesday's testimony centered on the budget reconciliation process in Congress. While hotels, Greenspans

STOCKS: MBNA Rises on Making Goldman List

By RICHARD LAYNE

Having cooled off in recent weeks, MBNA Corp. shares got a lift Tuesday when Goldman, Sachs & Co. added the banking company to its investment priority list.

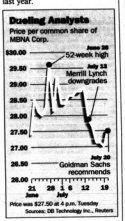
Robert Hottensen, a Goldman Sachs analyst, had already recommended the shares. But MBNA was put on Goldman's focus list based on its prospects for market-share gains.

In addition, Goldman said it expects MBNA to use its affinity-group ties, which are the basis of its credit card business, to market other products such as second mortgages and mutual funds.

Earnings Growth Predicted

Mr. Hottensen estimated that the company would earn $2 a share in 1993 and $2.30 a share in 1994. MBNA, based in Newark, Del., earned $1.73 a share last year.

Dueling Analysts
Price per common share of MBNA Corp.



On a day when most bank stock prices fell, MBNA shares rose 50 cents, to $27.50.

The company's shares had gained 19.4% in the second quarter, strongly outperforming the *American Banker* index, which lost 2.9%.

That runup made the shares too expensive for Michael R. Hughes, a San Francisco-based analyst for Merrill Lynch & Co. Mr. Hughes last week downgraded the stock to "neutral," from "above average."

But many analysts remain bullish on MBNA. .

Leveraging Its Strengths

They believe the company will use its underwriting and marketing expertise to generate double-digit annual profit growth during the next few years.

The bank will achieve this rate of earnings growth despite stiff competition in the credit card industry and possible interest rate increases, which would put pressure on credit card issuers' profits.

"This is a cheap stock if you look at the earnings growth and the quality of those earnings," said Thomas P. Facciola, an analyst at S.G. Warburg & Co. "The recent dip created a great buying opportunity."

MBNA's prospects for market-share gains boosted it.

Mr. Facciola's 12-month price target: $32. He expects 15% earnings growth in 1993 and 1994.

MBNA is gaining market share in the credit card business, where loan volume is on the rise.

MasterCard International recently reported that its members' credit card loans rose 20% in the first six months of this year compared with the same period of 1992.

Mr. Facciola estimated that MBNA's card receivables rose 15% in the second quarter. It's likely that MBNA is scooping up customers from other banks, adding to its market share at others' expense, analysts said.

MBNA added 1.1 million credit cardholders last quarter and is on track to add 2.5 million accounts this year. Those new customers could add as much as $2 billion in receivables. This would raise the company's total to $12 billion.

MBNA's growth has not come from offering the lowest-rate cards.

The company specializes in offering cards to groups such as teachers and dentists, so-called affinity cards. Because it understands the spending and bill-paying habits of those groups so well, it can offer higher credit limits and get stuck with lower-than-average chargeoff rates.

"They have a dependable market niche, which is important to survival," said Felice Gelman, an analyst at Dillon, Read & Co.

TUESDAY'S MARKET

Bank shares dropped with the bond market. The Dow Jones industrial average gained 9.50 points, to 3,544.78.

Shares of J.P. Morgan & Co. lost $1.125, to $70.875. PNC Bank Corp. shares fell $1.125, to $29.875.

S.G. Warburg upgraded shares of Chase Manhattan Corp. to "buy" from "hold." Francis X. Suozzo, a Warburg analyst, said earnings were improving more rapidly than expected.

In addition, the stock, which trades around book value, is relatively cheap. Chase's shares lost 25 cents, to $32.25. □

MasterCard, Visa Nudge Retailers To Automation

By STEPHEN KLEEGE

MasterCard, following and reinforcing the message from its rival Visa, has sent a clear signal to retail merchants and their banks: Get electronic.

In its annual announcement of interchange fees, which influences what merchants must pay to clear a credit card sale, MasterCard International left most of the rates unchanged. But the association also made it more difficult to qualify for some of the better rates without automation.

The latest schedule of fees, approved by the MasterCard board, takes effect next April. Interchange fees are a reimbursement for processing and fraud costs, paid on each transaction, by the merchant's bank to the card issuer's bank. The merchant's bank passes its cost on to the merchant.

NEWS ANALYSIS

Both MasterCard and Visa have been campaigning, through financial and other incentives, to increase the proportion of transactions that are authorized using electronic data bases.

"Our overall objective is to strengthen, using interchange requirements, our ability to combat fraud losses," said Daniel F. Fox, senior vice president of quality and systems at New York-based MasterCard.

Special Rate for Supermarkets

MasterCard said it is making one interchange adjustment – to the rate designed to encourage supermarkets to accept its cards. The new rate will be 1.1%, or $1.10 per $100 sale, up from 1%. Visa U.S.A. announced the same change earlier this year.

More important, MasterCard made it harder to qualify for the low rate or for the "Merit II" rate of $1.44 per $100, which is available for transactions cleared within three days.

Now a processor will have to be able to transmit the full contents of a card's magnetic stripe back to the issuer from the point of sale. That requirement previously applied only to the "Merit III" rate of $1.30 per $100, for transactions that clear in two days.

The Old-Fashioned Way

MasterCard's standard interchange rate, representing the cost of an old-fashioned, manual authorization procedure, is 2.18% plus 10 cents, or $2.28 on a $100 sale.

Earlier this year, Visa adopted

Analysts Pick Wells Fargo, 1st Interstate

By GORDON MATTHEWS

Wells Fargo & Co. and First Interstate Bancorp got endorsements from Wall Street on Wednesday after reporting strong second-quarter earnings.

Wells was added to Paine-Webber Inc.'s "focus list" of buy-rated stocks, while First Interstate was raised to "accumulate" from "hold" by Natwest Securities Corp.

In both cases, analysts said lower loan-loss provisions and writeoffs were the crucial factors in the higher earnings.

Growth Still Meager

But revenue growth is weak for the banks, with no upturn in the California economy on the horizon, analysts said.

On a day when bank stocks were narrowly mixed, Wells Fargo rose 75 cents to $110 in late afternoon trading, while First Interstate gained 25 cents to $64.875.

The endorsements came although shares of Wells and First Interstate have risen strongly already this year. First Interstate shares are up about 39%, while Wells' stock is up about 30%.

In contrast, the *American Banker* index of bank stocks has

Boston Fed Chief Faults Broad-Brush Use of CRA

By CLAUDIA CUMMINS

WASHINGTON — A top Federal Reserve official said Wednesday that the Community Reinvestment Act is improperly being used as a "catalyst for major social reform," threatening its effectiveness as a tool to ensure equal access to credit.

Richard F. Syron, president of the Federal Reserve Bank of Boston, urged lawmakers to either lower expectations about what the law can accomplish or else rewrite it to broaden its scope.

"We have to understand both the opportunities and the limitations of CRA," he said. "Fundamentally, we have to realize that it is about equal access to credit, and that alone is not a panacea for any number of economic problems."

Mr. Syron spoke at a conference in Boston sponsored by the Boston Fed and the Massachusetts Bankers Association. A text of his speech was released here.

Clinton Initiative

His comments came one week after President Clinton announced that bank regulators would reform the CRA by yearend to encourage greater investment by the banking industry in inner-city and low-income neighborhoods.

Mr. Syron praised the Presi-

Richard F. Syron
Says CRA isn't a panacea

dent's initiative, but stressed the importance of carefully examining the broader intent of the law before bashing out the specifics of how to enforce it.

"You don't want to think CRA is a panacea, because if you do, it is destined to fail," he said in a telephone interview after the speech. "The expectations are inconsistent with its ability to deliver."

In his speech, Mr. Syron said that "when you take a closer look at CRA, and peel away the layers of rhetoric that so often encompass discussions about CRA, what you find is a law that is valuable, but one that is actually quite limited in its statutory capabilities to solve those insid-

Country Boom Is Music to Ozark Banker

By BILL ATKINSON

BRANSON, Mo. — Over a hearty breakfast of pancakes and syrup at the Bob Evans restaurant here, banker Smith W. Brookhart 3d can barely contain his excitement.

"We are making a bunch of millionaires in Branson," said Mr. Brookhart, as a country music singer belted out a song in the background. "We are seeing a lot more Lexuses in the driveways then we used to. It used to be all pickups and jeeps."

Ever since Branson was dubbed the nation's new country music capital two years ago, it has become boomtown USA.

And Mr. Brookhart, president and chief executive of Ozark Mountain Bank, is right in the thick of it, helping to finance the burgeoning supply of theaters, motels, and restaurants.

Surging Assets

Ozark Mountain, the largest bank in this city of 3,700, saw its assets surge to $162 million the first half of the year, up 40% from a year ago. The bank expects to grow by another 40% this year. And by 1997, it projects assets to nearly triple from their present size.

Profits have clipped along, too, despite expenditures for more staff and a new main office. For the first six months of the year, Ozark Mountain earned $1.1 million, up 17% from a year ago. The bank posted a return on average assets of 1.49%, and a return on average equity of 24.60%.

Not surprisingly, other banks are expanding their operations in Branson. Boatmen's Bank of Southern Missouri opened a branch in Branson last summer, and Commerce Bank, Springfield,

Greg Chittenden

SMITH W. BROOKHART'S Ozark Mountain Bank is helping to finance Branson's building boom.

opened a branch two months ago.

NEWS *briefs*

Nordstrom Cleared to Issue Visa Cards

SEATTLE — Nordstrom Inc. said it has received approval from Visa U.S.A. to offer Visa cards.

The Seattle-based retailer said it will begin issuing cards next spring through Nordstrom National Credit Bank of Englewood, Colo. The bank was formed in 1991 to run Nordstrom's private-label card program and take advantage of Colorado's liberal usury law.

While customers remain loyal to the Nordstrom brand, the Visa option will appeal to the growing number of people who prefer to use a bank card, said John Walgamott, president of Nordstrom's bank.

Citicorp in Financing Deal for Toll Road

IRVINE, Calif. — California Private Transportation Co. has completed $125 million in bank financing, allowing it to start construction next week of the first privately owned and operated toll road in the United States in 30 years.

Citicorp arranged the financing package with Banque Nationale de Paris and Societe Generale.

The 10-mile highway will serve as express lanes in the median of the Riverside Freeway in Orange County, Calif. Tolls will be collected using an automated vehicle-identification system. It is the first private-sector demonstration project authorized by a 1989 state law.

British Air Forms Credit Union in U.K.

LONDON — British Airways PLC has formed a credit union in Britain that it hopes to model after one it has operated in the United States for more than 40 years.

The credit union plans to offer a full range of banking services, including transaction accounts, credit cards, and mortgages, the *Financial Times* reported. It would be the country's first private-sector, full-service credit union.

British Airways reportedly will push for a liberalization of British laws that limit the services that credit unions can offer. British Airways Employees Federal Credit Union of Jackson Heights, N.Y., has about $25 million of assets.

Ex-Crocker Chief Thomas Wilcox Dies at 76

DERING HARBOR, N.Y. — Thomas R. Wilcox, former chairman and chief executive of Crocker National Corp., died on Monday of cancer. He was 76.

Mr. Wilcox began his banking career in 1934 and rose to a vice chairmanship at Citibank in New York. In the 1970s, he moved to Crocker National Bank in San Francisco and was chairman of Crocker National Corp. before it was acquired by Wells Fargo & Co.

The briefs were compiled from staff and wire reports.

Corrections

An article on Tuesday about Chase Manhattan Corp.'s second-quarter earnings contained an incorrect figure for earnings per share. Chase earned $1.20 per share in the quarter.

* * *

Because of an editing error, an article on Wednesday incorrectly described the types of aggressive mutual funds run by banks that performed best during the second quarter. The top performers were funds that invest in small companies, in international stocks, or for maximum capital gain.

GOP Rebuffed in Effort to Win Community Loan Funds for Banks

By ROBERT M. GARSON

WASHINGTON — Republicans in Congress urged the Clinton administration Wednesday to assure commercial banks a role in the proposed community lending program. But they were rebuffed by a Treasury official.

Frank Newman, under secretary of the Treasury for domestic finance, told members of the House Banking Committee that only a limited amount of money will be available for the community development bank program.

Therefore, "it's difficult to propose giving money to Citibank, NationsBank, or Bank of America, which already have very substantial resources," Mr. Newman said.

Lloyd Bentsen
Says CRA duties are separate

$382 Million Earmarked

The administration has called for spending $382 million over four years on community development lenders of all kinds. A commercial bank would be eligible for grants only if its primary business was community lending.

"The problem is, in my area there are no" community development financial institutions, said Rep. Alfred A. McCandless, R-Calif.

Rep. Jim Leach, R-Iowa, who plans to offer an alternative to the administration's proposal, said he was disappointed that the administration had not incorporated any of the ideas advanced by Republicans.

Meeting CRA Obligations

Mr. Leach would encourage banks to invest in community development banks by offering a "safe harbor" on their Community Reinvestment Act responsibilities.

Mr. Newman said he expects that regulators will decide to give banks and thrifts credit toward meeting CRA responsibilities, but did not say how much.

Banks would be able to enhance their CRA ratings but could not satisfy their obligations by investing in a development institution, he said. Under the current system, investment in development banks is already a factor considered by examiners in evaluating a bank's CRA compliance.

His boss, Treasury Secretary Lloyd Bentsen, told the panel that the administration's program "is not a substitute for active community lending from institutions currently subject to the Community Reinvestment Act."

While most of the House committee's Democrats seemed inclined to support the administration proposal without modification, Rep. Floyd Flake, D-N.Y., is working with Rep. Leach on an alternative.

Alternative Law

Rep. Flake co-sponsored a 1991 law that gives banks credit toward their deposit insurance premiums for certain types of lending in poor communities. He said yesterday that he hopes to expand that program, the Bank Enterprise Act, with money from the administration's community development plan.

His program, he said, is up and running but in need of funds. By contrast, the administration has proposed spending $10 million a year – more than 10% of its total – on administrative and start-up costs.

"There's quite a lot of concern about that $10 million," he said.

Rep. Flake said he supports the administration plan, but believes that making use of existing institutions "lets us get the wheels turning a lot faster." □

The Private Market ...Revealed

Clues to the shadowy world of private placements come to light each week under the magnifying glass of *Private Placement Reporter*, an *American Banker* newsletter.

YOU'LL UNEARTH:
- Who is **buying** these deals— and why.
- What other banks and underwriters **charge to get the deals done**.
- The **best rates** in the traditional and Rule 144A markets, and **who can get them** for your company.
- The latest **flavor-of-the-month** deal structure innovation, and **who benefits**.

Private Placement Reporter answers these questions and more, and keeps you up to date on secondary-market trends, reg rights deal progress, and regulatory changes affecting the market.

If you want a leg up in private-market negotiations, you must read *Private Placement Reporter* — you can be sure your competitors are already on our subscription list.

MasterCard, to Stem Counterfeiting, Is Encoding Secret Numbers on Cards

By BARTON CROCKETT

In a bid to thwart counterfeiters, MasterCard International is requiring that secret numbers be encoded on the magnetic strips of all its credit cards.

MasterCard said it has already used the security procedure to impede notorious counterfeiting rings in southeast Asia.

"Because of the success rate, we felt there would be some value in implementing it worldwide," said Joel S. Lisker, the association's senior vice president for security and risk management in New York.

Rise in Losses from Fake Cards

Counterfeiting is the second-costliest type of fraud for MasterCard issuers, after card theft. Worldwide losses totaled $37 million this year through June, up 54% from a year earlier. Stolen cards, by comparison, caused $41 million in losses in the first half, down 18%.

While fraud has long been a major expense for MasterCard, it is showing signs of flattening out. Losses last year amounted to $460 million, up 23% from 1991, But in the first half of this year, fraud cost $164 million, about the same as a year earlier.

Banks will be required to incorporate the security technology – called CVC, for "card validation code" – on all cards issued after January.

Banks will also be required to use a package of other design changes, called the "enhanced security standard features," aimed at making it harder for counterfeiters to change account numbers and expiration dates embossed on genuine cards.

Changes Called Inexpensive

The cost of the changes is minimal, according to Mr. Lisker.

Use of the procedures has been optional since 1988. Late last year, MasterCard required their use in the Asia-Pacific region. That step contributed to a 14% drop in the region's counterfeiting losses last year, to $22 million, Mr. Lisker said.

The card validation code is being used in 68 million of the 188 million MasterCards in circulation worldwide.

CVC is essentially the same as a technology that Visa USA and Visa International have embraced, called CVV for "card verification value." Both technologies entail the encoding of a three-digit number on bank cards' magnetic stripes.

The numbers are not visible on the face of the cards, but are algorithmically derived from the numbers that are visible, including the account numbers and expiration dates.

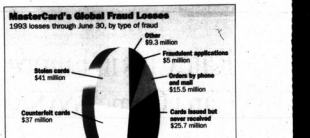
Counterfeit Cards Flagged

When card transactions are sent electronically from point of sale terminals to bank computers for authorization, the computers check for the proper CVC or CVV number.

MasterCard's Mr. Lisker said that skirting the security procedures requires a degree of sophistication beyond most criminals. The algorithm used to derive the code is said to be too difficult to crack. Thus the only way to get the numbers would be to use special computer equipment to read them from magnetic stripes, or to tap the computer phone lines that carry the codes.

Jerome Svigals, an electronic banking consultant in Redwood City, Calif., warned that the CVC and CVV technologies do nothing to protect the large number of card transactions that aren't authorized against a card issuer's computer database.

He added that the technologies also do little to protect banks from poorly trained or dishonest merchants. □



When it's this hot, you deserve extra scoops.

For many bankers, the thermometer is a lagging indicator of the heat they feel in handling current regulations and guessing the Clinton administration's next moves. But we've got a way to help you keep cool: *American Banker's Washington Watch.*

We broke the news about the plans by credit union trade associations to branch cross-country. We warned readers that the FDIC will crack down on banks and thrifts that aren't paying enough for insurance, and that the Fed was flirting with examination fees. We also uncovered plans that would let banks pay less for deposit insurance provided they set up certain special programs.

Those kinds of tasty scoops are the weekly fare at *American Banker's Washington Watch.* Within minutes, you get insights on regs and regulators—as well as your competitors—that could make the difference between profit and loss. We unconditionally guarantee it.

By Stephen H. Axilrod

Rate Cuts in Europe and Japan Can't Come Too Soon

THE QUICKER *interest rate cuts come, the better, particularly since the world will soon have to cope with a deflationary U.S. budget package on top of Germany's shift toward fiscal restraint.*

At the Tokyo summit, the heads of state of the G-7 countries put their signatures to an economic communique that contained all the correct positions on a number of topics – growth, trade, and interest rates, among others.

The need for lower rates was expressed more vigorously than usual – aimed, one assumes, mainly at Europe and Japan.

The question is, how is this message heard by the central banks that control interest rates in the key countries – some of which, like the German Bundesbank and the U.S. Federal Reserve, are quite independent of their governments.

Interest rates in key foreign markets have been declining for some time now, and more reductions are inevitable given depressed economies and low inflation.

Acting or Reacting on Rates

But it makes a great difference whether interest rates decline as a result of weakness in the economy and credit demands or whether they decline because a nation's central bank is actively attempting to pump up the supply of credit and money.

In Europe, the Bundesbank has been slowly lowering interest rates about in line with – and certainly not ahead of – the weakness in the German economy. I doubt that Chancellor Kohl got any guarantees about further rate declines from President Schlesinger of the Bundesbank before signing on to the communique.

But he probably felt safe in believing that rates would continue to fall gradually, given the slump in the economy.

Let Rates Fall

In my opinion, it would be better if rates fell quicker. The European exchange rate mechanism has again been under pressure, this time because the market has little faith in the French and Danish currencies. France is the key.

If France cannot be held within the exchange rate mechanism, or an orderly adjustment made, the future of the European drive to a common currency will be even more uncertain than it before. Britain and Italy withdrew from the exchange rate mechanism last year.

France's domestic situation is very weak, and it needs lower interest rates as much as or more than Germany does. The market's view about France is something like, though by no means as extreme as, its earlier attitude toward Britain.

The markets came to believe that the high interest rates needed to justify the relative value of the currency within the exchange rate mechanism could not be sustained because of Britain's domestic situation.

While in today's circumstances a dramatic crisis has so far been avoided, lower interest rates all around in Europe would go a long way to reducing the risk further.

In the Pacific

The Japanese central bank is not as independent as either the Fed or the Bundesbank. But with its government in disarray, it may be able to make its decisions less encumbered by intragovernmental disputes and pressures.

In the recent past, Japan's central bank has probably resisted further rate reductions partly because it believed it was time to the face of pressures for an even more active fiscal policy in Japan.

On the other hand, the Ministry of Finance in Japan has traditionally argued for lower interest rates in an effort to deflect pressure to present budgets that involve substantial deficits.

Without a strong government, the bureaucrats of the Ministry of Finance and the Bank of Japan risk a standoff. However, the continued weak economic conditions will themselves probably compel some action, and the central bank may be better positioned in current circumstances to deliver than the rest of the government.

The Federal Reserve

I doubt that the U.S. central bank generated much concern at the summit. In real terms, short-term interest rates here are the lowest in the industrial world, and longer-term interest rates are close to the lowest.

The Fed, in the person of Mr. Greenspan's policy testimony the other day before the House Banking Committee, noted that it now expected a little more inflation and less real growth this year than it had early projected.

For some time now, it has been clear that the Fed's policy dilemma has become more acute because the trade-off between inflation and growth over the short run has become less favorable. Mr. Greenspan seemed to feel that there was more reason to worry about inflation than growth, which left the impression that any easing he might take would be to raise rates.

However that may be, the lower rates that are needed in the industrial world should for the most part come from Europe and Japan, where economic conditions are weakest.

The quicker they come, the better, particularly since the world will soon also have to cope with a deflationary U.S. budget package on top of a continuing shift toward fiscal restraint in Germany. □

Letters to the Editor

FDIC Didn't Scrap Reinsurance Plan for Bank Deposits

To the Editor:

American Banker has reported twice, most recently on June 25 [Regulator's Mailbag, page 9], that the Federal Deposit Insurance Corp. has "shelved" a test of private reinsurance for bank deposits.

On the contrary, the FDIC intends to proceed with a pilot reinsurance program, as was described in the private reinsurance feasibility study approved by the FDIC board and sent to Congress on June 17.

The pilot will be divided into three phases, beginning with a solicitation of participation by potential reinsurers. After completing each phase, the FDIC will decide whether to continue on this course in light of the findings up to that point.

As was discussed at the June 17 board meeting, private reinsurance is an attractive idea, but issues surrounding its implementation are complex.

The test has not been "shelved" – it is proceeding into its next phase.

William R. Watson
Director
FDIC Division of Research and Statistics
Washington

Editor's Note:

The lead-in to the June 25 "Mailbag" of banker reactions did incorrectly describe the program as "shelved."

A June 18 article to which Mr. Watson also referred ["Tracking Too Costly, FDIC Finds," page 16] focused mainly on the FDIC's conclusion that it would be too expensive to limit deposit insurance by monitoring each individual's accounts in multiple institutions.

The article said that despite the complexities mentioned by Mr. Watson, "the FDIC agreed to continue development of a pilot reinsurance program which has been in the works since July 1992." □

OCC Consumer Compliance Squad Is a Redeployment, Not a Creation

To the Editor:

As a former national bank examiner, I beg to differ with a statement in the July 2 article on page 1, "OCC Readies Consumer Protection Squadron."

The article said, "The Comptroller's office is the last banking agency to specialty train and designate examiners for consumer compliance."

But the Office of the Comptroller of the Currency, in late 1975, installed a large group of personnel who specifically examined for compliance with consumer rules, laws, and regulations. In fact, a separate consumer compliance report was issued to each examined bank, and "consumer compliance examiners" were commissioned during the late 1970s.

In the mid-1980s, in an apparent attempt to control rising examination expenses and banks' assessments, the office merged the compliance function back into the regular commercial bank report of examination.

The decision to re-install a staff specifically trained in consumer compliance is welcome and will only help to ensure that national banks' fare in full compliance.

Home Loan System Urged to Reduce Capital, Decentralize

By ROBYN MEREDITH

WASHINGTON — The shareholders of the Federal Home Loan Bank System told Congress on Monday that the system should reduce its capital, transfer more control out of Washington to district offices, and allow members to join or quit more freely.

The Congressional Record in a study that Congress mandated in the Housing and Community Development Act of 1992. Some 24 thrift executives from around the country participated.

The law also required studies on the future of the system by the Federal Housing Finance Board, which oversees the system; Congressional Budget Office; General Accounting Office; and Department of Housing and Urban Development.

Funds for Home Loans

Congress created the Home Loan Bank System in 1932 to encourage home ownership. The system consists of 12 district banks, which lend money to their 3,905 bank and thrift members at below-market rates. Members then use the money in part to make home loans, and they must buy stock in the system to borrow from it.

Thrifts whose deposits are not insured by the Federal Deposit Insurance Corp. have always been required to belong to the system. Since 1989, when commercial banks were allowed to join, 1,609 have signed up. The stockholder study favors voluntary membership.

Michael T. Crowley Jr., chairman of the stockholder committee and president and chief executive of the Mutual Savings Bank in Milwaukee, said the

Shareholders also want easier entry and exit.

stockholders' group also discussed reducing the system's risk-based capital – now at 29.7% – to 12%, and dropping its core capital level from 6.8% to 4% or 5%.

Michael L. Wilson, policy and research director at the Federal Housing Finance Board, said, "The system could operate with less capital than it has today, given its current risk profile."

Local Control Sought

Throughout their study, stockholders pressed for more control over business functions at the district level. Responsibility for the appointment of district bank presidents, as well as approval of individual affordable housing projects, should be transferred to the district banks, according to the study.

The stockholder study also pointed to the bank system's support of community development projects as a key justification for the Association of Community Organizations for Reform Now.

Chemical Weighs Divesting Several Struggling Units

By KAREN GULLO

NEW YORK — Chemical Banking Corp. may sell up to 10 small businesses that have low revenue growth, said chief financial officer Peter Tobin.

Among the possible candidates: Small banks owned by Chemical's Texas subsidiary and some businesses that provide operating services for corporations.

"We are looking at five to 10 smaller businesses for possible divestiture," Mr. Tobin told securities analysts Wednesday.

May Form Alliances

In some cases, the bank might form alliances with outside parties, rather than selling businesses outright, he said.

Chemical's Texas Commerce Bancshares Inc. has sold four small banks this year and may sell others, Mr. Tobin said. "We are looking at selling in areas where we don't have dominant market shares."

Overseas Units May Go

Some foreign subsidiaries are also probably on Chemical's list, according to analysts. They speculated that Chemical would be willing to sell its stakes in banking operations in Spain and Portugal.

Chemical is also looking to buy businesses that would add volume and market share to its credit card, trust, and mortgage banking units, Mr. Tobin said.

Looking at New Jersey

The executive reiterated that the bank would like to acquire branches in New Jersey. Chemical would not rule out an acquisition of a regional bank, he said.

Separately, Mr. Tobin said Chemical expects to receive more than $200 million from past-due Argentine bonds over the next two quarters and another $200 million in Brazilian bond payments early next year. □

Fleet, Republic, and CoreStates Report Strong 2d-Quarter Profits

By YVETTE D. KANTROW

The banking industry got another dose of good news on Wednesday as three northeastern banking companies released strong second-quarter results.

Fleet Financial Group of Providence, R.I., netted $119 million, up 68% from a year earlier. Fleet's gain came despite a $100 million charge related to heavy mortgage prepayments amid the refinancing boom.

Republic New York Corp., like its larger New York competitors, benefited from hefty trading income. Profits grew 17% to $74.9 million, as trading gains doubled to $54.4 million.

Philadelphia's CoreStates Financial Corp., bucking the trend at most other banks, reported that loan demand rose by 3.4% during the quarter. The banking company turned a profit of $83.2 million, up 25%.

Shares of Fleet were down 25 cents on Wednesday to $35.375. Republic remained unchanged at $51.625 and CoreStates was up 25 cents to $57.375.

FLEET FINANCIAL GROUP

Results at Fleet, which translated to 72 cents per share, were in line with analysts' expectations, according to Zacks Investment Research.

Analysts said they were not surprised by the $100 million charge by Fleet Mortgage Group, considering historically low interest rates and the continuing refinancing boom. The value of servicing rights Fleet Mortgage Group purchases from other lenders declines as prepayments accelerate.

Fleet offset the charge – which consisted of a $40 million write-down of assets that have already become "impaired" by prepayment and a $60 million provision against future impairments – by recognizing $114 million in gains on the sale of securities.

"We've had a cushion in terms of our values there," chief financial officer Eugene M. McQuade said in an interview.

The banking company's securities portfolio had an unrealized appreciation of approximately $600 million at the end of the second quarter, he said, enabling Fleet to take the conservative step of reserving against future prepayments.

"They have the firepower to take this charge," said Keefe, Bruyette & Woods analyst Tom Theurkauf.

Analysts otherwise were pleased with Fleet's results, which featured stable net interest margins and continuing improvements in credit quality.

"There were some very positive signs," said Michael Mayo of UBS Securities Inc.

The net interest margin grew 3 basis points to 5.06% during the quarter. And nonperforming assets fell for the sixth consecutive quarter to $852 million, a reduction of $92 million from the end of the first quarter.

Fleet took a loan-loss provision of $69.9 million in the quarter, down from $84.9 million.

REPUBLIC NEW YORK CORP.

Republic cited heavy activity in foreign exchange and precious metals trading — and its newly established derivatives group – as big contributors.

Credit quality improved, as nonperforming assets were at $165.7 million, down $17.7 million from the first quarter.

Net interest income was up 11% to $198.3 million from a year ago, but the margin contracted 3 basis points to 3.58%.

Profits from Republic's securities brokerage subsidiary constituted a substantial portion to higher commission income, which amounted to 11.2 million, up 20% from a year ago.

— **Karen Gullo**

CORESTATES FINANCIAL

Results at CoreStates, which translated to $1.42 a share in the second quarter, exceeded Wall Street's expectations of $1.28 per share, according to Zacks.

In a press release, CoreStates chairman Terrence A. Larsen said the company benefited from "several consecutive months of improving loan demand in our markets."

Net interest income rose by $9 million from the previous quarter, to $280.1 million.

That increase occurred despite a small falloff in the net interest margin. It came in at 5.83%, off from 5.84% three months earlier.

Unlike those of other banks that have bolstered earnings by drawing down from their loan-loss reserves, CoreStates' strong performance "was not asset-quality induced" said Jeffrey B. Naschek, an analyst at Salomon Brothers Inc. "The provision was flat with the first quarter."

As it did in the first quarter, the company set aside $25 million for future loan losses. □

Get MOHR information about profitable banking in the 90's.

Two years ago, breakthrough research by MOHR Development, the recognized leader in sales, service and leadership training for banks, defined five key issues for profitable consumer banking in the '90s. Now follow-up research conducted jointly with the *ABA Banking Journal*—examines consumer banking's progress in addressing those issues, including:

- creating a high performance/ sales culture
- integrating sales and service
- translating market segmentation into front-line action

MOHR Development's all-new report highlights critical gaps between the industry's acknowledged priorities and its actual practices. It also draws important conclusions about how to close these gaps, and points the way to more profitable banking.

For a free copy of *Sales, Service and Leadership in Banking: The Gap Between Vision and Reality*, call **1-800-222-1349**.

Thomas Johnson Tapped For Top Job at Green Point

Thomas S. Johnson, the former president of both Manufacturers Hanover Corp. and Chemical Banking Corp., has joined Green Point Savings Bank as chairman, president, and chief executive.

Green Point, a Queens, N.Y.-based thrift with $6.2 billion of assets, is slated to go public later this year.

Mr. Johnson was president of Chemical Banking Corp. and its lead bank from 1983 to 1989. He left that year for rival Manufacturers Hanover, but lost his position as heir apparent to Hanover chairman John McGillicuddy when the two companies merged. □

Former Football Star On NationsBank Team

By KENNETH CLINE

People in the News

IT MAY NOT MATCH the thrill of making a game-clinching reception in the National Football League playoffs, but former wide receiver Mike Siani believes his new job as a banker is every bit as challenging.

"I've been there," said Mr. Siani, who joined NationsBank Corp. earlier this year to create a professional sports and entertainment group in its trust department. "I can relate to the athlete because I've seen former players and teammates of mine ripped off by agents, promoters, and whatever."

The Charlotte-based bank company calculates that it has relationships with 257 professional athletes in a range of sports, although many have only checking accounts. In one or two cases, these customers were carrying $1 million or more in their low-interest accounts.

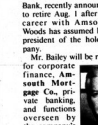
Mr. Siani, who was a wide receiver for the Oakland Raiders and the Baltimore Colts, has been asked to sell money management advice to the athletes.

"Certainly, they're candidates for our services," said F. Huling Poston 3d, manager of NationsBank's personal trust unit.

Mr. Siani said his three-person team will begin by soliciting clients from professional rookies and college players living in cities where NationsBank operates.

"They really need help planning for the future, because they've got a long, long time to live once they get out of playing ball," Mr. Siani said.

Mr. Siani, 43, is familiar with their plight. A 1972 graduate of Villanova University, he played for the Raiders from 1972 to 1978. Highlights of his career included playing in the 1977 Super Bowl and catching the winning touchdown pass in the 1973 American Football Conference championship.



Mike Siani

Mr. Siani will sell financial advice to pro athletes.

In 1979, Mr. Siani joined the Baltimore Colts, where he was voted Most Valuable Player by Colts fans in 1980. But a foot injury ended his career the following year.

"I was really depressed and disappointed, because at that point in my career I was making some pretty good money," he said.

Fortunately, Mr. Siani said, he had majored in business at Villanova. He parlayed his name and education into a job as a corporate bond trader on Wall Street for Gintel Co.

Later, he ran his own home construction business in New Jersey, but retreated into bond sales when the Northeast's real estate recession slowed his business.

He moved to North Carolina to be a municipal bond salesman for First Charlotte Corp., a subsidiary of J.C. Bradford Securities. NationsBank recruited him from the firm earlier this year.

"He brought to the table a down-to-earth, articulate manner that I thought represented NationsBank well," said Mr. Poston, who is Mr. Siani's supervisor.

Although he has not worked for a bank before, Mr. Siani has proven adept at mastering the bank's terminology and procedures. But negotiating its bureaucracy is proving as difficult as shaking off a clinging defensive back.

"We are such a big organization," he said. "The hardest thing is just trying to figure out, well, who does what and who do I talk to if I need this?" □

Magna's Net Rose 29% in 2d Quarter

St. Louis-based Magna Group Inc. netted $9.1 million, or 37 cents a share, in the second quarter, a 29% increase from the year-earlier period.

The bank said nonperforming assets declined 44% from a year ago to $35.2 million. Return on assets at the company, which has $3.6 billion of assets, was 1.02%, compared with 0.76% for the second quarter of 1992.

Looking ahead, William S. Badgley, the company's chairman and chief executive office, projected that 1993 earnings could achieve "the lower end" of estimates, which range from $1.50 to $1.70 a share.

— **John Racine**

EXECUTIVE *changes*

Amsouth Elects Bailey and Ritter Directors and Board Vice Chairmen

C. Stanley Bailey and **C. Dowd Ritter** have been elected directors and vice chairmen of the boards of **Amsouth Bancorp.** and **Amsouth Bank**, Birmingham, Ala.

Both previously were senior executive vice presidents.

C. Stanley Bailey

John W. Woods, the company's chairman, president, and chief executive, said the promotions

are part of a companywide restructuring.

William A. Powell Jr., president of Amsouth Bancorp. and vice chairman of Amsouth Bank, recently announced plans to retire Aug. 1 after a 40-year career with Amsouth. Mr. Woods has assumed his title as president of the holding company.

Mr. Bailey will be responsible for corporate finance, Amsouth Mortgage Co., private banking, and functions he will oversee by the company's chief financial officer and chief technology officer.

C. Dowd Ritter

Mr. Ritter will be responsible for the Alabama-based company's out-of-state subsidiaries, as well as commercial banking, consumer and business banking, and human resources.

— **Franklin Smith**

NEW ENGLAND

Hoyte** in the bank services division of the securities services area, and **Michael J. Tobin** in the U.S. mutual fund services division of global financial asset services.

New assistant vice presidents are **David W. Dickie** in information technology; **Donald Cignac** in the U.S. mutual fund services division of the global financial asset services area; and **Craig Hartnett** in the global cash management division of the capital markets area.

Also, **Michele S. Julian** in the human resources division of corporate staff; **Erin Kane** and **Mark Murphy** in the global securities lending division of the capital markets area; **John H. Reohr 4th** in State Street Global Advisors, and **Andrew F. Sears** in securities operations.

MIDWEST

SOCIETY CORP., Cleveland, has named **Robert G. Jones** senior vice president and retail center executive.

PNC BANK Ohio, Cincinnati, has elected **Craig M. Johnson** as senior vice president and controller. He is manager of the bank's financial division.

MIDDLE ATLANTIC

PNC BANK Philadelphia has appointed **Joseph W. Gonczi** vice president and general manager of the credit card department in the retail banking division; **Leon Lieberman** vice president and investment regional manager of PNC Securities Corp., the bank's brokerage arm, and **William E. Pomeroy** vice president and national director of personal trust sales in the investment management and trust division.

PNC BANK Corp.'s Bank of Delaware, Wilmington, has promoted **David G. Rash** to vice president and regional production manager of PNC Mortgage Co. **Robert C. Ballard** has joined the staff at Bank of Delaware as vice president in commercial real estate.

SOUTHEAST

THE FEDERAL RESERVE Bank of Atlanta recently reassigned **William H. Smelt**, assistant vice president, to be assistant branch manager of the Atlanta branch.

He had been assistant branch manager of the New Orleans branch.

Amy Goodman replaced Mr. Smelt as assistant branch manager in New Orleans. She is an assistant vice president.

Edward B. Hughes, formerly assistant vice president in Birmingham, Ala., has relocated to New Orleans. He has been an officer in the check collection and personnel departments and assumes responsibility for several operating departments.

Suzanna Costello has become assistant vice president with responsibility for international banking regulation in Miami, where she is directing examiner.

WEST

WESTCORP, Irvine, Calif., parent company of Western Financial Savings, appointed **Robert E. Adams** executive vice president of its mortgage banking division, which consists of 13 branches.

Mr. Adams most recently was first vice president, operations and administration of Countrywide Funding Corp., where he was responsible for the nationwide retail mortgage banking network. □

We'll save you money. We could save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division, to get every Monday the data you need to face the regulators.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... which agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 20% discount, so you'll be saving money even before you get the first issue. After that, how well you use the information before this year's exam could decide whether you're around next year.

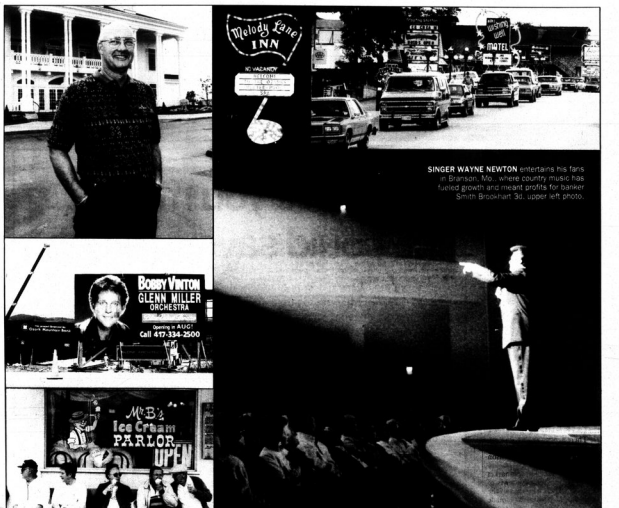
Country Boom Is Music to Banker's Ears



SINGER WAYNE NEWTON entertains his fans in Branson, Mo., where country music has fueled growth and meant profits for banker Smith Brookhart 3d, upper left photo.

Photos by Alan S. Weiner, excerpt top left by Greg Chittenden

Continued from *page 1*

about 50% in the past two years.

But boomtowns can bust, and there is concern that the area is becoming overbuilt. New hotels, condominiums, and apartments are springing up all around the main two-lane drag known as Country Boulevard 76, which at night is lit up like Las Vegas, without the casinos.

For now, though, it's full steam ahead.

What's driving Branson's boom?

Country music stars like Mickey Gilley, Mel Tillis, and Roy Clark have grown tired of the road and have opened their own theaters in Branson. The response: fans from across the nation have poured into the city by the millions.

In 1992, the number of visitors swelled to 5 million, up from 3.1 million in 1986. Branson's chamber of commerce expects the number to increase by another 500,000 this year.

The town is so popular the American Automobile Association ranks Branson as its No. 2 driving destination behind Walt Disney World in Florida. This month, Branson Airlines began offering flights to music city from several cities, including St. Louis and Kansas City.

Thirty-two theaters have been built with 42,729 seats, two more are on the drawing board, and there are rumors of more to come. The number of lodging rooms reached 14,004 in the first four months of 1993, up 26% from 1992. Another 1,800 rooms are under construction.

Fear of a Shakeout

"I'm worried about some kind of shakeout," said Vern Lewis, senior vice president of Capital Bank's Branson offices. "Branson is a for-real situation, but it is just going to have it growth cycles."

The banks are feeding off a huge demand for commercial construction. The total value of construction projects for 1991 and 1992 combined hit $134 million in 1991, up from $18 million in 1989-1990.

Ozark Mountain saw its assets surge to $162 million in the first six months.

Ozark Mountain Bank has been an aggressive player in the market. Its loan portfolio shot up by 50% in the first six months of the year to $126.7 million compared to a year ago.

It has $73.8 million in motel, resort, restaurant, and theater loans on its books, which make up 58% of total loans.

About $10 million is in theater loans to five groups that include Boxcar Willie Theater, with 901 seats, the 1,700-seat Baldknobbers, Moe Bandy's Americana Theater, 950 seats, Bobby Vinton's Blue Velvet Theater, with 2,000 seats, and Mickey Gilley's Family Theater, 970 seats.

This month, the bank signed a deal with the Welk Group Inc. to finance a 2,300-seat theater, a 160-room hotel, and a restaurant. The bank, which is owned by the $2.7-billion-asset Central Bancompany, Jefferson City, Mo., will lend more than $10 million to the $14-million-plus project, which is slated to open next May.

The Welk Group will feature music made famous by the late band leader Lawrence Welk.

"We have cherry-picked the loans," said the 58-year-old Mr. Brookhart, who has been a banker in Branson for 26 years. "We've got people who are strong enough to play in the market and to withstand a decrease in ticket sales. I can guarantee the five are going to survive the shakeout very well."

So far, so good. Ozark Mountain's outperformers stood at zero for the first half of the year.

Boxcar

One customer is country music star Boxcar Willie. He and Mr. Brookhart shoot the breeze as fans mill about the singer's museum and gift shop. The visitors pull Boxcar Willie T-shirts off hangers, eye train conductor caps, and finger mugs. The cash register hums.

"We've got a gold rush going on in here," says the potbellied

See **COUNTRY** *next page*

Continued from *page 8*

singer to his banker.

Boxcar Willie, who off stage goes by Lecil T. Martin, started banking with Ozark Mountain in 1986 when he bought a failed theater taken over by the bank. Since then he's opened a museum and gift shop and is building a motel.

"I've had one other bank come in and try to get our business," Boxcar Willie said. "I've just always been satisfied with this bank. I've borrowed a lot of money from them. I walk in and they say, "Hi Box," and that means a lot to me."

Thus far, the only problem the bank has run into is controlling its growth. Fifteen months ago, it built a two-story main office, hired 21 employees, and acquired new equipment. The bank has since grown out of the space.

Checking the Balance Sheets

Ozark Mountain has turned away country music stars who have weak balance sheets or demand 150% financing on a loan, Mr. Brookhart said. The bank typically lends up to 70% of the loan on a theater if the borrower has a net worth of 50% of the loan, and has historically done well at the box office.

"They (some stars) have a very exaggerated opinion," Mr. Brookhart said. "Some people will . . . overstate assets. The minute you say you want a copy of their personal tax returns they get green around the gills. The thing we are primarily after is their character. I still want to look people in the eye and see how they talk and act."

What may give Branson's building boom another kick is the housing market. Mr. Brookhart projects 1,500 new homes will be built in 1994 and 2,000 in 1995. The bank is aiming for 20% of the business.

But bankers, investors, and local proprietors expect a shakeout as the area becomes overbuilt with theaters, motels and restaurants.

"There's going to be a bump 12 to 18 months from now," said an investor in the Branson market.

"We are watching the market real hard," added Mr. Lewis of Capital Bank. "The truth of the matter is . . . bad loans are made in good times. We are trying to guard against that."

Christopher Dixon, an entertainment analyst with PainWebber Inc., said the city will likely go through a downturn, but it can be weathered if the local government plow funds into the infrastructure.

"The biggest problem with facilities like Branson is they get caught in their own success," he said. "They forget to take some of the monies and reinvest them back into the community. What was idyllic can become overcrowded and turn into a honkytonk."

$1 Billion from Tourists

There is plenty of money to go around in Branson. Last year, tourists spent nearly $1 billion. Sales tax collections soared 35% to $21.8 million in 1992 from the prior year, and have tripled since 1985.

Banks like Ozark Mountain are flooded with deposits. It maintains deposit relationships with heavy hitters like Silver Dollar City, a popular amusement park that last year packed in 1.7 million people, as well as with scores of restaurants and entertainers who include Ray Stevens and Andy Williams, as well as Mr. Tillis, and Mr. Clark, Mr. Brookhart said.

Deposits at the bank shot up 37% in the first half of the year to $141.1 million, compared to a year ago. One of the bank's three branches is open seven days a week.

Its busiest day is Saturday, and $800,000 in deposits can pour through the drive-up window on a typical weekend. The bank also processes MasterCard deposits from local merchants, which have reached $19.8 million for the first half of the year, up 55% from a year ago.

But life in Branson is much more complicated since it has become one of the hottest tourists spots in the nation. One day Mr. Brookhart had to divert a tour bus out of his neighborhood. Curious tourists were trying to find Mel Tillis' house, which is near Mr. Brookhart's.

"That's the Hollywood junk," Mr. Brookhart said. "That's not Branson."

Then there's the traffic problem, which is enough to make a New Yorker blanch. In July, the peak tourists month, more than 31,000 cars inch along the main drag.

Mr. Brookhart dodges the mess, zipping along backroads and cutting through shopping center parking lots in his white Buick Park Avenue.

"We are going to drive five miles to get one," said the banker, who has his radio dialed to an easy listening music station. "Fortunately, the tourists don't know about this."

But even a seasoned Branson traffic dodger can't escape the mess.

"Damnation," he said staring at a snaking line of red lights. "We've got gridlock. (Wayne) Newton just let out. It's a bloody zoo."

Mr. Brookhart takes the annoyance in stride.

"Other bankers would kill to be in Branson," he said. "Both coasts are dead on their butts, but we've never had it so great." □

NEED BANKING INFORMATION FAST?

AMERICAN BANKER ONLINE

For more information, including details on special direct data delivery options and redistribution rights, call:
Peter Leach, Database Licensing, American Banker • Bond Buyer, at 1-800-356-4763 or 1-212-943-6304.

Now there's a way to stay abreast of that vital information or to find any articles you may have missed by using your own PC with a modem to call up the American Banker Online on the information service of your choice.

American Banker Online is a full-text news service providing instant access to all the information appearing in the only daily banking newspaper. It enhances the value of the newspaper's daily information by giving you the ability to recall all the stories on a bank, or a banker, or legislation, or indeed anything you need to know about banking.

With the power of the computer, you can locate the information that's vital to your business. American Banker Online is a full-text database that provides direct, easy access to the daily news, statistics, surveys, speeches, commentary, and special editions of the print newspaper. And you can access this information each morning even before that day's paper is delivered!

In addition to being a daily information tool, American Banker Online is also an archive. Many users rely on our information to piece together the background on events that impact their business. Along with today's news, American Banker's historical online records include more than 80,000 articles dating back to 1979. These can be searched by headline, key words, bank name, or any other search terms.

New Jersey Mortgage Executives Plead Guilty to Fraud Charges

By EDWARD KULKOSKY

NEWARK, N.J. — Three executives of two New Jersey mortgage companies have pleaded guilty of defrauding banks and institutional investors of "tens of millions of dollars," Michael Chertoff, the U.S. attorney for New Jersey, has announced.

The three are Joseph Abatemarco, former executive vice president of American Mortgage Co. and of General Home Financial Services Inc.; Enrico Daidone, a loan officer and vice president of General Home; and Gerald Veglia, a vice president for sales at American Mortgage. Both companies, based in Woodbridge, N.J., went out of business in April 1991.

A certified public accountant, Stanley Minkin, also pleaded guilty in the case. He was charged with preparing false financial statements.

Among those suffering losses were the Federal Housing Administration and units of UJB Financial Corp., Princeton, N.J.; Midlantic Corp., Edison, N.J.; Ensign Bank, New York City, which is now in the hands of the Resolution Trust Corp.; and Security Pacific Corp., now part of

The men were charged with selling loans and not telling the lenders.

BankAmerica Corp., San Francisco, according to Cheryl G. Bader, an assistant U.S. attorney.

A number of smaller New Jersey thrifts and commercial banks were also caught up in the fraud.

A source close to the case said lenders and investors were now involved in a number of civil lawsuits over responsibility for the losses.

The three executives were charged, among other things, with funding mortgages through warehouse lenders, then selling the loans without informing the warehouse lenders of the sale or investors of the warehouse lien.

Warehouse lenders provide temporary financing for loans that are being prepared for sale into the secondary mortgage market. They are normally repaid when the sale is completed.

Duplicate Loans

The executives also sold the same loans to more than one investor, used duplicate loans as collateral to warehouse lenders, and concealed delinquencies to avoid having to buy back mortgages.

Mr. Abatemarco faces up to 35 years in jail; Mr. Minkin, 10 years; and Mr. Veglia and Mr. Daidone, five years. They also face fines of $250,000 or more. □

Fannie Mae Taps Joseph E. Amato for Portfolio Strategy Post

Joseph E. Amato has been named vice president for portfolio strategy by the Federal National Mortgage Association's board of directors.

In the newly created post, Mr. Amato will make recommendations for asset acquisition and hedging strategies for Fannie Mae's mortgage portfolio.

He also will produce projections of the portfolio's performance and analyze the company's risk-based capital.

For the last two years, Mr. Amato has been Fannie Mae's director of regulatory policy. His work included contact with federal regulatory agencies.

Mr. Amato joined Fannie Mae in 1987 as a financial analyst, working on financial-institution restructuring and corporate finance.

James M. Weld Resigns As Plaza Home's CEO

By CHRISTOPHER NOBLE

James M. Weld, president and chief operating officer of Plaza Home Mortgage Corp., resigned abruptly this week after six years with the company.

Jack French, Plaza's chief executive, will take over the jobs vacated by Mr. Weld.

Both the company and Mr. Weld portrayed the move as an amicable parting. But some industry watchers said Mr. Weld left the company over questions about his ability to manage Plaza now that it has arrived in the top tier of mortgage originators.

Brad A. Morrice, Plaza's corporate administrative officer, denied that Mr. Weld's ability was in question. He said Mr. Weld had told him that running the company was not as much fun now that the company had gotten so large.

"It was a resignation, not a termination," Mr. Morrice said of Mr. Weld's departure.

Family Time

Mr. Weld, 40, also said he wanted to spend more time with his wife and daughter. Mr. Morrice added that Mr. Weld had made more money in the last two years than he ever believed he would and was taking advantage of that to take a more "low-key" job. Last year Mr. Weld was paid $475,000 in salary and bonus, according to the company's proxy. Mr. Morrice said Mr. Weld owns between 80,000 and 100,000 shares in the company.

Plaza's shares were trading at about $9 at midday Tuesday, down 37.5 cents.

Jack French, Plaza's chief executive, praised Mr. Weld and his contribution to Plaza. "I accept his resignation with regret and wish him well in his future endeavors," Mr. French said.

During his six years at the Santa Ana, Calif.- based company, Mr. Weld helped transform Plaza from a blip on the mortgage map to one of the largest – and fastest growing – mortgage companies in the country.

After it went public last year, the company's growth spurted. As of the end of this year's first quarter, Plaza had originated $1.1 billion, making it the 22nd-largest originator in the country. Last year, the company originated $5.5 billion and had a servicing portfolio at yearend of $2.7 billion.

Banc One Chief: Branches Key to Fund Sales

By MICHAEL O'D. MOORE

Branches will be banks' biggest advantage in the 1990s for selling mutual funds and other retail products, says John B. McCoy, chief executive of Banc One Corp.

Just 10 years ago, when direct mail and telemarketing were proving successful, Mr. McCoy was thinking about jettisoning branches, he told more than 200 bankers recently at a conference sponsored by the Council on Financial Competition in Washington.

But no more.

Banc One credits a sizable portion of its fund sales to the existence of a large branch network. "A lot of it is just the customer walking in saying, give me the facts," he said.

Wire Houses Follow Suit

Even top telemarketing firms like Fidelity Investments are moving toward branches.

"They are opening offices on the ground floor because they can't get the customer," he said.

"Some lights go on [in an investment center], and the customer just walks in," he said.

The lights are going on in Columbus-based Banc One's 400 largest branches in the form of personal investment centers. These are areas within branches dedicated solely to the sale of investment products.

And banks have to sell funds because customers demand them, Mr. McCoy said.

But, he warned, banks also have cultural obstacles to overcome in gearing up these programs that brokerage houses don't have to deal with.

Paying generous commissions to securities salespeople who work near traditional banking employees can generate friction, he said.

"We've created real inequities," he said. "I just don't think that leads to good will over time."

While that problem has yet to be solved, he sees other cultural problems beginning to ease.

Banc One employees used to have "selling angst" about mutual funds. Now that is gone, Mr. McCoy said.

The change came largely from the use of an accounting method in which all the money from fund sales is credited completely to the branches, Mr. McCoy said.

"Banc One people don't believe in shadow accounting," he added, referring to an approach that gives "shadow" credit to the bank unit that referred business and actual credit to the unit that makes the sale. Under this system, branches often get only the shadow credit, while the fees are credited to a securities unit.

Glad Tidings

The assertion hit a chord with some bankers. William Kauper, vice president in charge of mutual fund sales at Security Bank in Milwaukee, said driving all fee income though the bank is preferable to the gyrations of shadow accounting.

Mr. Kauper and Security senior vice president Thomas J. Reuteman added that Mr. McCoy's statement about the growing importance of branches was welcome news.

"It's going to be what happens," Mr. Reuteman said. "Customers are going to start coming back to the branches."

"I think he really simplified our challenge – and that's what leaders do," Mr. Kauper added. □

John B. McCoy
Warns of cultural problems

Trade Group Elects State Street Official

William T. Blackwell, a senior vice president at State Street Bank and Trust Co., has been elected president of National Investment Company Service Association.

Mr. Blackwell has been involved with mutual funds since joining State Street in 1970. The Boston bank is the largest provider of securities processing and recordkeeping for U.S. mutual funds.

The trade group is for companies that provide shareholder services and operations support for mutual funds. Based in Chestnut Hill, Mass., it has 255 members. Currently, it is analyzing issues related to banks in the mutual fund industry.

Citicorp Giving Its Secured Card A Tryout in the Hispanic Market

By LISA FICKENSCHER

Adding momentum to its secured credit card strategy, Citicorp has begun test-marketing to the Hispanic communities of San Francisco, Los Angeles, and Houston.

The nation's largest credit card issuer is airing Spanish-language television commercials and has prepared similar print ads in what could be the start of a nationwide effort.

Citicorp officials are not disclosing details of their plan. Like all secured cards, Citicorp's is mainly for people who need to establish or reestablish a record for creditworthiness. Deposit balances serve as collateral for credit lines.

A Market with Potential

The Spanish TV spots began in June and are the only current television ads for the secured card, said Citicorp spokeswoman Maria Rullo. Other promotions are under way elsewhere.

Card issuers see the secured product as a way to reach new customers in an increasingly saturated market. Marketing experts see great potential in the Spanish-speaking communities.

David Thomas, vice president of Strategy Research Corporation West, Irvine, Calif., said: "The attraction of marketing to the Hispanic population is its size and potential for growth. You can't do business in California or Texas without touching this segment."

The market is also relatively untapped. Strategy Research says 67% of Hispanics don't own a credit card.

PREVIOUS ENTRANT: "Bilingual" card from First Consumers National Bank preceded Citicorp's Hispanic offering.

"There is an element of the Hispanic population [that exhibits] high telephone and airline usage," said Mr. Thomas. "And many card programs target these needs."

Citicorp is not the first card issuer to see the opportunity.

Tests are under way in L.A., Houston, and San Francisco.

People's Bank of Bridgeport, Conn., was first with a "bilingual" card - an affinity program begun in 1991 with the Telemundo television network.

In March, First Consumers National Bank of Beaverton, Ore., a private-label card issuer owned by the mail-order firm Spiegel Inc., launched the bilingual Adelante MasterCard.

'Fastest-Growing' in U.S.

The Hispanic-oriented card comes in secured and unsecured versions and includes a fund-raising feature – a portion of revenues goes to scholarships. The interest rate on both the secured and unsecured cards is 18.9%.

"The Hispanic market is the fastest-growing in the United States," First Consumers president J. Richard Speicher said when the program was announced. The bank's marketing partner is Hispanics Northwest Community Development Corp.

On the market since the beginning of the year, Citicorp's standard secured product – called Citibank Classic – is a MasterCard or Visa credit card with a relatively high 19.8% interest rate.

The offsetting, 18-month certificate of deposit currently pays 4.5%. The balance can be from $300 to $5,000, and the credit line is equal to that amount.

Citicorp is among the minority of banks that do not accept customers for its secured card who have had a previous bankruptcy or a serious delinquency listed on their credit report. The bank's intent is to graduate the customers to unsecured cards.

When the CD comes due, Citicorp evaluates the customer's payment record. If there has been no delinquency problem, the deposit is returned and the customer is issued an unsecured classic card at the prime rate plus 9.4% – which at present would come to 15.4%.

But if the customer does not yet qualify for the lower-rate card, Citicorp will not necessarily terminate the credit relationship at the 18-month mark. □

MasterCard, Visa Nudge Retailers to Automate

Continued from *page 1*

a new incentive for retailers in its PS2000 program. It rewards merchant banks with a 1.25% rate if they can clear transactions within two days and transmit complete magnetic stripe information for authorization, among other automation requirements.

At the other end of the Visa rate schedule is the standard interchange rate of 2% plus 11 cents, or $2.11 for a $100 purchase.

Last month, San Mateo, Calif.-based Visa said merchants in the travel and entertainment sector and in the mail order business would also be eligible for customized PS2000 rates, starting next April.

NEWS ANALYSIS

Because of the somewhat higher risk of such transactions, the best rate generally available to these merchants will remain at $1.40 at 50 per $100, depending on whether a card is physically presented.

Higher Costs Initially

Although the objective of the MasterCard and Visa programs is to save money through efficiency and fraud control, bankers said the short-term effect will be higher costs.

Anytime you have major repricing, you have major upheaval and potential defections," said Jerry Lester, director of merchant processing at Michigan National Corp. He said merchant banks will have to upgrade systems to get the favorable rates and keep customers.

But while MasterCard and Visa continued to move toward automation, they did show some sensitivity to bankers' cost concerns.

In announcing its plan for an interchange compliance program last month, MasterCard said few costly equipment upgrades would be required of merchants or their banks.

And Visa granted the travel and mail order merchants the security of knowing that their new rates will be locked in through April 1997, removing the threat of additional upgrades.

"Everybody understands the investment and changes required for some people were significant," said Allen Weinstein, Visa vice president of industry research and interchange. "In exchange for that, we wanted to guarantee them the rate."

Better rates are reserved for the high-tech stores.

Mr. Lester credited Visa with making some adjustments that recognize the unusual business practices of some merchants that make it difficult for them to qualify for the best rate.

In one such step, Visa said hotels could get the best rate by clearing transactions two days after the cardholder checks out, rather than two days after the traveler presented a credit card at check-in.

This will allow many sales to qualify for the lower rate that previously were disqualified because a traveler stayed several days. □

Bank of America Offers Flood Relief to Customers

SAN FRANCISCO — Bank of America is extending flood relief to its MasterCard and Visa customers in the Midwest.

The California-based bank, the nation's fourth largest in card outstandings, invited calls to two toll-free numbers – one for people requesting a credit line increase, the other for those seeking to skip a monthly payment.

"We're eager to do what we can to assist in the recovery process for our customers who may have been affected by these floods," said executive vice president Robert D. Sznewajs, manager of the credit card division.

Aug. 19 Deadline

Customers living in Illinois, Iowa, Minnesota, Missouri, and Wisconsin are eligible. They have until Aug. 19 to apply.

Also eligible to skip monthly installments are Security Pacific Financial Services customers who have mobile home, home equity, executive-professional, or consumer loans.

SunTrust Forms Credit Card Bank in Orlando

ORLANDO, Fla. — SunTrust Banks Inc. said it has established a credit card bank in Orlando to centralize a multistate operation.

The $37.6 billion-asset SunTrust, which is the product of several mergers across state lines, had 10 credit card centers in Florida, Georgia, and Tennessee.

The new institution, SunTrust BankCard, received a national charter from the Office of the Comptroller of the Currency on July 6. William J. Moore is president and chief executive officer of the unit, which employs 300 people.

According to *The Nilson Report*, SunTrust ranks 33d among credit card issuers. Its retail network consists of 650 offices in Alabama, Florida, Georgia, and Tennessee. □

In-Market Opportunity Spurred Deal By Banc One

By STEPHEN KLEEGE

Banc One Indianapolis caused a ripple in the placid credit card portfolio market, beating out other bidders for $20 million of receivables sold recently by Premier Financial Corp. of Elkhart, Ind.

The owners of Prime Bank, which though small had been successful as a niche player, decided to quit the banking business after two years out of frustration over the regulatory process.

The credit card sale allowed Banc One Corp.'s Indiana unit to build its local business with high-quality accounts.

Low Delinquency Rate

About 9,000 of Prime Bank's 16,000 cardholders live in Indiana, and delinquencies were well below average at 1% to 1.5%, said Robert Crothers, chairman of Prime Bank and president of Crittson Financial Services, its card processing affiliate. Nationally, more than 5% of credit card loans are considered delinquent.

The price paid by the Banc One unit was not disclosed, but it is widely believed to have paid the highest premium in several years for a credit card portfolio of this size. Joseph R. Minnis, Bank One Indianapolis' vice president for credit card sales, called the price "reasonable" given the opportunity to form relationships quickly with thousands of new customers.

Experts say a strong portfolio of credit card receivables typically commands a 20% premium, and that the recent scarcity of deals has boosted the price.

In the only other comparable deal this year, MBNA Corp. is believed to have paid about 25% above the face value of outstandings for $20 million of credit card loans from Provident Bank of Baltimore, according to Robert E. Hyer of Smith Barney, Harris Upham & Co.

The parent of Crittson, a credit card processor for 240 banks, acquired the $60 million-asset Prime Bank in 1990 with the intention of building its own credit card business. The bank is also active in mortgage and installment lending.

The group's intentions were spelled out to regulators from the start. But management decided to sell, Mr. Crothers said, because field examiners kept raising concerns over the bank's level of unsecured debt.

"We're extremely delighted with the premium," Mr. Crothers said. Crittson has signed a letter of intent to sell the rest of the bank to Lake City Bank of Warsaw, Ind.

Amex Card Bank Moving to Wilmington, Del.

By JEFFREY KUTLER

American Express Centurion Bank, the Delaware-based consumer lending unit of American Express Travel Related Services Co., said it will relocate to Wilmington at the end of this year.

The bank, which provides the Optima card and other credit products, will depart Newark, where its lease expires on Dec. 31.

The company will move with 125 employees to 27,000 square feet of space in Wilmington's One Christina Center. The lease there runs through 1998.

Each city is home to several credit card operations, lured to Delaware in the '80s by low taxes and no usury ceiling. Among the big issuers in Newark are Bank of New York (Delaware) and MBNA America Bank.

Frank Skillern
Amex committed to Delaware

Denizens of Wilmington

Wilmington-based banks include First Chicago Corp.'s FCC National Bank, Chase Manhattan Bank (USA), and First USA Bank, which is also in Christina Center.

The American Express unit's move was hailed by Wilmington Mayor James H. Sills Jr. as "a terrific boost for the city."

Centurion Bank's chief operating officer, Frank Perrilli, is on the board of Wilmington 2000, which is promoting revitalization of the central business district.

"We are committed to maintaining a strong presence in Delaware," said Frank Skillern, Centurion's chairman and president. "This move will help strengthen the bank's visibility as one of the preeminent consumer lending institutions in the U.S."

Centurion Bank ranks among the 10 largest in card receivables, With $10.2 billion of total assets at yearend 1992, it was the largest of all banks in Delaware.

Aside from the Optima revolving credit card, the bank administers the American Express Sign and Travel program and provides lines of credit on American Express gold card and platinum card accounts. □

"WITH THE RIGHT TOOLS, IN THE RIGHT HANDS, ANYTHING IS POSSIBLE."™

THE KEY TO THE NEXT DIMENSION IN PROCESSING

Claims of increased functionality and flexibility abound in the transaction processing industry, but results are scarce. You're about to see promises and new systems from others for years. Now see reality with First Data Resources' Account-level Processing.

The Account-level Processing concept is simple:

- Let our clients dictate cardholder pricing parameters at the account level.
- Give them online maintenance, easy customization and integrated support tables.
- And don't sacrifice flexibility or functionality.

A.L.P. has been implemented and FDR clients are using this new dimension in transaction processing today!

This new dimension offers you an online, menu driven system which guides you through linked applications to review, analyze and edit your processing options. A.L.P. is based on total control and flexibility, with less paperwork and reduced production time. This not only streamlines your portfolio management, but provides you with a high degree of customization throughout your system based on your own cardholders and circumstances.

Account-level Processing is an outgrowth of our continued commitment to client-defined processing because it has been developed in partnership with many of our clients, both large and small.

Take a look at how Account-level Processing can tap into new opportunities in your cardholder base and take your processing to a new dimension. No other processor can give you today the immediate advantages Account-level Processing offers.

Boston Fed Chief Faults Use of CRA as Tool for Reform

Continued from *page 1*

ious problems of society."

Mr. Syron laid out his views of what CRA can and cannot do: It can ensure that banks provide equal access to credit for minorities and low-income residents, he said. But as it stands, it cannot serve as a subsidy program, an affirmative action program, or a tax on the banking industry for deposit insurance.

"By misplacing our expectations on a statute that clearly does not have the strength to tackle the social problems of such magnitude, we are in danger of losing the benefits that can be derived from the law," Mr. Syron said.

"And worse, we are in danger of generating frustration and disillusionment among all those who genuinely wish to work toward equality and prosperity for all people in our society," he added.

If policymakers want CRA to take on added responsibilities, Mr. Syron said, then the law should be rewritten. And its reach should be extended to cover all financial institutions.

"But if we determine that [the law] should be limited to equal access to credit, then I'm not sure the extension is compelling," he said.

Bankers at the conference Wednesday appeared to shake the Boston Fed president's view.

"There are cases where advocacy groups and some other elected officials would like CRA to do things it was never designed to do," said Richard Driscoll, chairman of the Massachusetts Bankers Association.

Richard Driscoll
Leads Mass. bankers group

"When you have that attitude growing, you stand in the way of real progress."

Landmark Study

Mr. Syron has been one of the most outspoken and proactive Fed officials in fair lending and equal credit issues. His bank put out a landmark study last fall showing that even after economic characteristics are accounted for, blacks are still 60% more likely to be denied home mortgages than whites.

And this spring, the Boston Fed put together a booklet advising banks on strategies they can follow to insure they are not discriminating. That book has been widely circulated throughout the Fed system.

In his address Wednesday, Mr. Syron criticized efforts to use the Boston Fed study to detect lending discrimination at the institutions that participated in the study.

Massachusetts Attorney General Scott Harshbarger is now investigating close to a dozen lenders that participated for illegal bias. Also as a result of the study, one bank, Shawmut Bank, is being investigated by the U.S. Attorney General.

"The study was never intended as a tool for analyzing specific institutions, and in my own personal view is not an adequate tool for going so," he said. "My own fear is that using it to do so may forever poison the well for future research and analysis to develop a better understanding of these problems." □

Swaps Regulation Called Adequate

Dow Jones

LONDON — A study by an influential research group has concluded that no fundamental regulatory changes are needed for the derivatives markets.

But the report, by the organization known as the Group of 30, urged senior managements to take an active role in overseeing their firms' activities in swaps, options, and other sophisticated instruments.

The study was initiated about a year ago in response to growing alarm among banking regulators worldwide about the rapid growth of the largely unregulated market.

Conflicts Denied

At a press conference, Group of 30 members denied that they had a vested interest in the outcome of their study, even though many who participated in it are derivatives practitioners.

Dennis Weatherstone, chairman of J.P. Morgan & Co. and a founding member of the Group of 30, said 30% of senior managers are not sufficiently informed or involved in their respective firm's activities in derivatives.

The report makes 20 recommendations, several already widely employed by the industry. Other suggestions mirror those made in the past year by central banks and industry regulators.

Among the recommendations are that market players should "determine at the highest level" the scope of involvement in derivatives and the policies that should be applied.

It also suggests that "only professionals" with the appropriate skills be involved in derivatives, which are viewed as far more complex than the underlying currency, stock, and bond markets. □

Republic Renames Its Thrift

NEW YORK — Republic New York Corp. has changed the name of its thrift unit from Manhattan Savings Bank to Republic Bank for Savings.

The company said the change was being made to "reflect the fact that Manhattan is part of the Republic banking family."

— Dow Jones

STOCKS: Wells, First Interstate Get Boosts from Wall St.

Continued from *page 1*

risen about 7.5% this year.

But earnings were better than expected at both banks, leaving room for further stock-price increases, the analysts said.

Lawrence W. Cohn of Paine-Webber cited "rapidly improving" asset quality at Wells in hiking his estimate of earnings this year to $9.05 per share from $7.70. In 1994, he expects $12 per share, up from $10.80 previously.

In the second quarter, Wells earned $2.46 per share, up from $1.33 last year and well over Mr. Cohn's estimate of $1.65. The primary reason for the spurt was a loan-loss provision of only $55 million versus $133 million last year.

On a Short List

The analyst said he thinks the bank's stock can reach $150 within 12 to 18 months.

The "focus list" is an investment tool for PaineWebber's retail brokerage customers. It contains up to 30 recommended stocks. Shawmut National Corp. is the only other bank stock on the list.

Mr. Cohn said he thinks California's economy is "bottoming out," and that problem loans will continue declining for Wells, allowing the bank to forgo further large additions to its loan-loss reserve.

He does not expect an upturn for the state soon, but thinks improving credit quality at Wells provides a large amount of leverage for earnings gains.

The analyst does not expect "any loan volume until the first half of next year."

Trimming Credit Costs

Improved asset quality is also driving earnings at First Interstate, said Lehman Bertman Natwest.

The bank this week posted second-quarter earnings of $1.60 per share, up from 75 cents a year earlier. It said it expects its nonperforming assets to fall to 1% of assets by yearend from 1.15% on June 30.

"The company has gone through a period of aggressive chargeoffs and reserve building," Mr. Berman said. "While revenues are sluggish, this fall in credit costs is flowing back to earnings."

But the analyst said his 12-month price target of $70 does not provide enough room for potential for a "buy" recommendation. Rather, he suggested investors buy the stock during price declines.

Seen as Takeover Target

Mr. Berman also said he thinks First Interstate remains a candidate for acquisition "in two or two-and-a-half years."

First Interstate frequently was mentioned as a takeover target several years ago, with Wells the most likely suitor. The recession in California has muffled such talk. □

California Rolls

Increase in stock prices from Jan. 1 to July 20

But by yearend 1994, said Mr. Berman, First Interstate's book value will likely be near $50 from the current $46.

Assuming a takeout price of twice book value, based on its valuable franchise, the purchase price in a deal could be $100 per share.

WEDNESDAY'S MARKET

The top gainer among major bank stocks on Wednesday was Boatmen's Bancshares, St. Louis, up $1.125 to $62.75. Also enjoying advances were Comerica Inc., up 75 cents to $30.50, and NationsBank Corp., up 75 cents to $49.75.

But there also were losers. Wachovia Corp. fell 75 cents to $33.625 and First Fidelity Bancorp. slipped 75 cents to $46.75. U.S. Bancorp of Oregon dropped 62.5 cents to $26. □

Silicon Valley, Philadelphia National in Credit

WAKEFIELD, Mass. — Boston Technology Inc. said it has obtained a $15 million revolving line of credit from Silicon Valley Bank, Santa Clara, Calif., and Philadelphia National Bank.

The credit facility is scheduled to terminate in May 1995. William J. Burke, chief executive officer of the telecommunication systems company, said the new credit and a previous foreign exchange line will help finance both domestic and foreign expansion. □

Niagara Asset Corporation
Loan Sale Opportunity

Niagara Asset Corporation, a service corporation managing and selling loans for the FDIC, as Receiver of Goldome, intends to offer the following performing commercial mortgage loans for bid through a Bulk Loan Sale:

Commercial Mortgage Loans Package #000196	Approximate Principal Balance	Bid Date
Strip Plaza/Shopping Center	$5.2MM	August 18, 1993
Multi-family	$3.5MM	August 18, 1993
Office Building	$ 2MM	August 18, 1993

Properties located in TX, OH, OK, MI, and FL.

Each loan must be bid upon separately. There are 8 loans ranging in size from $.5MM to $2.3MM.

For details regarding this sale and bid packages, please contact:

Joanne M. Campagna, Vice President
at (800) 946-6164 or write to:
Niagara Asset Corporation
Waterfront Village Center
60 Lakefront Blvd, Suite 316
Buffalo, New York 14202-4392

Please respond by August 5, 1993.

Pathmark Parent Set to Revise Recapitalization

By WILLIAM GOODWIN

Supermarkets General Corp., owner of the Pathmark grocery and drugstore chain, said Wednesday it plans to revise a previously announced recapitalization that included $675 million of new bank loans.

Led by Bankers Trust Co., the bank deal was contingent on the company's completing an initial public offering of stock as part of the proposed recapitalization.

But in a statement, Supermarkets General said it pulled the offering because it received a poor market reception.

Effect of Strike

The company cited the impact of a labor strike on its second-quarter results as a reason for the cancellation.

Supermarket deals in general have fallen out of favor in the new-issue market because flat to lower food prices are hurting industry sales, according to analysts at Standard & Poor's Corp.

Supermarkets General said it is considering alternative recapitalization plans that would include many of the previous plan's elements, except for the stock offering.

Anthony Cuti, Supermarket General's chief financial officer, could not be reached for comment on how the revised plans would affect the bank financing.

Without the infusion of new equity from a stock offering, the company may have to bump up the pricing on the bank loans again. The credit was first repriced in May.

That's what happened to Ralph's Supermarkets Inc. last July, when it canceled a planned stock offering.

Ralph's proceeded with the other elements of its recapitalization, including a new bank credit. But it had to pay a higher interest rate on the loans.

Bankers Trust was also the agent bank for Ralph's.

Fear of Excess Debt

Even when the initial public offering was in the picture, some banks refused to participate in the Supermarkets General deal because they thought the recapitalization would still leave the company with too much debt.

Bankers Trust initially priced the Supermarkets General credit at 225 basis points over the London interbank offered rate, which was widely considered inadequate when the deal was first launched this spring.

Pricing was increased in May, and a special tranche was created to attract yield-hungry loan funds. The loan was then fully subscribed, but Bankers Trust was left with more of its original underwriting commitment than it wanted. □

CAPITAL

1st Chicago Issue Guarantees Minimum Rate

By DAVID SIEGEL

First Chicago Corp. on Wednesday issued $150 million in floating-rate debt with minimum-rate protection, becoming the third bank this month to tap demand for this type of security.

The 10-year subordinated debt issue floats at 12.5 basis points over the three-month London interbank offered rate, with a 4.25% minimum yield, called a "floor," First Boston Corp. was sole manager.

The first offering this year came from Chase Manhattan Corp., which issued $150 million earlier this month. A $150 million First Union Corp. issue followed last week.

Banks have called billions of dollars of floored floating-rate bonds in recent quarters, and a few large investors want to replace these issues.

Match-Funding Assets

Banks issue floating-rate debt to match-fund floating-rate assets and cushion earnings from changing interest rates.

The floors are an addition aimed at luring investors.

Investor interest has been so strong that banks using this structure have obtained cheaper funding than if they issued fixed-rate debt and swapped into a floating-rate payment stream – a more common way of raising floating-rate money.

For Chase, the saving was 10 to 20 basis points, market sources said. The amount of First Chicago's saving could not be determined.

Floor Financings
Recent floating-rate debt with "floors"

	Amount	Interest rate	Floor
First Chicago	$150 MILLION	3-month Libor +12.5 basis points	4.25%
First Union	$150 MILLION	Same	4.125
Chase Manhattan	$150 MILLION	Same	4.35

Select Audience

The issues are aimed at a limited number of investors. A single midwestern investor bought at least two-thirds of one issue, capital markets sources said.

Because of the limited number of investors, a flood of similar issues is unlikely.

"I'm surprised at how much volume we've seen," said one capital markets official. "It remains to be seen how big an appetite these few investors have."

A buyer of a floored floater accepts a lower initial rate than on a fixed-rate security but expects that rising rates in the future will increase the yield over the term of the security.

Hints of a Rate Rise

Recent comments by Fed officials, including Chairman Alan Greenspan, have led investors to believe that rates have bottomed and that the next change in monetary policy will be to raise short-term rates.

Also on Wednesday, Mellon Bank issued $250 million of 12-year subordinated notes. The noncallable bank notes were priced to yield 6.59%, 80 basis points above the 10-year Treasury note. Rated A3 by Moody's Investors Service and A-minus by Standard & Poor's Corp., the issue was lead-managed by Kidder, Peabody & Co. □

THE MARKETS

Long Rates Soar as Aftershock of Greenspan's Speech Takes Toll on Bonds

Long-term interest rates surged Wednesday, a belated reaction to Federal Reserve Board Chairman Alan Greenspan's inflation alarm the day before.

Market analysts said concern about upcoming sales of Treasury securities and heavy issuance of competing long-term debt by corporations also exerted pressure.

In late trading, the price of the government's 30-year bond fell ¾, raising the yield to 6.62% from 6.55% the day before.

Ten-year notes yielded 5.82%, up 9 basis points; five-year notes yielded 5.16%, up 10 basis points; and two-year notes yielded 4.12%, up 5 basis points.

On a bond-equivalent basis, the three-month bills yielded 3.14%, up 3 basis points.

Scenario for Rate Hike

In the first part of his semi-annual Humphrey-Hawkins testimony on Tuesday, Mr. Greenspan said inflation has been disappointing this year and that the Federal Reserve may increase short-term interest rates if economic growth picks up.

Mr. Greenspan's remarks caused short-term rates to shoot up on Tuesday, but longer-term securities showed a more muted response that day.

The long bond's yield rose to 6.62% from 6.55%.

Astrid Adolfson, economist at MCM MoneyWatch, noted that Wednesday's rise represented a "catch-up on the long end."

Heavy Government Sales

The Treasury on Wednesday announced that it will issue $16 billion in two-year notes next Tuesday and $11 billion in five-year notes next Wednesday.

While the amounts met expectations, the announcement marked the beginning of a period of heavy selling of new securities by the government.

The summer re-funding, including the sale of an expected record $11 billion in 30-year bonds, begins next month.

John Canavan, market analyst at Stone & McCarthy Research Associates, said a planned 30-year bond issue by the Tennessee Valley Authority also hurt the Treasury market. That offering was canceled later.

The Dow Jones average rose 10.62 points to a record 3,555.40. — **Bart Frassi**

Latest Problem For Regulators: Bias-Data Errors

By CLAUDIA CUMMINS

As the debate over minority lending heats up, the devil may prove to be in the details.

It turns out that regulators, legislators, and lenders overlooked one possibility: that the numbers used to judge mortgage-lending performance could be inaccurate.

"All of the emphasis has been on policies," said Lucy Griffin, a compliance consultant for banks. "The caption coming to the bank CEO is 'make fair lending a priority.' The message of 'get your numbers right' is being lost."

Indeed, as bank examiners have begun to scrutinize the data more closely – comparing the information lenders submit with actual loan files – they have been shocked by the number of errors.

A Federal Reserve official said last month that the Fed has begun warning lenders about the problem and even threatening to levy civil money penalties against violators.

Problem May Be Widespread

Fed officials said they do not know how widespread the problems could be. But public advocates who have scrutinized data supplied under the Home Mortgage Disclosure Act and the Community Reinvestment Act said the problem could be widespread.

"We've always been very suspicious of the data," said Hubert J. Van Tol, executive director of the Mid-South Peace and Justice Center in Memphis.

His organization has scrutinized Memphis lending data by census tract and found that in at least 50% of neighborhoods, the figures disclosed by banks conflicted sharply with data gathered from other government records.

Study in Pittsburgh

Likewise, in Pennsylvania, the Pittsburgh Community Reinvestment Group spotted wide-spread errors in data filed by 12 area banks. After comparing 1990 HMDA figures with county records, the group found that error rates ranged from 17% at the most accurate bank to a whopping 87% at the least accurate.

After sharing the findings with the banks, which had hired the organization to do the review, accuracy improved significantly. In 1991, error rates fell to be-

Bank Funds Rebuked by N.Y. Agency

By KAREN TALLEY and MICHAEL O'D. MOORE

NEW YORK — The New York City Department of Consumer Affairs on Thursday criticized the way some giant banks are marketing mutual funds to the public.

Institutions are failing to disclose that mutual funds are not federally insured, are using heavy-handed sales tactics, and are pushing risky funds to inappropriate investors, the agency complained.

The findings were based on telephone calls to salespeople at five institutions: Chase Manhattan Bank, Chemical Bank, Citibank, Dreyfus Savings Bank, and Marine Midland Bank. Each bank came under varying degrees of criticism.

Survey Tactics Faulted

The study itself drew immediate criticism from bankers, who challenged the reliance on telephone interviews. They said, for example, that disclosure about the lack of deposit insurance is usually made in person.

The department, which plans to forward its findings to bank regulators, was even more critical.

B of A Net Rises 103%, Bankers Trust Up 35%

Bank of Boston Gains as Loans Grow.

An American Banker News Roundup

Three big bank companies across the nation displayed varying signs of strength on Thursday as they issued second-quarter profit reports.

BankAmerica Corp., the nation's second-largest bank company, reported signs of progress on loan volume and credit quality as profits rose 103% over the year-earlier quarter to $488 million. But the big increase was colored by a major acquisition-related charge the previous year.

Some analysts complained that the California company's profit levels still trailed its peers'.

Bankers Trust New York Corp., like many of its East Coast competitors, used big second-quarter trading gains to net strong gains in the April-to-June quarter. The nation's seventh largest bank company reported earnings of $251 million, 35% higher than in the second quarter of 1992.

Bank of Boston offered signs that New England may be recovering from the doldrums, as it reported $66 million of net income in the second quarter amid increased loan volume. Excluding tax gains booked in the year-earlier period, Boston's biggest bank saw income rise 47% from the 1992 quarter.

Several other companies – in-

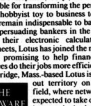
Lotus Aims for Workgroup Niche at Banks

By JEANNE IIDA
Third of a Series

Lotus Development Corp., the company largely responsible for transforming the personal computer from hobbyist toy to business tool, is working hard to remain indispensable to banks.

After persuading bankers in the early 1980s to replace their electronic calculators with PC spreadsheets, Lotus has joined the next technology crusade, promising to help financial institution employees do their jobs more efficiently than ever. Cambridge, Mass.-based Lotus is trying to carve



out a dominant territory on a new battlefield, where networks of PCs are expected to take on a more dominant role in banks, in many cases replacing the mainframe computers that have been relied on for decades.

But unlike software rivals Microsoft Corp. and Novell Inc., which are focusing on the operating systems that will manage the basic functions of PC networks, Lotus has opted to become a leader in a closely related field called "groupware."

Groupware has been described as an advanced form of electronic mail, letting a number of workers organize and deliver memos, quickly revise documents produced by committees, or even distribute pictures of new employees.

Information is stored in digital "folders," and the software controls who can open them and who cannot.

A raft of banks – among them Chase Manhattan Corp., J.P. Morgan & Co., Citicorp, and Chemical Banking Corp. – have seized on the groupware concept with Lotus' Notes program as a way to promote so-called relationship management among their staff, where teamwork to service clients is paramount. "Banks are rethinking their ba-

JIM P. MANZI, the company's chairman and chief executive, led it beyond single-user software.

NEWS *briefs*

Senate Panel Approves Levitt for SEC

WASHINGTON — The Senate Banking Committee unanimously approved Arthur Levitt Jr. as chairman of the Securities and Exchange Commission, clearing the way for full Senate consideration of Mr. Levitt's nomination.

Also approved were the nominations of Alan Blinder and Joseph Stiglitz to serve on the President's Council of Economic Advisers. Richard Carnell was approved for the post of assistant secretary of the Treasury for financial Institutions. Those nominations also go to the full Senate.

Visa Names Tallman to International Post

SAN FRANCISCO — Wesley C. Tallman, who played a key role in the development of Visa debit programs, has been promoted to executive vice president of product and market development at Visa International.

Mr. Tallman, 50, previously had the same title at Visa U.S.A. He and his staff will take on global responsibilities, including those related to Visa's Olympics sponsorship.

A former Rochester, N.Y., banker and payroll-processing executive, Mr. Tallman joined Visa in 1989 as executive vice president of debit products.

Comerica Unit Buys Failed Texas Bank

WASHINGTON — Comerica Bank-Texas said it paid $1.8 million for $39.1 million of insured deposits and $7.8 million of assets of Fidelity National Bank of Houston, which was closed Thursday by the Office of the Comptroller of the Currency.

The Dallas subsidiary of Detroit-based Comerica Inc. absorbed the failed bank's four offices and 4,800 insured accounts. Another 73 accounts with $3.1 million exceeded the Federal Deposit Insurance Corp.'s $100,000 ceiling.

The Comptroller said Fidelity's obligations exceeded its $46.3 million of assets, and the bank had failed to comply with a December 1992 consent order.

Northeast Federal to Trim Rights Offering

HARTFORD, Conn. — Northeast Federal Corp. will reduce the size of its previously reported rights offering to $25 million, from $60 million.

The company said it expects the offering to be completed by Sept. 30. A company spokesman declined to comment on the reduction.

As reported, Northeast Federal said it formulated the offer to increase the capital of its Northeast Savings unit to a "well-capitalized" level from its current "adequately capitalized" level.

Society in Pact to Buy Schaenen Wood

CLEVELAND — Society Corp. announced the signing of a definitive agreement to acquire Schaenen Wood & Associates Inc., a New York-based investment management firm with $1.3 billion under management.

The briefs were compiled from staff and wire reports.

Correction

In a June 30 listing of the top 100 banks in managed trust assets in 1992, figures for LaSalle National Corp., Chicago, were incorrect. LaSalle revised upward its discretionary trust assets for both 1991 and 1992. Its 1992 trust assets were revised to $4.39 billion, and its 1991 trust assets were revised to $4.58 billion.

LaSalle, majority owned by ABN Amro Holding, Amsterdam, ranked 62d in the nation by discretionary trust assets last year and 63d in 1991. As a result of these changes, LaSalle should not have appeared on a list of banks with large decreases in managed assets.

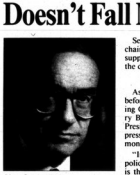
Greenspan: Fed Set to Raise Rates If Inflation Doesn't Fall More

By CLAUDIA CUMMINS

WASHINGTON — Federal Reserve Chairman Alan Greenspan told Congress Thursday that the Fed is prepared to raise interest rates if inflation does not fall further.

As the balance sheets of household and corporations continue to improve, he said, real short-term rates must rise in order to maintain balanced long-term growth. And in the absence of lower inflation, that will mean higher nominal short-term rates, he said.

"The signal we are endeavoring to send here is that at some point rates are going to have to move up," he said in testimony before the Senate Banking Committee.



Alan Greenspan
Testifies Before Senate

Fed Concerns

And although the Fed chief said he sees no signs of higher inflation in any of the economy's major industries, the Fed remains concerned that expectations of higher levels persist.

"If certain events occur which create not an inflation psychology but real inflation, as a consequence then we might – and I underline might – have to act," he said.

Mr. Greenspan presented his semiannual monetary policy report to the Senate two days after sharing the same report with the House. He came under heavy fire from the senators, who urged the Fed's cooperation with budget deficit reduction.

Call for Low Rates

Time and time again, members of the committee said that because reducing the deficit will put a drag on the economy, the Fed must keep interest rates low to counteract that force.

"In my judgment, this cooperation has probably never been more critical than it is right now," said Sen. Jim Sasser, R-Tenn. "The Federal Reserve has got to be a full partner in this endeavor."

At the hearing, Sen. Alfonse D'Amato, R-N.Y., asked for the Fed's continued support for his proposal to encourage the development of a secondary market for small-business loans, helping to ease the credit crunch.

Sen. D'Amato said the Fed chairman has already pledged support of the concept, if not all the details, of the bill.

Letter from Gonzalez

As the Fed chairman testified before the Senate, House Banking Committee Chairman Henry B. Gonzalez sent a letter to President Clinton asking him to pressure the Fed into easing monetary policy further.

"Instead of this continued policy of virtual no growth, this is the time to urge the Federal Reserve to follow a monetary policy that is consistent with your policies to put our citizens back to work," he wrote.

Mr. Gonzalez also urged the President to change banking laws so that the 12 presidents of the Fed's district banks are made presidential appointees subject to Senate confirmation. Currently, the presidents are selected internally by the Fed.

Mr. Gonzalez cited last week's selection of William J. McDonough to be president of the New York Fed as an example of the "old boy's bank network" that excludes qualified women and minorities.

"Because he has been selected through the Federal Reserve's internal private mechanisms, he will manage our nation's money supply without ever going before the American people or their representatives," he wrote. □

Opportunity is Spelled LDC DEBT REPORT

Emerging Markets are risky, notoriously inefficient, known for changing rules and limited public disclosure. Knowing what's really going on spells the difference between opportunity and loss.

The *American Banker*'s weekly *LDC Debt Report* delivers the most accurate, objective, succinct information available on emerging-market debt. *LDC Debt Report* provides the astute investor with news, reviews, and strategic insights. The popular Market section summarizes each week's developments, quoting bid and offer prices for 26 developing-country loans and 18 emerging-market Eurobonds. It also tracks the performance of selected equity markets.

If you must know what's going on in key emerging markets, recent trading, economics and politics, the World Bank, and more, LDC DEBT REPORT is a must read every week.

Read it free for 4 weeks! Just fax your letterhead to 212-943-7852, or call Hans Winberg at 800-407-8241

First Data Installing Card Software System

By BARTON CROCKETT

First Data Corp. expects to finish installing next month a multimillion dollar computer system designed to help banks closely manage their credit card programs.

The computer system is seen as an important step for the New York-based computer services company, which is the largest provider of bank card processing services in the United States.

"These kinds of things are just strategic moves to help solidify market share," said Louis Gigio, a vice president and stock analyst at Bear, Stearns & Co., New York, who has seen a demonstration of the computer system.

The system consists of an Amdahl Corp. mainframe computer with a data base management system from Oracle Corp.

Easy Access to Customers

The data base, which First Data calls Noah, will manage a massive repository of credit card information that the vendor's customers can access to do such things as design marketing campaigns or analyze profitability for the credit card operations.

First Data has maintained such a data base for about five years. But until now, it has been available only on an aging computer system that has been hard to use, said Ann Cannon, who runs the Noah business for First Data Corp.'s First Data Resources credit card processing unit in Omaha.

Ms. Cannon said the new computer system will be technically more robust, and much easier to use, than the current system.

She added that most, though not all of First Data Resource's credit card processing clients, use the Noah database, which is offered as a supplementary service to the company's core credit card processing operation.

Processes 54 Million Accounts

First Data Resources currently processes about 54 million credit card accounts, according to *The Nilson Report*, an industry newsletter.

First Data Resources is believed to contribute roughly 40% of the revenues of First Data Corp., which Thursday reported net income of $75 million for the first half of this year, up 23% over the previous year. Revenues were $726 million – 26% greater than the previous period.

Other players in the credit card processing market include Total System Services Inc. of Columbus, Ga., Banc One Corp. of Columbus, Ohio, and Electronic Data Systems Corp. of Plano, Tex.

The Nilson Report estimated that about 55% of the 185 million bank card accounts in the United States last year were administered by third-party processors

Winning Banks to Outsourcing

Mr. Giglio of Bear Stearns said that robust data analyses services like First Data's Noah can play a key role in helping credit card processors convince banks to outsource operations, by assuring the banks that doing so will not diminish their ability to get at customer data.

Mr. Giglio added that such capabilities could help First Data compete for what is turning into the Holy Grail of credit card processors: winning a contract to process Citicorp's massive portfolio of about 30 million bank cards.

"It can help them compete for some of those big banks, namely Citicorp, that haven't seen the light" about outsourcing, he said.

Early this summer, Citicorp began using an outside processor for the first time, when it started using Total System to process 200,000 Visa and MasterCard corporate cards.

Many in the industry believe that Citicorp, as part of its ongoing effort to streamline, is considering outsourcing more of its portfolio.

"Let me put it this way, I'm sure that some discussions have been had," Mr. Giglio said.

But Citicorp officials have never given any indication that they are interested in such a move. □

U.S. Trust Corp. Unit Picked by 4 Nonprofits

NEW YORK — United States Trust Co. of New York said it has been selected by four nonprofit institutions to provide master custody services.

The new customers of the U.S. Trust Corp. subsidiary's institutional asset services division include: Culver Academy, a prep school in Culver, Ind.; Sarah Lawrence College, Bronxville, N.Y.; American School of Classical Studies, a New York-based archeological institute; and the Robert Lehman Foundation, which supports the arts.

How to Tell if Your Bank Is Vulnerable to Unionization

HIGHER PAY *does not ensure labor-management harmony. What makes employees boil often has little to do with money – but management needs a system to get to the bottom of grievances.*

The early part of the Clinton administration was a heady time for the Service Employees International Union.

At its office workers division convention in June, union president John Sweeney proclaimed that organizing efforts would be launched in such industries as banking, publishing, insurance, and education.

The office workers' District 925, a nationwide local, was already up to 200,000 clerical, technical, professional, educational, and other office employees.

Organizers in Power

Meanwhile, in Washington, President Clinton tapped Geri Palast, the former head of the union's politics and legislation department, as an assistant secretary of labor, and Tom Glynn, a former hospital organizer for the union in New England, as the No. 2 man at the Labor Department.

David Wilhelm, who formerly worked with the union at Citi-

Mr. Goodfellow is executive director of University Research Center Inc., Chicago. The company does industrial research in white and blue-collar work environments.

zens for Tax Justice, is the new chairman of the Democratic National Committee. Karen Nussbaum, president of the union's District 925 and executive director of 9 to 5, the National Association of Working Women, has been chosen to head the Department of Labor's Women's Bureau.

Service Employees International Union has plans "to sweep through the country," one of its local presidents said recently. "We have a sympathetic force behind us in Washington. It is up to us to do the rest."

Can a nonunion bank or other financial company tell in advance whether it is susceptible to unionization? Our research suggests there is no pat answer – but there are some clues as to susceptibility. Let me present those factors in the form of questions often asked by executives.

Q.: In number of employees, what size facility or office is most vulnerable to unionization?

A.: In the last five years, unions won about 47% of all National Labor Relations Board elections. The unions' success rate declines as size goes up. For example, unions won 64% of elections at firms with up to 49 employees, and 38% at those with from 1,000 to 10,000 employees.

Q.: How successful are the unions in the financial industry?

A.: Unions win 56% of representation elections in finance and insurance companies. Since this is higher than the 47% National Labor Relations Board average, this is a susceptible industry.

And no area of the country seems to be immune. Even where a company wins an election, its cost is considerable. Moreover, any company victory in a union election is good only for one year, after which the union may try again.

Q.: Statistics aside, are there specific criteria for ascertaining vulnerability of the work force of a particular company, department, or branch?

A.: Watch for symptoms of low employee morale. If your customer or client complaints are higher than you like, or if productivity is unsatisfactory, you can conclude that employees are indifferent and morale is low.

Q.: What causes low morale?

A.: In the main, a basic feeling that the company (or facility manager or supervisor) does not treat workers fairly, decently, and honestly. This feeling usually has nothing to do with money.

Q.: Do computers and back-office modernization have any effect on employee attitudes?

A.: Union organizers promise all sorts of protection against job losses from automation. When installing equipment, a bank must explain that the primary objective is not merely to cut costs, but to meet customer or client demands for improved services.

Wider acceptance of a bank's services should make everyone's job more secure. Whether employees accept that depends on management credibility.

Q.: We have a grievance procedure in which the supervisor handles complaints first. Those he can't take care of, he refers to department heads or vice presidents. How does this affect unionization?

A.: Many grievances arise from the frontline supervisors' arbitrary, harsh, and sometimes prejudiced conduct. And of course it is difficult for an employee to complain to the supervisor directly. In nonunion shops, few employee grievances involving supervisors ever come

See **HOW TO** *next page*

men must relate to women at work as if they themselves were women.

The third, sixth, and ninth circuit courts of appeals have ruled that a "reasonable woman" standard must be applied in deciding sexual harassment claims brought by women.

This means that a court or jury would have to decide whether a "reasonable woman" would have considered the conduct severe enough to have altered a condition of her employment and to have created a hostile environment.

Rather than ensuring that women participate in the work place on an equal footing with men, the reasonable woman standard is likely to perpetuate the very stereotypes that women banking professionals seek to eliminate; namely, that women are not tough enough to compete in the financial arena.

No Risks, No Rewards

By legitimizing the concept that women think differently from men, males may conclude that women need to be treated differently, shielding them, for example, from the difficult but potentially rewarding assignments that often lead to promotions.

Ironically, male banking officials who quiet their fear of sex-

Comment

By Richard H. Block and Louis Ginsberg

Nonsexist Workplace the Best Defense Against Charges of Discrimination

The light of justice that exposed the sexual harassment of women banking professionals has begun to be obscured by the larger issue of women's advancement in the financial services industry.

Sexual harassment charges eliminate unwelcome male conduct, but they have also exacerbated the politics of exclusion – a much larger problem that prevents women from reaching senior executive positions.

Rather than resulting in a more educated and sensitive work environment, the escalating number of sexual harassment charges has caused a backlash in the banking community.

Adding Fuel to the Fire

Growing numbers of male managers, fearful of spurious charges, are excluding women from the informal networking opportunities critical to advancement. While this type of exclusion is not new, the recent spate of sexual harassment charges has added fuel to the fire.

The scenarios are painfully familiar to women banking executives. A male manager may choose a male employee over a female employee if the project requires a business trip or late-night work. He socializes at lunch with other men with whom he feels safe in his behavior.

Worse, the politics of exclusion prevent women from earning the trust of a male manager, which most often is developed during the day-to-day process of working together. As a result, a competent female may be passed over for a high-level position simply because she has missed opportunities to interact with the decision maker.

Likewise, diversity experts agree that even in the best-intentioned and most progressive financial institution, the climate of male fear of sexual harassment charges will keep women out of these informal channels of information, where important decisions about job advancement sometimes crystallize.

How critical is this? In a recent study of 201 of the nation's top CEOs by *Fortune* magazine, 31% said women are not becoming CEOs sooner because they "have not built up solid networks of connection and support."

Adding to the confusion and paranoia of male banking executives is the recent instruction of three federal circuit courts that

MALE BANKERS *have unfairly excluded women from the inner circle, fearing harassment suits.*

Mr. Block is a partner and Mr. Ginsberg an associate in the labor and employment law practice group of Strook & Strook & Lavan, New York.

How to Avoid a Union Drive

Continued from *page 4*

to managers' attention.

Q.: What about suggestion boxes?

A.: Suggestion boxes are best for production problems. For employee gripes, suggestion boxes are useless since most employees hesitate to put their names on critical complaints. Without names, it is difficult to follow up.

Q.: We try to tell employees everything we think they need to know about the state of our business, the competition, and other such matters. What is the best way to ascertain their reactions and basic attitudes?

A.: "Telling" is one-way communication. For maintenance of nonunion status in a white-collar venue, there should be periodic interviews with representative employees in structured groups. Consultants are often brought in to institute such systems.

Q.: We try to monitor wage levels at comparable organizations, and sometimes we fall short, causing us some embarrassment. How vulnerable does that make us?

A.: Contrary to what many executives think, high wage rates do not produce labor-management harmony. Wage rates can be an excuse for wanting a union, but what makes employees boil often has little to do with money.

It is more the feeling that they are not being treated fairly and decently. Sources of discontent may include unpleasant eating areas; parking lots that are crowded or where executives have privileged spots; faulty equipment; inequitable pay scales; uneven distribution of overtime, or an unconstructive or distant management.

That wages are not the major motivating factor can be seen in the case of utility companies, which pay high average wage rates yet have the second-highest percentage of union election victories.

There is only one technique for uncovering union susceptibilities: Listen to employees. (For articles on this and related topics, such as "What Your Employees Can Tell You" in the April 1989 *Appliance Magazine*, write to Matthew Goodfellow, University Research Center, Box 494, Chicago, Ill. 60690-0494, fax 708-733-0074.)

In a report on its own labor interviewing, Connecticut General Life Insurance Co. made a good suggestion: Use an impartial outsider as reporter. "This brings in special skills and experience which assure employees that no reprisals will follow any uncomplimentary remarks. Such a friendly beginning can be transferred to company personnel as the program progresses."

Listening to employees has benefits besides avoiding unions. It brings to management's attention anything that is preventing employees from achieving company or departmental goals. The process can improve productivity and quality, eliminate customer complaints, and reduce absenteeism. □

Nonsexist Workplace Is the Best Defense Against Bias Suits

Continued from *page 4*

ual harassment charges by avoiding women co-workers set themselves up for a specific problem. Women who feel they have been wrongfully excluded may be protected by law since certain courts have held that "harassing" events need not be sexual in nature to be actionable, and certainly the laws prohibit gender discrimination.

Rather than being fearful, men must feel as comfortable with women as they now do with men in senior management positions if women are to receive equal opportunities.

This may only be achievable if gender-blind standards are mandated by the courts, as they have been in certain other areas of employment law. Efforts are being made now on the state and federal levels to investigate and remedy the plight of women in this respect.

A More General Test

While endorsing legal standards that incorporate the different perspectives of men and women, the New York State Governor's Task Force on Sexual Harassment has proposed adoption of a "reasonable person" test that is not solely based on a sexual double standard. Rather, the test focuses on all the characteristics of the victim, which include sex, sexual orientation, race and ethnicity, and age.

In another example, the Civil Rights Act of 1991 established a "glass ceiling commission" to study the problem and make recommendations regarding the elimination of workplace barriers to minorities and women.

Male managers and the managements of banks must be prepared to respond to these legal initiatives by creating a business environment that fosters a cooperative nonsexist approach to work, so that women are not excluded from workplace activities, both formal and informal. □

We'll save you money. We could save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division, to get every Monday the data you need to face the regulators.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... which agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 20% discount, so you'll be saving money even before you get the first issue. After that, how well you use the information before this year's exam could decide whether you're around next year.

Stellar Earnings Reports Continue To Be the Norm for the Second Quarter

Continued from page 1

cluding Boston's BayBanks, Chicago's Harris Bankcorp and Bancorp Hawai – also reported second-quarter gains on Thursday.

WEST

Thursday's report from **Bank-America Corp.**, which translated to $1.19 a share, looked particularly impressive compared with last year's quarter, when the San Francisco-based company took big charges related to its April 1992 purchase of Security Pacific Corp. But bank executives indicated continuing concern with their home state's weak economy.

Lewis W. Coleman, Bank-America's chairman and chief financial officer, said the company had "good, solid earnings" in view of the economic slump in California.

Outstanding loans inched up 0.2% in the period, the first quarter-to-quarter gain in a year. But "there was not enough growth to declare victory," Mr. Coleman said at a press conference.

Analysts were divided on the quality of the company's results, the first in a year that did not include significant expenses related to the Security Pacific acquisition.

Campbell K. Chaney of Dakin Securities complained that BankAmerica's returns of 1.06% on assets and 12.16% on equity were "somewhat below average," due mainly to weak revenue, high costs, and the expense of amortizing acquisition-related goodwill.

But Donaldson, Lufkin & Jenrette analyst Thomas K. Brown said the quarter marked a "turning point," noting that income edged up 2.7% in the quarter – offsetting a 2.9% decline in non-interest income.

Nonperforming loans and foreclosed real estate fell 10% in the quarter to $3.445 billion, due mainly to a reduction in problem commercial real estate loans. That did not include $707 million of real-estate assets sold during the quarter to a group led by Stanley-led partnership.

The company trimmed its addition to loan-loss reserves to $200 million from $235 million in the first quarter and $240 million in the June quarter a year ago.

BankAmerica's Seattle-based Seafirst subsidiary, the dominant bank in Washington, had an outstanding quarter. It reported net income of $82.2 million and a return on assets of 2.19%. Seafirst produced 17% of BankAmerica's profits although it holds only 8% of the company's assets.

Separately, Honolulu-based **Bancorp Hawaii** reported second-quarter net income of $33.8 million, up 5.3% from the same period last year. The company's once-torrid profit growth has slowed substantially as the Hawaiian economy has cooled.

Sam Zuckerman

EAST

Bankers Trust New York Corp. booked stellar trading revenues of $405 million in the second period, smashing a quarterly gain of $186 million.

The results, which translated to $2.97 per share, far exceeded Wall Street's expectations of $2.16 a share, according to Zacks Investment Research.

Nevertheless, Bankers Trust's stock was down $1.25 to $76 in late trading Thursday to $76 a share.

Analysts said investors who bought the stock last week on expectations of a strong trading quarter sold as the news came in. Bankers Trust shares jumped $11.875 a share last Thursday after the bank's main trading rival, J.P. Morgan & Co., reported huge trading gains in the second quarter.

Bankers Trust, the nation's seventh largest bank company, said its traders benefited from fluctuations in interest rates and currencies during the quarter. Trading revenue climbed 21% from the second quarter of last year to a record $405 million. In the first quarter, the company booked $346 million of trading income.

In another reflection of Bankers Trust's trading prowess, net interest revenue soared 27% over the 1992 second quarter to $319 million and was up slightly from the first quarter's $315 million. The company said a steep yield curve aided its interest rate and currency trading activities.

On other fronts, Bankers Trust performed as expected.

"Except for trading, it's pretty much a plain vanilla quarter," said Raphael Soifer, an analyst at Brown Brothers Harriman & Co.

Fiduciary and funds management revenue rose 7% to $93 million nose 17% million from the first quarter but were only slightly behind the year-earlier second quarter. Bankers Trust said it recorded fewer performance-based fees from managing foreign exchange funds.

Corporate finance fees, a chronically weak area in recent years for the company, rose to $102 million, double the level in three years. Total fees and commissions rose 20% over the 1992 quarter to $173 million.

Expenses increased 27% over the year-earlier period, reflecting higher incentive compensation.

Asset quality continued to improve, as Bankers Trust lowered its loan loss provision to $23 million from $30 million in the first quarter. Net interest income edged up 2.7% in the quarter – offsetting a 2.9% decline in non-interest income.

Nonperforming loans and foreclosed real estate fell 10% in the quarter to $3.445 billion, due mainly to a reduction in problem commercial real estate loans. That did not include $707 million of real-estate assets sold during the quarter to a group led by Stanley-led partnership.

The company trimmed its addition to loan-loss reserves to $200 million from $235 million in the first quarter and $240 million in the June quarter a year ago.

BankAmerica's Seattle-based Seafirst subsidiary, the dominant bank in Washington, had an outstanding quarter. It reported net income of $82.2 million and a return on assets of 2.19%. Seafirst produced 17% of BankAmerica's profits although it holds only 8% of the company's assets.

Separately, Honolulu-based **Bancorp Hawaii** reported second-quarter net income of $33.8 million, up 5.3% from the same period last year. The company's once-torrid profit growth has slowed substantially as the Hawaiian economy has cooled.

Can It Be You Take More Risks Than He Does?

Technology has reduced the risks of drag racing. And while the hazards are still there, so is better protection.

But how about today's banker? With electronic banking and society's litigious nature, there are now many more ways for a financial institution and its directors and officers to run into difficulties than ever before.

Fortunately, prompt service and solid protection are available from the most experienced company in the business: F&D.

Ever since 1890, F&D, has been protecting financial institutions with special bonding and insurance products, all critical to reducing the dangers of banking.

Don't take any more chances than you have to. Have your independent agent or broker call the experts at F&D. For more information or the locationof the F&D office nearest you, call 1-800-821-4635.

Step on it.

The Fidelity and Deposit Companies since 1890

Continued from page 6

of 65 cents a share came in just one cent below analysts' consensus expectations, according to Zacks. Bank of Boston stock was trading at $23.625 a share late Thursday, down 12.5 cents.

The company's loan portfolio expanded 3% over both prior quarter and prior year levels. The company booked $600 million of new domestic commercial and industrial loans and $200 million of new home mortgages.

"We're hopeful that the loan growth will stick with us, that it's a sign that things are getting better in New England," William J. Shea, Bank of Boston's chief financial officer and treasurer, said in an interview.

Bank of Boston also said Thursday that it laid off 300 employees in the second quarter in a new cost-cutting campaign. More than half were corporate-office positions, Mr. Shea said.

Though savings from the layoffs will not be realized until this quarter, the company shaved $4 million from its second-quarter expenses since the first quarter. The decline stemmed mostly from a premium refund received from the Federal Deposit Insur-

Bankers Trust's

35% increase was

helped by big

trading gains.

ance Corp.

Credit quality continued to improve. Nonperforming assets declined to $526 million in the quarter from $597 million on March 31. The percentage of nonperforming portfolio, which has declined for seven consecutive quarters, is now the lowest in seven years.

BayBanks, one of the company's Boston competitors, reported a healthy gain of $14.2 million in the second quarter, a 118% increase over the same period last year, as credit quality and loan growth improved.

Nonperforming assets regained their ninth consecutive quarterly decline to $324 million from $350 million in the first period. The company's net interest margin grew 13 basis points since the first quarter to 4.96% primarily because of $126 million of new installment loans on its books.

BayBanks, which ended the quarter with $9.8 billion of assets, also announced a 5-cent hike in its quarterly dividend to 25 cents a share. BayBanks' stock rose 50 cents to $45 a share in late afternoon trading Thursday.

— Yvette Kantrow

MIDWEST

Firming credit quality and special gains helped fuel a 34% quarterly earnings increase to $35.4 million at Chicago-based

Bancorp Hawaii's

rapid profit growth

slowed down.

Harris Bankcorp, a subsidiary of Bank of Montreal.

Harris' return on assets soared to 1.07% from 0.99% in the first quarter and 0.77% a year ago.

The company's loss provision of $15.3 million was flat with the first quarter but down 29% from a year ago. Harris said that it recaptured $16 million from a special reserve previously set aside.

Harris booked security gains of $6.9 million during the quarter compared with $128,000 of such gains a year ago. Its foreign exchange income leaped 136% to $7.8 million. Harris also recorded $800,000 of bond trading profits, reversing a year-ago trading loss of $3.1 million.

Harris' net interest margin of 4.02% fell 21 basis points from the first quarter and 14 basis points from a year ago. Period-end problem assets totaled $141.9 million, or 1.9% of gross loans – up slightly from the first quarter but down 23% from a year ago.

Separately, **Michigan National Corp.** late Wednesday posted a second-quarter profit of $16.1 million, a 16.15% decline from last year's quarter. Its return on assets of 0.63% was down from 0.71% in the year-earlier period.

The company, based in Farmington Hills, Mich., said heavy mortgage refinancings forced it to accelerate amortization of purchased mortgage servicing rights to $21.6 million from $6.8 million one year earlier. It was the second straight quarter in which the company, which has $10.5 billion of assets, suffered from the refinancing trend. Michigan National posted a loss of $44.8 million in the first quarter.

Fourth Financial Agrees to Buy Great Southern, a Missouri Thrift

By STEVE KLINKERMAN

Providing further evidence that the banking border between Kansas and Missouri is a busy place these days, Fourth Financial Corp. has agreed to buy a Missouri thrift.

Fourth Financial, which at $6.1 billion of assets is Kansas' largest banking company, said last week it will purchase Great Southern Bancorporation, a Springfield company with $515 million of assets.

Despite the move, banking experts say that most Kansas-Missouri deals will continue to be initiated on the Missouri side.

Fourth Financial is the only Kansas institution with "enough horsepower" to reverse the interstate current, said Joseph

Darrell G. Knudson
Scouting for purchases

Stieven, an analyst at Stifel, Nicolaus & Co.

Since Kansas relaxed its banking laws last year, buyout deals have been struck by Missouri giants such as Boatmen's Bancshares, Commerce Bancshares, Mercantile Bancorp, United Missouri Bancshares, and Mark Twain Bancshares.

Darrell G. Knudson, chairman and chief executive of Fourth, said he continues to scout southwest Missouri for purchases, especially around Springfield and Joplin.

Fourth is paying roughly $90 million in stock, or about 1.6 times book value, for the parent of Great Southern Savings Bank. The thrift, which operates 23 offices in southwestern and central Missouri, returned 0.99% on assets to investors in its last fiscal year.

The deal is expected to be closed by the first quarter of 1994. □

Ahmanson and Glenfed Report Losses, While Dime Savings Posts Small Profit

By SAM ZUCKERMAN

H.F. Ahmanson & Co. and Glenfed Inc., two major California thrift companies, reported second-quarter losses on Thursday that reflected the state's depressed real estate market.

But analysts said the red ink at Ahmanson was a sign of strength while Glenfed's loss represented a setback in its efforts to prevent a federal takeover.

Separately, Dime Savings Bank, the East Coast's biggest thrift, eked out a profit of $3.2 million but would have reported a loss without capital gains.

H.F. AHMANSON

The nation's largest thrift company, which ended the quarter with $50 billion of assets, lost $290.9 million compared with a profit of $67.1 million for the second quarter of 1992.

The lwindale-based thrift, which preannounced its results earlier this week, said the loss was prompted by the bulk sale of $1.2 billion of delinquent home loans and a $163 million loan-loss provision for real estate development projects.

Ahmanson is selling the home loans to Bear, Stearns & Co. at prices estimated to range between 74% and 79% of face value. Analysts have applauded the deal as a quick way to eliminate credit problems burdening many banks and thrifts. Ahmanson said the sale will reduce its nonperforming assets to about $1 billion, – or 2.04% of total assets – from a peak of about $2.3 billion at the end of September 1992.

Ahmanson said it expects to report profits in the third and fourth quarters, but anticipates a loss for the year as a result of the second-quarter events. In trading Thursday afternoon, the company's stock fell 25 cents to $19.75 a share.

GLENFED

The nation's fifth largest thrift company, based in Glendale, lost $29.9 million for the quarter, slightly more than the $26 million deficit posted in the same period a year ago. Glenfed blamed the loss on continuing loan quality problems, a revenue slump, and a sharp decline in core deposits.

Glenfed's sixth consecutive quarterly operating loss came as it is trying to sell about $400 million of stock in order to meet federally mandated capital guidelines. Failure to reach the targets could prompt regulators to seize its main thrift unit, Glendale Federal Bank.

Ahmanson's red ink came from selling nonperforming assets.

As an interim target, Glenfed must achieve a 4.5% core and 9% risk-based capital ratios by the end of September. It ended the second quarter with those ratios at 2.65% and 5.77% respectively.

The second-quarter loss, though not surprising, may discourage potential investors, analysts warned.

"It's going to be very difficult for them to generate any enthusiasm," said E. Gareth Plank of Mabon Securities.

Glenfed's stock lost 12.5 points, trading at $1.25 Thursday afternoon.

During the quarter, the company registered modest improvement in credit quality. Nonperforming assets and restructured loans fell to $938.2 million, or 5.1% of assets, from $970.5 million at the end of March.

But Glenfed ominously reported an outflow of $2.1 billion of consumer deposits over its last fiscal year, which ended on June 30. It blamed the exodus on financial difficulties and resulting publicity of those difficulties." The deposits had to be replaced with about $2.2 billion of expensive short-term wholesale borrowings, the company said.

DIME

The Dime Savings Bank of New York earned $3.2 million in the second quarter, down 63% from its year-earlier gain of $8.6 million.

Without capital gains, it would have lost $3.4 million before taxes, said Gary Ford, an analyst at Smith Barney, Harris Upham & Co.

In afternoon trading on Thursday, Dime's shares were unchanged at $7.1125.

The company's credit quality improved, as nonperforming assets fell by $118.3 million during the quarter. But the Dime also suffered a major decline in net interest income, leading to an interest rate spread that plunged 51 basis points to 2.87% from the year earlier and 15 basis points from the first quarter of this year.

"The margin is way down," said Mr. Ford. "We didn't expect it to be that low."

Richard Parsons, chairman and chief executive of Dime, attributed the sharp decline to the thrift's decision to shed $1.5 billion of low-yielding commercial loans and $1.2 billion of expensive short-term borrowings

IBAA Offers Insurance For Environmental Risk

By BILL ATKINSON

Washington Watch

THE INDEPENDENT BANKERS Association of America is offering an environmental risk insurance program for banks that want to make loans to small businesses that work with chemicals.

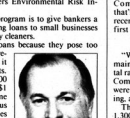
The trade group has teamed with Omaha-based Empire First and Marine Insurance Co., which is an A.M. Best A-plus rated company that will underwrite the loans. Also, Proctor Homer Warren, a Troy, Mich.-based firm, will market the program to bankers.

"Bankers are taking a look at it," said Stephen Ello, director of services of the IBAA.

He said 10 institutions have since signed up for the program, which is known as Bankers Environmental Risk Insurance.

Mr. Ello said the goal of the program is to give bankers a higher comfort level when making loans to small businesses like gas stations, printers, and dry cleaners.

Bankers have avoided these loans because they pose too great a risk. If an institution forecloses on contaminated property, it can be liable for the clean-up costs.



James Lauffer

"You could be making a $50,000 loan . . . but you might have a $1 million liability if there is some kind of chemicals or hazardous waste" on the property, said James R. Lauffer, the trade group's president and chairman and chief executive of First National Bank of Herminie, Irwin, Pa.

Mr. Lauffer said he hasn't yet signed up for the program.

"We are looking at it seriously," he said. "There were a couple of questions we were trying to get worked out."

Under the program, a bank that buys insurance through the IBAA pays premiums that are generally a quarter of the loan balance. The insurance either pays to clean up the property or pays the balance of the loan to the lender.

For a "due diligence" fee of $300, the program also inspects property for contamination. This way, bankers can cut expensive on-site property assessments, which are typically conducted before making the loan.

Mr. Ello said the program won't necessarily be an easy sell. With interest rates still at low levels, bankers aren't making many business loans.

"The other challenge is that it's a new product," he said. "I don't think bankers are real familiar with it. It is going to take time to get bankers comfortable with it."

The insurance program has been in the works for about a year. In March, at the IBAA's annual convention in San Diego, the trade group hosted a meeting introducing the program. About 400 bankers contacted the group for information, but enrollments have been slow.

Last month, the IBAA hired Proctor Homer to market the program.

"We needed somebody out in the field selling the product," Mr. Ello said. "We found that because it was a new product, there needs to be somebody to walk the banker through it and answer questions."

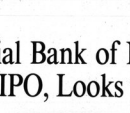
Commercial Bank of New York, Fueled by IPO, Looks to Expand

By PHILZABOIDAKIN

The Commercial Bank of New York has enjoyed astonishing growth since opening in 1988 – and a recent public offering positions it for even more.

Commercial already holds $760 million of assets – but just 24.5% consists of loans, the rest being deposits invested in government securities.

The emphasis on a "fortress" balance sheet, says chief executive Jacob Berman, is key to Commercial's success. And that's the reason the company recently went to market with its first public stock offering.



Jacob Berman
Fortifying the balance sheet

Capital Ratio Soared

"We wanted to make sure we maintained a strong [total] capital ratio," says Mr. Berman, also Commercial's president. "We were at 14.47% before the offering, and now we're at 18.8%."

The initial public offering of 1,300,000 shares was oversubscribed by 175,000 shares, yielding a net take of $15.6 million. That would allow Commercial to make an acquisition while keeping its balance sheet strong.

Commercial last year bought the deposits and four Manhattan branches of the failed American Savings Bank. All are corner offices in prime banking areas of the upper East Side and the downtown business district.

No Advertising

That puts Commercial, which does not advertise, in the midst of "small and medium businesses that are underserved by the larger banks," said Mr. Berman.

Commercial already has begun serving those businesses, however.

"They're not wet behind the ears," said Warren Heller, research director for Veribanc Inc., Wakefield, Mass. "They have $186 million in total loans, and $142 million of those are commercial and industrial."

Mr. Heller adds, "of the C&I loans, $77 million are overseas borrowers, so they have some smarts in import/export – and most New York banks don't get involved in [lending to] overseas business."

Of Commercial's deposits, which total $584.6 million, half are foreign in origin, said Mr. Berman, formerly senior lending officer at the Israel Discount Bank of New York.

"We have some import garment business and trade financing business," he said, stressing that his lending officers are prepared to evaluate any of the domestic businesses in Commercial's service area.

Headquarters in Waldorf

"The trick is, as we keep adding clients and deposits, we don't want to put our capital ratios out of whack. It's a very important marketing tool. Even though we're a small bank, we have clients who deposit more than the FDIC insurance limits."

Commercial was founded by Gabriel R. Safdie, who selected the Waldorf Astoria for its main office. Mr. Safdie is no stranger to banking – his family started Sao Paolo's Banco Cidade as well as Geneva's Multi Commercial Bank. □

Battle Lines Drawn as Insurance Ruling Nears

By BILL ATKINSON

Washington's Mailbag

The Federal Deposit Insurance Corp. will soon decide whether to limit the ability of healthy state-chartered banks to sell insurance outside their home turf.

On Oct. 27, 1992, the agency adopted rules that did not limit banks' insurance underwriting to a home state. Bankers don't like the direction the agency is now taking. The following are excerpts from comment letters to the FDIC:

The FDIC should amend the final regulation to read as originally proposed. For FDIC to ignore the clear intent of Congress and issue a final rule that is inconsistent with the legislative history is an abuse of discretion.

James R. Lauffer
President
Independent Bankers Association of America
Washington

CSBS strongly believes that the FDIC should confirm its current rule. The FDIC's interpretation made in its final regulation of Oct. 27, 1992, is the correct interpretation . . . and should be retained.

Doyle Bartlett
General counsel
Conference of State Bank Supervisors
Washington

The company urges the FDIC to adopt its original conclusions regarding the geographic scope of the grandfather, namely that the insurance underwriting activities of a bank must be limited to its chartering state.

Thomas F. English
Second vice president
Massachusetts Mutual Life Insurance Co.
Springfield, Mass.

The Private Market ..Revealed

Clues to the shadowy world of private placements come to light each week under the magnifying glass of *Private Placement Reporter*, an *American Banker* newsletter.

YOU'LL UNEARTH:
- Who is buying these deals— and why.
- What other banks and underwriters charge to get the deals done.
- The best rates in the traditional and Rule 144A markets, and who can get them for your company.
- The latest flavor-of-the-month deal structure innovation, and who benefits.

Private Placement Reporter answers these questions and more, and keeps you up to date on secondary-market trends, reg rights deal progress, and regulatory changes affecting the market.

If you want a leg up in private-market negotiations, you must read *Private Placement Reporter* — you can be sure your competitors are already on our subscription list.

Common Sense, Not Dogmatism, Is Key To Future Success for Community Banks

By JOSEPH LONGINO
Managing Director
Sandler O'Neill & Partners, New York

Recent discussion of the present and future of banking – particularly community banking – has too often been dogmatic.

We are told that the death of the thrift, the demise of the small, the extinction of the mutual, the rise of the megabank (or one guise or another), and the advent of niche banking are all inevitable.

In their advocacy of this fashionable ideology, many banking consultants and pundits sound more like misguided social engineers of some five-year plan for collectivizing American banking than commonsensical observers of it.

Comment

By contrast, the pragmatic approach to banking begins with the appreciation of common sense to business.

Running a successful business involves identifying market needs that the business has the resources and meeting these needs better or at a lower price, or both, than competitors do.

Bankers must also control expenses, diversify assets, and practice the right banking style. Successful community banks accomplish these tasks, and they do so in a variety of ways that constantly confound dogmatic notions of what banking must be or become.

Powerful Resources

The resources of the community bank are limited but powerful in the hands of capable bankers. Chief among these resources is the bank's superior knowledge of a community. It can use this knowledge to deliver products and services tailored to its customers in a personalized, unbureaucratic manner.

As well as its customers, a community bank's shareholders (unless the bank is a mutual), employees, and regulators also are stakeholders. Moreover, customers, shareholders, and employees are overlapping stakeholders whose needs and expectations are shaped by this blending of roles.

The customers are individuals and small businesses. Their needs are small deposit and loan services – the staples of a community bank. The bank may also provide investment services for individuals if the community has sufficient personal wealth to warrant such services.

Shareholder Loyalty

Shareholders are bank customers who expect a return on their investment consistent with the bank's service to the community. They will tend to be more loyal than the nonresident shareholders of a larger bank, but a community bank can quickly exhaust this loyalty if it provides lackluster financial performance and customer service.

Employees will also be customers – and often shareholders – of the bank. Their needs include competitive pay and the pride that comes from working for a highly regarded, locally owned and managed community bank.

Regulators will have three basic expectations of the bank: good capital, prudent and capable management, and service to the community, including a committed compliance with the Community Reinvestment Act.

Because regulators are averse to risk, there will be manageable – though not always palatable – tradeoffs in satisfying them as opposed to other stakeholders.

Three Challenges

If community banking presents savvy businessmen and businesswomen with worthwhile opportunities, it also carries with it the burden of three challenges: expense control, asset diversification, and banking style. While these challenges are not unique to community banking, meeting them effectively makes special demands of the community banker.

Expense control doesn't mean minimizing expenses, because such important selling points as customer service can suffer from a single-minded focus on expense reduction. Rather, expense control means managing expenses. The community banker must carefully weigh the tradeoffs of spending more or less, and for what purposes.

The resource constraints on a smaller bank require the community banker to decide with

We are told that the death of the small bank is inevitable.

some precision what must be accomplished internally and what may be accomplished externally in a more cost-effective manner through sourcing to consultants and other providers.

Because regulators may not appreciate or willingly acknowledge the value of some outsourcing by the community bank, the community banker must be prepared to persuade examiners of its prudence.

Asset Diversification

As all community bankers know, more probing examinations are but one aspect of a growing regulatory burden, which weighs most heavily on community banks.

Asset diversification is the second challenge to the community banker. Because the community bank serves a local market area, geographical diversification of its loan portfolio will be difficult, if not impossible, to achieve.

The industry's recent experience is an object lesson in the twin risks of lending too freely close to home and seeking to avoid this risk by purchasing loan participations outside the local market area.

Achieving asset diversification requires two realizations by the community banker. First, loans large in relation to capital are always high-risk and must be regarded as a carefully controlled sideline, not a core business.

Joseph Longino

Second, the securities portfolio is an important tool for diversifying risk even when creditworthy loan demand is plentiful.

Properly understood, the community bank's securities portfolio is not just a place to put funds when loan demand is weak – it's a place where the bank must invest funds even in the presence of strong loan demand.

Banking Style

Finding and practicing the right banking style is the third challenge to the community banker. Even though most community banks are stock institutions, many will have begun life as mutual savings banks or associations, and all community banks will find it useful to remember these roots.

The challenge for the community bank is to enhance future performance and shareholder value while preserving the personal touch.

Every community bank, no matter how small, will have a highly articulated corporate structure in which authority is both shared and delegated.

The board of directors must give management a clear mandate and sufficient leeway to run the bank. But management must appreciate that in a community bank, the directors will be more involved than would be the absentee directors of a larger institution.

The officers and directors of the community bank must find ways of respecting each other's role while taking an active interest in what each is doing to secure the success of the bank.

Directors' Role

No less than the officers, the directors of a community bank have a crucial role to play in marketing the bank to businesspeople in the community.

The community banker thus needs to be both a fiduciary and a businessperson with a face and a first name who is capable of satisfying the expectations of customers, shareholders, and employees.

To do this, the community banker must be informed about and involved in the community. He or she must understand that a business plan is merely a memorandum of current thinking that needs to be kept current.

The community banker must regard regulators not as enemies but as part of the bank's control environment, like its audit committee and public accountant. The community banker should try to work constructively with regulators to run the bank better, because the only alternative is fruitless confrontation.

Finally, the community banker must remember that a community bank consists of many community bankers. Not only the officers of the bank, but also its directors, employees, and shareholders are vital emissaries to the community upon whom the bank's success depends. □

California's Network Financial, Primed by Deals, Aims to Grow

By EDWARD KULKOSKY

Network Financial Services of San Jose, Calif., which bills itself as a one-stop shopping service for homebuyers, is moving aggressively to beef up its loan origination capability.

The company has agreed to buy Westmark Mortgage Corp. of Costa Mesa for about $6.4 million and to acquire the business assets of Mortgage Lenders Financial Network of San Jose, a private company, for an undisclosed price.

The deals should increase the company's annual loan volume by about 400%, to about $720 million, according to an announcement.

The ambitious moves come at a time when the California economy is struggling, but also when new federal rules have facilitated vertical integration in real estate and mortgage services.

Placing Software at Brokers

Network Financial now has plans to go national by offering new software for management of real estate offices. A mortgage origination capability is included, and the company hopes to significantly expand its lending volume by placing the software with large numbers of brokers. It is also looking to expand its insurance sales.

The company says users can operate the program by touching

Annual loan originations are projected to rise by 400%.

the screen or pushing buttons on the screen with a mouse. Network is hoping for wide acceptance of the software because of its simplicity in an industry where the use of computers is still limited and the focus remains on sales rather than operations, said Lee Danna, chairman and chief executive officer of the company.

The company will use the software in all its California offices and will offer it to brokers nationally as well. The program was developed with Sector Group, based in Burlingame, Calif.

'Stable Earnings Stream'

Mr. Danna said the acquisitions provide Network with more than $450 million of mortgage servicing, "which can provide a stable earnings stream to offset interest rate-related fluctuations in origination volume."

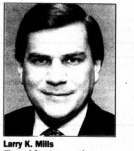
Network provides real estate, mortgage, insurance, and other related services in Northern California.

The company operates three divisions: Network Real Estate, a large real estate brokerage business; Network Capital Group, a 25-year-old mortgage banking operation; and Network Home Services, a provider of insurance brokerage and property care services.

Mr. Danna projects combined overhead savings of $1.2 million dollars after the acquisitions.

He added that the expansion should double the company's total annual revenue to about $27 million. □

Margaretten Appoints Mills To a New Finance Position



Larry K. Mills
Tapped for vice president

Margaretten Financial Corp. has appointed Larry K. Mills, 44, as vice president for finance, a new position.

Mr. Mills will oversee corporate finance activities for Margaretten, including corporate funding, bank relations, and cash management. He will report to Bruce Schnelwar, executive vice president and chief financial officer.

Before joining Margaretten, Mr. Mills was senior vice president and treasurer of Equitable Life Assurance Co. He also was on the board of the Economic Development Corp. of New York City and served on the advisory board of ABN Amro Bank, New York.

Mr. Mills is a native of Ottawa, Ill., and has a degree in business administration from Northwestern University. He completed the advanced management program at Harvard Business School in 1985.

Margaretten, based in Perth Amboy, N.J., is an independent mortgage company that ranked 17th in the nation in originations last year.

* * *

Arcs Mortgage Inc., the mortgage banking affiliate of Bank of New York, has named Ann Holmes Pennywit vice president for secondary marketing.

Ms. Pennywit held senior secondary marketing positions with Standard Federal Savings Bank of Virginia, and BancNewEngland Mortgage Co. and Pioneer Financial, both in Boston. Earlier in her career, she was a stockbroker in New York.

She has a bachelor's degree in history from the University of North Carolina at Chapel Hill.

N.Y. Agency Faults Fund Sales Tactics

Continued from *page 1*

cal of some brokers and fund companies.

It charged that advertising by Dreyfus Service Corp., Franklin Advisers, and Charles Schwab & Co. violated consumer protection laws. The companies face fines of up to $500 for each violation.

A Schwab spokesman denied using improper advertising. Officials at Dreyfus and Franklin said they were preparing a response.

The consumer agency, which announced its findings at a press conference Thursday, said it had launched the probe because of the explosion in use of mutual funds. It has published a 42-page guide for consumers seeking to buy mutual funds.

'Mystery Shoppers' Used

Consumer Affairs Department investigators phoned the banks in late June posing as first-time fund buyers with questions about fund types, safety, and management fees. The call was made to each bank, and the conversations lasted five to 10 minutes, the agency said.

The agency was particularly rankled by the failure to disclose

Salespeople often failed to mention that the funds are uninsured.

that mutual funds are not protected by the Federal Deposit Insurance Corp. In an attempt to elicit this fact, the investigators asked: "Is my money safe?"

Among the five banks, only sales agents at Citibank and Marine Midland specifically pointed out the absence of insurance, the department said.

"We were disappointed that the banks didn't make it crystal clear that the funds aren't FDIC insured and that investors face a real risk of losing their principal," said Jennifer Kohn, who wrote the report.

Added Richard Schrader, acting commissioner of the department: "They may not have a legal obligation, but they certainly have a moral obligation" to disclose that up front.

But J. Edward Diamond, president of the unit that oversees Dime Savings' investment products, said phone disclosure is not a serious issue.

"It's wholly inappropriate to [disclose that] without any knowledge of customers' investment objectives or level of sophistication," he said.

Banks generally "gave a much harder sell" than salespeople at fund companies, the report said. This may occur because bank agents earn commissions, while fund agents often do not, Mr. Schrader said.

One exception: The Dime Savings representative was the only sales agent who gave "good answers," the department said.

The report was especially critical of salespeople at Citibank and Chase, who were "particularly eager" to have undercover investigators come into the office for presentations. "Face-to-face sales presentations can be intimidating to new investors" who don't know much about mutual funds, the report said.

Undercover shoppers were steered to riskier investments.

But Mr. Diamond of Dime Savings disagreed. "If that's the case with those banks, I commend them," he said of Citibank and Chase. "I have to sit down with the customer and get to know them and their risk tolerances."

A Chase spokesman echoed Mr. Diamond, saying that personal meetings are preferable for discussing the risks involved with the complexity of mutual funds.

Bank representatives also frequently failed to steer first-time investors toward the more conservative fund investments they would likely be most comfortable with, the agency said.

The department singled out a salesperson at Chemical who "pitched the most risky investment and gave the least clear and accurate information."

Colleen Kelly, a spokeswoman for Chemical, said the bank couldn't respond to the individual allegation without knowing the specific case. But she added, "Our sales consultants are trained to make sure customers understand the strengths and limits of each type of investment."

Marine Midland declined to comment, while Citibank officers were unavailable.

The department also feels the Securities and Exchange Commission is dropping the ball by allowing banks to have fund names that are similar to their institution's. Bank regulators and the SEC have raised concerns about this, but have not prohibited the practice. □

TAKING NOTES: Mr. Manzi is said to have kept Lotus' Notes project alive and to have earmarked some $50 million toward its development.

Lotus Aims for Workgroup Niche at Banks

Continued from *page 1*

sic processes — wringing out costs, reducing brick and mortar, and rethinking the systems strategies that were put in place in the 1980s, when banks organized around products," said Jim P. Manzi, the 41-year-old chairman and chief executive of Lotus. "Now they are trying to organize around customers."

The recent success of Notes has breathed new life into Lotus, which in recent years struggled with declining revenues and sagging stock price as the market for spreadsheet software has matured.

Lotus announced Thursday second-quarter revenues of $235 million, up 6.8% from the previous year's period, near the high end of analysts' expectations.

Two-Track Success

The company said its second-quarter operating results benefited from strong early demand for the latest release of its 1-2-3 spreadsheet program, and "significant growth" in its communications business, particularly in sales volume for Notes.

Notes' success is also a personal success for Mr. Manzi, whom company observers credit with the company's shift in strategy away from single-user software to programs that can be used across networks. Mr. Manzi is said to have kept the Notes project alive, and to have earmarked some $50 million toward Notes development since 1989.

However, spreadsheet sales still contribute the lion's share of Lotus' revenues, representing about 80% of the company's 1992 sales, according to Gartner Group, a research and consulting firm based in Stamford, Conn.

But the firm also expects the installed base of Notes to rise dramatically, from 350,000 users today to more than a million by the end of 1994. The software "is the future of the company," says Michael Anderson, program director of office information systems for Gartner Group.

Race to Stay Ahead

But Lotus will not long be alone in the workgroup market: Microsoft is reportedly develop-

A raft of banks has seized on Lotus' groupware concept.

ing a similar document-sharing system.

Industry observers say Lotus has at least a year's head start.

"There's no product that does all of what Notes does," says Michael A. Mandelbaum, a vice president at Chase Manhattan Bank and Notes specialist.

"We want to establish Notes as a standard environment for workgroup computing," said Mr. Manzi. "That way, we're more likely to connect [banks'] customers."

A Bridge to Customers

Establishing communications links with customers using Notes is just what many banks are contemplating.

At J.P. Morgan, between 2,500 and 3,000 employees worldwide use Notes. Sources say that Morgan is working with Lotus to use Notes for linking the bank with its customers.

"The problem we have is we are doing business globally with different technologies, with people [working] in a taxi, some in a hotel room," said Jean-Louis Bravard, managing director at Morgan. "With this product, people can work together irrespective of location, irrespective of time zone."

Craig Goldman, chief information officer at Chase, was one of Notes' earliest proponents. Chase began testing the software in 1989, and now about 3,500 employees on both the retail and wholesale sides of the bank using it. By the end of the year, Chase expects to have 6,000 Notes users, Chase officials said.

Notes has enabled Chase to do more cross-selling in corporate finance and in cash management, Mr. Mandelbaum said. "Now we can see what is really going on with that customer," he said.

Marketing to Banks

Ultimately, Chase would like to provide a link to customers using Notes, allowing them to view information, send messages, and share documents with their bankers. "We believe Notes is a very strategic tool for us, and we'll continue to roll it out worldwide," says Mr. Goldman.

Although in general Lotus sells through third-party resellers, the company has set up its own marketing arm for bigger banks. Mr. Manzi said he personally handles some of Lotus' biggest bank clients, including Morgan and Citicorp.

Mr. Manzi has developed some longtime relationships with bankers – before joining Lotus in 1983, he was a management consultant at McKinsey & Co.'s Manhattan office, where he worked on operational studies for banks.

Today, Chase's Mr. Goldman and J.P. Morgan's Mr. Bravard are members of Lotus' executive council, a group of 20 corporate customers from a variety of industries that meet periodically to tell Lotus what their problems are and what standards they see emerging.

The key with money center bankers "is they want to make sure they have a strategic relationship with Lotus," said Robert Wyler, senior vice president of North American sales, marketing, and support.

Rough Edges

But it has not been all smooth sailing for Lotus, as it makes its shift in emphasis to groupware. The company's fortunes were built on the popular 1-2-3 program, which is still widely used in banks, although there have been inroads by Microsoft's Ex-

SEI Service 'Sweeps' Excess Cash into Mutual Funds

By DEIDRE SULLIVAN
Special to the American Banker

Seeking to help banks capitalize on the boom in investment products, SEI Financial Services Co. has introduced a new service that allows investors to easily move cash in and out of money market mutual funds.

The service, called Cash Management Investment Services, provides financial institutions with the technology to automatically invest excess cash from checking accounts in designated money market mutual funds.

Using SEI's systems, banks can "sweep" cash balances into their own proprietary mutual funds or into the Wayne, Pa.-based company's family of investment instruments, including a money market mutual fund with more than $18 billion under management.

The program allows a banker to generate fee income from the flow of funds rather than rely on interest spreads.

Repurchase Programs Devalued

Until now, most banks have swept excess customer cash into repurchase agreements in order to provide higher returns than traditional savings instruments.

According to Tony Carfang, a consultant with Treasury Strategies Inc., a Chicago-based consulting firm, the value of assets in repurchase programs has begun to decline as both companies and individuals demonstrate a preference for money market mutual funds.

"Traditionally, sweep products have been viewed as cannibalizing bank deposits, but the attractive feature of the SEI program is that it enables a banker to generate fee income from the flow of funds rather than rely on generating income from interest spreads," he said.

Mr. Carfang also said that it is critical that banks come up with ways to benefit from the movement of funds out of demand and savings accounts.

A Competitive Imperative

Treasury Services recently completed a study which indicated that for every dollar a midsize corporate customer had in a savings account, it had $4 in a money market account or mutual fund. "In order to compete, banks have to recapture these assets and increase profitability," Mr. Carfang said.

Cash Management Investment Services is targeted to banks of all sizes. Rick Lieb, President of SEI Investment Services, indicated that both a money-center bank and a community bank had recently made verbal commitments to use the sweep service. He declined to name either institution.

"Bank customers enjoy higher yields on their excess operating cash and still retain daily liquidity" while boosting a bank's fee income, Mr. Lieb said.

Ms. Sullivan is a freelance writer based in New York.

Lotus Aims to Carve Niche in Workgroup Computing at Banks

Continued from *page 12*

cel spreadsheet.

But while 1-2-3 was designed to run on a single PC, Notes has the additional technical complexity of running on networks of computers, and as such is more difficult to troubleshoot when system glitches arise.

Early purchasers of Notes complained about Lotus' technical support, which was still geared to the less complicated problems of the individual spreadsheet user.

"Lotus as a company is learning that Notes needs to be supported differently than 1-2-3," said Chase's Mr. Mandelbaum. Notes is "more of an environment that's built and maintained by systems professionals, and so it needs to be supported differently."

Some bankers say that it still can take a long time to get questions answered, and to get to the right person to answer a question, particularly if it is a particularly technical one.

Joining Forces

Crucial to Lotus' goal of becoming the standard for workgroup computing in banks is its ability to sign up other technology firms to develop software specifically for banking.

For example, Lotus has teamed with Eastman Kodak Co., Rochester, N.Y., to develop a system that captures and stores the images of documents with Notes. Bankers Trust New York Corp. and Chemical are using the system in their securities custody business.

Chemical is using the system initially to improve customer service on private placement issues where documents must be periodically reviewed.

On another technology front of interest to banks, Lotus decided to abandon discussions with Philips NV to develop software for a computerized telephone. One of the applications could have been for home banking.

Lotus decided not to pursue the discussions with Philips, because there already was too much competition in the market to produce these new telephones, Mr. Wyler said. □

FOUNDATION NOTICE

NOTICE

The annual report of THE ROBERT G. WILSON FOUNDATION for the fiscal year ended April 30, 1993 is available at its principal office located at c/o Grant Thornton, 1221 Brickell Avenue, Miami FL 33131 (305) 358-0077 for inspection during regular business hours by any citizen who requests it within 180 days hereof. The Principal Manager of the Foundation is Nat Wechsler.

Regulators Ease Rules to Spur Flood Loans

WASHINGTON — Federal regulators on Thursday moved to ease rules governing loans to banks in the aftermath of the Midwest flooding.

The Comptroller of the Currency and the Federal Reserve Board's chief bank examiners will go easy on banks that lose loans for customers who live in flood areas.

During flood seasons, banks on their feet in the future had been criticized by bank examiners for not setting aside enough money to cover losses.

The FDIC is creating a Community Investment Act zone to the southeast of Cincinnati, aimed at helping banks in Ohio, Kentucky and Indiana.

strong, even if they are weaker in the bank's market.

In addition to extending repayment schedules for existing loan customers, the agencies said, banks may extend new credit on more favorable terms and free of criticism from examiners.

Banks that see a jump in delinquent and nonperforming loans can expect the same examiner mercy, the Comptroller's office and FDIC said.

Appraisal Requirement Stayed

Banks that were adequately capitalized before the disaster may let their leverage level dip to a point that is one percentage point above the minimum ratio allowed, officially because customers are depositing government assistance funds or insurance proceeds in their accounts.

needed for affected real estate for up to three years, the regulators said.

The agencies also are giving banks in flooded areas more flexibility to file June 30 call reports. The amount of time depends on the bank's individual circumstances.

Finally, for banks that have damaged branches or want to set up temporary branches near flood victims, the regulators agreed to waive the formal application process.

For state-chartered member banks and bank holding companies, the Federal Reserve Board is expected to issue a similar statement soon. For thrifts, the Office of Thrift Supervision eased many of the same rules last week.

Columbia Plans Issue Of 1.25 Million Shares

BELLEVUE, Wash. — Columbia Banking System Inc. has filed a registration statement with the Securities and Exchange Commission to issue 1.25 million common shares.

Columbia shares were trading Tuesday at $12.75. The offering would raise $15.9 million at that price.

The company said $14 million of the proceeds would support plans to expand into the Tacoma-Pierce County, Wash., area.

Kemper Securities Inc. and Ragen MacKenzie Inc. will co-manage the public offering, which is expected to be completed by Aug. 17, the company said. — Dow Jones

Storm Brewing over Banks' Errors on HMDA Data

Continued from page 1

tween 5% and 50%.

Community groups say they have found every kind of error imaginable. The most common mistakes: miscoding loans to whites as minority loans, mischaracterizing loans in upper-class neighborhoods as low-income neighborhood loans, and including non-HMDA loans in the HMDA data base. In at least one case, for example, a loan to a car wash was counted as a home loan.

"We do not take at face value the loan application records that financial institutions supply to federal regulators," said Stanley A. Loeb, an official at the Pittsburgh community group.

Among common mistakes are miscoding loans to whites as minority loans and mischaracterizing loans in upper-class neighborhoods as low-income neighborhood loans.

NEWS ANALYSIS

The possibility that the HMDA data may have significant errors puts regulators in a tough spot. Given the magnitude of the HMDA effort, they are angry that some banks are not making a good-faith effort to submit accurate information. They want to send a message to the lenders that they need to shape up.

Data Base in Question

But in making an issue of the problem, they open themselves to criticism on the integrity of the data base, which has been used as evidence that there is widespread discrimination against minority borrowers.

Advocacy groups are ready to get the numbers straight if regulators don't.

"In my mind, the regulatory agencies have a real dilemma," said David C. Fynn, a corporate compliance officer of National City Bank. "They need to emphasize the accuracy of the HMDA data, but every time they talk about inaccuracies, they undermine its credibility."

Added Ms. Griffin: "The regulators are taking on two burdens they don't like: first, it takes a lot of time to correct errors, and that's expensive. Second, they risk taking pressure from Congress. And that's not a pleasant experience."

Some banks have taken strong precautions to make sure their data are as accurate as possible. National City Bank, for example, uses software developed by a private firm to check for accuracy. It also pulls a sample of loan files to compare with the computer-generated data. An error rate in excess of 3% generates a more thorough check of the records.

Careful review has enabled the agency to submit to regulators HMDA data that are "significantly accurate," Mr. Fynn said.

Pitfalls in Handling Data

In making sure reviews are accurate, compliance experts recommend many banks review how their loan application records are developed and emphasize the importance of careful compilation of the data.

"Every time the data is handled, there's an opportunity for error," Ms. Griffin said.

And just as important, the experts say, is developing a system of frequent and thorough self-auditing, comparing data from loan application records with individual loan files. While time-consuming and tedious, this internal review could stave off complaints from bank examiners.

The possibility of prolonged scrutiny from regulators, and possibility even civil money penalties, should be enough to convince banks to look more closely at the integrity of their data, regulators said.

And if banks do not do this themselves, public advocates and community groups may do the job for them. John Taylor, executive director of the National Community Reinvestment Coalition, said the 250 groups in his organization are waiting in the wings to take action if the industry and regulators don't. □

Imperial Bank of L.A. Wins an Export Award

LOS ANGELES — Imperial Bank of Los Angeles and one of its customers, Systems Integrated, received awards from the export finance office of the California World Trade Commission.

Systems Integrated, which has provided automation systems for hydroelectric dams in Asia, was named California exporter of the year for small.

The $3 billion-asset Imperial Bank, which concentrates on middle-market businesses, was named export lender of the year.

"We do not attempt to be all things to all businesses," said Imperial president Norm Creighton. "If we weren't focused on certain industries, we could never provide adequate service to entrepreneurs like Susan Corrales-Diaz," owner of Systems Integrated. □

AMERICAN BANKER Bookshelf /// THE FUTURE

How Important Is Service To Your Institution?

How can you spread, instill and improve service today? Developed specifically for financial institutions, you'll learn how to build and implement a successful service program with hundreds of examples of successful programs from other banks. Create the service culture you want by—

- Developing quality service standards
- Attracting and retaining customers
- Improving internal service
- Being an employee-focused organization

"...a wealth of ready-to-use ideas..." —Manufacturers Hanover

Start putting all the practical, ready-to-use ideas contained in this book to work for you. Order TODAY!

WALL STREET VIEW

Morgan Stanley Analyst Places His Bets On BayBanks, Boatmen's, Bank of N.Y.

By RICHARD LAYNE

Dennis F. Shea, regional bank analyst with Morgan Stanley & Co., recommends that investors remember the three B's when buying bank stocks: BayBanks Inc., Boatmen's Bancshares Inc., and Bank of New York Co.

BayBanks and Bank of New York stand to benefit most from falling loan-loss provisions and other credit costs, while Boatmen's is a good bet to substantially boost revenues in the future, he said.

Mr. Shea joined the brokerage firm in 1985 after spending five years as a vice president and manager of corporate finance with Mellon Bank Corp.

He started his career at Morgan by issuing "sell" recommendations on six Texas banks. But he's been bullish on banks in general since early 1991.

Since 1989, Mr. Shea has been recognized by Institutional Investor *magazine as one of the top regional bank analysts. He is a past president of the Bank and Financial Analysts Association.*

Frank Veronsky

DENNIS F. SHEA says banks are in the second leg of their bull market, which started in October 1990. While earnings, driven by lower credit costs, are now the key, the final leg will be based on loan growth.

Q.: Has the recent selloff in bank shares shaken your faith?

SHEA: I believe banks will continue to do well. My index of 33 regional banks was up 64% in 1991 and 44% in 1992.

I think it can outperform the Standard & Poor's [500 index] this year by 20 percentage points.

Q.: What's out there to make you confident?

SHEA: We are at the second stage of the bull market for bank stocks. The first stage began in October 1990, and the bell that rang at the time was that the Federal Reserve lowered rates. We had a sharp rise in net interest margins starting in early 1991 because of the wide spread between the prime rate and the fed funds rate.

In the second leg, earnings are driven by declining credit costs. That's where we are now, and we are about halfway through it.

Q.: How much further is there to go?

SHEA: Look at loan-loss provisions and all costs associated with foreclosed property in 1991 and 1992. They got as high as 23% of revenues. That's extraordinarily high.

Maybe the long-term average is 8%. What I think will happen is that credit costs will fall to 1% of revenues in 1993 and 8% in 1994.

The lower credit costs can carry the banks for a while. That's true, even if rates come up.

In this stage, you want to concentrate on banks such as Shawmut National Corp., the Bank of New York, and BayBanks — banks that have the greatest potential to benefit from the decline.

Q.: What's the last leg in the cycle?

SHEA: It's loan growth. It takes a while to see, and everyone is clamoring for it. Some banks are having loan growth, such as NationsBank and Banc One.

The lower credit costs can carry the banks for a while. That's true, even if rates come up.

We've seen reasonable loan growth in the Southwest. What's lagging is the Mid-Atlantic states, the Northeast, and California.

Everyone is saying we need loan growth. I don't care about it in the near term. Earnings will be fine this year without loan growth because of falling credit costs.

Loan growth comes late in the cycle. When you see too much of it, it means rates are going to rise; I don't want to see pressure on rates. I want a slow-growth economy.

Q.: During the recent inflation scare, banks said they could make money when rates rise. So what's the problem?

SHEA: You could see earnings expand in that period as spreads widen. There would be rising returns on loans and investment opportunities in securities and money markets, while deposit rates would lag.

You would get an expansion in earnings, but the stocks wouldn't respond.

Banks stocks won't do well if the next big move for long-term rates is to go to 8% or higher. Banks have shown little ability over time to push their returns on equity higher during times of higher inflation or higher interest rates.

The ROE for the banking industry has been steady for a long time at around 13% to 14%.

I think the ROE for the regionals will peak in 1995 between 16% and 16.5%. That's a cyclical peak, not a sustainable level.

Q.: Which stocks do you like today?

SHEA: I like BayBanks, which is the least understood and least followed company in my group. It is the one with the greatest chance for appreciation.

They are the purest consumer marketing company I follow — the U.S. Bean of banking.

They've got a catalogue of services they sent to customers. They've got 1,000 ATMs and a branch system. They've got the consumer locked up in eastern Massachusetts. This company could double in size out of two houses holds in the area. The stock sells at 12.9% of book. It has a high P/E, but how many banks will grow their per-share earnings $1 or more a year for the next few years?

Banks stocks won't do well if there's a big move in long-term rates to 8% or higher.

Q.: Who else looks good to you?

SHEA: Bank of New York is a company that is going through a gradual change. It was an classic money-center bank before it bought Irving. What Irving did was give them critical mass in a number of areas, particularly processing.

The bank isn't lending as much in big dollars to big companies as it did. That's being replaced by incredibly strong retail and processing businesses.

This is a company that is going to generate 40% to 50% of revenues for noninterest businesses. The securities processing business is growing rapidly, and their competition is in disarray.

If you look at them on a retail side, they have the biggest branch distribution network in the New York suburbs. They dominate Westchester County, which is a profitable place for banks.

They are very good at cost control. I went to see them in 1985 or 1986, and they were one of only two banks that had rotary dial phones and IBM Selectric typewriters — not computers. The other bank was Bank of Boston. Not coincidentally, these have two of the best efficiency ratios in the business.

Q.: What kind of banks would you recommend in the third leg of the rally?

SHEA: I look for value banks or cheap stocks, or companies that can grow revenues rapidly without taking extraordinary risks.

Boatmen's Bancshares particularly has been a wonderful company. I like them today, too.

They have a prejudice against Boatmen's because it did acquisitions between 1984 and 1988 that were very dilutive to earnings. They were done under a former chairman.

But in 1990, they did the most important acquisition for them, buying Community Federal Savings and Loan, a failed thrift in St. Louis, for $72 million. They got 200,000 household accounts. Plus, Community was the disruptive force in the market.

Boatmen's bought the thirdlargest banking company in Oklahoma. It bought the largest healthy thrift in Arkansas. That deal alone adds 4 to 5 cents per share per quarter to Boatmen's earnings.

It got into New Mexico with SunWest. Frankly, the deal was thought to be modestly dilutive to earnings. But I thought it had a very good return on investment.

The icing on the cake is that Boatmen's has a very large and incredibly profitable trust department that is run as an independent money management company. It generates about 15% of the bank's earnings.

People said the bank could never earn over $4 a share. It will earn close to $6 this year.

The stock has relatively low price-to-earnings and price-to-book [ratios] and a relatively high dividend yi'ld.

Q.: Which of your picks hasn't done well this year?

SHEA: Amsouth-Bancorp, hasn't done as well as I hoped. I put it on my "buy" list early in the year on a dip. It's flat so far.

And Banc One Corp. hasn't done well either. I recently dropped Banc One to a "hold" and upgraded Norwest, which I think can be a $36 stock in 12 months.

Q.: Is there any stock that you've continued to recommend since you turned bullish in 1991?

SHEA: I still recommend Sun-Trust. The stock trades at 2.5 times book. But if you give them full credit for the Coca-Cola holding, that's another $8 a share.

That means the stock trades at 1.65 times book for what is arguably one of the best-managed banks in the industry. I've always billed them as a stock you can own and go home and sleep well. The price moves glacially, but glacially up.

Bank Stock Table Explained: The table lists in alphabetical order the 225 largest publicly traded banks as measured by the market value of all common stock outstanding at the end of 1992, and the 25 largest publicly traded thrifts as measured by the market value of all common stock outstanding at the end of 1990. The smallest market value cutoff for banks was $75.06 mil. and for thrifts $244.20 mil. Bold face type is used for the names of banks with trading prices for the stock. PE: the price-earnings ratio. It is the current price of a share of stock divided by the last four quarters of earnings per share adjusted for stock splits and dividends. It is not computed for companies with less than four quarters of data. Mkt. to ten: Market value of the common stock at the closing price to the stock's book value, expressed as a percentage. Book value is adjusted for stock splits and dividends. Cls.: Closing price. Chg.: Change in closing price from previous day. Hi: Highest price in the last 52 weeks and 5 trading days. Lo: Lowest price in the last 52 weeks and 5 trading days. NM: Not meaningful. Footnotes: ¼ equals 0.25; ½ equals 0.50; ¾ equals 0.75. Highlights show largest percent gainsAnd losses in price and two volume leaders. Stocks must have a closing bid today's price and an average of average shares traded daily equal to or greater than 1,000.

CoreStates Shares Get 'Buy' Nods of 2 Firms

By GORDON MATTHEWS

Banking analysts unveiled a number of changes in investment ratings and earnings estimates Thursday in the wake of the industry's second-quarter results.

The biggest beneficiary was CoreStates Financial Corp., which received "buy" ratings from two firms, Bear, Stearns & Co. and S.G. Warburg & Co. The Philadelphia company's stock was up 87.5 cents to $58.25 in late trading.

Citicorp was upgraded to "hold" from "may sell" by Brown Brothers Harriman & Co. Its shares lost 37.5 cents to $31.125.

NationsBank Figures Lowered

Earnings estimates this year and next were raised significantly for both banking companies.

Estimates for NationsBank Corp. were lowered, however, by Robinson-Humphrey Co. Shares of the North Carolina superregional edged 75 cents to $49.

Bear Stearns analyst Carla A. D'Arista initiated coverage of CoreStates with a "strong buy" rating, saying she expected the stock to reach a target price of $79 within 12 months.

"Investors have been slow to recognize the bank's revitalized financial strengths," she said. "As perceptions catch up to the sustainability of CoreStates' growth prospects, look for significant stock price appreciation."

Ms. D'Arista noted that the stock is trading at 186% of book value, well below its mid-April high of 204%.

The earnings estimates for NationsBank were lowered.

"CoreStates' operating fundamentals were tarnished following the 1990 acquisition of First Pennsylvania Corp., which doubled nonperforming assets, and by the effects of the recession on the bank's primary markets," she said.

"After two years of aggressive chargeoffs and a difficult consolidation effort, CoreStates has regained its former stature among the most conservative but fastest-growing superregionals in the industry."

She compared the bank to Wachovia Corp., Winston-Salem, N.C., whose stock trades at 198% of book value, and SunTrust Banks Inc., Atlanta, now at 204% of book value.

Wachovia Shares Gain

Wachovia shares were up 62.5 cents to $34.25, while SunTrust stock was down 37.5 cents to $45.375.

Ms. D'Arista also said that CoreStates is "an attractive takeover candidate for other banks seeking to establish a larger superregional presence."

At Warburg, Francis X. Suozzo said he was "impressed by the strong earnings prospects for the bank," which has the largest market share in Philadelphia and has been noted for its electronic banking innovations.

Raphael Soifer of Brown Brothers raised his rating on Citicorp because of significantly higher earnings estimates for the bank.

The analyst raised his estimate for fully taxed, fully diluted operating earnings this year by 20%, to $2.75 per share from $2.30. His 1994 estimate was raised by 27%, to $3.50 from $2.75.

The rating amounts to a "long-term hold" rating, said Mr. Soifer, who still thinks the bank will have to raise additional equity in the future. But the analyst now considers the stock "fairly valued rather than fully-valued."

Estimates for NationsBank were cut by Susan Leadem of Robinson-Humphrey because problem real estate loans and unexpected costs for data processing dampened second-quarter results.

The analyst reduced her 1993 estimate to $5.60 per share, from $5.80. Ms. Leadem said she had expected the cost of holding problem loans to drop by $10 million during the second quarter, but it remained steady. □

U.S. Bancorp Unit Extends $90 Million Credit

DALLAS — Valhi Inc. said its subsidiary, Medite Corp., signed a definitive agreement for a $90 million credit facility with United States National Bank of Oregon, the principal unit of U.S. Bancorp.

Valhi said it will withdraw a registration statement at the Securities and Exchange Commission for a proposed $125 million offering of senior notes, because the bank credit is priced more favorably. — Reuters

Bank of America to Provide Financing For $260 Million Purchase of Timberland

By DAVID SIEGEL

Bank of America has committed to provide up to $260 million in financing for Plum Creek Timber Co.'s purchase of timberland from Champion International Corp.

The deal is one of a spate of financings this year stemming from the sale of assets in strategic corporate divestitures.

Plum Creek, a Seattle-based forest products company, is buying 867,000 acres of Montana timberland for $260 million.

Terms of the loan have not been finalized, and the company will probably not finance the acquisition completely through debt, said Rick Holley, chief financial officer of Plum Creek.

Mr. Holley said Bank of America will probably bring a small number of other banks into the financing.

Plum Creek has $35 million in working capital lines, which are undrawn, he said.

The company has no publicly rated debt, but it has $310 million in privately placed debt due in 2007 that is rated "2" by the National Association of Insurance Commissioners. A "2" rating on private debt is equivalent to a low investment-grade public debt rating of BBB, Mr. Holley said.

The company will probably maintain that rating after the purchase is financed, he said.

Greater Flexibility

Plum Creek opted for a bank loan over privately placed debt because revolving bank credit gives it more flexibility in paying down debt without penalty, he said.

The company expects the financing to be a revolving credit with a maturity of eight to 10 years.

In another acquisition-related loan, Morgan Guaranty Trust Co. underwrote a $425 million loan to finance Louisiana Land & Exploration Corp.'s $353.7 purchase of Nerco Oil & Gas Inc., according to a market source.

In the next few weeks, Morgan will lead a general syndication of a larger loan for Louisiana Land, the source said.

Nerco is a subsidiary of RTZ Corp., a British mining company, which is selling the company because it does not fit its focus on coal production.

Officials at Louisiana Land and Morgan declined to comment. □

THE MARKETS

Rates Rise on Greenspan Comments

Interest rates increased on Thursday, as Federal Reserve Board Chairman Alan Greenspan continued his hard line about inflation and a possible tightening.

The price of the 30-year Treasury bond, down ⅜ on Wednesday, had lost another ½ by Thursday at 4 p.m. This raised the yield to 6.66% from 6.62%.

Anti-Inflation Message

Ten-year notes yielded 5.89%, up from 5.83%; five-year notes yielded 5.23%, up from 5.16%; and two-year notes yielded 4.19%, up from 4.12%.

Alan Levenson, money market economist at UBS Securities, said Mr. Greenspan, delivering the Senate version of his Humphrey-Hawkins testimony, did not soften the anti-inflation message delivered Tuesday at the House version.

Steve Ricciuto, economist at Barclays de Zoete Wedd, said a disappointing response to a sale of $15.25 billion in one-year Treasury bills hurt bonds.

— Bart Frost

ISDA
INTERNATIONAL SWAPS AND DERIVATIVES ASSOCIATION
Presents

A REVIEW OF THE GROUP OF THIRTY GLOBAL DERIVATIVES STUDY AND NEW DERIVATIVE PRODUCTS AND INDUSTRY PARTICIPANTS

Tuesday, Wednesday and Thursday, July 27-29, 1993
The Plaza Hotel, New York City

ISDA presents a three-day seminar for swap dealers, corporate treasurers, legal personnel and others active in the swaps and derivatives market. Two days will focus on *Derivatives: Practices and Principles,* the study just released by The Group of Thirty, and one day will focus on new derivative products and new participants in the derivatives industry. These are issues which will affect your institution's business, forecasting and trading decisions.

Guest speakers will include:

David W. Mullins, *Vice Chairman, The Board of Governors of the Federal Reserve*
Dennis Weatherstone, *Chairman, J.P. Morgan, and Chairman of the Steering Committee of the Group of Thirty Derivatives Project*
Ronald H. Brown, *United States Secretary of Commerce*

WITH ADDITIONAL INDUSTRY EXPERTS...

Fed's Secrecy Comes Under More Scrutiny

By BART FRAUST

When it comes to open-market operations, the Federal Reserve is anything but open.

Here's how the world learns about what the Fed has in mind on any given day:

At about 11:29 a.m., a wire-service reporter places a call to a primary dealer of Treasury securities. At 11:30, another reporter calls the public information officer at the Federal Reserve Bank of New York.

The first reporter shouts, "Add, $2.5 billion, customer repo," meaning the dealer said the Fed entered the market and added $2.5 billion in reserves to the banking system via a repurchase agreement for a customer, usually a foreign central bank.

ECONOMIC OUTLOOK

The second reporter then confirms the action with the New York Fed. The official simply confirms or denies the action without the embellishment of an explanation. A headline goes out to the wire service's subscribers.

A legion of money market economists then interpret the action, which more often than not is routine and without importance to monetary policy.

Demand for More Openness

Why such a convoluted system? That question is being asked by lawmakers and economists, who increasingly are demanding more openness.

"I don't know why the Fed needs to send a signal," said Sung Won Sohn, chief economist at Norwest Corp. "Why can't they just say what they are doing in English?"

The secrecy starts with closed meetings of the Federal Open Market Committee, which sets the Fed's monetary policies. An edited version of the minutes of those meetings is not released for six weeks.

House Banking Committee Chairman Henry Gonzalez; for one, wants the Fed to release the FOMC minutes sooner and has proposed videotaping the proceedings.

The secrecy then extends into the transactions conducted by the New York Fed to implement the FOMC's policies.

Danger of Mixed Signals

The lack of openness can have major consequences.

For example, just before Thanksgiving in 1991, the Fed added reserves in a transaction widely interpreted as an easing

Chemical Said To Finance Big Buyout

By WILLIAM GOODWIN

Chemical Bank has agreed to underwrite a loan of over $500 million to help finance what would be the biggest leveraged buyout in a year, banking sources said.

Texas billionaire Robert Bass has teamed up with Haas, Wheat & Partners to acquire a collection of privately owned specialty food brands for a little over $1 billion, the sources said.

Chemical declined to comment on its financing role. A Bass spokesman also had no comment, while a spokesman for Haas Wheat said the firm has "not announced any deals."

The buyout, if completed, would mark the biggest LBO since the $1.4 billion acquisition of American Re-Insurance Co. by Kohlberg Kravis Roberts & Co., announced in April 1992.

Drop-Off Since the 1980s

There have been just four LBOs worth $1 billion or more that have been completed so far this decade, according to Securities Data Co.

In 1988, when the buyout boom was still in full swing, there were 16 completed deals worth $1 billion or more, including KKR's $30 billion buyout of RJR Nabisco Inc.

While no one is predicting a return to the overheated envi-

Community Loan Bill May Rival Clinton Plan

By ROBERT M. GARSON

Barbara Kelly

Rep. Jim Leach
Co-sponsors measure

WASHINGTON — A politically potent group of House Banking Committee members is sponsoring a community development lending bill that would provide more financial incentives for banks than President Clinton's program.

The measure, sponsored by Rep. Floyd Flake, D-N.Y., and Rep. Jim Leach, R-Iowa, appears to have a better-than-even chance of prevailing over the President's approach.

Six Democrats, including four minority legislators, have signed on as co-sponsors. If all 20 Republicans back the bill, it would have a bare majority when the full committee votes, even if no other Democrat signs on.

Other Influential Backers

In addition to Rep. Flake and Rep. Leach, the bill's sponsors include a number of influential Banking Committee members, among them Rep. Barney Frank, D-Mass., and Rep. Thomas Ridge, R-Pa.

"That's a very potent combination," Edward L. Yingling, chief lobbyist for the American Bankers Association, said of the coalition. "You can see the influence of the black caucus and the impact of the Republicans. It's something we would take very seriously."

The Flake-Leach package would make commercial banks eligible for funding if they want to start or expand a community development unit. In addition, it would divert half the money in the bill to the Bank Enterprise Act, which awards banks a rebate on deposit insurance premiums if they lend in low-income areas.

'Safe-Harbor' Provision

Another section of the bill would give commercial banks with a good CRA record a "safe harbor" that would shield them from CRA protests. In addition, investment in a community development financial institution would count as a factor in a bank's CRA evaluation.

The bill also gives community groups an opportunity to challenge a bank's lending record before it is rated under the Com-

NEWS *briefs*

Wachovia to Put 'Visa Check' on ATM Cards

ATLANTA — Wachovia Corp. said its banks in Georgia and North Carolina will be the first in the country to print "Visa Check" on automated teller machine cards.

The name is applied to the service formerly called Visa Debit and is said to be more descriptive of the way the card can be used in place of cash or checks.

In August, the Wachovia Banking Card with Visa Check will be introduced free for six months. Thereafter, the fee will be $1 a month, allowing unlimited point of sale purchases.

Chase to Manage Brady Bond Sale by Brazil

NEW YORK — Chase Manhattan Bank said its corporate trust division was named fiscal agent by the Brady bonds once its commercial bank debt restructuring plan is finalized.

First of America in a $500 Million Filing

WASHINGTON — First of America Bank Corp. filed for a shelf offering of up to $500 million of debt securities, preferred stock, common stock, and other securities.

In a filing with the Securities and Exchange Commission, the company said proceeds from the offering would be use for general purposes, including debt repayment and preferred-stock redemption.

No underwriters were listed.

Wachovia to Buy Back Five Million Shares

WINSTON-SALEM, N.C. — Wachovia Corp. said its board authorized the repurchase of up to five million common shares, an increase from the three million shares originally authorized for the buyback.

In a press release, the company said it had 173,498,420 common shares outstanding as of June 30.

Wachovia said it intends to use some or all of the shares repurchased for its employee stock plans, dividend reinvestment plan, and other appropriate purposes.

$100 Million Set Aside for Flood Loans

CHICAGO — The Federal Home Loan Bank of Chicago set aside $100 million in low-cost financing that member banks and thrifts may use to help flood victims in Illinois and Wisconsin.

Lenders in officially declared disaster areas may borrow money at interest rates barely above Treasury rates. The actual rate varies with the term of the loan, but it is set 5 basis points below the bank's special Community Investment Program, which makes loans at the bank's cost.

The funds will be available through January 1994, and terms are flexible, from one month to 20 years. The money may go to homeowners whose income does not exceed 115% of the area median, or to businesses in areas where a majority of households have incomes of 80% of the median or less.

The money can be used to help those waiting for insurance reimbursement for rehabilitation and repair loans, construction loans, and permanent mortgage financing. It can also be used to finance commercial projects which are in low-income and moderate-income neighborhoods, or which employ low-income and moderate-income people.

The briefs were compiled from staff and wire reports.

House Appears Close to Vote On Re-Funding Thrift Bailout

By ROBERT M. GARSSON

WASHINGTON — The once-again, off-again House vote on funding for failed savings and loans could be on again this week, with a vote tentatively scheduled for Wednesday.

Even if that schedule holds, however, it is by no means clear what the House will be voting on. Rep. Richard Baker, R-La., has been talking to House Democrats – including Rep. Stephen L. Neal of North Carolina, the likely floor manager for the measure – about a package that would provide $18.3 billion for the Resolution Trust Corp., but no money for the infant Savings Association Insurance Fund.

By far the most delicate set of talks involves Rep. Baker and Rep. Kweisi Mfume, D-Md., a member of the House Banking Committee and chairman of the Congressional Black Caucus.

Provision Stirs Debate

Rep. Mfume sponsored a minority contracting provision that many Republicans and some Democrats regard as a "quota" measure.

Rep. Baker is seeking a compromise that would retain the contracting provision, but subject it to the "least cost" test that other provisions in the bill are under.

Although Rep. Baker's approach is less favorable from Rep. Mfume's perspective, a compromise might be the only way to pass a bill.

Earlier in the week, Rep. Mfume told Rep. Baker that they two sides appeared to be "getting close," according to congressional sources. By week's end, however, an aide to Rep. Baker said the prospects were dimming.

While the bill has been tentatively scheduled for consideration by the House Rules Committee and a floor vote as early as Wednesday, that schedule could easily slip. The House leadership is reluctant to bring the measure up unless it is sure that a majority can be mustered.

Counting the Votes

Supporters of the bill have been encouraged by recent "whip" counts that showed 172 Democrats in favor of the RTC bill and another 18 leaning toward it. If those counts are accurate, only 28 Republicans would be needed for a bare majority if the full House votes.

However, Republican sources say that the number of GOP votes for the bill has been dropping since just before the July 4 recess. At that time, Republicans were confident they could deliver at least 30 votes.

As a result, Democrats have to take any Republican initiative seriously.

Rep. Baker said last week he was hopeful a deal could be struck on the RTC bill. "The overall concern for me is stability in the marketplace," he added. "To stand by and not do anything could lead to a calamity in the marketplace next year." □

PNC to Process Bill Payments for Hospital

By MATT BARTHEL

PNC Bank Corp. has signed an agreement to electronically process medical bill payments for the University of Pittsburgh Medical Center.

The bank will act as a receiver of electronic payments and remittance information to the medical center's account from Blue Cross/Blue Shield and other insurance companies that manage health coverage for Medicare recipients.

With the Clinton administration formulating proposals to reform the nation's health care system, processing of medical claims is expected to be one of the fastest growing areas of financial electronic data interchange.

And many banks like PNC are interested in getting in on the ground floor.

"There is a huge opportunity to save administrative costs by converting to electronic transactions," said Joseph McKitrick, electronic data interchange product manager at PNC. "We feel those opportunities are something that health care providers want to take advantage of."

Several Players

A number of financial institutions, including First Chicago Corp., Chase Manhattan Corp., and First Interstate Bancorp, offer extensive electronic data interchange services – the electronic transmission of payments and related information using standardized computer formats.

According to the EDI Group Inc., Aurora, Colo., 65% of corporations engaging in data interchange rely on banks to provide the service.

Yet despite the banking industry's strong presence in the market, experts said most banks offer the services mainly as a way to induce companies to use other cash management services. As a stand-alone business, financial electronic data interchange has not been very profitable.

But a number of institutions, including PNC, believe this will soon change, as banks grow increasingly willing to handle a range of nonpayment data in addition to a cash management customer's electronic payments and receipts.

The additional information services, which include remittances and other communications, are something that bankers view as a "value-added" service for which they can gather lucrative fees.

And it appears many health care providers, searching for ways to contain skyrocketing costs, are backing bankers' efforts in this area.

"The University of Pittsburgh Medical Center is enthusiastic about improving cash flow and updating patient receivables faster through the use of EDI," said Linda Zang, manager of treasury operations.

Although PNC already has about 500 financial electronic data interchange customers, the Pittsburgh Medical Center is its first customer in the health care industry.

Under the agreement, signed July 19, the bank will receive the hospital's Medicare payments and explanation of benefit information from the government's fiscal intermediary, usually Blue Cross or another insurance company.

PNC then will credit the hospital for the payment, translate the payment information into a standard electronic format, and send the information electronically to the computer housing the hospital's internal accounting files.

Because the information is sent in a standard format, the hospital's accounting files can be automatically updated without human intervention. The hospital said this will speed its internal accounting and reduce the number of errors.

PNC officials said the agreement only encompasses Medicare Part A payments, which are payments to hospitals. The bank is also interested in processing Medicare payments to physicians.

These payments, known as Medicare Part B, offer a huge potential source of revenue. □

Pulse ATM Network Expands into Mississippi

The Pulse automated teller machine network has decided to expand the geographic area it serves to include Mississippi.

The expansion brings the number of states in which Houston-based Pulse operates to seven. The other states are Texas, Louisiana, Arkansas, Oklahoma, Colorado, and New Mexico.

Pulse, a not-for-profit association of 1,468 financial institutions, has more than 5,600 ATMs and 9,140 debit point of sale terminals. It is the largest ATM network in the Southwest.

Two Mississippi banks already have joined the network. — **Matt Barthel**

NCR Financial Enterprise Architecture

The Advantages Of Massively Parallel Computing In The Financial Enterprise.

NCR's Financial Enterprise Architecture (FEA) offers a visionary blueprint for financial institutions to create a flow of information and solutions across the enterprise. One of the key technology enablers within FEA is NCR's massively parallel processing (MPP) solutions.

Parallel processing machines use hundreds of microprocessors to break down tasks into smaller pieces that can be processed simultaneously fat performance in excess of 10,000 MIPS), dramatically speeding up transaction times and complex queries.

On-Line Complex Transaction Processing (OLCP)

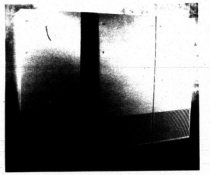
Most banks already have such an overwhelming amount of data that it is difficult to access selective information that supports decision making. Plus, that data is usually isolated in disparate systems and software across the enterprise.

However, with MPP, On-Line Complex Transaction Processing applications are possible. OLCP combines high volume transaction processing with larger, data intensive applications to dramatically improve real-time analysis of enterprise business data. OLCP environments are characterized by concurrent OLTP, decision support, complex processing and ad hoc query processing.

OLCP applications can provide bankers with actionable information for competitive benefits, including:

- **Real-time transaction analysis,** to help determine appropriate action for customers with complex investment, CD or loan decisions that require rate and options analysis.
- **Real-time availability of transaction/household data,** versus summary data, to create new products or services. For example, a marketing program query asking for all single income households with $50,000+ incomes, savings of $10,000+, and specific transaction parameters.
- **High volume credit card transaction analysis,** to identify customer patterns and other criteria that can minimize fraudulent use.
- **Real-time availability of credit history reports,** to support risk management analysis.
- **Strategic decision support,** to help banks evaluate the most profitable directions to pursue, which areas of business to move into or leave, where to locate branches, and what level of service and automation is needed in each location.

There are more ways the sheer computing power of parallel processing can help you create answers out of your mountains of data. Phone 1 800 CALL-NCR today, or talk to your NCR representative.



NCR's System 3600 and DBC/1012 have helped NCR gain an 80% share of the commercial parallel processing market.

Building Your Pension Business Through Defined Contributions

Many banks and other financial institutions have recently developed strategies to enter, or grow in, the pension market by building their defined contribution business. This product line is, in fact, generating impressive growth rates, but multiple challenges exist both for new entrants and established players.

In 1983, defined benefit plans accounted for more than 46% of the pension market, while defined contribution plans totaled 23% and government plans accounted for the remainder. In 1992, defined contribution plans and defined benefit plans each had 34%, with the remainder government-related.

Assets Grow

Defined contribution plans have registered a 6% real growth rate over that period, while defined benefits have suffered

MANY COMPANIES *have moved to the plans in response to tougher pension legislation.*

about a 2% real rate of decline. Total defined contribution assets now exceed $1 trillion with a nominal growth rate expected to be in the 9%-12% range.

The reasons for the shift to defined contribution plans are well known. Many companies have actively moved to defined contribution plans in direct response to tougher pension legislation.

The responsibility for investment performance is increasingly being placed with the employee, rather than the company, which could risk backlash for poor investment performance results.

In addition, defined contribution plans may enable firms to reduce their overall pension costs by requiring employee contributions, which are then matched by the employer.

High Returns

Many employees have responded favorably to these plans, welcoming the investment choices they offer. Going forward, the shift away from defined benefit and toward defined contribution plans should continue.

The economics of this business can be attractive to a bank that builds sufficient scale. The profitability of the existing book can continue to grow as the bank's cost to acquire a plan "runs off."

Overall, yearly account attrition is relatively low, at about 5%-10%. This varies by plan type.

Successful players providing defined contribution plans can generate returns on equity well in excess of 15% from a business that has a much lower risk element than many other banking businesses.

Further, given the access to plan participants, cross-selling opportunities exist for products such as brokerage services, retirement planning, and Individual Retirement Account rollovers.

Tougher Competition

In light of the growth of the defined contribution business and its fee-based profit potential, the competitive environment is, not surprisingly, getting tougher. Less sophisticated players risk finding that they are unable to generate the returns that they have projected.

Acquiring attractive accounts has become more expensive in two ways. First, customers are negotiating interest rate subsidies on guaranteed investment products and fee waivers for mutual funds.

The long-term trend away from guaranteed products, commonly known as GICs and BICs, and toward mutual funds may further reduce the profit margin for the defined contribution provider.

At the same time, distribution costs are rising as commissions increase. The net result is reduced revenue for the defined contribution provider.

A Free-for-All

Moreover, investment spreads on guaranteed products are shrinking as competitive pressures increase and interest levels remain low. Traditionally, companies in this business accepted low spreads (i.e., high participant credit rates) in the first few years of a plan and recouped this investment by gradually widening the spread.

Recently, large mutual fund companies such as Fidelity, Vanguard, and T. Rowe Price have leveraged their vast retail asset base to offer these low-load or no-load products to institutional investors.

While these companies have historically targeted 1,000-plus life plans, both Fidelity and T. Rowe have recently established separate units to pursue the 100-1,000 life segment.

Viewed in perspective, the defined contribution business offers an excellent example of how competition within the financial

Mr. Wendel is a vice president at Mercer Management Consulting in New York.

SUCCESSFUL *players in this area of the pension market can generate returns on equity well in excess of 15% with a much lower risk element than many other banking businesses.*

services industry now approaches a free-for-all.

Focus on Smaller Plans

An analysis of key segments of the defined contribution business emphasizes the need for a bank to choose where it wishes to compete. For example, companies with 1,000 or more participants buy unbundled plans in which the investment and record-keeping decisions are separate.

This market, in particular, is already highly penetrated. The only chance to build business in this segment is by taking it away from some other institution. That other institution will typically be a strong, "name brand" national player with deep pockets.

For regional and community banks, however, opportunities still exist with natural market segments – defined contribution plans sold to small (less than 100) or mid-size (100-500) par-

DEFINED *contribution plans have registered 6% real growth since 1983.*

ticipant groups. This is the one area in which local banks could have some competitive advantage.

Typically, smaller plans require a bundled product and easy-to-understand product features, as well as low cost. One factor that can weigh strongly in a local bank's favor in this market is the value that some small-er plans place on a local presence, both in follow-up service and marketing.

Low Penetration

Importantly, a decision maker buying the plan is the local business person. Having access to

him or her and being able to provide them the necessary "education" required is a key to selling to this market.

Today, only Norwest Bank appears in the list of the top firms servicing the 25-100 participant market. Insurance companies and investment firms are the biggest players.

With the exception of Norwest and Bankers Trust, State Street and Mellon on the high end, banks have been largely ineffective in building market share in this business.

Our analysis indicates that product penetration in the "small plan" end of the market is actually quite low, at about 10%. The fastest growing segments, both in assets and plan growth, will, therefore, be the small and lower-middle markets.

Setting Up for Growth

How should banks position themselves to grow in the small plan market?

First, banks must offer the right product, that is, a bundled product that is easy to understand.

Second, they need to provide a full range of products. Small companies often require profit sharing, ESOPs, and SEPs, as well as 401(k) plans.

Third, varied investment options are necessary for an increasingly demanding individual investor.

Fourth, to assure profitability, banks need to develop a cost-effective distribution system for selling smaller plans to existing and target customers.

Nontraditional Tactics

In pursuing this market segment, strategic alliances among banks, record keepers, benefit consultants, and mutual fund companies may be the essential infrastructure required to ensure both the right product offerings and low distribution costs.

Clearly, banks approaching this market will need to develop nontraditional tactics. A willingness to develop joint ventures and other "partnerships" will be required if they are to succeed at taking on some tough competition. The potential payoff to banks for doing so can be substantial. ❑

New Help for Competing with Big Banks

Many medium-size banks have disappeared – a phenomenon resulting from closures of the least profitable and acquisitions of the more profitable.

In many markets, that leaves smaller and community-oriented banks competing against the big boys.

Meanwhile, many new banks are being formed in markets where the leading banks have gotten too big to serve the needs of certain communities. Local talent identifies these opportunities and seeks the capital required to obtain a new charter.

Growing Pains

Management of small banks requires credit knowledge and general, seat-of-the-pants management skills. As long as the bank stays small (in the range of 'rotte D. Kantrow, Franklin Smith. simple formula is successful.

Beyond a certain size, the executive's chart has been removed from operations about which they are called upon to make decisions.

The key factor that makes smaller, community banks successful is service.

THE KEY FACTOR *that makes community banks successful is service.*

cessful is service. The big banks have professionals dedicated to meeting this objective. How can the little guy compete?

A Pool of Expertise

The answer is simpler than one might think.

The individuals who lost jobs over the past two years as the industry has consolidated have expertise that community banks will require more and more as they grow.

Small banks may not be able to hire such people full time, but they can "rent" their expertise on a consulting basis.

Large consulting firms have ample capabilities to fulfill any need – but at what expense? The new independent consultants coming out of banking positions have the motivation to get the job done at only a fraction of the Big Six firms' fee schedules.

Trimming Expenses

For example, take my own area of expertise.

One of the toughest jobs facing bank executives is curtailing noninterest expense. Salaries and benefits are the largest segment of this category.

Branch managers are constantly asking for more staff. Executives fielding these requests need to know the answers to such questions as:

- What branches really need staff increases?
- Are the branches staffing for peak periods?
- Are tellers in short supply while employees in other areas are underutilized?

Mr. Keegan, a former banker, is a consultant based in Chandler, Ariz.

- How can staff requirements be quantified?

A program of work measurement, which I prefer to call work management, takes staffing concerns out of the realm of the unknown.

Such a program first sets time standards for various processes.

The next phase is to examine when these functions are required, thus creating a staffing model that addresses such issues as the number of work hours needed as well as daily, weekly, and monthly peaks and valleys.

The last step is to merge this information into the management process and expect managers to make good staffing decisions, just as we expect them to make good credit decisions.

Big Benefits

Small and medium-size banks cannot normally afford such a program except through the use of consultants.

I have fairly consistently seen productivity rise about 15% after implementation of this program, which costs perhaps $10,000 to $15,000 for a five-branch bank. The annual savings run around $100,000 to $200,000. In bankers' terms, that's an excellent ROI.

No business today can operate without the assistance of an accountant or attorney. Since many small to medium-size banks cannot afford to have these professionals on staff, they retain outsiders for these services.

I suggest that this makes sense for other areas of management expertise as well.

It is foolish to try to make decisions without seeking the proper advice and analysis to do the job right.

And you have nothing to lose in speaking to consultants. many of whom have been educated at larger firms and can use that expertise to improve your operations while reducing your expenses. ❑

Announcing... A Landmark Event For the US Banking Industry

U.S. BANKER FORUM 93
The National Exposition For The Banking Industry
October 19-21, 1993
McCormick Place East, Chicago, Illinois

Discover strategies for profitability in the 90's and beyond!
U.S. Banker Forum presents a unique opportunity for executives from America's banks and financial institutions to gather the information they need to chart a course for a secure and profitable future. The open exchange of ideas, in an atmosphere free from association politics or politics, provides a broad perspective from which to evaluate the critical issues facing the U.S. financial industry and develop solutions for the future.

Get expert answers to tough questions.
U.S. Banker Forum's ground-breaking conference program features the nation's top bankers including Wachovia's John Medlin and Bank One's John McCoy, plus top government officials and regulators. Sessions focus on the industry's big issues and vital concerns, including mergers & acquisitions, expense control, government regulations, new sources of revenue, automation, outsourcing and more.

Discover a wealth of innovative solutions.
A comprehensive exhibit of products, equipment and services complements the U.S. Banker Forum conference. From ATM's to zero coupon bonds, you'll find everything you need to increase efficiency and enhance the bottom line.

Located in the heart of a thriving financial center.
More than half of the nation's banks and thrifts are located within a 500 mile radius of Chicago, many of which are reporting record profits. Chicago's central location and O'Hare International Airport make it easily accessible from all points.

Make U.S. Banker Forum part of your plans for the future!
Whether you are a bank executive or a supplier to the banking industry, U.S. Banker Forum is your best investment. For more information, call Scott Temple, Sales Manager at (203) 852-0500, ext. 106 or return the coupon below.

Union's Retail Gunner Aims at B of A, Wells

By SAM ZUCKERMAN

In the mammoth California banking market, San Francisco-based Union Bank seems a weakling despite its considerable size. Its $16 billion of assets are dwarfed by those of its powerful rivals, BankAmerica Corp. and Wells Fargo & Co.

But any competitor that tries to kick sand in Union's face will have to answer to Richard C. Hartnack, a 47-year-old ex-Marine who dropped bombs from the back seat of an F-4 jet during the Vietnam War.

As vice chairman of Union, the largest Japanese-controlled bank in the United States, Mr. Hartnack uses guerrilla tactics to harry the competition.

'More than Enough Size'

His arsenal includes supermarket branching, Sunday hours, and heavy promotion of debit cards. His bank is even making a play for check-cashing business in low-income neighborhoods.

"We have more than enough size to compete in California," insists Union's feisty retail chief.

Still, Mr. Hartnack is definitely an underdog.

Union, which is 71% owned by the Bank of Tokyo, is the Golden State's fourth largest bank. But Mr. Hartnack admits most consumers in San Francisco and Los Angeles scarcely know it exists. With just a 5% share of commercial bank deposits, Union trails far behind the market leaders.

Dwarfed by B of A, Wells

The bank's 209 branches are spread thinly over vast stretches, giving it a strong presence only in a few scattered locations, such as San Diego.

Chuck Porter

CLEAR STRATEGY: Richard C. Hartnack leans heavily on Union's branch managers to give the California company a community bank feel.

Competing in a Tough Market

	California branches	Domestic deposits ($bil.)
Bank of America	1,011	$86.6
Wells Fargo	618	41.0
First Interstate	326	16.6
Union Bank	209	12.4

Deposit totals are for California bank units as of March 31.

Source: Company reports

Union greatly expanded its territory when it bought 33 former Security Pacific Corp. branches from BankAmerica last year. But its retail offices still amount to less than one-third of Wells' total branches and about one-fifth of BankAmerica's.

"Without market concentration, they have a tough time," said San Francisco bank consultant K. Shelly Porges.

All the same, Mr. Hartnack contends he has advantages.

He is convinced that the sheer bulk of California's two banking giants leaves them musclebound.

And he argues that their top-down management and marketing approaches make them vulnerable to a nimble challenger that can move quickly.

In a recent interview, Mr. Hartnack summarized his formula for building market share: Offer customers the advantages of a big bank -- such as 24-hour telephone banking -- and the exceptional service of a community bank.

To accomplish that, he is pushing a decentralized banking strategy that gives branch managers wide-ranging authority and sales responsibility.

In essence, he is turning Union's branches into miniature community banks. His vision, he explained, is to sell Union as California's largest independent bank -- not as its smallest statewide bank.

"I tell my branch managers: You've got to act like a bank president," Mr. Hartnack stressed. "You've got to be the absolute master of your market."

In Sharp Contrast

That retail model contrasts sharply with those of his two major rivals.

Wells has downgraded the role of branch managers and is managing its sales force from headquarters.

BankAmerica operates its network the way McDonald's runs its burger franchise -- emphasizing efficient distribution through hundreds of locations instead of personal service.

Union's approach promises to differentiate it from its big rivals. But it is far from easy for a bank of Union's size to maintain service levels comparable with those at true community banks.

"Implementing Union's strategy is a challenge," said Lehman Brothers analyst James Rosenberg.

The statewide bank whose strategy most resembles Union's is First Interstate Bancorp's California unit, the state's third-ranking bank.

Mr. Hartnack said it makes sense that the two banks would compete on service since neither can match BankAmerica or Wells in advertising or location.

Union's success hinges on recruiting and training high-quality branch managers, Mr. Hart-

nack said.

Former colleagues note that his views reflect his experience at First Chicago Corp., where he served as head of retail banking before jumping to Union two years ago.

In Illinois, then a unit banking state, First Chicago assembled its retail network by buying a series of independent banks. The presidents of those institutions stayed on as managers.

"I found the guys running those banks were very good," Mr. Hartnack said.

Banking is in Mr. Hartnack's bloodline. His father, Carl E. Hartnack, served for many years as president of Los Angeles-based Security Pacific.

Colleagues say the younger Mr. Hartnack is a confident and inspirational leader.

"He makes decisions quickly -- there's a real pace to everything Rick does," said Charles W. Shoemaker, who reported to Mr. Hartnack at First Chicago.

That action-oriented style has found a home at Union, whose retail strategy is rapidly evolving.

The bank took its current shape in 1988 when Bank of Tokyo's consumer-oriented California First Bank bought Los Angeles-based Union Bank, one of the state's premier commercial lenders.

Union has successfully balanced its retail and commercial businesses during California's economic slump.

While commercial real estate produced major losses, consumer banking has helped keep Union profitable throughout the recession.

Following the 1988 merger, James R. Gibson, Mr. Hartnack's predecessor as retail manager, turned to what were then unconventional methods, such as supermarket banking and Sunday hours.

Sunday Service 'Clearly Valued'

Mr. Hartnack has built on that foundation. He has built Union's network of branches in Ralphs Supermarkets to 23. He has extended Sunday hours from the supermarkets to six regular branches ,in Southern California, with plans for more.

Sunday service "is something clearly valued and understood by consumers," he explained. "It provides us with a distinctive difference."

On pricing, Union's interest rates are about the same as those of its major rivals. But Mr. Hartnack is making it easier for consumers to get free checking accounts. He's also planning one of the first major debit card promotions in California.

At the same time, Union's retail chief is making a strong bid for California's low-income market. Mr. Hartnack estimated that Union may ultimately be able to generate about 5% of its income from low-income customers.

As an experiment, the bank has opened a branch in a low-income community near Los Angeles. Competing directly with local check-cashing stores, the office has an area set aside for handling checks of customers who have no bank accounts.

At 1%, Union's check-cashing fee is lower than the specialty stores'. At the same time, the bank encourages customers to open regular accounts at the branch. □

Boatmen's to Buy 1st Amarillo for $175 Million

By STEVE KLINKERMAN

Boosting its presence in West Texas, St. Louis-based Boatmen's Bancshares on Friday agreed to buy First Amarillo Bancorp. in a stock swap valued at roughly $175 million.

The price is 2.2 times First Amarillo's book value.

First Amarillo is solidly profitable, earning $6.4 million before extraordinary items in the first half of 1993, for a return of roughly 1.7% on average assets.

$800 Million in Assets

First Amarillo holds roughly $800 million of assets and is solidly profitable. It earned $6.4 million before extraordinary items during the first half of 1993, for a return of roughly 1.7% on average assets.

Boatmen's first entered Texas with its 1992 purchase of Sunwest Financial Corp., Albuquerque, N.M., which has a unit in El Paso, Tex.

An Unsuccessful Bid

Joseph Horn, chief financial officer of First Amarillo, said the company will be operated as a separate subsidiary of Boatmen's. Don Powell, chairman and chief executive, will remain in charge of the company after it is acquired, Boatmen's said.

An avid acquirer for two years, Boatmen's competed vigorously but unsuccessfully for parts of Houston's failed First City Bancorporation of Texas, most of which was sold to Chemical Banking Corp.

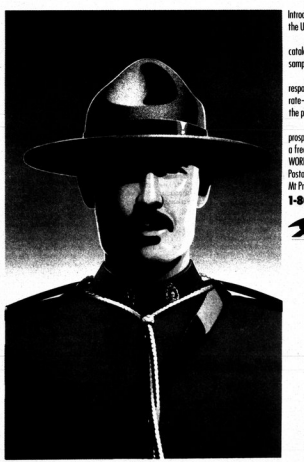
Andrew B. Craig 3d, chairman and chief executive of Boatmen's, said in a prepared statement that the First Amarillo deal would have a neutral effect on this year's earnings and would enhance profitability in 1994.

Key Geographical Position

Mr. Craig said First Amarillo occupies a "key location" along the highway linking Oklahoma City and Albuquerque, two cities where Boatmen's already has a major banking presence.

Boatmen's at midyear held $24.6 billion of assets and operated about 400 offices spread across Missouri, Illinois, Tennessee, Oklahoma, Arkansas, Iowa, New Mexico, and Texas. □

NOW YOU CAN CAPTURE 26 MILLION NEW PROSPECTS.



Introducing VALUEPOST™ CANADA from the United States Postal Service.

Finally, you can send direct mail, catalogs, brochures—even merchandise samples—to Canada at affordable prices.

And you'll reach an audience that responds to direct mail at twice the U.S. rate—spending over $8 billion a year in the process.

A Thrift's Hard Lesson In Merger Conversions

By ROBERT B. COX

Mergers

A WOOSTER, OHIO, THRIFT received an abrupt lesson last week in the difficulties of merger conversions.

FirstFederal Financial Services Corp. was thwarted in its attempt to acquire another Ohio thrift, First Federal Savings Bank of Dover, in a merger conversion when the target backed away.

FirstFederal's failure to obtain a definitive merger agreement with the $58 million-asset Dover thrift underscores the pitfalls of the transaction itself.

"Merger conversions are among the most difficult deals to accomplish," said David P. Downs. senior vice president at Ryan, Beck & Co.

FirstFederal, with assets of $571 million, announced in May that it had signed a letter of intent to acquire the Dover thrift. Under the terms of the preliminary agreement, Dover's depositors would have converted their ownership into roughly $6 million of FirstFederal stock.

FirstFederal would have picked up the Dover thrift and its $6.2 million of capital merely by issuing roughly $6 million of new equity. Thus FirstFederal would have bought the mutual while gaining about $12 million of new capital. The only cost to FirstFederal: About 5% dilution to shareholders.

Gary G. Clark

"These are the kinds of deals we would like to do," said Gary G. Clark, the Wooster thrift's president. "But they are relatively tough transactions to get done."

Nevertheless, 155 merger conversions have taken place since 1988, all of them involving thrifts under $1 billion of assets, according to Securities Data Co.

The majority of the deals were done in 1990, when 92 were completed. Since then, merger conversions have averaged about 12 each year, with 10 done so far this year.

Part of the recent reluctance of mutual thrifts to enter into merger conversions can be explained by the bullish market for thrift stocks in recent years.

"Thrift stocks jump considerably in price immediately after going public, and a mutual forgoes that opportunity in a merger conversion," said Mr. Downs at Ryan Beck. By converting to stock when demand is high for thrift shares, management and shareholders of mutuals are often richly rewarded.

That also helps explain why during the bearish market of 1990 – when merger conversions peaked – only 37 thrifts converted to stock ownership. That compares with 55 in 1991, 69 in 1992, and a record 130 during 1987, according to Capital Resources Group Inc., Washington.

Looking for a Different Target

Robert Gerber, president of First Federal Savings Bank of Dover, would not comment on why the thrift pulled out of the merger. Mr. Clark said, "I think some outside parties got in there and got them looking at some other alternatives."

In the meantime, FirstFederal is scouring a five-county area looking for other small mutual thrifts or community banks that might be willing to sell. So far it has targeted about 12, Mr. Clark said.

Q: Are you selling or holding your fixed-rate mortgages?

JAMES F. DWINELL 3d
President
Cambridge Trust Co.
Cambridge, Mass.

Neither. We write only two-year adjustables, and we keep them all in-house. We don't charge any points, and we've done pretty well with them. We felt that we'd prefer flexibility to the guidelines for selling in the secondary market.

For example, we once issued a mortgage that represented 50% of the borrowers' income for the first year, and 30% the second. That's not a mortgage you could sell in the secondary market, but it was a risk we wanted take. If customers insist on a fixed mortgage, we try to help them find one. I have heard of a savings bank that holds its two-, five-, and seven-year fixed loans. □

RONALD F. KNIGHT
Executive vice president
Cavalry Banking
Murfreesboro, Tenn.

We sell all of our fixed-rate mortgages. The structure of the industry would have to change for us to start holding.

We have no fixed cost that extends out 15 or 30 years, and nothing whose costs are guaranteed that far out – and a match of assets and liabilities tells you you can't offset an expense that changes on a frequent basis.

We might package and hold some fixed-rate mortgages for not more than 30 days, but it's just to securitize and sell them at a later date. I can't conceive of anyone originating 15- or 30-year loans with the intent to hold them to maturity. □

CHARLES R. LUSK
President and CEO
Rossville (Ga.) Bank

We are holding the five-year balloners – maybe 3% or 4% of our portfolio – but that's about it. If someone wants a fixed-rate loan, I'm passing my interest rate risk on to someone else.

Some of the savings banks are starting to hold them, or at least while they see what interest rates do – though they're limiting them to a set dollar amount.

But I think they are traditionally more attuned to the home mortgage market. Most of the savings bank people in this part of country are former S&L people, and their mentality is just different from a commercial bank mentality. □

Banks Seen Holding More Fixed Loans

By PHIL ZAHODIAKIN

Banks insist that they are selling their fixed-rate mortgages in the secondary market, but some experts aren't so sure.

"I'm sure quite a few banks are holding them to maturity. Mortgage investments at banks have increased dramatically over the last few years, adjustable-rate mortgages have lost popularity, so banks are increasing their exposure to long-term fixed-rate mortgages."

The danger in holding fixed mortgages is that rising rates may increase a bank's funding costs much faster than its asset yields. In the early 1980s, hundreds of thrifts were crippled by just such a rate squeeze.

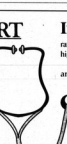
Certainly the numbers suggest that banks have favored fixed-rate loans over the years. Banks with fewer than $2 billion in assets hold three times the volume of fixed-rate loans as adjustable modes, according to Ferguson & Co., Irving, Tex.

Ron Gumz, senior vice president of Ferguson, says the volume of fixed mortgages held by banks with less than $2 billion of assets totaled $149 billion in 1992, an increase of $15 billion.

At the same time, Mr. Gumz adds, the number of adjustable-rate mortgages issued in 1992 increased $8 billion, to a total of $58 billion. □

HIGH YIELD REPORT

lets you *hear the heartbeat and feel the pulse* of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt



IN AN AGE OF DRAMATICALLY declining long-term interest rates, the *American Banker*'s weekly *High Yield Report* delivers money-making tips on high-yield investment opportunities.

This newsletter keeps a close eye on major court proceedings, and legislative and regulatory developments. Each issue features barometers of market size, bellwether pricing tables, a forward calendar, reports on filings, and the results of new-issue sales.

No longer considered the arena of "junk bonds," the high-yield market is rapidly gaining respectability as it is closely tracked by this objective, succinct weekly letter.

If you must know what's "ticking" in the heart of the high-yield market, HIGH YIELD REPORT is a must read every week.

Read it free for 4 weeks!

A Handful of Ideas to Keep Your Bank on Top of Its Game

Weekly Adviser

By PAUL NADLER

Community bankers sometimes make suggestions that really deserve to be shared with other bankers, but the ideas are not long enough to justify a whole column.

Therefore, this column marks the start of a suggestion box section to publish some of these valuable shorter hints.

Today's column will be devoted to such suggestions in the future, there will be one or two at the bottom of the regular column, provided there's room.

Naturally, any helpful hints you are willing to share will be welcomed for publication. You can send your ideas to the address at the bottom of this page.

2 Customer Calls per Employee

Why not develop a practice of having each contact person who deals directly with the public make two calls at the end of the day to thank the people who came in for giving the bank their business?

Most people report that these "warm calls," as opposed to "cold calls," are really appreciated, indicating to the customer that the banks know who they are.

Show the flag by giving every employee a pin with the bank's logo.

If you have five tellers and two platform people, that will mean 14 calls a day, 70 a week, over 3,500 a year (forgetting holidays).

It's a lot of good will for a small price in time and telephone charges.

Put a Calculator Next to Pens

Community bankers report that if an electronic calculator is firmly attached to the counter where people prepare their deposit slips in the bank, it is greatly appreciated.

In today's environment, it should be as routine an accessory as the ballpoint pen attached with a bead chain.

It shows the bank is up to date and thinks about what its customers need.

The price? Almost nothing.

Showing the Flag

The bank that develops a pin with its logo on it and expects all employees to wear it around towns gets a great deal of good will from this.

First, it demonstrates to all the stores, restaurants, and other places where the bankers spend money that the bank is an important economic force in town.

Second, it shows that the bank's employees have pride in their organization.

Consider having each bank employee who deals directly with the public make two calls at the end of the day to thank people for giving the bank their business.

Finally, a bank can introduce special pins as a way of recognizing longtime loyal employees. This could be a jeweled pin for bankers who have been on board a long time – maybe adding one jewel for each five years.

I remember when Fidelity Union in Newark, N.J., had its employees wear their bank pins during business hours. As I walked through town, it made its people and their bank special in my eyes.

Cartoon Diversions

Some banks have found that a TV screen showing silent cartoons is a great distraction on the drive-in line both for people waiting their turns and their children.

It wouldn't hurt to throw in a silent commercial for one or more of the bank's services, along with Bugs Bunny chasing the Roadrunner (beep beep) or Popeye eating spinach.

Want Ad in a Chess Magazine

If you are looking for a new employee whose work will require a lot in the way of analytical skills and you are afraid that most of the college grads you get are not up to the challenge, why not put an ad in a chess magazine?

Many bankers report that the type of person who enjoys being expert in chess has the type of brain that can handle the programming and other analytical work the bank needs to make its operations hum. □

United We Stand.

BANK UNITED
COMMONWEALTH
UNITED MORTGAGE
Houston,TX
$5 Billion

You can accomplish great things when you're United. Bank United of Texas FSB certainly proved it with their recent $5 billion deal with Fannie Mae.

The fact that Bank United is dedicated to the people they do business with is reflected not only in their relationship with Fannie Mae, but with the thousands of people across the country who couldn't finance homes without their help.

We admire your hard work, Bank United, and we're proud you've chosen Fannie Mae as your secondary market partner. So keep up the good work. Thousands of homeowners join us in a United thanks.

FannieMae

Guru Has 2 Words for Bankers: Mutual Funds

By KEITH DuBAY

Bank consultant William Wyman says he gives all his clients the same advice about mutual funds: Get into them.

Find a way to make them profitable, either by managing, servicing, or selling them, he says. Retaining a customer relationship is worth the effort.

Though naysayers maintain the bank mutual fund boom is a fad prompted by a raging bull market, the managing partner of Oliver, Wyman & Co. in New York scoffs at the suggestion.

'Better Provide Options'

"Look, banks, this isn't a temporary trend," he says. "You had better provide options for your customer."

If banks don't heed change, Mr. Wyman says, they will lose their customers to other providers of financial services, such as mutual fund companies.

Mr. Wyman's views have considerable heft. The firm he founded in 1984 is one of the world's leading bank consulting practices, with a staff of more than 100. And Mr. Wyman, 65, is a widely respected guru of bank strategy, with 28 years' experience in the industry.

In a recent telephone interview, Mr. Wyman said that an array of social and economic forces is helping to change traditional savers into investors.

Among them:

• The fear that pension and social security benefits won't be paid as promised. To ensure that their savings can cover their needs in retirement, consumers increasingly are seeking the higher returns afforded by mutual funds, Mr. Wyman said.

Banks should get into selling mutual funds, annuities, and other investment products because even a stock market crash won't deter consumers from mutual funds, he contended.

"The operative statement is this country is moving from an environment of borrowers and depositors to issuers and investors," Mr. Wyman said.

• Consumers are frightened by the prospect of higher taxes and unstable real estate values.

These changes are pushing people into mutual funds.

'A Continued Drain'

"The implication is the individual will push much harder to get a higher return," Mr. Wyman said. "It means there will be a continued drain from deposits into higher-yielding instruments."

Mutual funds are gaining popularity over federally insured bank deposits, and not just because of the low yields on certificates of deposit, he maintained.

"The facts are, it's not that much safer to invest in a CD," Mr. Wyman said."

Regulation a Factor

He challenges the notion that banks and mutual funds are at cross-purposes, that the bank is chiefly a depository institution and not a provider of investments. He said that contention is put out by mutual fund officials who don't want government regulation.

It's easier for a mutual fund to offer bank services than it is for regulation-strapped banks to offer mutual funds, he said.

As a result, some banks will compete aggressively in mutual funds, but others will ignore them and concentrate on payment processing, mortgage lending, and credit cards – fields in which they excel.

Are banks getting into the mutual fund business too late to really benefit?

'It's Never too Late'

"In some senses, it's pretty late," Mr. Wyman said. "In the customer's mind, it's institutions like Fidelity Investments that are established as a mutual fund. But it's never too late if you're smart or aggressive enough."

All this doesn't mean that it's a simple matter of offering mutual funds. Mr. Wyman recognizes that selling mutual funds for a one-time commission doesn't provide the kind of income a bank can realize from taking low-interest deposits and making higher-interest loans.

"Mutual funds are clearly less profitable," he said. "But the CDs banks are losing tend to be the shorter maturity CDs that are not profitable in the first place. Even if mutual funds reduce profitability, to some extent they are retaining customer relationships." □

William Wyman
"This isn't a temporary trend"

Midwest Bank Groups in Deal with TRW

By STEPHEN KREEGE

Hoping to offset big banks' credit card advantages, seven midwestern banking associations have reached a pact with TRW Information Services to get group rates on consumer credit reports.

Normally, community banks cannot keep up with the investments in information and technology that big card issuers use to find new prospects in the nearly saturated card market.

The TRW program "is not the full step up to what the big banks have, but it does help [smaller] banks become more efficient and have higher confidence in their [credit] decisions," said Michael Van Buskirk, executive vice president of the Ohio Bankers Association.

$1.30 a Report Versus $3

Mr. Van Buskirk is a former TRW executive. His association is being joined in the TRW program by those of Illinois, Michigan, Indiana, Kentucky, Wisconsin, and Minnesota.

Under their three-year contract, a TRW credit report that might have cost a member bank $3 can be purchased for about $1.30. "It's comparable to the price a Citicorp would pay," Mr. Van Buskirk said.

In addition to the lower price on the reports, which are used to evaluate many kinds of consumer loans, Mr. Van Buskirk said the members will gain access to TRW's national data base. That will help them to evaluate the potential profitability of credit card offers, he said.

Big banks have data in their nationwide card portfolios to build reliable predictive models of customer creditworthiness.

Even though they will have access to TRW's national data, the smaller banks would still lack some of the big banks' flexibility, Mr. Van Buskirk said.

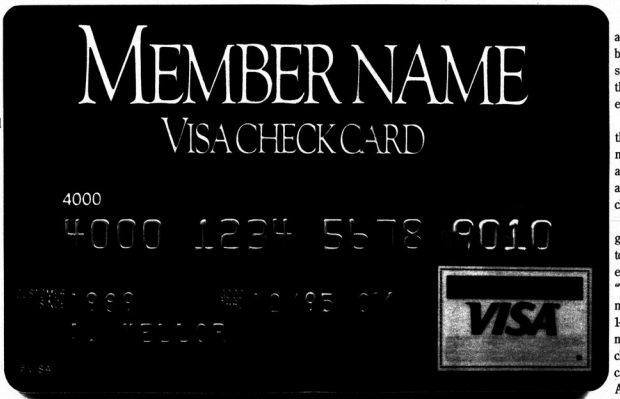
Seminars Under Way

He said they will not be able to challenge industry giants like Citicorp, nor would they want to. But the program will improve smaller players' effectiveness in offering a credit card to round out their relationships and build loyalty with local customers, the Ohio executive said.

Ohio and Illinois, with 254 and 872 banks respectively, have already kicked off their programs with seminars led by TRW officials. The other associations are expected to follow shortly.

In a bidding process, TRW's price was deemed superior to that offered by its rival, Equifax Inc., which offers similar group benefits through an affiliate to members of the Independent Bankers Association of America. □

Your customers will soon be convinced that this is a checkbook.



Let us explain. You see, while the banking industry has recognized the potential of debit cards, your customers are not necessarily familiar with their benefits. So to make sure they fully understand what debit cards offer them, we've taken a couple of important steps.

First, we've changed the name of the Visa® debit card to the Visa® check card. Now, from the name alone, consumers will have a better idea of what the card is and how it works at the point of sale.

And second, we're introducing "The New Shape of Checking," a comprehensive nationwide consumer education initiative. Simply put, this program is designed to help you educate your customers about the what, where, why and how of the Visa check card and Interlink® service.

A blend of public relations and promotional efforts, the program will feature a consumer handbook on responsible use of the Visa check card and Interlink, new modules of our Choices and Decisions educational materials which focus on Visa check card and Interlink, and consumer advocacy forums to advance consumers' awareness and understanding of how these services work.

We're also helping members educate their customers on a local level.

To achieve that goal, we've created "The New Shape of Checking" member kit.

Included in the kit are an 18-month marketing support schedule, sample consumer advertising materials, a program brochure, in-branch promotional support and a video explaining the Visa check card and Interlink educational programs.

When your customers discover through this program how convenient Visa check card and Interlink are to use, they will seem as simple and indispensable as the common checkbook.

So, to help get your customers interested, order "The New Shape of Checking" member kit today—just call 1-800-VISA-311. Or, for more information on how to become a Visa check card or Interlink issuer, call your Visa Member Relations Account Executive at 703-827-8404 in McLean, Virginia, or at 415-570-2120 in San Mateo, California.

Either way, take advantage of "The New Shape of Checking" program. Both you and your customers will find it very convincing.

First USA Boosts Yearly Dividend 30%, to 13 Cents

By JEFFREY KUTLER

First USA Inc., the parent of First USA Bank of Delaware, announced a 3 cent, or 30%, increase in its annual dividend, to 13 cents a share.

Reflecting the new rate, a 3.25-cent quarterly dividend will be paid Aug. 12 to shareholders of record on Aug. 2.

First USA reported last week that it earned a record $12.9 million, or 47 cents a share, in its fourth fiscal quarter, which ended June 30. Net income for the fiscal year rose to $39.2 million, or $1.46 a share, from $17.2 million. Per-share earnings rose 104% in the quarter and 143% for the year.

Felt Some Pressure

As a credit card specialist, First USA is one of the bellwethers of industry profitability.

The bank felt some of the pressure that analysts say has begun to creep in, increasing its loss reserve and seeing the net interest margin fall by 30 basis points in the latest quarter. But for the fiscal year, the margin improved to 8.09% from 7.21%.

John C. Tolleson, chairman and chief executive officer, cited a 61% fiscal-year growth in managed credit card loans, including those in securitized portfolios; increases in cardholder and merchant volume; and a decline in the delinquency rate to 2.81% from 3.88% on June 30, 1992.

First USA opened 513,628 new accounts in its fourth fiscal quarter, almost equaling the 570,098 opened in all of fiscal 1992. The new-account total in fiscal 1993 doubled to 1.16 million.

First USA Inc.'s annual return on assets was 1.41% and return on equity 22.78%, while its bank earned 2.93% and 35.77%. Yet income continues to be depressed by amortization of goodwill resulting from the buyout of First USA in 1989.

Banks' Portfolios Of Home Loans Grew 7.5% in 12 Months

By EDWARD KULKOSKY

Commercial banks appear to have been working hard to build their home-loan portfolios.

Despite heavy prepayments tied to the refinancing boom, the industry increased its holdings of single-family mortgages by 7.5% in the year through March 31.

The portfolios of the 65 largest lenders climbed by about 22%, though much of that gain was attributable to mergers. (See accompanying table.)

San Francisco's Bank of America, for example, showed growth of 43% because of its merger with Security Pacific. For the year to June 30, with the merger no longer a factor, the bank showed a decline in its portfolio holdings of about 1%.

Shift Away from Fixed Rates

The banks showed slightly less willingness to add fixed-rate mortgages to their holdings, even though such loans are much in demand by consumers. Adjustables constituted about half their portfolios as of March 30, against about 46% a year earlier.

"Several things are going on," said Alden Toevs, a managing vice president at First Manhattan Consulting Group.

"There's been some return of loan demand. But mostly, the banks are looking for a place to park money until customers come back and start asking for product. They are looking for yield and will accept prepayment risk to get it."

Mr. Toevs sees the buildup of bank portfolios as short-lived and expects a turnabout tied to accounting considerations. "Things are ripe for a major sell-off of bank mortgage assets once interest rates rise," he says.

As of next year, banks will be required to value assets that are held for sale at market, he points out. They have had a considerable cushion of value on the older portions of their fixed-rate portfolios because the decline in interest rates has increased the market value of the mortgages held.

But the newer fixed mortgages are diluting that cushion, and a rise in rates would erode it even further. And the banks, fearful of having to mark down their portfolios, would likely begin to sell off their fixed-rate holdings.

"Once interest rates rise, there's a steamroller effect of major proportions," Mr. Toevs says.

Some of the top 65 lenders, meanwhile, continued to hold high percentages of fixed-rate loans. Prominent among them were Chemical Bank, about 70%; NationsBank Texas and Wells Fargo, both about 74%; Comerica, 80%; and NationsBank California, about 94%.

The same banks, though, had relatively small portions of assets in home loans, so their exposure to rate risk is limited. □

Home Loan Bank to Aid Flood Victims

The Federal Home Loan Bank of Des Moines said it has set aside $100 million for low-interest loans to lenders in the flood-ravaged Midwest.

The loans, priced at the bank's cost of funds, are meant to help finance repairs of both residential and commercial properties. The funds will be available to member lenders until June 1994.

Separately, Moody's Investors Service said the flooding will have minimal impact on securities backed by mortgages in the area. Though thousands of homes have been damaged, relatively few have been destroyed, Moody's noted.

— Phil Roosevelt

Top Banks in Residential Mortgage Loans

Opportunity is Spelled LDC DEBT REPORT

Emerging Markets are risky, notoriously inefficient, known for changing rules and limited public disclosure. Knowing what's really going on spells the difference between opportunity and loss.

The *American Banker*'s weekly *LDC Debt Report* delivers the most accurate, objective, succinct information available on emerging-market debt. *LDC Debt Report* provides the astute investor with news, reviews, and strategic insights. The popular Market section summarizes each week's developments, quoting bid and offer prices for 26 developing-country loans and 18 emerging-market Eurobonds. It also tracks the performance of selected equity markets.

If you must know what's going on in key emerging markets, recent trading, economics and politics, the World Bank, and more, LDC DEBT REPORT is a must read every week.

Read it free for 4 weeks! Just fax your letterhead to 212-943-7852, or call Hans Winberg at 800-407-8241

EXECUTIVE *changes*

Bank Marketing Association Elects Premier's Biff Motley as President

L. Biff Motley, executive vice president of **Premier Bancshares,** Baton Rouge, La., is the newly elected president of the **Bank Marketing Association,** Washington.

Mr. Motley joined Premier in 1986 as senior vice president of marketing; he was later executive vice president of marketing and strategic planning. From 1982 to 1986, he was a partner in the Chicago consulting firm of Whittle, Hanks, Motley & Radon and was president of Financial Products Group.

L. Biff Motley

Phillip F. Hudson, executive vice president of **First Security Corp.,** Salt Lake City, will be president-elect of the trade association. **L. Leon Patterson** will continue as treasurer. He is chairman and chief executive officer of **Palmetto Bank,** Laurens, S.C.

Michael Riley is managing director of **Bank Marketing Group.**

Four members have been elected to serve three-year terms on the group's board. They are:

- **Jack David,** executive vice president and treasurer of the marketing division for **Seafirst Bank,** Seattle.
- **Wendy Godfrey,** vice president of marketing research at **Caliber Bank,** Phoenix.
- **Brad Iversen,** executive vice president of marketing for **Bank at NationsBank Corp.,** Charlotte, N.C.
- **Lori Teske,** vice president of marketing at **Andover Bank** in Andover, Mass.

Betty M. McDonald to Lead Credit Group

Betty M. McDonald is the 1993-94 chairman of the **National Association of Credit Management.**

She is manager, business credit information services, for **Bank of America Arizona** in Phoenix.

Betty M. McDonald

The trade group, based in Columbia, Md., represents 36,000 business credit executives in manufacturing, wholesale, service industries, and financial institutions.

Ms. McDonald has been a member of the group for 21 years. She was director of the western region from 1986 to 1989, national vice chairman from 1989 to 1992, and chairman of the strategic planning committee. She has also been chairman of the group's Phoenix affiliate.

— **Franklin Smith**

MIDDLE ATLANTIC

INSTITUTIONAL Group Information Corp., Great Neck, N.Y., has named **Andrew M. Vigasola** Sr. executive vice president and chief operating officer. He succeeds **Jeffrey Riback,** who has become senior vice president, national sales.

SOUTHEAST

NATIONAL Bank of South Carolina, Columbia, has named **Reginald D. Wilson Jr.** as executive vice president and trust department manager.

R. D. Wilson Jr.

Mr. Wilson was formerly regional manager for trust business development in Georgia for NationsBank.

He is a former vice president of C&S Trust Company South Carolina and a former personal financial officer at South Carolina Federal Savings Bank.

FRANKLIN Street Partners Inc., Chapel Hill, N.C., and **Susan T. Kaderabek** has joined the investment firm as an investment analyst.

SOUTHWEST

FIRST USA Bank, Wilmington, Del., has named **Rebecca Genna, Donna M. Higgins, Judy Ettinger-Klimoff,** and **Jerry L. Wilterding** as vice presidents.

Ms. Genna's responsibilities involve the bank's direct-mail efforts. Ms. Ettinger-Klimoff is the company's senior recruiting and career-development officer. Ms. Higgins has responsibilities in affinity-group marketing. Mr. Wilterding is responsible for quality assurance.

At First USA Bank, **Anton Blumberg, Steve Cavanaugh, Ann Conca, Cynthia Dumizo,** and **Debra Weyd** were promoted to assistant vice president.

Promoted to that rank at First USA Merchant Services Inc. were **Iselle Henderson, Deronda McGuire,** and **Sonya Pool.**

Ann Janssen was named an assistant vice president.

WEST

UNITED GUARANTY Residential Insurance Co., Greensboro, N.C., has named **Lisa Gomes** sales representative for the San Diego metropolitan area.

ROGERS & WELLS, an international law firm, said **Randolph H. Elkins** will head the firm's bank regulatory practice in its Los Angeles office.

He was formerly a partner in the law firm of McKenna & Fitting. □

OUR INTEREST IN THE ITALIAN MARKET STARTED 500 YEARS AGO.

We are a bank whose origins date back to 1497 and of course we are proud of our centuries of active presence in banking. But to be equal to our history and tradition, we are also aware of the continuous need for development and innovation.

Banco di Sicilia S.p.A. today operates as a diversified group, being in a position to offer, directly or through a network of associated companies, a wide range of banking products and financial services: from mortgage loans to leasing, from factoring to unit trusts, from banking to counter-trade transactions.

In particular, we operate through our network of over 700 branches in Italy and four branches abroad (London, Paris, Frankfurt, New York), plus a representative office (Singapore) and a wholly owned subsidiary (Banco di Sicilia International S.A., Luxembourg).

Through this network, we aim at providing comprehensive services to the business activity of foreign companies in Italy, as well as of Italian companies abroad.

Regulators Stepping Up to the Plate

OTS in First Place with Softball Season in Full Swing

Of all the games Washington banking regulators play, only one keeps them late, battling other bureaucrats.

It is softball.

And out on the diamond, the Office of Thrift Supervision's record is a grand slam compared with that of every other banking agency. The OTS coed team has racked up 13 wins and no losses this season, and the agency's men's team is 12-2.

The Inside Line

"We always whip the FDIC so bad that we just expect to beat them," said OTS men's team coach Dave Sjogren, program manager of corporate analysis. "We were a little disappointed that we only beat them 14-5 last time – we wanted to really drub them, but we had a bad game."

FDIC Strikes Out

But some would say the Federal Deposit Insurance Corp. team never had a sporting chance: It is second-to-last in *American Banker*'s rankings. The all-male team represents the FDIC division of supervision and so far this season it has no wins and 14 losses.

Only the Thrift Depositor Protection Oversight Board has teams all together. Within the FDIC, the lawyers have it hands down: The agency's legal division coed team is five and one for the season.

Take Me Out To the Ball Game

OCC Trounces Fed

Federal Reserve coach and financial analyst Don O'Mara confessed that for the first time, the Office of the Comptroller of the Currency has beat them – not just once, but twice. And that's too bad, he said, because "We enjoy beating the OCC just because they are a bunch of whiners."

The S&L trade group – Savings and Community Bankers of America – also fielded a team this year, and as usual, SCBA is complaining of being beat up by the regulators.

"Our team colors are black and blue," moaned coach Bob Schmernund, after a player broke his nose in the first game. His team is 1-2, losing in its first game to the RTC "by two touchdowns." Final score: 24-11.

The SCBA team is still trying to find a name for itself (since it doesn't want anyone to call it "scuba"). While "No Deposits No Returns" is high on the list, another of their leading candidate: "We thought 'SAIF Sex in the BIF' covered all the bases," Mr. Schmernund said.

— Robyn Meredith

To be fair, the FDIC has six a worse record: 15 losses, no wins.

"We almost beat the Fed," offers Oversight Board coach Lisa Minard, an advisory board specialist for the agency.

To be fair, the FDIC has six

The OCC's New Guidelines On Investment Product Sales

The Office of the Comptroller of the Currency issued guidelines last week for banks selling retail nondeposit investment products, such as mutual funds and annuities. Excerpts follow.

Banks should adopt a statement describing the features of the sales program, the roles of bank employees, and the roles of third-party entities.

Bank management must monitor compliance by other entities on an ongoing basis. The degree of bank management's involvement should be dictated by the nature and extent of nondeposit investment product sales, the effectiveness of consumer protection systems, and customers' responses.

The bank should adopt policies governing the permissible uses of bank customer information in connection with a bank-related retail investment sales activity.

Banks should market nondeposit products in a manner that does not mislead or confuse customers as to the nature of the products or the risks. To the extent permitted by space and personnel considerations, bank management should take steps to separate the retail deposit-taking and the retail nondeposit sales functions.

Verbatim

Banks should prohibit tellers from offering investment advice.

No Use of Bank's Name

In addition, banks may not offer uninsured retail investment products with a product name identical to the bank's name. Banks also should recognize that the potential for customer confusion may be increased where the bank uses product names that are similar to the bank's own and should design their sales training to minimize this risk.

Conspicuous Disclosures

Complete and accurate disclosure must be provided to avoid customer confusion as to whether a bank-related product is an investment product or an insured bank deposit. Product disclosures should be made conspicuously and should include the fact that the products are not FDIC insured; are not obligations of the bank; are not guaranteed by the bank, and involve investment risks, including the possible loss of principal.

The OCC believes it is appropriate to obtain a signed statement acknowledging such disclosures from a customer at the time a retail nondeposit investment account is opened. □

THE WEEK *ahead*

MONDAY, JULY 26

Kansans Visit: Kansas Bankers Association members arrive in Washington for their annual visit with lawmakers and regulators.

TUESDAY, JULY 27

FDIC Meets: The Federal Deposit Insurance Corp. board is expected to meet, though its agenda had not been set by late last week. The meeting starts at 10 a.m. at the agency's headquarters, 550 17th St. NW. Call 202-898-3813.

S&L Expansion: The National Commission on Financial Institution Reform, Recovery, and Enforcement is scheduled to release its long-awaited report on the rise and hows of the thrift crisis. National Press Club, 529 14th St. NW, 9:30 a.m. Call Bob Witeck at 202-944-5130.

Mortgage Insurance: The House Banking subcommittee on housing and community development will hold an oversight hearing on the Federal Housing Administration's Mutual Mortgage Insurance Fund.

The hearing will focus on the soundness of the fund and recent audits of the program. Rayburn House Office Building, room 2128, 10 a.m. Call 202-225-7054.

WEDNESDAY, JULY 28

Community Development: The House Banking Committee holds the second in a series of two hearings on President Clinton's plan for community development financial institutions. Rayburn House Office Building, room 2128. Call 202-225-4247.

Insurance Discrimination: The House Energy and Commerce subcommittee on commerce, consumer protection, and competitiveness votes on legislation aimed at preventing discrimination in insurance sales. Call 202-226-3160.

THURSDAY, JULY 29

CRA: The House Banking subcommittee on consumer credit and insurance looks at the Community Reinvestment Act. Rayburn House Office Building, room 2128, 10 a.m. Call 202-225-8872.

FRIDAY, JULY 30

Speak Now: Comments are due on a proposal from the National Credit Union Administration to allow corporate credit unions more options in purchasing fidelity bond coverage. Call 202-682-9650. □

PEOPLE

Schumer Drafting Mutual Fund Legislation

The federal banking agencies have proposed guidelines for insured institutions that sell mutual funds, but **Rep. Charles E. Schumer**, D-N.Y., wants to go a step further and write those rules into law.

Rep. Schumer, an influential member of the banking committee, is drafting legislation that would codify the mutual fund rules.

An aide to Rep. Schumer said the lawmaker would largely follow the approach of the regulators, but with a few twists.

In the past, Mr. Schumer has expressed misgivings about bank sponsorship of investment products, and his rules are likely to be more restrictive than those offered by the banking agencies.

For one thing, Rep. Schumer does not agree with the Office of the Comptroller of the Currency that banks ought to be able to put their names on their mutual funds, as would be the case with NationsBank Corp. and NationsFund.

The regulations proposed by the Comptroller would permit the use of similar names, while those issued by the Federal Reserve would not. The Federal Deposit Insurance Corp. has not acted on the issue.

* * *

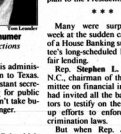
Jack DeVore, longtime aide to Treasury Secretary **Lloyd Bentsen,** is leaving his administration post to return to Texas. Mr. DeVore, the assistant secretary of the Treasury for public affairs, said he couldn't take bureaucratic life any longer.

* * *

The District of Columbia's banking regulator **Fe Morales Marks,** is President Clinton's choice to be deputy assistant Treasury Secretary for financial institutions policy.

* * *

Just 11 days after the President Clinton called on the regulators to reform the Community Reinvestment Act, the effort is well under way.



Tom Leander

Rep. Charles E. Schumer
Favors greater restrictions

Comptroller **Eugene A. Ludwig,** FDIC Chairman **Andrew C. Hove,** OTS Director **Jonathan Fiechter,** and Fed Governor **Lawrence B. Lindsey** met once last week and have scheduled a second meeting on the issue for today.

The four have agreed to meet weekly, on Mondays for now, to keep the effort rolling. They have until Jan. 1 to present their plan to the President.

* * *

Many were surprised last week at the sudden cancellation of a House Banking subcommittee's long-scheduled hearing on fair lending.

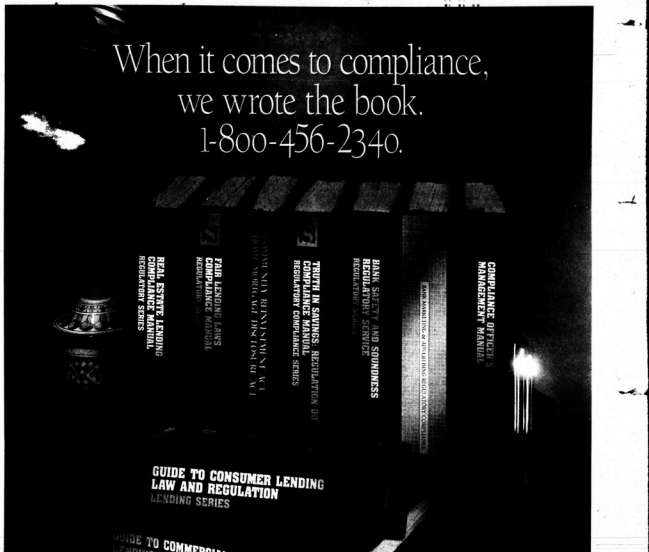
Rep. **Stephen L. Neal,** D-N.C., chairman of the subcommittee on financial institutions, had invited all the bank regulators to testify on their stepped-up efforts to enforce antidiscrimination laws.

But when Sen. **Joseph P. Kennedy 2d,** D-Mass., got wind of the event, he quickly put an end to it.

His subcommittee on consumer credit and insurance has jurisdiction over fair lending, and nothing is more carefully guarded on Capitol Hill than jurisdiction.

The Massachusetts lawmaker asked Rep. Neal to cancel the hearing, and North Carolinian acquiesced. □

When it comes to compliance, we wrote the book. 1-800-456-2340.



Compliance continues to be a critical issue. Staff comes and goes, rules are changing, and questions come up all the time.

You can make sure everyone in your bank has access to the latest compliance information, *in a format they can use and understand,* with "how to" manuals from Sheshunoff Information Services Inc., the compliance experts. And periodic Updates are available for all of them, so you and your staff can be sure you're doing things right no matter how often they change.

To get you started, we've put all the basics in one book:

- **Sheshunoff... Compliance Officer's Management:** This is the comprehensive overview of everything in the compliance area. We show you how to set up an effective compliance program, train your staff, and make sure it's working. Details on every consumer regulation including exemptions, requirements, and penalties are here. Plus, examples of compliance related items, assignment charts, sample forms and reports, and more. So be sure you've got every area covered, this is your guide. Then for more detail on specific compliance areas, your library includes manuals like:
- **Sheshunoff... CRA/HMDA Regulatory Compliance:** See how to structure an effective CRA/HMDA program, develop community outreach programs, document everything, train your staff, and audit your program to be sure it works. Includes copies of the regs in plain language and a review of a successful program.
- **Sheshunoff... Real Estate Lending Compliance:** Specifically designed to help you develop prudent lending standards that are appropriate for your bank.

Model policies let you pick and choose what you need, then easily adapt them. Guidelines for loan-to-value ratios are also provided.

You can order these and other Sheshunoff compliance manuals individually, or get the complete **Sheshunoff... Compliance Library** which also includes:

- Sheshunoff... Marketing & Advertising Regulatory Compliance.
- Sheshunoff... Bank Safety & Soundness Regulatory Compliance.
- Sheshunoff... Truth in Savings Compliance.
- Sheshunoff... Guide to Consumer Lending Law and Regulation.
- Sheshunoff... Guide to Commercial Lending Law, and
- Sheshunoff... Fair Lending Laws Compliance.

A Complete, Fully-Indexed Compliance Library Your Whole Staff Can Use.

Each manual includes a FULL INDEX for the library with the manual title, chapter, and page number where the reference can be found. So when anyone on your staff has a question, he or she can find the right answer quickly and easily.

The library is an annual service which provides periodic Updates for all these manuals as part of the price. So even if the regulations change, your staff can easily keep up and always have the latest information on hand.

To order single volumes, subscribe to the library, or get more information, call 1-800-456-2340.

Fed's Secrecy Under Scrutiny

Continued from page 1

of credit conditions.

It was not an easing, and the Fed later that day had to hustle to inform the market that it planned an offsetting move Monday.

"Everyone misinterpreted the move," said John Lonski, economist for Moody's Investors Service Inc. "Why not go ahead and explain actions to the public?"

A misreading of a Fed signal can be costly.

For the sophisticated trader or investor, it could mean a wrong hedge. For the average American, it could mean a lost investment or a hasty decision on a mortgage.

ECONOMIC OUTLOOK

The Fed does announce changes in the discount rate to the public, but the Fed's manipulation of its target for the funds rate amounts to a game of charades between the central bank and economists.

"Announcements on the federal funds rate would threaten the livelihoods of Fed watchers," Mr. Lonski quipped.

Sunlight in Germany

Curiously, even Germany's Bundesbank, hardly an open institution, announces changes in key money market rates as they are implemented.

Defenders of the system say the Fed needs to keep the public in the dark about its decisions temporarily to give itself flexibility and to maintain orderly markets.

Critics wonder what is gained by "sending signals."

"What we try to do is to create various different alternative paths that policy might take in the intermediate period, depending on certain events that could occur," Federal Reserve Board Chairman Alan Greenspan said at his Humphrey-Hawkins testimony before the House Banking Committee last week. "If we were to publish that immediately, the financial markets would respond and adjust to expectations of how we might or might not behave."

Charles Lieberman, economist at Chemical Securities Inc., endorsed the current setup, noting that it is part of a system that effectively insulates the Fed from political pressures. He noted that in most cases "it doesn't take a brain surgeon to figure that there might be a tightening of policy."

"The lag [in releasing FOMC minutes] gives the Fed room to maneuver and the ability to rethink its position," said Kathleen Stephansen , senior economist at Donaldson Lufkin & Jenrette Securities Corp.

But even some of the Fed's strongest backers blanch at one recent variation on the Fed's policy: leaking FOMC deliberations to some members of the press.

For example, both the *Wall Street Journal* and CNBC in May correctly reported the FOMC's decision that month to switch from an easing to an tightening mode. The CNBC report also correctly reported that two governors dissented — one who wanted an immediate tightening and the other who wanted to keep rates stable. Minutes of the meeting, released this month, confirmed the reports.

They should broadcast the information or say nothing," said Eugene Sherman, economist at M.A. Schapiro & Co. □

Community Lending Package Seen as Rival to Clinton's

Continued from page 1

munity Reinvestment Act.

It directs regulators to adopt a "performance-based" approach to CRA, a step President Clinton took when he announced his community development bank program.

Mixed Emotions?

Bankers are likely to have mixed feelings about the Flake initiative, which was introduced as a bill Thursday evening. Although industry representatives have argued that banks ought to be able to share in the financial incentives for community development, they are nervous about performance-based CRA standards.

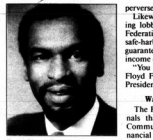
In addition, many have concerns about diverting deposit insurance premiums for social programs, even when – as in this case – the insurance fund is reimbursed.

But if bankers have mixed emotions about the bill, anti-poverty groups were adamant in their opposition.

"I'm somewhat appalled that there is a safe harbor in the bill," said Deepak Bhargava, a banking lobbyist for the Association of Community Organizations for Reform Now, or Acorn.

A Range of Criticism

"The only reason we need legislation like this is because mainstream banks have withdrawn from low-income communities," he said. "It would be perverse to reward them now."



Rep. Floyd Flake
Helps lead charge

Likewise, Chris Lewis, a banking lobbyist for the Consumer Federation of America, said the safe-harbor provision "would guarantee disinvestment" in low income communities.

"You have to wonder why Floyd Flake is abandoning the President," he added.

Way to Show Concern

The Flake-Leach bill also signals that the administration's Community Development Financial Institutions bill is likely to be opened up to other issues, despite the interest of the White House in keeping it "clean." That could work in the banking industry's favor.

"An awful lot of Democrats would like to vote for a 'regulatory burden' package as a vote to show concern about small business issues," said the ABA's Mr. Yingling.

That interest has been compounded by the reaction to the President's deficit reduction package. "The tax bill is seen by a lot of groups as anti-small business and the Democrats are being forced to vote for it," Mr. Yingling noted.

Other co-sponsors on the Flake-Leach bill are Rep. John J. LaFalce, D-N.Y.; Rep. Albert R. Wynn, D-Md.; Rep. Marge Roukema, R-N.J.; Rep. Richard Baker, R-La.; and Rep. Lucille Roysball-Allard, D-Calif. □

RTC Sets Auction Of Nonperformers

WASHINGTON — The Resolution Trust Corp. announced an auction of more than $600 million of nonperforming loans, to be held Aug. 24-25 in Kansas City.

The auction, the third in a nationwide series, will feature more than 14,000 loans in about 200 packages according to type of loan and geographic location.

The RTC, which is selling off the assets of failed thrifts, said the Kansas City auction is designed to encourage smaller investors with downsized, localized packages of loans. It also said it lowered the minimum deposit of bidders to $50,000 from $100,000.

The nonperforming loan packages are made up of mortgages on one-family to four-family residences, commercial real estate loans and consumer loans valued from $500,000 to $9 million.

The RTC also said it is conducting seminars around the country for potential auction participants. — Reuters

When it's this hot, you deserve extra scoops.

For many bankers, the thermometer is a lagging indicator of the heat they feel in handling current regulations and guessing the Clinton administration's next moves. But we've got a way to help you keep cool: *American Banker's Washington Watch.*

We broke the news about the plans by credit union trade associations to branch cross-country. We warned readers that the FDIC will crack down on banks and thrifts that aren't paying enough for insurance, and that the Fed was flirting with examination fees. We also uncovered plans that would let banks pay less for deposit insurance provided they set up certain special programs.

Those kinds of tasty scoops are the weekly fare at *American Banker's Washington Watch.* Within minutes, you get insights on regs and regulators—as well as your competitors—that could make the difference between profit and loss. We unconditionally guarantee it.

Student Loan Default Rate Fell to 17.5% in Fiscal '91

Reuters

WASHINGTON — The rate of borrowers defaulting on their school loans fell to 17.5% in fiscal year 1991 from 22.4% the previous year, the U.S. Department of Education said.

Assistant Education Secretary David Longanecker said the drop, to the lowest level since fiscal 1988, reflected improvements in program management and accountability.

"We believe this is probably due to the default initiative Congress took three to four years ago," he said at news conference.

Schools Dropped from Program

Congress in 1989 required the Department of Education to cut out of the federal guaranteed loan program schools where 30% or more of students defaulted in the past three years.

In 1989, 138 schools were cut off, followed by 80 in 1990. School default levels are now being calculated for 1991, the latest period for which data are available. That fiscal year ended Sept. 30, 1991.

Mr. Longanecker said the lower default rate is evidence that the government can administer a student loan program efficiently. Opponents of a current legislative proposal calling for direct student lending by the government have contended that the private sector would be more efficient.

The education department also reported that the taxpayer costs of loan defaults are declining. The Office of Management and Budget estimates it will pay out $2.5 billion to cover unpaid loans this fiscal year, down from $2.7 billion in 1992 and $3.6 billion in 1991.

Home Loan Bank Applauds Four Lenders

SEATTLE — Four banks and thrifts in the region were honored for their commitments to the community lending, the Federal Home Loan Bank of Seattle announced.

The lenders are Glacier Bank of Kalispell, Mont.; Sterling Savings Association of Spokane; West One Bank Oregon of Portland, and Zions First National Bank of Salt Lake City.

"These lenders are outstanding examples of what community-conscious financial institutions can accomplish in the area of affordable housing and community development," said James R. Hanlein, president and chief executive officer of the Seattle Home Loan Bank. "By cultivating public-private partnerships, they help leverage additional funds and bring organizations together to improve the quality of life for the citizens of their communities." □

Central Pa. Financial Freed from OTS Pact

SHAMOKIN, Pa. — Central Pennsylvania Financial Corp. said the Office of Thrift Supervision terminated the supervisory agreement under which the company had been operating.

The OTS also terminated the cease-and-desist order under which a subsidiary, Central Pennsylvania Savings Association, had been operating. The orders had been in place since December 1991.

Central Pennsylvania said the orders required the development or revision of numerous internal policies and procedures.

The OTS advised Central Pennsylvania Financial that its most recent examination showed continued compliance with the orders as well as an improved financial condition. □

FINANCE

CREDIT RATINGS

The rating agencies took the following actions last week:

H.F. Ahmanson & Co.: Moody's Investors Service Inc. confirmed senior debt at Baa2 and subordinated debt and preferred stock at Ba3. Long-term deposits of the subsidiary Home Savings of America were confirmed at A3.

Moody's said the action followed the company's sale of $1.2 billion in nonperforming single-family real estate assets last week to Bear, Stearns & Co. The sale resulted in write-downs and a $290 million loss at Ahmanson in the second quarter.

Banco Espanol de Credito: Thomson BankWatch assigned an A-plus rating to senior debt issued by this Spanish bank. The agency expects improved performance in the long term, though it will fight sharply last year, reflecting a reduction in asset sales.

In addition, the recession in Spain has caused nonperforming loans to rise. BankWatch said the company is in the midst of raising $1.1 billion in capital. The 7.8% of risk-adjusted assets at yearend.

Chase Manhattan Corp.: Fitch Investors Service Inc. assigned a BBB-plus rating to a new $200 million issue of 6.5% noncallable subordinated notes due Aug. 1, 2005. It described the credit trend as improving.

Fitch upgraded Chase in June, citing the sale of $740 million in equity and aggressive moves aimed at selling off commercial real estate.

Colonial National Bank USA: Thomson BankWatch assigned a BBB rating to a proposed $50 million issue of subordinated notes due in 2003. The credit-card bank, based in Wilmington, Del., is a unit of Advanta Corp.

BankWatch said the bank concentrates on direct-mail campaigns to market its single product: a no-fee gold card. It added that the bank has made progress in adding accounts, increasing loans, and improving asset quality.

Continental Bank Corp.: Fitch assigned a BBB-plus rating to the Chicago company's new $150 million issue of

Fitch affirmed its A rating on First Union's senior debt.

floating-rate Eurodollar due August 1998. It said Continental's operating strategy has boosted capital ratios and improved return on equity and assets.

Duff & Phelps Credit Rating Co. also assigned the notes its BBB-plus grade. Thomson DCRO said the issue is comparable debt at BBB-plus and subordinated debt at BBB.

Crestar Financial Corp.: Standard & Poor's Corp. revised its outlook on the Richmond company's position from stable. The BBB senior debt, BBB-minus subordinated debt, and BBB-plus preferred stock ratings were affirmed. It cited the company's "conservative financial profile" and improving asset quality.

First Union Corp.: Fitch affirmed senior debt at A. The North Carolina bank had been on review for possible downgrade since September 1992. It said cost savings from recent acquisitions will likely boost core profitability. Other strengths are good market share, a technological edge, and a conservative credit culture.

Fitch said it is concerned, though, about high nonperforming assets, low reserve coverage, increased leverage resulting from acquisitions, and an "organization size that threatens the basic nature of First Union's franchise."

First USA Bank: Thomson BankWatch assigned an A-minus rating to a proposed private placement of $150 million in 10-year subordinated debt. It said the Wilmington, Del., credit-card bank has benefited from growth in cards issued and loans outstanding as well as operating efficiencies and lower interest rates.

Riggs National Corp.: Moody's downgraded the Washington company to Ba1 from Baa3. It cited the company's "conservative financial profile" and improving asset quality.

The Washington-based company lost $73.2 million in the second quarter after a $61 million restructuring charge related to its British bank. Moody's also cut long-term deposits issued by Riggs National Bank of Washington to B3 from B1.

DEALS

Chemical Said to Lead Big Buyout

Continued from page 1

ronment of the 1980s, the buyout market does appear to be warming up, and financing seems readily available.

The junk bond market is on a roll, and banks have been turning to leveraged transactions in droves.

So far, most leveraged loans have been refinancings for companies that are taking advantage of today's low interest rates to replace high-cost buyout debt taken on in the 1980s.

Watched as an Indicator

The new Bass deal likely will be closely watched as an indicator of the bank loan market's ability to digest sizable new buyout loans, as opposed to refinancings of old deals.

Bankers suggest that more buyout loans are in the pipeline.

The final amount of the Bass deal is not known, but syndicators said it probably will be about $540 million, consisting of a term loan, revolver, and a bridge loan that will be replaced with an asset securitization.

Pricing is said to be 275 basis points over the London interbank offered rate.

In addition to the bank loans, other financing will include senior and subordinated notes.

Donaldson, Lufkin & Jenrette Securities Corp. is said to be underwriting at least one of the note issues.

Inviting Co-Agents

Chemical, meanwhile, is said to have invited about a dozen Bass relationship banks to participate as co-agents on the bank credit. The required commitment is $40 million.

The bank meeting will be held this week, a source said Friday. The syndicate is expected to be grouped in a new entity called Specialty Foods Corp. □

Washington Mutual's Net Up 72% in Quarter

Washington Mutual Savings Bank reported second-quarter net income of $45.6 million on Wednesday, up 72% from the same period a year ago and significantly above analysts' estimates.

The sharp rise in profits at the Seattle-based thrift followed the acquisition of hometown rival Pacific First Bank during the quarter. Washington Mutual, the Northwest's largest thrift at $14.4 billion of assets, said its results included a sharp rise in the operating earnings of its nonbanking subsidiaries.

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and up to 25 thrifts. Banks are ranked by size as measured by the market value of all common shares outstanding. As of the close of 1/3/89, the average price was assigned a value of $75.09 and, and for thrifts $244.20 and 82.98 Hi Le the moving average of these prices is used to calculate the index. The 52 Wk Hi and 52 Wk Lo columns show the highest and lowest prices reached in the four-quarter earnings per share adjusted for latest announced earnings. The ratio in each column is computed with less than four quarters of data. Mkt. to bookk: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Book value is adjusted for announced earnings and dividends. Last: The price at which the stock last traded. If no trades for the day, the bid and ask are used. Chg: Net change in the closing price from the previous day. Chg%: Percentage change in the closing price from the previous day. Footnotes: Stocks whose latest quarterly earnings have surged or plunged dramatically relative to price and two volume indicators: most shares traded and today's volume as a percentage of average daily volume. Stocks are not listed.

Data sources: SNL Securities, Charlottesville, Va. 804-977-1600, produced the tables; Financial News Network, Vienna, Va. provides 3:00, with the daily prices.

STOCKS: Banks Seen Vulnerable to Downturn in August

By RICHARD LAYNE

The stellar earnings reports released in the past two weeks failed to light a fire under bank stocks, leaving money managers worried about the sector's fate in August's doldrums.

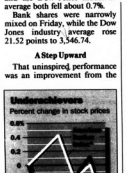
"Investors are skeptical about bank earnings," said Miles P.H. Seifert, chairman of Gray, Seifert & Co., New York money managers. "Many think that the earnings are interest related and have nothing to do with the operations of the banks."

In the five trading days that ended last Thursday, the *American Banker* index of bank stocks and the Dow Jones industrial average both fell about 0.7%.

Bank shares were narrowly mixed on Friday, while the Dow Jones industry average rose 21.52 points to 3,546.74.

A Step Upward

That uninspired performance was an improvement from the



previous week, when the first wave of earnings reports came out. Between July 12 and July 16, the *American Banker* index plunged 1.76%, while the blue-chip index inched up 0.2%.

Citicorp, NationsBank Corp., Bankers Trust New York Corp., and Chemical Banking Corp. were among the dozens of banks that last week reported earnings gains of at least 20% from a year earlier. That was a much better showing than most nonfinancial corporations, money managers said.

Federal Reserve Board Chairman Alan Greenspan's tough talk on interest rates last week nixed any chance for bank stocks to rise on the earnings. Mr. Greenspan, delivering his Humphrey-Hawkins testimony to Congress, indicated last week that a rise in short-term rates is in the cards.

Earlier Selloff Due to Rates

It was concern about rising rates that sent bank investors hurrying for the exit in mid-April. The prolonged selloff dragged bank stocks down an average of 15% in six weeks. Higher rates, many investors thought, would raise banks' cost of funds and cut into profits.

Mr. Seifert and others said earnings growth is sustainable even if interest rates rise modestly. Indeed, banks have been telling money managers that the third quarter should be good, too.

The level of nonperforming assets fell for most institutions last quarter. A handful went so far as to lower their quarterly contribution to loan-loss provisions. Some banks reported an uptick in lending for the first time in three years.

Damage Control

Last week's selloff was mild, compared with other recent periods. For the past five quarters, bank stocks have fallen sharply after earnings announcements. So far, bank shares appear to be

There is concern that earnings may drop if rates rise.

bucking that trend by holding the losses down.

Other sectors have been much more volatile recently. Investors have sold off consumer products companies, bashed pharmaceuticals, and decimated technology stocks.

"Bank stocks are an area of relative stability in a market that is unsure," said David Dreman of Dreman Value Management. "The earnings certainty seems to be higher."

But the August doldrums loom. One trader said that with no more good news expected for a while, bank shares may continue to drift down.

Broader Market Sluggish

The overall market doesn't appear lively, either.

"I think the market as a whole looks really tired and choppy," said Tucker Anderson, a principal with Cumberland Associates, a New York money management firm. "To expect banks to rally in the face of that is a tough call."

But money managers and analysts believe that bank stocks will rally again before the year ends.

"I think the banks will continue to do well, even if they don't do so immediately," Mr. Dreman said.

"The outlook is reasonably good for 10% earnings growth for some time, and you can't say that about many other industries." □

Unisys check imaging delivers the competitive magic of tomorrow. Today.

To picture the advantages of check imaging, picture the check imaging solutions Unisys already provides.

No one more effectively applies imaging technology to the mission-critical work of check processing. Our Unisys InfoImage IIPS system is an advanced, fully-featured solution that integrates readily with banking's computer environments, enabling you to protect your existing investment.

With a customer focus and decades of industry experience, we've designed check imaging to support not only an image statement application, but a truly comprehensive solution–including our breakthrough Proof of Deposit application and its substantial cost savings. Unisys check imaging even helps you create revenue-generating services such as payable-through drafts and account reconcilement.

Our fully-functional check imaging solutions are available today, not sometime down the road. And with two years of success, they're user-proven–bringing you the benefits of advanced technology, not the risks. Benefits we've already brought to banking leaders such as Comerica, Signet Bank, Huntington Banks, and others.

Call us at 1-800-874-8647, ext. 174. Ask how check imaging from Unisys can help improve your financial picture now.

UNISYS
We make it happen.

SEC Is Taking A Hard Line On Bank Funds

By KAREN TALLEY

Banks in the mutual fund business got a jolt recently when the Securities and Exchange Commission brought sanctions against Bank of California for mispricing a money market fund it manages.

The disciplinary action – believed to be the first ever against a bank-run mutual fund – provided unmistakable evidence that the SEC is holding banks to a high standard as they become more involved in managing mutual funds.

The SEC said the San Francisco bank failed to recognize a severe deterioration in the value of some bonds that it carried in a tax-exempt money market portfolio. Poor internal controls led to sloppy accounting, the SEC said.

The bank consented to a cease-and-desist order, but neither admitted nor denied wrongdoing. The bonds, with a face value of $1 million, dipped in price to $700,000, and the bank had to make up the difference.

Bank of California, like most of its peers, has not been managing mutual funds for very long. It launched its High Mark funds in 1987.

Wake-Up Call

"The lesson we learned from this, although it's not one we weren't aware of, is that the SEC takes compliance seriously and wants banks to know that," said C. Christine Stuart, a spokeswoman for Bank of California.

Industry experts said other banks should pay heed and learn from the episode.

Mistakes "can happen when you have a small, newer organization," said Avi Nachmany of Strategic Insight, a New York consulting firm. "There are a lot of things you have to do right, and there is room for errors."

But some bankers were reluctant to ascribe too much importance to the Bank of California case.

Safeguards in Place

"There's an awful lot of misconception that if there's ever going to be an antecident it will be at a bank," said Mark Williamson, senior vice president at NationsBank. "But the banks I know of are sophisticated and have layers of internal safeguards."

Nevertheless, the case shows that there are many ways a mutual fund manager can come un-

LATE NEWS

NationsBank Gets Nod

WASHINGTON — The Federal Reserve Board on Monday gave a NationsBank Corp. unit permission to underwrite and deal in debt and equity securities.

The company has told the Fed it would not use the new equity powers for one year.

The Fed also gave the unit, Nationsbanc Capital Markets, permission to participate in foreign exchange-related activities.

Banks Go Extra Mile to Give Minority Loans a Fair Shot

By CLAUDIA CUMMINS

Not long ago, bankers would demonstrate their commitment to minority lending by saying, "It takes one loan officer to accept a mortgage application and two to turn it down."

Now at some banks, it takes three, four, and sometimes even five separate reviews before a mortgage loan can be denied – especially if the application comes from a minority.

An Involved Process

Chemical Banking Corp.'s internal review policy demonstrates the lengths some banks have gone to make sure they are treating minority applications fairly.

Any mortgage loan that a Chemical underwriter wants to deny must be screened by a senior loan officer. If this second look confirms the denial and it's a minority or low-income application, it is sent to a special affordable-lending team that looks for a way to make the loan.

Once a month, a fair-lending committee of senior bank officials meets to review every application that has received a third turndown.

Finally, if Chemical still can't make the loan, the application is often bumped to an interbank mortgage review board, where it is examined by representatives of a dozen banks to see if one of

Calfed Posts $45 Million Loss, Ousts Top 2 Execs

By SAM ZUCKERMAN

SAN FRANCISCO — Jerry St. Dennis, the thrift executive who pulled California Federal Bank from the brink of failure last year, has been forced out as chairman.

The resignation, announced Monday, was effective immediately. The move was requested by California Federal's board, according to officials of the nation's sixth-largest thrift.

The departure came as California Federal, which has $15.9 billion of assets, reported a $45.5 million second-quarter loss. The thrift said this result reflected a continuing decline in Southern California residential real estate values.

Chief Executive Ousted, Too

California Federal's directors also requested the resignation of William L. Callender as president and chief executive. Mr. Callender, 60, will stay to manage operations until new leadership is installed this year, thrift officials said.

Michael W. Arthur, a Los Angeles management consultant who joined the board this year, will be interim chairman until a permanent chairman is hired.

Directors requested the resignations of the thrift's top two ex-

NEWS *briefs*

Firstfed Reports Profit of $8.3 Million

SANTA MONICA, Calif. — Firstfed Financial Corp., parent of First Federal Bank of California, reported net income of $8.3 million for the second quarter, reversing a $16.4 million loss in the previous period.

The $3.6 billion-asset company sharply reduced its loan-loss provision to $1.9 million, down from $44.1 million in the first quarter. "We decided to take a very conservative approach to loan-loss provisions during the first quarter, which allowed us to reduce our loan-loss provisions in the second quarter," said chief executive William S. Mortensen.

However, he added, "We are not out of the woods with loan problems in Southern California, and we will continue to closely monitor delinquencies and aggressively market any foreclosed properties."

In the second quarter of last year, Firstfed earned $8 million.

Centura of N.C. to Buy Robeson Savings

ROCKY MOUNT, N.C. — Centura Banks Inc. said it agreed to acquire Robeson Savings Bank Inc.

Shareholders of Robeson, based in Lumberton, N.C., will receive 0.844 share of Centura common stock for each common share. The merger is expected to be completed by yearend.

As of June 30, Robeson had assets of about $100 million and deposits of $90 million.

ASB to Run Independently of NationsBank

CHARLOTTE, N.C. — NationsBank Corp. said ASB Capital Management will continue to operate as an independent investment manager when the proposed merger between NationsBank and the Washington, D.C.-based firm's parent company, MNC Financial, closes later this year.

As reported, NationsBank exercised its right in February to acquire MNC financial under terms of a 1992 purchase-option agreement. The agreement gave NationsBank the right to acquire MNC based on a formula price, which has been calculated at $15.17 per MNC common share.

ASB Capital Management has $11.1 billion of assets.

PNC Unit Joins Cincinnati Home Loan Bank

CINCINNATI — The Federal Home Loan Bank of Cincinnati said PNC Bank of Ohio, a unit of PNC Bank Corp., Pittsburgh, has been approved for membership.

As a member stockholder of the home loan bank, PNC Bank will have access to a variety of customized credit products that promote the availability and affordability of housing finance and home ownership.

Key Bank Finishes Northwestern Acquisition

TACOMA, Wash. — Key Bank of Washington, a unit of Albany, N.Y.-based Keycorp, said it completed its acquisition of Northwestern National Bank. Total assets of the three-branch, Port Angeles, Wash.-based Northwestern are approximately $47 million.

Steps to acquire the bank were begun by the former Puget Sound Bancorp in 1991. The process was continued by Key Bank after completed its merger with Puget Sound Bancorp in January.

The Northwestern National branches, in Port Angeles, Forks, and Sequim, were to have opened for business on Friday as branches of Key Bank.

The briefs were compiled from staff and wire reports.

Regulators Urge House Leaders To Approve Funding for the RTC

By ROBYN MEREDITH and ROBERT M. GARSON

WASHINGTON — On the eve of a scheduled House floor vote, the heads of the four federal banking agencies mounted a new drive to persuade lawmakers to approve funding for failed savings and loans.

"Failure to provide timely funding for the RTC can only undermine confidence in the government's willingness to honor its most solemn promises," the four said, referring to the Resolution Trust Corp.

"Those promises backstop the safety and stability of our entire financial system, and provide incalculable benefits to millions of Americans not directly involved in the thrift cleanup."

Action Expected Today

The letter, signed by the heads of the Federal Reserve Board, the Federal Deposit Insurance Corp., the Office of Thrift Supervision, and the Office of the Comptroller of the Currency, was sent to House Speaker Thomas S. Foley, D-Wash., and Republican leader Robert Michel of Illinois.

The House Rules Committee, which serves as the gatekeeper to the House floor, is scheduled to take up the funding package today, with floor action following.

Although banking committee sources said last week they were confident the long-delayed vote would be held this week, the House leadership remains nervous about the vote count. A defeat would be seen as a setback for the Clinton administration.

Eugene A. Ludwig
Joins effort to sway vote

Another Warning

The bill approved by the House Banking Committee would free up $18.3 billion in previously authorized money for the RTC, and would make $16 billion available to the infant Savings Association Insurance Fund. However, the bill would set tough conditions for release of the SAIF funds.

Also Monday, thrift analyst Bert Ely warned that a failure to appropriate new money for failed thrifts would force regulators to impose what would amount to "a special, punitive tax on America's healthy thrifts."

A rate differential of at least 20 basis points, almost .25%, most likely will develop in 1997 when Bank Insurance Fund premium rates plunge to an average rate of 3 basis points or so, Ely wrote in a letter to House Banking Committee chairman Henry B. Gonzalez, D-Tex.

Avoiding Delays

In their letter to the House leaders, the bank regulators also said that a funding package would "avoid further costly delays in thrift resolutions, delays which have already saddled the American taxpayer with substantial and unnecessary extra costs."

The letters were signed by Fed chairman Alan Greenspan, acting FDIC chairman Andrew C. Hove, acting OTS director Jonathan L. Fiechter, and Comptroller of the Currency Eugene A. Ludwig.

Despite the industry's nervousness over SAIF funding, deputy Treasury Secretary Roger Altman said he was not concerned about the possibility that SAIF would not be fully funded and that, as a result, thrift insurance premiums could be significantly higher than banks' assessments in a few years.

He said he was "not aware of any plans" to merge the SAIF and the Bank Insurance Fund. □

B of A Taking On Clients' Back-Office Work

By JEANNE IIDA

As part of a broad wholesale banking overhaul, BankAmerica Corp. is testing software that gives corporate customers greater control over accounts, while shifting some of their back-office tasks to the bank.

By taking over some of its customers' back-office processing, BankAmerica seeks to bind its customers more closely. State Street Boston Corp. is another bank that is aggressively taking on some of its clients' back-office work.

BankAmerica is rolling out software based on Microsoft Corp.'s Windows operating system to customers of trade finance, custody, foreign exchange, and electronic data interchange services.

At the same time, it is redesigning its own back-office processes to give customers far greater access to information about the current status of their accounts.

Devoting Energy to Investing

The goal "is to let us take over [much of the processing] and apply our economies of scale to production environments, freeing up customers to focus on making investments," said Colin Klippen, executive vice president and manager of global payment services at BankAmerica.

The bank is overhauling its wholesale banking business.

The move is part of a Bank-America effort to revamp much of its wholesale bank. Two months ago, David Coulter, vice chairman of the wholesale bank, appointed Sherry Bartolucci, a senior vice president, to head an organization in charge of reengineering – or redesigning the workflow – of the wholesale bank.

As part of the effort, BankAmerica is rebuilding on a new trust and custody system, which will be used to integrate operations in London and in New York.

BankAmerica is expected to decide this week on a trust system. The company is evaluating whether to modify an existing system developed by Security Pacific Bank, which BankAmerica acquired in 1991, or to buy a new system from Premier Systems Inc., Wayne, Pa. It was software from Premier that was one of the causes of a systems debacle at the bank in the late 1980s. The project, which was abandoned, cost the bank at least $80 million.

Sources said they believe the bank will choose Premier.

In its cash management area, BankAmerica is rolling out new services, such as the ability to make payments via a Windows-based screen.

The bank also is testing some services with major customers, which it declined to name. One of the tests involves allowing a customer to send a payable file, which the bank would split into checks, automated clearing house items, and funds transfers. The company would define the conditions under which it wants the payment sent.

Another test involves coordinating the account management of customers by tying together all of a client's cash management accounts.

The systems will also act as a direct link into the bank's computers, where the Windows interface allows departments in the company to find out the status of transactions.

Mr. Klippen said that BankAmerica wants to automate much of customer service functions that currently take place over the telephone. This way, instead of having the customer call the bank with questions, the customer would be able to view the answer on a personal computer screen.

New Way to Link PCs

BankAmerica is also one of the first banking companies to test an early release of Microsoft Corp.'s newest operating system, Windows NT.

Windows NT, unlike previous PC operating systems, is designed to provide sophisticated network management and data security that typically was associated with mainframe software.

BankAmerica is using the operating system in conjunction with a unit that does business analysis and reporting for the wholesale bank, using software from Arbor Software Corp., Santa Clara, Calif.

The software from Arbor allows BankAmerica to extract customer information from the mainframe and analyze it on a spreadsheet program on a personal computer. Before BankAmerica installed Windows NT, the analysis software was stored on a mainframe, but now it runs on a network of personal computers, according to Kirk Cruikshank, vice president of marketing for Arbor. □

Courts Tearing Down The Barriers to Branching

THE McFADDEN ACT *has become so riddled with exceptions that it is no longer an effective barrier to interstate branching.*

The McFadden Act of 1927 was once thought of as an insurmountable barrier to interstate branching by national banks. The courts had construed the law strictly to prohibit branching across state lines.

National banks could not operate interstate offices that carried on the business of banking by accepting deposits or making loans.

Some have argued that these court decisions have resulted in market inefficiencies, placing banks at a competitive disadvantage against nonbanks that have no geographic constraints.

Although states have entered into regional, and in some cases national, compacts to permit interstate banking through subsidiaries of holding companies, the McFadden Act effectively blocked national banks, until recently, from full interstate branching.

Barriers Crumble

In recent years, courts have upheld decisions by the Office of the Comptroller of the Currency, with some exceptions, that break down these barriers to branching.

The McFadden Act has become so riddled with exceptions that it is no longer an effective barrier to interstate branching.

In the next several years, it is likely that the act will be further interpreted by regulators and courts to permit full interstate branching. Congress may accelerate the process by passing an interstate banking law.

These developments will certainly benefit large money-center and regional companies, such as NationsBank. The implications for community banks are less clear, but community banks, on their own or through networking arrangements (much like ATM alliances) with other banks, might also find advantages in interstate banking.

Gradual Changes

The process has been evolutionary, not revolutionary. In the 1960s, the OCC allowed a national bank to move its main office to a location where it could not have a branch under state law and establish a branch office at the old location.

In the 1970s, the OCC permitted national banks to establish loan production offices anywhere in the country, provided that they did not accept deposits or make loans at those offices.

At about the same time, banks were establishing automated teller machines where they could not have branches.

Although the courts held that these terminals met the definition of branches, and were therefore subject to the McFadden Act, they also held that if the terminals were owned or leased by a third party, including another bank, they were not branches.

Brokerage Offices

Thus we have ATMs that for all intents and purposes function as nationwide bank branch networks.

Several years ago, the Supreme Court ruled that national banks could operate securities brokerage offices anywhere in the country, because they did not constitute a "core banking function."

Meanwhile, the courts were upholding the Comptroller's decisions permitting national banks to branch within a state anywhere that thrifts could branch, even though state banks were not permitted to establish branches at these locations.

The Office of Thrift Supervision has permitted federally chartered thrifts to establish interstate branches. The 1982 Garn-St Germain Depository Institutions Act permitted national banks to acquire failed or failing thrifts and retain their interstate branches.

Under certain circumstances, the 1991 FDIC Improvement Act authorized national banks to acquire the branch networks of healthy thrifts.

New York and Utah have enacted laws permitting reciprocal interstate branching. Several other states have passed laws allowing state banks to merge with banks located in other states and then allowing the resulting bank to operate these offices as interstate branches.

The OCC has recently allowed a state bank with interstate branches to convert to a national bank and to retain its interstate branches, then for the national bank to merge with another national bank in another state and for the resulting bank to retain the branches of both of the banks.

Finally, last October, the OCC issued an interpretive letter that allowed a national bank in Illinois to use banking offices of affiliate banks of its holding company in Illinois to provide accommodation services. Those included depositing and withdrawing funds, even though under the McFadden Act it could be argued that the national bank was improperly operating branches in these affiliate bank locations.

A Sturdy Precedent

There will be further McFadden Act developments. The OCC seems likely to follow the Illinois ruling and permit accommodation services among affiliate banks of a holding company to take place interstate as well as intrastate. Such a ruling would, in effect, permit interstate offices of a holding company system to operate as branches.

Under the reasoning of the Illinois decision, there is also no legal impediment to allowing accommodation services among nonaffiliated banks, much like ATM network arrangements.

The bottom line is that brick-and-mortar offices of banks are no different in law than offices of other businesses or than other forms of modern communications, such as computer networks. The McFadden Act is dead; it has just not been buried. □

Letters to the Editor

Securitization Could Spur Small-Business Lending

To the Editor:

In her July 8 Comment ["Firms Won't Be Helped by Securitizing Lending," page 4], Anat Bird says securitization does not answer banks' needs, because banks want to keep small-business loans, not off-load them.

I suggest that this is too broad a generalization.

It is likely that some banks would be more inclined to expand small-business lending if on a regular basis they could off-load all or a substantial part of the credit risks involved.

Effect on Margins

That is, it is probable that some banks would prefer only to originate small-business loans, but not carry them as credit risks over the long term.

Ms. Bird also reasons that a market for securitized small-business loans could lead to shrinking lending margins for banks. But it should be remembered that legislative fiat will not produce such a market.

It will develop only if there is, in fact, a market for securitized small-business loans. If there is, the market for small-business lending will have become more perfect, resulting in lower borrowing costs for businesses. That is how the system is supposed to work.

Vice chairman
Republic National Bank of New York

Chicago Y's Inner-City Investment Paying High Returns

To the Editor:

Cole Taylor Bank's century old Woodlawn community in Chicago was indeed an important and welcome development. [See "Suburban Bank Places an Inner-City Bet," June 29, page 1.]

You may be interested to know that the initial community investment came from a more unlikely institution, at least in the financial parlance of risk and investment: the YMCA of Metropolitan Chicago.

In 1989 the YMCA opened an $11 million, full-service facility at 63d Street and Stony Island serving Woodlawn and surrounding communities.

A Creative Contribution

The YMCA has touched the lives of tens of thousands of youngsters and their families in a variety of creative and meaningful ways. In a human sense, we are generating an exceptionally high return on investment.

The South Side YMCA demonstrates daily that every neighborhood deserves and will support the institutions that make up the fabric of a successful community.

Jack Lund
Executive vice president
YMCA of Metropolitan Chicago

Some Banks Go the Extra Mile to Give Minority Loans a Fair Shot at Approval

Continued from *page 1*

them can approve it.

"We have really covered our bases," said Michael J. Burke, vice president of Chemical's affordable-mortgage program. "We have an absolute safety net, so if you are declined it is for perfectly good reasons."

While few lenders have internal reviews as extensive as Chemical's, a vast number have set up some sort of "second look" program for minority loans.

Senior bank officers or a committee made up of loan officers, compliance personnel, and, sometimes, even community members, meet to consider the proposed denials.

These internal groups examine applicants' credit histories and look for ways to make exceptions to their underwriting criteria.

Perhaps most importantly, they scrutinize the decision-making process to make sure they are not inadvertently denying minorities differently than whites.

The Human Element

In many ways, this second look turns the traditional loan review process on its head. Instead of looking for reasons to deny a loan, the second review process is about finding ways to approve it.

"We try to incorporate good sound lending practices but we try to add a human element to the process," said Regina G. Livers, community affairs officer for Fifth Third Bank in Cincinnati.

Officers at banks with internal review programs say that typically the programs allow them to make 10% to 30% of the loans they would have denied at first glance. And they say that, so far, these loans have performed just about as well as their conventional loans.

Half of Turndowns Salvaged

At Chemical, about 50% of the loans initially denied are approved, according to Mr. Burke. And in the year the bank has tracked a special pool of these loans – totaling about $18 million – they have performed almost perfectly, he added.

Many banks like Chemical supplement their internal programs with interbank review boards.

The granddaddy of these consortia, the Delaware Valley Mortgage Plan in Philadelphia, has been in existence since 1977 and includes eight lenders. Last year, the plan made $43.2 million in mortgage loans to 1,295 low-income and moderate-income families.

Model Program

The Delaware Valley plan has become a model for about a dozen other consortia around the country.

"Lenders benefit from that collaboration," said Mary Da Ivis, director of corporate community initiatives for Delaware Valley.

While most review boards focus on mortgages, some banks are applying the idea to business loans as well.

And Seafirst Corp.in Seattle doesn't just review denied small-business applications. The thrift regulators urged lenders to adopt internal second review systems for consumer, mortgage, and small- business loan applications.

"It's a fabulous idea," said Federal Reserve Board Governor Lawrence B. Lindsey. "I would urge all banks to begin some sort of internal review board."

Progress Seen

He points to the growth in second-look boards as a sign of the turnaround in the industry's attitude toward fair-lending issues.

"Think about what a change that is," Mr. Lindsey said. "People say nothing is being done. But just look at the internal reviews and how much that has changed in a year."

But public advocates remain somewhat skeptical.

"They represent some level of self-regulation in the industry, and that is a good idea," said Deepak Bhargava, legislative director for the Association of Community Organizations for Reform Now, or Acorn. "But my fear is that they are a tremendous diversion of resources."

Are Exceptions Uniform?

Even industry leaders concede that if not done properly, second-review plans have limited impact. For example, studies have shown that the vast majority of all mortgage applications have some problems.

This means that if internal reviews are limited to confirming that there is a good reason for denial, they will likely be able to find one.

Instead, many suggest, review boards need to focus on whether they are making exceptions uniformly.

Fed Recommendations

The Federal Reserve Bank of Boston, in its minority-lending guide, recommends including in all internal review plans acceptedapplications that do not meet stated loan policies. This way, lenders can make sure that they are making the same exceptions for both minorities and whites.

The Boston Fed also recommends reviewing even withdrawn applications, to make sure the applicants were not unequally counseled to withdraw.

In a talk to bankers last month, Eugene Ludwig, member of the Currency Steve Cross echoed this concern. In the past, he said, both examiners and bankers have overlooked some important comparisons.

Now examiners will more carefully compare not just minority and white denials, but minority denials and white approvals, he said.

"Before the examiner comes in, you should be doing the same kinds of things yourself," Mr. Cross said.

'Free Business Consulting'

"There is absolutely no charge [to applicants] so what you have is free business consulting," said Grani Pavolka, a vice president who runs the BankAmerica Corp. subsidiary's community business center. In just over a year, Seafirst referred 19 customers to the credit advocates and made 15 loans totaling $860 million, he said.

Bank regulators cheer second-look programs. In a letter sent to all banks this spring, bank and thrift regulators urged lenders to adopt internal second review systems for consumer, mortgage, and small- business loan applications.

"It's a fabulous idea," said Federal Reserve Board Governor Lawrence B. Lindsey. "I would urge all banks to begin some sort of internal review board."

Progress Seen

He points to the growth in second-look boards as a sign of the turnaround in the industry's attitude toward fair-lending issues.

"Think about what a change that is," Mr. Lindsey said. "People say nothing is being done. But just look at the internal reviews and how much that has changed in a year."

But public advocates remain somewhat skeptical.

"They represent some level of self-regulation in the industry, and that is a good idea," said Deepak Bhargava, legislative director for the Association of Community Organizations for Reform Now, or Acorn. "But my fear is that they are a tremendous diversion of resources."

Are Exceptions Uniform?

Even industry leaders concede that if not done properly, second-review plans have limited impact. For example, studies have shown that the vast majority of all mortgage applications have some problems.

This means that if internal reviews are limited to confirming that there is a good reason for denial, they will likely be able to find one.

Instead, many suggest, review boards need to focus on whether they are making exceptions uniformly.

Fed Recommendations

The Federal Reserve Bank of Boston, in its minority-lending guide, recommends including in all internal review plans accepted applications that do not meet stated loan policies. This way, lenders can make sure that they are making the same exceptions for both minorities and whites.

The Boston Fed also recommends reviewing even withdrawn applications, to make sure the applicants were not unequally counseled to withdraw.

In a talk to bankers last month, Eugene Ludwig, member of the Currency Steve Cross echoed this concern. In the past, he said, both examiners and bankers have overlooked some important comparisons.

Now examiners will more carefully compare not just minority and white denials, but minority denials and white approvals, he said.

"Before the examiner comes in, you should be doing the same kinds of things yourself," Mr. Cross said.

Wilmington to Buy a Bullion Dealer

WILMINGTON, Del. — Wilmington Trust Co. said it has reached an agreement to acquire the retail sales and service business of Sunshine Bullion Co., the Idaho-based precious metals company owned by Sunshine Mining Co.

The transaction, scheduled to be completed by July 30, will include Sunshine's custody service for retail gold and silver accounts.

Wilmington Trust, which operates one of the largest precious metals depositories in North America, expanded by buying the nationwide retail sales program of Citibank in 1990 and Bank of Delaware's depository business in 1992.

The Wilmington Trust Corp. subsidiary in 1987 became the first depository outside of New York City to be approved for precious metals storage by the New York Metals Exchange.

Wilmington Trust, with $4.1 billion of assets and $300 billion under trust, custodial, and investment management, said it earned $40.1 million in the first six months, an 8% increase from 1992 and equal to a 1.97% return on assets. □

Chicago's First National to Lead Refinancing

DES PLAINES, Ill. — Littelfuse Inc. said it has designated First National Bank of Chicago as lead bank and agent to refinance $94 million of debt.

James F. Brace, vice president, treasurer, and chief financial officer of Littelfuse, said the unsecured package will consist of a $45 million floating-rate private placement, a $25 million floating-rate bank term loan, and a $40 million floating-rate bank revolving loan. The borrower's costs will decline from current loans tied to the London interbank offered rate and the U.S. prime rate.

The fuse maker has retired $31 million of additional debt inherited early last year when it was spun off into an independent public company. □

Stagnant Economy, Weak Loan Demand Pinch in Louisiana

By KENNETH CLINE

Inside the Regions

DOWN ON THE BAYOU, the economic news is not good.

Loan demand in Louisiana is stagnant, and likely to remain that way for the next year or so, bankers and analysts said. That could put pressure on interest margins as banks with maturing investment portfolios find it hard to put their funds to work.

The Federal Reserve Bank of Atlanta recently summed up Louisiana's long-term prospects as "worrisome," noting that the state's economy "is not expected to match that of the region or the nation in the foreseeable future."

"You don't see the robust employment growth that leads to market growth," said R. Neil Williams, chief financial officer of Premier Bancorp, parent of the state's second-largest bank. "I would agree that loan demand is going to be pretty weak, certainly for the rest of this year and probably next year as well."

The outlook contrasts markedly with the mini-boom of 1990 and 1991, when Louisiana's economy, based on oil and gas, flourished while most of the country was sinking into recession.

But energy prices plummeted following the Gulf War. In the 12 months that ended March 30, nearly every metropolitan area in Louisiana suffered a significant drop in employment.

Louisiana's bank companies, like most around the nation, have been getting by because of low interest rates that have improved their spreads between funding and investing. They also have benefited from the interest-related surge in residential mortgage refinancings and a slight pick-up in consumer loans.

But core commercial lending business remains stagnant. First Commerce Corp. of New Orleans and Baton Rouge-based Premier, the healthiest of Louisiana's largest banks, reported asset growth of 3.1% and 5.6% respectively in the 12 months ending March 31. New Orleans-based Hibernia Corp. and Whitney Holding Corp., which are both still struggling with loan problems, registered double-digit declines.

Interest Rate Risk

Making the outlook still worse is the prospect of rising interest rates. Until now, the state's banks have been helped by some of the nation's lowest deposit costs. That created an average net interest margin for Louisiana banks of 4.68%, higher than in neighboring states.

But with little borrower demand, the banks will be hard pressed to maintain their margin advantage.

"Louisiana banks are a little more susceptible to getting their margins squeezed than banks elsewhere," said Peter W. Tuz said, a bank analyst at Morgan Keegan Inc. in Memphis.

Banking on Gambling

There is one bright spot in Louisiana: the tourism industry, primarily in New Orleans.

Plans to build the nation's largest casino in the Big Easy have fueled a revival in the city's commercial real estate market. Economists are predicting about $750 million of related construction over the next few years.

"There is a tremendous demand for infrastructure loans associated with gambling and casinos," said David B. Kelso, chief financial officer of First Commerce.

But the impact is not expected to extend much beyond New Orleans. And analysts contend that weak loan demand may mar the profit picture at most Louisiana banks for many months to come.

Calfed Posts Loss of $45 Million

Continued from page 1

ecutives at last Wednesday's board meeting and started a search for a new chief executive late last week.

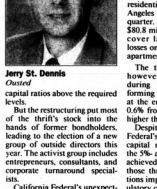
The decision to replace the top two officials was not due to the latest quarterly loss, California Federal officials said. Rather, they explained, directors want a more aggressive leadership style now that a federal takeover is no longer a threat.

"The feeling was that Jerry and I were spending so much time solving problems," Mr. Callender said. "They wanted somebody who would focus on the future."

Scott L. Adair, a former director familiar with the board's thinking, said board members did not "believe [Mr. St. Dennis] had a game plan going forward."

Ironically, Mr. St. Dennis' successful effort to recapitalize the thrift may have ultimately led to his dismissal.

Under a regulatory order to boost capital, the 51-year-old executive in the last year engineered a debt-for-equity swap, a preferred stock offering, and other measures that raised about $250 million – enough to lift



Jerry St. Dennis
Ousted

capital ratios above the required levels.

But the restructuring put most of the thrift's stock into the hands of former bondholders, leading to the election of a new group of outside directors this year. The activist group includes entrepreneurs, consultants, and corporate turnaround specialists.

California Federal's unexpected second-quarter loss followed two consecutive quarters of operating profits. For the first six months of 1993, the thrift lost $35 million.

As part of a capital plan approved last year, the thrift projected a 1993 profit of $42 million. But it warned that results hinged on a recovery of California's economy.

California Federal said the loss stemmed mainly from declines in the value of foreclosed residential property in the Los Angeles area during the second quarter. It was forced to add $80.8 million to loss reserves to cover larger-than-expected losses on the sale of houses and apartments.

The thrift's problem assets, however, declined modestly during the quarter. Nonperforming assets of $1.185 billion at the end of June were down 0.6% from March 31 but 4.1% higher than a year earlier.

Despite the loss, California Federal's core and risk-based capital ratios remained above the 5%- and 10%-of-assets ratios achieved this year. Reaching those thresholds ended restrictions imposed in the thrift's regulatory capital plan.

Mr. Callender declined to predict whether California Federal would return to profitability this year. But he said he was "hopeful" it would stay above the 5% and 10% capital levels. □

Shawmut Unit Sued in Bond Default

Reuters

HARTFORD, Conn. — Shawmut National Corp. has confirmed that its Shawmut Bank Connecticut subsidiary was named in a federal lawsuit filed in New York by purchasers of bonds issued by units of Towers Financial Corp.

Shawmut said the suit, which also names Duff & Phelps Credit Rating Co., seeks damages in an undetermined amount equal to the difference between the current value of the bonds and their face amount of about $200 million plus interest as well as punitive damages.

Premier Moving into New Orleans Market With Purchase of Ferruzzis' Alerion Corp.

By KENNETH CLINE

ATLANTA — Premier Bancorp, Louisiana's third largest bank company, said Monday it will gain a toehold in New Orleans by buying Alerion Corp. for $47 million in cash.

Alerion, a privately held company owned by the Ferruzzi family of Italy, has nine offices and $341 million of assets. The deal – valued at 138% of book value – is expected to close by yearend.

Analysts said the purchase price appears fair to both parties. The transaction also is believed to have the tacit approval of Banc One Corp., the Ohio-based superregional that has an option to purchase Premier by July 1995.

Other Targets Sought

Premier, which is based in Baton Rouge and has $3.8 billion of assets, has only one branch in New Orleans.

"We will continue to seek affiliations with other financial institutions in the area that would give us the opportunity to further broaden our New Orleans coverage," said Premier chairman and chief executive G. Lee Griffin, who on Monday relinquished his title as president of the company.

Banc One chairman John McCoy has publicly indicated a desire for a big presence in New Orleans, the state's great port city.

This has lead to speculation that he not only blessed the Alerion purchase but could be positioning himself for more. Alerion has less than 1% of total bank deposits in New Orleans.

Analysts are already speculating that Banc One would seek to buy one of the city's three biggest banks – First Commerce Corp., Hibernia Corp., or Whitney Holding Corp. – should it acquire Premier.

The deal is believed to have Banc One's tacit approval.

"I would bet that Banc One will purchase a big New Orleans bank within five years," said Peter W. Tuz, who follows southeastern banks for Memphis-based Morgan Keegan Inc.

A Banc One spokesman did not return calls for comment Monday. Connie Planche, a spokeswoman for Premier, said Banc One was made aware of the transaction but added, "We don't go to them for approval."

Premier and Alerion had confirmed earlier this year that they were in talks. Alerion, whose Italian owners are involved in a major business scandal, is a well-capitalized bank but has not been very profitable.

Its return on assets at the end of the first quarter was a slim 0.39%, while its Tier 1 capital ratio stood at a healthy 9.79%, according to Bloomberg Information Services Inc. Alerion's nonperforming loans equaled 2.52% of gross loans, slightly better than the average Louisiana bank's 2.64%.

Executive Promotions

In a related move, Premier announced a series of executive promotions on Monday.

Mr. Griffin ceded his post as president of the holding company to F. Walker Lockett Jr., who had been president of Premier Bank, the flagship subsidiary. Mr. Lockett also will be responsible for the newly created New Orleans banking group, the company said.

Mr. Lockett joined Premier from Charlotte-based NCNB Corp., now NationsBank Corp., in 1987.

His post as president of Premier Bank is being assumed by H. Brooks McElveen, who had been executive vice president in charge of statewide retail services. □

REGIONAL BANKING

Playing to Win in the Small-Business Lending Market

By JOHN COOK
President and CEO
Banco Corp., Dallas

The rush to small business is raising a dust cloud as big as a major cattle stampede.

If there is to be significant growth in the soft U.S. economy, it will be in this segment. If banks are able to grow their commercial portfolios, it will be from this segment.

Competition, however, will be intense. And as in any stampede, there is plenty of risk.

The small-business market calls for a carefully crafted strategy that maps the way to profit while keeping credit quality up and establishing a strong, pricing market position in the face of competitors.

As larger banks address this market they are confronted with three classes of competition.

The competition from small banks is serious but diffuse.

These banks are noted for their closeness to the customer and flexible credit standards. But despite these strengths, they have significant weaknesses.

Their lending capacity is limited, and the risk of any one deal may mean much more to them than to a larger bank. They also lack larger banks' variety of products, services, and delivery channels.

A smaller bank is not particularly likely to mount a specific counterattack – a challenge from a larger bank – especially if that challenge plays to the larger bank's strengths and to the smaller bank's weakness.

For the larger bank, the trick is to hit town with a program that reminds the small banker of Wal-Mart's arrival. The idea must be to change the competitive landscape forever.

Heavy Hitters

Competition from larger banks is more serious.

These banks have the financial and technological muscle to match products and marketing programs quickly.

Care must be taken if the major players in a market are to avoid beating each other's immediate profits to death while driving down portfolio credit quality.

A third area of competition is from nonbank lenders, such as Ford or Merrill Lynch.

These lenders approach the business differently. They have distribution systems that are sales'-oriented and underwriting and administration operations that are factories.

The cost for their entire delivery system is very low, giving them a significant advantage in pricing smaller transactions.

Better Service, Lower Cost

In the small-business market, a bank must develop its own twists and variations to make the sale and to build relationships. The process must be more customer responsive than the most successful competitor's. A key factor may be getting applications completed in less than 72 hours.

Credit risk management should be at least as good as in your best lending operation. This market provides an opportunity to manage risk, rather than just avoiding it. The answer lies between a credit process that you would use for credit cards and one used for large corporate deals.

Also, the cost to deliver your product should be lower than planned by your lowest-cost competitor. You simply cannot spend the same to make a $50,000 loan as you do for a $5,000,000 loan.

John Cook

Banking technology has changed more in the last four years than in the previous 20. Processes can be rethought and rebuilt so they are more closely aligned with the objectives and needs of both the customer and the bank.

Today's technology brings four key advantages to process and delivery systems:

- User interfaces that make it easy for line lender or relationship manager to work with a system.
- Portable computing, so work can be taken into the field.
- Easily accessible customer and relationship information.
- Location independence, so a bank can design its process with each element placed for maximum effect.

When designing a new delivery system, don't start with your old one. Start with the basic needs of the customer and the bank, and build a system to fit those needs like a glove.

Make the most of location independence. Optimize the use of your branch system and lenders for building customer relationships and sales. Structure centralized functions for marketing support, underwriting, and administration.

Insist that each element, whether central or in the field, contribute to your overall success in terms of cost of delivery, credit quality, and service. □

Comment

We'll save you money. We could save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division, to get every Monday the data you need to face the regulators.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... which agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 20% discount, so you'll be saving money even before you get the first issue. After that, how well you use the information before this year's exam could decide whether you're around next year.

Banks, Farmers Better Prepared to Ride Out Flooding

By ROBERT B. COX

PIPESTONE, Minn. — "That's another tool we never would have thought about before the crunch," Willys Kruisselbrink remarked to Robert Morgan of the First National Bank of Pipestone, who had come to survey the farmer's flooded soybean fields.

Mr. Kruisselbrink was pointing to the terminal on his kitchen counter that enables him to track the prices of futures contracts, and the "crunch" he referred to came between 1984 and 1989, when 304 farm banks failed and, nearly 100 farmers went bankrupt every day.

"We learned a lot in the '80s," said Mr. Morgan, the bank's president. "We have all become much better managers."

Balance Sheets Cleaned Up

Since the farm crisis of the 1980s, farm bankers across the nation have cleaned up their balance sheets. They have revamped the way they underwrite ag loans, and farm borrowers like Mr. Kruisselbrink have taken advantage of technology to lessen their risks of failure.

Ultimately, experts say this fundamental shift in the way bankers and farmers do business may help them weather the storms that have wreaked havoc on much of the upper Midwest.

"This crisis is not going to be a replay of the 1980s," said Neil Harl, economist at Iowa State University in Ames.

As the Midwest recovers from months of torrential rains and flooding, bankers are tallying up potential losses. Early estimates put the price tag for damaged crops at more than $2 billion.

Banks' Ranks Thinned

A decade ago, such losses would certainly have precipitated a rash of small-bank failures, as farms folded and financial institutions foreclosed on devalued property.

Pipestone was hit hard then: Five farmers committed suicide, and two local bankers were shot and killed by irate farmers after foreclosing on their land.

But ag banks, whose numbers have dwindled from 5,316 in 1980 to 3,971 last year, have reduced their exposure to nature's caprice.

Going into the 1980s, ag banks with less than $2 billion of assets had loan-to-deposit ratios as high as 60%, according to data provided by the economic research service of the Department of Agriculture. At the end of 1992 they hovered at 55%.

Increasing the Cushion

"There is nothing more apt to create a change in the way you do business than financial hardship, and farmers and ag bankers have had their share of that," said Clay Pederson, a vice president at the National Farmers Union.

By one measure of capital for which comparable figures are available, farm banks have increased their cushion against losses. Equity capital plus loan loss reserves totaled 8% percent of assets in 1980, compared with the current figure of more than 10%.

Farmers, too, have lowered their exposure to failure by borrowing less. Total farm debt has slipped from its high of $194 billion in 1984, to just $140 billion today, according to the agriculture department. Farmer debt-to-asset ratios at the end of 1992 were only 16.4%, the second-lowest level in 13 years.

But perhaps most importantly, bankers have transformed the way they make loans to farmers.

"Lending is no longer predicated on what a man is worth," said Ed Bouwman, ag-loan officer at First Farmers and Merchants National Bank, Luverne, Minn.

Bankers now make lending decisions based on a farmer's cash-flow analysis and ability to service debt. Today's farmers see themselves as small businessmen, equally able to milk a cow and crunch out financial statements on a computer.

"Our finances are no longer a few pieces of paper in a shoe box," said Mr. Kruisselbrink, the Pipestone farmer.

Indeed, Mr. Kruisselbrink and his wife, Eleanor, spend more than 10 hours a week on the farm's finances. She often logs full days fiddling with spreadsheets at the computer terminals of a nearby college.

"A decade ago we flew by the seats of our pants," said Mr. Kruisselbrink. "Now we have to come to the bank with our cash flow and prove we can make it work, otherwise they won't lend us any money."

In addition to revenue projections, many ag lenders require solid estimates of tax bills, interest payments, real estate taxes, operating costs, and even family living expenses.

Wants to Increase Reserves

"Before the crunch, what we were really doing was equity financing," said Mr. Morgan. "But when the farmer's net worth disappeared, so did ours."

The rains that have afflicted much of the western part of the Corn Belt have Mr. Morgan worried, however. The banker is asking his board of directors to double loan-loss reserves to $40,000 a month, as he expects from 10% to 20% of his farm customers to default on their loans.

"Make no mistake, for the people being hit this is a serious problem," said Mr. Harl, the economist.

In South Dakota and Minnesota alone, 20% of corn crops and 30% of soybean crops have been wiped out, according to Sung Won Sohn, chief economist at Norwest Corp., Minneapolis.

'A Total Disaster'

Many farmers in those areas will receive help from Uncle Sam, and some still have grain reserves that they can sell at prices much higher than last year's.

But for all their strength, it is unlikely that farmers in those areas could withstand another year of crippling rainfall.

"It's a total disaster," said Dennis Troseth, a Pipestone farmer who just two years ago was arranging the sale of 250,000 bushels of high quality corn to Japan.

Community bankers like Mr. Morgan say they will stick with their borrowers until they decide to quit farming, or until regulatory pressure forces the banks to foreclose.

"Regulation is a numbers game and sometimes we are forced to make decisions we wouldn't make otherwise," said Mr. Bouwman of First Farmers and Merchants in nearby Luverne.

Inevitably, the fortunes of many small towns across the farm belt rise and fall with the farm economy. Though some bankers have tried to diversify their portfolios, "in the end, it's all related to agriculture," said Ken Baker, president of Clarke County State Bank, Osceola, Iowa.

"We're going to bust our butts to get our farmers through," said James R. Thomson, president of First Midwest Bank, Centerville, S.D. "If we don't support each other, we'll both die on the vine." □

Robert B. Cox/American Banker

ROBERT MORGAN, right, has asked the board of First National Bank of Pipestone to double loan-loss reserves, as he expects up to 20% of farmers to default. Dennis Troseth lost 40% of his soybean crop.

THE LAST THING YOU NEED WITH A DO-IT-YOURSELF DATA PROCESSING SYSTEM IS A COMPANY THAT MAKES YOU DO IT YOURSELF.

Let's face it, it's nice to know you can rely on the knowledge and advice of data processing experts when you need it. That's why you should rely on a custom-oriented company like Peerless Systems. We enjoy helping people help themselves.

PEERLESS

COMMUNITY BANKING

For S. Dakota Bank, Troubles Are Rising

By ROBERT B. COX

VIBORG, S.D. — C.L. "Pete" Jensen steps over a puddle and looks out over a mile-wide "lake" whose surface is punctuated only by the roof of a barn and the tip of a grain silo.

"This is something I hope I never have to go through in my lifetime again," says the loan officer of Farmers State Bank. The water has dealt a crushing blow to one of the burly banker's borrowers.

Mr. Jensen's bank is in the center of one of the hardest-hit areas of the Corn Belt.

The fertile plains near here – where the borders of Minnesota, South Dakota, and Iowa meet – were among the first to experience the heavy rains that caused the Mississippi and its tributaries to overflow.

Impact Greatest?

Among the farm states experiencing crop losses, South Dakota may fare the worst, according to estimates prepared by Sung Won Sohn, chief economist at Norwest Corp., Minneapolis.

Agriculture accounts for a whopping 14% of the state's earned income, and 10% of personal income. That means that though the estimated dollar value of crop losses is higher for both Minnesota and Iowa, the impact on personal income is likely to be greater in South Dakota.

Mr. Sohn estimates that a $125 million loss of crops will translate into a 2% drop in South Dakota's personal income. Iowa, the next hardest hit state, may see a 1.5% decrease in personal income due to crop losses of $785 million.

A Businessman's Complaint

In Viborg (population 800), the economic consequences of crop damage will be higher. Every one of Main Street's small businesses, from the bank to the Kountry Kitchen luncheonette, quakes rises and falls with the fortunes of the town's farmers.

"There is always a program for the farmer, but there's nothing for the small businessman," complains Rodney Peterson, owner of Rod's Feed and Seed.

Most ag banks have lessened their exposure to crop losses by reducing their portfolios of loans to agricultural producers. Farmers State Bank, however, has about 90% of its portfolio invested in farm loans.

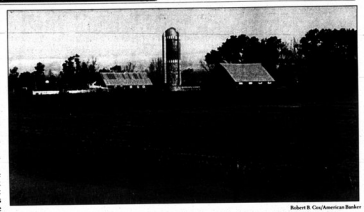
"Any bank is under severe stress if it has a high loan-to-deposit ratio, a large ag loan portfolio, and is in an area where 25% of the ground didn't get planted," said Ed Lotterman, an economist at the Minneapolis Federal Reserve Bank.

Farmers State Bank fits the bill.

But Mr. Jensen is confident that the bank can pull through difficult times with a little forbearance, some help from the government, and perhaps a few weeks of sunshine.

"Granted, before all this is over we'll know food assistance, fuel assistance, and other government programs real well."

Besides, says Mr. Jensen, the bank has no choice but to stick with most of its farm borrowers: "If we sell out a farmer, he is gone forever and there is no one to take his place." □



Robert B. Cox/American Banker

A BORROWER'S FIELDS went under, but C.L. Jensen is confident Farmers State Bank won't.

SEC Taking a Hard Line on Bank Funds

Continued from *page 1*

der fire. Even if banks market mutual funds carefully and choose investments wisely, they won't be spared criticism if they fail to follow accounting procedures.

"Some banks may be under the misapprehension that being an investment adviser to a mutual fund is basically a riskless business. That's not the case," said a securities lawyer, who requested anonymity.

Banks that lose credibility as mutual fund managers could lose customers, too. And they can look forward to the SEC taking a very keen interest in their mutual fund activities, especially when it comes to mistakes.

NEWS ANALYSIS

In accepting the SEC sanctions, Bank of California agreed to correct practices that violated the mutual fund pricing and accounting provisions of the Investment Company Act.

No fines were levied, though the SEC has the authority to assess civil penalties of up to $500,000 per violation.

Controls to Be Improved

To avoid repeat incidents, Bank of California promised to clean up its internal controls, which the SEC criticized as inadequate "in that they allowed the pricing problem to occur and remain undetected for a substantial period of time."

At issue was the bank's alleged mispricing of bonds issued by the Phoenix Industrial Redevelopment Authority and guaranteed by Mutual Benefit Life Insurance Co.

Bank of California's High Mark tax-exempt money market fund held $1 million of these bonds, which lost almost half of their market value in the summer of 1991, when the New Jersey insurer was taken over by state insurance regulators.

The bank failed to discover and correct the accounting mistake, although it had several opportunities to do so, according to the SEC.

Informed of Problems

Winsbury Co., Bank of California's mutual fund administrator, apprised the bank of Mutual Benefit's difficulties before the insurer was seized, the SEC said.

But the bank failed to flag that the Phoenix bonds in the money market fund were backed by Mutual Benefit. Consequently, it reported that it had no Mutual Benefit bonds on its hands.

The bank acknowledges this, saying the portfolio managers who looked into the matter were not the same ones who had been on board when the bonds were purchased.

Once the insurer was seized, the bank's fund accounting department received lower quotes for the bonds from an outside pricing service, but treated this information as a "transmission error," the SEC said.

The bank laid the blame for this error on an employee who, it said, overrode the pricing information and continued carrying the bonds at a higher value. The employee later quit the bank, a spokeswoman said.

The trouble was ultimately revealed when the bank's custody department requested pricing information while exploring the possibility of exercising the

Worries about errors

Mutual Fund Assets Increased in Week

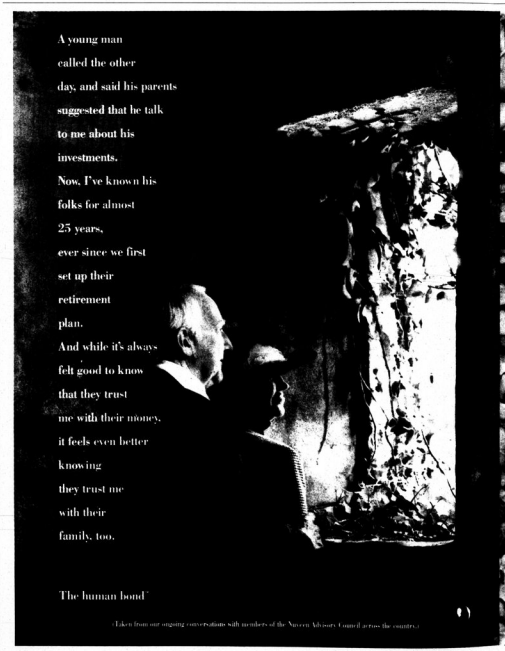
Reuters

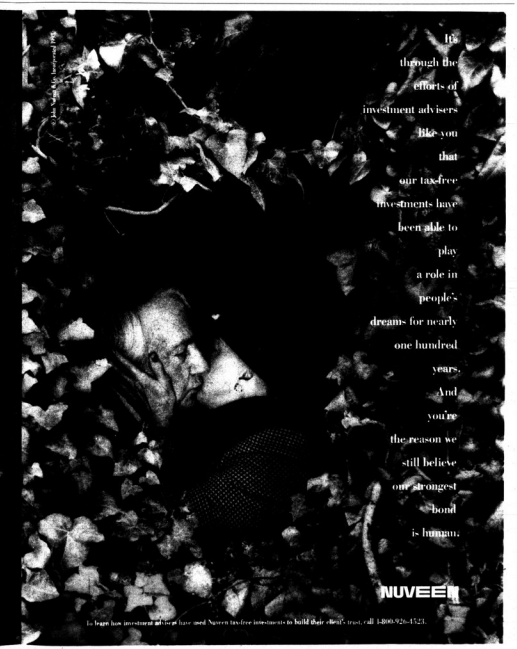
Assets of the nation's 642 retail money market mutual funds increased by $644.1 million, to $392.0 billion, for the week ended July 21, the Investment Company Institute said.

Assets of the 402 taxable money market funds in the retail category grew by $686.8 million, to $308.91 billion, while the assets of the 240 tax-exempt funds decreased by $42.7 million, to $83.09 billion.

Assets of the 267 institutional money market funds decreased by $4.33 billion, to $188.39 billion, for the same period.

Total money market mutual fund assets stood at $580.39 billion for the week.





SEC Taking Hard Line on Bank Funds

Continued from *page 10*

bonds' put feature.

Because the bank mispriced the bonds, shares in its tax-exempt money market fund were worth only 99.36 cents – not the $1 at which they were traded, the SEC said.

Price stability is paramount with money market funds. By industry convention, all money market funds trade at a $1 net asset value, instead of fluctuating as equity and bond funds do.

Because of this implied guarantee, money market funds are considered by many to be among the safest investments, on a par with certificates of deposit.

The net asset value of a money market fund is something banks cannot "break" with impunity, said Debra McGinty-Poteet, senior vice president and a director at Bank of America, which also has proprietary funds. "It's like motherhood and apple pie," she said. Break the $1 price and "investors would be out of there in a minute."

That's the last thing any bank, including Bank of California, would want.

In a statement, Bank of California said that it acted "immediately and appropriately" once the problem was discovered and that "no fund holder was harmed."

The bank reported the incident to the SEC and the Office of the Comptroller of the Currency. The OCC was satisfied with the SEC's involvement and took no actions of its own, an OCC spokesman said.

But banks can hardly expect the incident to be ignored. "This makes people question the fund industry, and they may shy away from the smaller players, including banks," said David Nadig of Cerulli Associates, a Boston consulting firm.

Mr. Nadig added that the incident could have industrywide ramifications. Even though a money market fund was involved, "mispricing of securities is an issue with every single fund," he said. □

Most Americans Aren't Saving for Retirement

John L. Steffens
Says "crisis" is worsening

By MICHAEL O'D. MOORE

More than half of American households with wage earners haven't saved a penny for retirement, according to a survey by Merrill Lynch & Co.

The brokerage house's fifth annual retirement planning survey found that 46% of preretirees (people 45 to 64 years old) and 35% of those 25 to 44 are saving for retirement.

"The crisis is getting to be worse," said John L. Steffens, who is executive vice president of Merrill Lynch's private client group.

Many middle-aged people say they don't, expect to get much out of Social Security, but "the fact is they are not doing much about it," Mr. Steffens added.

Women Less Prepared

Indeed, those who bother to save at all are setting aside less and less of their earnings for the future: from 14% in 1989 to just 8%.

The survey, conducted in January and February, encompassed 800 people, evenly split between the two age groups.

The survey also found that women are less prepared than men for retirement. They start planning later, earn less, and live longer.

Only 46% of women respondents said they started saving for retirement before the age of 40, compared to 67% of men.

More than men, women say they are saving for other goals, such as children's education, homes, cars, and travel.

In January, Merrill Lynch released a study of those in the 25-to-44 age group that found they are saving just one-third of the amount necessary to maintain their standards of living after retirement.

Lack of Focus

Americans must plan for the future, Mr. Steffens said. They should make better use of 401(k) plans and begin saving while they are younger to capitalize on the power of compounding interest.

The survey showed that 48% of the older group and 58% of the younger group believe they could save twice as much for retirement if they focused on the issue.

"I think people have just not thought about this," Mr. Steffens said. □

Bank of Boston Hires Three To Expand Private Banking

Bank of Boston has hired three staff members to expand private banking services in its Yarmouthport, Mass., office.

James L. Botsford was hired from Cape Cod Bank and Trust Co., Hyannis, Mass., to become assistant vice president-lending.

Felicia A. Holden, who had been a branch manager for Bank of Boston in Chatham, Mass., was named a mortgage specialist.

Robert P. Dinan, formerly a financial planner in Waltham, was named a vice president and private banker.

— **Michael O'D. Moore**

Interest rate risk has always been part of banking. Now, however, FAS 107, FDICIA 305, and other regulations make monitoring and managing this risk a key part of protecting your bank's capital.

The most basic part of this process is a sound model.

Quick Lesson #2: Interest Rate Risk Management

While most of the data you need is readily available, what you do with it is the crux. Modeling interest rate risk is highly specialized. Few firms have the necessary expertise to build such a model, let alone incorporate the specific data bankers need. And going from the model to data you can actually use without an expert at your side is another big step. RAF Financial Corp. pioneered the market-value approach to interest rate risk management. For 13 years they have helped banks to manage and monitor earnings and economic value in a changing rate environment. With Sheshunoff Information Services Inc., the leader in useable reports and analytical data tools for banks since 1971, they've developed a tool every bank can afford to use to comply with the new rules and improve the way you manage your interest rate risk.

Best of all, our automated reports are the most accurate, cost-effective way you can get the documented information you need.

FASB rules are effective now for banks over $150 million in assets. FDICIA rules take effect with the March 1994 call report. And everyone from auditors to regulators to your board wants to know where you stand now—before your capital is affected by the value of your assets and liabilities.

Don't let the complexity of the new requirements get you. Call the experts at 1-800-456-2340 today.

Bankers, Insurers Gird for Debate on FHA

By SNIGDHA PRAKASH

WASHINGTON — Mortgage bankers and mortgage insurers are expected to square off today over the future of the Federal Housing Administration's home loan insurance programs.

Mortgage banking companies, which originate most FHA loans, want to raise the size of loans eligible for the program and to roll back premiums.

But private insurers, which compete with the government fund, say they will resist any attempts to liberalize the program.

Each side is planning to make its case at a hearing before the House Banking Committee's housing subcommittee. The panel has oversight responsibilities for the FHA.

"There has been an endless debate between mortgage bankers and private mortgage insurers as to whether you need an FHA program, and if you do, how to define its business purpose and strategy," said Warren Lasko, executive vice president of the Mortgage Bankers Association of America.

FHA loans typically have lower down payments and are made to low- and moderate-income people. Lenders sell most of the loans into the secondary market, bundled as Government National Mortgage Association securities.

In evaluating the benefits and risks of the program, members of Congress can point to a new, upbeat report from Price Waterhouse. The accounting firm found that the strength of the insurance fund increased dramatically in fiscal 1992.

In the Black

The report says the "economic value" of the fund grew by $2 billion, to $1.4 billion. This marked the first positive value for the fund in the three years Price Waterhouse has conducted the study. Economic value is defined as premiums minus default losses and other expenses.

The firm also found that the fund's capital ratio, defined as economic value divided by total loans insured, is now 0.43%. That falls short of the 1992 target that Congress mandated in 1990. But the report projects that the fund will meet Congress' goal by the year 2000.

The health of the single-family insurance fund stands in stark contrast to the FHA fund for multifamily housing. A study by Coopers & Lybrand in April found that fund stood to lose up to $11.9 billion as apartment building owners defaulted on their loans.

But interpretations of the Price Waterhouse report are sure to vary widely today as mortgage bankers and mortgage insurers testify.

Two broad issues are up for grabs: Should Congress roll back the premium rises it enacted in 1990, and should the loan limits be raised so that FHA insures more expensive loans?

The mortgage bankers are expected to argue that the strengthening of the fund can continue only if FHA originations are spurred. FHA loans accounted for just 6% of all new mortgages last year, down from 8% in 1991.

In its testimony, the mortgage bankers' group will attribute the decline to the program's premium structure, arguing that it is uncompetitive with premiums of private insurance.

Specifically, the group will ask Congress to phase out the up-front premium of 3% adopted in the mid-'80s as a revenue-adding measure and charge only an annual premium of 0.5%.

The group is also expected to advocate raising the minimum size of FHA loans to diversify risk. On this front, the bankers' group is getting some support from the Department of Housing and Urban Development. The agency is proposing to raise the maximum loan size in high-cost areas to about $172,550 from the current $151,875, according to industry sources.

The mortgage group's ideas infuriate private mortgage insurers. "I guess what I find annoying [is the] premise that lower-income people . . . somehow don't value the house or their credit obligations. That's just ridiculous," said Suzanne Hutchinson, executive vice president of the Mortgage Insurance Companies of America.

Ms. Hutchinson says the most important finding is the fund is still not at the level of strength mandated by Congress. □

Warren Lasko

EXECUTIVE *changes*

Chase's Richardson to Head Its Rochester, N.Y., Region

William W. Richardson has been named president of the Rochester, N.Y., region of **Chase Manhattan Bank** in a realignment to focus the bank's businesses more directly on customer services.

He succeeds **Robert D. Wayland-Smith,** who has been named upstate wealth and affluent segments executive, with additional responsibility for managing the upstate personal, corporate, and institutional trust and investments unit.

W.W. Richardson

Mr. Richardson has been wholesale banking executive for Chase's regional banking sector since October 1990.

Before that, he was president of Chase Lincoln First's banking group and, from 1984 to 1988, president of the bank's Syracuse, N.Y., division.

R. Wayland-Smith

Mr. Wayland-Smith joined Lincoln Rochester Trust Co., a predecessor of Lincoln First Bank, in 1967 as a management trainee in the portfolio and liability management department.

He has managed the municipal dealership, portfolio and liability management department, financial and investment services, and trust.

William L. Bitner 3d Retiring from Evergreen

William L. Bitner 3d said he plans to retire as chairman, president, and chief executive of **Evergreen Bancorp** and its principal subsidiary, **First National Bank** of Glens Falls, N.Y.

Mr. Bitner will continue as president and CEO of the holding company and bank until a successor is named.

His career at Evergreen spans 25 years.

Edward F. Allard has been elected chairman of the board of both Evergreen Bancorp and First National of Glens Falls.

He has been a director of the holding company and bank since 1988.

— **Franklin Smith**

MIDWEST

BANC ONE Investment Advisors Corp., an affiliate of Banc One Corp., Columbus, Ohio, recently appointed **Richard R. Jandrain 3d** to senior vice president and senior managing director-equity securities, and **Douglas O. Kloppenburg** to vice president and director of portfolio management for Wisconsin.

MIDDLE ATLANTIC

ING BANK, New York, said **Ivy Hwang** has joined it as an assistant general counsel, reporting to **Bill Austin,** general counsel for the bank in North America.

Ms. Hwang was formerly senior securities counsel at Citicorp, New York, and general counsel to its broker dealer, Citicorp Securities Markets Inc.

BANCORP MORTGAGE Inc., Perkasie, Pa., an affiliate of **Independence Bancorp,** said **Sheree Wiezbicki** has joined the company as assistant vice president for acquisitions and manager of special projects.

She previously was a management information systems analyst for Independence Resources Inc. of Quakertown, Pa., and an assistant department manager at Bucks County Bank, also affiliates of Independence Bancorp.

CHASE MANHATTAN Bank, New York, has appointed **Dexter Charles** as the risk management executive for North American interest rates derivatives. He previously had been the senior trading manager for the group.

UNION CENTER National Bank, Union, N.J., has appointed **Lisha Beauvais** assistant vice president. She will continue as main office branch manager.

OGILVY ADAMS & Rinehart/New York said **Lawrence Parnell** has joined the firm as a managing director and **Henry Miller** joined as a senior vice president. **Karen Amrhine** was promoted to senior vice president. **Lucy Flinn** and **Michael Grayeb** were named senior associates.

COMMONWEALTH Mortgage Assurance Co., Philadelphia said **Jim Williams** has joined the company as vice president, Midwest regional sales manager. Based in the regional office in Columbus, Ohio, he is responsible for directing the company's sales force and business development efforts throughout the Midwest.

SOUTHWEST

BANKAMERICA Business Credit, part of BankAmerica Corp., San Francisco, said **Michael T. Norvet** has joined the division as a vice president and senior marketing officer in its Dallas office.

Mr. Norvet is responsible for asset-based products and services for leveraged acquisitions, recapitalizations, refinancings, and expansions.

WEST

COUNTRYWIDE Funding Corp., Pasadena, Calif., said **Gail Thakarar** has joined the mortgage lender as senior vice president of human resources.

Gail Thakarar

She will oversee benefits packages, compensation programs, payroll, performance, review, regulation compliance, training and management development, career planning, and staffing. □

Will You Be Spending Money On Direct Marketing This Year?

Before spending even one cent on a program, use the books that will help you maximize results! This is the **first** direct marketing reference designed **specifically** for the financial services industry. Learn to—

- Create direct response print advertising
- Pick the best strategic marketing approach
- Analyze what to test and pitfalls to avoid
- Cross-sell **effectively** to your customers
- Implement a foolproof DM program
- Producing Winning Direct Mail

Plus— • An 8-point checklist for effective direct response advertising • 5 criteria for evaluating creative executions

Place your order today! Start making money on your next program!

FINANCIAL SERVICES DIRECT MARKETING
James R. Rosenfield
256 pp., hardcover—$55.00 **Order #013B**

Learn How To Really Use Your Database Marketing Program

Get the **only complete guide to effectively using your MCIF**—by and for financial marketers. Today's MCIF is the starting point in the race to develop effective competitive and relationship-building strategies. The 22 thorough chapters cover—

- MCIF selection criteria
- The database analysis & marketing plan
- Targeting high depositors
- Creative development
- Producing Winning Direct Mail

Order this essential guide to using the most important tool available to financial marketers TODAY!

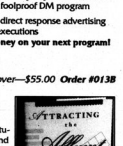
THE NEW AGE OF FINANCIAL SERVICES MARKETING
Edited by Arthur Holtman & Donald C. Mann
360 pp., hardcover—$69.95 **Order #015A**

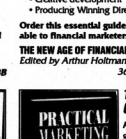
Explore New Ways To Reach The Affluents!

As the number of affluent consumers quintupled during the 1980s, *Research Alert* found new ways for marketers to reach them. **The results are in this book!** A must for targeting and selling this important banking customer segment. "...helps navigate the challenging waters of the affluent market."

—Adweek's Marketing Week

ATTRACTING THE AFFLUENT
The Editors of Research Alert
264 pp., hardcover—$49.95 **Order #023A**





195 Terrific Ideas That You Can Use At Your Bank TODAY!

A sourcebook of great ideas! BMA has gathered the **very best marketing programs** across the country into **one unique handbook**. Packed with successful examples for your use—product and service innovations, customer service, retention, event, promotions and more. **The ultimate idea starter!**

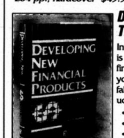
PRACTICAL MARKETING IDEAS
From Bank Marketing Association
300 pp., paperback—$49.95 **Order#021A**

Do You Have New Products In The Planning Stages?

Introducing a new product or line extension is an expense & essential propositon for any financial institution. This new book will help you stay ahead of the competition, avoid pitfalls and **get the most** from your new product unique concept by—

- Identifying market needs
- Quantifying product opportunities
- Evaluating alternative product concepts

An inexpensive solution to an expensive proposition!



DEVELOPING NEW FINANCIAL PRODUCTS
Gary H. Raddon
288 pp., hardcover—$69.95 **Order #005A**

Do You Need To Write A Marketing Plan?

This unique planning aid contains 18 actual marketing plans from other banks...**instantly available for your use.** You'll learn how—

- To put together a plan that **works!**
- To use a wide array of marketing tactics
- Other addressed market planning

A great resource guide for all banks!

BUILDING A FINANCIAL SERVICES MARKETING PLAN
From Bank Marketing Association

Fed Chief's Comments Signal the End of the Bond Rally

By STEPHEN A. DAVIES
The Bond Buyer

WASHINGTON — Federal Reserve Board Chairman Alan Greenspan's testimony last week to Congress sent an unmistakable message that the bond market rally is over and interest rates are headed higher.

"The signal that we are endeavoring to send is that at some point rates are going to have to move up," Mr. Greenspan said in an uncharacteristically blunt statement to the Senate Banking Committee.

Normally, the Fed chairman declines to forecast interest rates and tip his hand on monetary policy. In this case, he wanted to make clear to Congress and the public that policymakers intend to move promptly when the next batch of troubling inflation statistics flit across bond dealers' screens.

Currently, inflationary pressures remain subdued. But Mr. Greenspan and his colleagues at the central bank have been shaken by disappointed by their inability to get inflation below 3%, and they want to be ready to prevent prices from accelerating any more.

The shift in policy marks an end to three years of gradually trimming short-term rates in response to the credit crunch and a weak economy. And it means that Fed officials probably will raise the current federal funds rate of 3% to 3½%.

Essentially, the bet at the Fed is that the economy will continue to improve gradually as consumers and businesses step up demand for credit and put upward pressure on interest rates.

As that happens, policymakers want to be set to form policy quickly but gently so that they avoid the mistake of waiting too long to check rising price pressures.

Inflation Hawks

It is an evolution in thinking at the central bank that has not been without internal disagreement. According to one banking source, Federal Reserve Board Governors Wayne Angell and Edward Kelley have been calling for a move now on rates.

Mr. Angell is a well-known hawk who has been upset at the rise in gold prices. Mr. Kelley's tough stance raises interest because unlike most other board members, he is not an economist, and his views are often taken as reflecting mainstream thinking at the central bank.

At the same time, some of the Federal Reserve district bank presidents have been more inclined to be neutral on rates out of lingering concern about the soft economy, the source said.

Any rise in interest rates is likely to be gradual because the economy will not gain much steam in the months ahead. Mr. Greenspan conceded that small businesses continue to lack credit from their usual commercial bank sources, and defense cutbacks, among other things, will continue to be a drag on growth.

"Greenspan and the Fed do have time," said Charles Lieberman, managing director of Chemical Securities Inc.

"There is no inflationary problem today. And there is not likely to be a significant inflationary problem any time in the near future, meaning in the next six or 12 months. Greenspan has the luxury of being able to move slowly on monetary policy."

Mr. Lieberman said he is looking for the Fed to bump up the federal funds rate to 4% by the middle of next year. But he said he doesn't expect any action before Labor Day, because price reports from the government are expected to be positive. By the end, he is calling for yields on the Treasury long bond to be around 7%.

'Lock in Rates Now'

Such rate increases are not expected to have much impact on the economy. Still, the mortgage for homeowners and businesses is to go to the credit markets now because rates will not get any lower.

In fact, rates edged up slightly last week in reaction to Mr. Greenspan's testimony. "Anybody who listened to what Greenspan said would be well-served to look in rates now," said Mr. Lieberman.

One bright spot is the deficit-reduction package moving through Congress. The bond market's belief that the package will pass has contributed to the drop in the long-term rates, as have recent reports from the government showing price pressures were almost nonexistent in May and June.

The Bond Buyer is a sister publication of the *American Banker*.

Says rates will have to rise

NEWS ANALYSIS

Greenspan Warns FOMC To Plug Leaks

By CLAUDIA CUMMINS

WASHINGTON — Federal Reserve Chairman Alan Greenspan has warned members of the Federal Open Market Committee against leaking policy decisions to the press.

Mr. Greenspan said that if the leaks don't stop, the Fed will reconsider its policy of waiting six weeks before releasing a summary of the committee's previous meeting.

House Banking Committee Chairman Henry B. Gonzalez made an issue of FOMC leaks to news organizations several weeks ago.

Dangers Cited

Mr. Greenspan wrote to Mr. Gonzalez Wednesday, July 20, saying "unauthorized release of FOMC proceedings through unofficial channels is unfair to the public, is potentially disruptive of the policymaking process, and erodes public confidence in the Federal Reserve."

Rep. Gonzalez released the letter to the press on Monday.

"I have discussed the issues raised by the recent developments with members of the board and Federal Reserve bank presidents," Mr. Greenspan told Mr. Gonzalez.

Mr. Greenspan also said that the Fed believes current policies are "broadly based," and earlier release of monetary policy decisions would reduce the committee's "flexibility and willingness to make needed adjustments in policy or in the directive guiding policy."

Rep. Gonzalez, a frequent critic of the Federal Reserve, has introduced legislation to force the Fed to release a videotape of Federal Open Market Committee meetings 60 days afterward. And recently, as leaks have increased, he has advocated requiring the FOMC to meet on a Friday and release a summary of that meeting on the next Monday.

"Financial markets do not work well when inside information, including detailed analysis, is given to a privileged few," he told Mr. Greenspan in a letter Monday.

In the letter, Rep. Gonzalez also asked the Fed to encourage banks to tell small-business borrowers that their advertised prime lending rates are not necessarily the lowest rates they offer. He called the practice of offering some business customers lower rates than their published prime rates "deceptive."

But in a letter, Mr. Greenspan rebuffed the congressman's suggestion.

Foreign Banks' Issues Driven by Upturn Abroad

By DAVID SIEGEL

Foreign bank bonds have rallied sharply in the U.S. market this year, fueled by the improving economic outlook abroad.

Among the winners: Debt issued by banks from Britain, Scandinavia, Australia, and Italy. And some analysts say these bonds are more attractive than U.S. bank bonds.

Foreign bank bonds still carry higher yields than those of comparably rated U.S. banks. But since the start of the year, the premium that investors require for foreign bonds – as measured by the amount that the yield exceeds U.S. Treasury securities – has fallen dramatically.

Improving Economies

Natwest Capital Corp.'s subordinated debt is trading at 60 basis points higher than Treasuries, down from 110 basis points on Jan. 12, according to First Boston Corp.

The nine-year subordinated debt of Australia-based Westpac Banking Corp. has a spread of 97 basis points over Treasuries, down from 190 basis points in mid-January.

Subordinated debt of the Swedish bank Skandinaviska Enskilda Banken is trading at 113 basis points over Treasuries, versus 155 basis points in mid-January.

Some British and Australian bank bonds have rallied because of their improving home economies, which have helped bank asset quality, said John Paulsen, a bond analyst with Kidder Peabody & Co.

Scandinavian bank bond spreads have tightened as the region's economies appear to be stabilizing and as the Swedish and Finnish governments have promised to support their country's banks, said Joseph Taylor, an analyst with Merrill Lynch.

The bullish trading in the secondary market means foreign banks can issue additional debt more cheaply.

Some analysts are recommending that investors swap out of American bank bonds and into some British, Swedish, or Australian banks because the foreign issues have higher yields with comparable or higher credit ratings.

Allerton Smith of First Boston recommends purchasing Westpac's subordinated debt, which is rated A3 by Moody's Investors Service and A by Standard & Poor's, and is offered at a 97-basis-point spread. This is more attractive than the tight 83-basis-point spread for BankAmerica Corp.'s subordinated debt, which is lower rated, at A3 from Moody's and A minus from Standard & Poor's, he said.

Svenska Handelsbanken's subordinated debt of 2004 is being offered at 108 basis points over Treasuries, which is a much higher yield than for BankAmerica, while the Swedish bank carries slightly lower credit ratings of A3 from Moody's and BBB-plus from Standard & Poor's, said Mr. Smith. □

THE MARKETS

Yields on Government Bonds Dip

Government bond yields fell slightly in slow trading on Monday. Traders were focused on this week's auctions of two-year and five-year notes, which starts with today's $16 billion auction of the two-year.

An $11 billion auction of five-year notes will follow on Wednesday.

Matthew Alexy, senior market strategist with First Boston Corp., attributed Monday's rise in bond prices to investors covering short positions. "There is no real information driving any of this stuff," he said.

The two-year note was yielding 4.18%, down from 4.19% on Friday. The five-year note yield was 5.23% late Monday, down from 5.24% on Friday, the 10-year note yield was 5.91%, down from 5.92%. The 30-year bond yield closed Monday at 6.68%, down from 6.69%.

T-Bills at 3.10%

The average discount rate for three-month Treasury bills at Monday's auction was 3.10%, and for six-month bills it was 3.24%. These were the highest rates since the June 7 auction.

Stocks rose strongly, with the Dow Jones industrial average gaining 21 points to close at a record 3,568.

— David Siegel

STOCKS

Takeover Speculation Adds Pizazz To Bank Shares After Spring Selloff

By RICHARD LAYNE

Nothing gets the attention of investors like mergers and the prospect of more mergers.

The latest example is Boatmen's Bancshares Inc.'s agreement to acquire First Amarillo Bancorp. in a stock swap valued at about $175 million.

The deal was announced late Friday afternoon, and on Monday, the stocks of other takeover candidates were in the spotlight once again. First Amarillo's shares themselves jumped $6.125, to $26.125, a 30% gain.

Investors Bid Up Integra

In midday trading, shares of Integra Financial Corp., Pittsburgh, were up $1.625, to $48.375. With neighbors like Mellon Bank Corp. and PNC Bank Corp., Integra isn't considered a long-term survivor by many money managers and analysts.

Shares of Constellation Bancorp., Elizabeth, N.J., were up, too, in early afternoon trading before backing off slightly on very high volume. The shares closed up 25 cents, to $10.25. New Jersey is considered a fertile hunting ground for both New York and Pennsylvania banks.

UJB Financial Corp., another New Jersey bank, also drew some interest Monday. UJB, Princeton, has long been the subject of takeover rumors, although it has never publicly acknowledged receiving an offer. Its shares rose 37 cents, to $26.625.

The stocks of many takeover candidates were in the spotlight Monday.

Money managers said the reaction to the merger news was muted at other takeover candidates. But that's probably because investors are still digesting earning announcements, not because of a lack of interest.

Devoted to Takeovers

"Investors are doing their homework, trying to figure out which banks are like to be taken over within the next 12 months," said Sam A. Marchese, investment manager at SIFE Trust Fund, Walnut Creek, Calif.

Throughout the prolonged selloff in bank stocks last quarter, money managers and analysts said they prayed for merger news to bring buyers back to the sector.

Investors like mergers for two main reasons.

First, if they guess right and buy shares in a bank that gets a takeover offer, the payoff can be sizable.

Second, mergers are seen as good for the industry. They reduce price competition in markets and give an acquiring bank a revenue stream at a time when in merger talks with a "larger" financial institution. The day of that announcement, its share price jumped $3, or 12%, to $28.

Then there's Commercial Federal, Omaha, Neb. Shares of the thrift, which has $4.8 billion in assets, have been rising since mid-June when its biggest shareholders announced plans to have investors vote on whether the bank should solicit takeover offers. The share price went as high as $27.75 before retreating. The stock closed Monday at $25.375, up $1.125.

Rising on Rumors

	1-day gain	Monday's close
Integra Financial Corp.	$1.625	$48.375
Constellation Bank Corp.	12.5	10.25
UJB Financial	37.5	26.625

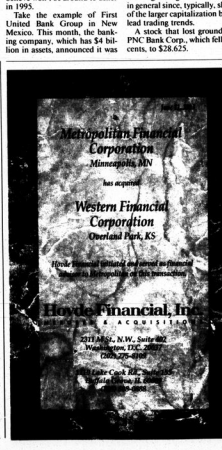
Potential takeover stocks returned to the spotlight.

revenue growth is a major concern among bankers and investors.

Speculation on 2 Banks

Just the possibility of a merger is enough to get investors to bid up the share prices of banks they believe won't be around to usher in 1995.

Take the example of First United Bank Group in New Mexico. This month, the banking company, which has $4 billion in assets, announced it was



MONDAY'S MARKET

Bank stocks were mostly up, as the Dow Jones industrial average rose 20.96 points, to 3,567.70.

Two of the biggest gains came from banks that have demonstrated revenue gains from trading. J.P. Morgan & Co.'s shares rose $1.25, to $70.50. Shares of Bankers Trust New York Co. jumped 75 cents, to $76.25.

BankAmerica Corp.'s shares rose $1, to $44.875.

Analysts said that those gains were a good sign for bank stocks in general since, typically, shares of the larger capitalization banks lead trading trends.

A stock that lost ground was PNC Bank Corp., which fell 87.5 cents, to $28.625. □

Industry Forced Study on Role For Fed Wire

By CLAUDIA CUMMINS

Wanted: a long-term vision for Fed Wire.

That's what the Federal Reserve hopes to glean from a study begun earlier this month on the operation of the electronic funds transfer system that moves about $1 trillion daily.

The review comes in response to industry sentiment that the central bank has been tinkering with Fed Wire without having a broader plan for how it wants the payment system to evolve.

The latest manifestation of this concern came after the Fed proposed extending Fed Wire's operating hours, opening at 6:30 a.m. instead of 8:30, to meet the needs of Chicago futures exchanges. Those markets already open early to service their global clientele.

The extended hours for Fed Wire would reduce risk to the system if a futures broker failed and its account could be settled, Fed officials said.

This seemingly simple move generated a storm of protest from the industry. Many bankers told the Fed that the risk-reduction benefits of the expanded hours would be too small to justify the added staffing costs. What's more, they said, the proposal was difficult to analyze, given that the Fed has never clearly articulated its long-term plans for the system.

Setting Strategy

"We think that there should be a plan or direction developed if the Fed Wire is to expand its hours," said George M. Hoffman, first vice president of the public National Bank of New York, in a letter to the Fed.

"Studies should be conducted to determine how expanded hours will benefit the risk market and encourage participants to change their payment and settlement habits," he added.

In response to the complaints, the Fed soon earlier this month to postpone plans to extend Fed Wire's operating hours. Fed officials said they will focus for now on action on that plan until they completed a comprehensive study of Fed Wire and the implications of expanding its hours.

Committee of Bureaucrats

The industry asked for a joint agency-industry task force to develop a long-term strategy. While Fed officials say they want to include private-sector input, the committee devising

U.S. Panel: Scrap S&Ls, Cut Insurance

By ROBYN MEREDITH

WASHINGTON — A congressionally appointed commission recommended Tuesday that the savings and loan industry be eliminated and federal deposit insurance be limited to narrow banks to avoid another crisis like the S&L debacle.

"Fundamental reform of the deposit insurance system is central to avoiding future disasters of the sort that we were asked to examine," said John W. Snow, co-chairman of the commission and chairman and chief executive officer of CSX Corp., the international transportation company.

'Monetary Service Companies'

The National Commission on Financial Institution Reform, Recovery, and Enforcement recommended that institutions be allowed to offer federally insured deposit accounts only through separately capitalized "monetary service companies," which would be allowed to invest only in low-risk, short-term debt.

Mr. Snow said that under the proposal, there would be "no need to limit the amount of funds one could put into an insured account." The monetary service companies could be affiliates of noninsured banks or other financial institutions, which would be allowed to keep their traditional lending and other activities.

PNC to Buy 1st Eastern In $330 Million Deal

By STEVE KLINKERMAN

PNC Bank Corp. on Tuesday agreed to buy troubled First Eastern Corp. in a stock deal valued at $330 million.

The nation's 11th-largest bank company separately announced that it would sell $130 million of problem real estate assets to a partnership organized by Goldman, Sachs & Co. PNC said the transaction would not affect its bottom line.

Wall Street reacted positively to the announcements, despite the fact that PNC is paying a hefty two times book value for First Eastern. PNC's share price rose 87.5 cents, to $29.50, in late trading Tuesday. In over-the-counter trading, First Eastern's stock soared $5 a share, to $25.

Large 1991-92 Losses

First Eastern eked out $1.1 million of profits in the first half of the year, rebounding from back-to-back losses in 1991 and 1992 that totaled $63.6 million. The Wilkes-Barre, Pa., company's lead bank continues to operate under a formal agreement with the Office of the Comptroller of the Currency.

But Thomas H. O'Brien, PNC's chairman and chief executive, said First Eastern should boost earnings per share almost immediately. The deal is expected to close in 1994's first half.

Mr. O'Brien cited market share gains, "rapidly improving" credit quality, and potential for cost savings to explain his company's strong bid.

First Eastern controls $2.1 billion of assets and 51 branches in the Scranton-Wilkes-Barre area. The deal will let Pittsburgh-based PNC boost market share in the anthracite coal region of northeastern Pennsylvania to about one-third of deposits.

PNC said it was uncertain whether First Eastern's top officer, Frederick A. Deal, would stay after the merger. The executive was recruited last August to turn around First Eastern. Since becoming president and chief executive, he has sold loan assets and a securities subsidiary, cut 150 jobs, and completed a secondary stock offering.

In discussions with analysts, PNC projected annual savings from the merger of about $33 million, or roughly one-third of First Eastern's annual noninter-

GRAPEVINE

Norwest Pounces

Norwest Corp. is about to snap up a trio of family owned banks in Denver, according to industry sources.

The Minneapolis-based banking company is paying two times book value for the $230 million of assets owned by First National Bank of Southeast Denver, First National Bank of Arapahoe County, and First National Bank of Lakewood, according to sources.

The deal would bring Norwest's assets in Colorado to about $6 billion.

"It's a seller's market," said one source, who added that Norwest came back three times before having its bid accepted. "I don't know how they can justify these prices."

The banks are owned by Denver's Leprino family, which owns a wholesale food products company and an upscale residential development.

Spokesmen for the Leprinos and for Norwest declined to comment. — **Keith DuBay**

Citi's Card Scar

Citicorp gives every sign of running on all its cylinders these days, but that old standby – credit cards – is slowing down.

The company's senior financial officer said competition in the credit card market is taking its toll on the bottom line.

Thomas E. Jones

During the first six months of the year, the nation's biggest bank saw revenues from fees and commissions fall $98 million, or 4%, compared with the same period last year. The reason is "obvious," said executive vice president Thomas E. Jones said last week. "There are more no-fee credit cards around."

Citibank, the country's largest issuer of MasterCard and Visa cards, has begun promoting some no-fee cards and is once again increasing its advertising and marketing budgets.

As Mr. Jones told analysts last week, Citi can accept some revenue loss "to protect [its] market share and franchise."

— **Yvette D. Kantrow**

Invisible Proposal

Banks are still waiting for the government to find a way to incorporate interest rate risk into its capital requirements. The delay appears to stem from a behind-the-scenes battle over how heavy-handed regulators should be on the issue.

Under the FDIC Improvement Act of 1991, banking regulators were required to design, by June 19, 1993, capital rules to protect banks from fluctuating interest rates. But the regulators have yet to take the first step of publishing their proposals for public comment.

The Federal Reserve Board and the Federal Deposit Insurance Corp. floated their ideas on the topic earlier this year. But OCC officials say they are being delayed by bureaucratic red tape. The agency has to clear proposed rules with the Treasury Department and the Office of Management and Budget. But others say there's more to the delay than that.

Rick Carnell, the Treasury's assistant secretary for financial institutions policy, helped draft the '91 law when he worked as a Senate Banking Committee staffer.

He is said to be taking a hard line – wanting regulators to require an automatic capital boost for banks with big rate risk. Mr. Carnell did not return phone calls seeking comment.

While the Fed thinks banks should take the capital hit, the FDIC and OCC want to give examiners more discretion in deciding when the capital boost will kick in.

If the Treasury doesn't publish a proposal in two to three weeks, sources said, the Fed and FDIC may go ahead without the OCC. That is likely to persuade Treasury to let the proposal go.

— **Barbara A. Rehm**

Correction

An article in the Community Banking section on Monday failed to identify the expert quoted as saying "quite a few banks" are holding fixed-rate mortgages to maturity. He is Reid Nagle, president of SNL Securities, Charlottesville, Va.

Republicans Demanding Cuts In Proposed Funding for RTC

By ROBERT M. GARSON

WASHINGTON — Republicans warned a House leadership panel that only a few GOP lawmakers will support funding for failed savings and loans, and urged support for amendments aimed at trimming the price tag of the legislation.

"You have 276 Democrats, and you're going to lose 70 of them," said Rep. Gerald Solomon, R-N.Y., during a hearing before the House Rules Committee. "You need Republicans."

The rules committee, an arm of the House leadership, took up the Clinton administration's $34 billion funding package Tuesday with the expectation that the measure could be cleared for floor action today.

Delay in Vote Expected

Even Tuesday, however, the leadership was reported to be nervous about the prospects for the bill, and some congressional sources said a floor vote would probably be delayed.

Tuesday afternoon, key members of the House Banking Committee held talks on controversial parts of the bill, including the size of the Resolution Trust Corp. and Savings Association Insurance Fund appropriations and minority contracting provisions.

Vote counts show about 190 Democrats supporting the measure, 28 short of a majority.

And Rep. Solomon, a member of the Rules Committee, said Tuesday that unless the House approves a Republican-sponsored amendment eliminating funding for the SAIF, no more than six Republicans will vote for the package.

Democrats responded that Congress has no choice but to pass the funding package.

"It's the only fiscally responsible thing to do," said Rep. Stephen L. Neal, D-N.C., chairman of the House subcommittee that considered the measure first.

More Modest Funding Proposed

"Depositors have a claim on the federal government and they are going to get their money one way or the other," he said.

Rep. Sam Johnson
Would slash plans

"This provides an orderly mechanism."

Several Republican-backed amendments appeared likely to be approved for floor consideration. One, sponsored by Rep. Sam Johnson of Texas, would scale back funding for the RTC to $11.9 billion, down from the $18.3 billion approved by the House Banking Committee.

A second amendment, sponsored by Rep. Bill McCollum, R-Fla., and Rep. Jan Meyers, R-Kan., would scale back minority contracting requirements for the RTC.

A third, offered by Rep. Spencer Bachus, R-Ala., would limit pay for RTC employees to the levels established for other federal employees.

A major question mark is the fate of an amendment sponsored by Rep. Richard Baker, R-La., and Rep. Richard Dreier, R-Calif., that would remove all funding for the SAIF, but give the RTC an additional year to deal with failed institutions.

With SAIF funding removed, the bill could be more attractive to many Republicans. However, a number of liberal Democrats and minority lawmakers might abandon the bill if minority contracting provisions are scaled back, as the Baker-Dreier provision would also do.

Still, a number of Republicans present said they would vote against the bill no matter how it is amended. □

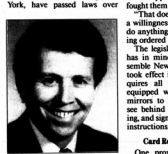
Correction

Banks in Chicago are again negotiating with city officials over automated teller machine security, hoping to avoid passage of stringent laws similar to ones New York City enacted last year.

But in Westchester County, N.Y., legislation mandating a minimum ATM safety measures designed to thwart crime appears inevitable, officials said.

Several cities, including New York, have passed laws over



Stephen Cole
Negotiating with lawmakers

bankers' objections that require financial institutions to install video cameras, rearview mirrors, and other security equipment at all ATMs.

Chicago banks have successfully avoided such legislation by meeting with local lawmakers and agreeing to adopt some basic safety measures, such as improved lighting at ATM sites.

The banks organized and lobbied by the Cash Station ATM network, hope that a round of meetings begun earlier this month will continue to make legislation unnecessary.

Legislation Looms

But while bankers in Westchester County are planning similar meetings with their local politicians, it now seems less likely that ATM security legislation in the county, which is just outside New York City, can be avoided.

According to Andrew A. Albanese, the majority leader of the Westchester County legislature, the county government is likely to introduce ATM legislation similar to the Big Apple's by the end of the year.

"We would like to give banks the opportunity to do this on a voluntary basis," he said.

"But if the New York [City] legislation is any indication, banks aren't going to do anything unless they are forced to."

Mr. Albanese said the impetus for the legislation is a recent rash of robberies in the towns bordering New York City.

He said that police and bank statistics indicate that the number of robberies of ATM customers is higher closer to the city.

In spite of that, Mr. Albanese, who is chairman of a safety committee that will oversee hearings on the new legislation, said he feels an ATM security law for the entire county is both necessary and likely to be passed.

Reluctance by Banks Seen

"I talked to New York City [council members] on this, and it was apparent that the banks fought them every step," he said.

"That does not indicate to me a willingness on banks' parts to do anything on their own, unless ordered to."

The legislator Mr. Albanese has in mind would closely resemble New York City's, which took effect in February and requires all ATM sites to be equipped with video cameras, mirrors to allow customers to see behind them, proper lighting, and signs giving ATM safety instructions.

Card Reader Provision

One provision in the New York City law would require improvements to the card readers that regulate entry to the ATM site is still being debated.

Originally, the provision required that the card readers take personal identification numbers before allowing a ATM users to enter a site.

But bankers and legislators are still studying whether that is technically feasible.

Mr. Albanese said it is unclear whether a card reader provision will be included in the bill he plans to introduce.

Bankers want to avoid strict security laws like the one New York adopted.

Meanwhile, in Chicago, the banks have contacted the City Council about revisiting the issue of ATM security and perhaps updating the measures that most banks currently employ.

"The key is that we aren't waiting for a problem to develop before we convene," said Stephen Cole, president of the Cash Station, which initiated the talks between its bank members and local officials.

Despite the fact that Chicago banks are not required to adhere to a minimum security standard, many banks have installed cameras and other safety equipment.

The number of reported ATM robberies in Chicago dropped from 57 in 1992 to 17 in 1993, said Mr. Cole, citing police statistics. □

Bankers in Chicago Keep Negotiating To Avert ATM Laws

By MATT BARTHEL

Officials Studying Fed Wire to Determine Its Role in Payment System of the Future

Continued from *page 1*

the strategy will be limited to Fed officials.

Bruce J. Summers, senior vice president at the Richmond Fed, will head the "Fed Wire hours working group," which will conduct the study. The 12 members come from the New York, Chicago, San Francisco, and Richmond districts, as well as the Washington board.

NEWS ANALYSIS

Representatives of the Fed's operations, monetary policy, legal, and discount and payment systems staffs will participate.

The group hopes to complete the study by yearend, an ambitious timetable, many industry officials said.

The effort aims to get a better handle on how Fed Wire fits into the broader architecture of interbank settlement arrangements, such as bilateral foreign exchange dealing and private-sector payment systems like the Chips network, run by the New York Clearing House Association.

The group will also study how and why various financial markets use Fed Wire, and how this use changes during systemwide financial shocks.

"To me, it's almost a study of the interaction of the markets," Mr. Summers said. "The focal point will be asking questions that enhance our knowledge of the role of final settlement in these particular markets."

Not an Easy Task

An important part of this effort will be better understanding the tradeoffs implicit in extending Fed Wire's day. One benefit to futures exchanges of greater certainty in final settlement must be weighed against the costs of changing bank operations to adapt to the new hours.

This sounds like a fairly straightforward issue, but given the broad reach of Fed Wire and the complexity of the payments system, understanding the market interactions and their impact on Fed Wire will not be easy, Mr. Summers said.

And Fed officials aren't likely to find a consensus among Fed Wire users.

Industry officials point out the myriad players – from small banks to large banks to clearinghouses to the exchanges – that have vested and often conflicting interests in the evolution of electronic funds transfer.

Fed officials say that until the study is completed, the board will not set a timetable for extending Fed Wire hours.

But Fed Governor Wayne D. Angell made his intentions known at a recent board meeting. "There's no backing away from our long-run plans to move in the 24-hour direction." □

It Takes Commitment to be a Winner

Banks Can't Play Santa Claus To Would-Be Entrepreneurs

A BANK NEEDS *to have 50 good loans for each one that goes bad, just to break even. What's the track record of new ventures? It's more like one in 50 than 49 in 50.*

It was a typical business meeting held by a bank.

The CEO had reviewed the bank's performance, then introduced me, after which I gave my usual 45 minutes – mixing my views on the economy with the tired jokes that have supported me through the years.

Then came what is always the most fun to me: the question period. Here I can show that I have not just memorized a talk (and, yes, the jokes).

A Touchy Point

But this time, the first question hit a hot button with me, and I gave it to the questioner with both barrels – but I hope tactfully enough so that he didn't pull his account from Schmidlapp National.

"What's happening to our country?" he asked.

"I have a new venture that I want financed. I walk into the bank, and despite their reputation for service, they don't give me the time of day. Instead, they wave me out of their bank and over to the venture capitalist.

"I go to him, and he wants half the company for putting any equity into it. How can we get new ventures financed to help the economy grow with a financial structure like this?" he complained.

No Tears

I showed him no sympathy.

"Look," I said, (or more likely I shouted), "you want the bank to finance your venture and take all the risk if it fails. Look at it from the banker's point of view.

"If the venture succeeds, the bank gets back its principal and maybe 2 or at most 3 percent above the prime rate in interest. If the venture fails, the bank loses everything it has placed into the project. Those are not very good odds.

"This bank is a beautiful earner, I explained, generating almost 2 percent on assets, which is about double what most banks earn today.

"But even with this record, the bank needs to have 50 good loans for each one that goes bad to just break even. What's the track record of new ventures succeeding? It's more like one in 50 than 49 in 50.

Ticket to the Poorhouse

"So if this bank were to finance new ventures like yours, we would undoubtedly be having a cash bar and no food in-

TOO MANY *think banks should be all things to all people.*

stead of a hosted reception tonight – if the bank were lucky enough to still be alive.

"What about the venture capitalist? He wants half of the project for providing finance.

"Should he get this?

"After all he is taking the risk of losing everything he invests. Shouldn't he get his share of the gain if the project succeeds?

"Does he demand too great a share? Probably," I said. "But there are two factors in defense of his position.

"First, you are running the venture, taking a salary from it, and determining by your actions whether the venture succeeds or fails.

"The lender is taking a passive risk or loss, a risk he can do nothing to prevent once his money is in the hopper. Why shouldn't he be paid for this?

"Second, look at supply and demand. The number of potential entrepreneurs ready, willing and able to spend someone else's money vastly exceeds the number of venture capitalists ready to put up the money for these ventures. So why not set a price for money that reflects this?" I concluded.

This particular encounter had a happy ending. The questioner was satisfied, feeling he now understood a little better what a bank's function is and isn't.

Too Much Asked of Banks

And several officers of the bank came up to me during the reception to thank me for stating their case in terms that they could not use since they did not have the position of tenured professor that I have.

But on reflection it seems to me that the banking industry has a big job ahead of it in explaining what a bank is and does and what it is not. Today everyone feels the bank should be all things to all people – providing banking service at low or no cost, rebuilding the community, and at the same time providing would-be entrepreneurs with a full wallet of borrowed funds.

Yet much of the money that these same people have available to deposit goes into thrift institutions, brokerage firms, and money funds.

For example, it is only now that politicians are first considering making Community Reinvestment Act provisions apply to nonbank lenders, like brokerage firms and finance companies.

Sure, banks have special responsibilities. They have to pay in some way for their deposit insurance and for the government capital limits on entry that prevent cutthroat competition.

But this does not mean that the banker has to give away the shop by financing ventures proposed by people who follow the philosophy "Heads I win, tails you lose."

The more banks do to get this point across, the better off the industry will be in the eyes of the public and its lawmakers. □

Mr. Nadler is a contributing editor of American Banker and professor of finance at the Rutgers University Graduate School of Management.

Letters to the Editor

Lawyers Can Be Directors, but Not if They Act as Counsel

To the Editor:

I was fascinated to read Paul Nadler's column, responding to Richard B. Foster Jr., concerning whether attorneys should serve on bank boards ["Lawyers as Directors: Maybe a Good Idea After All," July 12, page 9]. One gets the impression that lawyers are viewed as some sort of social pariah.

I believe Mr. Nadler and Mr. Foster miss the basic problem with lawyers' serving on bank boards. Lawyers should not be on the boards of banks they also serve as counsel.

Question of Objectivity

In the interest of full disclosure, I must admit – I are one. Therefore, anything said here could be considered biased, but I don't think so.

Lawyers bring expertise to bank and thrift boards no differently than accountants, druggists, housewives, farmers, executives, etc. There are so many legal ramifications of banks' and thrifts' business decisions that a lawyer is appropriate for a bank board.

A bank can run into a problem when decisions have been made by directors, when legal counsel is asked later to render an objective opinion on the legality or illegality, prudence or imprudence, care or lack of care of those decisions. If the bank counsel is also a director, then he is criticizing his previous conduct.

'Two Heads Are Better'

Needless to say, this can raise significant conflicts of interest between attorneys serving as directors and attorneys serving as attorneys.

An obvious solution is to recruit attorneys for bank or thrift boards who will be excellent in the role. Then, hire separate bank counsel to serve as either in-house or outside counsel to the board.

As P.T. Barnum might have said about his freak show, "Two heads are better than one." The outside, objective, disinterested legal counsel and the attorney on the board can act in concert rather than in conflict.

In essence, the issue is not whether attorneys should be on the board or serve simply as counsel, but whether the attorney can act in a nonconflict situation as both director and legal counsel at the same time.

A workable compromise might be to allow attorneys to be directors, and at the same time let legal counsel be attorneys and not directors.

By John J. Jerome

Bankruptcy Cases Move Faster than Ever

Proposed bankruptcy legislation now in Congress, which includes parts designed to expedite bankruptcy cases, is motivated by the presence of special interest proposals that would impinge on the efficacy of the 1978 reforms.

A review of the past 15 years of proceedings under the Bankruptcy Reform Act of 1978, against the background of its predecessor statute, Chapter 10 of the Bankruptcy Act of 1898, shows how far we have come in expediting bankruptcy proceedings.

Before 1978, Chapter 10 required that the assets of a financially distressed business be turned over to an "outside trustee." The debtor in possession, a feature of the Bankruptcy Reform Act of 1978, has shortened, not lengthened, the duration of bankruptcy cases.

Under the current system, Chapter 11 proceedings in major cases are concluded in two to three years, on average. This is in contrast to the seven to 10 years or longer under the old Chapter 10 system. Leland Cases, for example, lasted 41 years).

In enacting the Bankruptcy Reform Act of 1978, Congress was critical of the fact that the old Chapter 10 and its "outside" trustee system not only prolonged bankruptcy proceedings unduly, but resulted in liquidations costing jobs and capital and, in many cases, wiping out creditors altogether.

In introducing the current bankruptcy system in 1978, Rep. Don Edwards, D-Calif., said the new Chapter 11 system would "protect the investing public, protect jobs, and help some troubled businesses." He added at the time that one "cannot overemphasize the advantages of speed and simplicity to both creditors and debtors."

Streamlining Proceedings

The Chapter 10 system was extremely cumbersome and was replaced by the current Chapter 11 system in order to streamline and expedite bankruptcy proceedings.

While eliminating the outside trustee and installing the debtor in possession, creditors participating in the 1978 reform processes, mindful of the mischief that could be wrought by continuing management in possession, insisted on certain safeguards.

First of these was a provision for the removal of management for dishonesty or incompetence and replacing it with a court appointed trustee.

Second, the debtor was required to file a plan within 120 days unless that time was extended by the court for "cause."

Third, provision was made for the conversion of a Chapter 11 reorganization case to Chapter 7 liquidation case if the debtor or could not properly reorganize.

Fourth, the Securities and Exchange Commission insisted upon a provision for the automatic appointment of an official "examiner" in large public cases to foster the public interest.

Protections that Work

Finally, recent court decisions make it clear that the "adequate protection" to which secured creditors are entitled in Chapter 11 includes protection against undue delay in completing a Chapter 11 case.

By and large, the 1978 reforms have worked in large cases – though with some notable exceptions. They have greatly accelerated the emergence from bankruptcy proceedings of corporate debtors and maximized value for the benefit of creditors, shareholders, and employees.

This expedited process, as distinguished from the old process in which corporate debtors languished for years and lost values, encouraged more debtors in distress to seek the protection of the new Chapter 11.

While it is true that courts may extend the time in which a debtor is required to file a plan many times during the course of a proceeding, the "cause" for such extensions lies usually in the complexity of the large cases.

This is not to say, of course, that there is not room for improvement and that abuses of the system have not occurred.

Unfortunately, the legislative proposals now pending before Congress also include special interest legislation that would significantly restrict the relief traditionally offered to distressed corporate debtors. Indeed, the current hype for "reform" is driven by special interests.

The proposed "reform" legislation will, on balance, do more harm to the system than good and will result in more liquidations than rehabilitations. □

Meridian Cleared to Acquire Commonwealth

WASHINGTON — The Federal Reserve Board has approved the application of Meridian Bancorp of Reading, Pa., to acquire Commonwealth Bancshares of Williamsport, Pa.

The deal will make Meridian the fifth-largest bank in Pennsylvania, controlling $10.6 billion in deposits. As part of the acquisition, the company will merge its Reading-based Meridian Bank with Commonwealth Bank, and add several branches.

The Fed also approved Meridian's applications to acquire Phoenix-based Susquehanna Life Insurance Co.

Separately, the Fed approved an application by Continental Bank Corp. of Chicago to engage through a subsidiary in asset management, servicing, and collection activities.

Continental is the second-largest bank in Illinois, with assets of $22 billion. Its subsidiary would provide asset management services to the Resolution Trust Corp. and the Federal Deposit Insurance Corp.

It also would offer these services to third-party investors that buy pools of assets assembled by the RTC or the FDIC from troubled financial institutions.

Unionfed Says Loss Widened in Fiscal '93

BREA, Calif. — Unionfed Financial Corp., the parent of Union Federal Bank, announced on Tuesday a loss of $11.4 million, or $1.53 a share, for its fourth fiscal quarter, which ended June 30.

For the entire year, the thrift company lost $32.1 million, against a loss of $22.1 million for all of fiscal 1992.

The Southern California thrift attributed most of the loss to a loan provision and costs from real estate operations of $13 million, versus $6.5 million in the corresponding 1992 quarter.

Union Federal, which has $1.2 billion of assets, said it is taking the hits as part of an "aggressive reduction" of nonperforming assets through the sale of problem real estate and the restructuring of some problem loans.

The thrift is under a federal regulatory order to achieve core and risk-based capital levels of 4% and a total risk-based capital ratio of 8% by Sept. 22. At June 30, the ratios were, respectively, 1.4%, 1.8%, and 3.1%. Unionfed said it will meet the requirements by completing a planned $45 million common-stock offering.

Harris Seeks to Retain City Bankshares Stake

CHICAGO — Harris Bankcorp has asked regulators to let it continue holding a 22.6% stake in City Bankshares, the parent of City Bank and Trust Co. in Oklahoma City.

Harris, which picked up the investment after the Oklahoma bank defaulted on a loan five years ago, hopes to eventually sell the stake.

A spokesman for Harris Bank, which is wholly owned by Bank of Montreal, said the filing to extend the holding was routine. He added that Harris has no intention of expanding its stake in City Bank, which has $70 million of assets.

The market value of the stock held by Harris is about $400,000 short of the $2 million the company hopes to recover, officials said.

"The market is so thin that we haven't been able to sell it," said Paul Skubic, controller for Harris Bank. "We don't want to be forced to sell it for a fire-sale price."

Sterling Buying Units in Western Washington

SPOKANE, Wash. — Sterling Savings, a unit of Sterling Financial Corp., said it has agreed to acquire six branches in the western part of the state from Key Bank of Washington, a subsidiary of Albany, N.Y.-based Key.

"This purchase affirms Sterling's commitment to further expansion in Washington," said Harold Gilkey, chief executive officer. The thrift has 34 branches and about $700 million of assets.

First Union to Buy Florida's Enterprise Bank

WINTER PARK, Fla. — First Union Corp.'s First Union National Bank of Florida signed an agreement to pay $8.8 million in cash for Enterprise Bank.

Enterprise has one office in Winter Park, Fla., with about $40 million in assets.

First Union expects to complete the acquisition by the end of the year, subject to Enterprise shareholders' approval, regulatory approval, and other conditions.

The briefs were compiled from staff and wire reports.

NationsBank, Urban League Set Up 'Appeals Courts' for Borrowers

By JED HOROWITZ

NationsBank Corp. and the National Urban League on Tuesday unveiled a comprehensive plan to let people appeal their rejected loan applications.

The bank company said it will spend $1.4 million on a three-year pilot program that will create loan review panels in eight southern states and the District of Columbia.

NationsBank will reconsider applications that a panel deems to have been unfairly rejected. The review group also will work with rejected applicants on ways to improve their credit or better marshal their loan-application data.

The program is the latest attempt by the nation's fifth-largest bank company to demonstrate a voluntary commitment to community lending. Nations-Bank also hopes to persuade legislators and regulators to relax record-keeping requirements related to the Community Reinvestment Act and the Home Mortgage Disclosure Act.

Lenders Prodded by Regulators

Bank and thrift regulators have been urging lenders to take a second look at rejected consumer, mortgage, and small-business loan applications through internal review panels. Some banks have said such reviews lead to approval of 10% to 50% of loans that were initially rejected.

NationsBank, which said the panels will initially focus on mortgages and home-improvement loans, appears to be the first large bank company to formally set up review panels coordinated by outsiders.

Each group will include the president of a local Urban League affiliate, three community representatives, and three credit officers from the bank. The plan is expected to be operational in 18 cities by March 1.

Hugh McColl
Hopes to end bias in lending

The bank will spend $1.4 million to set up loan review panels.

John E. Jacob, chief executive of the National Urban League, said he will encourage other banks to join the review program.

"The intent is to raise the consciousness of the institutions so they have a hypersensitivity to understand the people they serve," he said.

Hugh McColl, the chairman and chief executive of NationsBank, said his company hopes to uncover conscious and unconscious prejudice on the part of lenders and credit officers through the review panels.

"We will review turndowns to see that we don't have discriminatory practices," he said. "We probably have some people who are overtly prejudiced, and when we found out we will get rid of them."

Another Agenda

The feisty chairman, whose company promised at the end of 1991 to make $10 billion of community loans over 10 years as part of its deal to buy C&S/ Sovran Corp., also hinted at another agenda.

"We would love to have the government relax CRA paperwork," said Mr. McColl, an outspoken advocate for rolling back record-keeping requirements. "We want to be judged on the results rather than on keeping the books."

The Urban League's Mr. Jacobs said his group, which has 113 national affiliates, is taking a calculated risk in working so closely with a big commercial bank.

"What prompted us to put our national credibility on the line for this is that our cause is right," he said. "The bank has money, we have goodwill and credibility, and we both have customers. Our customers ought to be their customers."

Standard Federal of Michigan to Purchase Heritage Bankcorp for $111 Million in Cash

By STEVE KLINKERMAN

Standard Federal Bank, the Midwest's largest thrift, agreed to buy Heritage Bankcorp in its home state of Michigan in a cash deal valued at $111 million, or 1.7 times book value.

Heritage, based in Taylor, owns Heritage Federal Savings Bank, which has 45 branch offices controlling $930 million of assets.

Standard Federal, which has about $9.8 billion of assets, operates in southern Michigan, northern Indiana, and northwestern Ohio.

Earnings of $54 Million

Thomas R. Ricketts, chairman, president, and chief executive of Standard Federal, said the deal will be accretive to earnings in 1994. The transaction is expected close early next year.

Standard Federal earned $54.3 million during 1993's first half, for an ROA of 1.12%.

The company operates 118 branch offices and 200 automated teller machines in its three-state market. □

PNC Bids $330 Million for Troubled First Eastern

Continued from *page 1*

est expense.

The deal requires approval by regulators and First Eastern shareholders.

Busy Merger Arena

Despite many years of economic decline, northeastern Pennsylvania has been an active locale for bank mergers in recent years. James M. Schutz, an analyst at Chicago Corp., said the First Eastern deal virtually completes consolidation in the area.

Outside bank companies – including PNC, Mellon Bank Corp., Meridian Bancorp., UJB Financial Corp., and First Fidelity Bancorp. – now dominate the scene.

Assets Discounted 21.5%-Plus

Sally Pope Davis, a Goldman analyst in New York, said PNC had made no secret of its desire to expand from northeastern Pennsylvania into neighboring New Jersey.

Separately, PNC said sale of problem realty assets to White-hall Street Fund, the Goldman partnership, should be completed in the third quarter. The assets, a mix of delinquent loans and foreclosed properties, are being sold for $102 million, a 21.5% discount from current carrying value.

William H. Callihan, head of investor relations for PNC, said additional writedowns had been taken earlier on the assets, meaning original book value was more than $130 million. □

EXECUTIVE *changes*

Mitsubishi Names Hirai as CEO Of North American Headquarters

Mitsubishi Bank Ltd., Tokyo, has appointed **Yasuyuki Hirai** chief executive officer of its North American headquarters in New York.

Mr. Hirai, who assumed the post last week, was formerly general manager of the bank's corporate planning division in Tokyo.

He was Mitsubishi's management international capital markets in 1987-89 and general manager of the bank's international planning division in 1989-90.

Yasuyuki Hirai

In New York he succeeded **Takeshi Yano**, who is returning to Mitsubishi's head office in Tokyo to oversee the corporate planning division and public relations. He will also represent the bank in the Federation of Bankers Associations of Japan.

— Franklin Smith

NEW ENGLAND

STATE STREET Bank and Trust Co., Boston, named **Roland P. Lacey** and **Nancy M. Newman** as vice presidents of its U.S. mutual funds service division.

Also named as State Street vice presidents were **K. Stuart Peskin** in the bank's global advisory division, **Thomas A. Pierce** in information technology, and **Philip M. Sinisgalli** in the personal trust division of the commercial banking services area.

Promoted to assistant vice presidents were:

• **Doreen R. Christopher** in the global data control services division of the operations area.

• **Joshua C. Feuerman** in the global advisory unit.

• **Darren J. Marcus** in the European financial asset services division-Luxembourg of the global financial asset services area.

• **George E. Sullivan Jr.** in information technology.

• **Kevin J. Williams** in the human resources division-London of corporate staff.

MIDWEST

HUNTINGTON Bancshares, Columbus, Ohio, said that **Beth Russell** has been promoted to senior vice president of its **Huntington National Bank** subsidiary.

Beth A. Russell

Ms. Russell is investment portfolio and wholesale funding manager in the bank's treasury group.

Other promotions at Huntington National include:

• **Jeanne P. Jones**, a commercial loan representative, who was named a vice president of corporate banking.

• **Christopher J. Humphrey**, a project architect in the bank properties division, who was appointed assistant vice president.

• **Rebecca H. Hord**, named an assistant vice president. She works in the personal banker automation project in the complementary delivery systems division, managing a training team that covers three states.

• **James J. Lombardi**, named an investment officer in the treasury group.

At **Huntington Services Co.**, **Thomas E. Hetterscheidt** was promoted to systems officer. And at **Huntington Trust Co.**, **Nicholas S. Madrod** was promoted to vice president of institutional and personal trust sales.

In the branch system, **Patricia D. Pilcher, Lawrence B. Klatt,** and **Matthew E. Hall** were named banking office managers – Ms. Pilcher for the Southern Village banking office in Springfield, Mr. Klatt at the Springfield Park office, and Mr. Hall in Groveport.

FIRST CHICAGO CORP. announced the following appointments to senior vice presidents at **First National Bank of Chicago:**

• **Stanley J. Dietzel**, head of marketing and sales for cash management products.

• **Paul C. Friedland**, head of banking for electronic and gas corporate customers.

• **Craig L. Coit**, head of profitability analysis and planning.

• **Peter J. Nowak**, chief financial officer for First Chicago's credit card business.

BANK ONE Akron in Ohio has promoted **Sandra J. Pryor** to senior vice president of human resources.

Sandra J. Pryor

She had been a vice president and human resources director for the bank since 1988.

WEST

ARCS MORTGAGE INC., Los Angeles, the mortgage banking affiliate of **Bank of New York**, has named **Ann Holmes Pennywit** to the post of vice president for secondary marketing.

Ms. Pennywitt had previously held senior secondary marketing positions with Standard Federal Savings Bank of Virginia.

She also has worked in Boston at BancNewEngland Mortgage Co. and at Pioneer Financial.

SOUTHEAST

BANK SOUTH, Atlanta, said **Barry R. Anderson** has joined the company as executive vice president and director of human resources.

Barry R. Anderson

He had been with Lanier Worldwide Inc., an Atlanta subsidiary of Harris Corp., as vice president of human resources. □

Youngsters' Work Gives Bank a Lesson In Inner-City Life

By ROBERT B. COX

CHICAGO — When Hyde Park Bank wanted to tout its commitment to community affairs, it came up with what it thought was a clever idea.

The bank decided to put together a promotional booklet, and, in a twist, held a contest for elementary school students, who were asked to submit poems, essays, and illustrations about their neighborhoods.

The bank, which has $180 million of assets, is based in the affluent Hyde Park area, where single-family homes typically sell for more than $200,000. But under the Community Reinvestment Act, its lending territory encompasses most of the city's South Side, which includes some of the city's poorest neighborhoods.

CRA

So the bank solicited responses from students at 53 inner-city schools – and got a lot more than it bargained for.

"We thought we would have brightly colored, childish drawings of trees and houses, and funny little stories about the postman and the people on the block," said Timothy Goodsell, the bank's president. "The responses we received stunned us."

A Fearsome World

What the bank received were disturbing portraits of children imprisoned in landscapes of urban despair.

- "My neighborhood is like a hellhole," wrote Carolyn Bradley, age 11.
- "Leaving for school is scary. You never know when you might get shot," wrote Demetrius Jones, 13.
- Ten-year-old Nicole Lampkin wrote:

My neighborhood is so bad,
It makes you sad.
It's not fun,
Because they have guns.
Don't go outside to get a ride,
Because they might skin your hide.

"I've lived in the South Side for almost 20 years," said Mr. Goodsell. "I thought I had a very good picture of what life is like in these neighborhoods – and this was news to me."

The 600 responses so stirred the bank that it published a paperback collection of the most moving entries, called "My Neighborhood: The Words and Pictures of Inner-City Children."

"We viewed this as an opportunity to serve this community by trying to educate the public in some small way of the problems that prevail here," said Mr. Goodsell. "We think there is a lesson in this for the banking industry: There are needs in this society that aren't being met."

With its efforts, the bank has also earned some good will in the community. "It indicates to me that the Hyde Park Bank is concerned about their community," said Nancy Stevenson, chief executive of Voices for Illinois Children, an advocacy group. "Anything that raises the consciousness about what we can do to help children is positive."

The initial printing of 5,000 copies sold out within weeks. Another 5,000 have been published, and the bank is weighing a third printing. It is also speaking with a national distributor.

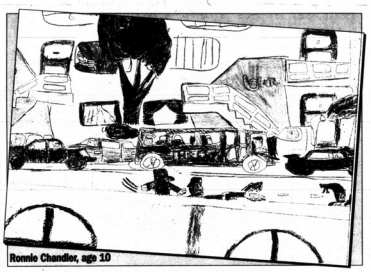
Proceeds from the book, which sells for $15.95, will go to the bank's foundation, which provides grants to local schools for enrichment and attendance incentive programs, said Linda Waldman, the public relations executive who wrote the text introducing the children's work.

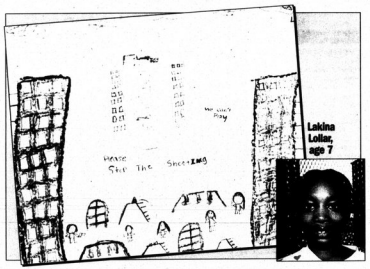
The bank also awarded savings bonds of $500, $250, and $100 to the three best entries, plus $1,000 in cash to the school of the first-place contestant.

'Eye-Opening Experience'

Mr. Goodsell said that what he thought was a sharp promotional campaign has become an eye-opening experience.

"The lesson for society in this is that there is a problem festering here that will come back to haunt us," he said. "The business community has got to play a larger role in developing a political consensus" on the problems of the inner city. □





Safe Deposit Boxes: Evaluating the Potential Payback

By MARIE HOFFMAN
Owner, Safetex Inc.
Newburyport, Mass.

Prosaic as they may seem, safe deposit boxes are in demand, and the service must be managed to provide a payback to your institution.

Here are some steps toward evaluating the potential payback and feasibility of the safe-deposit service.

The first step is to arrive at the number of boxes that you intend to offer, by box size. The mix of sizes is as important as the total number. The demand by size may vary greatly by locale because of demographics and the mix of available boxes in the area.

The projected rental income will depend on this size mix. A 10-inch by 10-inch box may generate as much as five times the rental revenue of a 2-inch by five-inch box.

To assess the demand per box size among your customers, do a survey in a newsletter or as a "sign-up sheet." Inform them that the results will determine, among other things, if you will offer safe deposit services. Give your customers some ideas as to how each box size could be used so that they can more accurately predict the box size that will best suit their needs.

Establish Rental Rates

Your next step is to obtain the range of rates for each box size offered in your locale. Safe deposit rates vary widely from community to community. The rates charged locally should be the most important gauge in determining your rates.

In addition to establishing the competitive rates by box size, determine how well local supply per box size is satisfying demand.

Ask each institution what box sizes are currently available after asking for rates. This information will further help determine the most favorable mix of box sizes for your vault.

You will learn a lot by doing this competitive survey. For example, you might notice that the institution with the lowest rates has a low vacancy rate and the one with the highest rates has a high vacancy rate.

This scenario will suggest that setting rates somewhere in the middle will help you attain the optimal occupancy rate.

Don't be afraid to set rates on the high end of the range in your community. Financial institutions have overlooked safe deposits when raising rates for other services in the past. Some are still charging the same rates as 20 years ago.

Estimate Start-Up Costs

Your third task is to estimate all start-up expenses for offering the service. Start by getting estimates from as many vault companies as possible.

Choose the company offering the best value on safe deposit boxes and their installation. Next, obtain estimates from outside consultants on their fees for developing the procedure manual, lease agreement, cards, and forms.

Compare these fees to an estimate of what it will cost to develop these in-house and make the "make or buy" decision.

Estimate other one-time expenses associated with offering the service. You will want to include initial staffing and training expenses that are not expected to recur.

Estimate Operating Expenses

Salaries will be the biggest expense, but you also have to consider insurance, periodic training, maintenance, and the vault's share of management and other credit union expenses.

Marie Hoffman

The initial investment in boxes, installation, operations system, and training should, for our purposes, be spread over 10 years.

Estimate Rental Revenue

The maximum revenue available from a given mix of box sizes and box rates needs to be multiplied by an estimated occupancy rate to arrive at the yearly estimated rental revenue.

Make a 10-year projection that reflects a low start-up occupancy rate which increases in the second and third years. Assume your maximum (but reasonable) occupancy rate is reached in the third year and is maintained.

When projecting revenues, it is best to avoid speculating on the effects of inflation.

The final step is to record the projected revenue for each of the 10 years less the projected expenses (including amortization and depreciation of start-up expenses) for those years.

Revenue estimates in excess of expense estimates tell the story. You have your "Go/No Go" decision expressed in dollars. If the number is positive, you have the green light.

And if you maintain competitive rates, control costs, and establish a conscientious personnel training program, safe deposit will not only satisfy customer demand but generate an attractive return on your investment. □

Bailey Fuels Janus' Growth with Variable Annuities

If any company epitomizes the meteoric rise in popularity of no-load mutual funds in the past decade, it is Denver-based Janus Capital Corp.

Just four years ago this month, Janus had less than $1 billion under management in a handful of funds. Today, the company manages $26.1 billion in assets, including $15.6 billion in mutual funds.

Janus was founded in 1969 by Thomas H. Bailey and William Mangus.

Mr. Bailey was working in New York as a stockbroker when a Colorado stockbroker offered to sell him a tiny fund management business: A self-professed Vail ski bum, Mr. Bailey leapt at the chance to head for the Rockies. He managed the $650,000-asset business with Mr. Mangus, then bought out his partner in 1970.

Mr. Bailey still loves the mountains, fly fishing, and skiing. He lives in Aspen and commutes by plane to Denver when business calls.

Under Mr. Bailey's leadership, Janus built a solid performance record throughout the 1970s, averaging an 18.4% annual return from 1970 to 1982.

But the bull market of the late 1980s provided the company's rocket fuel. With consistently impressive returns on its showcase portfolios, the Janus Fund and the Janus Twenty Fund, the company started showing up on everyone's list for best fund ideas.

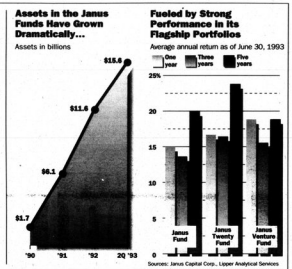
Assets have grown so dramatically that the company recently closed two fund portfolios to new investors. The Janus Twenty and Janus Ventures funds were becoming too big and unwieldly, the portfolio managers argued.

The company's growth investment strategy emphasizes companies that produce consistently increasing earnings. Today, Janus offers 12 no-load mutual funds. Its two newest additions are a federal tax-exempt fund and the Janus Mercury Fund, an aggressive growth stock fund.

In 1984, Mr. Bailey sold an 81% stake in Janus to Kansas City Southern Industries. He retains 18% of the company's stock, and a board member holds the remaining 1%. Mr. Bailey continues as chairman and president.

Keith DuBay, American Banker's Denver bureau chief, recently caught up with Mr. Bailey in his Denver office.

Thomas W. Bailey says Janus stays strong by sticking to its knitting. "I've turned down some business propositions. I don't want to try to grow this thing in all directions at once."



Q: How much money has come into the Janus funds from banks? And is it still flowing in?

BAILEY: I think generally that's going on. But how much we're getting, who knows? We're not targeting it.

Q: What do you make of banks entering the mutual fund business?

BAILEY: If I were a bank, I'd probably be in that business one way or another. It's a natural outgrowth. I can't imagine a bank that wouldn't do it.

Funds have always been an ease-of-entry business. I don't see a difference between a Bank of America growth fund and Fidelity Magellan.

It's been conventional to knock banks as not having any expertise in portfolio work. I've got analysts who worked for banks and think they're real bright.

Whether they'll be successful or not is another thing. With Janus, investment is 100% of what we do. Banks are not as focused. But banks are just as capable of hiring bright people as I am.

Q: It has been said mutual funds are becoming the banks of the 1990s. Do you agree?

BAILEY: I disagree. A typical mutual fund customer might have a three- to five-year outlook with an above-average rate of return. When I think of a bank deposit, I put money in there I might use next week. It's an entirely different objective.

Q: Does Janus have any plans to sell through banks?

BAILEY: We would certainly entertain being a subadviser. But we don't have any pointed marketing effort calling on banks around the country.

Q: Is there anything in the works?

BAILEY: We don't talk about potential deals. There are lots of potential deals we could pursue.

We have no banks selling Janus services. We're not entering the bank market. It just wouldn't be our deal. Our business is being an investment adviser on no-load, load for insurance, 401(k), pension, variable annuities, those kinds of things. □

Q: What is fueling Janus' growth these days?

BAILEY: We are getting ourselves involved in the variable annuity products. We are introducing a new Aspen series in that area. It's under registration. We have a pretty strong effort in the 401(k) business. We do research and don't get involved with administration.

We treat the $20 billion [asset base] like a stool and get as many legs as we can. Obviously, the biggest area is no-load mutual funds.

We're also subadviser on a number of other fund products, such as loads for insurance companies. We have 1.9 million accounts.

Q: Is the mutual fund business getting too big and too complicated?

BAILEY: It's a hell of a lot more complicated now than when I first started, when there were 520 mutual funds. There are almost, what, 5,000 now? It's also become a preferred method of saving in America.

[To succeed in the funds business,] you have to have the research, but also be strong in customer service. You have to answer phones, send out accurate statements.

We're not doing anything too differently. I've turned down some business propositions. I don't want to try to grow this thing in all directions at once.

I don't see us in the discount brokerage business. I don't see us doing a lot of things like sector funds, or index and country funds. We really can't be all things to all people.

Q: Are today's mutual fund investors different from those of 10 years ago?

BAILEY: The last guy in generally has the highest expectations. Maybe in that respect they're a little different. The 1980s were the second-best 10 years in history. Over the next five years those returns are not going to be achieved.

Q: Have you made any preparations for an extended market retreat?

BAILEY: What kind of contingency plan can I have for that? I've never been able to predict any downturn.

We can look at prices relative to historical periods and say this and that group is out of line. Hopefully, we're right on the earnings on a lot of these companies. If interest rates went way up, you'd see some things done in the portfolio.

"You have to have the research but also be strong in customer service."

Behavioral Testing Urged for Filling Sales Positions

By MICHAEL O'D. MOORE

Banks can double their mutual fund sales by profiling the behavioral patterns of prospective employees, according to a consultant.

H. Joseph Marshall, managing partner of Resource Management Associates, said using behavioral surveys can help banks select strong employees and then help those employees hone professional skills.

By using the surveys – which allow prospective job applicants to rate themselves on traits such as aggressiveness and the ability to conform – banks can identify which employees are most inclined to excel in sales.

Big Sales Boost Seen

Indeed, Mr. Marshall said, banks that use this approach for hiring and in training can boost their mutual fund sales to 4.3% of customer deposits – more than double the industry norm of 2%.

"The next quantum leap in terms of profits and profitability will come from emphasizing people as much as systems," he told bankers at a conference sponsored by the Council on Financial Competition.

As an example, Mr. Marshall points to a bank in New York State that hired more than 40 investment product sales representatives using behavioral profiling three years ago. Those employees have outsold representatives hired through more traditional means by 65%.

Mr. Marshall spent years developing profiling systems for banks as a senior executive with Liberty Financial Bank Group in Boston before launching a consulting firm in West Barnstable, Mass., a few weeks ago.

Academic Credentials

The roots of his interest in behavioral profiling go back to the 1970s, when he earned doctorates in psychology, sociology, and human resources development from the University of North Carolina at Chapel Hill.

He picked up some practical experience in 1986, when he surveyed employees for E.F. Hutton. A skeptical executive there challenged Mr. Marshall to pick the firm's top six brokers from a stack of more than 100 surveys. Mr. Marshall said he swallowed hard, then correctly identified the six.

Today, he routinely demonstrates how he can identify the top guns at banks.

But picking a top producer involves more than just finding the employee with what seems to be the right behavioral profile for the job. Sometimes a person's principles can override those behavioral measures.

Unstoppable Drive

In a recent challenge to pick the top producer at a New England bank, he chose an employee with a weak behavioral profile for sales who placed an amazingly strong value on success. This employee's drive to succeed was so strong that no behavioral traits could hold him back, Mr. Marshall said.

"Behavioral profiling probably accounts for 75% to 80% for one's motivation," Mr. Marshall said. "The remaining part is very dependent on peoples' values."

Bankers at the conference pressed Mr. Marshall to endorse one of the handful of surveys on the market, but he declined. He said a bank must identify what it wants from its employees, then select one or more surveys fitting those objectives. He often uses two or more tests to assess workers.

Developmental Approach

In looking at surveys, bankers have to choose between two philosophical approaches.

Some surveys are like litmus tests that indicate which people are less prone to succeed. Others are less black and white, and assume that employees can be educated to overcome weaknesses. Mr. Marshall leans toward the latter category, which he terms "developmental."

H. Joseph Marshall
Profiles potential employees

These developmental surveys are continually being improved to be more effective in identifying characteristics and how they relate to specific jobs. And the reports are easier for managers to understand than they were a few years ago.

But profiling has more uses than just in hiring, Mr. Marshall said. He believes surveys are a good way to train and retrain sales forces.

Using survey results to help employees understand and overcome weaknesses can improve morale and productivity, he said. "You create an environment where they mature themselves."

Some bank brokers use an abbreviated form of the survey to better understand customer motivations. After interviewing a customer the broker fills out a form with 10 questions. The answers determines in which of six ways the customer learns.

If the customer is a no-nonsense type who just wants the facts, the broker will try to present information in that manner. For the person who likes chit-chat and socializing, the broker will present information in a more informal way. □

Demand The Best.

"Any mutual funds we offer must have top-quality investment management. It's important to our customers and to us. We're bringing in SEI."

You want top-performing mutual funds that will grow your assets and profits for you – and your customers.

When it comes to SEI's mutual funds, only top-quality investment management will do. That's because top-quality investment management leads to consistently strong results.

As the owner of the world's largest investment performance data base, SEI is uniquely able to choose from among the best investment managers. We draw from our universe of over 1000 of the country's top performers, responsible for more than $450 billion in assets. And because we use independent managers, we can hold them strictly accountable for their performance to SEI and our clients.

We'd like to be your partner. Sharing the same ideals. Building profits. Demanding The Best!

About SEI

SEI has been dedicated to creating comprehensive investment programs for over two decades, focusing on the following areas:

Investment Products and Programs ($35 billion in assets): mutual funds, proprietary funds, annuities, and bank-wide investment programs.

Full Planning and Consultation Services: marketing planning, program definition and implementation, as well as full training and sales support.

Investment Management Technology: trust accounting, defined contribution recordkeeping, mutual fund accounting, and retail support systems.

For more information, call 1-800-DIAL-SEI (342-5734).

INVESTMENT PRODUCTS

Guidelines from Comptroller's Office For Bank Sales of Investment Products

In a long-awaited move, the Office of the Comptroller of the Currency last week issued guidelines for national banks that sell mutual funds, annuities, and other uninsured investment products.

The message was clear: Banks must design their investment programs to make sure that customers understand the risks of investing.

Banks and their directors will be held accountable for monitoring these programs, whether administered by the bank itself or by a third-party marketing firm.

Generally, the Comptroller's office said, banks should follow the National Association of Securities Dealers' Rules of Fair Practice.

But the agency elaborated on those rules in an attempt to tailor them to "the particular circumstances surrounding bank-related sales of nondeposit investment products."

Following are excerpts from the Comptroller's guidelines.

A. Program management

Banks should adopt a statement describing the features of the sales program, the roles of bank employees, and the roles of third-party entities. At a minimum, this statement should address the following issues:

• *Supervision of personnel involved in nondeposit investment sales programs.* Senior bank managers will be expected to ensure that specific individuals employed by the bank, an affiliated broker-dealer, or a third-party vendor are responsible for each activity outlined in the bank's investment sales policy.

• *The roles of other entities selling on bank premises, including supervision of selling employees.* Bank management must plan to monitor compliance by other entities on an ongoing basis.

The degree of bank management's involvement should be dictated by the nature and extent of nondeposit investment product sales, the effectiveness of customer protection systems, and customers' responses.

• *The types of products that the bank will sell.* For each type of product sold by bank employees, the bank should identify specific laws, regulations, regulatory conditions, and any other limitations or requirements, including qualitative considerations, that will expressly govern the selection and marketing of products the bank will offer.

• *Policies governing the permissible uses of bank customer information.* Such policies should address the use of bank customer information for any purpose in connection with a bank-related retail investment sales activity.

B. Setting and circumstances of retail nondeposit investment sales

Banks should market nondeposit products in a manner that does not mislead or confuse customers as to the nature of the products or the risks.

To avoid customer confusion about these products, bank policies should specifically address

> **"Banks should prohibit tellers from offering investment advice."**

the locations at which sales will take place. To the extent permitted by space and personnel considerations, bank management should take steps to separate the retail deposit-taking and retail nondeposit-sales functions.

Banks should prohibit tellers from offering investment advice. In addition, the OCC strongly discourages employees who accept retail deposits from selling retail nondeposit investment products.

If the bank permits an employee to perform both functions, the bank should disclose this dual role to customers.

In addition, banks may not offer uninsured retail investment products with a product name identical to the bank's name.

Banks should also recognize that the potential for customer confusion may be increased where the bank uses uninsured products/names that are similar to the bank's own, and should design their sales training to minimize this risk.

C. Disclosures and advertising

Complete and accurate disclosure must be provided to avoid customer confusion as to whether a bank-related product is an investment product or an insured bank deposit.

When selling, advertising, or otherwise marketing uninsured investment products to retail customers, the following product disclosures should be made conspicuously:

The products offered (1) are not FDIC insured; (2) are not obligations of the bank; (3) are not guaranteed by the bank; and (4) involve investments risks, including the possible loss of principal.

The OCC believes it is appropriate to obtain a signed statement, acknowledging such disclosures from customers at the time a retail nondeposit investment account is opened.

For accounts established prior to the issuance of this circular, the bank should consider obtaining such a signed statement prior to the next sale.

These disclosures also should be featured conspicuously in all written or oral sales presentations, advertising and promotional materials, prospectuses, and periodic statements that include information on both deposit and nondeposit products.

The bank should review bank-related sales advertisements to ensure that they are accurate, do not mislead customers about the nature of the product, and include required disclosures.

Where applicable, the bank should disclose:

• The existence of an advisory or other relationship between the bank or any affiliate involved in providing the nondeposit investment product, and

• The existence of any early withdrawal penalties, surrender charge penalties, and deferred sales charges.

D. Suitability

Consistent with the Rules of Fair Practice, the OCC expects banks to determine whether a product being recommended is an appropriate investment for the customer.

Banks should ensure that any salespeople involved in bank-related sales obtain sufficient information from customers to enable the salesperson to make a judgment about the suitability of recommendations for particular customers.

At a minimum, suitability inquiries should be made and responses documented consistent with the Rules of Fair Practice concerning the customer's financial status, tax status, investment objectives, and other factors that may be relevant prior to making recommendations to the customer.

E. Qualifications and training

Banks should ensure that sales personnel are properly qualified and adequately trained to sell all bank-related nondeposit investment products. Bank management should consider securities industry or other professional qualification training as an appropriate reference.

Banks should implement training programs to ensure that sales personnel have thorough product knowledge (as opposed to simple sales training for a product) and understand customer protection requirements.

> **Train salespeople to ensure they have "thorough product knowledge."**

Background inquiries about new bank sales employees with previous securities industry experience should include a check of possible disciplinary history with securities regulators.

F. Compensation

Bank management should ensure that compensation programs do not operate as an incentive for salespeople to sell retail nondeposit investment products over a more suitable option.

If tellers participate in referral programs that include compensation features, banks should not base such compensation on the success of the sale.

G. Fiduciary accounts

Banks must comply with all applicable state and federal restrictions on transactions involving the bank's fiduciary accounts.

For example, pursuant to 12 CFR 9.12, national bank fiduciaries are restricted from using the bank's own brokerage service, or any other entity with which the bank has a conflict of interest, to conduct fiduciary transactions without express authorization in the governing trust documents, under local law, a court order, or without informed consents from all beneficiaries.

Similar restrictions govern purchases of a bank's proprietary and other products for fiduciary accounts where a conflict of interest arises.

If so authorized, bank trust departments are reminded that they must conduct a regular and reasonable periodic review of the continuing prudence of holding the product for a fiduciary account.

Banks also should comply with any applicable provisions of the Employee Retirement Income Security Act of 1974, including it prohibited-transaction provisions.

H. Compliance program

Banks must maintain compliance programs capable of verifying compliance with the guidelines specified in this circular and with any other applicable requirements.

The compliance function should be performed independently of bank investment product sales and management.

At a minimum, the compliance function should include a system to monitor customer complaints and to review periodically customer accounts to detect and prevent abusive practices.

Supervision

The OCC will continue to include a review of compliance with all applicable requirements including those in this circular, in its supervision of national banks involved in retail sales of investment products. The guidelines take effect immediately.

Questions on the content of this circular may be submitted to the Office of the Chief National Bank Examiner, Capital Markets Group, Washington, D.C. 20219. □

Preview:

The Comptroller's guidelines are the latest in a string of regulatory announcements on bank mutual fund activities. So how do they all stack up?

Robert M. Kurucza, a partner with the Washington law firm of Morrison & Foerster, will tackle that question next week with an analysis of the policy developments.

Who's driven to give you great service day in and day out?

The only one to grow with.

Independent Financial Marketing Group Hires Polhemus for Annuities Program

By KAREN TALLEY

Independent Financial Marketing Group has snared insurance industry veteran James J. Polhemus to help it distribute more annuities through banks.

The White Plains, N.Y., firm named Mr. Polhemus to the newly created position of director of insurance services for IFS Agencies, its insurance unit.

Mr. Polhemus has been involved with insurance marketing for almost two decades, both as a bank employee and with outside companies.

Most recently, Mr. Polhemus worked for GNA Corp. as operations manager for the investment-products program that the Seattle company operates at Chase Manhattan Corp. At GNA, Mr. Polhemus reported to Steven Plump, who recently left for Liberty Financial, which is launching a joint venture with Chemical Banking Corp.

Mr. Polhemus declined to say whether his departure was related to GNA's recent purchase by GE Capital Corp.

"Independent's high degree of integrity and teamwork appeal to me," Mr. Polhemus said. "That's not to say GNA doesn't have these."

The addition of Mr. Polhemus underscores the company's growing focus on insurance products, executives said. Vice president Denis Kaplan, president of Independent, "We look forward to his leadership in further strengthening our carrier affiliations and product offerings."

Last year, Independent placed $200 million of fixed annuities and $50 million of variable annuities through banks.

These sales, in combination with $300 million of mutual funds distributed, make Independent the 30th-largest distributor of investment products through banks, according to Kenneth Kehrer Associates, a Princeton, N.J., research firm.

Successful applicants would become dual employees of Wells Fargo and Marketing One, an Oregon-based firm that does the actual recruiting, licensing, and managing of the sales force.

* * *

Trade Group Making Compensation Study

The Investment Company Institute is conducting its second annual survey of mutual fund industry compensation practices.

Some 90 companies will participate in the survey, up from 70 last year, according to Thomas Simmons, a vice president with the institute. He said banks that manage their own mutual funds will be better represented this year than last, although he would not provide figures.

The survey covers 75 job titles in 13 broad categories, such as investment management and marketing. Results will be distributed in early September to participants only. □

Fortis Financial Enters Asset Allocation Field

Fortis Financial Group has joined the growing number of financial service firms offering asset allocation products.

The St. Paul, Minn., company's entry is a privileged-account service with a minimum investment of $10,000.

The product carries a front-end load that generally ranges between 4.25% and 4.75%.

Like other asset allocation products, Fortis' offering is designed to maximize returns by maintaining a portfolio mix of stock, bond, and money market mutual funds.

The privileged account "helps investors to buy low and sell high to take advantage of the normal price fluctuations of stocks and bonds," said Kyle Seiberg, a second vice president at Fortis. Investors create their portfolio by choosing among Fortis' 13 mutual funds.

* * *

Wells Seeks Brokers For Its Proprietaries

Wells Fargo & Co. is trying to attract new brokers to sell its Stagecoach and Overland Express mutual funds.

The San Francisco-based banking company is advertising in industry publications for licensed representatives to market the proprietary mutual funds in branches.

Company officials said earlier this year that Wells Fargo was planning to increase its mutual fund sales from 200 to 300 by the end of 1993.

But a spokeswoman downplayed the ad campaign, saying it was part of Wells Fargo's "standard recruiting practice. There is no big push on to hire a lot of extra people."

A Strategic Alliance With
The #1 Mortgage Fund*

Trust & Private Bankers: Complement your investment services with a specialty you may not have in house - intermediate duration mortgages.

The **Managers Intermediate Mortgage Fund** can give your clients the benefits of high income and AAA quality consistent with preservation of capital and long term total return.

Norwest, Evicted by Flood, Keeps on Lending

NOBLE

Top execu... Norwest Mortgage knew things were bad when word came back that a damage-assessment team had paddled a boat through a window of their downtown Des Moines headquarters.

"It's drying out," said Mark Oman, the company's chief executive, reached this week in his temporary office in West Des Moines. "But it's a mess."

Though Norwest Mortgage says it has experienced little disruption of customer service, it has clearly had to scramble to stay a step ahead of the great flood of 1993.

Four Buildings Evacuated

The company, the nation's third-largest mortgage originator, evacuated its four headquarter buildings in Des Moines the day before the muddy flood waters arrived.

The company moved most of the 750 employees to temporary offices in West Des Moines, while another 100 or so people were sent to servicing centers in Ohio and Minnesota.

The flooding was worst at the company's main facility at River Point, a development located at the confluence of the Raccoon and Des Moines Rivers in the heart of the city. There, nearly four feet of water filled the building, destroying virtually all the furniture and fixtures.

Norwest was fully insured, so Mr. Oman foresees no significant financial loss for the company. But his best guess is that it will be at least two to three months before employees can return to their home base.

Meanwhile, the company has found itself playing some unusual roles. It flew water in to Des Moines for its employees, helped those displaced by the flood to find temporary homes, and has allowed employees to come to work.in casual clothes.

The lending business, however, has been unfazed. In fact, the company has taken in a higher-than-average $2 billion of mortgage applications in the past two weeks, Mr. Oman said. □

Banc One Mortgage Forming Division for 'Wholesale' Lending

By CHRISTOPHER NOBLE

Moving to bolster its share of a flourishing business, Banc One Mortgage Corp. announced Tuesday that it is forming a "wholesale" lending division.

The division will seek to step up the company's purchases of new loans from both mortgage banks and mortgage brokers.

In the first six months of this year, such purchases accounted for 31% of Banc One Mortgage's total loan production of $3.5 billion.

With the new division, that share could rise as high as 50%, said Kent Day, a senior vice president at the Indianapolis-based company.

A number of big mortgage companies have been increasing their wholesale lending as a way to expand their loan servicing businesses.

Bigger Market Share Sought

"This new organizational structure will permit us to expand our market share in this important segment of the mortgage business," said J. Albert Smith, president of Banc One Mortgage.

The department will be headed by Veronica Mensch, who is currently Banc One Mortgage's regional manager of residential production in Illinois.

The company's servicing portfolio stands at $17 billion and continues to grow, Mr. Day said.

Norwest, Evicted by Flood, Keeps on Lending

By CHRISTOPHER NOBLE

Top executives at Norwest Mortgage knew things were bad when word came back that a damage-assessment team had paddled a boat through a window of their downtown Des Moines headquarters.

"It's drying out," said Mark Oman, the company's chief executive, reached this week in his temporary office in West Des Moines. "But it's a mess."

Though Norwest Mortgage says it has experienced little disruption of customer service, it has clearly had to scramble to stay a step ahead of the great flood of 1993.

Four Buildings Evacuated

The company, the nation's third-largest mortgage originator, evacuated its four headquarter buildings in Des Moines the day before the muddy flood waters arrived.

The company moved most of the 750 employees to temporary offices in West Des Moines, while another 100 or so people were sent to servicing centers in Ohio and Minnesota.

The flooding was worst at the company's main facility at River Point, a development located at the confluence of the Raccoon and Des Moines Rivers in the heart of the city. There, nearly four feet of water filled the building, destroying virtually all the furniture and fixtures.

Norwest was fully insured, so Mr. Oman foresees no significant financial loss for the company. But his best guess is that it will be at least two to three months before employees can return to their home base.

Meanwhile, the company has found itself playing some unusual roles. It flew water in to Des Moines for its employees, helped those displaced by the flood to find temporary homes, and has allowed employees to come to work in casual clothes.

The lending business, however, has been unfazed. In fact, the company has taken in a higher-than-average $2 billion of mortgage applications in the past two weeks, Mr. Oman said. □

Banc One Mortgage Forming Division for 'Wholesale' Lending

By CHRISTOPHER NOBLE

Moving to bolster its share of a flourishing business, Banc One Mortgage Corp. announced Tuesday that it is forming a "wholesale" lending division.

The division will seek to step up the company's purchases of new loans from both mortgage banks and mortgage brokers.

In the first six months of this year, such purchases accounted for 31% of Banc One Mortgage's total loan production of $5.1 billion.

With the new division, that share could rise as high as 50%, said Kent Day, a senior vice president at the Indianapolis-based company.

A number of big mortgage companies have been increasing their wholesale lending as a way to expand their loan servicing businesses.

Bigger Market Share Sought

"This new organizational structure will permit us to expand our participation in this important segment of the mortgage business," said J. Albert Smith, president of Banc One Mortgage.

The department will be headed by Veronica Mensch, who is currently Banc One Mortgage's regional manager of residential production in Illinois.

The company's servicing portfolio stands at $17 billion and continues to grow, Mr. Day said.

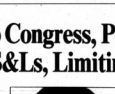
In Report to Congress, Panel Proposes Scrapping S&Ls, Limiting Coverage

Continued from page 1

service company subsidiaries "would significantly reduce the risk of taxpayers ever having to pay for losses," Mr. Snow said.

Sen. Christopher J. Dodd, D-Conn., praised the commission's report. "The best way to guarantee the safety and soundness is to limit the type of investments that thrifts can make with insured deposits," he said. "I think it's a key element to modernizing our financial service industries."

In addition, the commission said all S&Ls should be converted into commercial banks. "We see no remaining rationale for a separate thrift industry receiving special charters from the federal government," Mr. Snow said. "All distinctions between commercial banks and S&Ls should be eliminated."



Robert E. Litan
Dissents on deposit insurance

Paul A. Schosberg, president of the S&L trade group, the Savings and Community Bankers of America, said the commission's recommendation to eliminate the S&L industry was irresponsible and wrongheaded.

"It is a silly proposal. The savings institutions that are doing business today not only are not a threat, but are making significant contributions to the social and economic life of their communities," he said.

Robert E. Litan, director of the Center for Law, Economics, and Politics at the Brookings Institution, differed with the commission on the future of deposit insurance. He said deposit insurance should be offered not only to monetary service companies, but also to smaller, community banks.

There is no reason, he said, to disturb the "many thousands of small institutions," that use deposit insurance, as long as they were not allowed to link up with larger banks.

Deposit Insurance Proposal

Bert Ely, an Alexandria, Va.-based banking consultant, strongly opposed the commission's proposed restrictions on deposit insurance.

"A lot of people," Mr. Ely said, "to get the higher yield, are going to put their money in the uninsured part of the bank." But

The panel said "fundamental reform" was crucial.

if the bank fails and people lose their money, he said, they would protest that the government should have been protecting them.

Kenneth Guenther, executive vice president of the Independent Bankers Association of America, described the commission's proposal to scale back deposit insurance as "highly irresponsible."

"Community banks and thrifts depend on deposit insurance to maintain their core deposits," Mr. Guenther said.

Policymakers Assailed

James L. Pierce, the commission's executive director, said a key cause of the S&L crisis was "complete disregard by government policymakers of the role that deposit insurance played," by creating "a no-lose situation for operators of savings and loans" that were having trouble but wanted to gamble by making risky investments.

"Most fundamentally, misguided, and ill-advised government policies," created opportunities and incentives for crooks during the 1980s that culminated in the S&L crisis, Mr. Pierce said. "These individuals just didn't descend on the industry – they were attracted to it," by government policies, said Mr. Pierce, who is an economist at the University of California at Berkeley.

"Roughly one third of the industry acted on the incentives and the opportunities that were created," Mr. Pierce said. "These incentives were truly perverse," because with deposit insurance, "it paid to bankrupt a company," he said. □

The announcement appears as a matter of record only.

BT Marketing Its Expertise In Managing Swaps Risk

By YVETTE D. KANTROW

Bankers Trust Co. is selling its risk-management skills to other participants in the over-the-counter derivatives market.

The company is making available its C-Trax+ system, which helps manage collateral pledged by a counterparty in a derivatives trade, such as a swap or forward contract.

Bankers Trust, one of the largest participants in the derivatives market, has been using the system for four years.

"Collateral has been taking off as a risk-management tool," said Thomas F. Wiese, a Bankers Trust vice president. The value of collateral in the over-the-counter derivatives market – primarily government agency bonds and government securities – exceeds $10 billion, according to Bankers Trust.

Feeding Off Regulatory Intervention

The bank announced its program for monitoring counterparty collateral just days after an international group of banks – known as the Group of Thirty – released recommendations to help derivative-market participants better manage real and potential risks.

The report was seen as an attempt to fend off regulatory intervention in the unregulated over-the-counter derivatives market.

Bankers Trust officials said that C-Trax+ should help banks implement some of the recommendations.

"Every top manager is worrying about how to implement and how to charge finished at $565.65, down 2.24 points. Observers said weakness was due to profit taking after Monday's record close, and to sharp losses in steel stocks after the International Trade Commission ruled on several dumping charges.

Bank Stock Table Explained: The table lists in alphabetical order daily composite stock prices at 4:30 p.m. (unless otherwise noted) for the 225 largest publicly traded banks and thrifts. The first and the 25 largest publicly traded thrifts as measured by the market value of their outstanding common stock. The 225 banks had a market value cutoff for banks of $149.04 mil. and for thrifts $244.20 mil. **52 Wk Hi** (or the moving 52-week high and low closing prices for the stock. **PE to bb** (price/earnings ratio) is the current stock price divided by the trailing four-quarter earnings per share as reported to the Federal Reserve Board. **Mkt Cap.** is the value used for comparison with more than four quarters of data. **Mkt. to bb:** the ratio of the current day's closing price to the stock's book value, expressed as a percentage. **Div:** the latest annualized or announced earnings and dividends. **Last:** The price at which the stock last traded. If no trades for the day, the bid price. **52 Bank and Thrift Index:** A weighted average of the top 225 banks in market value. **Bold face** in the Chg. column and the Index Net Change highlights show largest percentage increases in price and two-volume indicators; most shares traded and today's volume as a percentage of average shares traded daily over the past month.

STOCKS

Thrifts Buoyed by Takeover Talk And Stronger Performance Trend

By JAMES R. KRAUS

Thrift stocks are quietly staging a rally.

Fueled by improving performance and takeover speculation, thrift shares have climbed by about 8% over the past month, according to the *American Banker* index of 25 large thrifts.

During the same period, bank stocks rose by 2.5%, while the broader market, as measured by the Dow Jones industrial average, climbed by 2.2%.

And despite earnings setbacks by a few big thrifts in recent days, analysts think the ride isn't over yet for the sector.

Hopeful Signs

Among the reasons for optimism: On the whole, loan quality is improving, provisions are declining, and profit margins are growing.

Another key factor is the growing interest by banks in acquiring thrifts, both to increase market share and enter new regions.

"Banks, which long looked as if they'd never acquire a thrift, are looking at them as a more cost-effective way of acquiring a franchise in a given geographical area," says Jerome Baroo, vice president and senior financial services analyst at Josephthal, Lyon & Ross in New York.

Recent Acquisitions

Within the last two months, First Fidelity Bancorp has acquired Peoples Westchester Savings Bank in Hawthorne, N.Y., and Citizens Financial Corp. of Providence, R.I., has acquired the Boston Five Bancorp as well as a Connecticut thrift, New England Savings Group.

Further west, three of the best-performing thrifts have also been purchased.

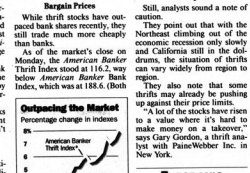
ABN Amro bought Cragin Financial Savings in Chicago. Fourth Financial Corp., the largest banking company in Kansas, acquired Great Southern Bancorp in Springfield, Mo.

And Huntington Bancshares of Columbus, Ohio, bought Railroadmen's Federal Savings and Loan Association in Indianapolis.

Bargain Prices

While thrift stocks have outpaced bank shares recently, they still trade much more cheaply than banks.

As of the market's close on Monday, the *American Banker* Thrift Index stood at 116.2, way below *American Banker* Bank Index, which was at 188.6. (Both sectors were indexed at 100 on Jan. 1, 1989.)



Indeed, thrifts have historically traded at a discount to banks because of the limited nature of their business.

"Thrifts sell at cheaper price-to-earnings ratio than banks, so banks view thrifts as a bargain," says Wayne Bopp, a thrift analyst in St. Louis with Stifel Nicolaus.

Among the thrifts his firm favors are MAF Bancorp in Clarendon Hills, Ill.; First Federal Capital Corp. in Lacrosse, Wis.; and Advantage Bancorp in Kenosha, Wis.

Josephthal Lyon recommends the $3.5 billion-asset Collective Bancorp, Egg Harbor, N.J.; the $11 billion-asset Firstfed Michigan in Detroit; and, on a turnaround basis, Greater New York Savings Bank.

Soft Spots

Still, analysts sound a note of caution.

They point out that with the Northeast climbing out of the economic recession only slowly and California still in the doldrums, the situation of thrifts can vary widely from region to region.

They also note that some thrifts may already be pushing up against their price limits.

"A lot of the stocks have risen to a value where it's hard to make money on a takeover," says Gary Gordon, a thrift analyst with PaineWebber Inc. in New York.

TUESDAY'S MARKET

Bank stocks were mixed at 4 p.m.

Among the losers was Chemical Banking Corp., which fell 50 cents, to $40.25. Comerica fell 75 cents, to $30, and First Bank System Inc. fell 50 cents, to $30.50.

Gainers included Fifth Third Bancorp, up 25 cents, to $53; and Crestar Financial, up 50 cents, to $41.625.

PNC gained 87.5 cents, to $29.50. Wachovia Corp. rose 75 cents, to $35.625.

Regional Differences

Raphael Soifer, an analyst with Brown Brothers, Harriman & Co. in New York, said investors were mainly favoring banks with prospects for bigger revenues.

"Banks in healthy regions are seeing loan growth, but you're not seeing much loan growth in New York, and what you're seeing in California is loan shrinkage," he said.

One of the negatives of Chemical, he added, is that the bank is heavily dependent on middle-market commercial and retail business in the New York metropolitan area, where the economy is still sluggish. □

UNDERWRITING

NationsBank Move Aimed At Corporate Customers

By DAVID SIEGEL

NationsBank Corp.'s entry into the securities underwriting business is the latest step in the bank's quest to raise its profile with corporate customers.

"We feel this will drive the value of the NationsBank relationship up in the eyes of our customers," said Robert Hollmeyer, chief operating officer of the company's securities subsidiary, NationsBanc Capital Markets.

The North Carolina-based superregional on Monday received approval from the Federal Reserve Board to underwrite corporate debt and equity through the subsidiary.

Expected to Wait on Equities

The bank can begin underwriting corporate debt immediately, but is not expected to underwrite equities for up to 18 months, pending a further review by the Fed.

Two other major U.S. banks have equity powers – Bankers Trust New York Corp. and J.P. Morgan & Co.

Full corporate debt underwriting powers were previously given to Bankers Trust, Chase Manhattan Corp., Chemical Banking Corp., Chicorp, and Morgan.

"Over time this may prove to be important to NationsBank because debt underwriting is a necessity for serving sophisticated corporations in a full capacity," said Diane Glossman, an analyst with Salomon Brothers.

Fifth in Corporate Loans

NationsBank is already a leader in the corporate loan business. It arranged syndicated loans totaling $42 billion for 41 corporate borrowers in the second quarter, ranking it fifth, according to Loan Pricing Corp.

The bank's new corporate debt underwriting business will not give an immediate lift to earnings from corporate banking, said Judah Kraushaar, analyst with Merrill Lynch & Co. But, taken together with the bank's pending purchase of derivatives powerhouse Chicago Research and Trading Group, NationsBank will be able to offer significant new products for its corporate clients, he said.

"If they can carefully manage the business, they may well be on to something in terms of sizable future incremental earnings," Mr. Kraushaar said.

Mr. Hollmeyer said the bank has no firm underwriting assignments at this point.

NationsBanc Capital Markets increased its capital by $90 million to $150 million at the end of last year, to support its plans for securities underwriting as well as other activities, said Mr. Hollmeyer.

Five foreign banks have full corporate debt and equity securities underwriting powers, and another has full debt powers. □

1st Interstate, UJB Debt Upgraded

Declining bad loans at First Interstate Bancorp and UJB Financial Corp. earned them rating upgrades from Moody's Investors Service.

First Interstate's long-term debt was upgraded a notch, to A3 from Baa1. The bank's other debt instruments were upgraded as well. In all, $7 billion worth of securities were affected.

The ratings company said the upgrades reflect the bank's "substantial progress" in improving its asset quality, despite economic weakness in some markets.

UJB's shelf registration for senior debt was upgraded to Baa2 from Baa3. The change follows improvements in reserve coverage, the result of a decline in new nonperforming loans, extensive chargeoffs, and provisioning against real estate and commercial loans over the past three years. — Richard Layne

MORE DETAILS INSIDE

COMPASS... *Securities training at the touch of a button*

You can have securities training with a snap of your fingers—or a push of a button. In fact, your trainees train themselves—with COMPASS.

COMPASS Securities Exam Computer-based Training is convenient, effective and economical. No need for in-house trainers, no hassle of scheduling classroom instruction. With your computer and our software, your people train themselves—whenever and wherever it's convenient.

Computer-based interactive training is effective, too. Each learner progresses at his own pace.

Many of the nation's largest securities and insurance firms have successfully used COMPASS for nearly 10 years—an enduring record of satisfied users.

COMPASS multi-user site licenses begin at $795 for Series 6 and just $995 for Series 7 training.

Contact: Mark Emmons, Vice President at (800) 621-9021 extension 737

BANK MUTUAL FUND CONFERENCE

General Information

REGISTER IN WRITING OR BY PHONE

Simply complete and fax or mail the registration form below. Or call Nancy Nikolic at **(212) 943-2221.**
Early Registration Is Recommended.

REGISTRATION FEE

Registration Fee: **$695**
Subscriber rate: **$645** (The American Banker, Bond Buyer, or any AB • BB Newsletter).
Special Banker Rate: **$595**

Please make checks payable to **American Banker • Bond Buyer Conferences**, and include the name of the delegate(s) on the face of the check. We also accept Visa, MasterCard, and American Express.

PAYMENTS MUST BE RECEIVED NO LATER THAN TWO WEEKS PRIOR TO THE CONFERENCE TO CONFIRM REGISTRATION.

EDUCATION COURSE CREDIT

Attorneys, Accountants Others: States have widely varying regulations regarding Continuing Education credit. For more information concerning approval contact:

American Banker • Bond Buyer
1 State Street Plaza
New York, N.Y. 10004
Attn: Nancy Nikolic

CANCELLATION POLICY

You may send a replacement at any time at no additional charge. Cancellation must be in writing. We regret that no cancellations will be accepted within 14 days of the conference.

DISCLAIMER

We reserve the right to change or replace speakers without notice.

FOR FURTHER INFORMATION

Please contact Brendan Doran at (212) 943-8633. Or fax to (212) 943-4842.

TRAVEL AGENCY

Garber Travel
1001 East Touhy St.
Des Plaines, IL 60018
Phone: 800-447-4166
Fax: 708-827-8239

For your convenience, Garber Travel has been designated the official travel agency for this conference. Attendees are responsible for their own travel and hotel arrangements.

AIRLINE DISCOUNTS

Garber Travel has negotiated substantial discounts with some airlines — at least 40% off unrestricted coach fare and 5% off any promotional fare. **To obtain these air travel discounts, you must make your arrangements through GARBER TRAVEL.**

Please call as soon as possible to obtain the lowest fares. All tickets must be charged to a credit card, and will be sent to you promptly. **Be sure to identify yourself as an American Banker • Bond Buyer Conference Attendee.**

HOTEL ACCOMMODATIONS

We have reserved blocks of rooms at the Essex House at a discounted rate. Please call the hotel on or before Sept. 2 to receive this special rate. **Be sure to identify yourself as an American Banker • Bond Buyer Conference Attendee.** If you book your air reservations through the travel agency, they can make your hotel reservations at the same time.

Nordstrom Deal With Visa Marks End of an Era

By JEFFREY KUTLER

Nordstrom Inc. buried a hatchet last week by announcing it will issue Visa cards.

For more than a decade, Nordstrom had been one of the retailing industry's harshest critics of bank credit cards. Although there was never any love lost between the merchants and bankers who compete for consumer credit, Nordstrom was especially militant. Its objections to Visa's pricing escalated into a lawsuit 10 years ago.

Changes in Visa policies led Nordstrom to withdraw that suit, and the trendy Seattle-based retailer has since been accepting MasterCard and Visa cards without incident. But the legal battle left an aftertaste — perhaps as strong among other merchandisers as within Nordstrom itself.

NEWS ANALYSIS

Retailers may still harbor suspicions about bankers, who have been tough — in some merchants' eyes, unfair — counselors for the credit card dollar.

But the bitter Nordstrom chapter, it is over. The company plans to begin issuing Visa cards next spring. Both Nordstrom and Visa are declaring an era of good feeling.

More Competitive Pricing

"Times have changed," said John Walgamott, president of Nordstrom National Credit Bank in Englewood, Colo., which will issue the cards. "They [Visa] have got a good franchise, and pricing is much more competitive" than it was when Nordstrom sued to protest Visa's one-price policy for both credit and debit transactions.

Retailers argued then that the fee banks charged to process a credit card payment should be greater than that to process a debit item. The latter worked like a check, which costs nothing to clear.

None of Their Business

Visa, which at the time did not require that debit cards look different from credit cards, said a store had no business knowing whether a transaction was one or the other. It was a private matter of customer choice.

"There was a time when one pricing scheme fit all," said H. Robert Heller, president of Visa U.S.A. "As we have become more sophisticated, with the ability to differentiate between types of cards and transactions from a product and technical

Norwest Defends Rich Price It's Paying for First United

By JOHN RACINE

Norwest Corp.'s decision to pay almost twice book value for First United Bank Group, a collection of banks in New Mexico and West Texas, was greeted with some concern by the stock market, but executives of the Minneapolis-based banking company defended the deal.

"It's a fair price for both parties and certainly within our own guidelines," Norwest president Richard M. Kovacevich said of the decision to pay $495 million in stock for First United.

The deal, one of the largest negotiated this year, was announced after the market closed on Tuesday. The company's stock fell $1 to $26.25 a share Wednesday. Shares of First United, which is controlled by the Ford Bank Group of Lubbock, Tex., lost 25 cents to $27.25.

Formed in March

First United, which has $3.8 billion of assets and 79 branches in New Mexico and Texas, was formed March 25 when United New Mexico Financial Corp. and the Ford group merged. The bank earned $15.9 million on a pro-forma basis in the first six months of 1993.

The purchase, which is expected to be completed in the first quarter of 1994, will include $400 million of assets that First United expects to acquire later this year. The purchase price

Citi Pitches Mutual Funds To Its Card Customers

By DEIDRE SULLIVAN
Special to the American Banker

In an aggressive bid to expand in mutual funds, Citicorp is enclosing promotional materials in mailings to credit card customers.

Along with their monthly bills, selected MasterCard and Visa holders are getting brochures from Citicorp Investments Services.

While some other banks have tried to boost sales by marketing a range of products to credit card customers, none has access to a list as big as Citicorp's industry-leading 20 million accounts.

Cross-Selling Trend

The marketing of mutual funds to customers is a new phenomenon, but it is in keeping with the trend toward cross-selling.

"Banks are always looking for ways to solidify and expand their relationship with customers," said Robert Skolnick, executive vice president at BAI Mail Monitor, a Tarrytown, N.Y., company that tracks credit card and direct mail solicitations.

His firm has not yet begun monitoring the mutual fund-related mailings consistently. But Mr. Skolnick said he has noticed an increase in the activity.

The Citicorp Investments brochure appeals to investors' dissatisfaction with the current

Mich. National Seeks President, Not Buyer

By STEVE KLINKERMAN

Michigan National Corp. has decided to search for a new president and steer an independent course, the company's top executive said.

Robert J. Mylod, chairman and chief executive of the struggling company, which has $10.5 billion of assets, said in an interview that he and the board decided to look outside the company for a president, who will also be chief operating officer of Michigan National.

The president's post has been vacant since 1990.

Mr. Mylod, 53, said he and the board jointly decided it was time to fill the president's post, explaining that growing managerial demands made it "inappropriate" for him to continue alone.

'I'm Still the CEO'

At the same time, Mr. Mylod emphasized he is not contemplating leaving his post.

Pat Beck/Detroit Free Press

Robert J. Mylod
Sees 'a bright future'

"I'm still the CEO, and Michigan National has a bright future," he said.

Michigan National's second-quarter net income plunged 16% over the year-earlier period to $16.15 million, for a 0.62% return on assets. In this year's first quarter, the company lost $44.8 million.

The company's recent problems included heavy refinancing activity that required it to accelerate amortization of its servicing portfolio.

Michigan National's board has given lengthy consideration to seeking a buyer, but recently rejected that option, Mr. Mylod said.

'A Course of Independence'

"We decided to steer a course of independence," the executive said. "[The board] wanted to get that issue clear in our heads before seeking a president."

Analysts expressed support for the stance, saying it does not make sense to sell the Farmington Hills-based company in its current state of disrepair.

However, most believe the company is stalling for time. They foresee a slow turnaround for Michigan National, predict-

NEWS *briefs*

Ford's Thrift Unit Posts $18 Million Loss

SAN FRANCISCO. — First Nationwide Financial Corp., Ford Motor Co.'s thrift subsidiary, reported an $18 million loss for its second quarter on Tuesday. In the year-earlier quarter, it had a deficit of $7 million.

In the first six months of 1993, the San Francisco-based thrift company lost $35 million.

First Nationwide, which has $17.3 billion of assets, said its most recent deficit resulted from writedowns on real estate development loans and losses on mortgage derivative securities purchased as interest rate hedges.

The company said its main operating unit, First Nationwide Bank, earned $16 million in the second quarter thanks to sharply lower operating costs and the transfer of some nonperforming assets to the holding company.

House Action on S&L Bailout Delayed

WASHINGTON — The House Democratic leadership has delayed action on funding for failed savings and loans, a sign that the votes needed to pass the $43.3 billion measure had not been found.

Though some congressional sources said the measure could come up at any time, others said prospects appear dismal. "I don't think we'll get to it before the August recess," said one key Republican lawmaker, Rep. Richard Baker of Louisiana.

Rep. Jim Leach of Iowa, the ranking Republican on the House Banking Committee, said a House-passed appropriation providing money for the infant Savings Association Insurance Fund could end up being the only funding available for failed thrifts this year. If so, he said, House and Senate negotiators could rewrite the measure to permit the Resolution Trust Corp. to also use the funds.

The House Rules Committee, an arm of the House leadership, took up the bill Tuesday but broke off without issuing a rule for bringing the bill to the floor.

Morgan Arranges $100 Million Chile Loan

NEW YORK — J.P. Morgan & Co. announced Wednesday that it has arranged a $100 million, three-year senior financing for Banco del Estado de Chile.

The loan represents the first foreign-currency borrowing by a Chilean government agency in more than 10 years and will be used for trade finance.

The government-owned Banco del Estado is Chile's largest bank, with 207 branches and $5.4 billion in assets at yearend.

Morgan is acting as arranger and agent for the loan.

NationsBank Raises Its Dividend by 5%

CHARLOTTE, N.C. — NationsBank Corp. increased the dividend of its common stock by 5%.

The quarterly dividend will be 42 cents a share, up from 40 cents. It is payable Sept. 24 to shareholders of record Sept. 3.

PNC Wins 'Strong Buy' Rating from Kemper

NEW YORK — Kemper Securities Inc. analyst Thomas Maier upgraded PNC Bank Corp. to "strong buy" from "market term buy," citing strong earnings momentum.

The analyst, who picked up coverage of PNC for Kemper recently, also raised his 1993 earnings estimate to $3.25 a share, from $3.10, and his 1994 estimate to $2.90 a share, from $2.75. In 1992, PNC earned $2.36 a share before nonrecurring charges related to changes in accounting standards.

Mr. Maier also noted that PNC's annual dividend of $1.14 a share is yielding 3.9%.

M2 Remains Useful, Fed's Mullins Says

NEW YORK — The M2 monetary aggregate, though deemphasized in the Federal Reserve Board's policy decisions, continues to be a useful tool in tracking the economy, Vice Chairman David Mullins said.

The Fed recognizes that investors are putting money into stock and bond funds but is not ready to create a new aggregate that would include the money now funneled into funds, Mr. Mullins said.

"In my opinion, we are not at the stage of annointing a successor to M2," he said in remarks at a swaps association meeting.

Mellon to Ban Smoking in All Its Offices

PITTSBURGH — Mellon Bank Corp. said it will institute a smoke-free workplace policy effective Jan. 1. The company said smoking will be prohibited at all of its facilities throughout North America and overseas.

Citing "the dangers of passive tobacco smoke as well as the expressed desire of a majority of Mellon associates for a clean-air work environment," D. Michael Roark, executive vice president and director of human resources for the company, said Mellon will assist smokers in adjusting to the new policy.

The company is working with the American Cancer Society to design smoking cessation-modification programs, he said.

The briefs were compiled from staff and wire reports.

HSBC Rises Most as Mergers Shift Rankings of World's Biggest Banks

By JAMES R. KRAUS

Mergers shuffled the rankings of the world's largest banks last year.

The biggest gainer: London-based HSBC Holdings PLC, which climbed 14 notches to 17th place, according to the *American Banker*'s annual survey of the 100 largest banks by assets. (Tables begin on page 8A).

Last July, HSBC acquired the $111 billion-asset Midland Bank PLC in London, then the world's 47th-largest banking company.

That boosted HSBC's assets to $258.1 billion at the end of last year, from $160.3 billion a year earlier.

BankAmerica Makes Strides

The No. 2 gainer was BankAmerica Corp., San Francisco, which moved up 13 places to rank as the world's 32d-biggest bank.

BankAmerica acquired $76 billion-asset Security Pacific Corp., Los Angeles, the world's 72d-largest banking company in April 1992, boosting its total assets to $179.4 billion, up from $114 billion at yearend 1991.

Banca di Roma was the No. 3 gainer, moving to 55th place after a merger with $61 billion-asset Banco di Santo Spirito in August 1992 boosted its total assets to $102 billion from $69.5 billion.

How U.S. Banks Rank Worldwide

World asset rank		Total assets (2-31-93) (billions)
30	Citibank	$162.0
32	Bank of America	132.2
47	Chemical Bank	107.6
66	Morgan Guaranty Trust Co.	75.7
73	Chase Manhattan Bank	73.8
91	Bankers Trust Co.	55.5
97	Wells Fargo Bank	50.7
130	Home Savings of America	47.6
132	Great Western Bank	36.6
137	Bank of New York	35.9

The survey also found that several banks slumped significantly in the ranks, especially banks in Sweden, Norway, Denmark, Italy, and France, after their assets fell sharply.

Exchange Rate Woes

The drop stemmed mainly from exchange rate fluctuations that drove down the value of their currencies against the dollar and from writeoffs on bad lending.

Among the top losers were 82d-ranked Skandinaviska Enskilda Banken, Stockholm, which slid 11 notches.

Scandinaviska's assets fell to $68.4 billion from $81.1 billion in 1991 after the Swedish krona fell 21.7% against the dollar and the bank had writeoffs resulting from the Swedish economic crisis.

Credito Italiano, Milan, fell six notches to 74th place, after its assets fell to $72.3 billion from $84.0 billion, largely because of a 22% fall in the Italian lira against the dollar. Assets in liras actually rose 7%.

Changing Capital Positions

Rankings in the survey also show significant improvements as well as deteriorations in capital ratios.

The bank that most improved its risked-based capital ratios was 75th ranked Bankers Trust New York Corp. It boosted its ratio 2.75% to 13.65% in 1992 from 10.90% in 1991.

Chemical Banking Corp., New York, the world's 39th-biggest bank, raised its capital ratio 2.41% to 11.54% at yearend from 9.13% in 1991. Citicorp, New York, rated No. 26, improved 2.14% to 9.50% from 7.46%.

J.P. Morgan & Co., Chuo Trust, Tokyo and Yasuda Trust also significantly improved their capital ratios.

European banks were hardest hit by weakening capital ratios, according to the survey. □

Flake Sees His Plan Speeding Loans to Poor

By ROBERT M. GARSON

WASHINGTON — Rep. Floyd Flake, D-N.Y., praised President Clinton for having "brought us to the table" of community development, but said his own bill would make more credit available more quickly to low-income communities.

Rep. Flake and Rep. Jim Leach, R-Iowa, last week introduced legislation that would fund community development banks but also provide financial incentives to commercial banks that lend to distressed communities.

Part of the money would be used to fund the Bank Enterprise Act, a law that gives banks a rebate on deposit insurance premiums for certain types of lending activities.

Bonus for Good Grades

The bill would mandate performance-based standards for the Community Reinvestment Act, and give banks with a three-year record of outstanding ratings on CRA a "safe harbor" on CRA challenges.

"We are trying to solve the problems of the Third World nation within our own borders," said Rep. Flake.

He said his bill complements the President's approach, but the bill differs in major respects from the White House bill. The White House proposal would not permit financial incentives for most commercial banks, thrifts, or credit unions, and it puts off CRA issues.

"The goal of this is to make the President look as good as possible," said Rep. Leach. □

Signet's Profit Software Gets Marketing Push

By BARTON CROCKETT

Signet Banking Corp. of Richmond, Va., has begun using new profitability software that is now being made available to other institutions.

The new software, called Insight, is being marketed by Software Alliance Corp. of Berkeley, Calif., and Milwaukee-based Marshall & Ilsley Corp. It uses a technology called relational data base management that helps bankers better understand how and where they make their money.

"This type of software is absolutely critical for banks," said Lawrence A. Willis, executive vice president of First Manhattan Consulting Group in New York.

Custom Designed

Signet began using Insight, which runs on a mainframe computer, in November. The software was designed to Signet's specifications by Software Alliance and Marshall & Ilsley in partnership with Electronic Data Systems Corp., of Plano, Tex.

EDS runs Signet's computers as part of a 10-year outsourcing contract signed in 1991, using a number of other Marshall & Ilsley software packages to manage the bank's core computing chores.

Insight takes transaction and account information from deposit, lending, and corporate account systems and stores it in a relational data base management system from International Business Machines Corp. called DB2.

Signet uses Insight to analyze the information in the data base, and to figure out such things as the profitability of various bank customers, products, or lines of business.

Used in Marketing

Signet also uses the software to help with marketing campaigns, by tracking how they affect customer behavior.

Vendors have been responding with a series of new products to meet this need. The vendors include: Hogan Systems Inc. Dallas; Newtrend, Orlando, Fla.; Interactive Planning Systems Inc., Atalanta; Micro/Resources Inc., Costa Madeira, Calif.; Treasury Services Corp., Santa Monica, Calif.; and Sendero Corp., Scottdale, Ariz.

David Fassler, Software Alliance's chief technology officer, said that banks can license Insight for between $300,000 and $500,000. □

First Financial To Buy Installer Of Store Branches

By JEANNE IIDA

First Financial Management Corp. has agreed to acquire IBT, an Atlanta-based company that specializes in installing bank branches in supermarkets.

The privately-held IBT, which stands for International Banking Technologies, had revenues in 1992 of $20 million. It has installed about 600 in-store bank branches – one-third of all in-store branches – in 34 states.

First Financial, a computer services company with 1992 revenues of $1.5 billion, has been expanding rapidly.

Sold a Bank In Past Year

In the last 12 months, First Financial, also Atlanta-based, sold a thrift subsidiary and an outsourcing unit to concentrate on marketing information services.

First Financial said it will pay one million unregistered common shares in IBT. Subject to regulatory approval, the deal is expected to close in 30 to 45 days.

Founded in 1985, IBT built on its consulting work by forming a trade group, the In-Store Bankers Alliance. It also tracked the growth of supermarket branching. The facilities have grown more than eightfold since 1985, and 28% since midyear 1992, to 1,749 as of June 30.

Retree into Supermarkets

A spokesman for First Financial said IBT could give its other businessmen an entree into supermarkets.

First Financial also owns Nabanco, a merchant credit card processor; Microbilt, which builds systems for use in credit card authorizations; and Telecheck, a check guarantee company.

First Financial is developing an integrated product offering that includes processing and handling of credit cards, debit cards, and checks, as well as coupon fulfillment programs for food stores, the company said.

We'll save you money. We could save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division, to get every Monday the data you need to face the regulators.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... which agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 20% discount, so you'll be saving money even before you get the first issue. After that, how well you use the information before this year's exam could decide whether you're around next year.

Bank Structures Blur The Responsibility for Risk

In April 1979, Paul Harvey told a story on his radio broadcast about a woman in Jackson, Miss., who was having all kinds of trouble driving to and from work.

She said it used to be easy. No traffic, no rat race.

But now – wow! Cars coming from all directions!

Ever since she got her new glasses.

Risk Is Not a Bad Word

If a better glimpse of reality doesn't change circumstances, at least it should change our awareness.

Our world is undergoing an incredible transformation. Because of rapid technological advances, opening of global markets, and the banking industry are in bankers' misguided belief that risk management is achieved through regulatory compliance and rigid control systems within their organizations.

Change Needed

The banking industry's future is plagued by two major problems: a burdensome, rigid, and outdated regulatory structure and a need to dramatically improve the ability to take risk.

Bankers must accept responsibility for changing and improving their industry. If they want more freedom, deregulation, and the ability to take risk on their own terms, they must prove that they have increased their understanding of risk.

Additionally, they must demonstrate that they will accept more responsibility and take greater "ownership" of the risks they choose in a less controlled environment.

Maximizing Returns

Bankers must revolutionize their philosophy of risk management.

In the world of financial services, the ultimate is not to categorically reduce risk, to minimize risk, and certainly not to eliminate risk. Bankers are here to maximize risk-adjusted returns — to move in those areas where it will be best utilized on a risk-adjusted basis.

They must remember that taking risk is not the same thing as intelligent risks, educated risks, active risks – they use knowledge and creativity to stack the deck in their favor.

Process Has Been Fragmented

And when bankers take risks correctly, they have the power to create wealth. Winning this way does not require that someone else lose.

Why do banks seem to continually lose the battle with risk? The answer lies in the fact that the banking industry, among others, has disaggregated the fundamental process of risk taking, weakening the ability to manage risk.

Think how basic the process really is:

Banks invest capital that generates a return on the investment sufficient to compensate for the risk involved in the transaction.

To an individual, this algorithm is fairly straightforward. But in a bank, the interdependent components of taking a risk and return have been fragmented all over the organization.

Because of this organizational design, banks do not force the balancing of risk and return strongly enough for these business units and individuals.

Wrong Focus

Banks push their loan officers to generate volume – and ask them only parenthetically to keep an eye on risk.

Loan officers are not told to go out and maximize risk-adjusted equity returns. But that is just what they should be told.

Bank portfolio managers may make investment decisions, but usually these investments get quickly dumped into a balance-sheet melting pot, with the true consequences of this risk-return decision never to be known.

The problem is actually very simple:

• The fundamental mission of a financial organization is balancing – balancing risk and return, deploying capital to appropriately balanced transactions.

But when this process is fragmented so the balancing dynamics cannot be tracked and bankers can't learn from the outcomes of past decisions – cannot assign "ownership" to the risk-adjusted return – the industry is consigned to a future of flawed risk taking.

People, Not Rules

How can the banking industry improve its risk-management capabilities?

• Rely on the knowledge and the "ownership" of the risk managers, not on rigid rules and controls.

• Create an environment that encourages and requires constant learning. Only in such an environment can risk-management organizations increase their knowledge.

• Increase risk managers' "ownership" of risk by aligning the goals of individuals with those of the organization. Actual "co-ownership" of the risk and return is the optimal approach.

• Encourage candid debate in risk-management organizations.

• Do not allow badly performing risk managers to survive in the organization – and conversely, let top-performing risk managers gain influence.

• Live by the process; that is the only way to understand its complexity. Risk management is a never-ending process that allows the organization to learn, change, and improve its ability to survive. □

Marilyn Seymann

Steve Williams

• Use risk-adjusted return on capital as the common risk-measurement and analytical tool throughout the organization.

Plan Ahead

Finally, develop a formal risk-management plan that recognizes the complexity of the banking enterprise.

Unfortunately, high bank executives usually augment their institutions' strategic plans with financial plans, marketing plans – sometimes even information systems plans – only rarely are formal risk-management plans prepared.

It will be very difficult for the banking industry to effect worthwhile changes in its risk-management cultures without such plans.

Taking Responsibility

Our lawmakers must enact a long-term plan to create a more open, market-driven financial system.

The movement of capital cannot rest on the practice of regulatory arbitrage. Technical, global markets, and value-driven consumers will make it impractical to segregate the American financial system into simple, convenient pieces that never touch.

The financial system of the future should stress the two key principals of enterprise: knowledge and ownership. Bankers must focus on these principles as they build their risk-management organizations.

It comes down to creating cultures in which bankers, having developed the instincts of successful entrepreneurs, act more as if the money entrusted to them were their own. □

REGIONAL BANKING

Norwest Defends the Price It's Paying for First United

Continued from *page 1*

equals about 1.9 times the mid-year book value of First United, analysts said.

Mr. Kovacevich, whose profitable company has been on an acquisition spree for two years, said Norwest will continue to look selectively for purchases in New Mexico and Texas.

Norwest, the nation's 14th largest bank company with $47.8 billion of assets, has outposts in 15 states, including recent expansions into Arizona, Colorado, and California.

Analysts said they have few arguments with Norwest's acquisition strategy but are somewhat disappointed with its willingness to pay such high prices.

Bankers in the Southwest said they understood that several banks, including Banc One Corp., competed for First United. A Banc One spokesman was not available for comment.

Long-Term Investment

Kenneth Puglisi, an analyst at Chicago Corp. who reduced

The stock market greeted the deal with some concern.

Norwest's stock to "hold" from "buy" shortly before the deal was announced, said the company's sterling credit quality and revenue potential has been fully valued by the market. But he recommends Norwest only for investors with long-term horizons.

"I continue to think it's one of the best-run banks in the country," Mr. Puglisi said. "It's a safe-deposit-box stock. Put it away and you'll do just fine."

Norwest said the acquisition will be slightly dilutive to earnings in the first year of operations and begin to add to earnings per share beginning in the second year.

"It's not a home run," said Sandra J. Flannigan, an analyst at Merrill ynch & Co., "but it recently has been trading at a modest 15% premium over book value. In late trading Wednesday, its shares rose $1.625 to $59.875.

Mr. Mylod said the search for a president began in earnest about a week ago. He noted that the new executive's arrival will allow him to devote fuller attention to corporate strategy.

To Promote Bank's Strengths

He said he will try to promote Michigan National's strengths in middle-market commercial lending and consumer banking.

But Mr. Cummings, the analyst, said it might take until 1995 for Mr. Mylod to deliver a benchmark 1% return on assets and 15% return on equity.

Michigan National's return on assets for 1992 was 0.56% ROA, well below the average of 1.09% for 28 Midwest regional banking companies tracked by Keefe, Bruyette & Woods Inc. □

Richard M. Kovacevich
"Within our own guidelines"

Michigan National Looking for President

Continued from *page 1*

ing it eventually will be acquired.

Problem Assets Linger

"Longer-term, it is difficult to picture Michigan National as a survivor in the banking industry consolidation, especially in the context of a slow-growth economy," said Fred Cummings, a banking analyst with McDonald &Co. in Cleveland.

A Modest Premium

Though credit quality has improved at the company, problem assets still equaled an unwieldy 4.15% of gross loans at midyear.

The banking company's stock

The struggling company has decided to steer an independent course.

Fleet Reviewing Operations In the Northeast to Cut Costs

By YVETTE D. KANTROW

Fleet Financial Group said Wednesday that it is embarking on a seven-month, comprehensive review of costs throughout its banking operations in the Northeast.

The program, dubbed Fleet Focus 1994, will ultimately result in staff reductions and other cost-cutting measures, said the Providence, R.I.-based banking company.

The "reengineering" is designed to meet chairman Terrence L. Murray's goal of reducing Fleet's efficiency ratio from 67% – that is, 67 cents of expenses for each $1 of revenue – to under 60% within two years.

Kudos from Wall Street

Analysts applauded Fleet's decision to go public with its plan.

"They have really put their feet to the fire," said Michael Mayo, an analyst at UBS Securities, New York. "The entire investment community will be watching them, and that's good."

Eugene M. McQuade, Fleet's chief financial officer, said in an interview that Fleet hopes to add $25 million to $150 million of annual profits as a result of the program.

Fleet is also sending a clear, though risky, message to its employees in unveiling the plan. Officials said they have not established a work force reduction goal but know that the program could create low morale and fear.

Finessing the Work Force

But management said it hopes to persuade employees that the easier lies in getting their own hands. Fleet is asking all employees to work toward the goal of improving their units' profitability by 50%, Mr. McQuade said.

"We are asking them not just to fine-tune their jobs but to redefine them," he said.

The company said Fleet Focus is an outgrowth of that reorganization.

The program, designed in consultation with Tandon Capital Associates, a New York-based bank advisory firm, will be administered by 50 employees companywide.

Fleet said they were chosen from 250 of the bank's "top performers."

The group will meet over the next few months with 150 business units to discern ways to trim expenses.

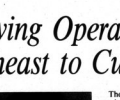
Aiming for March

After a seven-month review period, the group will make its recommendations to Mr. Murray, Mr. McQuade, and the vice chairmen – Robert Higgins, H. Jay Sarles, and Michael Zucchini.

Fleet hopes to put the recommendations into effect by March.

Some analysts praised Fleet's measured approach to layoffs as more effective than a massive slash-and-burn technique.

"Other banks have run into problems in the past when they have cut costs too hastily," said Gerard Cassidy, an analyst with Hancock Institutional Equity Services. "Those banks run the risk of adversely impacting their customer base." □



Eugene M. McQuade
Aiming to boost profits

Fleet, the nation's 14th-largest banking company, has long been plagued by high costs. The New England-based company, which has $48 billion of assets, operates seven banks in six northeastern states and several finance units and fee-producing subsidiaries.

Power Centralized

In March, Fleet took steps to centralize an unwieldy organizational structure that had been blamed for problems in some of its units.

The bank reduced many management responsibilities of its seven bank presidents, centralizing power in the hands of three new vice chairmen in Providence.

Get MOHR information about profitable banking in the 90's

Two years ago, breakthrough research by MOHR Development, the recognized leader in sales, service and leadership training for banks, defined five key issues for profitable consumer banking in the '90s. Now follow-up research – conducted jointly with the *ABA Banking Journal* – examines consumer banking's progress in addressing those issues, including:

- creating a high performance sales culture
- integrating sales and service
- translating market segmentation into front-line action

MOHR Development's all-new report highlights critical gaps between the industry's acknowledged priorities and its actual practices. It also draws important conclusions about how to close these gaps, and points the way to more profitable banking.

1st Tennessee Buying In-State Bank

MEMPHIS — First Tennessee National Corp. and Cleveland Bank and Trust Co. of Cleveland, Tenn., announced Wednesday a definitive agreement by which First Tennessee will buy Cleveland Bank.

Cleveland Bank and Trust has $225 million of total assets, $198 million in total deposits, and $22.2 million in capital. First Tennessee reported total assets of $9 billion and shareholders' equity of $635.3 million at June 30.

Subject to Approval

In trading late Wednesday afternoon, First Tennessee shares were up $1, to $42.50.

The agreement is subject to approval by regulators and Cleveland Bank's shareholders.

Based on a price of $40 per share for First Tennessee's common stock, Cleveland Bank shareholders would receive 10.95 shares of the buyer's common stock for each share of their stock.

First Tennessee will pay out about 1.1 million shares of its common stock, subject to adjustments for increases or reductions in the price of its common.

Retaining Name and Charter

Cleveland Bank will retain its charter and name and will continue to be managed by its current officers and directors.

"We're very pleased to welcome the customers and employees of Cleveland Bank and Trust to the First Tennessee group of companies," said Ronald Terry, First Tennessee's chairman.

"Our goal is to go beyond what our customers expect in order to provide the highest level of service available from any bank. Our affiliation with Cleveland Bank and Trust will further strengthen our position in east Tennessee."

Cleveland Bank chairman Sam McReynolds said the deal should provide new products for its customers. □

Citizens Financial Posts Quarterly Profit of $7.2 Million

PROVIDENCE, R.I. — Citizens Financial Group said Wednesday it earned $7.2 million in its third fiscal quarter, a 16% gain from the year-earlier period ending June 30.

Citizens, a wholly owned subsidiary of the Royal Bank of Scotland, attributed its improved results to "strong mortgage banking activity" and income from a newly acquired bank in southeastern Connecticut.

In the past 12 months, Citizens bought the 21-branch New England Savings Bank in Connecticut and the eight-branch Plymouth Five Cents Savings Bank in Massachusetts. Both were acquired from the Federal Deposit Insurance Corp.

The bank company, which had $5.3 billion of assets on June 30, also is waiting to close on its purchase of the Boston Five Bancorp, a healthy company with about $1.8 billion of assets.

The company's credit quality improved. Its provision of $5.4 million was down 16.7% from the year-earlier period and its reserve coverage for problem loans and leases grew to 97.9% on June 30 from 85.1% three months earlier. □

Why PNC's Joe Irwin Swung Toward Joining Home Loan System

By STEVE KLINKERMAN

People in the News

JOE R. IRWIN IS ONE of hundreds of bankers who have made alliances with the Federal Home Loan Bank System. But his recent move to join the government-sponsored group brings new visibility to the arrangements.

Mr. Irwin is chief investment officer of PNC Bank Corp., the nation's 11th-biggest bank company. Its flagship subsidiary, the $31 billion-asset lead bank in Pittsburgh, joined the Home Loan system earlier this month as its largest commercial bank member. PNC Bank of Ohio also has been approved for membership.

For decades the Home Loan banks have provided long-term wholesale funds to thrifts, but only since 1989 have they been empowered to sell advances to qualifying commercial banks, credit unions, and life insurance companies.

Joe R. Irwin

After an early lull, the arrangement has gained steam. About 800 commercial banks joined the system during the 12 months that ended May 31 – more than doubling their ranks, to 1,609, according to the Federal Housing Finance Board.

Simultaneously, outstanding advances to bank members leaped by 150%, to about $10 billion.

Mr. Irwin said risk management guided his decision. Home Loan bank advances should help narrow maturity mismatches on funding for PNC's vast holdings of residential mortgages and mortgage-backed securities, he explained.

"As long as we are comfortable with rate risk, we'd rather not shrink the balance sheet, because that would penalize profitability," said Mr. Irwin, who is responsible for the treasury, securities, and investment banking divisions of PNC.

The company expects to draw advances having maturities of two to five years, he said.

That is clearly preferable to selling liabilities to money-market mutual funds, which are legally restricted to investments with maturities of 13 months or less, he explained.

Mr. Irwin is a new convert to the advantages of the Home Loan system.

He said he shrugged off membership three years ago, when the yield curve was flat and short-term rates appeared poised to fall.

But the reversal of those two variables changed his thinking, he said.

PNC Bank of Pittsburgh has agreed to phase in its required purchase of more than $90 million of stock in the Federal Home Loan Bank of Pittsburgh, over a year, so as not to swamp the lender with capital.

Mr. Irwin must keep a close eye on the other advantage of membership: the dividend on the Home Loan Bank stock.

The current annualized yield of 8% is "fairly attractive," he said. "Should it become unattractive, then we would have to reevaluate."

Commerce Unit Buys 4 Anchor Offices in N.J.

CHERRY HILL, N.J. — Commerce Bancorp said its unit, Commerce Bank, completed the acquisition of about $210 million of deposits and four branch offices of Anchor Savings Bank, a unit of Anchor Bancorp.

The branches are in Cherry Hill, Bellmawr, and Mantua, N.J.

Separately, Commerce Bancorp said it has completed the sale of $23 million in 10-year, 8.375% subordinated notes. The sale included an overallotment option of $3 million.

The company said proceeds will be used for possible future acquisitions and general corporate purposes, including about $14 million to provide equity capital to Commerce Bank for its recent acquisition.

Tennessee's Bankers Hope Luck Can Hold

By TERRENCE O'HARA

Community bankers in Tennessee had plenty of reason to fret a couple of years ago. Commercial real estate values were plummeting, and weakness in the sales of automobiles – a top source of manufacturing revenue in the state – raised the specter of layoffs.

But the anticipated hit in auto manufacturing jobs never materialized as the central Tennessee plants of Nissan and General Motors Corp.'s Saturn division became huge successes. So capital, and luck, saved the state's 200-plus community banks from the real estate crunch.

"Tennessee has been lucky through the bad economic times of the last three years," said Kathryn Edge, assistant commissioner of financial institutions. "It hasn't been a great time, but there are strong trends toward an economic recovery."

Fallout from Realty Slump

Five years ago, when James D. Harris founded a bank in the tony Nashville suburb of Brentwood, his business plan didn't include a drop in commercial real estate prices.

"Most of our market is retail and it's affluent," said the president of $84 million-asset Brentwood National Bank. "While we weren't impacted by it directly, many of our customers were in the real estate investment business. We had a few years of higher-than-normal reserves, but that has slackened off recently."

Mr. Harris said the booming residential construction market around Nashville is his best hope for the near future.

Brentwood's core capital stands at 13.5%, and its return on average equity has hovered between 6% and 7%.

Insulated from Problem

Brentwood's capital, while on the high side, is indicative of Tennessee's small banks. Of the 249 banks in Tennessee, 239 have asset sizes of less than $500 million. And only a handful of these small banks have a core capital ratio under 6%. So both size and capital strength insulated these banks from the commercial real estate problem.

Of greater concern is the automotive industry.

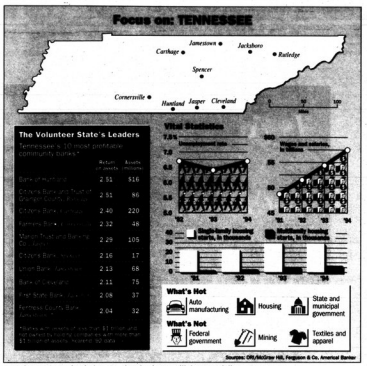
"Where the automotive industry goes so goes our community," said Mike Rowland, chief executive of Hardeman County Bank in Bolivar, Tenn. Much of the economy is based around a plant that manufactures mirrors for automobiles.

He said $71 million-asset Hardeman County Bank, though profitable, has not grown significantly in 10 years. And, with the uncertain future of the American automotive industry, he doesn't see that changing.

"The best we can hope for in a town like this is to steal some business away from some other small bank," Mr. Rowland said.

Jennifer Ver Linden, a DRI/McGraw-Hill analyst, says stealing business will be especially difficult now that Kentucky has enacted an economic ingentive package granting income tax credits to new or expanding manufacturers, service industries, and existing operations that would shut down without the credits.

However, she says, "Stronger growth in Tennessee's existing industries will help to offset the fact that Kentucky may be the region's winner in the struggle for new industries." □



Discover The Future Of Banking Where Fantasy Reigns.

Join us September 12-14 at Walt Disney World® Resort, where banks will be *all ears* at our first PFA users conference.

Don't Miss This Unique Opportunity

If your bank or credit union has strategic plans to offer alternative delivery solutions, you need to see what is taking place on the cutting edge of the industry. This is your chance to meet the leaders driving this movement in advanced banking, which will not only save you thousands of dollars in research and development, but also save you valuable time.

When you attend our conference at Disney's Yacht Club Resort, you'll learn about issues ranging from PFA technology to customer support, marketing, and training. And the best thing about it, you'll hear from banks that are actively using the PFA System, and realizing the impact it has on their bottom line. If you believe self-service is the future of banking, come meet the visionaries from PNC Bank, Seafirst, and Bethpage FCU that know it's true.

Get on the guest list for our conference at the Walt Disney World Resort today by calling 1-800-356-1201. And prepare to experience the future of banking via a simple-to-use, computer-based retail delivery system.

Summit of S. C. Finds a Way To Keep Insider Rates in Line

By PHIL ZAHODIAKIN

A community bank in South Carolina has come up with an ingenious way to keep track of insider loans and their rates using an artificial intelligence program.

Summit National Bank, Greenville, says the program helps it comply with Regulation O, which requires pricing for insider loans to reflect rates applied to other lending.

"Our exercise with Regulation O leads us to believe that, ultimately, our approach would help document our adherence to fair lending rules as well," says Bill Squadroni, head of deposit banking and compliance at the $60 million-asset bank.

Issue Raised by Auditor

Mr. Squadroni says he thought of applying an artificial intelligence program – Braincell, by Promised Land Technologies, New Haven, Conn. – after reading about such programs.

But the issue already had been raised by an external auditor, who advised the bank to attach explanations and rate comparisons to each insider loan file.

"We fed a data base of noninsider loans into the program, and showed what rates of interest were applied. Then we took 31 insider loans and fed in the inputs but not rates. We then asked the program to predict the insider rates, and its prediction fell within 25 basis points of the rates we actually applied."

Compliments from Examiners

"The OCC [Office of the Comptroller of the Currency] folks complimented us for taking the extra step," Mr. Squadroni said. "They said the numbers [in the prediction spreadsheets] looked fine."

Ed Furash, president of Furash & Co., Washington, calls Summit's approach ingenious, but adds: "AI is just a process of putting in an orderly fashion what is normally done intuitively. The real utility here is affording one more piece of documentation for the examiners to hang their hat on when they try to determine if a decision meets a set of standards."

Mr. Squadroni believes that determining this is no mean feat because "after enough [loan] comparisons, the argument [with an examiner] becomes very subjective. Each side thinks the other cherry-picked the loans in the comparisons." □

EXECUTIVE *changes*

American Pacific Appoints Chen President, Chief Executive Officer

David T. Chen has been appointed president and chief executive officer of **American Pacific Bank**, Portland, Ore.

From March 1990 to December 1991, Mr. Chen was associate administrator of Farmers Home Administration, Washington.

David T. Chen

Mr. Chen was state director of the Farmers Home Administration for Oregon from 1986 to 1990. Earlier, he held financial management positions with several public entities.

Silicon Valley Hires Simmons as Exec VP

Glen G. Simmons has joined **Silicon Valley Bank**, San Jose, Calif., as executive vice president and manager of human resources and administration.

Glen G. Simmons

Mr. Simmons, 51, was most recently senior vice president and manager of human resources for First Interstate Bank's northwest region, an organization with 7,000 employees.

He will be responsible for the management of Silicon Valley Bank's human resources, marketing and communications, compliance, and facilities departments.

Mr. Simmons has been in banking, mostly in human resources, for 18 years.

In addition to First Interstate, he has held senior positions with Seafirst Bank and Olympic Bank, both in Washington State.

Simmons was also responsible for designing human resource and training programs as head of human resources consulting for the West Coast regional office of Moss Adams, a public accounting firm. — **Franklin Smith**

MIDWEST

AMERIBANK, Bloomington, Minn., has launched a residential mortgage lending division and hired three executives.

They are: **Forrest Gillson**, who has been named senior vice president and manager of the residential mortgage division. He previously was vice president and manager of mortgage lending at American National Bank in St. Paul.

Karl Mueller has been named vice president of the division. He previously was vice president of mortgage lending at American National Bank.

Judie Swierczek has been named mortgage operations officer. She, too, joins Ameribank from American National, where she was a mortgage processor.

DOLLAR SAVINGS AND Trust Co., Youngstown, Ohio, an **Ohio Bancorp** subsidiary, has promoted **Jewell Klumpp** to vice president of operations.

He is responsible for managing the wire transfer, automatic clearing house, and automated teller machine departments. Mr. Klumpp also manages the bank's central information file, oversees regulatory compliance, and coordinates operations functions for the other Ohio Bancorp affiliates.

Mr. Klumpp worked 26 years for Potters Bank and Trust Co. in East Liverpool, most recently as senior vice president and secretary.

Also, **Robert A. Coggeshall**, assistant treasurer of the Dollar Savings and Trust Co. and manager of its Columbiana office, has been elected president of the Columbiana County Bankers Association for 1993-94.

MIDDLE ATLANTIC

FIRST NATIONAL BANK of Long Island, Glen Head, N.Y., has appointed **John T. Scagnelli** senior vice president, executive officer, and senior operations officer.

John T. Scagnelli

He come to his job with 13 years of experience in bank operations, technology, and branch administration management.

He was formerly principal and president of J. Thomas Associates, a management consulting practice with clients in the financial services and consumer products industries.

Mr. Scagnelli spent nearly a decade with Bankers Trust Co., New York, where he was a vice president and division executive for several operating and technology functions.

WEST

BANK OF THE WEST, Walnut Creek, Calif., has promoted **Peggy S. Turney** to vice president and employment manager, human resources department.

Richard D. Arendt has joined the bank as vice president and chief loan examiner. He was formerly credit examiner for national banks at the Office of the Comptroller of the Currency in San Francisco.

SOUTHEAST

GOVERNORS BANK, West Palm Beach, Fla., has named **Dotty Perkins** vice president of operations and branch administration. Ms. Perkins was formerly assistant vice president of the bank.

Dotty Perkins

Kristine Mattson has been named assistant vice president of lending. She had been assistant vice president commercial loans, commercial real estate, and business development at Flagler National Bank. □

Behind FDIC Rules, A Veteran Author

By BARBARA A. REHM

Robert F. Miailovich never figured his first job would be his only job.

But 30 years after joining the Federal Deposit Insurance Corp. right out of college, he is the agency's chief regulation writer.

Mr. Miailovich (pronounced mee-AL-o-vitch) has had a hand in every regulation the FDIC has issued since 1985, when he took his current position as associate director for policy and planning.

Risk-based capital, brokered deposits, highly leveraged transactions, prompt corrective action, interest rate risk, real estate appraisals, bank audits, golden parachutes, and many more regulations have been crafted by Mr. Miailovich and the 10 people who work for him.

One of a Kind

"Bob is the sort of a guy who can sit down and write regulations for a year and come out on the other side still sane," said Jim Sexton, a partner with Bracewell & Patterson in Austin, Tex. "There are not a lot of people in the world who can do that.

"He is very organized. All this sounds pretty corny, but he likes to do things right."

Acting FDIC Chairman Andrew C. Hove Jr. agreed. "He's a valuable person at FDIC. We've dumped a lot of regulation in his lap. He really does a very thorough job."

Not everyone is so complimentary.

Some people – off the record, of course – criticize Mr. Miailovich for being too stubborn. His dry sense of humor also can make him appear flippant.

The Job Gets Done

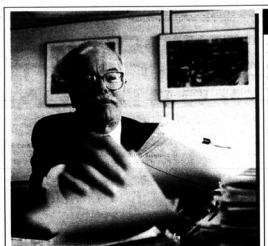
But friends and enemies alike concur: Mr. Miailovich is a workhorse who gets the job done.

Mr. Miailovich, 54, started as an examiner, spending eight years monitoring banks in the West. Then, from 1971 to 1975, he took a management job in the FDIC's San Francisco office. He was plucked from the field to serve as a special assistant to then-FDIC Chairman Frank Wille.

After his two-year stint, during which he oversaw failed bank deals, Mr. Miailovich moved to the supervision division, where he continued to work with problem banks.

In April 1980, the FDIC experienced its first big bank failure: First Pennsylvania, the $5 billion-asset Philadelphia bank. Mr. Miailovich considers that failure the biggest challenge of his career.

From failing banks, Mr. Miailovich in 1982 went on to run the FDIC's applications office, where banks go for merger approvals and the like.



Robert F. Miailovich

Age: 54

Years at FDIC: 30

Pay: $130,000

Born: San Francisco

Home: Arlington, Va.

Education: University of California at Berkeley

Career: Began as a field examiner in San Francisco. Moved to Washington in 1975 to work in chairman's office. Ran troubled banks section and then shifted to current position as chief regulation writer.

Most memorable experience: Handling the collapse in 1980 of First Pennsylvania Bank, at the time the biggest failure in U.S. history.

Interests: Music and theater

Cause: Bringing the Catholic church into the 20th century

Then in 1985, Mr. Miailovich landed in his current job. Today, he is one of three associate directors in the supervision division.

Unlike many regulators, Mr. Miailovich doesn't hesitate to tell you what's on his mind. That can be a problem, particularly when superiors think differently.

Mr. Miailovich's boldest moment came in April 1991 when he stood to challenge then-Treasury Secretary Nicholas Brady who had just concluded in a speech that overzealous bank examiners were to blame for the credit crunch.

"I knew going into that dinner that I really wanted to say something. Until I said it, I didn't know if i would have the guts," Mr. Miailovich recalled recently. "There are a few people around here who wished I hadn't said it . . . but people were willing to live with me."

Mr. Miailovich, who makes about $130,000 a year, is eligible to retire at the end of this year but is not sure if he will. □

BANCO di NAPOLI

The total assets of Banco di Napoli exceeded Lit. 110,000 billion in 1992. In the course of the year the Bank opened 110 new branches, thereby achieving its objective of 750 branches in Italy. The strength of the Bank's balance sheet and the extension of its branch network enable it to meet the European challenge with confidence. Banco di Napoli also has many other branches throughout the world in order to maintain ever closer contact with its customers.

Government Subpoenas Cost Banks $11.2 Million in '92

By ROBYN MEREDITH

Banks spent $11.2 million last year complying with government subpoenas for data on their corporate customers, according to a survey by the American Bankers Association.

"We felt all along that this was costing our banks a lot of money," said John Byrne, senior counsel at the ABA. The results of the survey reinforced that view, he said.

When banks receive court requests from the federal government asking for information on their customers, they search, retrieve, and photocopy the records requested and send them to the government.

If the subpoena covers an individual's records, the government reimburses the bank for the cost of turning over the records.

Practice Called Unfair

But if the request covers corporate records, the bank is not reimbursed, which Mr. Byrne said is "patently unfair."

Both the number of requests for corporate records and the costs of complying with them have steadily increased over the past three years, the survey showed. In 1990, banks received 60,000 requests and spent $2.7 million complying.

In 1991, they received 76,000 such requests, and spent $7.4 million on them. By last year, when they got 90,000 requests for data, they spent the $11.2 million complying, the survey showed.

Rule Change Studied

As the result of a law passed last year, the Department of Justice will use the ABA survey, along with other data collected – such as what it would cost law enforcement agencies to reimburse banks for corporate records – to determine whether the reimbursement rules should be changed. A final report on the issue is expected in September from the Justice Department.

All together, 788 banks across the country responded to the ABA survey. The larger the bank, the more likely it was to be asked for data, the survey showed.

On average, each 1992 request cost banks $8,091 to comply with, but the costs varied greatly by region.

The corporate records rule "is just another example of [compliance] costs that are involved that people are not aware of," Mr. Byrne said. □

COMPLIANCE

Bank Boards Have Veered from Their Role as Guardian

By ROBERTA J. WAGNER
President
Director Resource Group

How many of you have seen successful companies run by three or four CEOs? Or watched pharmacists, doctors, hospital administrators, and local business owners make day-to-day decisions about running a financial institution?

It's pretty pathetic, and it doesn't work. It's like trying to get the tentacles of an octopus to move synchronously.

Yet – with pressure from regulators, lawyers, and consultants – boards increasingly have become involved in the day-to-day operations of their financial institutions. It's led me to believe that the only thing worse than a board cowed by a CEO is a CEO dominated by the board.

Or how many of you have watched with surprise when strong leaders in their own right take a back seat during board meetings or are not part of the active management team? Rather than criticize them for that behavior, it's time to recognize that 20 strong leaders all exercising their leadership abilities would be dysfunctional.

Not Up to Snuff

The failure of so many financial institutions must raise questions about the way boards operate within our system of corporate governance. But I believe the current solution, getting boards more involved in daily operations, is the wrong one. Why?

They lack industry-specific expertise. They are part time and don't have time to devote to operating the company. They do not have as much information as management about the company (even with the best board package around). And a company doesn't run well with a group making operating decisions.

Tough in a Crisis

I have seldom seen boards perform well when a financial institution is humming along. But, without exception, boards have done a superb job of moving decisively and with good judgment after acknowledging they are in a crisis. Acknowledging the crisis is the tough part.

It's too easy to make excuses like "Maybe it's the regulators being to harsh; maybe it's the economy; maybe it's just a slight down cycle." And on it goes until the crisis no longer can be ignored.

As a board member was quoted in "Pawns or Potentates," by Jay Lorsch: "Directors are like firemen. They sit around doing very little until there's a crisis, and then they spring into action."

Early Warning Signal

That's not a bad approach if boards develop the process to recognize the crisis earlier, when there is a better chance that the emerging problems can be rectified without harming shareholders or, as is the case with insured financial institutions, the insurance funds or the taxpayers. It's time to redefine the board's role in this light.

What can boards do to improve their ability to recognize an oncoming crisis and take appropriate action?

First, break some boardroom taboos and talk openly about what the role of the board really is. Define objectives and the methods for meeting them.

Second, focus on the areas of greatest concern and risk. Too often, board meetings are dominated by operating minutiae, and the major strategic issues don't have sufficient air time.

Adjust Audit Function

Third, oversee the audit and review functions so that they report to the board more than in name only. They can be a major signal that a crisis is brewing.

Roberta J. Wagner

If audit (both internal and external) had functioned more independently of management and had a strong relationship with the board (or audit committee), many of the failures I have worked with could have been averted.

Fourth, insist on board information packages that are designed with a board perspective. Information that the board receives and does not review can come back to haunt it later.

Call In Experts

Fifth, periodically meet without management to discuss company performance and/or concerns.

Sixth, use outside experts to help the board assess its own processes or institution trends.

Seventh, when danger signals appear, stop business as usual and acknowledge that a new role for the board is needed until the problems are rectified.

It is time that we more clearly differentiate the role of management and the role of the board before we perpetuate the monster of having our financial institutions run by groups of well-meaning but ill-prepared directors.

Instead, let's use these talented individuals for the function for which they are best suited – acting as the stopgap when the company is headed for crisis. □

Nordstrom's Visa Deal Marks End of Era

H. Robert Heller
"We are pricing to the market"

Continued from *page 1*

standpoint, we have developed a broad pricing matrix that does justice to the differences among merchants.

"This makes big retail stores happier," Mr. Heller said. "We are pricing to the market."

Such an approach would certainly appeal to a store like Nordstrom, renowned for its single-minded commitment to customer satisfaction.

But Mr. Heller suggests there is much more to this development than just one merchant's decision to issue a bank card. Years of fence-mending by bankers and their card associations – both Visa and MasterCard International – seem to be paying off.

NEWS ANALYSIS

Virtually all major department and specialty stores accept the bank cards, often alongside the proprietary store cards that once had the business to themselves.

There are strong indications that Sears, Roebuck and Co., the last great holdout, is getting ready to accept MasterCard and Visa in addition to its own card and Discover, which it invented.

Talk of More Deals

Sources within MasterCard and Visa hint that more Nordstrom-like card-issuing or co-branding deals are on the horizon.

"We expect quite a few retailers to look at this option," said Mr. Heller. "They will certainly ask if it is better to [issue through] an existing institution or on a stand-alone basis."

Nordstrom is also the latter, using the facilities of the bank it formed in 1991 for the in-house credit card of its 72 stores in 11 states. They had total sales in 1992 of $3.4 billion.

Annual credit volume is running at about $1.6 billion, and the bank's assets range between $600 million and $700 million, Mr. Walgamott said in an interview.

Very Different Programs

With 24% of receivables turning over each month, the characteristics of a store credit program like Nordstrom's are very different from a bank card business with sizable and stable outstanding balances, Mr. Walgamott pointed out.

Bankers' and retailers' differing outlooks on the credit business were at the root of their historical enmity. Perhaps they are finding common ground.

"Customer buying trends indicate that bank card usage is increasing," Mr. Walgamott said. "They also tell us that our customers would prefer, if given more options, to use a Nordstrom credit card.

"Once Nordstrom issues its own Visa card, we will be able to satisfy both of those specific customer needs."

Visa was the chosen brand because it is "a good franchise, well thought out, well planned," the executive said.

More than Just Cards

Mr. Walgamott said MasterCard was "not far behind."

"As I learned in the lawsuit," he added, "Visa and MasterCard are not just card products. They are payment systems, and they will dominate."

Nordstrom figured out a way not just to be resigned to the "necessary evil" of accepting outsiders' cards, but to become an active player in the bank card game, on its own terms.

The company has not set its pricing, which presumably would be calculated to win some balances away from banks. "All the decisions will be financial," Mr. Walgamott said. "We hope to be profitable and create additional volume."

Pricing Still an Issue

Other retailers will not necessarily follow Nordstrom's lead, nor share in the interindustry good feelings.

The question of accepting bank cards "is largely behind us," said Ralph Spurgin, credit division president of the Limited Inc. "But pricing is still very much an issue." He called debit card pricing "unfair and wrong" and said that "with the ongoing debate about interchange rates, pricing will never be a dead issue."

"We have no plan to issue a Visa or MasterCard," said Mr. Spurgin, whose company opened a credit card bank in 1989. □

L.I.P.

THE KEY TO THE NEXT DIMENSION IN PROCESSING

Claims of increased functionality and flexibility abound in the transaction processing industry, but results are scarce. You've heard promises about new systems from others for years. Now see reality with First Data Resources' Account-level Processing.

The Account-level Processing concept is simple:

Let our clients dictate cardholder pricing parameters at the account level.

Give them online maintenance, easy customization and integrated support tables.

And don't sacrifice flexibility or functionality.

A.L.P. has been implemented and FDR clients are using this new dimension in transaction processing today!

This new dimension offers you an online, menu-driven system which guides you through linked applications to review, analyze and edit your processing options. A.L.P. gives you more control and flexibility, with less paperwork and reduced production time. This not only streamlines your portfolio management, but provides you with a high degree of customization throughout your system based on your own cardholders and circumstances.

Account-level Processing is an outgrowth of our continued commitment to client-defined processing because it has been developed in partnership with many of our clients, both large and small.

Take a look at how Account-level Processing can tap into new opportunities in your cardholder base and take your processing to a new dimension. No other processor can give you today the immediate advantages Account-level Processing offers. For more information, call 1-402-222-4622.

FHA Worried About Plunge in Volume

By SNIGDHA PRAKASH

WASHINGTON — A decline in the Federal Housing Administration's home-loan business may pose a threat to the financial strength of its insurance fund, Assistant Secretary of Housing Nick Retsinas told Congress.

The volume and market share of FHA mortgages are shrinking as higher-equity borrowers and those who are refinancing choose private insurance over FHA insurance, Mr. Retsinas told the housing subcommittee of the House Banking Committee on Tuesday.

If the trend continues, the fund may not meet its capital requirements by the year 2000, he said.

20-Year Trend Reversed

The volume of outstanding single-family loans insured by the FHA has fallen for the first time in 20 years, from $301 billion at yearend to $289 billion on June 30, Mr. Retsinas said.

The FHA insured 13% of all new home loans in 1990 but only 5.6% last year.

By linking the shrinking business volume to the fund's stability, Mr. Retsinas may be "setting the stage for expansion of the program and possible proposals coming in the fall," said Ron J. McCord, president of American Mortgage and Investment Co. of Oklahoma City.

An expansion of the program would be good news for mortgage banking companies, long the dominant originators of FHA loans.

Mr. Retsinas said the FHA is working on initiatives, but he declined to elaborate. Industry sources have indicated in recent days that the FHA is looking at raising loan limits, offering new mortgage products, and entering risk-sharing partnerships with state housing finance agencies.

One short paragraph in Mr. Retsinas' testimony especially caught the eye of Republican members and their staff.

In 1990, Congress set target capital ratios for the single-family insurance fund to make sure it would not need a government bailout.

The ratio is defined as the

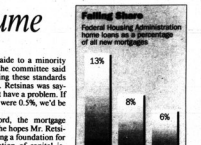
morning that we revisit the ratio," he replied. But "the higher that [capital] number is, the more difficult it will be to achieve that public policy mission."

Price Waterhouse & Co. said in a report this month that the ratio was 0.43% at the end of fiscal 1992 but would exceed the 2% goal for fiscal 2000.

But neither friends nor foes of a more activist FHA were buying Mr. Retsinas' disclaimer completely.

One staff aide to a minority member of the committee said that in labeling these standards arbitrary Mr. Retsinas was saying: We don't have a problem. If the standard were 0.5%, we'd be home free.

Mr. McCord, the mortgage banker, said he hopes Mr. Retsinas was "laying a foundation for further visitation of capital issues and the balance between public purpose and financial stability." □



Arbor National of N.Y. To Repurchase Stock

Saying its stock is undervalued, Arbor National Holdings Inc. of Westbury, N.Y., has announced a two-year stock buyback plan.

Ivan Kaufman, the mortgage company's chief executive, said the plan allows it to repurchase up to 250,000 shares of its common stock, to be used for employee-benefit programs.

"Given our consistently strong operating results, our solid foundation, and prospects for future growth, management believes that Arbor's stock is currently undervalued," he said. — Christopher Noble

Mortgage Fund for Credit Unions

The Trust for Credit Unions has launched its fourth mutual fund, designed to meet credit unions' intermediate-term investment needs.

The Target Maturity Portfolio-1996 will invest in government-agency and private-issue mortgages as well as collateralized mortgage obligations. The fund's investment advisor is Goldman Sachs Asset Management.

Officials of the Washington-based Trust for Credit Unions said the fund will be managed with an eye toward outperforming three-year Treasury instruments.

"With total credit union investments nearing 20-year lows, new options are needed," said Chip Filson, president of Callahan Financial Services, co-distributor with Goldman Sachs of the Trust funds.

In addition to the Target Maturity Portfolio, the Trust family includes a money-market, a government securities, and a mortgage-securities portfolio. — **Karen Talley**

Citicorp Promoting Mutual Funds In Mailings to Its Card Customers

Continued from *page 1*

low yields on certificates of deposit.

"With today's high taxes and low interest rates, how should you be investing?" the brochure states. "Couldn't you be doing better?"

Handpicked Fund

The flier highlights two funds – an insured tax-free income fund from Franklin Resources and the Massachusetts Financial Services Total Return Fund – and has a mail-in coupon for information requests.

The brochure also invites prospective investors to come into a Citibank branch and meet with an investment counselor, or call a toll-free information line.

A Citicorp spokeswoman declined to say how long the program has been going on or what effect it is having on mutual fund sales.

Elsewhere, credit card powerhouse MBNA Bank, Newark, Del., has introduced a cross-selling pilot. The bank is offering eight choices from mutual fund companies, including John Nuveen & Co., Kemper, and Franklin.

MBNA, with more than nine million cardholders, ranks in the industry's top five. Executive vice president David W. Spartin declined to say exactly how many customers are being targeted as mutual fund sales prospects.

Cross-selling of mutual funds makes sense in light of card issuers' shrinking profitability, said Robert McKinley, president of RAM Research Corp., a credit card tracking firm in Frederick, Md.

Over the past few years, he said, issuers' returns on assets have shrunk from upwards of 5% to 2% or less. "They are feeling the pressure from the price wars and bad consumer debt, and they are looking for ways to increase profitability," he said.

Casting a Wider Net

But some banks with ambitious plans for mutual funds favor a broader approach.

Instead of focusing just on its 1.4 million cardholders, First Union Corp. cross-sells a range of investment products to customers who have a strong relationship with the bank and who come into branches regularly.

"A bank customer usually wants to sit down and talk to someone, so we reach out to checking account, IRA, and brokerage account customers," said Susan Koch, marketing director for the Charlotte, N.C. bank's capital management group.

First Union also sends out reply cards for investment products with its annual reports and other financial materials.

Ms. Koch said the response from the annual report was good and that the bank would continue this strategy. "It makes sense because the people who get the reports are likely to be investors," she said.

Ms. Koch said First Union has not ruled out targeting the cardholder base.

Ms. Sullivan is a freelance writer based in New York.

STOCKS

MBNA Takes Off on Strength Of Earnings and Card Franchise

By RICHARD LAYNE

While most bank stocks are marking time, MBNA Corp.'s shares are heating up.

The reason: a strong earnings report and continued growth in its giant credit-card operation.

On Tuesday, when the Newark, Del., bank announced a 20% increase in second-quarter earnings, its shares jumped $1, or 3.6%. The stock picked up another $2.50 on Wednesday, to close at $31.

That amounted to a two-day rise of 12.7%, far exceeding those of other banks.

A Focus on Cards

But MBNA is not like most other banks. Its business is dominated by card lending, and thanks to the success of its affinity marketing programs, analysts are bullish about the bank's ability to sustain earnings growth.

"I think MBNA's earnings will grow at more than the 15% annually that I originally projected," said Thomas Facciola, an analyst with S.G. Warburg & Co. "The rate of growth will be more like 17% to 20%."

If he's right, MBNA's shares should trade higher than their current price-earnings multiple of 13.3, based on projected 1994 earnings.

Mr. Facciola thinks a multiple of 15 is reasonable, so MBNA stock should be selling around $36 before yearend. That's based on his forecast of $2.30-per-share earnings in 1994.

Quarterly earnings of 46 cents a share (or $46 million) were only a few pennies higher than consensus estimates. But the real indication of growth came from MBNA's burgeoning list of cardholders and receivables.

The bank added 920,000 cardholders in the second quarter, bringing the total of new accounts to 1.6 million for the first six months of the year. And the company has told analysts that it will add one million more accounts by yearend.

Moving Up

MBNA's stock price for the past 10 trading days

Price was $31 at 4 p.m. Wednesday
Source: DB Technology Inc. Reuters

On top of that, the bank's receivables grew 19% in the second quarter, to $10.6 billion, an increase over the first quarter's 16% growth. And MBNA is predicting 20% growth in 1994.

"MBNA has created a product that's not as much a commodity as other credit-card issuers," said David Hochstim, an analyst with Bear, Stearns & Co. He initiated coverage of the bank with a "buy" on Wednesday.

Affinity Programs

MBNA's strength comes from its affinity-card programs for groups such as teachers and dentists. Its knowledge of the spending habits of those and other groups allows it to give higher credit limits.

The bank's cardholders tend to have balances around $4,000, twice the industry norm. Chargeoffs, which are below average to begin with, fell slightly last quarter, to 3% on an annual basis.

Now MBNA, which has $6.5 billion in assets, is moving into another phase of marketing to affinity groups, issuing cards that feature the name of a state or a classic car.

Analysts believe that MBNA's marketing expenses for those cards will fall, too. □

Mullins Plays Dutch Uncle In Talk to Swaps Dealers

By CLAUDIA CUMMINS

WASHINGTON — Federal Reserve Vice Chairman David W. Mullins urged the derivatives industry Wednesday to implement programs that keep the industry sound, in order to stave off stiff regulatory action.

Speaking in New York before the International Swaps and Derivatives Association, Mr. Mullins said without this self-regulation, the derivatives industry could face the same regulatory morass as the banking and government securities markets.

"If the industry does not assume the responsibility for addressing public policy concerns and do this job well, others are quite willing to take discretion out of the industry's hands and do the job perhaps much less well," he said.

On Congress' Agenda

In his speech, which was released here, Mr. Mullins said he anticipates that Congress will take up the issue of derivatives regulation soon after several government and industry studies are released later this year.

And he warned that policymakers are increasingly focusing on investor protection issues, and this interest could spill over into the derivatives industry.

"Although users of derivatives products mostly are institutions, they are not necessarily sophisticated institutions," he said.

David W. Mullins
Advises self-policing

The Fed governor also laid out a public-policy agenda to foster the industry while minimizing systemic risks.

Recommended Steps

He urged central banks to: strengthen the legal framework for derivatives; coordinate tax regulations; modernize accounting and disclosure standards; and build supervisory expertise.

Mr. Mullins also called for speedy implementation of a recent Basle proposal to recognize, in capital standards, the risk-reducing benefits of netting arrangements.

"We must be concerned about efficiency and flexibility in the regulatory process," Mr. Mullins said. "Regulatory micromanagement would be particularly counterproductive in this innovative marketplace." □

The Whole World Is Watching Asset Quality, Rate of Return

By JAMES R. KRAUS

There was a time when bankers in the United States went home at midafternoon every day. That ended when deregulation wiped out fixed margins and forced U.S. banks to look more closely at profitability.

Now, bankers around the world are following suit.

From Tokyo to Madrid to Mexico City, they are coming in early, going home late, and cutting out long lunches. The new catch phrase: return on quality.

'Emphasis on Asset Quality'

"Banks are going to have to improve asset quality, productivity, and the allocation of capital," says Marc Vienot, chairman of France's Societe Generale.

His own bank's target, he notes, is to raise return on equity to between 12% and 15%. Last year, the bank posted 9%.

"Bankers have replaced aggressive marketing and expansion efforts with a new emphasis on asset quality and rates of return," Serge Bellanger, executive vice president and general manager in New York for Paris-based Union Europeenne de CIC, wrote in a recent essay.

Others sound a similar note. In a recent report, "Banking in the 1990s," First Boston analyst Thomas Hanley wrote: "Bank managements have dramatically bolstered their balance sheets over the past few years, and the deployment of this capital will be a major factor determining the 'winners' in the investment sweepstakes."

Competition Growing

The worldwide push for higher profitability comes as margins are narrowing, competition from other financial institutions and mutual funds is growing, and protectionist barriers in the financial sector are falling.

In Luxembourg, for example, the number of mutual funds increased nearly 50% last year to some 1,100. Their assets grew by nearly 20%, to $203 billion, while bank assets grew a mere 7%, to $410 billion.

Similar trends are under way in the United States and other countries, where banks face growing competition in everything from mortgages to credit cards to corporate loans.

Margins 'Under Pressure'

"Competition is increasing across the entire range of products, and margins are under pressure," says Josef Ackermann, president of Credit Suisse and a member of the executive board of its parent company, CS Holding.

"Everybody's trying to concentrate on what they can do best," adds Mr. Ackermann.

That means a movement toward "niche markets that will be attractive to different players depending on their strengths and abilities," observed Hector Rangel, deputy chief executive of Mexico's Bancomer SA, in a recently published interview.

On the Cutting Edge

To boost performance, banks are cutting staff, merging operations to reduce costs, and boosting productivity through increased use of technology. Emilio Ybarra, chairman of Spain's Banco Bilbao Vizcaya, notes that last year alone, some 7,000 banking jobs, or 4.4% of the total, were cut in Spain – 635 of them at his bank.

In Switzerland, bankers predict that the number of banks and banklike finance companies will decline from 569 to less than 500 within the next two or three years.

"Growing competition in the 1990s will be one of the major themes – in international banking certainly – but also in our own backyard, among Swiss banks," notes Georges Blum, chief executive officer of Swiss Bank Corp.

In the United States, the number of banks is shrinking quickly. In Japan, consolidation is moving at a slower pace, with banks taking over troubled regional institutions and finance companies.

Mergers and acquisitions have picked up as banks seek to diversify and to spread marketing and computer costs over a broader base.

Holland's ABN Amro Holding, for example, recently agreed to acquire Cragin Federal Bank for Savings, a $2.8 billion-asset Chicago thrift, as part of a drive to build up an efficient banking base in the United States.

British banks with retail operations in the United States are pursuing a similar strategy, while at the same closing unprofitable operations back home.

Cross-Border Acquisitions

Meanwhile, France's Credit Lyonnais acquired Bank fur Gemeinwirtschaft as part of its own cross-border strategy.

"Everybody's trying to concentrate on what they can do best."

Josef Ackermann
Credit Suisse

Commerzbank, another German bank, recently agreed to buy Paris-based Caisse Central de Reescompte, a full-service bank owned by the Paribas Group, in order to broaden its international asset management.

Banks' concern over return on equity is not coming out of the blue.

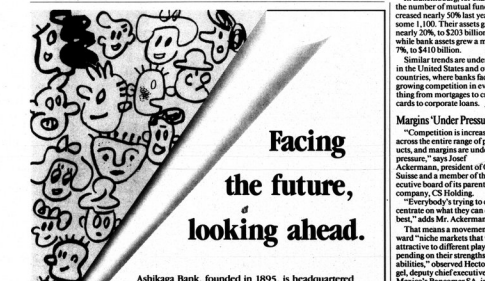
A worldwide economic recession and problem loans to big international corporate borrowers and local real estate developers have forced many to sharply increase provisions against bad loans in the industrialized world.

Requirements Tighter

Capital requirements, too, have tightened since 1988 under international agreements.

Banks may have to set aside even more capital under guidelines now being drafted for so-called market risk, such as interest and currency exchange

Continued on *next page*



Facing the future, looking ahead.

Ashikaga Bank, founded in 1895, is headquartered in Tochigi Prefecture near Tokyo. Through its commercial banking business in this area Ashikaga Bank has developed a strong customer base among individuals and smaller corporations, becoming one of Japan's leading regional banks. The bank's overseas correspondent network has also grown, to 252 cities in 71 countries, underscoring our focus on the principal international financial centers.

fluctuations.

And in the United States, banks are getting pushed one step further by being required to mark their securities holdings and loans to market value – something that could further erode their capital bases in an environment of rising interest rates.

Capital Scarcer, Costlier

Meanwhile, capital, once cheap and abundant, has become increasingly scarce and more expensive.

German banks, which could once rely on local markets for their funding needs, are finding that the government's growing budget deficit from infrastructure investments in eastern Germany is raising costs and forcing them to look further afield for funding, to the United States and the Euromarkets.

Latin American banks, no longer able to borrow from other banks, are also increasingly turning to international capital markets.

An Eye on Credit Ratings

And Japanese banks, which only a few years ago paid little or no interest on deposits and seemed to have access to an inexhaustible supply of cheap equity, are paying market rates.

Banks "are turning away from their traditional business of lending money in favor of the more rewarding activities of fee-based services and trading."

Serge Bellanger
Union Europeenne de CIC

As a result, banks worldwide are nervously watching their credit ratings, since a fall in ratings makes funding even more expensive.

They are also making information about their balance sheets more readily available in an effort to attract international investors.

Still, generalizing is difficult, and some banks clearly have further to go than others when it comes to reaching acceptable returns on equity.

Profitability Higher in U.S.

According to rankings compiled by IBCA Ltd., the London-based bank rating agency, four of the 10 most profitable banks in the world – and 19 of the top 50 – are from the United States.

The seven biggest U.S. commercial banks, for example, had an average return on equity of 22.37% last year.

That compared with 13.62% for the five largest private commercial banks and two largest savings banks in Spain, 4.77% for the 13 major Japanese banks, and only 4.58 % for the eight top British banks.

Norwegian and Finnish banks, heavily burdened by bad property loans and an economic slump, posted negative returns of minus-78.9% and minus-21.5% last year.

But all is not gloom and doom.

As interest rates fall and lending margins improve, U.S. banks are posting record profits.

Falling interest rates in other countries could similarly help improve banks' profits.

Outside the major industrialized countries, banking is expanding rapidly, fueled by rapid economic growth and still-low levels of retail and wholesale borrowings.

Commercial Banking Boom

Bankers and analysts note that Asia and Latin America are experiencing a major boom in old-fashioned commercial banking.

Cross-border lending by U.S. banks to Latin America, for example, is on the rise again after dropping for eight years in a row, while Japanese banks are stepping up their lending to China despite problems at home.

Analysts say foreign and local banks can also find ample opportunities for lending to

Margins are narrowing, competition from the outside is growing, and protectionist barriers are falling.

corporate and retail customers in other regions, such as Eastern Europe.

Fee-Based Income Eyed

"In terms of growth in the 1990s, Eastern Europe will be one of the more attractive areas, provided the politics don't intervene," says Matthew Czeplikewicz, a London-based bank analyst with CS First Boston.

But in Europe, the United States, and Japan, bankers can no longer afford the luxury of continuing to do what they have done in the past.

The result is that they are steadily trimming capital-intensive lending.

"We're seeing pretty low loan growth overall, and most of what you see is on the consumer side," says Mark Gross, a banking analyst with IBCA in New York.

Instead, bankers say they are developing transactions that are fee-based rather than capital-intensive – such as derivatives, underwriting, trading, and securities processing – and adopting complex risk-management strategies.

"Banks . . . are turning away from their traditional business of lending money in favor of the more rewarding activities of fee-based services and trading," notes CIC's Mr. Bellanger.

Recommended Strategies

"Balance sheet and capital of a bank are important," says Mr. Ackermann of Credit Suisse.

"It's obvious that the lending business is not profitable and does not generate return on equity."

Adds Raymond Kirsch, president and general manager of the State Savings Bank of Luxembourg:

"Big banks need to find out what's going on within their institutions and cut costs. Medium-sized banks need to realize they can't do everything. And small banks must be aware they cannot take on significant risks because it could wipe out their capital." □

EURO RISCO

THE FIGURES SAY IT ALL.

	1991/92 - % CHANGE
Customer deposits	+20.8
Loans to customers	+21.0
Net profit	+31.1
Total assets	+21.9
Shareholders' equity	+ 3.9

The 1992 figures speak for themselves. However, it is worth reflecting on the major developments which occurred in 1992 and contributed to such positive results. The merger with Citibank Italia allowed us to incorporate 47 branches, mainly located in Southern Italy. Furthermore, we opened 34 new branches in areas of particular economic interest.

Parent Bank's figures as at 31st December 1992	US$ m
Customer deposits	14,537
Loans to customers	12,806
Net profit	117
Total assets	26,302
Shareholders' equity	1,285

(Exchange Rate Lire/US$ as at 31st December 1992 : 1470.96)

As a result, we now benefit from the resources of a network of 500 branches. To this, we can add a further 500 sales points provided by Ambro Italia, which, together with the other Ambroveneto Group companies, offer a comprehensive range of financial services including leasing, factoring, merchant banking, insurance and investment funds. Finally, 1992 saw the inauguration of our London branch, situated in the heart of the City.

Financial results, territorial expansion, preferential agreements with major European banks and a network of 4,000 correspondent banks worldwide.

The figures involved speak for themselves. Add all the figures together and they indicate the steady growth of Banco Ambrosiano Veneto, which can rightly be regarded as Italy's Leading Private Bank.

ITALY'S LEADING PRIVATE BANK

On the Home Front, Banking Has Bounced Back

By JAMES R. KRAUS

Boosted by falling interest rates that improve their lending margins, gains on securities trading, and lower provisions for loan losses, U.S. banks are riding record profits.

"For banking in general, the best news is the industry renewed financial strength," says John F. McGillicuddy, chairman and chief executive of Chemical Banking Corp.

First-quarter net income totaled $10.9 billion for U.S. commercial banks, up $3.3 billion over the same quarter a year earlier and well above the previous record of $8.3 billion in the third quarter of 1992.

Endangered Species?

Second-quarter earnings continue to improve at almost all banks.

Yet, even as banks post some of the best results in years, banking in the United States increasingly appears to be an endangered species.

For one thing, the number of banks is steadily shrinking, mainly through consolidation.

As of March 31, there were 11,328 commercial banks in the United States, down from 13,139 five years earlier.

For another, bond and stock mutual funds, offering higher rates of return, are sapping deposits at banks.

United States

Mutual fund assets, growing at around 17% a year, currently total $1.7 trillion and will probably hit $2 trillion before the end of this year.

That compares with a slight increase in bank deposits – between 2% and 3% a year.

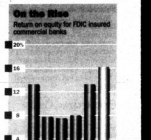
Creditworthy companies are also increasingly turning directly to capital markets for their borrowings, bypassing banks.

"Commercial banking has migrated from a world of borrowers and savers to a world of issuers and investors," Mr. McGillicuddy observes.

Investors Skeptical

Bank stock prices, too, are languishing as investors see little growth in bank lending and believe that once the current slump in interest rates stalls, rising bank profits will level out.

"It's difficult to see where future earnings will come from," says Mark Gross, a U.S. banking analyst in New York with the credit rating agency IBCA Inc.



The Nonbank Factor

Banks also face increasing competition from nonbank institutions in everything from lending to credit cards and an ever-increasing mass of costly regulation.

At the same time, Congress has balked at broadening commercial banks' powers to engage in other activities, such as insurance and corporate debt underwriting.

This, in turn, has prevented banks from developing new lines of business and constrained them to an ever-shrinking role as a source of finance within the U.S. economy.

'A Costly Abomination'

"Whoever actually fulfills these functions isn't nearly as important as making some rational sense out of the way financial services are delivered in this country," says Robert Douglass, vice chairman of Chase Manhattan Corp.

"That rational sense isn't going to come until Congress wakes up and recognizes the current system is a costly abomination that impedes economic growth."

According to recent estimates, banks' share of total U.S. financial assets has shrunk from around 40% two decades ago to less than 25%.

Long Downward Trend

The shrinkage is likely to continue as demand for loans remains slack and creditworthy borrowers in increasing numbers are turning directly to capital markets for funding.

"The banking industry has been losing market share with respect to share of credit granted since the end of World War II," says Lawrence Cohn, a banking analyst at PaineWebber Inc.

"I don't think that's going to change as capital markets get more efficient and the regulatory burden gets greater."

Still, no one is prepared to predict that U.S. banks will soon disappear.

But observers add that banks are likely in the future to focus on a more restricted range of operations where they have an inherent advantage.

"The capacity to know how to make a loan is still a skill, and banks offer the only real payments mechanism in the U.S. economy," Mr. Cohn says.

"That still offers them real opportunities." □

1992 Highlights

The AGM of Banca Popolare di Milano was held on April 24, 1993. The meeting, chaired by Piero Schlesinger, approved the financial statements for 1992 which closed with net income of US$ 69.2 million. A cash dividend of US$ 0.14 per share was declared, together with a stock dividend of one share for every 100 held. The total value of the payout was about US$ 35 million.

The principal parameters of the banking business are summarized below:

Customer deposits	US$ 10,000 million	+ 5.2%
Total deposits	US$ 19,507 million	+ 10.9%
Loans to customers	US$ 10,423 million	+ 14.0%
Total loans	US$ 17,578 million	+ 25.0%

EXCHANGE RATE AT DECEMBER 31, 1992: US$ 1 LIRE 1,470.96

The rise in lending was directly reflected in profitability: the interest margin rose 18.5% to US$ 685 million while income from services was unchanged at US$ 235 million. Overall, the gross operating margin was 32.1% ahead at US$ 364 million, although net income fell 27.8% after writing down securities by US$ 40 million to reflect depressed market conditions at year-end and absorbing a tax charge of US$ 70 million, up 88.8%.

Twenty new branches were opened during 1992, expanding the network to 240 in 12 regions throughout Italy. Capital stock increased by about US$ 31 million during the year following the exercise of warrants and, after the allocation of net income for 1992, capital and reserves rose to US$ 1,710 million.

During 1993 the stockholders authorized the issue of subordinated convertible bonds totaling a maximum of US$ 153 million.

Little Relief in Sight as Recession Hurts Profits

JAMES R. KRAUS

A deepening recession across Europe is wreaking havoc with banks' profits.

Bankers and analysts say they see little hope for improvement until interest rates fall further and bank lending margins improve.

"It's well understood that banks have been under pressure," says Marc Vienot, chairman of France's Societe Generale.

"Europe is still in a very pessimistic mood, and it's very hard for one country or the other to do something on its own."

'Trying to Limit Losses'

"It's kind of a grin-and-bear-it year, and banks are trying to limit losses, control costs, and look forward to some recovery next year," says Matthew Czepliewicz, a banking analyst with CS First Boston in London.

"There's not a lot positive in general terms, and you're looking at very modest lending, revenue, and asset growth and some improvement in spreads as interest rates decline."

The economic downturn comes as cash-short governments in several European countries are seeking to sell off the stakes they hold in big banks.

The fall in profits as a result of bad real estate and corporate lending is affecting some of Europe's biggest banks.

Europe

£ $¥₣ Lit
Fr £ $¥₣
£ $¥₣ Lit
$¥₣ Lit Fr

But with profits falling and provisions for bad corporate and real estate loans rising, it could take a lot longer than planned to privatize the remaining government-owned banks.

Credit Lyonnais, one of the world's biggest banks, with $350 billion of assets, lost $316 million last year after earning $562 million a year earlier.

Barclays First Loss

Banque Nationale de Paris, with $284 billion in assets, earned $380 million last year, down from $515 million a year earlier.

Barclays Bank PLC, Britain's largest commercial bank, with $225 billion of assets, announced a $515 million loss last year, the first in its 97-year history.

Trouble in Sweden

The bank's chairman, Andrew Buxton, said there is little reason to believe that Britain's economy will improve soon.

And banks in Sweden and Finland are facing an unending series of disasters.

Ferruzzi Failure Costly

At the end of June, the Swedish government laid out over $50 million to cover an interest payment missed by Swedbanka, one of the largest banks in Scandinavia. Earlier, it had bailed out and taken over two other banks, Gotabanken and Nordbanken.

The bad news is still coming in.

In June, Italy's Ferruzzi group disclosed it would be unable to meet its obligations to lenders, leaving more than 100 banks, including some of the biggest U.S. and European banks, unable to recover hundreds of millions in loans.

Still, analysts caution against sweeping generalizations.

Big Gain at Natwest

They note that some banks are posting stable or even improved earnings and are holding up rather well, despite the economic slowdown.

For example, National Westminster Bank PLC, Britain's second-biggest, boosted earnings nearly fivefold – from $73.5 million in 1991 to $325.5 million last year.

France's Societe Generale earned nearly $580 million, down only slightly from $591 million a year earlier, and the bank predicts profits will be at or around the same level in 1993.

No Relief in Sight

Meanwhile, German and Spanish banks also performed strongly.

Still, the outlook remains grim, and bankers say any near-term improvement in profits is unlikely.

Substantially diminished economic activity, low demand for credit, and increased provisions remain the main problems, they add.

"We have very little margin for maneuver," says Mr. Vienot of Societe Generale.

He and others add that, given the current scenario, no improvement in earnings is likely until the middle of next year. □

"Europe is still in a very pessimistic mood."

Marc Vienot
Societe Generale

OUR INTEREST IN THE ITALIAN MARKET STARTED 500 YEARS AGO.

We are a bank whose origins date back to 1473 and, of course, we are proud of our centuries of active presence in banking. But to be equal to our history and tradition, we are also aware of the continuous need for development and innovation.

Banco di Sicilia S.p.A. today operates as a diversified group, being in a position to offer, directly or through a network of associated companies, a wide range of banking products and financial services: from mortgage loans to leasing, from factoring to asset finance, from banking to securities transactions.

In particular, we operate through our network of over 390 branches in Italy and four branches abroad - London, Paris, Frankfurt, New York; plus a representative office (Singapore) and a wholly owned subsidiary (Banco di Sicilia International S.A., Luxembourg).

Through this network, we aim at providing comprehensive services in the business activity of foreign companies in Italy, as well as of Italian companies abroad.

MORE EXPERIENCE IN ITALIAN BANKING.

Growth Stirs Region's Banks, Lures Outsiders

By JAMES R. KRAUS

Banking markets in Asia are roaring to life as economic growth in the region accelerates.

"Capital needs throughout Asia are increasing dramatically, especially for infrastructure development," says John Gray, chairman of Hong-kong Bank, the main commercial banking unit in Asia for HSBC Holdings PLC.

Throughout southeast Asia and China, banks are striving to meet increased demand for credit by modernizing antiquated bureaucracies, expanding their networks, adding technology, and supplying a bigger array of banking services.

Foreigners Intrigued

Big French, British, and U.S. banks also see countries like China, Vietnam, Thailand, Indonesia, and India as among the most promising markets for trade finance, private banking, institutional asset management, securities trading, and even consumer services such as credit cards and mortgage lending.

New bank lending to lesser-developed countries in Asia that are not members of OPEC was $10.9 billion for the second half of last year -- a greater expansion than in any other region, according to the Bank for International Settlements.

Asia

The boom in economic activity is reshaping the region, creating new offshore financial centers like Bangkok and turning a manufacturing center like Hong Kong into a financial springboard for doing business in China.

Hong Kong, which has offices of more than 500 banks, including 19 of the top 20 in the world, is expected to be among the banking centers that will benefit most from economic growth, especially in China.

According to surveys by Credit Lyonnais Securities, companies listed in Hong Kong are involved in 801 projects in China worth at least $67.3 billion.

Hong Kong Seen as Hub

China, in turn, is estimated to have invested at least $12 billion in Hong Kong.

"Capital needs throughout Asia are increasing dramatically."

John Gray
Hongkong Bank

"Banks will flock to Hong Kong to help to finance the rapid expansion of retail and other consumer businesses into China," Mr. Gray predicts.

The vast volume of trade pouring through Hong Kong and other South China ports, he adds, will mean huge growth in trade finance, foreign exchange activity, and asset management for institutional investors.

Still, the massive global lending binge of the 1980s has left its scars.

Japanese banks have been hit hardest and will probably spend the rest of the decade sorting out and restructuring billions of dollars of bad assets, both at home and abroad.

'Unlikely to Improve'

According to estimates by Japan's Ministry of Finance, gross nonperforming loans as of March 31 for Japan's 21 major banks totaled nearly $120 billion.

"Asset quality problems are unlikely to improve in the near term as it will take the banks several years to complete the work-out process, and a significant number of restructurings that have been put together will undoubtedly be unsuccessful," Standard & Poor's ratings group warned in a recent report.

Japanese Banks in Position

Nonetheless, analysts believe Japanese banks and regional powerhouses like HSBC Holdings are best positioned to profit from Asia's booming economy.

"Within Asia, Japanese banks are still the strongest and most competitive players despite capital constraints, poor earnings, loan problems, and a real estate crisis at home," says Ricardo Kleinbaum, an international banking analyst with Fitch Investors Service.

'Own Financial Culture'

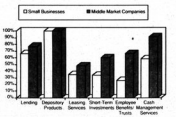
The analyst adds that Japanese banks and other local players in Asia may also have an edge over Western banks because of cultural factors.

"The ways of doing business in Asia are different from U.S. and Europe," Mr. Kleinbaum says.

"They [Asian banks] have their own financial culture, and contacts are more important than simply offering the best price on a specific transaction." ☐

How Much More Corporate Business Will You Lose to Non-Banks?

Financial Services Used

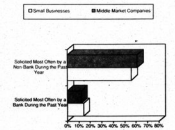


Small businesses use many services in addition to credit, particularly depository and investment products. The business potential is significant and taking these companies' business for granted would be a mistake.

Non-banks now market aggressively to small businesses and middle market companies. And their products and services often are rated as superior to or better priced than those offered by banks.

In fact, 80% of middle market companies that chose a new provider last year selected a non-bank.

Selling Efforts



Do you know how to successfully compete in the small business and middle corporate market segments? And, what's at stake? PSI's *Corporate Services Research Program* is the premier information resource available to financial services organizations for understanding business opportunities within small and mid-sized business markets.

Financial Market Reform Spurs Lending Boom

By JAMES R. KRAUS

Latin America's economies may be just getting off the ground, but its banks are already well ahead of the game.

Starved by more than a decade of credit shortages, banks are catering to a surge in loan demand from corporations, consumers, and investors as financial market reform gathers steam.

"You have the economies opening, you have deficits being controlled, and you have inflation coming down," notes Stefano Natella, a Latin America analyst with CS First Boston in New York.

"With inflation coming down, this has triggered a boom in lending, especially consumer lending."

Dramatic Change Predicted

Bankers and analysts say market reform in Latin America and the privatization of formerly state-controlled economies and corporations are radically altering the kind of business banks do and vastly increasing the scope of the services they provide.

"The banking sector in Mexico will change dramatically," predicts Manuel Somoza Alonso, chief executive officer at Banco Mexicano SA.

"What you have is a total change in lending patterns in banks, away from big corporate and state-run sectors in favor of the retail sector," says Mr. Natella.

That, he says, means that although banks stand to profit from higher margins, they also risk running into more nonperforming loans.

This trend is most pronounced in Mexico, where bank lending has skyrocketed in recent years as problem loans have increased.

"Loans have grown dramatically since 1989, reflecting the improving economic environment and improved availability of credit," Duff & Phelps Rating Co. notes in a recent assessment of Mexico.

"As the economy has slowed, the industry has experienced a sizable increase in problem loans."

Still, compared with many other areas of the world, the level of nonperforming loans remains low in Latin America and bankers and analysts remain sanguine.

'Not a Widespread Problem'

"Nonperforming loans are not a widespread problem through the industry," adds Mr. Natella.

According to calculations by First Boston, provisions for possible loan losses among banks in Mexico ate up 5.28% of gross interest income during the first quarter this year.

In the United States, where banks are benefiting from steadily improving earnings, Mr. Natella points out that provisions against bad loans accounted for nearly 10% of gross interest income.

Not 'Over Their Heads'

"Growth appears strong, but when you relate it to individual people, they're not indebted way over their heads," says Constantin Boden, executive vice president at Bank of Boston Corp. and head of the bank's international operations.

Per-capita retail debt in countries like Argentina where lending is growing by leaps and bounds is still well below levels acceptable elsewhere, Mr. Boden adds.

The Boston-based bank, which has a large network of offices in Argentina, Brazil, and Chile, sharply increased its local lending in Latin America last year and plans to increase it even more in 1993.

Some Lag Behind

Profits also remain strong.

Mexico's 18 commercial banks, for example, had a combined return on assets of 1.56% for the first quarter and a 25.7% return on equity -- both figures well above international norms.

Still, not all countries are moving at equal speed.

Mexico, Argentina, and Chile are among the countries where the biggest market reforms have been implemented and banking has grown fastest.

Colombia and Peru are slowly but steadily deregulating banking, while countries like Brazil and Ecuador are still mired in regulatory constraints.

Nonetheless, bankers believe it's only a matter of time before the laggards start catching up.

Both Peru and Colombia, they point out, are following in the wake of Mexico, Argentina, and Chile by privatizing state-owned banks and setting up genuine local capital markets.

"Colombia will be the next," Mr. Natella predicts. ☐

Data Source: Compiled by American Banker from its survey of the world's largest banks. Rankings are determined against amount reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of the equity of banks. Data for most banks are for Dec. 31, 1992 and Dec. 31, 1991, ship exceeds 50%. Data of figures: Data for most banks are for Dec. 31, 1992 and Dec. 31, 1991. Exceptions: Data for Australian and New Zealand banks are for June 30, 1992, Sept. 30, 1992, and March 31, 1993; Canadian bank data are for fiscal yearend Oct. 31, 1992; and all Japanese and Indian bank data are for fiscal yearend March 31, 1993. Exchange rates: Whenever possible, the New York rates are used, and this rate is for same date as bank's figures. (a)— Revised. (b)— Rank bank would have had, if revised deposit data were used. (c)— Asahi Bank, Ltd. merged with Taiyo Kobe Bank, Ltd. on April 1, 1990, to form Asahi Bank, Ltd. Exchange rate is 140.5 billion yen = $1 billion. (d)— Bayerische Landesbank Girozentrale, Munich, merged with Bayerische Kommunale Landesbank Girozentrale, Munich, on Jan. 1, 1994. (e)— Changed title. Compiled title on Sept. 21, 1992. (f)— Changed title. Formerly known as Banque Bruxelles Lambert. (g)— Changed title. Formerly known as Bruxelles Lambert Groupe. (h)— Changed title. Formerly known as Hessische Landesbank Girozentrale. (i)— Changed title on Sept. 21, 1992. (j)— Changed title. Formerly known as Westdeutsche Landesbank Girozentrale. (k)— Changed title on Sept. 21, 1992. (l)— Changed title. Formerly known as Bayerische Hypotheken-und Wechsel-Bank. (m)— Changed title. Formerly known as Creditanstalt-Bankverein. (n)— Changed title. Formerly known as Kredietbank N.V. (o)— Changed title. Formerly known as Nordbanken Sverige, AB. (p)— Changed title. Formerly known as Bayerische Vereinsbank. (q)— Changed title. Formerly known as Banque Indosuez. (r)— Changed title. Formerly known as Skandia Bank Ltd. (s)— Changed title. Formerly known as Bayerische Landesbodenkredit und Hypothekenbank. (t)— Changed title. Formerly known as Westdeutsche Landesbank Girozentrale.

Data Source: Compiled by American Banker from its survey of the world's largest banks. Rankings are determined against amount reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of the equity of banks. Data for most banks are for Dec. 31, 1992 and Dec. 31, 1991, ship exceeds 50%. Data of figures: Data for most banks are for Dec. 31, 1992 and Dec. 31, 1991. Exceptions: Data for Australian and New Zealand banks are for June 30, 1992, Sept. 30, 1992, and March 31, 1993; Canadian bank data are for fiscal yearend Oct. 31, 1992; and all Japanese and Indian banks are for fiscal yearend March 31, 1993. Exchange rates: Whenever possible, the New York rates are used, and this rate is for same date as bank's figures. (a)— Revised. (b)— Rank bank would have had, if revised deposit data were used. (c)— Asahi Bank, Ltd.

The Top 500 Banks in the World

Banks ranked by assets on Dec. 31, 1992, or nearest fiscal yeared. Holding companies are excluded. (Dollar amounts in thousands)

Data Source: Compiled by American Banker from its survey of the world's largest banks. Data were checked against annual reports wherever possible. Consolidated data, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. Date of figures: Data for most banks are for Dec. 31, 1992 and Dec. 31, 1991. Exceptions: Data for Australian and New Zealand banks are for June 30, 1992, Sept. 30, 1992, and March 31, 1993; Canadian banks data are for fiscal yearend March 31, 1993; and all Japanese and Indian banks data are for fiscal yearend March 31, 1993. Exchange rates: Wherever possible, the New York cable rate is used, and this rate is for same date as bank's figures. Compiled by American Banker, Copyright 1993. a-Includes assets of $1.5 billion acquired from Banque Worms in this survey of the world's largest banks. b-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. c-Includes assets of $1.5 billion acquired from Banque Worms in this survey of the world's largest banks. d-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. e-Includes assets of $1.5 billion acquired from Banque Worms in this survey of the world's largest banks. f-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. g-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. h-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. i-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. j-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. k-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. l-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. m-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. n-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. o-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. p-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. q-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. r-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. s-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. t-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. u-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. v-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. w-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. x-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. y-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. z-Includes assets of $2.5 billion acquired from Banque Worms in this survey of the world's largest banks. Data Source: Compiled by American Banker from its survey of the world's largest banks. Data were checked against annual reports wherever possible. Consolidated data, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. Date of figures: Data for most banks are for Dec. 31, 1992 and Dec. 31, 1991. Exceptions: Data for Australian and New Zealand banks are for June 30, 1992, Sept. 30, 1992, and March 31, 1993; Canadian banks data are for fiscal yearend March 31, 1993; and all Japanese and Indian banks data are for fiscal yearend March 31, 1993. Exchange rates: Wherever possible, the New York cable rate is used, and this rate is for same date as bank's figures.

Compiled by American Banker, Copyright 1993.

The Top 500 Banks in the World

Banks ranked by assets on Dec. 31, 1992, or nearest fiscal yearend. Holding companies are excluded. (Dollar amounts in thousands)

Data Source: Compiled by American Banker from its survey of the world's largest banks. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which owner ship exceeds 50%. Date of figures: Data for most banks are for Dec. 31, 1992 and Dec. 31, 1991. Exceptions are: Japanese and Thai banks, fiscal year ended March 31, 1993; Canadian banks, Oct. 31, 1992; Sept. 30, 1992; and March 31, 1993; Canadian bank data are for fiscal yearend Oct. 31, 1992; and all Japanese and Indian bank data are for fiscal yearend March 31, 1993. Exchange rates: Whenever possible, the New York rate is used, and this rate is for most of the banks in the bank's figures. (e)— A subsidiary of $258 billion-asset HSBC Holdings Plc, the world's 17th largest banking company.

VOL. CLVIII NO. 145 Friday, July 30, 1993 158th year

Banks Turning Sights on Loans To Boost Profits

By WILLIAM GOODWIN

In a turnabout from the past few years, banks today are hungry to book new loans, and second-quarter earnings reports provided evidence that credit demand is picking up.

"It was the best quarter we've seen in quite some time" in terms of loan growth, said Dennis Shea, regional bank analyst at Morgan Stanley & Co.

Loans on the books of the 22 major regional banks followed by Mr. Shea rose by an average of 6% over the year-quarter, adjusted for acquisitions.

David Berry, research director at Keefe, Bruyette & Woods Inc., which tracks about 135 banks, said the uptick in second-quarter lending was "good news," because banks need a fresh source of sustainable earnings growth.

NEWS ANALYSIS

In recent quarters, bank earnings have been driven by declining loan chargeoffs and historically high net interest margins. Big trading gains have boosted earnings at the money-center banks.

Temporary Benefits

But analysts tend to view the big trading profits as transitory, while the discovery process of starting to play itself out.

Margins, while still high by historical standards, have also begun to soften.

"As a source of earnings growth, that has probably spent itself" too, Mr. Berry said.

As maturing Treasury securities roll off the balance sheet, they are being replaced with lower-yielding assets, given the sharp drop in interest rates.

On the liability side of the balance sheet, banks have pushed down deposit rates about as far as they can go.

"If you're going to get margin growth, you've got to get it from someplace else," said Mr. Berry, and that probably means writing more loans.

Help from Refinancings

Most of the second-quarter loan growth was driven by increased consumer borrowing, and much of that was in the form of mortgage refinancings.

Rather than selling the mortgages in the secondary market, banks were more inclined to hold on to them. That was true not just for adjustable-rate mortgages, but 15- and 30-year mortgages, too.

Business lending has remained essentially flat nationwide, despite pockets of strength in certain regions.

Bankers Trust Goes It Alone In $2.3 Billion Kodak Credit

By WILLIAM GOODWIN

In what is believed to be the biggest corporate loan underwriting ever by an individual bank, Bankers Trust committed to provide a $2.3 billion credit to finance the spinoff of Eastman Kodak Co.'s chemical unit, sources said.

Kodak announced the planned spinoff in June, and said Eastman Chemical would borrow some $2 billion for a special payment to the parent company.

About half a dozen of the nation's biggest banks bid to lead the financing, but most proposed to retain the bulk of the funds on what is known as a best-efforts basis, sources said. They added that only one other bank, whose identity could not be learned, had submitted a fully underwritten bid.

Betting Its Balance Sheet

By committing to underwrite the entire amount singlehandedly, Bankers Trust is betting its balance sheet that it can sell the deal to a bevy of other banks, and whittle its underwriting exposure to a manageable level.

Kodak has a strong following among banks, and many bankers will be eager to establish formal ties with the stand-alone chemical unit. As a result, Bankers Trust's bet probably isn't all that

Banks Insist Trading Gains Are Not a Flash in the Pan

By YVETTE D. KANTROW

Many of the nation's largest banks are basking in the glow of record second-quarter profits stoked by spectacular trading revenues. But they also are trying to convince investors that the trading income was not a passing phenomenon.

Most of the gains came from currency and interest rate products, as quick-fingered traders pounced on rapidly declining rates in Europe and placed bets on the continuation of a steep yield curve.

Two New York banks each had stratospheric trading revenues of over $500 million, while three others in Manhattan also had record trading gains.

Citicorp led the pack, with $572 million of trading revenues that fueled net income for the quarter of $446 million. J.P. Morgan & Co. was close behind, with $520 million of revenue en route to $431 million of profits.

Not Just New York

The phenomenon spread outside New York as well, to such giants as San Francisco-based BankAmerica Corp. and First Chicago Corp.

The banks are the first to admit that the boom has a volatile rate climate – which sustained them in both the first and second quarter of the year – cannot last indefinitely. But they are doing their best to convince Wall Street that much of the income

Sears to Accept MasterCard, Visa, Amex

By LISA FICKENSCHER

Sears, Roebuck and Co. said Thursday that it will begin accepting MasterCard, Visa, and American Express cards in all its stores beginning Sunday.

The announcement ended decades of resistance by Sears, the last major merchandise retailer not to accept credit cards other than its own.

It also represented a long-sought victory by the banking industry, which adds 809 full-line Sears stores and about 1,000 furniture, hardware, and other affiliated outlets to the list of locations taking MasterCard and Visa.

Move Was Anticipated

Sears does about $32 billion in annual retail sales. MasterCard International estimates that 15% of the volume, or $4.8 billion, will be converted to bank cards. That would equal 1.6% of last year's domestic MasterCard and Visa volume.

As momentous as Sears' decision is, it was widely expected. Only its timing was uncertain.

The Sears Merchandise Group, toppled from retailing leadership in recent years by competition from Wal-Mart and other discounters, studied credit card acceptance as part of a far-reaching strategic reassessment.

Since last November, Sears gave customers at 140 stores in six markets – Dallas, Dayton, Miami, Orlando, San Diego, and Syracuse – the option of using the bank cards or American Express rather than Sears' own card or Discover, which Sears invented and recently spun off

See SEARS page 15

Why Sears Held Out...

- **It opened** 50 million proprietary card accounts, about one for every two U.S. households
- **A 27 million accounts** are active, equal to the total accounts of Citicorp and First Chicago combined
- **No annual fee,** a 30-day grace period, and a rebate program promoted loyalty to Sears card

And Why It Is Changing

- **Merchandise which** shoppers like multiple payment options
- **A 140-store test** indicated that sales increases when customers can choose among credit cards
- **20 additional** without Sears cards have MasterCard, Visa, and American Express

NEWS *briefs*

Pioneer Fed, 1st Hawaiian Deal Advances

HONOLULU — Pioneer Fed Bancorp said its shareholders approved a previously reported merger with First Hawaiian Inc.

Pioneer Fed said the proposal was approved by 98.3% of the holders represented at a special meeting Monday.

The merger still needs the approval of the Federal Reserve Board. The company said the Office of Thrift Supervision approved the deal last week.

Pioneer Fed said that after the merger, First Hawaiian will operate Pioneer's sole unit, Pioneer Federal Savings Bank, as a separate unit.

Integra to Buy Back Up to 1 Million Shares

PITTSBURGH — Integra Financial Corp. said its board authorized the repurchase of up to one million common shares.

Integra said its board wants to have the additional common stock available for "employee benefit and other stock plans, possible future financing and acquisition transactions, stock dividends or distributions, and other general corporate purposes."

Purchases of the common stock would occur from time to time in open-market transactions, through privately negotiated transactions, or in other transactions. It is expected that the transactions will be funded by cash from operations and cash on hand, the company said.

Hearing Set in San Diego on Homefed Seizure

WASHINGTON — The House Banking Committee will travel to San Diego on Sept. 1 for a hearing on the failure of Homefed Savings Bank and its takeover by the Resolution Trust Corp.

The hearing comes in response to a resolution passed by the San Diego City Council on June 7 that urged a congressional inquiry into the impact on the local economy of the RTC's takeover procedures.

At the time of its takeover, Homefed was the eighth-largest thrift in the nation, with assets of about $13 billion. It was the RTC's largest takeover.

House Banking Committee Chairman Henry B. Gonzalez, D-Tex., said he plans to hear from members of the San Diego City Council, representatives of Homefed, and experts on the local economy and real estate.

National City-Ohio Bancorp Deal Approved

CLEVELAND — National City Corp. said that the Federal Reserve has approved its application to acquire Ohio Bancorp.

As reported, National City has agreed to buy Ohio Bancorp for $200 million. Ohio Bancorp's holders will receive a combination of cash and stock valued at about $28 a share.

The company said that Ohio Bancorp's shareholders will consider approval of the acquisition at a special shareholders' meeting scheduled for Aug. 31. Pending the approval of Ohio Bancorp's shareholders, National City expects to complete the acquisition in October.

The briefs were compiled from staff and wire reports.

Correction

A news brief Thursday misstated Kemper Securities' earnings projections for the stock of PNC Bank Corp. Kemper forecasts $2.90 a share for this year and $3.25 for next.

SBA Head Sees Lawmakers' Plans On Reform Preferable to Clinton's

By CLAUDIA CUMMINS

WASHINGTON — The new head of the Small Business Administration says congressional proposals to reform his agency's general business loan program are better than one made earlier this year by President Clinton.

Like the President, Rep. John J. LaFalce, D-N.Y., and Sen. Dale Bumpers, D-Ark., have proposed cutting government guarantees on some SBA loans and setting up new fees. But their proposals are far less drastic than Mr. Clinton's.

"I wholeheartedly believe the proposals of both the Senate and House are vast improvements over the original proposal put forward by the administration," SBA Administrator Erskine B. Bowles told the House Small Business Committee on Thursday.

Less of a Sacrifice

Mr. Bowles and the committee agreed that the congressional proposals would be less painful for the lending industry than the President's plan.

"I'm fearful these [Mr. Clinton's] changes are too onerous and will adversely impact on small-business borrowers," Rep. LaFalce said.

Congress is expected to appropriate about $155 million for the SBA's 7(a) program next year, roughly what the President requested. That's $169 million less than this year's funding, a necessary cut to help reduce the budget deficit, Mr. Bowles told the committee.

Unless some guarantees are cut and unless new fees are added, the SBA would be able to fund only about $3.3 billion of loan guarantees, he said. But demand for the 7(a) loans could be almost triple that, he said.

"I've found no one who doesn't expect demand to be somewhere in the $7 [billion] to $9 billion range," Mr. Bowles said.

Larger Purpose

Mr. Bowles said that while he expects the banking industry to complain about the changes, the broader goal of deficit reduction makes them necessary.

He is already talking to bankers and has found them to be understanding once he has explained the reasoning behind the proposed changes.

"While they didn't particularly fall in love with any of these proposals, I think they found them acceptable," he said.

"Each of these proposals in one way or another will cut into the profitability of these loans for the lending community," he added. "But I do believe it will remain a very profitable form of lending for the banks."

Many in Congress want to implement the changes soon, so savings in this year's budget could be carried over to 1994. If passed, the changes could be implemented as early as Sept. 1.

Impact on Capital Formation

But many remain unconvinced. Richard D. Turner, chairman of the National Association of Government Guaranteed Lenders, told the committee that efforts to cut the deficit are hurting capital formation, a necessary ingredient for job creation and economic growth.

"The administration's lack of funding support for this program indicates that solving the credit crunch was not as high a priority as they have stated publicly," he said.

But he did say that each of the congressional proposals "genuinely tries to make the best out of a bad choice." ☐

Gonzalez Ridicules the Fed as Out of Touch

By ROBERT M. GARSON

WASHINGTON — Reacting to news that the economy grew at a meager 1.6% annual rate last quarter, House Banking Committee Chairman Henry B. Gonzalez called on the Fed to loosen its grip on the money supply.

'They Need a New Radar'

"For months I have been saying that the monetary policy growth rate is dangerously low," the Texas Democrat said.

"But instead of heeding it, the Federal Reserve now says the monetary growth rate is meaningless.

"Judging from the economic results, I'd say they need a new radar over there," he added.

In an appearance before a banking subcommittee last week, Fed Chairman Alan Greenspan said the agency's basic measure of the money supply "has been downgraded as a reliable indicator."

'Crunching the Economy'

Rep. Gonzalez, a longtime critic of the Federal Reserve, aimed most of his wrath at Mr. Greenspan's statement to the panel that the economy was growing at a rate of up to 3.5%.

"Who is kidding whom?" the lawmaker said. "The Federal Reserve is supposed to be the champion number crunchers, but the only thing they seem to be crunching is the economy."

The health of the economy depends "on a decent policy at the Federal Reserve, " Rep. Gonzalez said. But the central bank "seems wholly disconnected from reality, not even in touch with the most basic indicator of all – economic growth." ☐

First Union Service Targets Big-Check Fraud

By BARTON CROCKETT

First Union Corp. is rolling out a new reporting service for large-dollar checks that is meant to help corporations detect fraud.

The service is believed to be the first of its type, according to cash management experts and First Union officials.

"It's not a difficult thing to do," said Richard Richardson, vice president of Phoenix-Hecht, a cash management research firm in Research Triangle Park in North Carolina. "But, to my knowledge, there's not anyone else doing that."

First Union's new service, scheduled to be available later this summer, is called the Fraud Management Report.

More Technology News Pages 16 and 17

Payee Name Is Key

Basically the report, which cash managers obtain from personal computers hooked through phone lines to bank computers, is a daily listing of all checks for more than $100,000 presented against their companies' controlled-disbursement accounts.

A key piece of information included in the report is the payee name.

Payee names aren't included in fraud detection systems typically used at banks, so bank clients can be vulnerable to con artists who change the name on a check.

The new service is intended to minimize that vulnerability, at least for large-dollar checks.

"We think its going to be extremely well received by most of our controlled-disbursement customers," said Catherine Bates, a vice president in the bank's cash management division.

Some corporate clients agreed.

"This looks like it would be a good tool," said Randy Sharrow, senior cash manager with Fieldcrest Cannon Inc. in Eden, N.C.

The company, a First Union customer, plans to test the report when it is available.

Michael Daly, a First Union product development manager, said that to make the report available the bank had to design a new computer system and hire a few extra clerical workers to key in payee names.

But Mr. Daly said the bank expects to make a profit on the service, by charging clients $5 each time they obtain a report.

Bank clients will not be charged if they ask for a report but no checks have been presented against their accounts for more than $100,000. ☐

Telephone Service Fields Inquiries Around the Clock

By BARTON CROCKETT

A small technology company has started selling a computerized telephone answering service that some bankers hope will save them money and improve customer communications.

Atlanta-based Strategic Solutions Group Inc. will run the telephone system like a service bureau, answering customer inquiries around the clock about mortgages, loans, investments, and bank services.

"I've never seen anything quite like it," said Terry Williams, executive vice president of Margaretten & Co. of Perth Amboy, N.J., which plans to start using the telephone service bureau nationwide later this year.

Lower Cost, Expanded Hours

Margaretten, the country's 13th-largest mortgage originator, expects to boost service by answering consumer questions after normal business hours, and to cut costs by eliminating the time employees spend answering basic questions from prospects, Mr. Williams explained.

At least two other companies have signed up to use the telephone service bureau; Middlekauff Mortgage Co., a small, privately held broker in Jacksonville, Fla., and First Mortgage Corp. of Tempe, Ariz, according to Mr. Goetz.

Bankers said the telephone service is unique because it lets consumers do "what if" inquiries, to determine, for example, how much it would cost to refinance a mortgage.

Generating Prospects

The computers also generate a list of prospects, along with the information they entered into the vendor's computers.

Mr. Goetz said Strategic Solutions for years has sold telephone answering systems that banks can buy for $25,000 to $75,000. Customers include Citibank, First Chicago Corp., and NationsBank.

The new service bureau costs only a few hundred dollars per month and is targeted at small community banks that can't afford their own equipment, Mr. Goetz said. ☐

We'll save you money. We could save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division, to get every Monday the data you need to face the regulators.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... which agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 20% discount, so you'll be saving money even before you get the first issue. After that, how well you use the information before this year's exam could decide whether you're around next year.

Congress Must End the Terror Stalking Innocent S&L Officers

When Congress votes this summer, as expected, to fund the last big chunk of the savings and loan bailout, it will close the books on history's costliest financial disaster.

While the legislators are at it, they should also put an end to the litigation rampage set loose when the bailout effort began four years ago with the passage of the Financial Institutions Reform, Recovery, and Enforcement Act.

Since that 1989 law, the Resolution Trust Corp. and the Federal Deposit Insurance Corp. have become the country's largest employers of law firms. In addition to their own immense legal staffs, the RTC and FDIC retain over 2,000 private law firms at a cost to the taxpayer approaching $1 billion a year.

Not a Call for Amnesty

No one suggests the RTC Funding Act of 1993 provide a blanket amnesty for the S&L industry's bad actors. The government should continue to handle cases where fraud, self-dealing, and other serious wrongdoing led to the collapse of banks and thrifts.

But government should call off the attack dogs demolishing the careers and financial state-

Mr. Morris is president of Fortune Group, a St. Louis investment banking firm, and publisher of *Regulatory Watchdog.*

ments of thousands of innocent former officers and directors accused only of "simple negligence."

Members of Congress who were around in 1989 may recall that the language of the original bailout bill included only "gross negligence" — wanton disregard or intentional wrongdoing. But overzealous government lawyers found ways to use state law to sue on simple negligence – flawed business judgment – and thereby circumvent the intent of the bailout law.

Well-Meaning Thrift Managers

Former S&L directors from all over the country had approved, in good faith but with less than perfect foresight, loans in the Southwest before oil prices collapsed or on real estate before the 1986 Tax Reform Act knocked the pins out from under property values.

Now they find themselves in David-and-Goliath legal battles with the government — an opponent with unlimited funds and 20-20 hindsight.

One group of beleaguered directors from a failed Utah thrift took the gross versus simple negligence question all the way to the U.S. appeals court in Denver. The judges were sympathetic but ruled against them on state law, saying they had come to "the wrong forum."

The right forum is Congress, which – with a sentence or two

DECENCY DEMANDS

that Congress call off the attack dogs demolishing the careers of thousands of innocent former thrift officers and directors accused only of "simple negligence."

in the RTC Funding Act – can finally make clear that it never intended to brutalize well-meaning bank managers for mistakes in judgment.

Net Loss on Lawsuits

Even a cynical calculus that justifies this legal reign of terror based on "net proceeds" to the government breaks down.

I publish a newsletter for defendants, and we provide information obtained under the Freedom of Information Act on how much the RTC and FDIC has spent on the law firms it retains to sue directors. While admittedly anecdotal, our information indicates that the government spends far more than it will ever take in.

If the cost of the agencies' in-house lawyers and investigators is added in, it is impossible to envision a "profit" from these suits.

My attempts through Freedom of Information Act requests to get comprehensive information on simple-negligence suits have been unsuccessful. So I suggest that Congress, through its oversight hearings, ask for hard data on the resources expended, compared with the actual restitution obtained on the taxpayers behalf.

I expect that when the settlements coerced from a few major law firms and accounting firms are eliminated, the efficiency of the recovery is shockingly low.

Chill on the Economy

The decline in business lending in the middle of an expansion is unprecedented and hurting the economy. Then again, so is the spectacle of the government suing its citizens for good business judgment.

The connection is obvious. Bankers are chilled in assessing risk and return, so when they see their counterparts hauled into financial institutions hung out to dry for making loans that eventually sour, they shy the ratchet thing with respect to lending – they make fewer loans.

Inside the Washington Beltway may be too jaded to understand that the vast majority of the simple-negligence defendants served institutions in places like Coeur Rapids, Jasper, and Birmingham. They were performing a community service and received only modest board fees.

Congress should end the shameful vengeance attack launched unwittingly against many of our most productive citizens.

Several states have already passed laws to prohibit such lawsuits against their residents on simple negligence grounds, but the laws will apply only to future lawsuits. Only Congress can cause these malicious suits to be dropped retroactively.

The only special interest group that is materially offended would be the Association of American Trial Lawyers. □

The 'Organic' Bank: Attractive Structure Marries Safety and Competitiveness

It is time to rethink the structure of the financial services industry. Once interest rates rise – and bank profits sink accordingly – the risks of perpetuating on outmoded financial system will become patently obvious.

The two prevailing models for industry restructuring fall under either the "core bank" or "depository institution holding company" label.

The difference between the two is one of degree rather than kind. Each posits a diversified financial services company that includes at least federally insured deposits and other lines of business.

The variations between them come from the kinds of activities that could be housed either in the bank or in its parent holding company – with the core bank approach requiring a more constrained insured depository operating in a more diversified corporation than in most versions of the holding company proposal.

Need for Firewalls

Both the core and holding company models share a troublesome problem: Each depends

THE ORGANIC-BANK

model permits the creation of integrated, efficient, and diverse financial services companies.

on firewalls to ensure that problems in affiliated businesses do not contaminate the insured depository.

Because the two proposals differ on what activities would be allowed in the insured bank, they differ on precisely where the firewalls would be erected and on how high and how solid they would have to be. Nevertheless, each approach relies on prohibitions on integrated funding, cross-selling, and common management as the basic barriers to risk.

While these firewalls improve the appeal of these reform proposals from a policymaker's point of view, they have precisely the reverse effect on a manager of a financial services firm. The same firewalls that limit risk impede efficiency.

The Organic Bank

Another way to reform financial services would be called the organic bank. It is based on a supervisory — rather than a regulatory — approach to containing risk, and is thus based more on securities industry regulation than on the banking approach of the earlier models.

The organic-bank model permits the creation of integrated, efficient, and diverse financial services companies – attractive to policymaker and shareholder alike.

The organic bank would retain its deposit insurance, and would be allowed to operate much like existing commercial banks and S&Ls.

Insured deposits could still be converted into loans for small businesses, mortgages, or other purposes – a key difference from the core-bank proposal, which would generally limit the use of insured deposits to the purchase of no-risk government securities and, in some variations, asset-backed securities (which are by no means low risk).

Limits on Insurance

Meaningful deposit insurance reform is critical to the organic bank. If risk within the new structure is to be limited, then the scope of deposit insurance coverage must be limited, too.

Restricting coverage to no more than $100,000 per person per insured institution significantly reduces the cost of a failure to the government and is therefore essential.

In the organic bank, the distribution system of the insured institution can be used to sell any and all products offered by the parent and its affiliates.

However, products such as mutual funds, which could be mistaken for insured deposits, would be covered by rules designed to prevent consumer confusion. The sale of securities, insurance, or other products requiring licenses and similar certifications could be made only by people who have all the same regulatory requirements that are imposed on sales made outside a bank branch.

The clear penalties associated with coercive tying of sales should be more than adequate to prevent potential customer abuses, especially if the rules are accompanied by the vigorous enforcement on which the success of the organic bank relies.

Variety of Activities

A wide range of activities could continue to be conducted in an insured depository under the organic-bank model. They would include not only conventional lending, but also the trading and servicing operations increasingly associated with the modern bank.

This would avoid the almost fanatical arguments over what types of activities should or should not be conducted in conjunction with the business of taking insured deposits.

Yet the organic-bank model is by no means laissez-faire. All activities conducted within the insured depository would be subject to whatever restrictions risk regulators choose to impose.

These could be more stringent than if the same activity were conducted in an uninsured affiliate – an appropriate reflection of the different risk to the government in such cases.

For example, both a bank and a nonbank might choose to engage in foreign exchange trading, but only the bank might be subject to complex risk-based capital rules, trading limits, or similar sanctions. Each institution's management could decide whether the synergy of the relationship to the insured depository was worth the additional regulatory cost.

IF RISK WITHIN

the new structure is to be limited, then the scope of deposit insurance coverage must be limited, too.

Safety Test

Under the organic-bank approach, regulators would review all the activities conducted within an insured depository to ensure that they are done in a safe and sound fashion by properly trained personnel under appropriate internal controls. Unless all these tests were met, the activity would have to be moved outside the insured depository.

This standard would permit the organic bank to evolve as the financial markets do, with regulators determining the risk associated with different new financial services. The flexibility of the risky operation or shed its insured depository and transfer all but the deposit-taking function to an equal footing.

As new products are created, companies would be permitted to offer them either inside or outside the insured bank – but they would be allowed to offer the product and thus compete on the basis of the degree of risk presented.

A further constraint on risk would be the controls bank regulators could exercise over the insured depository. While bank regulators may not now have the power to regulate the affiliates or the parent, they would be able to supervise, not only any potentially abuses of insured funds, but also any problems that could eventually damage the insured entity.

Again, this approach borrows from securities regulation. Although the SEC regulates directly registered broker-dealer operations in a securities firm, it also has the power to require reports and other data from all of the broker-dealer's affiliates. When it finds that an affiliate is taking undue risk, it can order the broker-dealer to sever its ties.

Under the organic-bank model, the bank regulator would have similar power. However, the new approach would give an institution two options: divest the risky operation or shed its insured depository and transfer all but the deposit-taking function to an equal footing. □

'Singing' Radio Ads Have Their Place, Even for Bank

To the Editor:

I was disappointed with Paul Nadler's column, "Radio Ads Can Speak Volumes About a Bank's Character" [July 14, page 4].

Mr. may have forgotten that the whole purpose of advertising is to communicate. Since, as he put it, "the radio airwaves are saturated with bank ads," it behooves a bank to create messages that break through the monotony and cacophony.

The "singing" commercial has its place. If, for example, you were to buy airtime on an all-news station, then a singing commercial would be a welcome, and memorable, relief.

At our agency, we rarely get an opportunity to use radio exclusively to promote products. We do, however, use radio to reinforce print advertising. Sometimes, it's even nice to let people know that the banks trying to reach them and services are people, too.

I sincerely hope that Mr. Nadler's "sensible people" who "do not want to have their money in a place whose only message seems to be, 'We are friendly, la la la,' " will see banks as something other than "serious places" to hold our money.

I would like to believe that most bankers are genuinely concerned about people and about helping them survive in the 1990s. And if they want to "sing" their praises over the airwaves, I'm willing to listen.

Earnings, Not Book Value, the Key Issue in an Acquisition

To the Editor:

Your coverage of many banking companies' June-quarter earnings and the acquisition of Great Southern Bancorp. by Fourth Financial Corp. [July 23, page 7] highlighted a discrepancy in your reporting.

The acquisition article mentioned the purchase price relative to the acquired company's book value [1.6 times] but not relative to the latest reported earnings.

Have you talked to any acquiring companies lately? They will tell you, I am sure, that book value and assets of the target company are interesting, but that any combination, the target's earnings (or, more particularly, basic earning power as part of the combined entity) is the real issue.

Making the Difference

How else can one management (Security Financial Group of Minnesota) agree to sell out for 81% of book value, while another will not agree for less than 210% of book value (First American of Canton, Ohio)?

In the first case, earnings were low and asset quality not so good. For First American, earnings were so good that at the time of the announcement, the selloff price was only 9.7 times latest reported earnings.

NationsBank Gains New Territory With Commercial Finance Deal

BY KENNETH CLINE

ATLANTA — NationsBank beat out four rival banks and several nonbanks to capture the financial services subsidiary of US West Inc., and is winning plaudits for its aggressiveness.

"I don't see any downside to it," said Moshe Orenbuch, an analyst at Sanford C. Bernstein & Co., commenting on the deal to buy US West Financial Services, a commercial finance firm. "It doesn't require integration and it doesn't require cost savings. It's just a good financial transaction on its face and it makes strategic sense as well."

Charlotte-based NationsBank announced the deal Wednesday, after the market had closed. On Thursday, NationsBank stock rose $1.375 to $58.

The nation's fifth-largest bank said it will pay a premium of $85 million premium for $2.3 billion of US West's net receivables.

It touted the transaction as an extension of its strategy to develop "nonbank business[es] to meet financial services competitors outside the commercial bank arena." The finance company provides funds to commercial companies often deemed uncreditworthy by banks.

James H. Hance Jr., Nations-Bank's chief financial officer, said in an interview Thursday that the pending deal should add at least 15 cents a share to the bank's 1994 earnings. "The premium is low and [the firm] has a self-contained management," Mr. Hance said. "There are no management issues."

US West Financial, which has 208 employees, will maintain its current management and location in Stamford, Conn.

Analysts at Merrill Lynch and Morgan Keegan raised their 1994 earnings estimates for the bank after the deal was announced.

Since Dec. 1991, when the former NCNB Corp. acquired Atlanta-based C&S/Sovran Corp. to form NationsBank, the company has aggressively expanded geographically and by product line. [See table.]

Analysts have expressed concern in the past about the quick expansion, but have few qualms about the US West deal.

"The ability to fold in finance companies, where there seems to be a decent management team in place, doesn't keep me up late at night very often," said Judah Kraushaar, an analyst at Merrill Lynch & Co. "I think people are finally getting comfortable that this is not just another sleepy southern bank."

US West Financial earned $55.1 million last year, up from $52.2 million in 1991. Mr. Hance said he expects about the same from the unit in 1994.

James H. Ozanne, US West Financial's president and CEO, said nine bids were received for all or part of the company. Bidders included General Electric Capital Corp. and four banks that he declined to identify. □

Trading Seen as Source Of Continuing Gains

Continued from *page 1*
can be considered core revenue, derived as much from services provided to customers as from proprietary activities.

Timothy Yates, chief financial officer of Bankers Trust New York Corp., told analysts last week that the income will keep coming, regardless of interest rate differentials. The nation's seventh-largest bank company booked $405 million of trading revenue and overall net income of $251 million between April 1 and July 1.

Correlation Denied

The big gains in most of the company's recent quarters, Mr. Yates asserted, were "not correlated at all to the steepness of the yield curve."

At Citicorp, executive vice president Thomas E. Jones acknowledged the unusual market conditions of the quarter, saying they probably added $150 million of trading revenues beyond the norm. But he assured investors that the nation's biggest bank can sustain exceptionally strong trading income of $400 million in future quarters.

"The firm will ultimately prove this track record can be maintained," agreed Judah Kraushaar, an analyst at Merrill Lynch & Co., in a recent report.

The Bankers Trust and Citicorp officials also both stressed that customer-related business was integral to their trading activities. Of course, the more customer orders they or their colleagues see, the better positioned they are to make trades for the bank's own account since they have a view of the market.

More Big Returns Seen

At Chemical Banking Corp., senior executive vice president Donald H. Layton told analysts last week to expect double-digit growth in trading revenues to continue as the company concentrates on sales, arbitrage, and market-making for customer accounts. Chemical reported an 18.2% gain in trading from its strong first quarter, recording $298 million of trading revenue and net income of $381 million.

Mr. Layton noted that recent rating upgrades also will help the cause, since Chemical will be able to attract more counterparties to swap transactions.

Analysts accept the bankers' arguments – to an extent. "As several banks have pointed out, there is a certain secular upturn in trading and derivatives which will still be there, even though the last two quarters have been above average," said Raphael Soifer, an analyst at Brown Brothers Harriman & Co.

But the bank investment community remains concerned. Many of the trading activities relate to sophisticated and relatively new instruments and strategies that traditional bank investors still distrust. The gains are a far cry from the traditional lending or plain-vanilla bond trading activities that banks used to excel at.

"Wall Street is still trying to figure trading out," said David Berry, an analyst at Keefe Bruyette & Woods Inc. in New York. "It's perceived as volatile income, and that makes Wall Street uneasy."

Focus of Distrust

Bankers Trust, arguably the most sophisticated trader of esoteric derivative products, is a victim of that distrust. The company's return on equity is consistently among the highest of any banking company, and in the second quarter again toppled the scales at 25.56%.

What a Quarter
Second-quarter trading revenues, in billions

Citicorp	$572

Bank of New York	23

Source: Keefe, Bruyette & Woods

But uneasiness over the trading activities – and skepticism about the bank's claims that it is merely selling risk-management products to clients – has kept the company's stock price relatively low. The price-to-earnings ratio of Bankers Trust shares stood at a mediocre 7.4% based on Thursday's market price.

The skepticism from investors is not merely a reflexive, conservative reaction, analysts say. It is truly difficult to get a handle on the definition of "trading revenue" and its contributions to the bottom line. Indeed, different banks define the term differently.

Trading revenue at some companies seeps into numerous lines on the balance sheet. At Bankers Trust, for example, net interest income derives in large part from trading activities.

But at the great majority of banks, net interest income is a reflection of corporate lending and retail banking, making it much more difficult to use as a proxy for trading prowess.

Making matters worse, most banks refuse to provide details of their trading revenue.

Karen Gullo contributed to this report.

EXECUTIVE *changes*

Mercantile Bancorp. Promotes Three of Its Senior Executives

MERCANTILE BANCORP. has promoted three senior executives to new posts.

John H. Beirise has become president and chief operational banking officer of the holding company's lead bank, Mercantile Bank of St. Louis.

John H. Beirise

Mr. Beirise has been senior executive vice president in charge of institutional banking since joining the bank in 1992.

In his new post, he will be responsible for the corporate banking and institutional trust units. He also will be responsible for systemwide institutional banking strategy.

Walter F. Gray is now chairman of Mercantile Trust Co., which is being established as a nationally chartered bank. It will handle all individual trust activities now conducted by Mercantile's lead bank.

Walter F. Gray

Mr. Gray has been with the company since 1977 and currently is vice chairman and senior trust officer of Mercantile Bank of St. Louis.

W. Randolph Adams was named president and chief executive of Mercantile Trust. For the past two years, he has been senior executive vice president of Mercantile Bank of St. Louis. Mr. Adams will continue to head Mercantile's consumer banking strategy.

W. R. Adams

Central Fidelity Taps William I. Foster 3d

William I. Foster 3d has been promoted to president of the eastern region for Virginia's **Central Fidelity Bank.**

He will succeed **Ken Farmer,** who is retiring after a 35-year banking career.

William I. Foster 3d

Mr. Foster's responsibilities include overseeing the Norfolk-based company's largest retail branch network, which includes 41 branches, 24 supermarket offices, 59 automated teller machines, and more than 700 employees.

Since 1989, Mr. Foster has been statewide manager of Central Fidelity's real estate finance division.

He joined the bank in 1984 in its real estate finance department. He then headed the Norfolk commercial lending platform. — **Franklin Smith**

MIDWEST

THE MICHIGAN LEAGUE of Savings Institutions, Lansing, has elected **Leonard L. Eishen** as chairman of the League for 1993-94. He is president and CEO of **Sturgis Federal Savings Bank,** Sturgis.

He succeeds **Charles B. Cook,** president of **Marshall Savings Bank.**

Elected vice chairman of the League was **Duane L. Dickey,** president, **First Federal Savings and Loan Association of Alpena.**

The second vice chairman is **Robert J. Delonis,** president, **Great Lakes Bancorp,** Ann Harbor.

Robert G. Howell continues as president of the league.

MIDDLE ATLANTIC

PEOPLES Westchester Savings Bank, Hawthorne, N.Y., has promoted **JoAnn M. Ciocca** and **Marc Braverman** to senior vice presidents.

Ms. Ciocca oversees the daily operations of the bank's 31-branch office network, situated throughout Westchester County. Her responsibilities also include implementing policies and procedures and working closely with the bank's operations, compliance, legal, and security departments.

JoAnn M. Ciocca

Mr. Braverman oversees the bank's loan accounting department. He joined the bank in 1988 to set up the department.

Promoted to vice presidents were **Ellen J. Duck,** in the bank's training and development program, and **Dale Jewell Thornton,** who will run the payroll function of the bank.

Marc Braverman

Also named as assistant vice presidents are: **Jane W. Goodrich,** branch manager, North Yonkers office; **Samy F. Sapek,** deputy auditor; **Kathleen M. Wall,** Cortlandt office; **Thomas Alencherril** of the corporate audit unit, and **Angela Marie Asaro,** manager of the Bryn Mawr office.

WEST

FIRST INTERSTATE Bank of California, Los Angeles, has promoted **Marie Doyle-Brown,** its manager of support services for retail banking, from vice president to senior vice president. She works from offices in Los Angeles and San Mateo.

Ms. Doyle-Brown oversees a central branch-operations support unit in Los Angeles and a central risk-review department.

She also directs four teams of risk-management officers that review the bank's 326 branch offices to ensure compliance with federal, state, and bank regulations and procedures. □

Video Training Session For Nation's Ag Lenders

By BILL ATKINSON

Washington Watch

AS MANY AS 4,700 bankers from California to Connecticut will tune in to a meeting held by the Farmers Home Administration.

For the first time, the agency is holding a 6½-hour televised training conference on Aug. 12. to explain its new certified lending program.

"It is definitely a big deal here," said Robert Bonnet, chief of guaranteed loan making and farm programs for the agency. "I think the lenders are going to like it. We've invited any banker who wants to come."

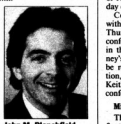
The certified lending program is designed to cut the time it takes for bankers to get approval on loans guaranteed by the farm agency. The loans are generally made to start-up farmers and farmers recovering from economic setbacks.

The Farmers Home's program will air from the Department of Agriculture's main office in Washington at 11 a.m. Eastern Standard Time, and run until 5:30 p.m.

Five panelists will explain to bankers, farmers, and 3,700 of the department's field staff how the certified lending program works. They will watch from 170 locations.

Members of the audience will be able to pepper the panelists with questions. Field office personnel familiar with the lending program will be at the sites to answer questions during breaks.

"I can't wait to see how this thing works," said John M. Blanchfield, manager of the American Bankers Association's agricultural division. "Farmers Home is not know for being innovative. We've told bankers to make sure they know about it."



John M. Blanchfield

John W. Syndergaard, senior vice president of agriculture and asset quality for Valley Bank of Shawano, Wis., said he wants to get up to speed on the lending program, but he's still debating whether or not to attend the meeting.

"We have not processed, historically, the numbers [of government guaranteed loans] they are asking for to become a certified lender," he said.

Mr. Bonnett said that in the past Farmers Home has conducted training sessions by flying as many as 300 field staff personnel to a central location. They, in turn, train other staff members. "The training is not as good, because you get it second and third hand," Mr. Bonnett said. "It [the viedo session] is considerably cheaper than what we normally would do."

* * *

The American Bankers Association has published a book on setting up a salary administration program.

The 60-page book, called "Guidebook to Salary Administration," gives bankers who run large and small institutions the inside scoop on: job evaluation programs, incentive compensation, and trends in compensation.

The guidebook also gives bankers tips on educating employees on how their salary is determined.

Gary J. Peters, senior vice president of West One Bancorp, Boise, Idaho, wrote the guidebook. It sells for $58 and is discounted to $39 for ABA members.

FirstRock: Probe of Stock Offering Has Left Its Operations Unscathed

By ROBERT B. COX

CHICAGO — FirstRock Bancorp officials have assured investors that Justice Department investigations into the Rockford, Ill., thrift's initial public offering have had no bearing on the company's operations.

"I don't think the case has had any effect," said David A. Ingrassia, president and chief executive of the $400 million-asset thrift said this week at a meeting with analysts here.

First Rock's October conversion was tainted by scandal when federal law enforcement officials seized 278,000 shares, or 10.5% of its stock, on the first day of trading.

Company officials visited with investors on the eve of a Thursday afternoon settlement conference between defendants in the case and the U.S. attorney's office. The civil case could be resolved without full litigation, Assistant U.S. Attorney Keith C. Syfert said prior to the conference.

David A. Ingrassia
Reassures investors

Misrepresentation Charged

The office of the U.S. attorney for the Northern District of Illinois charged individuals not associated with the company of illegally obtaining shares. Specifically, it alleged up to $1,500 each to depositors eligible to buy stock in the conversion. A depositor could order up to $210,000 in shares for the speculators while falsely representing the purchase as his own.

Typically, shares of healthy converted thrifts rise in value once traded on the open market.

"I don't think [FirstRock] has necessarily been tainted" by the federal investigation, said John E. Snow, analyst at Hamilton Investments, Chicago. In fact, analysts are encouraging investors to buy FirstRock's shares on the basis of its strong fundamentals and low stock price.

The stock hovers around $15.5, or about 85% of book value. That compares with an average valuation of about 100% of book value for Illinois-based thrifts, according to Howe Barnes, Chicago.

Mortgage Bonanza

FirstRock has profited handsomely from its booming mortgage division, which services $812 million in loans. The company boasted $418 million in residential loan originations and purchases during the first half of 1993 – compared with $276 million in all of 1992.

"Mortgage banking companies are just grabbing market share from the traditional mortgage lenders, and the banks and thrifts that have realized that and started acting more like mortgage banking companies themselves are doing extremely well," said Howe Barnes analyst Dan Coughlin. □

Iowa Bankers Petition for Regulatory Relief So Flood Victims Can Get the Help They Need

Regulator's Wailage

As midwesterners struggle to recover from disastrous floods, bankers in an ever-growing chorus are petitioning for relief from regulations.

The following is excerpted from a letter sent to the Federal Deposit Insurance Corp. by T. Bernt Gronstal, president and CEO of Carroll County State Bank, Carroll, Iowa, and by Carol Wieland, vice president.

Bankers need relief from red tape to speed up processing of loans for flood victims.

The banks in affected areas need time to devote to rebuilding their communities. Bankers need to spend time with customers instead of in committee meetings writing policies required by federal regulation.

Regulators should be asked to move back required implementation dates for policies on branch closings, executive compensation and other FDICIA-inspired policies having no practical use in community banks.

Enforcement Moratorium

Banks in the flood disaster areas need an enforcement moratorium on regulations requiring banks to act as law enforcers and tax collectors.

Appraisal requirements, RESPA, HMDA reporting, advertising regulations, and other regulatory red tape should have an enforcement moratorium so that bankers can make loans without fear of a compliance examiner causing major trouble over technicalities. Banks that make a good-faith effort to get credit to flood victims should be exempted from CRA geocoding and other time-consuming documentation.

Bankers need to spend time working with real customers until this crisis has passed.

Banks should be allowed to make low-cost loans to victims, with the interest income federally tax exempt. Banks could reduce the cost to borrowers if the income was tax exempt. □

Deal Puts Pohlad Halfway to $1 Billion of Texas Assets

By JOHN RACINE

DALLAS — Minneapolis investor Carl R. Pohlad has agreed to acquire family owned First National Bank of Grapevine, putting the owner of the Minnesota Twins baseball team halfway home in his quest to build a $1 billion-asset holding company of Texas community banks.

Spokesmen for both sides expect the Federal Reserve late this year to approve the cash-for-stock purchase of the $152 million-asset institution, which has its headquarters just north of the Dallas-Fort Worth International Airport. Terms of the deal were not disclosed.

'A Plaid Number'

"Carl has always had an interest in Texas," said Lamar Ball, chairman of the First State Bank of Denton, the largest of Mr. Pohlad's three institutions in Texas.

"He has said that he wants to build a $1 billion presence, but that is a fluid number."

Mr. Pohlad first showed an interest in Texas in July 1992, when he agreed to buy troubled Texas American Bancshares of Fort Worth and San Antonio-based National Bancshares Corp., which once had combined assets of $8 billion.

Carl Pohlad
Aiming for $1 billion

The Grapevine purchase would give the investor four banks with $500 million of assets.

Because of concerns over the price of the acquisitions and the level of federal assistance, Mr. Pohlad backed away from the deals.

Charging Ahead

Despite that early setback, Mr. Pohlad has charged ahead in Texas. Earlier this year, his company purchased the Terrell State Bank east of Dallas and the Watauga State Bank in suburban Fort Worth. Both banks have assets in the $30 million range.

The purchases came more than three years after Mr. Pohlad's Texas-based First Bancorp. acquired the lead Denton bank, which was recapitalized in November 1991.

Mr. Ball said that while Mr. Pohlad does not have direct ownership of any of the banks, his "family interests" control the Texas holding company.

Looking for More Banks

Once the Grapevine bank is acquired, First Bancorp. will have just over $500 million in assets. With Mr. Ball taking the lead, the company continues to search for other community banks to acquire in Texas.

Mr. Pohlad is also known to have similar plans in several midwestern states.

Robert D. Rieke, a vice president at The Principal/Eppler, Guerin & Turner in Dallas, said that Mr. Ball has a proven track record on the operations side, which should help generate efficiencies from the banks even if they operate under separate names.

'Has the Experience'

"Lamar Ball certainly has the experience and the understanding to build a successful acquisition program," said Mr. Rieke, who helped broker the sale of the Denton bank.

While the purchase price for the Grapevine bank was not made public, observers say that metropolitan banks in Texas have been fetching prices of up to 1.75 times book value.

Because the bank had equity estimated at $10.9 million, some estimate the purchase price may have been as much as $19 million.

Thad McDonnell, vice chairman and chief executive officer at the First National Bank of Grapevine, said that Mr. Pohlad's bid was the strongest of four received since the bank was put up for sale following the death on Jan. 11 of Joe N. Box, the majority stockholder.

The buyout involves 57 stockholders, including Mr. Box's widow, Cecelia, who controls 68% of the company. The one-office bank, founded in 1919 by D.E. Box, will continue to operate under the First National Bank name. □

Sterling Unit in Deal For Keycorp Offices

Reuters

SPOKANE, Wash. — Sterling Savings, a unit of Sterling Financial Corp., said it has agreed to acquire six branches in the western part of the state from Key Bank of Washington, a subsidiary of Albany, N.Y.-based Keycorp.

"This purchase affirms Sterling's commitment to further expansion in Washington," said Harold Gilkey, chief executive officer.

The thrift has 34 branches and about $700 million of assets.

Colorado Hurdle to Growth Seen as Minor Roadblock

By JAMES B. ARNDORFER

Colorado credit unions are taking in stride a law that for the first time requires their regulator to hold public hearings before an institution can expand its membership into a community.

Bankers lobbied for the hearings because they are angry with a decision by a regulator to allow a credit union at Lowry Air Force Base to expand its membership base into the adjacent community of Aurora.

The law, which went into effect this month, creates a five-member financial services board within the Colorado Division of Financial Services that will grant credit union charters, oversee mergers, and set regulations – powers formerly belonging to the division commissioner.

Carroll D. Beach

"I don't think there'll be any problems," said Carroll D. Beach, president of the Colorado Credit Union League. "We feel comfortable with a board and we think it will be responsive to the needs of credit unions and the community as well."

But the statute allows bankers to comment at public hearings when the board considers granting charters for credit unions seeking to expand their so-called field of membership. It also limits to one the number of branches a credit union can open if its common bond is within a community of more than 100,000. The restriction is in effect until Jan. 1, 1997.

Bankers Angered at Lowry Decision

The change comes in the wake of a December 1992 state court ruling that held legally binding Commissioner David Paul's controversial decision to allow Gateway Credit Union, formerly Lowry Federal, to expand into Aurora. The credit union asked for approval to expand after the Air Force base was targeted for closure. Gateway is the state's only community chartered credit union in the 100,000-population category.

Colorado bankers still don't know if the steps are enough to prevent credit unions from expanding into their communities.

"We'll wait and see," said Don Childears, executive vice president of the Colorado Bankers Association. "We greatly support it since we helped author it, but it doesn't go quite as far as we would've liked."

Bankers wanted hearings for all charters, Mr. Childears said.

'Industry Boards Tend to Be More Lenient'

"The banking industry will be disappointed in the new board," said Barbara M.A. Walker, state bank commissioner. "Industry boards tend to be more lenient, more concerned with competitive issues and even-playing-field issues."

A public hearing must be held before the board can grant a "community charter" or approve a merger that involves a community charter. Representatives of each credit union, savings and loan, bank, and industrial bank within the targeted community can attend the hearing and inspect the credit union's application.

Mr. Paul doesn't expect many community charter applications. "Lowry was more of a unique circumstance than the beginning of a trend," he said.

Pentagon Federal Takes a Step Into the Mutual Funds Arena

By JAMES B. ARNDORFER

Pentagon Federal Credit Union has jumped into the mutual funds business to keep up with customer demand.

The Alexandria, Va.-based institution, which has 410,000 members worldwide, launched a pilot program that will offer about 20 mutual funds. If the program works, Pentagon could design and broker its own family of funds within five years.

Ronald Snellings
Targeting 40,000 members

'An Expected Service'

"Mutual funds are becoming an expected service of financial institutions," said Ronald Snellings, president of the credit union, which is the fifth largest in the country, with $1.6 billion of assets. "We wanted to provide that service to our members and offer them something they couldn't get anywhere else."

Since May, Pentagon Federal Insurance Services Corp., a wholly owned subsidiary of the credit union, has been using branch displays and mailings to market funds to members in Maryland, Virginia, and the District of Columbia.

This week, the subsidiary mailed 400 letters to members, netting about 30 accounts, said Lansing Hewitt, sales director of Pentagon Federal Insurance, and head of the mutual fund program.

A Target Group

The credit union is initially targeting about 40,000 members in Maryland, Virginia, and Washington, D.C., Mr. Snellings said. The group is composed of members chosen for their interest and familiarity with mutual funds.

The target group will expand to 60,000 when the program picks up. The subsidiary is also licensed to sell funds to members in Pennsylvania, Florida, and California, but has not begun sales in those states, Mr. Hewitt said.

Pentagon broke with tradition in picking Egon USA Securities Inc., a Cedar Rapids, Iowa-based insurance company, to serve as a third-party broker-dealer.

Most credit unions that offer mutual funds use Madison, Wis.-based Credit Union National Association's Plan America mutual fund program. The association is the largest trade group representing credit unions.

Range of Choices

Pentagon liked the number of funds available through Egon, and it felt comfortable with the company because of an an existing business relationship. For the last four years, Egon has offered Pentagon's fixed annuities program.

A 410,000-member institution, in a pilot program, is offering 20 funds.

"We were given good service and we felt comfortable dealing with them," said Mr. Hewitt. "We didn't like Plan America's product," said Mr. Snellings.

"It's strictly front-end load. We wanted to have more than one choice and offer no-load funds as well."

The credit union will sell four types of funds: growth, growth and income, income, and tax-exempt. The funds will be drawn from six of the families brokered by Egon: American Funds Family, Dreyfus Funds, Fidelity Advisor Funds, Putnam Funds, Aim, and Invesco.

Sales of $4 Million Seen

Pentagon's initial investment for the project is between $40,000 and $50,000, not including the cost of hiring a new salesperson, Mr. Snellings said. Sales are expected to reach $4 million after six to 12 months.

At that point, the credit union subsidiary plans to expand the number of funds offered, increase the support staff, and establish itself as its own broker, Mr. Snellings said.

After two to three years, the subsidiary hopes to design and license a mutual fund. Starting a new fund would cost $800,000, Mr. Snellings said, and it would need to reach $40 million to $50 million in sales to be considered viable.

The credit union's board is still leery of the idea, Mr. Snellings said.

Strong Interest

Pentagon decided to offer the funds after members began requesting the product.

The credit union conducted marketing surveys after receiving calls from members inquiring about credit unions, Mr. Hewitt said.

The surveys found that 77,000 either had invested or planned to invest in mutual funds, Mr. Snellings said. Also, 4% of its members said they would definitely invest in mutual funds if the credit union offered the service, Mr. Hewitt said.

Taking a Chance

But Mr. Snellings acknowledged that there are risks. One fear is that the mutual fund will compete with the credit union's deposit business. Mr. Snellings doesn't expect this to be a long-term problem.

"In looking at banks you see at first there is some disintermediation with depositors taking out money to put it into mutual funds. But usually, within 18 months, the deposits are back up," he said. □

Banks Get a Boost in Fight to Restrict Membership

By ED ROBERTS

The banking industry's bid to restrict credit union membership got a boost last week when the Justice Department decided not to launch a Supreme Court appeal of a recent bank victory.

After six weeks of lobbying by the National Credit Union Administration and the American Bankers Association, Solicitor General Drew Days decided not to ask for a high court appeal in the key "common-bond" case.

His decision left the Credit Union National Association, the industry's leading trade group, to carry the ball.

The decision effectively reduces from 50% to around "2.5% to 5%" the chances that the Supreme Court will accept an appeal, according to Durant Abernethy, general counsel for the trade group.

The more likely scenario now is that the National Credit Union Administration will return to the U.S. district court and argue the controversial AT&T Family Federal Credit Union case on the merits, hoping to establish exclusive authority once and for all to make decisions on field-of-membership expansions.

NEWS ANALYSIS

But even if the the federal agency wins that case, the banking industry appears to have won the issue of "standing," opening up future field-of-membership rulings by the regulator to a multitude of lawsuits by the banks.

New Law Seen as More Likely

The solicitor general's decision also make the chances of a legislative remedy more likely, because credit union lobbyists are expected to seek some kind of assistance from Congress in the next year or two.

"Congress is not going to stand idly by and watch another S&L debacle happen to the credit union industry," said David A. Daetwyler, president of AT&T Family.

The regulator's general counsel, Robert Fenner, who had asked the solicitor general to launch an appeal, expressed disappointment at the decision. He noted that even if the agency wins the case in the district court, "we're stuck with a bad decision [on standing], and the bankers can cause us a lot of problems."

In the case, four community banks in North Carolina and the ABA are seeking to overturn a decision by the credit union regulator to let AT&T Family, based in Winston-Salem, N.C., expand its field of membership to include nine select employee groups not affiliated with American Telephone and Telegraph Co.

The bankers' challenge was rejected by the U.S. District Court for the District of Columbia, which ruled that the banks lacked standing to challenge NCUA decisions.

But the district court's position on standing was overturned last April by the U.S. Appeals Court for the District of Columbia Circuit.

Challenges Proliferate

The decision of the appeals court gave bankers standing to challenge any NCUA field-of-membership rulings, and by extension, all other policy or regulatory decisions. As a result, the banking industry has launched

The solicitor general decided not to appeal a decision favoring banks.

field-of-membership challenges in several other states, including another suit in federal court in Michigan.

The AT&T Family case has enormous ramifications for the credit union industry, which has been hit hard by corporate failures and plant closings over the past decade and also will be hurt by planned closings of military bases. To help credit unions affected by plant and closures, the regulator has offered to liberalize guidelines for field-of-membership expansion.

Mr. Fenner had hoped for a Supreme Court appeal endorsed by the Justice Department to settle the issue of standing and discourage more challenges.

That issue having been decided for now, the case will return to the district court. If the regulator loses there, it will probably again ask the solicitor general to appeal to the Supreme Court, Mr. Fenner said.

He suggested that the solicitor general's decision was based on the assumption that the standing issue could be appealed to the top court later.

Michael Crotty, deputy general counsel for the ABA, suggested the solicitor general's decision will hasten a district court ruling on the case.

"This wise decision . . . all but assures that there will be a determination of the merits of this case in the federal district court in rather short order," said Mr. Crotty, who lobbied the solicitor general on the case.

The solicitor general's decision does not rule out the regulator's participation before the Supreme Court if the court decides to hear the trade group's appeal, noted Mr. Fenner. The top court is expected to decide Oct. 15 whether to hear that appeal. □

Directors Mortgage, A Former Unknown, Savors Its Growth

By CHRISTOPHER NOBLE

Walking through the sprawling maze of hallways and staircases at Directors Mortgage Loan Corp.'s headquarters complex, Raymond L. Crebs marveled out loud at his company's size.

"It's scary," the chief executive said. "I can't believe how big we've gotten."

In just three years, the Riverside, Calif., company has risen from anonymity to the top ranks of the industry, becoming a shimmering symbol of the nationwide mortgage boom.

Loan Growth of 353%

Last year, Directors wrote $7.66 billion of loans, up some 353% from 1990. That made the company the 15th-largest originator in the country. In the first six months of this year, Directors picked up the pace even further, producing $4.2 billion of loans and moving up to No. 14.

For 1994, Directors' CEO plans to push originations to $14 billion.

To accommodate the growth, the company has been snapping up nearby buildings almost as soon as they become available. Directors' 800 workers now inhabit seven buildings sprawled haphazardly about a dusty, pancake-flat industrial park.

Perhaps most remarkable of all, Directors has managed to pull off the growth without following the herd of companies that have gone public over the past year.

No Plans to Go Public

Directors remains the largest, privately held mortgage bank in the country. It is owned by a family trust set up by the late A. Gary Anderson, who built the company almost from scratch in 1976. Mr. Anderson died last August. (See related story on facing page.)

There is not even the hint of a plan to go public, says Mr. Crebs.

"Would we like the dollars of being public? Yes," Mr. Crebs said. "Would we like the handcuffs? No."

On a more personal level, he said, it was Mr. Anderson's wish that the company remain private – and that wish will be honored.

Sitting Pretty

Though the company's financial affairs are a private matter, Mr. Crebs is not exactly bashful about his own well-being. A bearded man of 43, he tools around Southern California in a dark green Jaguar with sheepskin seat covers.

"I make more than the Angelos and Felix Becks of the world," he says, referring to Angelo Mozilo, vice chairman of Countrywide Credit Industries, and Felix Beck, chairman of Margaretten & Co.

Mr. Mozilo, the highest paid of those two, earned $2.3 million in cash compensation last year, more than J.P. Morgan & Co. chairman Dennis Weatherstone.

Mr. Crebs declined to elaborate on his compensation. But Mr. Anderson was reported to have become fabulously wealthy since acquiring the company in 1976.

Shortly before he died last August, he transferred ownership of the company to the A. Gary Anderson Living Trust. The company is operated by a five-member board of advisers, one member of which is the Anderson trustee. Mr. Crebs reports to the advisory board.

Rising Prominence

To some extent, the rise of Directors Mortgage mirrors the new power of mortgage banking companies nationwide. These companies, which sell the bulk of their new loans into the secondary market, have been gaining market share rapidly as capital-strapped thrifts and banks have retreated.

That trend, in the view of Mr. Crebs, is sure to continue. He says the entrepreneurial spirit that rules mortgage banks will push them to take more risks and reap greater rewards.

Certainly Mr. Crebs has some lofty goals for Directors.

He wants to originate $10 billion in 1993 and have a yearend servicing portfolio of $14 billion. Right now the company services about $11.7 billion, funneling monthly payments from homeowners to holders of mortgage-backed securities.

For 1994, Mr. Crebs plans to push originations to $14 billion and hit $20 billion in servicing. The servicing portfolio should reach $35 billion by 1997, he says.

All this is part of his plan to make sure the company secures

Directors' Builder, Dead a Year, a Continuing Presence

By CHRISTOPHER NOBLE

A. Gary Anderson's office at Directors Mortgage Loan Corp. looks like any other executive's office.

There is a briefcase open behind the desk, family photographs and mementos on the wall, and gold-rimmed reading glasses – temples crossed neatly – lying on a stack of papers.

There is nothing in the room, except the thin layer of dust gathering over it, to indicate that its occupant has been dead for a year.

In Memoriam

The office, preserved exactly as it was last Aug. 1, when Gary Anderson died, is only the most obvious sign of the continuing "presence" Mr. Anderson has at Directors Mortgage in Riverside, Calif.

"I think it's important to keep his memory alive," said Raymond L. Crebs Mr. Anderson's chosen successor as Directors' chief executive.

A. Gary Anderson

Mr. Anderson bought the company in 1976 and was the sole owner and CEO until he died last year. His death, at 52, came after a long illness and, while not unexpected, it nevertheless stunned Mr. Crebs and his employees.

Mr. Crebs said the transition was smooth from a business standpoint.

"Gary knew he was dying and he laid out the game plan," said Mr. Crebs. In addition, Mr. Crebs said he had been running Directors' day-to-day operations for most of the year leading up to Mr. Anderson's death.

> **"I think it's important to keep his memory alive."**
> **Raymond L. Crebs, CEO**

Mr. Crebs says the company has not faltered, and he believes that would please Mr. Anderson.

He also says that Directors' steady pace may have surprised some competitors who believed the company was a one-man show.

"We continue to shock some people that we haven't stumbled."

Portraits Adorn Walls

But a walk around the office proves that even if the business has gone on without a hitch, people at Directors are not yet ready to let go of Mr. Anderson.

There are small framed portraits of Mr. Anderson hanging throughout the corporate headquarters. The first one greets visitors in the lobby, and there are more wherever one looks.

On the first-floor landing, two industry awards to Mr. Anderson are conspicuous during the long climb up the stairs.

"It's my way of giving back to him, of making sure his memory is alive and well," Mr. Crebs says.

He says he soon plans to convert part of Mr. Anderson's office into an executive meeting room. But the desk and surrounding area will remain untouched, and Directors' executives will continue to labor under Mr. Anderson's watchful eye. □

Directors Savors Meteoric Growth

Continued from page 12

a leadership role in the inexorable consolidation of mortgage banking. When the dust settles, Mr. Crebs firmly intends for Directors to be among the top 10 in the country.

What's his immediate outlook for the mortgage market? Interest rates will remain at historically low levels – and lending volume will continue to shoot through the roof.

"I personally feel that there's more potential for rates to go to 6.5% in the form of a 30-year mortgage than there is for them to go to 7.5%," he said. Rates in Southern California are currently about 7.3%.

"I just don't see that the economy, anytime in the near future, is going to be strong enough to survive with higher rates," he said.

But eventually, he says, rates will rise and the refinance music will stop.

And when that happens, mortgage brokers, who have been feeding vast amounts of loans to mortgage banks, may quickly find themselves without chairs.

"When the refinance business goes away we're going to see a shift as a lot of those mortgage brokers go looking to find a home," he says. Many brokers, he adds, will seek to ally themselves with mortgage banks.

Meanwhile, he has expanded demand for housing, particularly among immigrants and young, first-time buyers of modest means. □

Rates Up 15 Basis Points; Biggest Rise in 2 Months

Mortgage interest rates have risen significantly this week, according to preliminary results of a survey by HSH Associates, Butler, N.J.

Lenders were offering 30-year fixed mortgages at 7.35%, up 15 basis points from the week ended July 23, the research firm said.

The jump reflected a rise in long-term bond yields.

The last time the average climbed by more than 10 basis points was the week ended May 14. — Phil Roosevelt

Rates Paid on Annuities Decline Slightly

By KAREN TALLEY

After a modest increase in June, rates paid on annuities sold through banks edged back down in July.

The average rate paid on annuities fell to 5.13%, from 5.17% in June.

The bonus rate received by new investors fell slightly, to 6.01% from 6.02%.

Kenneth Kehrer Associates, a consulting firm in Princeton, N.J., calculates the averages by surveying leading annuity companies.

Rates declined for five of the 41 annuities covered in the survey. Only one showed an increase.

There was no change in rates for the 35 remaining annuities.

NationsBank Offers Back-End Loads

By DEBRA COPE

NationsBank Corp. is offering to let investors in its proprietary mutual funds defer sales charges until redemption, or even pay nothing if they hold the funds long enough.

The Charlotte, N.C., banking company quietly introduced the back-end-load option for its NationsFunds family of mutual funds in early June. That was around the time that Nations Securities, its joint venture with Dean Witter Financial Services, opened for business.

The back-end-load option is gaining popularity in the funds industry as an alternative to the traditional up-front sales charge for mutual fund purchases.

So far, however, only a handful of banks offer back-end loads, known formally as contingent deferred sales charges. Among them: NationsBank's hometown archrival, First Union Corp.

Back-end loads are figured on a sliding scale that drops from 4% in the first year to zero in the sixth, so long-term investors pay less.

NationsBank already had two mutual-fund pricing options for retail customers: level loads, which are similar to an annual fee, and front-end loads.

The back-end loads make up a third "class of shares" in the retail mutual fund lineup, known as the NationsFunds investor shares. (Funds in a separate stratum of the NationsFunds, known as the trust shares, are sold no-load to trust customers.)

Back-end loads were added in response to customer demand, and sales have been quite strong, said Mark Williamson, a senior vice president at NationsBank.

Only a handful of banks – including archrival First Union – offer the option.

He noted that the NationsFunds opened the year with $8 billion in assets, and said he expects that sales will push assets to $13 billion or $14 billion by yearend.

Mr. Williamson added that it is too soon to say whether back-end-load sales will outsell front-end loads.

Commission Problem

One reason back-end loads are still relatively rare is that they are expensive to finance.

A sale load is used to compensate a broker who helps a customer select a fund. If the load isn't collected up front, the broker's commission must be paid some other way.

The Office of the Comptroller of the Currency won't allow banks that manage mutual funds to advance the commissions, so it is up to the nonbank companies that distribute bank-managed mutual funds to do so.

Boston Co. acts as distributor for the NationsFunds. NationsBank officials declined to disclose how brokers' commissions are being financed, saying that the information is private.

Meanwhile, Dean Witter Financial Services announced last week that it will transfer 200 account executives to Nations Securities by the end of August.

Since they opened on June 7, the Nations Securities investment centers have been staffed by 200 NationsBank officers. □

Sears Finally Accepts Bank Cards and American Express

Continued from page 1

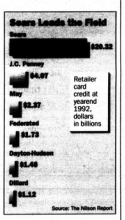
with the Dean Witter Financial Services Group.

"Our customers have responded enthusiastically to these new credit options during our recent test, resulting in new customers shopping our stores," said Arthur C. Martinez, chairman and chief executive officer of Sears Merchandise Group.

Sales Increase Seen

Stating a position that other merchandisers have been taking for years, Mr. Martinez said the policy change responds to customers' desire for choice "while providing us with opportunities to increase sales and attract new customers."

On July 9, *American Banker* reported that Sears had signed a contract with Nabanco, a unit of First Financial Management Corp. of Atlanta, to process point-of-sale credit transactions. That was viewed as a prelude to the announcement that came Thursday.



Since Sears had also been testing bank card acceptance in its catalog operation, the announcement was "no great surprise to us," said a Visa U.S.A. spokesman. "We saw [the catalog program] as a sign of things to come."

Sears was able to keep competing cards at bay because of the strength of its in-house credit operation, known as Sears-Charge. With 50 million accounts – 27 million of them active – and 70 million total cards, Sears has a larger customer roll than any other card issuer.

Clear Industry Leader

According to a compilation being published next week by *The Nilson Report* of Oxnard, Calif., Sears' $20.3 billion of outstanding card loans dwarfs that of its nearest retailing competitor, the $4.1 billion of J.C. Penney Co.

In card outstandings, Sears is also bigger than any single banking company except Citicorp. But retailers offer credit mainly as a means of increasing sales. With Sears no longer owning Discover, which competes directly against MasterCard and Visa, it made sense to try to boost revenues by taking other cards as well.

The "incremental sales" argument has been a major selling point for American Express Co. as well as the bank cards. American Express said its research shows Sears is one of the top three retailers at which cardmembers say they would like to see the card accepted.

Sears Roebuck was the last major retailer not to accept cards other than its own.

"Sears will be the only store accepting all five of America's most popular credit cards," Mr. Martinez said.

"Sears exhibited good timing, because the Discover card isn't there any more and the increase in sales will probably offset the loss of finance charges from the Sears card," said Janet Mangano a retailing analyst with Burnham Securities in New York.

Sears said it will not deemphasize the SearsCharge card, which "continues to be our customers' first choice." The company expects to add more than five million SearsCharge accounts this year.

Signaling that SearsCharge will not willingly cede its market to the outside brands, Sears said it has enhanced its Rapid Credit program. Customers who qualify can open an account in less than 2.5 minutes – instead of the previous five minutes – at cash registers in Sears stores.

Jane J. Thompson, executive vice president of credit, also pointed out that customers are drawn to a rebate program, called Bonus Club, which pays 1% when total purchases exceed $200.

Sears also does not charge an annual fee, requires relatively low monthly installment payments, and allows a 30-day interest-free grace period on purchases.

"New and existing SearsCharge customers also are attracted to our card because it offers them a line of credit beyond their traditional bank cards," Ms. Thompson said. □

Divining the future is not all that hard when you have

THE REDEMPTION REPORT

Calls and prerefunded bonds are scheduled to drain the yields out of portfolios at a faster and faster pace in the third quarter. With ***The Bond Buyer Redemption Report,*** *you can anticipate redemptions well ahead of the actual events.*
If you want to know when your bonds will be called away, this report has the answer.

We published the first such book in history for the first quarter of 1993.
Buyers received instant access to the entire universe of called and prerefunded bonds in one volume.

And now you can get the third-quarter volume, a 916-tome chock full of information on which, how much, and when. Here's a sample listing:

AK ANCHORAGE ALASKA TEL REV — *Total Amount Redeemed :* $8,465,000.00

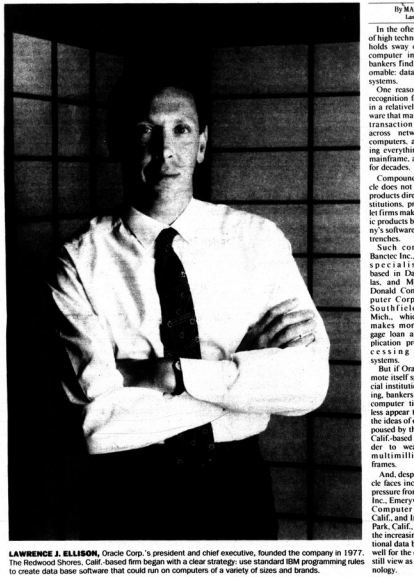
Oracle's Fortunes Rise as Banks Exit Mainframes



LAWRENCE J. ELLISON, Oracle Corp.'s president and chief executive, founded the company in 1977. The Redwood Shores, Calif.-based firm began with a clear strategy: use standard IBM programming rules to create data base software that could run on computers of a variety of sizes and brands.

By MATT BARTHEL
Last of a Series

In the often mystifying world of high technology, Oracle Corp. holds sway over a part of the computer industry that many bankers find downright unfathomable: data base management systems.

One reason for Oracle's low recognition factor: It specializes in a relatively new type of software that manages customer and transaction data distributed across networks of personal computers, as opposed to storing everything in a centralized mainframe, as banks have done for decades.

Compounding the issue, Oracle does not actively market its products directly to financial institutions, preferring instead to let firms making industry-specific products based on the company's software do the work in the trenches.

Such companies include Banctec Inc., an item processing specialist based in Dallas, and Mc-Donald Computer Corp., Southfield, Mich., which makes mortgage loan application processing systems.

But if Oracle's efforts to promote itself specifically to financial institutions have been lacking, bankers riding the personal computer tidal wave nonetheless appear to be latching on to the ideas of data distribution espoused by the Redwood Shores, Calif.-based software firm in order to wean themselves off multimillion-dollar mainframes.

And, despite the fact that Oracle faces increasing competitive pressure from the likes of Sybase Inc., Emeryville, Calif., Tandem Computer Inc., Cupertino, Calif., and Informix Inc., Menlo Park, Calif., many observers feel the increasing popularity of relational data bases at banks bodes well for the company that many still view as the king of the technology.

"I don't think bankers recognize the Oracle name the way they do some other horizontal software vendors, like Microsoft," said Richard Finkelstein, president of Performance Computing Inc., a data base consulting firm based in Chicago.

"But with many banks buying into relational data bases on a departmental basis, that may change."

Flexibility Was Goal

Oracle was founded by its current president and chief executive, Lawrence J. Ellison, in 1977. The company's early strategy was straightforward.

It would use standard programming rules from International Business Machines Corp. called Structured Query Language to establish business data base software that could run on computers of a variety of sizes and brands.

Another goal was to make the software usable by workers without extensive training in computer programming.

Armed with this vision, Oracle proceeded to take over the data base market in the early 1980s. The company's sales revenue grew from about $1 million in 1980 to nearly $1 billion in 1989. Then, when some of the company's product development efforts fell short of market expectations, the go-go growth waned.

Attractive Capabilities

Oracle's strategy of compatibility with a wide range of hardware paid off mightily as companies began to downsize.

The company's wares tapped a vein as a new breed of executive sought a quick way to access and analyze the data housed on their host computers.

The software culls information from the host computer from virtually any vendor – and off-loads that data to a personal computer for further analysis.

The most important aspect of the Oracle products was that they offered the ability to get the data they wanted without having to spend the time or money reprogramming.

The cost savings derived from installing relational data bases was supposed to be.

The compatibility questions came to light mainly because many companies in the late 1980s were beginning to replace their VAX computers from Digital Equipment Corp. with lower-cost computer workstations from companies like Sun Microsystems Inc., as well as networks of PCs.

Competitive Inroads

Installations on VAX machines made up the lion's share of Oracle's sales in the late 1980s, and Oracle had been slow to come up with a new version of its software designed specifically to take advantage of the move to smaller computers, experts said.

This crack in Oracle's armor let several competitors into the fight for relational data base business.

Time and Space are Running Out

can be dramatic, said Robert F. Kirk, vice president of marketing at Banctec, and a 10-year veteran of Mellon Bank Corp.

Such capabilities were extremely attractive to bankers from the beginning. Bankers had long been looking for ways to better dissect their sales efforts and analyze the performance of customer segments with a minimum of programming.

Banks Reluctant

Nonetheless, financial institutions have been slow to install the relational data base systems that would allow these distributed capabilities. There are several reasons for the reluctance, experts said.

First, bankers have an almost innate fear of decentralized systems. Moving data from the mainframe raises questions about data security and complicates systems cost-allocation and control.

Second, the large financial institutions that typically break the ice on emerging technologies have historically been mainframe shops.

This means most of the employees of these banks are dedicated to mainframe maintenance and programming, and are thus slow to embrace alternate technologies for fear their jobs will disappear.

"Banks are a bit reticent to move into the flexible systems arena," said Nigel Morris, executive vice president in the credit card area of Signet Banking Corp., Richmond, Va.

Warming Trend

But, Mr. Morris noted that this is slowly changing, as financial institutions hire more business managers who are capable of "taking intelligence out of big, old, monolithic production systems and moving it into areas that allows them to gain the flexibility to cut up data any way they need to."

Signet, a $13 billion-asset institution, has been using Oracle software since 1988 for its credit card business, which consists of about 2.5 million cardholders.

The Oracle software is the data base management engine behind industry-specific software from First Data Resources.

Other financial institutions using Oracle software include Wells Fargo & Co. in San Francisco, NationsBank in Charlotte, N.C., and Citicorp in New York.

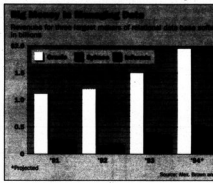
Questions of Soundness

As good as the Oracle software is at allowing access to mainframe data, experts point out that a data base manager is only as good as the application running with it. Oracle makes no banking-specific applications.

And some bank technologists have questioned whether Oracle products are as sound as the company's sales force makes them out to be.

According to several independent consultants, Oracle is infamous in the computer industry for selling what is termed "claimware," or software that does not perform up to promised levels.

In 1989, Oracle's phenomenal decade-long sales growth began to tail off as reports began to surface that the company's software was not compatible with as many hardware platforms as it



The most notable of these, Sybase, has made hay of Oracle's weakness in the area of client-server computing, in which processing for specific applications is shared among a group of linked PCs.

On the strength of its client-server computing and on-line applications, Sybase has become a force in a market that was once owned almost exclusively by Oracle.

Still on Top

Nonetheless, Oracle clearly remains the dominant force in the relational data base market, with annual revenues at the close of their fiscal year in May of $1.5 billion. That figure is roughly twice the 1993 combined revenues expected from Oracle's two nearest competitors, Sybase and Informix, according to analysts at Alex, Brown & Sons in New York.

Alex, Brown projects that Oracle will continue to grow to $2.5 billion in revenues in 1995.

There are indications that these growth plans involve banks, although Oracle executives decline to be specific. □

CITATION NOTICES

File No. 3586-1991

CITATION

THE PEOPLE OF THE STATE OF NEW YORK, BY THE GRACE OF GOD, FREE AND INDEPENDENT,

TO Gary Rawls;
Tanaka Rawls;
Barbara Lee as guardian of Benjamin F. Rawls III;
Benjamin Rawls, Sr.;

And to the distributees of Benjamin F. Rawls, Jr., also known as Benjamin Rawls, Jr., deceased, whose names and post office addresses are unknown and cannot after diligent inquiry be ascertained by the petitioner hereto, being the persons interested as creditors, legatees, heirs-at-law, next of kin, distributees or otherwise in the estate of Benjamin F. Rawls, Jr., also known as Benjamin Rawls, Jr., deceased, who at the time of his death was a resident of 630 Lenox Avenue, New York, N.Y.

Send Greeting:

Upon the petition of the Public Administrator of the County of New York, having her office in Room 311, in the Surrogate's Court Building, 31 Chambers Street, New York, N.Y.

You and each of you are hereby cited to show cause before the Surrogate's Court of New York County, 31 Chambers Street, in the County of New York, on AUGUST 25, 1993, at 9:30 a.m., why the account of proceedings of the Public Administrator of the County of New York, as administrator of the goods, chattels and credits of said deceased, should not be judicially settled, and why a decree should not be held to determine the identity of the distributees of decedent and why the fee of Ph(1)p Bekerman, P.C., in the sum of $4,125.00, of which $2,475.00 has been paid, should not be approved and reasonable additional fee be fixed and allowed for Philip Bekerman, P.C. for any services to be hereafter rendered by Philip Bekerman, P.C. in connection with proceedings relating thereto, etc., prior to the entry of a final Decree on this accounting.

Dated, Attested and Sealed: June 24, 1993.

(SEAL) HON. EVE PREMINGER, Surrogate, County of New York

ROBERT M. REAVES
Clerk of the Surrogate's Court

Name of Attorney: Philip Bekerman, P.C.
Address of Attorney: 350 Broadway
New York, New York 10007
Tel. No. (212) 732-8400

Bankers Trust Flying Solo In $2.3 Billion Kodak Loan

Continued from page 1

risky.

"I don't think underwriting this thing is an outlandish thing to do," said an official at one of the banks that competed against Bankers Trust for the mandate to lead the credit.

Will Convert to Revolver

Spokesmen for Kodak and Bankers Trust declined to comment on the size of the bank's underwriting commitment.

Much of the $2.3 billion is expected to be replaced with proceeds from public debt and equity offerings within a year. The credit will then convert to a $500 million, multi-year revolver.

Bankers Trust, which has both bond and stock underwriting powers, may be hoping to land future underwriting assignments for Eastman Chemical in the capital markets.

Kodak did not specifically seek a fully underwritten commitment on the bank credit, but Bankers Trust apparently felt that providing one would make its bid more competitive. The bid was also considered by sources to be aggressively priced.

Other bidders included Chase Manhattan Bank, Chemical Bank, Citibank, and NationsBank.

Bankers Trust was viewed by some as the favorite to win the bidding, because it had just led a $3.5 billion revolver for Kodak last year. Bankers Trust's underwriting commitment on that deal was $400 million.

While Bankers Trust has strong relationships with Kodak and other investment-grade corporations, the bank's forte in recent years has been lending to highly leveraged borrowers.

The credit will finance the spinoff of Eastman Chemical.

The bank's aggressive pitch to win the Eastman Chemical deal signals that Bankers Trust wants to make more of a push in the higher end of the credit-quality spectrum.

"We are extremely interested in the investment-grade market-place," said Bankers Trust spokesman Tom Parisi.

Bankers Trust's securities underwriting subsidiary, which received out a niche in the junk bond arena, recently began pursuing investment-grade deals. ☐

West One Bancorp Sets a 2-for-1 Stock Split

BOISE, Idaho — West One Bancorp said its board has authorized a 2-for-1 stock split, payable Aug. 13 to shareholders of record on July 23.

The board also declared a quarterly cash dividend, adjusted for the split, of 15.5 cents, payable Oct. 21 to shareholders of record Sept. 30.

Banks Now Turning Their Sights On Loans to Boost Earnings

Continued from page 1

wide, but there are some scattered signs that banks have begun to increased their holdings of commercial and industrial loans.

Even in the battered New England economy, Bank of Boston's portfolio of domestic corporate loans rose to $10.4 billion in the second quarter from $9.7 billion in the first quarter.

About a third of the increase came from new loans to middle-market customers in New England, according to Kevin Mulvaney, executive vice president of national banking at Bank of Boston.

The rest of the increase came from a pickup in loan demand

NEWS ANALYSIS

from specific industries.

"There was very good usage in the energy area," Mr. Mulvaney noted.

Second Half Seen Strong

He also said the bank is optimistic about continued growth in the second half of the year, which typically is a seasonally busy period in terms of loan demand.

CoreStates Financial Corp., based in Philadelphia, said it is seeing good loan growth in its regional markets, which extend from northern Virginia to Massachusetts, and west to Ohio.

But a lot of that increase represents market share that the banks has captured from competitors, said Dorothy Motz, executive vice president and chief lending officer.

At the same time, though, the bank's middle lines are weak in commercial lending, both in the large corporate market and on its home turf.

Carlos Evans, an executive vice president who is responsible for commercial lending in the Carolinas, said loan growth in the first half of this year was running at a 15% annualized rate.

He handles customers with annual sales of $5 million to $100 million. Larger corporate credits are the province of the so-called institutional bank.

About 75% of Mr. Evans' new business is refinancing, as opposed to loans to finance new capital spending programs.

While Mr. Evans said he is glad to have the business, he'd rather finance the type of activity that creates jobs.

Keen Competition

With so many banks now looking for assets, competition for loans now is as competitive as it has ever been, according to bankers around the country.

That, in turn, has put pressure on loan pricing and banks' net interest margins.

"We, like everyone, are seeing pressure on margins," said Mr. Evans.

Banc One's Mr. LaVelle said his bank is "concentrating on more effective marketing and cost control to counteract any softening of margins that may occur."

In New England, Mr. Cassidy at Tucker Anthony said, "We have to make sure that the contraction in banks does not offset any improvement in loan growth." ☐

Second-quarter reports indicate that loan demand is rising.

"What we are seeing are stronger survivors now back in, replenishing their fleets," Ms. Motz said.

CoreStates Bank, the holding company's flagship subsidiary, outstanding C&I loans rose by $300 million in the second quarter, compared with the first period.

In general, though, loan demand in the Northeast remained subdued at best in the second quarter.

Signs of Improvement

But there are signs that demand may be picking up.

Loans at big regionals rose 6% in the quarter.

Gerard Cassidy, a banking analyst at Tucker Anthony Inc. in Portland, Maine, said that more business borrowers are being approved for new credit lines. And as the funds are drawn, the new loans will show up on banks' balance sheets.

Loan demand is stronger in the Midwest and Southeast, analysts said, and several large banks in those regions reported at least a modest pickup in lending. On the West Coast, demand remained sluggish.

Banc One Corp. in Columbus, Ohio, reported a 2.8% net increase in loans in the second quarter, compared with the first three months of the year.

James LaVelle, senior vice president and chief credit officer, said residential real estate was the strongest segment, fueled by mortgage refinancings.

Business loans were basically flat, but the bank is looking for a modest increase in the second half, he added. ☐

Going After Business

NationsBank Corp. in Charlotte, N.C., has made a big push

Citfed to Call Euronotes

DAYTON, Ohio — Citfed Bancorp said its subsidiary, Citizens Federal Bank, intends to call its Euronotes at par on Sept. 13.

It said the outstanding principal balance of the floating-rate Libor-based notes is $67.4 million, with an interest floor of 5%.

Citfed said its bank intends to replace the borrowing with lower-cost Federal Home Loan Bank advances. ☐

STOCKS

First Chicago Earnings Are Winning Converts

By RICHARD LAYNE

First Chicago Corp.'s stellar second-quarter earnings, especially the strong showing in trading, venture capital, and credit cards, have given it a new gloss among investors.

The stock has risen 8.8% since the earnings report was issued on July 14, making First Chicago the hottest superregional stock.

Most bank stocks have slid sideways since releasing earnings. But in late afternoon trading on Thursday, First Chicago's shares were at $46.25, up $1.125.

Investors bid up the price of the stock primarily because the bank said it had $92 million in revenues from trading and foreign exchange last quarter. That's nearly three times the revenues from that period last year. By comparison, the bank's trading revenues for all of 1992 were $177 million.

Revenue Gains

Investors took notice, too, of other revenue gains. Equity gains from the venture capital portfolio last quarter were $42 million. And fee revenue from credit cards was $164.2 million, a 12% jump from the first quarter.

In all, the bank's quarterly earnings soared to $168.5 million from $34.5 million last year.

J. Richard Fredericks, an analyst with Montgomery Securities in San Francisco, said First Chicago is a better turnaround story than Citicorp, another hot stock.

First Chicago's shares sell at a lower price to book than Citicorp's shares – 124% versus 136%, Mr. Fredericks points out. Plus, First Chicago pays a dividend and Citicorp doesn't.

Also, First Chicago has moved faster in alleviating the burden of bad loans, Mr. Fredericks said. The Chicago bank's ratio of nonperforming assets in the second quarter was 1.7%, far better than Citicorp. And First Chicago could book profits from the sale of bad real estate loans, which were written down to about 54 cents on the dollar.

"I don't think enough people pay attention to First Chicago," said Mr. Fredericks.

Catching Eye of Investors

Last quarter's trading revenues helped changed that. First Chicago reported earlier than the big New York trading banks and its results caught investors attention. Of course, Citicorp, J.P. Morgan & Co., and Bankers Trust New York Co. had far bigger trading revenues last quarter.

"There is an argument to be made here that First Chicago has broken out of its historical range in the trading business," said Frank R. DeSantis Jr., an analyst with Donaldson, Lufkin & Jenrette Securities Co.

Trading revenues are always suspect on Wall Street. The question is whether they can be sustained over the following several quarters. And First Chicago has less of a track record in the business than the big trading banks.

"For the past four years, First Chicago spent a good amount of money on the capital market area, but there was never a visible return," said Judah Kraushaar, an analyst with Merrill Lynch & Co.

Mr. Kraushaar said he isn't prepared to give the bank a vote of confidence based on one quarter's results.

The venture capital business, in which First Chicago holds stakes in other companies, is unpredictable as well. The gains in the past were around $25 million to $50 million per quarter, said analysts. So far this year, First Chicago has made $160 million from equity gains in the venture capital business.

However, the credit card business is seen as a growing business and a good one for First Chicago.

"That's a core business that isn't as cylical as trading," said Mr. DeSantis.

THURSDAY'S MARKET

Bank shares turned sharply upward Thursday, helped by gains in the broad stock market and bond market.

NationsBank's shares led the way, rising $1.375 to $50.625, after the bank announced it was buying $2.3 billion in receivables from a subsidiary of U.S. West.

J.P Morgan & Co.'s shares jumped $1.25 to $73. And Banc One Corp.'s shares gained $1.125, to $54.875. First Union Corp.'s shares rose $1.25 to $47.375.

MBNA Corp.'s shares continued their tear, jumping $1.375 to $32.375. In the past three days, the stock has gained 17.7%. □

UNDERWRITING

NationsBank Exercising New Power With $150 Million Issue for First USA

By DAVID SIEGEL

NationsBank Corp. will use its new corporate debt underwriting powers in an upcoming $150 million issue of debt by First USA Bank, a NationsBank spokesman confirmed Wednesday.

The company's NationsBanc Capital Markets unit will be one of three underwriters, along with J.P. Morgan Securities and lead manager Merrill Lynch & Co.

The North Carolina-based superregional received Federal Reserve Board approval to underwrite corporate debt and equity earlier this week.

"They asked us to participate," said the NationsBank spokesman. A First USA spokesman declined to comment.

Established Relationship

NationsBank is a lead bank of First USA Inc., the parent company. NationsBank is a coagent of a new $250 million financing for the parent.

First USA is one of the largest issuers of credit cards, with more than 4.5 million outstanding at June 30. The Dallas-based company was taken private four years ago in a leveraged buyout by company management and investors, including Merrill Lynch.

First USA Bank will issue $150 million of 10-year subordinated bank notes as early as today. The notes are expected to be rated BB-plus by Standard & Poor's Corp., said a market source. They are expected to be priced with a yield around 185 to 190 basis points over the 10-year U.S. Treasury note, said a market source.

Bolstering the Capital Ratio

The issue will raise the bank's total capital ratio to 14.6% from 10.30% at June 30, said a source.

First USA recently refinanced high-cost debt related to its leveraged buyout. The company arranged a new $250 million bank credit line to refinance $111 million of bank debt and retire $90 million of 13.5% senior subordinated notes.

The new bank financing has a borrowing rate of 100 to 150 basis points over the London interbank offered rate, compared with the rate of 250 basis points over Libor for the old bank financing.

First USA will incur a $16.2 million cost from prepaying its old debt, but it expects the refinancing will result in $8 million of annualized pretax interest savings and $5.2 million of after-tax savings, the company said in a statement. The company earned $12.9 million in its fourth fiscal quarter, which ended June 30, and $39.2 million for the full year.

Merrill Lynch is lead manager of the deal.

First USA is also planning to sell five million shares of common stock: four million shares by stockholders, including Merrill Lynch Capital Partners, and one million shares by the company.

Offering by Advanta Unit

Separately, Colonial National Bank USA, a subsidiary of Advanta Corp., is expected to issue $50 million of subordinated debt shortly. The 10-year notes are being marketed by underwriter First Boston Corp., a company spokeswoman said. The notes are rated BBB-minus by Standard & Poor's Corp., Baa3 by Moody's Investors Service Inc.

On Thursday, Chase Manhattan Corp. issued $100 million of floating-rate subordinated notes through underwriters led by Salomon Brothers Inc. The 10-year notes will float at the three-month London interbank offered rate, with a 4.5% minimum rate, known as a floor. Three-month Libor is currently 3.3125%.

The issue is rated Baa2 by Moody's and BBB-plus by Standard & Poor's. □

THE MARKETS

Rates Go Down On GDP Report

Interest rates fell yesterday after the government reported that the economy grew at a slower rate than expected in the second quarter.

The Commerce Department reported a 1.6% rise in gross domestic product, below expectations for a 2.2% expansion.

The yield on the 30-year bond fell to 6.57% Thursday afternoon, down from 6.64% Wednesday; the 10-year bond yield fell to 5.80% Thursday afternoon from 5.87% Wednesday.

Stock Prices Rise

Short-term rates also fell, as the weak GDP growth quelled fears that the Federal Reserve will push up rates in the foreseeable future. Late Thursday, the three-month Treasury bill was yielding 3.09%, compared to 3.13 the day before.

Falling interest rates sparked a rise in stock prices. The Dow Jones industrial average rose 13.97 points to a 3567.42 close.

Gold's Price Rise Is False Alarm On Inflation

By STEPHEN A. DAVIES
The Bond Buyer

This year's big run-up in gold prices should not scare investors into thinking that inflation is taking off.

Gold selling for more than $400 an ounce makes for good chatter in financial markets, but many everyday measures of prices provide evidence that inflation remains in check.

The message for portfolio managers and individual investors is simple: Inflation is still not a problem, and stocks and bonds remain valid investments if they are bought carefully and held over time to ride out any bumps in the marketplace.

ECONOMIC OUTLOOK

Anthony Karydakis, senior financial economist for First National Bank of Chicago, traces the jump in gold prices, from a low of $330 in January, to several special factors.

None of them tell of an economy that is expanding too rapidly and leading to the classic situation of too many dollars chasing too few goods.

Triple Threat

First, Mr. Karydakis notes, the disappointing government statistics on inflation earlier this year prompted Federal Reserve officials to adopt their May policy directive leaning toward a tighter monetary policy.

Though the Fed is still looking for new signs of price pressure, analysts have been reassured by the May and June price data and do not see inflation breaking out of a 3% range anytime soon.

Second, the First Chicago economist points out, there were widely publicized purchases of gold by George Soros, a well-known global fund manager who predicted gold prices were headed higher. His comments, and others by such prominent market players as Jim Goldsmith, helped fuel the gold frenzy.

Third, Mr. Karydakis says, cutbacks in production by South Africa and other major gold producers helped buoy prices. Meanwhile, there were reports of unusually large purchases by China and other buyers, for political reasons.

Bond Yields Steady

Mr. Karydakis concludes that the rise in gold prices "has set off a hopelessly false alarm" and says the more impressive event in markets is that bond yields, which normally go up on infla-

Analysts Bullish on Bank Stocks

By RICHARD LAYNE

Bucking a trend, bank stocks rallied last week after the release of quarterly earnings, raising optimism for the weeks ahead.

For the five trading days that ended last Thursday, the *American Banker* Bank Index was up 2%, roughly in line with the Dow Jones industrial average.

In the previous five quarters, bank shares went into a tailspin after earnings announcements, as profit taking and concerns about revenue growth fueled selloffs.

Bullish Analysts

But now that pattern has been broken, and money managers and analysts are bullish about bank shares, which gained 1.9% in the past month versus 1.4% for the blue chips in a lackluster market.

"I think the outperforming trend will continue," said Sam A. Marchese, investment manager for SIFE Trust Fund, Walnut Creek, Calif. "Value investors recognize that banks will have very good earnings over the next four quarters."

Value investors, who look for cheap stocks, can find them in banks. The average price-earnings multiple is 35% less than that of the S&P 400, which

Conferees Agree to Limit Student Loans by U.S.

By ROBERT M. GARSSON

WASHINGTON — Congressional negotiators have agreed to cap the government share of the student loan market at 60% in 1999, giving banks an opportunity to prove their contention that the direct lending program won't work.

The tentative agreement is a large step toward cutting banks, thrifts, and other lenders out of the student loan market altogether. However, it is still a major improvement over legislation that cleared the House this year,

In the House bill, the government share of the market would have gone to 100% in four years, with no mechanism to reevaluate the program. The compromise approved Friday calls for creation of a presidential commission to evaluate the program after its fifth year.

'An Opportunity to Compete'

"We're glad we've been able to maintain an opportunity to compete," said Joe Belew, president of the Consumer Bankers Association. "We continue to believe that direct lending is a bad idea, and with the commission, we have a chance to prove it."

The conferees also agreed to a "risk-sharing" measure that would force banks to absorb 2% of loan losses. And they approved a separate provision that sets a 50-basis-point origination fee, paid by the lender, on new loans. A plan to impose a 5% transfer fee on loans sold in the secondary market was dropped.

The Budget Compromise At a Glance

- **While the government could** start lending directly to students, its share of the market would be limited each year, peaking at 60% in 1999.
- **Intangible assets, including** acquired core deposits, could be amortized over 14 years, clarifying uncertainty under current law.
- **Made an exception for one key category** of intangible assets - purchased mortgage servicing rights - which can be amortized over nine years, rather than 14.

The action on student loans came as a House-Senate conference committee labored to finish work on President Clinton's huge deficit-reduction bill.

Among other decisions, the conferees agreed to permit a 14-year amortization of intangible assets, including acquired core deposits, a step banks have been urging for years.

The panel also agreed to a "carve-out," or exemption, for

NEWS *briefs*

Crossland Expected to Fetch $300 Million

WASHINGTON — The Federal Deposit Insurance Corp. hopes to sell Brooklyn-based Crossland Federal Savings Bank for $300 million within three weeks, the agency announced Friday.

In a prospectus filed with the Office of Thrift Supervision, the FDIC said it planned to go ahead with previously announced plans to sell the $5.3 billion-asset thrift to institutional investors.

The deal was delayed when Dime Savings Bank of New York expressed interest. A Dime spokesman declined to comment Friday, but a regulatory source said it was still possible Dime could bid.

If the FDIC gets $300 million, Crossland will end up costing the government about $850 million. That's about $100 million more than the FDIC staff predicted when Crossland was seized in January 1992.

According to the prospectus, the FDIC for the next five years will assume 80% of the losses on Crossland's portfolio that exceed its $179 million loan-loss reserve.

Colonial of Alabama Buying First Amfed

MONTGOMERY, Ala. — Colonial Bancgroup has agreed to acquire First Amfed Corp. in a stock swap valued at $45 million.

First Amfed Corp. has assets of $485 million and nine Alabama offices. The purchase will increase the assets of Colonial to $2.5 billion, or more than 20%. The acquisition will dilute the projected 1994 earnings per share for Colonial by less than 2%, the company said.

Projected earnings for 1994 were $2.60 to $2.65 per share, the company said. Assuming that the acquisition will close by Jan. 1, the new expected earnings will be $2.59 to $2.60 per share for 1994.

PNC's Robbins to Head Corporate Banking

PITTSBURGH — PNC Bank said it named Bruce Robbins head of its corporate banking line of business in addition to his role as president and chief executive officer of PNC Bank, Pittsburgh.

Robbins will be responsible for directing efforts with corporate customers across PNC Bank's multistate service area, as well as with selected corporate customers nationwide.

The company said Robbins replaces James Rohr as head of corporate banking.

NationsBank, Barclays in Colombia Deal

NEW YORK — NationsBank Corp. and Barclays Commercial Corp. have signed a trade finance agreement with Bancoldex, the Colombian foreign trade bank.

Carlos Caballero, president of Bancoldex, told *American Banker* that NationsBank and Barclays will check the creditworthiness of U.S. buyers and handle collections in the United States.

The Colombian bank will provide financing to Colombian exporters who sell to U.S. buyers while the two U.S.-based banks assume the risk in the event that the importer does not pay.

The briefs were compiled from staff and wire reports.

Law Expands New York's Power To Keep Tabs on Foreign Banks

By JAMES R. KRAUS

New York Gov. Mario Cuomo has signed legislation that greatly increases the state's ability to monitor foreign banks and handle their liquidations.

"This new law and other recently promulgated foreign bank regulations greatly enhance the department's ability to supervise foreign banking institutions," New York's state superintendent of banks, Derrick D. Cephas, said in a statement last week.

Extensive Studies

The new law comes after nearly two years of studies by the department.

It parallels similar, but more general legislation approved by Congress in response to pressure to tighten control over foreign banks after banking scandals involving the U.S. offices of Luxembourg-based Bank of Credit and Commerce International and Italy's Banca Nazionale del Lavoro.

The law empowers the department to examine transactions by employees in the state on behalf of any office of the foreign parent bank, expands the grounds for revoking or suspending foreign bank licenses, and requires foreign bank offices in New York to provide prompt notification of any changes in control.

Peggy Turkett/American Banker

Derrick D. Cephas
Gets stronger authority

Other Provisions

The law also:

- Requires foreign banks to pledge funds that can be used to cover any expenses involved in a liquidation
- Subjects New York offices of foreign banks to stat restrictions on the amount that can be lent to any one borrower.
- Sets tough specifications and certain restrictions on the types of claims the banking department will accept from creditors of a foreign bank.
- Simplifies liquidation procedures and enhances the banking department's ability to gain control over assets of a foreign bank in the event of a liquidation. □

Chase Plans Mexico Bank After Trade Pact Is Implemented

MEXICO CITY — The president of Chase Manhattan Corp. said the company plans to open a commercial bank in Mexico once the North American Free Trade Agreement has been implemented.

"We have not finalized all of our plans, but we expect to keep our current activities and to open, with approval, a new commercial bank," Arthur Ryan said in a press briefing.

Chase now has a representative office that focuses on corporate finance. Foreign banks, with the exception of Citibank, are not allowed to operate as commercial banks under existing Mexican banking laws.

Mr. Ryan said Chase does not plan to enter the retail sector but would use the bank to enhance its corporate finance activities.

"With a representative office we have certain limitations [on activities] in money and foreign exchange markets . . . that is why we would want a commercial bank," he said. — **Reuters**

Citi Workers Try Out Stored-Value Card

By JEANNE IIDA

Citicorp is testing a stored-value payment card that can be used for small-ticket purchases such as pay telephone calls and vending machine purchases.

Citicorp employees in the bank's 50-story office building in Long Island City, New York, are using the cards in the company cafeteria and vending machines. About 3,500 employees work in the building.

The machines can accept a card made of heavy paper, or a standard plastic Citibank automated teller machine card.

Citicorp is the second big bank to experiment with the stored-value cards, which are operators, who can eliminate the costs of processing cash, and reduce vandalism.

Citicorp has installed six machines, called Value Stations, where employees can add value to magnetic-stripe cards. Three of the machines, developed by Verifone, accept cash and credit cards to issue value up to $99.99. Citi is accepting Visa, MasterCard, and Diners Club cards at the Value Stations.

In addition, Citicorp worked with Verifone for a year to develop a kiosk that accepts a Citibank ATM card, transferring funds from an employee's bank account. Unlike the cash and credit card machines, the ATM kiosk gives customers a receipt.

Since working with Citicorp to set up the trial, Verifone announced it will stop making stored-value terminals using magnetic-stripe technology in favor of smart-card-compatible devices.

The magnetic-stripe card can be used for small purchases at a Citicorp office tower in New York.

Smart-Card Conversion Mulled

As a result, Citicorp will not extend the magnetic-stripe pilot to other locations and is now talking with Verifone about converting the Long Island City facility to smart-card technology. Citicorp, is also considering expanding the smart-card pilot to other large facilities in South Dakota and Honolulu.

Commonplace in Europe

The prepaid application, which can be used on cards equipped with a magnetic stripe or an embedded computer chip – a design known as a smart card – is widely viewed as the first big U.S. opportunity for the stored-value concept, which is already widely used in Europe.

Although the magnetic stripe technology Citicorp is using is very different from smart-card technology, the trial can yield data about market acceptance of smart cards.

A recent study by PSI, of Tampa, Fla., showed that 21% of consumers were interested in stored-value cards, typical of the ones used in public telephones in the United Kingdom, France, and Japan.

The cards can lower operating expenses for vending machine

NCR Sells Norwest Unit An Image Capture System

Norwest Bank Minnesota has bought an image capture system for its wholesale lockbox processing area from NCR Corp., according to NCR officials.

The bank is installing 20 NCR devices, called Personal Image Processors, for capturing images of checks. Dayton, Ohio-based NCR, a unit of American Telephone and Telegraph Co., will also supply 42 NCR workstations that will be used to review the check images.

The workstations run software from Rigakos Software Development Corp. of New York.

More Small Banks, Fewer Big Ones Doing Their Own Core Processing

By MATT BARTHEL

The number of financial institutions using outsourcing services for all of their core processing dropped by a few percentage points in 1992, a recent study found.

But the study, issued by Mentis Corp., Eden, Md., found that demand for selective outsourcing services remained high among larger institutions. Mentis surveyed more than 2,000 commercial banks and thrifts in the U.S.

The banking research firm found that 44% of commercial banks and 75% of thrifts used a service bureau or a facilities manager to handle their core processing applications in 1992, compared with 47% of banks and 80% of thrifts using third-party computer services in 1991.

While these numbers appear to point to an overall decline banks' consumption of outsourcing services, a significant decline in outsourcing is evident only among the nation's smallest financial institutions.

Last year about 26% of banks and thrifts with under $50 million in assets reported that they owned and operated their core banking systems themselves, up from 5% in 1991.

The more than 6,000 financial institutions with $50 million in assets or less represent about 44% of the nation's banks and thrifts.

Mentis Corp.'s president, James B. Moore, said more flexible and affordable hardware and software options have persuaded many of these institutions to run their own systems.

Help with Mergers

At the larger and more influential institutions, however, there is a different story.

Many banks with more than $1 billion in assets are engaged in mergers and acquisitions that result in huge systems-conversion projects. While some financial institutions can handle these projects on their own, an increasing number are looking for help from outsourcing vendors.

Other large institutions are also using third party computer services for selective businesses.

NationsBank Corp. is the largest example of an institution engaging in both of these practices.

Some industry observers believe that the days have passed when the country's biggest banks, like First Fidelity Bancorp. and Continental Bank Corp., hand over all their data processing to a third party.

Nonetheless, the Mentis study found that outsourcing is alive at many large institutions.

The most obvious evidence that the percentage of $4 billion-plus thrifts handling their own core processing dropped from 58% in 1991 to 65% last year. □

Fast-Growing Onbanc of Syracuse Attracts Suitors

By KAREN GULLO

After spending most of his career building empires, Robert J. Bennett has little time for people who advise him to join a larger kingdom.

Mr. Bennett, 52, has spent the past six years turning a once sleepy thrift in upstate New York – the Onondaga County Savings Bank – into Onbancorp Inc., one of the best-managed, healthiest, and safest banks in the Northeast.

As chairman and chief executive of the Syracuse-based company, Mr. Bennett says he is only halfway toward his goal of building the company into a super community powerhouse.

Potential suitors are nevertheless sizing up Onbanc, as the $3.8 billion-asset company is known, at its current size.

Time Is Not Right

"People have made overtures," concedes Mr. Bennett, who declined to name them. "We're not interested at this point."

Instead, he said, Onbanc will double its size over the next few years. He has made significant strides toward that goal by negotiating the purchase of Franklin First Financial Corp., a $1.2 billion-asset thrift in northeastern Pennsylvania. He also has his radar out for deals in other small cities in Pennsylvania, upstate New York, and even in Canada.

Analysts say it's unlikely that suitors will stop knocking on Mr. Bennett's door anytime soon. "They have an outstanding franchise," says Anthony J. Polini, an analyst at Mabon Securities Corp., New York. "Their takeover appeal is tremendous."

Potential Buyers

He lists superregionals such as Keycorp in nearby Albany, Rhode Island's Fleet Financial Group, New Jersey's First Fidelity Bancorp., and Pittsburgh's PNC Financial Corp. as potential suitors.

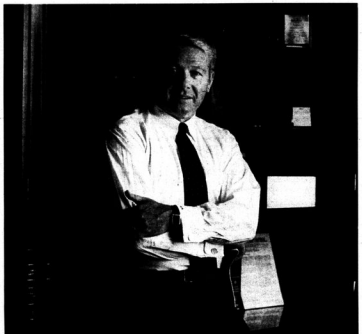
Mr. Bennett is aware that his ambitious plans may contain the seeds for a takeover. The bigger and stronger a company gets, he says with the voice of experience, the more attractive it is to acquirers.

He should know. Before joining Onbancorp in 1987, Mr. Bennett spent 12 years at Boatmen's Bancshares. During his tenure at the expansionist St. Louis-based company, he oversaw the integration of 69 separate banks and more than 150 branches in four states. Boatmen's grew from $700 million to $11 billion in assets during his stay.

Today, he says that the best shark repellent is to be the highest-performing bank around. "If anyone wants to pay three times book, we can talk," he quipped.

Startling Makeover

Right now he's brewing shark repellent. He helped transform Onbanc from a $1 billion-asset



Hal Silverman

ROBERT J. BENNETT, chairman of Onbanc, knows that his ambitious plans may contain the seeds of a takeover. The bigger and stronger a company gets, the more attractive it is to acquirers.

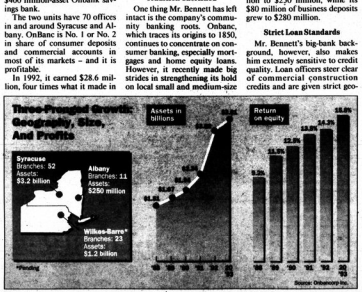
underperforming savings institution to a successful commercial banking company. The company, which became a bank holding company in 1989, operates the $3.1 billion-asset Onbank and Trust Co. and the $400 million-asset Onbank savings bank.

The two units have 70 offices in and around Syracuse and Albany. Onbanc is No. 1 or No. 2 in share of consumer deposits and commercial accounts in most of its markets – and it is profitable.

In 1992, it earned $28.6 million, four times what it made in 1988, Onbanc's first full year as a publicly-held company. In that same period, Onbanc has doubled its deposit base to $2.2 billion and expanded its loan volume by 55%.

Tradition Cherished

One thing Mr. Bennett has left intact is the company's community banking roots. Onbanc, which traces its origins to 1830, continues to concentrate on consumer banking, especially mortgages and home equity loans. However, it recently made big strides in strengthening its hold on local small and medium-size businesses.



Late last year, Onbanc bought two banks in Albany and Syracuse from Midlantic Corp. For $89.9 million, Mr. Bennett expanded his company's commercial loan portfolio from $70 million to $250 million, while its $80 million of business deposits grew to $280 million.

Strict Loan Standards

Mr. Bennett's big-bank background, however, also makes him extremely sensitive to credit quality. Loan officers steer clear of commercial construction credits and are given strict geographic limits on where they can operate. But in keeping with Onbanc's community banking spirit, Mr. Bennett says that local officers call the shots on 97% of loan decisions.

The discipline has paid off. Nonperforming assets were just 0.91% of total assets, well below the average 3% for banks with assets between $2 billion and $5 billion, according to Keefe, Bruyette & Woods Inc.

Despite his recent acquisition binge, Mr. Bennett is keeping a firm eye on profits. In the first six months of 1993, OnBanc's earning's were up 52% to $18.9 million over the same period last year.

The company's return on equity is a healthy 15.7%, while its return on average assets was 1.0%. Mr. Polini, the Mabon analyst, expects Onbanc's 1993 earnings to be 23% higher than last year's.

Boon to Earnings

Mr. Bennett believes the pending purchase of Franklin First Financial will be as important to earnings as the Midlantic deal. The healthy 22-branch Pennsylvania thrift is being purchased for $138.6 million, or 1.4 times book value.

Onbanc ventured into northeastern Pennsylvania two years ago with a loan production office. It liked Wilkes-Barre, an aging city that was built over an anthracite coal mines, because its characteristics were close to those of Syracuse: Lots of small businesses, major transportation routes, stable realty values, and a middle-class population.

Having established a toehold, Mr. Bennett waited for the right opportunity, then moved swiftly to bag Franklin First.

Target Cities in New York

He says he hopes to repeat the pattern in Buffalo, Rochester, and several other New York towns where Onbanc has opened loan offices. He has no desire to be in a large city like Pittsburgh – which is hundreds of miles from Wilkes-Barre – but he has opened a lending office there in the hopes of expanding in the suburbs.

Observers say Mr. Bennett, a Massachusetts native with a degree from Harvard Business School, has imported an aggressive, big-city style to Onbanc. It's refreshing, they say, but some wonder if the executive is moving too fast.

"In some ways they've taken on the tone, style, and operating approach of a larger bank," said Les Dinkin, president of NBW Consulting, a bank marketing consultant in Westport, Conn. "They may have lost some of their edge as a the local hometown bank."

Mr. Bennett counters that Onbanc keeps local management in place as it expands. But he notes that an aggressive acquirer and potential takeover target can't afford to be too laid back.

"We can accommodate the growth and reach our goals," he said. □

California Facing Another Year of Economic Stagnation

By CAROLYN SHERWOOD-CALL
Regional economist
Federal Reserve Bank of San Francisco

The current recession in California has lasted three years, longer than any other postwar downturn, and has cost the state 585,000 jobs, for a drop of 4.7%.

Defense cuts have contributed significantly to the severity of the downturn. According to the California Commission on State Finance, the volume of real defense dollars going to California has fallen 21%, or $13 billion, since the peak in 1988.

Largely as a result of the defense cuts, the number of aerospace jobs has fallen 137,000 since that year.

Economic troubles in the construction and real estate sectors also are more severe than they would be in a "typical" California recession.

Residential markets have suffered, but most of the more serious problems have been on the commercial side.

The weakness has been reflected in construction activity, property values, and rental rates.

California's problems are not confined to the defense and real estate sectors, however. Nonaerospace manufacturing has lost 150,000 jobs, or 9. 1 % of the total, since California's downturn began, while employment in wholesale and retail trade has fallen 6.9 %, a loss of 207,000 jobs.

Loans Down 11%

Banks have struggled during recent years as well.

The volume of loans outstanding at large California

Commercial realty and fiscal problems will remain drags on the economy.

banks has fallen 11% since the peak in early 1991.

At the end of the first quarter, 6.48% of bank loans were delinquent. That's lower than one year earlier, but still well above the 4.11% delinquency rate in the middle of 1990.

Partly as a result of California's broad-based economic problems, state and local governments have faced severe fiscal troubles in recent years.

For the current fiscal year, lawmakers this June addressed a large budget shortfall – this time amounting to $8 billion.

State Budget Cuts

This year's solution to the budget impasse will result in cutbacks in public services, particularly those provided by local governments.

By reducing the funds available to government employees and recipients of public aid or services, the budget cutbacks will tend to have a constraining effect on economic growth in the state.

Some measures of California's economic health have been flat for the past year or so.

For example, taxable sales (adjusted for seasonality and for changes in the "snack tax") have been more or less flat since the end of 1991.

Also, the number of existing homes sold has not fallen below where it was at the end of 1991.

Moreover, the number of construction jobs was the same in June as it was six months earlier, a big change from the persistent declines seen previously.

At the same time, though, the number of housing permits issued has fallen again, after a brief upturn (on a seasonally adjusted basis) around the beginning of the year. And total payroll employment continues its persistent decline.

Carolyn Sherwood-Call

While there is some evidence that the worst of the downturn is past, it is important to distinguish between the end of a downward trend and the beginning of a normal recovery.

For one thing, California is likely to see additional large defense cuts during the next few years.

Extraordinary Times

These defense cuts alone would normally not be enough to keep California from recovering. Historical relationships suggest that even unexpectedly slow growth in the national economy, with the number of jobs rising only 1% a year, would be more than enough to offset the anticipated defense cuts and any associated secondary effects.

However, these clearly are not normal times. Overbuilt commercial real estate markets and persistent fiscal problems also will continue to be drags on California's economy during the next few years.

Nevertheless, the apparent stabilization of taxable sales and home sales means that there are fewer sources of downward pressure than there were earlier in the recession.

Taken together, these factors suggest that California is likely to "bump along the bottom," with little trend either up or down, during the next year. □

Thank You Old Kent Bank!

OLD KENT
Grand Rapids, MI

$1 Billion

We thank you for the opportunity to work with you. You've been one of our top lenders over the past two years and we appreciate your commitment to excellence. We're happy to announce that together we achieved $1 billion in business – nearly double the volume from the previous year.

From all of us at Fannie Mae, we're proud to be Old Kent Bank's partner in the secondary market.

Interstate Branching Yet to Sound Alarms

By TERRENCE O'HARA

Ronald P. Haberman, chief executive of Valley of the Rogue Bank in Rogue River, Ore., wasn't even aware that his state had just legalized interstate branching.

The way he sees it, the issue doesn't really affect his community bank, which serves small businesses along the Interstate 5 corridor in southern Oregon.

"It doesn't worry me at all."

Arthur Wilmarth
Sees Northeast, West as next

Mr. Haberman said last week.

But as the forces for interstate branching move on state houses across the country in coming years, the issue will increasingly light up community bankers' radar screens.

Questions Will Arise

When the office of the super-regional bank down the street becomes a branch of a bank in another state, myriad questions about taxation, competition, regulation, and community reinvestment will arise.

Some key issues: Will a bank branch have to pay the same in state taxes as a local community bank? Will a local branch of a bank chartered in another state have to comply with the same CRA requirements as a one-office community bank?

A year ago, New York was the first to pass an interstate branching bill. North Carolina, Oregon, and Alaska have since enacted laws modeled on New York's.

The law allows a state-chartered commercial bank that does not belong to the Federal Reserve System to become a branch of a bank in any other state that has an identical law.

Delay Seen Likely

The number of banks establishing interstate branches is likely to be small until a significant number of states have enacted laws, said Arthur Wilmarth, a lawyer specializing in banking issues at Barley, Snyder, Senft & Cohen in Lancaster, Pa.

But just which states or regions will jump on the bandwagon – should there be one – is an open question. The success of such legislation within each state depends largely on the prevailing attitude of the legislature and the banking associations which usually sponsor the bills.

For example, California-based interstate bank holding companies would greatly benefit from interstate branching but the California Bankers Association hasn't pushed for such a state law. Tom Celebrezze, spokesman for the trade group, said it wants the Congress to act on the issue nationally.

A bill modeled after New York's law died in committee earlier this year in the Washington Legislature.

'A Critical Mass'

Despite the present reluctance of some states to pass interstate branching laws, the Conference of State Bank Supervisors predicts that it will be the states, not the Congress, that will take action on the issue.

"At some point, you're going to see a critical mass," said Ellen Lamb, spokeswoman for the group.

Mr. Wilmarth predicted many states in the Northeast and the West would move sooner rather than later on interstate branching. States in the Southeast (excluding North Carolina) and the Midwest will move more slowly on the issue, he said.

"Nobody knows how it's going to shake out [in the states]," said Matthew Street, associate

Q: What do you think of President Clinton's budget plan?

MICHAEL E. GROVE
President and CEO
First National Bank
of White Sulphur Springs
Montana

I see a program that isn't going to stimulate the economy. In fact, I think it will slow down the economy even more at a time when it is already weak. I see too much in taxes and not enough in spending cuts.

I see the influence of that on a small rural community being very negative. I think the increase in taxes will hit them hard. □

DONALD R. MENGEDOTH
Chairman and president
Community First Bankshares
Fargo, N.D.

I am tremendously concerned about the increased tax levels that will ultimately be involved for corporations and customers of ours who invest capital into job creation.

I agree that the deficit needs to be reduced, but it is critical to focus on expense reduction opportunities rather than revenue increases. □

JOHN S. KREIGHBAUM
CEO and president
Premier Bank and Trust
Elyria, Ohio

Frankly, I believe it will have a chilling effect upon the business community. I think it will have a tendency to discourage business as far as investing back into our markets in the form of capital.

My suggestion is to pull back on tax increases and work on spending cuts.

Psychologically, I think it will have a negative rather than a positive effect. □

Banks Win a Few on Budget Plan

By BILL ATKINSON

Lobbyists with banking and thrift trade groups say President Clinton's budget-reduction plan would not be a total bust for the banking industry.

In fact, the industry has won victories on several fronts. It thwarted an effort to increase exam fees for state-chartered banks. The measure would have raised more than $1 billion over five years.

It also appears to have simplified rules governing intangibles. Banks that acquired assets and liabilities have had to fight the Internal Revenue Service in court to write off these intangibles within seven years. The new language sets a 15-year time frame for writing off intangibles and goodwill.

"It is a great victory," said Jim O'Connor, tax counsel with Savings and Community Bankers of America. "It is fair and it should make everybody happy."

Knowing the Score

"You will know exactly when your deductions occur," added Henry Ruempler, director of tax and accounting with the American Bankers Association. "Without this law you are shooting craps. You were spending a small fortune in lawyers' fees and you had no certainty to the outcome."

But the lobbyists aren't thrilled with everything in the bill. To be sure, student lending is a sore point. A bill in the House would cut banks out of student lending altogether and put the business in the hands of the government.

"That will be some business lost and some business relationships lost," Mr. Ruempler said.

Others fret about the budget's proposal to raise $300 billion in new taxes.

"It certainly makes small businesses less profitable to the extent they get a tax increase," said Stephen J. Verdier, senior legislative counsel with the Independent Bankers Association of America. □

Develop a Solid Training Plan for Recruits

Goal: A low-cost training program that utilizes the resources available in the bank to train potential officers in a structured way.

Pitfalls: Assigning new people to work with Mr. Gridley, who has had 40 years' experience in the job.

Problem: Mr. Gridley has not had 40 years' experience. He has had one year's experience 40 times.

Furthermore, Gridley will look at the bright young new employee and think, "He wants my job. The only way I can keep my job is to make him look bad so the bank will appreciate what I do and how I do it."

Better approach: An organized program that judges Mr. Gridley as a teacher as much as it judges the new recruit as a student. This motivates Mr. Gridley to be a positive force and not a roadblock.

Weekly Adviser

By PAUL NADLER

From the Top

The Start: The community bank gets few recruits that it can afford to make a fuss over each one. This should involve a luncheon with top management during the first week, if not the first day, followed by introduction to the entire staff.

Next: The recruit should be given an itinerary of what he or she will be doing for the next several months.

This should include a list of the departments to which the recruit will be assigned and the officer in charge of training and how long the stay will be.

The Ins and Outs

One hopes the recruit will sit down with this department officer immediately to learn what the department does and what role he or she will be expected to fill while undergoing training.

The training will consist not only of the day-to-day job, but interviews with everyone in the department, at least several of the people if there is duplication of function.

(The recruit need not talk to every teller, just enough to understand what tellers do and what their problems are).

Then, at the end of the internship in that department, the recruit will have to prepare a written report on the department, including what it does and what the recruit sees as its strengths and weaknesses.

Giving Praise

If the CEO really wants to get the best out of these new people, he will not only read the reports but reward with favorable comments both the recruit who is able to point out weaknesses and the officer assigned to train the recruit.

The CEO may even wish to circulate the entire report to the staff or circulate parts that would be useful as examples.

Only after the recruit has been assigned to each of the major departments should a decision be made on placement in the bank.

Training should include introductions to all departments.

Other assignments: Each recruit also should be given some serious reading to do at home as part of the training.

In particular, I advise that the recruit first be given a pamphlet available from the Federal Reserve Bank of New York called "Money Master or Servant?" about the role of banks in the economy, and "The Moneychangers," Arthur Haley's novel of the banking industry.

After this is done, I would give the recruit the bank's annual report and any other literature available on the organization.

Further Reading

Following that, I would either give or lend each recruit a marvelous textbook, "Money and Capital Markets," by Dr. Peter S. Rose of Texas A&M (Richard D. Irwin, 1992).

It not only describes banking and most related fields, like mortgage-backed securities, but it can serve as a reference for the recruit when unfamiliar terms or practices come up.

(As an aside, I have written my own banking book, but I stopped assigning it to students because I think Rose's is superior).

Finally, I would suggest that recruits read the daily and weekly financial press, and that their mentors periodically sit down with them and discuss current issues of interest to the bank to get them in the habit of looking outside the internal operations of the bank to augment their personal growth.

Icing on the cake: After about six months on the job, recruits should be asked to spend 10 minutes at a board meeting talking about their backgrounds and what they have learned.

Additionally, whenever possible, a recruit should be part of meetings with customers. □

Ahmanson CEO Revs Up Before Passing the Torch

By PHIL ROOSEVELT

People in the News

IT LOOKS LIKE Richard H. Deihl will be going out with all his guns blazing.

The former fighter pilot plans to retire by year-end as chief executive of H.F. Ahmanson & Co., the nation's largest thrift company. But he is showing no signs yet of easing up.

Two weeks ago, Mr. Deihl turned a lot of heads by selling $1.2 billion of delinquent home loans to a subsidiary of Bear, Stearns & Co.

It was the largest-ever sale of bad home loans and, Mr. Deihl says, it will help free his staff to boost mortgage originations.

Last week, he followed up with a hefty $250 million offering of convertible preferred stock. That fattens the California company's war chest for acquisitions – and Mr. Deihl makes no secret of his desire to pull off some more deals before he exits.

"I'd like to do that," he said in an interview. "There are some obvious opportunities now, and they've been growing rather significantly in the last few weeks."

Specifically, he is keeping a close eye on two Golden State neighbors. One, Glenfed Inc., faces a key re-capitalization deadline Aug. 3 for its struggling Glendale Federal Bank. The other, California Federal Bank, forced out its top two executives on July 26.

Richard H. Deihl

"I don't know whether that puts them [California Federal] in play or not, but I was talking with some people about that today," Mr. Deihl said. A California Federal spokesman declined to comment.

Mr. Deihl, who turns 65 in September, expects to step down in late October as chief executive of Ahmanson and its main unit, Home Savings of America. He has been the flagship's CEO for more than 25 years.

Charles Rinehart, Mr. Deihl's co-pilot for the past three years, is likely to assume both CEO posts. Mr. Deihl expects to remain chairman of Ahmanson, possibly for a few years.

For now, one of the big pushes is to increase the volume of mortgage lending. Ahamanson slid in mortgage originations from No. 1 in the nation in the late 1980s to No. 8 last year, reflecting the weak California economy and a decline in the popularity of its specialty, adjustable-rate mortgages.

In the first half of this year, the $50 billion-asset company wrote $5.1 billion of loans, down from $5.8 billion in the year-earlier period.

But the big sale of delinquent loans should help reverse the trend. That's because the company's lending staff has been spending much time working with realty brokers to sell foreclosed homes. Now, with the volume of nonperforming assets down to 2.04% from 3.91% before the sale, the number of homes going into foreclosure should steadily diminish.

"We'll have more and more time to get back to residential lending," Mr. Deihl said.

Readiness to lend will be especially important once the California economy recovers, and Mr. Deihl is guardedly optimistic on that front.

"The robin isn't singing and spring isn't here, but there are definitely some signs," he said.

HUD Seen Setting Rigorous Goals For Loans by Fannie and Freddie

By SNIGDHA PRAKASH

WASHINGTON — The Department of Housing and Urban Development plans to hold Fannie Mae and Freddie Mac to some tough standards for financing lower-income housing.

That, at least, is the message that congressional sources, housing advocates, and industry officials are reading into proposed regulations that HUD recently sent to the two secondary-market agencies.

HUD, carrying out a law enacted by Congress last year, proposed specific goals for each agency, with rigorous standards for what kinds of loans will count.

Tight 'Strike Zone'

"The net result of these proposals is that the umpire is going to call the strike zone pretty tight," said Brian Smith, director of policy development at Savings and Community Bankers of America.

If the agencies have trouble meeting the goals, he warned, they may pressure lenders to sell them more loans outside "the suburban cookie-cutter mold."

Congress last year directed Fannie Mae and Freddie Mac to ensure that 30% of the housing units financed by loans they purchase be for low-income and moderate-income people, and that 30% be in central cities. Any given purchase can count toward more than one goal.

A Break for 1993

Legislators gave HUD leeway to set the goals at lower levels for 1993 and 1994, and authority to set entirely new levels – higher or lower than 30% – in 1995.

HUD decided to give the Federal National Mortgage Association and Federal Home Loan Mortgage Corp. a break on some of those goals in 1993. But both corporations must reach the 30% goals in 1994.

Freddie Mac's Goals Lower

For 1993, Fannie Mae must make sure that 30% of the housing units it finances are bought or rented by lower-income and moderate-income people; 28% are for central city residents.

Freddie Mac's lower-income and moderate-income goal is 28%, and the central city goal is 26%. Freddie Mac's goals are lower than Fannie Mae's because it has not bought multi-family mortgages for some years, and thus finances fewer units than Fannie Mae.

Though the goals are not mandatory, they carry a lot of weight in the politically-charged environments in which the corporations operate.

Now, it's the 1995 horizon that all sides are eyeing.

Once Fannie and Freddie meet the initial goals, HUD is "going to get tougher," said Mr. Smith of the thrift group. Chris Lewis of the Consumer Federation of America agreed.

One sign of HUD's tough stance is its decision on a third goal that targets borrowers who make 80% or less than median income.

An Add-On to '92 Level

HUD proposed that Fannie add $2 billion of these loans to the level it purchased in 1992. Freddie's two-year goal is $1.5 billion over its 1992 activity.

Freddie Mac had thought the goal would be $1.5 billion alone, rather than on top of last year's lending, said Mindy Delk, that corporation's vice president for government and industry relations. Fannie Mae officials declined comment. □

Tough Targets

Affordable-housing goals set by HUD

1993

- **Fannie Mae** must seek to ensure that 30% of the housing units it helps finance are owned or rented by low- and moderate-income people. And 28% of the units financed should be in central cities.
- **Freddie Mac**'s low and moderate-income goal is 28%, while its central city target is 26%.

1994

- Each agency will have targets of 30% for both low- and moderate-income units and central city housing.

GE Capital Closing In on Deal To Buy Shearson Mortgage Unit

By CHRISTOPHER NOBLE

Despite weeks of public silence, General Electric Capital Corp. is still on track to buy the large mortgage unit of Shearson Lehman Brothers, industry sources said.

GE had originally planned to announce the deal July 16, the sources said, but negotiations have taken longer than expected. The announcement is near, but no date has been set, they said. "There appears to be nothing to blow it up this time," one industry insider said of the deal.

Headed for No. 5 Spot

Last month, *American Banker* reported that GE was moving to buy the Irvine, Calif., Shearson unit, which services about $17 billion of loans. The deal would make GE one of the nation's five largest servicers, with a portfolio of $56 billion.

The sources speculated that the delay in finalizing a deal was caused by hard bargaining by GE Capital, which is known for demanding last-minute concessions in acquisitions.

A GE Capital spokesman declined to comment, and Shearson did not return phone calls.

"Please find out about this structured finance deal and get back to me."

Fannie's Technology Push Described by Its Chairman

As the Federal National Mortgage Association explores new technologies, lenders have been wondering how they will be affected. James Johnson, Fannie Mae's chairman, laid out the agency's technology agenda while speaking at a conference of the California League of Savings Institutions. An excerpt follows.

Verbatim

Our technology agenda is substantial. We're working with our customers on reducing the costs of origination. We are supporting the development of electronic data interchange standards that improve the sharing of origination, credit, mortgage insurance, title, underwriting, and delivery information among industry participants.

We're working with the [Mortgage Bankers Association of America] to create a book-entry registry for mortgages like those that exist for the stock and bond markets. We are developing an automated underwriting system that will reduce time spent on routine applications so that more time is available for processing more complex files.

We're developing a home-buyer counseling system to enable housing counselors to better prepare low- and moderate-income applicants, match them with affordable mortgage products, and create financial plans that put them on the path to home ownership.

Slashing Origination Costs

We believe these efforts by Fannie Mae and our customers can cut in half the average cost of originating mortgages and improve the industry's responsiveness to low- and moderate-income buyers.

Technology will provide a more efficient business environment.

We've shared these ideas with our Technology Advisory Council and have heard from them what a significant effect these initiatives could have on the industry. We've told them that we recognize that our size and central position in the industry thrusts upon us a leadership role in this area as well.

We share the desire of many in the industry to avoid a technology competition that could result in higher costs rather than reduced costs. We also agree that any industry technology must be open, adaptable to existing systems, and available to all participants at reasonable costs.

Technology will change the way we all do our business and will reinforce the strong, competitive nature of our industry.

Vital Partnerships

Nevertheless, our continuing partnership with Fannie Mae seller-servicers will be the centerpiece of our business relationships. I can assure you they will be vital to the success of these technology initiatives.

We will keep our focus squarely on the seller-servicers who originate and service mortgages, interact with borrowers, and have the financial strength to stand behind their origination decisions.

Technology will, not by itself, determine who will be the most successful competitors. Rather technology will provide a more efficient business environment where lenders will compete to provide the best service to homebuyers of every economic status. □

Bear Stearns, Cargill in Venture

By CHRISTOPHER NOBLE

A leading investment bank has teamed up with a large financial services company in a venture to buy and securitize multifamily mortgages.

Bear, Stearns & Co. Inc., New York, and Cargill Financial Services Corp., Minneapolis, said their new conduit should "introduce a steady, ongoing source of liquidity for apartment loans by utilizing the highly efficient mortgage-backed securities market."

So far, three mortgage banks have been approved to sell loans to the conduit: American Residential Mortgage Corp., La Jolla, Calif.; ARCS Mortgage, Calabasas, Calif.; and Collateral Mortgage Ltd., Birmingham, Ala.

Apartment Mortgages

The MMC Program, as the new venture is called, will purchase apartment mortgages and bundle them into securities for sale in the secondary market. The conduit will handle all the different stages of the securitization and sale of the loans.

William T. Ratliff 3d, Collateral's president, said the new program would make it easier for his company to sell the multifamily loans.

"The big advantage is that it will open up a much wider universe of investors into multi-family mortgage-backed securities," he said.

Bank of N.Y. Names Executive

Separately, Arcs – a unit of the Bank of New York Corp. – has named a new head of secondary marketing.

Ann Holmes Pennywit previously held a senior secondary mortgage marketing position at Standard Federal Savings Bank of Virginia.

"Ann's extensive knowledge and experience in the secondary mortgage market and on Wall Street will allow our company to reinforce its position as an industry leader," said Howard J. Levine, chief executive officer of Arcs. □

When it's this hot, you deserve extra scoops.

For many bankers, the thermometer is a lagging indicator of the heat they feel in handling current regulations and guessing the Clinton administration's next moves. But we've got a way to help you keep cool: *American Banker's Washington Watch.*

We broke the news about the plans by credit union trade associations to branch cross-country. We warned readers that the FDIC will crack down on banks and thrifts that aren't paying enough for insurance, and that the Fed was flirting with examination fees. We also uncovered plans that would let banks pay less for deposit insurance provided they set up, certain special programs.

Those kinds of tasty scoops are the weekly fare at *American Banker's Washington Watch.* Within minutes, you get insights on regs and regulators—as well as your competitors—that could make the difference between profit and loss. We unconditionally guarantee it.

The American Banker Newsletters 1325 G St. NW #900 Washington, D.C. 20005

Concord Led the Field of Administrators Of Bank-Managed Funds in 2d Quarter

By KEITH DuBAY

Concord Financial Group cemented its position as the No. 1 administrator of bank-managed mutual funds during the second quarter.

The New York-based company provided administrative services to bank proprietary funds with $29.5 billion of assets, up from $25.6 billion of assets in the first quarter, according to a survey by Lipper Analytical Services Inc.

Underscoring the growing popularity of bank mutual funds, Lipper reported that 13 of the 15 companies it tracks boosted the volume of mutual fund assets that they administer.

The exceptions were Concord's nearest competitors, PFPC Corp. and Boston Co.

Variety of Services

Mutual fund administrators provide a range of services, including accounting, statement preparation, literature mailing, custodial and transfer services, and institutional and wholesale marketing. Exact duties can vary and may even be split among several companies.

Concord officials attributed its gains to hot fund sales, particularly among individual bank customers. "There's been a tremendous emphasis on the retail side of the business," said Joseph F. Kissel, a Concord executive vice president. "It's a monetizing. It's a commitment by the bank partners to focus their retail efforts."

Leaders of the Pack

The five top administrators of bank-managed mutual funds

	Fixed assets (Millions)*	Biggest Client
Concord Holding Corp. New York	$29.5	BankAmerica Corp.
PFPC Inc. Wilmington, Del.	24.2	PNC Institutional Management Corp.
Boston Company Boston	18.3	NationsBank Corp.
SEI Financial Management Corp., Wayne, Pa.	17.4	Banc One Corp.
Federated Administrative Services, Pittsburgh	14.6	First Union Corp.

*As of June 30.

Sources: Lipper Analytical Services, American Banker

Concord serves six bank clients with large mutual fund families: BankAmerica Corp., Bank of New York Co., Barnett Banks Inc., Chase Manhattan Corp., Credit Suisse, and United States Trust Co.

Proprietary Programs

Its two newest clients – First American Corp. of Nashville and Continental Bank of Chicago – are preparing to launch proprietary funds.

PFPC, the second-ranked administrator, saw its assets slip from $25 billion to $24.2 billion in assets.

The decrease was caused by trading decisions made by advisers of the institutional funds, according to a spokesman for the Wilmington, Del., company, a subsidiary of Pittsburgh's PNC Bank Corp.

Boston Co., the third-largest administrator of bank-related funds, closed the quarter with $18.3 billion under its control, down from $21.4 billion the previous quarter.

Sold to Mellon

Company officials attributed the decline to the sale of Boston Co. by Shearson Lehman to Mellon Bank Corp. in Pittsburgh.

Among the accounts lost by Boston Co. was the $4.5 billion Pierpont Fund family, managed by J.P. Morgan & Co.

Boston Co. also lost administration contracts for Baltimore-based Mercantile Safe Deposit and Trust Co. (MSD&T Funds) and for the Arch Funds managed by Mercantile Bank of St. Louis. Together, they represent about $1 billion in assets.

Jon Hubbard, spokesman for Boston Co., dismissed the decline as "a one-time event" caused by the merger with Mellon.

The company's internal figures show assets under administration at $22.3 billion, with the increase coming from new investments and increased value of existing accounts, Mr. Hubbard said. "This is a growth business for us and we continue to do well."

All of the funds that left were jointly serviced by Boston Co. and PFPC.

Awkward Situation

After PNC Bank bought Boston Co., it left those accounts in the awkward position of being jointly serviced by the two bitter rivals from Pittsburgh, Mr. Hubbard said. Morgan, for instance, feared its service would suffer, he said.

Signature Financial Group in New York was the major beneficiary of the merger jockeying. The bank fund assets it administers leapt from $5.2 billion to $12 billion, largely on the strength of picking up the Pierpont business. That boosted Signature from 11th to a tie for sixth place with Winsbury Co. in the Lipper rankings.

In 1989, Signature pioneered the "hub and spoke" style of mutual fund administration that is attracting much interest in the industry. Signature has trademarked the name. Other fund families call it a "master feeder" system. It is a legally separate entity that requires different accounting and regulation.

Instead of creating several different funds for no-loads, front-end loads or back-end-loaded products, the master feeder sets up one "hub" that does fund management, custody, and securities pricing.

The "spokes" are whatever flavor the investments take, whether annuity, privately managed account, group trust, load mutual fund, or offshore investment.

The spokes are responsible for their own marketing, distribution, transfer agency, and shareholder servicing. They can charge fees or market the funds any way they want, but all of the partners are investing money with the hub adviser.

Joseph F. Kissel
"It's a monumentum thing"

"We were very happy with the Boston Co., but our conversion to the hub-and-spoke structure led us to move to the author of that structure," said Eve Guernsey, managing director of Morgan's U.S. funds management division.

Carol Bradovchak, a marketing executive with Boston Co.'s investor services group, said her company has studied the issue and its potential regulatory and accounting complications. She added, "The vote is still out on hub and spoke." □

Citibank Ad Campaign Stresses Funds Are Not Insured

By KAREN TALLEY

Citibank has launched a new television advertising campaign stressing that the mutual funds it sells are not covered by federal deposit insurance.

The giant New York bank's commercials feature a shot of an ATM screen with the words "securities" and "not insured" prominently highlighted.

Since early this year, Citibank customers have been able to use ATMs to transfer money into and out of the bank's four Landmark money market funds.

Erasing Any Doubt

Banks have been under pressure from regulators and consumer groups to make double sure that consumers understand mutual funds aren't backed by the Federal Deposit Insurance Corp.

Customers can transfer money to funds via ATMs.

Maria Rullo, a Citibank spokeswoman, said the disclosures are consistent with the bank's basic approach to marketing securities.

Money Management Focus

"It's important our customers understand up front which of our accounts are covered by FDIC insurance and which are not."

The television ads, which recently began airing in the New York metropolitan area, are part of a campaign to draw attention to the bank's money management offerings.

The bank is also conducting a print campaign emphasizing the convenience of its consolidated statements, which now include information on securities and investments, as well as loans and deposits. □

HIGH YIELD REPORT

lets you *hear the heartbeat and feel the pulse* of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt

IN AN AGE OF DRAMATICALLY declining long-term interest rates, the *American Banker*'s weekly *High Yield Report* delivers money-making tips on high-yield investment opportunities.

This newsletter keeps a close eye on major court proceedings, and legislative and regulatory developments. Each issue features barometers of market size, bellwether pricing tables, a forward calendar, reports on filings, and the results of new-issue sales.

No longer considered the arena of "junk bonds," the high-yield market is rapidly gaining respectability as it is closely tracked by this objective, succinct weekly letter.

If you must know what's "ticking" in the heart of the high-yield market, HIGH YIELD REPORT is a must read every week.

Read it free for 4 weeks!
Just fax your letterhead to 212-943-7852, or call Hans Winberg at 800-407-8241

Marshall & Ilsley, Bucking Bank Trend, Eliminates Load

By MICHAEL O'D. MOORE

Just months after introducing its own mutual funds, Marshall & Ilsley Bank dropped the funds' sales charges.

Strong customer resistance to loads that ranged up to 3.5% on the six Marshall funds caused the bank to reconsider the charges almost immediately, said John McCarthy, vice president in charge of the funds.

"It was a big decision that filtered through all elements of the bank," Mr. McCarthy said.

Milwaukee-based Marshall & Ilsley, with $7.8 billion in assets, is one of the latest banks to go against the tide of banks offering load products. It launched its funds in October, and switched to no-load pricing on April 23.

Mr. McCarthy said that though, brokers may want the additional fees, some markets may prove too competitive for load funds to thrive.

Local Competition

Wisconsin, like Massachusetts, is home to many no-load mutual funds companies, including Strong/Corneliuson Management Corp. and Nicholas Co.

Milwaukee-based Firstar Corp.'s Portico Funds are also sold no-load.

In Boston, three of the four bank proprietary fund families are no-loads.

Customers resisted the charges, which ranged as high as 3.5%.

Offering a no-load family backs a trend that goes back at least to the mid-1980s, according to a 1990 study by Alliance Capital Managment, New York.

Noting that 75% of banks offer only load funds, Alliance concluded, "No-load funds are disappearing from bank's product lines."

Strategic Error Seen

Avi Nachmany, a partner in Strategic Insight, a New York-based consulting firm, said offering a no-load is a "a strategic error."

Mr. Nachmany said that most banks should charge loads for their proprietary funds, because doing so will build a stronger fee base and enable banks to devote a larger staff of employees to serve customers.

Trying to compete with a no-load giant like Fidelity is a mistake, he said. Banks' niche should be dealing with the majority of investors, who want more advice than those who buy directly from no-load mutual fund companies, he said.

Though some banks with no-load programs are doing well – Fleet Bank, for instance – Mr. Nachmany said the true test of the strategy will come when the market drops.

'It's Against My Religion'

He believes the banks with loads will be in a stronger position to keep customers through better service.

Not everyone agrees.

A down market will just make investors who are becoming more sophisticated look around and say "Hey, what are we paying here?" said David Anderson, executive vice president in charge of the $1 billion no-load UMB Funds for United Missouri Banks.

UMB Funds have been load free since they were introduced, in 1982. "It's against my religion" to offer loaded mutual funds, Mr. Anderson said. "If you're not a salesman, what good is a load?"

M&I customers had similar thoughts about the Marshall funds. Retail sales were "negligible" in the months after the funds were rolled out. The fund family, which was started with $1.2 billion in trust assets, has grown to $1.5 billion in assets.

Why did M&I offer loads in the first place?

"The dilemma is that you're trying to satisfy the broker-dealer," Mr. McCarthy said. The additional fees are very appealing, he said.

Class System Rejected

After identifying the resistance, M&I could have switched to a classes-of-shares system that gives different investors various fee-structure options.

But that structure was viewed as too confusing for customers, who would wonder whether the funds are load or no-load. Mr. McCarthy said.

Mr. Nachmany believes some banks selling no-load funds may be missing the mark. Instead of marketing to customers who need the guidance a financial intermediary provides, these banks are going after customers who could just as easily invest directly with a fund company.

Most bankers seem to agree. A 1992 study by Dalbar Financial Services, Boston, found a contradiction between brokerage and bank views toward sales fee-structure options.

While brokers identified loads as the biggest source of sales resistance, bankers said customers aren't worried about loads. □

Card Banks Record Robust Profits Despite the Pressure on Margins

By STEPHEN KLEGGE

Despite signs that competition is hurting profit margins, credit card banks have posted another strong quarter.

The healthy profits can be viewed most clearly through the three highly efficient, specialist issuers that investors view as a proxy for the card industry:

- First USA Inc. earned $12.9 million, more than double what it earned in the same period of 1992.
- Advanta Corp. reported a 67% increase, to $17.2 million.
- MBNA Corp. boosted its quarterly net by 20.1% to $46.1 million.

All the results reflect growth in card loans, as new categories of merchants such as supermarkets are starting to accept the cards.

"In general, business appears strong," said analyst Mark Alpert of Alex. Brown & Sons.

Volume Up 20%

The bank card associations have reported 20% growth in overall volume, and the specialists have been growing faster, Mr. Alpert said.

But increasingly intense price competition is beginning to hurt margins.

The first sign of that came earlier this month, when Signet Banking Corp. reported a 32-basis-point slip in its net interest margin, to 5.03.

The Richmond-based banking company has been building its credit card portfolio with one of the more aggressive low-interest-rate strategies in the nation. Its earnings were up 51% from the 1992 second quarter, at $40.4 million, much of the gain attributable to the growth in card receivables.

But investors, concerned about card profitability rates, dumped Signet's stock when the report came out.

Analysts discounted the margin decline, saying it was due mostly to an increase in funding costs. To the extent that card pricing was a factor, it was unlikely to presage a general problem in the credit card sector, they contended, because few banks are pricing as aggressively as Signet.

First USA's Margin Slips

Nevertheless, First USA also saw its margin on managed credit card loans fall – by 16 basis points since March 31, to 7.65% at midyear.

That was believed to be mostly the result of a $500 million securitization that temporarily took earning assets off the books. But observers noted it was the first full quarter in which Delaware-based First USA Bank was offering a pre-approved gold card at rates as low as 9.9%.

The net interest margin at Advanta, the parent of Colonial National Bank of Wilmington, slipped in the quarter by 2 basis points to 7.72%. That was also off from 8.46% in the second quarter of 1992. A spokeswoman attributed the change since last year to a repricing in November, when the issuer removed a floor of 18% on its loan rates, allowing rates on many cards to drop to around 14%.

MBNA, meanwhile, saw its margin expand in the latest quarter to 8.55%, from 8.26%, primarily as a result of a decrease in the cost of liabilities. "We don't just compete on price," a spokesman said. "We compete on the quality of the product, the quality of service."

Inevitable Changes

Whether or not the margin pressure represents a turning point for credit cards remains to be seen. But as Samuel G. Liss of Salomon Brothers Inc. pointed out in a report released before the earnings season, it is inevitable that price competition and an increase in funding costs from today's historically low levels will reduce margins.

According to RAM Research of Frederick, Md., the weighted-average interest rate on a standard card has slipped to 17.29% from 17.84% in January and from 18.40% in June 1992. The average annual fee on a standard card has fallen to $16.85 from $17.20 in June 1992, RAM said. □

The Big 3 Card Specialists

	Size (end of 2nd quarter, in billions)	Year-to-year increase	Net interest margin
MBNA	$46.1	20%	8.55%
Advanta	17.2	67	7.72
First USA	12.9	108	7.65

Rep. Flake, a New York Liberal – and Bank Defender

By ROBERT M. GARSSON

Antipoverty activists were aghast when Rep. Floyd Flake, D-N.Y., introduced a community development lending bill that rivaled President Clinton's proposal. What angered them most were the incentives the bill offered to commercial banks and thrifts for community lending.

But Rep. Flake, a three-term congressman from Queens, has never been a traditional sort of liberal. In 1991, he weathered similar criticism when he joined Rep. Tom Ridge, R-Pa., to win approval of the Bank Enterprise Act, which gives banks rebates against deposit insurance premiums for certain kinds of community lending activities.

Voice of Experience

And in the debate over community development, Rep. Flake's credentials are better than most of his critics'. A veteran of the Great Society programs of the 1960s, Rep. Flake is an African Methodist Episcopal minister who has used his church in the New York City borough of Queens as the focal point for community development effort that even his most ardent critics might admire.

As pastor of the Allen A.M.E. Church, Rep. Flake has built up an organization that employs nearly 1,000 while providing assistance ranging from prenatal care to financial services.

"If our church was listed on the *Black Enterprise* list of top businesses, we would be No. 66 in the country," he said.

Anything That Works

His voting record is distinctly liberal, but Rep. Flake sees himself as a moderate and a pragmatist, willing to support anything that works in his quest to bring prosperity to "the Third World nation within our borders."

And he says his experiences with antipoverty programs have convinced him that community development will not succeed without the involvement of mainstream lenders.

"I come to this as a pragmatist who was involved in the process of community development, and who realizes there comes a point where you don't have all the resources you need available to you," he said.

Two Lending Tracks

"If there is a big marketplace out there in the banking industry where there are resources, there ought to be as many vehicles as possible to access those funds," he added.

As a result, Rep. Flake's legislation would create two lending tracks for businesses. First, it has authorized $105 billion in three installments to pay for the S&L cleanup.

The Clinton administration originally asked Congress to approve $28 billion for the RTC. In May, the Senate passed a bill that would give the agency $18.3 billion. But the House has refused to vote for RTC funding.

Seidman Sees Savings

Some experts, like L. William Seidman, who once headed the RTC, argue that the lack of funding has actually saved taxpayers a bundle. How? Borderline thrifts that would have been shut down by the Office of Thrift Supervision and given to the RTC for liquidation have been left open – and recovered.

The OTS denies that it ever stopped closing bad thrifts.

The reason House members are afraid to vote for the bill is that they think their voters will be angry. Members of Congress "don't want to go back to their constituents and explain why they voted for it. The public doesn't seem to understand that when you vote for RTC funding, you're voting to bail out depositors," said Ms. Goodman.

In early May, the RTC resumed its job of liquidating the thrifts by freeing $3 billion from reserve funds. The agency isn't sure how long the funds will last.

Robyn Meredith

Rep. Floyd Flake
Sees himself as a pragmatist

would provide seed money for small community development banks that can help entrepreneurs get started. It also provides incentives for traditional lenders to pick up those businesses when they outgrow their development banks.

Tall and dapper, Rep. Flake is coming into his own. Thanks to the huge turnover in Congress this year, he won the chairmanship of the House Banking subcommittee on general oversight, making him a major player on banking legislation.

And with his community development lending bill, which he cosponsored with Rep. Jim Leach, R-Iowa, he has an opportunity to reshape what may be the only major banking initiative to clear Congress this year.

'So Much Waste'

In a voice that seems perpetually hoarse, Rep. Flake recalled recently how the Great Society years shaped his views on community development.

"There was so much waste," he said, in a pained voice. "When you think about the billions of dollars we spent on model cities, and other than Columbia, Md., and a few others, we just don't have much to show for the money we spent.

"I never want to see that again," he added.

Rep. Flake said the program failed partly because it had so little oversight, but mainly because the government did not involve private lenders – a mistake he did not repeat in his church.

Leveraging the Donations

In Queens, he said, "we are leveraging church tithes and offerings." About $3.6 million goes into the church's collection plates each year. A third of that goes to community projects, many of them profit-making businesses. All told, income from church-sponsored business and collections gives Rep. Flake a $21.9 million annual budget.

But the real muscle comes from private lenders, he said.

For example, the church has become a major real estate developer, buying up and rehabilitating vacant stores in Queens. In most cases, a 20% down payment comes from church funds and the rest is borrowed.

Bank, Community Benefit

"We bought a block of stores for $250,000," he said. "We put about $500,000 in it, rented it out, and it was appraised at $1.4 million. So we went back and borrowed $650,000 on that and bought more properties."

The bank benefited by picking up two good loans, he said. More importantly, he added, the community benefited from the new stores, which provide services and employment.

"The problem is, you have secondary markets for mortgages, but nobody does that for small business," he said. "So no matter how much housing we produce, the Main Streets of most urban communities are in total depression."

Despite his years in Washington, Rep. Flake said it is the pull of his Queens parish that helps him maintain his balance.

"I realize I could never be a Beltway politician," he said. Back home, "there are real people with real everyday problems that need to be addressed." □

Taxpayer Groups See Red Over Lack of RTC Funding

Congress' delay in funding the Resolution Trust Corp. has cost taxpayers about $2 billion since last year, the agency argues.

That figure has outraged some taxpayer groups. "Congress is just being incredibly cowardly in not voting for this money," said Susannah Goodman, legislative advocate at Public Citizen. "They are losing big bucks by not funding the RTC. It is bad public policy not to fund the RTC."

Without funding, the thrift cleanup agency must continue to operate failed savings and loans while losses mount because it cannot afford to pay off depositors and put sick S&Ls to sleep.

"It is like running a bankrupt business," an RTC spokeswoman said. The agency must pay operating and overhead costs for the S&Ls it still runs.

"Members [of Congress] are ducking their responsibility," by not passing the bill pending in the House, said Chris Lewis, director of banking and housing policy at the Consumer Federation of America.

The agency's spending authority ended on April Fools' Day, 1992. Since the RTC's creation in August 1989, Congress

The Inside Line

PEOPLE
Oversight Post Going to a Minority

Dietra L. Ford, who was a member of President Bill Clinton's transition team, will become president and chief executive of the Thrift Depositor Protection Oversight Board, which sets policies for the Resolution Trust Corp. That job was previously held by **Peter Monroe,** a Republican.

Ms. Ford, who is black, would be the first minority to have such a high-ranking federal post in the banking or thrift industries. She is currently a senior legislative associate for the House Committee on the District of Columbia, where she has worked since 1975.

She also has served as a commissioner of the National Capitol Planning Commission.

Edward C. Sylvester Jr., who directed the D.C. committee's majority staff before retiring, said Ms. Ford is "extremely bright, very personable, and a hard worker.

"I'd be surprised if there any administration jobs she couldn't do well," he said.

* * *

A U.S. Air shuttle carrying Federal Reserve Board Vice Chairman **David Mullins** from New York last Wednesday had to abort its initial landing attempt at National Airport. As the pilot pulled up and went to full throttle, he announced that a plane taking off from National had not yet cleared the runway. Mr. Mullins was unfazed. He said he's had similar experiences on airlines in the past.

* * *

James J. Didion, chairman and chief executive of CB Commercial Real Estate Group in Los Angeles, was elected chairman of the National Realty Committee at its annual meeting here. NRC's president and full-time CEO, **Steven A. Wechsler,** was reelected.

* * *

It was probably only a coincidence, but Rep. **Joseph Kennedy 2d,** D-Mass., canceled a hearing and put his House Banking consumer affairs subcommittee to work instead on an insurance bill – the day after an Energy and Commerce Committee panel voted out its own insurance regulation package.

Following his own subcommittee vote, Rep. Kennedy conceded that the fierce turf rivalry between banking and energy and commerce could have had something to do with his decision to go to a markup last week. And it could lead to a full committee vote next week, he said.

"The fact is, there are jurisdictional questions and they are addressed in part by who gets to Rules first," he said.

A rule setting a floor vote on the Kennedy bill would add weight to the banking committee's claim to jurisdiction over insurance.

* * *

Senate Banking Committee Chairman **Donald W. Riegle,** D-Mich., can breathe a little easier now, knowing that at least one potential challenger has taken a pass on the 1994 Senate race.

Republican Rep. **Fred Upton** said Thursday that he would not enter the race, citing the demands of his young family.

Sen. Riegle, still bearing the scars of the Keating Five scandal, is widely regarded as one of the most vulnerable Democratic senators up for reelection in 1994. Wags say he'll be running against **Charlie Keating.** □

David Mullins

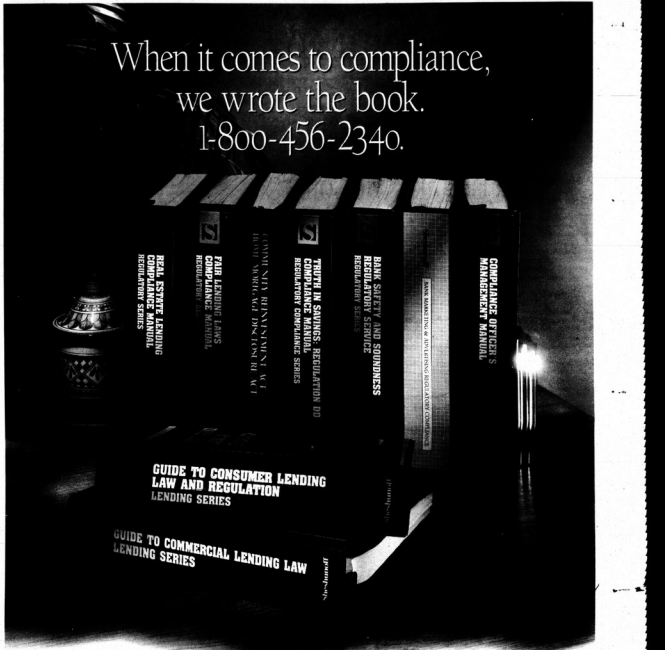
When it comes to compliance, we wrote the book. 1-800-456-2340.



Compliance continues to be a critical issue. Staff comes and goes, rules are changing, and questions come up all the time.

You can make sure anyone in your bank has access to the latest compliance information, *in a format they can use and understand*, with "how to" manuals from Sheshunoff Information Services Inc., the compliance experts. And periodic Updates are available for all of them, so you and your staff can be sure you're doing things right no matter how often they change.

To get you started, we've put all the basics in one book:

- **Sheshunoff... Compliance Officer's Management:** This is the comprehensive overview of everything in the compliance area. We show you how to set up an effective compliance program, train your staff, and make sure it's working. Details on every consumer regulation including exemptions, requirements, and penalties are here. Plus, examples of compliance related items, assignment charts, sample forms and reports, and more. To be sure you've got every area covered, this is your guide. Then for more detail on specific compliance areas, your library includes manuals like:
- **Sheshunoff... CRA/HMDA Regulatory Compliance:** See how to structure an effective CRA/HMDA program, develop community outreach programs, document everything, train your staff, and audit your program to be sure it works. Includes copies of the regs in plain language and a review of a successful program.
- **Sheshunoff... Real Estate Lending Compliance:** Specifically designed to help you develop prudent lending standards that are appropriate for your bank.

Model policies let you pick and choose what you need, then easily adapt them. Guidelines for loan-to-value ratios are also provided.

You can order these and other Sheshunoff compliance manuals individually, or get the complete **Sheshunoff... Compliance Library** which also includes:

- Sheshunoff... Marketing & Advertising Regulatory Compliance.
- Sheshunoff... Bank Safety & Soundness Regulatory Compliance.
- Sheshunoff... Truth in Savings Compliance.
- Sheshunoff... Guide to Consumer Lending Law and Regulation.
- Sheshunoff... Guide to Commercial Lending Law, and
- Sheshunoff... Fair Lending Laws Compliance.

A Complete, Fully-Indexed Compliance Library Your Whole Staff Can Use.

Each manual includes a FULL INDEX for the library with the manual title, chapter, and page number where the reference can be found. So when anyone on your staff has a question, he or she can find the right answer quickly and easily.

The library is an annual service which provides periodic Updates for all these manuals as part of the price. So even if the regulations change, your staff can easily keep up and always have the latest information on hand.

To order single volumes, subscribe to the library, or get more information, call 1-800-456-2340.

The Unmitigated Gall Of NationsBank's McColl

The military-industrial complex, which has been ordered to beat guns into plowshares, apparently has found a way to market some of its most advanced technology to the banking industry.

I call your attention to the stealth spokesman, a super secret unveiled by the White House on July 15 during a media event called to promote President Clinton's community development lending program.

NationsBank chairman Hugh McColl stepped up to the podium following the President's speech and revealed to the world for the first time that he is the industry's official mouthpiece. Then, on behalf of bankers everywhere, he endorsed the lending plan, which is about as bank-friendly as John Dillinger.

Spokesman for Whom?

Naturally, other claimants to that lofty title were "shocked" and "surprised," and they groused that Mr. McColl is spokesman for NationsBank — period.

Furthermore, they contended that he had shafted them big-time by endorsing the President's community lending and Community Reinvestment Act plans.

The cynics further charged that Mr. McColl would endorse any half-baked Clinton idea in return for the White House's support for interstate branching legislation.

"McColl is the kissy-kissy of interstate," sneered one banker.

Mr. McColl no doubt enjoys these whiney plaints from his rivals. His claim to be the industry's spokesman was an obvious taunt aimed at trade groups that still pretend that bankers are capable of finding common ground on important issues.

Phony Theory

The unity myth was foisted upon the industry by the 101st Congress which said, disingenuously, that it had failed ty consider controversial reform legislation, like eliminating Glass-Steagall, because bankers hadn't spoken to them with one voice.

The actual reason for the inaction was a reluctance to give bankers a present and try to explain it to other constituents.)

CYNICS CHARGE that Mr. McColl would endorse any half-baked Clinton idea in return for the White House's support for interstate branching legislation.

Ever since, some trade groups have been obsessed with achieving some form of unity in their ranks. Their efforts have failed miserably, primarily because there are at least four banking industries, if not more.

Mr. McColl realizes this. In fact, he's been on a tirade about all-inclusive trade groups since January of last year.

At that time, the blustery banker threatened to quit the American Bankers Association and 11 other state and national organizations if they didn't disregard the wishes of their small-bank members and lobby for interstate branching in 1992.

Later that year, Mr. McColl and five other big bank CEO's formed a splinter group of the ABA to lobby for interstate branching.

Right in Character

There's nothing surprising or out-of-character, then, in Mr. McColl's going his own way.

In fact, it's hard not to admire the gift he has for ingratiating himself with the high and mighty to press his agenda.

President Clinton burned the midnight oil with Mr. McColl talking about the Community Reinvestment Act. No muckety-mucks from the ABA or the Independent Bankers of America were present.

This remarkable access is due in part for Mr. McColl's support during his campaign, even though it came in the 11th hour.

The banker is also buddies with H. Ross Perot, with whom he does business. He supported Mr. Perot for President until Perot dropped out.

Before that, Mr. McColl was a regular guest at the Bush White House when banking matters were discussed. (He was stricken from the list when he began supporting Mr. Perot.)

False Comfort

Bankers opposed to interstate branching take succor in the fact that a President alone can't enact such legislation. It takes a Congress, and they claim that Mr. McColl has little currency on Capitol Hill.

Don't be so sure. Nations-Bank was a generous contributor to Congressional candidates in 1992. Mr. McColl no doubt has plenty of capital at that end of Pennsylvania Avenue as well. ☐

Ruling Guides Lenders in Preserving Exemption from Cleanup Liability

A recent court decision in the landmark lender-liability case of U.S. v. Fleet Factors Corp. embodied the Environmental Protection Agency's final interpretation of the secured-creditor exemption from the Superfund law.

While the court's finding was specific to that long-running case, the decision provides guidance to lenders, defining some activities they may undertake without voiding the exemption.

The story began back in 1976, when the Fleet Financial Group subsidiary entered into a factoring agreement with Swainsboro (Ga.) Print Works. Fleet advanced funds against account receivable and took a security interest in real property, inventory, equipment, and machinery.

The print company filed for bankruptcy in 1979 and ceased operations in 1981. In 1982, Fleet foreclosed on its inventory, equipment, and machinery, but not on the real property.

Fleet employed Baldwin Industrial Liquidators Inc. to auction the equipment and machinery. After the auction, Fleet allowed Nix Rigging Co. to salvage the remaining equipment and machinery. Nix remained on site until the Environmental Protection Agency's arrival in 1984.

Hazardous Substances

In 1984, the EPA discovered asbestos debris and several hundred drums of hazardous chemicals. After Fleet refused the EPA's demand to clean up the site, the EPA conducted a removal action under the Superfund law (formally, the Comprehensive Environmental Response, Compensation, and Liability Act).

The costs of the action were considerable, and the United States sought to recover them by suing Fleet.

IN THE preforeclosure period, the court in the Fleet Factors case allowed significant involvement by the lender in winding down its borrower's operations.

The first Fleet Factors decision, issued in response to a preliminary appeal by Fleet, established a controversial new standard, imposing liability on lenders who have a mere "capacity to influence" a borrower's treatment of hazardous wastes.

Partly in response to that decision, the EPA proposed a rule interpreting the Superfund law's secured-creditor exemption. The Fleet Factors trial court stayed the case pending the EPA's final rule, which became effective April 29, 1992.

See **FLEET** *next page*

The case then proceeded to trial. The government alleged that Fleet was liable as a owner-operator of Swainsboro Print Works.

Secured-Creditor Exemption

The principal question was whether the secured-creditor exemption protected Fleet.

The Superfund law imposes liability for the cleanup of hazardous substances on "any person who at the time of disposal of any hazardous substance owned or operated" the facility where disposal occurred.

The law exempts from the definition of the term "owner or operator" any "person who, without participating in the management of a . . . facility, holds indicia of ownership primarily to protect his security interest" in the facility.

This secured-creditor rule discusses activities a lender can undertake without voiding the exemption.

The trial court analyzed Fleet's role in two phases: preforeclosure and post-foreclosure.

The court held that Fleet's preforeclosure actions did not void the secured-creditor exemption, but that the post-foreclosure actions of Fleet's agents – Baldwin and Nix – amounted to participation in management under the rule's foreclosure provisions, and therefore voided

Comment

By Kathy Robb and Nathaniel Chapin

Fleet Factors Ruling Guides Lenders on Cleanup Liability

Continued from page 18

the exemption.

Under the rule, a lender participates in the management of a facility, abd thus incurs Superfund liability, if it makes decisions about its environmental compliance or exercises managerlike control over a facility's day-to-day operations.

The government claimed that Fleet participated in Swainsboro Print Works' management by blocking the sale of chemicals, which then leaked and contaminated the site.

The court found the evidence inconclusive, however, and limited its ruling to the facts, declining to rule on whether a creditor that affirmatively blocks the sale of chemicals at a facility is participating in management.

Also, the court rejected the government's argument that Fleet assumed managerlike control of the print works.

The court applied a "reasonable person" standard, comparing Fleet's actions to those of a "reasonable secured creditor acting primarily to protect its security interest."

Before foreclosure, Fleet disposed of inventory, provided payroll funds, and hired and fired helped resolve customer disputes, and collected receivables.

Even though Fleet was the only entity making decisions at the plant, the court held that Fleet's actions were those of a reasonable lender seeking to mitigate its losses and acting in the "normal course of business."

Post-Foreclosure

The rule's foreclosure provisions, triggering the "foreclosure or its equivalents," permit a lender to undertake a number of specific managerlike actions after foreclosure to preserve a secured asset.

Even though Fleet conducted an extra-judicial reposession of assets at Swainsboro Print Works, the court found it was "consistent with normal lending practices" and therefore the equivalent of a judicial foreclosure.

The court noted that the foreclosure powers permit the incidental handling of hazardous substances if it is directly related to a permitted activity such as preparing a facility for liquidation.

But the court found Baldwin's handling, or mishandling, of drums containing hazardous substances was not permissible under the foreclosure provisions, and amounted to participation in management of the facility.

The critical factor was that the environmental threat posed by the drums was readily and apparent "even to a lay observer."

The court further found that Nix's activities at the facility voided Fleet's secured-creditor exemption for three reasons.

• First, like Baldwin, Nix handled hazardous substances at the site in a manner that was not merely incidental to Fleet's foreclosure activities.

• Second, Nix aggravated a conspicuous environmental hazard by haphazardly moving drums around the site, rupturing some in the process, and leaving asbestos-laden insulation strewn around. Those actions constituted decision-making control and amounted to impermissible participation in management even under the foreclosure provisions.

• Third, Nix remained on site over 18 months after Baldwin's auction and failed to finish its salvage operations "in a reasonably expeditious manner." As a result, Fleet exercised excessive control over the real property that had not been foreclosed on at the time of foreclosure of the assets.

The court stated that a lender may exercise control over real property on which the creditor hasn't foreclosed only to the extent necessary to protect and liquidate assets on which the creditor has foreclosed.

LENDERS MAY conduct wider managerlike activities after foreclosure but should avoid excessive control of assets on which they have not foreclosed.

Limited Mandate

In the preforeclosure period, the court allowed significant involvement by the lender in winding down its borrower's operations.

While lenders may conduct more extensive managerlike activities in the post-foreclosure period, they should avoid exercising excessive control over assets on which they have not foreclosed. When hazardous substances pose a serious and apparent environmental threat, lenders should avoid handling those substances without EPA or state agency supervision.

Also, the court's broad reading of the phrase "foreclosure and its equivalents" is helpful to lenders because it permits them greater involvement in a borrower's activities under the rule's foreclosure provisions than under the preforeclosure provisions. ☐

Divining the future is not all that hard when you have

THE REDEMPTION REPORT

Calls and prerefunded bonds are scheduled to drain the yields out of portfolios at a faster and faster pace in the third quarter. With ***The Bond Buyer Redemption Report,*** *you can anticipate redemptions well ahead of the actual events.*
If you want to know when your bonds will be called away, this report has the answer.

We published the first such book in history for the first quarter of 1993.
Buyers received instant access to the entire universe of called and prerefunded bonds in one volume.

And now you can get the third-quarter volume, a 916-tome chock full of information on which, how much, and when. Here's a sample listing:

AK ANCHORAGE ALASKA TEL REV — *Total Amount Redeemed :* **$8,465,000.00**
TEL REV BDS
Series: ***1983*** — *Issue Amount:* ***9,000,000***

China to Take Bids for Banking System

Reuters

BEIJING — China's central bank will solicit bids from international computer companies this year for a new national computer system to handle financial payments.

According to the newspaper *China Daily*, the proposed interbank payment system would be a breakthrough for China's antiquated financial sector, in which money often languishes for weeks while banks go through outmoded clearance operations that rely on the telegraph and mail.

"It will help accelerate circulation of capital, reduce use of cash, and improve social economic efficiency," said a People's Bank of China spokesman.

He said there will be two separate bids, one for the overall design and the other for equipment. The project could take more than 10 years to complete.

China's financial system has failed to keep pace with the country's accelerated economic development, and modernization of the banking structure has become a major priority for the government. □

First Union Agrees to Buy Enterprise Bank

WINTER PARK, Fla. — First Union Corp.'s First Union National Bank of Florida signed an agreement to pay $81.5 million in cash for Enterprise Bank.

Enterprise has one office in Winter Park, Fla., with about $40 million in assets.

First Union expects to complete the acquisition by the end of the year, subject to Enterprise shareholders' approval, regulatory approval, and other conditions.

Small Banks Not Worried By Interstate

Continued from page 6

general counsel of the American Bankers Association. "It's still a very limited phenomenon."

If enough states pass such laws, and if Congress fails to repeal or at least amend the McFadden Act, there could be a trend of changing from national to state charters, Mr. Wilmarth said. He added that he favors federal legislation that would amend the McFadden Act and allow states to set their own rules about interstate branching.

"Many states in 1991 were waiting for Congress to act," Mr. Wilmarth said. "When that fell through, some states decided to take the initiative, which is what we're seeing now."

A Watchful Eye

The Independent Bankers Association of America, the trade group for community banks, is keeping a watchful eye on state legislation.

"If this thing gets to be more of a movement, we'll likely help out [state community banking

The issue will increasingly light up their radar screens.

associations] in dealing with it," said Stephen J. Verdier, senior legislative counsel to the IBAA.

Mr. Verdier doesn't think interstate branching is as inevitable as the interstate banking movement – in the form of regional compacts – became in the mid-1980s.

CRA, Taxation Big Hurdles

"I still see many roadblocks," he said. "It's not inevitable."

The biggest roadblocks, he feels, are community reinvestment and taxation.

"If there's a CRA challenge that NationsBank isn't serving a particular market, but NationsBank says its market is the entire United States, how does a local trade deal with that?

In addition, the effect on state tax revenues could be significant if a branch becomes part of a taxable entity in another state.

The laws in Oregon, Alaska, New York, and North Carolina all deal with those issues, albeit in very different ways and under regulatory oversight. But different states could take different approaches, Ms. Lamb said, creating conflicts.

Oregon Bankers Not Worried

That doesn't faze Frank Brawner, executive vice president of the Oregon Bankers Association, who shepherded the interstate branching bill through his state legislature.

"For one we thought [Oregon banks] deserved to be in the forefront of this issue," Mr. Brawner said. "We hope Congress does act on this issue. We hope Washington, Idaho, California, and Nevada act on this issue. If there are conflicts, we'll deal with it."

Mr. Brawner said community bankers did not oppose the law in Oregon. □

Gold Sends False Alarm On Inflation Prospects

Continued from page 1

tion fears, have held steady.

With stock and bond markets generally strong, gold offered a tempting alternative for investors looking for a place to put their money. And worries about shaky currencies in Europe and elsewhere have encouraged traders to build up their positions in bullion and gold futures as a currency hedge.

Private banks in Europe, U.S. investment banks, hedge funds, mutual funds, and foreign exchange dealers have all been in on the gold-buying binge, says Jeffrey Christian, managing director of CPM Group, a precious-metals consulting firm in New York.

Anti-Inflationary Forces

But ordinary investors do not have to look far to be assured that inflation is not building up much steam. And there are plenty of cases where prices are coming down, not going up.

• Oil prices have dropped to $18 a barrel, from $19.50 at the beginning of the year, and there has been speculation that they will go lower if Iraq ever gets a gain its status as a major exporter.

• Phillip Morris Cos. announced that the its price cut in Marlboro cigarettes may be made permanent, suggesting other tobacco prices will be coming down, too, after years of steady increases.

• Prices of high-tech footwear that carry endorsements from TV superstars like Michael Jordan have come down below $100, and retailers have slashed prices repeatedly to move inventory.

• The continuing war in the computer business is providing more and more processing capabilities at lower prices. J&R Computer World, a discount

Other measures provide evidence that inflation remains in check.

catalog in New York, lists an IBM PS/1 personal computer with a 486SX Intel processor and a 14-inch color monitor, plus other accessories, at $1,699.

Price Consciousness

If anyone doubts that retailers are having trouble boosting prices stick, they only have to ponder the announcement by Procter & Gamble that it is slashing 13,000 jobs, 12% of its work force, and shutting down 30 plants.

Chairman Edwin L. Artzt frankly acknowledged that the company's top-line products, which have long been household names, will have to priced more aggressively to compete with generic brands, which are gaining in popularity.

The Bond Buyer is a sister publication of the *American Banker*.

Congressional Negotiators Limit Direct Student Lending

Continued from page 1

one sort of intangible, purchased mortgage servicing rights.

The agreement would allow financial institutions to amortize servicing rights over nine years, instead of the 14 years they now must use for the Mortgage Bankers Association, which lobbied hard for the exemption.

Under current law, servicing rights are amortized over seven years, the accepted useful life of mortgage loans. While the nine-year amortization is less generous, it is better than the 14-year timetable for other intangibles.

Feeling of Uncertainty

But while those deals have tentatively been set, a separate decision to hold the gas tax to 4.5 cents a gallon could force congressional negotiators back to the table to find ways to meet the President's deficit-reduction goals. □

Centennial Bancorp Buys Harding Fletcher

EUGENE, Ore. — Centennial Bancorp said it bought Harding Fletcher Co., a mortgage banking company. Terms were not disclosed.

Harding Fletcher has offices in Oregon, Washington, and California. Centennial said it planned no changes in the firm's staff or operations. Co-founder Wallace Harding will remain president and CEO of Harding Fletcher.

— Reuters

"It creates the possibility that they will have to go back over everything and see if they can squeeze out more revenues," said Henry Reumpler, tax lobbyist for the American Bankers Association. The IRS "still doesn't know anybody knows exactly where they stand."

The deal on purchased mortgage servicing rights could be particularly vulnerable, since Rep. Dan Rostenkowski, chairman of the House Ways & Means committee, opposes it.

One item that was still undecided Friday was whether the tax treatment of debt-to-stock conversions for bankrupt companies.

Current law does not tax the income that might be attributable to such transactions, since it helps companies stay in business. However, the committee is considering whether to make the conversions taxable as a means of raising revenue. □

CREDIT RATINGS

The ratings agencies took the following actions last week:

Banc One Corp.: Thomson Bankwatch upgraded the subordinated debt of Banc One to AA from AA-minus.

It said the company demonstrates all of the qualities needed for a high rating, including solid capital ratios, good asset quality, consistently strong earnings, and a dominant franchise.

Bank of Boston Corp.: IBCA raised the holding company's senior debt rating to BBB-plus from BBB, and its short-term rating to A2 from A3. The senior rating of First National Bank of Boston was raised to A-minus from BBB-plus.

IBCA cited Bank of Boston's continued improvement in asset quality and capital levels.

BayBanks Inc.: Standard & Poor's Corp. raised senior debt ratings to an investment grade BBB-minus from a junk rating of BB-plus, and raised the rating of uninsured certificates of deposit to BBB/A-2 from BBB-minus/A-3.

The upgrades reflect improving operating performance measures as asset quality pressures continue to subside. Moody's Investors Service Inc. said BayBanks' asset quality measures have improved, with nonperforming loans down around 40%, but they still compare unfavorably with other New England banks.

First Interstate Bancorp: Moody's Investors Service Inc. raised the ratings of long-term senior debt to A3 from Baa1, and subordinated debt to Baa1 from Baa2. The preferred stock rating was raised to baa1 from baa2.

Ratings for the company's bank subsidiaries were also raised, Moody's cited improving asset quality and strong reserves.

Standard & Poor's Corp., citing the same factors, affirmed its ratings for the bank, but revised its ratings outlook to "positive" from "stable." First Interstate senior debt is rated BBB-plus, its subordinated debt is rated BBB and its preferred stock is rated BBB-minus.

Midlantic Corp.: Duff & Phelps Credit Rating Co. raised the bank's senior debt rating to BB from B-plus, and subordinated debt to BB-minus from single B.

The agency cited Midlantic's progress in raising more than $200 million in common equity, and improving operating earnings, while recognizing the significant asset quality problems that still exist.

PNC Bank Corp. and First Eastern Bank: Moody's Investors Service confirmed PNC's ratings and placed First Eastern's ratings on review for upgrade as a result of the announcement that PNC will buy First Eastern Corp.

PNC's subordinated debt is rated A3, and the senior debt of a funding vehicle, PNC Funding Corp., is rated A2. First Eastern's long-term deposits are rated Baa3, and its long-term debt backed by letters of credit is rated Ba2.

The $330 million purchase will be financed partly by debt, but will not have a big impact on PNC's capitalization, Moody's said.

Signet Banking Corp.: Duff & Phelps Credit Rating Co. upgraded the senior debt rating to BBB-plus from BBB, the subordinated debt to BBB from BBB-minus, and affirmed its Duff-2 commercial paper rating.

Duff & Phelps cited Signet's improved asset quality and profitability, and solid capitalization levels, and said that the recent rapid growth in credit card receivables will be an important factor in assessing the bank for possible future upgrades.

Society Corp.: Duff & Phelps Credit Rating Co. raised the debt ratings of Society Corp. and its major subsidiary bank, Society National Bank, by one notch. Corp.'s senior debt was raised to A-plus from A, and subordinated debt to A-minus from A-minus. Society National Bank's senior debt was raised to A-minus from A-plus, subordinated debt to A-plus from A, and short-term certificates of deposits to Duff 1-plus from Duff 1.

The upgrades reflect Society's strong earnings, solid balance sheet, improving asset quality, and ample reserve coverage.

UJB Financial Corp.: The banking company's credit ratings were raised. The action elevated its subordinated debt and preferred stock to an investment grade Baa3 from junk grade Ba1. Its senior ratings were raised to (P) Baa2 from (P) Baa3, and commercial paper was upgraded to prime-2 from prime-3.

Moody's said UJB has shown improved reserve coverage of problem loans, due to declining levels of new nonperforming loans, extensive chargeoffs, and provisioning against bad real estate and commercial loans over the past three years.

Wells Fargo & Co.: Standard & Poor's revised its ratings outlook to stable from negative, and affirmed its current ratings of BB-minus for senior debt, BBB-plus for subordinated debt, BBB for preferred stock, and A-2 for commercial paper.

The outlook revision reflects the agency's judgment that the chances are lessening that the real estate recession could further damage the long-term prospects of the company. Wells Fargo is weathering the downturn in California commercial real estate markets better than most have been expected, given the severity of the downturn.

Attention: Senior Bank Management

Are you considering a negotiated, direct sale of your non-performing loan portfolio? If so, consider this:

- In the past two years, the best offer on a competitively bid portfolio often exceeded the next highest offer by 5% to15%.
- Every month, new capital sources are entering this market and may be a better buyer for your portfolio than the one you are considering.
- We have always found that a well-managed competitive sale results in the highest price for the seller.

If you would like advice on your portfolio, call the only firm that has handled over $5.5 billion in non-performing loan sales in the past two years.

We have generated offers for non-performing loan pools from over 400 different investor groups. We can market your loans quietly to a select group of buyers or openly to the numerous bidding groups that may have interest in your portfolio.

1st Chicago Arranges $100 Million Chinese Deal

By JAMES R. KRAUS

First Chicago Corp. has arranged a $100 million commercial paper program for China National Chemicals Import and Export Corp., the first Chinese company to venture into the U.S. public debt market.

First Chicago also will act as the issuing and paying agent and depositary and Chase Manhattan Markets Inc., a unit of First Chicago, as the sole commercial paper dealer, the Chinese company announced in a press release.

The Participants

The Bank of China and Credit Suisse are co-arranging. Credit Suisse is also acting as agent and providing letters of credit.

Other participating banks are Italy's Monte dei Paschi di Siena, Germany's Bayerische Hypotheken-und Wechsel Bank AG, and Japan's Dai-Ichi Kangyo Bank Ltd.

Funding for Debt Deals

The funding is being done in the name of Sinochem American Holdings Inc., the New York-based U.S. operating unit of the Chinese government-owned company which will be mainly used for trading transactions.

Sinochem National Chemicals, also known as Sinochem Beijing, is one of China's biggest trading companies, with a turnover of $12.25 billion last year.

Chinese Expansion

The issue comes as Chinese companies are seeking to broaden their international borrowings in order to invest and to expand their operations.

Market sources said several other Chinese companies in the United States are planning to launch U.S. commercial paper programs soon, and are also considering issuing dollar-denominated bonds in the United States. □

Bank Stock Table Explained: The table lists in alphabetical order daily composite stock prices at 4:30 p.m. (unless otherwise noted) for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the market value of all common shares outstanding as of June 30, 1993, the market value cutoff for banks was $75.09 mil, and for thrifts $18.1 mil. **PE** is the ratio of the stock price to the latest 12 months' earnings per share for the stock. **PE**, the latest 12 months' earnings per share for the stock. **PE** is the ratio of the stock price to the latest 12 months' earnings per share for the stock. **PE** is the ratio of the stock price divided by the trailing four-quarter earnings per share, adjusted for latest announced earnings. The ratio is also not used for companies with less than four quarters of data. **Mkt. Cap.** is the market value of the company's stock price to the stock's latest closing price, reported as a percentage change from the previous announced earnings and dividends. **Last** The price at which the stock last traded. **Chg.** is the change in % scales for the day, the latest bid. **52 Wk. Hi** and **Lo** is the highest and lowest price the stock has traded at during the past 52 weeks, not including the most recent trading day. **Highlights** show largest percent gainers/loses in price and two volume leaders. **Most Shares Traded** lists the most active stocks. **Volume as %** compares shares traded on the past day to the average of average shares traded over the past 20 days.

STOCKS

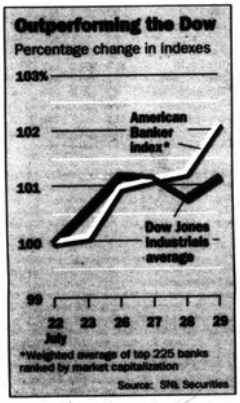
For Once, Profit News Failed to Depress Shares

Continued from *page* 1

trades around 17.

Bank stocks last week were aided by a rallying bond market and a slew of merger announcements, which fueled speculation of other takeovers.

Nearly half of last week's gain in the bank index came Thursday, when the bond market surged. On Friday, bank stocks were off slightly, while the Dow plummeted 27.95 points, to close at 3,539.47.



Banks have locked in solid growth in earnings for at least the rest of the year, according to many analysts. The source: falling credit costs, including loan-loss provisions, and lower expenses in general.

Turnaround Stories

Banks that can benefit the most from those declining costs, so-called turnaround stories, were among last week's best performing banks. Also doing well were the two big trading banks, J.P. Morgan & Co. and Bankers Trust New York Co.

The turnarounds were led by Citicorp and Wells Fargo & Co. – the two bank stocks that analysts either embrace or disdain. Citicorp's shares jumped 3.9%, to $33 on Friday. Wells' shares rose 4%, to $115.75.

J.P. Morgan and Bankers Trust both had record revenues from trading last quarter. Both have the potential for bigger gains in the future. While trading revenue may be unpredictable, those two banks have track records for investors to bet on.

Morgan's shares soared 5%, to $72.75. Morgan shares are now above where they traded at year-end 1991. Bankers Trust shares jumped 3.2%, to $77.625.

Many of the so-called quality banks – those with strong capital and low levels of bad loans – drifted last week. NBD Bancorp and SunTrust Banks, for example, posted little or no gain.

That's no accident, said Thomas Brown, an analyst with Donaldson, Lufkin & Jenrette Securities Co.

"I think this week is indicative of what we will seeing going forward," said Mr. Brown. "A rising tide isn't going to raise all boats."

Mr. Brown believes that for the rest of the year the best-performing stocks will be the turnaround names. These banks will be able to improve earnings, regardless of whether there's a pickup in lending. Citicorp and Wells, along with Bank of Boston Corp. and Shawmut National Corp., are the best bets, he said.

Deal by Norwest

Merger activity came roaring back last week, highlighting the industry's beneficial trend toward consolidation. Norwest Corp. announced a deal to buy First United Bank in New Mexico. PNC bought First Eastern. NationsBank announced a deal to buy $2.3 billion in receivables from a subsidiary of US West.

Speculators are trying to sniff out the next target, boosting shares prices of some small banks.

One example of speculators' attention is Pacific Western Bancshares in San Jose, Calif. Comerica Inc. told money managers last week that it wants to buy a bank in Northern California. Pacific's shares jumped $2, to $9 Thursday. In late afternoon trading Friday, the shares retreated 50 cents.

The recent Texas acquisitions, including First Amarillo by Boatmen's Bancshares, helped spur movement in the share prices of other Texas banks.

Cullen/Frost Bancshares, long thought to be a takeover target, rose $2.25 during the week, to $37.50 Friday afternoon on heavier-than-average volume. Friday, shares of Charter Bancshares in Houston started to rise, gaining 50 cents to $13.

Two takeover targets in New Jersey received attention, Constellation and UJB Financial.

Constellation shares traded at 10.25, up 50 cents late Friday afternoon on heavy volume. As recently as June 28, it was at $8.50.

UJB's shares rose 5.9% last week, to 26.875, on average volume. □

Colonial Buys 2 Offices of Failed Alabama S&L

PHENIX CITY, Ala. — Colonial Bancgroup has purchased two Phenix City locations of First Federal Savings and Loan Association of Russell County from the Resolution Trust Corp.

Montgomery-based Colonial said it assumed about $55 million in deposits and holds an option to purchase about $50 million in loans from the Russell County thrift, which was taken over by the RTC last year.

UST Sells Equity to European Investors

By YVETTE D. KANTROW

European offerings are somewhat in vogue for medium-size banks.

UST Corp., a Boston-based holding company with $2 billion of assets, said it is selling 2.87 million shares of common stock to European investors.

The company said the sale will raise about $22 million, at $8.125 a share, upon completion. UST shares were trading at $9.375 Friday afternoon, down 12.5 cents.

UST, which lost $24.9 million in its second quarter, said the stock was being sold to more than 60 investors. When the deal is completed, UST will have 17.23 million shares of stock outstanding.

European offerings are somewhat in vogue for medium-size banks these days. Both First Eastern Corp., the Wilkes-Barre, Pa., company that recently agreed to be acquired by PNC Bank Corp., and Midlantic Corp., the recovering New Jersey bank company, have tapped foreign markets in the past year.

Neal F. Finnegan, UST's recently appointed president and chief executive, said European deals are often quicker and less expensive than domestic transactions because Securities and Exchange Commission requirements are avoided.

"When you look at all your choices of how you can raise capital, it's a very attractive vehicle," Mr. Finnegan said.

Turnaround Plan

Last month, Mr. Finnegan announced an aggressive plan to return UST to profitability. In addition to raising capital, the program included a drive to put its real estate-related loan problems behind it.

UST took a $42.7 million loan-loss provision in the second quarter – up 36% from the first quarter. The company's reserve at June 30 stood at $74.9 million, or 122.6% of its nonaccruing loans. □

H.F. Ahmanson Issues $250 Million in Preferred

By DAVID SIEGEL

The proceeds may be used for acquisitions.

H.F. Ahmanson & Co. issued $250 million in convertible preferred stock Friday.

The California-based thrift holding company sold five million depositary shares representing series D cumulative convertible preferred stock. Ahmanson may use the additional equity for acquisitions. (See article on page 8.)

6% Dividend Yield

The preferred stock's dividend yield is 6%, and the shares are convertible into common stock at $24.335 per share, a 24% premium over the last sale price of the company's common stock.

The preferred shares are noncallable for five years. First Boston Corp. was lead manager of the offering, which is rated Baa3 by Moody's Investors Service and BBB-minus by Standard & Poor's Corp.

Separately, Colonial National Bank USA, a subsidiary of Advanta, issued $50 million of 10-year subordinated debt Friday through First Boston Corp. The issue was priced to yield 7.11%, 130 basis points over the 10-year U.S. Treasury note. It is rated BBB-minus by Standard & Poor's and Baa3 by Moody's.

Wachovia Bank of North Carolina, a Wachovia Corp. unit, priced $175 million of 4.30% bank notes due Aug. 7, 1995, at par. Goldman, Sachs & Co. was sole manager. The notes yield 17 basis points over comparable U.S. Treasury securities.

The issue is rated Aa2 by Moody's and AA-plus by Standard and Poor's. □

Ex-Banker Settles Insider Trading Suit

Reuters

WASHINGTON — A former group vice president of Procter & Gamble Corp. and a former officer of Star Bank Corp.'s lead bank have settled insider-trading charges stemming from Procter & Gamble's acquisition of Noxell Corp. in 1989.

Malcolm Jozoff, 54, and Ellen Millman, 50, who was vice president at Star Bank in Cincinnati, settled without admitting or denying the charges.

In a civil complaint, the SEC said Mr. Jozoff, head of Procter & Gamble's health and beauty care divisions, disclosed nonpublic information about merger talks to Ms. Millman between May and September 1989.

In several transactions over that period, Ms. Millman allegedly bought a total of 2,700 Noxell shares, earning a profit estimated by the SEC of $23,178 after the merger was announced Sept. 25, 1989. □

Bank of Boston in Credit to Capacitor Firm

NORTH DARTMOUTH, Mass. — Aerovox Inc. said it signed a $15 million revolving credit agreement with the Bank of Boston that expires May 31, 1996.

The credit line, which will finance growth, is at the prime rate and replaces a $9 million demand loan, said Ronald F. Murphy, senior vice president and treasurer of the electrical capacitor manufacturer.

Aerovox also has a term line of credit of $10 million with an equipment financing company. □

AMERICAN BANKER'S

August 2, 1993

MANAGEMENT STRATEGIES

USING INFORMATION TO INCREASE PROFITS

Adaptable Systems Oil 1st of America's Growth

BY BRIAN HELLAUER

FOR MORE THAN two decades, acquisitions have been the name of the game for First of America Bank Corp.

The Kalamazoo-based company began gobbling up banks long before merger mania struck the rest of the industry. It has acquired more than 100 since 1971, when it was chartered as the first multibank holding company in Michigan.

THE BACK OFFICE: SYSTEMS

In the process, it has attempted to stay close to its community banking roots, even while growing from $300 million in assets to more than $20 billion. In addition to its home state, First of America has added banks in Illinois and Indiana.

"We've gone as far as we care to go in Michigan, with one or two exceptions," Richard F. Chormann, president and chief operating officer, said during a recent interview.

First of America's plain-folks approach is evidenced by the building where its top executives work. Instead of an ornate office tower, Mr. Chormann and other managers work out of a compact building whose classical appearance belies its prior life as a YWCA.

"Community banking, I think, is a matter of philosophy, an approach to the marketplace," said Mr. Chormann, 55. "We've centralized most of the functional areas in order to free the bankers and local boards of directors, and have them focused on selling and servicing the customer."

Concerns for both marketing and efficiency have driven First of America's recent consolidation efforts, Mr. Chormann said. The company's efficiency ratio, or noninterest expense as a percentage of revenue, has hovered around 65%, higher than many of its peers.

Stung by some one-time accounting charges, First of America also saw a drop in net income in 1992 to $147.5 million, or $2.46 per share. However, the strong performance of the bank's continuing operation's continued in the first quarter of 1993, when it reported net income of $60 million, or $1 per share, with a return on assets of 1.17% and a return on equity of 17.16%.

Mr. Chormann said First of America's bulging network of more than 550 branches accounts in large part for the company's high efficiency ratio, but he still believes costs can be driven downward, calling a ratio in the mid-50s "doable."

To achieve that sort of improvement would be "a big stretch," said Joseph Stieven, an analyst at Stifel, Nicolaus & Co., St. Louis.

However, Mr. Stieven said First of America could probably bring its efficiency ratio under 60%, which he said would place it in the top 25% of the regional banks he follows.

Mr. Stieven said the bank is "not yet done" realizing the cost savings from two of its most recent acquisitions, Illinois' Champion Federal Savings and Loan in late 1991, and Security Bancorp in 1992.

Another acquisition initially triggered the bank's transition to common systems. At one

First Commercial's Payment Service a Big Hit with Little Guy

BY WILLIAM PESEX JR.

WHEN OFFERING cash management services to local businesses, First Commercial Bank believes that bigger is not necessary better.

The Sacramento, Calif.-based bank is targeting a largely untapped segment of the market – small businesses.

With fee income all the rage these days, many banks are chasing after the large-market and middle-market bastions of corporate America in the hope of producing huge transaction volumes. But this quest has caused many to pass over an important chunk of the market.

First Commercial, with $335 million in assets, has found a way to go after the little guys. The bank offers a cash management product that, among other features, provides small companies with access to automated clearing house services.

"We found a niche in the market with small businesses," said Rebecca A. Reynolds, vice president, senior operations administrator, and compliance officer.

First Commercial is using Maxx-Banker, a complete PC-based cash management product line, which the bank also offers its clients. Marketed by San Francisco-based Maxxus Inc., the system affords small businesses many of the same types of services provided by money-center banks, but at a lower cost.

When First Commercial first opened its cash management program to mom-and-pop shops two years ago, it found the cost prohibitive in light of the meager potential for fee income.

"The cash management service we were offering was expensive and we could only offer it to larger customers with large transaction numbers," Ms. Reynolds said. "We were charging them $1,200 to $1,500 per month."

Today, First Commercial is able to design and offer cash management services to small businesses for as little as $49 per month.

The bank is focusing on solidifying its customer base and shoring up profitability. Hit hard by the weak West Coast economy and problem real estate, the bank posted a $327,000 loss in 1992, and has placed increased emphasis on serving its customers.

"We've given our customers their own bank branch at their desk," Ms. Reynolds said. "The system allows us to provide our small to medium-sized customers with services normally provided to the biggest firms; to manage their business portfolio and see how much they have on a daily basis."

The cash management system is modular in design. Modules include balance reporting, account reconciliation, stop payments, book transfers, and electronic mail.

The key component for many of First Commercial's small-businesses clients is the MAXX-ACH module. The microcomputer-based unit allows banks to offer automated clearing house origination capabilities to a broad customer base. It gives clients access to a full range of cash management tools, from payroll to more sophisticated strategies, while sparing the bank the high cost of developing hardware and software.

"It's opened a new market for banks and small businesses that they haven't had opened to them before," said Blake Williams, vice president at J.D. Carreker and Associates Inc., a payment systems consultancy in Dallas.

That's certainly true for the bank. First Commercial gets access to new fee income and account relationships.

"It allows us to get our foot in the door with companies," Ms. Reynolds said. "It's a domino effect. We help companies out with direct deposit and we get access to their customers, market share, and fee income."

So far First Commercial has signed up 45 local companies for its automated clearing house services, which includes employee expense reimbursement, electronic payment of taxes, automated collection of payroll processing fees, and collection of payments, fees, and dues.

For small businesses, offering ACH helps to develop and strengthen customer relationships by providing cost effective solutions for their customers' funds transfer and cash management needs.

Furthermore, smaller companies – many of whom could not offer ACH services before – no longer have to turn away customers and can compete with larger companies.

"It's made [our customers] more competitive," said Monica Darling, assistant manager of the California Pacific Federal Credit Union.

The credit union, based in Pleasant Hill, Calif., provides direct deposit of payroll for two dozen service stations and their 1,300 employees.

"To our customers paperwork is a real problem and ACH cuts out another chore for them," Ms. Darling added.

With $2 million in assets and a small staff, Pacific Federal lacks the resources to support its own automated delinquency notification system and previously had to track accounts manually.

But with MaxxBanker, the credit union is able to automatically download account balance and activity records. Therefore, the system saves Ms. Darling and her staff valuable time and energy while reducing risk.

The bank designs and offers cash management services to small businesses for as little as $49 a month

"ACH is cheaper for firms to use and much safer," Carreker's Mr. Williams said. "If a company can take in less checks and automate the payment collection process they can avoid risk."

Another user is Life Inc., a nonprofit social services agency based in Sacramento. It administers social security payments for 450 individuals who are unable to manage their own money. Life and its three employees depend on First Commercial's cash management offering to serve their customer base.

"For a company our size, having a way to move and account for money without dealing with checks has been a lifesaver," said Tracy M. Stein, director of financial services for the agency. MAXX-Banker has saved Life a healthy chunk of money. Without automated clearing house capabilities, the agency would have to cut and distribute about 3,000 checks per month. Armed with the ability to transfer funds electronically, Life is able to keep staffing and costs to a minimum. The system also enables Ms. Stein to download account information onto the PC, significantly reducing the amount of time it takes her to maintain records.

Ms. Stein has also found the balance reporting module useful. MAXX-Banker includes a wide variety of on-line inquiry and reporting options.

First Commercial is currently setting up its cash management services in eight new member companies and negotiating deals with several others.

"We're giving our customers what they want, regardless of their size," Ms. Reynolds said. Sometimes good things come in small packages. □

Shirley Burman, Richard Steinheimer

THINKING SMALL: First Commercial has signed up 45 local companies for its automated clearing house service. "It allows us to get our foot in the door with companies," says VP Rebecca A. Reynolds.

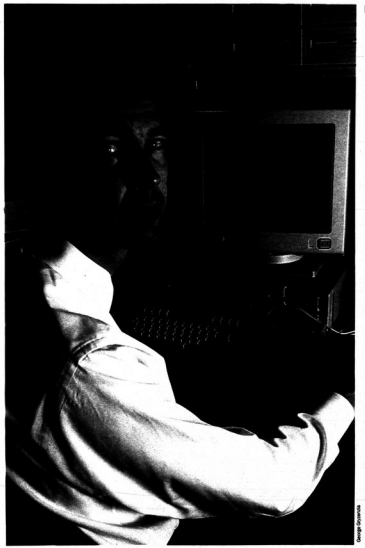
Consumer Banking: Data Base Marketing



George D'Amore

New Weapon Puts Old Kent on Target

BY BRIAN HELLAUER

SCOTT D. NELSON doesn't look like a guerrilla.

Actually he looks like a banker, more precisely the vice president of market research at $9.1 billion Old Kent Financial Corp., Grand Rapids, Mich.

Still, Mr. Nelson lists guerrilla marketing as part of the support his department provides to Old Kent's network of 213 retail branches in Michigan and Illinois.

His preferred weapon: a comprehensive data base that seeks out attractive targets for direct marketing campaigns. Old Kent relies on these campaigns to maintain its customer base and add to its retail lending portfolio.

"Technology is the great equalizer," he said. "Whether it's in Chicago, where we're a gnat on the back of First Chicago, or in Gaylord [Mich.], where we have a 70% market share, I can use my technology to be smarter, faster, and more precise than they are."

Old Kent also has become something of a direct mail guerrilla, judging from its heavy volume. The bank's direct mail count went from zero in 1991 to more than one million pieces in 1992.

"Most financial institutions realized about five years ago that marketing is more than punch and cookies," said John Landgraf, president of Spatial Decision Management, a Windermere, Fla., firm that specializes in data base marketing.

That realization, Mr. Landgraf added, coincided with the rise of bank marketing systems that ran on personal computers.

"These systems do most of the marketing that banks need," he said. "The biggest problem now is coping with the staggering amounts of data, both internal and external, that are available."

As in many other businesses, bankers often have a lot of information about their customers, but no way to conveniently collate it and put it to use.

Take mortgage applications. "You bare your financial soul to the bank, they deign to give you this mortgage, then they take the application and throw it in a box," Mr. Nelson said. "Well, you just told them most of your significant financial assets and liabilities. It's a gold mine for marketing."

Old Kent recruited Mr. Nelson from Household International, a financial services firm renowned for its marketing prowess, to open such untapped veins. One of his mandates at Old Kent was to update its customer data base, commonly called a marketing customer information system .

In 1992, the bank scrapped its existing system, replacing it with one from Harte-Hanks Data Technologies, Billerica, Mass. "We switched because of their back-room expertise," said Mr. Nelson.

BOTTOM LINE WARY: Old Kent Financial Corp. market research VP Scott D. Nelson says he wants "to make sure I don't tank the profitability of a product because of the work I'm doing."

When updating the customer information system, the bank provides Harte-Hanks with a copy of its entire customer data base. The company extracts the relevant marketing information, formats it, and forwards the data to Old Kent on a digital audio tape, which can store more than two gigabytes of data.

The tapes update the customer information system, which runs on a Sun Microsystems Computer Corp. SparcserverTM. Marketing department users access the system over a local area network.

Complementing the information system is a broader demographic data base from Claritas/NPDC, Alexandria, Va. These data assist in identifying gaps in Old Kent's market penetration.

The research staff then performs what Mr. Nelson calls "the slicing and dicing, to find out what's really going on," alluding to standard statistical methods of analysis.

Old Kent merges its segmented customer information with the products it wishes to push. This information is placed on a matrix, which serves as the basis for mailings.

"Right now we're in a loan acquisition mode, so the matrix is skewed towards loan products," said Mr. Nelson.

For a home equity line of credit promotion, for example, the bank may choose to mail to homeowners older than 35 who have an existing loan relationship.

When reviewing the results of the promotion, the bank may find that "over 35 doesn't seem to predictive of anything, so that'll drop," Mr. Nelson said. "But the presence of two or more children does seem to make a difference."

In that fashion, mailings can be more finely targeted to groups that will respond.

"There was some concern that we were going to inundate our customers with junk mail," Mr. Nelson explained. "So we take it one step at a time."

Each mailing, he says, must pass through 149 steps before it reaches the post office. It also must be approved by a direct-marketing quality team, which includes employees from the branches and the affiliates.

Once a mailing is approved, the data is electronically forwarded to the bank's direct mail house in Virginia, which maintains its own copy of Old Kent's data base. It then completes the mailing using Michigan and Illinois postmarks to create a local feel.

With each campaign, the researchers also provide lists to branch managers for voluntary telephone follow-up. "The smart managers will call," Mr. Nelson said. "We've found very good response to customers' being contacted by their branch people. On some pieces, we double the lift [success] rate by doing telemarketing."

Response rates aren't as important to Old Kent and Mr. Nelson as acquisition costs.

"Different products have different acquisition costs," Mr. Nelson explained. "I want to make sure I don't tank the profitability of a product because of the work I'm doing."

The rule of the thumb for Old Kent is that the cost of acquiring customers for a given product should not exceed one-third of the first year's incremental profit of that product.

That equation is clearly realized in large markets. In cities like Chicago, "I can use my guerrilla marketing through matrix mail to come in at a much lower cost, without spending beaucoup bucks on WGN-TV and the Chicago Tribune," said Mr. Nelson.

The bank's direct mail count went from zero to more than one million pieces in one year

He also said Old Kent's approach can be effective against the reckless pricing that occurs when competition becomes heated. "It's almost a counter-stupidity strategy," Mr. Nelson noted. "We're not going to compete with them on the basis they're competing [price], but use our system to get into these households and retain those relationships."

While data bases such as the one Old Kent uses are intended for larger institutions, smaller banks are not shut out. Mr. Landgraf, the consultant, said that marketing customer information systems and geographic information systems designed for PCs are both inexpensive and effective.

With technology continuing to act as the great equalizer, it's clear that future marketing skirmishes will be fought door-to-door. □

Consumer Banking: Mortgages

GE Capital Program Helps Small Bank Compete in Mortgages

BY WILLIAM PESEK JR.

IT TOOK 65 YEARS of writing home mortgages, but Union National Bank of Texas, San Antonio, has finally found a way to move into the secondary market.

The $257 million-asset bank recently joined a national online network that helps smaller banks compete in home mortgage lending.

The program, called Residential Express, allows Union National to offer competitive fixed-rate home mortgages along with more than a dozen other financing options.

A division of GE Capital Mortgage Services Inc., Residential Express has opened up opportunities at Union National.

"The program allows us to offer products that for a bank our size would otherwise be unavailable," said S. Bradford Sledge, senior executive vice president.

Through Residential Express, Union National offers more than a dozen types of mortgages

Union National's $40 million mortgage portfolio is composed primarily of adjustable-rate mortgages and short-term loan products. This mix leaves the bank relatively well insulated against a rise in interest rates, but ill-positioned to offer fixed-rate loans.

By participating in Residential Express, the bank can originate long-term, fixed-rate mortgage loans at competitive rates, at the same time limiting risk by selling the loans on the secondary market. GE retains servicing rights on all loans originated through the program.

"There's a need for programs like this in smaller banks because most cannot afford to carry any significant amount of fixed-rate mortgages on their books," said Suzanne F. Donner, a principal at Donner & Associates, Atlanta. The financial services consulting firm specializes in consumer banking.

"Most community banks and smaller thrifts have a limited amount of mortgages they can offer. This program gives them the capacity to offer a much broader range of mortgage products," Ms. Donner said.

Through Residential Express, Union National offers more than a dozen types of mortgages, from simple fixed-rate mortgages to adjustable-rate mortgages to balloon mortgages, with a variety of terms.

GE Mortgage provides the underwriting and document preparation and provides the up-to-the-minute computer online system used by the bank.

The software allows mortgage counselors to visualize a wide variety of scenarios for customers

Union National's customer service representatives accept the mortgage applications, then transmit them electronically to be processed and underwritten.

At the heart of the program is sophisticated loan origination software.

Residential Express' proprietary loan origination software provides the bank's customer service representatives with loan prequalification and application analysis and supplies immediate feedback about underwriting considerations.

The software's graphic capabilities let Union National's mortgage counselors visualize a wide variety of mortgage scenarios for its customers, including rates, points, down payments, and repayment schedules, thus making loan origination easier.

"The software speeds the loan process and gives banks greater accessibility," said Ray Sims, president of Residential Express. "Banks can dial in 24 hours a day and get the status of a loan."

Within three months of introducing the program, Union National had approved 200 more loans than it normally would have, said Mr. Sledge.

Mr. Sims said the program was set up to provide community- and minority-owned banks a better means of serving their customers, since the high costs of operating a mortgage department that sells to the secondary market are often prohibitive. As a result, these institutions tend to offer products with shorter maturities, adjustable rates, or higher down payments.

"Most of these lenders require 20% or 30% down," Mr. Sims said.

Such shortcomings can send some regular customers to other lenders that offer the gamut of mortgage products.

"But with Residential Express, they are qualified for GE's national insurance. With as little as 5% down they're putting people into homes," said Mr. Sims.

This was certainly part of Union National's decision to join the mortgage program. When the bank started Residential Express in March, its intention was to ride an upswing in the housing market. With both new home construction and existing home sales growing in the area and mortgage rates at historically low levels, the bank hoped Residential Express would help it grab a bigger piece of the lending pie.

"The home mortgage market is more important than ever now, and we're ready to serve both new home buyers and homeowners who want to refinance with whatever mortgage package is right for their needs," Mr. Sledge said.

As he sees it, the program makes Union National more competitive because it can provide the best product based on the needs of the customer at an attractive price.

"We can change the variables of the mortgage, and then [customers] can 95% qualify for a loan on the spot," Mr. Sledge said.

Union National is also saving money. Aside from eliminating some of the interest rate risk and liquidity problems inherent in offering residential mortgages, the program allows the bank to actively participate in home lending without adding tremendous staff and overhead to its mortgage department.

For GE Capital, the payoff comes from new relationships. "Our profitability is in the servicing of mortgages. Adding more accounts is economically favorable for us," Mr. Sims said.

For the customer, there is no fee required to prequalify for a particular mortgage type and size. However, there is a single $350 application fee, which covers the cost of credit checks, appraisals, and origination fees.

Customers pressed for time can also apply over the telephone. A mortgage counselor at Union National asks for specific information about income, debt load, and type of loan required in order to first prequalify the customer for the size of loan he would be eligible for. This process can be completed in minutes.

If the customer has a specific property in mind or wants to refinance a current mortgage, the customer service representative can then proceed with the loan application, credit check, appraisal, and other steps involved in approving the loan.

As Mr. Sledge sees it, Union National and its 167 employees have finally perfected the art of offering competitive mortgages to the customer base it has serviced since 1928.

"We're now offering them the best loans they can get anywhere," he said. □

BRADFORD SLEDGE said Union National wrote 200 more mortgages than usual in the first three months of the program.

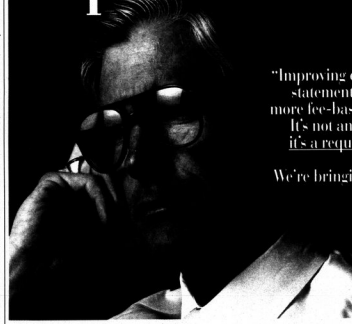
Improve Your Profits.



"Improving our income statement means more fee-based income. It's not an option– it's a requirement."

We're bringing it to SEI."

It's very basic. To keep your profits growing, you need more fee-based income. And to stem the outflow of your depositors' money, you need investment programs.

And you need those programs now!

SEI can deliver a variety of investment programs and services for your individual and corporate customers. Through your branches, brokerage, private banking, and trust departments. One or all.

And we'll help you with all the program components – the products, the marketing, the distribution, and the technology you need to support these programs cost-effectively.

We'd like to be your partner in building your fee-based income. Because we both have the same objective for your bottom line: Improve Your Profits!

About SEI

SEI has been dedicated to creating comprehensive investment programs for over two decades, focusing on the following areas:

Investment Products and Programs ($35 billion in assets): mutual funds, proprietary funds, annuities, and bank-wide investment programs.

Full Planning and Consultation Services: marketing planning, program definition and implementation, as well as full training and sales support.

Investment Management Technology: trust accounting, defined contribution recordkeeping, mutual fund accounting, and retail support systems.

For more information, call 1-800-DIAL-SEI (342-5734).

Trust and Investments: International Trade

Trader Workstation Propels Barnett onto Global Stage

BY WILLIAM PESEK JR.

BECOMING A BIG player on the international banking scene is no small feat.

But for Barnett Banks Inc., it was simply a matter of moving over to a new platform.

Last May, the Jacksonville, Fla.-based bank holding company implemented a trade services platform to help it react faster to the demands of its international trade customers.

Barnett is using its new client-server platform, called MicroTradeLine, to process all letters of credit and international collections for its 33 affiliate banks.

The system will reduce processing time and allow Barnett to target a greater variety of international trade customers.

Developed by Arlington, Va.-based American Management Systems Inc., the microcomputer-based system provides the same functionality as its mainframe counterparts with the added benefits of a workstation environment.

"We invested money in the project to become a major player in the international market," said Charles Piazza, vice president and manager of international operations at the $38 billion-asset bank. "We sensed a vacuum in the market and we saw the opportunity to expand into it."

For Barnett, the system integrates and automates all phases of the bank's trade services, including receipt of incoming international funds transfer (SWIFT) messages, customer applications for these services, back-office accounting and processing, and transmission of outgoing documents and messages.

Before converting to the new system, Barnett used a standalone, PC-based product and churned out letters of credit in about 24 hours. Now, Barnett is routinely generating letters of credit in less than two hours.

Industry observers agree that moving from a host-based system to intelligent workstations can make all the difference when trying to compete for a chunk of the international trade market.

"The volume and velocity of change in host-based systems is paralleling what's happening with PCs," said William M. Arnold, a principal at Towers Perrin, Atlanta. "They put an amazing amount of processing power and control on someone's desk. That's a change that has been nothing less than dramatic."

Barnett continued to build on its strong capital ratio in the first half of 1993. The bank posted net income of $104.2 million in the second quarter of 1993, as compared to a $275 million gain for all of 1992. Second quarter earnings represented a 1.11% return on average assets and a 15.51% return on average shareholders' equity.

The system will reduce processing time and allow Barnett to target a greater variety of international trade customers

Barnett should be able to continue its strong performance, due to advances in technology and the resulting quicker delivery of products and services.

Perhaps the most important benefit of the new system is that it allows Barnett to target companies of all sizes. Now the bank's trade customers run the gamut from giant pharmaceutical and commodities firms to shrimp fishermen.

"Our focus is from small businesses all the way up to the big guys, but it's the small business that we really need to service," said Mr. Piazza, who oversees credit, collections, cash letters, foreign exchange, and notes processing, as well as back office support.

By allowing Barnett to process letters of credit and collections faster, addressing the concerns of smaller customers has been simplified – not to mention profitable.

"The net effect for a customer must be positive," Mr. Piazza said. "This is a fee-based business and to convince customers to pay our fees we have to provide them with great service."

Barnett Banks Inc.

OFF PAPER: "This system will eventually allow me to work in a paperless environment," Barnett Banks International operations VP Charles Piazza says of MicroTradeLine.

Besides making money, the system also saves it. With MicroTradeLine, Barnett avoids the overhead involved in supporting a mainframe system and allows the bank to operate without relying on paper.

"We're moving toward a system that has little or no operator intervention," Mr. Piazza said. "This system will eventually allow me to work in a paperless environment with electronically sent messages."

MicroTradeLine has two major components: a letter of credit system and a collection processing system.

The letter of credit component of the system automates all transmissions associated with commercial and standby letters of credit, reimbursements, and bankers' acceptances. The system has ultimately enabled Barnett to tailor trade services products to individual customer needs, improve operational control, and reduce cost.

The collection processing system provides support for inward and outward presentation of collections and direct sends. It supports the collection process whether a bank is the remitting, collecting, or presenting institution.

Barnett has also found MicroTradeLine to be a powerful marketing resource.

"We invite our customers in and we provide a demonstration of the new system. An exporter can come in and look at what we have and see the value," Mr. Piazza said. "Any time you save your customer time and money, he's going to be happy."

Barnett's system, a fully distributed client-server application for processing letters of credit and international collections, runs on an OS/2 local area network in Jacksonville, and supports operations centers there, as well as in Miami and Tampa, Fla.

MicroTradeLine can operate on any IBM-compatible PC in the OS/2 operating system. The mainframe portion of the system operates on IBM 3090 and larger machines.

Mr. Piazza looks forward to the day when his new trade services platform is armed with imaging capabilities. American Management Systems is trying to come up with a way for banks and their customers to scan documents, thus creating a true paperless trade culture, said Kurt E. Cavano, senior principal.

Mr. Arnold at Towers Perrin is also of the thinking that more is yet to come from trade-savvy banks.

"Putting power at the point of decision is very powerful and will forever change the landscape of trade," he said.

Looking ahead, Barnett Banks believes that customer service and operational efficiency will make it world class in international trade.

"Our new platform has made us a bigger bank and a more important one on a world scale," said Mr. Piazza. □

The Back Office: Systems

Centralized Systems Help to Smooth First of America's Growth

Continued from page 1A

time, Mr. Chormann said, "common data processing won't really an issue," because priority was given to more basic operational tasks such as restructuring pricing schemes and standardizing loan policies and audit techniques.

As it continued to acquire banks, First of America decided to give them "the capabilities we had developed, namely products," Mr. Chormann added.

That approach was solidified when the company acquired New Century Bancorp in 1986.

"It was an interesting partnership since as the acquiring bank, we were adopting . . . primarily the systems of the acquired organization," said Peter Purcell, a senior vice president at First of America Services, the company's technology arm.

From a systems standpoint, the centerpiece of that acquisition was New Century's deposit accounting system, which was developed by Hogan Systems Inc., Dallas.

At the time, First of America had been pondering whether to standardize on the Hogan system or another package. The acquisition swayed things in Hogan's favor.

"We got a lot of bang for the buck as well as a jump start by taking the Hogan approach," said Mr. Purcell.

Prior to the acquisition, First of America was running six deposit accounting applications, as well as maintaining service bureau relationships for a number of its affiliate banks. By standardizing on a single system, Mr. Purcell said, the bank was able to reduce its maintenance costs while significantly increasing the number of products it offered to customers.

Former New Century employees worked on First of America's conversion to the new system. Then the services unit created two distinct programming staffs, one for standard systems and programming and another for conversion development.

This configuration, said Mr. Purcell, helped First of America maintain an even keel during a spate of successively larger acquisitions that continued through 1992.

"We said, 'let's track the number of hours to do a conversion and the number of hours we spend post-conversion fixing problems,'" Mr. Purcell recalled. "Just by managing this process, we were able to dramatically decrease these numbers." Conversions are now perceived within the organization "as a nonevent."

Although the Hogan deposit system had a reputation as a software only for the biggest banks, First of America found it supported the demands of its community banking structure.

"Even though we have common systems, the community bank environment requires different pricing," said Donald J. Kenney, senior vice president of the holding company and chairman of the technology unit. "Some banks with a centralized structure have an approach to common systems of developing one product and getting it in plain vanilla fashion."

With First of America's accounting and delivery systems, Mr. Kenney added, "we may put the product out, but when it hits the street, it may have five or six different flavors, depending on how the local bankers want to present it and price it." He added that the system can support as many as three separate pricing scenarios for different branches within a given affiliate bank.

After more than five years of conversion efforts, the streamlining culminated with the consolidation of First of America's data processing functions in a new data and operations center, which opened last year.

Affiliate banks within Michigan and Illinois now look like single entities to their customers – meaning a Kalamazoo First of America customer can cash checks and obtain account information in Detroit.

With all of its acquired banks now running on the same core processing systems, the bank estimates it has created $50 million in improved operating efficiencies and customer service opportunities.

"I think now we have the foundation of the company solidly in place," Mr. Chormann said. "Now we're in a position to convert any future acquisitions quickly."

With that task completed, "we're starting to look at being able to leverage the capabilities of the standard systems we have in place," Mr. Purcell said.

Mr. Purcell said that rather than modifying purchased software such as the Hogan system, First of America tries "to add value around those core systems."

For instance, the bank has given considerable attention to its branch automation system, which uses a combination of personal computers as workstations, connected over a local area network to NCR Corp. computers running the Unix operating system.

"We put that branch automation system out there several years ago knowing that there was going to be a second development of software," said Mr. Kenney. In the first phase, the bank acclimated branch workers to the new hardware and to using the system as a selling tool.

> First of America's efficiency ratio has hovered around 65%, higher than those of many of its peers

The first version, introduced in the late 1980s, "was a sales assistant. The new version incorporates product delivery but also controls the sales process," Mr. Kenney added.

"We've learned that what you need to look at is a more natural sales flow," said Mr. Purcell. "You collect the information and integrate that into the sales lead-throughs." In other words, branch personnel no longer need to follow a fixed script when working with a customer, but can use the system as needed.

The fine tuning of the branch automation system dovetails with First of America's "focus on selling the customer and servicing the customer," according to Mr. Chormann. "You don't maintain a long-term advantage with products alone, because this is a copycat business."

The bank has adopted a number of programs for training and tracking its efforts in sales and service. Such programs are attended by non-sales types, as well as branch and marketing workers.

Those employees are also looking for more products to sell. Like many banks, First of America is looking to augment its menu of financial services. Its Parkstone family of 14 mutual funds, introduced in 1988, were among the first proprietary mutual funds to be offered by banks. The company is currently the nation's sixth largest provider of proprietaries. It also added $600 million to its credit card portfolio in the Security Bancorp acquisition.

"We just have to be able to vend more products through our stores," Mr. Chormann explained. "By the end of this decade, I think the balance sheet and income statement of the typical community bank is going to look a lot different."

Technology is going to drive the product delivery more efficiently than we are doing it today," he added.

With movement on the M&A front quieted for the time being, First of America Services has turned its attention to cutting costs and investigating areas for future development.

"There's been a renewed focus on information technologies," as the backlog of conversions was completed, Mr. Purcell said. Those technologies include such applications as electronic mail, profitability analysis, and executive information systems.

Mr. Purcell said another challenge within the technology unit has been to keep a lid on core production expenses during a period when mainframe computing requirements continue to grow at a rate of 20% to 30% annually.

The possibility of off-loading applications from the mainframes is being evaluated. The bank currently outsources its mortgage and credit card processing, as do many others. It has also developed a client/server-based trust application, using the OS/2 operating system of International Business Machines Corp.

Despite his roots as a hard-core technologist – he began programming professionally at the age of 16, when he was hired by Mr. Kenney at the Federal Reserve Bank of Boston – Mr. Purcell is no fan of technology for its own sake.

First of America's latest version of its branch automation system eschews the graphics-oriented, point-and-click user interface of the latest PC operating systems like Microsoft Corp.'s Windows in favor of a more traditional approach. The reason: The hand-eye coordination needed to control a mouse can interfere with the eye contact needed to sell a customer.

"We try to stay away from the flashy stuff," Mr. Purcell explained. "You're on lunch hour, opening a checking account, you don't want to watch cartoons.

"Too many things are done because of technology fever," he added.

Given its deliberate approach, First of America probably doesn't have to worry about that malady sweeping through its organization in the foreseeable future. □

Our structure fits your structure.

Fiserv data processing solutions are already working in over 5,000 financial institutions. Worldwide. Because we're structured to offer multiple solutions, ranging from in-house, service bureau, resource or facilities management to performance analysis, electronic banking, item processing, business forms and card management.

We're the fastest-growing independent data processing company focused on the financial industry. And with more than 5,100 dedicated employees, Fiserv has earned one of the highest client retention rates in the industry. We concentrate on solving problems, just like yours.

Legacy Systems: The Tireless Workhorses of an Industry

EXECUTIVE VIEW

By Diogo Teixeira

LEGACY SYSTEMS are a vital but maligned component of bank technology. They are responsible for most of the industry's transaction processing, the maintenance of core accounts, and possibly 90% of debit and credit posting.

Cumulative investment in legacy systems probably exceeds $100 billion. Decades of features built by tens of thousands of programmers have made these systems the repository of knowledge on how to process banking transactions.

At the same time, legacy systems are far more costly, more inflexible, and less useful than they would be if they were rebuilt using new technologies. Yet progress in converting legacy systems to more modern technologies has been agonizingly slow. Less than 0.1% of the industry's mainframe systems have been "downsized," one high-potential approach to converting a legacy system.

Several well-known examples of attempts to modernize have failed spectacularly, such as Westpac's $100-million-plus investment in a set of new core banking systems. Even successful examples of modernization, such as State Street's Horizon system, have not spurred movement in this direction.

No wonder the subject creates such frustration.

We define a legacy system in terms of function. If it is a very important system to the bank and is difficult to work with and change, then it is a legacy system. In practice, most are older and likely to be mainframe-based. Many are written in older languages (generally COBOL, but in some cases assembly language) and run on IBM mainframes. They are usually large systems and often have millions of lines of code.

Specific problems with legacy systems include:

- There is a lack of documentation because the system has been changed and enhanced many times over the years. Usually no one has kept track of all the changes.
- The original design has degenerated from one that was elegant or at least sensible to one that no longer makes sense.
- The architecture may be 25 years old and wildly out of sync with today's environment.
- There is a long backlog of system enhancement requests. There may even be an "invisible backlog," which is an accumulation of user needs that have not yet been turned into requests.
- Adequate functionality may be lacking, and because of the cost and time delays, may not be restored anytime soon.

For example, one major bank has a wholesale business that is completely dependent on a very large legacy system. The system was purchased six years ago. The original vendor's financial difficulties have severely reduced its ability to provide promised enhancements. The user has consequently paid millions each year to an outside systems integrator to enhance the system.

Despite the problems, legacy systems offer benefits too. The principal ones include:

- They already exist. At the end of the day, this is the reason why we continue to use them.
- They may have a lot of functionality with numerous options, lots of reports, high configurability, built-in controls, industrial-strength standards, and high security levels.
- They can be very sophisticated in servicing the value-added business needs that derive from today's complex financial banking world.
- They can generally handle high volumes efficiently, a business requirement that in some cases would argue against conversion to a smaller platform with less throughput.
- They have generally been proven to work, through years of experience and testing. Moreover, the interfacing of each legacy system to that bank's other systems (including other legacy systems) is already accomplished.

Legacy systems can be extremely valuable, and many banks depend heavily on them. And some vendors' systems with legacy attributes are doing very well in the marketplace.

Computer Power Inc., for example, is essentially one high-throughput mainframe system with extensive functionality. About 42% of the country's one- to four-family mortgages are processed on this system. The system has been well-maintained, since it is such a valuable investment, and may or may not be considered a legacy system.

Yet, it is a COBOL system, with very old roots. It is hardly new technology. Begun in 1969 for a very modest investment, this system – and its customer base – was last sold in 1991 for $300 million.

The 15-year-old Hogan system is another example. As a package, it has some of the attributes of a legacy system, such as being written in assembler and COBOL, with a mainframe orientation and confidsparability. Yet Hogan is doing better today than ever. Profits were up 100% in its latest fiscal year, and the company had no debt.

Hogan's IDS package for demand and time deposit accounts has 110 licensees worldwide and is a leader in the bigger bank marketplace. In short, maturity does not necessarily negate value.

The banking industry must learn to live with its legacy systems. Progress in eliminating them through various methods has been agonizingly slow. About 3% to 4% of the total number of legacy systems can be "resolved" yearly. By "resolve" we mean either the complete elimination of the system or a porting, conversion, or reinvestment in the system so that it is much easier to deal with and maintain and therefore no longer deserves to be called a legacy system.

At the same time, some legacy systems are becoming larger and are doing more of the industry's work. They may even become, like the CPI system, irreplaceable industry assets.

Nevertheless, we predict that the number of legacy systems will decline. The following reasons are leading to this decline:

- Acquisitions. Generally, an acquired bank loses its technology and any legacy systems it has. However, the acquiring bank's legacy systems usually just absorb the workload of the resolved systems.
- Conversions. Purchases of packages (like Hogan) or conversions to third-party processors (like CPI) to replace an in-house legacy system generally mean that more accounts are being concentrated in fewer legacy systems.
- Restructuring technologies. Software and methodologies are available today that, in theory, allow older code to be "restructured." Depending on the circumstances, the benefits could range from documenting the old code to actually generating new code that is more efficient and maintainable. Generally, usage by banks has been low because these techniques haven't been proved effective with large transaction processing systems.
- Client-server technologies. Distributed platforms like Unix, OS/2, or Windows NT will improve with time and should become more capable of replacing legacy systems.
- Reinvestment. An increased rate of reinvestment in new systems, fueled by higher industry profitability, will also help.

Thus, we estimate that the number of legacy systems will decrease because of these factors at an accelerating rate into the next century. Today there are about 5,000 legacy systems in use in U.S. commercial banks. We predict that by 1995, that number will be reduced to 4,650 and by the year 2000, U.S. commercial banks will have only 3,410 legacy systems. In the year 2005, there will be 2,010 legacy systems; in the year 2010, that number will drop to 1,030; and by the year 2015, there will only be 480 legacy systems still in use in U.S. commercial banks.

It is worth noting that many of today's newer systems may be completely outmoded by the year 2015 and may well be considered "legacy" under the standards of the future. We are used to saying that all new systems are obsolete the day they are built. But perhaps the moral of the story is that technical obsolescence, in the form of today's legacy systems, does not mean of no value.

Banks must therefore plan a future for their legacy systems. The first step is to determine, as part of the strategic technology planning process, which of a bank's legacy systems are destined for survival. The objective is to rank and prioritize them.

The second step is to install both front and back ends around the legacy systems that are earmarked for survival. Many legacy systems are worst in their inquiry function and their inability to give bankers cross-customer data drawn from multiple systems. The front ends, built using networking technologies, isolate the legacy system and greatly improve the ability to keep using it. The back ends allow better manipulation of decision-making data.

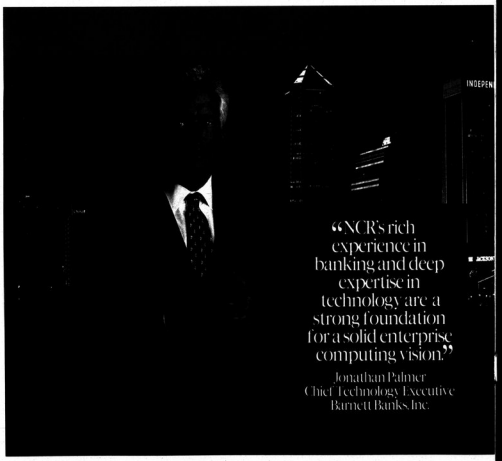
The third step is to carefully add new products or services to the surviving legacy systems. These additions must be driven by the needs of the business and be capable of sustaining reinvestment.

Eventually, the legacy system can be ported to a client-server technology, even though this may not occur until well into the next century.

The bottom line is to move carefully. Planning for the future is essential and this planning should be neither utopian (get rid of all the legacy systems) nor myopic (they'll last forever). The key, as usual, is informed evaluation and decision-making. □

Mr. Teixeira is president of the Tower Group, a consulting firm in Dover, Mass.

NCR's Financial Enterprise Architecture.



Delivering Business Solutions Across The Enterprise.

A strong foundation may, indeed, be your most important consideration as you move to bring your enterprise together.

NCR can provide the foundation, in the form of Financial Enterprise Architecture (FEA), an open, cooperative environment that allows you to take your existing information investment and build it into a highly competitive business solution.

In effect, FEA becomes a blueprint, with you as the architect and NCR as your strategic partner, there to guide and support you as you shape your own enterprise vision.

FEA provides solid building blocks of advanced technology that can be layered to build innovative and customer-responsive solutions. Solutions that can deliver information in all forms to those points in the enterprise where and when it is needed.

Simply stated, NCR's Financial Enterprise Architecture is the means to enable new levels of service, support better decision-making and fundamentally change the way banking operations are performed to make your bank more competitive.

Find out more by contacting your NCR representative, or phone 1-800 CALL NCR, for a copy of our extensive Financial Enterprise Architecture brochure.

The Back Office: Systems

WHAT DO YOU TAKE INTO CONSIDERATION when purchasing and upgrading office automation equipment?

JANE ELLEN RAWDON
Vice president
Community Bank of Germantown
Germantown, Tenn.

THE OFFICE AUTOMATION SOFTWARE we use needs to be user-friendly. We have tried to establish a standard so that everyone in the bank is using the same software. That makes it easier if an employee moves to a different position.

We have 120 employees at eight locations.

Although we do not deal with software manufacturers directly, we have two or three vendors that we use a lot and when software is upgraded, we will work out a deal where we will buy a number of copies of an upgrade at a reduced price. In some cases, we may choose not to upgrade.

We were a DOS-only operation, but now that Windows has gotten so popular, we are rethinking that standard. I don't know if we'll be moving entirely to Windows as a standard. Eventually, I expect we probably will change our standard to either Windows or OS/2. ■

JOHN L. COOPER
Senior vice president
Liberty Bank
Oklahoma City

WE LOOKED AT HOW THE SOFTWARE integrated into our overall technology and information strategy. We looked at how it fit into our client-server technology, how it interfaced with our common graphic interface, how it worked on our network.

We use a whole array of office automation products from Microsoft: Microsoft Word, Excel, Powerpoint.

We operate in a Windows environment. We are getting as far away from DOS as possible. We think Windows is more user-friendly, requires less training, and now the tools and products are being developed to support Windows.

We also have a product that distributes upgrades on all this software to all of the PCs on our network automatically. ■

PATRICK RIELLY
Division manager
Key Services Corp.
Albany, N.Y.

WE'VE APPROACHED IT FROM TWO different angles. We look at cost, but we also look at how the office automation software will fit in with other, bank-specific software that we use.

For example, in our 900 branches, where they use both branch automation software and office automation software, we pick the best branch automation software first, and then we choose office automation software that will be easily integrated.

In the [corporate] offices, we structure our selection process toward work groups. Accounting may have a different package than secretaries, depending on each group's needs.

We make sure the E-mail is compatible with all the systems throughout the bank, so that is another consideration as well. ■

KEVIN M. TIERNEY
Senior vice president
Salem (Mass.) Five Cents Savings

WE ACQUIRE SHRINK-WRAPPED office automation products. When we decide which off-the-shelf program to buy, we look at ease of use and functionality as our primary considerations.

The more sophisticated applications often come with less ease of use and we have found that some of our employees simply won't learn or use the more advanced functions, so we really watch that the software is user-friendly.

We have just over 300 employees in 20 branches. We choose the applications centrally and then install them throughout the bank. For example, Lotus 1-2-3 is our standard spreadsheet program, although Microsoft Excel is used in one department because of their specific needs. Since it is exportable to Lotus, we agreed to allow that exception to the standard. ■

WILLIAM CALLAGHAN
Vice president
California Bancshares
Alameda

WE HAVE CORPORATE STANDARDS for our office automation software. We mostly use Lotus 1-2-3 and dBase. To establish these standards, we went out and asked everybody – all the users – what they wanted and we made our decision based on those wants and needs. We have about 185 microcomputers in use in 25 different locations. Probably 90% of our offices are DOS-based. We have some Windows users and that's fine until there's a problem. I prefer DOS-based computing because it's easier to fix problems on DOS.

I keep reports that show where all the software packages are installed. When upgrades are released, we purchase them in bulk and use our own systems people to install them. ■

MICHAEL MOZDEAN
Vice president
National Westminster Bancorp
Jersey City

WE HAVE CENTRALIZED THE SUPPORT of bank-wide LANs and PCs. Going forward, we will be providing centralized management and the software will reside on the PC. This should help us save money since we will no longer need all the stand-alone copies. We plan to standardize on a Microsoft Windows platform with a full suite of software from Microsoft.

We chose the Windows platform because the users believe that [a system with] icons and point-and-click is easier to use. From our standpoint in the technology area, we see a lot more companies writing software for Windows. We want to make sure the direction that the bank is taking is in sync with the direction the technology is taking. We are watching Windows NT very closely, and that will probably be the approach we will be taking in the future. ■

MICHAEL SIMMONS
Executive vice president
Bank of Boston

WE HAVE A LIST OF APPROVED products that we tested. We chose these products because they interacted well with our other systems and because we can support them.

We limit the choices, but provide the function our users need. If there's a special request for a product that's not on the list, we will investigate it to make sure it does interact with the other products we use.

When an upgrade is announced, we send out a notice that it's available and then, if users want it, they can order it through our centralized purchasing department. ■

New Products

Information Resource Offers Encoding Choices

Using encryption technology, Information Resource Engineering Inc. has introduced a line of low-cost products aimed to reduce risks in electronic funds transfers.

Because electronic services vary from bank to bank, security for such transfers is often complex. These new products allow banks and their clients a range of choices – encryption, message authentication, and user authentication – depending on the level of security needed.

For those requiring rigorous security, the AX500 – priced at $995 – uses all three forms. The system automatically manages different encryption keys for each bank and corporate client.

The AX200 ($295) uses data encryption to provide medium-level security for clients with moderate transaction or dollar volumes.

The AX100 ($225) uses encryption technology to identify and authenticate those seeking access to the host computer from remote sites so that only authorized users are accepted.

Information Resource Engineering is based in Baltimore. Its clients include Citibank, J.P. Morgan, and the U.S. Internal Revenue Service.

Sendero Unveils Pricing System

A funds transfer pricing system that values the sources and uses of bank funds was released by Sendero Corporation, Scottsdale, Ariz. The PC-based system lets the user define the method for pricing instruments and portfolios. Other features include individual account pricing, multiple transfer methods, and a Windows interface.

The product will be beta tested at the Farm Credit Bank of Spokane, Wash., a $2.9 billion-asset cooperative. The bank hopes to use the information to raise managers' awareness of the actual cost of funds and of which products produce higher margins.

Sendero Corporation is a wholly owned subsidiary of Milwaukee-based Fiserv Inc.

BankLink Updates Reporting System

BankLink Inc. has released the latest version of its PC-based MicroLink, a reporting and transaction system for cash management. Version 3.7 includes enhancements to the product's reporting functions, which include automated payments and collections, depository transfer services, and controlled disbursement.

BankLink is a subsidiary of Chemical Banking Corp., New York.

Alert Update Adds Custodian Banks

A new version of the Alert data base from Thomson Financial Services adds custodian banks to its network. The previous version allowed institutions to electronically communicate trade settlement information to broker. Now with version 2.0, each subscriber (institution, broker, custodian bank) will be able to send and receive account delivery instructions. Other new features include report writing capabilities, an electronic mail feature, and custom print formats. The new version is expected to be released in the fall.

Alert is a unit of Thomson Financial Services, Boston.

Bosch Offering A Tape Library

Bosch Storage Systems, Bridgeman, Mich., has entered the mainframe data storage market with an automated tape library. Using open architecture, the library can accommodate tape drives from many vendors, including IBM, Hitachi, and Memorex. It is also adaptable to the 5¼-inch optical disk format. The system can accommodate from 360 to 184,320 cartridges.

Bosch Storage Systems is a wholly owned subsidiary of Robert Bosch GmbH, Stuttgart, Germany.

Ampersand Software For Sales Support

A new Windows-based product from Ampersand is designed to automate the sales and delivery of retail products.

Dubbed Sellstation, it provides sales-support functions such as presentation, information, comparison, cross-sell, and calculations.

For example, it will help personnel retrieve existing customer information from local or remote data bases, determine customer needs and match them to products, present product information, and suggest additional complementary or associated products.

It automates the delivery flow, including data entry, data validation, and forms printing. It will also deliver required disclosures or disclaimers.

Ampersand is based in York, Pa. □

How Fast Can You Stop Credit Fraud?

Trans Union

How Fast Can You Mail In This Coupon?

Almost every minute of every day, someone commits credit fraud. So before you approve anyone for credit, you need to know certain facts . . . fast!

Is the information in the application the same as that in the applicant's credit file? Is a creditor's inquiry just one of a recent flurry of credit activities? Has the address, phone number or social security number ever been used to receive a credit card or merchandise fraudulently? Is the location really a rental box, a vacant lot or a prison? Is the social security number valid?

A discrepancy in any of these areas could signal an intent to commit fraud. That's why this coupon can't wait. We will rush you the facts about the most powerful credit fraud preventatives available today. They're part of the security that comes with a Trans Union credit report . . . and the best protection you can have against credit fraud. The sooner you send for the facts, the sooner you can put these powerful fraud-fighters to work for you.

Contracts

Wausau Financial to Sell Cincinnati Bell's Imaging

In an attempt to attract community banks, Cincinnati Bell Information Systems Inc. gave Wausau Financial Systems Inc. the exclusive right to repackage and sell its image application software. The software will be sold with the NCR Series 3000, Unix-based computers, and the NCR 7780 image capture platform.

Based in Schofield, Wis., Wausau Financial Systems resells NCR products in the financial industry. Targeting small to midsize banks with less than $2 billion in assets, the company plans to incorporate these products into its Imageworks application group under the name ImageBanc 3000.

CBIS also signed a contract to provide a retail brokerage system to Barnett Technologies Inc., Jacksonville, Fla. Work has already started on the project, which is expected to be completed in the third quarter.

CBIS will provide Barnett Securities with the Invest-Source System, which was jointly developed with National City Corp., Cleveland. The $28 billion-asset bank holding company has been using the system for two years. It uses client-server architecture and open-systems technology to accommodate software from a variety of vendors.

Barnett Technologies provides operating and information systems services for Barnett Banks Inc. and its affiliates.

Chemical Offices To Get NCR Peculiar

As part of its consolidation efforts, Chemical Banking Corp. will buy $32 million worth of self-service terminals and branch automation systems to upgrade and standardize its branches. NCR Corp. will supply the new systems.

The contract includes automated teller machines with touch-sensitive screens, self-service terminals for inside banking lobbies, and about 6,600 workstations for tellers and platform personnel. The touch-screen units should be installed by yearend.

The platform automation system utilizes NCR's system 3000 series of open computers to allow Chemical to integrate software and hardware from a number of vendors. Each branch is equipped with NCR teller and platform workstations connected to the system server via a token-ring local area network.

The branch LAN is also linked to a host mainframe at Chemical's processing center in Delaware for centralized processing.

With more than $130 billion in assets, Chemical operates 700 retail branches throughout New York, New Jersey, and Texas.

NCR Corp. is based in Dayton, Ohio.

Fiserv Signs Up Handful of Banks

Fiserv Inc., Milwaukee, clinched a number of deals in June.

Union Federal Savings Bank of Brea, Calif., expanded it current service relationship to include complete item processing services. The bank will be using the Fiserv centers in Los Angeles and Seattle. With assets of $1.6 billion, Union Federal currently uses the Fresno center for its data processing.

Foothill Community Bank of Brownsville, Calif., and Mount Diablo National Bank of Danville, Calif., have both selected the company's data processing center in Los Angeles. The banks' own software systems will be operated at the Fiserv data center. Foothill Community Bank has $15 million in assets and Mount Diablo National Bank is a start-up.

The Bluebonnet Savings Bank, Dallas, renewed its contract for item processing services with the San Antonio center and has expanded its relationship through the addition of eight recently acquired locations. Fiserv will also provide Bluebonnet Savings with on-line file processing services. The file processing conversion will be consolidated from two different processors for the $3.1 billion-asset institution.

With $8 million in assets, Regent Thrift and Loan in San Francisco will outsource financial data processing to Fiserv.

Buffalo Federal Savings and Loan of Buffalo, Wyo., with $33 million in assets, will outsource its data processing to a Fiserv center in Seattle.

Snow Bank, Dillon, Colo., expanded its relationship with Fiserv to use its full-service check and remittance processing services in the Denver center. Snow Bank, with assets of $24 million, already has a relationship with Fiserv's data center in Arlington Heights, Ill.

Tri-Counties Bank, Chico, Calif., will install the Fiserv comprehensive banking system on its IBM AS/400. Tri-Counties Bank has assets of $500 million. □

Unisys check imaging delivers the competitive magic of tomorrow.

Today.

To picture the advantages of check imaging, picture the check imaging solutions Unisys already provides.

No one more effectively applies imaging technology to the mission-critical work of check processing. Our Unisys InfoImage IIPS system is an advanced, fully-featured solution that integrates readily with banking's computer environments, enabling you to protect your existing investment.

With a customer focus and decades of industry experience, we've designed check imaging to support not only an image statement application, but a truly comprehensive solution–including our breakthrough Proof of Deposit application and its substantial cost savings. Unisys check imaging even helps you create revenue-generating services such as payable-through drafts and account reconcilement.

Our fully-functional check imaging solutions are available today, not sometime down the road. And with two years of success, they're user-proven–bringing you the benefits of advanced technology, not the risks. Benefits we've already brought to banking leaders such as Comerica, Signet Bank, Huntington Banks, and others.

Call us at 1-800-874-8647, ext. 174. Ask how check imaging from Unisys can help improve your financial picture now.

AMERICAN BANKER

VOL. CLVIII NO. 147 | Tuesday, August 3, 1993 | 158th year

Shrinking Spread Highlights Need For Loan Growth

By STEVE KLINKERMAN

The second quarter raised an important question about the banking industry: Will sufficient loan growth emerge to offset the now visible declines in net interest margins?

That question won't be answered until next year. But short-run prospects for continued robust profits should make the wait fairly painless.

Many of the nation's largest banking companies reached turning points in the second quarter as net interest margins began long-anticipated descents. According to statistics compiled by *American Banker*, the average net interest margin of the 25 largest banking companies sank 9 basis points from the first-quarter level, to 4.29%. (See table on page 4.)

NEWS ANALYSIS

That is a modest slide, to be sure. But from this point forward, some experts contend, loan growth will be increasingly necessary to sustain profitability at many banks.

Linked with the maturation of higher-yielding securities, moreover, is a dwindling potential for gains from securities sales, deflating a cushion that has provided crucial support for numerous reviving banking companies over the past two years.

Credit Quality Improves

Amply offsetting these concerns in the short run, however, is widespread improvement in credit quality – a swing factor in earnings.

During the second quarter, the top 25 banks shed $4.44 billion of problem loans and foreclosed properties, slashing their backlog by 9.8% to $41 billion, according to *Americah Banker* statistics. The concentration of nonperforming assets plunged by 31 basis points, to 2.29% of total assets.

And revenues from equity and foreign exchange trading have proved more extensive and sustainable than previously imagined, providing a hefty earnings supplement for a cadre of the largest banks.

This provides breathing room for the banking industry as it stretches for loan growth.

Signs of Life

By booking instead of selling newly originated residential mortgages, boosting card loans, and refinancing consumers, a number of banks are delivering palpable portfolio growth.

But some experts want to see

Fiserv to Buy Outsourcers From Mellon

By JEANNE IIDA

Fiserv Inc., a Milwaukee-based data processing company, has agreed to buy two outsourcing units from Mellon Bank Corp. for $70 million in cash.

The transaction, announced Monday, stems from Mellon's decision earlier this year to exit the bank outsourcing business, under which it provides data processing services to other banks. The Pittsburgh-based company concluded that the outsourcing business was peripheral to its strategy and had limited future growth.

For Fiserv, one of the nation's largest outsourcers, the deal provided an opportunity to boost its core business.

'A Good Deal'

The units it acquired provide basic banking services, such as savings and checking account processing, plus mortgage services. Mellon's trust outsourcing unit, which was also put up for sale in March, was not included in the deal and remains on the block.

"Overall, Fiserv got a good deal," said Lawrence A. Willis, consultant with First Manhattan Consulting Group.

The price tag was equal to the two units' annual revenues of $70 million, whereas similar processing businesses are typically sold for up to 1.5 times revenue, Mr. Willis said.

Fiserv's stock was up $1 to

CoreStates Acquiring Constellation of N.J.

By KAREN GULLO

Boosting its presence in neighboring New Jersey, CoreStates Financial Corp. of Philadelphia agreed Monday to buy Constellation Bancorp in a stock swap valued at $312 million.

Constellation, which has $2.3 billion in assets and 49 branches in central New Jersey, had been the subject of takeover rumors for months.

The price tag was equal to two times Constellation's book value, a stiff premium for a company saddled with problem loans.

Constellation had $177.8 million of nonperforming assets at June 30, equal to 9.78% of loans plus foreclosures. Most of the problem credits involve commercial real estate.

The Partners At a Glance

	CoreStates	Constellation
Headquarters	Philadelphia	Elizabeth, N.J.
Branches	280	49
Assets	$22.9 billion	$2.3 billion
Net Income*	$156.6 million	$5.75 million
ROA*	1.39%	0.49%
Tier 1 Capital**	8.99%	9.07%
Employees	3,782	1,102

*First-half 1993
**At June 30

'We Feel Comfortable'

CoreStates chairman Terrence A. Larsen said that "though nonperforming assets are high, we feel comfortable that the overall risks are manageable."

The deal, scheduled to be completed in the first quarter next year, is expected to dilute CoreStates' earnings by less than 1% in 1994 and increase profits slightly in 1995.

CoreStates' shares closed down $1.50, at $55.625, on the New York Stock Exchange on Monday, while the overall market rallied.

Takeover Premium Built In

Constellation closed unchanged, at $10.375. The fact that its price did not rise, as is typical for acquired companies, reflected the fact that a takeover premium had already been built into Constellation's price.

Analysts said the acquisition is strategically important for CoreStates. "It's certainly not inexpensive for a franchise that has significant asset quality problems," said Jeffrey Naschek, an analyst at Salomon Brothers Inc. "But now they are well positioned in the state."

The deal would make CoreStates the fourth-largest banking organization in state, with $6.5 billion in assets. Overall, the banking company has $23.5 billion of assets.

Constellation is CoreStates' third acquisition in New Jersey

NEWS *briefs*

NationsBank Leading Credit for Genesco

NASHVILLE — Genesco Inc. said it has entered into a three-year credit agreement with seven banks, led by NationsBank of North Carolina as agent.

Also in the lending group are First National Bank of Chicago as co-agent, First American National Bank, Candian Imperial Bank of Commerce, Third National Bank in Nashville, First Union Bank of Tennessee, and Hongkong and Shanghai Banking Corp.

The agreement replaces a $45 million revolving credit and $25 million letter of credit facility. It gives Genesco, a Nashville-based consumer products company, up to $100 million of revolving loans or letters of credit.

First Security Buys B of A Deposits in Utah

SALT LAKE CITY — First Security Bank of Utah has completed the acquisition of about $8 million of deposits formerly held by Bank of America Arizona at its two branches in Utah.

Terms of the cash transaction were not disclosed.

First Security is a subsidiary of the $8.2 billion-asset First Security Corp., which operates offices in Utah, Idaho, Oregon, and Wyoming. The company has pending deals to enter Nevada and New Mexico.

B of A Donates to Conservation Groups

SAN FRANCISCO — Bank of America has announced the donation of $1.1 million of its $6 million pledge of developing-country loans to conservation organizations working on preserving rain forests in Mexico, Central America, and South America.

The bank also announced a donation of $250,000 in developing-country loans to the International Foundation for Education and Self Help.

The largest part of the $1.1 million donation consists of $750,000 of developing-country debt going to Conservation International. A donation of $250,000 of developing-country debt will be made to the World Wildlife Fund, and $100,000 of debt will go to the Smithsonian Institution, which is advising the bank on applications for donations.

Profit Surges at Seattle Home Loan Bank

SEATTLE — The Federal Home Loan Bank of Seattle reported net income of $61.7 million for the quarter ended June 30, compared with $21.5 million for the same period in 1992.

Prepayment fees accounted for the sharp rise in income, the bank said Thursday. Net income adjusted for prepayments totaled $38 million in the second quarter, up 75% from the $22 million net of the 1992 period.

The bank, which has $12.2 billion in assets, paid an annualized stock dividend of 15.28% for the quarter, up from 10.25% for the second quarter of last year.

Wells Grants Credit Line to Gottschalks

FRESNO, Calif. — Gottschalks Inc. said it has reached an agreement with Wells Fargo & Co. and Teachers Insurance and Annuity Association for a new line of credit that will satisfy the cash needs of the company through June 30, 1994.

Gottschalks said the agreement, which will remove all current loan defaults, is subject to final documentation. All parties expect final documentation to take place prior to Aug. 6, Gottschalks said. The company did not immediately elaborate.

The briefs were compiled from staff and wire reports.

Regulators Set Hearing on Reform Of the Community Reinvestment Act

By CLAUDIA CUMMINS

WASHINGTON — Bank and thrift regulators announced Monday they will hold a public hearing next week to discuss reforming the Community Reinvestment Act.

Next Tuesday, bankers, community activists, and others concerned about banks' responsibilities to their neighborhoods will sound off before Comptroller Eugene A. Ludwig, Federal Reserve Board governor Lawrence Lindsey, Federal Deposit Insurance Corp. acting Chairman Andrew Hove, and Office of Thrift Supervision Jonathan Fiechter, acting director.

The meeting will be held from 1 p.m. to 7 p.m. at the OTS's Washington headquarters.

Hearings Around the Country

The forum will be the first of a series of hearings to be August and September around the country. Prior to these public meetings, these regulators plan private, separate meetings with banking trade groups and consumer groups. The banking leaders are scheduled to meet with the four top regulators Aug. 5 and the consumer group officials Aug. 6.

These meetings mark the first phase of the agencies' initiative to reform CRA, as directed by President Clinton last month.

Mr. Clinton gave the regulators until Jan. 1 to rewrite the rules, and told them to consult with the public before making any changes.

Regulators want ideas on improving CRA to make it clearer and more objective. They also are interested in whether differences between banks and thrifts should be taken into account in measuring CRA performance. Another concern is increasing the volume of banking services to residents of low- and moderate-income neighborhoods.

The regulators have asked anyone interested in participating in the Washington hearing to call the OCC's Pamela Mount at 202-874-4446 by Friday. □

Lending Up 19.2% at Home Loan Banks

By ROBYN MEREDITH

WASHINGTON — Borrowing from the Federal Home Loan Bank system at the end of June was up 19.2% from the same period a year ago.

According to the Federal Housing Finance Board, which regulates the system, demand rose because it is tailoring the terms of more and more loans to the needs of its commercial bank customers.

Rates Are Better than Market's

But sources said banks and thrifts also are borrowing more because a steep rise in deposit insurance premiums has made deposits less attractive.

Thrifts and banks had $93 billion in loans outstanding from the Federal Home Loan Bank system at the end of last month. At the end of the June 1992 quarter, $77.8 billion was outstanding.

Members' Advantages

Daniel F. Evans, Jr., chairman of the system's regulator, the Federal Housing Finance Board, denied that institutions are joining the system specifically to avoid paying higher deposit insurance premiums. It's just that "the bank system's rates are better than the market," he said. Because the system is a government sponsored enterprise, it is able to raise funds just above the rate on Treasury borrowings.

Banks and thrifts can use the system's advances to fund long-term loans.

Thrifts have always been required to belong to the home loan bank system, but commercial banks were allowed to join starting in 1989. Since then, 1,675 banks have joined the system, amounting to 42% of the membership. □

Unisys to Upgrade Check Processing

Unisys Corp. said it plans to upgrade its check processing system to work better with software sold by J.D. Carreker and Associates of Dallas.

The upgrade is expected to make it easier for banks that use Unisys check sorting equipment and software to participate in the Electronic Check Clearing House Organization, an association of 38 banks that hope to speed check clearance and reduce fraud losses by sending check data to each other electronically.

J.D. Carreker is a consultant to Ecchs, and also sells software called CheckLink that nearly two dozen banks in the association use to send and receive check data.

Four of these banks – the Bank of California, Barnett Banks Inc., Comerica Inc., and Citicorp – also use Unisys' Item Processing System, which is mainframe software that operates Unisys check sorters.

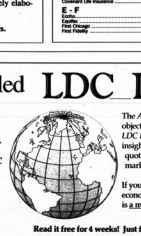
Opportunity is Spelled LDC DEBT REPORT

Emerging Markets are risky, notoriously inefficient, known for changing rules and limited public disclosure. Knowing what's really going on spells the difference between opportunity and loss.



The *American Banker*'s weekly *LDC Debt Report* delivers the most accurate, objective, succinct information available on emerging-market debt. *LDC Debt Report* provides the astute investor with news, reviews, and strategic insights. The popular Market section summarizes each week's developments, quoting bid and offer prices for 26 developing-country loans and 18 emerging-market Eurobonds. It also tracks the performance of selected equity markets.

If you must know what's going on in key emerging markets, recent trading, economics and politics, the World Bank, and more, LDC DEBT REPORT is a must read every week.

Read it free for 4 weeks! Just fax your letterhead to 212-943-7852, or call Hans Winberg at 800-407-8241

Fiserv to Buy Outsourcers from Mellon

Continued from page 1

$21 in afternoon trading in the over-the-counter market.

But by completing the sale, Mellon achieved its overall goal, leaving the business at a reasonable price. "This was a sensible strategic move for Mellon," said Dennis Shea, a banking analyst with Morgan Stanley. "Growth [in Mellon's business] had slowed significantly, and it wasn't likely to pick up."

Mellon said the deal will give it an after-tax gain of about $15 million, and said it expects to complete the transaction by the fourth quarter. Mellon's shares were down ¼ to $55.75 in afternoon trading on the New York Stock Exchange.

The unit that provides basic banking services, commonly called Data Center, contributes about $60 million annual revenue, Mellon said.

The mortgage unit, called Data Link, generates about $10 million in annual revenue.

Expanding Customer Base

With the systems come more than 200 bank customers, about 40 of which have more than $1.5 billion in assets.

The deal will expand Fiserv's customer base to include larger banks than the vendor typically serves.

Fiserv has grown rapidly over the past decade, acquiring about 40 companies. Two of its largest recent deals involved a Citicorp data processing unit and Basis Information Technologies Inc., an Atlanta-based outsourcing company.

"Fiserv is the one with the best track record" in acquiring other outsourcing operations, said Arthur Gillis, president of Computer Based Solutions Inc., New Orleans.

With the Mellon units, Fiserv

Mellon's growth had slowed significantly.

said it will follow custom and leave the management and systems largely intact.

As part of the agreement, Fiserv will hire all 710 employees of the two business units, which operate in Pittsburgh, South Bend, Ind., and other locations.

Fiserv will also take over Mellon's Philadelphia data center, which employs about 85 people. Fiserv said it intends to retain most if not all of those employees as well. Fiserv said it plans to keep the data center in Philadelphia.

The deal ends months of speculation over which outsourcing vendor would ultimately acquire the units.

Customer Defections

During that time, at least two banking customers left Mellon for Milwaukee-based M&I Data Services Inc., an M&I official confirmed. Fiserv will need to act quickly to stave off further customer defections.

"We'll meet with customers before the month is out, and tell them: We're not here to convert you, and we're not here to raise your prices," said George D. Dalton, chairman and chief executive officer of Fiserv.

Mellon put the units up for sale publicly after talks with M&I floundered early this year, according to banking sources.

Subsequently, both EDS Corp., a unit of General Motors; and Systematics Information Services Inc., a unit of Alltel Co., were said to have discussed buying the units with Mellon. □

Narrowed Spread Points to Need for Growth

Continued from *page 1*

more signs of life in the moribund commercial and industrial lending market.

"We have few swallows, but not a full Capistrano in terms of loan growth," said George Salem, a banking analyst with Prudache Securities.

"Still, the industry is looking healthy."

Falling credit costs fueled many earnings revivals, and progress was evident in most parts of the country.

In Los Angeles, First Interstate Bancorp slashed its loss provision 43% from the first-quarter level, delivering a 13.5% increase in pretax income. In Jacksonville, Fla., Barnett Banks Inc. lowered its provision 20% and posted an 11.4% earnings increase. And in Cleveland, Society Corp. cut its provision by 23.3% while boosting net income from an already-high first quarter by 2.1%.

NEWS ANALYSIS

The average net interest margin sank 9 basis points in the quarter.

Trading Gains

Far more compelling for certain banks was a bonanza of revenues from foreign exchange and equity trading.

Citicorp engineered a colossal $572 million of trading revenues, up 25% from the first quarter. Bankers Trust New York Corp. posted a 17% increase, to $405 million. And First Chicago Corp.'s trading revenues skyrocketed by 68% from the first quarter, to $91.6 million.

Analysts have been hesitant about impounding trading revenues into bank stock prices, arguing that such gains are not sustainable. But top officers of the banking companies reaping trading rewards insist the trend has room to run.

At the least, experts say, trading gains will help recovering banks such as Citicorp cope with portfolio cleanup costs.

Rights' Value Slides

One sour note surfacing in the second quarter was deterioration in the value of purchased mortgage servicing rights, provoked as refinancing customers paid off residential mortgages earlier than envisioned.

Bank of Boston Corp. took $20 million of accelerated servicing write-downs in the second quarter.

First Union Corp., Charlotte, N.C., took a $23 million charge. Michigan National Corp., Farmington Hills, took a $21.6 million amortization charge.

And Fleet Financial Group, Providence, R.I., took a whopping special charge of $100 million for accelerated amortization.

Retail Strength

On the whole, however, consumers were good to the banking industry in the second quarter, sparking much of the loan demand recorded during the period.

Tapping its 1,340 banking offices, Columbus, Ohio-based Banc One Corp. mustered a quarter was at Bank of Boston, analysts said. Its $700 million increase in average loans represented an annual expansion rate of 13%.

The company credits market-share gains for much of the progress.

$499 million, or 5.29%, increase in average residential mortgages during the second quarter, accompanied by an increase of $348 million, or 17.7%, in consumer loans.

And NationsBank Corp. in Charlotte said consumer lending largely was responsible for a $2.8 billion loan expansion in the second quarter, for a 16% annual growth rate.

One emerging story of well-balanced growth in the second

Post-Merger Blues

Growth remains a touchy question for some banking companies, however — particularly those coming off mergers premised on efficiency gains that soon will run their course.

In San Francisco, for example, BankAmerica Corp. reported a roughly $2 billion contraction in average loans from the first quarter to the second — results attributed to the weak California economy.

Consolidation Benefits

In Pittsburgh, for example, PNC Bank Corp. posted a snappy $169.1 million of earnings — for an ROA of 1.39% — that did not hinge on special gains from sales of securities and operations, as in past periods.

Similarly, other institutions showed improved second-quarter results on the strength of merger assimilations.

Consolidations in Indiana helped Cleveland-based National City Corp. deliver a 1.45% ROA in the second quarter, up from 1.38% in the first.

Similar progress helped Detroit-based NBD Bancorp boost its ROA to 1.23%, from 1.17%. □

At the same time, some large banking companies are winning converts simply by virtue of their return to normal, healthy results.

Data Sources: The data were compiled by Americas Banker from the earnings releases of the nation's top banking companies. Unless otherwise noted, net income for previous quarters are as originally reported and have not been restated for mergers or changes in accounting principles. % Change is the percentage change in total assets from March 31 to June 30. Net income is income after taxes, minority interest and changes in accounting principles, but before preferred dividends and extraordinary items. Net interest margin is tax-equivalent net interest income as a percentage of gross interest-bearing financial assets. Nonperforming assets are the sum of nonaccrual loans, restructured loans, and other real estate owned, net of reserves. For the top 25 as a group, the nonperforming assets ratio is a weighted average. ‡(-) = An American Banker estimate based on information from bank analysts. (*) = Restated for changes in accounting principles; net income was $325 million. (**) = Restated for changes in accounting principles; net income was $186 million. (***) = Restated for mergers; net income was $242.9 million. (†) = Restated for mergers; net income was $130.5 million. (%) = Restated for changes in accounting principles; net income was $34.5 million. (^) = Restated for mergers; net income was $81.3 million. (^^) = Restated for mergers; net income was $109.8 million. (^^^) = Restated for mergers; net income was $82.2million. (^^^^) = Restated for mergers; net income was $17.8 million. *trace/very lem, utilization of prior years' tax benefit carryforwards.* (**) = Restated for mergers; net income was $75.6 million.

in the last year. Last September the bank acquired First People's Financial Corp., a $1.1 billion-asset institution.

Last month the bank announced its intention to acquire Inter Community Bancorp., a $125.7 million-asset holding company.

Constellation has $2.3 billion of assets and 49 branches.

30% Staff Cut Planned

CoreStates will consolidate Constellation's branch network with the 100 branches of CoreStates' New Jersey National Bank and close 12 overlapping offices, bank officials told analysts yesterday. The overlapping branches will include some CoreStates branches, they said.

The closings, as well as consolidation of back-office operations and a 30% staff reduction, will reduce Constellations operating costs by about $35 million, said Mr. Larsen.

CoreStates said that when the deal is closed, it would add $107 million to loan-loss reserves and take a $38 million charge related Constellation's foreclosures.

The company said it also plans to set aside $50 million to $100 million of Constellation's problem assets for bulk sale.

Constellation's president and chief executive, George Zoffinger, would become chairman of the merged New Jersey National Bank. Thomas A. Bracken would remain as president and chief executive of the subsidiary. □

First Fidelity To Buy Thrift In Connecticut

By YVETTE D. KANTROW

Continuing to expand northward, First Fidelity Bancorp. on Monday said it will buy Greenwich Financial Corp., a thrift holding company with $412 million of assets based in Connecticut's affluent Fairfield County.

First Fidelity, New Jersey's largest banking company, said it would pay $41.9 million in cash, or 1.26 times book value, for Greenwich Financial. The thrift's lead subsidiary, Greenwich Federal Savings and Loan, operates seven offices in and around Greenwich and Stamford.

The deal will add girth to First Fidelity's newly acquired Connecticut franchise, the Union Trust Co. of Stamford. First Fidelity gained Union Trust through its recent purchase of Northeast Bancorp., a troubled company with 68 branches in Fairfield.

'A Reasonable Way'

That transaction gave First Fidelity a strong presence in northern Fairfield County. The Greenwich Financial deal will add 22,000 deposit accounts in southern Fairfield County.

"The Union Trust franchise probably needs some beefing up, and this seems like a reasonable way to do it," said Dennis Shea, an analyst at Morgan Stanley & Co. The area also abuts Westchester County, New York, another area with several affluent communities where First Fidelity is expanding.

In April, First Fidelity announced a deal to buy Peoples Westchester Savings Bank, a $1.8 billion-asset thrift in Hawthorne, N.Y. It is also buying Village Financial Services Ltd., a Westchester thrift with nine branches.

First Fidelity, which has $32.3 billion of assets, said it expects the Greenwich Financial purchase to close in the fourth quarter and to contribute to its earnings by next year.

We'll save you money. We could even save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings… which agency is twice as likely to give a failing CRA grade… and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 20% discount, so you'll be saving money even before you get the first issue.

After 112 Years, Merchants Bank of N.Y. Remains Committed to Middle Market

By PHIL ZAHODIAKIN

On Broadway a block north of Canal Street, amid textile outlets, Chinese shops of rampant variety, and sidewalks teeming with pedestrians, sits the staid marble headquarters of Merchants Bank of New York.

This is the office from which chairman Spencer B. Witty helps preserve the traditions of a bank that's seen it all.

Since opening for business in 1881, the Manhattan bank has severed ties with its offshore parent, survived the Great Depression, weathered transformations in its service area, and added a dimension demanded by regulators.

Through it all, $1 billion-asset Merchants has stubbornly remained a prudent middle-market bank. Its earnings, along with the businesses it serves, have taken hits. But the bank is fundamentally healthy and, having just turned itself into a holding company – Merchants New York Bancorp – has set the stage for an out-of-state expansion.

Founding the Pavement

Not suprisingly, Mr. Witty says any takeover in Connecticut or New Jersey would have to be positioned where the bank already has a core of customers. Not an adventuresome strategy – but then, Mr. Witty never pursues business in unfamiliar territory.

Well, almost never.

In 1990, Federal Reserve examiners slapped the bank with a "needs to improve" rating for Community Reinvestment Act compliance.

The problem was that most of the area served by its offices on 93 Canal St. and 434 Broadway – once part of Manhattan's Little Italy – had been engulfed by Chinatown. Merchants had not industriously pursued business among the new neighbors, or at least not industriously enough to satisfy the Fed.

So Mr. Witty, 78, went out and knocked on doors.

"Every lunch hour when I didn't have an appointment I'd stop in a few shops and talk to proprietors," he says. "I said I'd have a lending officer stop by if we could help.

But his Chinatown neighbors "were reluctant to talk," Mr. Witty says. "They're not used to seeing Occidentals in their shops. They thought I was IRS or FBI."

Mr. Witty was determined, however. "With a smile and a bit of encouragement, we got them out of their shells," he says. "Our percentage of loans in Chinatown is still very small, but it's growing."

The efforts have paid off with the Fed's latest CRA rating – "satisfactory." It was issued just last month.

But Merchants isn't just a Chinatown bank. It has five other offices in mid-Manhattan, where various blocks are known as the city's capitals of such wholesale and retail businesses as toys, handbags, and Oriental rugs.

These are the middle-market business – those with annual sales in the $3 million to $100 million range – that Merchants historically has sought for assets. Now it would like to see those assets picking up.

With its loan-to-deposit ratio at 33%, Merchants has $250 million available for that market. The ratio had been nearly 50% in last November, when the bank purchased the deposits and one branch of First New York Bank for Business, formerly First Women's Bank, from the Federal Deposit Insurance Corp.

Mr. Witty would like to bring the ratio up 40%, but that's not always easy for a bank that studies borrowers as closely as Merchants.

"We like to visit the facilities and lift a few boxes," says CEO and president James G. Lawrence, "just to make sure they're filled."

Moreover, when Merchants' loan committee meets there can be as many as 30 people at the table, Mr. Lawrence added. Junior lending officers as well as the borrower's accountant, attorney, and bookkeeper all are likely to be present.

"The bookkeeper's especially important," Mr. Lawrence says. "Many of your quality middle-market businesses have bookkeepers who have been there a long time, and he or she probably has a significant say in the day-to-day operations of the business."

The businesses served by Merchants are varied, to say the least. "We try to do everything New York does," Mr. Witty says. That includes textile imports and exports, hardware and hardware imports, lingerie and lingerie exports, white goods, sportswear, jewelry, rug imports, handbags, shoe imports, publishing, printing, and specialty chemicals.

Nonperformers Low

Merchants' scrutiny of the borrowers in these industries has resulted in a note file whose nonperformers make up just one-third of 1% of the total.

"It's not the return on the money" that counts, Mr. Witty says, "it's the return of the money."

Slumps of varying degrees among Merchants' borrowers have hurt the bank's net income, which was $10.4 million in 1989, $8 million in 1990, and $6.5 million in 1991 and again last year.

The slumps, along with Merchants' effort to flush out with repricing about half of First New York's deposits, also have pressured Merchants' return on assets, which fell from 1.64% in 1989 to 1.25% in 1990, 1% in 1991, and 0.89% last year.

The numbers gaining ground so far this year, however. At the end of the second quarter, Merchants posted earnings of $2.3 million, 20% more than in the same period last year. Earnings for the six months ended June 30 totaled $4.6 million, an 18.2% rise.

Mr. Witty points out that, even after the First New York purchase, the bank's risk-based capital ratio was 17.82% – well in excess of the 8% federal minimum. The risk ratio, Mr. Witty

COMMUNITY BANKING

For Urban Niche Banks, CRA Trouble Can Be Chronic

By PHIL ZAHODIAKIN

Most urban banks have seen their service areas, or fringes of them, transformed over the years – and many have since been assailed for Community Reinvestment Act shortfalls.

Efforts by Merchants Bank of New York to fix its rating have ended in success – but urban niche banks frequently can be susceptible to CRA problems.

Lack of Relevance Seen

Warren Traiger, a New York City attorney who advises banks on CRA issues, says: "Notwithstanding the fact that CRA was originally an antiredlining law, it just doesn't have a lot of relevance for banks like Merchants."

Because the bank offers few retail products, it did not have any traditional solutions to the problem of a bad rating. Nor did it have any ties to Chinatown, whose growth led to the "needs to improve" grade issued by the Federal Reserve.

Mr. Traiger, who was retained to advise Merchants, says: "Almost everyone agrees that Chinatown is overbanked. There are 12 or more Chinese banks, and just about all the money centers have significant branches there."

States 'Closer to Reality'?

The key to Merchants' success, Mr. Traiger says, was the "hands-on" culture at the bank. "Once I delivered the message, there was no problem involving the senior people."

Mr. Traiger adds that Merchants' executives might have been justified had they protested. After all, the state of New York already had rated Merchants "satisfactory."

Mr. Traiger hopes to see CRA compliance options.

Showing Their Plans

"It may be, and not just with CRA, that states are closer to reality. To be sure, New York reminded Merchants that there's an affirmative responsibility to ascertain and address the needs of all segments within its delineated communities. But, the state knows full well that Chinatown is overbanked, and it saw fit to use persuasion, while the Fed interpreted CRA literally."

For banks like Merchants, Mr. Traiger hopes Congress eventually will provide CRA compliance options.

In lieu of them, Jim Carras, president of Carras Community Investment Inc. in Fort Lauderdale, Fla., says banks should structure their business plans to show the regulators how they will meet the community's needs even though the idea "is anathema to a lot of longtime CEOs."

He adds, "If you're not a mortgage lender, but you're making a few here and there, it does open you up to criticism. I've seen it often. But CRA says you have to make your mortgages available to a community, and market them. If they're not that important to you, you might want to drop them altogether."

Continued from page 6

says, helps explain why deposits have risen 5% this year – and why Merchants' stock is trading at $55, nearly twice its $30 book value.

Safety and Soundness

"We don't have ATMs, and we don't try to compete with the Citis and the Chemicals for retail accounts. But people like to put there money here, because we have a reputation for safety and soundness."

In fact, the bank once turned down a request by a major retailer for Merchants to handle its payroll account.

Merchants was founded back in 1881 as Market Brothers Private Bankers, an offshoot of a German institution. At the outbreak of World War I, the Canal Street office broke off from the German parent. The bank's service area at the time was mostly cotton warehouses.

The bank went public as Merchants in 1926. It paid its first dividend in 1933, and Mr. Witty points out that it has been paying them without a single reduction for 240 quarters in a row.

The waterfront and the rest of the garment industry moved north, to midtown, but Merchants never lost its commercial character. As of March 31, it had $300 million in loans in commercial loans and $6.1 million in commercial realty. The rest of its assets, about $4 million, are in residential mortgages.

The mortgage is issued as a courtesy to Merchants' top customers. Some of them are businessmen who "many years back got a loan for just a few thousand dollars," Mr. Witty says. "Now the have the run of the place."

Sympathetic Leaders

"We like to bring along and work with small businesses," says Mr. Lawrence, "and we let them down gently if we turn them down. We explain why, and we explain what they have to do to qualify with us.

"Eventually they're back, with stronger financials."

Mr. Witty notes that the minimum amount of a small-business loan is $25,000. He argues that a big bank would treat a loan that size, and probably up to $50,000, as an installment loan.

But at Merchants, which boasts that it's been lending to small businesses since the days of clipper ships, installments are out and character is in. □

When it's this hot, you deserve extra scoops.

For many bankers, the thermometer is a lagging indicator of the heat they feel in handling current regulations and guessing the Clinton administration's next moves. But we've got a way to help you keep cool: *American Banker's Washington Watch.*

We broke the news about the plans by credit union trade associations to branch cross-country. We warned readers that the FDIC will crack down on banks and thrifts that aren't paying enough for insurance, and that the Fed was flirting with examination fees. We also uncovered plans that would let banks pay less for deposit insurance provided they set up certain special programs.

Those kinds of tasty scoops are the weekly fare at *American Banker's Washington Watch.* Within minutes, you get insights on regs and regulators—as well as your competitors—that could make the difference between profit and loss. We unconditionally guarantee it.

SHORT TAKES

Countrywide Opening Texas Servicing Office

By PHIL ROOSEVELT

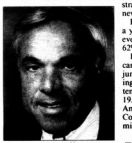
Countrywide Credit Industries, angling to become the largest mortgage servicer in America, is opening a servicing facility on 18 acres in Plano, Tex.

The California company said it has bought a 253,000-square-foot office building there from Franklin Life, a unit of American Brands, for $19.25 million.

Countrywide plans to divide its servicing between California and the new site, partly to hedge against earthquakes and other natural disasters in California.

Nearing No. 1 Ranked Fleet

Countrywide was servicing $66.5 billion of mortgages as of



Angelo Mozilo
Will divide servicing

June 30, up 33% just since the beginning of the year. That put it within striking distance of No. 1 ranked Fleet Mortgage Group, which owns $68.2 billion.

Countrywide, already the nation's largest mortgage originator, is expected to produce nearly $50 billion of loans this year.

Countrywide was drawn to Texas by its business climate and pool of available workers, said vice chairman Angelo Mozilo.

* * *

Profits Remain Below Mortgage Originations

Anyone who thinks the mortgage originations boom is being matched by profit gains should take a look at second-quarter earnings at the nation's publicly traded mortgage banks.

"Across the board, earnings were up a lot less than originations," says Sy Jacobs, an analyst at Alex. Brown & Sons.

Fleet Mortgage Group, the most glaring example, more than doubled its loan production from the second quarter of 1992, to $10.7 billion. But the unit of Fleet Financial Group posted a loss of $35.4 billion for the quarter, due to a writedown of servicing assets tied to refinancings.

Some other companies, such as Plaza Home Mortgage Corp., saw their profit growth restrained by aggressive pricing in new markets, Mr. Jacobs said.

Plaza's earnings fell 11% from a year earlier, to $3.3 million – even though originations soared 67%, to $2.3 billion.

In other results, North American Mortgage Co. posted a 62% jump in second-quarter earnings, to $13.1 million. Margarten Financial Corp. was up 19.4%, to $7.5 million, and American Residential Holding Corp. was up 110%, to $7.7 million.

* * *

Freddie Mac Installs Second Supercomputer

Freddie Mac has installed its second Cray supercomputer, backing up one that it bought last year.

The Federal Home Loan Mortgage Corp. was the first financial services firm to buy a supercomputer. It has used the computer to analyze and price mortgage securities and manage its portfolio of securities and loans.

Calculations that used to take several days require less than an hour on a supercomputer, said Jim Thompson at Freddie Mac.

Freddie Mac will also use the second computer to test new financial models.

Upswing in Interest Rates Fails to Dampen The 18-Month-Old Refinancing Boom

By CHRISTOPHER NOBLE

Despite a recent rise in interest rates, refinance mania shows no signs of letting up.

"For the last 45 to 60 days, we've been very strong – as strong as last fall," said Dennis Meroney, director of mortgage banking at First National Bank of Gainesville, Ga.

Last week, rates on 30-year fixed mortgages climbed 11 basis points, to 7.31%, marking the first significant rise since mid-May, according to HSH Associates, Butler, N.J.

Rate Decline Expected

But lenders say the rise barely affected loan demand. And many observers, citing a rally in the bond market late last week, say they expect mortgage rates to fall this week.

"I think the next interest rate reading we see will be flat or down a bit," said Warren Lasko, executive vice president of the Mortgage Bankers Association of America.

Meanwhile, the trade group's index of refinancing has reached the highest level since March. The index now stands at 1,406, after rising 15% during the week ended July 23, the last week for which it was calculated. An index value of 100 corresponds with the level of March 1990.

Rates on 30-year fixed loans climbed 11 basis points, to 7.31%.

The refinance boom has kept mortgage originations at or near record levels for more than 18 months.

Boom Seen Continuing

Mark Lynch, vice president for retail loan production at Centerbank Mortgage Corp. in Waterbury, Conn., said he expects strong production for the remainder of the year.

"I think we're in for a relatively flat interest rate environment," he said.

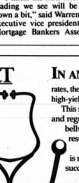
Though lenders have been raking in origination fees, the refinancing boom carries clear pitfalls. As homeowners pay off their loans to take out new ones, mortgage bankers can suffer serious declines in their servicing portfolios.

City Leading in Refinancings

The American city with the highest prepayments is Milwaukee, according to data provided by the Mortgage Information Corp. In that city, the firm found, 34.13% of all mortgages are prepaying annually, based on trends of the past six months. New York City posted the lowest prepayment rate, an annualized 14.38%. □

HIGH YIELD REPORT

lets you *hear the heartbeat and feel the pulse* of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt



IN AN AGE OF DRAMATICALLY declining long-term interest rates, the *American Banker*'s weekly *High Yield Report* delivers money-making tips on high-yield investment opportunities.

This newsletter keeps a close eye on major court proceedings, and legislative and regulatory developments. Each issue features barometers of market size, bellwether pricing tables, a forward calendar, reports on filings, and the results of new-issue sales.

No longer considered the arena of "junk bonds," the high-yield market is rapidly gaining respectability as it is closely tracked by this objective, succinct weekly letter.

If you must know what's "ticking" in the heart of the high-yield market, HIGH YIELD REPORT is a must read every week.

Read it free for 4 weeks!

PMI, an Insurer, Faces Increased Competition

By JAMES H. SAPT

On face of it, Jim Wagner is cruising down Easy Street.

He is vice president of Capital Markets for PMI Mortgage Insurance, responsible for the company's booming business of insuring loans that back privately issued mortgage securities.

PMI wrote $12.5 billion of this "pool" insurance last year, up from $5.2 billion in 1991. That has left the company with nearly 50% of the market.

But PMI, based in San Francisco, is facing a big threat from an alternative form of credit enhancement for mortgage securities.

Dividing the Deals

Lenders and other private issuers have increasingly been winning investment-grade ratings for their securities by dividing the deals into senior and subordinated classes.

An alternative form of credit enhancement could cut into PMI's booming business.

The subordinated classes, which represent a small portion of the issues, are the first to absorb any credit losses.

That allows the senior paper to get high credit ratings.

"Right now, we see senior/subordinated as the biggest competitor," Mr. Wagner says.

Low Interest Rates Cause Lift

Indeed, 60% of the private mortgage securities issued in the first quarter of this year used the senior/subordinated structure, up from 48% in 1992, according to PMI.

Much of the increase, analysts say, stems from the low interest rates of the past two years. Yield-hungry investors have been drawn increasingly to the subordinated classes, making the deals attractive for issuers.

"The use of senior/subordinated has become more viable because of the development of a market for the subordinated debt," said Alex Zabik, an analyst with Fitch Investor Services.

Brisk Business

When demand for subordinated classes was weaker, issuers often were forced to hold the subordinated classes themselves, Mr. Zabik said.

So what's the prognosis for pool insurance?

Mr. Wagner of PMI maintains that the market will see pool insurance in a new light if investors begin to take significant hits on subordinated classes.

Raising Rates

In the meantime, PMI is still doing brisk business in pool insurance, as the refinancing boom lifts the overall mortgage market to record levels.

Certainly the company isn't resorting to cutting its credit standards. To the contrary, PMI has decided to tighten underwriting criteria in California and parts of Washington, responding to increased losses in those areas, Mr. Wagner said.

Effective Aug. 15, PMI will raise its rates on pool insurance for properties in California and two counties in Washington.

And nationwide, the company plans to stop writing insurance on pools containing mortgages greater than $650,000.

That will take effect Sept. 1. □

Norwest Joining Long & Foster in Venture

By CHRISTOPHER NOBLE

Norwest Mortgage Inc. and Long & Foster Realty are banding together in a venture to capture mortgage business generated by the real estate company.

The venture, called Prosperity Mortgage, is expected to handle mortgages for a significant portion of Long & Foster's customers, Norwest executives said.

Long & Foster, based in Fairfax, Va., is one of the largest independent real-estate brokerages in the country. With 190 offices, the firm handled total sales of $7.4 billion last year.

The deal, slated to close in 60 to 90 days, comes as mortgage lenders across the country are exploring new ways to get business from realty brokers.

Norwest Mortgage, the nation's third largest originator, views the venture as "another extension of our retail business," said Pete Wissinger, a senior vice president at the Norwest Corp. unit.

Norwest will get a captive source of mortgage loans.

The new company will be a restructured version of the Prosperity Mortgage currently operated by Long & Foster. The existing company, based in Fairfax, produced $250 million of loans last year.

Financial details on the venture were not disclosed, but Norwest and Long & Foster will reportedly be equal partners.

Source of Loans

The advantage to Norwest is a captive source of mortgage loans from a well-known and respected real estate firm. For Long & Foster, the arrangement provides access to Norwest's wide variety of loan products and competitive pricing to homebuyers at the time of sale.

Many Prosperity loan officers will have offices in Long & Foster buildings. In effect, homebuyers will be offered one-stop shopping for mortgages, Mr. Wissinger said. □

Divining the future is not all that hard when you have

THE REDEMPTION REPORT

Calls and prerefunded bonds are scheduled to drain the yields out of portfolios at a faster and faster pace in the third quarter. With ***The Bond Buyer Redemption Report,*** *you can anticipate redemptions well ahead of the actual events.*
If you want to know when your bonds will be called away, this report has the answer.

We published the first such book in history for the first quarter of 1993. Buyers received instant access to the entire universe of called and prerefunded bonds in one volume.

And now you can get the third-quarter volume, a 916-tome chock full of information on which, how much, and when. Here's a sample listing:

Ruling on Bank Insurance Sales Seen Clearing Path for Annuities

By KAREN TALLEY

Annuities sales by national banks could get an unexpected boost in the wake of a recent federal court ruling.

The decision, handed down last month by the U.S. Court of Appeals for the District of Columbia Circuit, affirmed that national banks in towns of fewer than 5,000 people may market insurance nationwide.

The ruling has received wide attention, with observers saying it will open the door for banks to sell life insurance. But some experts say its immediate effect has been to provide a clear path for banks to sell annuities.

Immunity from State Bans Seen

The appellate ruling gives national banks some immunity from state prohibitions on using their employees to sell annuities, said Melanie Fein, a partner with the Washington law firm of Arnold & Porter.

Banks could set up insurance subsidiaries in towns with populations of less than 5,000 and use employees of those units to sell annuities throughout their branch systems, Ms. Fein said.

Kenneth Kehrer, president of a Princeton, N.J., consulting firm that tracks the annuities business, said he is aware of 17 states that prohibit bank employees from offering annuities.

Annuities are insurance contracts that invest in a pool of securities or mutual funds to provide a steady stream of income to investors.

Earnings Tax-Deferred

The earnings on annuity investments are tax-deferred until the funds are tapped. That has made annuities one of the most popular investment products for retirement planning.

Last year, $12.2 billion of fixed and variable annuities were sold through banks. This year, sales should top $15 billion, Mr. Kehrer said.

Having their own employees sell these products would enable banks to hold onto more fee income. Currently, many banks get around the state restrictions by contracting with nonbank marketing companies to sell annuities in bank offices. The tradeoff is that the banks have to share profits with their partners.

Foresees Challenges by States

A top executive of one such firm said he doesn't think many banks will sever their ties to marketing companies.

Melanie Fein
Sees immunity from state bans

"There will still be a need for people to provide access to the products and training for employees," said Michael McCoy, senior vice president at Holden Group, a California marketer of investment products.

"Some state insurance commissioners are bound to challenge banks, no matter what."

For years, banks have faced challenges in offering annuities and other insurance products, fighting wars with insurance agents who don't want to see their turf invaded.

'Solid Fallback Position'

But with the additional firepower of the appeals court ruling, banks could have more confidence about the go-ahead from the Office of the Comptroller of the Currency to set up small-town insurance subsidiaries, Ms. Fein said.

The ruling also would give national banks "a solid fallback position" if the Comptroller's office loses another court case, one specifically involving annuities, she added.

In this case, insurance industry groups are suing the Comptroller's office over its 1990 decision to allow annuity sales by NCNB National Bank of North Carolina, predecessor of NationsBank.

DOSSIER by MICHAEL O'D. MOORE

HANS P. ZIEGLER
Stein Roe & Farnham

After years of catering to affluent clients at a commercial banks, Hans P. Ziegler is moving to one of the nation's oldest money management firms.

Mr. Ziegler was recently named president of Stein Roe & Farnham Investment Counsel, a unit of Stein Roe & Farnham that specializes in investment management for wealthy individuals.

Until joining the Chicago-based firm about two weeks ago, Mr. Ziegler was president and CEO of Pitcairn Financial Management Group in Jenkintown, Pa.

The company announced last year that its elite Pitcairn Trust subsidiary would begin shifting its book of business to First Fidelity Bancorp., Lawrenceville, N.J.

Why the move?
Mr. Ziegler will be in charge of building Stein Roe's high-net-worth business. Such accounts now make up $6.8 billion, or 23% of the $29 billion Stein Roe manages, and the company is aiming higher.

Career track:
Worked in private banking at Boston Co., Chase Manhattan Bank, and Manufacturers Hanover Trust Co.

Vital statistics:
Education: B.S. from Georgetown University, 1963; M.B.A from New York University, 1971
Age: 52
Family: Wife Ann and four children in their 20s
Home: Looking for a house in downtown Chicago
Hobbies: "I play a terrible round of golf, but under my son's tutelage I've improved significantly." Also reads biographies, and enjoys music and gardening
Current reading: Walter Isaacson's "Kissinger"

Liberty Financial Unit Better Known For Funds than for Investment Advice

By MICHAEL O'D. MOORE

Managing money for affluent customers is an important part of Stein Roe & Farnham's business, but the company is best known in banking circles for its mutual funds.

That's because the Chicago-based money-management firm is a unit of Liberty Financial Cos. of Boston, specialists in setting up investment-product sales programs for banks.

Stein Roe, founded in 1932, became a subsidiary of Liberty in 1986. It has nearly $29 billion in assets under management. The biggest chunk of Stein Roe's business is institutional investment management, which accounts for $16.7 billion of assets.

The company's investment-counseling business, which caters to affluent clients, is next in size, with $6.8 billion in assets under management. This is the segment overseen by Hans P. Ziegler (see dossier above).

Finally, the company manages 15 no-load SteinRoe mutual funds, with combined assets of $5.2 billion.

SteinRoe funds, mostly marketed directly, are sold through banks by Liberty. They are also marketed by Charles Schwab & Co. and Fidelity to specific groups of brokerage customers. Stein Roe has regional offices in Cleveland, Fort Lauderdale, Fla., Minneapolis, New York, Scottsdale, Ariz., and Puerto Rico. □

The Private Market ...Revealed

Clues to the shadowy world of private placements come to light each week under the magnifying glass of *Private Placement Reporter*, an *American Banker* newsletter.

YOU'LL UNEARTH:
- Who is **buying** these deals— and why.
- What other banks and underwriters **charge to get the deals done**.
- The **best rates** in the traditional and Rule 144A markets, and **who can get them** for your company.
- The latest **flavor-of-the-month** deal structure innovation, and **who benefits**.

Private Placement Reporter answers these questions and more, and keeps you up to date on secondary-market trends, reg rights deal progress, and regulatory changes affecting the market.

How S&P Will Weigh Funds Holding Unrated Municipals

By RUSSELL E. LONG
Standard & Poors Corp.
New York

A growing number of banks are managing mutual funds that invest in tax-exempt municipal bonds.

Standard & Poor's Corp. recently revised its guidelines for rating funds that invest in small-er issues. The following article was excerpted from S&P's CreditWeek.

Standard & Poor's Corp. has expanded its tax-exempt fund ratings to accommodate funds that invest in unrated municipal paper and municipal paper with a single rating other than from S&P.

Verbatim

The municipal sector differs from other sectors in that for some funds, particularly single-state funds, much of the debt issued is either unrated or rated by a single nationally recognized statistical rating organization (NRSRO).

In assigning ratings to tax-exempt money market and bond funds, S&P has considered analytical scope to factor in all such ratings assigned to individual securities. This policy change allows S&P to take a broad-based portfolio approach to analyzing all tax-exempt mutual funds.

Credit Research

In order to rate tax-exempt mutual funds that hold securities S&P has not rated, S&P must be able to assess the funds' credit evaluation methods.

Therefore, in conjunction with all ratings assigned to tax-exempt funds (both current and future), S&P will conduct a detailed review of each fund's credit analysis procedures. This will entail an in-person meeting with each fund's credit research staff to examine its analytical practices, policies, and methodologies.

Each fund's credit analysis procedures will be reviewed in detail.

The examination will cover security evaluation, market analysis, security selection, asset dispersion, diversification, pricing, ongoing monitoring of credits, sources of secondary credit information, response to distressed credit situations, resource dedication, and staff qualifications.

Included will be a review of credit files for specific securities in several sectors, to get a strong sense of the analytical process.

Where appropriate, S&P also will sample securities it has not rated to assess their credit quality using S&P's rating services and portfolio assessment service.

Discussion also will focus on the use of NRSRO ratings, any internal rating system used, and the process in which the fund's approved list of securities is presented to and reviewed by the fund's board of directors.

Additionally, secondary market factors – such as size of issues, liquidity, and marketability – will be examined.

Securities rated by nationally recognized organizations other than S&P are eligible investments in S&P-rated funds. Unrated securities also are eligible on a case-by-case basis.

S&P may discount ratings by other organizations based on where each security would likely be classified under S&P's rating scale.

In most cases, such a discount would involve no more than a one rating-category drop. But in some sectors, where S&P believes other organizations may depart significantly from S&P's rating standards, discounts may be more than one category.

Generally, S&P will deem such a security to be of lesser quality if:

- The security is within a sector or category of municipal securities where there tend to be material differences in the ratings assigned to like securities by the various nationally recognized organizations, or
- The security is within a sector or category of municipal securities in which the organizationrating the security has limited market presence.

S&P's rating guidelines state that for a money market fund to be rated AAAm, at least 75% of the securities held by the fund should be rated either SP-1 or A1-plus (S&P level 1). The remainder of the securities should be rated SP-1 or A1 (S&P level 2).

In considering other rating scales, S&P will make the following distinctions.

1. Securities not rated by S&P that have been assigned the highest short-term rating by another nationally recognized statistical rating organization typically will be considered S&P level 2, except as noted in items 2, 3 and 4 below.

2. Securities not rated by S&P that have been assigned the highest short-term rating by another nationally recognized organizations and have a long-term rating comparable to S&P's AA or better generally will be considered S&P level 1.

3. Securities not rated by S&P that have been assigned the highest short-term rating by another NRSRO by virtue of credit support from an entity rated A1-plus by S&P will be considered S&P level 1.

4. General-obligation debt not rated by S&P and issued by a municipality that has an SP1-plus short-term unsecured debt rating will be considered S&P level 1. □

Equifax to Buy Integratec, a Debt Collector

By JEFFREY KUTLER

Equifax Inc., the consumer credit reporting company, has agreed to acquire Integratec Inc., which performs debt collection and other back-office functions for credit card issuers and other lenders.

Equifax announced the agreement in principle last week but gave no details about the price or other terms of the deal. The Atlanta-based company also did not allow senior executives to discuss the purchase.

But it is clear that Integratec, also based in Atlanta, would represent a sizable expansion, adding almost 1,000 employees to Equifax's 12,000.

Sophisticated 'Teleservicers'

Industry observers see Equifax and Integratec as a potent match.

Both companies have sophisticated "teleservicing" back offices that make and receive large volumes of phone calls. There are opportunities for synergy, for example, between Integratec's collections and telemarketing businesses and Equifax's Telecredit card-processing operation.

Equifax released a written statement that Integratec fits its strategy of providing "a total solution to [customers'] risk management needs by delivering more innovative information-based products and services."

Integratec, founded in 1987, was a trailblazer in the business of "prechargeoff collections." Integratec found that by contacting lapsed borrowers at an early stage of delinquency, many chargeoffs could be avoided. This was attractive to many credit card banks that had found the traditional collection process unwieldy and expensive.

Branching Out

The privately held company later entered the post-chargeoff recovery business by acquiring DCI, a major Houston-based collection agency, and a smaller operation in Buffalo that has grown to 165 employees, said Donald K. Griffin, president of Integratec.

"Eighteen months ago we started teleservicing, using our resources to help banks acquire customers, prevent attrition, activate cardholders' accounts, and cross-sell services," Mr. Griffin said.

He added that some bank clients buy the complete range of services, thus outsourcing much of their back-office work to Integratec.

In starting Integratec, Mr. Griffin had financial backing from the investment bank Welsh, Carson, Anderson & Stowe and two former partners– A. Wayne Johnson and Jack Gilbride.

Mr. Johnson, a former consultant and former executive of Visa U.S.A. and First Interstate Bancorp, founded a customer-service outsourcing company in 1991 called Qualitech. It was acquired last November by First Data Corp.

He had retained a small stake in Integratec and said he was elated by the acquisition news.

"This is confirmation that our ideas and approach to risk management had real merit," Mr. Johnson said.

"When most people think about Integratec it's about collections, but it's a much more interesting story than that," said James B. Shanahan of Business Dynamics, a White Plains, N.Y., consulting firm that has done some work for Integratec.

"For banks in the credit card business, the alternatives used to be either do everything yourself or be an agent" for another issuer, he said.

"Integratec created a middle ground, where a bank can keep the relationship and take advantage of economies of scale without the hassle of doing its own operational support."

Equifax, having diversified well beyond the credit bureau business, reported a 4% revenue increase last year, to $1.1 billion. Revenue for the second quarter – led by high-margin activities in credit services – was a record $298.5 million, while net income was $23.2 million. Each figure was up 8%.

Net income has been hobbled by losses at High Integrity Systems Inc., a subsidiary providing lottery services, which is in a breach-of-contract dispute with California. □

Senate Vote Is Just First Hurdle for RTC Pick

By ROBYN MEREDITH

WASHINGTON — Deputy Treasury Secretary Roger Altman, who has temporarily assumed the thankless task of overseeing the savings and loan bailout, had a few words of warning for Stanley G. Tate, his likely successor as head of the Resolution Trust Corp.

Mr. Altman spoke recently of April 13, 1945, when Eleanor Roosevelt broke the news to Vice President Harry Truman that her husband , President Franklin Delano Roosevelt, had died. After a long pause, Mr. Truman finally asked, "Is there anything I can do for you?"

Mrs. Roosevelt replied, "Mr. President, the question is, is there anything we can do for you, for you are the one in trouble now."

Mr. Tate would take on the unforgiving job of selling off the assets of the nation's failed thrifts – and that's only if he succeeds in cajoling Congress into approving funding for the agency. Mr. Clinton nominated the Miami real estate developer for the RTC post on July 13, and the Senate has not yet scheduled confirmation hearings.

Claims Bipartisan Support

"I really feel strongly that I can bring a level of experience that really has not been there," Mr. Tate said. "The administration must have thought enough of my credentials, because I am a Republican," he said.

"They were looking for someone extremely qualified in banking and real estate, and particularly problem real estate."

Mr. Tate, 65, said his nomination has received bipartisan support, and he is confident that his background in the real estate industry will serve him well.

But Mr. Tate's nomination raises paradoxes seldom seen in Washington.

First, it is unusual that a Democratic president would nominate a man who, according to the Federal Election Commission, has given more than $55,000 to Republican candidates since 1991.

Switched to GOP in 1987

Mr. Tate said he used to be a Democrat, but switched parties in 1987 to support his friend Bob Martinez when he ran for governor of Florida.

And most members of the congressional black caucus have lined up in support of Mr. Tate, who is white. One Democrat in that group said the nomination has persuaded him to vote for RTC funding because he appreciates Mr. Tate's support of African-American causes in Miami.

Florida Rep. Alcee L. Hastings said he was considering voting against continued RTC funding before Mr. Tate was faced as a candidate for the job.

"Because he has received the nomination, I think I can live with it," Rep. Hastings said. "I intend to vote for the funding."

"If I had my druthers, would I prefer a black Democrat for the job? Damn right," the congressman said. But he has known of Mr. Tate's work for 15 years. "I know him as a public servant and a good one for African-Americans in southern Florida," Rep. Hastings said.

Since 1990, Mr. Tate has served as a member of the RTC's East Coast region advisory board, one of six regional boards that counsels the agency on the disposal of its real estate. For the past six months, Mr. Tate has served as the board's acting chairman.

'He's a Great Choice'

Peter H. Monroe, who until June was president of the Thrift Depositor Protection Oversight Board – which sets policy for the RTC – has known Mr. Tate for years and worked with him when he chaired the regional board.

"He's a great choice," Mr. Monroe said of the nomination. "He knows real estate as well or better than anyone I know – He's done bankruptcy and receivership. He understands liquidation."

The nominee owns Tate Enterprises, a Miami-based company that had gross revenue of about $40 million in 1992. Tate Enterprises is a holding company for Mr. Tate's construction, investments, and real estate development and management businesses as well as his consulting and receivership activities.

He also donates 50% of his time to public service, working for local charities, hospitals, and community projects – activities he says he would severely limit if confirmed.

Agrees with Bentsen Agenda

Mr. Tate said he would not discuss his plans for the RTC until his confirmation.

He would only say he agreed with Treasury Secretary Lloyd Bentsen's March 16 pledge to improve the agency's operations by strengthening internal controls and contractor oversight, expanding opportunities for women and minorities, and setting up a comprehensive business plan for selling the nation's largest cache of real estate.

He added that if he is confirmed his first priority will be to visit each RTC field office to introduce himself to employees.

"I think it is very important that they know who I am, that they have a comfort level," said Mr. Tate, a slim, 6-footer with thinning light brown hair who wears gold-rimmed glasses. "It is important for them to know me so they can be on my team."

"I have my own management style and it has been successful for me," said Mr. Tate. Several sources said he is likely to keep extremely long hours at the agency. "I am as hard a worker as any man who has been working for the RTC," he said. Mr. Tate said he never goes to bed before 2 a.m.

'Very Strong Ideas'

"I intend to bring some very strong ideas," Mr. Tate said. He wants RTC employees "to respect me and to like me, but I'm not looking for anyone to stroke me." Mr. Tate insists that he is a "people person," and that he will "have no problem with people so long as they do what they are supposed to do."

Mr. Tate admits to having a strong ego. "I think people who do not think highly of their own abilities are not successful," he said.

Mr. Tate owns three Florida office buildings, four shopping centers in the Southeast, two apartment buildings, a condominium development, a subdivision, and the Villa del Ray golf club in Delray Beach, Fla.

He manages six Florida properties, and has recently served as a court-appointed receiver for 50 Florida properties – including everything from a gas station to apartment buildings. He was even chosen by a court to review the accounts of the rap group 2 Live Crew.

Proud of Work with HUD

He manages several properties for the RTC and the Federal Deposit Insurance Corp., but said he plans to stop doing so should he be approved for the RTC job.

Mr. Tate said he is most proud of his work as chairman of the Dade County regional oversight board for the Department of Housing and Urban Development.

He helped turn around 12,500 HUD-owned apartments scattered across Dade county. "We put in day care, we put in police substations," Mr. Tate said. "We got rid of the drugs," he said, and made the apartments pleasant places to live again.

The nominee serves as chairman of the Florida Prepaid College Foundation, under which parents may buy a policy that will guarantee to pay the cost of tuition to any college in the state when their child grows up. There are 215,000 children currently enrolled, about 9,000 of them attending college.

It is the only outside activity he said he hopes to keep up if the Senate approves his appointment. Mr. Tate said he got involved with the program because, "I wanted to make an education both attainable and affordable."

He is a director of the Intercontinental Bank in Miami, and a former officer and director for several other Florida banks. He also serves as a director of several Florida charities, including the Miami City Ballet, the Miami Jewish Home and Hospital for the Aged, the Miami Heart Institute, and the Dade County unit of the American Cancer Society.

A Bank Director

He was a mayor of a small Miami suburb for four years, but he insists, "I am not a politician. The Mayor of Bay Harbor does not qualify me as a politician," Mr. Tate said.

Mr. Tate said that Joni, his wife of 44 years, told him the RTC job is his "last hurrah." The Tates have three children, all of whom are married, and six grandchildren with a seventh on the way.

It is a close-knit family. "I talk to my children every day."

Seeking Support on Hill

He has spent the last two weeks visiting Capitol Hill, seeking support for his nomination. He said he has many friends there. And election commission records show he made dozens of donations to the campaigns of Republican congressional candidates – from Alaska and Hawaii to Pennsylvania and Florida.

No date has yet been set for his Senate confirmation hearing, and it is not clear whether it will take place before Congress' fall recess. But Mr. Tate is eager to get started. What can people expect to see from him?

"I am a very strong person. I've been around a long time and I've been successful," said Mr. Tate. "I am what I am." □

Barbara Rios

LIQUIDATION ASSET: Stanley G. Tate thinks his experience in problem real estate gave him an edge over other candidates to head the RTC.

AMERICAN BANKER

Opinion

Comment

By Steven P. Williams

Risk Management in Banking: Rationality or Reregulation?

It is truly ironic. After absorbing the profound impact of the banking legislation of the 1989 and 1991, the industry has supposedly embraced a renewed emphasis on risk management.

Yet in the midst of this process, neither bankers nor lawmakers and regulators have mastered the concept of risk clearly enough to prevent future debacles.

As an industry, we have taken false comfort in the latest arsenal of risk management tools and have allowed political and regulatory forces to skew the rational relationship between risk and return.

A dramatic example of this can been seen in banks' being urged to abandon secured, cash-flow lending and bring back the old-fashioned "character loan."

It sounds great, but in reality, the "character loan" will end up

LAWMAKERS, *regulators, and bankers have not mastered the concept of risk clearly enough to prevent future debacles.*

being an excuse for bankers to ignore, underprice, and mismanage risk. Loan volumes would increase, business activity would heat up, and things would start to "feel good" again.

But before it's over, banks will have used insured deposits to take high, venture-capital risk for low, debtlike returns. With liberal bankruptcy laws, one questions how much "character" will be around to repay these loans. It could get ugly.

Closer Look at Risk

Does this mean we need to keep the board of restrictive regulations currently in place? Hardly. It means that the banking industry needs to increase its understanding of risk and that our government needs to increase its appreciation for capitalism.

Webster defines risk as the "possibility of loss or injury." Ironically, our industry has continued to address this broad and infinite concept with "cookie cutter" measurement and management techniques. This line of thinking reached its pinnacle with the passage of the Federal Corporation Improvement Act in late 1991.

While the banking industry has loudly protested the act and the regulatory community has been loathe to implement its provisions, we have, nonetheless, witnessed an unconscious acceptance of the act's rigid approach to risk management.

Unfortunately, many are beginning to equate risk management with regulatory compliance, and therein lies our industry's greatest threat.

Seeking 'Quick Fixes'

The irrational perceptions created by regulatory compliance can be seen everywhere. The FDIC improvement act purports that a bank's capital level is the sole indicator of its risk exposure.

Risk-based capital standards ignore interest rate risk and oversimplify credit risk to the point of absurdity (e.g., a well-structured commercial loan is 200% more risky than a poorly underwritten mortgage loan). The Federal Reserve recently had to offer a conditional surrender after attempting to create a standardized methodology for measuring interest rate risk.

The overall conclusion is simple: no regulation, contract, guideline, nor amount of oversight can address the infinite number and combinations of risk that a free-market economy will deliver.

As an industry, we need to stop searching for illusory "quick fixes" to operating volatility and instead become comfortable with the ongoing analysis, reflection, and debate which should accompany the proper management of risk.

Growing Complexity

Over the past few decades, the banking industry has become much more complex and, therefore, much more risky. Will this trend continue?

When one considers the explosion of derivative instruments, the rapid growth of secondary asset markets, the Federal Reserve's diminished influence on interest rates, and the increased volatility that businesses and consumers will face in a global economy, the answer is a resounding "Yes!"

How will the banking industry handle this profound change? Not with laws like the improvement act. Instead, the entire industry — its owners, managers, regulators, and lawmakers — will need to develop a deeper understanding of risk and capitalism. We will need to ready a set of core values and universal tools to manage risk in any situation.

Core Values

The core values which must be present in any risk management strategy are leadership, ethics, and debate.

WE HAVE TAKEN *false comfort in the latest arsenal of risk management tools and have allowed political and regulatory forces to skew the rational relationship between risk and return.*

Leadership is essential if risk management is to be viewed by the entire organization as a top priority and if the core values of ethics and debate are to be instilled.

Bank managers must view themselves as Socratic investigators, who do not blindly rely on the opinions of their line managers and staff specialists, but rather lead an ongoing investigation with the aid of these individuals.

Ethics is an obvious prerequisite for risk management to work. As bankers, we should constantly remind ourselves what is at stake when we manage risk. Risk management should be viewed as a "moral" obligation to the bank's stakeholders.

This obligation is not fulfilled by simply refraining from fraud or conflicts of interest. It is fulfilled by putting hard thought into each action and decision and by having the courage to speak out when this obligation is not being fulfilled by others.

Acceptance of Questioning

Debate must not only be allowed in a banking organization,

MANY ARE *beginning to equate risk management with regulatory compliance.*

it must be encouraged. In the past, banks have seen improper risk-taking when an egotistical leader or even an unchecked specialist began to feel immortal.

The main problem: neither the professional training nor the corporate cultures of most banks have adequately encouraged employees or board members to question the powerful executive or the exalted expert.

Board members and subordinates need not duplicate the role of senior managers, but a constant atmosphere of questioning and debate must be present for banks to build strong risk cultures.

The universal tools of risk management are the traditional tools of capitalism, beginning with strategic planning: a well-

thought-out, detailed, and written plan that identifies areas of weakness and disciplines management to develop the competencies, systems, and controls necessary to mitigate threats.

Transfer of Responsibility

An institution's primary risk is its inability to meet the cash obligations necessary to continue operations as a financial intermediary. Maintaining ample amounts of liquidity is certainly a deterrent to risk; however, excessive liquidity carries opportunity costs.

Therefore, banks must optimize liquidity by striking a balance among earnings, liquidity risk, and the "safety value" that the market assigns to the bank for maintaining this liquidity.

Banks must also continue to seek sources of contingent liquidity beyond cash and marketable securities. Conscious efforts to effectively underwrite, document, and maintain detailed information systems on the banks' loan portfolios will facilitate asset sales if the need arises.

Bank capitalization levels have declined dramatically since the implementation of deposit insurance. In effect, deposit insurance has been substituted for capital as a buffer against loss to depositors, and the ultimate responsibility for ensuring "safety and soundness" has been transferred from bank owners to the insurers/regulators.

Agency Theory is Critical

Contrary to the improvement act, the appropriate level of capital depends on the risk profile, management expertise, and market environment of each banking institution. However, one cannot overemphasize how strongly "at-risk" capital will affect the risk management practices of an organization.

The threat of losing money has always mobilized more character and action in people than the opportunity of riches; it is a quirk of human nature that should be recognized and incorporated into any risk management strategy.

Strong capitalization is a primary risk management tool; however, this equity will be useless if the goals and incentives of the bank's management and owners are not closely aligned.

Agency theory refers to the contractual relationships that exist between principals (owners) and agents (management). Several academic studies have proven that companies run by strong owner/managers have outperformed those run by pro-

Risk Management in Banking

Continued from *page 14*

fessional managers.

A keen appreciation for agency theory is critical in banking for two reasons: management has unlimited opportunities to subject the institution to devastating risk; and, the complexity of embedded risk within banking organizations allows management to downplay problems for some period of time — often until it is too late.

Optimally, bank managers should "act like owners" by actually being long-term shareholders with significant equity positions.

The Human Factor

In risk management, people make the difference. Although management will typically pay 20% more for an outstanding employee, a skilled credit officer may be 100% more valuable than a marginal credit officer.

A "skilled" risk manager should be defined as one who knows when, how, and why to take risk, not one who categorically avoids risk.

For all employees, ongoing training and education is key to

NO REGULATION, *contract, guideline, or oversight can address all the combinations of risk.*

creating a rational, inquisitive risk management culture. Banks need to develop more "teeth" in their training programs by placing greater emphasis on financial analysis, investment analysis, and credit analysis.

Great strides will be made over the next decade in the technological and analytical tools that support risk management.

Banks that correctly see the economic value of risk information and invest wisely in this intangible asset will make better business decisions, will be subject to less stringent oversight, and will see their stock price increase because of diminished "black box" fears from the market. To effectively utilize risk information, management must improve its capabilities to distinguish data from information.

Data is essentially the raw material for information. Many banks are currently wasting their efforts by generating mountains of computer printouts without analyzing their true information needs or developing adequate methodologies to apply this information to decisions.

Using Measurements

The old saying, "You cannot manage what you cannot measure" applies strongly to risk management. For risk information to be used properly, bank managers and board members must receive clear, concise reporting measurements that are closely aligned with the strategic objectives of the bank. Acceptance criteria should also be established for each critical measurement.

Risk measurements and acceptance criteria are important tools, but management and boards should not fall prey to "cookie cutter" decision-making. The results of most quantitative models are highly sensitive to a few input variables.

MANAGEMENT MUST *improve its capabilities to distinguish data from information.*

Before making decisions, management and boards should understand these sensitivities and either accept or modify the key assumptions that drive the model. When used properly, risk measurements will provide questions to begin discussions, not answers to complete decisions.

The Push to Securitize

Risk must be thought of as a commodity that can be packaged, bought, and sold. The insurance industry is living proof of this. As the banking industry becomes more disaggregated, bankers must continually search for opportunities to sell their risk. Securitization is the prime example.

Banks can earn income from the origination and servicing of these assets and unload the credit and interest-rate risk when the market price implies a higher economic return than that of holding the risk in portfolios.

To sell risk without destroying shareholder value, banks must become more adept at their ability to measure and price risk. □

Who says bankers don't get excited?

Editor's Note

In a commentary published Friday, Edward L. Morris contended that overzealous government lawyers were bringing unnecessary lawsuits against thrift officers and directors.

The commentary should have noted that Mr. Morris, the president of Fortune Group, a St. Louis investment banking firm, faces federal charges of mail and wire fraud in connection with the collapse of Germania Bank of Alton, Ill.

Mr. Morris has pleaded not guilty to the charges.

A federal trial is scheduled to begin later this year.

Subscribe to **AMERICAN BANKER** today and we'll give you five good reasons to get excited:

1. **American Banker's Commitment to Excellence.** Regular features on industry changes, legislation and technology are written for you, so that you'll be informed on how they affect you—our reader.
2. **Management Strategies Section.** This full-color 20-time-supplement specifies how to increase profits using technology.
3. **Investment Products and Services.** Our daily coverage with weekly features gives you the facts you need to keep customers coming to you for investment advice.

Brazil and Lead Creditors Agree To Reduction in Debt Collateral

Reuters

NEW YORK — Brazil and a steering committee of its commercial creditor banks have agreed to reduce the amount of collateral needed to underpin a huge debt accord signed last year.

A statement issued by the bank advisory committee, which is headed by Citicorp, said that the collateral requirement has been reduced to $2.8 billion from $3.2 billion and that all of Brazil's creditors had been advised of the change.

According to the statement, Brazilian Finance Minister Fernando Henrique Cardoso said the cut was being made because the stock of debt to be treated is less than originally estimated.

Banking sources said the restructuring, initially estimated to cover $40 billion of debt, actually covers $35 billion, according to Brazilian calculations.

Because of the change in the amount of collateral, creditor banks now have the right to reallocate by Sept. 9 the bond options they have chosen under the financing plan, the statement said.

However, they must still keep their choices within the government's guidelines of no more than 40% par bonds, and no less than 35% discount bonds.

Analysts of the Latin American debt market expected Brazil to seek a reduction in the amount of collateral.

Some speculated, however, that this was because Brazil appears to be having problems reaching a stand-by agreement with the International Monetary Fund.

Mr. Cardoso has said in Brazil that the government may be unable to clinch an IMF accord in time for the November closing of its agreement with private creditor banks and he asked for special consideration from the monetary fund.

A large part of the $7.8 billion in collateral is supposed to be funded by the IMF and other multilateral lending agencies.

Onbancorp's Merger with Franklin Advances

SYRACUSE, N.Y. — Onbancorp and Franklin First Financial Corp. reported that the Federal Reserve Bank of New York has approved their applications to merge.

The merger had been approved by the shareholders of both companies at special meetings held on May 25, 1993.

The closing of the acquisition is still contingent on approval by the New York State and Pennsylvania Banking Departments and certain conditions in the merger agreement.

Santa Monica CEO Retiring

SANTA MONICA, Calif. — Santa Monica Bank said that Joe Walling will retire as chief executive, effective Sept. 30.

Walling, a 42-year veteran of the bank, will retain the office of chairman, which he has held since 1988.

No successor has been named.

— Reuters

FINANCE

MARKETS

Long Bond Falls, Shorter Notes Up

The yield on the 30-year Treasury bond ended lower on Monday, while yields of shorter-maturity issues rose.

Market participants said technical factors were behind the long bond's slight fall.

The 30-year bond yield was 6.55% late Monday afternoon, down from 6.56% on Friday.

The 10-year note yield was 5.84%, up from 5.80% Friday, and the five-year note yield was 5.21%, up from 5.14% Friday.

The dollar was lower on Monday afternoon from its Friday levels. It had hit a postwar low against the Japanese yen of 104.14 before rising slightly.

Traders said the yen's strength made Japan look as a safe haven from continuing tensions in the European monetary system.

The dollar also fell to 1.70 German marks on Monday afternoon, from 1.7415 marks late Friday.

The Dow Jones industrial average rose 21.52 points, to close at 3560.99.

Stocks were buoyed by expectations of lower European interest rates.

Overhaul Compromise Lifts Sallie Mae Shares

By GORDON MATTHEWS

Shares of the Student Loan Marketing Association jumped in active trading Monday as investors apparently decided that final plans by the government to restructure the college loan program were not as bad as expected.

Sallie Mae stock was up $1.625 to $49.125 at the close, with heavy volume of more than 2 million shares.

Help was provided by a rating increase to "buy" from "hold" from Eric Hemel of Morgan Stanley & Co., with a $56 target for the stock in 12 months.

Based on the congressional compromise, Mr. Hemel raised his 1994 earnings estimate to $5.40 from $4.40 and raised his five-year growth rate estimate to 10% from zero.

Banks Opposed Clinton Plan

But Sallie Mae's price is still nearly 30% below the 52-week high of $75.875 it reached before Bill Clinton's election as president.

Congressional negotiators last Friday reached a compromise to shift up to 60% of government-backed college loans to direct lending within five years.

President Clinton wanted a complete move into direct lending, but that was fiercely opposed by banks, which now originate most student loans.

Sallie Mae makes a secondary market in the loans, buying them from banks and then issuing securities with the loans as collateral.

'More Positive' than Speculated

"The proposal, as it stands, is more positive than the speculation a few weeks ago about what might be coming down the pike," said Thomas O'Donnell, an analyst at Prudential Securities Inc.

Sallie Mae shares bottomed out on June 23 at $40 -- 47.3% below their high on Sept. 14 -- as worries peaked on Wall Street about the final shape of the government direct lending plan.

Mr. O'Donnell on Monday raised his 1994 earnings estimate for Sallie Mae to $5.40 from $4.45 per share, reflecting the compromise on fees to be paid by the government-sponsored enterprise. His estimate for this year remains at $4.85.

Expresses Caution

But the analyst is extremely cautious about the stock, rating it a "hold" and recommending it only for speculative investors.

"Next year looks like the earnings peak. Beyond that, things are very cloudy, with the ultimate impact of direct lending unknown," he said.

Gary Gordon, an analyst at PaineWebber Inc., has a similar "hold" rating with a "negative bias" on the stock because of what he term a "serious cut" in revenue prospects.

Under the plan, direct student lending by the government would cover 5% of college loans for the 1994-95 academic year, jump to 40% in 1995-96, climb to 50% in each of the two succeeding years and then peak at 60% in 1998-99.

Fee of 0.30% Required

The Clinton administration believes direct lending will be cheaper than paying interest rate subsidies to banks. Critics assert the government and colleges involved will not be able to manage the program.

Under the compromise struck by Senate and House negotiators, Sallie Mae would have to pay an annual fee of 0.30% on new loans it purchases. The fee will cost the company an estimated $540 million.

While the House version imposed no fee, the compromise proposal is better from Sallie Mae's perspective than the Senate version, which levied the fee on the company's entire $46 billion loan portfolio.

"The fee is prospective as opposed to being retroactive," pointed out Mr. O'Donnell.

MONDAY'S MARKET

The major bank stocks were mixed, despite gains in the stock market overall on Monday.

In late trading, BankAmerica Corp. was off 50 cents to $44, J.P. Morgan & Co. was off 25 cents to $72.50, and Wells Fargo & Co. was down $1.625 to $114.

Among gainers, Citicorp was up 37.5 cents to $33.50, Bank of New York was up 62.5 cents to $55.125, and Wachovia Corp. was up 37.5 cents to $35.50.

Old Kent Financial Corp., up $7.5 cents to $33.50, had the biggest improvement of the day among banks. Other winners were Marshall & Ilsley Corp., which rose 50 cents to $23.25, and Shawmut National Corp., up 37.5 cents to $24.375. □

CAPITAL

Regulators to Propose Updated Rules That Reflect Market-Value Accounting

By BARBARA A. REHM

WASHINGTON — Federal regulators this week will propose changing capital and reporting requirements to bring industry rules in line with new market value accounting standards.

The banking and thrift agencies are expected to recommend that institutions add or subtract from tier one capital any unrealized gains or losses in the portion of their securities portfolio that are classified as "available for sale."

Tier 1 is one-half of risk-based capital, the tool regulators use to measure a bank's credit and offbalance sheet risk. Tier 1 is considered the tougher of the two risk-based components because it is comprised of various forms of equity capital.

Each Agency to Review Plan

The Federal Reserve Board on Wednesday is scheduled to be the first of the four federal agencies to consider the plan. The Comptroller of the Currency, the Federal Deposit Insurance Corp., and the Office of Thrift Supervision are expected to take up the issue later this month.

While no formal action yet has been taken, regulators working on the plan said the staffs at all the agencies are concurring on the changes to tier one capital. Still, the heads of the agencies may have different ideas and alter the proposal.

Once all the agencies have introduced the proposal, it will be published in the Federal Register. Comments will be accepted from interested parties for a month.

Rule Due by Yearend

The regulators must have a final rule in place by yearend because that's when the accounting rules take effect.

The Financial Accounting Standards Board set the stage for the changes when it voted in May to require banks to mark certain assets to market.

The accounting changes, called FAS 115, require banks to report at market value securities that are not in a trading account and will not be held to maturity. The changes do not affect income, but do impact capital.

Banking regulators would rather not be making these changes. They generally oppose

The Fed will be the first of four agencies to consider the plan.

market-to-market accounting on the grounds it injects too much volatility into bank capital calculations.

Limited Choice

But, they don't have much choice because, by law, bank capital standards must be at least as stringent as Generally Accepted Accounting Principles, which are dictated by the accounting standards board.

Larger banks may be affected the most because smaller banks hold more of their securities to maturity.

"Banks will likely shorten the maturities of their securities portfolio," one official writing the new regulations said.

The upside: banks will be more liquid and less susceptible to fluctuations in interest rates, one official writing the new regulations said. The downside: shorter-term securities produce less earnings.

Taking the Gain

Another regulator said that if a bank has sizeable unrealized gains, it may cash out and take the gain to avoid the risk of a market turnaround that could force a hit to capital.

Swings in capital are more important to bankers than ever because regulations adopted last year require regulators to come down hard on banks when their tier one risk-based capital falls below 4%.

These Prompt Corrective Action rules allow regulators to control everything from dividend payouts to asset growth, depending on how low capital goes. When capital drops to 2%, the regulators may seize the institution.

In addition to changing capital rules, regulators are expected to change the quarterly call report so banks can disclose changes in the value of their securities available for sale. □

Chemical to Redeem $173 Million of Debt

NEW YORK — Chemical Banking Corp. said it will redeem four issues of long-term debt totaling $173 million on Sept. 1.

The company said it will redeem $56 million of 8.25% debentures due 2002, at 101.54% of principal; $53.6 million of 8.125% sinking fund debentures due Aug. 15, 2007, at 102.7%; $38.5 million of 8.125% sinking fund debentures due March 1, 2004, at 101.77%; and $24.9 million of 8.4% debentures due April 15, 1999, at 110.42%.

Chemical said it will pay accrued interest, if any, in addition to the redemption price.

Budget Provision Threatens Credit Of Weak Banks

By BARBARA A. REHM

Nestled in the massive budget reconciliation that lawmakers are hammering out this week is a provision that could cut off credit to weak banks.

The national depositor preference measure would put insured and uninsured depositors, along with the Federal Deposit Insurance Corp., ahead of all nondeposit creditors when a bank fails.

Banks with less-than-solid capital levels would find it hardor to float debt, borrow federal funds from other banks, lease computers, or rent space.

Right now, insured depositors get paid back first. Then the FDIC and uninsured depositors share equally what's left with the other creditors.

"This will be an additional disadvantage to weak banks," Rep. Peter Hoagland (D-Neb.), president of the Texas Bankers Association.

Thicket of Regulation

Congress has been piling regulations on troubled banks for years. The 1991 banking law spawned regulations that:

- Take away weak banks' ability to buy brokered deposits.
- Limit discount-window borrowings from the Federal Reserve.
- Require the weakest banks to pay the most for deposit insurance.
- Impose increasingly severe sanctions against banks as their capital falls. Once capital falls to 2% of equity, regulators are required to seize banks.

Even banks experiencing temporary problems could be hurt by the new law, according to James Sexton, a partner with Bracewell & Patterson, a law firm in Austin, Tex.

'In Last Place'

"Say you're a fed funds supplier and you see that a bank lost a fair amount of money last quarter. You are going to be gone and that bank is going to be dealing with the Fed," Mr. Sexton said.

"The fed funds suppliers are going to know they are in last place if anything happens to that bank."

Karen Shaw, president of the Institute for Strategy Development, predicted that some banks could be shut out of the derivatives market because no one will want to be on the other side of the transaction. "By putting creditors of banks at a greater

Nabanco to Process Visa, MasterCard Sales for Sears

By JEFFREY KUTLER

Nabanco confirmed this week that it won the bidding to process all MasterCard and Visa sales at Sears stores.

Sears, Roebuck and Co. began taking the bank cards, along with American Express cards, on Sunday. Except for a recent market test, the Sears Merchandise Group had accepted only the proprietary SearsCharge card and the Discover card.

Nabanco, a unit of First Financial Management Corp. of Atlanta, is providing the authorization, processing, and settlement services for bank card transactions at more than 1,800 Sears stores and affiliated units.

'Demonstrated Leadership'

"Signing a contract of this magnitude with one of the nation's oldest and largest retailers clearly demonstrates the leadership position that Nabanco has established in the industry," said Patrick H. Thomas, chairman, president, and chief executive office of First Financial Management.

Nabanco, formally National Bancard Corp., is the largest merchant credit card processor in the United States. According to *The Nilson Report*, an Oxnard, Calif.-based newsletter, Nabanco handled $35.8 billion in card sales last year.

Nabanco, which is based in Fort Lauderdale, Fla., says it processes one out of every six Visa and MasterCard transactions, and should increase that share with the Sears business.

Nabanco's closest rivals are National City Processing Co., a unit of National City Corp. of Cleveland, and Card Establishment Services Inc., a recent spinoff of Citicorp.

Word Began to Spread

National City Processing participated in the six-city, 140-store test that preceded Sears' decision to accept bank cards

NationsBank Shelf Filing Of $4 Billion Is a Record

By DAVID SIEGEL

Fast-growing NationsBank Corp. on Tuesday filed for regulatory approval to issue up to $4 billion in debt and equity, the largest shelf registration ever by a commercial bank.

Combined with $1 billion left from a previous shelf filing, the North Carolina bank company can now issue up to $5 billion in securities.

NationsBank is expected to tap the capital markets to finance its recent buying spree.

Four Deals

In the past year, NationsBank has struck deals to acquire MNC Financial Inc., a Baltimore bank company with $16 billion of assets; Chrysler First, a consumer finance company with $4 billion of assets; Chicago Research and Trading, an options firm, and the $2.3 billion-asset financial services subsidiary of U.S. West Inc.

"They are buying a lot of assets which have to be funded," said Joseph Labriola, a bond analyst with Kidder Peabody & Co.

A shelf registration, which is filed with the Securities and Exchange Commission, permits a

Merger Muckers

A small but vocal group of investors in Peoples Westchester Savings Bank wants to upset the bank's pending merger with First Fidelity Bancorp.

At a shareholder meeting next month, the disgruntled group – which holds 1% of Peoples' stock – plans to distribute a proxy asking shareholders to turn down the deal.

It argues that Peoples sold out too cheaply and adds that neither bank adequately disclosed potential problems with the purchase formula.

The original agreement called for Peoples' shareholders to receive $43.90 a share, or $233 million, in cash and First Fidelity stock, with an escalator provision if First Fidelity's shares rose above an average of $50.50 during the 10 days preceding the sale.

But First Fidelity's shares tumbled 10% within a week of the deal's announcement. The two banks quickly amended the buyout formula so that shareholders would get less than $43.90 if the price of the stock averaged below $50.50 in the pre-closing period. The stock is currently trading at $47.125.

A First Fidelity spokesman declined to comment. Peoples chairman William F. Olson did not return phone calls.

Chase Bites Bullet

For years, Chase Manhattan Corp. declared it would sell its Arizona bank for the "right price." Recently, it disclosed that it had written down the value of the $600 million-asset unit, signaling that today's right price is lower than yesterday's.

Arizona banking sources say the move means a sale is likely. For years, the New York company had insisted it must recover its entire investment, including the acquisition premium it paid when it entered the Grand Canyon State in 1986.

It repeatedly spurned lower offers, including one for roughly $50 million, or book value minus goodwill. The sources say Norwest Corp.'s buyout of Citicorp's Arizona unit earlier this year brought several potential bidders for Chase Arizona out of the woodwork.

Once it was effectively in play, Chase bit the bullet by reducing the carrying value of the bank to prices closer to what bidders were offering. A Chase spokesman confirmed the company has entertained offers, but declined to identify any bidders.

Chicago Story

The recent departure of First Colonial Bancshares' chief financial officer had tongues wagging in the Windy City.

Steve Daniels last week hopped from First Colonial to crosstown competitor Lake Shore Bancorp.

His departure had Colonial insiders speculating that he was troubled by some recent community reinvestment problems.

C. Paul Johnson

The Federal Reserve, citing Community Reinvestment Act grounds, in May rejected applications from the $1.5 billion-asset company to acquire two banks.

Rumors also recurred that C. Paul Johnson, the bank's chief executive and No. 1 stockholder, was selling the company he founded to Banc One Corp.

The real reason? "It has nothing to do with the company," said Mr. Johnson. "We had some personality differences. The chemistry just wasn't right."

CEO Sightings

SunTrust Banks Inc. is considering getting into a new line of business – helping small banks and thrifts drive up their stock price. Well, sort of. . . .

The story inside the Atlanta-based company is that chairman James B. Williams several months back attended a board meeting of Sonat, the Birmingham, Ala., natural gas utility on which he serves as a director.

The headquarters of Amsouth Bancorp. is in the same building as the utility, so Mr. Williams decided to visit his old friend John Woods, Amsouth's chairman.

When Mr. Williams was sighted at Amsouth's door, word quickly circulated about a potential merger. Amsouth's stock popped, before SunTrust quietly quelled the talk about the recurring rumor.

Now it's become a joke at SunTrust that it can boost other banks' stock prices and earn some fee income at the same time by leasing out top executives to make a visit.

FDIC and the OTS Square Off On Handling of Glendale Federal

By ROBYN MEREDITH

WASHINGTON — Two federal banking agencies are squabbling over whose budget may have to absorb the cost if either has to shut down the nation's fifth-largest savings and loan, California's Glendale Federal Bank.

According to sources, the interagency debate was summarized in blunt terms in a confidential letter sent last month from the Federal Deposit Insurance Corp., which regulates banks and oversees the S&L insurance fund, to the Office of Thrift Supervision, which regulates thrifts.

The thrift agency has given Glendale Federal, which has $18 billion in assets, until Aug. 31 to finish its ongoing deal to raise $375 million to $425 million by restructuring the company and completing a rights offering.

The memo, according to sources, was mailed to OTS on July 9 but not received until July 26.

Concerns Said Addressed

Glenfed chairman Stephen Trafton said he had no direct knowledge of the memo but said that it was probably part of the process in which the pros and cons of the thrift's capital restoration plan were discussed by the banking agencies.

Stephen Trafton
Calls it normal give and take

The FDIC's purported concern was taken care of in the approved plan, he said, because it requires Glendale to have 4% core capital and 9% risk-based capital by the ends of August, well in advance of the Sept. 30 sunset date for the Resolution Trust Corp. to add failed thrifts to its case load.

Sources claim that Glendale had its debt and equity investors on board its capital plan until last week when Calfed, which was recapitalized in the spring, queried a $45 million loan, sending its shares to $9 or 45% of book. Glenfed was trying to sell shares at 60% to 65% of book.

Glenfed reportedly renegotiated the deal with equity and bond holders and supposedly is close to an agreement.

Mr. Trafton refused to comment on the offering.

Pointed Questions from FDIC

In the July letter, the FDIC's regional supervisory director for San Francisco, George J. Maas, demanded to know what the thrift office's plans were for money-losing Glendale and repeatedly mentioned the sunset date for the Resolution Trust Corp., which is now responsible for disposing of failed thrifts, said a person who had seen the document. Federal officials privately confirmed the letter's contents.

The FDIC letter focused on whether there were indications of interest from investors in the company's ongoing rights offering and preferred stock offering justified keeping Glendale open. The FDIC letter also refers to an earlier memo from Marianne Wright, the assistant director of the thrift agency's San Francisco office, to her bosses.

In the memo, Ms. Wright expressed general concerns about whether the deal would go through, and specifically raised questions about how strong the expressions of interest from shareholders had been and

We'll save you money. We could even save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... which agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 20% discount, so you'll be saving money even before you get the first issue.

AMERICAN BANKER'S Regulatory Compliance Watch

EFT Illinois to Merge with Access 24

By MATT BARTHEL

In an effort to improve their chances of surviving the consolidation of the electronic funds transfer industry, two second-tier automated teller machine networks have agreed to merge.

EFT Illinois Inc., based in Rockford, Ill., and Access 24, operated by Computer Services Inc. in Valparaiso, Ind., agreed last week to combine their ATMs into a single, not-for-profit network.

"The two organizations can achieve better economies of scale by merging," said Mark Horwedel, executive director of EFT Illinois. "There is also the feeling that [larger networks] might target this area of the country for new members, and our two organizations feel the bigger we are, the better off we are."

According to *The Nilson Report*, a newsletter based in Oxnard, Calif., EFT Illinois is the nation's 26th-largest ATM network and Access 24 is ranked 51st.

Expansion Planned

The still-unnamed network will operate primarily in Indiana and Illinois, but Computer Services will also offer network membership into nearby states such as Ohio, Michigan, West Virginia, and Kentucky.

Penetration into other states will be a highly competitive undertaking. One of the most influential networks in the country – Delaware-based Money Station Inc., which operates under the MAC logo – has already targeted the Midwest region for its own membership drive.

In addition, 15 of the region's largest financial institutions are in the process of forming a venture similar to EPS that could further intensify competition in the area.

But the EFT Illinois-Access 24 tandem may well be able to attract new members from the large pool of small banks in the Midwest, experts said.

The reason for this is that, unlike the giant networks vying for dominance in the region, the new network will allow all members, not just equity owners, to have a say in the strategic direction of the network.

This is a function of the new network's not-for-profit structure.

In addition, EFT Illinois' Mr. Horwedel believes the widespread acceptance of the national point of sale programs – Visa's Interlink and MasterCard's Maestro – are only a few years away.

"I don't think it's going to take nearly as long for [national point of sale] to come along as it did for Cirrus and Plus on the ATM side," he said.

Links to National POS

This runs counter to the opinions of many electronic banking experts who feel that regional POS marks will dominate many areas of the eastern United States, including Chicago and New York, for at least the next decade.

EFT Illinois already has gateway links to the national POS programs, as well as to Visa and MasterCard's national ATM networks, Plus and Cirrus.

The combination of EFT Illinois and Access 24 will result in a network of about 1,000 ATMs that generate about 28 million interchange transactions, according to *The Nilson Report*.

Interchange transactions are those that result from a bank customer using an ATM that is not owned by the financial institution that issued the customer's ATM card.

The merger is expected to begin in November. □

NEWS *briefs*

GE Division to Buy Shearson Mortgage Unit

STAMFORD, Conn. — General Electric Capital Mortgage Services Inc. said Tuesday that it will buy Shearson Lehman Hutton Mortgage Corp. for $70 million.

The long-rumored deal adds Shearson's $17.5 billion servicing portfolio to the huge $42 billion portfolio controlled by GE Capital. The company will jump from ninth place to fifth among all servicers in the country when the deal closes. Edward D. Stewart, executive vice president of GE Capital, said: "This transaction represents an important expansion of our servicing operations."

Citi's Reed Starts Brazilian Debt Talks

BRASILIA — Citicorp Chairman John Reed met Tuesday with the president of Brazil in the first of a series of meetings that are expected to include discussions on the restructuring of Brazil's commercial debt.

Mr. Reed, whose trip was described by Brazilian authorities as a "courtesy visit with some substance," gave President Itamar Franco an "optimistic balance of how things are going" on the debt talks.

Citicorp is Brazil's largest foreign creditor. Over the weekend, Brazil asked for a waiver to cut from $3.2 billion to $2.8 billion the amount of collateral it would put up to guarantee the restructuring of its debt under the Brady plan. A local newspaper reported Tuesday that the 19-member debt steering committee, headed by Citicorp, agreed to the waiver request.

$8 Million Infusion for 1st National of Calif.

SAN DIEGO — First National Corp. said it and its wholly owned subsidiary, First National Bank, will receive a capital infusion of $8 million from a private investor group.

Additionally, the company announced a loss of $1.3 million, or 37 cents per share, for the second quarter, compared with a loss of $19.9 million, or $5.58 per share, for the same quarter in 1992.

The California company said Monday it signed a definitive agreement to issue new shares of common stock to investors led by John W. Adams and Jeffrey A. Smith. When the shares are issued, the investors will own 96% of the bank's issued and outstanding common stock, while the bank's interest will drop to 4%.

Although most of the members of the investor group have yet to be identified, the lead investors have conditioned their purchase on the participation of Malin Burnham and Robert D. Richley, the chairman and chief executive officer of both the company and the bank, respectively.

First National Corp. said that even with the recapitalization, it will remain in default on $7 million of debt to Bank of America.

NationsBank Wins Fed Nod to Buy MNC

WASHINGTON — The Federal Reserve Board approved NationsBank Corp.'s application to merge with MNC Financial Inc. of Baltimore.

The Fed move will permit Charlotte, N.C.-based Nations-Bank to acquire MNC Financial's banking and nonbanking subsidiaries.

Upon completion of the proposed merger, NationsBank would remain the fourth-largest commercial banking organization in the United States, with consolidated assets of $134.6 billion and total domestic deposits of $94.4 billion, the Fed said.

The briefs were compiled from staff and wire reports.

Shawmut's Customers Stay Put Despite Drop in Deposit Rates

By YVETTED. KANTROW

Shawmut National Corp. has significantly dropped its deposit rates – and its customers don't seem to mind.

In March, New England's third-largest banking company began reducing rates on its savings products by 30, 40, and 50 basis points, said Eileen S. Kraus, vice chairman in charge of retail banking and marketing. Shawmut's competitors did not follow its lead, she observed, nor did its customers flee.

"I have never seen a phenomenon like this," Ms. Kraus said.

NEWS ANALYSIS

Shawmut reaped the rewards of its plan in the second quarter, when it reported net interest income of $236.4 million. That was 10% higher than the $215.5 million reported for the first quarter.

Simple in Hindsight

The company traced part of the increase — which helped Shawmut book a second-quarter profit of $56.3 million – to "an improvement in the net interest margin generated by the lower rates paid on interest-bearing liabilities."

It sounds easy in hindsight. But Shawmut did not lightly make the decision to lower rates ahead of its competitors in the

Eileen S. Kraus
Prepared for possibilities

Boston and Hartford, Conn. markets.

"We were fully prepared for a whole range of actions," Ms. Kraus said. "We thought through what the competition would do and what the runoff of depositors would be. We were prepared with counteractions."

To Shawmut's delight, however, most of its competitors also dropped their deposit rates – but only by 5 to 10 basis points.

'A Unique Experience'

"It was clearly different from any other historical experience we've had," Ms. Kraus said.

Shawmut's Massachusetts banks recently were offering one-year certificates of deposit with an annual percentage yield of 2.43%. By comparison, one-year CDs at Boston's BayBanks Inc. were yielding 2.94%.

Shawmut's gamble was well-timed, some observers said, in today's low-rate environment.

"Any bank with a strong franchise can take the calculated risk of proceeding ahead of the market," said Edward Furash, head of Furash & Co., a bank consultancy in Washington. When rates are low, he explained, few consumers consider it worthwhile to move their funds.

Strategy Has a Time Limit

The risk, however, is that rival banks will raise their deposit rates significantly if loan demand rises. "You become vulnerable to competitors who can pull funds out of you very fast," Mr. Furash said.

Ms. Kraus acknowledged that Shawmut's strategy "is not something you can continue for a year."

But in an interview after Shawmut's second-quarter earnings were released, chairman Joel B. Alvord said he was confident the bank will sustain robust interest income going forward.

"We will maintain a reasonable margin not because of dropping deposit rates but from growing loan activity," he said. "And we are restructuring our balance sheet so we have higher levels of interest-earning assets." □

Fleet Names 2 in Consumer Bank Shuffle

By YVETTED. KANTROW

Fleet Financial Group announced Tuesday a reorganization of its consumer bank, tapping two executive vice presidents to manage all the company's branches in the Northeast.

David M. DeFazio, the 53-year-old consumer banking chief at Fleet Bank of New York in Albany, will be responsible for all branches in Maine, New Hampshire, and New York.

His counterpart, with responsibility for Fleet branches in Connecticut, Massachusetts, and Rhode Island, will be Dennis M. Murphy, a 45-year-old executive most recently in charge of community banking at Fleet Bank of Massachusetts.

Overseeing Customer Service

As regional managers, Mr. DeFazio and Mr. Murphy will oversee customer service, product sales, and the branch network. They will report to Michael R. Zucchini, vice chairman in charge of consumer banking for New England's largest bank company.

Until recently, consumer banking and other lines of business were overseen by the presidents of Fleet's seven bank subsidiaries, which operate in six Northeastern states. But under a March reorganization, power was centralized in the hands of three new vice chairmen in the Rhode Island headquarters of Fleet, which has at least $48 billion of assets. □

EXECUTIVE *changes*

SunTrust's Florida Unit Names Wendell Colson as Chairman

Wendell H. Colson, president of **SunBanks Inc.**, has assumed the additional post of chairman of the Florida-wide bank holding company.

Wendell H. Colson

SunBanks is a part of **SunTrust Banks Inc.**, a superregional bank holding company based in Atlanta.

Theodore J. Hoepner, president of **SunBank**, lead bank in the SunBanks system, assumed the additional duties of chairman of SunBank.

T.J. Hoepner

Mr. Hoepner and Mr. Colson succeeded **Buell G. Duncan Jr.**, who retired from the chairman posts on Aug. 1.

Mr. Colson, 62, has been president of SunBanks since 1989. He began his banking career in 1952 as SunBank's first management trainee. The 18-bank holding company operates more than 375 offices.

Mr. Hoepner, 52, has been president and chief executive officer of SunBank since 1990. He joined the SunBank system in 1968 with a predecessor bank and has been chairman and CEO of the Jacksonville and Miami affiliate banks.

— **Franklin Smith**

NEW ENGLAND

STATE STREET BANK and Trust Co., Boston, has promoted **Sharon Doherty Clancy** and **Catherine E. White** to the rank of senior trust officer in the personal trust division of the commercial banking services area.

The bank also announced the hiring of six vice presidents: **James W. Burton, Melissa C. Marzelli, David Miller, Robert L. Pierre, John Serbant,** and **Robert Schnibbe Jr.**

Mr. Burton is in the benefit plan services division of the global financial asset services area. Ms. Marzelli is in the international trade banking division in Sydney, Australia, of the commercial banking services area.

Mr. Miller is with State Street Global Advisers-U.K.

Mr. Pierre is in the custody services division of the securities operations area, Mr. Serbant in State Street Global Advisers, and Mr. Schnibbe in the processing engineering division of the securities operations area.

State Street also announced the hiring of four assistant vice presidents: **Joseph G. McDonagh, Timothy J. Murphy, Vernon Turner,** and **Dawn Zanotti.**

Mr. McDonagh works in in global financial asset support services and Mr. Murphy in the corporate services division of the securities services area. Mr. Turner is in the global data center services division of the operations area and Ms. Zanotti in the corporate services division of the securities services area.

MIDWEST

MERCANTILE Bank of St. Louis has named **Dennis O. Battles** as senior vice president and manager of large corporate accounts and specialized services, including corporate lending, cash management services, and trade finance.

Mr. Battles, 46, spent the last 11 years at National Westminster Bancorp in corporate lending. Most recently, he focused on northern New Jersey.

Mercantile Bank of St. Louis is the lead bank of $10.1 billion-asset **Mercantile Bancorp.**

ARN AMRO BANK, Chicago, said **Benjamin L. Rose** has joined as managing director of its project advisory group.

The new group will focus on developers of independent power plants, particularly those fueled by gas or coal.

Mr. Rose was formerly executive vice president of Hambro Resource Development Inc., which he co-founded. Hambro provided financial advice as well as investment and merchant banking services in the independent power and environmental management industries.

BANK ONE Indianapolis, an affiliate of **Banc One Corp.**, Columbus, Ohio, has elected **Carl J. Lile** as vice president and Community Reinvestment Act officer.

He will be responsible for the development and implementation of the bank's CRA program, assuring compliance with regulations and Banc One Corp. policies and directives.

MIDDLE ATLANTIC

PNC BANK CORP., Philadelphia, said **Douglas E. Klinger** has been named a managing director of **PNC Investment Management and Research.**

Douglas E. Klinger

He is responsible for managing institutional product research and development, marketing strategy, and wholesale and retail distribution strategies for the institutional markets.

He was vice president and director of corporate markets management for PNC Institutional Management Corp., PNC Bank Corp.'s mutual fund business in Wilmington, Del.

There he managed institutional money-market and fixed-income product research and development, sales, and marketing, as well as proprietary mutual fund consulting.

SOUTHEAST

BARNETT BANK of South **Florida**, Miami, an affiliate of Jacksonville-based **Barnett Banks Inc.**, has promoted **Ricardo Lajas** to vice president/corporate banking. □

A U.S.-Funds Portfolio Tailored for Small Banks

By PHILZAHODIAKIN

Compliance

WHEN MONTGOMERY ASSET Management of San Francisco unveiled its Short Duration Government Bond Fund, Deborah Hicks Midanek, director of mutual funds, was surprised by the interest among smaller banks.

The fund was for individual investors, and the firm didn't think it met Federal Financial Institutions Examination Council guidelines because it invested in corporates, Ms. Midanek said.

But the bankers, searching for a way to increase short-term investment yields with safety and liquidity, saw a fit. And they also were intrigued by features that would help keep their banks in step with new financial accounting standards.

So, Ms. Midanek and her husband, James, who is chief investment officer of Montgomery Fixed Income Group, designed the Short Duration Government Portfolio for Financial Institutions.

Small banks often rely on just one officer for compliance or investment. But "the days when community bankers ran their investments out of their vest pockets are long gone," said Ed Furash, president of Furash & Co., in Washington.

Deborah H. Midanek

Among the investment headaches for small banks is FAS 107, a financial accounting rule that will require banks to report in their financial statements estimates of fair value for their assets and liabilities and FAS 115, which will require them to estimate the effect of interest rate swings on earnings and equity.

The portfolio will provide daily valuations and detail the various securities, along with their interest rate sensitivity, in the fund.

The side of government funds is being pushed not only by financial accounting regulations, but by the increasingly difficult problem of small institutions trying to hedge their rate risks, and the rapid development of derivatives, Mr. Furash said.

One of the derivative vehicles in which many small banks have invested is the Collateralized Mortgage Obligation, which "are ostensibly agency securities, but they are very complex instruments and frequently not what they appear to be," said John J. Lyons, a senior principal at Lyons, Zombak, Ostrowski, New York.

"Small banks are buying CMOs because their spreads are really in a box, but in many cases, they are dangerous. The banks need to be clear of regulatory criticism for investing in them, so they really need a professional manager to screen them."

Such CMOs as Montgomery might buy for the portfolio will be in a pool of cash and highly rated debt securities representing 35% of the fund's value; the remaining 65% will be represented by obligations either issued or guaranteed by the U.S. government.

Currently, the portfolio's yield is 120 basis points ahead of that for the two-year Treasury note, or 5.23%. The minimum investment is $1 million, and subsequent investments must be at least $50,000.

Swollen Missouri, Kansas Rivers Forced Evacuations at 20 Banks

By JIM McTAGUE

Record high water last week along the Missouri and Kansas Rivers forced the evacuation of over 20 commercial banks, according to federal regulators in the area.

Most of the banks were small institutions, said Roger Denesia, Federal Deposit Insurance Corp.'s deputy regional director for its Kansas City, Mo., office.

In contrast, only three or four banks were forced to relocate because of the flooding Mississippi River.

'Most Banks Won't Be Hurt'

James Leese, who heads the FDIC's regional office in Kansas City, said it is likely to take months to assess the impact of the flood on the banks and their borrowers. "My feeling is that most banks won't be hurt that bad," he said.

David Herndon, president and CEO of First State Bank in Kansas City, Mo., rented a tractor trailer last week, and he and his 23 employees loaded it up with records and equipment last Monday when the National Guard advised them to evacuate as water neared the top of a le-

It may take months to assess the impact on the banks and their borrowers.

vee. His bank is three blocks from the Kansas River and six blocks from the Missouri.

"We entered into mutual assistance agreement several years ago with UMB Commercial National Bank, two miles to the north," Mr. Herndon said.

Banks Share Space

Under the agreement, if one bank's facilities are incapacitated, the other bank will share space.

"I called up and asked if it was still in effect, and when they said 'yes,' we drove over with the truck," he said.

First State Bank's proof and transfer employees went to another bank in the suburbs and borrowed desktop computers for some work.

Mr. Herndon said, laughing, that initially they relied on a 10-key adding machine and a rubber stamp for endorsements.

Flood Insurance

The levee held and the bank's headquarters sustained no damage, Mr. Herndon said. He had flood insurance anyway – but not because of the rivers, since his building is not in an official flood plain.

"Our insurance man convinced us to get the coverage because we are in a low-lying area and we could be flooded if the storm sewers in the intersection out front back up," he said. "I guess he'll be calling to say, 'I told you so.' " □

Nebraska's Small Banks Unite in Protest Of Credit Union's Attempt to Branch Out

By ROBERT B. COX

In what is fast becoming a common scene in an unfolding drama between bankers and credit unions, Nebraska bankers are protesting applications submitted by a credit union to expand its field of membership and open a branch.

More than 60 community bankers have written to the Nebraska Department of Banking, opposing plans by Western Heritage Credit Union, based in the city of Alliance, to open a branch in Gering and expand its membership by 12 counties.

"Western Heritage cannot possibly define a common bond that satisfies both statutory and regulatory criteria . . . in an area composed of diverse regions with separate identities and characteristics," said Ken Sedlacek, associate general counsel for the Nebraska Bankers Association, at a preliminary hearing on the issue in late July.

Must Prove a Common Bond

Typically, a credit union must prove that its expansion plans will encompass communities and customers linked by some underlying common character-

Similar challenges are under way in two other states.

istics such as similar employment. Ted Bohlen, president of the credit union, would not comment on the issue.

Because the credit union is regulated by the state, its officers must submit a brief within the next two weeks summarizing their case for expansion, according to James A. Hansen, Nebraska director of banking and finance. A final decision is likely within six weeks.

Similar battles are being waged by bankers throughout the country. Recent cases involved expansion moves by federally chartered credit unions in North Carolina and Michigan.

'Could Have Some Bearing'

While bankers in those states have yet to declare victory in thwarting credit unions' plans, they have won the right to challenge the credit unions and the National Credit Union Administration in court.

Mr. Hansen, a former community banker, said "issues affecting nationally chartered credit unions could have some bearing." Nebraska's state-chartered credit unions are given the same powers as nationally chartered institutions. □

Local Advisory Boards Help Norwest Keep in Touch

By ANAT BIRD

In talking about Norwest Corp.'s service-oriented and community-oriented mission, president Richard N. Kovacevich emphasizes local boards.

"We seek local advice and counsel to help us meet the financial and human needs of each community," he has written in a company handbook.

"Our vision is viable only if we can identify and act upon real concerns in real communities. Community board members are critical to the success of this approach."

Members are "community leaders, talented professionals, and motivators of others" who lend their unique perspectives to

"Our vision is viable only if we can identify real concerns in real communities."
Richard N. Kovacevich
Norwest Corp.

bank management, Mr. Kovacevich wrote. They "share the vision of being the best."

As one of the biggest super communities in the nation, with $48 billion in assets and 200 banks subsidiaries in more than a dozen states, Norwest could find it hard to stay close to local roots. This is where the community boards come in.

Super Community Banking

By ANAT BIRD

A Crucial Factor

Mr. Kovacevich looks at the boards as the communication channel that facilitates understanding their markets' needs.

Community board members are essential to super community banks of any size, but especially to ones like Norwest. The company's management recognizes it, and hence gives special attention to selecting the best available candidates.

Norwest's community banking group is designed to allow each subsidiary bank to meet its community goals while serving the customer in the best possible way. Ken Murray, the head of community banking for Norwest, says:

"Our mission is to provide the personal service of a community bank with the extensive product and service resources of Norwest Corp. – the best of both worlds."

That is a concise recitation of super community theory.

Membership Criteria

Community board members are selected on the basis of expertise and business and community service, reputation as community leaders, talent as professionals and motivators of others, and ability to lend unique perspective to other board members and the management of the bank.

The members' role is to provide the president with an outside, objective source of expertise. They should counsel and support the bank in achieving business and community goals.

They are also expected to take an active interest in the performance of their banks, and to take the responsibility in seeking out information that is necessary to fulfill this role.

Each Norwest president is responsible for selecting his bank's community board and keeping its members informed about significant policy changes, management decisions, local market developments, and new business strategies.

Other Responsibilities

The community board members are expected to contribute to the bank's community marketing initiatives to assure that Norwest is meeting the banking needs of its entire community.

The board will annually review the Community Reinvestment Act statement and other aspects of community relations.

Among the community boards' other responsibilities are:

- To review their bank's statements of condition, income statements, and other financial performance reports on a periodic basis.
- To monitor, and advise the bank president on, the competitiveness and effectiveness of Norwest products and services.
- To assist in business development activity by identifying new customers and services and by suggesting changes in existing services that would enhance the bank's market position.

Through this set of responsibilities, Norwest puts meat on the bones of the advisory board membership and makes the board a true contributor to bank management and local focus, even without the legal ties of full board membership.

Like BB&T Financial Corp. in North Carolina [see my column of May 12], Norwest successfully motivates hundreds of "partners" in community relations and customer development by making them integral parts of the management team.

It is the commitment that makes the difference, not the legal status of the directors. In fact, the advisory status confers all the advantages of a full-fledged board without the downside of legal liability.

Norwest provides suggested guidelines that include frequency of meetings, terms of office, stock ownership, business commitments, an annual performance review, and retirement and conflict-of-interest policies. □

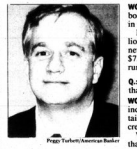
CEO Says Fleet Mortgage Group Has Learned from Refi Problems

Fleet Mortgage Group, long one of the most respected companies in the business, surprised Wall Street last month by announcing a $35.4 million loss for the second quarter. The results reflected heavy prepayments of loans amid the refinancing boom. Andrew D. Woodward Jr., chief executive, discussed the boom and other topics in an interview with Phil Rosinelli of the American Banker.



Peggy Tarbert/American Banker

Andrew D. Woodward Jr.
Looking for ways to hedge

Q.: Would you like to see the refinancing boom go away?

WOODWARD: The refinancing boom has clearly been a good news/bad news story. It has been great for loan production. But if you're a large servicer, it has led to accelerated prepayments in your portfolio.

Given the fact that we were the largest servicer at the time the refi story started, it's been kind of a balanced story for us.

Q.: What have you done to head off more big hits?

WOODWARD: We already have boosted originations, principally in our retail branches.

In 1991, we produced $3.2 billion of loans in our retail branch network, and in 1992 we did $7.9 billion. This year we're at a running rate of $8.8 billion.

Q.: How did you manage to do that?

WOODWARD: We've significantly increased the staffing in our retail network and significantly increased our efficiency.

We have fewer branches today than we had a year and a half ago – we're down from 108 to 91. We've consolidated some of our smaller offices into larger ones with regional processing.

Q.: You buy a lot of loans from banks and mortgage companies. Why not follow your competitors' example by also using mortgage brokers?

WOODWARD: We're looking at that. We're not saying that it can't be a good business – but you have to build the infrastructure to ensure that the credit quality and the handling of loans is in conformity with your standards. □

American Residential Wins Right to Buy Foster of Tex.

By JAMES H. SAPT

American Residential Mortgage Corp., La Jolla, Calif., has emerged as the winning bidder for Foster Mortgage Co., according to industry sources.

American Residential is now in final negotiations to buy the Fort Worth-based Foster, which services about $3.5 billion of loans. The deal is on track to close by the middle of next month, the sources said.

Foster, a unit of United Companies Financial of Baton Rouge, has been on the auction block since last spring, after being hit hard by prepayments tied to the refinancing boom.

Within Striking Distance

The purchase of Foster would increase American Residential's servicing portfolio by about one-third, to $13.8 billion. That would put it within striking distance of a position among the top 25 servicers in the country.

The mortgage bank, one of about a dozen to go public last year, has been increasing its servicing business steadily since 1990. At that time, it was servicing just $1 billion of loans.

Many mortgage bankers and analysts have come to view servicing as an essential line of business. Servicing fees, they say, can help offset declining origination revenues in periods of slack loan demand.

Price to Be Adjusted

The purchase price will be somewhere in the "mid $30 millions," one source said. But that

Foster was hit hard by prepayments.

number will be adjusted depending on prepayments in Foster's servicing portfolio between now and closing.

United bought Foster for $94 million in 1990 from the Resolution Trust Corp., only to see Foster's servicing portfolio almost cut in half by prepayments.

John Robbins, Chief Executive Officer of American Residential, declined comment. Calls to Foster Mortgage officials were not returned by press time. □

Margaretten Cuts Its Funding Costs with Two Revolving Credit Lines

By JAMES H. SAPT

Margaretten Financial Corp. said it obtained two revolving lines of credit – one for $555 million, one for $50 million – at lower interest rates than the credits they replace.

Chase Manhattan Corp. led the larger line, while First Chicago Corp. led the smaller one.

Margaretten, a major mortgage bank based in Perth Amboy, N.J., recently received its first rating for senior debt – BBB-plus from Standard & Poor's.

Close to Mandate

"Getting an investment grade rating has greatly expanded the number of banks with which we can do business," said Bruce Schnelwar, Margaretten's chief financial officer.

Separately, BankPLUS Mortgage Company of San Antonio, Tex., is close to handing out the mandate to lead a new credit package of about $375 million, according to bankers monitoring the deal.

Three bidders are said to be on the short list: Bank of New York, Texas Commerce Bank and Bank One Corp.

For Margaretten, the $555 million credit will function as a "warehouse" line. Mortgage banks use such credits to funds mortgages awaiting sale into the secondary market.

Priced at 125 basis points over the London interbank offered rate, it replaces a $374 million loan, priced at 150 basis points over Libor, according to bankers close to the deal. The new line matures in 364 days.

Deal Highlights

Borrower:	Margaretten Financial
Amount:	$555 million
Purpose:	To fund originations
Agent:	Chase Manhattan
Co-agent:	Chemical Bank
Maturity:	364 days
Pricing:	Libor plus 125 basis points

The deal has a 31-member syndicate, with Chemical Bank serving as co-agent.

Other Warehouse Credits

Margaretten has two other mortgage warehouse credits that total $630 million, according to Mr. Schnelwar.

Those loans, put into place at the time of Margaretten's spinoff from Primerica Inc. in 1992, were led by ABN AMRO Bank and National Westminster Bank PLC.

Margaretten's new $50 million credit partially replaces debt incurred during the 1992 acquisition of a servicing business from NationsBank Corp.

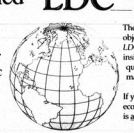
The credit matures in one year and two months, and is earmarked for general corporate purposes. The loan is priced at Libor plus 150 basis points, according to bankers. That is 75 basis points less than rate on the acquisition credit.

Standard and Poor's recently rated the company's senior debt as BBB-plus.

Banks coming into the First Chicago credit include NationsBank, Bank of Montreal, Canadian Imperial Bank of Commerce and Bank of New York, sources said. □

Opportunity is Spelled LDC DEBT REPORT

Emerging Markets are risky, notoriously inefficient, known for changing rules and limited public disclosure. Knowing what's really going on spells the difference between opportunity and loss.



The *American Banker*'s weekly *LDC Debt Report* delivers the most accurate, objective, succinct information available on emerging-market debt. *LDC Debt Report* provides the astute investor with news, reviews, and strategic insights. The popular Market section summarizes each week's developments, quoting bid and offer prices for 26 developing-country loans and 18 emerging-market Eurobonds. It also tracks the performance of selected equity markets.

If you must know what's going on in key emerging markets, recent trading, economics and politics, the World Bank, and more, LDC DEBT REPORT is a must read every week.

Read it free for 4 weeks! Just fax your letterhead to 212-943-7852, or call Hans Winberg at 800-407-8241

GAAP Accounting Paints a Distorted Profit Picture

By LARRY SWEDROE
Residential Services Corporation of America
Clayton, Mo.

Warning! Proceed with extreme caution!

These disclaimers should be required on all mortgage bank financial statements until the industry and the accounting profession come to terms with the inadequacies and inconsistencies in how mortgage servicing rights are treated by generally accepted accounting principles.

GAAP accounting can obscure the true value of mortgage companies, ignore servicing runoff, and lead to short-term decisions that are inconsistent with long-term strategic plans.

These inadequacies have led a number of equity analysts, lenders, and mortgage executives to advocate an alternative approach known as net value added. NVA adjusts GAAP earnings for changes in the economics of a mortgage bank's entire loan servicing portfolio, on and off the balance sheet.

It captures the effects of unexpected prepayments on servicing revenues – a significant factor in this low-rate environment – and gives a true picture of the economic performance of a mortgage bank.

A discussion of this subject is timely since this fall the Financial Accounting Standards Board will address the issue of mortgage servicing.

Servicing Rights

Distortions in GAAP accounting are primarily due to the difference in the way originated and purchased servicing are treated.

The distortion can lead to short-sighted decisions.

In general, GAAP does not immediately reflect the value of mortgage servicing rights on loans originated by a mortgage bank. Instead, this income is recognized over time as the servicing fees and other ancillary revenues are collected.

In contrast, purchased servicing rights may be capitalized on the balance sheet, and generally result in higher current year GAAP earnings. Servicing fees and ancillary revenues for purchased servicing are then offset by amortization as they are collected.

This practice makes it difficult to compare the profitability of mortgage banks with different mixes of retail and wholesale origination volume. It also encourages uneconomic decisions – such as selling a portion of originated servicing and then purchasing servicing from others – to bolster GAAP earnings.

A Telling Example

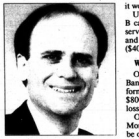
Let's look at how GAAP can distort the economic profile of a company.

Mr. Swedroe is managing director of Residential Services, the parent of Prudential Home Mortgage Corp.

Assume that Mortgage Bank A originates a $100,000 mortgage through its retail network. It collects a 2-point fee ($2,000), spends $2,500 to originate the asset, and sells the loan at par into the secondary market, producing no gain or loss.

Under GAAP, the value of the originated mortgage servicing rights, or $1,300 (130 basis points), is not capitalized on the balance sheet. As a result, GAAP reflects only a $500 loss ($2,000 in fees minus $2,500 in costs).

But suppose that $100,000 loan were acquired by a wholesale lender, rather than originated, and sold into the secondary market at par. The purchaser, Mortgage Bank B, would pay a



Larry Swedroe

servicing release premium of $1,300, or 130 basis points, and earn $400 in fees, against which it would incur $100 in expenses.

Under GAAP, Mortgage Bank B can capitalize the purchased servicing on its balance sheet and record $300 in earnings ($400 minus $100).

Who Outperformed Whom?

On a GAAP basis, Mortgage Bank B appears to have outperformed Mortgage Bank A by $800 (a $300 gain versus a $500 loss). But has it?

On a net-value-added basis, Mortgage Bank A's loss would be offset by the value of the servicing it has created – $1,300, showing a net value added of $800. (For the purposes of comparison, this example ignores the impact of income taxes).

Mortgage Bank B's earnings would remain at $300 on a net-value-added basis, because the value of the servicing is already reflected in the GAAP results.

In contrast with GAAP earnings, the real economic performance of a mortgage bank is captured by NVA. Moreover, NVA permits management to focus on strategies to maximize long-term value.

While NVA provides a more accurate measure of a mortgage bank's performance, it should not be considered the only yardstick. One must also assess operating strategies, risk/return profile, and cost of capital. But with NVA, you at least start with a level playing field. □

NEED BANKING INFORMATION FAST?

AMERICAN BANKER ONLINE

For more information, including details on special direct data delivery options and redistribution rights, call:

Peter Leach, Database Licensing, American Banker • Bond Buyer, at 1-800-356-4763 or 1-212-943-6304.

Now there's a way to stay abreast of that vital information or to find any articles you may have missed by using your own PC with a modem to call up the American Banker Online on the information service of your choice.

American Banker Online is a full-text news service providing instant access to all the information appearing in the only daily banking newspaper. It enhances the value of the newspaper's daily information by giving you the ability to recall all the stories on a bank, or a banker, or legislation, or indeed anything you need to know about banking.

With the power of the computer, you can locate the information that's vital to your business. American Banker Online is a full-text database that provides direct, easy access to the daily news, statistics, surveys, speeches, commentary, and special editions of the print newspaper. And you can access this information each morning even before that day's paper is delivered!

In addition to being a daily information tool, American Banker Online is also an archive. Many users rely on our information to piece together the background on events that impact their business. Along with today's news, American Banker's historical online records include more than 80,000 articles dating back to 1979. These can be searched by headline, key words, bank name, or any other search terms.

Put American Banker Online to work for you. It is accessible with any PC and modem through the following information retrieval services:

BankAmerica Aims for $2 Billion in Retail Sales

By DEBRA COPE

BankAmerica Corp., one of the giants of the bank mutual fund business, is engineering some big changes in the products it sells and the customers it reaches.

The San Francisco-based company plans an aggressive push into the retail side of the investment products business.

"We want to really continue to grow the retail side," said Debra McGinty-Poteet, managing director of BankAmerica's funds management unit.

Noting that about 95% of the bank's mutual fund assets come from institutional investors, she said, "Our goal is to get to 30% retail."

Expanding the Product Mix

At the same time, the bank is expanding its product mix, with the aim of bolstering sales of its proprietary funds. Plans call for the introduction of 18 new Pacific Horizon funds by the end of next year, boosting total offerings to 29.

The changes, BankAmerica executives say, could push total retail fund sales to $2 billion in 1993, far above previous levels notched by banks.

Till now, BankAmerica has built its $19.3 billion-asset mutual fund business chiefly through sales of money market funds to institutional clients.

But the record-low interest rates have whetted consumers' appetites for stock and bond mutual funds, shifting the action to the retail side of the market.

400 Investment Specialists

To lead its retail sales efforts, BankAmerica recently recruited John O. Myers, a veteran mutual fund executive from Boston-based Colonial Investments.

Mr. Myers oversees a sales force of 400 investment specialists, all experienced, full-fledged stockbrokers with Series 7 licenses from the National Association of Securities Dealers.

His first task in joining BankAmerica was to undertake a 100-day evaluation of the bank's investment products strategy. As his self-imposed deadline draws near, Mr. Myers says some key elements of a mission statement are beginning to take shape.

Chris Hardy

SHIFTING FOCUS: John Myers and Debra McGinty-Poteet are intent on building the consumer side of the wholesale giant's business.

For one thing, he said, he is convinced that using Series 7 stockbrokers to sell mutual funds is the right way to go. Many banks prefer to train platform employees to sell mutual funds part time, typically by putting them through the less rigorous Series 6 exam.

"I'm really committed to a highly trained sales force focused on long-term relationships," Mr. Myers said. "I want to steer away from the somewhat opportunistic path of using thinly trained individuals."

Restraint on Proprietaries

In carrying out his mission, Mr. Myers will be working closely with Ms. McGinty-Poteet, who heads up the unit that creates and manages proprietary funds. In BankAmerica parlance, Mr. Myers is her "client," because he is responsible for retailing the funds.

They are in absolute agreement on a key point: The bank must bolster retail sales of the proprietary funds, but not go too far in that direction.

The Pacific Horizon funds account for about 20% of sales. The BankAmerica executives think the figure should be 40% or 50%, but no higher.

In fact, products from four mutual fund companies – American Funds, Franklin Resources, Colonial, and Putnam Financial Services – are currently marketed to retail customers alongside the Pacific Horizon funds.

"Customers need to be served with an array of choices," Mr. Myers said. "We offer no incentive payout for selling the in-house fund group.

"We have to earn our position alongside the other products," Ms. McGinty-Poteet added.

"There's no free lunch."

Money market funds are likely to remain the centerpiece of the fund colossus at BankAmerica, which already has a commanding presence in the market.

Its Prime Fund, with $14 billion in assets, has consistently been a top performer, and that is crucial to sales.

"When it comes to money market funds, sometimes the bottom of the pack and the top of the pack are only divided by 10 or 15 basis points" in return, Ms. McGinty-Poteet said. "But that is huge."

"With money market funds, you have to be a real street fighter out there," she said.

Aiming High

Ultimately, BankAmerica hopes to become nothing less than the very model of a successful bank mutual fund program.

"We want to be among the biggest, best-executed delivery systems in the country," Mr. Myers said.

Of course, the executives also have some clear profit targets.

"The corporate goal is to have this business at $100 million total contribution [to profits], after taxes," said Ms. McGinty-Poteet. All of BankAmerica earned $1.492 billion for 1992.

As a newcomer to banks, Mr. Myers is impressed by the trust they are accorded by their customers. "Brokers are now realizing that banks are where the action is," he said.

But, he added, it's only a matter of time before mutual fund companies start to apply some heat.

"Banks need to be prepared for that competition, and start now," he said. "You can go only so far with the comparative advantages of trust, comfort, and convenience." □

PNC in Test of Money Management for the Little Guy

By KAREN TALLEY

PNC Bank Corp. is testing a wrap-fee account that would make sophisticated money-management services available to customers with as little as $5,000 to invest.

The Pittsburgh company plans to use its proprietary mutual funds to build 20 different investment portfolios for retail customers at its more than 500 branches.

The product could be ready for sale by this fall, according to George Bernard, vice president in charge of mutual fund management at PNC Securities Corp.

More Banks Joining Fold

"We feel that most customers should have this kind of program," Mr. Bernard said.

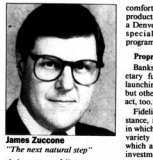
Banks increasingly are launching their own versions of wrap-fee accounts, so-called because money management, investment advice, and trading fees are all wrapped together in one fee.

In PNC's case, these services will cost customers an annual fee of 1.3% of the assets under management.

Like many mutual fund wrap programs offered by fund companies and brokers, PNC will periodically change the mix of mutual funds within each portfolio to respond to changing market conditions and to maximize customer returns.

Right now, PNC is testing the program by using hypothetical customers as models.

Other bank companies that are working on mutual fund wrap programs include BankAmerica Corp. and Chemical Banking Corp. Like PNC, these banks have proprietary mutual funds they could use to create their wrap portfolios.



James Zuccone
"The next natural step"

"It's the next natural step for banks as they become more comfortable with investment products," said James Zuccone, a Denver-based consultant who specializes in bank wrap programs.

Proprietaries Not Required

Banks that manage proprietary funds have an edge in launching wrap-fee programs, but other banks can get into the act, too.

Fidelity Investments, for instance, is marketing a program in which it supplies banks with a variety of funds and software, which are then used to fashion investment portfolios for customers.

Mutual fund wraps are offshoots of traditional wrap products that rely on professional money management firms to build portfolios from individual stocks. These programs typically cater to customers of higher net worth than the mutual fund programs do.

Chase Manhattan Corp. is believed to be the only bank in the country using this traditional route. It shares a 3% annual management fee with outside money management firms that assemble baskets of individual securities for Chase customers.

Some banks argue they have trust departments to serve this clientele and don't want to open the door to turf battles that could develop if outsiders become involved. □

Choose The Best.

"For our proprietary mutual fund program to succeed, we've got to choose the best partner – one who can help us grow our assets.

We're bringing in SEI."

Peter H. Gallary
Tapped for two-year term

Boston Co. Exec Elected to Board Of Industry Group

By DEBRA COPE

Peter H. Gallary, executive vice president of Boston Co., has been elected to a two-year term on the board of directors of the National Investment Company Service Association.

The trade group represents companies that provide services and products to the mutual fund industry.

Joined in 1990

Mr. Gallary joined Boston Co. in 1990. As head of its investor services group, he oversees all mutual fund services, including custody, fund accounting, treasury, legal, financial reporting, systems, and marketing.

The group oversees $120 billion in mutual fund assets, including $18.3 billion in bank proprietary mutual funds.

Boston Co. is owned by Mellon Bank Corp.

It's a partnership. And it goes way beyond just administering your proprietary funds.

At SEI, our number one goal is growing your assets. We do this through our superior marketing and distribution expertise and our integrated technology solutions. Backed by our proven legal, accounting, and operations capabilities.

But our support doesn't end there. We'll develop customized plans and programs for you. Our investment experts will help structure products that meet your customers' needs. We'll even provide direct sales support — if you need it.

SEI administers and distributes more than 100 portfolios for major proprietary fund complexes. We're partners to BANC ONE (Helmsman Fund), SunTrust Banks (STI Classic Funds), Union Bank (Union Investors Fund), and many other industry leaders.

Growing your assets and improving your profits is what our partnership is all about. Which is why your goal should be: Choose The Best!

About SEI

SEI has been dedicated to creating comprehensive investment programs for over two decades, focusing on the following areas:

Investment Products and Programs ($35 billion in assets): mutual funds, proprietary funds, annuities, and bank-wide investment programs.

Full Planning and Consultation Services: marketing planning, program definition and implementation, as well as full training and sales support.

Investment Management Technology: trust accounting, defined contribution recordkeeping, mutual fund accounting, and retail support systems.

For more information, call 1-800-DIAL-SEI (342-5734).

Sales Guidelines from the Comptroller Are Serious Business but No Surprise

By ROBERT M. KURUCZA
Special to American Banker

Comment

On July 19, the Office of the Comptroller of the Currency issued its much-anticipated guidelines for national banks offering mutual funds, annuities, and other nondeposit investment products to retail customers.

These guidelines, set forth in OCC Banking Circular No. 274, were reprinted in substantial part in the July 28 issue of *American Banker*.

Before the guidelines were released, there was much speculation about them – and some trepidation – within the banking industry.

These same concerns existed within other segments of the financial services industry, most particularly among the securities and insurance-related companies, which support banks in a variety of ways in connection with their retail investment-product activities.

The speculation intensified during the several weeks before the release of the guidelines, as members of the Comptroller's staff floated trial balloons in various contexts as to the content of the guidelines.

At the same time, some quarters of Capitol Hill and the media continued to express serious reservations about the potential negative consequences of banks offering investment products.

'Horror Stories' Rare

This persistent negative focus, while understandable to some extent in Washington political terms, is perplexing.

After all, though many banks have been involved in investment-product activities for over 10 years, there have been few "horror stories."

Furthermore, bank customers are enjoying substantial benefits from more convenient access to much-demanded retail investment products and increased competition among providers.

Indeed, consumers need easy access to the widest range of investment options now more than ever, in view of the current interest rate environment. And it has become abundantly clear that neither employers nor the federal government is in a position to provide adequately for the retirement needs of an aging population.

Against this backdrop, banks and their securities and insurance industry "partners" waited for the Comptroller's guidelines with baited breath, fearing the worst.

A Balanced Response

Fortunately, their worst fears were not realized. There were no "showstoppers" in the guidelines.

The Comptroller's office appears to have carefully balanced the growing demands of consumers to obtain investment products at their banks, the obvious desire of banks to meet these demands, and the critical need that banks "do it right."

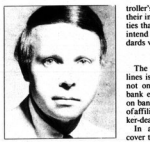
The worst fears of the banking industry were not realized.

The guidelines are similar, in many respects, to recent policy statements issued for state-chartered member banks by the Federal Reserve Board and for savings associations by the Office of Thrift Supervision.

(The Federal Deposit Insurance Corp. has not yet issued guidelines on investment-product sales for state-chartered nonmember banks.)

The guidelines from the Comptroller's office also generally conform to the requirements it set forth in its April approval of the establishment of Nations Securities, the securities brokerage joint venture between NationsBank and Dean Witter, as well as earlier OCC approvals of specific investment-product activities by national banks.

For example, like many of the earlier approvals, the new guidelines require that specific disclosures be made in connection with the sale of investment products, and that national banks take various measures to avoid possible customer confusion between investment products and insured deposit products.



Robert M. Kurucza

New Requirements

However, it would be a mistake to view the guidelines as representing nothing more than a codification of earlier pronouncements relating to investment-product activities of national banks.

In fact, the guidelines impose a number of new substantive requirements on national banks involved in the sale of investment products.

Certain of these new requirements apply directly to senior bank management and boards of directors of national banks. The most significant is an obligation to consider and develop comprehensive formal policies addressing the potential risks posed by investment-product sales.

Review Is Urgent

The guidelines also contain certain requirements which vary to some degree from prior positions of the Comptroller's office, as well as some requirements that are not entirely clear.

Accordingly, it is vitally important that national banks that offer or expect to offer investment products to their customers carefully review the guidelines and consult with their counsel to ensure that the bank is in full compliance.

There is a particular urgency to lend to this task, since the guidelines became effective upon issuance.

It already is clear from national banks that are undergoing or have recently undergone Comptroller's examinations relating to their investment-product activities that the agency's examiners intend to apply the new standards vigorously.

Broad Coverage

The application of the guidelines is very broad. They cover not only direct sales made by bank employees, but also sales on bank premises by employees of affiliated and unaffiliated broker-dealers.

In addition, the guidelines cover telephone and direct-mail sales efforts initiated from bank premises.

Moreover, sales resulting from bank referrals also are covered if the bank receives a benefit.

Given their wide scope, the guidelines are obviously of interest not only to national banks, but also to nonbank entities involved with them in connection with the offering of investment products.

These entities include third-party marketing firms and proprietary mutual fund sponsor-distributors.

Third-Party Arrangements

In fact, the guidelines include a number of requirements which national banks must ensure are embodied in arrangements with such third-party service and product providers.

These providers, particularly those providing "turnkey" product and service programs to national banks, would seem well served to immediately review the structure and operation of their programs to ensure compliance with the new guidelines.

The guidelines mirror earlier pronouncements.

There is little doubt that their bank clientele will be expecting such compliance, although the guidelines make clear that national banks cannot totally rely on the efforts of the third-party service providers.

Directors' Duties

The guidelines provide that national bank's boards of directors are responsible for evaluating the potential risks posed by bank investment-product sales activities.

In this connection, directors must adopt self-regulatory policies and procedures to ensure compliance with all applicable laws, rules, regulations, and regulatory conditions (such as applicable banking, securities, and insurance law requirements), including relevant provisions of the guidelines

The directors of each national bank, in conjunction with senior management, must ensure that they are appropriately monitoring the bank's investment-product sales program.

Active Oversight Mandated

The Comptroller's office is looking for directors to take an active oversight role in connection with investment-product activities.

The difficult question is what this means in a particular circumstance.

Most significant is an obligation to develop policies addressing potential risks.

On the one hand, a board clearly must satisfy the guidelines' requirements.

On the other hand, it may not be appropriate from a corporate-law perspective for the board to "micromanage" the investment-product sales program.

The ultimate answer to this question will depend in part on the specifics as to the national bank involved and its investment-product program.

Given the importance of this issue, it would not be surprising if the Comptroller's office provided some further guidance on the issue in the near future.

At a minimum, a board should carefully review and approve the bank's investment-product activities, which must be detailed in the newly required program statement discussed below.

Program Statements

The guidelines require national banks to adopt a comprehensive investment-product sales program statement describing the features of the sales program; the roles of the bank, its affiliates, and their respective employees; and the roles of any

Consumer Demand Boosts 'Socially Conscious' Funds

By DEIDRE SULLIVAN
Boston Bureau of the American Banker

Banks are beginning to roll out the welcome mat to mutual funds that follow "socially conscious" investment strategies.

A handful of banks have begun offering such funds, which invest in companies that meet certain litmus tests of environmental, political, or social good.

Strong consumer demand has helped to popularize the funds, which are promoted as a way of "investing with a conscience."

Customer Demand

Investments in socially responsible funds, or "green" funds, as they are popularly known, have grown from $40 billion in 1984 to $848 billion in 1991, according to the Social Investment Forum, Minneapolis.

Milwaukee-based Marshall & Ilsley Bank recently started selling the Calvert family of socially responsible mutual funds after it noticed that customers were asking for socially-responsible investment options.

The bank had already been offering Calvert tax-exempt funds when it added the company's stock and bond funds to its menu, according to Steve Schueth, vice president at Calvert.

"That first relationship with our tax-exempt funds opened up more possibilities with M & I," said Mr. Schueth. "Because of consumer interest, we anticipate more potential as the years unfold."

Calvert has also established a relationship with the trust department at Dubuque Bank and Trust in Dubuque, Iowa.

Strict Investment Criteria

The trust department adheres to very strict investment criteria. For example, it will not buy funds that invest in casino companies, even though such stocks have been hot performers lately.

Dubuque Bank and Trust vice president and chief investment officer, Mel Miller, has recently started purchasing shares in Calvert's World Values Global Allocation Fund, a $35 million fund which was started last year. It emphasizes companies that promote environmental improvements and steer clear of those that do business in South Africa.

"From an asset allocation standpoint, we have need to invest internationally, and the Calvert Fund was exactly what we were looking for," said Mr. Miller.

Jack Farrell, vice president and sales manager at Working Assets in San Francisco, said his company is eager to explore the bank channel as a means of distributing their family of funds.

He also said that Working Assets is currently working to develop broker-dealer relationships and that they recently signed an agreement with Fisco Equity, a broker-dealer in Providence, Rhode Island.

Ms. Sullivan is a freelance writer based in New York.

Financial Markets Group Issues Compliance Manual

The Financial Markets Association has published a handbook to help financial institutions comply with mutual fund laws, regulations, and guidelines.

The book includes detailed information on state and federal regulations, plus a 20-page compliance checklist.

The Alexandria, Va.-based trade group developed it in conjunction with consultants from Securities Risk Management, also of Alexandria. For more information, call 703-836-9378. □

OCC Guidelines: Serious Business But No Surprise

Continued from page 14

third-party entities.

This statement should address at least the following matters:

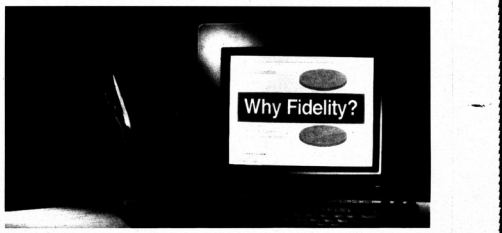
- Supervision of personnel involved in investment-product sales programs.
- The roles of other entities selling on bank premises, including bank supervision and monitoring of compliance by selling employees.
- The types of products the bank will sell, including identification of specific laws, regulations, and other requirements governing the selection and marketing of such products.
- Policies governing the permissible uses of bank customer information.

Comprehensive Manifesto

In sum, a national bank is required to maintain a comprehensive program manifestum that addresses all aspects of its investment-product sales program.

The guidelines require senior management and the boards of national banks to be engaged in investment-product sales activities to review and approve bank policies regarding sales of investment products (or prepare new policies and procedures if none exist) to ensure full compliance.

Coming Next: Mr. Kurucza discusses specific points that banks must address in their investment-product program statements. □



It isn't a question. It's an answer to your customers' asset allocation needs.

There isn't one thing that makes Fidelity's asset allocation program different than any other in the industry. There are many.

First and foremost, it's an ***instant asset.*** Our turnkey program can help put you in business today by providing you with investment solutions, not just investment products.

Mutual Fund Assets Pass $1.8 Trillion for First Time

By DEBRA COPE

Assets in mutual funds shot past the $1.8 trillion mark for the first time in June, the Investment Company Institute reported.

Continued strong sales helped fuel the surge. Sales of long-term mutual funds – that is, stock and bond funds – totaled $40.7 billion in June, outpacing May's $36.9 billion.

In June 1992, long-term fund sales totaled $28.3 billion.

Bond funds were the top sellers, drawing $22.8 billion during June.

Stock funds took in $17.9 billion. Funds specializing in growth-and-income stocks led all categories, accounting for $6.5 billion in sales.

At the end of June, assets in bond funds totaled $673.1 billion. Stock funds claimed $580.4 billion. Taxable money market funds had $452.9 billion in assets, while tax-exempt money funds had $97 billion.

Liberty Spruces Up Its Variable Annuity

Liberty Financial Cos. has revamped the variable annuity product it markets to banks.

The Boston investment product supplier introduced Preferred Advisor, replacing its eight-year-old Keyflex variable annuity.

Preferred Advisor was developed by Keyport Life Insurance, a division of Liberty.

Variable annuities are tax deferred products that give customers the opportunity to choose from among a number of mutual fund-type investments.

Preferred Advisor features three new fund choices, managed by Colonial Management Associates of Boston.

The new funds invest in utilities, U.S. government securities, and growth and income stocks.

Preferred Advisor also includes seven fund options that the Keyflex annuity offered.

These choices, which include money market and asset allocation funds, are managed by Stein Roe & Farnham of Chicago, a Liberty affiliate.

Other new features include a reduction, to $250 from $1,000, in the minimum for additional investments in the annuity.

The so called "add-on" minimum was lowered to make the product accessible to more people, a spokeswoman said.

Liberty feels Preferred Advisor offers more flexibility than other annuities. Investors can discontinue payments at any time and take a lump-sum payout. They can, however, face tax penalties for doing this.

Griffin to Head Unit Of Midland Savings

Midland Savings Bank, a Des Moines thrift, has named Lee Griffin as president of its Midland Investment Services unit.

Mr. Griffin will retain his position as vice president of retail banking for the thrift, Iowa's largest. Both the thrift and the investment services unit are subsidiaries of the Central Companies.

Midland Investment Services specializes in selling mutual funds, annuities, securities, and life insurance. It was established in 1986, and its cumulative sales volume recently topped the $200 million mark. Of that, nearly $40 billion was sold in 1992 alone.

Lee Griffin
Thrift is Iowa's largest

Mr. Griffin said his aim is to enhance coordination between the thrift and the investment unit.

Alfred P. Moore, Midland's president, said Mr. Griffin's new position is "a natural extension of the work he's already doing in retail banking."

* * *

Marshall & Ilsley Taps Presidents of 2 Units

Marshall and Ilsley Corp., the holding company of Marshall & Ilsley Bank in Milwaukee, has elected presidents for its trust and investment management units.

Morry L. Birnbaum, division head of corporate trust services since 1979, has become president of Marshall & Ilsley Trust Co. He succeeds Michael J. Revane, who is retiring.

Mr. Birnbaum, 45, joined M&I in 1969 as a tax analyst. He graduated from the University of Wisconsin-Milwaukee with a major in finance.

David W. Schulz, 35, was elected president of M&I Investment Management Corp. A chartered financial analyst, he has been director of fixed-income since 1990. He joined the bank in 1980 as a fixed-income portfolio manager.

He earned a BBA degree in finance and accounting at the University of Wisconsin.

Mr. Schulz takes over for William J. Gumerman, who resigned, according to the bank.

Marshall & Ilsley Corp. has 37 affiliated banks in Wisconsin and Arizona.

— **Michael O'D. Moore**

It's instinct that turns nectar into honey. But, many investors don't instinctively turn their idle cash into working cash for sweet results. That's why they come to you.

And, that's why Federated Investors has developed a complete range of institutional cash investment products that fit highly defined market niches. Treasury securities, with or without repp positions. Agency securities. Commercial paper. Tax-exempts. And many, many more.

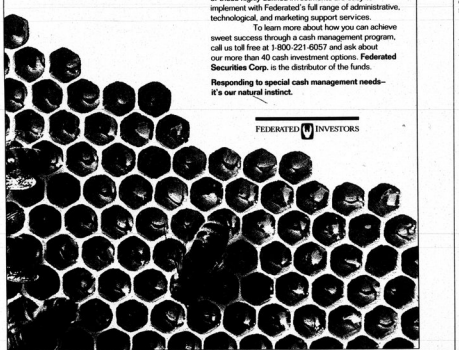
Hardworking Cash Can Yield Sweet Results

Using our niche funds, you can design a comprehensive cash management program and tailor it to the sensitivities of individuals or institutions.

Such a hard-working program is an effective relationship-building tool that also provides your institution with additional fee income. Of course, all of these highly defined investments are easy to implement with Federated's full range of administrative, technological, and marketing support services.

To learn more about how you can achieve sweet success through a cash management program, call us toll free at 1-800-221-6057 and ask about our more than 40 cash investment options. **Federated Securities Corp.** is the distributor of the funds.

Responding to special cash management needs– it's our natural instinct.



FEDERATED INVESTORS

As Capitalism Grows in China, So Does Use of Visa Debit Cards

By STEPHEN KLEGGE

Bank card use is growing explosively as capitalism makes headway in China, Visa International said.

Payment volume on Visa debit cards issued by Chinese banks reached $9.3 billion in the 12 months ending March 31 – an increase of 333% from the previous year.

The number of cards rose 288% to 1.87 million.

Credit Cards on Horizon

"The reason for the phenomenal growth is that businessmen are going interprovince" and need to draw from accounts at their home bases for cash and expenses, said Carl Pascarella, president of Visa International's Asia-Pacific region.

He said Visa, by expanding its payment system and training Chinese bankers in credit approval and monitoring, is hastening the day when credit cards will be issued to the Chinese people.

With the United States market reaching maturity – a phenomenon reflected in slow growth in the amount of cardholders and in merchant acceptance – emerging Asian markets are expected to fuel future growth.

Volume increased 333%, and the number of cards went up 288%

Mr. Pascarella cited Taiwan as a precursor of what to expect from such countries as China, India, and Vietnam.

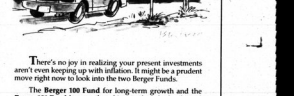
Since trade and foreign exchange restrictions were relaxed two years ago, he said, Taiwanese banks have issued a million credit cards, most of them Visa cards.

Overseas spending charged to Taiwanese credit cards has surpassed that of Korean and Australian cardholders and now ranks second in the region behind Japan, Mr. Pascarella said.

Sees Other Issuers Profiting

Citicorp, Chase Manhattan Corp., and BankAmerica Corp. all issue cards in Asia, the Visa official said.

He added that other U.S. card issuers will benefit from the increase in spending by Asian tourists and from greater worldwide card acceptance. □



There's no joy in realizing your present investments aren't even keeping up with inflation. It might be a prudent move right now to look into the two Berger Funds.

The **Berger 100 Fund** for long-term growth and the **Berger 101 Fund** for growth and income have both achieved impressive records for over 18 years and are worth consideration for your portfolio. For the investment philosophy behind these funds, please call for a prospectus and study it carefully before investing.

THE BERGER FUNDS • (800) 333-1001

Plastic Delinquency Rate Declined to 5.27% in April

NEW YORK — More American consumers have been paying their credit card bills on time, according to an indicator published by Moody's Investors Service.

In April, 5.27% of receivables in Moody's-rated portfolios were delinquent.

The delinquency rate was down from 5.50% in March and 5.69% in April 1992.

The chargeoff rate – loans actually written off as uncollectible – in the securitized pools of card receivables dropped to 5.19% in April from 5.29% in March and 5.93% in April 1992, Moody's Credit Card Performance Index said.

Impact of Lower-Rate Cards

For the 11th consecutive month, principal payment rates in the pools rose compared with year-earlier levels, this time to 12.19% from 10.93% in April 1992.

Moody's attributed the overall improvement in the indexes primarily to the economic recovery in the United States.

"Another factor contributing to the high payment rate may be the availability of lower interest rate credit cards," said Ed Bankole, a Moody's senior analyst. "Some people may simply be rolling their balances over from one card to another."

The Moody's data are based on performance of 68 of the more than $58 billion of bank credit card-backed securities rated and monitored by Moody's.

Each of the transactions in the index sample has been outstanding for at least one year. □

Nabanco Wins Sears Processing Contract

Continued from page 1

and American Express nationwide.

In early July, word began to spread in the bank card industry that Nabanco was closing in on the coveted Sears contract.

Electronic Signatures

At the end of June, Microbilt, another First Financial Management subsidiary, signed a contract to provide signature capture devices for all Sears points of sale.

The electromagnetic devices create an electronic versions of customer signatures, which reduce paper files and streamline resolution of disputes or errors.

Microbilt's terminals also can read cards' magnetic stripes and embossed characters, as well as the magnetic-character lines of checks. □

Chemical Names Ryzewicz to Post in Credit Card Unit

Chemical Banking Corp.'s credit card unit has named Gene F. Ryzewicz managing director of marketing and business development, Mr. Ryzewicz, 47, previously worked in Citicorp's credit card and Diners Club units.

He replaces Daniel T. Murray, who left Chemical in January to take the top marketing post at MasterCard International.

By Paul S. Nadler

Why Middle-Class Children Face a Squeeze on Earnings

One fact of economic life that has become obvious to all of us is that our offspring will not have it as easy as many of us did.

We went to school, graduated, got a job, and married, and we had a good expectation that we could support a family well on our income, even including paying college tuition.

Such a plan in today's environment is like a pipe dream.

What happened? Why do our children look at what we accomplished economically and feel that with few exceptions they won't be able to match it in their own lifetimes?

Is Debt to Blame?

Some look at our national debt, which is rapidly approaching $4 trillion, and they hold that this is the cause.

"You mortgaged our future by generating this debt you are passing on to us," is the cry.

There is an answer to this: We are passing on the assets that the debt financed as well as the debt itself, so it is a wash. The national debt has to be owed to someone.

And we are turning over to our kids these bonds, either directly or in the form of insurance policy claims, bank deposits, and the other assets that reflect the liabilities of the institutions that own the bonds directly. Assets and liabilities must match. So if we pass on one, we pass on the other.

Foreign-Owned Assets

What about so called "foreigners." Haven't we so abused our international position that we have become the world's largest debtor in history? Aren't our children's prospects damaged by the fact that foreigners have these huge claims that must be met?

But ask yourself, how are these claims to be met? If foreigners buy American goods, which we want them to, they help provide American jobs. And if they invest in American real estate, industries like movies and the like, they provide the capital for our growth and also again provide new jobs.

Look at the success of the Japanese auto industry in building cars while making employees happy in many southern U.S. communities.

Can this take the money out of our country? No, dollars are American bank deposits. They remain here. All they can do is spend them or switch them over to others who are willing to buy or hold them.

The Japanese and others who are earning dollars are realizing the only way they can use their earnings in the long run is to spend them here for goods and services. We are beginning to see this as Japanese tourists flood the United States.

We Enjoyed a Free Ride

I think what is really behind the fact that American youth can not expect to do as well as their parents did is that we, the older generation, got a lot of our benefits by living "off the backs," so to speak, of less fortunate people in Europe, Japan and from abroad.

America always had immigrants who worked for very little. We benefited from their labor. We had industries who also were paid below the regular wage level.

But now we find that immigrants, minorities, and less skilled people are unwilling to accept lower wages than others earn, and they are using their political clout to even matters out.

Something Has to Give
