When the bottom of a seesaw goes up, the top goes down. In other words, as the wage level of the bottom rises, since there are only so many goods and services to go around, the top must fall, and this top is the children who will not do as well as their parents.

Look at the movie "Hoffa". The basic conclusion of the truck driver is, "He made as part of the middle class."

Now, without sounding like a snob, if truck driving is a middle class occupation – something you can learn pretty rapidly, then what is banking? Is banking now an aristocratic field? No.

It means that through the clout of the Teamsters Union, we have given this truck driver the same pay and benefits a banker gets, despite the years of education and training the banker needs to handle his job.

Similarly, bankers worry about the fact that a checker in a grocery store can earn double what a bank teller earns or even more when overtime is factored in.

There is more truth than fiction in the old joke of the bank president who complains on looking at the plumber's bill, "I don't earn that much per hour," to which the plumber replies, "Neither did I when I was a bank president."

Being Spread Around

So the answer to why the new generation can't expect to do as well as their parents is really that overall the generation is doing as well as ours or even better. It is just that the benefits are being spread more evenly around.

Those whose parents were at the top of the ladder may cry that they can't climb as high as their parents did. But for many others, the new chances of moving partly up the ladder are far greater than ever before.

Or as the opening song of the old TV series, "The Jeffersons" concludes, "We finally got a piece of the pie." □

OVERALL, *the new generation of wage earners is doing as well as ours or even better. It is just that some who were formerly economically disenfranchised now have a better shot at sharing the wealth.*

Mr. Nadler is a contributing editor of *American Banker* and professor of finance at the Rutgers University Graduate School of Management.

By Brian W. Smith and Charles M. Horn

Charting a Responsible Course For Banks in the Mutual Fund Arena

We were pleased to read Charles W. Woodford's letter to the editor June 23, calling on bankers and consultants to remember that a trust business is grounded on a highly developed sense of fiduciary duty.

In the past, banks' fiduciary roles were straightforward, and compliance efforts were impressive. These days, the roles are changing and compliance is more difficult, yet it is nonetheless as necessary as before.

In our recent experience, some outside advisers and vendors, in apparent zeal to establish themselves in this competitive business, have put their actions, statements, and advice demonstrated a dangerous lapse of memory about what the banking business is all about.

In so doing, they have contributed to an environment which to observers may appear abusive, and may invite unwanted legislative and regulatory involvement.

Not Whether, But How

We want to encourage moderation and realism in the ongoing debate over these issues.

It is time to recognize that the important debate over bank securities activities is no longer whether banks can engage in such activities, but how they should conduct them in a manner that not only complies with legal and supervisory requirements, but also retains customers' confidence and trust.

Pricing is one issue that banks have been wrestling with. This is not an easy subject.

The pricing levels for many traditional fiduciary services and the methodology used in setting them have not been reexamined for a long time; bank trust customers are demanding easier access and more money management options, e.g., sweeps from deposit accounts into fiduciary accounts; and fiduciary accounts have been linked by the banks to other financial vehicles, e.g., mutual funds, which have a different regulatory scheme and separate fee structures and pricing methodology.

Fanning the Flames

In the midst of the uncertainty created by customer demands, technology, and new products, banks have sought guidance from their vendors and advisers and from the regulators. The regulators have provided guidance in a general nature, leaving the bank to consult its advisers on specific situations.

In August 1992, Mellon Bank suffered a federal court defeat in a class action suit brought by trust customers challenging the bank's pricing practices for trust and investment management services.

Some commentators fanned the flames of panic, suggesting that this lawsuit would threaten the pricing practices of virtually all banks and set disastrous precedent for further limitations to be imposed on banks' pricing of their services. (This decision was appealed by the bank and the complaint dismissed on procedural grounds.)

By Brian W. Smith and Charles M. Horn

Charting a Responsible, Realistic Course For Banks in the Mutual Fund Arena

Continued from *page 18*

A careful, informed reading of the allegations in the case, however, demonstrated that if fiduciary fees (particularly sweep account fees) are assessed and disclosed in a reasonable, fair, and orderly manner and the imposition of fees is permissible under state law or the governing trust instruments, the risk of legal action and liability can be significantly reduced.

Fortunately, the case never created any real problem for bank fiduciaries. Why then the flap? Was there a need to sound the alarm about a case which was so clearly off the mark from its inception?

There is not, and never was, a magic formula for avoiding the types of problems faced by the bank in this case.

But if banks sell their fees for fiduciary service at a reasonable rate which is reflective of the value of the service actually rendered, and disclose those fees to their customers in a timely and meaningful manner, they diminish the risk of fiduciary problems.

Growing Preference

Meanwhile, more and more banks are becoming heavily involved in the offering of mutual funds to their customers, including fiduciary customers.

Customers increasingly express a preference for the investment of their fiduciary assets in mutual funds in order to derive the many benefits of efficient diversification that only a pooled investment in the newspaper, ease of redemption and flexibility of investment, just to name a few benefits.

In deciding whether fiduciary assets in mutual funds, particularly mutual funds in which the bank receives fees from the fund and from the regulators. The regulators have provided guidance in a general nature, leaving the bank to consult its advisers on specific situations.

In August 1992, Mellon Bank suffered a federal court defeat in a class action suit brought by trust customers challenging the bank's pricing practices for trust and investment management services.

Some commentators fanned the flames of panic, suggesting that this lawsuit would threaten the pricing practices of virtually all banks and set disastrous precedent for further limitations to be imposed on banks' pricing of their services. (This decision was appealed by the bank and the complaint dismissed on procedural grounds.)

See CHARTING *next page*

'Double-Dipping' Fees

It is disturbing to hear that some outside advisers and advisers reportedly are suggesting to banks that they can "double-dip" their fees in the fiduciary account-mutual fund relationship.

Is there any banker who doubts the wisdom of avoiding even the appearance of a conflict of interest in this setting? Why would anyone adopt or counsel a course which experience has taught over and over will result in customer, regulatory, and congressional wrath?

Under clearly well-defined conditions, a bank may legitimately and fairly receive more than one fee for fiduciary customer after linking the customer's fiduciary account to a mutual fund (which also provides the bank additional fee sources) than it does when it receives or receive fees from more than one source.

These conditions revolve around the premise that the linkage must result in services and value to the customer, increases the efficacy of services already provided, and that the fees are understood and agree to by the customer.

This is not "double-dipping," and is nothing more than using the criteria for pricing we set out earlier: the fees must be reasonable, reflective of the value of the products and services rendered, disclosed in a clear and meaningful manner, and consistent with applicable law and the governing account documents.

Mellon Bank and Boston Co.

In April, the Federal Reserve Board approved the acquisition of Boston Co., a major mutual fund advisory and service organization, by Mellon Bank Corp.

Like other board decisions in the bank powers area, the decision was the subject of avid debate in the press, Congress, the industry, and the banking bar as to what, if anything, the approval means for an expansion of bank securities powers.

In fact, however, this debate should not have occurred at all, as the denouement of the discussion clearly demonstrates.

Many in the Glass-Steagall bar, ourselves among them, were disappointed and concerned with the Mellon order.

These concerns arise from the shared belief that the order has the unfortunate potential for restricting bank mutual fund activities, rather than expanding them, by reviving affiliation and control issues long dealt with under the law, not the law, of bank-mutual fund relationships.

Stoking the Embers

Still, other observers put a characteristic spin on this decision by highlighting their views of the potential waiting to be unlocked fiat activity order, even to the point of suggesting that the order offered the potential for mutual fund sponsorship and distribution by bank holding companies.

These prognostications, however, threw kerosene on the smoldering embers of congressional disquietude over bank mutual fund activity.[1]

Rep. John D. Dingell, D-Mich., staunch protector of the remnants of Glass-Steagall, wrote a pointed letter to the Federal Reserve Board positing what is actually going on, before officially deciding how to deal with the matter.

Here, as in other areas, industry overreaction or regulatory overreaction will benefit no one. The relationships, technology, marketing practices, and business objectives are just now in the process of evolving, and it remains unclear precisely how all these relationships will naturally sort out.

It would be most unfortunate if natural development were stifled by the imposition of overly restrictive regulatory requirements which would have the effect of limiting how banks arrive at critical relationships, and therefore the product itself, must be structured.

Steady Course

As the bank mutual fund business evolves, bankers, their vendors, their advisers, and even their regulators must approach the issues that emerge in a forthright, balanced, and realistic manner.

Charting the course to the future of the banking business can be dangerous if we swing the helm wildly from the center of balance. At the core of the balance is the necessary sense of responsibility that must permeate banks' dealings with their customers. □

IF BANKS SET *their fees for fiduciary service at a reasonable rate, and disclose fees to customers promptly and meaningfully, they probably can avoid serious problems.*

BANKS' ROLES *are changing and compliance is more difficult, yet it is nonetheless as necessary as before.*

their customers in a timely and meaningful manner, they diminish the risk of fiduciary problems.

Congress and the regulators continue to debate the merits of the federal banking regulators to respond to the congressional pressure from those members of Congress who view expanded bank securities powers with suspicion.

Avoiding Overkill

While there is no doubt that more clarity and consistency in requirements, and more regulatory involvement in the supervision of these activities, would benefit all concerned (banks, mutual fund companies, regulators, and politicians), care must be taken to avoid "oversolving" and thus create more harm than a potential problem.

Over the last several years, billions of dollars of mutual fund shares have been sold courts who have witnessed little evidence of abuse in the process.

Some of the problems which may have emerged – e.g., bank tellers informing their retail customers in evidence of systemic abuse, and any problems should be resolvable or preventable through reasonable administrators' Association, on an effort to understand what the banks are doing and where additional regulation or supervision might be useful.

While this effort appears to be in its early stages, individual states have evidenced a greater position toward stronger and more aggressive supervision, even to the extent of forcing actions by individual banks not specifically mandated by the states' black letter law or regulations.

IT IS TIME *to recognize that the debate over bank securities activities is no longer whether banks can engage in them, but how they should conduct them.*

Congressional pressure on the federal banking regulators to demonstrate that sufficient regulatory safeguards are in place to prevent abuses in mutual fund sales by banks has further raised concerns over the sufficiency of the regulatory scheme.

Several commentators, including a major securities trade association, have suggested that the federal banking regulators should take steps to institute a comprehensive scheme of uniform guidelines in this area.

This is apparently intended to both preempt the jurisdiction of the states and to forestall any

Mr. Smith and Mr. Horn, both former officials in the Office of the Comptroller of the Currency, are partners in the law firm of Mayer, Brown & Platt in Washington.

Depositor-Preference Measure Could Put Weak Banks in a Bind

Continued from page 1

disadvantage than creditors of nonbanks, the government's stake in insured institutions will necessarily increase," she said.

"This is counterproductive to the long-term goal of both reducing the government's involvement in the banking system and making that system more competitive."

NEWS ANALYSIS

The measure could lead the ratings agencies to downgrade some institutions or lower the ratings of their nondeposit obligations such as letters of credit and bank notes.

'Actively Watching'

"It's something that we are actively watching," said Bob Swanton, a director in the financial institutions group at Standard & Poor's. "Until we see how they are really going to apply this, it's tough to say how we're going to come out."

Christopher Mahoney, a vice president at Moody's Investors Service Inc., said his company agency will put out a statement on the new provision this week.

"The question we have to ask ourselves is: Would it affect nondeposit obligations?" he said.

Depositor preference is becoming law mainly because it is seen as the lesser of two evils.

Karen Shaw
Sees creditors frightened off

The Clinton administration wanted the FDIC to raise money by charging for its exams. The depositor preference provision was agreed to as a tradeoff.

Savings Seen for FDIC

The Congressional Budget Office estimates that the FDIC would save $750 million over five years as a result of the preference provision.

Paul Fritts, the FDIC's executive director of supervision and resolutions, said the agency supports the measure.

"One of two ways, it's going to save us money," Mr. Fritts said.

First, if a bank fails, the FDIC is going to recoup more money – because it gets paid before other creditors.

Second, Mr. Fritts predicted, nondeposit creditors are going to avoid the risk and convert their funds to deposits. The bank will then have to pay insurance premiums on more deposits. □

United of Philadelphia Gets $11.8 Million In Deposits of a Failed Thrift for $7,777

By ROBYN MEREDITH

WASHINGTON — For the price of a new subcompact car, a Philadelphia bank bought $11.8 million in deposits of a failed hometown thrift.

United Bank of Philadelphia, a $26.5 million-asset institution, paid the Resolution Trust Corp. $7,777 for the deposits of Chase Federal Savings and Loan Association of Philadelphia, the RTC announced.

'Best We Can Get'

Chase, which was a minority-owned institution, had $17.3 million of assets and $19.5 million in liabilities, the RTC said.

United Bank's bid was the only one received. United also is a minority-owned institution.

"The best we can get is the best we can get," an RTC spokesman said.

In addition to getting Chase's deposits, United will have the use of its buildings for five years, with an option to buy them.

United is also buying $1.8 million of Chase's cash and cash-equivalents for an additional $1.8 million.

And it will have the option of buying at market value up to $11.8 million in pools of loans from the RTC's portfolio.

Premier of Ohio Makes Purchase

Separately, $489 million-asset Premier Bank and Trust in Elyria, Ohio, will pay the RTC $947,500 for a $29 million-asset failed thrift.

Premier will assume the $18.7 million in deposits of Crestline Federal Savings and Loan Association in Crestline, Ohio.

In addition, Premier will pay $16.5 million for the same amount of the failed thrift's assets, which include cash as well as home, consumer, and commercial loans.

FDIC and OTS Square Off over Glendale

Continued from page 2

whether OTS could justify allowing Glendale to stay open based on the agency's ruling on a concrete agreement. Glendale announced in July its sixth consecutive quarterly loss.

Termed a Lost Cause

Because Glendale does not have a strong earnings stream, "forbearance will only prolong the agony," said Bill Ferguson, president of the Dallas-based consulting firm Ferguson & Co.

Neither the FDIC nor the Office of Thrift wants the responsibility for shutting down Glendale. The FDIC, which is the backup regulator for thrifts, wants Glendale to be shut down if its financial troubles are unlikely to be resolved quickly.

Who Would Pay, and When

If the institution closes after Sept. 30, the FDIC's insurance fund would have to pay an estimated $5 billion tab for its closing. Congress this week is considering additional funding for the RTC. The House bill – if passed – would grant the S&L cleanup agency $18.3 billion. A failure of Glendale alone could consume nearly a third of the money in the bill.

But if Glendale is allowed to stay open after the RTC stops taking thrifts, and later fails, it will go to the new Savings Association Insurance Fund, which is run by the FDIC and which at the end of March had just $441 million.

Complicated Recapitalization

Congress is considering appropriating $16 billion for the Savings Association Insurance Fund along with funding the RTC, but the money would come with lots of strings attached. □

The company's management is attempting a complicated recapitalization. It seeks shareholder approval to merge its holding company, Glenfed Inc., into Glendale Federal, the thrift subsidiary.

It is restructuring its holding company debt by offering a new debt-for-equity exchange; it is seeking reclassification of the thrift's preferred stock, and subsequent to that, with shareholder and bondholder approval, it will begin a rights offering to current and other investors, which it expects to raise $250 million to $300 million. It will also offer an additional $125 million in other securities, most likely preferred stock.

The thrift agency and the FDIC refused to comment on record regarding the matter.

The interagency debate is also complicated because neither agency has a Clinton appointee at its head yet. □

Callable on or after August 12, 1998

Price 99.78125%

The debentures of August 12, 1998 are redeemable on or after August 12, 1996 and the debentures of August 12, 2003 are redeemable on or after August 12, 1998. The debentures are redeemable in whole or in part at the option of the Corporation at any time (and from time to time) at 100% of the principal amount redeemed plus accrued interest thereon to the date of redemption.

The debentures are the obligations of the Federal National Mortgage Association, a corporation organized and existing under the laws of the United States, and are issued under the authority contained in Section 304(b) of the Federal National Mortgage Association Charter Act (12 U.S.C. 1719 et seq.).

The debentures, together with any interest thereon, are not guaranteed by the United States and do not constitute a debt or obligation of the United States or of any agency or instrumentality thereof other than Fannie Mae.

This offering is made by the Federal National Mortgage Association through its Senior Vice President-Finance and Treasurer with the assistance of a nationwide Selling Group of recognized dealers in securities.

Debentures will be available in Book-Entry form only.
There will be no definitive securities.

company to register securities it expects to sell within two years.

The maneuver gives an issuer the flexibility to move quickly once market conditions are seen as advantageous. Companies are not required to issue the full amount registered.

Seen Raising $1.4 Billion

The largest previous shelf registration for equity and straight debt by a commercial bank was for $3.3 billion by BankAmerica Corp. in November 1991, according to Securities Data Co.

NationsBank will probably raise at least $1.4 billion in the capital markets before the end of the year, a spokesman said.

The company, which has $123.8 billion of assets, has become a major securities issuer and has grown. The bank has raised $1.833 billion in long-term markets so far this year, more than it did in the five years ending in 1991, according to Securities Data.

U.S. West, MNC Deals

Two pending acquisitions are scheduled to close by yearend. The company last week agreed to pay about $2.4 billion in cash for the assets of U.S. West Financial Services. And the MNC deal, set to be completed on Oct. 1, is expected to cost $1.4 billion, which will be paid in cash and stock, said the spokesman.

The spokesman said no firm plans have been made for financancing the two acquisitions. A NationsBank treasury official declined to comment.

But since NationsBank had $1 billion in cash and short-term investments at the end of June, the bank will probably need to raise at least $1.4 billion in the capital markets before the end of the year, the spokesman said.

Upgrade Possible

Moody's Investors Service is reviewing NationsBank's senior debt for possible upgrade. Moody's currently rates the debt A3. Standard & Poor's rates the senior debt A.

Separately, State Street Boston Corp. filed for a shelf offering of up to $250 million of debt securities.

The company said in a filing with the SEC that proceeds will be used for general purposes, including debt repayment or refinancing. Underwriters may include Goldman Sachs & Co., the company said.

Duff & Phelps Credit Rating Co. on Tuesday upgraded the credit ratings of Keycorp. The bank's senior debt was raised to A from A-minus, subordinated debt was raised to A-minus from BBB-plus, and preferred stock was raised to BBB-plus from BBB.

The agency said "the ratings upgrade reflect Keycorp's solid operating fundamentals. Geographic diversification and a consumer/middle market lending focus have helped Keycorp maintain better-than-average asset quality and an overall lower risk profile." □

1st Chicago to Redeem $112 Million of Stock

CHICAGO — First Chicago Corp. said it will redeem on Sept. 2 the $112.1 million issued and outstanding of its $3.75 cumulative convertible preferred stock, series A.

The company said the total redemption price is $52.135 a share.

As an alternative, the company said, stockholders have until 3 p.m. EDT on Aug. 26 to convert each preferred share into 1.391 First Chicago common shares.

First Chicago said the market value of the common stock into which the preferred stock is convertible will be greater than $52.135 as long as the market price of the common stock exceeds $37.48 a share. □

STOCKS: Signet Shares Upgraded on Possibility of Spinoff

By RICHARD LAYNE

Will Signet Banking Corp. spin off its fast-growing credit-card operation?

The Richmond, Va., bank isn't tipping its hand, but Thomas J. Brown, an analyst at Donaldson, Lufkin & Jenrette Securities Co., thinks such a move is increasingly likely.

And that is a key reason why Donaldson, Lufkin added Signet's shares to its "recommended" list Tuesday.

To make room for Signet, Fleet Financial Group was pulled off the list.

Although Fleet retained its "very attractive" rating, Mr. Brown said Signet has more potential to rise significantly. His 12-month price target: $40.

Price Rises

In late trading Tuesday, Signet's shares were up $1.625, to $30. Signet's shares have risen 25% this year, making it one of the better performing bank

stocks. Fleet's shares, which have gained less than 1% this year, were off 62.5 cents, to 33.375.

In a spinoff, Signet might create a separately chartered credit-card company, in which current shareholders would have a stake. The equity as well as senior management would be divided between the traditional bank and the credit-card bank. The two companies, taken together, could have more value for shareholders than Signet does now.

"I think there is better than a 50-50 chance that management will decide to break the company into two parts: a credit-card bank and a traditional bank," said Mr. Brown.

Signet officials could not be reached for comment.

High Level of Capital

The catalyst, Mr. Brown said, may be the bank's high level of capital. Signet's common equity is a strong 7.9% of assets and is growing at 13% a year from retained earnings. There is little asset growth, because lending hasn't picked up yet and the bank is securitizing its credit-card receivables.

Too much equity could depress the bank's returns, hurting share price and leaving it vulnerable to a takeover. Signet executives have told analysts that they are studying the bank's capital and organizational structures.

A spinoff could be beneficial. Since the traditional bank isn't growing earnings quickly, it wouldn't have to worry about accumulating equity. And a separate credit-card bank might use the extra capital to buy card portfolios.

Contribution to Earnings

Signet's card business is booming, accounting for more than half of bank's earnings last

A separate credit-card bank may be created.

quarter. In the past three quarters, card receivables have doubled, to $3.4 billion. The bank now has a sophisticated computer system designed to root out the best potential customers. Analysts say the system is among the best in the industry.

But the credit-card business is not being highly valued by investors. Shares of credit-card banks such as MBNA and Advanta trade at price-earnings multiples of 14 to 16. Signet's shares trades at 8.5 times Mr. Brown's estimate of 1994 per-share earnings, making it a cheap stock.

The MNC Precedent

"The marketplace is confused," said Mr. Brown. "It seems to me that by mixing the rapidly growing credit-card company and the traditional bank, it results in a lower valuation for Signet."

There is a precedent for a credit-card spinoff, of course. MNC Financial Inc. spun off MBNA Corp., a credit-card company.

If the split does occur, Mr. Brown does not expect the traditional bank to stay independent. Signet could be a target for a takeover offer.

Even if the bank doesn't split off the credit-card business, it may still find itself on the receiving end of an acquisition offer. The shares trade at a much lower multiple than big southeastern banks such as First Union Corp. □

VOL. CLVIII NO. 149 Thursday, August 5, 1993 158th year

Will Smaller ATM Networks Disappear?

By MATT BARTHEL

The consolidation of the 30 or so automated teller machine networks in the Midwest is proceeding exactly as industry experts had anticipated.

With 15 of the region's most influential financial institutions talking about merging their electronic banking capabilities, a mega-network as big as Delaware-based Electronic Payment Systems Inc. seems to be taking shape.

And in the shadow of these discussions, dozens of small networks are hatching smaller-scale alliances in attempts to weather the increased competition from larger networks.

NEWS ANALYSIS

The latest to be announced is the planned merger of EFT Illinois Inc. and Access 24, the nation's 26th-largest and 51st-largest networks, respectively.

But though the Midwest developments to date were widely expected, experts are split on what will happen next.

And what ultimately emerges is likely to be a blueprint for the rest of the country, experts say.

Alternative Futures

Some believe smaller networks will be gradually squeezed out by larger companies, such as Wilmington-based EPS, that can provide a wide array of processing services in addition to the basic ATM transaction switching to which most smaller networks are limited.

A more prevalent opinion is that a handful of smaller networks will be able to coexist with the mega-networks by holding onto financial institutions that want to have a say in the strategic direction of their networks without having to buy equity positions.

Many networks with 1,000 ATMs or fewer are not-for-profit enterprises that allow all members to vote on network-related issues.

Larger electronic banking companies – with the exceptions of the Pulse network in Texas and Star in California – are typically for-profit ventures owned by a handful of banks that make all strategic decisions.

Investment Seen as Crucial

"There are elements of the not-for-profit structure that will always appeal to some financial institutions," says Richard Westelman, a senior consultant at Dove & Associates in Boston.

"The key to surviving [for a

Loan Demand Flat or Down, Fed Finds

By CLAUDIA CUMMINS

WASHINGTON — Loan demand has remained flat across much of the country this summer, with the economy continuing a slow but steady improvement, the Federal Reserve reported Wednesday.

According to the Fed's periodic report of regional economic conditions, lending has actually softened in some areas, particularly in the Great Lakes states and much of the South.

But mortgage refinancings have surged again in many areas, the Fed's Beige Book reported. And residential construction and real estate activity remained strong in most of the country, although commercial real estate has remained weak.

The Fed prepares the Beige Book several times a year, in anticipation of Federal Open Market Committee meetings. The next meeting is scheduled for Aug. 17.

Mixed Signals

Overall, the survey found "generally sluggish" manufacturing activity, with little expectation for increased employment this year. Retail sales grew unevenly, but car sales strengthened in many regions, particularly the Midwest and South.

Inflationary pressures were slight, but mixed.

Although flooding has devas-

Fed Reluctantly Backs Mark-to-Market Rule

By BARBARA A. REHM

WASHINGTON — The Federal Reserve Board reluctantly agreed Wednesday that banks should have to adjust equity capital to reflect unrealized gains or losses of the securities they hold for sale.

The Fed governors gave their staff the go-ahead to draw up a proposal for industry comment in cooperation with the three other bank and thrift agencies. That's the first step down a long road to a final rule, which is expected by yearend.

Regulators don't like the mark-to-market rule, because they believe it is an unsound policy that will cause bankers to shorten the maturities of their investments. They say it's being foisted upon them by the accounting profession. In May, the Financial Accounting Standards Board adopted FAS 115, a mark-to-market rule for banks.

"Should accounting procedures govern how an institution is run?" Fed Chairman Alan Greenspan asked. "We have to assume that the action on the part of institutions holding longer medium-term securities is one based . . . on the risk profile of the bank."

But Mr. Greenspan voted for the plan, conceding that, by law, the banking regulators must keep capital rules at least as tough as generally accepted accounting principles.

"I don't see where we have much choice," Fed Vice Chair-

AP/Wide World

Alan Greenspan
Sees shortening of maturities

man David Mullins said. "I would unenthusiastically not oppose the proposal."

Mr. Greenspan predicted that banks will shorten the maturities of their securities portfolios to avoid big hits to capital. He said the government should not be interfering with banks' economic decisions.

Maturities Predicted

Bill Roberts, senior vice president and controller at First Chicago Corp., agreed.

"I think it's a concern for the whole industry because it would motivate banks to modify prudent portfolio practices," he said. "It creates a tension between managing interest-rate risk and managing capital."

But Bill O'Halloran, control-

NEWS *briefs*

Citi Leads Group Promoting 'Smart Cards'

NEW YORK — Several banking organizations led by Citicorp Inc. joined a multi-industry association to promote development of "smart cards," which are plastic cards enhanced with computer-chip memories.

The group, which has been holding meetings since last year, said Wednesday that it has incorporated in Delaware as the Smart Card Forum. Citicorp played an active organizational role, and Catherine Allen, a vice president in Citibank's corporate technology group, is interim chairman of the forum.

She said the forum will explore the need for "interoperability standards," which could allow cards used in pay telephones, for example, to be compatible with transit or banking applications.

Initial members include American Express Co., Apple Computer Inc., AT&T, Bank of Montreal, BayBanks Inc., International Business Machines Corp., MasterCard International, Microsoft Inc., the Washington Post Co., the U.S. Treasury, and Visa International.

FDIC Settles Suit over National of Washington

WASHINGTON — The Federal Deposit Insurance Corp. has settled a lawsuit against directors of the failed National Bank of Washington for $300,000.

A federal judge threw out the government's case against nine of the 11 directors in February and took the unusual step of criticizing the FDIC's case. The judge ordered the FDIC to pay the cleared defendants' legal fees.

The remaining two defendants, Luther Hodges, the bank's former chairman, and Robert Washington, a lawyer, will pay the FDIC $500,000, which is reportedly covered by insurance. The terms of the settlement were not made public, and the FDIC had no comment on Wednesday. *The Washington Post* reported that lawyers involved said the settlement contains no finding of wrongdoing by Mr. Hodges or Mr. Washington.

Amsouth to Buy 1st Federal of Calhoun, Ga.

BIRMINGHAM, Ala. — Expanding its franchise in northwestern Georgia, Amsouth Bancorp. said it would purchase First Federal Savings Bank of Calhoun, Ga., for $14 million in stock.

Amsouth, which is based in Birmingham, said late Tuesday it had signed a definitive agreement to buy the $69.4 million-asset thrift for 1.23 times book value. The deal, which will be accounted for as a pooling of interest, is expected to close in 1994.

Amsouth's shares were trading up 12.5 cents at $31.50 at noon Wednesday.

First Federal is "strategically located between our Chattanooga franchise and the Georgia State Bank of Rome, which we are in the process of acquiring," said Amsouth Chairman John Woods in a prepared statement.

The thrift, which has assets of $69.4 million and deposits of $57.7 million, earned $1 million in the nine months ended June 30, for a return on average assets of 2.01% and a return on average equity of 12.47%.

Amsouth, which has $11.1 billion in assets, has six acquisitions pending in Florida as well as the two Georgia deals.

Chemical Sets Up Credit for Argentine Firm

LONDON — Chemical Banking Corp.'s Chemical Investment Bank Ltd. unit and Galicia Capital Markets of Argentina have arranged a $100 million Euro-Commercial Paper Program for Aguas Argentinas, which operates water and sewerage systems in Buenos Aires, Argentina, and its suburbs.

Chemical Bank said Aguas Argentinas operates these services under a 35-year concession contract granted by the government of Argentina, which recently privatized the services.

The briefs were compiled from staff and wire reports.

Neal's Compromise on Bailout Bill Unlikely to Succeed Before Recess

By ROBERT M. GARSSON

WASHINGTON — A new effort by Rep. Stephen L. Neal, D-N.C., to jump-start the stalled Resolution Trust Corp. funding bill is unlikely to succeed before Congress goes on a monthlong break.

Hoping to woo the 30 or so Republicans who House leaders believe will be necessary to pass the measure, Rep. Neal proposed dropping money for the Savings Association Insurance Fund from the bill.

In return, the federal government would pick up a $772 million annual tab for the $10.8 billion in bonds sold in 1987 to finance an effort to shore up the thrift industry's insurance fund.

With that obligation extinguished, the industry's premium dollars could be devoted to building up the insurance fund.

Rep. Stephen L. Neal
Would drop funding for insurer

Waiting for Deficit Vote

Rep. Richard Baker, R-La., who has been negotiating with Rep. Neal, agreed to float the idea past other Republicans, according to an aide to the lawmaker. But with the lone exception of Rep. Richard Dreier of California, Republicans working on the bailout package appear to have rejected the idea.

In addition, House Democratic leaders told Rep. Neal this week that they did not want to bring the bill up before the chamber finished work on Presidents Democrats some political cover on the controversial issue.

Little Incentive for GOP

But as they have lost control of the White House, Republicans have little incentive to support the package, and many have gone on the attack.

Rep. Toby Roth, R-Wis., circulated a "Dear Colleague" letter in recent weeks arguing that – among other resources – the RTC has $7 billion in unspent cash that could be used.

Seidman Quoted

Rep. Roth quoted from a letter in which L. William Seidman, the former RTC chairman, said it "would be reasonable to fund remaining and future thrift resolutions by allowing the RTC to borrow from the Treasury against the approximately $100 billion of assets currently held by the agency."

"There is absolutely no justification for appropriating or reappropriating any more federal taxpayer funds for the S&L bailout at this time," Rep. Roth said.

Rep. Neal, who is chairman of the House Banking subcommittee on financial institutions, is expected to be the floor manager for the bill. He has said that if Congress fails to provide the funding, public confidence in insured institutions will be diminished. □

Citi Centralizing Global Custody Operation With Product-Line Focus, Systems Revamping

By JEANNE IIDA

Citicorp announced to its employees a management reorganization of its Worldwide Securities Services unit, which has lost ground in recent years in the cut-throat custody market.

The reorganization will replace a regional sales and marketing structure with one based on product lines.

Citi has appointed worldwide heads of sales, marketing, and relationship management for each of the unit's 21 product lines, which include global custody, clearing, and trust services.

Citi also aims to revamp technology – by creating common systems to replace multiple, disparate systems, and by consolidating some processing – in order to create products with consistent features.

Citicorp is the world's largest global custodian, with $600 billion assets under management and $250 billion in cross-border assets. In recent years, however, it has been seen as less focused than rivals such as State Street Boston Corp. and Northern Trust Corp.

Because Citi has always been organized along geographical lines, rather than product lines, the bank has been unable to provide the same level of service in all the 47 countries where it offers custody and clearing services.

In addition, it has had difficulty making winning bids for the worldwide business of potential customers, because operations in one or more countries may hold out for higher fees.

Citi also has multiple, incompatible computer systems in many countries, giving it higher unit costs than some of its competitors.

In recent years the unit has lost ground in a cutthroat market.

Steven Baker, division executive in charge of Worldwide Securities Services, said he did not anticipate any layoffs in connection with the reorganization.

"When I got into the position six months ago, I said we would spend six months in identifying the various issues confronting us around the world and look at where we've done a less than perfect job," Mr. Baker said.

He said the bank would not quit any product lines.

The bank is investing "tens of millions" of dollars this year to upgrade systems overseas, Mr. Baker said.

Citicorp is also centralizing much of its processing and marketing from offices in 47 countries to four regional processing centers. About 2,000 people will be those country offices.

"Organizing with worldwide product managers is a natural evolution of Citi's client-focused orientation and would help it leverage its proprietary custodian network into a clear strategic advantage," said Harold C. McIntyre, a consultant and president of Summit Group, Murray Hill, N.J.

No Changes Planned on U.S. Side

The reorganization will primarily affect Citicorp's overseas operations; the domestic trust and custody organization will be left intact.

In domestic trust and custody, Citicorp also has had difficulties, stemming mostly from management turnover several years ago.

This summer, the State of Florida moved all its business and American Telephone and Telegraph Co. moved part of its business away from Citi to other master trust institutions.

The State of Florida had generated some $5 million annually for Citicorp in fees, according to industry sources.

Aiming to Boost Market Share

Mr. Baker said that new technology in the master trust and custody area would help Citi gain market share.

"With the additional functionality we're building and improved customer service, I think we're going to take an increasing share of that business over time."

Citicorp is installing a $80 million trust and custody system from International Business Machines Corp. and Financial Technologies International to handle master trust and custody.

The bank plans to move the first customers to the new system in the beginning of 1994. □

The regional sales and marketing structure will be replaced.

Midwest May Set Pattern for Networks

Continued from *page 1*

not-for-profit] lies in investing in new products and services for the next generation, and not just passing everything back to members in the form of lower pricing."

Most observers believe that when the dust from the nationwide consolidation settles, close to half of the networks that are expected to remain will be relatively small-line not-for-profits with 2,000 or fewer ATMs.

Various reasons are given for this high survival rate.

NEWS ANALYSIS

First, much of the ATM transaction processing currently done in the United States is handled by third-party networks such as Deluxe Data Systems Inc. of Glendale, Wisc., and General Motors' Electronic Data Systems Corp. of Plano, Tex.

While the fact that the mega-networks typically run transaction-processing businesses of their own will probably hurt these businesses, many also believe that this competition will benefit smaller networks by forcing companies like Deluxe and EDS to lower their prices.

At a not-for-profit network, a reduction in cost to the network usually translates directly into lower costs for the members, which could well help the smaller organizations to attract and keep new members.

Fight Brewing

If the mega-networks are to be successful, "they are going to have to first displace a lot of traditional third-party-operated switches," says Mark Horwedel, executive director of EFT Illinois, a 1,000 ATM network based in Rockford.

"Those guys aren't going down without a fight," Mr. Horwedel says.

Mr. Horwedel pointed out that the third-party processors that have been in the business for years have probably already paid for their computer equipment, putting them in a position to cut prices aggressively.

By contrast, most of the larger networks in the United States, including NYCE in New York and EPS-owned MAC in Delaware, have just begun to finance their computer systems.

National Brands

A second reason that some smaller networks are expected to survive is the existence of national ATM networks, such as MasterCard's Cirrus and Visa's Plus, to which most small networks can give access.

Since over 80% of the nation's ATMs participate in one national network or the other, many institutions do not make a priority of having a membership in the dominant regional network in their areas.

True, institutions in the East and Midwest that want to give their customers access to the most debit point-of-sale terminals need to belong to regional networks, which currently dominate the POS business in these regions.

But many believe that national POS brands, such as MasterCard's Maestro and Visa's Interlink, will gain widespread acceptance in these areas within a few years.

Rapid Attrition Foreseen

Yet even if small networks have some things working in their favor, popular wisdom says that most of the existing not-for-profit networks will disappear in the next five years.

Upward of 50 networks are expected to be merged or forced out of business in that time frame. Many of them are likely to be not-for-profits.

And if you wonder what characteristics the survivors will possess, the experts say, keep an eye on the Midwest. □

1st Fidelity Ends Software Dispute

By BARTON CROCKETT

Computer Associates International Inc. of Islandia, N.Y., and First Fidelity Bancorp. of Lawrenceville, N.J., have settled a year-old legal dispute over software licenses.

The agreement gives First Fidelity a so-called enterprise license to use Computer Associates software on any of the bank holding company's computers for five years for an undisclosed fee.

The "flat-fee" agreement means that First Fidelity will not pay any additional fees — beyond the one-time fee paid for the enterprise license — to use Computer Associates software in any affiliate or venture.

This includes the Global Processing Alliance Inc., a check processing venture Fidelity recently formed with Bankers Trust New York Corp., Donald C. Parcells, a Fidelity executive vice president, said in a statement.

Paul Levine, a bank spokesman, said the agreement will not have a material impact on the bank's operating expenses.

Computer Associates, a leading maker of database, security, and systems software for mainframe computers, had sued First Fidelity in April 1992 for breach of contract.

The vendor said that as a result of a computer consolidation, six Fidelity affiliates were using Computer Associates software without paying the required license fees.

The Fidelity consolidation was being managed by Electronic Data Systems Corp., which Fidelity tapped in 1990 to run its computers.

A Fleet Executive Raised Funds For N.Y. Campaign Probed in Loan

By CHARLES GASPARINO
The Bond Buyer

A controversial link between Fleet Financial Group Inc. and New York City Comptroller Elizabeth Holtzman has taken a new twist with the revelation that a senior bank executive raised money for the comptroller's failed U.S. Senate campaign last year.

James P. Murphy, an executive vice president at the Providence, R.I.-based holding company, was on the finance committee for the campaign, say legal and campaign officials for Ms. Holtzman.

New York City began investigating a possibly illegal link between the bank and the campaign after discovering that Fleet made a loan to Ms. Holtzman's senatorial campaign and was subsequently appointed a co-manager of a city bond issue.

James Murphy
On campaign committee

Fleet Recommended

Although the selection of New York City underwriters is a joint decision between the comptroller's office and the mayor's office, Ms. Holtzman's office recommended Fleet's inclusion.

City conflict-of-interest rules prohibit public officials from using their office for private gain.

Sources with knowledge of the probe say the state Department of Investigation is examining what role, if any, Mr. Murphy played in the matter. A department spokesman would not comment.

Mr. Murphy was the top administrator of the New York State Bankers Association for 13 years before joining Fleet in 1989 to run its government relations area.

New York City is investigating a link between the bank and the campaign.

Mr. Murphy's duties include coordinating Fleet's lobbying efforts, with special emphasis on public and municipal finance.

He did not return calls for comment.

'Judged on Its Own Merits'

Thomas L. Lavelle, a spokesman for Fleet, confirmed that Mr. Murphy supported Ms. Holtzman's failed Senate bid, but denied that the loan or its provisions were connected to his support.

"The loan was judged on its own merits," Mr. Lavelle said.

Officials close to Ms. Holtzman, who is campaigning for re-election, said Mr. Murphy's role in the campaign's fund-raising efforts was minimal.

"If you're trying to look at this guy as an active fund-raiser, you're way off," said campaign spokesman George Arzt.

According to Federal Election Commission records, Fleet's political action committee contributed $3,000 to the campaign.

Relationship Cited

Ms. Holtzman has maintained that Fleet was selected as one of 23 co-managers in a March bond sale because of its reputation as an underwriter of municipal debt. She said the decision was made by her finance staff, not by her.

Ms. Holtzman noted that her campaign has a long relationship with Fleet Bank because of its proximity to the municipal building in downtown Manhattan and because it has had no ties to the government of South Africa.

Influence Seen

For public-policy watchdog groups, however, Mr. Murphy's joint role as banker and fund-raiser adds weight to claims that politicians can be tainted by ties to powerful business interests.

"In this case, you are seeing in a very real way how a business delivers money to a politician with an eye toward influencing the politician's action," said Josh Goldstein, a policy director for the Center for Responsive Politics, which tracks campaign contributions to political candidates.

Mr. Lavelle said Ms. Holtzman's campaign officials approached Mr. Murphy when seeking the loan last year. Mr. Murphy referred the inquiry to loan processing officials at Fleet Bank.

"Mr. Murphy is not a lender, he did not do the credit analysis, the underwriting, nor did he approve the loan," Mr. Lavelle said.

"The loan met all the credit standards and legal requirements."

Fleet's Melville, N.Y.-based bank affiliate made the uncollateralized loan of $450,000 at 1% over the prime rate.

The campaign, which has had difficulty repaying the loan, still owes the bank $255,400, according to its last Federal Election Commission filing.

Get MOHR information about profitable banking in the 90's.

Two years ago, breakthrough research by MOHR Development, the recognized leader in sales, service and leadership training for banks, defined five key issues for profitable consumer banking in the '90s.

Now follow-up research–conducted jointly with the *ABA Banking Journal*–examines consumer banking's progress in addressing those issues, including:

- creating a high performance sales culture
- integrating sales and service
- translating market segmentation into front-line action

MOHR Development's all-new report highlights critical gaps between the industry's acknowledged priorities and its actual practices. It also draws important conclusions about how to close these gaps, and points the way to more profitable banking.

Calif. Banks See Relief From Real Estate Slump

By SAM ZUCKERMAN

From the Regions

LIKE A SPENT HURRICANE, Southern California's real estate slump is gradually losing its force.

In the devastated Los Angeles and Orange County areas, there are few signs of a recovery in commercial property values, but "the market is no longer in free-fall," says analyst Charlotte Chamberlain of Wedbush Morgan Securities.

This stabilization has been a blessing for the region's exhausted banks and thrifts. Many commercial real estate lenders find that the inflow of problem loans has dropped significantly.

What's more, with prices no longer plummeting, it's easier to sell foreclosed property. BankAmerica Corp., Union Bank, and H.F. Ahmanson & Co. recently demonstrated the point with bulk asset sales.

"There is more liquidity in the market," said Stan Ross, a Los Angeles real estate expert with the accounting firm Kenneth Leventhal & Co. Nevertheless, Mr. Ross warned, conditions vary tremendously by location and project category.

Babette Heimbuch

In prime areas, affordable housing developments and retail properties are fetching reasonable prices. Depending on location, apartment prices are leveling off. But industrial property values are still eroding. And, despite some gains in occupancy rates, the decline in office building prices has slowed but not stopped.

The confused state of the market is reflected in the diverging earnings of Southern California lenders.

Results "depend on the makeup of your portfolio, the locations you are concentrated in, [and whether] you have already addressed your problems," said Babette Heimbuch, president of Santa Monica-based Firstfed Financial Corp.

In the second quarter, profits rose for lenders who had already set aside enough reserves to cover uncollectable loans and for those in more stable sectors of the realty market.

The region's major banks–BankAmerica, Wells Fargo & Co., and First Interstate Bancorp, were able to trim nonperforming loans and boost profits because they had previously made massive provisions for loan losses. That permitted them to sell foreclosed property at a rate exceeding the addition of new nonperforming loans to their books.

But Los Angeles-based California Federal Bank lost $45.4 million, reflecting the sale of foreclosed apartment buildings during the quarter at prices significantly lower than the properties' already-discounted carrying values on the thrift's books.

"It's a question of when does management perceive the problem," said Ms. Heimbuch. "We saw the downturn [in apartment values] in the first quarter."

Firstfed was able to post an $8.3 million profit in the second quarter, although about 40% of its $2.6 billion in loans are for multifamily housing.

The thrift took its medicine at the beginning of the year when it provided $44.1 million for loan losses and recorded a $16.4 million loss.

1st Interstate Buying Bank Near L.A.

SAN FRANCISCO — In its third California expansion move in less than a year, First Interstate Bancorp on Wednesday said it will buy First State Bank of the Oaks for $23 million in cash.

The Thousand Oaks-based bank, which has five branches in Ventura County, west of Los Angeles, controls $144.5 million of assets. The transaction price equals 1.71 times the bank's book value.

Fits Strategy

Bank of the Oaks, whose business mix is balanced between consumer and commercial accounts, has avoided the losses that have plagued many other Southern California banks.

It earned a return on assets of 0.42% for the first half of 1993, while nonperforming loans were a slight 0.13% of total loans at the end of March.

The acquisition, which is expected to close at the end of the year, fits First Interstate's strategy of buying institutions with few credit problems and a big market presence. The transaction will make the Los Angeles-based company third among banks in deposit market share in Ventura County.

— Sam Zuckerman

Wachovia's Medlin Ranks His Priorities: Soundness, Then Profitability and Growth

John G. Medlin Jr., the chairman and chief executive of Wachovia Corp., runs what is widely perceived as one of the nation's healthiest and most profitable banking companies.

At a recent conference sponsored by First Boston Corp., he gave his thoughts on the need for disciplined management in today's unfriendly financial and regulatory environment, and sought to dispel the notion that Wachovia's culture is too conservative.

His remarks are excerpted below.

The economy and the financial system still are in the throes

Verbatim

of adjustment from the excesses of times past. The fallout effects of lower interest rates are being moderated by the enlarged debt burden, layoffs from restructuring, a decline in the young-adult population, and stifling regulation. These factors are restraining growth in employment, income, spending and credit.

Despite these impediments, the economy appears likely to continue growing moderately for the near term.

A slower-growing economy is less forgiving of marginal credit judgments.

However, the longer outlook is clouded by the promise of huge tax increases, the relentless growth in federal spending, the persistence of huge budget deficits, and the prospect of more government. There also are serious concerns and risks on the international scene.

Tight Controls Essential

Therefore, financial institutions can't expect much more help from the economy. Their near-term success will depend more on control of operating expenses, reduction of credit losses, and improvement of risk compensation than on business growth.

There will not be a strong economy or a willing Congress this time to bail out careless management, liberal lending, or excessive costs.

While the credit losses of the financial system have declined, the level of problem assets remains historically high. Some borrowers wounded by the recession are having difficulty surviving in a slow economy.

The worst may not be over, but lingering credit problems will haunt some banks for many more years.

Margin Worries

The sharply sloped yield curve is both a blessing and a curse. It has widened interest spreads but also is causing an outflow of consumer savings to higher-return investments.

This could lead eventually to funding problems and increased money costs for lesser-quality institutions. An inevitable rise in short-term rates will narrow interest margins for the strong and the weak.

Other challenges include more stringent banking laws and regulations which make it more difficult and costly to serve customers.

This is a natural offspring of a financial system where the federal safety net breeds excess capacity, protects unsound institutions, and encourages uneconomic credit and pricing practices.

Also, there is a growing need for more complex and expensive information and service-delivery systems for banks to be efficient and competitive.

A Time of Testing

Thus, the conditions which lie ahead will continue to test the credit quality, operating efficiency, financial strengths, and management skills of banking companies.

The differences among individual institutions have grown wider and more apparent with each passing economic cycle. More quality awareness and sensitivity by customers and investors should provide even better rewards to strong and soundly managed banks prepared to meet the challenges.

Wachovia's guiding principles and basic strategies remain the same in difficult or easier times, but they are especially appropriate for the present and prospective conditions.

Our steadfast approach is to pursue progressive business strategies but within the disciplines of sound financial principles.

In order of priority, the emphasis is on soundness, profitability, and growth.

Equal importance is placed on marketing, risk management, and efficiency. This requires maintaining careful balance among the business develop-

We have a good record of resisting risky fads and passing fancies.

ment, credit administration, funding management, and operations functions.

Recipe for Excellence

Our objective is to have above-average loan growth, net interest margins which are at least average, and below-average credit losses and operating costs.

Mixed with capable people, that is the basic recipe for excellence in banking.

The top-priority emphasis on soundness causes some to characterize us as conservative. In reality, we are creative but disciplined risk takers who have good loan growth as well as good credit quality.

It is possible for our bankers to sell more aggressively and during relationships, and to avoid excessive concentrations of business and risk. Technological and operational excellence and financial strength and flexibility also are top priorities.

Our ultimate goal is to maximize shareholder value by building steadily an annuitylike stream of higher-quality and more dependable profits, which deserve a premium price-earnings ratio.

The guiding principles of Wachovia are sacred, but they are applied in new and different ways as times and conditions change.

Complacency is not one of our soft spots. The winds of change blow freely across our organization, but we also have a good record of resisting risky fads and passing fancies.

Merger Considerations

Acquisitions of banks in other southeastern states will be considered whenever they can enhance per-share earnings and market value.

This requires a realistic assessment of the cost to bring an acquiree up to our high standards of personnel professionalism, operational excellence, and credit quality as well as considering possible synergies and cost savings.

Also, care must be taken today not to pay too much for branch banking networks supported heavily in the past by cheap consumer deposits, which now are migrating to higher-yield investments.

Meanwhile, Wachovia has three strong banks which cover three excellent states [North Carolina, South Carolina, and Georgia] with above-average economic prospects.

Care must be taken today not to pay too much for branch networks.

It also has a prominent business presence and good growth potential in corporate banking services for a select clientele across the nation and overseas.

The organization is large enough to afford modern systems and to compete effectively with larger institutions while being small enough to maintain Wachovia's special character and qualities. □

One Bank's Struggle To Reach a Decision On Mutual Funds

By TERRENCE O'HARA

Marketing

JAMES HARRIS OF BRENTWOOD National Bank is at a crossroads. Mr. Harris, who is Brentwood's president, his board of directors, and his employees are on the verge of a decision that could fundamentally affect their bank's role in Brentwood, an affluent suburb of Nashville.

The question is simple, but with myriad implications: Should Brentwood National offer mutual funds to its customers?

"It's just so different from anything we call community banking," Mr. Harris said last week. "In the long run, I think it's extremely dangerous."

Thousands of community bankers share Mr. Harris' concerns. And over the next decade, as the mutual fund industry targets banks as the next great frontier, those bankers will face the issues he's grappling with now. Massachusetts Financial Services Inc., a Boston mutual fund company, estimates that only 30 percent of the nation's 10,954 community banks offer mutual funds to their customers.

The $84 million-asset Brentwood, founded in 1987, has lost millions of deposits in the past two years to alternative investments, Mr. Harris said. Much of the money is going into mutual funds, the hottest investment vehicle in the land.

James Harris

In recent months, Mr. Harris and his board have entertained several proposals from mutual fund providers, eyeing a typical third-party contract that would put an investment representative in the bank.

"My concerns are deep," he said. "You have the potential for moving deposits into investments that are outside of the community. It's a huge change because it takes us out of our role as a financial intermediary for this community. Also, a third party is going to be very aggressive in trying to get our depositors' money."

'A Valid Argument'

This "disintermediation" – the outflow of community-based bank deposits into alternative investments – is already going on, however. It leads Mr. Harris to wonder: If he can't beat them, shouldn't he join them?

The mutual fund companies "all say that," Mr. Harris noted. "It's a valid argument."

He is also worried about alienating customers if investments go sour. His board is split on what to do, he said.

First International Bank in Watford City, N.D., went through all this seven years ago. The $100 million community bank started offering a family of mutual funds through a third party in 1986.

First International President Stephen Stenehjem said that disintermediation got so bad in the mid-'80s that he was forced to look to mutual funds.

Competition from the broker-dealer in his bank, who represents Investment Centers of America, is not a problem, Mr. Stenehjem said. And, he said, the mutual fund service has apparently not speeded the outflow of deposits. "Interest rates are a bigger reason, not the availability of mutual funds," he said.

Jeremiah Potts, head of the financial institutions division at Massachusetts Financial, which markets loaded mutual fund services to banks, understands Mr. Harris' fears. Mr. Potts was instrumental in his firm's recent deal with the Independent Bankers Association of America to offer mutual funds to community banks through the trade group.

Responsibility to Customers

"Clearly, the community bank has a responsibility to fund the community," Mr. Potts said. "But it has a responsibility to its customers to assure certain things . . . things that a deposit alone can't provide."

Brentwood's management is still tentative, however. Mr. Harris said the bank will continue to sell fixed annuities a while longer before making a decision about mutual funds.

"It's a conservative banker's approach," he said.

Minnesota's Small Banks Thrive Amid a Big Surge in Loan Demand

By ROBERT B. COX

Something enviable is happening at Minnesota banks – a healthy surge in loan demand.

It's the first big jump in more than three years, and it's boosting profitability at the state's 584 small commercial banks.

Commercial and industrial loans by all Minnesota banks rose $200 million in the first quarter, according to the Federal Deposit Insurance Corp.

The gains have increased the group's average return on assets from 1.12% at yearend 1992 to 1.21 at the end of the first quarter, according to data supplied by Ferguson & Co. and compiled by the *American Banker*.

Average return on equity for the group – 13.04% at yearend 1992 – also was up, to 14.34% at the end of the first quarter.

'A Pretty Good Year'

"So far, it's been a pretty good year," said Michael LaFrenz, vice president at Elysian State Bank, which earned an enviable 3.16% return on average assets in the first quarter.

"Minnesota banks are making one heck of an effort to lend locally," said Tom Bengtson, publisher of the *Northwestern Financial Review*, a regional magazine based in Minneapolis.

Indeed, even the Twin City powerhouse First Bank System has been actively courting small and middle-market businesses throughout the state.

First Bank has unveiled a program aimed at attracting small and midsize businesses, in addition to its corporate lending unit.

"The middle market is what is really growing," said William F. Farley, vice chairman of the $25 billion-asset company.

First Bank has made a hefty $70 million in new commercial and industrial loans this year alone.

"Loan demand has picked up," said Everett E. Kelly, chief executive of Minnwest Bank Dawson.

C&I loans by Minnesota banks rose $200 million in the first quarter.

Conditions have turned around so much in Mr. Kelly's central Minnesota community that he was able to plow about $450,000 from his bank's $1 million loan-loss provision into the income stream.

Tops Availability Study

Strong demand for loans propelled Minnesota to the top slot in a survey of credit availability in nine states.

The study, Project 21, was conducted by the Greater Des Moines Chamber of Commerce. It found the ratio of loans to deposits at all of Minnesota's banks higher than those in six other midwestern states, Texas, and Tennessee.

The Minnesota economy consistently performs "above average," said University of Minnesota economist Tom Stinson.

"The last recession didn't ever really hit Minnesota," he said, adding that the state picked up 93,000 jobs from December 1989 to December 1992.

What's more, the state's relatively low reliance on defense spending positions it for further growth as military cuts increase.

To be sure, not all of the state's bankers are celebrating. Severe rains have delayed crops in southwestern Minnesota, dampening potential returns for many bankers with large agricultural-loan portfolios.

'Some Agricultural Losses'

"Clearly there will be some agricultural losses this year," said Mr. Stinson, who also functions as the state's economist.

Minnesota may see a drop of close to 1% in net personal income this year just as a result of the flooding, according to Sung Won Sohn, chief economist at Norwest Corp. in Minneapolis.

In some areas, losses from drowned crops and flooded rivers are likely to be higher.

Still, Mr. Sohn added, the higher prices for commodities such as corn and soybeans may prove a windfall for farmers – and their bankers – in areas not afflicted by the flooding. □

COMMUNITY BANKING

EXECUTIVE *changes*

First Colonial Names Presidents For 5 Units of Holding Company

First Colonial Bankshares Corp., Chicago, has named presidents for several units of the bank holding company.

Robert J. Malatt has been named president and chief operating officer of First Colonial Bank Southwest in Burbank, and **A. Louis Petritz** has been named president and chief operating officer of **First Colonial Bank of DuPage County** in Naperville.

Robert J. Malatt

Mr. Malatt comes to First Colonial from Bank One (formerly Marine Bank Corp.) in La Grange, where he was vice president and chief financial officer for the past six years.

Mr. Petritz joins First Colonial from **First Colonial National Bank of Chicago/Gary-Wheaton Bank of Fox Valley,** where most recently he was president of the Aurora-Naperville branches. He had been president, chairman, and chief executive officer of Gary Wheaton Bank of Fox Valley.

A. Louis Petritz

Martin J. Noll has been named president and chief executive officer of **Avenue Bank of Oak Park.** He joins the bank from First Chicago Bank Oak Park, a branch of the First National Bank of Chicago, where he was division president.

Martin J. Noll

Allen S. Lencioni has been named president of **Northlake Bank.** He was formerly president of First Colonial Bank of DuPage County. Mr. Lencioni was senior vice president and senior lending officer at Colonial Bank in Chicago. First Colonial's flagship bank, prior to becoming president of First Colonial of DuPage County.

Allen S. Lencioni

Also, **Michael A. Speziale** has been named president of **All American Bank** in Chicago.

Michael A. Speziale

Mr. Speziale was formerly president of All American's sister bank, Avenue Bank of Oak Park. Before that, he was with First United Financial Services Inc., where he held the position of vice chairman of First Chicago Bank of Mt. Prospect.

He replaces **Thomas A. Caravello,** who will now work at Colonial Bank, Chicago.

Thomas Caravello

Vice chairman and chief executive officer of Colonial Bank since 1992, Mr. Caravello will team up with president **Richard Vucich** in running the holding company's flagship bank.

— Franklin Smith

AMERIBANK, Bloomington, Minn., has named **Gary Veverka** to vice president of commercial lending and **Todd Peterson** to commercial loan officer. Mr. Veverka was previously senior vice president and senior loan officer for First American Bank in St. Paul and vice president for First Bank in Minneapolis.

NEW ENGLAND

FIRST NATIONAL BANK of Suffield, Conn., announced the following personnel changes:

Robert A. Taravella recently joined the bank as business development officer. He is responsible for maintaining and developing personal and business relationship in the Suffield area.

Jay Babcock has joined the bank as assistant vice president. He is responsible for the business and commercial development and maintenance for companies located in Suffield and surrounding towns.

MIDWEST

SEAWAY NATIONAL BANK, Chicago, said **Dedra M. Delaney** has joined the bank as vice president and trust officer of its new corporate trust services department.

Dedra M. Delaney

The new department will provide a full range of trustee services to corporate and municipal customers.

Ms. Delaney comes to Seaway from Continental Bank, Chicago, where she had been a vice president and trust officer. She joined Continental in 1978.

AMERIBANK, Bloomington, Minn., has named **Gary Veverka** to vice president of commercial lending and **Todd Peterson** to commercial loan officer. Mr. Veverka was previously senior vice president and senior loan officer for First American Bank in St. Paul and vice president for First Bank in Minneapolis.

Bias Tests Can Backfire, Banks Warned

By JIM McTAGUE

Bankers trying to root out lending discrimination in their ranks are being told by federal regulators to use testers posing as customers as a means of identifying specific problems.

That's not a bad idea in Maryland, which has a new law that protects the confidentiality of such data. But it might not be such a hot one in the other 49 states, according to Steven I. Zeisel, general counsel for the Consumer Bankers Association.

In the other states, a tester's findings could be used against the banks in a lawsuit, because the plaintiff could obtain the data during the discovery process.

Words of Caution

Mr. Zeisel, who turned 39 on July 30, dresses like a lawyer from central casting: bow tie, suspenders, oval spectacles.

He has been at the trade group for about two years and compliance issues have been one of his major focuses.

"We're not telling members not to test," he said. "But we are telling them that there's a problem and to be aware of it."

He's also making certain that the association's 800 members know about the Maryland law, in case they want to press their own state representatives to adopt similar legislation.

'Banks Are Concerned'

"The New Maryland law came about because of this problem. Banks are concerned that as an industry they can't do their own internal analysis, make their own determination of what the problem is, and look for solutions to that problem without being hung out to dry," he said.

The law protects from discovery in civil suits filed in state courts all information from testing and other sources that is gathered for a bank's compliance review committee.

Banks are interested in this type of protection because the Massachusetts attorney general's office has attempted to obtain information on lending submitted by 36 banks to the Federal Reserve Bank of Boston for a study on racial bias.

The banks participated in an effort to help correct any problems. Now that evidence might be used against them by the state.

The Massachusetts Bankers Association has filed a suit to stop the attorney general on jurisdictional grounds.

"A lot of banks are upset that what started out as a voluntary effort to help to address this problem – to find out what was wrong and to fix it – was turned into a potential source of liability for them," Mr. Zeisel said.

Mr. Zeisel grew up in Washington, D.C., and now lives right outside the city in the Maryland suburb of Silver Spring with his wife and two-year-old son.

His work on compliance issues often finds him on Capitol Hill talking to Congressmen, and he also is a fixture at Consumer Bankers Association seminars on the subject.

A recent meeting attracted hundreds of bankers, and he said most of them were interested in ways to improve minority lending.

Are bankers looking for an easy solution?

"No," he said. "I find that Congress comes looking for an easy solution and the bankers are the ones who recognize how difficult the problem is." □

Steven I. Zeisel

Age: 39
Born: Washington, D.C.
Home: Silver Spring, Md.
Title: Vice president and senior counsel, Consumer Bankers Association
Education: He received his BA from Carleton College and his JD from the University of Maryland School of Law.
Experience: He was a senior attorney with the Federal Reserve Board, in-house counsel for Equitable Bank in Baltimore and for Maryland National Bank after the two merged.
Most memorable experience: Recent birth of his first child
Interests: Acting, the theater

95% of Banks Offer Basic Checking, Study Finds

By ROBYN MEREDITH

WASHINGTON — Most banks and thrifts offer basic banking services to the poor in their communities, according to a Consumer Bankers Association study.

About 95% of banks offer basic accounts, and 75% do not impose eligibility requirements, according to the study, which surveyed 147 of the roughly 10,000 banks and thrifts nationwide.

Basic – or lifeline – accounts are cheaper than traditional checking accounts, allowing limited check-writing for low or no monthly fees.

"The accounts are there, they are affordable, they are widely available, and I think the banks have hit the challenge head-on," said Joe Belew, President of the Consumer Bankers Association.

Defining 'Basic'

But consumer groups don't think banks are doing enough. "Probably a majority of banks offer some kind of basic banking account," said Deepak Bhargava, legislative director of the Association of Community Organizations for Reform Now. Sometimes even those accounts are out of reach for the poor, he said.

"It's all in how you define what 'basic' means," Mr. Bhargava said.

For example, many basic accounts have a $25 minimum balance.

"Most people who are low-income draw down to zero every month," he said.

But Mr. Belew replied, "If it's a $25 minimum balance, they ought to take a look at what they are spending at check cashing stores."

Balance Requirements

According to the CBA survey, 93% of banks require minimum balances on their basic banking accounts. But of those which do, the average balance is $202, the survey said.

Institutions that answered the survey had $9.9 billion in assets on average. They charged $3.14 a month on average for the basic accounts.

Most institutions surveyed – 85% – said their basic accounts were widely used by the poor, while 17% said they were not well-utilized by low-income people.

Many banks also cash government checks for people who do not hold an account there. The survey showed that 72% of banks and thrifts cash them, and that about half of those do not charge for the service.

Metcalf Savings Howls over Cost of Truth-In-Savings

By BETH PISKORA

Officers at Metcalf Savings Bank plan to give the Federal Reserve Board a piece of their mind. They say the Fed asked for it.

Metcalf Savings Bank, a $120 million-asset community bank in Overland Park, Kan., was one of the many community banks that howled in protest when Regulation DD, also known as the Truth-in-Savings law, was passed. Community banks said the costs of complying with the regulation would be very high.

1,600 Expected to Respond

The Fed responded by asking banks of all sizes to fill out a two-part survey in which they would record the time and money spent complying with the new law. The questionnaire also asked banks to report any service or product changes that were being made because of the new law.

Federal officials expect that close to 1,600 banks plan to complete the survey. Metcalf officials agreed to participate because they wanted the voice of the community bank to be heard.

"We're talking about a regulation that is very lengthy and very difficult to understand," said Vicki L. Fisher, senior vice president. "We're a small bank without a legal department, which means implementing the regulation is very, very time-consuming for our officers."

Ms. Fisher estimated that Metcalf's officers spent close to 30 hours learning the regulation and preparing the compliance effort.

Costs Put at $30,386

"Every hour that our officers spent on this regulation was an hour that they could have been doing something else," she said.

According to Metcalf's completed questionnaire, a copy of which the bank made available to *American Banker*, Metcalf's start-up compliance costs for the Truth-in-Savings law will be $30,386.

That number encompasses review of the proposed regulation, legal expenses, training costs, data processing and system

The Fed invited banks to figure out their outlays.

changes, redesign of disclosure statements, customer notifications, and other miscellaneous expenses. It does not include any ongoing expenses now that the rules have taken effect.

Metcalf's total operating budget for 1993 is $172,500.

Impact on Services

Metcalf also told the Fed that it plans to eliminate one of its two types of statement savings accounts offered, as well as reduce the interest paid and increase the fees imposed on the remaining products.

This service change bears out a fear shared by two of the Fed governors: Lawrence B. Lindsey and John P. LaWare. They approved the regulation to meet a congressional mandate, but they predicted that the new disclosure rules could backfire on consumers when they shop for product offerings.

Metcalf officials said they did not expect to obtain any benefits from the new regulation.

"In the past, our employees could just sit and have a friendly conversation across the new-account desk if a customer was interested in our services," said Jon L. Stewart, chief financial officer. "Now we will have to fill out disclosures and hand them to the customer. It's a lot more paperwork and no one wins." □

PENDING LEGISLATION

Issue	Principal Bills	Status and Outlook
Interstate branching	S 371, introduced Feb. 16 by Sen. Christopher J. Dodd, D-Conn., would permit interstate acquisitions by adequately capitalized institutions a year after enactment and interstate branching two years later. The bill includes concentration limits that would bar any institution from holding more than 30% of the insured deposits in any state or 10% of the nation's deposits. States could choose to bar interstate branching within their borders, however. In the House, Rep. Stephen L. Neal, D-N.C., introduced a similar measure, HR 256, on Jan. 6. Rep. Bruce Vento, D-Minn., who led the charge on interstate in 1991, introduced HR 2235, the Interstate Banking Efficiency Act of 1993, on May 20.	Some observers believe President Clinton's community development bank bill might provide a vehicle for interstate, but White House allies will try to keep that from happening. Prospects appear dim, at least for this year.
Community development banks	Rep. Jim Leach of Iowa, ranking Republican on the House Banking Committee, took the lead Jan. 6 by introducing HR 238. Under his bill, any bank that made the maximum investment in a community development institution (5% for national banks) would be deemed to be in compliance with the Community Reinvestment Act. In addition to providing this CRA "safe harbor," the bill would require regulators to set specific standards for CRA compliance and would permit banks to underwrite mutual funds that invest in the securities of small businesses. President Clinton unveiled his own approach to community development lending last month, and his bill was introduced by the chairmen of the House and Senate banking committees, Rep. Henry B. Gonzalez, D-Tex., and Sen. Donald W. Riegle, D-Mich., as HR 2666 and S 1275. The President's bill would provide $382 million over four years for community development lenders, but nothing for most commercial banks. On July 22, a bipartisan group of lawmakers led by Rep. Floyd Flake, D-N.Y., and Rep. Leach introduced HR 2707, a measure that would make more of the money in the President's bill available to existing commercial banks.	Community development banks may be the only major banking bill to pass Congress this year. It's likely the House proposal is likely to be rewritten to provide more incentives for banks to make loans. Also, there is a better-than-even chance that a performance-based CRA standard will be mandated. Bankers could win a measure of regulatory relief in the bill.
Resolution Trust Corp.	The Clinton administration's original proposal to spend $43 billion for the RTC and the fledgling Savings Association Insurance Fund has been scuttled in favor of much smaller spending bills. The House Banking Committee and the full Senate have approved measures that would give $18.3 billion to the RTC and a maximum of $16 billion to the SAIF. But on the SAIF funds, each body set a number of restrictions that could keep the money from ever being used.	The bill has been scheduled for floor action a number of times, most recently July 28. The House Rules Committee actually took up the measure the day before but retreated when it became apparent that the votes weren't there. Some observers believe the House will not act until September, at the earliest.
Overhauling the Federal Reserve	HR 28, introduced Jan. 15 by Rep. Gonzalez, would attempt to increase accountability of the central bank by giving the President authority to appoint district bank presidents, by expanding disclosure of Federal Open Market Committee deliberations, and by requiring government audits of the central bank. HR 586, introduced Jan. 26 by Rep. Lee Hamilton, D-Ind., would create an advisory committee for the Open Market Committee. A companion bill, S 219, was introduced Jan. 26 by Sen. Paul Sarbanes, D-Md. HR 587, introduced Jan. 26 by Rep. Hamilton, would require prompt disclosure of Open Market Committee decisions. The Senate companion bill, S 212, was introduced the same day by Sen. Byron Dorgan, D-N.D.	Hearings in the House and Senate are expected later this year. Efforts aimed at opening up the Fed, traditionally a Democratic issue, may have gotten a boost last year when the recession-weary Republican administration called for more openness. If the economy continues to recover and Fed Chairman Alan Greenspan's relationship with President Clinton continues to be warm, the central bank might easily dodge this bullet, however.
Fair Credit Reporting Amendments	HR 1015, introduced Feb. 18 by Rep. Esteban Torres, D-Calif., would make it easier for consumers to obtain copies of their credit reports and to correct errors. It would also set penalties for banks and others that fail to correct mistakes in credit information. A similar bill, S 783, was introduced in the Senate by Sen. Richard Bryan, D-Nev., and Sen. Christopher S. Bond, R-Mo.	A similar bill was withdrawn last year in the final days of Congress, but many observers believe Rep. Torres and his supporters, including Rep. Gonzalez, will triumph this year. Hearings began in the Senate in May and could begin in the House after the August recess.
Secondary market for small-business loans	HR 660, introduced Jan. 27 by Rep. John J. LaFalce, D-N.Y., would create a federal agency, nicknamed Veida Sue, to sponsor a secondary market for small-business loans. A companion bill was introduced in the Senate by Sen. John Kerry, D-Mass., on March 4. S 384, introduced Feb. 17 by Sen. Alfonse M. D'Amato, R-N.Y., takes a different approach. His bill would reduce a number of regulatory impediments to securitization, making it easier for the private sector to pool small-business loans. A companion bill was introduced in the House on Feb. 24 by Rep. Richard H. Baker, R-La., and Rep. Leach. Meanwhile, Rep. Paul Kanjorski, D-Pa., introduced HR 2600, a bill that would give the Treasury the power to license public and private-sector units to securitize any kind of business loan.	There appears to be more interest on Capitol Hill this year than ever before, but it may not be enough to produce legislation this year.
Regulatory relief	HR 59, introduced Jan. 15 by Rep. Doug Bereuter, R-Neb., takes a two-tier approach to bank regulation. Well-capitalized institutions would be given more favorable treatment, including exemption from some regulations and authority to file "short form" call reports. HR 269, introduced Jan. 6 by Rep. Bill McCollum, R-Fla., would reduce record-keeping requirements under the Community Reinvestment Act. In addition, banks that invest in community development institutions would be deemed to have met their CRA requirements. S 265, introduced Feb. 28 by Sen. Richard C. Shelby, D-Ala., would repeal or modify some of the congressionally mandated regulations that bankers despise most, including the operations and auditing standards required in the 1991 banking law. A companion bill, HR 962, was introduced in the House on Feb. 18 by Rep. Bereuter and Rep. Leach, co-sponsored by a majority of House members. S 1124, introduced June 18 by Sen. D'Amato, is a broad regulatory-relief bill that would also limit lender liability for environmental cleanup.	The chairman of the House and Senate banking committees are at best skeptical about the industry's agenda for regulatory relief, and at worst openly hostile. The Clinton administration, though more sympathetic, appears to have backed away from proposals relief legislation. As a result, passage is unlikely this year. The best chance for legislative relief may come after the regulatory agencies release their recommendations.
Agency consolidation	Two major bills are pending in the House. HR 1214, the Regulatory Consolidation Act of 1993, was introduced by Rep. Gonzalez on March 4. His bill would consolidate all thrift and bank regulation in a single, independent Federal Banking Commission. HR 1227, the Bank Regulatory Consolidation and Reform Act of 1993, was introduced by Rep. Leach on the same day. His measure would combine the Office of the Comptroller of the Currency and the Office of Thrift Supervision into an independent Federal Banking Agency. Senate Banking Committee Chairman Riegle has said agency consolidation could be a big step toward easing the regulatory burden on banks. He has indicated that such legislation would be a major priority.	Although consolidation has been a quagmire in the past, interest is high this year — in large part because it promises cost savings. A kind word from the President might be enough to do it.
Bankruptcy reform	Sen. Howell Heflin, D-Ala., introduced S 540 on March 10. The bill would make it more difficult for individuals and businesses in bankruptcy proceedings to avoid repaying debts. Rep. Mike Synar, D-Okla., introduced a similar bill in the House, HR 2326.	Similar legislation died in the final hours of the last Congress because of a parliamentary maneuver involving an unrelated bill. Bankruptcy reform appears to have a good chance of passing in this Congress.
Insurance regulation	Rep. Joseph P. Kennedy 2d, D-Mass., introduced the Federal Insurance Administration Act, HR 1257, on March 9. His bill would expand the powers of the Federal Insurance Administration and give the insurance industry easier access to the Federal Reserve's discount window, a step most banks oppose. Rep. John D. Dingell, D-Mich., chairman of the House Energy and Commerce Committee, introduced HR 1290, a bill providing for federal regulation of the insurance industry, on March 10.	Though the outlook for both bills is uncertain, they set the stage for the next round in the continuing jurisdictional battle between the House Banking Committee and the House Energy and Commerce Committee. Members of the banking panel would like to expand their say over insurance, a product of increasing importance to banks.
Federal Home Loan Bank System	Reps. Baker and Neal introduced HR 1085 on Feb. 24. The measure would ease some of the pressure on the Home Loan Bank System by reducing its contribution to the savings and loan cleanup to the lesser of $300 million or 20% of the system's profits. Currently, the system pays the larger of the two sums. The bill would also equalize membership requirements for banks and thrifts.	Rep. Baker offered a similar bill last year, in the face of opposition from the Bush administration and resistance from the chairman of the House Banking Committee. It is unclear whether he will fare any better this year.
Credit cards	Rep. Charles E. Schumer, D-N.Y., introduced legislation that would increase disclosure requirements for credit cards, particularly in solicitations for new customers. HR 1872 would require, among other things, that envelopes containing solicitations bear information about rates, grace periods, and fees. The bill drops that envelopes containing solicitations bear information about rates, grace periods, and fees. The bill drops a requirement considered earlier by Rep. Schumer that the government study whether rates are too high.	Rep. Schumer tried to move similar legislation in the past without success. With rates generally declining, support for such measures may also be on the decline.
Basic banking	Rep. Cleo Fields, D-La., and Rep. Albert Wynn, D-Md., are sponsoring legislation to regulate check-cashing facilities. The bill, HR 1448, would also require banks to cash government checks for free. In the Senate, Sen. Howard Metzenbaum, D-Ohio, introduced a similar bill, the Financial Services Access Act, on Jan. 21.	Mandatory cashing of government checks has come close to winning congressional approval in the past and could hitch a ride should a banking bill begin to move.

Thrifts' Originations Plunged in the First Quarter

By EDWARD KULKOSKY

Mortgage originations by the nation's thrift industry slumped in the first quarter as consumers continued to turn up their noses at adjustable-rate loans.

Volume fell by about 45% from the level in the fourth quarter of 1992 and by about 12% from that in the first quarter of 1992, according to data recently released by the Office of Thrift Supervision. (See accompanying table.)

With fixed-rates at 7% to 7.5%, borrowers have been showing a strong preference for such loans although adjustable rates of about 5% are available.

Afraid of a Squeeze

But thrifts, which hold most of the mortgages they write rather than selling them, do not want fixed-rate loans because they fear getting caught in a squeeze as rates rise. As a result, thrifts have been ceding market share to mortgage banks, which are happy to originate, and sell, whatever borrowers demand.

According to figures from the Department of Housing and Urban Development, thrifts originated 16.2% of all home loans in the first quarter, down from 20.8% a year earlier.

2 Biggest Thrifts Hurt

The two biggest, H.F. Ahmanson & Co.'s Home Savings of America and rival Great Western Bank, both based in suburban Los Angeles, had sharp declines year to year, about 29% and 30%, respectively.

Sam Lyons, senior vice president for mortgage banking at Great Western, attributed some of the decline to a surge in refinancings in the 1992 quarter. But other factors were also at work. "Mortgage bankers continue to make inroads in the marketplace," he added.

"If you are trying to grow assets in this low-rate environment, it's going to be a very tough challenge," he said.

"You're doing well if you just replace runoff due to prepayments, let alone grow assets. It's hard to see any appreciable growth of assets in this atmosphere."

Redwood Unit a Big Gainer

The figures for the first quarter showed a split between the biggest thrifts and the industry as a whole. At the top 25 thrifts, originations dropped by $5.26 billion, or 24.6%, accounting for most of the $5.54 billion first-quarter decline by all thrifts insured by the Savings Association Insurance Fund.

One of the few top thrifts showing a big year-to-year gain was Allied Savings Bank of Santa Rosa, Calif., a unit of Redwood Empire Bancorp.

With half of its business in mortgage banking rather than portfolio lending, it managed a gain of about 133%. A major capital infusion from its parent also helped, according to John Simons, chief financial officer.

The other thrift with a big gain was First Federal of Rochester, N.Y., a unit of CT Financial Services Inc., London, Ontario.

Ronald Lent, senior vice president for mortgage lending, said First Federal experienced a surge of applications near the end of 1992 that resulted in heavy loan closings in the first quarter of 1993. □

Top Thrifts in Residential Mortgage Loan Originations

First quarter of 1993 compared with first quarter of 1992 (dollar amounts in thousands)

		Residential Mortgage Loan Originations		
		First Quarter 1993	First Quarter 1992	% Change
1	Home Savings of America, FSB, Irwindale, Calif.	$2,167,720	$3,000,000	-29.17
2	Great Western Bank, A FSB, Chatsworth, Calif.	1,803,436	2,582,715	-30.17
3	World Savings & Loan Assn., FSB&LA, Oakland, Calif.	1,451,123	1,283,475	13.06

Shaky Borrowers Give Long Beach a Solid Niche

By JAMES H. SAFT

Long Beach Bank of Orange, Calif., has carved itself a niche in the growing business of originating, securitizing, and servicing loans to borrowers with blemished credit histories.

Secondary Market

The company is in the process of issuing $255 million of mortgage-backed securities through Greenwich Capital Markets, a Connecticut investment bank. It is Long Beach's second such issue of the year.

These types of issues, partly because they offer higher interest rates to investors, are increasingly popular. "Over the next couple of years, we'll probably see more" of such issues, says Jayme Laurash, an analyst with Standard & Poor's Corp.

'Slower Repayment Profile'

Securitizations of loans to homeowners with troubled credit histories, known as B and C borrowers, are attractive to investors for other reasons as well, says Jennifer Schneider, an analyst at Duff & Phelps. "These borrowers have a slower prepayment profile than A borrowers," she said.

This is thought to be because B and C borrowers have less access to refinancings and have little excess cash. Also, because they pay higher closing fees, it takes a bigger drop in rates to make refinancing economical.

Investors have been stung by prepayments in recent months. Thus, the likelihood of greater stability is a seductive feature.

Securitizations of B and C loans are increasingly popular.

Extra Work Required

Though mortgage banks that make loans to borrowers with a history of credit trouble can be well compensated by higher interest rates and fees, these loans also require extra work, both before and after the loans close.

B and C borrowers are generally required to make higher down payments, resulting in lower loan-to-value ratios. According to Ms. Schneider, this gives added collateral to investors but makes a accurate appraisals all the more important.

Besides the standard appraisal checks, banks like Long Beach use tools such as desktop appraisals, computer programs that take into account valuation of similar properties nearby.

"Aggressive servicing is key," says one old B and C hand.

"It's more like consumer loan servicing, you have to stay on top of things," says Mr. Laurash.

Long Beach has been known to get in touch with borrowers before the first payment is due to remind them of the correct amount and address. Long Beach also makes it a point to phone borrowers as soon as possible after they become delinquent.

Though making mortgage loans to B and C borrowers has been the province of a small band of specialists, market observers believe the ranks are expanding.

"We see a lot more proposals of originators that want to start these types of programs" says Ms. Schneider. □

We'll save you money. We could even save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... which agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 20% discount, so you'll be saving money even before you get the first issue.

Bankers, Realty Agents Gird for Clash on Fees

By SNIGDHA PRAKASH

WASHINGTON — Mortgage bankers and real estate brokers will square off again Friday over some federal rules aimed at combating kickbacks for loan referrals.

Both sides, as well as consumer advocates, will testify at a hearing at the Department of Housing and Urban Development about regulations to implement a 1983 amendment to the Real Estate Settlement Practices Act of 1974.

The Mortgage Bankers Association wants the rules overturned and has lobbied HUD as well as bringing suit in federal court. And the National Association of Realtors and other real estate groups are fighting to keep them in place.

"The fees are big pork-rillas that are in the playpen together. There's no way to take on this decision without rattling the cage," said Chris Lewis of the Consumer Federation of America.

In an unusual alliance with mortgage lenders, Mr. Lewis' group will also tell HUD to go back to the drawing board.

It is a measure of the difficult politics of this issue that the agency did not issue final rules for the 1983 amendment until election eve last year.

The timing left the new housing secretary, Henry Cisneros, and on the opposite side from consumer groups on a touchy matter.

Two issues will be on the table.

- The rules allow real estate agents to earn referral fees when they use a computerized loan origination (CLO) system to help homebuyers shop for a loan, so long as the shoppers are told about the arrangement.
- Realty employees are allowed to earn fees or bonuses if they refer homebuyers to a lender owned by the same company as the realty broker.

HUD has asked for comment on whether CLOs should be better defined. It also wants to know if consumers are protected by the disclosure rules.

Both the MBA and consumer groups will ask the agency to ensure that the CLOs list the rates of many lenders.

Both also will ask that no referral fees be paid for CLOs.

"If there's going to be a fee, it should be disclosed and paid up front," said Warren Lasko, the trade group's executive vice-president.

Tough Language

Mr. Lewis expects to tell the lawmakers that the bonuses to realty employees "look and smell like kickbacks."

But what smells like a kickback to MBA and Mr. Lewis looks like good business to the Realtors association. It says it will fight hard to keep the rules.

"What we'd like to do is suggest that CLOs are the wave of the future," said Norman D. Flynn, who was president of the group in 1990 and will testify Friday.

"We ought not to be putting artificial barriers in the way of technological advancement that will assist purchasers in finding the best, most suitable loan for them," Mr. Flynn will tell HUD.

Mr. Lewis and the mortgage bankers draw heart from the very fact that HUD called a hearing, and from the the consumer-oriented questions in the agency's hearing notice.

"Our understanding is that the secretary's office is not pleased to be in litigation with the CFA," said Mr. Lewis. □

Consumer Bankers Seek Industry Sales Yardstick

By KALEN HOLLIDAY

Keeping up with the Joneses may soon become easier for banks that sell investment products.

The Consumer Bankers Association is conducting a survey that could provide its members with a yardstick for evaluating their sales programs for mutual funds, annuities, and securities. The aim is to help banks see how they stack up against peers in key areas, such as fees, compensation, and expansion plans.

The trade group, based in Alexandria, Va., mailed the 30-question survey to 800 financial institutions on July 15. Results will be unveiled at the group's annual convention in Florida next month. In a letter urging bankers to participate, CBA president Joe Belew said the survey would help create "a variety of important new peer measurements and benchmarks" to measure success. Bankers say they are eager to see the results.

Joe Belew

"A lot of this information would be very helpful to those of us who are trying to plan marketing strategies," said John M. Cortelli, senior vice president at Cleveland-based Society Corp.

Though it is too early to draw conclusions, early responses suggest that banks are paying close attention to sales structure and disclosure, according to Fritz Elmendorf, communications director for the association.

'A Valuable Contribution'

"With this being the hot new banking area of the '90s, we thought we could make a valuable contribution to our members," Mr. Elmendorf said.

The survey questions cover a wide range of topics, from compliance policies to marketing practices.

On the compliance front, for instance, it asks whether banks require customers to sign statements acknowledging that investment products are not insured by the Federal Deposit Insurance Corp.

On the marketing form, it asks for information on how many customers are transferring certificates of deposit into uninsured investments, and whether banks are actively trying to convert CDs. The association is also tabulating information on sales charges, or "loads," annuity premiums, and sales volume for brokerage services.

Alexander B. "Sandy" Berry 3d, a principal at Mercer Management Consulting in Richmond, Va., who helped design the survey, said bankers are "craving information" of this type.

"As this whole product area has developed, there has not been a good body of information about what is going on in the industry," Mr. Berry said.

In May, the Federal Reserve published the results of a survey of sales practices at 56 of the nation's largest banks, Mr. Berry noted. The central bank's aim was to gauge how mutual fund sales by banks are affecting the money supply.

Not surprisingly, the association's emphasis is a bit different.

"We're trying to see how this area is evolving," Mr. Berry said. If enough people respond, "we should have a very valuable piece of information."

Q: Have mutual funds helped you to bring new money and new customers into the bank?

GEORGE BERNARD
Vice president
PNC Securities Corp.
Pittsburgh

Yes, we have seen increases. That's been by design. We've developed our mutual fund products and services based on the needs of our customers.

If developed well, they should attract customers, and they have.

A year ago, we had 11 funds in our PNC family, with about $900 million in assets under management. Now, we're going on 20 funds and have $2.7 billion in assets under management.

We have a number of tax-free funds for customers in the different states that we operate in. And we're helped by the fact that our funds have been solid performers.

We also offer other companies' mutual funds and that helps strengthen our relationships. Customers know we're not going to force PNC funds on them if they want something different. ☐

DAVID MILLS
Marketing manager
Mellon Bank
Pittsburgh

As we're rolling into the retail market, the focus initially is to provide funds to existing customers. But the fact you have another arrow in your quiver can help bring customers to your organization.

We have nine of our own Laurel funds with about $2.5 billion in assets under management. A year ago, we had nine portfolios with about $2.1 billion.

We also have 19 Boston Company funds with about $1.4 billion in assets. Mellon acquired the Boston Company in May. To a minor degree, we are selling them to customers now, but we do want to make them broadly available to customers, just as we want to make the Laurel funds broadly available to Boston customers.

Our mutual funds were originally focused on trust, capital markets, and corporate banking clients.

If the customers needed a mutual fund, they didn't have to leave to get it. It allowed us to new customers through children of trust customers. Their parents could have set up a gift to minors account or made an outright gift. ☐

JUDY RUDNICK
Product manager
Harris Bankcorp
Chicago

In the past, retail sales haven't been the biggest source of sales for us. But I would say we've gotten some new institutional customers since we began offering the Harris Insight Funds.

That was in February 1988, and now we have about $900 million under management in six funds. We have three money market funds, and equity, taxable bond, and tax-exempt securities funds.

We have sweep accounts where we'll sweep excess cash from checking accounts or securities that pay dividends into a Harris money market fund.

And we are starting an asset allocation program using our mutual funds and others. We hope that will be a significant source of new money for us. ☐

Great Western's Sierra Investment Advisors Adopts a More Defensive Portfolio Strategy

By KAREN TALLEY

Responding to changed market conditions, Sierra Investment Advisors has rejiggered the investments in its four asset allocation portfolios.

The restructuring affects the fixed, value, balanced, and growth investment portfolios managed by Sierra Investment, an arm of Great Western Financial Corp.

The four portfolios are marketed as the Sierra Asset Management program.

The program, begun three years ago, has $251 million in assets under management.

The portfolios choose their investments from among nine of 13 funds in the California thrift's Sierra Trust proprietary mutual fund family.

Mutual Fund Family

Sierra Investment Advisors said it reallocated funds in its fixed portfolio to achieve greater balance between short, intermediate, and long-term bonds.

The value strategy was realigned to a "slightly more defensive position" to increase price stability and total return while sustaining yield, a spokesman said.

The balanced strategy shifted into a slightly more conservative mix of 45% equities and 55% debt from an even mix.

More Conservative Mix

The growth strategy was slightly adjusted to include more established growth companies.

The four investment strategies carry a maximum front end load of 4.5% and an annual management fee of 0.5% of the assets, under management.

Additionally, individual mutual funds in which the program invests carry annual management fees that range from 0.41% to 2.25%. ☐

Voyageur Gears Up to Tap Growing Business with Banks

By KEITH DuBAY

In 1989, Voyageur Asset Management sold less than $1 million of its funds through banks. This year, bank-related sales will range up to $200 million, executives of the Minneapolis-based mutual fund company estimate.

The increased importance of bank mutual fund sales to this conservative fund company manager is prompting the firm to boost its functions that support banks.

National sales manager Pat Wolfe said banks now account for 20% of the company's fund sales. His goal is to sell a third of Voyageur's funds through banks.

"The escalation of our bank sales has been dramatic. It's a big number and it's growing very quickly," Mr. Wolfe said.

An Easy Transition

Among the company's bank clients is First Bank System, the Minneapolis-based banking company that has a big presence in the plains states and the Rocky Mountain region.

Voyageur recently completed a large training project for First Bank System employees. Topics ranged from explaining what mutual funds were to defining investor suitability.

"Banks have grown from a nonentity in the fund business four or five years ago to a powerhouse, both on a proprietary and nonproprietary basis," he said.

An officer will establish relationships with banks nationwide.

Mr. Wolfe said he thinks Voyageur's funds sell well through banks because the portfolios comprise highly rated municipal and government bonds. It's an easy transition for a bank customer to make when reinvesting certificates of deposit, he said.

Mr. Wolfe said he is close to hiring a new investment officer to establish and maintain relationships with banks nationwide. Voyageur has sales agreements with 75 banks in 10 states in which it manages and sells its state-specific municipal bond funds.

$5.5 Billion Partnership

Voyageur was founded 10 years ago by Ken Dawkins and Michael Dougherty, who act as chief investment officer and chairman, respectively. Both were from the municipal bond business and Mr. Dougherty is still active with the firm that bears their names.

Voyageur is organized as a partnership, half-owned by Minnesota Twins owner Carl Pohlad's Marquette Banks Holding Co. The other half, owned by Allied Insurance Co. in Des Moines, is being sold back to a group led by Mr. Dougherty, officials said.

Voyageur has $5.5 billion of assets in private accounts and 22 mutual funds. The funds, 18 open-ended and five closed-ended, are in Arizona, California, Colorado, Florida, Kansas, Minnesota, Missouri, New Mexico, North Dakota, Oregon, Utah, and Washington.

Eleven of the funds covering $1 billion of assets are managed by Denver-based portfolio manager Drew McCullagh.

Voyageur also manages asset/liability accounts for 17 banks in Minnesota, South Dakota, and New Mexico. Assets managed for the banks total $670 million.

One-on-One Marketing

Unlike some fund families, which have wholesalers dedicated exclusively to banks, Voyageur's salespeople don't specialize. But they are generally limited to one state, where other funds will have a wholesaler who covers a group of states. A wholesaler provides support for banks, financial planners, and brokerages.

Voyageur has sales agreements with 75 banks in 10 states in which it manages and sells its state-specific municipal bond funds. Banks account for 20% of the company's fund sales.

"You can't provide the level of services that the banks want with one person covering a number of different states," Mr. Wolfe said.

"A higher percentage of our marketing effort is done on a one-on-one basis. If a wholesaler has half a dozen states, they just can't get around to see all their clients.

"It's more expensive for us, but we feel the higher level of service has allowed us to compete more effectively," he said.

One of the first jobs for the new bank development officer will be to design marketing materials and training programs for bank employees on such issues as cross-selling and referring customers to investment salespeople.

The bank development officer will travel to Oregon and Washington, where Voyageur has recently started funds, and identify bank distribution networks and meet with bank officers.

Voyageur doesn't discriminate among banks. "Anyone can sign a marketing agreement with Voyageur," Mr. Wolfe said. ☐

When it's this hot, you deserve extra scoops.

For many bankers, the thermometer is a lagging indicator of the heat they feel in handling current regulations and guessing the Clinton administration's next moves. But we've got a way to help you keep cool: *American Banker's Washington Watch.*

We broke the news about the plans by credit union trade associations to branch cross-country. We warned readers that the FDIC will crack down on banks and thrifts that aren't paying enough for insurance, and that the Fed was flirting with examination fees. We also uncovered plans that would let banks pay less for deposit insurance provided they set up certain special programs.

Those kinds of tasty scoops are the weekly fare at *American Banker's Washington Watch.* Within minutes, you get insights on regs and regulators—as well as your competitors—that could make the difference between profit and loss. We unconditionally guarantee it.

Household Bank Still Virtually Unknown, But GM Card Issuer Has Insiders' Respect

By STEPHEN KLEEGE

Ask the man on the street, "Who issues the General Motors card?" and you're likely to get a "Who's buried in Grant's Tomb?" response -- if not a blank stare.

The right answer – Household Bank – is a name that "barely registers" in consumer surveys, says Bruce Brittain, the Atlanta-based credit card marketing analyst.

But card industry insiders certainly know about the bank owned by Household International, which has quietly become one of the five largest in the credit card business.

Card bankers also know Joseph Saunders, the former Continental Bank executive who has put the stamp of his personality, and reputation for industry leadership, on what is arguably the most influential credit card issuer in the country.

GM Talked to the Elite

While it was preparing to enter the credit card fray with a powerful rebate program that could help people buy cars, General Motors Corp. approached other members of the industry elite – Citicorp , Banc One Corp., and Bank of New York Co.

But it was most impressed by Mr. Saunders' willingness to try something completely new, to work out a revenue-sharing agreement, and to let GM's identity overshadow Household's in what became the most massive credit card launch ever.

Household's competitors were reluctant to issue a card that would be identified solely with GM, said Ronald N. Zebeck, managing director of GM card. That was a problem because the automaker didn't want to "dilute" its own recognition by cluttering the front of the card with the name of a less-well-known bank partner.

Amenable to No-Fee Strategy

What's more, Mr. Saunders proved more amenable than the others to issuing a card with no annual fee, Mr. Zebeck recalled. And he was ready to commit the resources required to meet GM's ambitious growth goals.

"When I asked Joe what he would do if he had $3 to invest, he said $2 would go into credit cards and the other dollar would go into the banking business," Mr. Zebeck said. "That indicated how devoted he was to bringing value to the customer."

"We listened to what they had to say," Mr. Saunders said, recalling a video presentation Mr. Zebeck made to Household executives at their Salinas, Calif., headquarters in early 1992. "We ended up collectively buying into the vision that this was a potentially dynamite product."

All signs say their judgment was correct.

Largely thanks to the GM Card, which hit the market 11 months ago, Household Bank has surpassed AT&T Universal Card Services in credit card loans outstanding, to move into fifth place among bank card issuers.

Household credit card loans under management reached $7.3 billion, compared with the $7.2 billion AT&T has amassed since 1990, according to a midyear report released Wednesday by Ram Research Corp.

Consumers have run up $3.3 billion in balances on GM cards and cashed in rebates toward the purchase of some 45,000 GM cars, Mr. Zebeck said.

Household has surpassed AT&T Universal Card Services in credit card loans outstanding.

Analysts point out that Household's example was at least a part of the inspiration for Citicorp to issue a similar card with Ford Motor Co. The presence of still more value in cards also prompted Chase Manhattan Corp., to upgrade its frequent-flyer program with British Airways and Wells Fargo & Co. to offer a card that gives a rebate covering mortgage-closing costs.

For Mr. Saunders, 47, the GM Card is only the latest in a series of credit card successes.

"Joe had a track record of being in a card business that had grown dramatically in a short period of time. And that's what Household wanted," said Stephen P. Topper, who was among the bankers Household hired to staff the unit under Mr. Saunders in 1985.

Chuck Gothard

JOSEPH SAUNDERS won GM's business by agreeing to revenue sharing and by letting the automaker's identity overshadow Household's in what became the biggest launching ever of a credit card.

At Continental, Mr. Saunders had built the Town & Country card division into one of the largest in the nation, before the bank ran into unrelated troubles and sold the portfolio to Chemical Banking Corp., Mr. Topper said.

Household was so impressed, it continued to pursue Mr. Saunders even after he was hired for a brief stint at Bank of America, said Mr. Topper, who is currently senior vice president of direct mail at First Nationwide Bank in San Francisco.

At Household, Mr. Saunders did not disappoint.

A "heavy investment" in data management systems paid off by enabling the bank to target its cards to individual consumers, said Warren Wilcox, executive vice president of planning and development under Mr. Saunders.

"In retrospect, it turned out to be a little chairyoeant," said Mr. Wilcox, who recently announced that he would leave Household Bank to form a data services unit for Fair Isaac & Co.

"Right out of the gate, we were going as low as 16.9% for some people," he said, referring to an interest rate that was considered low at the time. "Some products had fees, some not, some had $10 fees and some had $20 fees. We had a lot of flavors of ice cream."

Buying Card Loan Portfolios

Household also built its market share by aggressively acquiring card loans from other issuers, Mr. Wilcox said. The bank added more than $2.5 billion in receivables in 20 different purchases, starting with the portfolio of Avco National Bank in 1987.

Mr. Wilcox said Mr. Saunders' management style came to the fore in negotiating those purchases, as he delegated all but the final sticking points to staff members.

At one point, Mr. Wilcox recalled, Mr. Saunders got on the phone at 3 a.m. to nail down a purchase from CoreStates Financial Corp. that involved a complex side deal with the investment bank Ranieri, Wilson & Co.

"He's got a strategic focus," Mr. Wilcox said of Mr. Saunders. "He can be tough and demanding one minute, sensitive the next. He has a superb sense of when to push people."

For his part, Mr. Saunders credits teamwork, saying, "You need to get a management team put together that buys into the notion that they are all focused on the same objective. You need

For Mr. Saunders, 47, the GM Card is only the latest in a series of successes.

to create a culture where everybody feels they're competing with other people, not with each other."

The GM Card was the largest in a series of products that Household has issued under strategic alliances with nonbank partners.

"People have been trying to add value to the cards for the past 10 to 12 years," Mr. Saunders said, referring to airline affinity cards and other promotions. Only a bank with the "horsepower" of a Citicorp has the ability to distinguish itself purely on the basis of quality service, the banker added.

For Household, the first such product was the Alliance Compu-Card, associated with a discount buying service, that was issued in a joint venture with CUC International of Stamford, Conn.

More recently, Household issued a card on behalf of Chicago-based Ameritech that offers a 10% discount on long-distance calls. That product was dwarfed by the GM Card, which has been issued to seven million people with five million accounts. But Ameritech's is a substantial success by almost any other measure, with 600,000 cards issued in a five-state region, and $300 million in loans outstanding.

Marketing Advantages

What's new in the GM card, he said, is "the notion of talking to other people and saying how your marketing objectives can be supplemented by associating with a credit card."

Although it is a major force in the credit card world, Household's parent has yet to reap the full rewards of Mr. Saunders' efforts.

Richard S. Goleniewski , who follows the $33 billion-asset Household International for Goldman, Sachs & Co., said credit cards is its fastest-growing asset category but will contribute only 50 cents to 75 cents of the projected $6 a share of earnings this year.

Mr. Goleniewski said the card unit's profitability remains burdened by start-up costs, and that the revenue sharing arrangement with GM may be cutting into its total yield. The unit is earning about 1% on assets, he said, which is good for a commercial bank but shy of the 1.87% average for a credit card issuer.

Some observers have warned that the rapid growth of the GM Card will be followed by a rise in delinquencies and chargeoffs as the accounts mature.

But according to Stuart A. Feldstein, of SMR Research Corp., which recently published a study of "high-value" cards like GM's, there are indications that credit quality will be better than average. Cardholders are seen as reluctant to default because they could lose their rebate points.

And it's clear that Mr. Saunders, who is among the contenders to assume the presidency of Household International left vacant following the recent death of Edwin Hoffman, has no intention of letting up.

Mr. Wilcox hints that there are some new initiatives coming that, if they won't rival the GM Card, will at least keep Household a step ahead of the rest of the industry.

And Mr. Goleniewski notes that with the Chesapeake, Va., processing unit that recently opened to service the GM Card, Household is operating at only about half of its capacity. □

CREDIT/DEBIT/ATMs

MasterCard Moves to Cut Card Delays at Sales Counters

By LISA FICKENSCHER

MasterCard International said it is taking steps to shorten the delays that occur when a card-issuing bank must be called to complete a point-of-sale authorization.

By instituting a system called Automated Referral Service, MasterCard aims to eliminate most of the five to 10 minutes that can be lost when a store's card-reading terminal does not authorize the sale.

"Delays at the point of sale cause inconvenience for cardholders, merchants, acquirers, and often translate into lost sales for issuers," said MasterCard executive vice president Philip P. Verdi.

Toll-Free Number

When fraud is suspected or some other problem arises, a point-of-sale terminal signals the need to call the card-issuing bank.

With the Automated Referral Service, a merchant calls a toll-free number that will put it in touch with the card issuer.

If the issuer's line is busy or the call is not answered in 30 seconds, MasterCard will respond on behalf of the issuer, using pre-approved guidelines.

By centralizing the referral procedure, the system eliminates the need for acquirers to keep many issuers' telephone numbers on file.

MasterCard says it receives 225,000 to 250,000 such referrals in an average month.

Referrals usually occur when an issuer wants to verify the identity of the customer, but the issuer may also be flagging a cardholder who wants to make an expensive purchase or is near or over the credit limit.

MasterCard's offering comes a little over a year after Visa introduced a similar referral service.

Some of the larger merchants and transaction processors already have the capability to get in touch with the issuer.

"The automated referral services really help the smaller banks that can't afford to invest in their own program," said Craig Millington, senior vice president of Family Bank in University Park, Ill.

"They requested this of MasterCard, and the bigger banks developed their programs out of necessity."

A spokeswoman for Master-Card said the Automated Referral System also benefits the larger banks, because they would not otherwise have the advantage of MasterCard intervening in the process and accepting some of the calls. □

With its "Automated Referral Service," MasterCard will automatically intervene when card issuers are unavailable to answer merchants' questions.

Total and AT&T Renew Contract For Processing

By STEPHEN KLEGE

Total System Services Inc. said Wednesday that AT&T Universal Card Services has extended its credit card processing agreement through the end of the decade.

Total is expecting $300 million in cumulative revenue from the contract, which replaces one that was to expire in 1995.

The Columbus, Ga., processor, which is 81% owned by Synovus Financial Corp., did not disclose contract details but said there will be no material change in its earnings.

In three years, AT&T Universal has grown into the second-biggest bank card program. With 16 million cards, it trails only Citicorp and accounts for half of the 32 million cards processed by Total.

The AT&T cards are issued by AT&T Universal Bank, another Synovus subsidiary.

Unrelated to Production

AT&T and Total System officials said the contract change was unrelated to a recent change in the way AT&T has been producing its MasterCard cards, which make up 11.2 million of AT&T's total.

Since March, the cards have been embossed and encoded at AT&T's service center in Jacksonville, Fla. AT&T officials attributed the change to MasterCard antifraud specifications.

Kenneth E. Evans, vice chairman of Total System, said the company is capable of meeting the MasterCard requirements.

The Georgia company is the second-largest nonbank card processor, behind First Data Resources Inc. of Omaha.

Warrants granted to AT&T in 1990 to purchase Total System stock have expired and are not part of the new processing agreement. Total's price on the New York stock exchange was up at midday Wednesday 62.5 cents to $27.

Fed Sees Loan Demand Generally Flat or Down

Continued from page 1

tated much of the Midwest, the Fed said it was likely to have only limited impact on the overall economy. So far, the flood's damage has been "highly concentrated," and has not threatened overall growth in any Fed district, the report said.

Despite the anecdotal reports of soft loan demand, many economists remain optimistic about a pickup later in the year.

"Business loans outstanding is lower than it was a year ago, but the marginal decline has narrowed," said Stuart G. Hoffman, chief economist at PNC Bank Corp. "When this year ends, business loan demand will have come full circle and gotten back to where we were a year ago."

District by District

Highlights of the report, by Fed district, follow:

• **Boston:** The economy continued to expand slowly, with little inflation. The housing market has improved only modestly.

• **New York:** Despite improvements in June, July showed "preliminary indications of some retrenchment." Overall loan demand stabilized. Interest rates were unchanged, lower.

• **Philadelphia:** Loan demand overall has been stagnant, and overall activity steady. Bankers foresee sluggish loan demand continuing, because of uncertain economic conditions and the possibility of increased taxes.

• **Cleveland:** Deposits continue to leave banks, causing some to offer new products, such as certificates of deposit with higher-than-market rates. Business lending softened, and consumer loan volume leveled off after a surge in the spring.

• **Richmond:** Growth has been moderate and uneven. Commercial, consumer, and residential mortgage loan demand was marginally higher, with a pickup in refinancing activity.

• **Atlanta:** The economy grew modestly, with flat commercial loan demand. Consumer lending, especially for cars and home refinancing, has increased in most areas.

• **Chicago:** The economy has expanded overall, but flooding has significantly disrupted activity in affected areas. Although the full impact will not be evident for some time, flooding is not likely to threaten overall economic expansion.

• **St. Louis:** Despite the floods, which will cost the district at least $1.5 billion, much of the area has been unaffected. Banks for the most part have been unaffected by flooding, and many are offering special loan

Stuart G. Hoffman
Sees business loan comeback

products and low rates to flood victims.

• **Minneapolis:** Moderate growth, despite the flood. Price levels have remained stable, and construction continues to be one of the strongest areas in the economy.

• **Kansas City:** Moderate growth, with increasing retail sales, strong housing activity, and a slight pickup in bank loan demand. Demand for home mortgages and commercial real estate loans was unchanged.

• **Dallas:** Slow expansion, with robust residential construction but slowing loan demand. Home mortgage originations and refinancings "remain a bright spot."

• **San Francisco:** Continued weakness in California has offset growth in much of the West. Idaho and Utah lenders report excellent conditions, in part due to strong construction lending. □

2 Accused of Trying To Defraud the RTC

WASHINGTON — Two Florida businessmen have been arrested and charged with bank fraud and money laundering in connection with a scheme to defraud the Resolution Trust Corp. and the Small Business Administration, the RTC announced Thursday. The two were identified as Jack J. Pearson and Patricia D. Richards, both of North St. Petersburg, Fla.

The federal complaint alleges that their company, Largo-Belleair Corp. of Largo, Fla., bought a bank building from the RTC for $450,000 by using false financial information on their application for an RTC loan, which was for 70% of the purchase amount. □

Clinton Tax Bill, a Mixed Bag, Seen Boosting Realty Markets

By ROBERT M. GARSON

WASHINGTON — President Clinton's deficit reduction bill, which faces key votes on Capitol Hill today and tomorrow, is a mixed bag for the banking industry. But the package promises genuine relief in one area crucial to lenders – the nation's flagging real estate markets.

The bill reinstates deductions for passive losses by real estate professionals and permits pension funds to invest more freely in real estate investment trusts, or REITs. It also eliminates a tax barrier to restructuring loans secured by real estate.

"None of these things are a panacea," said Richard J. Boyle, vice chairman of Chase Manhattan Bank, New York. "But it's a smart piece of legislation. All of these things, taken as a whole, bring stability to the market."

Mr. Boyle said the loan restructuring provision may prove particularly important to banks.

A Tax Liability

Under current practice, a restructured loan creates a tax liability for the borrower. If a bank agrees to reduce the loan principal for a cash-strapped borrower and accepts an equity stake in the company in its place, the amount of debt reduction is treated as income for tax purposes.

Real estate lobbies have argued that borrowers often find it cheaper simply to deed the property back to the lender or to declare bankruptcy and avoid the tax altogether. In either case, the lender is worse off.

Under the tax bill, which is a major component of the deficit reduction package, the reduction in debt would not be treated as income. Instead, the borrower's tax basis in the property would be reduced.

'Everybody Benefits'

As a result, the government would still get most of the tax revenue in the long run, through lower depreciation deductions

Richard J. Boyle
Understands bill's limits

rather than a one-time tax on income.

Lobbyists who have been working the bill argue that everybody benefits. Lenders maintain a performing loan, going businesses are saved and the government still gets paid.

"The provisions are critical to addressing the asset-value and liquidity problems that continue to plague real estate markets and, consequently, the economy overall," said Steven A. Wechsler, president of the National Realty Committee, which represents a number of large banks and real estate interests.

In addition, the passive loss provision, which makes it possible for real estate professionals to deduct losses on rental properties, also could prove important, according to industry lobbyists.

"The passive loss rules are an important psychological thing," said Jim Butera, a financial institutions lobbyist. "But psychology is an important part of all markets."

Ambivalent at Best

Still, Mr. Butera and others said that the gains on real estate were offset by losses in other areas. Many bankers and thrift executives are at best ambivalent about the package.

"An awful lot of bankers would say they are concerned that there are not more spending cuts," said Edward L. Yingling, executive director of government relations for the American Bankers Association.

On the plus side, however, bankers beat back an effort to assess new fees on states-chartered banks and won approval of an important provision that permits banks and thrifts to amortize the value of acquired core deposits.

And while lenders did better than expected on student lending, the bill would still transfer a majority share of the market to the federal government.

Even Worse News

For investors that acquired failed thrifts prior to Jan. 1, 1989, the news was even worse. The bill includes a provision repealing a key tax break that cash-strapped regulators used to finance the sale of failed thrifts.

"It is unfair in the extreme that those induced to acquire thrifts by the promise of tax breaks" should lose those advantages retroactively, said Leonard Bickwit, a lawyer with Miller & Chevalier, here.

Still, Chase's Mr. Boyle said the bill as a whole is a step forward.

"On balance, we are at a point where everybody can find something in the bill they don't like," Mr. Boyle said. "But as a whole, it is good for the country." □

Expect More Courtroom Dueling On Banks' Insurance Powers

Following a June 7 decision by the U.S. Supreme Court on a rather unusual legal question, the U.S. Court of Appeals for the District of Columbia circuit has upheld a determination by the Comptroller of the Currency that a national bank's small-town subsidiary could solicit and serve insurance customers without geographic limitation.

The District of Columbia circuit court's decision is in direct conflict with a 1992 decision by the U.S. Court of Appeals for the Second Circuit.

The Supreme Court thus would seem to have little choice in its upcoming term but to review and settle, perhaps once and for all, the issue of banks' insurance powers.

'Section 92'

The Supreme Court's June 7 decision had its genesis in a 1984 application to the Comptroller from the Portland-based United States National Bank of Oregon

INTERPRETATION *of section 92 is of great importance for banks and the insurance agents with whom they would compete.*

to sell a full range of insurance through a wholly owned subsidiary located in Banks, Ore., a town with a population of 489.

In a 1986 ruling on the Oregon bank's application, the Comptroller relied on a provision of law that is commonly referred to as section "92."

Enacted by Congress in 1916, section 92 authorizes any national bank "doing business in any place the population of which does not exceed 5,000 inhabitants ... [to] act as the agent for any fire, life, or other insurance company."

No Limitation for Insurance

The Comptroller noted that as originally enacted, section 92 imposed "a geographic limitation in the statute with regard to [a national] bank's brokerage of real estate loans" but that it contained no such limitation with respect to the sale of insurance.

The Comptroller said that permitting a national bank to sell insurance outside the town where its selling office was located was consistent with the original purpose of the law – to provide additional income to banks in small towns that were having problems deriving a reasonable profit from their banking business.

The Comptroller therefore determined that, under section 92, the Oregon bank's subsidiary could sell insurance products to existing and potential customers in Oregon, as well as in those states in which the bank's insurance subsidiary was authorized to do business.

Agencies Return Fire

A number of insurance agency trade associations filed suit in U.S. District Court for the District of Columbia, challenging the Comptroller's ruling. They argued that section 92 placed geographic restrictions on sales of insurance by banks and that the Oregon bank's subsidiary therefore should be limited to sales of insurance in its community.

The court concluded that the Comptroller's interpretation of section 92 was "rational and consistent with the statute" and accordingly upheld the Comptroller's ruling.

The District of Columbia Court of Appeals reversed that decision. The appeals court found that section 92 had been repealed in 1918, and noted that the Comptroller had cited no other authority for its ruling. The appeals court ordered the district court to enter judgment for the insurance agents.

Comptroller Upheld

On June 7, however, the Supreme Court ruled that section 92 had not been repealed by Congress in 1918, accidentally or otherwise. Justice David H. Souter, writing a unanimous opinion for the court, said that section 92 remains in effect.

The Supreme Court sent the case back to the District of Columbia circuit court of appeals for consideration of the main issue – whether to uphold the Comptroller's 1986 decision.

On July 16, the appeals court issued its ruling in the Bank of Oregon case on remand from the Supreme Court.

The appeals court upheld the Comptroller's determination. Examining the words of the statute and its legislative history, the court first found "no specific congressional intent to restrict the geographical reach of the insurance sales authorized by section 92."

It then gave deference to the Comptroller's interpretation of the law and said that it constituted a "permissible construction" that the courts should not overturn because it was not so inconsistent with a "sufficiently clear" statutory policy as to demonstrate that Congress' clear intent had been violated.

Conflicting Interpretations

The District of Columbia circuit court's decision clearly conflicts with the 1992 decision by the U.S. Court of Appeals for the Second Circuit.

There, the second circuit court issued a decision on review of a 1989 decision by the Comptroller to allow two operating subsidiaries of the Chase Manhattan Bank to sell title insurance to lenders and borrowers. The second circuit court first found that section 92 had not been repealed.

It then ruled that section 92, by authorizing insurance agency activities only by those national banks located and doing business in places with 5,000 or fewer inhabitants, barred by implication national banks located and doing business in larger places from engaging in the title insurance agency business.

It said it did not have to decide whether the section of the National Bank Act that authorizes national banks to engage in activities "incidental" to the

IT WOULD APPEAR *quite likely that the Supreme Court will agree to review the 1992 and 1993 circuit court decisions.*

"business of banking" could support the Comptroller's decision, finding that "the specific limits on insurance activity contained in section 92 had to prevail over the more general grant of incidental powers" contained in the section.

In its decision, the second circuit court relied in large measure on a 1986 opinion by the U.S.

THE COMPTROLLER *has determined that a national bank's small-town subsidiary may solicit and serve insurance customers without geographic limitation.*

Court of Appeals for the Fifth Circuit, which struck down a ruling by the Comptroller permitting a national bank to sell to borrowers broad forms of automobile, home, casualty, and liability insurance.

The fifth circuit court had ruled that under section 92, national banks had no power to act as insurance agents in cities of over 5,000 population.

Further, the second circuit court criticized a 1979 decision by the District of Columbia circuit that section 92 did not bar national banks from selling credit life insurance in a town with a population greater than 5,000.

The second circuit court did not mention a 1988 decision by the District of Columbia circuit upholding the Comptroller's determination that a national bank may offer municipal bond insurance through a subsidiary by the use of its incidental powers.

Much at Stake

The interpretation to be afforded to section 92 is of great importance for banks and the insurance agents with whom they would compete if the Comptrollers' 1986 decision is validated.

Today, nearly 200 national banks sell insurance on the basis of section 92 and there are as many as 100 state banks indirectly rely on section 92 as a result of state parity laws that allow them to exercise the powers of national banks. The ability to sell insurance beyond a state's borders under section 92 would certainly increase that total).

Review Is Likely

Given its decision to resolve the conflict among the circuits with respect to the asserted repeal of section 92, it would appear quite likely that the Supreme Court will agree to review the June 15, 1992, decision by the second circuit and the July 16 decision of the District of Columbia circuit.

Of course, it is impossible to predict how the Supreme Court will rule. What is clear, though, is that bankers and insurance agents soon will be focusing all their energies on the Supreme Court in an attempt to persuade the court to rule in their favor. □

Banks' Fed Reserves May Be Outmoded

Should the Fed should start paying interest on bank reserves, or at least on the noncash portion of them?

This old issue, which seems to come up every few years, has been revived again.

The substance of the arguments never changes. A principal one in favor of the proposition goes like this:

Banks get no interest on their required reserves, which the Fed invests, turning most of what it earns back to the U.S. Treasury. In effect, banks are paying a tax in the form of lost earnings.

Whatever the merits or deficiencies of such arguments, we should be clear about the central issue.

It seems to be widely assumed that the Federal Reserve System acquires the reserves from financial institutions and then uses those reserves to purchase government securities, upon which the Fed draws interest.

There are two basic misconceptions in that view of what happens.

Creating Money

The first is that the Federal Reserve buys government securities simply because it has the

MISCONCEPTIONS *underlie the argument that banks should be paid for maintaining required reserves.*

"cash" deposited by banks in their reserve accounts.

Commercial banks can be forgiven for thinking that way. After all, that is how things work at a depository institution.

However, the Federal Reserve has a motivation other than to employ deposits in an earning asset. Rather than using reserves to buy government securities, the Fed buys securities in order to create bank reserves. It must in turn enable banks to create money (deposit liabilities) through lending and investing.

The extent to which banks can create money depends upon their reserve position, and it is that reserve position which the Federal Reserve affects by its purchase of government securities.

So, the Fed acquires securities as a result of its attempts to influence the economy by affecting the growth of the money supply.

The Fed's Magic Check

The second misconception is that the Fed needs bank reserves to acquire the securities on which it draws interest.

In no way does the central bank use a financial institution's reserves as a means of payment for government securities.

The Fed does not need any reserves or any cash to buy securities. In fact, the reserves and money supply are created precisely because the Fed writes a check and uses it to purchase government securities.

Fundamental Paradox

It may be a bit difficult to grasp the idea that the Federal Reserve can buy government securities without having any money in a checking account – but that is one of the main characteristics that make the Fed different from any other entity.

Quite simply, the Fed has a checkbook but no checking account. When my students learn how the Fed works, they want to become a Federal Reserve System, if only for 30 minutes!

Let us hope that bankers and politicians, as they debate whether the Fed should pay interest on reserves, understand understand what they will be debating.

A More Basic Question

Also, perhaps the debate should be expanded to consider whether we need reserve requirements today.

Money market mutual funds, insurance company annuities, and other substitutes for bank deposits are not subject to such requirements. In terms of competitive equity as well as regulatory burden, it may be a good time to consider eliminating the requirements entirely. □

PROFESSIONAL EMPLOYMENT OPPORTUNITIES

The Board of Governors of the Federal Reserve System, located in Washington, D.C., has the following opportunity available within our **Division of Bank Operations and Payment Systems:**

SR. EDP AUDIT ANALYST

Responsibilities will include reviewing Federal Reserve Bank audit functions, assisting in policy formulation and coordinating CPA reviews of division programs, GAO reviews at Federal Reserve Banks and Board-wide annual evaluations of Federal Reserve Banks. In addition, this individual may supervise up to three assistants on specific projects or reviews. Frequent trips to major cities throughout the Continental United States will be required.

The ideal candidate will possess a mastery of audit standards, practices, theoretical concepts and a high degree of competence in EDP. Excellent communication skills, ability to balance multiple assignments and problem-solving techniques are required. At a minimum, a bachelor's degree and five years of experience is also required. Master's degree with CISA, CPA, or CDP certification is strongly preferred. Salary range is from $52,370 to $65,460.

The Board provides excellent benefits and a challenging working environment. Interested and qualified candidates, please forward your resume to:

Board of Governors of the Federal Reserve System
Division of Human Resources Management
Mail Stop #156, Attn: Otis Sutton
20th and C Streets, N.W.
Washington, D.C. 20551 or Fax (202) 452-3863.
Equal Opportunity Employer

Senior Compliance Officer

First Empire State Corporation, a $10.6 billion bank holding company headquartered in Buffalo, New York, is seeking a results-oriented individual to join the Corporate Compliance team. The successful candidate will have a demonstrated working knowledge of the applicable federal and New York banking regulations governing loan products. Strong project management and analytical skills with particular emphasis on operating procedures, documentation and policy are a plus. The position also requires superior written and oral communication skills and work experience that has had significant, regular interaction with senior management of a firm.

Applicants must have a minimum of 10 years of progressively responsible experience. A bachelor's degree or equivalent experience is required: an MBA and/or CPA or law degree preferred.

Salary is commensurate with experience and is accompanied by a comprehensive Flexible Benefits plan and relocation assistance. Qualified applicants should send a resume with cover letter detailing total compensation history in confidence to: **First Empire State Corporation, Dept. WM, One M&T Plaza, 10th Floor, Buffalo, NY 14203 or fax (716) 842-5020.** Only applicants providing compensation history will be considered. First Empire State Corporation is an equal opportunity employer M/F/D/V.

Project Managers sought for rapidly expanding PC/LAN based financial software firm. One position requires operations background in check processing/reconciliation to check research and adjustments preferred. Familiarity with PCs and LANs and strong background in coordinating implementation of system projects from requirement analysis through testing and training required. Second position requires greater technical project management experience (including familiarity with host systems and LAN interfaces) with operations exposure a plus.

John J. Connolly, Esq.
The Attorney General of the State of New York and to the Distributees of Jerome Kromoy, whose names and post-office addresses are unknown and cannot, after diligent enquiry, be ascertained by the petitioner herein;

being the persons interested as creditors, legatees, devisees, beneficiaries, distributees, or otherwise in the estate of Otto Hohl, deceased, who at the time of his death was a resident of 641 West 169th Street, New York, New York.

Upon the petition of ETHEL J. GRIFFIN, Public Administrator of the County of New York, with offices at 31 Chambers Street, Room 311, New York, New York 10007

You and each of you are hereby cited to show cause before the Surrogate's Court of New York County, held in and for the County of New York, on the 14th day of September 1993, at nine-thirty o'clock in the forenoon of that day, why the account of proceedings of the Public Administrator of the County of New York, as Administrator of the estate of Otto Hohl, deceased and why you and each claiming to be a distributee of the decedent should not establish proof of your kinship and why the possible claims of West Side Emergency Medical Services, P.C. and National Health Laboratories should not be rejected & why the claim of Evelyn Ann Kromoy and Clouise Lee Bentley, personal representative of the estate of Jerome Kromoy in the amount of $1,000,000.00 should not be rejected, and why the Public Administrator should not fix and allow a reasonable amount of commissions payable under Schedule C and C-1 of the account of proceedings to the undersigned, and allow for legal services rendered to petitioner herein and if additional legal services are rendered that the same be adjusted by the Surrogate upon further application by the petitioner, and why the balance of the alleged legal fees, if any, and disbursements, if any, of John J. Connolly, Esq., should not be fixed and determined by the Court and why the Surrogate should not fix and allow as an administration expense as listed in Schedule C-1 of the account an amount equal to one percent of the items reported in Schedules A, A-1, A-2 of the account of proceedings, as fair and reasonable amount payable to the Office of the Public Administrator for the expenses of said office pursuant to SCPA 1810(4).

Dated,Attested and Sealed, June 22, 1993.
(L.S.) HON. EVE PREMINGER
Surrogate
RICHARD A. CONDON
Clerk of the Court

ROBERT M. HEAVEY
Attorney for Petitioner
233 Broadway, Suite 310
New York, New York 10279
(212) 406-6600

This Citation is served upon you as required by law. You are not obliged to appear in person. If you fail to appear it will be assumed that you consent to the proceedings, unless you file written objections thereto. You have a right to have an attorney-at-law appear for you.

FINANCE

Argentine Interest Deal Said to Be in Jeopardy

By JAMES R. KRAUS

Some $7 billion in past-due interest payments from Argentina to foreign creditor banks may not be paid by Sept. 1 deadline because agent banks have been unable to reconcile who is owed what, senior banking sources said.

Sources added that a failure to reconcile the payments would force the issue into New York State or federal court ajudication and could delay payments for years.

On Wednesday, a Citicorp spokesman said Argentina and Citibank, the closing agent, are working to get an extension notice out to the banks. He flatly ruled out any possibility the deal will wind up in court in September.

The spokesman added that more than half the amounts have been reconciled so far.

'A Real Problem'

However, senior bankers contradicted the spokesman's statement and said there was a real possibility that the payments could be delayed.

"It's a real problem and they're going to have to find some way of getting an extension," said one banker.

"Unless the payments are substantially reconciled by Sept. 1, the whole deal goes to court."

Bankers said large-scale trading in the paper over the past few years was mainly responsible for delaying the reconciliation.

"The syndicate agents have to trace paper trails, some covering over 100 trades in the paper, and the question is who had it at what time and who should have how much of the interest payments," said another banker.

Single Biggest Agent

Sources said Bank of New York, the single biggest agent handling approximately 40% of the reconciliation, has been slowest to complete its reconciliation.

Other banks acting as agents on the reconciliation are Banque Nationale de Paris, Chemical Bank, Citibank, Credit Lyonnais, Midland Bank PLC, J.P. Morgan & Co., and Royal Bank of Canada.

Agent banks have been unable to reconcile who is owed what, sources say.

Argentina resumed partial interest payments on its foreign debt in June 1990, after previously making payments for over two years, and reached an agreement to restructure the debt with banks in April last year.

The country paid $770 million and issued some $6 billion in uncollateralized 12-year bonds at Libor plus 13/16 to cover the arrearage interest on April 7.

The cash and bonds have been held in an escrow account pending distribution to creditors.

In a related deal, banks agreed to reduce $19.3 billion in debt Argentina owed foreign creditors by swapping the debt for bonds at a reduction of either interest or principal. □

Fed: Banks Should Adjust Capital To Reflect Fluctuations in Securities

Continued from page 1

ker for Atlanta-based SunTrust Banks Inc. and chairman of the American Bankers Association's accounting committee, is ready to look at the bright side.

"We fought the good fight and lost, now we're looking for upside," he said.

Mr. Fuhrman doesn't have to look far because SunTrust's capital will balloon by $1 billion

Regulators regard the accounting policy as unsound.

under the new rules. The bank owns 24 million shares of Coca-Cola that are currently valued at cost, which was $100,000 each in 1919. Under the new rules, SunTrust declares the Coke stock as "available for sale" and marks it to market, or $1 billion.

SunTrust plans to label its entire $6 billion securities portfolio as available for sale, he said.

Bob Muth, president and chief executive of Ohio's Andover Bank, said he has already shortened the maturity of the securities in his $30 million portfolio. "In order to prevent that from destroying my entire year's earnings, I just reduced the term of my investment portfolio," he said.

Sacrificing Earnings

But the $120 million-asset bank is sacrificing about 5% of earnings due to the lower rate he is getting on the shorter-term securities, Mr. Muth figured. "I'm willing to give up 5% rather than have my capital impacted."

"My feeling is it [FAS 115] shouldn't be in regulatory capital at all," said Marti Sworobuk, program manager for accounting and financial reporting at the Savings and Community Bankers of America. Unrealized gains or losses on securities available for sale should not be used to measure the strength of a financial institution, she said.

Under the proposal, as spelled out in a Fed staff paper, Tier 1 capital will be adjusted quarterly to reflect changes in the value of securities a bank holds for sale. If these securities go up, Tier 1 will be increased. If the securities decline in value, then the bank's Tier 1 capital also will decrease. □

STOCKS: Massachusetts Seen Due for Merger Action

By GORDON MATTHEWS

With its economy stabilized, Massachusetts may be ripe for another wave of consolidation. Attention is focused on the remaining independent banks and savings banks. .

"The current prices of smaller Massachusetts bank and thrift stocks offer substantial appreciation potential for investors" because of prospective deals, said Brian D. Bertonazzi; an analyst at H.C. Wainwright & Co., Boston.

A particularly appealing target, he said, is NBB Bancorp., New Bedford, the largest independent bank left in the state, with assets of $2.4 billion. It has

Bay State Banking Targets

	Stock price 8/5/93	Market to book ratio
BankWorcester Corp.	$25.75	123%
Cooperative Bank of Concord	15.25	99
Independent Bank Corp.	4.31	116
Massbank Corp.	34.75	92
Medford Savings Bank	27.00	85
NBB Bancorp.	32.88	119
Peoples Bancorp of Worcester	31.25	103
Quincy Savings Bank	9.38	81
Sterling Bancshares	23.25	111

Sources: H.C. Wainwright & Co., SNL Securities

strong capital and reserves as well as a dominate share of its home market.

NBB shares on Wednesday were up 12.5 cents to $33 in late trading and are at a 52-week high, priced at 120% of book value. But Mr. Bertonazzi thinks a minimum takeover price of 1.5 times book, or $41.25, is possible in the event of a deal.

Next to Go?

The most likely takeover candidate in the state, according to most banking analysts, is BankWorcester Corp., Worcester. However, the Boston analyst said he felt its takeover value "is substantially reflected" in its current price.

On Wednesday, shares of BankWorcester were up 25 cents to $26, trading at 125% of book value. The bank, with $1.2 billion of assets, is in a recovery phase from loan problems incurred during the state's recent, deep recession.

Desirable targets near the Boston area with healthy balance sheets and more upside potential in share prices, he said, are Sterling Banchares, Waltham; Massbank Corp., Reading; and two thrifts, Medford Savings Bank and Peoples Bancorp of Worcester.

On Wednesday, Sterling was up 50 cents to $23.75, Massbank was unchanged at $34.75, Medford was unchanged at $27, and Peoples was unchanged at $31.25.

Packaged Purchase Advised

Mr. Bertonazzi cautioned that some of the banks and thrifts are small in terms of market share and have limited market liquidity and are best acquired by investors as a package.

"The analyst believes fill-in acquisitions will be made by the four large organizations now dominating the state: Bank of Boston Corp., BayBanks Inc., Fleet Financial Group, and Shawmut National Corp.

Bank of Boston, Fleet, and Shawmut have all said they are interested in expanding their franchises in local markets, particularly in Middlesex County, which encompasses many affluent Boston suburbs.

But deals by out-of-state institutions cannot be ruled out, he said. As proof, he cited the pending acquisition of Boston Five Bancorp. by Citizens Financial Corp., Providence, R.I., a savings bank wholly owned by the Royal Bank of Scotland.

'Late-Cycle Plays'

Independent Bank Corp., Rockland, and Quincy Savings Bank cannot boast the same degree of balance sheet health, he noted, but are in recovery phases and should be regarded as "late cycle plays."

Co-operative Bank of Concord, is an attractively situated merger candidate. With small, but strategic shares of the banking markets in both Middlesex and Norfolk counties, he said the institution is "a classic fill-in candidate."

Independent was unchanged at $4.31 on Wednesday while Quincy was down 25 cents to $9.125 and Co-operative Bank was down 62.5 cents to $14.625.

WEDNESDAY'S MARKET

Major bank stocks, like the overall market, were mixed Wednesday as investors awaited further developments from Washington on the federal budget.

The top gainers were BankAmerica Corp., up $1 to $44.875 in late trading, First Fidelity Bancorp, up $1 to $48.25, and Bank of New York, up $7.5 cents to $56.

Among losers, Northern Trust Corp. was off 75 cents to $41.25, Society Corp. was down 62.5 cents to $32.375, and Norwest Corp. was off 62.5 cents to $25.75. □

THE MARKETS

Long Bond Rebounds from Record Low

Investors in the bond and stock markets marked time Wednesday, while watching last-minute maneuvers to get the federal budget passed.

Interest rates rose across the board, with the 30-year bond yielding 6.55% Wednesday afternoon, up from a record low 6.52% on Tuesday. The 10-year note yield was 5.86% Wednesday afternoon, compared with 5.80% on Tuesday. Traders are looking ahead to Friday's key July employment report, which is expected to show a rise of 174,000 in nonfarm jobs.

The Dow Jones industrial average fell 9.22 points, to close at 3,552.05. But the Nasdaq Composite rose 4.73, or 0.7%, to close at a record 713.74.

Spot gold prices dropped below $400 an ounce for the first time since Friday, closing at $398.75 an ounce in New York.

Glenfed Forced To Drop Price In Rights Offer

By SAM ZUCKERMAN

Glenfed Inc. is making a ninth-inning move to sweeten terms of its $425 million recapitalization in order to overcome Wall Street skittishness.

Potential investors backed away from the initial proposal after California Federal Bank and several other major California thrifts posted hefty second-quarter losses, Glenfed officials said. Glenfed itself lost $29.9 million in the period.

On Thursday, the Glendale-based thrift trimmed the price of common stock to be issued in a rights offering from $10 to $9 a share. Investors can now buy

NEWS ANALYSIS

shares at about 59% of the company's tangible book value, down from 65%.

But the action's fifth-largest thrift holding company is scrambling to keep other stakeholder groups from jumping ship. Opposition from bondholders or preferred or common stockholders could block the recapitalization.

"In order to get new investors to come in, we've had to give them a little bit more," explained Richard A. Fink, Glenfed's chief legal officer. "That's got to come out of the other constituents."

The stakes are enormous. Federal regulators have given Glenfed until the end of this month to complete its recapitalization or face a takeover.

Goal of $250 Million

Glenfed, which has $17.9 billion of assets, has proposed a far-reaching plan that includes raising $250 million through the rights offering. While the subscription price is now $9 per share, various enticements, including stock warrants, could reduce the real cost to as low as $8.

Bondholders, meanwhile, have a new offer of about 52 cents in stock and other payments for every $1 of debt they hold, down from 57 cents, Mr. Fink said. Preferred stockholders would recover around 57 cents on the dollar, down from more than 60 cents. Common shareholders would suffer additional dilution because they would receive new shares worth less than the amount provided under the original proposal.

Given that bankruptcy is the alternative to accepting the new terms, the old stakeholders probably will accept them. "We still think it's a good transaction," said Cary J. Stanford, a lawyer who represents bondholders. □

GE Purchase of Shearson Unit Rattles the Mortgage Industry

By PHIL ROOSEVELT and CHRISTOPHER NOBLE

Friend or foe? Increasingly, that is the question mortgage bankers are asking about GE Capital Corp.

The issue heated up this week when the financial services giant announced an agreement to acquire the large Shearson Lehman Hutton Mortgage Corp., Irvine, Calif.

The deal, slated to close by early September, will make GE the nation's third-largest mortgage servicer, processing monthly payments on nearly $60 billion of mortgages. The General Electric Co. unit is currently ranked No. 7.

In the view of many mortgage bankers, the deal makes clear that GE has become a serious competitor. But mortgage bankers have historically viewed GE as a trusted ally, because the company is a leading supplier of default insurance.

'Having Your Dog Bite You'

"It's disconcerting," says Angelo Mozilo, vice chairman of the huge Countrywide Credit Industries, "it's like having your pet dog bite you."

He and others said GE already is an aggressive competitor in wholesale mortgage banking — the business of buying loans and servicing rights from other lenders.

In the wake of the acquisition, GE plans to pick up the pace of those purchases — and for good reason. Based on recent prepayment rates, GE will have to take in about $15 billion of rights a year just to hold its massive portfolio even.

"We're having an internal debate about whether they're an ally or a competitor," says Marc Smith, chief executive of Crestar Mortgage Corp. The Crestar Bank unit uses GE for mortgage insurance but competes "head to head with them in wholesaling," Mr. Smith said.

High Marks for Service

To be sure, few lenders are expected to pull their insurance business from GE, which han-

J.P. Morgan Gearing Up For Push in Mutual Funds

By MICHAEL O'D. MOORE

J.P. Morgan & Co. has completed a massive reorganization of its Pierpont Funds and is now poised to expand its proprietary mutual fund sales efforts.

The bank recently restructured its 11-year-old family of Pierpont Funds, originally aimed at private banking clients, adopting the innovative hub-and-spoke structure developed by Signature Financial Group.

The change should enable Morgan to tailor investment products to specific market segments, such as retirement plans, without incurring the expense of starting up new funds.

The New York bank is also eyeing opportunities to develop "private label" mutual funds for other banks. The funds would be managed by Morgan, but the banks selling them could put their own stamp on the products.

A Matter of Leverage

"You can sum up the term hub-and-spoke with the word 'leverage,' " said Evelyn E. Guernsey, managing director of Morgan's U.S. funds management division.

Under the structure, mutual fund assets are managed as a sin-

NEWS *briefs*

Andersen Pays RTC $65 Million Settlement

WASHINGTON — Arthur Andersen & Co. has paid the Resolution Trust Corp. $65 million to settle government charges of professional negligence, an agency official said.

The RTC had filed a $400 million suit against the accounting firm accusing it of negligence in its auditing of Houston-based Ben Franklin Savings Association. That thrift collapsed in 1989 at a cost of $1 billion to the government.

The accounting firm reached a global settlement with the RTC.

Separately, the Office of Thrift Supervision announced that Arthur Andersen has agreed to follow certain reporting and other standards in its auditing of thrifts.

Ala.'s Central Adopting 'Compass' Name

BIRMINGHAM, Ala. — Central Bancshares of the South Inc. is changing its name to Compass Bancshares Inc. to ease future expansion and to capitalize on the advantages of operating under one name, the company's chairman and chief executive officer, D. Paul Jones Jr., has announced.

The change becomes official in November when all Central Bank offices in Alabama, Florida, and Texas will be united under the Compass Bank name.

Compass was first chosen as the name for Central's Texas banks in 1987 because the name "Central" was unavailable when the company acquired its first bank in the Houston area. The name was selected because of its compatibility with the company's established logo and its availability in target markets.

Central's Nasdaq national market system trading symbol will change from CBSS to COMP in November.

SunTrust Ratings Get Upgrade from S&P

NEW YORK — Standard & Poor's Corp. said it revised its ratings outlook on SunTrust Banks Inc. to positive from stable.

S&P also said it affirmed its ratings on SunTrust Banks Inc.'s senior debt at A-plus; senior/subordinated debt, filed under a shelf registration, at preliminary A-plus/A, and commercial paper at A-1.

S&P said it affirmed its AA-/A1-plus certificate of deposit rating on Sun Bank-Orlando, and Third National Bank, Nashville, and its AA-/A-1-plus rating on the letter-of-credit-backed issues of Sun Bank-South Florida, Fort Lauderdale.

S&P said about $475 million of outstanding long-term debt is affected.

Morgan Plans Put, Call Warrants on Gold

HONG KONG — Morgan Guaranty Trust Co. said its Hong Kong branch plans to issue put and call warrants on gold.

The warrants, exercisable at any time over two years, will permit investors to sell gold at $406 an ounce or buy it at $411 an ounce. Settlement is in Hong Kong dollars, rather than the metal itself.

The briefs were compiled from staff and wire reports.

Corrections

An article Wednesday on the Resolution Trust Corp. sale of Chase Federal Savings and Loan Association of Philadephia was incorrect in saying Chase had been minority owned.

Thursday's Stocks column misidentified the H.C. Wainwright & Co. analyst whose assessments of Massachusetts bank and thrift stocks were quoted. The article was based on a report by Jeffrey L. Cohn.

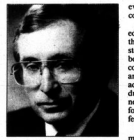
Fed Proposes Easing the Rules For Calculating Bank Overdrafts

By CLAUDIA CUMMINS

WASHINGTON — The Federal Reserve on Wednesday proposed revising its payments system risk policy, saying the changes would cut the regulatory burden on lenders.

The Fed proposed simplifying the way banks calculate their "net debit cap," or limits on daylight overdrafts in their Fed accounts. It also proposed publishing a short overview of its payments system risk policy plan, for use by smaller banks that are not required to set a debit cap.

"We really believe this will simplify the procedures," said Wayne Angell, the Fed governor who oversees payment system policies.



Wayne Angell
An "interim arrangement"

A Simplification

Large banks that use Fed Wire frequently are currently required to set a limit on their daylight overdrafts, based on three assessment factors: creditworthiness, intraday funds management, and customer credit policies.

The Fed's new plan would simplify the way banks gauge the first of these factors. This factor would be determined by a simple matrix based on a lender's prompt corrective action capital category and supervisory rating.

A Fourth Component

Under the new rules, the Fed predicts that about 54% of banks would retain their current cap rating, 26% would be eligible for an upgraded cap, and 20% would have their caps downgraded. But it predicted that even the lower caps would not constrain bank activity.

Although the Fed said it wanted to ease the burden on banks, the proposal does include one step that will increase it. The board proposed that a fourth component – operating controls and contingency procedures – be added to the assessment procedures that determine lenders' net debit caps. If approved, the fourth factor would not take effect until Jan.1, 1995.

The Fed has proposed this move "because the potential losses that depository institutions could incur as a result of fraud could be large, and because operating outages experienced by major payment system participants could disrupt markets," a staff memo said.

The way banks calculate their "net debit cap" would be simplified.

Market-Based System

In the board meeting Wednesday, Mr. Angell said the Fed is anxious to move to a more market-based system for daylight overdrafts, instead of relying on quantitative caps.

"This is an interim arrangement," he said. "We hope to move in to a more market-driven daylight credit allocation program."

The board unanimously approved the proposal. □

We've been talking lately with some of your enemies.

Many association publications give you reports from the front lines that make it sound as if the war's half won. We know better. At American Banker's Washington Watch, we spend much of our time dealing with the people who cause you grief. Then our staff—Washington's biggest group of banking reporters—adds its own analysis to give you the news about regulatory developments that you need. And we keep things concise, to give you time for all your other duties. No matter whether you run a bank, a thrift, a credit union or some other financial company, we keep in close contact with the people you'd never let in the front door.

Start-Up Wins Key Patent in Home Banking

By BARTON CROCKETT

A start-up technology firm has won a broad patent over the use of automated teller machine technology for home banking services.

With the patent, top officials of Online Resources and Communications Corp. of McLean, Va., have stirked a claim as the inventors and owners of the concept of using ATM networks and security controls to operate a home banking service.

While such a coupling of ATM technology and home banking is rare now, many bankers believe it will be commonplace in the future.

May Raise 'Obstacles'

But, to move in this direction, bankers may have to grapple with the Online patent, industry officials said.

"On the face, it seems as though it could raise some obstacles, although we'll have to wait until our patent attorneys review it," said David A. O'Connor, chief executive of Internet Inc., which runs the Most ATM network.

The Online patent was granted June 15.

Online, a privately held vendor which has only been in business for a couple of years, sells a home banking service bureau now used by MNC Financial Corp. to offer home banking services to its customers.

Two credit unions, Combined Science Technology and Research Federal Credit Union, also known as Comstar, of Gaithersburg, Md., and Eastman Credit Union, of Kingsport, Tenn., also have struck agreements with Online.

Banking over the Phone

The patent basically covers the way Online's business operates.

As part of its service, Online supplies telephones with screen displays to bank customers, who use the phones to pay bills, check account balances, and move funds between accounts.

Later this year, Online plans to let customers buy mutual funds and other investment products over the phones.

For security, consumers must enter their ATM personal identification numbers into the phones before doing any transactions.

ATM executives said that many companies are looking to process transactions through ATM networks, using an approach similar to Online's.

Such a combination of home banking and ATM technology could let home banking services benefit from the economies of scale and sophisticated security controls of ATM networks.

But companies considering such a marriage would be well-advised to study the Online patent, said Arthur S. Kranzley, president of Task Inc., a bank technology consulting firm in Westmont, N.J.

"This is a very awesome patent," Mr. Kranzley said. "It covers a great deal of ground."

One group that may have to pay particularly close attention to the development is MasterCard International, which is teaming with Checkfree Corp. of Westerville, Ohio, to roll out a new home banking service bureau, called MasterBanking.

The MasterBanking service bureau calls for Checkfree to process electronic bill payments, and for MasterCard to market the service and process other transactions.

More Technology News
Pages 15 and 16

Checkfree plans to start using the Cirrus ATM network, which MasterCard operates, to expedite the delivery of bill payments.

But, depending upon how the link is engineered, it could be covered by the Online patent.

This means that either Checkfree or MasterCard may have to get permission from Online to incorporate Cirrus into Master-Banking, said Matthew P. Lawlor, Online's president, and one of two inventors listed on the Online patent.

"We're going to defend our patent," Mr. Lawlor said. "We did invent it."

Mr. Lawlor added, however, that he does not yet know of any entity violating the patent. He also said that Online plans to be "reasonable" about licensing the invention to others.

Michael M. Sapienza, a Checkfree vice president, said the Online patent "doesn't present any stumbling blocks with what we are doing with MasterCard." But he declined to comment further. □

Fleet Financial Chief Won't Shrink from Cuts

People in the News

By YVETTE D. KANTROW

EUGENE MCQUADE, THE NEW CHIEF financial officer of Fleet Financial Group, has accepted an assignment that could easily turn him into a pariah among his peers.

He is the point man for "Fleet Focus 1994," a "reengineering" designed to help reduce Fleet's efficiency ratio from 67% to 60%. Translation: He will be responsible for across-the-board layoffs at New England's biggest banking company once the seven-month review period is over.

But Mr. McQuade, who joined Fleet 18 months ago after 12 years at Manufacturers Hanover Corp., is not worried about winning popularity contests. The consummate corporate man, he said he believes his low-key style and Fleet's employee-centered approach will stand him in good stead.

Eugene McQuade

"You can't be effective at changing anything if you're not accepted by the players," the 43-year-old executive said in a recent interview.

Mr. McQuade noted that Fleet's plan is democratic to the core.

"The expense programs I have seen have all come from the top down," he said. "Fleet Focus is different, he said, because it "empowers" the company's 20,000 employees to examine how they do their jobs and come up with ways to do them better.

Mr. McQuade was recruited by Fleet at the end of 1991 after he was passed over for the post of controller of Chemical Banking Corp., which was was about to absorb Manufacturers Hanover. The executive, who was Hanover's controller, was offered the strategically crucial post of director of management information systems.

Fleet must have a better offer. He went to work for John W. Flynn, the New England company's vice chairman and chief financial officer, who was widely considered second-in-command to chairman Terrence L. Murray.

Mr. Flynn decided to retire shortly after Mr. McQuade's arrival. When he left two months ago to begin a teaching career, Mr. McQuade took the title of chief financial officer and was promoted to executive vice president.

Mr. McQuade, a certified public accountant, now calls himself Fleet's "lead commentator," since a big part of his job involves talking to analysts, investors, and the media.

"It's put me on the firing line," Mr. McQuade said. "I'm held accountable for the good things and the bad things that happen here."

For example, when Fleet took a $100 million charge in the second quarter related to heavy mortgage prepayments, Mr. McQuade had to explain the move to analysts and journalists.

The native New Yorker admitted that the post can be stressful, but he also said that life outside the Big Apple makes the recovery much easier. Mr. McQuade lives with his wife and three children in pastoral East Greenwich, R.I., and the family has a vacation home on Cape Cod.

New England "is a tremendous place to have spare time," Mr. McQuade said. "Sometimes I like to just sit on the ocean and play with my kids." □

One Valley Buying Mountaineer, West Virginia Rival, at Twice Book

By JED HORowITZ

CHARLESTON, W.Va. — One Valley Bancorp of West Virginia said it agreed to buy Mountaineer Bankshares in a stock swap valued at about $130 million.

The deal, which One Valley said will make it the state's biggest bank in assets and deposit share, is valued at a hefty 2.06 times Mountaineer's book value. The price reflects the fervid takeover activity characterizing West Virginia banking.

In recent months, powerful Ohio companies have been moving in.

Banc One Corp. bought Key Centurion Bancshares, the state's largest independent bank.

Huntington Bancshares bought CB&T Financial Corp. last year and is waiting to close on its purchase of Commerce Bank Corp., which has $894 million of assets in west-central West Virginia.

The purchase prices hovered around twice book value.

West Virginia Deal At a Glance

	One Valley	Mountaineer
Assets	$2.7 billion	$738 million
Offices	57	23
Employees	1,600	400
Profits*	$16 million	$4.5 million
ROA*	1.19%	1.22%
Indicated purchase price	$130 million	
Multiple of book value	2.06	

*First half of 1993

No Other Talks Held

A spokesman for Charleston-based One Valley quoted Mountainner chief executive Lacy I. Rice Jr. as saying that the Marshall, Va.-based company had not negotiated with any other potential suitors.

Mountaineer has $738 million of assets, $604 million of deposits, and loans of $323 million.

Both companies have been strong earners. In the first six months of the year, Mountaineer reported a profit of $4.5 million, for a return on assets of 1.22%. One Valley netted $16 million in the same period, up 12.1% from the first six months of 1992, for a return on average assets of 1.19%.

Mountaineer, which granted One Valley a lock-up option to purchase up to 19.9% of its outstanding common shares, operates 23 offices in eight counties in northern West Virginia and in the panhandle regions of the state.

Mr. Rice, Mountaineer's chairman, will be named vice chairman of One Valley. Brent D. Robinson, chief operating officer and chief financial officer of Mountaineer, will assume the title of executive vice president of One Valley Bancorp with direct responsibilities for achieving timely and effective integration of the merger.

J. Holmes Morrison, president and chief executive of One Valley, will retain his position.

The transaction, which is subject to approval by regulators and by stockholders of both companies, is expected to be completed during the first quarter of 1994.

Merrill Lynch & Co. represented One Valley and McDonald & Co. represented Mountaineer. □

One Valley will have total assets of about $3.5 billion when the deal closes.

The merger, which is based on a fixed exchange ratio, will be accounted for as a pooling of interests.

Mountaineer's stock soared 14.6%, or $5.25 a share, to $41.25 on Thursday. One Valley's shares fell 75 cents to $29.

Both Strong Earners

One Valley estimated it will shave at least 22% of Mountaineer's operating expenses through merger efficiencies. It said it has identified at least four market areas where the companies have overlapping branches.

Barclays' First-Half U.S. Loss $427.5 Million

By JAMES R. KRAUS

Barclays Bank PLC lost $427.5 million dollars in the United States in the first half of this year, versus an $82.5 million loss a year earlier, the bank said Thursday.

The London-based bank attributed the loss to substantially higher provisions for nonperforming property loans and to $90 million in losses at its homelending unit, Barclays American/Mortgage. The value of the unit's purchased mortgage servicing rights declined because of heavy loan prepayments.

The bank added that nonperforming loans in the United States remain high. It expects to take large provisions in the second half of this year for real estate lending.

Separating Assets

Barclays has $254 billion of assets worldwide, including more than $33 billion in North America.

The group earned $336 million before taxes for the first six months, up from a $337.5 million loss over the previous six months.

In a move to separate its problem and so called nonstrategic assets from operations it seeks to develop, the bank last year placed $6.4 billion in U.S. assets under the management of Barclays de Zoete Wedd, the group's investment banking arm. □

HIGH YIELD REPORT

lets you *hear the heartbeat and feel the pulse* of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt

IN AN AGE OF DRAMATICALLY declining long-term interest rates, the *American Banker*'s weekly *High Yield Report* delivers money-making tips on high-yield investment opportunities.

This newsletter keeps a close eye on major court proceedings, and legislative and regulatory developments. Each issue features barometers of market size, bellwether pricing tables, a forward calendar, reports on filings, and the results of new-issue sales.

No longer considered the arena of "junk bonds," the high-yield market is rapidly gaining respectability as it is closely tracked by this objective, succinct weekly letter.

If you must know what's "ticking" in the heart of the high-yield market, HIGH YIELD REPORT is a must read every week.

EXECUTIVE *changes*

Wachovia Corp. Names McLean, A Longtime Exec, as Controller

John C. McLean Jr., an 18-year veteran of **Wachovia Corp.**, has been named controller of the North Carolina-based holding company.

Since 1990, Mr. McLean has been manager of management accounting and financial analysis, with responsibility for financial analysis of acquisition candidates, budgeting, strategic planning, and oversight of expense-management programs.

A native of Savannah, Ga., Mr. McLean has held various Wachovia assignments in loan administration, including loan administration manager for corporate banking activities in the company's Georgia banking operations.

He was elected a senior vice president in 1983.

Wachovia also announced that **R. Elaine Addison** had been elected senior vice president of **Wachovia Bank of North Carolina** and **Alton M. Jones** of **Wachovia Mortgage Co.**, both in Winston-Salem, N.C.

Ms. Addison is a counselor in the capital management area of the bank's personal financial services division. Mr. Jones is manager of the mortgage company's loan servicing division.

PNC Taps Schatteman For Kentucky Unit

PNC Bank Corp., Pittsburgh, has promoted **Stephen C. Schatteman** to president and chief executive officer of **PNC Bank Northern Kentucky** in Fort Mitchell.

He succeeded **Ronald P. Cooney**, who retired after 15 years at the bank, including 13 as CEO.

S.C. Schatteman

Ralph S. Michael remains chairman of the board of PNC Bank Northern Kentucky and president and CEO of **PNC Bank Ohio** and of **PNC Banc Corporation Ohio**, the holding company for both banks. Mr. Schatteman had been executive vice president of administration at PNC's Cincinnati bank subsidiary since 1990.

He joined the Ohio holding company in 1988 as general counsel and was promoted that year to senior vice president of it and the Ohio bank. Last year he became a director of both.

Before joining PNC Banc Corp., Mr. Schatteman was an attorney with Frost & Jacobs, Cincinnati, in its banking and commercial group.

— **Franklin Smith**

WEST

FIRST INTERSTATE Bancorp, Los Angeles, said **Randall Kahn**, head of its corporate electronic products department, has been promoted to senior vice president.

Mr. Kahn's responsibilities include electronic information reporting, wire transfer, automated clearing house, and online point of sale products that First Interstate offers through its banks in 13 western states.

MIDWEST

FIRST NATIONAL BANK of Chicago has established a division to coordinate its push into supermarket banking.

The division is headed by vice president **Maria Scumas**, who previously managed First Chicago's branches in downtown Chicago and on the near North Side.

The bank is a unit of **First Chicago Corp.**

LaSALLE National Bank, Chicago, said its newly formed business banking division is expanding.

Anthony D. Schiller has been appointed a vice president in charge of new relationships and the division's newest product, the Business Credit Account.

Anthony D. Schiller

The account is also being offered to customers of **LaSalle Talman Bank**, the thrift recently acquired by LaSalle.

Mr. Schiller was formerly with Chicago's Colonial Bank, where he was vice president and manager of commercial lending.

LaSalle National is a subsidiary of **ABN Amro Bank** of the Netherlands.

MERCANTILE Bank of St. Louis, lead bank of **Mercantile Bancorp.**, said **Stephen F. Milstid** has been appointed senior vice president of operations at **Mercantile Information Management Co.**

Mr. Milstid is responsible for item processing, noncredit services, and payment systems, as well as trust, international letter of credit, and commercial loan operations.

SOUTHWEST

FIRST SECURITY CORP., Salt Lake City, has elected **David R. Wilson** executive vice president. He continues as manager of its capital markets division.

SOUTHEAST

CRESTAR BANK, Richmond, Va., has named **Warner L. Blunt 3d** as manager of its financial institutions division.

Warner L. Blunt 3d

Mr. Blunt, who is a senior vice president, directs correspondent banking activities. These include check clearing, investment sales, safekeeping, portfolio accounting, loan participation, cash management, and investment bank products.

Before joining Crestar in 1992, Mr. Blunt was president and chief operating officer of Investors Savings Bank. □

Fed Orders Four Officials At Colonial of Missouri To Return Stock Bonuses

By BILL ATKINSON

The Federal Reserve Board has filed a cease and desist order against Colonial Bancshares Inc., Des Peres, Mo., and four of its officials.

The order requires the officials to tender to Colonial a total of 98 shares from stock bonuses that were distributed to them more than three years ago.

It also orders them to submit a joint written plan for an appraisal of Colonial stock purchased by the two affiliate banks' employee stock plans. The stock was acquired for $250,292 in five transactions between September 1990 and July 1992. The Fed wants to determine whether the plans overpaid for the shares. Prices ranged from $422 to $535 a share.

"I don't think this particular order will have any great impact on Colonial Bancshares in the long run," said Gene Brockland, a partner with Herzog, Crebs & McGhee, St. Louis, who represents the bank.

In agreeing to enter into the order, the company and its officials made no admission of wrongdoing.

Mr. Brockland said the officials have already tendered the 98 shares, and the bank is selecting a appraiser.

The action comes two months after Firstbank of Illinois Co., a $1.5-billion banking company in Springfield, Ill., signed a definitive agreement to acquire Colonial for $11.9 million. Colonial has 20,002 shares outstanding, and shareholders will receive about $614 a share.

Stepping in
The Federal Reserve has ordered Colonial to:

- **Not declare or pay** dividends without Fed approval.
- **Submit a written policy** on payment of dividends by subsidiary banks.
- **Not directly or indirectly** pay fees or salaries or make any payments to its directors or officers without Fed approval.
- **Submit a written plan** to improve the capital position of the consolidated organization.
- **Not increase its borrowings** or incur any debt without written approval.

Source: Federal Reserve

Mr. Brockland said the banks are conducting due diligence. He expects the merger to close by the end of the year.

Chris R. Zettek, Firstbank's chief financial officer, said the company isn't unduly concerned with the order. Firstbank officials knew about it before they agreed to acquire Colonial.

"It is not something we think is going to preclude us from completing the merger," Mr. Zettek said. "We have to get the Fed's approval, so they will have to be comfortable."

It would be Firstbank's initial foray into Missouri.

Colonial operates Colonial Bank, Des Peres, and the Village Bank of St. Louis County, Ellisville, Mo. Combined assets were $169 million at the first quarter. It also owns Guido Insurance Agency Inc., and Minuteman Properties Inc.

The Colonial officials named in the order are: Kenneth Tiemeyer, chairman; Kenneth Davis, chairman emeritus; David Fairchild, a director; and John Weber, vice president.

Under the July 13 order, Mr. Davis must pay Colonial $35,788 in interest on the redemption price of his Colonial stock on those redemptions made since December 1989.

Mr. Brockland said Mr. Davis has made full payment.

San Diego Group Out to Double Its Community Lending Volume

By PETER SCHOENKE
Special to the American Banker

A group of bankers hopes to double its community development lending in San Diego County during the next 12 months.

As of June, the Bankers Small Business Community Development Corporation of San Diego had made 10 loans totaling $311,000 to businesses owned by women or minorities.

The for-profit group is made up of 27 banks and one thrift. Currently, the corporation has commitments for $775,000 in 1993-1994 lending.

Need as 'Great as Anticipated'

"We have learned that the need for microloans to minority- and women-owned businesses is as great as anticipated," said Jeffrey A. Stone, the group's president. "We are trying to develop them into bankable clients."

Most of the member banks, which own Community Reinvestment Act credits for their contributions, have assets below $1 billion.

Mr. Stone, also general auditor for San Diego Trust and Savings, says the group was set up as a for-profit "to attract more banks and to prove that this isn't

Jeffrey A. Stone
Seeking "bankable clients"

a CRA giveaway. The main thing we gave up by incorporating as a for-profit is the ability to attract foundation grants."

No Collateral Required

Loans issued by the group range from $5,000 to $50,000. They require no collateral, but run just three years, with payments calculated as though the loans were for five years.

Mr. Stone, who was his bank's urban lending officer and has been active in community groups, said the repayment approach builds credit borrowers will need to obtain larger loans.

Although the lending is being done in a high-risk area, corporation leaders say the eligibility requirements – at least one year in business and six months of profitability – increase lenders' chances of making a profit.

"It is a CRA program, but it is a program that will have some return on investment," said corporation loan officer Jeni Burgess.

Eligible Borrowers Scarce

Since the program does not loan money to start-up companies, only a few businesses owned by women and minorities qualify.

Lee Fenn, a loan officer with the Small Business Finance Corp., the San Diego community development corporation with which the loan program collaborates, said that only 50% of the businesses his organization helps could qualify for loans from the bankers' group.

However, Mr. Fenn is pleased the loans have yielded 73 new jobs while establishing larger credits in overlooked areas.

"They're basically character loans – the loans banks did 20 years ago," he said. "These are the types of loans that are needed to really help these kinds of small businesses get off the ground. The difficult part for us is to get the word out."

Mr. Schoenke writes for the Medill News Service.

Bankers Hail Dropping of Duplicate Reports

By TERRENCE O'HARA

On May 10, the Office of the Comptroller of the Currency proposed a rule that would eliminate the duplicative reporting requirements under two fair-lending laws.

Currently, all national banks must compile mortgage lending data for both the Comptroller's office's Fair Housing Home Loan Data System and the Home Mortgage Disclosure Act.

National banks now subject to both reporting requirements would be subject only to HMDA's; they would file the data monthly.

The 39 bankers responding to the rule change came out unanimously in favor of it – with some reservations. Following are excerpts from letters the Comptroller's office received on the proposal. The comment period ended July 9.

At our institution, the employee commitment for the collections and reporting of information required for the home loan activity report could be reduced from the current level of three individuals to the level of one individual.

Kayla Carpenter
Assistant vice president
First National Bank of Amarillo
Texas

We urge the OCC to use restraint in increasing the requirements in HMDA during the process of eliminating FHHLDS record keeping. The physical updates should be required on, at most, a quarterly basis, rather than monthly as proposed.

Lucille Stietz
Senior vice president
National Bank of Alaska

Va. Thrift Cools Regulatory Heat with Stock Offering

By TERRENCE O'HARA

Washington Federal Savings Bank, Herndon, Va., resolved four years of regulatory pain when it raised $15.3 million in a June stock offering to its existing shareholders.

The Office of Thrift Supervision terminated Washington Federal's capital directive on June 27, which mandated that the District of Columbia-area thrift raise the capital by July 1 or succumb to prompt corrective action measures.

Earlier Capital-Raising

"We sought to raise $15.3 million and received subscriptions for more than $19 million," said Washington Federal chairman William Calomiris.

Washington Federal was the second Washington area thrift to raise capital in the last year through a stock offering. American Savings Bank in Annandale raised $30 million in equity last December to bring it into capital compliance.

Washington Federal's risk-based capital, which was less than the required 8% before the offering, now stands at 11.89 percent of total assets. The thrift now qualifies as a "well-capitalized institution" for regulatory purposes.

Such was not always the case. Though Washington Federal has a highly profitable mortgage operation and has earned money over the last four years, the thrift's balance sheet was hammered by the capital requirements imposed by the Financial Institutions Reform, Recovery, and Enforcement Act of 1989.

Washington Federal sought $15.3 million and raised over $19 million.

Washington Federal in 1990, under then-president William Sinclair, a well-known local banker, had its recapitalization plan approved by the OTS. But in August 1991, as shrinkage and earnings proved unable to resolve the thrift's capital problems, the OTS revoked the approval.

Convincing the OTS

At least one prior effort to recapitalize the thrift, through a rights offering and a $9 million private placement of stock to a local investor group, fell through late last year.

But Washington Federal's management, under chief executive Carroll Amos, convinced the OTS that the prospects for raising capital were good enough to extend the thrift's deadline. Legg Mason Wood Walker Inc., the Baltimore brokerage, advised Washington Federal on the offering.

The thrift shrunk its footings from more than $1 billion in 1990 to $655.8 million in March. Nonperforming assets, however, remained at 4.35 percent in March, the latest period for which figures are available. In its most recent quarterly statement, Washington Federal said reducing nonperformers is its No. 1 priority.

Mr. Among said the bank expects to dispose of a high percentage of its other real estate owned "at nondiscount prices" in the next fiscal year. He cited the slightly improved real estate market. □

Indecorp in Deal To Maintain Black Ownership

By ROBERT B. COX

CHICAGO — Indecorp the largest black-owned banking company in the country, with $267 million in assets, signed a letter of intent to be acquired by an African-American investor group from Detroit.

The investor group is headed by William T. Johnson, a Detroit banker and cable television franchiser who bought a troubled savings bank in 1988 in River Rouge, Michigan The bank, now called Omni Banc Corp., had assets of $22 million at yearend 1992.

Nonbinding Deal

Specific terms of the deal have not been released. Alvin J. Boutte, Indecorp's chairman, said the nonbinding deal met board directors' concerns that the bank remain black-owned.

"Keeping the bank in African-American hands had some relevance in this," said Mr. Boutte. "We have many constituents, and we have many fiduciary responsibilities, but we also have a responsibility to our own."

Inside and Outside Debate

Earlier, the possibility of the bank's selling out to South Shore, which is not minority-owned, sparked debate inside and outside of Indecorp.

At yearend, Indecorp's two banks, Drexel National Bank and Independence Bank of Chicago, had loan-to-deposit ratios substantially below the average 60% for Chicago institutions of similar size, according to data provided by Ferguson & Co., at 28% and 31% respectively.

Omni Banc had a loan to deposit ratio of 53% at the end of 1992.

"I hope as a consequence of this sale Indecorp's community lending will be strengthened," said Malcolm Bush, president of the Woodstock Institute, a Chicago firm that tracks lending patterns.

13 Start-Ups in 1st Half Reverse Longtime Trend

By JAMES B. ARNDORFER

For the first time in 23 years, the number of credit union start-ups is on the rise. During the first six months of 1993, 13 credit unions opened their doors, compared with two in 1992, and seven in 1991.

The figures are based on a running tally of operating credit unions kept by the Credit Union National Association. This is the largest increase in start-ups since 1969, when 515 credit unions opened their doors, said the Madison, Wis.-based trade group.

"Now the thinking is that it's O.K. to start a credit union," said William Hampel, senior vice president of research and development for CUNA. The group's numbers do not include credit unions that failed before 1980.

Political support for community-based lending to fight poverty is one reason for the upsurge, industry experts said.

The number of start-ups won't add up to a net increase of credit unions. Attrition through liquidation or merger claimed 293 credit unions through May 1993, continuing a longtime decline in the total number of institutions even as membership increased.

The yearend total for 1992 was 13,379 institutions, and Mr. Hampel predicted that number will drop to between 10,000 to 12,000 by the end of the decade.

Mr. Hampel said as many as 30 to 50 credit unions will start up each year over the next three or four years. NCUA officials said that number is optimistic, but added there will be an appreciable increase.

William Hampel

Low-income credit unions are driving this surge. Seven of the new starts this year are geared toward people with low incomes, and the National Credit Union Administration expects to charter 10 such institutions a year over the next three or four years.

A credit union is considered in the low-income group if the majority of members earn wages below 80 percent of the national average. These institutions, usually community chartered, are allowed to accept nonmember deposits. At yearend 1992, NCUA recognized 139 such credit unions, down from 231 in 1987.

Why the second chance for low-income credit unions?

Under Mr. Swan's prodding, the NCUA began administering the Community Development Revolving Loan Program for Credit Unions in 1989, which offers loans and technical assistance. But the real watershed was the Los Angeles riots.

"What happened in L.A. was a wake-up call to politicians and financial institutions that a new social policy was needed in inner cities and poor communities," said Clifford Rosenthal, executive director of the National Federation of Credit Unions.

In July 1992 the NCUA announced a pilot program that would look into ways it could better serve low-income credit unions. And some of the low-income credit unions that started this year received their charters in late 1992.

Since then, the election of President Clinton has been a "positive reinforcement," said Christopher Kerecman, executive assistant to NCUA board member Robert Swan. □

Regulator Increases Budget 3.3%, To $91.9 Million, and Cuts 18 Jobs

By JAMES B. ARNDORFER

The National Credit Union Administration approved a $91.9 million budget for fiscal year 1994, representing a 3.3% increase from the prior year.

The budget, however, contains the agency's first staff cuts since 1985. The cuts bring the number of NCUA staff to 978.

"That reduction was made possible by a decline in the number of problem-case credit unions and a decline in the shares held by those credit unions," said Herbert Yolles, the regulatory agency's controller.

Ken Robinson
Glad to see belts tighten

Driving Factors

Several factors drove the agency's budget increase. They were:

- Annual merit pay adjustments, due to take place in December, will increase by 2.3% to $1.4 million.
- Employee benefit costs will increase by about $1 million.
- The agency's new headquarters building in Alexandria, Va., will add $1.1 million to the 1994 budget over 1993 rental costs, but is $1.6 million less than continued leasing at the current downtown location would have been.
- Three planned regional conferences will increase the budget by an estimated $1 million.

To hold down the budget increase, the regulatory agency's board of directors agreed to cut 18 positions.

Ken Robinson, president of the National Association of Federal Credit Unions, was glad to see the belt tightening.

'Deliberate Staff Decline'

"I want to see a deliberate decline in the staff that parallels the decline in number of credit unions," he said. "Otherwise we're going to wind up with one big credit union west of the Mississippi, one big credit union east of the Mississippi, and about 600 examiners."

Charles Zuver, executive vice president of Credit Union National Association Governmental Affairs, criticized the budget in a statement. He said the NCUA's figures actually represent a 9% increase because the agency will come in under budget by three to 5%.

Mr. Zuver's comparison is "not valid," Mr. Yolles said.

"It's mixing apples and oranges," he said. "Either you have to compare budgets to budgets or expenditures to expenditures."

NCUA will finish the year between 3% to 5% under budget, largely due to long lapses in filling vacant positions, he said. □

EDS Takes over Systems of Nevada League, Hoping to Bolster Its Share of the Market

By JAMES B. ARNDORFER

EDS Credit Union Services, with an eye toward expanding its market share in Nevada, has assumed operation of the state credit union league's information systems.

Under an agreement, the unit of Plano, Tex.-based Electronic Data Systems Inc. will take over all technology services the Nevada Credit Union League and Affiliates has been providing to its members.

The league, which has endorsed EDS systems since 1975 and began supplying EDS check-processing services in 1990, will continue to handle marketing and customer service.

Already 20 of Nevada's 34 credit unions use EDS, a unit of General Motors, for their deposit and loan accounting systems. By increasing convenience and offering new services, such as remittance processing and credit and debit cards, EDS is hoping more credit unions will sign on.

'More Cost Effective'

"By expanding the product offering and supplying the services all at once instead of one at a time, we're making things more cost effective for credit unions," said Albert Ku, EDS product manager.

Since the agreement went into effect July 1, EDS has installed new hardware and personal computers, as well as a new telephone system, at the league's Las Vegas headquarters.

The league may not be one of the biggest in the country, but its 34 credit union members have $1.4 billion in assets.

Mr. Ku wouldn't say what sort of income EDS or the league expect to bring in through the venture, but he did say, "It's a significant piece of new business."

This relationship is the first of its kind, Mr. Ku said. Discussion of starting such a service dates back to July 1992.

EDS hopes to enter into similar alliances with other state credit union leagues, but it has no definite schedule as of now, Mr. Ku said.

"We haven't gone knocking on anyone's doors," Mr. Ku said. □

Trade Groups Show Their Prowess in Lobbying Efforts

Banking lobbyists could be excused if they took an older credit union brethren in envy when pondering the mess they're in, thanks to the 1991 Federal Deposit Insurance Corporation Improvement Act.

For credit unions were in much of the same bind – the heightened regulatory scrutiny, greater auditing requirements, and mandated capital standards that were imposed on banks and thrifts by the act, until some crafty work by credit unions' lobbyists.

It was in the early morning hours following one of those sweltering summer nights in Washington when the credit union lobby engineered its greatest coup.

A joint House-Senate conference committee was meeting to discuss what would become of the landmark banking bill and debate was raging on whether to include security provisions exclusive to credit unions.

Among them were measures that would have allowed the National Credit Union Administration to assess a deposit insurance premium twice a year instead of once, would have prevented the agency from reimbursing insurance deposits until after the fund reached a 1.5% equity ratio, required the regulator to set minimum a capital level for the industry, and reduced allowable limits on loans to a single borrower.

Winning Exemptions

But House conferees, wellobbied by the leading credit union trade associations, balked at the provisions and eliminated them from the final bill.

$700,000 was donated to campaigns.

By then the industry lobby, mostly the Credit Union National Association and the National Association of Federal Credit Unions, had already won credit unions an exemption from the more onerous provisions of the improvement act that haunt banks and thrifts.

Those little-loved provisions include mandatory audit requirements for large institutions, imposition of a risk-based capital system, and a concept known as prompt corrective regulatory action, which allows the regulator to move in immediately after an institution's capital falls to a defined level.

Making Its Own Rules

Instead, Congress was persuaded to leave the imposition of mandatory audits for big institutions, a risk-based capital system, and prompt corrective action to the credit union regulator's discretion.

The exclusion of credit unions from the audit provisions enabled the regulator to propose its own mandatory audit standards, then reject them on its own, as it did last month.

The credit union lobby even persuaded Congress to let the regulator draft its own version of the Truth-in-Savings Act provision of the improvement act while standards for banks and thrifts were covered by the Federal Reserve Board's guidelines.

Gaining Strength

The success of the lobby may be attributed mainly to two things. First, credit unions and

Political action committees buttress grassroots strength.

the National Credit Union Share Insurance Fund, though hit by numerous failures over the past five years, are in better condition than their banking and thrift brethren.

Gun-shy about negative publicity and any similarities to savings and loans, the credit union administration regularly trumpets such positive industry indicators as asset and share growth and record-low loan delinquencies.

Second, the nation's 65 million credit union members have become more active politically. They write letters to Congress, participate in congressional campaigns, and stage petition drives.

Capitol Hill has probably never seen a petition drive as overwhelming as Credit Union National's "Operation Grassroots."

Power of the Purse

In 1991, an incredible 6.5 million signatures were gathered on a petition calling for the maintenance of the credit union administration as an independent agency.

This grass-roots power has been buttressed over the past few years by the emergence of the trade groups' political action committees, especially Credit Union National's, as legitimate campaign fund-raisers.

During the last two-year election cycle, Credit Union Legislative Action Council, the trade group's political action committee, distributed more than $700,000 in campaign contributions, making it one of the top 100 such committees in Washington.

The national fund-raising network allows the committee to donate the maximum $10,000 to targeted power brokers on Capitol Hill and to congressional allies who may be threatened by challengers. □

GE Purchase of Shearson Unit Rattles the Industry

Continued from page 1

dles more than 25% of all new mortgage insurance. Indeed, mortgage bankers still give GE high marks for service in insurance.

But lender anxiety is clearly on the rise, making the GE situation a classic case of the often-conflicting relationships in the modern mortgage market.

Consider thrifts' relations with Federal National Mortgage Association and the Federal Home Loan Mortgage Corp.

Some thrifts complain bitterly that the government-sponsored titans have unfairly muscled in on the business of funding mortgages. But these same thrifts routinely sell sizeable portions of their own loans to the agencies.

The debate over GE is likely to play out in a similar manner, observers say.

"Lenders will huff and puff about it, and some won't use GE for mortgage insurance," said Charles Wendel, a vice president with Mercer Management Consulting, New York. "But most will take a more pragmatic view. If GE offers quality service, lenders will continue to use it, even if another part of GE is competing with them."

Newcomer to Servicing

GE entered the servicing business three years ago by acquiring a $12 billion servicing portfolio from Travelers Corp. That deal included a major servicing facility in St. Louis.

Since then, GE has more than tripled the portfolio by purchasing servicing rights from other lenders.

The acquisition of Shearson Lehman Hutton Mortgage, which carries a price tag of $70 million, will give GE another $17.5 billion of servicing and a new facility in San Bernadino, Calif. Shearson is a unit of Lehman Brothers Holdings, which in turn is part of American Express Co.

GE was clearly hungry for a another big servicing unit. Before settling Shearson, it made bids earlier this year for Sears Mortgage Corp. and GMAC Mortgage Corp., according to industry sources. The Sears, Roebuck & Co unit ultimately was sold to PNC Bank Corp., while the General Motors unit was pulled from the auction block last month.

All-Star Bidding Cast

In snaring Shearson, GE reportedly beat an all-star cast of bidders, including Chase Manhattan Corp. and Margaretten Financial Corp. (See related story on this page.)

Why is GE so bullish on servicing? The company likes both the income and the opportunity to cross-sell other financial services to homeowners, says Alan Hainey, president of GE Capital Mortgage Services.

That unit, GE's mortgage servicing and production arm, is based in Cherry Hill, N.J. The insurance unit, GE Capital Mortgage Insurance, is based in Raleigh, N.C.

Mr. Hainey played down lenders' complaints about competition from an old ally.

"There are times when you are providing services to others throughout the mortgage banking industry and there are times when, if you buy loans, you are competing with someone else."

However, he said, the company focuses on "underserved" segments of the wholesale market. For example, it recently started a special service aimed at getting business from very small banks. It also operates as a "wholesaler's wholesaler," buying new servicing rights from other big purchasers.

"We believe that the service we bring to the industry as a whole far outweighs the competitive nature of individual deals," he said.

Though he declined to reveal any growth targets for servicing, the potential is vast. The California facility and the existing one in St. Louis each have the capacity to handle about $60 billion of loans, Mr. Hainey said.

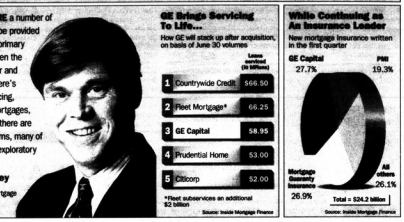
Mr. Wendel of Mercer Management, who has studied the mortgage insurance industry closely, says he believes the earnings GE reaps from its expanding servicing business will more than offset any customer defections from the mortgage insurance business.

"GE Capital is so good at taking costs out of processing businesses that they're a natural for servicing," he said.

Such words, of course, are of little comfort to anxious mortgage bankers. "I'm not too pleased about seeing GE as a competitor and they definitely are," said a production chief at one large mortgage company.

All the same, a number of mortgage bankers are taking GE's ambitions in stride.

"We compete with them head to head in some areas and they bring value added in others," said Mark Oman, president of Norwest Mortgage Inc. "If I get angry, I don't have to use them for mortgage insurance. We use them, so obviously I'm not that angry." □



Three Years of Deals That Couldn't Quite Fly

By PHIL ROOSEVELT

The GE-Shearson deal capped a tortuous sales effort that stretched out for more than three years.

In 1989, Michigan National Corp. appeared to be on the brink of buying Shearson Lehaman Hutton Mortgage. Then, in 1991, BankAmerica showed serious interest. GE Capital itself thoroughly investigated the unit that year.

Sale Unravels

Next, some Arabian investors moved into the picture, teamed with the owners of a San Francisco thrift. But their deal unraveled.

Sources say the selling effort was intensified this year by Harvey Golub, who in February became chief executive of American Express 10 Co., the unit's parent.

In the latest round of bidding, GE Capital apparently squared off with Chase Manhattan Corp., Margaretten Financial Corp. and Source One Mortgage Services Corp.

Eyebrows Raised

The final sale price, $70 million, struck some observers as unusually low – certainly far below the norm for big servicing deals.

But others said it was impossible to evaluate the price without seeing the unit's balance sheet. GE bought the unit's stock, not just the servicing assets. That means the company effectively assumed the unit's liabilities.

"Please find out about this structured finance deal and get back to me."

MORTGAGES

An RTC Review Stalls Servicing Rights Sales

By JAMES H. SAPT

New Clinton administration policies are delaying the Resolution Trust Corp.'s efforts to sell billions of dollars of mortgage servicing rights seized from failed thrifts.

The RTC is reviewing the way it awards contracts to broker the servicing portfolios, according to Carol Weatherly, the executive in charge of servicing rights.

The review will slow the sale of at least two properties, Standard Federal Savings Bank of Gaithersburg, Md., and Home Federal Savings Bank of San Diego, by 60 to 90 days.

May Cost Millions

This may end up costing the federal government millions of dollars in sales proceeds, according to industry sources.

The value of the portfolios continues to decline because of prepayments, and there is little origination capability to replace it. But the losses could be offset to some extent by the continuing flow of revenues from the servicing.

Though Standard Federal has a mortgage originations unit, it has seen its servicing portfolio, $34.5 billion at the end of 1992, erode to $27.5 billion, according to Ms. Weatherly.

Home Federal of San Diego, another RTC property, is also suffering attrition in its portfolio, according to Ms. Weatherly. However, because the RTC has bundled in assets from other properties, the amount of loans serviced has grown from $6 billion to $7 billion since Jan. 1.

The Clearwater, Fla.-based mortgage banking unit of Carteret Savings Bank of New Jersey will be especially impaired by any delay in coming to market because, unlike Home Federal and Standard Federal, it has no origination capacity.

"We want to bring Carteret to market as soon as possible," said Ms. Weatherly. Carteret was seized in December 1992.

Selection Process Changes

The section of the RTC that markets the portfolios is examining the way it contracts with brokers who then sell the properties to third parties.

"We're trying to bring our selection process more in line with the RTC as a whole," said Ms. Weatherly.

She also said the RTC wanted to do more business with brokers owned by women and minorities, in keeping with administration policy. The RTC has a pool of pre-qualified companies. □

PNC Bank Corp. Abandons Its Plan To Sell Sears Mortgage's Western Units

By CHRISTOPHER NOBLE

PNC Bank Corp. has scrapped its plans to sell Sears Mortgage Corp.'s western production branches later this year when it acquires Sears Mortgage Banking Group.

Pittsburgh-based PNC said Tuesday that negotiations to sell the branches to a group led by Arthur D. Ringwald, executive vice president at Sears Mortgage Corp., were "discontinued." No reason was given. The bank said it would not try to sell the branches to anyone else.

The decision to retain the branches comes as a surprise. PNC had said when it announced the Sears deal that it wanted to maintain an extensive regional bank and appeared eager to shed Sears' western assets.

No executives from PNC were available for comment but a spokesman said the bank changed its mind because "those are high-production offices and we've determined it's more profitable to retain them."

Mr. Ringwald and his group would have gained control of about 30 branches in 12 states west of the Mississippi that in 1992 produced $2.5 billion in loans.

At the time that PNC announced its plans, Mr. Ringwald said he was excited at the prospect of having his own mortgage company.

He said the deal presented him with "an opportunity to do something I've always wanted to do: be an entrepreneur." □

Average Rate Falls to 7.24%

The national average interest rate on 30-year fixed-rate mortgages dropped fairly sharply this week, to 7.24% from 7.36% a week earlier, according to preliminary figures from HSH Associates of Butler, N.J. The points charged by lenders averaged 1.37%, little changed from 1.38% a week ago.

The Washington, D.C., area continued to have the lowest average rates in the country, 7.12%, but was also the highest in points, 1.86%.

The highest rates were in Minneapolis, 7.35%, but lenders in the area were apparently marketing low-fee mortgages aggressively, as points averaged 1.03%.

The national average for 15-year fixed loans was 6.82%, down from 6.9%, while the one-year adjustables averaged 4.4%, down from 4.45%.

Geographic spreads in mortgage rates generally reflect regional differences in the cost of doing business and the secondary market's estimation of prepayment experience and credit quality for each region. — Edward Kulkosky

Vanguard Chief Promises a Fight for 401(k) Market

By KEITH DuBAY

John Bogle, chairman of Vanguard Group, is known for his frugal ways.

So it's no surprise to hear his advice to banks that want to face off with the giant mutual fund company for a share of the burgeoning business of managing 401(k) retirement plans.

Be prepared, Mr. Bogle says, to do battle on the field of cost containment.

"If banks can provide better performance with better service at a lower price, we're going to lose every penny we have," Mr. Bogle said in an interview from the company's headquarters in Valley Forge, Pa. "But they've not been traditionally good at service."

The company has $29.5 billion of 401(k) plan assets under management. That's about a quarter of Vanguard's $117 billion book of business.

Changing Market

Banks once dominated the field in managing retirement plans, but in recent years their market share has dipped.

One reason is that the market is changing.

Defined-benefit plans, in which employers have to pay predetermined benefits no matter how investments perform, are disappearing. Managing these plans has been banks' strong suit.

Instead, defined-contribution plans such as 401(k)s are sprouting up. These plans, which typically use mutual funds as the primary investment vehicles, put the burden on employees to choose their investments.

In 1992, insurance companies led the 401(k) field, managing 37% of assets, according to Access Research Inc., Windsor, Conn. Banks followed, with 27%.

Mutual fund companies, ranked third, with 24%, but were gaining market share faster than any other group.

According to a recent survey by *Institutional Investor*, Vanguard is the No. 3 manager of defined-contribution plans, after Fidelity Investments and Prudential Insurance Co.

Its nearest bank competitors are State Street Bank and Trust, which placed fourth, with $29 billion; and Bankers Trust Co., which tied for fifth place with Merrill Lynch, at $25 billion.

Penny-Pinchers

Tightfisted cost control is a religion at Vanguard. The company charges its customers no sales fees and its total expense ratios are the lowest in the business, according to *Money* magazine.

Mr. Bogle said his company hasn't had to beat the bushes for new 401(k) customers. "They come to us, by and large." Vanguard's institutional assets, including 401(k) plans, have grown 125% over the past three years, versus 90% for retail assets.

John Bogle
Sees banks as the losers

Mr. Bogle believes that in the next few years 401(k) plan assets at Vanguard will grow 35% a year, versus 25% a year for individual accounts. Investors are "looking for a mutual fund company that has funds you can get the price of in the daily paper," he said.

Costly Customers

Mr. Bogle worries about the onslaught of 401(k) business. It generally costs more to service such accounts, and the added reporting – which includes yearly tax reports for each plan – clogs computers and requires more staff. The cost per year ranges from $20 to $50, he estimated.

"It's so expensive to operate these plans on a fee basis," he said. "Just trying to cover our operating costs is hard. It's difficult to do anything for a company for under 500 employees."

Banks see the big mutual fund companies as havens for defined-contribution plans from big companies. And, in fact, Vanguard manages 401(k) plans for giants including Texaco and Federal Express.

But Mr. Bogle points out that many smaller companies, too, have Vanguard plans.

B of A's Plans

Debra McGinty-Poteet, who heads the mutual funds management business at Bank of America, said she'd rather concentrate on midsize and small companies for their institutional business.

Banks have an edge in this market because of their commercial relationships with these companies, she said.

Bank of America has $19.3 billion under management, 95% of it institutional money. Ms. McGinty-Poteet said her division is putting together a plan to attack the 401(k) market, in which it has not been a player.

"The larger corporations are choosing to deal with some fairly major competitors," she said.

The bank is looking at developing more international funds through the new structure. Under the old system that would not have been viable, Ms. Guernsey added.

The cost to convert funds to hub and spoke varies according to the attributes of a fund family, according to Signature's Mr. Hoolahan.

IRS Opinion Awaited

For Morgan, the majority of conversion work involves preparing proxy materials for a shareholder vote on the issue, Ms. Guernsey said.

Shareholders agreed to the change in March.

Now Morgan is waiting for an opinion letter from the Internal Revenue Service before converting one last fund to the structure.

The conversion has been seamless, Ms. Guernsey said.

When the mutual fund company Eaton Vance Corp. began converting its funds to the structure last year, it ran into numerous regulation issues surrounding tax laws for assets moving between hubs and spokes, Mr. Hoolahan said.

With rulings on those issues now on the books, those adopting hub and spoke have an easier time, he explained.

Another advantage to the structure is the ease with which outside companies can offer their own portfolios spoked into Morgan's hubs, Ms. Guernsey said.

With conversion almost complete, Morgan executives are beginning to talk with smaller banks and trust companies that may want to create private-label spoke funds using a Pierpont hub.

'Significant' Increase Seen

Though Ms. Guernsey wouldn't project how much new business that could generate for Morgan, she said, "I've got to believe it will be significant."

Ms. Guernsey said she is developing basic guidelines that Morgan will follow as it forms private-label relationships with other banks.

"I think we want to make sure that we're dealing with responsible people and that they're going to market our funds in a responsible manner," she said. □

Boston's Liberty Financial Recruits Exec to Run a Sales Unit

By MICHAEL O'D. MOORE

Liberty Financial Co. of Boston, a leading marketer of mutual funds through banks, has named Reginald L. Truman to head its institutional sales unit.

As a vice president in the company's Liberty Financial Bank Group subsidiary, Mr. Truman will be responsible for expanding and strengthening relationships with financial institutions.

Worked for a Rival

The company currently markets investment products through 65 banks and thrifts.

Mr. Truman was recruited from Marketing One, a rival firm based in Portland, Ore. As vice president of sales, he was in charge of recruiting new accounts, retaining existing ones, and building sales in the western states.

A veteran banker, Mr. Truman started his career at First Interstate Bank California in 1968. He later worked at Mercury Savings and Loan Association.

Mr. Truman holds a bachelor's degree from Pepperdine University's School of Business and Management.

Liberty also named Paul G. Mattaliano to the post of chief financial officer.

Reginald L. Truman
To expand relationships

He is responsible for overseeing and managing finance, accounting, analysis, and information resources, among other areas.

Mr. Martins was hired away from Berkeley Financial Group, where he was controller.

He previously worked for John Hancock Mutual Life Insurance Co. and Alden Corrugated Container Corp.

He holds a bachelor's degree in accounting and an MBA from the University of Massachusetts at Dartmouth.

* * *

Adrian J. Waters has been named managing director of BankAmerica can provide with companies that employ 50 to 5,000 people, she said.

"The General Electrics of the world are going to be different to deal with than the middle market," Ms. McGinty-Poteet said. "There are only so many Fortune 500 companies, but there are thousands and thousands of companies with $50 million in revenue."

Shift in Focus

But William McNabb, vice president in charge of institutional marketing at Vanguard, said banks shouldn't count companies like his out of this sector of the market.

The institutional management industry has undergone a fundamental shift away from catering to plan sponsors – that is, employers – and toward serving the individuals invested in funds, he said.

The shift has intensified in the last two years, Mr. McNabb said. It translates into providing more personal contact, more information, more choices, and more services – such as instant fund transfers and 24-hour phone access to fund valuation.

"Banks have been super at master trust or custody," Mr. McNabb said, "but they don't have it as part of their culture to deal with individual investors." □

J.P. Morgan Gearing Up for Big Push in Mutual Funds

Continued from page 1

gle pool, or hub. Shares in funds, or spokes, that invest in the central pool can then be offered to different investors at different prices.

The spoke funds share the investment objectives of the hub, but each has its own board of directors.

Fund companies can share their expenses by managing assets in a single pool rather than setting up separate funds for institutional, trust, and retail investors.

Signature's Largest Convert

With $4.8 billion in hub assets, Morgan becomes the largest bank fund using Signature's structure.

More and more banks and mutual fund companies are switching to Signature's trademarked structure or similar "master/feeder" setups.

Signature's convert now has $25 billion in more than 100 hubs, according to James Hoolahan, a senior vice president.

The Pierpont funds were rolled out in 1982.

Another Alternative Rejected

With the old "plain vanilla" mutual fund structure, setting up new portfolios also required an individual investment engine and fund administration.

Some mutual fund companies have opted for another alternative, known as the classes-of-shares structure.

But Morgan rejected that approach, because it would have had to present information on all share classes in a single prospectus.

"We wanted to be able to separate information out and tailor the prospectuses for different purposes," Ms. Guernsey said.

20 Spokes in All

Morgan, still waiting for some prospectuses from the regulator, will have nine Pierpont funds and 11 new JPM Institutional funds feeding 10 hubs. Four more Pierpont funds and two new JPM funds are planned, Ms. Guernsey said.

A hub-and-spoke structure for its Pierpont Funds should enable Morgan to tailor investment products to specific market segments at reduced cost.

Morgan may launch private-label funds for other banks.

Omega Offers Seminar On Mutual Fund Sales

Omega Performance is offering a three-day seminar to teach bankers how to boost mutual fund and annuity sales.

The San Francisco-based company, which specializes in bank training, designed the program last year for First Chicago Corp.

Seven more banks have signed up since then.

Called "Making Investment Referrals," the seminar is designed to teach platform employees how to identify sales prospects and refer them to investment specialists. — Karen Talley

AMERICAN BANKER /*Bank Rate Monitor's*™

Consumer Money Index — **Personal loan rates and fees**

Here are the personal loan rates and fees being charged by selected large banks and thrifts nationwide on August 3. The rates are those offered to the general public for a $3,000, unsecured personal loan, with a fixed rate and a 24-month term. During the past eight weeks, the trend of these rates has been declining. The eight week trend is based on the rates being charged by the ten largest banks and thrifts in the ten largest markets. The highest rate reported over the period was 15.59% on June 14th and July 6-12. The lowest rate reported over the period was 15.57% on June 21-28.

Outstandings Grow At Half the '92 Rate

By MICKEY MEECE

Consumers' sensitivity to interest rates and their personal debt loads may be slowing the growth in credit card loans.

A midyear survey by RAM Research Corp. shows the annual growth rate for outstandings is 4.2%, compared with last year's 9% level. But card-spending volume is up 9.8%, which is nearly consistent with last year's rate.

The Frederick, Md., researcher's study covers the portfolios of 300 credit card issuers, representing 85% of the industry, and weights the results according to market share.

"I think it's disappointing," Robert B. McKinley, RAM president and chief executive officer, said of the growth trends. "We're running way below where we should be."

He added, however, that he expects the receivables growth rate to rise to to 8% by Christmas.

Growth was flat at most of the top 10 credit card issuers, but Mr. McKinley noted a few bright spots. Household Bank outstandings grew 20%, Bank of New York's grew 10%, and AT&T Universal Card Services grew 8.3% in the first six months.

"Those are very strong increases," Mr. McKinley said. He attributed Household's growth to the success of the General Motors card that it issues.

Bank of New York, meanwhile, modified its pricing, he said, and stepped up marketing on its low-rate Consumers Edge card. And the sheer size of the three-year-old AT&T program aided its growth.

Card balances rose by only 4.2% in the first half of the year.

He said that AT&T ranks second in accounts and volume to Citicorp, but ranks seventh in outstanding loans, with $7.2 billion. But the card issuer had solid increases for the first half of the year, he said, doing a good job of getting customers to revolve their balances, and to switch from other issuers.

Trying to Outbid Competition

Mr. McKinley found that issuers remain aggressive in pricing, trying to outdo each other with reduced-rate programs. The average annual rate for a standard card stands at 17.25%, down from 18.22% a year ago. Gold card rates dipped less than a percentage point, to 16.08%.

"You're seeing a lot of those single-digit promotional rates," Mr. McKinley said. ("And there's no indication the interest rates are going to rise."

Big banks have been aggressive with promotional rates this year to compete with smaller issuers, he said. As a result, attrition has slowed.

Two Basic Strategies

In general, card issuers have been keeping with two strategies, Mr. McKinley noted: cards at 16% to 17% interest rates with enhancements, or more basic packages at 14% or below, often with single-digit promotional rates.

But issuers pay a price in lower profitability for their aggressive pricing and marketing.

Despite the reduced-rate plans, Mr. McKinley said consumers are not piling up credit card loan balances as they once did. □

Document Imaging On the Rise at Banks

By MATT BARTHEL

About one in 10 financial institutions plans to install document imaging software in its branch offices by 1996, according to two recent studies.

Separate research by the American Bankers Association and Mentis Corp. in Eden, Md., have found that document imaging is an integral part of the branch automation upgrade boom that has seized the banking industry in recent years.

Imaging systems, which convert paper documents into digitized images that can be accessed by personal computer, have become more popular for check processing applications but few institutions are currently using the technology to reduce the volume of paper and microfiche in their file cabinets.

Low Percentage Expected to Jump

According to Mentis, only about 2% of banks and thrifts with less than $1 billion of assets use imaging to streamline such functions as credit applications and signature verification. And only about 7% of financial institutions with more than $1 billion in assets are using imaging at the branch level.

In terms of absolute numbers, this means that only about 300 of the nation's more than 13,000 financial institutions are currently employing document-imaging applications in branches. But according to both Mentis and a recent ABA bank automation survey, financial institutions – both large and small – are busy to embrace imaging technology in the hopes that it can make branch workers more productive.

The ABA's annual retail operations and automation survey found that more than 13% of U.S. financial institutions plan to invest in branch-based image applications within two years.

Percentage Higher at Bigger Banks

Similarly, Mentis found that 17% of banks with more than $1 billion of assets will buy imaging systems, as will 7% of banks with less than $1 billion of assets.

The average of these projections, culled from surveys of more than 2,000 financial institutions, indicates that about 10% of U.S. institutions – about 1,300 banks and thrifts – will be using document imaging applications by 1996.

The most important development spurring the move to imaging in branches is the rising number of personal computers at teller and platform locations. According to Mentis, more than 71% of all branch workstations installed last year were personal computers – as opposed to "dumb" terminals, which rely on a host computer for processing power.

PCs are ideal for imaging applications because they allow the user to rotate and otherwise manipulate document images on the screen. Such capabilities on a dumb terminal would require a significant amount of host computer programming.

"The arrival of the PC will almost certainly boost the amount of imaging that we'll see at the branch level," said Stanley E. Militko, an imaging consultant at Littlewood, Shain & Co., based in Exton, Pa.

According to Mentis, institutions with assets ranging from $500 million to $1 billion will be the most aggressive implementers of branch imaging applications. Just 1.5% of those institutions currently employ imaging in branches. But by 1996, that percentage is expected to climb to 27%. Smaller banks will be much slower to install the technology, Mentis found.

The most common imaging systems installed at branches were for loan applications and signature verification. □

Q: What impact will multimedia technology have on banking?

ROBERT E. LUND
Chief operating officer
Newtrend
Orlando

The most important factor to consider is acceleration. Today's desktop PCs, for example, have more power than the mainframes we ran entire banks on 20 years ago. Not only is the pace of change increasing, but so is the complexity of the technology.

If you look at the progress to date, it's clear that bankers are making "incipient" use of multimedia technology particularly as it relates to imaging and interactive video both at the ATM level and in conferencing.

These initiatives, though, tend to be segmented efforts undertaken only by the really big players.

So how quickly can these capabilities begin extending themselves to the rest of the industry? Two factors are critical at this stage: expertise and economies of scale.

I anticipate that community banks and other small institutions who can't afford the costs of proprietary development will have to create alliances with vendors and consulting firms.

It's also a good idea for smaller institutions to designate a staff member to become knowledgeable in cutting edge technology issues. □

TODD RULON-MILLER
Chief Executive Officer
Software Alliance Corp.
Berkeley, Calif.

When it comes to assessing the future of multimedia in banking there are three questions to consider: Is there a demand? Are the hardware and telecommunications capabilities affordable? And will the application software follow?

My sense is that the demand is clearly there. People have had such a multimedia-rich life over the past decade that I think they absolutely want to use multimedia professionally.

The hardware is extraordinarily affordable too. A desktop PC at a $1500 price point can now deploy multimedia.

In addition, telecommunications companies can broadly deliver and connect just about anyone to anything.

As for software applications, today's headlines are dominated by stories about billion-dollar companies getting into this market. These firms are sinking a lot of research and development dollars into multimedia.

At this stage, what's a banker to do? I don't think there is a single answer.

Pilot projects will have to be installed to show bankers how they might increase revenues or cut expenses. □

WILLIAM E. STORTS
Partner, retail financial services
Andersen Consulting
Columbus, Ohio

Bankers first have to consider the fact that their products and services are going to be delivered through a variety of alternative delivery channels.

These include home banking, remote banking, and variations on the traditional branch. In each delivery channel there is going to be an increasing reliance on self-service.

This is important in terms of multimedia because the general population is already very comfortable dealing in various media forms. As bankers consider new channels of distribution, audio, video and image will be critical – particularly video.

When making a decision about multimedia as part of their delivery channel, bankers need to carefully consider the technology's benefit and its maturity.

But even if a bank decides not to deploy multimedia right away, that institution should not box itself off from the future.

They should not deploy products, services, architectures, or other capabilities that preclude them from being flexible and moving to alternative channels later on. □

Republic Signs Up with Systematics for Check Processing

By JEANNE IIDA

Republic National Bank of New York has hired Systematics Information Services Inc. to process its checks, on an imaging system from Unisys Corp.

Republic, with $36 billion in assets, is the first large bank to contract for a vendor to provide image-capture services.

The bank anticipates savings of 20% of its annual check-processing budget in the first full year of the contract, an executive said.

Republic officials said that, by outsourcing its check operations, the bank will move to image technology at least a year earlier than it could have done had it kept the operations in-house.

Both the bank and Systematics declined to disclose the contract terms.

N.J. Processing Site

Republic's 200,000 items a day will be processed in Systematics' Piscataway, N.J., check-processing facility. The software and services vendor is based in Little Rock, Ark.

The New Jersey site will also be the first that Systematics converts to technology for capturing images of deposited checks.

"These are very exciting times in check processing," said Thomas Rea, senior vice president of Littlewood Shain & Co., a consulting firm in Exton, Pa.

The bank is the largest to contract for image-capturing services.

"There are clear opportunities to drive costs down by consolidating operations or relegating functions such as check processing to a utility status," Mr. Rea said.

"The questions senior executives have to ask themselves are 'What is the role of check processing in my strategic plan?' and 'What do I have to gain or lose by outsourcing?' "

Many banks have been hesitant to invest in image systems for proof-of-deposit functions because of the multimillion-dollar price tag.

But for several years bankers have been interested in sharing check-processing facilities to reduce unit costs and share the investment needed to take advantage of image processing.

Rethinking the Issue

Until recently, talks along these lines have failed because of technical and competitive concerns.

Last month, however, Bankers Trust New York Corp. and First Fidelity Bancorp agreed to establish a shared check-processing utility, leading other banks to rethink the entire question.

Systematics acquired the Piscataway check-processing facility last year from the Federal Home Loan Bank of New York.

The facility already provides conventional check processing to 130 financial institutions.

Abandoning IBM

The company is converting the facility from International Business Machines Corp. technology to Unisys systems and is testing Unisys image processing technology there.

Systematics expects to have the image capture system up and running by November.

The Republic deal will bring Systematics' expected throughput at the facility to 600,000 checks daily. The company plans to move all its New Jersey clients to the image processing system by next year.

Republic National plans to move about half its check-processing operation to the Systematics facility while retaining customer service, research, and adjustment functions in its Manhattan data center.

Big Savings

Bank senior vice president Nicholas A. Calabro said Republic expects to reduce its check-processing budget by 20% overall.

He said the outsourced portion of the operation, which includes encoding, reading and sorting of items, and computer-assisted recognition of handwritten amounts on checks, would cost 35% less than Republic has been spending on similar functions.

Systematics will be replacing an operation in which Republic employs 48 full-time operators and 27 temporary workers.

The processor plans to hire 15 bank employees. Republic is moving 20 to 30 to other jobs in the bank and laying off six or eight, Mr. Calabro said. □

Meyer, Datatron Linking Services

The Meyer Interest Rate Survey and U.S. Datatron Inc. have agreed to jointly sell deposit and loan pricing information and service-fee data to financial institutions nationwide.

The linkup calls for Meyer to provide its rate-related surveys to clients of U.S. Datatron, and for U.S. Datatron to provide its fee-related surveys to Meyer's clients.

Meyer, based in Calabasas, Calif., produces daily studies of deposit, consumer loan, and mortgage loan rates offered by competing institutions. U.S. Datatron, based in Palm Beach Gardens, Fla., concentrates on fee-based product studies.

Datatron recently bought the customer contracts of RateLine, a New Jersey company that had produced rate surveys for Datatron clients. RateLine customers will be served by Meyer.

Opinion

Comment

By Nathaniel E. Butler

Official Confusion a Brick Wall To Debt Cancellation Contracts

Debt cancellation contracts were approved by the Comptroller of the Currency for national banks in 1963. They were upheld for national banks by a federal court in Arkansas and by the U.S. Court of Appeals for the Eighth Circuit in the First National Bank of Eastern Arkansas case. But they have not taken off.

The reasons debt cancellation contracts have not been widely used by national or state-chartered banks is that neither the Office of the Comptroller of the Currency nor the courts have addressed the many legal questions that must be answered before a debt cancellation program can be safely undertaken for installment loans, credit cards, or other credit products without regulatory and legal risk.

While this article is limited to contracts that parallel credit life insurance, and it does not specifically relate to other credit insurance types that products such as disability and unemployment, many of the issues raised here are relevant to these products.

Forgiving a Debt

In a debt cancellation contract, the bank agrees that in return for a payment, it will forgive the debt if the borrower dies.

This looks like credit insurance and "quacks" like credit insurance. Under the Eighth Circuit opinion, debt cancellation contracts are not "the business of insurance" but may be treated or considered as insurance for certain regulatory purposes.

Rather, the contracts are viewed as "incidental" to the business of banking.

State Versus Federal Authority

The court further holds that even though these contracts were perhaps insurance under state law purposes, the Arkansas insurance commissioner was overzealous unable to prohibit a national bank from offering debt cancellation agreements.

Finally, the court comments that the comptroller conceded that particular state insurance regulations, such as those limiting premium rates, may apply to national banks because they do not "conflict" with, that is, essentially prohibit, the exercise of national banking powers.

Ford Barrett, a senior attorney with the Office of the Comptroller of the Currency, commenting on the district court decision in *American Banker* in 1989, speculated that a particular insurance activity could be both the "business of banking" and the "business of insurance."

In this event, the appropriate solution from a public policy standpoint would be for the states to regulate the activity but not prohibit it.

Insurance ?

Hence, the debate continues: Are debt cancellation contracts insurance or not? Are these contracts insurance for some regulatory purposes and not for others? If so, for what purposes are these contracts insurance?

The Eighth Circuit Court has suggested that rates ceilings by states on credit life insurance may apply to a national bank's debt cancellation contracts. A question arises concerning Section 85 of the National Bank Act, which limits national banks to the highest rate of interest permitted a competing lender.

Is the amount paid by the debtor to the bank interest under state law? Is it material to the determination of the interest rate under the comptroller's interpretation of Section 85? Since the cost of funds now is low, this may not for the moment be a crucial question, but it may become so for usury purposes in the future.

Truth-in-Lending Angle

Another troubling area is how the amount paid for the debt cancellation agreement should be treated under Truth-in-Lending. Truth-in-Lending provides special treatment for premiums for credit life insurance.

If certain steps are taken, insurance premiums for credit life can be excluded from the finance charge. If, on the other hand, the amount paid for the debt cancellation contract is not a premium and the contract is not insurance, then presumably the amount paid would have to be included in both the finance charge and the annual percentage rate, no matter what is disclosed.

Risking Absurd Results

The staff of the Federal Reserve Board, the group to whom such Truth-in-Lending matters are entrusted, seems to be leaning toward leaving the question of whether the fee for a debt cancellation contract is an insurance premium up to state law.

While this may appear to be a solution, in fact it produces absurd results. For example, it will not be very helpful to interstate issuers of credit cards. Issuers would face the prospect of offering a different annual percentage rate, depending on a state characterization of what is insurance.

Furthermore, it may not be helpful in any given state. For example, the Oklahoma Banking Department has ruled that debt cancellation contracts are not insurance and therefore may be offered by state banks. The Oklahoma Department of Consumer Credit, on the other hand, ruled that the contracts were insurance.

Similarly, the federal Equal Credit Opportunity Regulation permits differences in rates, availability, and terms in credit-related insurance products. If a debt cancellation contract is not insurance, would age rating, for example, violate the Equal Credit Opportunity Act?

Which Law Prevails?

Assuming national banks can offer these contracts because they are incidental and necessary to banking, what about state banks? If a state bank is prohibited under the State Banking or Insurance Code from offering insurance, but is permitted to engage in any activity that a national bank can offer under the so-called wild-card statute, which prevails?

THE DEBATE *continues:*
Are debt cancellation contracts insurance or not?

This question has not been addressed by the courts but it has been addressed by many state attorneys general. They appear to favor prohibiting the contracts for state banks.

There are several other state issues. The Circuit Court made it clear that the prohibition on the exercise by state agencies of visitorial powers over national banks, and the status of national banks as "federal instrumentalities" would prevent extensive state regulation.

It did not address many other state-oriented issues. For example, if state law requires a credit life insurance contract to be filed or approved, does that apply to a debt cancellation contract issued by a state or a national bank? What about an AIDS exclusion prohibited by a state? What about state premium taxes? And so it goes with other lesser state requirements.

Tax Issues

There are also several tax issues relating to both the bank and the debtor. The bank under the comptroller's ruling is supposed to take a certain amount into reserve to protect against amounts which would be forgiven in the event of death.

Is this treated differently as fee income to a bank as compared to premium income to an insurance company? The tax accounting for both premium income recognition and deductions for policy reserves and claim liabilities apply only to insurance companies as defined in the Internal Revenue Code. Banks do not qualify as insurance companies.

Lacking access to the applicable Internal Revenue Code sections reserved for bona fide insurance companies, banks would appear to be subject to normal corporate tax treatment where general tax principles would appear to force immediate tax recognition of the income and defer deduction of claims until paid.

With respect to the debtor, if the amount forgiven is the proceeds of insurance, presumably it is not taxed as income to the estate of the debtor.

If, on the other hand, it is a simple debt forgiven and not insurance, then presumably it is income and taxed as such to the debtor's estate. Does this raise withholding and reporting questions?

More Questions than Answers

Debt cancellation contracts ostensibly have been a legal activity for national banks for 30 years. Credit life insurance has been regulated by the states even longer. The questions surrounding these contracts seem to have proliferated faster than answers. The Eighth Circuit Court of Appeals decision leads to a regulatory morass.

The court suggests that the issues be taken up on a case-by-case basis. This is not a practical solution. Until a vehicle is found to resolve comprehensively most if not all the issues, debt cancellation contracts will continue to languish. □

Mr. Butler, a former Federal Reserve staff official, is with the law firm of Kaye, Scholer, Fierman, Hays & Handler, Washington.

IN A DEBT *cancellation contract, the bank agrees that, in return for a payment, it will forgive the debt if the borrower dies.*

THE REASON *these contracts have not been widely used is that neither the Office of the Comptroller of the Currency nor the courts have resolved the necessary questions.*

NOTICE OF FORECLOSURE

SUPREME COURT OF THE
STATE OF NEW YORK
COUNTY OF COLUMBIA
Index No. 2220/93

Federal Home Loan Mortgage Corporation.

Plaintiff,

SUPPLEMENTAL
-against- SUMMONS AND NOTICE

Stanley Jehsman and Dorianne Beyer if living, and if any be dead, any and all persons who are spouses, widows, devisees, mortgagees, heirs, heirs, devisees, destributees or successors in interest of each of them as may be dead, and their spousers, heirs, devisees, distributees and successors in interest, all of whom and whose names and places of residence are unknown to Plaintiff,

Defendants

PROPERTY ADDRESS:
111 Pumpkin Hollow Road,
Taghkanic, NY 12502

TO THE ABOVE NAMED DEFENDANTS:

YOU ARE HEREBY SUMMONED to answer the complaint in this action and to serve a copy of your answer, or, if the complaint is not served with this summons, to serve a notice of appearance on the attorneys for the Plaintiff within twenty (20) days after the service of this summons, exclusive of the day of service, or within thirty (30) days after the service is complete where is made in any other manner than personal delivery within the State. The United States of America, if designated as a defendant in this action, may serve a reply in sixty (60) days of service hereof. In case of your failure to appear or answer, judgment will be taken against you by default for the relief demanded in the complaint.

NOTICE OF NATURE OF ACTION AND RELIEF SOUGHT

THE OBJECT of the above captioned action is to foreclose a Mortgage in the sum $75,000.00 and interest, recorded in the Office of the Clerk of the County of Columbia on April 1, 1987, in Liber 432 of Mortgages. Page 385 covering premises known as 111 Pumpkin Hollow Road, Taghkanic, NY 12502.

The relief sought in the within action is a final judgment directing the sale of the premises described above to satisfy the debt secured by the Mortgage described herein.

Plaintiff designates Columbia County as the place of trial. Venue is based upon the County in which the mortgage premises is situated.

Prominent Bull Stays Optimistic

Continued from page 24

lock in spreads. We have loan-loss reserves up front now. This is the first time I recall banks zeroing on in productivity. Mergers will let banks buy loan volume, which will smooth out earnings.

Q.: Who do most like now?

HANLEY: We just put First Chicago on our recommended list. The other money center we like is Chemical. Both can generate earnings internally. Among the regionals, we like NationsBank, which is cheap, and Keycorp, for its earnings and the possibility that it will be taken over in 1995 or 1996. We also like First

He is betting on Integra Financial Corp. as a takeover target.

Union Corp and Wells Fargo. We raised Wells' 12-month target from $125 to $146.

Q.: Do you stick with your forecast that the trading multiples will be higher for bank stocks?

HANLEY: If I've noticed one thing during my career at banks, it's the corollary between bank stock moves and the macroeconomy. I'm not very adherent, as which we've seen in the early 1960s and now: modest but improving growth in the GNP, controlled inflation, and relatively stable short rates. In the 1960s, the merger and acquisition activity heated up and the stocks went wild. We saw the same thing in the early 1970s and mid-1980s.

Those two are very powerful factors. When you add them together, these multiples do well. Bank stocks traded at a 40% discount against the market. Excluding an overall downturn, I think those multiples will expand to 70% to 75%.

Q.: You put a lot of takeover candidates. Who is likely to go next?

HANLEY: We think Integra and Union Planters are next. Then there's Liberty Bancorp, the largest independent in Oklahoma. In Texas, there are a few, and we've talked about Cullen/Frost.

Remember, there were 40 bidders for First City Bancorp. in Houston, and 38 came away with nothing. And Cullen/Frost is the largest independent left in the state. □

Missouri Merger Approved

KANSAS CITY, Mo. — Central Mortgage Bancshares said it received approvals from the Federal Reserve Board, the Missouri Commissioner of Finance, and the Federal Deposit Insurance Corp. to acquire the Blue Springs Bank.

Central Mortgage said it expects to complete the transaction through its Citizens Bancshares Country Bank subsidiary by Aug. 31. — Reuters

Mark Twain Bancshares Declines After Second Analyst's Downgrade

By GORDON MATTHEWS

Chicago Corp. on Thursday sliced its investment rating for Mark Twain Bancshares to "hold" from "buy," saying shares of the St. Louis bank have reached their price target and are now fairly valued.

It was the second such downgrade for the stock in three weeks. Alex. Brown & Sons Inc. cut its rating to "buy" from "strong buy" on July 15, also citing the price.

After Thursday's move, Mark Twain shares were off 50 cents to $28 in late-afternoon trading. Earlier in the day the stock had slumped as much as $1.25.

Chicago Corp. bank analyst Christine A. Pavel said there is no change in the fundamental outlook for Mark Twain, which has a record of strong profits, and she did not reduce earnings estimates.

But she noted that the stock has gained 280% in value since October 1990, the most recent low point for bank stocks, compared with a 164% gain for other banks traded in the over-the-counter market, The Standard & Poor's Corp. 500 stock index rose 43% in the period.

So far this year Mark Twain shares have risen 24%, in line with the 22% gain for other over-the-counter bank stocks and much better than the S&P 500, which is ahead 3%.

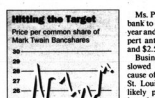
"During the last month, however, Mark Twain has been hovering around our target price of $29," Ms. Pavel said. "We think the market is valuing the stock appropriately."

The stock has been trading at 216% of its per-share book value, compared with 161% of book value on average for other mid-western regional banks, Ms. Pavel noted.

Analyst Mark Alpert of Alex. Brown similarly said his rating change was based "solely on the rich valuation of this equity compared to other banks." But he also said he feels Mark Twain shares deserve a premium valuation, since the company's 13% annual growth rate in per-share earnings should remain "well above the group average."

Hitting the Target

Price per common share of Mark Twain Bancshares



The American Institute of Banking Correspondence Study Program . . .

The Flexible Education and Training Option for Today's Busy Banker

For your bank to thrive in today's competitive climate, a well-trained and educated staff is a must. That's why when an employee needs a flexible training option, successful bankers nationwide turn to AIB's Correspondence Study Program, featuring self-paced, independent study with nationally developed instructional materials.

Choose From More than 20 High-Quality, Cost-Effective Programs That Address These Vital Areas in Your Bank:

- Corporate and Retail Banking
- Management
- Marketing and Sales
- Real Estate
- Plus, core courses in accounting and other banking fundamentals

Bankers Trust's Novel Hybrid Issue Seen Competing with RJR Preferred

By DAVID SIEGEL

Bankers Trust New York Corp. has begun marketing a $100 million issue of a hybrid security that starts as debt and can be exchanged for preferred stock.

The issue is expected to have a tough time competing for investor interest against a preferred stock issue by RJR Nabisco that is offering a higher yield and a simpler structure.

The Bankers Trust issue will start as 40-year subordinated debt. The bank has the option of lowering the rate by 1.5 percentage points.

At that point, investors can opt to exchange the debt for preferred stock, with a dividend equal to the debt's original rate. Because the issue starts off as subordinated debt, with tax-deductible interest payments, the preferred issue is less costly to Bankers Trust than straight preferred stock, whose dividends cannot be deducted from taxes.

Sole manager Goldman Sachs & Co. is marketing the issue to carry a rate of 7.38% to 7.5%, with pricing expected as early as today. Market sources said that a number of investment banks with large retail brokerage networks declined to be co-managers of the issue due to its complex structure and its low rate.

They also noted that the Bankers Trust issue may have a hard time attracting investor interest while RJR Nabisco Holdings is marketing a $750 million issue to have a dividend of around 9.25%.

In addition, RJR is rumored to be seeking to raise the offer to anywhere from $1 billion to $1.25 billion, which would take a lot of liquidity out the preferred market.

Earlier this year, a preferred stock issue by International Business Machines Corp. of more than $1 billion saturated the market and put a damper on the sales of a number of bank preferred issues. □

WALL STREET VIEW

Hanley of 1st Boston, Prominent Bull, Liked What He Saw in 2d-Quarter Data

By RICHARD LAYNE

Thomas Hanley, a prominent bull on bank stocks, has turned even more bullish after looking over banks' second-quarter earnings reports.

The First Boston analyst sees strong earnings growth from dramatic reductions in loan-loss provisions and from loan growth. And he thinks bank earnings are more stable now, because of new attitudes among bankers, productivity gains, and the use of derivatives to lock in margins.

Mr. Hanley has been a bank analyst for 27 years, the last two at First Boston. His experience tells him that mergers and acquisitions activity combined with low-rate environments are a powerful stimulus to bank stock prices.

That's part of the reason he is convinced that bank shares will trade at a higher multiple relative to the broad market.

He's had some luck in picking takeover targets, which he publishes. Recently, two of his picks have accepted takeover offers: First United Bank Group and Constellation Bancorp. Who's next? He is betting on Integra Financial Corp. in Pittsburgh.

Gabe Palacio

EVER THE BULL on bank shares, First Boston analyst Thomas Hanley saw good things in second-quarter earnings reports. He thinks shares will trade at a higher multiple relative to the broad market.

Q: You've been bullish for a while. Did second-quarter earnings make you more or less optimistic?

HANLEY: I came out more bullish. I feel better about the industry's fundamentals.

We changed earnings estimates on 24 banks in our 35-bank universe. The percentage change in 1993 earnings was 9.95%. The percentage change for 1994 is6.68%.

I think the first half of the 1990s could be the best of all worlds for bank stocks.

Q: What in the earnings reports convinced you?

HANLEY: Loan volume is just a little bit better than what we thought, especially on the consumer side.

Net interest margins weakened a touch more than what we would have thought. But there wasn't a bank that showed a decline in margins that didn't have an increase in net-interest income.

The improvement in credit quality is still running six months ahead of where we thought it would be. So are the productivity ratios.

Q: Is the loan growth significant?

HANLEY: According to the Federal Reserve numbers I saw on June 2, it was the first time the industry broke into positive loan growth, at 0.5%. If you excluded two of the districts, New York and San Francisco, the other 10 districts were up 5.8%.

Ideally, loan growth more or less parallels nominal growth in the economy, which is about 6%.

Even on the West Coast, you are seeing lending commitments picking up.

If you look at the past 30 years, after the economy bottomed, it took five quarters before total loan growth ran at an annualized 7% rate. We think it will be 10 quarters in this case, which puts normal loan growth around the first quarter of 1994.

He sees earnings growth from loan-loss provision reductions.

Q: You've been talking about falling loan-loss provisions as a source of earnings. Did this happen last quarter?

HANLEY: Several banks have shown a negative loan-loss provision, including Deposit Guaranty and First American.

In conference calls, managements have been dancing around this issue. They've indicated they will recapture part of this reserve in 1994 and 1995.

NationsBank said its has $700 million in unallocated reserves. NationsBank viewed a lot of that $700 million as excess reserves that would be brought back into the income statement over the next year or so. Wells said an $800 million in unallocated loan-loss reserves.

In our forecasts, we assumed reserve coverage in 1995 would be 126%. It now looks like that number will be 80%, which we've had confirmed by several banks.

For the 35 banks we cover, that works out to be worth $9.9 billion dollars in pre-tax income. About $6 billion after-tax. That's equal to about 37% of what we thought the banks would earn in 1995.

This will prove to be a real cushion to banks when many outside observers are apprehensive about loan volume or margins.

Q: Are you talking about guaranteed earnings? Don't the bears argue that those earnings won't last?

HANLEY: I recall last year, after bank stocks had been going up for a year and a half, people said the party is over. The argument was, look at the investment gains these banks are booking.

People ignored the fact that the banks set themselves up according to classic bank economics: When you think there is going to be a recession, you move aggressively to buy bonds and when the rates come down, you shorten the maturity and you book the profits.

Then for the last couple of quarters, people said margins had peaked, that they would come down very sharply. Now they are questioning loan volumes. They always question foreign-exchange trading and bond trading.

Ironically, when robust loan growth returns, it is the time to underweight commercial banks. Because you only see strong loan growth when you see a healthy American enconomy.

And when you see that, there are other industries that will come through with substantial earnings leverage. So that even though the banks stocks may continue to rise absolutely, it is ironic that they wil underperform the market.

Q: Won't there always be ways to criticize bank earnings?

HANLEY: Banks' earnings are different now. They will be more predictable for several reasons. Banks can use derivatives to

Clinton and Fed Setting Courses For Rate Fight

By STEPHEN A. DAVIES
The Bond Buyer

Like two battleships, President Clinton and Fed Chairman Alan Greenspan seem to be gradually steering toward a clash.

The changes of course are subtle and do not necessarily mean immediate heavy fire. But the first warning signals have been sent.

The issue is whether the Federal Reserve Board should leave short-term interest rates alone until the economy shows much more strength, or whether slightly higher rates will be needed to keep inflation under control.

ECONOMIC OUTLOOK

Mr. Greenspan staked out his position in recent testimony to Congress. He warned that if the current 3% rate of inflation gets a notch higher, Fed officials will probably feel compelled to tighten monetary policy. He did not say when that might happen.

Some analysts think it might not be until late this year or early next year, and they say any rise in rates will be slight. Rates on 30-year home mortgages could go from the current 7½% to 7½%, and 15-year mortgage rates might rise from 6¼% to 7%.

President's Rebuttal

In a White House conference call with newspaper editors, President Clinton gave his first public reaction to Mr. Greenspan's testimony.

"I don't think you should raise interest rates until there's real economic growth that brings on real inflation," the President said.

"I mean, there's no real inflation in this economy, and we can have growth without inflation."

At best, the President's comments reflect the down-home view of most Americans, who don't exactly talk about inflation at the corner market these days.

But it is not the view of Fed policymakers, who take a 3% inflation rate as a problem that must be contained before it gets out of hand.

The Clinton Test

What is more interesting is the benchmarks that President Clinton has set up in his own mind for when it would be appropriate to raise rates.

"If we were having 4% or 5% growth and inflation was getting out of hand, I could understand it," the President said. "But

Colorado Banks Stress Roots In Fight with Invading Titans

By ROBERT B. COX

Faced with an invasion by out-of-state giants, some Colorado banks and thrifts are fighting back.

Their weapon: provocative advertising campaigns stressing that their rivals are outsiders.

Typical is a radio ad by First Federal Savings Bank of Colorado, a $1 billion-asset thrift based in Lakewood.

A customer telephones his bank only to find that the company has changed its name. "Vast Outstate Bank, the bigger we are, the smaller you are," a bank operator replies. The customer then asks to speak to the bank president, only to hear: "The new president hasn't arrived from the East Coast yet."

Playing the Local Angle

First Federal also ran print ads comparing its fees, services, and charges with those of its larger rivals.

Another example: Goldenbanks of Colorado appealed to sports-minded Denver-area residents in a print ad alluding to two giant competitors from Minneapolis: "Would you rather bank in the Colorado Rockies or with the Minnesota Twins?"

The $275 million-asset bank also put up billboards saying: "Has your bank withdrawn from Colorado?" and "We call our own shots, not Minneapolis."

The ads are primarily aimed at the three biggest outsiders – Columbus, Ohio-based Banc One Corp. and the Minneapolis companies, First Bank System and Norwest Corp..

Out-of-State Giants Dominate in Colorado

The five biggest bank organizations, based on assets in Colorado on March 31

Organization/ Headquarters	Assets (billions)
First Bank System Minneapolis	$7.9
Norwest Minneapolis	5.4
First Nationwide San Francisco	3.4
Banc One Columbus, Ohio	2.8
Firstbank Holding Co. Lakewood, Colo.	1.6

'Trying to Counteract'

Since Colorado passed an interstate banking bill five years ago, out-of-state companies have snatched up more than 60% of the state's share of bank and thrift deposits.

"Small banks are trying to counteract" incursions by superregionals, says Glenn Pray, president and chief executive of Mountain States Bank, a $180 million-asset Denver institution.

Will the ploy work? Maybe not, according to some experts, noting that such campaigns have been waged elsewhere.

"It is often merely an ego-gratification strategy for the local

Citicorp Planning A Big Debt Offering

By DAVID SIEGEL

NEW YORK — In the latest sign of its turnaround, Citicorp last week met with groups of bond analysts and investors for the first time in years, apparently paving the way for a large debt offering.

Bond market specialists expect the giant bank to issue $250 million to $500 million of subordinated debt as early as this week.

Citicorp executive vice president Thomas Jones met with bond analysts and investors last week in Boston and New York, touting the bank's improved credit quality and future prospects.

The meetings revealed little new information about Citicorp, according to participants. But the fact that the meetings were held reflects the bank's growing confidence. Citicorp officials had not met face to face with groups of bond analysts for years.

'They've Come a Long Way'

Mr. Jones did not comment on the bank's plans for new debt issues at the meetings, which were closed to reporters.

"In general, the meeting was very positive and well-received

News *briefs*

Southern National to Buy S.C.'s 1st Savings

LUMBERTON, N.C. — Southern National Corp. announced a definitive agreement to buy First Savings Bank of Greenville, S.C.

Southern National, which has assets of $5.2 billion, said it will pay about $181 million in stock for the $2 billion-asset thrift company. The transaction, which will be accounted for as a pooling of interest, is expected to be completed in early 1994.

The ambitious bid by Southern National, which is believed to have competed with North Carolina giant First Union Corp. for the thrift, will make it the third-largest bank in South Carolina, providing entry into 21 new markets in the state. First Savings is the largest financial institution with headquarters in South Carolina.

Southern National said it will relocate its South Carolina bank headquarters from Columbia to Greenville, where the company will have the largest deposit market share of any bank or thrift. The combined company will have $8 billion of assets and more than 200 banking offices in North Carolina and South Carolina, following the completion of other pending North Carolina mergers.

Two Farm Credit Banks to Merge in 1994

WASHINGTON — A farm credit bank with $7.1 billion in assets will be created with the merger of two members of the Farm Credit System, the system announced last week.

The Farm Credit Bank of Omaha and the Farm Credit Bank of Spokane said they intend to merge on March 31, 1994, pending approval of regulators as well as stockholders in both banks.

No decision has been made on the location of the new bank, but James D. Kirk, current president of the Omaha Bank, will be president of the merged bank, the system announced.

Bank of San Diego Selling Trust Company

SAN DIEGO — The Bank of San Diego has signed a definitive agreement to sell North American Trust Co.

The buyer will not be disclosed until the sale is approved by the State Banking Department of California, said BSD Bancorp, the holding company for Bank of San Diego.

The sale will close immediately upon approval, expected within 30 to 45 days. Alta Colleges, which had previously bid for North American Trust, is not a participant in this transaction.

Standard Federal's Home Lending Up 54%

TROY, Mich. — Standard Federal Bank said it closed 4,054 single-family home mortgage loans totaling $319 million in July, a 54% increase in lending volume from a year earlier.

Standard Federal said that so far this year, it has closed 28,482 home loans totaling $2.2 billion. In the same period in 1992, the bank closed 24,238 loans totaling $1.8 billion.

"Low interest rates continue to be the catalyst for the bank's record-breaking lending activity," Standard Federal said.

54 PNC Branches Adopt Parent's Name

CAMP HILL, Pa. — PNC Bank Corp. said its 54 former CCNB Bank, Hershey Bank, and First Bank and Trust Co. branches have changed their names to PNC Bank.

The briefs were compiled from staff and wire reports.

Correction

An article Thursday was mistaken in saying that according to a Consumer Bankers Association survey, 93% of banks require minimum balances on basic checking accounts. The group found that 93% do not.

President Clinton and Greenspan Set Courses for Battle over Rates

Continued from *page* 1

there's no grounds for it now."

Here is the real dividing line between the central bank and the White House. The days of steady growth in excess of 4% were last seen during the Reagan years, when baby boomers were stocking up on Volvos and split-level Colonials and dropping their kids off at the day care center.

Those days are not likely to come back any time soon in an economy with see-through office buildings and unemployed defense workers.

Both administration and Fed economic forecasts do not show growth estimates much in excess of 3% over the next five years. Douglas Lee, chief economist for County Natwest USA, estimates the long-range growth potential for the economy may

ECONOMIC OUTLOOK

The Fed will not wait for 4% or 5% growth.

only be around 2½%, unless business productivity makes further strides.

Optimistic Scenario

It is reasonable to hope that the economy can do better, and that interest rates will not go zooming off into the blue as they did during the 1970s.

Analysts at Merrill Lynch estimate the economy will experience growth of 3% to 3½% in the second half of the year with the help of low mortgage rates and stepped-up auto production. Still, that would be nowhere near the kind of growth the President is talking about.

Clinton's comments reveal an impatience with a central bank getting cranky about inflation when the economy is still soft.

But the bottom line is that the Fed will probably not be able to heed the President's appeal for holding rates steady.

Policymakers will not wait to see a growth rate of 4% or 5% before they tighten. The White House is setting down markers that are off the playing field. □

House Leaves Bailout Bill for After Recess

Reuters

WASHINGTON — House lawmakers failed to craft a bill to fund the thrift cleanup before their August recess, so taxpayers must continue to pay about $3 million a day to cover the cost of operating defunct thrifts.

So far, House members have tried for eight weeks to cobble a bill to bring to the House floor that would give the White House money to finish the savings and loan bailout, which ultimately could cost taxpayers as much as $190 billion.

The Senate voted in May to provide up to $34.3 billion in funds. Negotiators had hoped to conclude a deal Friday, before their scheduled monthlong recess. But bickering over how much more money to pay for closing failed S&Ls has sunk efforts for now.

78 Defunct Thrifts

The money is needed so the Resolution Trust Corp. can sell the remaining failed thrifts it controls. The approximately $3 million daily price tag for taxpayers is the agency's cost of keeping open 78 defunct S&Ls, based on government estimates.

The RTC has been broke since April 1992. Recently, federal auditors said the RTC could free up to $5 billion in reserves, allowing it to proceed with the sale of 23 failed S&Ls.

House negotiators had had hopes of striking a deal providing $18.3 billion for the RTC. □

Plus ATM Network Upgrades Its Systems

By DEIDRE SULLIVAN
Special to the American Banker

As part of its move to new headquarters, Plus System Inc. has upgraded its systems to provide for new product development and improved disaster recovery.

Plus, a global automated teller machine network, processes over 18 million transactions a month. In 1992, ATMs carrying the Plus logo disbursed more than $8 billion in cash.

D. Dale Browning, president of Plus, said the new facility doubled the network's transaction capacity when it opened last month.

'Gateway Business'

Mr. Browning also said one of the major sources of future growth in ATM processing will come from what is called "gateway" business. Gateways are computer links within a network where one processing company connects with another.

Plus has been actively establishing these gateways, allowing Plus member banks to accept more types of cards at their ATMs by routing those transactions through Plus. Gateway volume already constitutes 25% of Plus annual volume total.

The new computer facility also enables Plus to process transactions for Visa's debit card point-of-sale products.

Card Connections

With these new services, customers can use a card that is connected to their checking account for payment at stores, restaurants, and other establishments.

When Plus moved to the new location in southeast Denver, it ended an outsourcing relationship with Colorado National Bank for some "off-line" processing tasks, an arrangement in place since 1982.

Fault-Tolerant Computers

Plus has installed an International Business Machines Corp. AS/400 at their new headquarters and is now handling off-line processing themselves.

ATM transaction switching uses Concurrent 3280 MPS fault-tolerant midrange computers. The systems at Colorado National Bank are being maintained as backup support in case of a disaster.

"We left the original off-line processing capabilities intact," explained Mr. Browning. "If something happens to our new headquarters, we can divert traffic downtown back to the bank."

The new Plus facility is also equipped with diesel engine-driven electrical generators to be used in case of power failure.

The computer facility became operational on July 18, a Sunday, when transaction traffic would be at a minimum, Mr. Browning said.

Plus allowed for two hours of computer "down time" to switch over to the new facility, but Mr. Browning noted the changeover went better than expected and that their network was not operating for only one hour and twenty minutes. □

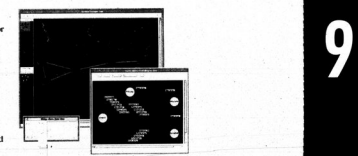
NCR Financial Enterprise Architecture

Managing Networks And Systems As Part Of The Financial Enterprise Solution

As more and more institutions implement plans for distributed client/server environments that span the enterprise, the question becomes "how do you manage it all?" One of the key technology building blocks under NCR's Financial Enterprise Architecture (FEA) provides an enterprise solution to this question.



StarSENTRY™. Managing It All.

StarSENTRY is an end-to-end family of network management products, which will enable you to manage your LANs and WANs, plus the systems and devices on those networks, regardless of the vendor. With StarSENTRY, anything that is important to the enterprise will be managed from a single point of control. This includes clients, servers, self-service terminals, teller terminals, signature devices, pin pads, telephones, mobile computing, smart-card readers... every point for transaction and information activity.

StarSENTRY is based on a graphical user interface (GUI), with hierarchical maps of networks and systems, and color icons for devices. The user sees everything clearly, and doesn't have to wade through error messages.

Industry Standards

- DOS, OS/2, Windows NT, UNIX hosts, servers, devices and clients.
- TCP/IP, OSI, X.25, NetBEUI, SNA protocols.
- Novell NetWare®, LAN Manager/LAN Server, Banyan Vines networks.
- SNMP with security.
- Supports NetView® and Accumaster® Integrator.

The system proactively monitors all networks, and polls all devices, identifying problem areas for operator attention. From the control workstation, an operator can check the frame relay backbone network, routers and hubs, analyze server and client performance, check applications and thresholds, add or delete devices... and much more.

StarSENTRY provides operations management as well, allowing you to distribute software to your end nodes. And all from a central or regional control station...depending on your requirements.

StarSENTRY's multi-layer maps make it easy to view networks. A click of the mouse takes the operator to any point or device in the network.

Bringing The Enterprise Together

No other company can offer the degree of functionality in an integrated platform that you get with StarSENTRY. It can give you a global view – and global control – over your enterprise solutions.

For more information on StarSENTRY, contact your NCR representative. Or phone 1 800 CALL NCR today.

US Order Downplays Rival's ATM Patent

Officials at US Order Inc., a technology company in the electronic home shopping business, said a patent recently issued to a competitor will not impede it or the home banking industry.

The patent, won by Online Resources and Communications Corp., of McLean, Va., on June 15, involves using automated teller machine networks and security controls to let consumers bank from home.

Fraser Bullock, president of Herndon, Va.-based US Order, said his company has a patent for its service that predates Online's patent. He also said there are ways to use ATM networks and security controls in home banking that aren't covered by the Online patent.

Growth-Minded Banks Rush to Buy Healthy Survivors of Thrift Shakeout

"Fourth Financial Corp made us a good offer, and we think we are worth every penny of it."

William V. Turner
Chairman
Great Southern Bancorp.

"Thrifts aren't that much different from community banks, and they have better valuations."

Theodore H. Roberts
President
LaSalle National Corp.

"There are fewer potential bank acquisitions left for smaller regional acquirers."

Allen L. Davis
President and chief executive
Provident Bancorp.

"I shy away from banks that have bought too many healthy thrifts."

Dennis Shea
Banking analyst
Morgan Stanley & Co.

By STEVE KLINKERMAN

Healthy thrifts are becoming the favored prey of banks.

In Cincinnati, Provident Bancorp has ballooned its assets by 60% to $4 billion by buying mutual and stock-owned thrifts.

In St. Louis, the avaricious Boatmen's Bancshares considers an Arkansas savings and loan one of its most successful takeovers.

And in Birmingham, Ala., Amsouth Bancorp. is using thrift purchases to build a multi-state Southeast empire.

'Not Through Buying'

"We're looking, and talking, and probably not through buying," said Harvey Campbell, a senior vice president at Amsouth, which last week snapped up a small thrift in northwest Georgia.

How strong is the trend? During the second quarter alone, banks agreed to pay $1.1 billion for 19 stock-owned thrifts, devouring $9 billion of assets.

Just last week Southern National Corp., a North Carolina bank company, said it would buy First Savings of Greenville, S.C., in a stock swap valued at $181 million.

On average, prices in the second quarter equaled a healthy 1.55 times book value, according to SNL Securities.

No Other Deals to Be Had

Architects of these deals say several forces are at work in the buying bash:

• As mergers cut the population of small banking companies, thrifts remain as the prime – or sole – vehicles for major expansion in a growing number of markets.

• The residential mortgage and consumer loan portfolios held by thrifts look more attractive as commercial lending remains in the doldrums.

• Thrifts cost less than most commercial banks.

• Certain legal constraints against bank purchase of thrifts have been cleared away.

• There are few government bargains left now that the Resolution Trust Corp. has essentially completed sales of its thrift inventory.

One consequence of the new mergers, however, is that the thrift industry itself seems less viable. Banks have purchased 384 thrifts from the RTC since 1989, and some experts think the day is not far away when the banking and thrift industries completely merge.

"The thrift industry ultimately will be absorbed by the banking industry and disappear," predicted Reid Nagle, president of SNL Securities.

Drawbacks in Buying Thrifts

For all the apparent advantages, however, buying a healthy thrift remains a ticklish form of acquisition.

Buyers of healthy thrifts, unlike those who made government deals, cannot rescind the relatively high interest rates on certificates of deposits that many thrifts offer. Nor can they deal problem assets to the federal government.

New owners of thrifts being converted into banks also must repay Uncle Sam for special tax breaks on loan-loss provisions that were accorded to many savings and loans.

Thrifts are sometimes the sole vehicles for major expansion in a number of markets.

Provident's chief executive, Allen L. Davis, says his banking company invested $13 million of after-tax charges on the recapture of tax breaks. "It can really skew earnings and affect public and investor perceptions," said Mr. Davis.

Too Many Home Loans

Outsized mortgage concentrations also can be a problem. And banks must take into account the time it will take to convert thrift customers to transaction-oriented accounts and commercial lending relationships.

"I shy away from banks that have bought too many healthy thrifts," said Dennis Shea, a banking analyst with Morgan Stanley & Co., New York.

Mr. Shea voiced concerns about New Jersey-based First Fidelity Bancorp, for example, which is buying Peoples Westchester, a thrift in suburban New York City that has $1.8 billion of assets.

Another issue that some bankers are worried about is that healthy thrifts tend to be overcapitalized, which, ironically, can create a profitability problem. That's because profitability sags when an institution has more capital than earnings can support.

Paying a Premium

The problem only gets worse when a buyer pays a premium for a heavily capitalized institution, said Jon Stowe, head of acquisitions at Firstar Corp., Milwaukee.

Once a bank decides to pursue a thrift, it must keep antitrust considerations in mind, just as when it pursues other banks.

The Federal Reserve Board in 1992 denied regulatory permission for thrift buyouts planned by Norwest Corp., Minneapolis, and SouthTrust Corp., Birmingham, Ala., on the grounds that the benefits of the mergers were outweighed by their anticompetitive effect on consumers.

With all the negatives, it is not surprising that many banking companies in the best position to be choosy are cool to thrift acquisitions. One of their chief concerns is the very different management cultures and customer profiles between thrifts and banks.

William Boardman, head of acquisitions at fast-growing Banc One Corp., often has said the company would consider thrifts only as a supplement to existing banking operations in a region – not as market entry vehicles.

All the concerns, however, appear to be only slowing deals, not breaking them. Many banking companies remain enthusiastic about their thrift purchases, and want more.

In Cincinnati, Provident Bancorp's Mr. Davis said his $4 billion-asset company is eager to buy more newly-converted mutual thrifts and operate them as banks.

A series of bite-sized thrift deals is the most feasible expansion strategy for a comparatively smaller banking company such as his, he noted.

"There are fewer potential bank acquisitions left for smaller regional acquirers," he said.

Purchase of Cragin

In Chicago, ABN Amro North America is shelling out nearly $500 million for Cragin Financial Corp., a $2.8 billion-asset thrift with 27 branches. Cragin, which posted a 1.45% annualized return on average assets in the second quarter, will be folded into LaSalle National Corp., an ABN Amro subsidiary.

"Thrifts aren't that much different from community banks, and they have better valuations," said Theodore H. Roberts, LaSalle's president.

From a back-office and customer standpoint, he said, the thrift operations will be merged entirely into LaSalle.

However, Cragin will retain its thrift charter, at least initially. Mr. Roberts cited the familiar deal rationales of in-market consolidation efficiencies and market-share gains to explain his enthusiasm.

Kirk Barc, a senior vice president at First Union's South Carolina bank, said his company opted for a thrift when it bought South Carolina Federal Savings Bank in 1992 to avoid the headaches of consolidating a string of community banks and to gain valuable mortgage lending expertise.

Why Thrifts Agree to Sell

From the standpoint of thrifts, it's relatively easy to explain the sellout trend.

Surviving S&Ls are still suffering the regulatory aftershocks of the thrift crisis that devastated so many of their counterparts.

Though most survivors are solidly capitalized and profitable, they live in a stifling regulatory environment. Congressmen have not forgotten that taxpayers have thus far spent $80 billion rescuing depositors in 660 broke thrifts.

"I haven't counseled anybody to get into the thrift industry for four or five years," said Richard Kneipper, a banking and thrift lawyer in the Dallas office of the Ohio law firm of Jones, Day, Reavis & Pogue. "Regulators,"

One consequence of the new mergers is that the thrift industry itself seems less viable.

he added, "seem more concerned with chasing the bad guys than preserving the competitive viability of the industry."

Sitting on Hot Commodities

Thrift managers also know that they are sitting on hot commodities.

"Fourth Financial Corp. made us a good offer, and we think we are worth every penny of it," said William V. Turner, who is selling Great Southern Bancorp, Springfield, Mo., for $88 million, or 1.7 times book value.

The thrift's stock traded at roughly $9 a share after it converted from mutual ownership in 1989. Now, investors in the $515 million-asset company are promised about $30 a share from Wichita, Kan.-based Fourth Financial.

Once the decision is made to intermarry, experienced bankers say, management and communications become key to success or failure. That's true of any merger, but the pitfalls are greater with thrifts.

Avoiding Saviour Mentality

It is tempting for acquiring bankers to view themselves as conquerors, swooping in from above with all the answers for customers and employees. That approach, bankers warn, is the kiss of death.

"You want to be careful not to charge in and destroy the franchise," said Mr. Roberts of LaSalle National.

Mr. Davis of Provident admits to having acted "inappropriately" in yanking old-fashioned passbook accounts at several thrifts, and he says he will not disturb such accounts in future deals.

Mr. Bare of First Union said he bent over backward in the name of continuity with South Carolina Federal. He preserved an uneconomical debit card and waded gingerly into converting depositors from high-yielding CDs into alternative investments.

Despite his caution, he said, the thrift's lobbies overflowed with anxious customers during branch transitions. "More communication would have been helpful," Mr. Bare said.

Future Merger Action

Two regions where a slew of further thrift takeovers by banks appears probable are the Midwest and the West, though such transactions clearly have not run their course on the East Coast.

Linda Stromberg, an analyst with Chicago-based Howe Barnes Investments, said she is tracking Amerifed in Joliet, Ill., which has $890 million of assets, and two Chicago-based companies, MAF Bancorp, with $1.5 billion, and Bell Bancorp, with $2 billion.

Joseph A. Jolson, an analyst with Montgomery Securities, predicted that offers will surface for Chicago's St. Paul Bancorp, with assets of $3.3 billion, Michigan's $9.8 billion-asset Standard Federal Bank, and Cleveland-based Charter One Financial, with $5 billion of assets.

On the West Coast, southern California's Downey Savings and Loan Association, with assets of $3.3 billion, recently retained Lehman Brothers to help it "evaluate strategic alternatives." The company's stock has risen by 12% since the July 23 announcement.

Other California thrifts viewed as potential buyout candidates are San Francisco-based SFFed Corp., with assets of $3.3 billion, and Los Angeles-based California Federal Bank, with $15.9 billion of assets, and Coast Federal Bank, with $8.2 billion of assets.

Almanson Mentioned

Gareth Plank, an analyst at Mabon Securities Corp., even goes so far as to say that H.F. Ahmanson, the nation's biggest thrift company at $50 billion of assets, could be a candidate for a megamerger.

Given that the thrift industry still controlled more than $800 billion of assets at March 31, it clearly will take many more deals before the banking and thrift industries ever truly consolidate.

But the strong takeover numbers of the second quarter show that plenty of bankers are at work on the project. □

Colorado Banks Battle Invaders in Ads

Continued from page 1

bank, and is not necessarily helpful, particularly if it is not well-directed," says Barry Deutsch, a marketing consultant based in Fort Lauderdale, Fla.

And for their part, the giant competitors dismiss the ads as ineffective. Such campaigns by independent banks are "predictable," and have "absolutely no impact whatsoever on our customer base," says Banc One spokesman John Russell.

"We love to see them run those ads because they are spending money on things that don't make a difference."

Still, market research conducted by Goldenbanks found that 32% of 400 new accounts opened from June 2 to July 24, were opened as a result of the advertisements. First Federal said its ads had brought in some new business, too.

"We have had without a doubt the biggest response from both customers and noncustomers of any campaign we have ever done," says Scott Gagon, president of Goldenbanks' lead bank.

Goldenbanks seized on the hometown campaign after its franchisee contract with Los Angeles-based First Interstate Bancorp expired in January.

Fighting Fire with Fire

Norwest has picked up on the theme. The bank recently ran television commercials featuring Norwest loan officers engaging in a variety of typically Coloradan activities.

The Norwest ads were designed to appeal to the bank's business borrowers. They picture Norwest bankers in four Colorado vistas, including a ski slope and a dude ranch.

"Our goal is to get our story out," says Steve Caldwell, manager of advertising at Norwest's Denver unit.

Stressing Advantages Helpful

Experts say hometown campaigns can be successful if they communicate specific benefits to consumers.

"The bottom line is that for a depositor the location of the bank's headquarters is almost irrelevant," says Mr. Deutsch, the marketing consultant. "But for a borrower, there can be an advantage to being local."

Over the past few years hometown campaigns have been tried – with varying degrees of success – from New York to Seattle, according to the Bank Marketing Association, .

'Frontier Mentality'

Ad execs say the success of their campaigns for local banks stems to no small degree from qualities peculiar to the state.

"Colorado is a kind of parochial place," says Mike Jordan, who created First Federal's "Get Outa-state" campaign.

"Colorado has a very independent, frontier mentality," says George Pollack, who designed the Rockies-Twins ads for Goldenbanks. □

PLAYING HARDBALL: Print ads that play up the advantages of using the local bank — and appeal to Coloradans' sports allegiances while tweaking two Minneapolis-based invaders — have drawn a greater response than any previous Goldenbanks campaign, an executive says.

60-Second Radio Commercial

(SFX: PHONE RINGING)
OPERATOR: Vast Outastate Bank, the bigger we are, the smaller you are.
MIKE: Yes, I'm calling about a checking account.
OPERATOR: Hold please.
PHONE MAIL VOICE: Enter your 2-digit bank code NOW.
MIKE: My wha-?
PHONE MAIL: If you don't know your number, press zero.
(SFX: TONE)
OPERATOR: Vast Outastate Bank. The bigger we
MIKE: I need a two-digit bank code?
OPERATOR: Sir, that's a number with two digits. Hold please.
RADIO STATION ON HOLD: ...with more music right after this.
(FIRST FEDERAL MUSIC UP...)
Hi, this is Pete Smythe for First Federal, Colorado's Convenient Consumer Bank.
MIKE: First Federal? I wonder if they have a free checking account.
PETE: And right now you can get a FREE checking account with no monthly service charge and no minimum balance for a full year. And that's not all. When you open your account....
MIKE: Free Checking? I wonder if they have a debit card.
PETE: ...for a limited time, qualified customers can get a debit card FREE for a full year, too!
MIKE: Free checking AND a free debit card? Which bank was that again?
OPERATOR: I don't have that information, sir.
MIKE: Well, who does?
OPERATOR: I don't know.
MIKE: You don't KNOW?
OPERATOR: I just started yesterday. Wait a minute ... here's the custodian. He's been here a long time, maybe he knows. (FADING OUT) Chuck? Chuck ... do you know who has the account information? Was there money in your account, sir? I have the list somewhere. Do you think bookkeeping would help? How about....
PETE: For stability in your banking life today, why not make First Federal your bank? Since 1885, First Federal, Colorado's convenient consumer bank.

Mutual Fund Sales Carry Dangers of an Unknown World

When bankers look back on the early 1990s, many are likely to look at the world of investment securities and wish they had never entered it.

Sure, observers expect that about half of all mutual funds will be sold by banks by the turn of the century. And it will be hard to read any business publication without seeing story after story about banks entering annuity sales and mutual fund distribution.

But must all banks go this route?

Community banks have built their solid place in our financial structure by doing their own jobs and doing it well. This means knowing the customer, giving quick answers (both yes and no) to loan requests, and handling correction of errors on the first call.

Weekly Adviser

By PAUL NADLER

To most community banks, interest rate swaps, securitization, immunization, and the other terms that mean so much to larger institutions are merely words skimmed over in the financial press.

Fear of Being Abandoned

Sure, with interest on savings so low, many banks feel they must offer something more attractive to keep their depositors. At a recent seminar for community banks, run by BNK Advisory Group of Northampton, Pa., several speakers pointed out that up to now the cut in rates paid savers has been all to the good for the banks.

But now depositors appear to have reached the point of rebellion. They want returns. And many banks feel that turning to annuities and mutual funds is the only way to provide these returns since bank rates earned on loans and investments are so low that the institutions cannot afford to pay more on savings than they do.

Know Your Business Partners

But warnings are in order.

Do the community bankers really know the annuity issuers and mutual fund companies they are beginning to deal with?

A bank is judged just as much by the record of the affiliates it recommends to its customers as it is by its own operations.

And I have been amazed to see banks tie up with annuity issuers of far lower stature than the banks themselves. And then the banks encourage their employees to push these annuities by offering the employees a commission on each dollar switched from bank deposits into these new investments ventures.

Not only is the bank risking its name, but it is encouraging people to remove its livelihood – deposits and IRA funds!

Remember, many banks have been able to return to profitability after the terrible time at the beginning of this decade only because of a willingness to let the bank shrink, concentrate on basics, and recognize that if the customer is not satisfied with the return the bank can afford to pay him, then the bank just has to accept the loss of footings.

Community banks have succeeded by sticking to the basics.

Remember the halcyon days of the discount brokerage operations? Many banks thought this would be the sure route to expanded profitability, only to find that the contingent liability from every single trade exceeded the total earnings for the year from the commissions generated.

Even with regard to investing bank funds themselves in investment vehicles, the community bank needs caution and diligence. Jay Brew, managing director of BNK Advisory, reported at its Pittsburgh meeting that one community bank client came to him with the prospectus for a tax-sheltered investment fund in which the bank was thinking of placing money.

He asked Jay to read the complicated prospectus for him. Jay found that there was no appraisals of assets, sales commissions and fees for the funds promoter were allowed to go up to 69.5% of receipts, and there was no need for board approval of any transactions between the fund's promoters and the fund!

Of course, all of this is legal, just as long as it is spelled out in the prospectus.

In sum, community banks have always done well by following a different drummer. Some may find the new world of investment securities attractive to their customers and to themselves. But for others it could be a disaster.

And while most major-sized institutions feel that if everyone else is offering annuities and funds, they must go along, the community banker does not have to accept this burden.

This ability to turn away from such trends without adverse consequences is one of the community bank's greatest strengths. □

Johnson on Smaller Stage At Green Point Savings

By PHIL ROOSEVELT

People in the News

CAN A TOP money-center banker find happiness at a Flushing, N.Y., mortgage emporium? Thomas S. Johnson hopes so.

Mr. Johnson, a former president of Manufacturers Hanover Corp. and Chemcial Banking Corp., reported to work last week as chairman, president, and chief executive officer of Green Point Savings Bank.

Green Point's business – taking deposits and making home loans – is a far cry from Mr. Johnson's past pursuits. At Hanover and Chemical he was responsible for wholesale banking, investment banking, trading, and treasury.

"This is the first time I will be totally immersed in what we would have called retail banking," he said, adding that he is "really excited" about the prospect.

Green Point, with $6.2 billion in assets, is very profitable, strongly capitalized, and, in Mr. Johnson's words, "refreshingly well focused." What's more, it is about to convert from mutual to stock ownership, in an offering expected to raise about $800 million.

Thomas S. Johnson

All the same, Mr. Johnson's decision to join Green Point surprised observers. Earlier this year, his name was mentioned for such high-profile posts as president of the New York Federal Reserve Bank and chairman of the Federal Deposit Insurance Corp.

Mr. Johnson still seems to have federal policy matters on his mind. In a phone interview last week, he inadvertantly referred to Green Point as "Greenspan" – not once but three times.

Mr. Johnson, 52, spent 20 years at Chemical, including a stint as president from 1983 to 1989. He went on to become president of Hanover – only to be forced out when the two companies merged in 1991.

He has generally kept a low profile since then, though he popped up briefly last year as president of Olympia & York, the troubled real estate developer. He quit after two weeks.

Career Crossovers

In joining Green Point, he becomes the second prominent commercial banker to cross over into the mortgage world in recent years. Two years ago, Lawrence Small, vice chairman of Citicorp, jumped to the No. 2 post at the Federal National Mortgage Association.

"Home mortgages are probably the largest single financial product in the United States," Mr. Johnson said. The mortgage business "certainly isn't a boring type of thing."

Green Point, long a leader in the New York area, specializes in "low doc" and "no doc" mortgages – loans that require little or no documentation of borrowers' incomes.

The thrift covers the risks by demanding high downpayments, conducting careful property appraisals, and in some cases charging high interest rates.

"If you're going to require less documentation of borrowers' incomes and financial assets, you better make darn sure you know what the asset is that you're lending against," Mr. Johnson said. "That's what Greenspan has always done."

Er, Green Point.

Freddie Mac Gains Some Ground Over Fannie Mae in Market Share

By SNIGDHA PRAKASH

WASHINGTON — Freddie Mac gained some small ground over Fannie Mae in the first half of this year in their long-running fight for market share.

The most dramatic shift took place in the secondary market for adjustable rate mortgages. Freddie trounced Fannie, and grew its share of that shrinking pie by a fifth.

Lenders and Fannie Mae said Fannie is trying to recoup those losses.

The ARM market "has been tough for us," acknowledged Donna Callejon, senior vice president for single-family marketing at the Federal National Mortgage Association.

"What our customers have been telling us is that we are not as competitive as Freddie Mac on ARMS, both on pricing and underwriting," she said.

No Strategic Decision

The Federal Home Loan Mortgage Corp., known as Freddie Mac, said there had been no strategic decision to go after the ARM market.

"Our market share is up across the board," said Jim Cotton, director of business management.

The two secondary market giants bought $219.6 billion of mortgages in the first half of this year, up slightly from $214.1 billion in the period last year. Freddie's share of that market grew about 2.5 percentage points, to almost 44%.

The market for adjustable-rate-mortgages went down slightly to $16.8 billion in the first six months, from $17.2 billion. But Freddie's share of that market grew to almost 58%.

'The Lion's Share'

"There is a fairly small pie of ARM loans being originated. The lion's share of that is being originated or bought for portfolio by banks and savings and loans," said Ms. Callejon.

Fannie is trying to gain some lost ground in adjustables by designing more flexible underwriting standards. The present standards were written when interest rates were higher, and they do not fully allow Fannie to shop for the lower-rate loans now being written.

Presently, Fannie buys adjustable loans or securities only if the borrower can make payments at a 7% interest rate, even though the interest rate on most ARMS is lower, Ms. Callejon said.

Freddie, on the other hand, buys loans if borrowers can make payment at the prevailing lower rates, Mr. Cotton said.

Market 'Extremely Fluid'

S. Muir Atherton, in charge of secondary marketing at American Residential Mortgage Corp., said the market for adjustable mortgages was "extremely fluid" right now as Fannie and Freddie jockey for business.

American Residential, based in La Jolla, Calif., sold $50 million of ARMs to Fannie Mae in the first six months of the year. But in May, it decided to start selling ARMs to Freddie as well, and sold $12 million to that agency in June alone.

Freddie Mac was "a little more aggressive in how it qualifies FARM buyers. Fannie has recognized this, and is taking steps to try and capture that back," said Mr. Atherton.

For lenders with a history of making good loans, Fannie is relaxing that 7% rule," Mr. Atherton said. □

Plaza Awarded over $1 Million In Fraud Suit Against Borrowers

During the trial, nobody seemed to know anybody.

The borrowers said they didn't know the brokers, the brokers said they didn't know the borrowers, and the brokerage firm said it had never heard of the brokers who were acting in its name.

But in the end, said a Plaza Home Mortgage Bank spokeswoman, "Everyone was found guilty, and everyone is responsible for paying the money."

Plaza announced last week that a California court awarded it over $1 million in damages, concluding a yarlong fraud suit against two borrowers, their brokers, and the brokerage firm that employed them.

Most of the money was awarded as punitive damages, which Plaza does not expect to collect, said Phyllis Downes, executive vice president for loan administration.

Plaza found out about the fraud while performing a quality review on a 1991 loan that defaulted on the first payment, said Ms. Downes. After examining the loan file and another brokered by the same women, it turned out that not a single document relating to the individuals posing as the homebuyers was legitimate. — Christopher Noble

Rx for FHA Program: Focus It or Scrap It

Robert D. Horner, who resigned two years ago as chairman of Citicorp Mortgage, is back on the scene as chief executive of Chicago-based Hamilton, Carter, Smith Consulting.

At a June forum of the prestigious Housing Roundtable, he offered his views on the Federal Housing Administration's home-loan insurance program. Excerpts of his talk follow.

I want to lay out two possible alternatives.

First of all would be a narrowing of the focus of FHA – narrow the focus so that it truly supports homeownership for those people who have no other alternatives for homeownership, yet have a desire to own a home.

Verbatim

In doing that, I would suggest that we should focus the benefits on first-time homebuyers below a certain income cap, perhaps $50,000 in family income.

With that, I would lower the insurance premiums, and pay them over time instead of up front. I would also suggest a limit in terms of the lending caps.

None of these ideas are unique. But I would make one key point, and that is: We should

Targeting lower-income buyers would have positive policy implications

acknowledge and understand that this program will not be self-funding.

If we choose this path, I think the government or the Congress has to recognize the fact that this program is going to cost some money.

No Free Lunch

Like many of our entitlement and subsidy programs, this is one that, if we choose to adopt it, has positive policy implications for the nation and for the economy.

But we have to understand there's no free lunch. You are asking this program to take risks that cannot be compensated for by insurance, and if you try to do that, you're going to destroy the program.

I think one of the major benefits of this is that you would have a broader range of credit characteristics within the borrowing pool.

You would have people with more down payment who would participate in the program to take advantage of the lower rates and lower insurance premiums.

I think within the income strata that we're talking about, those below $50,000 and within the median house price in a market, you would see not only a broadening of the credit, but probably an enhancement of the credit qualities that may offset some of the cost of the subsidy.

Now a second alternative of the vision would be to eliminate the program completely.

Letting the economically viable segments of the homeowner population be served by the market-oriented firms is certainly an alternative, and one that should be given serious consideration.

What we are seeing is that there is a continuation of an effort to force portfolio lenders to serve this market. That will help.

I don't think increasing premiums is going to do anything except make this situation worse than it is today. □

Firstar Program Gets Boost from Radio Show

By CHRISTOPHER NOBLE

At first glance, the mortgage program is just another among a slew of initiatives aimed at low-income households.

It's got the usual incentives – liberal underwriting guidelines, low down payments, more flexible credit standards, and higher debt-to-income ratios.

But Firstar Bank Milwaukee has Eric Von and WMVP.

Educational Talk Shows

Firstar and WMVP have teamed up for a series of weekly educational talk shows designed to help potential homebuyers take advantage of the Firstar first-time homebuyers program.

The radio station caters to a largely black audience, and the programs are meant to stimulate interest in homeownership, said Mr. Von, the popular radio personality who is host of the weekly shows.

"It breaks down the fear that a lot of consumers – especially minorities – have about banks," he said in a telephone interview.

'Tremendous Response'

The radio station and the bank used the inaugural show to promote the Firstar/Select Milwaukee Parade of Homes, a bus tour to showcase Milwaukee's affordable housing stock. Select Milwaukee is a local housing organization.

The tour opened ten homes in a variety of neighborhoods to the approximately 100 participants, said Pam Smith, the special lending program administrator with Firstar.

Ms. Smith said neighborhood response has been "tremendous." She said 75% of the calls to the bank's mortgage subsidiary are currently from people who have heard the radio show.

Mr. Von says that while it remains to be seen how sincere the banks are in their desire to serve the African-American community, Firstar has taken a big step forward. Firstar has gone "much farther than the other banks in the area," he said. □

What's Moving at Banks? Proprietaries, Tax-Frees

By DEIDRE SULLIVAN
Special to the American Banker

What mutual funds are bank customers buying these days? American Banker *recently posed that question to executives at five large banks.*

Not surprisingly, banks that manage their own funds often report strong demand for the homegrown products. Customers appear to take comfort in knowing that the bank is calling the shots on these investments, bankers maintain.

Most banks also sell funds managed by other companies. While plain-vanilla government funds have traditionally been the most popular offerings through banks, that may be changing.

Funds that help customers shield income from taxation, provide strong yields, or represent a cautious first step into equity investing are gaining popularity, bankers reported.

Bankers also emphasized the importance of sales support from outside fund companies.

Riggs National Bank

Washington's Riggs National Bank is a newcomer to the mutual fund business, but that hasn't hindered its efforts to market its proprietary Rimco Monument funds.

The $5 billion-assets company launched the fund family in 1991 with two money market funds. In 1992, four stock and bond funds were added to the lineup. Mutual fund assets total $600 million.

Going for the Yield

The best seller is the Prime Fund, which has grown to $280 million in assets, and currently yields 3.44%. "People gravitate to it for the yield. It's that simple," said Deanna Belli, a senior vice president.

"When customers debate whether to go with a well-known fund family or with us and they learn that Riggs National Bank's trust group manages the fund, it makes a difference to them."

Riggs is also doing a big business in Putnam Funds. Ms. Belli credits wholesalers at Boston-based Putnam Financial Services for providing a high degree of customer service and support.

She said interest in annuities is also rising, particularly among older and first-time customers.

National City Corp.

At National City Corp., a $29 billion-asset bank holding company based in Cleveland, the hottest proprietary fund is the NCC Stock Fund, which focuses on large-capitalization stocks in about 10 sectors.

Since it was launched in 1989, the $100 million-asset fund has posted a 51.66% annualized return.

Like Riggs' funds, National City's are an extension of the trust and investments department.

"We've been managing trust money for 75 years," said Joseph C. Penko, a National City vice president, "and retail customers like the fact that we're offering them a product that is conservatively managed."

Eaton Vance Fund a Hit

National City supplements its seven proprietary funds with a preferred list of funds from other providers. According to David Dunning, managing director at NCC Securities, the Eaton Vance Total Return Fund – heavily weighted toward utilities – has been moving well in recent months.

Mr. Dunning also said the way a fund is marketed has an impact on sales. "All our preferred funds offer deferred sales charges," she said.

"The public is learning that paying a load up front may not be in the best interest in the long haul. A deferred charge eliminates a customer objection and makes it easier to make a sale."

NBD Corp.

At Detroit-based NBD Corp., the top seller is a homegrown stock fund, the Woodward Opportunity Fund.

Focusing on midsize companies with proven records of growth, it has provided a 27.8% total return over the past year.

In all, NBD manages $5.3 billion in mutual fund assets.

"Our bank has one of the lowest loan-loss ratios in the industry," said Russell Browne, first vice president. "We're well managed, and our funds mirror that conservatism."

Outside Fund List Revamped

The bank recently revamped the list of outside funds that it offers, so Mr. Browne said it is too soon to say which funds are selling well.

Since Aug. 1, NBD has been using only two outside fund vendors: Putnam Financial Services and Franklin Resources, which manages the Franklin and Templeton funds. The bank dropped two other vendors.

"What we are doing is offering more funds within fewer families," said Mr. Browne.

"When customers learn that Riggs' trust group manages the fund, it makes a difference to them."

Deanna Belli
Riggs National Bank

"Retail customers like the fact that we're offering them a product that is conservatively managed."

Joseph Penko
National City Corp.

"What we are doing is offering more funds within fewer families."

Russell Browne
NBD Corp.

"We see an enormous demand for tax-free products as people anticipate tax increases."

- Barbara Colvin
First Union Corp.

"Clients are taking advantage of current yield curves to invest in intermediate-term bond funds."

Steven Plump
Chemical Banking Corp.

First Union Corp.

Saving money on taxes appears to be a priority among customers at First Union Corp., a $68 billion-asset company based in Charlotte, N.C.

The bank's proprietary First Union Funds are heavily weighted towards the fixed-income variety. Three municipal bond funds – for Georgia, Florida, and Virginia – were launched in July.

According to Barbara Colvin, vice president of retail investment products, the bank's best-selling proprietary funds are a U.S. government fund and an insured tax-free fund.

"We see an enormous demand for tax-free products as people anticipate tax increases," she said. "We've also got a lot of yield-sensitive customers who are used to a different kind of return that what they can get with an insured [bank deposit] today."

In addition, two stock funds – the balanced fund and the value fund, made up of strategic growth and income stocks – are attracting interest from people saving for retirement.

Chemical Banking Corp.

At Chemical Banking Corp. in New York City, fixed-income funds continue to attract large numbers of customers. The $140 billion-asset company sells a range of the best-known outside funds as well as its own Hanover Funds.

Steven Plump, director of sales for Chemical Investment Services, said he is beginning to see customers diversifying their investments among several bond funds.

"Many clients are taking advantage of current yield curves to invest in intermediate term bond funds, which offer up to 8.5% in the long end," he said.

He cited Massachusetts Financial Services' Government Limited Maturity Fund as an example. In addition, variable annuities and equity funds weighted toward utilities are drawing investors' interest.

Ms. Sullivan is a freelance writer based in New York.

Invest Financial Finds Annuity Sales Soaring on Tax Fears

By KALEN HOLLIDAY

Investors' fears of impending tax hikes have sent variable annuities sales soaring at Invest Financial Corp.

"You can thank President Clinton for all this increased interest in variable annuities," said D. Mark Olson, president and chief executive of the Tampa, Fla.-based company, which markets investment products through more than 200 banks and thrifts.

Two years ago, variable annuities represented just 15% of Invest's annuity sales. This year, Mr. Olson expects variables to account for 60% of total annuity sales, which he projects at $500 million.

Annuities are insurance contracts that invest in an underlying pool of securities to generate a steady stream of income, typically for retirement. Earnings aren't taxed until they are tapped.

Yields Fluctuate

Fixed annuities, which pay set yields much like bank certificates of deposit, have traditionally been far more popular than variable annuities, whose yields fluctuate day to day depending on the performance of the investments.

But the decline in interest rates over the past two years has helped to boost interest in variable annuities. Sales of variables, which totaled $14.9 billion in 1992, came to $6.8 billion in the first quarter of 1993 alone, according to Lipper Analytical Services, Denver.

Interest rate declines have boosted demand for variable annuities.

Variable annuities now account for about one-third of all annuities sold through banks, according to Cerulli Associates, a Boston-based consulting firm.

On average, Invest's customers are doing far more business in variable annuities than their competitors are. Mr. Olson credits Invest's efforts to educate investment product sales people and investors.

'Evolution Is Easy'

Once a consumer understands mutual funds, Mr. Olson said, "the evolution to variable annuities is fairly easy."

Invest's client banks receive no special incentives for selling variable annuities, so the surge is "truly motivated by helping the consumer," Mr. Olson said.

Buying variable annuities is just another way to invest in your favorite mutual fund without being taxed, Mr. Olson explained. "In reality, it has always been better for people to own their mutual funds this way."

Historically, consumers have shied away from variable annuities because they were perceived as a complicated product, Mr. Olson said. And, he added, the financial services industry has not done a good job of demystifying them.

Out of economic necessity, consumers are becoming more receptive to variable annuities.

Seminars for Investors

In an effort to help customers understand variable annuities, Invest has started training its representatives and conducting seminars for prospective investors. The company is promoting annuities as a good hedge against tax increases.

Bank customers appear to be heeding the advice. And while Invest's variable annuities sales are soaring, Mr. Olson admits his company "doesn't have the corner on great ideas."

Variable annuities sales are generally up substantially at banks, according to Kenneth Kehrer Associates, Princeton, N.J. "Last year, bank sales of variable annuities more than doubled" to $1.35 billion, said Kenneth Kehrer, the company's president.

Currently, there are roughly $90 billion in variable annuities, Cerulli Associates has estimated that volume will double over the next few years.

Twice the Industry Average

Variable annuities sales are running about 5% of banks' sales of all annuities and loaded mutual funds, Mr. Kehrer said. At Invest, the product now accounts for 9% of total sales, or nearly twice the industry average.

D. Mark Olson
Expects increase to continue

The annuities' earnings are not taxed until they are withdrawn.

As one of the nation's top mutual fund sellers, "Invest is very well positioned to sell lots of variable annuities," Mr. Kehrer said.

Companies that have been successful in mutual fund sales have the best chance of succeeding in the variable annuities arena, Mr. Olson said. "There is a correlation." □

NEED BANKING INFORMATION FAST?

AMERICAN BANKER ONLINE

MBNA to Market Affinity Cards Through Stock Car Racing Group

By MICKEY MEECE

MBNA Corp. has revved up its affinity machine by landing Nascar – the National Association for Stock Car Auto Racing.

It could be one of the most powerful card-marketing alliances. Tens of millions of Nascar followers spend $1 billion annually on tickets and merchandise.

MBNA America Bank will issue a series of MasterCard affinity cards that feature racing themes and individual stock car drivers. The MBNA-Nascar cards will have a 14% annual percentage rate and no annual fee the first year.

Marketing

So far, MBNA has signed eight Winston Cup Series drivers for its cards: Geoff Bodine, Bill Elliott, Harry Gant, Ernie Irvan, Rusty Wallace, Darrell Waltrip, Jeff Gordon, and Kyle Petty.

Nascar claims to be one of the first organizations to be placing individual personalities on credit cards.

MasterCard Sponsorship

At the same time, MasterCard International has become the official credit card of the Nascar circuit, said to be the nation's fastest-growing spectator sport. MasterCard is the first payment system to market through the Daytona Beach, Fla.-based racing association.

Strategically, the sponsorship allows MasterCard and MBNA to reach 20 million spectators and national television and radio audiences. Almost 2,000 Nascar races take place in 40 states.

"When the market is this large, you don't need all the 20 million to create a business proposition that makes sense," said Steven Drees, MasterCard's vice president of affinity and co-branded marketing. "We think [Nascar] is the next big affinity opportunity."

Draw for Corporate Sponsors

Jim Andrews, editorial director of IEG Sponsorship Report, a newsletter that tracks sports promotions, pointed out that Nascar is already a big draw for corporate sponsors, including

AFFINITY CARS: MBNA's card series has the inside track for NASCAR fans.

NationsBank Holds a Contest

CHARLOTTE, N.C. — NationsBank Corp. is trying to boost credit card usage by giving away a 1994 Jeep Cherokee.

The Jeep is the grand prize in the NationsBank High Gear Sweepstakes, running through Oct. 31. Customers enter automatically each time they make a purchase on a NationsBank classic Visa or standard MasterCard.

"We want to encourage our cardholders who will be making back-to-school purchases or doing other fall shopping – even early holiday-related buying – to use their NationsBank credit cards," said Susan W. Bossert, vice president of business development for NationsBank Card Services.

NationsBank, which has 1.5 million Visa and MasterCard holders and $4 billion in receivables, has also been promoting usage through "preferred rates" for people with good payment records – 14.9% on standard cards and 13.9% on gold cards – and a free-mileage offer with the NationsBank-USAir Visa card.

Your customers will soon be convinced that this is a checkbook.

Let us explain. You see, while the banking industry has recognized the potential of debit cards, your customers are not necessarily familiar with their benefits. So to make sure they fully understand what debit cards offer them, we've taken a couple of important steps.

First, we've changed the name of the Visa® debit card to the Visa® check card. Now, from the name alone, consumers will have a better idea of what the card is and how it works at the point of sale.

And second, we're introducing "The New Shape of Checking," a comprehensive nationwide consumer education initiative. Simply put, this program is designed to help you educate your customers about the what, where, why and how of the Visa check card and Interlink® service.

A blend of public relations and promotional efforts, the program will feature a consumer handbook on responsible use of the Visa check card and Interlink, new modules of our Choices and Decisions educational materials which focus on Visa check card and Interlink, and consumer advocacy forums to advance consumers' awareness and understanding of how these services work.

We're also helping members educate their customers on a local level.

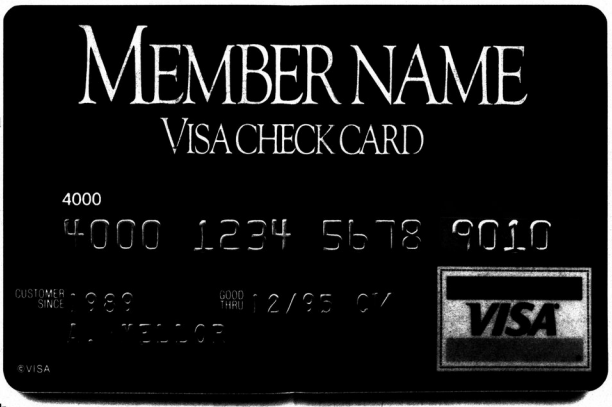
To achieve that goal, we've created "The New Shape of Checking" member kit.

Included in the kit are an 18-month marketing support schedule, sample consumer advertising materials, a program brochure, in-branch promotional support and a video explaining the Visa check card and Interlink educational programs.

When your customers discover through this program how convenient Visa check card and Interlink are to use, they will seem as simple and indispensable as the common checkbook.

So, to help get your customers interested, order "The New Shape of Checking" member kit today—just call 1-800-VISA-311. Or, for more information on how to become a Visa check card or Interlink issuer, call your Visa Member Relations Account Executive at 703-827-8404 in McLean, Virginia, or at 415-570-2120 in San Mateo, California.

Either way, take advantage of "The New Shape of Checking" program. Both you and your customers will find it very convincing.



VISA

MBNA Targets Car Racing Fans

Continued from page 12

McDonald's, Maxwell House, and Kellogg's.

Among financial service providers, Commercial Credit Co., a unit of Primerica Corp., is a Nascar sponsor in the Southeast.

"It reaches our customer base," said Marjorie Magner, president of the finance company. "It's a phenomenal way to reach people. We run drawings and other activities that allow us to build customer lists."

Billboards at Racetracks

Mr. Andrews estimated MasterCard paid $200,000 for the sponsorship rights, which allows the card association to post billboards at racetracks and signs in point-of-sale areas.

"We touch every aspect of society," Mr. Drees said. "When we look for sponsorship or business opportunities, we want to be the card for every person."

Mr. Andrews predicted stock car fans will embrace the MBNA cards.

Attracted Homeowners

"Certainly, these are people who have developed an interest in anything attached to a driver or logo," he said. MBNA, the nation's largest affinity issuer with 3,000 marketing partnerships, sought out the stock car association because of its loyal and creditworthy fans, plus the popularity of the sport, a bank spokesman said.

The $6.5 billion-asset MBNA, based in Newark, Del., has used the affinity concept to build one of the biggest and most profitable credit card operations. By working through associations, it has attracted cardholders who typically own their homes and make an average $55,000 a year.

The bank will issue MasterCards that feature individual stock car drivers.

Nascar fans pay $80 to $100 for tickets to each race, said Brian France, Nascar's vice president for marketing and corporate communications. About three out of 10 spectator earn at least $50,000.

Mr. France said market research shows that 92% of Nascar fans support stock car sponsors. "It actually changes their purchasing decision," he said.

Aggressive Marketing

Nascar had been open to an affinity card relationship but turned down proposals from a dozen banks over the past couple of years, Mr. France said. The association wasn't pleased with the marketing plans.

MBNA's aggressive marketing approach – sending teams of workers to event sites, along with direct mail and telemarketing – won over the race association, Mr. France said.

Nascar said it will earn royalties from MBNA's issuance of the custom-designed credit card. □

MasterCard Raises Status Of Debit Unit

By MICKEY MEECE

Underscoring its commitment to debit cards, MasterCard International announced a realignment that makes its debit subsidiary, Maestro U.S.A., an integral part of the U.S. corporate structure.

The move gives the debit business equal billing with the credit card and remote banking areas – each reporting to MasterCard U.S. president Peter S.P. Dimsey.

Arthur D. Kranzley, president and chief operating officer of Maestro U.S.A., which had been operating at relative arm's length, becomes senior vice president and general manager of debit products.

Daniel Murray, senior vice president of marketing, becomes senior vice president and general manager of credit products. Mr. Murray has been overseeing MasterCard's current "Smart Money" advertising campaign.

'Maximizing the Synergies'

"By moving all of our payment systems into one division, we are maximizing the synergies we are able to develop between these programs," Mr. Dimsey said.

Maestro, credit cards, and remote banking are equals.

Mr. Dimsey said this is a major step in evolving into a multi-service "payment franchise." "It's important," Mr. Dimsey said. "I think that's where the industry's moving and that's what our members want."

He pointed out that each division will remain distinct, with the credit division generating the most revenue.

In April, MasterCard selected Glenn Santmire to head its remote banking program as senior vice president.

Member Relations Post Open

The card association has yet to fill the senior position in member relations, which would be on the same level as the three promoted executives.

More than 15 million Maestro debit cards have been issued in the United States since their introduction in 1991. The cards, which facilitate instantaneous transfers between a customer's transaction account and a retailer's, are accepted at 10,000 merchant locations.

MasterCard said Maestro U.S.A.'s staff will continue to report to Mr. Kranzley.

John Smith, executive vice president of MasterCard debit services, will continue to oversee debit product development worldwide. Separate domestic and international boards will continue to govern the products.

Mr. Murray's credit products division is responsible for the standard, gold, and business cards, plus advertising, promotion, market research, and creative services. □

BOARDROOM *changes*

Gerry Cameron Named Chairman Of U.S. Bancorp's Oregon Bank

Gerry Cameron, a vice chairman of **U.S. Bancorp,** Portland, Ore., since January, has been chosen as board chairman of its **U.S. Bank of Oregon,** succeeding **Roger L. Breezley,** chairman and chief executive of the holding company.

Mr. Cameron remains chairman of the bank's executive committee.

Gerry Cameron

Mr. Breezley said the change "will allow me to fully devote my time and energy to the management of the holding company."

John D. Eskildsen will remain president and chief executive officer of the bank. **Edmund P. Jensen** continues as a vice chairman and chief operating officer of the holding company, and **Kevin R. Kelly** as its president.

Until January, Mr. Cameron had been president and CEO of U.S. Bank of Washington, which is U.S. Bancorp's second-largest bank. He had held those posts since 1987, the year the bank was formed.

When named a vice chairman of the holding company this year, he was made responsible for traditional bank and commercial lending services in U.S. Bancorp's Northwest markets.

— **Franklin Smith**

MIDDLE ATLANTIC

SHADOW LAWN Savings Bank, West Long Branch, N.J., said **Ella M. West** has been elected chairman of its board of directors.

Ella M. West

Ms. West was executive vice president and chief administrative officer at the bank when she retired in January 1990 after 42 years of service. She has been a member of the board since 1986.

During her career at Shadow Lawn Savings, Ms. West held numerous posts, including senior vice president and lending officer.

CITIZENS BANCORP, Laurel, Md., has appointed **Judy A. Johnson** to the board of directors of its **Citizens Bank of Virginia** subsidiary.

Ms. Johnson is senior vice president for professional programs and systems at the **American Society for Training and Development.**

COVENANT BANK, Haddonfield, N.J., has named **Paul R. Fleagane** and **John H. Durham** to its board of directors.

Mr. Fleagane is president of **Paul R. Fleagane Co.** Mr. Durham is the former chief executive officer for **Delaware Management Co.,** a Philadelphia-based mutual fund group and investment advisory firm. He remains a director of the Delaware Group of mutual funds.

Newly appointees to the bank's advisory boards are:

Burlington County: **James E. Palmer,** co-founder of **Spectron Corp.** and **Telenex Corp.,** from which he recently retired; and **Harry R. Koons,** president and owner of **Howees Corp.,** a computer consulting and mail/packing service in Moorestown.

Atlantic County: **Susan Braunstein,** business manager, **Seaside Dental Associates,** Ventnor.

Camden County: **Mindy Holman,** vice president of **Holman Enterprises;** Jack Leonard, a partner in **Roney, Vermatt & Leonard Inc.,** a Haddonfield-based real estate firm; and **Reynold P. Cicalese,** vice president of the accounting firm of **Alley, Silverstein, Shapiro, Adams & Mulford & Co.**

MIDWEST

BOATMEN'S NATIONAL Bank of St. Louis has elected **John S. Alberici** and **Charles W. Mueller** to its board of directors.

Mr. Alberici is secretary and senior vice president for finance and administration of **J.S. Alberici Construction Co.** Mr. Mueller is president of **Union Electric Co.**

SOUTHEAST

THIRD NATIONAL BANK, Nashville, a subsidiary of **SunTrust Banks Inc.,** Atlanta, has named **Ben S. Gambill Jr.** to its board of directors.

Mr. Gambill is president and chief executive officer of **Braid Electric Co.,** Nashville.

FIRST NATIONAL BANK of Gainesville, Ga., has elected **James A. Walters** to its board. He is chairman and chief executive officer of **Walters Management Co.,** Gainesville.

SOUTHWEST

MIDFIRST BANK, Oklahoma City, has named **Gerald R. Marshall** as a director.

Mr. Marshall is chairman and chief executive officer of Oklahoma City's **Ram Management Associates Inc.,** which is one of the top 10 asset-management contractors, managing over $1 billion in real estate and loans for the Resolution Trust Corp.

Gerald R. Marshall

He has been the board chairman, chief executive officer, or president of several financial institutions.

WEST

GREAT WESTERN Financial Corp., Chatsworth, Calif., said **Stephen E. Frank** has been elected a director of the corporation and its principal subsidiary, **Great Western Bank.** Mr. Frank is president and chief operating officer of **Florida Power and Light Co.** and a director of **FPL Group Inc.** □

Multibank President Retires

DEDHAM, Mass. — Multibank Financial Corp. said its president, **Selwyn Atherton,** had retired.

The retirement coincided with the company's acquisition by Bank of Boston Corp., Multibank said. □

Using too much or too little to get the job done isn't prudent, and it won't impress the regulators.

The new prudent standards for real estate lending require each bank and S&L to develop written real estate lending policies that are *appropriate* for the size of your institution and the nature and scope of your operations. That's a key word. It means you've got to cover everything you do, not everything there is.

The **Sheshunoff Real Estate Lending Compliance Manual** helps you develop the required written policies for your real estate lending operation that are consistent with what your bank really does. And it helps you apply the formulas for loan-to-value limitations, too.

You just pick and choose from the model policies we provide, and adapt them to your bank.

You'll have a consistent set of written policies to guide prudent real estate lending, complete and clearly written so every member of your staff can easily understand them. And with Sheshunoff Information Services Inc. as your source you can be sure your policies will work for your bank and satisfy the regulators.

To put prudent policies in your bank now, call 1-800-456-2340.

'Prompt Action' Specter Fades

Upturn Made Plans for Early Intervention Irrelevant

By BARBARA A. REHM

One year after "prompt corrective action" regulations were written, it's hard to remember what everyone was so worked up about.

Back in September 1992, when regulators sat down to draw up the rules that curb the activities of weak banks, the Federal Deposit Insurance Corp. predicted that the regulations would impact 325 institutions, with $230 billion in assets.

Today, the FDIC says less than 1% of all banks holding about 0.7% of all bank assets fall into any of the three undercapitalized categories created by the rules.

Fearing a taxpayer bailout of the bank insurance fund, Congress wanted a way to hold down the costs of failed banks for FDIC. To catch bank problems sooner, lawmakers came up with "prompt corrective action" and included it in the FDIC Improvement Act of 1991.

The rules set up five categories: well-capitalized, adequately capitalized, undercapitalized, significantly undercapitalized, and critically undercapitalized. Once a bank becomes undercapitalized – that is, when it's capital falls below 8% risk-based capital and 4% leverage capital – the regulators move in.

Improving Fortunes
Capital ratings of FDIC-insured banks

	Number of banks	Percent of total	Assets (in billions)	Percent of total
Well capitalized	11,352	96.7%	$3,341.2	89.92%
Adequately capitalized	286	2.4	348.6	9.38
Undercapitalized	49	0.4	9.2	0.28
Significantly undercapitalized	38	0.3	15.4	0.41
Critically undercapitalized	13	0.1	1.5	0.04

Source FDIC

The more capital a bank loses, the more regulatory sanctions it faces. A bank becomes critically undercapitalized when its capital falls below 2%. At this point, the regulators have 90 days to seize the institution.

But record-breaking earnings due to low interest rates have padded banks' capital accounts so much that almost the entire industry is completely unaffected by "prompt corrective action."

"The rising water lifted all those boats that 'prompt corrective action' was supposed to sink," says Karen Shaw, president of the Institute for Strategy Development.

Don Inscoe, an associate director in the FDIC's research division, says just 49 banks, with $9.2 billion in assets, are undercapitalized. Another 38 banks, with $15.4 billion in assets, are significantly undercapitalized. Finally, there are six banks, with $400 million in assets, tagged critically undercapitalized.

"When we put this in place the picture looked a lot different," Mr. Inscoe says. "The number of banks that are on the problem bank list is larger than all three undercapitalized categories combined."

Indeed. The FDIC's in-danger-of-failing list has 671 banks, with $377 billion in assets. Though these banks are adequately capitalized, Mr. Inscoe explains that supervisors have other worries about them. □

Haste Makes for Waste In RTC Delivery Costs

The Resolution Trust Corp. spends $16,000 a day on Federal Express delivery service but should be spending a lot less, according to Stephen M. Beard, director of the agency's office of inspections.

The RTC, which is accused routinely of wasting taxpayer dollars, has a Federal Express tab that averages $2.60 per day per employee, despite the discounted government rates.

The Inside Line

The walk-in rate for next-morning delivery is $13. The walk-in rate for next-afternoon delivery is $9. Federal Express charges the RTC $3.75 for overnight delivery of a small package.

RTC employees used overnight service for credit card payments and to send letters to family members. But the biggest waste, according to Mr. Rea's July 28 report, was about $500,000 over two years for sending 341,500 packages to arrive at their destinations by 10:30 a.m. the next day instead of noon.

A 30% Premium

"Priority overnight service is almost 30% more expensive than government overnight service, which guarantees delivery within an hour and a half of priority service," the report noted.

The RTC's Oklahoma City office sent 87% of its packages by priority overnight, and for some Dallas, Tulsa, and Phoenix RTC accounts, priority overnight accounted for 50% of the Federal Express traffic, the report said.

It costs at least $1.48 per package to shorten the guaranteed delivery time by 90 minutes.

"Federal Express is used to mail virtually everything at RTC, from letters to training manuals," the report said.

And in January the RTC paid $780 to send 578 pounds worth of its monthly newsletter, *Resolution Trust News*, to its field offices overnight.

For $440 the agency could have gotten delivery two or three days later.

$1,816 a Ton

And last November, the agency's human resources department shipped more than a ton of employee benefit forms and booklets. Federal Express charged $1,816, but fourth-class postage would have been $497. Even first-class mail would have cost only $1,567.

An RTC spokeswoman said the agency is creating new guidelines on when employees should use Federal Express services. The guidelines will be distributed by the end of the month, she said. — **Robyn Meredith**

Fed's Fondness for Red Tape Runs to Its Own Parking Rules

By CLAUDIA CUMMINS

If you think the Federal Reserve Board's banking rules are burdensome, try pulling into the employee parking lot beneath its headquarters.

The regulators, it appears, can't resist complicating a fairly simple procedure. Parking rules for the garage fill five and a half pages. They're are so detailed, you'd think you were landing at National Airport.

They're are strictly enforced, too. Violations result in demerits. Five demerits result in a 30-day suspension of one's parking permit. Each demerit above five counts for another 30 days.

A Pine Line

The rules detail 20 specific violations that trigger an enforcement action, from backing into a parking space to changing carpools without approval.

Fed employees are fond of reciting Violation 2, the one that forbids car tires from touching the yellow lines. (*"Vehicles parked on or over the line are in violation. Some spaces are smaller than others; therefore, it is the responsibility of the driver to ensure that the vehicle fits entirely within the proper size space."*)

Having just one inch of a tire on the yellow line is good for one demerit.

And for those who are unsure if they can squeeze into that last spot near the elevator, the memo also has the answer: cars less than 192 inches long and 72 inches wide must use the smaller spaces; those larger are limited to the others.

Some Leniency

The Fed reportedly enforces these rules to the letter – almost. As tough as they are on the majority of Fed parkers, there ap-

You'd think you were landing at National Airport.

pears to be a sort of "too big to fail" doctrine in place: six governors each with his own parking spot, are given a little more leeway than the rest of the staff.

That's not to say there haven't been sightings of governors violating some of the regs, especially rule 9 (*"Headlights must be turned on whenever a vehicle is in motion in the garage."*)

Those sightings have not been of Fed Chairman Alan Greenspan, though. He hardly needs the garage: He has door-to-door limousine service. No demerits for Mr. Greenspan. □

PEOPLE

Clinton Pressed on Naming an FDIC Chief

Sensing an opportunity, banking industry leaders are pressing **President Clinton** to name a chairman of the Federal Deposit Insurance Corp.

"We urge you to appoint a permanent chairman of the FDIC with all reasonable speed," reads a recent letter to the president from the Independent Bankers Association of America and the Conference of State Bank Supervisors.

IBAA executive vice president **Kenneth A. Guenther** said last week that he thinks the seven-month wait for an FDIC chairman may end soon. The President may go ahead with a nomination, Mr. Guenther said, once work on the budget bill is finished.

It's anyone's guess who will get the nod; the leader of the pack has changed many times. But New Hampshire lobbyist **Chris Gallagher** may still be the president's choice.

* * *

Don't expect the congressional black caucus to fall in line automatically behind a community development bank proposal sponsored by one of its members, Rep. **Floyd Flake,** D-N.Y.

Another member of the caucus, Rep. **Bobby Rush,** D-Ill., wrote Rep. Flake recently to denounce the measure, and some observers believe he may be more representative of the group's views.

Rep. Bobby Rush
Blasts development bank plan

"By permitting all U.S. financial institutions – depository institutions already backed by the taxpayer – access to scarce public funds allocated to this initiative, your bill would greatly dilute the efficiency of the President's focus," Rep. Rush said.

Rep. Rush, himself a sponsor of community development bank legislation, supports the President's proposal and believes commercial banks should be induced to lend to low-income communities through enforcement of the Community Reinvestment Act.

So far, he said, banks "have largely evaded their legal obligations to serve their entire communities." As a result, he added, it would be inappropriate to provide them with financial incentives for community development lending, as Rep. Flake's bill would.

Instead, Rep. Rush said, "I am eager to work with the President to improve the effectiveness of CRA so that the banking industry does its fair share to bring hope to these communities that have been left out of the economic mainstream for so long."

* * *

The Municipal Securities Rulemaking Board acted last week to require disclosure of political contributions by participants in the municipal securities markets, but that didn't satisfy Rep. **Henry B. Gonzalez,** D-Tex.

"The municipal securities business has long been a cesspool of corruption," the House Banking Committee chairman said. Though a step in the right direction, he added, the rulemaking body's disclosure requirements are far from comprehensive. □

Health Care Chief's Stand Would Be Welcome at FDIC

BANKERS COULD *benefit from a forceful, public statement about the pluses and minuses of mortgage disclosure data.*

Someone ought to ask President Clinton to throw Bruce C. Vladeck's name into the ring for the chairmanship of the Federal Deposit Insurance Corp.

If the name doesn't ring a bell, that's because Mr. Vladeck, 43, is a health care professional, not a banker.

Since May, he has been running the Health Care Financing Administration, the agency responsible for Medicare and Medicaid. Before that, he was president of the United Hospital Fund, a charity based in New York City.

How does that qualify him as a bank regulator?

Since 1986, HCFA has produced a colossal annual report (55 volumes last year) on hospital mortality rates that is the medical industry's equivalent of the Home Mortgage Disclosure Act, in that it is grossly misleading. Mr. Vladek, 43, thought that was grounds enough to delay its release, so he sat on it.

"I'd rather give out no data than crummy data," he told a reporter from the Associated Press. "It's overly simplistic. People perceive it as telling you more than it does. I think it doesn't adequately adjust for some of the problems faced by inner-city hospitals."

The report (a voluntary undertaking as opposed to a statutory requirement) implies that public hospitals serving the predominantly black populations of our inner cities are grossly inferior to hospitals in other neighborhoods because the inner-city hospitals have a higher-than-predicted death rate among the elderly.

What the data fail to note is that the elderly inner-city patients are often older or sicker than the national average.

He couldn't get away with sitting on mortgage disclosure data if he were a bank regulator, because there's a federal law that says the Fed has to release it to the public, no matter how flawed it might be.

Still, it would be refreshing to hear a top regulator say forcibly in public what many of them whisper in private: that using HMDA's distorted data to finger a bank for racial discrimination, while perhaps politically correct, is outrageously unjust.

Largely Unnoticed

Mortgage disclosure data, like the hospital data, is too thin a measure of discrimination. It's also too thin to demonstrate any positive effects of bank efforts to reach out to minorities, such as second review programs and counseling.

Conclusions drawn from the numbers tend to caricature the industry, exaggerating its vices and understating its virtues, making it perfect prey for demagogues.

In fact, regulators would have to ask banks for an additional 30 to 40 items of information about each mortgage applicant before the disclosure could be considered an accurate indicator of lending bias. (But the cost to the banks of providing the added data would be preposterous.)

Mr. Vladeck's rebellious action engendered no hysterical reaction. His stand on behalf of fairness and accuracy warranted about eight column inches inside *The Washington Post*. As far as I know, not a single congressman made a federal case out it by accusing him of a coverup.

Bankers Could Benefit

Bankers, like the administrators of those inner-city hospitals, could benefit from a very forceful, public statement about the pluses and minuses of the mortgage disclosure data by a regulator of stature at the time of its release.

A speech in favor of fairness and accuracy might curb the impulse of some editors to write hysterical headlines and the urge of some congressmen to seize upon the issue more for self aggrandizement than concern about the well-being of the public. Bankers might even get a fair hearing. □

Create Equity Market for Small Business By Having Banks Form Mutual Funds

THE LACK OF ACCESS *to equity markets makes many small businesses unable to obtain credit. They simply are inadequately capitalized.*

A nat Bird's commentary on July 8, asserting that banks are looking for sound small-business loans and that government-sponsored securitization will not benefit banks, was on the mark. The situation begs for a next step, however.

As Ms. Bird observed, "Small businesses do not have ready access to the capital markets." And it is the lack of access to equity markets that makes many small businesses unable to obtain credit. They simply are, inadequately capitalized to justify bank credit.

One way to rectify this situation is to provide government-subsidized credit to the nonworthworthy, either directly or through guarantees of securitized pools of loans.

Good News, Bad News

This would stimulate business activity enormously but probably would ultimately lead to significant losses for the government-sponsored entity that enhanced the borrowers' credit. That would be a legitimate strategy, but one for which future generations are unlikely to thank us.

More productive in the long term would be enabling private parties to create a market for small businesses' equity securities.

I believe there is a natural way to create an equity market for small businesses by using the same banks that lend to them.

Market Obstacles

Factors preventing small businesses from tapping the equity markets are their inability to provide information efficiently and a lack of potential liquidity.

The size of an offering is not sufficient either to warrant the cost of providing and analyzing the necessary information or to provide liquidity to the purchasers. Nor can the entrepreneur afford the time necessary to seek out private venture money, even if it might be available.

I do not advocate that the banks themselves invest in small-business equity. They need more-liquid assets that can be valued correctly.

Individuals and pension plans, however, do have an appetite for long-term investments that are not immediately liquid or subject to current valuation, so long as those investments are sufficiently diversified.

But individuals and small pension plans don't have the time or the expertise to evaluate small businesses and to monitor performance and protect against fraud and illegal self-dealing.

Thus we should put banks, which have the necessary expertise, and investors together by encouraging banks to form mutual funds that invest in small businesses' equity securities.

Ideally, community banks would concentrate their small-business mutual funds in local companies. This would be both sensible in terms of their resources and good marketing – in that it would allow customers to invest in their local economies. Banks with greater geographic scope logically could manage investments in companies in larger geographic areas.

Naturally, there are some technical, legal, and marketing issues that would have to be dealt with.

These mutual funds should be exempted from Glass-Steagall Act restrictions; the Investment Company Act's pricing and liquidity rules would have to be modified to take account of the illiquidity of the underlying securities; and perhaps some form of tax benefit or deferral should be provided to the investors.

In addition, the natural issue of potential conflicts of interests of the local bank as manager of the mutual fund, lender, and depository would have to be worked out. And there would have to be mechanisms to provide eventual liquidity to the investing mutual funds and to their stockholders.

An Ideal New Investment

The basic point is that access to capital markets has permitted American companies to grow and flourish. There is tremendous liquidity in our capital markets in general, and this liquidity is seeking new productive forms of investment.

The small company, in the form of a diversified portfolio, is an ideal new investment. It would have good potential for long-term returns and would spur the economy. Interestingly, community banks are the institutions in the best position to create these new entities. □

Comment

By Gary N. Kleiman

An Rx to Spur Global Financial Services

In the past year, the Basel group of central bankers has proposed capital and supervisory guidelines for international financial operations that have been poorly received by the securities industry and developing countries.

Suggested equity ratios for ensuring competitive fairness between securities dealers and banks' trading arms have again been spurred by International Organization of Securities Commissions after repeated attempts to adopt a common approach.

Consolidated oversight rules embraced last year in the wake of the Bank of Credit and Commerce International scandal have barred the expansion of Latin America-based and Asia-based groups, notably in the United States, where the principles are embodied in the Foreign Bank Supervision Enhancement Act.

Harmonization Hindered

At a time when the world banking system faces an "uncertain focus," in the words of the Bank for International Settlements, the lack of global and intrinsically cooperation is glaring, and endangers progress toward harmonization through the current international agreement on Tariffs and Trade talks and other initiatives.

Government and professional bodies can inject needed momentum by creating a separate forum dedicated specifically to advancing financial service convergence across the range of business and geographic lines.

Worldwide, the universal banking model is increasingly the norm. In Europe, the "single passport" equips institutions to lend and deal on equities and insurance throughout the region.

In Japan, the barriers between commercial and investment banking have eroded under recent statutory reform.

In the United States, banks' Article 20 subsidiaries, authorized under the Glass-Steagall Act, have moved aggressively into debt and equity underwriting.

Expansion Quelled

In developing countries, too, financial liberalization and modernization continue apace, with officials striving to bolster international oversight standards for capital adequacy and other areas. Perhaps the nation offering the best example of this supervisory commitment is Mexico, which has pledged under the North American Free Trade Agreement to match the style of rigor in the United States and Canada.

Yet, an application by industry giant Banamex to open a branch in Miami was denied earlier this year under the foreign bank supervision act, because of the alleged absence of consolidated local and overseas monitoring by Mexican authorities.

Following this rejection, other Latin American institutions, fearful their regulators would not pass muster either, withdrew their expansion plans.

Cooperation Needed

At the same time, the Basel committee and the securities commissions organization remain at loggerheads over minimum capital requirements, and their lingering dispute has undermined potential collaboration on other fronts.

Tired of the acrimony which has characterized relations between the two panels, European Community banking and securities officials have pushed ahead with their own directive to go into effect next year. Before his resignation, former Securities and Exchange Commission Chairman Richard Breeden criticized the formula as insufficient to protect investors.

Toward a Turnaround

To resolve these difficulties, which have bred conflict among financial officials in both the developed and developing world, they should meet to charter a new body for truly global financial service cooperation both functionally and regionally.

Their intent should be not to add another layer of multilateral bureaucracy, but instead to fold groups which have to date championed sectoral and hemispheric interests into a unified organization.

This fresh start for multilateral efforts offers a chance to reverse today's spiral of mutual recrimination.

The dangers posed need not be self-inflicted by regulatory division when a high degree of solidarity can be harnessed to ensure smoothly functioning cross-border and cross-selling activity. □

Chemical, Chase, and BT Issue $350 Million of Debt

By DAVID SIEGAL

Chemical Bank, Chase Manhattan Corp., and Bankers Trust New York Corp. raised a total of $350 million in subordinated debt on Friday.

Chemical issued $150 million of 12-year subordinated bank notes. The notes were priced to yield 6.67%, a spread of 85 basis points over the 10-year when-issued U.S. Treasury note.

Salomon Brothers was lead manager for the issue, rated A3 by Moody's Investors Service Inc. and A by Standard & Poor's Corp.

Chase Manhattan Corp. sold $150 million of floating rate subordinated notes in the Euromarkets. The issue has a coupon of 15 basis points under the London interbank offered rate.

The note also has a minimum rate of 5.5% and a maximum of 9%, which together are called a "collar."

Savings of 10 Basis Points

Market sources said the collared floating rate issue allowed the bank to save about 10 basis points, compared with the cost of issuing fixed-rate debt and swapping it into a floating rate payment stream.

Kidder Peabody International lead managed the issue, which was rated Baa2 by Moody's and BBB plus by Standard & Poor's.

Bankers Trust New York Corp. issued $100 million in convertible capital securities. The securities start as 40-year subordinated debt with a 7.5% yield.

The bank has the option of lowering the rate by 1.5 percentage points. At that time, investors can opt to exchange the debt for preferred stock, with a dividend equal to the debt's original rate.

Bank of N.H. Readies 600,000 Share Offering

MANCHESTER, N.H. — Bank of New Hampshire Corp. said it filed a registration statement with the Securities and Exchange Commission for an offering of 600,000 common shares and up to 90,000 additional shares to cover over-allotments, if any.

The company said it plans to use a portion of the net proceeds for capital contributions to its banking subsidiary, and to use the balance for other corporate purposes.

The company said it has about 3.4 million shares outstanding. □

CREDIT RATINGS

The ratings agencies took the following actions last week:

Bank of New York: Duff & Phelps Credit Rating Co. upgraded the debt ratings of the Bank of New York Co. and its major subsidiary, Bank of New York.

The parent company's senior debt was raised to A from A-minus, its subordinated debt was lifted to A-minus from BBB-plus, and its preferred stock was upgraded to BBB-plus from BBB.

The upgrades reflect the bank's improving asset quality, solid reserve coverage measures, strong earning power, ample capital strength, and reduced risk profile.

The bank now derives about half of total revenues from a number of fee-based businesses that add stability to its revenue streams, the ratings agency said.

CoreStates Financial Corp.: Moody's Investors Service Inc. confirmed the credit ratings of CoreStates Financial and subsidiaries, following the announcement that CoreStates will acquire Constellation Bancorp of Elizabeth, N.J., which has $2.3 billion in assets.

Moody's has an A-1 rating for the senior debt of CoreStates Capital Corp., which is guaranteed by CoreStates Financial, and an A2 rating for subordinated debt.

Moody's expects a modest negative effect on capital and asset quality associated with the acquisition, but said CoreStates should remain strong.

The acquisition should also reinforce the company's market position in New Jersey, and should provide in-market cost savings.

First Interstate Bancorp: Duff & Phelps raised the ratings of First Interstate and its major subsidiary banks, and is keeping them on rating watch for a possible upgrade.

The holding company's senior debt was raised to A minus from BBB plus, subordinated debt was raised to BBB plus from BBB, and preferred stock was raised to BBB from BBB minus.

At the subsidiary level, the ratings for all rated banks have been upgraded, with the certificate of deposit ratings raised to Duff1 and the long-term deposit ratings to A.

The rated banks include First Interstate Bank of Arizona, First Interstate Bank of California, First Interstate Bank of Oregon, First Interstate Bank of Texas, and First Interstate Bank of Washington.

Duff & Phelps is no longer tiering the banks' ratings. Formerly the Arizona and California banks had been rated one level below the Oregon, Texas, and Washington banks.

The upgrades reflect improved nonperforming asset levels, improvement in reserve coverage of problem loans, strengthening of core profitability and capital measures, as well as the reduction in parent-company double leverage.

Keycorp: Duff & Phelps raised Keycorp ratings, and those of Key Bank of New York, its principal subsidiary. Keycorp senior debt was raised to A from A-minus, subordinated debt to A-minus from BBB-plus, preferred stock to BBB-plus from BBB and commercial paper to Duff 1 from Duff 1-minus.

Bank of New York's upgrades reflect asset quality, Duff & Phelps said.

Duff & Phelps said, "the rating upgrades reflect Keycorp's solid operating and profitability fundamentals. Geographic diversification and a commercial loan workout unit's ongoing focus have helped Keycorp maintain better-than-average asset quality and an overall lower risk profile."

SunTrust Banks Inc.: Standard & Poor's Corp. revised its ratings outlook on SunTrust to "positive" from "stable." Standard & Poor's also affirmed its ratings on SunTrust's senior debt at A-Plus; senior/subordinated debt, filed under a Rule 415 shelf registration, at preliminary A-Plus/A, and commercial paper at A-1.

Standard & Poor's said the outlook revision reflects SunTrust's proven ability to main-

STOCKS
Big Banks Becalmed In Summer Slowdown

By RICHARD LAYNE

Shares of major banks slid into the August doldrums last week, but merger fever lit a fire under the stocks of some small banks.

For the five trading days that ended Thursday, the *American Banker* index was off 0.27%. The Dow Jones industrial average dipped slightly more, to 0.52%. Bank shares were mixed Friday, while the Dow gained 11.46 points to close at 3,560.43.

Bank shares are expected to be more or less flat again this week.

Prices are expected to be more or less flat again this week.

said money managers and analysts.

"The dog days of August are setting in," said Judah Kraushaar, an analyst with Merrill Lynch & Co.

One reason for last week's lackluster trading and this week's similar forecast is that money managers are still digesting the second-quarter earnings reports. Some big banks reported record trading profits and big gains in venture capital activity. The question money managers are still debating is how sustainable are those sources of revenue.

"A lot of the action in bank stocks is from money managers repositioning their holdings," said David Sloan, a trader at SIFE Trust Fund in Walnut Creek, Calif.

Last week's dull trading, however, was considered good news.

"The week was quiet, but at least bank stocks didn't give up ground," said James Schmidt, who runs the Freedom Regional Bank Fund in Boston.

Unlike previous quarters, bank shares haven't nosedived after the release of quarterly earnings.

"Shares of a few big banks had sizable moves last week.

Chase Manhattan Corp.'s shares jumped 6.9% to $33.625 in late-afternoon trading Friday. Earlier in the week, Frank Suozzo, an analyst at S.G. Warburg & Co., issued a report on the bank that said it had the best prospects for total return in the industry over the next six to 12 months.

CoreStates Tumbles

Mr. Suozzo's price target is around $42, or 10 times his 1994 earnings estimates. Given that appreciation and the dividend yield, he calculates the total return from Friday's share price at around 32%.

The shares of Corestates Financial Corp. tumbled 4%, to $54.75, after the bank announced it would acquire Constellation Bancorp. in Elizabeth, N.J., last Monday.

Investors were unhappy with the high price CoreStates paid and the slight dilution of CoreStates' book value that the merger will cause. But even more, they expressed dissatisfaction with CoreStates' record on acquisitions.

The Philadelphia bank accepted 8% dilution in its earnings per share when it acquired New Jersey National Bank. While the more recent acquisition of First Pennsylvania made more economic sense, CoreStates ran into a nest of bad loans there.

Focusing on Targets

Nevertheless, the deal for Constellation kept investors focused on mergers.

"In the past few weeks, we've seen a lot of merger announcements," said Mr. Sloan. "That lit a fire under potential takeover names."

The shares of other New Jersey banks climbed up again last week. These shares have been running up since bank stocks came out of their slump in mid-June.

"New Jersey will be a battleground state," said Mr. Schmidt.

Shares of UJB Financial Corp. gained $1.875 last week, or 7%, to $28.875 in late trading Friday. The shares had dipped to $22 in mid-June, after a prolonged sell-off, but are now near their 52-week high.

Midlantic's shares gained only 87.5 cents last week, to $25, but its share price is higher than in mid-April. In mid-June, the shares traded around $18.

Takeover Speculation

Oklahoma banks continued to be the focus of takeover speculation. In late trading, Liberty Bancorp.'s shares were up 50 cents, to $34.50., a 4.5% gain on the week.

The remaining independent banks in Texas had a quiet week, after a torrid three weeks. For example, Cullen/Frost Bankers shares were unchanged at $38.50 last week. But in the past month, the shares have jumped 13%. □

CAPITAL
Citicorp Plans Big Debt Offering

Continued from *page 1*

by the audience," said one bond analyst.

"They've come a long way in the past few years, and it was sort of safe to come out and sit down with fixed-income analysts again," said Michael O'Brien, a bond analyst with Fidelity Investments.

Citicorp faces ideal conditions for a new debt issue. Its bonds have rallied strongly in the last two months. The bank's 7¾% 10-year subordinated notes on Friday were bid to yield 90 basis points over the 10-year U.S. Treasury note, compared with a 120-basis-point premium when they were issued, according to Kidder Peabody & Co.

$1.1 Billion Issued

So far this year, Citicorp has issued $1.1 billion in subordinated debt. Joseph Labriola, a bond analyst with Kidder Peabody, estimated Citicorp will issue another $800 million to $1 billion this year.

Mr. Jones told analysts that any debt issued by Citicorp this year will replace existing debt, meaning the company is looking to cut its interest expense rather than raise additional capital.

Mr. Labriola recommends buying Citicorp bonds because the bank has the potential for big earnings improvement, will likely have credit ratings upgrades in the next few quarters, and has little risk of credit deterioration.

Profitability Rising

Mr. Jones discussed Citicorp's rising profitability in the last two years, which has stemmed from

An issue of $250 million to $500 million is expected.

declining loan-loss provisions and expenses and growing trading earnings.

The bank's operating earnings in the first half of this year were $816 million, compared with $326 million of net income in the first half of 1992.

Citicorp's reserve coverage of cash-basis commercial loans has risen from 22% in the 1991 first quarter to 63% at the end of June, and its Tier 1 capital has risen from a weak 3.7% at the end of 1991 to 5.7% at the end of June.

Mr. Jones said the bank plans to continue building reserves. Still, Citicorp's reserve coverage is far below the 156% average for the nine money-center banks covered by First Boston Corp.

In another bright note, the company's Citibank subsidiary may be close to being categorized as "well-capitalized," a classification that would reduce its deposit insurance premiums.

The main roadblock now is an outstanding memorandum of understanding it signed with regulators, putting it under close scrutiny. A spokesman declined to say when the memorandum might be lifted.

But otherwise, the bank has met the criteria for "well-capitalized" banks. Its ratios now have climbed above the minimum requirements of 5% leverage capital, 6% Tier 1, and 10% total capital.

Mr. Jones said Citicorp's global reach in consumer banking and trading differentiates it from other U.S. banks, and will support future earnings improvement. □

First Interstate Deal

First Interstate Bancorp said it will buy San Diego Financial Corp., parent of San Diego Trust and Savings Bank, for about $340 million in stock.

The acquisition would triple Los Angeles-based First Interstate's deposit market share in San Diego to 9%. San Diego Financial has $2 billion in assets.

Merger Wave Sweeping into Keystone State

By KAREN GULLO

Expansion-minded suitors are moving quickly to consolidate Pennsylvania's banking industry, according to experts in the Northeast.

Nearly a dozen small and medium-size banks and thrifts are sprinkled throughout the state. Those with assets of $1 billion to $15 billion are expected to be swept up in mergers, as has already happened in Florida, Georgia, and some other states.

The suitors will come from Pennsylvania and elsewhere, according to analysts.

The Keystone State's largest banking institutions – PNC Bank Corp., Mellon Bank Corp., and CoreStates Financial Corp. – are seeking fill-in acquisitions, across its wide expanse.

Meanwhile, big regional banks from New York, New Jersey, and Maryland Ohio are also scouting with fervor.

The prize is demographics. Pennsylvania is rich in small and medium-size businesses, has a relatively well-educated population, and borders six other states.

Assorted Strategies

"We'll see a combination of in-market mergers as well as acquisitions by out-of-state banks seeking contiguous market share," said James P. Benson, research director at Ryan, Beck & Co., Philadelphia.

Some analysts believe that some of the state's bigger banks also will be acquired quickly.

Thomas Hanley, who follows large banks for First Boston Corp., is betting that Integra Financial Corp., a $13 billion-in-asset Pittsburgh-based company, will be scooped up relatively soon.

Meridian Bancorp, a Reading-based regional bank with $12 billion in assets, is also considered a likely takeover target.

And even Philadelphia-based CoreStates, with $23 billion in assets, would be a valuable franchise for a New York or New Jersey bank, banking sources said.

The Search for Revenue

In some respects, consolidation in Pennsylvania is happening for the same reasons as it is everywhere else, according to Mr. Benson.

Potential acquirers are trying to broaden revenue streams by acquiring new franchises, and

Drop in Rates Could Put Banks in Bind, Analysts Say

By GORDON MATTHEWS

No sector in the stock market has benefited more from falling interest rates than the banking industry. But some analysts are warning that any additional declines might backfire.

The reason: Many banks, assuming rates recently hit their lowest point, have positioned themselves for a gradual rise in money market rates late this year and into next year.

But short-term and long-term rates fell Monday, apparently in response to congressional passage of President Clinton's economic program over the weekend.

Long Bond at New Low

The benchmark 30-year Treasury bond hit a new low. In afternoon trading, its yield was at 6.47%.

If the trend continues, "there will be unpleasant consequences for bank investors," said Stephen Berman of NatWest Securities Corp.

Mr. Berman and a handful of analysts who share his views remain in the minority. Indeed, bank stocks rallied Monday along with the rest of the market.

But these analysts are convinced that banks have already derived all the possible benefits of falling rates.

"The wearing out of the funding advantages and credit quality improvements carried over from 1992 is an increasing threat to bank earnings," he noted.

During the past two years, as the cost of funds fell faster than

Chemical Glitch Leads To $350,000 ATM Fraud

By MATT BARTHEL

Computer problems related to Chemical Banking Corp.'s merger with Manufacturers Hanover Corp. allowed more than $350,000 in fraudulent transactions to be made at the bank's automated teller machines, according to internal documents obtained by the *American Banker*.

The fraud incidents, which number almost 1,000, arose when some Chemical ATM cardholders found they could withdraw cash without its being debited from their accounts.

A series of Chemical memos indicates that system conversion problems last spring – specifically in transferring control of Hanover ATMs to Chemical's computers – were responsible for the security lapses.

'Bug in the Software'

On May 11, the day when Hanover's ATMs were linked, "there was apparently a bug in the software which allowed customers who opened new accounts and received a temporary ATM card to obtain credit card advances where no credit linkage was ever established," one memo said.

The memo goes on to say that 974 fraudulent transactions oc-

NEWS *briefs*

RTC Approves the Sale of 3 Failed Thrifts

WASHINGTON — The Resolution Trust Corp. has approved the sale of three failed thrifts.

Household Bank of Newport Beach, Calif., will assume $119 million of insured deposits from $119 million-asset San Clemente Federal Savings Bank. Household paid the RTC $382,595 for the deposits and paid an additional $31.5 million for the same amount of cash, cash equivalent, and share loan assets.

Separately, Summit (N.J.) Bank paid the RTC $4.6 million for $87.6 million of deposits from the failed Marine View Federal Savings Bank in Middletown, N.J.

Summit is also buying $40 million of the failed thrift's assets. Marine View Federal had $93.3 million of assets when it failed.

Also, First Commercial Bank, Birmingham, Ala., agreed to pay the RTC $888,889 for $53.1 million in deposits of failed Birmingham Federal Savings Bank. First Commercial is also buying $19.9 million of the failed thrift's assets. Birmingham Federal had $52.6 million in assets when it failed.

Argentina, Citicorp Seek a Later Deadline

NEW YORK — Argentina and Citicorp have asked the nation's creditor banks to extend the deadline for reconciling $7 billion in past-due interest payments to Oct. 29 from Sept. 1.

Domingo Cavallo, minister of the economy, and William R. Rhodes, vice chairman of Citibank, said Friday the extension was necessary because of the complex reconciliation process and the consequent difficulties some banks and agents were having in determining the amounts due.

Argentina paid $770 million and issued more than $6 billion in 12-year bonds into an escrow account on April 7, pending distribution to creditors. The country will separately swap some $19.3 billion in debts to commercial banks for bonds at a discount on either interest or principal.

Senior bankers warned last week that the deal on past due interest could wind up in Federal or New York State court unless creditor banks moved quickly and agreed to an extension before Sept. 1.

MBank Executives in $39 Million Settlement

DALLAS — Insurers of 26 former executives of the failed MBank Dallas paid $39.2 million to settle regulators' potential claims stemming from the bank's 1989 collapse, according to a published report.

The Dallas Morning News reported that the payment is the largest on behalf of officers and directors of a failed bank.

Officials with the Federal Deposit Insurance Corp. told the newspaper that three insurance companies representing the officers and directors made the payment earlier this week.

The settlement is not an admission of wrongdoing, liability, or fault, but it releases the former bank executives from potential legal action brought by the FDIC and frees the federal agency from possible counterclaims, the newspaper said.

Bank regulators seized MBank Dallas and 10 other MCorp banks in March 1989 because of troubled assets.

Earlier this year, former officials of the failed First Republic-Bank Corp paid $23 million to the FDIC.

Mercantile Establishes Flood Loan Fund

ST. LOUIS — Mercantile Bancorp. has established a $10 million fund for low-interest consumer loans to flood victims in Missouri, Illinois, and Kansas.

The company said the fund will offer unsecured loans of up to $5,000 at 8% interest for five years and secured loans of up to $25,000 at 6% interest for 10 years.

Snyovus Unit Buys Birmingham Deposits

COLUMBUS, Ga. — Synovus Financial Corp. has acquired the deposits of Birmingham Federal Savings Bank.

The Birmingham Federal offices in Vestavia and Roebuck will operate as full-service banking centers of First Commercial Bank, Synovus said.

At June 30, Birmingham Federal had deposits of about $49 million. With the assumption of Birmingham Federal's deposits, First Commercial Bank's assets will exceed $400 million. First Commercial Bank now has nine locations in Birmingham.

Fleet Mortgage Lending Up 59% for July

COLUMBIA, S.C. — Fleet Mortgage Group Inc. said its loan production totaled $2.2 billion in July, 59% more than a year earlier.

Retail production soared 95%, to $1 billion. Correspondent production hit $1.2 billion, up 39%.

Loan production through this year's first seven months was $12.1 billion, up from $10.4 billion in the comparable 1992 period. Retail production was up 30%, to $5.4 billion. Correspondent production rose to $6.7 billion, from $6.3 billion.

The briefs were compiled from staff and wire reports.

Sears Hiring Civil Rights Group To Scrutinize Its Lending for Bias

By CLAUDIA CUMMINS

Walter Klein Jr.
Heads mortgage unit

WASHINGTON — Sears Mortgage Corp. is planning to hire a civil rights group to help stamp out any racial bias in its huge lending operation.

The pending deal between Sears, the nation's seventh largest mortgage originator, and the National Fair Housing Alliance, a Washington-based nonprofit organization, is a potent example of the growing cooperation between lending institutions and their former adversaries.

The alliance's members have filed lending discrimination suits against a number of banks.

Recently, it won a contract worth around $1 million from the Department of Housing and Urban Development to look for lending bias by mortgage lenders in three undisclosed cities.

8 Months of Negotiations

The program being discussed would include a review of Sears' underwriting guidelines and application procedures, lengthy training of loan officers and others that come into contact with the application, and testing.

Sears and the alliance have been negotiating the contract for about eight months. All that remains is for it to be signed, said Shanna Smith, director of programs at the civil rights group.

Sears spokesman Larry A. Costello confirmed that the two groups are negotiating, but declined to comment on specifics.

'High Credibility'

Sears chose to work with alliance, he said, "because they are known for their high credibility and professional approach."

Sears Mortgage Corp., headed by Walter Klein Jr., was the seventh largest mortgage originator in 1992. The Vernon-Hills, Ill.-based company funded $5 billion in residential mortgages in the first half of the year. PNC Bank Corp. announced in May that it plans to buy the company and close the deal by yearend.

The National Fair Housing Alliance, a network of about 60 grass-roots fair housing groups around the country, is the only national advocacy group that focuses exclusively on education and enforcement of fair-housing laws.

Based in Washington, the three-year-old network has worked closely with the Department of Housing and Urban Development in its efforts to deter discrimination in all aspects of housing, including lending.

Members of the National Fair Housing Alliance have sued a number of banks.

Works Closely with HUD

The alliance investigated homeowners insurance companies for HUD. It also has worked closely with HUD as the department develops a specialized unit that will focus exclusively on lending discrimination.

Ms. Smith said the group sees no conflict of interest in contracting with both the government and the industry to test lenders for discrimination. In fact, the group hopes to use the Sears program as a prototype for training and testing with other mortgage companies and banks.

"We intend to develop a good nationwide program for mortgage-lending training," she said.

Already, the group is talking with a major mortgage lender in the South about a similar contract, Ms. Smith said. And several other banks have contacted the alliance for advice on fair lending, she added, although the group has not entered formal contracts with any of them.

"Our goal is to eliminate housing discrimination, and you do it two ways: education and litigation," Ms. Smith said. While the alliance's members will continue to bring lawsuits against lenders that they believe have discriminated, she said, the testing program will protect lenders to some extent.

"Our goal is not to file as many lawsuits as we can," Ms. Smith said. "It makes more sense to have a working relationship between the fair housing centers and the lenders."

Will Scrutinize Guidelines

Ms. Smith said she hopes the Sears program will be completed by year-end. It will begin by scrutinizing Sears' underwriting guidelines, training manuals, advertising and outreach.

Sears will pay the group $300 per hour for this analysis, which will be conducted by a Toledo, Ohio-based expert in fair-lending litigation.

"What we try to explain to the lender is all the points where they are at risk," Ms. Smith said.

The alliance will hold a two-day training session for Sears' loan officers, underwriters and appraisers. NFHA will charge $3,000 per day, plus expenses, for the training sessions.

Testers

The alliance will hire individuals to pose as mortgage applicants to see whether blacks and whites are treated differently. This phase will demonstrate whether or not the revised policies and training have been effective, Ms. Smith said.

Beyond the training program, the two groups hope to establish a close, ongoing relationship, Ms. Smith said. □

Chemical Loses $350,000 in ATM Fraud

Continued from *page 1*

curred with a total dollar amount of approximately $357,000.

A Chemical spokesman confirmed the existence of the fraud, but declined to elaborate on its size or the cause.

The losses, much of which Chemical is now trying to recover from its customers, highlight the high stakes involved in merger-related computer conversions.

In addition to giving customers access to credit card accounts that did not exist, software glitches resulted in customer accounts being erroneously linked to one another.

The bank was slow to identify the fraud because response time on the systems that Chemical uses to research irregular transactions has been hampered by a move to new computer hardware. Hanover's old research system is being moved to the Tandem Computer Inc. systems that run Chemical's ATM operations, the memo indicated.

The conversion problems created a backlog that kept the bank from promptly identifying the existence of fraud, said bank officials who requested anonymity.

Employees Involved?

Chemical declined to comment on a suggestion in one of the memos that bank employees also were initiating some of the bogus transactions.

The improper transactions are an extension of ATM-related problems that Chemical has been having since April. Since then, many of the bank's customers frequently have been unable to withdraw cash or obtain account balances.

When the problems first were reported last month, Chemical executives blamed the service lapses on ATM hardware failure and on complications in the card issuance process. They denied reports that the source of the ATM problems was the systems area.

Tracing the Thefts

The reason the bank expects to recover much of the money, sources said, is because it has records of the cards used to initiate the illegal transactions, and it also has photographs of the people withdrawing cash.

Bank executives, speaking on the condition of anonymity, indicated that as of the end of May, Chemical had solved the systems problems that had allowed the fraud.

But as previously reported, ATM service outages have continued.

Cardholders could get cash without their accounts' being debited.

Chemical executives now admit that these service lapses are the result of communications glitches that have developed as the bank has migrated to a new core software system.

Subpar Performance

While they declined to give specific performance levels for May, June, and July, Chemical executives indicated that ATMs were down more frequently in those months than in April, when the terminals were operating only 95% of the time.

Chemical, like most large banks, has internal standards that require its cash machines to be operational at least 98% of the time.

ATM performance reached its nadir in late July, according to bank officials.

ATM experts were critical of how the bank managed the consolidation of its cash machine network.

"Ordinarily, the type of problems that Chemical are seeing are fixed in 30 or 40 days and are then dismissed as things that routinely happen in a big merger," said one technology consultant familiar with Chemical operations, who requested anonymity.

Some industry observers also were skeptical of Chemical's earlier claim that its ATM problems were largely due to their aging fleet of cash machines manufactured by Omron Systems of America Inc., a company that withdrew from selling the machines in the United States in 1990.

"Omron machines, if well-maintained, are as reliable as any machines in the industry," said David T. Parfin, president of ATM Exchange Inc. in Cincinnati, a seller of used cash machines. "To suggest otherwise is ludicrous." □

Merger-and-Acquisition Wave Sweeping into the Keystone State

Continued from page 1

other opportunities – such as cheap thrifts from the Resolution Trust Corp. – are drying up.

Stronger Numbers

Some acquirers who prefer to make purchases through stock swaps also want to move quickly while the market gives them high valuations.

Improving profitability in Pennsylvania also plays a role.

Pennsylvania's 211 commercial banks earned 12.2% on average common equity last year, up from 10.5% in 1991, according to Ryan Beck. Asset quality is also improving. Nonperforming loans plus foreclosures represented 3.15% of the banks' total loans plus other real estate owned in this year's first quarter, compared with 4.11% a year earlier, according to data on the state's 316 banks and thrifts compiled by Ferguson & Co.

"Most of the Pennsylvania banks have put their credit-quality problems behind them," said Bernard M. Markstein 3d, chief economist at Meridian Bancorp.

The consolidation wave has already hit institutions with $2 billion or less in assets. Five banks and eight thrifts in this category were consolidated into other organizations last year, according to Ryan Beck.

The pace remains brisk this year.

Two weeks ago PNC Bank Corp. announced its intention to acquire First Eastern Corp., a $2.1 billion banking company with 51 branches in and around Wilkes-Barre, in the northeastern corner of the state. The transaction is a stock deal valued at $330 million, or two times book value.

Shareholders of First Financial Corp., a $1.2 billion bank in Wilkes-Barre, recently agreed to be acquired by Onbancorp, a $4 billion-asset bank company in Syracuse, N.Y. Onbanc has agreed to pay $138.4 million, or 1.4 times book value.

Meridian, the state's fifth-largest bank, announced in March that it will acquire Commonwealth Bancshares, a $2 billion company based in Williamsport. It is paying $349 million, or a hefty 2.23 times Commonwealth's book value.

First Eastern and First Financial were among the last independent community banks with assets above $1 billion in the Scranton/Wilkes-Barre area. Others have been scooped up over the last few years by PNC, Mellon, and Meridian, as well as by New Jersey banks such as UJB Financial Corp. and First Fidelity Bancorp.

Onbanc's Reasoning

"Wilkes-Barre had very similar demographics to our local markets," said Robert J. Bennett, chairman and chief executive of Onbancorp.

His company, which opened a regional lending office in Wilkes-Barre three years ago, was waiting for the right acquisition to come along, Mr. Bennett said. First Financial gives Onbanc a No. 2 position in Luzerne County, with 14% share of deposits.

While Wilkes-Barre may now be picked over, several other towns are home to attractive takeover targets.

Analysts identified $2.2-billion-asset Fulton Financial Corp. of Lancaster, in the central part of the state. Also high on the list is Keystone Financial Corp., a commercial bank in Harrisburg, the state capital, with $3 billion of assets. □

Waiting for the Call

Pennsylvania banks seen as takeover candidates

	Assets ($ billions)	Market/ book value
Meridian Bancorp Reading	$12.2	155.6%
Integra Financial Pittsburgh	13.3	189.2

Carolina First Unit to Acquire Omni

GREENVILLE, S.C. — Carolina First Corp. said its Carolina First Bank unit had agreed to acquire Omni Savings Bank, a subsidiary of FirstFed Michigan Corp.

Financial terms were not disclosed.

A spokesman for Carolina said the company had agreed to assume Omni's $40 million in deposits but was still negotiating over Omni's $45 million in assets.

The spokesman said the difference between the deposits and assets that Carolina agrees to assume will determine the purchase price.

Carolina said it will acquire all three branches of Omni, which is based in Columbia, S.C. The company said the acquisition is subject to regulatory approval and is expected to be completed by yearend.

Southern National Takes a Risk Buying Big S. Carolina Thrift

By KENNETH CLINE

From the Regions

SOUTHERN NATIONAL Corp. took a bold and chancy step last week by agreeing to buy the largest independent thrift remaining in South Carolina.

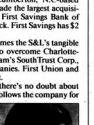
The move will dramatically increase Southern National's market share in the Palmetto State – at the expense of a merger-related charge that will about equal its projected earnings for 1994.

Southern National, a Lumberton, N.C.-based company with assets of $5.2 billion, made the largest acquisition in its history by agreeing to buy First Savings Bank of Greenville, S.C., for $181 million in stock. First Savings has $2 billion of assets.

The purchase price – equaling 1.74 times the S&L's tangible book value – was aggressive enough to overcome Charlotte-based First Union Corp. and Birmingham's SouthTrust Corp., according to sources close to the companies. First Union and SouthTrust officials declined comment.

They paid a full premium for it – there's no doubt about that," said Christopher Marinac, who follows the company for Interstate/Johnson Lane in Atlanta. "Whether it's excessive is really too early to tell. It's going to be a function of how much they can cut in expenses and how much they can actually realize in earnings going forward."

Southern National's shares were trading unchanged Monday afternoon at $20.75 a share, after falling 12.5 cents on Friday, the day after the merger was announced. Shares of First Savings on Monday were unchanged at $15.875 after rising 50 cents to $16 after the merger was first announced.



L. Glenn Orr

Southern National anticipates that it will reap about one-fifth of its 1994 earnings – which analysts project at about $100 million – from the Greenville thrift. But much of that will be wiped out initially by a $77 million after-tax restructuring charge that First Savings is putting on its books.

"It's basically a three-year payback to earn our equity back," said Hal Johnson, Southern National's director of strategic planning.

Southern National feels the wait is worth it, since it will be able to compete in South Carolina with market leaders such as NationsBank Corp., Wachovia Corp., and First Union.

Entering the Major Leagues

Before the transaction, Southern National was a minor player in the state, with 25 branches and $650 million in assets. It ranked only No. 12 in share of deposits in the state. Incorporating First Savings of Greenville's 57 offices will boost its market share to number three statewide.

Equally important, Southern National will rank number one in Greenville, the center of South Carolina's prosperous Piedmont region. Indeed, Southern National said it will move its South Carolina headquarters to Greenville, which is booming with new auto and textile plants, from Columbia after the merger.

Some analysts warned, however, that First Savings of Greenville is far from an ideal expansion vehicle. It earned $10.7 million in its fiscal year ending June 30, for a slim 0.53% return on assets.

Southern National is betting it can raise this return to 1% next year, in part by consolidating the combined company's two data-processing and mortgage-servicing centers. But the typical in-market savings that come from closing overlapping branches won't be available because the companies share few common markets.

"Going from 0.53% to 1% ROA in the first year is optimistic," said Mr. Marinac, the Interstate/Johnson Lane analyst.

Some analysts believe First Savings accepted Southern National's bid over First Union's in part because of its gentler approach.

Nevertheless, L. Glenn Orr Jr., Southern National's chairman and chief executive, toured New York last week to tell investors and analysts that his company would cut about 250 of First Saving's 1,230 employees.

Quayle Joins Start-Up In Financial Services

By ROBYN MEREDITH

WASHINGTON — Former Vice President Dan Quayle is teaming up with the chairman of the Federal Housing Finance Board and a former official there to start a financial services holding company in Indianapolis.

R. Matthew Neff, former deputy to the chairman of the finance board, is the chief executive of the new company, Circle Investors.

Mr. Quayle is chairman of Circle's six-member executive committee, on which finance board chairman Daniel F. Evans Jr. also holds a seat.

Finance board rules allow Mr. Evans and other board members to participate in other business activities because all board seats at the agency are part time.

Planning and Products

Circle plans to offer "cradle to grave" financial planning and products, Mr. Neff said. Toward that end, the company will acquire a life insurance company or companies, he said.

Mr. Neff resigned from the finance board on July 2 to start Circle Investors and to rekindle his financial institutions practice at the Indianapolis law firm of Baker & Daniels, which he left when he joined the finance board.

"We are going to take life insurance products, and we're going to build them out," said Mr. Neff, who conceived of the company and is running its day-to-day operations.

The goal is developing new products "so that families will be better able to handle the major financial events in a life – educating children, long-term health care, and retirement financial needs," he said.

Longtime Associates

Insurance companies are allowed to join the Federal Home Loan Bank system, which the finance board regulates.

If Circle Investors joined the system, Mr. Evans would have to divest his share of the company, a finance board official said.

The other three Indianapolis-based investors and members of Circle's executive committee are Allan B. Hubbard, who is chairman of the Indiana Republican Party and was Mr. Quayle's deputy chief of staff in the White House; William R. Neale, a longtime friend of Mr. Quayle who was active in Indiana in the Bush/Quayle reelection campaign, and Randolph P. Wilson, a director of National City Bank of Indianapolis and a former counsel to Mr. Quayle. □

Boatmen's Acquires First Continental

ST. LOUIS — Boatmen's Bancshares Inc. said it completed the acquisition of First Continental and Trust of Overland Park, Kan.

First Continental has about $185 million in assets, Boatmen's said.

Point Counterpoint

John LaWare

Wayne Angell

The Federal Reserve Board this month approved First Hawaiian Inc.'s purchase of Pioneer Federal Savings Bank in the bank's hometown of Honolulu. Since First Hawaiian, at $7 billion of assets, is the state's second-largest bank company, and Pioneer the second-largest thrift, questions arose about the effect on competition. Some local thrifts and credit unions also objected to the deal. The majority of the Fed governors approved the merger, however, saying its public benefits would outweigh any adverse effects. The board also noted that the Justice Department did not object. Two governors filed statements that spelled out some central issues of the debate.

Statement of Governor John LaWare:

I dissent from the board's action in this case.

This is the second acquisition in Hawaii for First Hawaiian Inc. within the last 2½ years.

While I voted in favor of the acquisition of First Interstate of Hawaii, also of Honolulu, by First Hawaiian, I felt at that time that the proposal represented the upper limit of permissible concentration in these highly concentrated banking markets.

This acquisition [of Pioneer Federal] would further substantially concentrate the already highly concentrated Hawaiian banking markets and, when viewed in light of First Hawaiian's previous acquisition, represents in my view a significantly adverse lessening of competition.

The anticompetitive effects of this trend are particularly troubling in light of the barriers to potential competition imposed by Hawaii's decision not to permit interstate banking acquisitions.

I am also unable to find any significant competitive developments in these markets that would mitigate my concerns. I would therefore deny these applications.

Statement of Governor Wayne Angell:

I concur in the board's decision in this case.

While I dissented from the board's decision to approve a previous acquisition by First Hawaiian, I believe that a number of factors differentiate this case and, on balance, warrant approval of this proposal.

First, since the last acquisition by First Hawaiian, a major commercial bank holding company [BankAmerica Corp.] has entered the five Hawaiian banking markets.

Entry of this bank holding company should increase competition and indicates a method by which others may enter into the Hawaiian banking markets.

In addition, unlike the previous case – which involved the acquisition of a bank – Pioneer Federal Savings Bank ..., is a thrift institution that, while having the authority to engage in commercial lending, is not actively engaged in commercial lending.

Thus, First Hawaiian's acquisition of Pioneer should increase the availability of small-business loans and other types of commercial loans in the Hawaiian banking markets.

For these reasons and the reasons stated in the board's order, I believe that consummation of this proposal would not have a significantly adverse effect on competition in any of the Hawaiian banking markets.

Georgia Banker Is Reluctant Turnaround Artist

By TERRENCE O'HARA

ROSWELL, Ga. — James H. Powell likes to press the flesh and chat with customers at a local deli, the conversation sauntering with the ease of his Georgia drawl from the hot weather to how business is.

He doesn't cut the figure of a turnaround artist – a man who slashed his staff by a third, excised $5 million in nonperforming assets, and revamped an organization that was run more like a favor bank than a community bank.

"I've never thought of myself as a turnaround guy, and I don't want to see myself that way now," Mr. Powell said.

"I've been asked to do it at other banks, but I don't want to do it again. I want to stay here."

Miracle Worker

Just three years after taking control of Northside Bank and Trust Co. in this affluent suburb north of Atlanta, Mr. Powell has worked miracles on problems he never thought he would confront in banking.

In his first year, 10% of the loan portfolio went bad. The company was bleeding money. The regulators said flatly in September 1991 that despite its enviable 13.9% capital cushion, Northside would not survive on its own.

"It was a scary time," said Northside chairman Trummie L. Patrick, a Roswell insurance agent. "Jim took us through it incredibly.

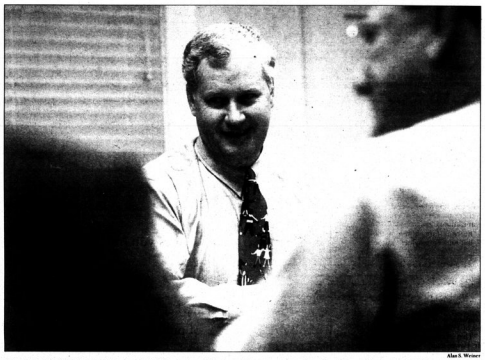
"I think that he's the best banker I've ever known, and probably the best banker in Georgia."

"There's no question about it," said Georgia's commissioner of banking and finance, E.D. "Jack" Dunn. "They've done a good job. Management is the secret in any bank like this."

Hard Decisions

Mr. Powell wasn't always basking in such praise. He's made some hard decisions about his employees and his customers to keep Northside independent.

Northside was started in 1986 by Tom Perdue, a well-known Georgia politico who had been two governors' chief of staff.



Alan S. Weiner

JAMES H. POWELL didn't realize that Northside Bank and Trust would need major surgery. "I don't want to do it again," he says.

Mr. Perdue's plan was to form four banks around Atlanta and merge them under a holding company, Southern Bank Group Inc.

Mr. Perdue raised a whopping $32 million, $12 million more than required by state law to start four banks. The biggest capitalization was for the flagship Northside Bank, which got $10 million.

"It was a great plan," Mr. Powell said ruefully. "The execution was poor."

New Blood

Northside exploded to $142.4 million in assets by 1990 and was making loans all over the state, 33% of them real estate construction and development loans.

The bank posted its first, albeit questionable, profit in 1988: $400,000.

But by the first quarter of 1990, with recession looming, problem loans mushrooming, and the Federal Deposit Insurance Corp. making noise about Northside's management depth, Southern Bank Group's board asserted itself by bringing in some new blood.

Mr. Powell had spent his entire 21-year career to that point at Trust Company Bank of Georgia, most recently as president of its Cobb County bank.

But in 1989 Trust Company consolidated most of its county banks, and Mr. Powell began seeking an independent bank that needed a chief executive. He picked Northside "because it had a good plan," he said.

But "within six weeks, I realized the problems were significant."

The atmosphere at Northside was palatial – wet bars in the executive offices, a boardroom that was one of the fanciest in the county. ("I don't even want to know how much that cost," Mr. Powell said, pointing to the huge, circular mahogany table in the boardroom.)

But the bank "just wasn't what it appeared to be," Mr. Powell said. "They had all these big names running the show. It was like a facade – a pretty front with no substance."

By the end of 1991, nonperforming assets had ballooned to $8.2 million, or 7% of assets, from just under $2 million in 1989.

In two years, 1990 and 1991, Northside charged off $3 million in loans, took $3.34 million in loan-loss provisions, and lost $1.84 million.

At the worst, after a September 1991 federal examination, nearly one of four dollars in loans was classified and the bank had $4 million in other real estate owned.

Mr. Powell and Laurice Tatum, a Florida banker brought in just before him to take over credit administration, say the staff was at a loss when problems hit in 1990.

Though the recession's impact on real estate values hurt the bank, most of its problems were caused by poor underwriting, Mr. Tatum said.

"There were reams of loan files with no credit memoranda

PEERLESS

Continued from *page 6*

in them," he said. "I spent the first few months I was here going through every loan file, only to realize there was nothing in them."

Mr. Powell said there were loan officers with "zero experience." Employment at the company appeared to be based on patronage, with the coveted jobs "going to cousins, or friends, or whatever." Some staff members were making more money than their superiors.

Founder Departs

By the end of 1991 Mr. Perdue had resigned, returning to politics. One board member said the holding company, it's multibank aspirations unfulfilled, "simply couldn't afford his salary."

Mr. Perdue, who made $150,000 a year as chief executive of the holding company, declined to be interviewed for this article.

Once Mr. Powell was firmly in control, he made some significant changes. One was firing the 14-person staff of the holding company, which had abandoned its effort to become a multibank organization.

The bank hired three of the 14, but total employment at the company went from 92 at the end of 1990 to 63 a year later.

The worst was laying people off, says Northside's CEO.

"That was the worst part," Mr. Powell said. "Laying people off or reducing their salaries."

Nonperformers Slashed

Meanwhile Mr. Tatum had set about cleaning up the loan portfolio.

The immaculately groomed executive takes special pleasure in making things right.

He acknowledges a "sadistic interest in problem loans" and came to an interview with 10 pages of notes detailing what he wanted to say.

"I go after past-dues with vengeance," Mr. Tatum said.

"I think he'd collect on anybody, no matter who," said Mr. Powell.

Northside's nonperforming assets have been reduced by two-thirds. The bank was released from an FDIC memorandum of understanding in February, 17 months after it was issued.

In the Black

In late 1992, the bank became profitable again. It made $318,000 last year, and so far this year has made $239,000 with no loan-loss provisions.

Only three out of 18,000 credits were past due at midyear, and the high-rate jumbo deposits used to grow the bank in the early years have been bled off.

Northside now is considering new branch sites, is offering mutual funds and is on the verge of launching its own credit card.

With the cleaning job done, Mr. Powell can look back on why he stuck it out.

"I know a lot of bankers in Georgia, and I think I have a pretty good reputation," he said. "I just didn't want anyone to think that I couldn't do it." □

'There Are Very Few People Still Mad at Us'

By TERRENCE O'HARA

ROSWELL, Ga. — When James Powell and Laurice Tatum, respectively CEO and chief credit officer of Northside Bank and Trust Co., got here in 1990, they might as well have worn buttons on their lapels that screamed, "Pay Up!"

Mr. Powell "likes to say that I'd foreclose on my mother if she was late by 30 days," Mr. Tatum, the point man for much of Northside's cleanup, said with a laugh.

Tight-Knit Community

But the aggressive workouts created relatively little ill will in this tight-knit community, Mr. Powell said.

When he lunches at the local delicatessen, he's heartily welcomed by patrons who still do business with the bank. And his children and Mr. Tatum's children hang out with those of borrowers.

Northside's workouts created relatively little ill will, the bank's CEO says.

Mr. Powell says the good will reflects the success of the bank's founders in establishing it as a community fixture.

"That's the one thing they did right," Mr. Powell said. "They marketed this institution to make it a key part of this community, and they succeeded."

Mr. Powell said that despite its problems, Northside remained the premier community bank in suburbs north of Atlanta.

Throughout 1990 and 1991, its core deposits remained steady as management bled off high-cost deposits and went after nonaccruals with a vengeance.

A key reason was Northside's board. Only two directors resigned, one being Tom Perdue, the Georgia politician who was the driving force behind the bank's formation.

"This has been a very cohesive board," said bank chairman Trummie L. Patrick, a local insurance agent. "We all hanged tough."

"There are very few people who are really still mad at us," Mr. Powell said. "Even though this is a very personal business, you can't get emotional."

HIGH YIELD REPORT

lets you hear the heartbeat ...

...and feel the pulse

of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt

This objective, succinct, weekly newsletter delivers money-making tips on high-yield investments.

A Portfolio Value Rule Has Gone by the Boards

By EDWARD KULKOSKY

Pipeline

WHAT'S A MORTGAGE servicing portfolio worth these days?

Recent major transactions haven't shed much light on the topic, except to make it clear that the long-standing rule of thumb of 125 basis points is obsolete.

GE Capital Corp.'s purchase of the Shearson Lehman Hutton Mortgage Corp. portfolio, for example, appeared to be priced at about 40 basis points, a big bargain. But observers pointed out that the deal included liabilities as well as assets, so the effective price could not be determined without a look at the acquired company's balance sheet.

The 125-point rule of thumb apparently developed during periods of stable interest rates and delinquencies and moderate prepayments. This stability made the value of servicing easy to predict.

But life isn't so simple anymore. The long decline in interest rates has caused a fire storm of refinancings that continues to devastate servicing portfolios.

Now experts say the industry has quite properly given the thumb to the old rule of thumb. Instead, every underlying mortgage should be evaluated, they say. That's between 8,000 and 9,000 loans for each $1 billion of servicing.

* * *

Countrywide Credit Industries is getting to be a bit of a bore.

Every month brings from the company another remarkable success story. The latest is that its mortgage pipeline – applications being processed – has swollen to $9.1 billion.

Just a month ago, the figure was $8.1 billion, something previously unheard of in the industry. That means it will soon be reporting originations of more than $5 billion a month, something also previously unknown.

Back in May, Countrywide shares plunged 2 points, to $28 a share, when a prominent analyst removed his "buy" rating. But the company has since gotten votes of confidence from others, the latest being Standard & Poor's Corp., and the stock has rebounded to about $32.25.

* * *

The rules put in place by the Department of Housing and Urban Development to implement the Real Estate Settlement Procedures Act have stimulated a lot of talk about one-stop shopping for real estate and mortgage services – known more ponderously as vertical integration.

In their present form, the regs appear to facilitate such integration. But in the real world, developments have for various reasons been a mixed bag.

Network Financial Services of San Jose, Calif., has been making acquisitions to build a one-stop shopping capability. And in Minneapolis, Rottlund Cos., a home builder, has announced it is forming a mortgage company.

On the other hand, the mortgage and realty brokerage units of Sears, Roebuck and Co. are no longer under the same roof. And San Francisco-based Grubb & Ellis Co., which has a home-loan brokerage business, has sold its residential realty brokerage offices in Northern California as it continues to shed such brokerage businesses.

So one-stop shopping is idea whose time has yet to come.

Pulse of the Market

Unexpected Economic Weakness Leads to Drop in 30-Year Rate

By CHRISTOPHER NOBLE

Mortgage interest rates fell last week in response to slower-than-anticipated economic growth, reversing the preceding week's surge.

"I think the markets calmed down a little after Alan L.Greenspan's comments, and everything's back in perspective," said David Lereah, chief economist for the Mortgage Bankers Association of America.

Last week, rates on 30-year fixed rate mortgages fell 6 basis points to 7.25%, erasing slightly more than half of the gain recorded the week before, according to HSH Associates, Butler, N.J.

Information Leaks Cited

The rate decline was expected, and most industry experts said they believed continued slow growth would keep levels low for the forseeable future.

Mr. Lereah said a series of information leaks from the Federal Reserve Board indicated to him that Fed chairman Greenspan was retreating from his threats to raise short-term interest rates and that markets had responded with a rally, driving rates down.

The rate on 30-year loans fell 6 basis points, to 7.25%.

Meanwhile, the MBA refinance index continued to climb. The index reached 1,312 for the week ending July 30, up from 1,304 the preceding week.

An index value of 100 corresponds with the level of March 1990. The value is calculated as a moving three-week average.

Charles Shaffer, president of Mark Twain Mortgage of St. Louis, said the last week had produced yet another rise in refinancings.

"We never expected rates to go this low, and we never expected it to last this long," he said of the refinancing boom.

Over the past 18 months, many borrowers have taken advantage of the low rates to move from 30-year mortgages to 15-year mortgages.

With rates so low, homeowners can pay off the mortgage in half the time while barely increasing monthly payments.

According to a survey by the Federal Home Loan Mortgage Corp., 33% of homeowners who refinanced their 30-year loans chose 15-year loans to replace them.

Fully 83% of homeowners refinancing 15-year mortgages chose to stay with the shorter term mortgages, the highest repeat rate since 1987. □

2 Origination Systems May Herald a New Era

By JAMES H. SAFT

If two new electronic systems for originating home loans are successful, the way mortgage lenders and borrowers find each other could be changed significantly.

GHR Systems of Wayne, Pa., and Smart Mortgage Access of Hinsdale, Ill., are two new entrants in the growing field of computerized loan origination systems. The systems are networks that will allow lenders and homebuyers to hook up directly at real estate offices.

An amendment to the Real Estate Settlement Procedures Act of 1974 that took effect Jan. 1 allows real estate brokers to receive fees for processing applications. It also permits lenders to pay referral fees to employees of other companies owned by the same parent.

Linking Lenders to Agents

This is expected to open the field to computerized loan origination.

GHR Systems, founded by two Wharton School professors, has designed the MARS Independent Network, a loan origination system that will be open to all real estate companies and lenders.

Under the system, real estate professionals will be able to provide consumers with an array of loan rates and payment scenarios. The real estate agent, using the computer system, will handle the loan application and be able to monitor it as it moves toward approval.

Pacts and Partnerships

Real estate agents and lenders participating in the system will make agreements to work together, according to Gerald Hurst, vice chairman and cofounder of GHR, so that an agent may, for instance, end up working with four lenders.

A standardized fee will be disclosed to the borrower at the point of sale.

GHR already has commitments from three lenders for the program.

Whereas GHR will train real estate agents and provide and maintain an infrastructure through which they will work with lenders, Smart Mortgage Access wants develop partnerships with realty companies to provide point-of-sale mortgage service.

Smart Mortgage Access, targeting real estate offices with 35 to 40 agents, will seek partnerships that would employ a mortgage counselor to handle originations. Each partnership will offer the loan products of 10 to 15 lenders, according to David Buckman, executive vice president of Smart.

As with MARS, the mortgage counselor will receive a standard fee, to reduce the possibility of steering.

A unique feature is that the Smart system will undertake to process, underwrite, and close the loan, presenting the lender with a finished product.

The loan counselor will prequalify the loan and complete the application at the point of sale, passing the documents on to an independent provider, which will underwrite and close the loan. The loan would then be delivered to the lender.

Mr. Buckman said he believes that the system will help to level the playing field, from the point of view of mortgage providers. "It's getting harder for loan officers to get through the door at real estate offices, and this is one way to get access." □

Housing Aide 'Inscrutable' at Hearing

By SNIGDHA PRAKASH

WASHINGTON — The hearing last Friday on the regulations for the Real Estate Settlement Procedures Act wasn't quite the donnybrook that everybody expected.

Mortgage bankers seemed more preoccupied with sizing up Nick Retsinas than with the substance of the testimony. Was the new assistant secretary of housing, who presided over the hearing, with them or the other side?

While industry representatives spoke their minds on the controversial rules, everything remained civilized and orderly. The session even ended a bit ahead of schedule.

A Careful Listener

Jackettless in a sea of blue suits, Mr. Retsinas was almost like a psychotherapist in his noncommital demeanor.

Listening carefully and taking notes, he perked up when the combatants lapsed into plain English. But he gave no clue as to how he felt.

Norman D. Flynn, past president of the National Association of Realtors, drew Mr. Retsinas' attention when he likened the dispute over the legitimacy of referral fees to a "family spat" between realty brokers and mortgage bankers.

'Looked Us in the Eye'

Warren Lasko, executive vice-president of the Mortgage Bankers Association, said he found Mr. Retsinas impressive but "inscrutable."

"He looked us in the eye. He clearly seemed to be listening," said Mr. Lasko. "He's got a good technique for not showing his hand."

Bankers are Bullish on Mutual Funds

BayBanks' Big Leap Meant a Training Blitz

By MICHAEL O'D. MOORE

The way John J. Arena of BayBanks sees it, "you can't inch your way into mutual funds."

So when the Boston-based banking company launched its own no-load mutual funds last spring, a training blitz was on.

Between December and March, the bank put 3,000 employees – about half of its work force – through mutual fund sales and referral seminars that lasted one to five days.

"This was a huge, herculean task," said Mr. Arena, president of BayBanks Investment Management. In fact, he said, it was the largest and fastest training program in BayBanks' history.

Tricky Logistics

Taking employees off the line for days at a time was a logistical nightmare, Mr. Arena said. "We commandeered the training center for January, February, and March."

Training accounted for a large chunk of the $5 million the Boston-based bank spent developing its proprietary funds, which have $1 billion in assets.

"Just the Xeroxing cost alone would surprise you," Mr. Arena said.

BayBanks linked up with Performance Systems Inc., a Boston-based training firm, to develop a manual and other materials to teach employees at all levels of the bank about the funds.

Primary responsibility for selling the BayFunds rests with 35 sales representatives, most of whom hold series 7 stockbroker licenses from the National Association of Securities Dealers.

An Emphasis on Promotion

But to build referrals, BayBanks wanted employees throughout the banks to understand and promote the funds. Thus, branch employees, officers, and the bank's 24-hour telephone sales and service staff all needed training.

Performance Systems, which has worked with companies like Fidelity Investments, had to step lively to develop the program. "They were hiring people at the same time we were developing the training," said John Roberts, a development specialist.

The goal was to pare the training to the basic compliance and selling skill elements that each group needed, he said.

For 2,000 employees who received the most extensive training, BayBanks provided a thick home-study manual, said Rick Lyman, the BayBanks training manager who led the effort.

Employees had to study the information and pass a test before being admitted to educational sessions. The days spent in training emphasized the application of skills, Mr. Lyman said.

One particularly successful facet of the training involved role-playing sessions, he said. With trainers taking the part of customers, the trainees made mutual fund presentations. Videotapes allowed employees to see themselves and their colleagues in action, and to critique one another's techniques.

The process encourages employees to share accumulated knowledge about bank customers, Mr. Roberts said. □

"You can't inch your way into mutual funds."

Distributors' Fund Role at Banks Is Pivotal and Varied

By KEITH DuBAY

More than 100 banks manage their own families of mutual funds, and they all need an outside partner to act as "distributor." But how do they choose? And what exactly does a distributor do, anyway?

Distributors perform a variety of legal and marketing tasks that are off limits to banks under the Glass-Steagall Act.

The distribution function is often overlooked in the rush to put mutual fund companies like Dreyfus and Goldman Sachs will do the job for banks. At the other end of the spectrum are specialty firms such as Concord Holding Corp. and Alps Securities Corp. All distributors are registered broker-dealers.

David Raub
Sought legal expertise

Distributors have legal departments that handle registrations with state and federal regulatory bodies. Distributors also prepare the prospectuses that are mailed to potential investors.

Some of the companies go a step further, helping banks to develop and carry out marketing strategies.

Earlier this year, Boulevard Bancorp in Chicago had to pick a distributor when it launched its Boulevard Fund family. It was an unusually small startup, with only $100 million.

Boulevard looked at several different distributors before settling on Federated Investors. A big attraction was Federated's expertise in legal and compliance matters.

"If there was one thing we needed to be strong in, it was legal," David Raub, Boulevard's senior vice president and trust manager. "We wanted to feel we were dealing with someone who could tell us authoritatively about what the regulatory response was likely to be, and we've been quite pleased." Mr. Raub said.

Federated also provided advice on how to organize, train, and motivate the bank's in-house sales staff.

Because Boulevard was not set up to administer and service its own fund, it looked to Federated for that also.

Mr. Raub recommends that banks "make sure your sales culture is in place before you start. If we hadn't started five years ago, we would have gone to a lot of trouble for nothing."

Task Force Often Used

The process of choosing a distributor starts with a task force of three or four people who will be responsible for the mutual fund effort.

The task force studies the market and meets with prospective distributors to determine their strengths and weaknesses.

W. Robert Alexander, chairman of Denver-headed Alps Securities, advises banks to check out the back shop operations. Be convinced, he advises, that the necessary staff is in place to handle legal and compliance issues and to produce prospectuses.

Bankers should also quiz prospective distributors on how they can integrate a program into the bank's operations, said Dennis McGonigle, a senior vice president at SEI Corp.

The Wayne, Pa.-based company provides mutual fund distribution services to many banks, including Banc One Corp., Columbus, Ohio.

'3d Party' Guide Offered to Banks

By KAREN TALLEY

American Brokerage Consultants has published its 12th edition of the "Bankers Guide to Third Party Securities & Annuity Programs."

The guide, produced semi-annually since 1988, describes the services, products, and programs of scores of marketing companies that supply investment products to banks.

The guide is "the only publication that brings together all the data banks need about these companies," said Richard A. Ayotte, managing partner of American Brokerage Consultants, St. Petersburg, Fla.

Mr. Ayotte's firm is also updating its "Bankers Guide to Mutual Fund Companies & Packaged Products."

This publication covers more than 20 major companies that distribute more than 500 mutual funds through banks on a retail level.

First Financial Setting Sights on Grocery Stores

By JEFFREY KUTLER

First Financial Management Corp. has opened another front in its drive to dominate in transaction processing.

And this one has nothing to do with its recent headline-making catch of Sears, Roebuck and Co.

Sears represented a coup for First Financial's Nabanco subsidiary, which was tapped to process MasterCard and Visa sales in all Sears stores beginning Aug. 1. But that potentially sizable chunk of merchant-processing business may ultimately be dwarfed by First Financial's new target: the supermarket industry.

Key Acquisition

To go after this relatively untapped market, First Financial announced a definitive agreement on July 28 to acquire IBT, a consulting firm that has helped financial institutions install branches inside about 600 grocery stores in 34 states.

IBT and First Financial, each based in Atlanta, expect to close the deal within a month, pending antitrust clearance under the Hart-Scott-Rodino Act.

IBT will join other First Financial units in "an integrated product offering and sales strategy approach to supermarkets," said Patrick H. Thomas, chairman, president, and chief executive of the fast-growing processing firm.

IBT — it is an acronym for International Banking Technologies — "has significant relationships with a significant number of the major supermarkets in the country," said Donald Y. Sharp, senior vice president at First Financial.

Basket of Services

"We have a lot of services – such as check verification, credit card authorization, point-of-sale systems, coupon fulfillment – to offer that market, and IBT brings us into contact with a lot of potential customers," Mr. Sharp said.

The company's supermarket clients include Kroger, Safeway, Albertson's, Ralph's, and Winn-Dixie.

Whereas the Sears contract brought about 1,800 stores into the Nabanco point-of-sale network, there are 138,000 supermarkets, many of them just beginning to consider taking bank credit and debit cards.

Nabanco is especially interested in the 30,000 large stores that account for 75% of total grocery sales, where the economies of scale pay off.

"These superstores handle over 18 billion transactions per year," Mr. Thomas said.

"IBT has active relationships with 56 of the top 200 retail food companies, which represent over 10,000 stores," Mr. Thomas added. IBT has had more limited relationships with 46 other retailers that have 4,000 stores.

Contributing to the planned "integrated product offering" would be IBT as the supermarket liaison; Nabanco as bank card processor; Telecheck, which provides check verification services; Microbilt, which markets card-reading terminals for retail points of sale; and First Image, an image processing company.

By combining resources, First Financial said it can handle all credit card, debit card, and check transactions, with technical linkages to supermarkets' internal computers, the automated clearing house network, and various information systems and services.

"All of these consumer services will be based on an electronic solution offering greater efficiency, functionality, and flexibility in a cost-effective manner," Mr. Thomas said.

IBT has not only been bringing bankers and supermarket operators together – a business in which its closest rival is National Commerce Bank Services Inc., a unit of National Commerce Bancorp. of Memphis.

Spreading the Word

IBT has taken on the role of champion of the in-store branching concept. Its missionary work has included organizing an interest group – the In-Store Bankers Alliance; an annual conference on the subject, where it gives an award to in-store branch manager of the year; and a running count of supermarket branches, which stood at 1,749 on June 30.

About 3% of all U.S. bank branches are in supermarkets, and advocates like IBT say they have barely scratched the surface. A store's traffic typically ranges from 15,000 to 30,000 shoppers a week, and the banks stay open for them far longer than normal banking hours, often seven days a week.

Some bankers have become true believers in supermarkets' business development potential.

Star Bank in Cincinnati is typical, with staff at store branches who spend most of their time selling in the aisles. The bank is primarily opening

Visa Close to Taking Full Control Of Merchant-Assistance Center

SAN FRANCISCO — Visa U.S.A. announced that it had entered the final phase of its transition to the direct management of its merchant assistance center.

The center, which provides support services to Visa banks' merchant customers, has been operating under a five-year outsourcing contract with POS Systems Inc. of Tempe, Ariz.

Visa took over the management functions on July 6 and has scheduled a complete transition for November. The 24-hour center provides point-of-sale equipment installation and training, support and management of data-capture terminals, and after-hours help-desk services.

Visa said POS Systems will continue to provide terminal support services through the transition period. Visa plans to maintain a working relationship with POS Systems for specific projects and services.

The assistance center and its associated help desks "have grown dramatically" over five years, said Jeffrey C. Connelly, senior vice president of Visa U.S.A.

"POS Systems has proven to be a valued business partner, and they will play a key role in providing [merchant bank services] as we continue to grow," he added. □

Equifax Completes Integratec Deal

By JEFFREY KUTLER

The credit bureau paid $23 million for the debt collector.

Equifax Inc. said Monday that it completed its acquisition of Integratec Inc., a debt-collection outsourcing company, for $23 million.

The agreement in principle was announced last month, but the price and related details were not disclosed.

Complementary Programs

Equifax, one of the leading credit bureaus, is aiming to provide a "total solution" to customers' marketing and risk management needs, said Thomas F. Chapman, executive vice president and group executive of Equifax Financial Information Services.

Integratec's debt-collection, telemarketing, and teleservicing, application processing, and customer retention programs are seen as complementary to Equifax's core business and its credit card processing operation.

More than 800 Employees

"Integratec's impressive market presence will significantly enhance Equifax's ability to market a more comprehensive range of innovative information-based products and services," Mr. Chapman said.

Equifax and Integratec, both based in Atlanta, had 1992 revenues of $1.1 billion and $32 million, respectively. Integratec will add more than 800 full-time and part-time employees – the number fluctuates and has been up to nearly 1,000 – to Equifax's 12,000 in the United States, Canada, and Europe.

Donald K. Griffin, an Integratec founder who now is senior vice president and general manager, said the company's joining Equifax will "provide our clients with much more powerful and complete solutions in accounts-receivable management, telemarketing, and full credit card servicing." □

First Financial Setting Its Sights On Supermarkets

Continued from page 12

demand deposit accounts, executive vice president Phillip A. Parker said in a recent report put out by IBT.

"We look at the checking account as the linchpin," Mr. Parker said. "Once we have it, we have the basis for cross-selling additional products and services."

Attention, Shoppers

Doug Ferris, who runs National Commerce Bancorp.'s supermarket banking unit, told *American Banker* earlier this year that his in-store bankers are college educated and make 15% to 20% more money than tellers. They make money for the bank by playing the supermarket promotion game.

"They use the public address system a lot, and they get requested above the produce section, the meat section, and elsewhere."

"In-store banking is a bottom-line retail solution," John W. Garnett, IBT executive vice president, said recently.

"For each fifth the cost to build a traditional branch, a financial institution can get into an in-store location," he added. "Now more than ever, cost-conscious, results-driven bank executives are looking for [such] opportunities to impact market share."

Branching Out

IBT traces its history to 1983 when Heritage Bank of Atlanta began experimenting with branches in Kroger stores. The bank was owned by Virgil R. and James M. Williams, who, based on Heritage's growth through in-store branching, formed IBT in 1985.

Other principal officers included Craig Gieler, who came from Kroger Co. and left about three years ago, and John Garnett, formerly of Heritage Bank and First National Bank of Atlanta.

IBT chairman Virgil Williams, a prominent Atlanta businessman who served on the First Financial Management Corp. board from 1985 to 1989, rejoined it when the IBT acquisition was agreed to. □

The Industry Has a Stake In Reform of Home Loan Banks

Despite its many other priorities, the Clinton administration is moving ahead on its community development agenda. This includes urban revitalization, elimination of mortgage bias, creation of a new community development fund, and toughening the Community Development and Reinvestment Act of 1977.

For banking, the key question is whether this program will add to or alleviate the industry's own problems – increased regulatory burdens, reduced profit margins, and diminished loan portfolios.

Meeting Goals Faster

Fortunately, there is another legislative goal, that, if properly framed, could put the administration, the banking industry, and consumer and community development interests on the same side. That issue is Federal Home Loan Bank System reform.

Mr. Britt is an associate at Furash & Co., Washington, a management consulting firm specializing in the financial services industry.

Unlike frontal assaults on the Community Reinvestment Act, which pit lenders against consumers and big banks against small, this issue could further everyone's goals. It could also give banking what it most needs: a way to reduce the regulatory costs of community lending.

The administration's community reinvestment initiative identifies all the right goals, but Home Loan Bank System reform is a quicker and more effective way of achieving them.

THE PRESIDENT's *community reinvestment initiative identifies all the right goals, but Home Loan Bank System reform is a quicker and more effective way of achieving them.*

The Issue

Last year, Congress enacted the government sponsored enterprises bill. In addition to updating Fannie Mae's and Freddie Mac's capital standards, this law ordered a comprehensive review of the third housing government sponsored enterprise – the Federal Home Loan Bank System.

Four government agencies and a special shareholder committee were ordered to evaluate the system in the context of today's mortgage market. They are to recommend any changes necessary for it to better serve that market.

These studies, originally due at the end of April, now are being completed. They will document the changes which have occurred to housing finance, including reduced multifamily, economic development, and minority lending.

They also will provide a new context for banking's call for regulatory relief. Because the fact is, banking and community lending and the Federal Home Loan Bank System are all suffering from the same problem: a regulatory environment which discourages local risk-taking. The fix for the system – an expansion of its credit powers – could provide the very relief that banking seeks.

The System

Among the Financial Institutions Reform, Recovery, and Enforcement Act's many changes was the opening of the Federal Home Loan Bank System to commercial banks and credit unions. So far, more than 1,700 banks have taken advantage of the system's low-cost funding and other community lending services.

Many have found its risk mitigation measures particularly valuable. Others have been undrawn to attractive member dividends, totaling $600 million in 1992. All in all, the system has been a good-news story for banking.

This is not to say that all is well with the system. It, too, is being undermined by some legislative burdens, such as an annual fixed tax of $300 million to help fund the Resolution Trust

Banks Must Learn to Juggle Their Wholesale and Retail Strategies

With the economic environment much more subdued than 20 years ago, many banks and thrifts have turned to wholesale activities to help offset the volatility that has been inherent in retail activities.

By diversifying in both the wholesale and retail arenas, financial institutions can improve their services to customers, enhance profitability, and maintain balance sheet stability.

Lending institutions have a basic challenge in working with retail customers. They offer borrowers the opportunity to prepay or refinance their loans, or both, yet they cannot revoke or "refinance" certificates of deposit, a major source of funding to support lending activity.

A Tough Sell

In the current low-interest-rate environment, it is difficult for banks to attract new CDs, though refinancing activity is rampant.

Should interest rates rise in the next several years, institutions that rely strictly on retail deposit funding may be forced to offer higher rates on short-term CDs, while they continue to accrue income at lower rates from their assets. This is the same combination that led to the thrift crisis of the early 1980s.

Regardless which direction interest rates move, however, wholesale banking can benefit financial institutions.

In fact, any diversification from a wholly retail strategy to a mix of retail and wholesale activities would be a more conservative approach to banking and place the bank in better control of its asset-liability mix.

Link to Capital Markets

Wholesale banking, by definition, involves raising and investing money on a retail level, as a community bank would normally do.

Superregional and money-center banks can issue debt in the capital markets to help fund their positions and manage the duration match (or mismatch) of their balance sheet.

While community bankers do not generally have access to the capital markets, they do have access to similar wholesale funding via membership in the Federal Home Loan Bank System.

By using Home Loan bank borrowings, known as advances, community banks can lengthen the duration of liabilities. Those advances require no FDIC premium, and are offered at attractive spreads to the Treasury market. Borrowings can be used to purchase securities with more predictable prepayment profiles than a retail loan might provide.

INSTITUTIONS *need to maintain operating flexibility in an ever-changing economic environment.*

A Better Mix

Financial institutions do not necessarily need to keep the assets they produce. A better mix of assets may be available via the capital markets. Bankers can entertain both fixed-rate securities and fixed-rate loans with maturity ranges that, absent a matched-maturity funding, would never otherwise be considered.

Thus, by borrowing funds at a wholesale level to support loan growth or investments in capital markets assets, the banker has largely insulated the balance sheet from the market risk problems posed by retail banking.

Needless to say, this wholesale approach is not intended to, nor could it, replace the community nature of retail banking. The two concepts are not mutually exclusive; indeed, they support one another.

When loan demand is weak and/or deposit flows are fast (like today), the availability of cost-effective funding and credit-risk-free assets (at a positive spread) provides great comfort to asset-liability managers.

When to Push Retail Side

Conversely, when loan demand is good and deposit flows are strong, the retail franchise can, and should, be pursued to

Reforming the Home Loan Banks

Continued from *page 14*

Corp.

Second, the system's membership rules are unequal, with commercial banks enjoying voluntary membership while thrifts must belong to the system whether they use it or not.

Also, the system is required to hold too much capital, especially given the collateralized nature of its lending. This reduces its ability to compete against other funding sources.

Finally, the huge growth in securitization is reducing the system's traditional role, lending on mortgages in portfolio. This market will continue to shrink under mark-to-market and interest rate risk capital rules. Yet portfolio lending is the key to overcoming mortgage discrimination and the multifamily and community credit crunch.

Banking's Stake

System reform presents a unique opportunity to redirect an existing government sponsored enterprise to serve today's community lending needs. Banking has a special stake in this debate, given increasing pressure on it to fill these credit deficiencies on its own.

The components for sound community lending have not changed: underwriting expertise, flexible and low-cost funding sources, and willingness to take some risk. What has changed in today's regulatory environment is the cost of this risk. It has gone way up – both in market terms and in regulatory terms.

The system already can provide much of what community lending needs, including asset-liability management, technical assistance, and low-cost funding.

It already has limited authority to lend for commercial and economic development purposes. What it cannot provide, however, is what lenders most need: a way to share the risk of holding nonconforming loans or enhance their ability to sell them.

There are a number of ways the system could fill this need. One is to authorize it to purchase all or parts of community housing and economic development loans. These could be held in the system's own portfolio or pooled and participated back to other members or third parties.

A second option is to give the system new credit enhancement authority in the underserved multifamily market. This could be guarantee or enhanced letter of credit authority, targeted to the low-income and moderate-income market most in need.

A third possibility is the creation of a new community bank subsidiary in the system, investment in which would be given CRA credit.

A Comprehensive Effort

These ideas could unlock the entire industry's capacity for change, without additional cost or risk to the taxpayer. But the effort would need to be comprehensive to succeed. The needs of the current membership as well as the market as a whole must be served. This means changes to the system's tax under the thrift rescue act and its unequal membership and capital rules.

Already in Place

Also, since the purchase or credit enhancement of assets would alter the system's risk profile, it would mean other structural changes as well. This would include, at a minimum, centralized credit controls and loan-loss reserves, so as to protect the system's credit rating.

Before authorizing any new community development entity, Congress needs to take a hard look at redirecting the Federal Home Loan Bank System to new purposes. The system is up, operating, and profitable.

It is a valuable and viable government-business partnership that commercial banks have joined. System reform is a far better alternative to another start-up funding mechanism that would have to be organized. System reform will put money to work in our communities quickly.

The benefits of comprehensive reform would extend far beyond the system – to banking, to communities, and to consumers. This would make system reform a win-win situation for all. □

Wholesale Activities Can Bolster Retail

Continued from *page 14*

its fullest.

Obviously, the value of a bank's franchise is a function, at least in part, of its local market penetration and its image in the community. To the extent that the bank serves its community with attractive loan products and competitive savings rates, its image in that community will be favorably affected.

The ability to offer these products, however, is determined by earnings, liquidity, and capital. These critical measurements can be greatly enhanced by the use of various wholesale-banking strategies as a supplement to local loan-deposit activity.

In order to be able to continue funding families and businesses, as it has done successfully for 60 years, institutions will need to maintain operating flexibility in an ever-changing economic environment. Wholesale banking will help them operate more profitably, and better serve their customers, in the years ahead. □

BankAmerica Offers Floating-Rate Debt With a 4.2% 'Floor'

By DAVID SIEGEL

BankAmerica Corp. joined the trend toward floating-rate subordinated debt with a $150 million issue on Monday.

The 10-year subordinated issue, priced at par, has a yield that floats at 5 basis points over the London interbank offered rate, with a minimum rate of 4.20%, called a "floor." Three-month Libor is currently 3.2%.

First Boston was lead manager of the issue, which is rated A3 by Moody's Investors Service Inc. and A-minus by Standard & Poor's Corp. It is noncallable for life.

With the BankAmerica issue, six banks have sold a total of $900 million of "floored" floating-rate subordinated debt issues this quarter, according to Securities Data Co. This is about half the $1.9 billion of publicly issued subordinated debt by banks this quarter in the U.S. market.

Attractive Features

Floored floating-rate debt attracts investors with its minimum guarantee, a feature that may float upward if prevailing rates rise.

Issuers opt for floored floaters because they can be a less expensive source of funding than offering a fixed-rate issue and contracting for a floating-rate payment stream. The structure was launched on July 8 in a $150 million issue by Chase Manhattan Corp. that was managed by Bear, Stearns & Co.

Elsewhere in the market, First Hawaiian Inc. on Monday issued $50 million of fixed-rate subordinated debt.

The seven-year notes were priced at 6.30%, 87.5 basis points over the seven-year Treasury note. Goldman, Sachs & Co. was lead manager of the issue, which is rated Baa1 by Moody's and BBB-plus by Standard & Poor's.

Bankers Trust's Bet On Derivatives Pays Off

Continued from *page 20*

gives the management another benefit if the index slips.

"If I mention to another company that we were thinking about doing some weird derivative, they'll say you must have been talking to Bankers Trust," said Dan Urbani, assistant treasurer at Air Products and Chemicals, Allentown, Pa.

Says Risk Decreases

That concentration on novelty carries risk.

"These instruments are more risky, and more difficult to hedge," said Ms. Azarchs. "They may be tied to more volatile and less liquid markets."

Mr. Walsh said that in fact the risk in Bankers Trust's derivatives portfolio has decreased in the past year and the business requires less capital now than 12 months ago.

And that's the real proof of a risk manager – rising profits and lessening risk.

Further Decline in Rates May Put Banks in a Bind, Analysts Caution

Continued from *page 1*

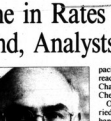
earning assets were replaced, bank net interest margins widened to record levels and industry earnings blossomed.

But now further declines in rock-bottom deposit rates seem remote. So the consequence of fresh declines in money market rates would be a decline in net interest income as returns on earning assets fall.

Rate stability would also put pressure on margins as the slow pace of asset repricing catches up with lower cost of funds, Mr. Berman said.

Analysts at Lehman Brothers noted that the median net interest margin for banks contracted 3 basis points during the second quarter to 4.86%. "Asset yields dropped more quickly than deposit costs," they said, especially yields on investment securities portfolios.

Mr. Berman said that for many banks' balance sheets, the best possibility would be a moderate rise in rates. That would help maintain rate margins by



Stephen Berman
Best scenario: mild rate rise

blunting the repricing of assets.

But there is also the risk that rising rates might deal a blow to the stock market that would surely hit bank shares.

"Should the market suffer a setback, it could quickly reveal that bank stocks are ripe for profit taking," Mr. Berman warned. He urged clients to focus on money-center banks with global funding and trading capacities whose earnings have not reached full potential – Citicorp, Chase Manhattan Corp., and Chemical Banking Corp.

Other analysts are less worried about the consequences for banks from rate movements.

Margins, a key ingredient of bank earnings, should remain wide for several reasons, Lehman's analysts said. Not only do assets reprice slowly, but loan growth is finally growing, with prospects for more assets.

Meanwhile, banks are "awash in liquidity" and will not have to compete for deposits to fund loan growth. Finally, competition has shrunk because of mergers and regulatory supervision of "irrational competitors."

Mary P. Quinn, an analyst at Keefe, Bruyette & Woods Inc., said that investors concerned with the near-term outlook for margins ought to "shake off their exaggerated interest rate anxieties and pay more attention to the improving fundamentals intrinsic to the industry."

Each of the 5,000,000 Depositary Shares (the "Depositary Shares") represents a one-tenth interest in a share of 6% Cumulative Convertible Preferred Stock, Series D, $500 liquidation preference per share (the "Series D Preferred Stock"), of H.F. Ahmanson & Company ("Ahmanson") deposited with the Depositary (as defined in the Prospectus) and, through the Depositary, entitles the holder to all proportional rights and preferences of the Series D Preferred Stock (including dividend, voting, conversion, redemption and liquidation rights). The proportionate liquidation preference of each Depositary Share is $50. The Series D Preferred Stock is convertible by the holder at any time prior to the close of business on the tenth day prior to the redemption date, if any, into Common Stock of Ahmanson at a conversion rate ("2.05465 shares of Common Stock per share of Series D Preferred Stock (equivalent to 20.5465 shares of Common Stock per Depositary Share) and a conversion price of $24.315 per share of Common Stock), subject to adjustment under certain conditions. See "Descriptions of the Series D Preferred Stock—Convertibility" in the Prospectus Supplement.

Price $50 Per Depositary Share
(Plus accrued dividends, if any, from the date of original issue)

Copies of the Prospectus and the related Prospectus Supplement may be obtained in any State in which this announcement is circulated only from such of the undersigned as may legally offer these securities in such State.

Stocks Reach A Record High

By DAVID SIEGEL

A surprising rally in the bond market pushed rates to record lows, triggering a surge in stock prices to historic highs. The yield on the 30-year Treasury bond finished at 6.47% Monday afternoon, down five basis points from Friday's close, and the lowest yield since the Treasury began issuing the long bond in 1977.

In when-issued trading, the 30-year bond to be auctioned on Thursday fell to 6.39%.

Trading volume was light, with short-covering responsible for much of the drop in rates.

Many participants stayed on the sidelines ahead of Thursday's $11 billion auction of 30-year bonds.

Unexpected Turn

The rally took most observers by surprise. Analysts had expected stocks and bonds to post marginal gains, at best, following the Senate's passage late Friday of the deficit reduction bill.

Instead, optimism over the president's budget victory and over the rally in bonds sent blue-chip stocks racing to a record.

The Dow Jones industrial average rose 15.65 to 3,576.08, topping an all-time high of 3,567.70 set July 26.

Broader indexes also gained but stayed below their all-time highs.

But smaller stocks, as measured by the Nasdaq Composite Index, set a fourth straight record high. That index rose 0.41 to 718.49.

Bank Stock Table Explained: The table lists in alphabetical order the composite stock prices as of 4:30 p.m. Eastern time yesterday for the 225 largest publicly traded commercial banking firms and for the 25 largest publicly traded thrifts, as measured by the market value of common shares outstanding. As of June 30, 1993, the market value cutoff for banks was $75.06 mil. and for thrifts $244.20 mil.; **52 Wk Hi** is the moving 52-week high and low closing prices through the end of the previous week; **PE to Ne** is the net share price divided by the trailing four-quarter net profit per share adjusted for latest announced earnings. The ratio is annualized for companies with less than four quarters of data; **Mkt Cap. bank:** the ratio of the current day's closing price to the stock's most recent four-quarter net profit per share, adjusted for latest announced earnings and dividends; **Last:** The price at which the last trade was made; **Chg.** The change in price from the day before. **BOLD TYPE indicates** 1) weighted average of the top 225 banks in market value and the top 25 thrifts in market value, respectively; 2) highlights new target companies added to the table and new index indicators; most shares traded and today's volume as a percentage of average shares traded; NM: not meaningful.

Data source: SNL SECURITIES, Charlottesville, Va. 804/977-1600, produced the tables. Financial News Network, Inc. provides SNL with the daily prices.

BT's Bet on Derivatives Business Paying Off

By RICHARD LAYNE

NEW YORK — There is a revolution going on in corporate finance, and Bankers Trust New York Corp. is leading the charge.

Using complex financial instruments called derivatives, it is helping corporations like Shell Oil Co. and Johnson & Johnson dramatically change their financing methods while protecting against fluctuations in interest rates and currency values, or even in the values of products and investments.

Shell, for example, recently needed to finance a new oil field. Traditionally, it would have borrowed the money or issued bonds. But Bankers Trust advised Shell to raise funds by selling some of the oil before it was produced, by using prepaid forward contracts.

As a bonus, Shell was able to lock in a price for its major revenue source, a dramatic change from the usual crapshoot of selling oil on the open market.

The Door to Knock On

Transactions like that have made Bankers Trust one of the biggest dealers in swaps, options, and other derivatives. And many corporate treasurers regard the bank as the most innovative player in the market, the door to knock on when complex risks need to be hedged with novel products.

"I see Bankers Trust leading a revolution," said Eugene Barron, assistant treasurer at Johnson & Johnson.

The revolution is internal as well. In the past few years, Bankers Trust has abandoned lending as a major source of revenue, reshaping itself as a risk manager. In so doing, it has moved even further into investment banking and away from its roots as a commercial bank.

"We are derivative missionaries," said Brian E. Walsh, 39, co-head of Bankers Trust's derivatives business and joint manager of the global investment bank, the company's umbrella group for worldwide capital markets and finance.

Dependent on Derivatives

Some other banks, including J.P. Morgan and Citicorp, are also emphasizing risk management, but by the $4 trillion derivatives market. But no other bank's capital and earnings are as tied to these products as Bankers Trust's. Indeed, nearly three-quarters of the company's before-taxes net income last year came from derivative dealing and related activities.

Bankers Trust's evolution into a derivatives powerhouse has not been seamless. Unlike some rivals, the bank does not have the credit rating. It has suffered the body blows of defections. And even now, analysts worry about the amount of risk Bankers Trust assumes in supplying derivatives products.

Paying Off Big

So far, though, the bet on derivatives is paying off big.

Raphael Soifer, an analyst with Brown Brothers Harriman & Co., calculates that the net income from managing clients' risk has grown from a loss of $33 million in 1988 to a $228 million profit last year. During that same period, Bankers Trust's net income from lending moved in the opposite direction: from $344 million in profits to a $23 million loss, said Mr. Soifer.

Derivatives and related trading last year provided $431 million in net income before taxes, or 68% of total profits. The comparable figure for Morgan was 56%, according to Mr. Soifer.

15% of Capital at Risk

"Derivatives are more important to Bankers Trust than any

> **"I see Bankers Trust leading a revolution."**
>
> **Eugene Barron**
> *Johnson & Johnson*

other bank," said Mr. Soifer.

That dependence is evident in the amount of capital at risk from derivatives positions. Tanya Azarchs, an analyst at Standard & Poor's, estimates that in the first quarter of this year, $600 million of the bank's capital, or 15%, was at risk. At Morgan, the percentage of capital at risk is 11%, Ms. Azarchs said.

If anything, derivatives will become more critical to Bankers Trust. It has recently been politicating other business lines with derivatives experts.

'A Way of Life'

Lucy Rinaldi, an expert in foreign-exchange derivatives, is now in charge of the internation- al private bank. Lisa Polsky, a former risk-management executive, will be creating investment funds that use derivatives. Richard Marin spent several years in derivatives and is now head of the bank's retirement services.

"They are focused on derivatives as a way of life," said Mr. Barron of Johnson & Johnson.

Aided by Bankers Trust, Johnson & Johnson has issued $50 million and $100 million of medium-term notes at lower-than-expected rates. The trick: include an option or forward that lets an investor place a bet on the direction of interest rates.

Switch Hasn't Been Easy

Bankers Trust hasn't always doted on derivatives. Nor has its strategic shift been a breeze.

Throughout the 1980s, risk management took a back seat to lending and foreign-exchange trading. Back then, Bankers Trust was the leading source of leverage buyout financing and was Kohlberg Kravis Roberts & Co.'s lead bank.

The emphasis on lending, combined with internal squabbling and turf battles, may have convinced some top executives to leave. Allen Wheat, the head of derivatives, and a dozen managing directors jumped to Credit Suisse to form Credit Suisse Financial Products. The mass exodus hurt Bankers Trust initially.

Since then, another top executive, Martin Loate, has moved to Merrill Lynch, and John Giannotti, London-based head of the global advisory products group, has resigned.

Bankers Trust has had other hurdles to overcome in building its business. In a business where relationships and balance sheet strength are critical ingredients, it lacks the loyal clients and the AAA credit rating of Morgan. Bankers Trust is nine more AA.

But in the words of a rival, "They turn those into not very big weaknesses."

Innovations Spur Growth

What has kept Bankers Trust's derivative business growing despite cracks and competition is the bank's ability to be innovative, to create new derivative products from the building blocks of options, forwards, and futures. Only Credit Suisse rivals Bankers Trust in inventiveness, said analysts and corporate treasurers.

Mr. Walsh said that 80% of the profits in the derivatives business comes from more customized products developed in the past three years, as opposed to interest-rate swaps.

These products can earn bigger spreads – needed to meet the bank's profit hurdles and pay the huge contracts top derivatives people command.

Bankers Trust has spearheaded the innovation in this business," said Ms. Azarchs.

The bank invented equity derivatives, instruments linked to stock indexes or baskets of stocks. These allow a corporation, for example, to get the economic benefit of investment in foreign securities without taking the currency risk of actually owning them. Or, an investor can con bet that a stock index will rise.

The bank has either led the way or been among the leaders in derivative trading with companies and governments in Southeast Asia, Latin America, and Central Europe.

A Pioneer in Credit Hedges

And it was among the first to market the latest in derivatives, credit hedges. This type of instruments can be used as insurance against credit exposure.

Say a money manager buys $100 million of a corporation's bonds and the yield of those bonds is tied to a junk-bond index. He can have a derivatives dealer structure a hedge that

VOL. CLVIII NO. 153 Wednesday, August 11, 1993 158th year

First Interstate Digs Deep to Buy San Diego Gem

By SAM ZUCKERMAN

First Interstate Bancorp's purchase of San Diego Financial Corp. is a breakthrough deal at a breakthrough price.

In acquiring the biggest independent financial institution in San Diego, First Interstate will triple its local share of deposits, making itself the No. 3 bank in California's second-largest market.

But it's paying an eye-popping price to get there. The nation's 13th-largest bank company has agreed to a stock swap valued at $340 million — or 2.35 times book value – for San Diego's Financial's $2 billion of assets.

"That's a very high price," said Diakin Bucktin Securities analyst Campbell K. Cheney. "I'm surprised."

Indeed, not since the heady years of the late 1980s have Californ- nia banks traded hands at such multiples.

First Interstate was far more frugal in two transactions earlier this year, paying no more than 1.7 times book value for California commercial banks.

But First Interstate officials contend that San Diego Financial is a special case that justifies a premium price.

Strong Franchise

The company's San Diego Trust and Savings Bank unit has 52 of its 53 branches in San Diego County, a one-of-a kind franchise in a market of nearly three million people.

First Interstate has just 15 offices in the area and a paltry 3% share of commercial bank deposits. That puts it far behind market leaders BankAmerica Corp. and Wells Fargo & Co.

"For some time, First Interstate has sought to increase its presence in San Diego County," said First Interstate Bank of California chairman Bruce G. Willison in a statement. "The acquisition of San Diego Trust allows us to quadruple our local branch network."

End of an Era

The deal, expected to close early in 1994, is by far First Interstate's biggest acquisition since returning to financial health last year. And for the San Diego banking community, it represents the end of an era.

San Diego Trust and Savings, founded ill 1889, remains an old-line institution with conservative management and ties to the local business community that go back generations. De-

Crossland Sale Seen This Week

By BARBARA A. REHM

WASHINGTON — The government is aiming to complete its $300 million sale of Crossland Federal Savings Bank to institutional investors this week, at least a week ahead of schedule, Federal Deposit Insurance Corp. officials said.

The FDIC is hurrying to finish the deal in order to head off bids from rival New York savings banks, according to sources who work for these potential bidders.

Sources close to the negotiations claim that Harrison Young, the FDIC's resolutions director, is dead set on selling the $5.3 billion-asset Brooklyn-based Crossland to several dozen institutional investors and does not want to be sidetracked by other bidders.

"What's happened is Harrison has wound up his money and wants to pull the trigger," said a source involved in the horse race for Crossland.

Competing Plans

A consortium of New York-area savings banks, led by Anchor Savings Bank in Northport, N.Y., sent FDIC a letter last month explaining their plan to buy Crossland's branches and spin off its assets to a workout company, according to sources.

Bank Fund in the Black; Treasury Loan Repaid

By BARBARA A. REHM

WASHINGTON — The Bank Insurance Fund is back in the black and debt free for the first time since 1991.

The Federal Deposit Insurance Corp. said Tuesday that the insurance fund repaid its final $2.5 billion in borrowings from Treasury on Aug. 6. The fund's balance, too, rebounded – to $6.8 billion at June 30 from negative $100 million at yearend 1992, according to the FDIC's midyear financial update.

Just 18 months ago, the fund was $7 billion in the red.

Premium Prospects

The improving financial picture sets the stage for quicker-than-expected reductions in the deposit insurance premium that banks pay. The FDIC is barred by law from lowering premiums below 23 cents per $100 of deposits before the insurance fund's ratio of reserves to insured deposits hits 1.25%.

With the fund at $6.8 billion, the fund has just 35 cents for every $100 of insured deposits.

The FDIC's official estimate has premiums declining in 2002, but FDIC staff members have said they think premiums will come down in 1994.

Acting FDIC Chairman Andrew C. "Skip" Hove improved on that prediction Tuesday, telling reporters that premiums could come down as early as 1996. Mr. Hove did hedge his prediction by saying that if the economy sours, premiums may not be reduced until 1999.

Mr. Hove credited the turnaround in the FDIC's fortunes to the dramatic decline in the number of bank failures, the added income from higher premiums, and expense savings.

"We're very happy to be debt free," Mr. Hove said during an open meeting of the FDIC board. "This loan repayment should help demonstrate that the insurance fund is recovering from the financial strains of the past, and that the fund will not become another drain on the American taxpayer."

In 1991 Congress gave the FDIC the right to borrow from

Proprietary Funds' Assets Up 36% in Year

By DEBRA COPE

Banks may be newcomers to the mutual fund business, but they are outpacing the pack in asset growth.

In the 12 months through June 30, banks boosted the mutual funds assets they manage by 36%, to $190.9 billion, according to data compiled for the *American Banker*.

That was well ahead of the 23% growth recorded by the fund industry overall, which had $1.803 trillion of assets at midyear.

While the gains underscore banks' growing involvement in the mutual fund business, it is still unclear whether banks can reap substantial profits by managing mutual funds, said Geoffrey Bobroff, a senior vice president at Lipper Analytical Services, which assembled the data for the *American Banker.* (Table begins on page 12.)

Fees Being Waived

He noted that banks have been waiving investment advisory fees as they build their fund businesses.

"As late entrants, banks have had to engage in subsidization to maintain competitive returns," Mr. Bobroff said.

"At some point, it may come home to haunt the bank executive if true revenues cannot be achieved from this venture."

Lipper ranked 103 bank and thrift holding companies that act as investment advisers to mutual funds, comparing their assets in the second quarter with assets three months and one year earlier.

The Leader Slides

The ranking, which will be updated quarterly, showed nearly universal gains in fund assets,

Short Stay

David B. Horn, banker to the superwealthy, has left Bessemer Trust less than one year after jumping there from Chicago's Northern Trust Corp.

Mr. Horn has set up his own private banking boutique, Graystone Partners, which he says specializes in nontraditional investments. The venture is being backed by the Blackstone Group, the prominent New York merchant bank.

Mr. Horn is the architect of Northern's gilt-edged wealth management group, which caters to families with a net worth of at least $100 million. Joining him at Graystone are Charles S. Hopper and Louise M. Wasso, who worked with him years ago at Morgan Stanley & Co. and followed him to Northern and Bessemer.

Also in the group is Mark S. Ostroff, who was briefly at Bankers Trust New York Corp. Mr. Ostroff was said to be setting up a wealth management group there similar to Northern's. But Bankers Trust recently abandoned the effort, sources said.

* * *

Southern Persuasion

Bankers First Corp., beware! Jerry Shearer, a former South Carolina banker with a penchant for coercive investing, has his eye on you.

Mr. Shearer's Mid-Atlantic Investors purchased 7% of the $880 million-asset thrift, based in Augusta, Ga., in late July. The thrift's shares have since climbed from $12.25 to just over $18.

Why the surge? Because Mr. Shearer's group has a history of persuading reluctant managements to sell out.

Just ask First Savings Bank of Greenville, S.C., which last week agreed to sell itself to North Carolina's Southern National Corp. for 1.74 times book value. Earlier this year, Mid-Atlantic bought 10% of First Savings and then lobbied hard for a sale.

Mid-Atlantic was also instrumental in the sale of South Carolina Federal Corp. to First Union Corp. in 1992 for $78.7 million, or 1.4 times book value.

"When our name is associated with something, it starts the rumor mill running," Mr. Shearer quipped.

Bankers First officials declined to comment.

— Kenneth Cline

Bidding War Brews

A deal announced last week by a Detroit banker to buy America's largest black-owned bank may be just a prelude to a lengthy bidding war.

Indecorp, a Chicago bank holding company with $267 million of assets, signed a letter of intent to be acquired by an investor group led by William T. Johnson. Mr. Johnson is president of Omni Bancorp., a black-owned bank company in River Rouge, Mich., with $22 million of assets.

But now Marcus Alexis, a professor at Northwestern University's J.L. Kellogg Graduate School of Management, says he has assembled a group of African-American investors in Chicago to make a counteroffer.

"We still intend to make an offer for Indecorp," said the former board director for the Federal Reserve Bank of Chicago. He declined to elaborate.

— Robert Cox

Calling All Analysts

Wheat First Securities is having a hard time replacing Anthony R. Davis, its senior banking analyst, who left to join Dean Witter Reynolds in New York back in February.

"There's not a big supply of analysts, and people like where they are," said a source at the Richmond brokerage.

So Wheat is considering lowering its sights by seeking a second "junior" analyst to cover banks. The candidate would work with David Stumpf, who is 29 and was Mr. Davis' assistant for five years.

Elsewhere in the southern bank investment world, Buck Jones is saying goodbye to J.C. Bradford & Co., where he was managing director of financial institutions. Mr. Jones, a virtual fixture of the southeastern banking scene, has been with the Nashville firm for 21 years.

He is going to Okra Marketing Corp., Tampa, Fla., where he will be an executive vice president at Okra, a market research firm.

Mr. Jones, 45, began his career as a bank analyst at Bradford in 1972. In 1984, he transferred to the firm's corporate finance department, where he helped raise capital for many Southeastern banks.

— Kenneth Cline

Banks Said to Underestimate Risk Small-Business Loan Rivals Pose

By ROBERT M. GARSSON

WASHINGTON — Commercial banks could lose their dominant position in the small-business lending market and not even know what hit them, a prominent industry consulting group warned.

Reporting on a study her firm conducted for the Association of Reserve City Bankers, an analyst for Furash & Co. said the "commercial banking industry's traditional small-business franchise is at risk" to nonbank competitors and changing market conditions.

And with few exceptions, "The banks in our survey do not see the depth and nature of the nonbank threat to their small-business lending franchise," added Cynthia Glassman, director of research at the Washington-based firm.

Cynthia Glassman
Says threat hasn't hit home

'It Really Adds Up'

In an interview, Ms. Glassman said the changing nature of competition may be difficult for bankers to see because they operate in well-defined local markets while competitors from outside the industry market their products nationally.

"When a Merrill Lynch makes a push in commercial lending, it may not show up as real big in any one market," she said. "But across the country, it really adds up."

Most Banks, she added, don't have the same opportunities to market nationwide.

Ms. Glassman said bankers should be particularly wary of proposals under consideration in Congress to create a secondary market in small-business loans.

"The threat to banks of such programs is that they facilitate the same type of disintermediation that has drained large commercial financing out of the banking industry," Ms. Glassman wrote.

In the interview, she said banks should be particularly concerned about the development of a secondary market with implicit or explicit government guarantees.

"That will take the market away from intermediaries that make loans to hold in their portfolios, as banks do, and give it to those that originate loans to sell, rather than hold," she said.

Urges a Number of Steps

The result would be similar to the way in which the mortgage lending business was transformed by the secondary market agencies, shifting volumé from thrifts to mortgage bankers, she said.

Ms. Glassman said banks, individually and as an industry, should take a number of steps to maintain their share of the small-business market:

• Continue to press for regulatory relief legislation.

• Support efforts to require other types of lenders to make the same kind of lending disclosures as banks do. Without such reporting by others, banks "will continue to take the heat" for problems such as the credit crunch.

• Reduce the "hassle factor" for customers by making regulatory impediments as transparent as possible.

• Fight nonbank competitors by leveraging the industry's inherent advantages. For example, Ms. Glassman said, securities firms are viewed by businesses as companies that "want to sell you something. That's a perception banks can market against." ☐

SPS, a Card Processor, Upgrades Fraud Effort

By DEIDRE SULLIVAN
Special to the American Banker

SPS Payment Systems Inc., a third-party processor of electronic credit card transactions, is now providing transaction authorization services that comply with Visa International's new fraud detection program.

SPS, of Riverwood, Ill., is one of the country's largest processors of credit card receipts for merchants, handling more than 247 million transactions last year.

A code helps thwart card counterfeiters who lift valid account numbers and expiration dates from receipts.

The new Visa program, called Card Verification Value, strengthens SPS' fraud detection capabilities by using information encoded on a card's magnetic strip to help issuers identify transactions made with counterfeit cards.

The technology involves adding a three-digit code to the account number on a credit card's magnetic strip.

Because the code remains hidden in the strip, it is supposed to thwart criminals who lift account numbers and expiration dates from receipts so that they can manufacture counterfeit cards.

With the swipe of a credit card at a point-of-sale terminal, the data on the magnetic strip is transmitted to SPS, which forwards it to Visa for validation.

To ensure the card's authenticity, Visa checks the code against a one generated in its own system.

By adapting its systems to the new Visa technology, SPS officials said they have ensured that its merchant customer base can qualify for the lowest fee structure offered by the card association.

Compatibility Issue

"Since we are processors, we always try to qualify our merchants for the best rates," said JoAnn McCartney, an executive at SPS.

Ms. McCartney also said that instituting the program was relatively simple because most of SPS' equipment was already compatible with the new verification technology.

Ms. Sullivan is a freelance writer based in New York.

NationsBank Agrees To Link with Vendor Of Float Analysis

NationsBank, in a move to restructure the way it delivers some cash management services, has agreed to refer customer requests for float studies to Sagner/Marx Inc., a Chicago-based consulting firm.

Float studies are quantitative analysis tools that are used to examine a corporation's accounts-receivables collection and disbursement processes.

For many years, banks performed these studies for their largest clients, often charging little or no fee. The studies were used to identify the customer's lockbox and controlled disbursement needs.

According to Larry Marx, president of Sagner/Marx, in recent years most banks have stopped offering this service because the analysis is too time-consuming and expensive.

Considerable Savings

"The studies can result in significant savings for the customer, but they are extremely costly and highly specialized services for banks to provide," he said.

"Banks have to make strategic decisions as to where to deploy their expertise and people," said Edward Sykes, senior vice president at NationsBank. "We're no longer performing float studies, so having a credible third party to refer customers to is important."

Sagner/Marx specializes in cash management and treasury consulting services. The firm has entered into over 20 agreements with banks that no longer perform float studies but want to refer their clients to a firm that does.

Mr. Marx said the Sagner/Marx studies often include recommendations on which banking products and services a corporate customer should use to be more profitable.

NEWS *briefs*

Metropolitan Financial to Buy Back Stock

MINNEAPOLIS — Metropolitan Financial Corp. said its board authorized management to repurchase up to 5% of the company's outstanding stock in the open market and in other transactions through the first quarter of 1994.

The stock will be used by the Minnesota savings bank company for employee benefit plans as well as to replenish shares issued in a recent acquisition.

The company's shares rose 87.5 cents to $15 on the news.

Norman Jones, Metropolitan's chairman and chief executive, said the company is exploiting "the recent price of our stock" to purchase shares below book value, an activity he termed "the best and most prudent use of our capital in this market."

As of June 30, the company's book value was $14.96 a common share. Metropolitan operates more than 190 offices in the upper Midwest and Arizona.

Southern National CDs Put on Alert List

NEW YORK — Fitch Investors Service Inc. said it put the long-term and short-term certificate of deposit ratings of Southern National Bank of North Carolina on its alert list, with negative implications. The action follows an announcement last week by the bank's parent company, Southern National Corp., that it plans to acquire First Savings Bank of Greenville, S.C.

The acquisition, scheduled to be completed early next year, will boost consolidated assets by roughly 40% and result in significant decreases in nonperforming assets and balance sheet leverage. But it noted that the First Savings transaction is more than five times larger than any other merger the company has undertaken to date and, along with other pending acquisitions, will reduce consolidated equity to approximately 7.2% of June 30 assets on a proforma basis from its reported level of 8.7%.

In addition, it said management's demonstrated ability to quickly resolve asset quality problems will be challenged by the acquisition-related surge in the company's consolidated nonperforming asset ratio to 2.63% from 0.82%.

Separately, Standard & Poor's Corp. affirmed its BB-Plus subordinated debt rating on Signet Banking Corp. and revised its rating outlook on the Virginia banking company to "positive" from "stable." It said the revision "reflects Signet's continued progress in disposing of its large book of troubled commercial real estate assets, as well as strong operating performance measures derived principally from its rapidly growing credit card portfolio."

Net Soars at Pittsburgh Home Loan Bank

PITTSBURGH — The Federal Home Loan Bank of Pittsburgh reported second-quarter net income of $14.2 million, more than a sixfold increase from the $2.1 million it earned in the first quarter. The bank, which earned a 9.74% return on equity, paid an annualized dividend rate of 8% in the quarter to its thrift and bank members.

The Pittsburgh home loan bank said its financial performance improved during the quarter because of strong loan demand in spite of a weak housing market and a higher net interest margin. Prepayment fees and gains on the sale of securities also contributed to the second-quarter results.

James D. Roy, president of the bank, said loan demand was driven by customers' eagerness to lock in low interest rates.

The briefs were compiled from staff and wire reports.

Amsouth to Buy Citizens National Of Fla. for $49 Million in Stock

By KENNETH CLINE

ATLANTA — Amsouth Bancorp., Alabama's largest bank company, said Tuesday it will buy Citizens National Corp. in Naples, Fla., for $48.8 million in stock.

The move will give Amsouth another $289.6 million of assets in Florida, a state in which it has been expanding aggressively.

Amsouth now has six acquisitions pending in Florida. When they are completed, the company's $1.2 billion-asset bank in the Sunshine State will more than double to $3.5 billion of assets.

John W. Woods
Hints at more acquisitions

'Going Rate'

Amsouth agreed to pay a hefty price for Citizens National – 2.74 times adjusted book value. But analysts suggested that the bank's attractive location and good market performance justified the deal.

Citizens National earned $1.6 million in the first six months, representing a 1.11% return on assets.

"It's the going rate" for strong banks, said Kathryn Bissette of Sterne, Agee & Leach Inc. in Atlanta.

Shares of Amsouth, an $11.1 billion-asset institution with a presence in Alabama, Florida, Tennessee, and Georgia, were up 12½ cents Tuesday afternoon.

John W. Woods, Amsouth's chairman and chief executive, said the purchase of Citizens National will complement its pending acquisition of a bank in Fort Myers on Florida's southwest coast, which is one of the state's fastest-growing areas. And he hinted that more deals in the area are on the way.

The acquisitions "provide us with a strong nucleus to build an even stronger southwest Florida banking franchise," Mr. Woods said in a prepared statement.

Thrift in Its Sights?

In a related development, the stock of Fortune Bancorp, a thrift in Clearwater with $3 billion of assets, has been active on speculation about a takeover by Amsouth or another bank. Since early April, its stock has risen from $18.50 a share to over $23.

John R. Torell 3d, the chairman of Fortune, said in a recent interview that the reviving company wants to expand along the West Coast.

But he also repeated on Tuesday that his company is obligated to talk to any potential acquirer that would increase value for current shareholders. He would not comment specifically on Amsouth or any other company. □

First Interstate Goes All Out to Stake Claim In San Diego, California's 2d-Biggest Market

Continued from *page 1*

scendants of Joseph W. Sefton, the bank's founder, still own a majority of the holding company's thinly traded stock.

The company is well capitalized and steadily, if unspectacularly, profitable. It has posted returns on assets ranging between 0.6% and 0.8% in recent years.

It is also known as a tightfisted lender, with loans equaling only 45% of deposits.

Despite the slumping Southern California economy, San Diego Financial's problem assets represented just 1.7% of loans and foreclosed property at the end of June. That may have been one of the biggest attractions for First Interstate. Since returning to the acquisition market last year, the company has scrupulously avoided buying banks with credit problems.

NEWS ANALYSIS

'You Pay for Quality'

"This is a premier bank," said executive vice president Theodore F. Craver, who oversees acquisitions for First Interstate. "You pay for quality."

Still, First Interstate faces a challenge in earning back the huge premium it is paying. It can earn an adequate return on its investment only if it cuts costs sharply and takes advantage of cross-selling opportunities to boost revenues.

Analysts who were briefed by

Bruce G. Willison
Long-held goal accomplished

First Interstate said it is aiming to trim $50 million in San Diego Financial's annual operating costs, with more than half the amount coming from staff cutbacks.

First Interstate is reluctant to provide details of cuts because of community concerns in San Diego.

Fund Sales May Be Boosted

On the revenue side, First Interstate expects to sell its diversified product line through its new branches and is also considering expanding sales of the San Diego bank's successful proprietary mutual funds.

Based on these assumptions, First Interstate has been telling investors to expect less than 1% earnings dilution in 1994. By 1995, they added, the acquisition should begin adding to earnings.

"You look at all these things and the price begins to make a little more sense," said Brent B. Erensel, an analyst at UBS Securities.

First Interstate executives also told analysts they expect an acquisition-related charge of about $50 million in the first quarter of 1994.

Family Considerations

In San Diego, the disappearance of the biggest locally owned bank was a surprise. Through the years, Sefton family members repeatedly proclaimed their determination to keep San Diego Financial independent.

The family changed its mind to avoid hefty estate taxes that could force the sale of the bank under disadvantageous conditions, said Harley K. Sefton, a family member and vice chairman of the company.

At the request of the Sefton family, the company's board hired J.P. Morgan Securities earlier this year to contact potential buyers, a bank spokeswoman said. Several potential buyers explored the deal, the spokeswoman added, but she declined to identify them.

For San Diego Financial stockholders, the deal is a tremendous windfall. They are expected to get about $756 a share when the deal closes. The stock has traded hands most recently at about $255 a share. □

REGIONAL BANKING

EXECUTIVE *changes*

Tokai's Takao Soeda Is Chosen As President of California Unit

Takao Soeda has been elected president of **Tokai Bank of California**, Los Angeles, a unit of **Tokai Bank Ltd.**, Nagoya, Japan.

He will also be general manager of the parent bank's Los Angeles agency.

He succeeds **Takashi Inouchi**, who was promoted to general manager of Tokai Bank Ltd.'s New York branch.

Mr. Soeda, who has an MBA from Northwestern University in Evanston, Ill., was joint general manager of Tokai Bank Ltd.'s international headquarters in Tokyo. He joined Tokai in 1969. — **Franklin Smith**

Takao Soeda

MIDWEST

BANC ONE OHIO CORP., Columbus, has promoted **Glover L. Shearron** to vice president of workforce diversity.

Mr. Shearron had been a vice president of Bank One Columbus, managing equal employment opportunity matters and employee relations, since 1982.

Glover L. Shearron

MERCANTILE BANK OF St. Louis has elected **Linda P. Jones, Joseph B. Mercer, Paul C. Rhea, Laura S. Roberson,** and **Walt L. Stroud** as vice presidents.

Ms. Jones works in the institutional banking department. Mr. Mercer in **Mercantile Information Co.**, Mr. Rhea and Mr. Stroud in consumer banking, and Ms. Roberson in the institutional banking department.

NATIONAL CITY CORP., Cleveland, said **Dale A. Branham** has been elected senior vice president and chief financial officer of **National City Mortgage Co.**, succeeding **John W. Mann 3d.** Mr. Branham was vice president and controller of the unit.

Dale A. Branham

MIDDLE ATLANTIC

UNITED STATES TRUST Co., New York, said **Donald P. Casler, Martha A. Kirwin,** and **A. John Wright** have joined the company as vice presidents.

Mr. Casler is a banker in the private banking division. He was formerly a private banker at Citibank.

Ms. Kirwin is in the institutional sales department of the asset management business development division, specializing in retirement planning services. She was a senior retirement plan counsel at Alliance Fund Services.

Mr. Wright is a portfolio manager in the private client services department of the private banking division. He was a portfolio manager at Bank of New York.

SOUTHEAST

WACHOVIA CORP., Winston-Salem, N.C., said **Richard H. Sneleire** and **Beverly B. Wells** have been named to new positions at **Wachovia Corporate Services Inc.** Both will remain based in Winston-Salem.

Mr. Sneleire has been given responsibility for enhancing Wachovia's cross-border capabilities in treasury services, corporate finance, and international banking through the development of strategic alliances with financial institutions and providers of information technology services.

Ms. Wells succeeds Mr. Sneleire as manager of the treasury services group. In addition to her new responsibilities for the marketing of cash management operational and consulting services, she retains responsibility for corporate product management and corporate technology and information services.

SOUTHWEST

COMERICA BANK Texas, Dallas, has announced a new executive management team.

In addition to **Charles L. Gummer**, president and chief executive officer of the bank, the team includes vice chairman **Joseph R. Goyne 3d** and executive vice presidents **C. Fred Ball, J. Patrick Faubion, George F. Jones Jr., John M. Killian,** and **Edward K. Mims.**

It also includes directors **Lisa J. Murray** and **Gail B. Cooksey.**

Mr. Goyne is responsible for state banking markets and the operations areas. Mr. Ball is responsible for the newly created custom banking division, which includes private banking and statewide trust and investment services. Mr. Faubion is responsible for statewide loan administration.

Mr. Jones is responsible for the Metroplex corporate lending division and Mr. Killian for the Metroplex retail banking division. Mr. Mims is responsible for the finance division.

Ms. Murray is responsible for human resources, and Ms. Cooksey for marketing.

The new organizational structure is a result of Comerica Bank Texas' recent mergers with Hibernia National Bank in Texas, NorthPark National Bank, and Sugar Creek National Bank.

WEST

GREAT WESTERN Financial Corp., Chatsworth, Calif., said **Jesse L. King** has joined as senior vice president and controller.

He succeeded **Bertill A. Gustafson,** who retired.

Mr. King was senior vice president and manager of accounting operations for NationsBank in Charlotte, N.C. □

For an Illinois Savings Bank, Red Tape Spurs Decision to Sell

By ROBERT B. COX

Amity Bancshares of Tinley Park, Ill., announced that it was engaging investment bankers Kemper Securities to help it find a buyer.

"It has just become so difficult to keep up with regulations," said Edward Eckert, a vice president and a member of the thrift's board.

Management's Age a Factor

Those are powerful words coming from Mr. Eckert, who spent 40 years as a regulator at the Federal Home Loan Bank of Chicago until retiring four years ago.

Amity is the holding company for Amity Federal Bank for Savings, a $130 million-asset thrift in Chicago's southern suburbs.

The company is well capitalized, with an equity-to-assets ratio of 13%, and a healthy return on average assets of 1.15% in the second quarter of 1993.

Amity has been mentioned as a possible acquisition target by analysts for some time, mainly because the average age of the thrift's board members is about 70 years.

Many of the Illinois thrift's managers are at, or beyond, retirement age.

"I think management decided that now is a good time to sell," said one thrift analyst, Linda Stromberg, at Howe Barnes Investments, Chicago.

"They have two choices: Either pass the reins on to someone else, or take the money and run," Ms. Stromberg said.

The timing appears to be excellent. The average price paid by suitors for thrifts in the second quarter was a record 1.55 times book value, according to SNL Securities of Charlottesville, Va.

Amity management's decision to put the bank on the auction block is typical of institutions where officers and directors are near or beyond average retirement ages, experts said. In Amity's case, increased regulations and directors' liabilities have strengthened the resolve of bank officials.

"The emphasis today on the board is almost to the point where they are being made responsible" for management of the institution, said Mr. Eckert.

"Individuals up in years don't want to face the possibility of having to defend themselves in any legal action," Mr. Eckert said. □

PRIME MOVER: Evelyn France, left, and one of five houses she had rehabilitated and hauled by truck to a needy neighborhood.

Elyria Goes Extra Mile With 'Home Delivery'

By BILL ATKINSON

CRA

IN THE RUGGED AUTO TOWN of Elyria, Ohio, even houses have wheels.

Ever since Evelyn France was named president of a low-income housing corporation formed by Elyria Savings and Trust National Bank in 1991, town residents have watched two-story houses inch their way down West Avenue on flatbed trucks.

Last summer, Ms. France engineered the rescue of five houses slated for demolition. They were not only renovated, but also hoisted atop the trucks and moved more than three miles to a low-income neighborhood so poor families could have a roof over their heads.

Now, she's working to save six more, and possibly as many as 14 more houses.

"You've got to rebuild from the bottom up," said the 41-year-old Ms. France, who heads community reinvestment for the bank and is president of Community Housing Cooperative, a nonprofit corporation. "I see things that need to be done."

Ms. France's effort to help Elyria, a blue-collar city of 57,000 with 7.7% unemployment, is unique. But it is an example of the work some community banks are doing to rebuild their communities.

So far, examiners haven't given the bank Community Reinvestment Act credit for its work because the program got off the ground during its last exam. But officials say moving houses is more important than getting a good CRA grade.

"Lorain County is a county that needs some help," said C. Donald Bramley, president and chief executive of the profitable $465 million-asset bank. "Evelyn sells this bank in more ways than just CRA."

Experience as a Loan Officer

A native of Elyria, Ms. France decided to help house low-income people while she was working as a loan officer with the bank. Customers didn't want traditional home loans, but kept asking her for affordable home loans.

At that time, the Elyria United Methodist Home was expanding its facility and planned to tear down five large houses. She persuaded Mr. Bramley, a trustee of the home, to see if United Methodist officials would donate the houses. A deal was struck, but many people doubted she could pull off the move.

Hauling houses over bridges, railroad tracks, and under telephone wires is a tricky business. But at a meeting, she got city officials to donate vacant lots for the houses, movers to transport the houses, the police to use free time to block traffic, and electrical engineers to take down power lines.

Politicians Had an Incentive

"Timing is everything," Ms. France said. "It was an election year for the councilmen as well as for the mayor."

Ms. France also rounded up a committee made up of six members of the community to interview applicants who wanted to live in the houses. More than 200 people applied. To qualify, the families' income could not exceed 80% of the median income established by the Department of Housing and Urban Development. Most of them made about $20,000 a year.

The bank counseled the families on resolving credit problems. It also charged them $370 a month to rent the houses, and agreed that after 18 months of payments, the funds would be used as a down payment. The bank also agreed to provide 20-year mortgages at a 7.5% rate. The houses sell for about $40,000.

"We hope this will be long term," Ms. France said. "I really love this community." □

AMERICAN BANKERS ASSOCIATION

In Brief

Security Capital Bancorp said its second-quarter earnings jumped to $3.4 million for the quarter ended June 30, from $219,000 a year earlier.

The 1992 quarter's earnings were adversely affected by $4.1 million in special charges relating to the merger of First Security Financial Corp. and Omni Capital Group, which formed Security Capital.

Exclusive of 1992's special charges, Security's earnings in the second quarter and the first half of 1993 increased 14% and 23%, respectively. Security is based in Salisbury, N.C., and has 41 offices and $914.6 million of assets.

* * *

The Federal Reserve recently approved Pinnacle Bancorp's plan to acquire Windsor Bancorp and its Windsor Bank in Windsor, Colo.

The Central City, Neb.-based banking company's acquisition will add $20.5 million to Pinnacle's $893.9 million of consolidated assets. The deal had led to complaints competition in Windsor would be stifled. But the Fed found that Windsor and nearby Greeley form a common market.

* * *

Central Virginia Bankshares said it raised $4.3 million in a secondary stock offering, and earned a record $352,964 in the quarter ended June 30.

For the first six months of the year, the Powhatan, Va.-based bank earned $672,049, up 54% from a year ago. The bank's stock offering was oversubscribed. Central Virginia has $97 million of assets and three branches. □

Relieve Banks of the Responsibility for Flood Insurance

By T. HERBERT STEVENSON
Executive vice president, Young & Associates, Kent, Ohio

In the wake of the "great flood of 1993," Congress is beginning to reassess the National Flood Insurance Program. Begun with the National Flood Insurance Act of 1968, the program was designed to mitigate the personal losses of citizens and the need for federal disaster relief.

The program has never performed according to plan. Many lenders do not require flood insurance as a condition for credit approval for properties in floodplains, and as many lenders allow the coverage to be canceled during the term of the loan.

Comment

It's ironic that customers and lenders do not require or maintain flood insurance coverage. The majority of customers maintain some type of property insurance and the majority of lenders immediately take action to "force" insurance coverage for minimum property insurance.

The irony becomes clear by observing the laws of probability. There is a 26% chance of a devastating flood during a 30-year period of homes in a 100-year floodplain, compared with a 1% chance of a devastating fire during the same period. Yet less than two million of the approximately 11 million properties in floodplains are covered by flood insurance.

Realizing that the insurance program is not working, Rep. Doug Bereuter, R-Neb., introduced legislation to allow banks to require flood insurance, similar to property-insurance requirements.

In addition, he has proposed that fines of up to $100,000 per year be assessed on institutions that maintain a pattern and

Insurance should be required in all floodplain areas.

practice of failing to require flood insurance.

Flood insurance is not a banking issue and never will be, except as a risk that can be considered in the credit approval process. As a result, the National Flood Insurance Program will never work so long as it is focused on using banks as loan enforcement officers versus the insurance industry as a means to finance the flood risks.

Much of the failure of the flood insurance program is due to its design. It ensures conflict between customers and bankers.

On the one hand, the bank is required to foist flood insurance on the customers as a condition of credit.

A Better Deal

On the other hand, customers without the need to finance their properties have the choice to maintain insurance, knowing that some form of federal disaster relief will be provided if a major flood occurs. In other words, millions of taxpayers not living in floodplains will be required to help foot the bill.

A simpler and more effective solution would be to require all insurance carriers to incorporate flood coverage in all policies for properties in floodplains. This would eliminate the need for any banking laws for flood insurance.

Further, the Federal Deposit Insurance Corp. would have one less risk, as it would minimize loan losses resulting from flood damage as well as eliminate the threat of lawsuits against lenders for falling prey to customer demands to drop the flood insurance requirement and later being sued by the customers when floods wipe out their properties.

Using the flood insurance program, incentives for floodplain control could be developed by

T. Herbert Stevenson

the market in cooperation with federal law. Specifically, the present law requires that local communities participate in the National Flood Insurance Program in order to have access to flood insurance. Such participation requires the local community to establish minimum flood-control building codes.

Failure to establish and/or to enforce these codes can lead to suspension of the community and loss of flood insurance availability and disaster relief grants.

The Bottom Line

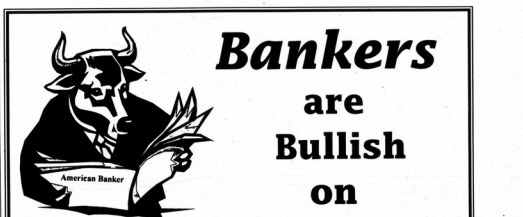
If flood insurance were required as part of all property insurance coverage for properties in flood plains, the insurance rates could be set by the insurance companies similar to other coverages.

In other words, insurance would be available and required in all floodplain areas. Its costs would be determined by the local communities' compliance with the flood insurance program's flood-control requirements.

The bottom line is that the costs of disaster relief could be brought under control for flood damages.

Using the present cost of flood insurance of $300 per year and the nine million properties not carrying flood insurance, there would be $27 billion per year to pay for annual flood damages.

More important, it would push the burden back to the industry that finances risk, where it belongs, and off the backs of bankers. □



How will this affect **Your** bottom-line?

CEO of Lender's Service Races with Refi Boom

Q&A

Phillip Bracken, 43, was named chairman and chief executive of Lender's Service Inc. in January after a 17-year career in mortgage banking.

The Pittsburgh unit of Prudential Insurance Company of America is the nation's largest residential appraisal management company, with 10,000 appraisers, over $150 million in revenue, and more than 900 clients, mostly lenders.

Teresa Carson, a Pittsburgh-based freelance writer, talked with Mr. Bracken.

Q: We've been in a huge refinancing boom. Should your clients be worried that you can't keep up with the demand?

BRACKEN: I'm confident we'll be able to keep up. I'm a little bit less confident about the infrastructure of some of our clients at these volume levels for this length of time. It has been a marathon refinance stress test.

We are beginning beta tests to automate the assignment process [for appraisers], the order process, the way lenders or clients order work from us.

Where we want to head is to make it a personal-computer-based order system, so anybody can put it right on any PC they have anywhere in their office. It will be a seamless transaction which will take only minutes. We expect to be through the testing phase by the third quarter and we will have begun the rollout.

Phillip Bracken

Q: Are we on the brink of yet another boom?

BRACKEN: Yes, we are relatively close to the point where the 30-year fixed-rate mortgage passes below the fully indexed adjustable mortgage rate. If we get there, that will stimulate another boom.

And there are still something like $1 trillion of adjustable-rate mortgages on the books, and something close to $1 trillion of fixed-rate mortgages out there with rates over 9%. And that doesn't even take into consideration the purchase activity.

Q: What about rates?

BRACKEN: The likelihood of their declining is probably a little greater than the likelihood of their increasing. I don't expect to see a 100-basis-point change either way for six to nine months.

Q: Has the flood in the Midwest affected your business at all?

BRACKEN: We are getting a significantly larger number of orders for properties we have appraised there in the last six months. In some cases, the loans have been sold and the lenders want to know if the home is still there.

Q: What regions have strong housing markets, and where is there still weakness?

BRACKEN: We have this incredible living software network, our appraisers, that we survey. It is a very thorough survey and it is prospective, not retrospective. I want to thrust us forward in this regard and be in lender information services. We're going to improve the data and the speed and probably the frequency of the information.

But to get back to your question, the strongest markets are Austin, Denver, Omaha, and Madison, Wis. The worst continue to be in California. The four worst in the country are Los Angeles, Orange County, San Diego, and San Francisco.

July Refinancings Up Sharply At Seven Big Housing Lenders

By JAMES H. SAPT

Seven large mortgage lenders have reported their customers continued the feeding frenzy of refinancings in July.

All seven institutions showed marked increases in loan production in July over the level in the corresponding month last year.

Even the smallest gain was a hefty 54%, at Standard Federal Bank of Troy, Mich., while American Residential Mortgage Corporation of La Jolla, Calif., showed an exceptionally strong 110% rise.

An Unusual Gain

Standard Federal reported $319 million in originations in July, up from $207 million the year before. Year-to-date originations at the thrift were up to $2.19 billion, from $1.88 billion in the first seven months of 1992.

The gain was unusual for a thrift because most S&Ls have been reluctant to write fixed-rate mortgages demanded by consumers. Standard's originations grew partly because of the strong local appetite for adjustable-rate loans, according to Joseph Krul, chief financial officer.

Keeping ARMs on Its Books

Perhaps because of lower housing costs in the Midwest, 17% of all mortgages booked by Standard Federal of Troy, Mich., are 10-year adjustables.

"Our loan portfolio is growing," said Mr. Krul, who says that the portfolio increased by $700 million in the first six months of this year.

Mr. Krul says that loans originated by Standard Federal now make up a higher percentage of its portfolio, replacing mortgage-backed securities that have been prepaid.

Even the smallest gain was 54% as borrowers sought lower rates.

Like most other thrifts, Standard is selling almost 100% of its production of 30-year, fixed-rate loans into the secondary market while keeping most of the ARMs on its own books.

Others Join Uptrend

Plaza Home Mortgage, of Santa Ana, Calif., currently the 18th-largest mortgage originator, showed total mortgage production of $638 million in July, versus $355 million in the corresponding period last year. The year-to-date total is $4.04 billion, up from $3.17 billion last year.

American Residential Mortgage announced total origination of $707 million as well as a year-to-date total of $4.20 billion.

North American Mortgage Company, the publicly traded mortgage giant based in Santa Rosa, Calif., experienced a jump to $1.32 billion in total fundings in July, up 73% from last July.

The company has originated $8.38 billion so far this year, up from $5.86 billion in the equivalent period last year. Refinancings comprise 68% of North American Mortgage's July volume, up from 60% last July.

Countrywide Credit Industries of Pasadena, Calif., the nation's largest mortgage lender, saw its total production in July hit $4.3 billion, a 67% increase from last July's $2.6 billion figure. The company had total originations of $25.4 billion for the first seven months of this year.

Margaretten Financial, of Perth Amboy, N.J., also weighed in with a large increase, reporting $833 million in total production in July, up 72% from last year. Margaretten's total production year-to-date is $5.62 billion, up from $3.88 billion in the first seven months of last year.

Fleet Mortgage Group, of Columbia, S.C., had total originations of $2.2 billion in July, up 59% from last year's period. □

Housing Affordability Hits 20-year High

The affordability of housing has reached a 20-year high, according to figures compiled by the National Association of Realtors.

The association's index reached 132.6 in the second quarter, up from 118.9 a year earlier. An index of 100 means that a family earning the median income has exactly the amount needed to buy a median-priced resale home with a 20% down payment.

The second quarter number means that the median-income family has 132.6% of the income needed to buy a median-priced home. Thus, well over half of all households can afford to buy, but the figures do not indicate how many.

Well over half of all households can afford to buy.

Gain Shown for Renters

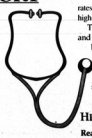
The outlook for first-time homebuying has also improved significantly, the association's report said. Among renters between the ages of 25 and 44, the the affordability index reached 86.7, up from 78.5 a year ago. This index assumes a lower-priced home and a down payment of just 10% on a conventional mortgage.

This means that less than half of prime prospects for first-time purchases can afford to buy. The median price used in the calculations for repeat buyers was $107,000, while the median for a starter home was $91,000.

— Edward Kulkosky

HIGH YIELD REPORT

lets you *hear the heartbeat and feel the pulse* of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt



IN AN AGE OF DRAMATICALLY declining long-term interest rates, the *American Banker*'s weekly *High Yield Report* delivers money-making tips on high-yield investment opportunities.

This newsletter keeps a close eye on major court proceedings, and legislative and regulatory developments. Each issue features barometers of market size, bellwether pricing tables, a forward calendar, reports on filings, and the results of new-issue sales.

No longer considered the arena of "junk bonds," the high-yield market is rapidly gaining respectability as it is closely tracked by this objective, succinct weekly letter.

If you must know what's "ticking" in the heart of the high-yield market, HIGH YIELD REPORT is a must read every week.

Read it free for 4 weeks!

Give Consumers Full Disclosure, and Let the Chips Fall

By LAURENCE E. PLATT
Principal
Brownstein, Zeidman, and Lore

Never trust a consumer to make an informed credit decision. Indeed, never let a consumer have the freedom to make a bad economic choice – unless, of course, the consumer picks me.

After all the rhetoric is peeled away, this is the basis that underlies the efforts of some participants in the mortgage business to roll back the regulatory relief recently afforded consumers by the U.S. Department of Housing and Urban Development.

The department has announced that it is considering revision of regulations issued last year. These regulations are perceived by some to promote unfairly the ability of diversified companies to cross-market residential real estate products and services by permitting employers to compensate their employees for successful referrals to affiliated companies.

In addition, the regulations facilitate the automation of the lending industry through computer loan origination systems by permitting customers to pay for such a service.

The HUD Revision

The final regulations rejected proposals both to restrict the amount and timing of payments of these fees and to require the products of multiple lenders to be displayed on these systems. In each case, the agency concluded that requiring full disclosure to consumers was sufficient.

Protection of the consumer is not the industry's paramount concern.

HUD is now rethinking whether both the cross-marketing of residential real estate products by efficient companies and the origination of mortgage loans by computers should be restricted further under the Real Estate Settlement Procedures Act.

The amended regulations are very controversial. The free flow of uncompensated referrals to unaffiliated mortgage brokers and mortgage lenders is perceived to be impaired.

Whether the government should sharply limit these activities by rescinding the revised regulations or merely require the disclosure to borrowers of the potential risks is the heart of the debate.

Protection from Bad Choices

Neither cross-marketing nor new computer technology is generally perceived in other industries to be abusive to consumers. Yet mortgage bankers are the strongest proponents of increased regulation.

Why should practices not objectionable in other industries be considered abhorrent and worthy of increased government intervention in the residential real estate market?

Critics of the law say, in effect, that the government should take away the right of a borrower to make an informed but ill-advised choice.

Under this view, the job of the government is not merely to assure that consumers are provided with accurate information on which to make decisions, but to protect the consumer from making bad choices.

But even if this view were correct, the alternative certainly is worse. If the government is going to limit choices, at what point should the government draw the line? No mortgage broker or mortgage lender wants to limit the right of a borrower to choose it, only the right to choose someone else.

Allow a borrower to make an informed but ill-advised choice.

The logical extension of this principle is that the government should prohibit any referral or the making of any loan that is not in the best interests of the consumer.

Federal consumer credit law generally relies on informed choices through full disclosure. The new regulations are consistent with this approach.

Fight for Market Share

Protection of the consumer is not the industry's paramount concern. Protection of turf is. The cloak of consumer protection could be viewed as a subterfuge for an intense fight to retain market share.

The battle is based on three simple facts. First, through the use of diversified companies and new computer technologies, the capital markets can directly access home loan applicants.

Second, mortgage products essentially are generic, with little variation in type or price discernible to the consumer. If a product is generic, who cares who offers it?

Third, mortgage brokers and lenders generally market their loan products to real estate agents and builders rather than directly to consumers.

Nobody is saying that retail lenders should not fight back. There are legitimate unfair-competition issues to be raised. Using the Real Estate Settlement Procedures Act, however, to disparage the ability of consumers to make informed choices after receiving full disclosure probably will backfire. □

Commentary

Mr. Platt specializes in mortgage finance. He is a co-author of "A Practical Guide to Respa," the Real Estate Settlement Procedures Act.

When it's this hot, you deserve extra scoops.

For many bankers, the thermometer is a lagging indicator of the heat they feel in handling current regulations and guessing the Clinton administration's next moves. But we've got a way to help you keep cool: *American Banker's Washington Watch.*

We broke the news about the plans by credit union trade associations to branch cross-country. We warned readers that the FDIC will crack down on banks and thrifts that aren't paying enough for insurance, and that the Fed was flirting with examination fees. We also uncovered plans that would let banks pay less for deposit insurance provided they set up certain special programs.

Those kinds of tasty scoops are the weekly fare at *American Banker's Washington Watch.* Within minutes, you get insights on regs and regulators—as well as your competitors—that could make the difference between profit and loss. We unconditionally guarantee it.

Data Source: The data were provided by Lipper Analytical Services Inc., New York, from its mutual funds data base. A proprietary fund is a fund over which the bank exercises management discretion or that was formed or founded by the bank. (*)— In the case of funds with multiple classes of shares, each share class is counted as one portfolio. (a)— Data for prior periods have been restated for the acquisition of *The Boston Company*, in May 1993. (†)— Mutual funds are managed by a U.S.-based investment advisory unit of the bank. (+)— Majority owned by a foreign bank. N.A.— Not available.

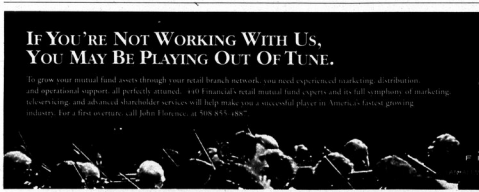
For a first overture, call John Florence, at 508 855 1888.



Banks Outpace Investment Industry As Proprietary Fund Assets Rise 36%

Continued from *page 1*

though there was a striking exception.

PNC Bank Corp., which took first place with $18.9 billion of fund assets, experienced a nearly 40% decline from mid-1992 as institutional investors seeking higher yields shifted assets into other investments, including Treasury securities and funds of rivals.

"Our trading volume is about $5 billion a day," said Thomas H. Nevin, president of PNC Institutional Management Corp.

"People will move that kind of money, believe me, even for a basis point."

BankAmerica Gains

Closing in on PNC, BankAmerica Corp. ended the second quarter with $18.3 billion of assets, up from $11 billion a year earlier. Like PNC, BankAmerica specializes in running money market funds for institutional clients.

BankAmerica's growth has been fueled by the strong performance of its Prime Fund, a money market portfolio. The bank has also stepped up its retail marketing and is developing new funds.

Third-place honors went to retail-minded NationsBank Corp., which broke into double digits with $10.3 billion of fund assets.

Much of the money came from conversions of trust assets, as NationsBank geared up for a big sales push via its joint venture with Dean Witter Financial Services, Mr. Bobroff said.

Though a few banks have managed mutual funds for as long as 20 years, most of the 103 banks with proprietary funds have entered the business in the past five years.

One attraction: the investment advisory fees that banks can collect. "Every day you turn on the lights and you're assured a stream of income," Mr. Bob-

Bank and Thrift Fund Rankings

As part of its stepped-up coverage of mutual funds, the *American Banker* today unveils exclusive rankings of bank and thrift companies that manage funds.

The data were prepared by Lipper Analytical Services, following specifications set by the newspaper. The detailed rankings will be updated quarterly and expanded as banks enter the field.

"This new initiative is in recognition of the growth of assets in mutual funds advised and distributed by banks," said A. Michael Lipper, president of the mutual fund tracking firm, which is based in Summit, N.J.

"The banks are becoming a potent force and now have assets in excess of where the fund industry was approximately 10 years ago," Mr. Lipper added.

What's Tabulated

The charts list bank and thrift companies in order of their total proprietary fund assets, and provide breakdowns according to the types of funds.

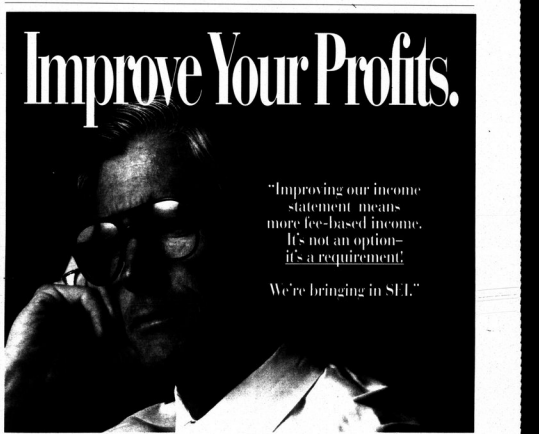
They also list the number of portfolios – greater, in some cases, than the number of funds. In the case of funds with multiple classes of shares, each share class is counted as one portfolio.

The reason: Each share class is a distinct product, with its own pricing structure and record of performance.

Money Market Funds Dominate Banks' Business

Types of mutual funds under management of bank and thrift companies

Improve Your Profits.



"Improving our income statement means more fee-based income. It's not an option– it's a requirement!

We're bringing in SEI."

It's very basic. To keep your profits growing, you need more fee-based income. And to stem the outflow of your depositors' money, you need investment programs.

And you need those programs now!

SEI can deliver a variety of investment programs and services for your individual and corporate customers. Through your branches, brokerage, private banking, and trust departments. One or all.

And we'll help you with all the program components – the products, the marketing, the distribution, and the technology you need to support these programs cost-effectively.

We'd like to be your partner in building your fee-based income. Because we both have the same objective for your bottom line: Improve Your Profits!

About SEI

SEI has been dedicated to creating comprehensive investment programs for over two decades, focusing on the following areas:

Investment Products and Programs ($35 billion in assets): mutual funds, proprietary funds, annuities, and bank-wide investment programs.

Full Planning and Consultation Services: marketing planning, program definition and implementation, as well as full training and sales support.

Investment Management Technology: trust accounting, defined contribution recordkeeping, mutual fund accounting, and retail support systems.

For more information, call 1-800-DIAL-SEI (342-5734).

Chemical and Liberty Financial Get OCC Approval for Partnership

By MICHAEL O'B. MOORE

The Office of the Comptroller of the Currency has given its nod to a plan by Chemical Bank to form an investment-products company in partnership with Liberty Financial Services, provided strict disclosure practices are followed.

The joint venture, dubbed Chemical Investment Services, must clearly inform consumers of the risks associated with nontraditional bank products, the Comptroller's office said in an approval letter.

Industry observers said the nine-page letter, dated July 1, contained no surprises. It is similar in tone and content to one the Comptroller's office issued earlier this year, when it approved a joint venture between NationsBank Corp. and Dean Witter Financial Services.

Among the conditions:

• The partnership should explain to customers any relationships either party has to products, the letter stipulates.

• Chemical, through its subsidiary, must have veto power over any partnership activities.

The deal is structured so that Chemical and Liberty have a fifty-fifty stake in the partnership for an initial term of 20 years.

The last regulatory hurdle is approval by the National Association of Securities Dealers. Chemical Investment Services expects that will come in September.

Meanwhile, 60 Liberty representatives have been selling products in Chemical branches as part of an intermarketing arrangement.

U.S. Trust Wins Pact For 21 Nuveen Funds

U.S. Trust Corp. has snared a big mutual fund servicing contract with John Nuveen & Co., Chicago.

The New York-based bank will take over custody and account servicing on 21 Nuveen funds that previously were serviced by State Street Bank of Boston.

U.S. Trust already provides custody, fund accounting, and transfer agency services to 76 of Nuveen's funds with $22 billion of assets, according to the bank.

Nuveen plans to transfer the 21 open-end mutual funds, totaling more than $6 billion of assets, in September because of the "efficiency of having funds done through one source," said Ed Dunn, a Nuveen spokesman.

U.S. Trust already services 76 Nuveen funds with $22 billion of assets.

The move reflects Nuveen's trend toward consolidating services in all areas. U.S. Trust is also a known quantity, Mr. Dunn said.

Through the services now provided, U.S. Trust has demonstrated its "willingness to customize the types of services our clients need," said Frederick S. Wonham, vice chairman and head of U.S. Trust's fund services group, in announcing the deal last week.

"This significant new commitment from Nuveen cements the strength of the total partnership," Mr. Wonham said.

U.S. Trust has more than $28 billion of assets under management and over $350 billion of total assets under administration.

Mellon Sued Again Over Its Sweep Fees

Disgruntled investors have hit Mellon Bank with another lawsuit alleging that trust customers are being charged exorbitant fees.

A class-action suit filed in the U.S. District Court for the Eastern District of Pennsylvania alleges that Mellon's "sweep fee" violates federal banking and securities laws.

Like many banks, Pittsburgh-based Mellon charges trust customers for sweeping idle cash into interest-bearing accounts, such as money market deposit accounts.

A federal appeals court recently overturned an earlier ruling that Mellon had overcharged customers. That case alleged violations of state banking laws.

The current suit "is a different complaint, alleging a federal course of action," said C. Oliver Burt 3d, a partner with Chimicles Burt Jacobson & McNew in Haverford, Pa.

The suit contends that Mellon violates state and federal laws that allow reasonable fees for sweep services. The fees are "unreasonable, unjustifiable, and unlawful," the complaint charges.

Mellon maintains that its sweep fees, at 50 cents a year per $100 invested, are legal and competitive with others charged by banks.

The lawsuit "is without merit, and we will be looking at all our options to resist and defend the case," said Stephen Yoder, assistant general counsel for Mellon.

The Mellon suit probably won't go forward until a similar case against CoreStates Bank is decided, said Sarah A. Miller, senior counsel for the American Bankers Association.

— Karen Talley

Banks Outpaced the Investment Industry As Proprietary Fund Assets Climbed 36%

Continued from page 13

roff said.

By contrast, banks that sell only other companies' funds earn only sales commissions.

CD Flight

Consumer demand for alternatives to low-yielding deposits is also driving banks into the fund business.

"Every banker in the country has woken up to the fact that his customer has a need for mutual funds," said David B. Dyche, director of financial industries at Arthur D. Little Inc., New York.

But while consumers are developing an appetite for fixed-income and equity funds, the data showed that the banking industry is still heavily tilted toward money market funds.

Some $128.2 billion, or about two-thirds of the money invested in bank-managed funds, was in money funds. In comparison, money market funds make up about 30% of the fund industry's $1.8 trillion of assets, according to the Investment Company Institute.

Some industry experts foresee changes, though.

"We are seeing a shift into nonmoney-fund sales," said Richard Stierwalt, president of Concord Holding Corp., a New York mutual fund distributor that has helped several major banks boost their fund sales.

One reason, he said, is that "banks are maturing in their retail delivery systems. They're going to be selling more and more product."

Equity Funds

Though banks had $29.4 billion of equity fund assets under management, only 10 had more than $1 billion each. The leader was NationsBank, with $1.9 billion of equities.

Taxable fixed-income funds totaled $23.5 billion. Tax-exempt fixed-income funds – that is, municipal bond funds – had $9.7 billion of assets. Wells Fargo & Co. led in both categories, with $2.9 billion of taxable funds and $959 million of tax-frees.

In a clear sign of banks' growing stature as fund managers, the Lipper data showed that 29 banks have $2 billion or more of mutual fund assets under management. That places them squarely within the top 100 mutual fund companies, Mr. Bobroff said.

'A Significant Player'

"Even though the banks are still money-fund dominated, they are very much a significant player in the industry," he said.

"They've got to grow assets from the current level, and they need to diversify the assets into products that are less interest-rate sensitive," Mr. Bobroff added. □

"Collins, you're getting a raise! Moving our pension funds to the Berger 100 Fund and the Berger 101 Fund was a brilliant idea."

PERFORMANCE IS WHAT COUNTS! For well over 18 years the **Berger 100 Fund** and the **Berger 101 Fund** have achieved an impressive record. We're proud of it, but more important is the investment philosophy behind our outstanding numbers. Please call for a prospectus and study it carefully. Each fund is offered for a minimum investment of $250.

Tallman, Visa's U.S. Product Czar, Faces Wider Assignment – the World

By JEFFREY KUTLER

Visa's product and market development team is going international.

Moving to beef up its global product support, communications, and related functions, Visa is expanding the scope and responsibilities of a 50-member staff headed by Wesley C. Tallman.

Mr. Tallman, Visa U.S.A.'s executive vice president of product and market development, has been given the same title and responsibility for Visa International as well.

Internally, it means Mr. Tallman reports to both H. Robert Heller, president of Visa U.S.A., and Charles T. Russell, chief executive officer of the international body.

People in the News

Mr. Tallman is a counterpart on the executive vice president level of Roger Peirce, who is responsible for systems and operations.

From the critical strategic standpoint, the increasingly influential Mr. Tallman and his team of managers, with noteworthy domestic accomplishments under their belts, will turn their attention to the whole global picture.

"THERE IS AN EXPLOSION in card usage" in the United States and abroad, says Wesley C. Tallman. "All regions want support for such things . . . so we brought our resources together" to meet global needs.

Shrinking World

"It may be a cliche, but there is a realization that the world is becoming a smaller place," Mr. Tallman said in a telephone interview from his San Mateo, Calif., office.

"There is an explosion in card usage, both debit and credit," he said. "All regions want support for such things as debit cards, corporate cards, and business cards, so we brought our resources together" to meet international needs.

Mr. Tallman's domestic product and market development staff dwarfed the resources that had been available internationally. The growth in global demands prompted the realignment. Mr. Tallman stressed that the U.S. region will not suffer in the transition.

Visa U.S.A. is the largest of the autonomous regional units in the Visa International structure. The others, which include fast-growing card markets in developing countries, are Canada, Latin America, Europe-Middle East-Africa, and Asia-Pacific.

Debit Cards Burgeoning

Mr. Tallman pointed out that while U.S. credit card growth rates have slowed in comparison to those in the rest of the world, the U.S. debit card business is just beginning to take off.

Visa expects its debit products – Interlink and Visa Check – to grow to 100 million cardholders, from the current 30 million, within a few years. That would require significant involvement by his staff.

"We have never grown that fast in credit cards," Mr. Tallman said. "It took 20 years" to reach 100 million. (There are currently 152 million Visa cards in the United States and 309 million worldwide.)

Visa International anticipates growth in payment volume from $500 billion of this year to $1 trillion by 2000, so demands for staff support will escalate in the United States and other regions alike.

"We have some very talented and capable managers and middle managers," Mr. Tallman said. "The idea was to spread that expertise."

Meanwhile, he said, it is likely that Visa will add staff just below the level of those who report to Mr. Tallman.

That level includes Greg Bjorndahl, overseeing product operations; Richard Hagedorn, credit products; Peter Gustafson, debit products; and Mike Nash, market development.

Mr. Tallman has also consolidated international market research, under Harvey Bondar, and marketing and communications, under John Bennett, the veteran Visa U.S.A. executive who engineered the Olympics sponsorships that have become key elements of Visa's advertising and promotions.

"We have never before had an international marketing-communications function," Mr. Tallman said.

Mr. Bennett was "very good at taking the international Olympic flavor and communicating it to the U.S. market," Mr. Tallman said. "We are looking to him to spread that effectiveness" so that other regions can get the same mileage from the sponsorship.

A Payment-System Veteran

Transferability, in fact, describes much of what Mr. Tallman is doing and has done throughout in his career.

Before joining Visa U.S.A. in 1989, the 50-year-old executive spent three years in an older but parallel payment system – as chief operating officer of Paychex Inc., a Rochester, N.Y., payroll processor.

Mr. Tallman came to Visa as executive vice president of debit products – an appointment that signaled Visa's seriousness of purpose in that emerging area. He used the post as a springboard to the broader product and market development job.

Earlier, he spent 20 years at Chase Lincoln First Bank, the Rochester subsidiary of Chase Manhattan Corp., rising to senior executive vice president. □

Verifone Certifies Broadcast System

By JEFFREY KUTLER

Verifone Inc. has certified a radio-transmission system for use with its transaction authorization terminals.

The system, Bison Data Corp.'s DataMover 2000, uses broadcast signals as an alternative to telephone lines.

Focus on 'Developing' Areas

Bison Data, based in Buffalo, markets the system mainly in parts of the world that have "developing telecommunication infrastructures," said Joseph P. Savage, vice president of Verifone's network systems division.

Verifone, based in Redwood City, Calif., is the leading provider of terminals and related systems for handling card transactions at points of sale.

3 Million Installations Made

The company has made three million installations in 70 countries and had $226 million in revenue last year.

Bison Data president Joseph Wolfson said the Verifone agreement was a strong endorsement for DataMover 2000 that gives both companies the opportunity to jointly open previously restricted new markets.

U S West Sees Bright Future for Phone-Company Cards

In May, Colorado-based U S West joined the ranks of telephone companies marketing cobranded credit cards.

William F. Keenan, who was hired away from First Omni Bank to become managing director of Phoenix-based U S West-BRI Credit Card Services, gave an upbeat progress report in an interview with American Banker *reporter Stephen Kleege.*

Q.: How has the U S West card fared so far?

KEENAN: We're very happy with the results. The industry average response rate is about 1.5%, and we're considerably above that. Our expectation is to grow to 500,000 accounts in 24 months and a million by our fifth year.

Q&A

Q.: What value does this cobranded card offer?

KEENAN: The value we add to it is the brand and the quality we've built in our natural market, our 14-state franchise.

The most important functionality is calling-card access. It also offers a competitive rate, a rebate on purchases, no annual fee.

Q.: What are the rates?

KEENAN: The product is evolutionary. We're being responsive to the market. But the initial offering was 16.9% for classic, 15.9% for gold. No annual fee. Up to 1% rebate on all purchases, and up to 2% on calling card.

Q.: Why did U S West choose U.S. Bancorp [of Portland, Orc.] as the issuer?

KEENAN: One of the initial decisions by U S West was to cobrand the card not only with a major mark, Visa, but also to have a relationship supported by a national bank.

The cards are "advertising in the consumer's wallet."

For the most part, banks were responsible for growing and building the Visa and MasterCard associations, and we wanted to go with an organization that had that history.

U S West went though a fairly exhaustive selection process and U.S. Bancorp met the initial criteria.

The organization has strong skills in managing relationship-driven, cobranded opportunities – they've got a very big portfolio with the American Automobile Association – and we thought it was a very good fit. Because they're on the West Coast, there was a strong geographic fit, too.

Q.: What were the precursors to your card?

KEENAN: The Discover card stimulated a lot of demand and educated the market on the no-fee proposition. Advanta Corp. was very successful in marketing a no-fee gold card, which differentiated them in the marketplace based on price.

AT&T came along and assessed the success of both Discover and Advanta and took the no-fee position to gain critical mass.

Q.: What do the phone companies get out of these deals?

KEENAN: The value AT&T, U S West, Ameritech, MCI, Sprint, and some of the large telecommunications players see with credit cards is that it's another extension of the brand – personalized billboard advertising in the consumer's wallet.

They can use that credit card as platform for helping market some of their core services, especially the calling card.

GM is following a similar formula, using the credit card and rebate structure as a vehicle for generating higher incremental profits.

William F. Keenan
Pleased with response

Q.: Aside from the calling feature, what products or services does U S West plan to sell through the card?

KEENAN: We're very interested in the credit card as a channel for marketing a number of core services.

We have a lot of regulatory constraints and issues we have to manage through, but within that framework we're examining a lot of possibilities. I'm not in a position to go into detail, because I don't want to tip off my competition.

Q.: Can you at least say what kinds of products we can expect? What is it that has prompted all these phone companies to issue credit cards?

KEENAN: The Visa and MasterCard networks offer lot of potential for synergy, with MasterCard developing a fiber optic network in Project Omni, and Visa making tremendous inroads with its Payment Service 2000.

The credit card industry may look entirely different 10 years from now. Today it's credit and payment utility. In the next decade you'll also have the information-access tie-in with the card.

It'll carry forward as far as our imaginations lead – to home banking, electronic banking, and a lot of other ideas that I'm sure all of us are looking at. □

On the Speaking Circuit, A Greater Sense of Purpose

One part of my professional life that has always been fascinating has been giving talks before business and banking groups.

Speaking for a living is not easy. First, there are the plane rides, where happiness is an empty middle seat and a baby in the next row who doesn't cry.

For as a fellow speech-maker put it to me, "Every night is opening night, closing night, and the whole run." There is no second chance – you have to win the audience right away.

Speech Must Go On

Yet, in many instances, the talk itself is the least important part of the convention or meeting. The value to the business people or bankers is in getting together before and after to converse informally, and many a valuable idea that more than pays the cost of the trip has been planted that way.

But the speech goes on, and woe be to the reputation of the speaker who misses an engagement.

I have had a few close calls, like the time I had to hitch a ride on a plane of bank checks going from Atlanta to Dallas, because my chartered plane from Hilton Head didn't reach me in time for a scheduled flight.

In that instance, I was also laughingly later bawled out by Paul Volcker for paying the pilot $250 to let me sit on a bag of checks in his Learjet.

"That was my plane!" the former Federal Reserve chief exclaimed a year later, when I told him the story. "He had no right to let you go."

Marquee Value

Usually a group has two types of speakers. The first type is picked because of fame, and the audience can go home and say, "When I was with ex-President Reagan," or "When Henry Kissinger was with us at the convention, he said . . . "

Frequently, this group includes TV newspeople who fill their responsibilities if they just stand up and smile. (I heard a talk by a network TV anchor whose principal contribution to the meeting was in telling us that he had traveled so much that he could spell Kaopectate in seven languages.)

The Other Type

I include myself in the second group – those who must both

CONVENTIONS *are different: more serious, more informal, less lavish*

educate and entertain in the same talk if they ever want another booking. I find that I am more valuable if I spend most of my time explaining rather than predicting.

This means giving an explanation of something like the Europe-dollar and how it does not violate the concept of "money never leaves the country of origin, only the ownership does," instead of predicting interest rates for the next 30 days.

One of my greatest triumphs was when a banker told me I had

WE ARE SEEING *more meetings devoted to one topic of interest, and groups spending more time in educational breakout sessions or roundtables and less at formal addresses.*

saved him about $1 million through one of my talks.

He explained: "You had said that if the examiner tells you to raise more capital [it was a time when capital requirements were more negotiable than they are today] you should first explain why you don't need it, then scream and yell, and he will go away. I did and he did, and I saved a million."

Days of Wine and Stand-Up

But not all my talks offer such usefulness. I remember one for a now-defunct savings bank, where they asked me to speak at the 21 club in New York for their First Annual Economic Seminar. When I arrived, I found it was only their top officers, their directors, and me.

We had two hours of great food and wine, and then, just before I was to speak, the CEO said, "Sommelier, brim the cups." Then he said, "We will now have our First Annual Economic Outlook Address," and turning to me he whispered, "Make it short and funny."

I did eight minutes, concluding after the jokes that the economy would go up unless it went down. Then we all went home and reevaluated.

Executives may budget millions of dollars on the basis of multiyear forecasts, yet they are often unable to tell what products or customer relationships are actually profitable. They are also frequently "flying blind" with respect to major sources of financial risk.

Little Spent on Analysis

With information technology that can effectively process every penny in a $100 billion institution, banks still lack the timely and accurate information necessary to guide their most critical management processes.

As a result, some banks fail. Many others are gobbled up by rival institutions at bargain-basement prices. What's wrong with this picture?

The problem may be that while banks spend a great deal of money on automating and maintaining their processing operations, they have not invested enough in the analytic systems that can help senior management make sense of the numbers.

Scrimping on Bank Analytic Systems Gives Rivals an Opening to Move Ahead

Surveys indicate that banks pay billions of dollars each year to maintain and improve their technology.

Estimates vary from $14 billion to $26 billion, depending on whether costs such as salaries and benefits are included. For some banks, technology expense may represent 25% of total noninterest costs and exceed 5% of total revenues.

Most of this sum appears to be spent in service of day-to-day operations. In the classic bookroom information processing shop of a full-service bank, powerful mainframe computers process literally millions of transactions every day.

'Flying Blind'

These operations generally run smoothly and, on a per-unit basis, cheaply. It is impossible to imagine contemporary banking without them.

As we move up the organization chart, the scene changes. Highly paid managers and analysts struggle to crank data into spreadsheet programs on personal computers. Critical information may be incomplete or unavailable. Financial managers can spend endless hours estimating missing elements and even more time justifying their estimates.

At every level of management, reviews produce changes that must be manually reentered

Mr. Dorman is president of Treasury Services Corp., Santa Monica, Calif. Ms. Gentry-Buswell is a senior manager for systemetrics Financial Services Inc., Little Rock, Ark.

Don't Scrimp on Bank Analytic Systems

Continued from *page* **18**

erations, they invest relatively little in analytical and managerial systems that can inform such essential management processes as planning, performance measurement, risk measurement, and decision-making.

Little Data for the Dollar

Nearly half the money banks spend on information technology goes for personnel, overhead, and associated services. Hardware accounts for another quarter. Software accounts for only about 16% of the multibillion-dollar investment.

Within software, nearly all of the money goes to maintain and improve transaction processing operating systems and programs.

The smaller remainder includes, among other things, the money spent for the financial management and analysis systems that can help senior management with critical strategic decisions.

It represents only a tiny fraction of the total spent on information systems. It would appear that bank executives are getting relatively little information for their technology dollar.

Technology Not the Danger

This fact should startle us more than it does. Neither of us can think of one bank that has gotten into really serious trouble because its transaction processing costs were too high or its accounting systems too inaccurate.

Banks get into trouble because they make bad decisions at high levels. They lend too much money in one vulnerable industry (real estate, for example, or defense); they don't introduce the right products, or they misprice them, or market them ineffectively.

They can't generate enough revenues to match rising costs, including the costs of new transaction processing systems needed to match competition.

They don't position themselves properly to adapt to sudden shifts in interest rates. They cut costs too aggressively in service-intensive products and lose highly profitable relationships without knowing it.

'Smart' Systems

A favorable environment can temporarily reduce the penalties for bad decisions, but the increasing competitive pressures of the American financial industry will not let poorly informed decisions go unpunished for long.

The wave of acquisition and consolidation shows little sign of abating. By the end of the decade, only 8,000 of our current 12,000 banks will survive as independent entities. And competition with other, nonbank institutions will become ferocious.

Processing transactions swiftly and accurately is important. And improvements in processing operations can make real contributions to a bank's profitability and competitiveness. New processing technologies like check imaging and optical storage represent important advances in the way banks can do business.

However, the imbalance in technology focus is painfully evident in the fact that several banks have spent more effort scrutinizing a decision of less than $500,000 to install a new management system to measure profit and risk than they spent evaluating a more than $30 million commitment to image processing.

But the real improvements that information technology can make in a bank's balance sheet lie somewhere else. They lie in "smart" systems that can guide bank managers in essential functions such as profit performance measurement, asset/liability management, marketing, planning, and credit risk management.

Missing the Point

These systems can make effective use of the vast quantities of data already captured and paid for in a bank's information technology systems.

As more banks have begun to invest in systems to provide management information and decision support, an unfortunate number seem to be addressing the problem with the same approaches and techniques that are used for operational systems.

Missing the point that management systems are dramatically different from operational systems usually leads to much higher cost of development, longer lead times, and unacceptable risk of failure.

The real irony is that the most successful examples of financial management systems we're describing are very inexpensive compared with major transaction processing systems. They can be installed on existing hardware and operate with existing data bases.

They offer tremendous benefits for very small, risk-free investments. The vital information you need is probably sitting in your information system.

A small but rapidly growing number of high-tech-edge financial institutions is proving that effective investment in management systems leads directly to dramatic improvements in earnings and share price.

As these institutions become stronger through the power of information, banks that focus most of their technology investment on streamlining operational systems will increasingly wake up to find that they have been merely arranging deck chairs on the Titanic. □

The Principal Manager of the Foundation is Felicia G. Laubich.

Bank Fund in the Black; Treasury Loan Repaid

Continued from *page 1*

Treasury. The agency took its first loan in June 1991, and borrowing peaked at $15.1 billion in June 1992. The FDIC began paying back its loans last September; interest on the borrowings totaled $739.4 million.

Trade-Group Blames GAO

The American Bankers Association seized the opportunity to blast the General Accounting Office's audits of the insurance fund over the past two years. The GAO forced the FDIC to bulk up its reserves to cover bank failures that never materialized.

The fund was never insolvent, the ABA argued Tuesday. It blamed the GAO for shoving the Bank Fund into the red in 1991.

In a letter to Comptroller General Charles A. Bowsher, the ABA asked the GAO to restate the fund's size as of the end of 1991 and 1992. According to the ABA's figuring, the fund had $3.2 billion at yearend 1991 and $6.5 billion at yearend 1992.

Also at the meeting yesterday — the first since June 17 — the FDIC proposed interim rules regarding the national depositor preference provisions that became law yesterday, when President Clinton signed the massive budget bill. The new law requires the FDIC to be repaid before nondepositor creditors when a bank fails.

The rules that the FDIC put in place Tuesday merely clarify that administrative expenses related to a bank's failure will continue to be paid before anyone gets a dime, including depositors. Such expenses include the final payoff as well as data processing services and utilities. The FDIC said it will not cover "golden parachute" payments or severance pay claims.

Also at the meeting, the FDIC revised its branch closing policy. All the agencies will eventually make the same changes, which implement the FDIC Improvement Act.

Banks wishing to close a branch must give regulators and customers 90 days' notice. Signs must be posted in the branch 30 days before the closing. Automated teller machines and temporary offices are not considered branches under the rules. □

FDIC Aims for Sale of Crossland To Investors Group This Week

Continued from *page 1*

lyn also has talked to the FDIC about buying Crossland. Republic Bank of New York, a company that bid for Crossland 18 months ago when it was seized by the government, is also said to be mulling an offer.

Though the FDIC, Anchor, Dime, and Republic are all refusing to comment officially, people at the agencies are talking privately and painting a frantic behind-the-scenes picture of the FDIC's efforts to return Crossland to the private sector.

Possibly complicating matters more, the FDIC filed an amendment to its public offering on Tuesday. An explanation of the changes was not available, but they are not expected to delay the deal.

Quick Completion Sought

The FDIC announced in mid-May that it wanted to sell Crossland through a public offering. The agency released its prospectus in early June to kick the deal said it would complete the sale in three weeks.

Finishing this week would put the deal a week ahead of schedule.

Peggy Turbett/American Banker

Harrison Young

Insists he'll study all offers

Crossland's core deposit intangible.

When it took over Crossland, the FDIC had an incentive to bloat its capital because the more money Crossland had, the less cash the FDIC had to pump in.

But when selling the institution, it's in the FDIC's best interest to reduce its capital because that lowers the asking price.

If the FDIC gets the $300 million it is seeking from investors, the government's tab for Crossland will be $850 million, or $100 million more than the FDIC staff had predicted. But it is $450 million less than Chase's or Republic's offers would have cost, according to the FDIC's calculations.

The FDIC will assume 80% of the losses on Crossland's portfolio after its $179 million loanloss reserve is depleted, according to the prospectus. The FDIC, however, does not think Crossland's losses will exceed $179 million.

That's an optimistic assumption, considering that Crossland has $1.1 billion in nonperforming assets, or 4.6% of total loans, plus $571 million in repossessed real estate and another $435.4 million invested in restructured troubled debt. □

BANK CALL NOTICE

REPORT OF CONDITION OF

Consolidated Subsidiaries of the

Bessemer Trust Company, National Association

of New York

Shares of European Banks Climb As Rates Continue 3-Month Slide

By JAMES R. KRAUS

Bank stocks throughout Europe are surging.

The catalyst: Falling interest rates and growing optimism that an economic recovery is near.

Over the past three months, bank shares have climbed 37% in Switzerland, 23% in France, 19% in Ireland, 15% in Britain, and 13% in Austria and Germany.

The major exception was Italy, where prices fell by about 4%, mainly because of mounting problem loans to big corporate borrowers like Ferruzzi Finanziaria.

In comparison, Standard & Poor's price index for U.S. regional banks rose only 4% over the same period, while money center banks rose 14%.

'May Be a Recovery Coming'

"Things are changing in Europe, and there may be a recovery coming," said Robert Alberston, a banking analyst with Goldman, Sachs & Co. in New York.

"Many see a U.S.-style scenario being transplanted."

Analysts think the rally still has a way to run, despite a drop in bank stocks Tuesday that was attributed to profit-taking and concern that continued high provisions for loan losses are in store.

They noted that many banks are still trading at close to their 52-week highs. Deutsche Bank, for example, lost nearly 9 marks ($5) Tuesday to end at 773 marks ($455), but that was still more than 10% higher than its price in mid-June.

Martin Wirth, analyst with Credit Suisse First Boston in Frankfurt, said many German shares are still undervalued and predicted falling rates will further boost the profits of Deutsche Bank and other German banks.

Analysts in France noted that Tuesday's decline came after sharp recent improvements and predicted more gains for banks.

Spanish and Portuguese bank analysts were also bullish.

They noted investors view banks as a safe bet in those two countries and pointed out that share prices for banks in Spain and Portugal remained unaffected by the drop in prices elsewhere in Europe on Tuesday.

Recent currency exchange-rate fluctuations have also helped Spanish, Portuguese, and other European banks boost earnings, they said.

'The Main Beneficiaries'

"Banks have been the main beneficiaries of falling interest rates and speculative trading in currencies," said one analyst.

"We see a lot of income coming from these areas."

In contrast to the sharp movements in prices in Europe, bank stock prices were down slightly in the United States Tuesday following Monday's across-the-board rise in response to a renewed decline in interest rates.

Gainers included J.P. Morgan & Co., up 25 cents to $71.875; Society Corp, up 50 cents to $32.875; First Bank Systems, up 37.5 cents to $31; First Chicago Corp., up 50 cents $46.625, and Firstar Corp., up 50 cents to $33.375.

Among the losers were First Interstate Corp., down 37.5 cents to $62.625; First Fidelity, down 12.5 cents to $48.50, and Old Kent Financial, down 62.5 cents to $34.375.

'Nothing's Moved a Lot'

"Stocks are mainly down, but nothing's moved a lot."

said Mark Alpert, an analyst at Alex Brown & Sons Inc.

Both other analysts said that continuing drops in interest rates are also an indication that loan demand remains weak and may actually be deterring investors from banks.

"Investors are much more interested in seeing uptick in loan growth than an uptick from Chapter 12's in a declining interest rate saga," said Mr. Alberson. □

CAPITAL

Citicorp, Chase Float Notes For Total of $550 Million

By DAVID SIEGEL

Citicorp and Chase Manhattan Corp. issued a total of $550 million in subordinated debt Tuesday, taking advantage of low rates and strong investor interest.

Citicorp floated $350 million of 12-year notes priced to yield 6.79%, or 98 basis points over what U.S. Treasury notes were being sold at in advance of their sale later in the week.

The bonds are likely to sell well at their issue price, said one bond analyst.

Citicorp bonds have rallied this year because of the bank's improved earnings and credit quality, as well as investors' expectations that more improvement is in store.

10-Year Debt Rallying

Since yearend 1992, Citicorp's 10-year subordinated debt has rallied. On Tuesday it was trading at 85 basis points above Treasuries, down from 180 basis points in December. "Certainly the bank's spreads are as tight as they've ever been since 1990," said John Works, bond analyst with J.P. Morgan Securities.

But investors still view Citicorp as weaker than its New York City rivals. The yield on Citicorp's new 12-year subordinated bonds is a few basis points higher than the yield on a similar outstanding Chase issue. And it would take about 10 basis points more than a comparable Chemical Banking Corp. issue, according to a market source.

Refinancing Seen as Goal

Based on recent comments to investors by a Citicorp executive vice president, Tuesday's offering was aimed at reducing borrowing costs. The executive, Thomas Jones, said he expected all subordinated debt raised this year to be used to refinance outstanding issues, rather than to build capital.

Goldman, Sachs & Co. led the issue, rated Baa2 by Moody's Investors Service and BBB plus by Standard & Poor's Corp.

Chase issued $200 million of 15-year subordinated notes.

Both banks took advantage of low rates and strong investor interest.

They were priced to yield 6.80%, or 103 basis points over the when-issued 10-year Treasury. Market participants said the issue was aggressively priced, and unlikely to sell out at that rate.

NBD Issue Expected

Since being upgraded by Moody's on July 2, Chase has raised $750 million of subordinated debt in the U.S. and Euromarkets, according to Securities Data Co. Its 10-year debt has rallied, spurred by improving credit quality and earnings. The yield-spread over Treasuries has narrowed 50 basis points since December.

Separately, market sources said NBD Bancorp is expected to issue $200 million of subordinated debt on Wednesday through a bank subsidiary. □

THE MARKETS

Long Bond Falls to a New Low of 6.44%

The bond and stock markets stuck to narrow trading ranges Tuesday, with the 30-year bond falling to a new low of 6.44% and stocks falling back slightly.

The Treasury sold $16.67 billion of three-year notes at a yield of 4.49%, up 3 basis points from late Monday. While the 30-year bond yield fell 2 basis points, the yields at all other maturities rose only a basis point or two.

Trading is in tight ranges in anticipation of auctions for the 10-year note and 30-year bond, as well as reports this week on consumer and produce price inflation.

The stock market retreated after the Dow hit a new high.

Profit Taking

Stocks finished mostly lower as investors took profits after a record advance on Monday.

The Dow Jones industrial average, which gained 15.65 to a new high on Monday, fell 3.35 to 3,572.73.

Broader indexes also retreated, but advancing issues narrowly led decliners on the Big Board.

Prices remained in a narrow band all session. But trading volume jumped to about 255.5 million shares on the New York Stock Exchange from 231.7 million on Monday.

— David Siegel

Need Securities Training?

Whether you need to train one individual or 1,000—whichever training approach you're looking for—turn to Dearborn for training for the NYSE/NASD securities exams. Dearborn offers a full menu of training choices to meet your needs:

- print based self-study tools,
- computer-based instruction,
- classroom seminars for the NYSE/NASD securities exams.

Our well-known PassTrak® Securities Exam Preparation texts are continually refined and updated. And there's our COMPASS computer-based, on-demand training. Use it for one individual or install it company-wide.

We also offer videotape programs for produc• or securities exam training support—and classroom training, at more than 50 locations nationwide.

And all of these are efficient, cost-effective, and proven to work! So, whichever training vehicle you prefer, call Dearborn.

Contact: Mark Emmons, Vice President at (800)621-9621 extension 757.

Lawmakers Face Oct. 1 Deadline For S&L Bailout

By ROBERT M. GARSSON

Congress left town last week without providing new money to deal with failed savings and loans, setting the stage for a high-stakes war of nerves when the legislative body returns in September.

By law, the Resolution Trust Corp. must stop taking in new conservatorships on Oct. 1. After that date, failed thrifts will be handled by the Savings Association Insurance Fund, which is essentially broke today.

As a result, there will be considerable pressure on lawmakers to act by the end of September on a funding for the S&L bailout, a politically unpopular issue on which the House has avoided action for 18 months.

Conversely, however, next month could be the last chance to enact a bailout bill.

"September really is the window of opportunity," said Edward L. Yingling, executive director of government relations for the American Bankers Association. "If they can't get it together then, they'll begin to lose momentum."

A number of other big issues will loom later in the year, Mr. Yingling noted. They include the controversial Riegle-Neal plan can Free Trade Agreement and Hillary Rodham Clinton's health care reform proposal. Those issues will command most attention on Capitol Hill.

First Things First

Supporters of the legislation believe they could have mustered the votes before the August break. But the House leadership was unwilling to risk a vote on the contentious issue until after Congress completed action on the high-priority deficit reduction package.

Thrift regulators are also likely to have their eyes on the stock in September. In the absence of legislation, the RTC cannot accept new cases after Oct. 1, and few believe the thrift industry could bear up under the strain of having to pay for the resolution of institutions insolvent now or likely to go belly up in the next few years.

Good Reasons for Haste

Every weak institution placed with the RTC before Oct. 1 lessens the pressure on the thrift fund, as well as the thrifts that fuel the insurance agency with their premium dollars.

Consequently, thrift regula-

Kemper Downgrades Six Midwestern Banks

By GORDON MATTHEWS

Kemper Securities has downgraded six midwestern bank stocks, saying banks will have more difficulty outperforming other stocks over the next 18 months than during their big rally of the past two years.

"We remain bullish on bank and thrift stocks, especially in the longer term," said analyst Thomas J. Maier. "Just a little less bullish now than we've been."

Banks' net interest margins, a big element of profitability, will probably weaken from current levels, he said. But they will remain healthy, he added, since many price-cutting competitors, notably in the thrift industry, have been eliminated.

Merger Plays Expected

Bank stocks will remain of keen interest to investors, however, because consolidation will continue throughout the industry and especially in the Midwest, he noted.

Downgraded to "hold" from "long-term buy" status were NBD Bancorp, Detroit; Northern Trust Corp., Chicago; Marshall & Ilsley Corp., Milwaukee; First Midwest Bancorp, Naperville, Ill.; and Associated Banc-Corp, Green Bay, Wis.

Huntington Bancshares Inc., Columbus, Ohio, was downgraded to "long-term buy" from "strong buy."

Prices Seen as Fair

Mr. Maier also upgraded one company, raising First of America Bank Corp., Kalamazoo, Mich., to "strong buy" from

Bank of S.F. Shakes Up Management, Posts Loss

By JED HOROWITZ

Bank of San Francisco repudiated its latest strategy for survival Wednesday by announcing a new management team and another capital infusion from its principal investor to help it meet regulatory requirements.

The announcements came as the bank's parent reported a second-quarter loss of $4 million, or 48 cents a share. Bank of San Francisco, which was founded in 1979 to serve wealthy individuals, has lost $38 million over the past eight quarters.

$6 Million Infusion

The company, which has $315 million of assets, said it submitted a capital plan to state and federal banking regulators that includes an infusion of $6 million by Sept. 30 from Putra Masagung, an Indonesian investor who is its principal stockholder.

He previously injected $26 million to bring the company up to regulatory standards.

The bank, which has crumpled under the weight of California's real estate market, tried to recreate itself as a small-business bank two years ago, centering its activities in Sacramento.

On Wednesday, Bank of San Francisco said it will sell the regional office's $48 million of assets and deposits to American River Bank, a community bank.

The sale will result in a loss of "a few hundred thousand dollars" but will help ease Bank of San Francisco's regulatory capital ratios, said Rodney D. Freed, its president and chief operating officer.

CEO Ousted

The Sacramento strategy was hatched by Thayer Prentice, a seasoned community banker who was brought in as chief executive of the bank in 1991. He will be replaced by Kent Price, who – subject to regulatory approval – will be chairman and chief executive officer of the holding company and the bank.

A former chief financial officer of Bank of New England, Mr. Price ran Bank of America's international private banking division until he was demoted in March.

Mr. Freed, the president and chief operating officer, said the company will refocus on private banking and business banking in San Francisco and the Pacific Rim.

The company's stock fell 18.75 cents a share to $1.06 on the American Stock Exchange Wednesday afternoon. □

NEWS *briefs*

American Savings of Fla. Freed from Curbs

MIAMI — American Savings of Florida said the Office of Thrift Supervision had released it from a capital plan in effect since April 1991 and from a capital directive in effect since January 1992.

The company also said the OTS had formally removed its designation as an institution "requiring more than normal supervision."

American Savings said it believed that the OTS took these actions because of the progress demonstrated by the company in meeting compliance with regulatory capital requirements, achieving core earnings, reducing nonperforming assets, and improving levels of loss reserves.

The company said the capital directive had limited its activities to those specified in its capital plan and generally prohibited asset growth.

American Savings said it has met all current capital standards since March 31, 1992, and all fully phased-in requirements since Sept. 30, 1992.

Discount Corp. Holders Back Sale to Zions

NEW YORK — Discount Corporation of New York shareholders approved a plan in which the company would be acquired by a unit of Zions Bancorp.

The approved plan calls for each Discount Corp. holder to receive $8 a share, for a total of $65 million. Zions will also assume certain obligations.

About three-quarters of the nearly 8.2 million shareholders approved the agreement. During the meeting, some longtime shareholders and former employees expressed anger and frustration at management.

Central Bank Unveils Phone Bill-Paying

BIRMINGHAM, Ala. — Central Bank of the South, a unit of Central Bancshares of the South Inc., has introduced Pay-Mate, a new telephone bill-paying plan, to its customers in Alabama and Florida.

The company said the new PayMate service costs $3 a month, and personal checking account customers may apply at any Central Bank office in the two states.

Central Bank said a customer can list those accounts to be paid on a regular basis, such as department stores, utilities, and major credit card companies. Customers call in payments using the toll-free number, indicating the account number and the amount of the payment. The customer may also indicate automatic payments for recurring bills with fixed amounts, including mortgage and other loan payments.

First Banks Inc. to Buy American Home S&L

ST. LOUIS — First Banks Inc. said it had entered into a letter of intent to acquire all of the outstanding stock of American Home Savings and Loan Association of St. Louis.

In a news release, the companies said the shares would be acquired by First Banks for $1.50 each in cash.

The companies said a previous letter of intent under which American Home was to be acquired by First Capital Corp. for $2 a share had been withdrawn.

The companies said that under the current agreement, American Home Savings and Loan would merge with First Bank — A Savings Bank, a unit of First Banks Inc.

The transaction is subject to a definitive agreement and various approvals and conditions.

1st Tennessee to Test Home Banking Service

MEMPHIS — First Tennessee Bank and BellSouth Telecommunications said they will begin testing a new screen-based telephone that will offer home banking and shopping services.

The briefs were compiled from staff and wire reports.

Fed Proposes Curbing Access To Advances by Troubled Banks

By CLAUDIA CUMMINS

WASHINGTON — The Federal Reserve on Wednesday proposed changing its regulations on discount window advances to limit extensions of credit to troubled banks.

The rules would carry out section 142 of the Federal Deposit Insurance Corporation Improvement Act, which makes the Fed liable for certain losses to the Bank Insurance Fund. This occurs when a bank leaves off failure through discount window borrowings, fails anyway, and then ends up costing more to resolve.

Congress passed the law to discourage the Fed from propping up troubled banks for long periods. This assistance, lawmakers said, increases taxpayer costs if the bank eventually fails, because it increases operating losses and scares away uninsured, unsecured depositors and creditors from the bank.

Grudging Approval

The Fed board unanimously approved the rules, albeit begrudgingly. The governors added this new law to the list of those they dislike because they require the central bank to "hard-wire" its policies, in the words of Fed Vice Chairman David W. Mullins.

"To the extent we do this, we eliminate the ability to exercise judgment on individual cases,"

David W. Mullins
Hates more flexibility

added Fed Governor John P. LaWare. "I just don't like what the statute forces us to do."

According to section 142, when the Fed lends to an undercapitalized lender that is not deemed "viable" after it has borrowed for 60 out of 120 days, or when it lends to a critically undercapitalized lender five days after it gets this rating, the Fed becomes liable for losses to the FDIC caused by the advances. In addition, the Fed must report this liability to Congress.

Amendments to Reg A

The board proposed four amendments to Regulation A, which guides loans to depository institutions. The proposal would:

• Require district banks to consult with the board about credit that could result in Fed liability to the FDIC.

• Adopt "prompt corrective action" capital categories to determine which banks are undercapitalized and critically undercapitalized for this rule.

• As the law allows, exempt from the liability rule most undercapitalized institutions that have submitted capital restoration plans, as long as the primary federal regulator has accepted the plan and the lender is complying with it.

• Assess all district banks on a pro rata basis for the liabilities, rather than only the bank that causes it.

Also in its meeting Wednesday, the Fed approved a new interagency policy statement carrying out legislation that requires lenders to give agencies advance notice when closing branches. The rule was proposed earlier by each of the agencies.

The final statement follows the initial proposal, with a few major exceptions. In response to complaints from the industry, the agencies have excluded automated teller machines, as well as branches being relocated or consolidated through an acquisition, from the requirement.

Finally, the Fed approved a rule imposing daylight overdraft penalties on bankers' banks that do not hold reserves, Edge Act corporations, and limited-purpose trust companies. □

Chemical Struggles to Merge Trust Systems

By JEANNE IIDA

In the 19 months since its merger with Manufacturers Hanover Trust Co., Chemical Banking Corp. has moved less than half of its trust and global custody customers to a unified accounting and reporting system.

The conversion is critical for Chemical's competitiveness in a market beset by price wars and consolidation.

The bank expected to have all 500 overseas accounts on the system, dubbed Chemtrust, by the end of 1992. Most of those accounts were originally Hanover customers.

But by June of this year, all the overseas customers and nearly half the domestic ones remained on the old systems.

Merging the two banks' global custody businesses proved so complex that the timetable had to be rethought late last year, Chemical officials said.

Aiming for Early '94

The revised schedule for installing the necessary software focuses on getting domestic customers onto the new system first. All customers are to be moved by early 1994.

In the first six months of this year, Chemical moved half of its more than 5,000 master trust accounts to the new reporting software, from Premier Systems Inc., Wayne, Pa.

"We're very pleased with our progress," said Jeremiah O'Leary, general manager, global securities services, at Chemical.

Before the merger, Chemical and Hanover were midsize players in securities processing and custody. The merged bank hopes to make use of its size to achieve economies of scale that will make it more competitive with the biggest custody banks.

Chemical is estimated to have $150 million to $200 million in revenues from master trust and global custody services, and profits of between 10% and 20%. Growth has been relatively flat, according to a well-placed source.

Chemical began testing the software in its Cardiff, Wales, data center late last year with about 50 overseas Chemical accounts. It planned to move the rest of its overseas customers by the end of 1992.

Instead, after some testing, Chemical moved the test accounts back to the existing Chemical system and decided to focus on moving master trust customers.

Mr. O'Leary said the change in plans was due to the complexity of merging the overseas operations and offices of the former Hanover with Chemical.

It was determined that some software enhancements required to accommodate former Hanover customers could be better implemented, according to a source close to the project who requested anonymity.

Chemical still expects to have domestic customers on the system by the end of 1993. But overseas customers won't be moved to the system until late 1993 to early 1994.

Many bankers believe it is important for global and domestic trust systems to be compatible, so customers can see all of a pension fund's assets on a single screen. U.S. customers are increasing their investments overseas, and reducing the distinction between domestic and international services.

Now Chemical is in the first phases of designing a consolidated securities tracking system to underlie the system.

Chemical is currently using two securities movement and control systems — one from the old Hanover to handle domestic activity, and one from Chemical to handle overseas accounts.

The systems manage securities processing, tracking such transactions as dividend collections and settlement practices in different countries and time zones.

"It is in our plans to build one integrated [tracking] system to handle all types of currencies and all types of instruments," Mr. O'Leary said. □

Banc One in Deal to Buy Utah's Capital Bancorp

By STEVE KLINKERMAN

Banc One Corp. agreed on Wednesday to buy a healthy community bank in Salt Lake City, thus increasing its share of the Utah market by nearly 15%.

The Ohio-based bank company, the nation's eighth largest, said it expected to complete the purchase of Capital Bancorp by the first quarter of 1994. The Utah bank, which has $117 million of assets and seven branches, will raise Banc One's position to fourth place from fifth place in terms of total bank assets in the western state.

Capital Bancorp is privately owned, and terms were not disclosed.

Banc One entered the Utah market through its 1992 purchase of Valley National Corp. The Phoenix, Arizona-based company owned a bank with $843 million of assets in the Beehive State.

According to Sheshunoff Information Services, Banc One's Utah operations earned $1.6 million in this year's first quarter, the most recent period for which public data is available. The showing equaled a soft 1.76% return on assets.

The Utah unit lost $2.2 million in 1992. By contrast, Capital Bancorp delivered a hefty return on assets of 1.8% in the first half of 1993.

Kent Jones, the company's chief financial officer, said loans to small businesses and fee revenues from mortgage refinancings were key factors in its strong performance.

The one-bank holding company, founded in 1977, boasted a net interest margin of 6.28% in 1993's first half, Mr. Jones said.

The acquisition will vault Banc One to fourth place from fifth place in Utah in terms of total bank assets. The dominant players in Utah are First Security Corp., with $7.9 billion of assets; Zions Bancorp., with $3.9 billion of assets; and Key Bancshares of Utah, a $1.15 billion-asset subsidiary of Keycorp, Albany, N.Y.

The largest pending buyout in Banc One remains Firstier Financial Inc., an Omaha-based bank company with $3 billion of assets. It also has smaller deals pending in Oklahoma, Illinois, and Texas. □

Continental's Finance Chief Brings a Cosmopolitan Flair

By STEVE KLINKERMAN

For years, Michael E. O'Neill has worked behind the scenes at Chicago's Continental Bank Corp. on projects that have been key to its continuing rehabilitation. Now, he is taking a front-line position.

Mr. O'Neill, 46, will become chief financial officer of the $22 billion-asset company in September, picking up the reins from Hollis Rademacher, who is retiring.

Despite a conventional banker's pedigree that includes an MBA from the University of Virginia, stints overseas for Continental and First Interstate Bancorp, and a period as a consultant, Mr. O'Neill is cut from a different mold than most CFOs.

A professed skeptic when it comes to strict corporate hierarchies, the executive describes himself as "unstructured – someone who is comfortable dealing with a somewhat uncertain environment, trying to craft solutions that may not be perfect but that are improvements."

That should stand him in good stead at a company whose chief financial goal remains the improvement of credit quality.

Continental has endured $1.7 billion of chargeoffs since the beginning of 1988. Though it has rebounded from a third-quarter 1991 loss of $185 million with seven consecutive quarters of solid profits, lingering performance issues have caused rating agencies to withhold full endorsements.

A 'Need to Improve'

When Duff & Phelps Credit Rating Co. recently raised ratings on Continental's long-term certificates of deposit to BB-plus, for instance, it simultaneously granted an A-plus rating to Bank of New York Co., a rival for the business customers that Continental cultivates.

"We need to improve our credit ratings to compete in our maintaining the bank's earnings momentum while building loss reserves to levels that satisfy the market.

"It is hard to build capital while taking higher-than-normal loss provisions," he said.

Corporate Lending Strategy

The key to it all, he said, is disciplined expansion. He believes the bank can build revenue by booking more corporate loans – if it uses its loan syndication department to limit exposure on any one credit.

"What we increasingly like to do is underwrite relatively large amounts of credit, but retain relatively small amounts of that underwriting," he said. "We really have learned our lesson on overconcentration."

The executive has a long history at the bank. He joined Continental in 1974, fresh from graduate school, stayed for 10 years, and then joined First Interstate Capital Markets for one year.

He spent most of that time wandering through London, Hong Kong, Brussels, and Antwerp, first as a business development man, then building his skills in capital markets and workouts. He rejoined Continental at its Chicago headquarters in 1989, following a stint as a consultant.

Throughout his journeys, Mr. O'Neill cultivated his cosmopolitan interests. A graduate of Princeton University, where he majored in the study of European civilization, the executive continues to travel for leisure and admits to a weakness for art and antiques.

He recently finished reading "The Civilization of the Renaissance in Italy," by Jacob Burckhardt. □

Michael E. O'Neill
Skeptical of hierarchies

People Hollis Nolan

Mr. O'Neill led the divestiture of First Options.

Mr. O'Neill said the greatest single issue confronting the company today is its $500 million portfolio of California home loans, 74% of which are nonperforming. Continental will need up to a year to resolve remaining credit-quality issues, he said.

Like any good CFO, Mr. O'Neill also keeps a steady eye on what pleases the rating agencies and investors. He had he must manage the delicate task of

F&C Bancshares Director Dies in Crash

PORT CHARLOTTE, Fla. — Wilber Cole, a director of F&C Bancshares Inc. was killed in an airplane crash July 31.

The company said that Cole, together with his wife, his son, and his son's girlfriend, were killed in a crash in the Bahamas.

Cole's death decreases the board to five directors. A spokeswoman said the bank has no current plans to find a replacement.

Out of a Job? Jump into Action Immediately While Your Severance Cushion Is Still Plump

By ANTHONY W.G. LORD
Managing director
A.T. Kearney Inc., New York

I remember June 21, 1985, as if it were yesterday. That was the day I received a call at my hotel outside Frankfurt telling me that the board of Marine Midland Banks had passed a resolution closing down the international division.

While it wasn't stated during that conversation, it didn't take a genius to know that in all probability the four of us on the senior team would be asked to leave. A few days later, I was asked to close down all operations in Europe, the Middle East, and Africa.

Six months later, I left the institution.

I was 43, had spent 27 years with several banks in New York and overseas, and for the previous five years had been responsible for Marine's business in Europe, the Middle East, and Africa-South Asia. It never occurred to me that I would be laid off.

It was a real shock to the system, but like nearly everyone who has been through this predicament, I survived.

As it turned out, we were one of the first of many large groups of people who were asked to leave the financial services industry over the past eight years. Tens of thousands of bankers have lost their jobs as a result of downsizing or mergers.

Taking Stock

Perhaps the best way to discuss career alternatives is to explain my immediate thoughts after being told I no longer had a job.

I took a look at myself, my background, and where I believed the industry was going over the next decade, and came to the reluctant conclusion that I was a dinosaur.

Switching career paths isn't for everyone.

My claim to fame was as an international-oriented general manager with credit, new business development, and product management skills. In New York, there was limited demand for people with my background at my level of seniority.

While there were positions available heading foreign bank branches in New York, I determined that within five years U.S.-based people would probably be replaced by officers from the banks' home country. Once I reached that conclusion, I was both relieved and scared.

The 'Golden Rules'

I decided within a few weeks to form a specialized consulting firm in partnership with one of my former colleagues. We analyzed what it takes to be successful in the consulting business and concluded that five golden rules apply:

- Have specialized skills (in our case, global cash management and international product development).
- Have a reputation.
- Have credibility with senior management people.
- Possess good sales and marketing skills.
- Be financially secure enough to survive at least a year during which cash flow might be limited.

In retrospect, we made the right decision. But it isn't easy. Even if someone is confident, timing becomes critical.

Cautionary Note

Most people have been leaving banks with fairly generous severance packages, which at the beginning gives them a reasonable amount of flexibility. The longer a person takes to review alternatives, the weaker he or she is financially.

Switching career paths isn't for everyone, but people with good contacts, an ability to sell, and the financial strength to survive an extended start-up period may well succeed.

Bankers with the right skills may look at the "buy" side of the business.

Those who want to remain in the financial services industry are facing a slowly improving environment. But the number of available positions for "dinosaurs" remains limited, particularly in New York and other financial centers.

Look on the 'Buy' Side

Bankers with the appropriate skills may wish to consider switching to the "buy" side of the business, to corporate positions involving financial management. While this is not easy to do in today's environment, a meaningful number of corporate treasury people do have commercial or investment banking backgrounds.

I also believe people should look at the possibility of changing career paths completely by considering buying a small business. In each community, there are brokers listed in local newspapers. These people arrange the purchase and sale of cash businesses, and a call to their offices will enable a person to sit down and talk about the types of businesses for sale.

Capital will be required, but the majority of the purchase price is usually financed by the seller over as long as 10 years at a competitive interest rate.

Temporary Situations

Finally, there are many part-time jobs out there. This temporary work extends one's severance and that, in turn, increases flexibility in the job search.

When I knew I was about to be laid off, I seriously considered driving a limousine in my spare time. In discussing this option with a couple of the drivers, I discovered that I could earn as much as $2,000 a month without hurting my job search.

In summary, while the job market in the financial services industry cannot be described as robust, there are jobs available. A well-structured resume combined with an effective networking program will in time produce results.

Alternatives to old careers always exist, and while they may not be for everyone, they should certainly be explored. □

Anthony Lord

Arkansas Bankers' Bank Lets Clients Do Lending While It Relies on Fees

By PHIL ZAHODIAKIN

Banking with Banks

THE ARKANSAS BANKERS' BANK never saw a lending opportunity it didn't hand off.

As a result, the nation's youngest bankers' bank doesn't have a single loan on its books.

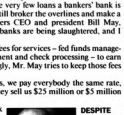
But the usury laws in Arkansas make it hard to find bankable assets, so Bankers refers its overline opportunities to the banks it was chartered to serve.

An overline – the part of a note that exceeds a lending limit – is one of the very few loans a bankers' bank is allowed to carry. "I could still broker the overlines and make a quarter point," says Bankers CEO and president Bill May, "but why should I? Small banks are being slaughtered, and I want to help them."

Thus, Bankers relies on fees for services – fed funds management, safekeeping, investment and check processing – to earn money. And, not surprisingly, Mr. May tries to keep those fees at a bare minimum.

"When we buy fed funds, we pay everybody the same rate, 10 basis points, whether they sell us $25 million or $5 million – and that's unheard of."

He says the small-bank "slaughter" in Arkansas resulted from legislation allowing intrastate branching.



DESPITE HIS palatial office, Arkansas Bankers' Bank CEO Bill May keeps his operations lean.

Arkansas has 257 small banks, and about 20% of them now have outside ownership. "The name on the office might be the same, but people don't know it's owned by somebody in Memphis or Little Rock until they can't get their banking business done."

In view of the slaughter, Mr. May, who had been vice president of investments at One Bank, Little Rock, before losing his job as a result of a takeover, persuaded a few small banks that the time was ripe for a bankers' bank.

Armed with $10,000 in traveling expenses lent by four bankers, Mr. May hit the road to raise capital for the bank. He got 56 small banks to invest the $2 million required, and has increased their equity to $2.4 million since opening on May 23, 1990.

The operation set up by Mr. May is extremely lean, though the trait is belied by the bank's palatial headquarters. But the bank is renting its two floors at the nationally registered Ward Hayes House for just $1,500 a month, there are only 13 employees to pay, and "we don't pay the directors any board or committee fees," Mr. May points out.

Bankers' after-tax earnings totaled $115,000 in 1992, and were up to $95,000 as of June 30. That translates into an 8.26% return on equity, and a 0.59% return on its $35 million in assets.

Data supplied by the Bankers Bank' of Wisconsin shows that the nation's 16 bankers' banks posted an average 12.42% ROE and 0.89% ROA. Mr. May says the numbers for his bank would line up with the national averages if he had not passed along $5 million in overline lending last year.

Keeping a few of the the loans might have enabled Bankers to earn up to 8%, instead of the 4% his investment portfolio earns from government securities.

The limit is set by the Arkansas usury law, which caps the maximum lending rate at prime plus 5%. It is a limit that is hurting all Arkansas banks, because they turn away borrowers seeking money for pursuits riskier than home buying.

Data supplied by Ferguson & Co., show that the state's 262 banks have a loan-to-deposit ratio of 55.05%, far below the 76.00% average for all banks insured by the FDIC.

Despite the usury laws and the small-bank slaughter, Mr. May says starting and running the bank "is more fun than I've had doing anything else in my life."

North Dakota Laws Give Lenders More Options on Loans in Default

By BILL ATKINSON

North Dakota bankers are all smiles.

The reason: After years of losing fights to bring real estate laws into the 20th century, they saw the state Legislature pass two key bills that take effect this month.

"The legislation session was very favorable to lenders," said Gary Preszler, the state's banking commissioner, who regulates 115 state-chartered banks with $4.3 billion in assets.

'Some Pretty Big Hits'

One bill allows banks to foreclose on a commercial property and seek a deficiency judgment for funds that are owed on the loan. Before, a borrower who ran, say, an apartment complex could collect as much rent on the property as possible before the bank foreclosed.

Once the bank took action it had no way of collecting the difference on the loan even though the borrower may have had enough assets to pay part or all of it off.

"A number of banks took some pretty big hits out here in the mid-1980s when we were going through recession," said James D. Schlosser, executive vice president of the North Dakota Bankers Association. "There were people who had the means to repay commercial loans who walked away."

The other new law will apply when a borrower who the lender suspects has the ability to repay the loan is in default. It gives the lender a choice of foreclosing on a junior mortgage or seeking a judgment.

Working Together

Until now, if the borrower defaulted on the junior mortgage, the lender had to either pay off the first mortgage in full or make payments on the first mortgage so it wouldn't go into default.

"It's a big deal," said Kenneth D. Reno, president of United Bank of Bismarck. "Those are two steps in the right direction."

Mr. Schlosser attributes the legislative victories to the fact that his group and the Independent Community Banks of North Dakota are finally working together.

"I think we were very effective," he said. "We look at what is happening in Washington and we are just getting murdered."

North Dakota's legislature doesn't meet until January 1995, but Mr. Preszler is already drafting new bills.

One concerns banks whose facilities have been affected by the recent floods. The bill would permit bank hit by floods, tornadoes, or fires to temporarily relocate.

"We've wondered how the procedure would work," Mr. Preszler said. "You don't want to disrupt services to the people." □

In Brief

San Francisco-based Pacific Bank reported a net loss of $4.3 million in the second quarter.

The bank also announced that it is hiring investment bankers Keefe, Bruyette & Woods to assist it in raising $25 million in capital by the end of the year.

"We are confident that we will meet our capital requirements," said chairman Ned Dean.

Mr. Dean also separately announced he would relinquish the title of chief executive to Leonard W. Busse, a former Continental Bank Corp. executive brought in as chief operating officer earlier this year.

* * *

First United Bancorp of Boca Raton, Fla., reported earnings of $1.4 million for the first six months of the year, compared with $311,000 for the same period a year ealier.

The results for the period include income of $640,000 from an accounting change.

First United had $128 million of assets and seven branches.

* * *

The Federal Reserve Board has approved Dickinson Bancorp's application to acquire First National Bank of Bowman, N.D.

Dickinson, which is based in Dickinson, N.D., will pay $3.4 million for First National's stock. The acquisition is expected to be completed in September. After the acquisition, Dickinson will become the state's ninth-largest commercial banking company, with $121.3 million in deposits. □

COMMUNITY BANKING

EXECUTIVE *changes*

United of Philadelphia Names Buford As Its Chief Administrative Officer

Sharnia "Tab" Buford has been appointed chief administrative officer of **United Bank of Philadelphia.**

Emma C. Chappell remains the chairman, president, and chief executive officer of the black-controlled commercial bank.

Mr. Buford was president and chief executive officer of Buford and Associates Inc., a business and financial management consulting firm in New York.

S. "Tab" Buford

He remains chairman of the board of **City National Banc shares,** Newark, N.J., and of its **City National Bank of New Jersey.**

From 1977 to 1987 he was president and chief executive of Freedom National Bank of New York. Freedom National failed in 1990.

Mr. Buford had been the president and chief executive officer of Douglass State Bank, a minority-owned institution in Kansas City, Kan., from from 1972 to 1977. He joined Douglass State in 1967.

— **Franklin Smith**

MIDWEST

MID AMERICAN National Bank and Trust Co., Bowling Green, Ohio, has named **Amy Gonyer** as assistant vice president/human resources and **Thomas S. Sigel** as assistant vice president/international.

Ms. Gonyer's new responsibilities include overseeing the operation of the human resources department and employee payroll and benefits.

Mr. Sigel's responsibilities at the bank include international business development.

COMMUNITY First Bank, Lansing, Mich., has named **Holly L. Schreiber** as vice president and chief financial officer.

Ms. Schreiber was formerly with KPMG Peat Marwick as a manager in the financial services practice, where she specialized in financial industry regulations and current accounting principles applicable to the thrift, banking, and insurance industries.

PARK NATIONAL BANK, Newark, Ohio, has promoted **Richard E. Baker 2d** to assistant vice president.

Mr. Baker will continue as manager of the bank's North 21st Street office.

AMERIBANK, Bloomington, Minn., has named **Teresa Zicharth** as senior vice president of retail banking and marketing.

Ms. Zicharth was marketing director for the bank's parent, **American Community Bank Group Inc.**

Carol Youngdale has been named assistant vice president of personal banking and retail credit manager at Ameribank. She had been a personal banking officer.

HAWTHORN BANK, Mundelein, Ill., has appointed **Erich Lanner** as vice president and controller.

MIDDLE ATLANTIC

BANK OF DELAWARE, Wilmington, has announced promotions for **Jacqueline L. Benton, Karen A. Graham, Kenneth Y. Jones, Susan L. Pratt,** and **Betty A. Thornton-Dunn.**

Ms. Benton was named sales manager of the Greentree Village office in Dover. Ms. Graham was promoted to senior estate settlement officer, and Mr. Jones was named a retail operations officer.

Ms. Pratt was promoted to senior personal financial services officer, and Ms. Thornton-Dunn to deposit support services officer.

UNITED NATIONAL Bank, Plainfield, N.J., has appointed **Joanne F. Herb** as vice president and corporate strategic planning manager.

Joanne F. Herb

Ms. Herb was a vice president in internal consulting with National Westminster Bank USA, with responsibilities centered on business analysis, information systems project management, property management, and retail operations.

SOUTHEAST

BARNETT BANK of South Florida, Miami, has promoted **Andrew H. Chesnick** to vice president in commercial real estate.

ISLAND NATIONAL Bank and Trust Co., Palm Beach, Fla., has appointed **Karen A. Balmath** as loan officer.

Mrs. Balmuth is responsible for developing the bank's commercial loan portfolio.

She was formerly a credit analyst with Admiralty Bank in Palm Beach. Before that she was affiliated with NationsBank Corp. in Atlanta.

SOUTHWEST

BROADWAY NATIONAL Bank, San Antonio, has promoted **Rick Krenz** to assistant vice president and loan accounting officer.

WEST

CHINO VALLEY BANK, Ontario, Calif., has appointed **Elsa I. Zavala** as vice president and director of the bank's data processing center.

Elsa I. Zavala

Ms. Zavala had been an assistant vice president and central services manager with General Bank, Los Angeles. □

Exec's Efforts Put Compliance Up Front

By PETER SCHOENKE
Special to the American Banker

People in the News

MARGARET McKENZIE IS ONE of those people whom bankers formerly loved to hate – a compliance officer.

Bank employees, she said, used to look at their colleagues from the compliance section and grouse, "Oh, look at these people. They are creating all this paperwork for us and we have to follow all these procedures because Margaret McKenzie wants us to."

"But now, at least at my bank, they are starting to realize it is in their best interest," said the 42-year-old senior vice president for Old Point National Bank in Hampton, Va.

Having prevailed on her home turf, she is using her role as head of the American Bankers Association's compliance committee to proselytize the rest of the industry.

"I try to get the message across to the CEOs, particularly of community banks, to say this is no longer a back-room function," she said. "Compliance really happens on the front line. It does not happen in the back room."

At the ABA conference on compliance in June, Steve Cross, the Office of the Comptroller of the Currency's deputy comptroller for compliance management, said the biggest problem regulators have with banks is that management is not taking compliance seriously and working it into its everyday operations.

"I thought it was interesting for him to make that comment because he is right on," she said.

Margaret McKenzie

Ms. McKenzie has headed the ABA compliance committee since October 1991. Her term ends in September.

Under her guidance, ABA compliance seminars changed from a lecture format to a series of shorter, interactive discussions.

Ms. McKenzie joined Old Point – a 13-branch bank in northern Virginia with 270 million of assets – in 1969 as a teller. She later moved into lending.

That experience gave her the background necessary to step into compliance in 1981, because she had been wrestling with regulations almost every day.

Compliance departments have changed radically since then because of an avalanche of new laws. Gone are the days of a lone person working in a tiny back room.

A Function 'All over the Bank'

"You can't just appoint a person and put them in the back room; shut the door, and say, 'Deal with compliance.' It is now all over the bank, and everybody must have that as part of their job description," she said.

She added, "You have to manage this process like you do any other function in the bank."

Old Point, on Ms. McKenzie's recommendation, set up a committee system to implement new rules and procedures. She retains advisers from the trust department and from the computer division.

The tradeoff is that more people are spending time trying to comprehend the regulations.

"It seems to work quite well instead of having her take all the responsibility," said Old Point president John Sebrell. "The difficulty is providing people with the information to keep them abreast of everything."

Mr. Schoenke writes for the Medill News Service.

Frazzled Bankers Hiring Help With Truth-in-Savings Maze

By PETER SCHOENKE
Special to the American Banker

WASHINGTON — The sheer size of the Truth-in-Savings Act makes it hard for a small compliance division – let alone one individual at a small bank – to put it into action.

But a host of services have sprung up to help reprogram computers and train employees.

"The bankers right now are reeling, but they are getting there," said Matt Chapman, chairman and chief executive for CFI Proservices, a consulting firm in Portland, Ore., that sells a variety of services to help with Truth-in-Savings.

"The implementation of this law is the most difficult I have ever seen."

Hard to Keep Up

Three bank consultants – Bankers Systems Inc., Bankers Training and Consulting Co., and CFI Proservices – are helping where banks' resources on Regulation DD have fallen short.

"As fast as this stuff changes, its almost impossible to keep people up on it," said David Mills, a vice president of compliance for Synovus Financial Corp., a Columbus, Ga.-based holding company that operates 31 banks.

Many smaller banks find that their staffs are unable to handle the complexities of the law.

"We found it very economical to use some of the services on the market."

Faced with the task of training employees at a wide variety of banks, with assets ranging from $50 million to $1 billion, Synovus turned to Bankers Training and Consulting Co., a St. Louis division of Westcott Communications, for help.

Multimedia Training

Synovus used a combination of a video and a PC-run testing program to train its employees. "It is flexible enough for a small bank but also can work for a large bank or holding company," Mr. Mills said.

Bankers Training offers a Regulation DD package as part of its Compliance Instructor Library, a series of computer programs and training manuals to which a bank can subscribe.

Regulation DD includes a teaching program on the computer and a comprehension test. The company also sells two videos to explain Truth-in-Savings, one that explains the law in great detail for management and one that gives an overview for other employees.

Matt Chapman
"Bankers are reeling"

But the strength of the program for Mr. Mills was the testing. The test gives immediate feedback to compliance officers to let them know if employees are comprehending the regulations.

The tests show you which areas seem to be missed the most and then you can target the training," Mr. Mills said. "It cuts the cost of compliance because you can narrow the problem."

The cost to Synovus for the PC system is $1,000 per year for three years.

The training videos, which cover topics in addition to the Truth-in-Savings law, cost $395 for short tapes and $495 for longer ones.

'Flexible Disclosure'

Reliability was the major factor in Mount Greenwood Bank's decision to purchase its employee training and software program.

Mount Greenwood, a $120 million single-branch bank in Chicago, bought 17,000 copies of standard disclosure forms from Bankers Systems in St. Cloud, Minn. The cost was 17 cents each.

"They create very flexible disclosure statements," said Karen Huffman, assistant vice president in charge of operations for Mount Greenwood. "They also have an in-house legal department, so they are very good at answering questions."

Seminars Also Used

Mount Greenwood did most of its training within the company, but sent six employees to seminars put on across the country by Bankers Systems.

Bankers Systems has conducted five seminars in the past year, with more than 11,000 people in attendance. The company also offers two videos for management and front-line personnel.

Riverside Bank in Minneapolis, a four-branch bank with assets of $100 million, chose CFI Proservices to help reprint its disclosure materials.

Kate Barr, senior vice president of the bank, said it chose CFI because the consultant's software was easy to integrate with the bank's.

Riverside also liked CFI's approach to compliance.

"Our theory of compliance requires that the rules be in the software," Mr. Chapman said. "You can't rely on people who are selling the products to customers to know all the information. They have too much else to think about."

CFI sends a team to an institution to help train employees. On site training is the best method because the complicated rules require feedback for employees, Mr. Chapman said.

"If you look at compliance as apart from the banks main operation – it isn't going to work," he said.

Small Banks and Big Ones

All three consulting companies sell most of their products to smaller banks, which often do not have the resources to tackle the entire task themselves.

While planning for Truth-in-Savings "we realized how difficult it would have been if this had been a smaller bank," said Andy Will, compliance officer for Norwest Corp. in Minneapolis. "It would have been a monumental task."

But Mr. Chapman said that the size of the law has led record numbers of large banks to look for outside help.

Large banks also have turned to outside help to save money on research, Mr. Chapman said, and then they modify the program with their own internal staff.

"I think we are getting many larger banks because of the number of people they have to train," said Nora Rinehart of Bankers Training and Consulting. "A lot of the larger banks are buying 12 to 15 copies of our tapes."

'A Great Opportunity'

"Part of our general focus is to service large holding companies and expand our customer base," said Kurt Stentz, a spokesman for Bankers Systems. Truth-in-Savings "was a great opportunity to implement that."

Norwest has spent "in excess of $300,000" to put its Truth-in-Savings compliance program into place, Mr. Will said.

Riverside Bank spent about $7,000 on its program, according to Mr. Barr.

Neither figure includes the pay of employees being retrained. Mr. Will said this could equal as much as twice the other costs of the Truth-in-Savings program.

Consulting firms are helping where bank resources have fallen short.

Mr. Schoenke writes for the Medill News Service.

Nationwide Hearings Set on CRA Overhaul

WASHINGTON — Regulators announced Friday that they had chosen six cities as sites for public hearings on revamping the Community Reinvestment Act.

The first will be in San Antonio on Aug. 25. The other hearings, scheduled for September, are in Los Angeles on the 8th; Albuquerque on the 9th; New York City on the 10th; Henderson, N.C., on the 15th; and Chicago on the 22nd.

Industry and consumer groups representatives presented their positions at a Washington hearing Tuesday.

President Clinton called in July for changes in enforcement of the reinvestment act and gave the regulators until Jan. 1 to come up with a solution.

— Barbara A. Rehm

Fed, Treasury Seek to Standardize Wire-Transfer Record Keeping

By ROBYN MEREDITH

WASHINGTON — The Treasury and the Federal Reserve are readying regulations to make financial institutions standardize and retain their records of wire transfers.

Currently, the only regulation or reporting requirement that governs electronic payment of funds is that if a transmitter keeps a record of a transaction, it must keep the information for five years.

Earlier Proposal

In 1990, the regulations the Treasury proposed to govern wire transfers garnered 333 unfavorable comment letters and were never implemented, said Peter G. Djinis, director of the department's Office of Financial Enforcement.

"I think we have accommodated the vast majority of those concerns," Mr. Djinis said. "What we have suggested is to adopt, in essence, standardization of information."

The Federal Reserve is expected to sign off on the regulation this month.

At that point the agencies will have two options: issue a final rule, or issue a revision of the 1990 proposal and solicit comments again.

"The wire transfer system has

Peter G. Djinis
Target is money laundering

been exploited by money launderers and other individuals who are engaging in transactions," Mr. Djinis said. There needs to be "some way of at least tracing [money] once it is already in the system."

A Wide Net

The proposal would require financial institutions that perform such transfers – whether banks, security broker-dealers, consumer currency exchanges, thrifts, or casinos – to collect and keep information on wire transfers for five years.

The information would not have to be reported to the government unless the financial institution filed a criminal referral or otherwise reported the transaction as suspicious.

But the data would have to be standardized. The transmitting institution would have to record the identity of the person sending the money, the financial institution acting as a conduit, and the recipient.

The sender and recipient would have to be identified by account number, if possible, as well as by address.

Trade Group Worried

John Byrne, the senior counsel for the American Bankers Association, said the group has no idea what changes the wire transfer regulations will require.

As a result, the ABA is concerned about whether banks could comply with new regulations by next Jan. 1, when they are required by law to take effect.

The ABA suggests pushing back the effective date.

"We are still aiming for January," said Mr. Djinis. "Obviously, a critical factor is the ability of the industry to comply with the regulations."

"I am confident that if there are going to be surprises over the text of the wire transfer regulations that are going to be announced," Mr. Djinis said, they will be "happy surprises." □

Andersen Will Pay RTC $65 Million in Settlement

By ROBYN MEREDITH

WASHINGTON — Arthur Andersen & Co. has agreed to pay $65 million to the Resolution Trust Corp. to settle a suit over the Big Six accounting firm's audits of four failed thrifts.

In a decision announced last week, the firm agreed to settle – without admitting or denying guilt – with the RTC for work at the failed Benj. Franklin Savings Association and University Savings Association in Houston, at Resource Savings Association in Denison, Tex., and at Home Fed Bank in San Diego.

Andersen also agreed to settle – without admitting or denying guilt – a similar case brought by the Office of Thrift Supervision.

That settlement involved no monetary penalty, but required Andersen to agree to abide by stringent interpretations of the disclosure requirements in existing laws on savings and loan accounting practices.

Kenneth J. Guido, deputy chief counsel for special projects at the OTS, said the settlement should signal other accounting firms to practice more complete disclosure when they work for thrifts.

"Any other firm that reads this should be on notice to what our views are about these requirements," Mr. Guido said.

The OTS suit covered Andersen's accounting work for Benj. Franklin as well as Lincoln Savings and Loan Association in Irvine, Calif.; American Continental Corp. in Phoenix; and Westport Co. in Connecticut, an S&L holding company.

Alabama Law Journal Looks at Money Laundering

If you're looking for a little beach reading on money laundering to round out your summer, pick up the latest issue of the *Alabama Law Review*.

Volume 44, No. 3, of the Law review offers nine papers, spanning 212 pages, discussing various aspects of money laundering.

Copies are $12, plus $2 postage. For information, call Deanne Brogden at 205-348-5300. □

REGULATORY ROUNDUP: A summary of rules of major interest to bankers

Proposal	Agency	Status
Loosen the approval process for banks that want to invest more money in their community development bank units or individual projects. Banks with less than $100 million in assets could invest as much as 5% of capital in community development without OCC approval. The capital limit for larger banks would be 2%. Published July 16	OCC	Comments are due Aug. 16.
Simplify public-notice requirements under the Bank Merger Act. Published June 15	FDIC	Comments are due Aug. 16.
Convert the regulations on special-mention assets to more flexible guidelines.	OTS	Comments are due Aug. 19.
Expand the definition of "financial institution" in section 402 of the Federal Deposit Insurance Corporation Improvement Act to validate netting contracts among depository institutions, securities brokers and dealers, and futures commission merchants. Published May 13	Fed	Comments are due Aug. 20.
Reexamine the Farm Credit System's regulations, specifically rules that duplicate other government requirements. Published June 23	Farm Credit Administration	Comments are due Sept. 21.
Revise international supervisory treatment of netting arrangements, market risk, and interest rate risk as proposed by the Bank for International Settlements.	Fed	Comments are due Dec. 31.
Change the way banks calculate annual percentage yields for some certificates of deposit under the Truth-in-Savings Act.	Fed	Approved by the board on July 14 but not yet published in the Federal Register. No comment deadline has been set.
Add an interest rate risk component to the risk-based capital standards. First draft published Aug. 10, 1992	Fed, FDIC, OCC, OTS	A new proposal was approved in March by the Fed. The FDIC faced court suit on June 9. The OCC is in agreement, but the plan has not been published, so no comment deadline has been set. The OTS plan is complete but awaits the Treasury's approval.
Establish sweeping operational and managerial standards for banks.	Fed, FDIC, OCC, OTS	The Fed and the FDIC have publicly proposed these regulations, but none of the agencies have published plans or set a comment date. The rules take effect Dec. 1.
Revise home mortgage reporting by national banks to include reasons that applications were rejected and to require monthly, rather than annual, reports. Published May 10	OCC	Comments were due July 9.
Make permanent the Fed's small-bank exemption from insider-lending rules. Banks with deposits of less than $100 million would be able to have insider loans of up to 200% of unimpaired capital, instead of the usual 100%.	Fed	Comments were due July 15.
Change appraisal regulations to exempt all loans under $250,000 and all business loans under $1 million that do not count on real estate as primary repayment means. Published June 4	Fed, FDIC, OCC, OTS	Comments were due July 19 at all but the OCC.
Specify where the earnings held by a farm credit bank and allocated to a direct lender may be counted as permanent capital. Published June 23	Farm Credit Administration	Comments were due July 22.
Allow corporate credit unions more options in purchasing fidelity bond coverage. Published May 27	NCUA	Comments were due July 30.
Amend regulations on activities of state-licensed insured branches of foreign banks. Published March 2	FDIC	Comments were due June 4.
Amend capital-adequacy guidelines to let certain deferred-tax assets be included in the Tier 1 capital calculation for risk-based capital. Published May 5	Fed, FDIC, OCC, OTS	Comments were due June 4.

Low-Cost Closings Spur Consumers to Refinance

By JAMES H. SAFT

Secondary Market

THE GROWING AVAILABILITY of mortgages with low-closing costs, or none at all, has raised the level of refinancing, perhaps permanently.

Premium-priced mortgages – in which all or a portion of the closing costs are absorbed by a higher interest rate – facilitate refinancings, according to Karl Mendenhall, senior vice president of secondary marketing at First Union Mortgage Corp., Charlotte, N.C.

Mr. Mendenhall said he believes that these types of refinancings may become a fixed part of the mortgage banking landscape.

"With the advent of low-cost or no-cost mortgages, we've seen refinancings of loans only 50 to 75 basis points above current rates," said Mr. Mendenhall. An old rule of thumb was that rates must fall 200 basis points, or 2%, before consumers would refinance.

"Consumers are more aware of how the game is played," said Robert Spears, vice president of Nationsbanc Mortgage of Dallas. He said he believes that a more sophisticated consumer and the opportunity to refinance with no money out of pocket combine for a powerful stimulant to refinancings.

Premium-priced mortgages are themselves more likely to be refinanced, according to Mr. Spears, a fact which has driven up the cost of these mortgages to the consumer.

Mr. Spears reports that the margin tacked on to the coupon rate for a no-cost mortgage has risen from about 50 basis points two years ago to 75 basis points today.

Growing sophistication among buyers is playing a role.

Though many mortgage companies feel pressed to offer no-cost mortgages to compete, some are cutting back. First Union Mortgage won't do pure no-cost mortgages, though it does market low-cost versions.

Of course, mortgage lenders are only able to provide premium-priced mortgages with the cooperation of Fannie Mae, Freddie Mac, and secondary investors. Thus far, according to traders and secondary specialists, that support is strong.

Because secondary investors have observed that mortgage-backed securities formed from premium-priced mortgages prepay more quickly than market-rate securities, they trade at a discount relative to their interest rate.

For instance, 30-year, 7% mortgage-backed securities which should trade at 103 to 103.5 tend to bring about 102.5, according to secondary executives.

Fannie Mae and Freddie Mac, for their part, treat no-cost loans in essentially the same way as other higher paper, and have even made some efforts to aid in their securitization.

The so-...ndary market behemoths have made it a practice to purchase excess servicing from holders of premium-priced mortgages.

The practice, known as round-ups, allows holders to sell as much as 25 basis points in excess servicing fees.

Despite the fact that there is a booming primary and secondary business in premium-priced mortgages, many in the industry feel that they represent a change for the worse.

Mortgage bankers say they believe that a permanently increased rate of refinancings will increase the cost of doing business.

Non-Current Residential Mortgage Loans

First quarter of 1993 compared with fourth quarter of 1992 (dollar amounts in thousands)

		Non-Current Residential Mortgages As Total 1-4 Fam. Loans

Data source: Data were extracted by *American Banker* from the federal regulatory *Report of Condition* using data provided by W.L. Ponczkowski, Irving, Tex. Residential Mortgage Loans are 1-4 family residential mortgage loans secured by first junior liens. Nonaccrual Residential Mortgage Loans are loans 90 or more days past due plus those loans placed on a nonaccrual basis. Nonaccrual as a % of Residential Mortgage Loans is nonaccrual loans divided by total residential mortgage loans outstanding, expressed as a percentage.

Northeast Banks Are Prominent On High Delinquency Rate List

By EDWARD KULKOSKY

Many banks in the Northeast continued to show high delinquency rates on home loans in the first quarter.

Almost two-thirds of the 25 commercial banks with the highest incidence of payments at least 90 days past due were in New York, New Jersey, Pennsylvania, and New England, reflecting continuing economic problems in the region.

Bankers Trust Leads List

Surprisingly, only two California banks, both small, were in the top 25. Problem loans have have continued to be high in the state because of its battered economy. A BankAmerica Corp. unit, Las Vegas-based Bank of America Nevada, did show high delinquencies, but on a small portfolio.

Leading the first-quarter list was Bankers Trust New York Corp., with delinquencies of 12.84% on a portfolio totaling $109 million. Given the small size of the holding, however, the problem loans pose little risk to the giant commercial bank.

The region is expected to lead in foreclosures over the next five years.

More significant was the 7.09% delinquency rate reported by Citibank, New York, on a portfolio of $7.4 billion. Citibank (New York State), a unit in Pittsford, N.Y., also reported high delinquencies.

The Citicorp units are still suffering from aggressive marketing of adjustable-rate mortgages.

Tough Road Seen

Delinquencies have been declining nationally in recent quarters, and forecasts generally call for continued improvements.

A recent study by Fitch Investors Service Inc. predicted that the Northeast, while improving, would experience the highest foreclosures in the nation over the next five years.

Foreclosures in California were expected to return to about the national average, Fitch said.

The figures in the table above are compiled from regulatory filings and may differ from numbers provided by the banks in quarterly financial statements. □

Clinton to Tap Freddie Mac Aide For the Presidency of Ginnie Mae

WASHINGTON — Dwight P. Robinson, a mid-level Freddie Mac official with a background in affordable housing issues, will be nominated as the next president of the Government National Mortgage Association.

The White House announced late last week that it would nominate Mr. Robinson to the position. President Clinton will formally notify the Senate after the Federal Bureau of Investigation completes a check of Mr. Robinson's background.

Mr. Robinson currently designs and implements Freddie Mac's low-income and moderate-income lending programs. He has been with the company since 1990.

Before that, he was deputy executive director and chief mortgage underwriter of the Michigan State Housing Development Authority.

How Battle Lines Shape Up in Fight over FHA Ceiling

By SNIGDHA PRAKASH

WASHINGTON — The debate over expected changes in the Federal Housing Administration single-family loan insurance program is shaping up as more of a clash of business interests than of social philosophies.

Lenders want the FHA to insure larger loans because they believe it would increase volume. Insurers fear that would divert some of the business to the FHA loans, and they resent government competition.

The two are vying for opportunities in the middle-class market, particularly first-time homebuyers – often a couple who together make far above the median income but have not yet saved enough money to make a large down payment.

Higher Limit on Coasts?

The FHA's lower down payment and more flexible qualifying conditions make it easier for these borrowers to buy homes.

One change under consideration is raising the loan limit in high-cost housing areas, such as cities on the two coasts.

The agency now insures loans up to $151,725 in those areas, or 75% of the maximum loans insured by the Federal National Mortgage Association or Federal Home Loan Mortgage Corp. That may be raised to 85% of the current secondary market limit,

Hugh R. Harris
Sees little growth from changes

or about $172,550, according to industry sources.

"Certainly the higher the mortgage amount, the more market you can go after," said Rick L. McGuire, senior vice-president of Inland Mortgage Corp. in Indianapolis.

When the FHA increased loan limits in high-cost areas from $125,000 to $150,000 a year ago, it "opened the doors up" to more business in those areas, Mr. McGuire said.

He's sure that if loan limits go up, the FHA will pull in new borrowers, whom "private mortgage insurers cannot accommodate because they manage their risks differently than FHA."

Bill Simpson, president of Republic Mortgage Insurance, Winston-Salem, N.C., isn't sure.

He believes that if the FHA insures larger loans, the government insurance will inevitably steal some business from him.

The Good with the Bad

"They'll get people we would have liked to insure [and] those we would not have liked to insure," he said.

Hugh R. Harris, president of BancBoston Mortgage Co., Jacksonville, Fla., tends to agree that a higher FHA loan limit would hurt private insurers.

"I don't know if [FHA changes are] going to generate that much more business, because I think the housing market is pretty well served," he said. □

Fannie Says It's 'Hard-Pressed' To Meet Targets

By SNIGDHA PRAKASH

WASHINGTON — The Federal National Mortgage Association says it will be "hard-pressed" to meet the low-income lending targets set for it by the Department of Housing and Urban Development.

In a December letter to HUD, as well as in public speeches, Fannie Mae had stressed its commitment to goals that were even a bit higher than those set by HUD, and had said it was confident in its ability to meet the targets.

Fannie's latest comments, in a letter sent Monday to HUD, appear to signal that the company will take a confrontational stance to match HUD's tough line on the lending institutions monitoring the performance of Fannie and the Federal Home Loan Mortgage Corp.

Laying the Groundwork

Fannie's groundwork for future battles over higher targets that HUD has signaled it will set in 1995.

Congress directed Fannie Mae and Freddie Mac last year to ensure that 30% of the housing units financed by loans they purchase be for low-income and moderate-income people, and that 30% be in central cities.

HUD has directed Fannie Mae and Freddie Mac to meet those goals in 1994. For 1993, the low-income and moderate-income goal for Fannie was 30%, and the central city-goal was 28%.

Each of those goals was two percentage points lower for Freddie.

In its letter, Fannie continued to protest the disparity between companies in these goals and in an affordable-housing goal that is also lower for Freddie.

The letter also urged HUD to relax some of the detailed data and reporting requirements for the company and its lenders.

Wells Tops Field in Retail Mutual Funds

By DEBRA COPE

When it comes to managing mutual funds for retail customers, Wells Fargo & Co. is the banking industry's undisputed champ.

The San Francisco-based bank had $7 billion of retail fund assets under management as of June 30 – 44% more than its nearest competitor, according to a ranking prepared for the *American Banker* by Lipper Analytical Services.

In second place was NBD Bancorp, Detroit, with $4.9 billion in retail fund assets. J.P. Morgan & Co. ranked third, with $4.2 billion.

$88 Billion of Assets

In all, 94 banks managed $88.3 billion in retail fund assets as midyear, up 41% from a year earlier, according to the Lipper ranking.

On Wednesday, the *American Banker* published a ranking based on banks' combined retail and institutional fund assets. The accompanying chart spotlights the top 25 banks in retail funds, and provides totals for all 94 banks with retail funds.

Lipper tracks 103 banks that have proprietary mutual funds, but nine offer the investments only to institutional customers, such as pension plans, corporations, and trusts.

Consumer Funds Grow

Most bank funds for individual investors are of recent vintage. In the past, banks in the fund business concentrated on institutional clients.

Banks have been rolling out new retail funds because, in the face of low interest rates, consumers are demanding alternatives to deposits.

Consumers view banks as a convenient place to invest, and often feel an affinity for their financial institutions, said Geoff Bobroff, a senior vice president of Lipper.

Banks also have a practical edge, he said. "A bank customer is probably less inclined to wander into a traditional brokerage firm."

'Light in Equities'

Banks' retail fund assets were heavily tilted toward money-market funds, which hold $49.2 billion, or 56% of the total. In contrast, 30% of the mutual fund industry's total $1.8 trillion of assets is in money-market funds.

Equity funds were the second largest category, with $16.8 billion of assets. While equity funds equal 19% of bank retail fund assets, they are shy of the industry average of 32%.

"Banks are light in equities," said David B. Dyche, director of financial industries at Arthur D. Little Inc., New York. "But I think that's probably the nature of the bank client."

Robust Growth the Rule

Taxable fixed-income funds held $14.4 billion, or 16% of retail assets, and tax-exempt fixed income funds held $7.9 billion, or 9% of retail assets.

Only one bank – BankAmerica Corp. – ranks in the top 10 in both institutional and retail assets. (Rankings of banks by institutional assets will appear Friday.)

Twenty-four of the top 25 banks in the retail fund business boosted their assets during the 12 months that ended June 30. The sole exception was Mellon Bank Corp., ranked No. 23, which saw its retail assets decline from $1.7 billion to $1.3 billion.

Among the leaders, Wells Fargo's retail fund assets climbed by 82% in the 12 months, from $3.9 billion at midyear 1992, and NBD's retail assets rose 61%, from $3 billion.

But while robust growth was the rule, it wasn't universal. J.P. Morgan, for instance, boosted its retail assets only 1.6% during the 12 months. □

Grant Thornton Acquires FSS

Grant Thornton, a Chicago accounting firm, has acquired Financial Special Services, a company that provides automated estate-accounting services to banks and law firms.

FSS, with 30 employees in Jersey City, uses a proprietary computer program to prepare estate and trust accountings. Its clients include Bank of New York, Chase Manhattan, Citicorp, and Chemical Bank.

Offices Throughout U.S.

FSS will become a division of Grant Thornton, which has 50 offices in the United States.

The company's services will fit in nicely with Grant Thornton's tax consulting, litigation support, and loan review services, said Domenick J. Esposito, a managing partner for Grant Thornton.

All senior managers of FSS will remain with the firm, according to Grant Thornton.

Miami's Capital Bank Targets Accounts at Its Rivals

By MICHAEL O'D. MOORE

Capital Bank, a newcomer to mutual fund sales, has hit on an unusually aggressive strategy for attracting business: Raid the competition.

The Miami bank, with $1.2 billion of assets, is crafting a strategy whereby customers can transfer administration of existing mutual fund investments to the bank.

To accomplish this, the bank plans to offer a wide range of brand-name funds so that banking customers can consolidate their financial relationship under Capital's roof.

> **The bank plans to offer a wide range of brand-name funds.**

'A Lot of Sense'

"To me that makes a lot of sense," said Thomas J. Flood, executive vice president of retail. "I really believe the idea now is more ripe."

With the unusual strategy, Capital bank will be facing off against large competitors like Barnett Banks, NationsBank, First Union Corp., and Sun-Trust Banks Inc. – all well-entrenched in mutual fund sales.

By persuading its customers to transfer administration of mutual funds, Capital Bank hopes to snatch ongoing fees, known as "trailers," away from firms that sold the funds in the first place. Then, more importantly, the bank could grow its investment product relationship with the customer.

> **Capital has an eye on ongoing fees, called "trailers."**

Private-Label Strategy

"Not having our own house products, I think we've lost that part of the customer's financial life," Mr. Flood said.

The bank, which plans to jump into the business later this year, had been looking at offering just a few Federated Investors funds under the Capital Bank label. But by also offering a universe of outside mutual funds, the bank enables the customer to avoid cashing out of a fund in order to go with Capital.

Mr. Flood said he was won over to the conversion strategy after hearing a Fidelity Investments executive speak at a conference last month.

The Fidelity executive, senior vice president Steven M. Graziano, told bankers at a Council on Financial Competition conference that they have "a very good chance of bringing customers back from brokerages."

Mr. Graziano said Fidelity's research found that convenience drives customers into bank branches. Developing needs-based programs for investment goals like college education or retirement could win those customers back, he said.

A Dissenting Opinion

Marketing One Inc., a Seattle-based company that markets investment products through banks, does not put much stock in Capital's idea of transferring existing outside investments.

Customers might face barriers to cashing out their accounts with a broker/dealer, and may not see an advantage in shifting accounts to a bank, said Reid Reichert, senior vice president and national sales director at Marketing One.

A bank may ultimately lure customers' outside investment relationships to the bank with its programs, but the primary goal for a fledgling program should be reaching into the existing deposit base, Mr. Reichert said.

World Focus on Existing Assets

Most bank customers have no outside investments, so converting existing assets in the bank to a new program should be the focus, he said.

individual's investments.

Capital plans to use those sorts of programs to lure the customer's investment product money back, Mr. Flood explained. Those programs are still on the drawing board, he said.

The company is leisurely developing a blueprint to market to retail, institutional, and private-banking clients.

No 'Major Evaporation'

"The fact that we have not entered the market yet is not a major cause for concern," he said. "There has not been a major evaporation of our customer deposit base."

Mr. Flood said coming in late will make it easier to anticipate the regulatory hoops the bank will need to jump through. By later this year, he expects, new regulatory recommendations will be complete.

Though many banks of similar size have chosen to offer proprietary funds, Mr. Flood said Capital isn't interested.

Too many banks have taken that route despite warnings that they might not have the size to be successful, he said.

"I think it's a very delicate activity for a bank of our size to convince the marketplace that [what it offers] is far superior to wider-known names," he said.

Capital's trust department is small, making seeding of the funds a problem, he added. □

We'll save you money. We could save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division, to get every Monday the data you need to face the regulators.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... which agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 10% discount, so you'll be saving money even before you get the first issue. After that, how well you use the information before this year's exam could decide whether you're around next year.

Card Giants' Gamble on Sports Shaping Up as World Class Event

By MICKEY MERCER

Diving headlong into the big business of sports, the major bank card groups have their hands on two of the world's hottest tickets.

Now the MasterCard and Visa associations are racing – against time and each other – to prove the worth of their sponsorship investments in the two biggest global sporting events.

While they are spending tens or hundreds of millions of member banks' dollars to be associated with the events, the returns on the investments may be far less tangible to individual banks.

An Expensive Proposition

Yet the stakes are rising both inside and outside the bank card community, as shown in the escalating costs of everything from Olympic television contracts down to local promotional rights like those being sold by the Atlanta Olympic committee for 1996.

Visa International is the veteran at this game. When the summer Olympics come to Atlanta, Visa will be completing its third four-year cycle as one of the event's elite handful of global sponsors.

Sports industry sources estimate that Visa paid $40 million just for the rights – perhaps 15% more than it paid in 1992 – and may spend another $100 million on related advertising and promotions.

But Visa is really running two marathons – one to Atlanta, and one to Lillehammer, Norway, next February, when the winter Olympics begins a new "off year" schedule between summer games.

Soccer Play

And so, 1994 will prove both an Olympic trial for Visa, and the first full test of MasterCard

Visa paid an estimated $40 million to sponsor the Olympics.

International's sponsorship of the quadrennial World Cup soccer tournament, to be played in nine U.S. cities next June and July.

With Visa getting the inside track a decade ago for the Olympics' bank card and travelers check sponsorship, MasterCard gradually built up an involvement with international and regional soccer federations.

It paid an estimated $15 million for rights to what is considered the biggest of all single sporting events, and may spend another $75 million on advertising and promotions.

Direct Benefit Seen

Visa officials are certain their Olympics deals have paid off. The San Mateo, Calif.-based association offers the 1992 sponsorship boosted card usage by 9.5%. Both Visa and MasterCard want to do something similar in 1994-96.

For MasterCard, the soccer sponsorship requires a major selling job. It is a first for MasterCard, and the World Cup's first visit to the United States, a country that is only beginning to warm to the world's No. 1 sport.

The excitement is building. In a recent road show, MasterCard marketers gave a sneak preview of their plans to 500 Washington-area merchants, who were moved to enthusiastic applause by an action-packed video.

"You all are in for the treat of your lives," David Jensen, the

THE KEY TO THE NEXT DIMENSION IN PROCESSING

Claims of increased functionality and flexibility abound in the transaction processing industry, but results are scarce. You've heard promises about new systems from others for years. Now see reality with First Data Resources' Account-level Processing.

The Account-level Processing concept is simple:

Let our clients dictate cardholder pricing parameters at the account level.

Give them online maintenance, easy customization and integrated support tables.

And don't sacrifice flexibility or functionality.

A.L.P. has been implemented and FDR clients are using this new dimension in transaction processing today!

This new dimension offers you an online, menu-driven system which guides you through linked applications to review, analyze and edit your processing options. A.L.P. gives you more control and flexibility, with less paperwork and reduced production time. This not only streamlines your portfolio management, but provides you with a high degree of customization throughout your system based on your own cardholders and circumstances.

Account-level Processing is an outgrowth of our continued commitment to client-defined processing because it has been developed in partnership with many of our clients, both large and small.

Take a look at how Account-level Processing can tap into new opportunities in your cardholder base and take your processing to a new dimension. No other processor can give you today the immediate advantages Account-level Processing offers.
For more information, call 1-402-222-4622.

FIRST DATA RESOURCES.
QUALITY, OUR COMMITMENT. TO EXCELLENCE.

Washington director for World Cup 1994, told the crowd. "There's nothing like World Cup soccer."

Incidentally, he projected, World Cup soccer fans are expected to spend $244 million in the capital region.

Playing the Host

MasterCard wants to be known as the host payment system.

"They are welcoming the world to America," said Jim Andrews, editorial director of *IEG Sponsorship Report*, a biweekly newsletter in Chicago covering sports, arts, and event marketing. "They're very aggressive in terms of getting out their message."

"There are very few vehicles for this type of exposure – the Olympics and World Cup are two of the top," Mr. Andrews said. "You really can't get much bigger in terms of creating global awareness."

Bankers and sports industry consultants say the sponsorship investments are solid. Experts disagree on which association has the better deal.

MasterCard Given Edge

In general, MasterCard is seen as having the edge internationally because of soccer's vast popularity outside the U.S. Visa capitalizes more on Americans' love affair with the Olympics.

"From a practical standpoint, there's a much higher awareness for the Olympics than for the World Cup," said Cynthia Graham, president and chairman of Barnett Banks Inc.'s Barnett Card Services Corp. in Jacksonville, Fla.

Ms. Graham said the World Cup has become "a much bigger deal" by coming to the United States. "I think it's a good competitive response to Visa's Olympics," she said.

"In terms of recognition, both are big events, but World Cup is bigger," said Rob Prazmark, president of Twenty-First Century Sports Inc., a consulting firm specializing in global events that works with both MasterCard and Visa.

MasterCard will sponsor World Cup soccer next June and July.

Strategically, Visa and MasterCard are poised to capture new cardholders overseas as the domestic credit card market becomes saturated.

U.S. growth is "hard to come by without cannibalizing someone else's share," said card industry consultant Gerry Lopez, chairman and chief executive officer of R.K. Hammer Investment Bankers, Newport Beach, Calif. "Internationally, the growth rates are double digits."

Television exposure is a key part of the strategy. A cumulative audience of 26 billion people watched World Cup matches from Italy on television in 1990, compared with the 15 billion viewers of the Barcelona summer Olympics in 1992. (The winter games' audience is considerably smaller.)

Perhaps more important to the associations, their bank members, and merchants, are the millions of visitors who will come to the United States with credit cards, debit cards, and travelers checks at the ready.

Spending Money

Atlanta Olympic officials are expecting two million foreign visitors, and those who buy the 7.5 million event tickets will spend more than $1 billion.

World Cup officials estimate one million visitors will come to the United States next summer for the soccer championship. Some 3.6 million ticket holders are expected to spend $4 billion.

With its logo appearing on two billboards along each soccer field's boundaries, MasterCard will have a leg up on Visa in television exposure, said Mr. Prazmark, the events consultant. Researchers predict 32 billion viewers will see the MasterCard signs for an average of seven minutes per 90-minute match.

Such billboards are not allowed at the Olympics' competitive venues.

Kick from Pele

The marketing combat also comes down to individuals.

MasterCard has hired Pele, the legendary Brazilian soccer star, as World Cup spokesman. He will be in MasterCard television, radio, and print advertisements next summer.

Pele, whose fame in dozens of countries is comparable to Babe Ruth's in the U.S. alone, is also making personal appearances – so far in 14 countries and 25 U.S. cities. He will be in the Washington-Baltimore area next month for a MasterCard promotion at a mall.

"MasterCard's coup of getting Pele was very smart," said Mr. Hammer, the investment banker and consultant.

MasterCard is also sponsoring the U.S. National Soccer Team.

Visa U.S.A., which has taken an individual event sponsorship of the "USA/Visa Decathlon Team," signed three of that sport's most famous competitors – Bruce Jenner, Dave Johnson, and Dan O'Brien – to serve as spokesmen. They will be featured in print and television advertising, repeating the 1992 theme, "Visa is everywhere you want to be."

For the winner Olympics in Lillehammer, Visa is using ice skater Brian Boitano and skier Julie Parisien as spokespeople for its "Pull for the Team" fund-raising campaign. Visa will use the stars in television advertising beginning Oct. 1.

Visa says its sponsorship of the Olympics in 1992 boosted card usage by 9.5%.

"For the summer games, we're really going to let loose," said John Bennett, senior vice president of Visa. "We'll just be more evident, more involved. It's the biggest thing in a decade in the U.S."

Strategies Differ

Visa and MasterCard are taking slightly different promotional approaches. Some have characterized Visa's as thematic and MasterCard's as generic.

As it did with the previous two Olympics, Visa is taking advantage of the well-known Olympic logo of five rings, topped for domestic purposes by "USA."

"When you put the five rings on a Visa card or advertising theme," Mr. Prazmark said, "the results are phenomenal."

The "USA' over the rings is as definitive as anything in business. It is extremely positive," said Mike Moran, a United States Olympic Committee spokesman. "That is why so many [sponsors] keep coming back." Among them are Coca-Cola and Kodak.

One of Visa's goals is to increase the percentage of consumers who know about the Olympic sponsorship. The goal for 1996 is 75% consumer awareness. "If we achieve that," Mr. Bennett said, "it will probably be the highest awareness of any sponsorship achieved."

To build business, association members are urged to participate in fund-raising campaigns, hold contests for free trips to the Olympics, and use Visa's Olympic logo on merchandise.

Visa has a program for the winter games called "Olympics of the Imagination." In October, 11- to 13-year-olds from the United States, Canada, and Norway can submit drawings or paintings to depict how they envision the Olympic games 100 years from now. Twenty-five winners will get expenses-paid trips to Lillehammer.

Promotions under the Olympic umbrella paid off for Visa and its card-accepting merchants in 1992. A survey by SRI International in London showed that 35% of cardholders will buy Olympic-related products. "They feel they are personally contributing to the Olympics," Mr. Prazmark said.

The card giants are looking overseas for growth opportunities.

Visa officials say they are committed to winning a greater share of the travel and entertainment market, going head-to-head against American Express Travel Related Services Co. They see the Olympics' exclusivity as an ideal vehicle.

Getting Serious

MasterCard, meanwhile, has stepped up its worldwide activities, raise its stature as an international payment system, stimulate card usage, and provide business opportunities to member banks.

MasterCard is holding seminars, such as the one in Washington last month, and promotional events in the other host cities: Los Angeles, San Francisco, Detroit, Chicago, Boston, Dallas, New York/New Jersey, and Orlando.

"They have been one of the most aggressive [sponsors] from a promotional standpoint," said Jeffrey R. Bliss, senior vice president of World Cup marketing, Fairfax, Va.

Visa has a program for the winter games called "Olympics of the Imagination." High Cost of Taking Risks Keeps Banks from Lending

Federal Reserve Chairman Alan Greenspan testified recently before Congress that the credit crunch stubbornly remains with us. He's right.

And unless we take a good hard look at the real reasons behind the problem, I'm afraid it might be here to stay.

The damage to the economy and our social order could be enormous. Entrepreneurs and small businesses, so important to economic growth and upward mobility in our society, need access to credit at reasonable prices.

Periodic credit crunches are familiar in history. The economy gets overheated, the Fed tightens the supply of money, and the more marginal borrowers are squeezed out. The economy cools, the Fed loosens the money supply, and funds are once again available to those who were frozen out.

Structural Weakness

The problem today is that an easier monetary policy is not bringing about the desired result of increased bank lending. Something else, something structural, seems to be at work.

From the 1950s to the early 1980s, deposit interest rates were held artificially low. Savers subsidized borrowers.

When the federal government lost control of its budget, beginning in the 1960s, market interest rates began to rise dramatically, particularly in the late 1970s. Savers voted with their feet to end the subsidy. They left the banking system in droves, forcing the elimination of deposit interest rate ceilings in the early 1980s.

Borrowers Take Hit

Freed from the controls, banks were able to pay depositors enough to attract money. But the higher cost of deposits had to be passed along to borrowers.

As the relative cost of bank loans increased, more and more top-quality borrowers bypassed the banking system by obtaining funds in the securities markets. Banks replaced these customers with higher-risk credits, lowering the quality of their loan portfolios.

Coming on the heels of the ready reeling industry. Deposit insurance premiums were raised sky high. Massively expensive and burdensome new regulatory requirements were imposed, and the penalties for unsuccessful risk taking were increased.

Say what you may about them, bankers tend to be very rational economic beings. Tell them you are raising the cost of risk taking, and their appetite for taking risk will diminish. They will stop taking risks and will charge more for the risks they do take.

Loans Pose the Most Risk

I have no doubt this is in large part what has happened to business lending. The simple fact is that most of the risk in the banking business stems from making loans.

If we do not change course soon and ease the penalties and burdens we have placed on the banking industry, I believe the credit crunch will be with us for some time to come.

The marketplace might eventually develop a substitute for bank lending to entrepreneurs and small businesses, but not before considerable damage is done to our nation.

The root of the problem is political. Having imposed on the taxpayers to the tune of some $200 billion to bail out the S&L mess, the politicians are in no mood to risk ponying up more money to bail out the Bank Insurance Fund.

Unless we address the issue of the scope and nature of the deposit insurance guarantee, we are not likely to see any significant regulatory relief for companies in the banking business. That will mean banks will continue to focus their efforts outside the lending business.

UNLESS WE ADDRESS *the issue of the scope and nature of the deposit insurance guarantee, we are not likely to see any significant regulatory relief for companies in the banking business.*

S&L debacle, the serious problems in the banking industry resulted in a regulatory and legislative firestorm. Regulators changed the rules, marking troubled loans to liquidation values and demanding greatly increased reserves to cover the potential losses.

Capital Rules Enacted

Hundreds of banks were closed, and officers and directors of failed institutions were subjected to severe sanctions and personal liability. Capital requirements were raised substantially, and risk-based capital rules were implemented that raised the ante even further for business loans.

Congress piled it on an all-

After years of growing disenchantment with the way our federal government operates, particularly at the bureaucratic level, it is my conclusion that there is only one way to end all of the nonsense: The industry should declare a holiday.

Bankers would do themselves, their customers, American business, and the country as a whole a much needed service by halting unwanted and unnecessary government intrusion into the private sector. Just close the banks until reason and judgment return. Repeal of the Truth-in-Savings Act and other congressional abominations is a must.

Lack of Nerve

Unfortunately, most bankers over the years have shown little backbone and gumption. They have been content not to rock the boat and supposedly protect their job security.

Bank lobbyists have also failed in their efforts to eliminate or reduce regulation.

Bankers have one last chance to remain a private enterprise. To accomplish the objectives of a "holiday," a majority of banks must join with the ABA, Independent Bankers Association of America, and state banking associations to set a competitive agenda that adheres to the goal of getting the government out of the banking business. ☐

Mr. Isaac, a former chairman of the Federal Deposit Insurance Corp., is managing director of the Secura Group, a consulting firm in Washington.

By Marvin C. Schumm

Bank 'Holiday' May Be the Only Way To Put a Stop to Government Meddling

There will probably never be a better time than now for the banking industry to declare a "bank holiday."

In its attempt to engineer social change, the federal government is commandeering the banking system. If bankers continue to let it happen, they will have only themselves to blame.

Suggestions are already being made to inject social engineering into other financial intermediaries. (See "Treasury Mulls How to Make Nonbanks Aid Communities" in the June 29 *American Banker*).

Federal Reserve Governor Susan Phillips recently stated at the Stonier Graduate School of Banking in Newark, Del., that no bank can escape the growing perception that private companies should be involved in meeting social problems.

She also indicated that if banks do not anticipate and understand changes concerning social and cultural diversity, Congress will step in and tell them how to do business.

Regulatory Juggernaut

One must certainly ask, "When did Congress learn how to do business?" and "When did it become banking's business to direct social and cultural changes?"

Bankers have to have their heads in the sand not to realize that the already overwhelming regulatory burden will not stop growing. Contrary to all of President Clinton's promises about deregulation, relief is not in sight.

At the American Bankers Association's national regulatory compliance conference, Fed Governor Lawrence Lindsey said, "A service industry, like banking, which does not serve its customers or which operates in a vacuum of reason and judgment will soon find that the vacuum filled by legislative fiat."

Mr. Lindsey also indicated that the Clinton administration would introduce this year or next legislation broadening the Community Reinvestment Act.

Shut the Doors

I ask, who should determine whether the bank serves the customer – the customer of the federal government?

JUST CLOSE *the banks until reason and judgment return. Repeal of congressional abominations is a must.*

Or should the federal government determine whether the bank serves the customer? Or should the bank serve the customer?

Bankers must answer these questions. Their answers will determine the future of the banking industry.

Bankers must also ask themselves if they want to be in the banking business. If they do, they must understand that the business is changing. Bankers must be willing to change with it.

Bankers must also understand that they are in the business of taking risks. Risk is the basis for profit. Bankers must be willing to take risks

Deadline Looming For the S&L Bailout

Continued from page 1

tors "will have every incentive to put everything over to SAIF" before Oct. 1, said Stephen Katsanos, the RTC's spokesman.

Once an institution is placed in the RTC, it becomes somebody else's problem, at least as far as the thrift industry is concerned. Congress can fund the RTC and let it work its caseload out gracefully, or not fund the agency and let failed institutions remain in conservatorship indefinitely.

NEWS ANALYSIS

Edward L. Yingling
New "window of opportunity"

"Congress has not been particularly concerned about institutions remaining in conservatorship," Mr. Katsanos noted.

A spokesman for the Office of Thrift Supervision acknowledged that agency officials are paying attention to the clock running at the RTC, but said the agency still intends to deal with thrifts on a case-by-case basis.

At present, there are 183 thrifts on the agency's problem list, said spokesman Bill Fulwider. "But a good many are profitable and reasonably well capitalized. There are a lot of factors to be taken into consideration."

Prime Targets

Most likely to be closed eventually are a smaller group of 75 thrifts, with assets of about $58 billion, Mr. Fulwider said.

Ideally, thrifts would like to see legislation that provides more funding for the RTC and the savings association fund, while extending the life of the bailout agency for another year.

The House Banking Committee has passed legislation that deals with the RTC on those two points. On the thrift fund, however, the bill makes $16 billion available, but sets conditions for release of the money that may be impossible to meet.

Even in that form, the savings association fund has proved to be a sticking point. Republicans are at best mildly opposed to RTC funding, but they are vehemently opposed to the idea of giving money to the thrift fund.

Allied Irish Banks Sees Recovery In Loan Demand at Home, in U.S.

Reuters

DUBLIN — Allied Irish Banks PLC said it was confident of a recovery in loan demand in Ireland, the United States, and Britain next year.

"We expect some pickup in all three major markets early next year," Allied finance director Kevin Kelly said after the company reported a 42% rise in pretax profits in the first half, but a slowdown in lending.

"In the United States, there's been a very small pickup in loans of about 0.2% or 0.3% since the yearend," Mr. Kelly said. He said he could not detail progress in other markets.

'Good Mix of Locations'

"The three economies we operate in are still fragile," he said. "Banks lag economic pickup so we think it will be next year before we feel the benefit."

But he added, "We're still confident we have a strategically good mix of locations balancing the ebbs and flows."

The companies U.K. outlook is stable "until loan demand picks up," a spokesman for the company said at the end of the year," Mr. Kelly said.

'Still Well-Positioned'

Capital market trade was the highlight, but Mr. Kelly said 51 laid made only $7 million to the million of exceptional European Rate Mechanism-related gains.

"We're still well-positioned ... we'd see a continuation of fairly satisfactory performance," he said. The strong performance of Allied's U.S. subsidiary First Maryland Bancorp contrasted with a $11.9 million loss at Allied Irish Banks New York, Mr. Kelly said.

But he added: "We feel we are about to turn the corner. We'd be disappointed if we didn't ... at least break even." Asked whether that would be possible by the year end, he said the company had some optimism, but it was too early to say.

Record Rate Increases Hurt

In Ireland, unprecedented rises in unemployment rates in the last quarter of 1992 were a huge blow to investor confidence, Mr. Kelly said.

"It's taken time for confidence to return, but we're seeing some slight indications."

The company boosted its half-year dividend 7.9% to $5.74 per share. Asked about prospects for a further dividend rise for the full year, Mr. Kelly would say only, "It is the board's policy to pay well in excess of Irish interest."

Chemical's Offering Fueled by Rate Swap

By DAVID SIEGEL

Chemical Bank on Wednesday raised $150 million in 15-year subordinated debt, enticed by an interest-rate swap that made the offering less expensive than a 10-year issue.

The offering was priced to yield 6.73%, or 95 basis points more than the pre-issue yield of 10-year U.S. Treasury notes that were sold Wednesday.

Chemical entered a swaps agreement after Wednesday's issue in order to change its pay-

ments to a floating rate from a fixed rate, said Dina Dublon, senior vice president for corporate finance.

8 to 10 Basis Points Saved

She said the swap, combined with the rate of the debt issue, gives Chemical a floating rate of 35 basis points over the London interbank offered rate, including underwriting costs. This is about eight to 10 basis points less than what it would have paid for a 10-year issue with a swap into floating-rate payments, she said.

"The issue essentially comes in at a lower cost than 10-year money comes in at, so it's a hard temptation to resist," she said.

Favorable swaps conditions also led Chase Manhattan Corp. to issue $200 million of 15-year subordinated debt Tuesday, said a capital markets source.

Chemical's issue cannot be called. It is rated A3 by Moody's Investors Service Inc. and A by Standard and Poor's Corp. Morgan Stanley & Co. is lead manager.

Chemical Banking Corp. has been in a refinancing mode this year, said Ms. Dublon. The company has called or redeemed about $1.8 billion in subordinated debt this year, which counted for about $1.2 billion in Tier 2 regulatory capital. Regulators start to discount subordinated debt when it has five years or less to maturity.

The bank this year has raised about $1.4 billion in subordinated debt, including Wednesday's issue, Ms. Dublon said. The new issues allow the bank to extend the maturities of its outstanding debt at a better rate, she said. At June 30, Chemical's estimated total capital ratio was 11.9%, up from 11.1% one year earlier.

A $2.5 Billion Universal Shelf

Ms. Dublon said the bank's refinancing of called debt this year is essentially complete, and that the bank will only be doing "opportunistic" capital issues in the remainder of the year, when the market offers rates too good to pass up.

Also on Wednesday, Chemical filed to issue up to $2.5 billion of debt securities, preferred stock, common stock, and other securities. The "universal shelf" is one of the largest securities filings ever by a bank.

It allows the bank to cover many different types of securities under one filing but does not signal any new slew of securities offerings, said Ms. Dublon. Combined with other filings outstanding, Chemical has a total of $4.2 billion of securities under registration.

NBD Bank, a unit of NBD Bancorp, issued $200 million of 6.25% subordinated notes due Aug. 15, 2003, at 99.596 to yield 6.305%, said lead manager Merrill Lynch Capital Markets.

The notes yield 55 basis points over comparable U.S. Treasuries. Noncallable for life, the deal is expected to be rated Aa3 by Moody's and AA-minus by S&P. □

USG in $138.5 Million Debt Swap

CHICAGO — USG Corp. said it completed the exchange of $138.5 million of bank term loan and capitalized interest notes for new 10¼% senior notes due in 2002. The company said the exchange eliminates all scheduled bank amortization payments prior to Dec. 31, 1997, and provides USG with a mechanism to repay or purchase up to $165 million of its public senior debt due prior to Jan. 1, 1999.

Under terms of the exchange, USG Interiors also paid off all outstanding revolving credit facility capitalized interest notes for approximately $9 million in cash. As previously reported, the new 10¼% senior notes were offered to the bank group in exchange for up to $95 million of bank term loans and up to $47.4 million of capitalized interest notes.

USG said the exchange was completed with more than 97% acceptance by the bank syndicate.

Kemper Downgrades Six Midwest Banks, Saying Performance Will Be Hard to Repeat

Continued from *page 1*

"long-term buy."

The analyst said he felt NDB and Northern Trust, both well-regarded banks, are fairly priced at current levels and will likely trade in line with the market. NBD was up 25 cents to $33.25 in late trading Wednesday. Northern was up 75 cents to $42.25.

Associated, which was up $1.25 cents to $38, is also fairly valued and unlikely to outperform the market except on takeover speculation he said.

First Midwest is a "solid takeover target" but on fundamentals is more than fairly valued, he said. Its shares were down 37.5 cents to $27.125.

He said Marshall & Ilsley "stands out from the crowd in generating 48% of operating revenues from noninterest sources," principally data processing and trust products, "but may be struggling a bit to put the capital it generates from these activities to equally productive use."

Marshall & Ilsley shares were unchanged late Wednesday at $23.

Active Purchaser

Huntington is enjoying record profitability, Mr. Maier said, but is close to his 12-month price target of $29 and also is an active acquirer, "which adds an element of uncertainty." Its stock was unchanged at 25.875 late Wednesday afternoon.

First of America, which was upgraded, has been trading "at a below-average multiple of earnings because of the market perception that it is likely to disappoint shareholders in the future with a very dilutive acquisition."

NBD, Northern Trust, and Marshall & Ilsley were among those lowered to "hold."

But Mr. Maier said he did not believe this will happen "and that over time the market will recognize this and restore an average earnings multiple to the stock."

Multiple of 8.5

First of America currently trades at 8.5 times the analyst's estimated 1994 earnings, while other midwestern banks trade near 10 times expected earnings. On Wednesday, the stock was up 50 cents to $39.50.

Mr. Maier noted that after six downgrades, Kemper still rates 19 midwestern bank stocks either as strong buys or long-term buys.

"The region, is populated by an impressive collection of high-performing companies that stand to reward investors either as acquirers or as acquirees, or as both," he said.

WEDNESDAY'S MARKET

First Interstate Bancorp. was the biggest gainer among major bank stocks, up $1.875 to $64.50 as investors seemed to approve its efforts to expand the bank's Southern California market share.

The biggest loser was Banc One Corp., down $1 to $53.25 after announcing it will buy Capital City Bancorp., Salt Lake City. Deal terms were not disclosed.

Other banks were mixed. J.P. Morgan & Co. was up 87.5 cents to $72.75 and Bankers Trust New York Corp. was ahead 62.5 cents to $79.50 in late trading.

BankAmerica Corp. was up 37.5 cents to $46.875, and NationsBank was up 37.5 cents to $52.75. □

IT'S GOOD TO BE FAST, BUT IT'S MORE IMPORTANT TO BE ACCURATE.

LEXIS Document Services

The Nationwide Filing / Searching Source

Don't get us wrong. When it comes to UCC document searches and filings, no one is faster. But at Lexis, we realize it's not enough to fill an order quickly. It has to be done correctly. Every time. It's for this reason that we have a centralized quality control system that is both fast and accurate. Our account executives have the most experience in their territories. And each understands individual jurisdictional requirements so your documents don't get held-up, misfiled or lost. Please call us at 1-800-634-9738. Because if anyone is faster or more accurate than we are, it'll be news to us.

Smart Card Project Attracts Heavy Hitters

By JEFFREY KUTLER

After more than half a year of preliminaries, a multi-industry smart card association is officially up and running.

The group, calling itself the Smart Card Forum, includes some big names and somewhat strange bedfellows: American Express and Citicorp, AT&T and IBM, Apple Computer and Microsoft, and about 25 others.

The membership mix is not quite complete. MAC, the joint venture of four banks that is well along in planning for a smart-card payment system, is conspicuously absent.

But the initial members certainly have given the group clout. They have agreed they can accomplish more together than separately, said Catherine Allen, a Citicorp vice president and acting chairman of the Smart Card Forum.

"In a closed computer system, you don't necessarily have to work with others," said Ms. Allen, who personally and on Citicorp's behalf was a driving force in creating the forum.

No Longer a Loan Wolf

That Citicorp played such a central role was news in itself. (See related article on page 15.) Historically a lone technological wolf, Citicorp once insisted on using systems of its own making, including a nonconforming data-encoding method for its cards.

"Times have changed," said Ms. Allen, reflecting the outlook of her boss, senior technology officer Colin Crook, and his boss, chairman John Reed.

The participants think they have the power and influence to make the technology go in the United States. It is a goal that so far has only frustrated the few enthusiasts who have exerted any effort.

France and Japan Lead

The technology, which involves placing a microcomputer chip inside a plastic card, has met the most success in France and Japan. But most of the applications are limited — cards used for telephone calls or transit rides generally are not interchangeable.

Behind the Smart Card Forum is a desire for "open systems" and to do what it takes, in the form of technical standards and eventual market tests, to prove their feasibility.

Aside from telephone and

UJB Stock Trading Heavily Amid Takeover Speculation

By GORDON MATTHEWS

NEW YORK — Takeover fever has struck UJB Financial Corp.

The New Jersey company's shares gyrated again Thursday in heavy trading amid speculation that it will be the next bank snapped up in the nation's hottest merger market.

After rising $2.50 on Wednesday, the stock ran up another $2.25 on Thursday before falling back later in the day. At 4:30 p.m., UJB was down 12.5 cents, at $31.625. Volume, at 976,200 shares, was about five times average.

Merger Talk

Analysts said the activity was tied to speculation that another banking company had taken an equity stake in UJB, presaging an acquisition agreement.

If such an investment occurred by June 30, it would have to be disclosed in a filing with the Securities and Exchange Commission by Monday, 45 days after the quarter's close.

A spokesman for Princeton-based UJB, which has $13.8 billion of assets, said Thursday he could not comment on the possibility of an SEC filing, on merger rumors, or on the recent movement in the bank's stock.

Nader Study Accuses 49 Lenders Of Redlining

By CLAUDIA CUMMINS

WASHINGTON — Consumer advocate Ralph Nader unveiled a study Thursday accusing 49 major mortgage lenders of redlining in 16 cities across the country.

Mr. Nader said he has sent the study to Attorney General Janet Reno and to bank and thrift regulators, asking them to investigate these lenders for illegal lending bias.

"There are federal laws on the books that are supposed to prevent racial redlining," he said. "These laws have not been enforced."

The study, based on 1990 and 1991 Home Mortgage Disclosure Act data, reported finding 62 instances of institutions avoiding mortgage loan business in minority neighborhoods. It focused on the relative number of loans an institution made in a given neighborhood, not on the application and denial rates highlighted in some other reports.

Sears Unit Fared Worst

Sears Mortgage Corp., based in Vernon Hills, Ill., was identified as the lender with the worst record, with six separate instances of redlining. Prudential Home Mortgage Co. followed.

NEWS *briefs*

Glenfed Recap Hurdle Lowered by OTS

WASHINGTON — Regulators are making it easier for Glenfed Inc. to complete its $4.5 million recapitalization.

The Office of Thrift Supervision signed off Wednesday on a plan that would permit the deal to take place with the approval of only 80% of the company's bondholders, instead of the 90% specified in the previous terms.

Stephen J. Trafton, Chairman and CEO of Glendale, Calif.-based Glenfed, the parent of Glendale Federal Bank, said in a statement: "We are quite pleased with the progress to date on all aspects of our recapitalization effort, and are on track to complete the transactions according to schedule."

"We're having a difficult time finding all the bondholders out there," said Cary J. Stanford, a senior vice president at Houlihan Lokey Howard & Zukin, a Los Angeles firm that is advising the holding-company bondholders. "We are lowering the acceptance rate because half of Europe is on vacation, and most of these bonds are held in Europe."

Mr. Trafton said, "the response to the exchange offer has been favorable by nearly all of the debenture holders we have been able to identify."

Appraisal Rules Eased in Flood Regions

WASHINGTON – Banks in flood areas may now begin making loans without first getting appraisals on the real estate pledged as collateral, the five federal banking agencies announced Thursday.

"The exemption is necessary because the disruption of real estate markets in the flood areas interferes with the ability of institutions to obtain appraisals that meet the requirements of federal law and regulations," the agencies said in a statement.

The relaxed rules will remain in effect until 1996 and cover parts of nine states declared major disaster areas by President Clinton.

The states are Illinois, Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota, and Wisconsin.

A Virginia Bank Is 32d to Fail This Year

WASHINGTON — New Atlantic Bank, Norfolk, Va., failed Thursday, bringing the total to 32 banks with $3.1 billion this year.

Its 2,300 deposit accounts, totaling $15.3 million, were assumed by Bank of Hampton Roads, Chesapeake, Va.

The Federal Deposit Insurance Corp. is stuck with $8.3 million of the failed bank's $15.1 million in assets. The agency advanced $4.8 million to help Bank of Hampton Roads buy $7.8 million of New Atlantic's assets.

Fla. Purchase by Central of South Advances

BIRMINGHAM, Ala. — Central Bancshares of the South has signed a definitive agreement to purchase 1st Performance National Bank, Jacksonville, Fla.

Central, with $7 billion of assets, said it would pay cash for the unit of Resource Bancshares, Columbia, S.C. Other terms were not disclosed. The deal awaits shareholder and regulatory approval.

The Florida bank has $278 million of assets, $248 million in deposits, and $25 million in equity.

As reported June 10, Central signed a letter of intent in June to acquire 1st Performance's offices in Jacksonville, Jacksonville Beach, Fernandina Beach, Hasting, Hilliard, Middleburg, Orange Park, St. Augustine, and Yulee, Fla.

Also as reported, Central said it would change its name to Compass Bancshares in November, facilitating expansion and uniting affiliates in Alabama, Texas, and Florida – including 1st Performance – under the Compass Bank name.

Bank of N.Y. Acquires National Community

NEW YORK — Bank of New York Co. has completed the acquisition of National Community Banks Inc.

The buyer said each outstanding share of National Community's common stock had been converted into 0.96 share of Bank of New York common. National Community's Series B 7¾% cumulative convertible preferred stock was converted share-per-share into class A preferred.

The briefs were compiled from staff and wire reports.

Corrections

An Aug. 5 news brief misstated a provision of the settlement of a government lawsuit against directors of the failed National Bank of Washington. The $500,000 figure was agreed to by 14 former directors, not just by Luther Hodges, the bank's former chairman, and Robert Washington, a lawyer. The fine is covered by insurance.

The last line of a table accompanying an article Thursday about Banc One Corp.'s planned purchase of Utah's Capital Bancorp was mislabeled. Capital has seven branches and 90 employees.

Nader Study Finds Lending Bias At 49 of the Top Mortgage Firms

Continued from *page 1*

with three cases cited in the study.

Mortgage companies, including bank subsidiaries, were the subject in 40 of the 62 redlining instances cited, or 65% of the cases. These included Chase Home Mortgage Corp., Nationsbank I Mortgage Corp., Republic Bancorp Mortgage Inc. in Michigan, Norwest Mortgage Inc., GE Capital Mortgage Services, GMAC Mortgage Corp., and Source One Mortgage Services.

The Nader study cited commercial banks in the remaining 30 instances, including Chemical Bank, Republic Bank, Wells Fargo Bank, Citibank Federal Savings Bank and Bank of America.

Terrney Marie Calleder

Ralph Nader
Wants an investigation

Mapping Techniques Used

Researchers Jonathan Brown and Charles Bennington used computerized mapping techniques to translate HMDA data into color-coded maps for the 20 largest mortgage lenders in 16 metropolitan areas.

When lenders had a low market share in minority neighborhoods, originated mortgages throughout most of the metropolitan area, and excluded or substantially underserved minority areas, the authors judged redlining to have occurred.

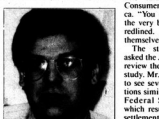
While the researchers did not accuse the lenders of purposefully discriminating against minorities, they charged that because policies and practices – like prescreening, exclusive marketing, and rigid underwriting standards – led to fewer loans in these areas, illegal discrimination occurred.

Many bankers say the study's methods do not prove lending bias.

"We think we are in full compliance with the current interpretation of the lending laws," said Larry Costello of Sears Mortgage. "Our focus has been on ensuring nondiscrimination in the application process rather than outreach in particular neighborhoods."

And regulators say that while studies like this are an important tant start, HMDA analysis without further investigation is not proof of discrimination.

"The mere fact that HMDA data show a particular institution has relatively few applications from minorities, or from particular neighborhoods, does not in and of itself tell you there is illegal discrimination," said Steve Cross, deputy comptroller



Chris Lewis
Praises new use of bias data

for compliance management at the Office of the Comptroller of the Currency. "It's enough to raise some serious red flags but its not enough in my mind to draw a conclusion."

The Comptroller's office will follow-up on the study for the banks it regulates, Mr. Cross said.

Warren Lasko, executive vice president of the Mortgage Bankers Association of America, attacked the report, saying it was full of "distorted and undocumented accusations."

"This supposed study makes in impossible leap in logic from looking at raw HMDA data to concluding that banks are willfully discriminating in their lending decisions," he said.

Added C. Howie Hodges, director of the American Bankers Association's center for community development, "We're concerned with this. We vigorously oppose discrimination of any kind in the banking industry, or even the perception of discrimination."

But the colorful, computer-generated maps produced by the researchers illustrate the power of the HMDA data in studying lending in specific neighborhoods.

New Uses for Data

"They've really revolutionized the utility of the HMDA data to pinpoint bias in the market," said Chris Lewis of the Consumer Federation of America. "You can almost recognize the very blocks that have been redlined. They do speak for themselves."

The study's authors have asked the Justice Department to review the cases detailed in the study. Mr. Brown said he hoped to see several Justice investigations similar to that of Decatur Federal Savings and Loan, which resulted in a $1 million settlement.

The authors called also called on the Department of Housing and Urban Development to establish strong enforcement standards, using its authority under the Fair Housing Act. And the department appears ready to take on this burden.

"This report underscores the importance of the necessity for a concerted federal response to redlining, a response that includes HUD, the Justice Department, and the federal banking regulators," said Roberta Achtenberg, HUD's assistant secretary for Fair Housing and Equal Opportunity. □

BankAmerica Eyes Health Payment System

By JEANNE IDA

BankAmerica Corp. officials said they are forming a unit to develop integrated payment services for consumers and health care providers.

The bank has proposed to several potential health care customers a service in which BankAmerica would receive patients' checks, and insurers' electronic payment information and funds, and would consolidate the data for doctors' and hospitals' record keeping.

The new unit, called BankAmerica Health Information Services, will be supervised by Colin Klipin, executive vice president and head of corporate services, including cash management.

'A Lot of Variables'

Many banks see a big potential for fee income in promoting health care payments, but programs have been slow to take off.

American Express Corp. last year was disappointed by insurers' response to a health care credit card that would be used in conjunction with electronic filing of insurance forms.

A big potential for fee income is seen in such services.

The program, called Quattro, has since been revamped and is slated for a new test this fall.

BankAmerica declined to project income from the new business unit.

"There are a lot of variables," said Robert Winn, senior vice president. Among them are what the Clinton administration will do to reform the nation's health care system and how quickly the industry will automate.

"The market needs a venture that meets the cash flow needs of medical providers," said Joel Friedman, a principal consultant with Andersen Consulting Co., in San Francisco.

The Bank of America venture "is an indication there is a significant under-banked market."

Mr. Winn said the bank aims to give providers "one-stop shopping" that combines per-handling and automated transfer of information and payments.

An 'Important Line'

Americans spend about $150 billion annually on medical care, and of that, about 20% goes to administrative and billing costs, according to health care industry estimates.

From $3 billion to $10 billion of the health care industry's administrative costs could be saved by automating claims processing, payments and reminances, enrollment, and eligibility services, said Bank of America vice chairman Marty Stein, citing estimates by a group convened by the U.S. Dept. of Health and Human Services last year.

The unit does not yet have staff or budget allocated to it, said Robert Winn, senior vice president in charge of the project. He said that those decisions would be made by the fourth quarter.

Better Customer Service

"There are a lot of people in this market, and we've been asked, 'Where is B of A in this?' "We consider this an important line of business to the bank."

Longer term, BankAmerica says it will develop services that would improve customer service in the health care arena. BankAmerica could, for example, answer inquiries about the eligibility of a patient for coverage under a certain plan, track the status of claims, and reconcile remittance advice and payments.

The service that BankAmerica is currently promoting would integrate collections and disbursement services currently offered to corporate customers into a single program for health care providers.

The bank would receive electronic payments and remittance data from an insurer, then consolidate that information with data from all other insurance companies that have a relationship with a particular doctor or hospital.

It would provide the doctor or hospital with one stream of information so they could easily update their billing and accounts receivable.

The patients' own payments would be routed to a special health care lockbox service, and be merged with the other data.

Bank of Boston Prodding Lenders to Push Services

By YVETTE D. KANTROW

Keyword Focus

KNOWING THAT IT CAN'T live on lending alone, New England's preeminent corporate bank is aggressively pushing its traditional lenders to market noncredit services.

With a pitch and a shove, Bank of Boston is encouraging its relationship managers to hawk cash management, trade finance, stock transfer, custody, and other corporate services to their loan customers.

The pitch: A bonus of up to $15,000 a year for cross-selling the fee-producing products and services.

$2,500 for Selling Six Products

Lending officers earn $2,500 every time they sell six new products – from at least three separate categories – that bring in annual revenue of $50,000.

Kevin Mulvaney, Bank of Boston's group executive in charge of national banking, said 108 of about 500 eligible officers took home cross-selling bonuses in 1992. He expects 140 to qualify this year.

The program is already leading to results on the bank's bottom line, according to Mr. Mulvaney. Revenues from noncredit corporate services in the second quarter jumped 12% from the year-earlier period.

Kevin Mulvaney

And the proportion of Bank of Boston's total noninterest income from cash management, trade finance, and other corporate services soared to 45% from 25% 2½ years ago.

In the second quarter, the corporation booked $136 million of noninterest income.

"We are taking market share from other banks," said Mr. Mulvaney, an executive vice president.

Mr. Mulvaney attributes the increase almost exclusively to the bonus program.

Bank of Boston instituted the plan not so much because it was shying away from lending, he said, but because it wanted to ensure that it was establishing well-rounded relationships with its corporate customers.

Practice Is Gaining Popularity

It is a trend that has taken hold at other banks as well.

"As a marketing strategy, it makes a great deal of sense," said Jack M. Meckler, a senior vice president at Littlewood Shain & Co., a consulting firm in Exton, Pa. "As long as you are calling on a company, you should talk about everything a bank can do."

Meanwhile, Bank of Boston is setting plans to expand its cross-selling program next year to reflect what Mr. Mulvaney calls a "total revenue approach."

Loan officers and their division managers will set individual and department revenue goals based on sales of 25 different products. Revenue goals will be set for each product as well.

"The goal-setting process will become much more dynamic," Mr. Mulvaney said. "Relationship managers will really think through the breadth of what we do."

Thrift That Lost Goodwill Case Raises $44 Million in Rights Issue

By ROBYN MEREDITH

WASHINGTON — Charter Federal Savings Bank is back from the dead.

The $720 million-asset Virginia thrift, left insolvent this spring when it lost a battle with regulators over supervisory goodwill, raised $44 million in a rights offering completed Thursday.

"I guess we are the only bank in America that has been allowed to operate with negative net worth," said Cecil R. "Andy" McCullar, Charter Federal's president and CEO. "We are all deliriously happy," he said.

Regulators are happy too.

"We are delighted, obviously," anytime an institution that is undercapitalized manages to raise capital, said Jonathan L. Fiechter, acting director of the Office of Thrift Supervision.

Charter Federal, he said, "was able to demonstrate sufficient earnings potential that the market saw value in that institution."

'Landmark Recapitalization'

On March 29, the Supreme Court refused to hear Charter Federal's argument that it should be allowed to count supervisory goodwill as capital.

Cecil R. McCullar
"Deliriously happy"

Strengths Cited

He said Charter Federal's rights offering was successful because the company's only problem was capital. Charter "had low levels of nonperforming assets, it had high earnings, and it had a management team that was very credible," Mr. Mabry said.

Charter Federal has 26 branches in Southwestern Virginia and Northeastern Tennessee. The federally chartered, stock-owned thrift has not paid a dividend since 1988, and does not plan to until its core capital level hits 5% and its risk-based capital is 10%. Then it would qualify for the "well-capitalized" category under federal capital regulations.

Two days later, the 73-year-old thrift, based in Bristol, Va., wrote off $41.1 million of the intangible asset, which left its core capital at negative 1.76% although it continued to earn a profit.

Now that the rights offering has been completed, Charter has 4.53% core and 9.78% risk-based capital.

"It is a landmark recapitalization," said Jim C. Mabry, managing director at Wheat, First Securities Inc., the Richmond investment banking firm that advised Charter.

Mr. Hoskins, who also is vice chairman of the parent company, will succeed William J. Williams, who is retiring.

Mr. Williams will continue to serve on the boards of both Huntington Bancshares and Huntington National Bank.

Before joining Huntington in 1985, Mr. Williams was president and chief operating officer of Republic Steel Corp. before its merger with LTV Corp. After the merger, he was a senior vice president of LTV.

Mr. Hoskins was president of the Federal Reserve Bank of Cleveland before joining Huntington in 1991.

Previously, he was chief economist at Pittsburgh National Bank and was for 11 years an economist with the Federal Reserve Bank of Cleveland.

Huntington National Bank Adds To the Duties of CEO Lee Hoskins

W. Lee Hoskins, president and chief executive of **Huntington National Bank,** Columbus, Ohio, will assume the additional post of chairman of the Huntington Bancshares unit, effective Sept. 1.

W. Lee Hoskins

Mr. Hoskins, who also is vice chairman of the parent company, will succeed **William J. Williams,** who is retiring.

Mr. Williams will continue to serve on the boards of both Huntington Bancshares and Huntington National Bank.

William J. Williams

Before joining Huntington in 1985, Mr. Williams was president and chief operating officer of Republic Steel Corp. before its merger with LTV Corp. After the merger, he was a senior vice president of LTV.

Mr. Hoskins was president of the Federal Reserve Bank of Cleveland before joining Huntington in 1991.

Previously, he was chief economist at Pittsburgh National Bank and was for 11 years an economist with the Federal Reserve Bank of Cleveland.

— Franklin Smith

MIDDLE ATLANTIC

MIDLANTIC NATIONAL Bank, Edison, N.J., a subsidiary of **Midlantic Corp.,** has appointed **James L. Sullivan** vice president and director of the bank's new public finance group.

James L. Sullivan

Working with Midlantic's government banking department, Mr. Sullivan is responsible for developing financing for municipalities, counties, and the state of New Jersey.

Midlantic's Pennsylvania subsidiary, **Continental Bank,** appointed **Gregory J. Webster** head of real estate investor and developer activities.

Gregory J. Webster

He is responsible for relationships with the bank's real estate investor/developer clients in the Delaware Valley.

Joseph H. Kott has been promoted to executive vice president and general counsel of Midlantic Corp.

Joseph H. Kott

Mr. Kott continues as a member of the Midlantic management committee with responsibility for the corporation's legal functions.

He had been senior vice president and general counsel of Midlantic.

MIDWEST

NATIONAL CITY CORP., Cleveland, said **Alan J. Davidson** has been appointed chief fiduciary officer of **National City Trust,** based in Columbus.

Mr. Davidson is currently executive vice president of National City Bank, Columbus. He brings nearly 30 years of trust experience to his new post.

SOUTHEAST

WHITNEY NATIONAL Bank, New Orleans, a subsidiary of **Whitney Holding Corp.,** has appointed **G. Blair Ferguson** executive vice president and head of the bank's trust division.

G. Blair Ferguson

Mr. Ferguson joins Whitney from the former First City Bank, now Texas Commerce Bank, Houston, where he was executive vice president and regional director of trust activities for the North Texas region.

He will oversee the trust division and develop an investment strategy.

WEST

BANK OF AMERICA, San Francisco, named **Gary J. Matus** an executive vice president and head of private banking and investment management and trust services.

Mr. Matus had been senior vice president and industry manager in charge of the global entertainment and media industries group at the bank since 1989.

He will be responsible for the management of individual investment portfolios.

Reporting to group executive vice president **Peter McPherson,** head of the Asset Management Group, Mr. Matus will remain based in Los Angeles.

AMERICA FIRST EUREKA Holdings, San Francisco, parent of **EurekaBank,** has named **Marianne Byerwalter** chief operating officer and chief financial officer.

Ms. Byerwalter also was elected chief financial officer of EurekaBank.

For the past five years, Ms. Byerwalter has been executive vice president and a director of EurekaBank. She served as its interim chief operating officer after its acquisition by America First. □

A Kansas Bank Finds High Ground By Crossing the River to Missouri

By TERRENCE O'HARA

First Bank of Elwood crossed the Missouri River two weeks ago, accomplishing interstate banking not by law or acquisition, but by disaster.

The small Kansas bank moved its operation across the Missouri's swollen breadth to St. Joseph, Mo., when the town of Elwood, situated on a spit of land jutting into the river at the northeast corner of the state, was deluged on July 25.

"We had to get approval from the Kansas bank commissioner and the Missouri bank commissioner and from the Federal Deposit Insurance Corp.," said First Bank president Robert Means, whose family owns most of the bank.

"But they were all very understanding. It's weird because we're a Kansas-chartered bank, and we're over here in Missouri."

Only Kansas Bank Put Out

First Bank is only one of many banks that have suffered from flooding in the Midwest.

Only two banks in Kansas, however, were physically affected by the flooding along the Missouri River, and First Bank was the only one displaced, according to the Kansas Bankers Association.

First Bank had been having dampness problems all summer because of the heavy rain, Means said.

But on July 25, water rushed into the building when the town's levee, visible from Means' office a half-mile away, gave way.

Didn't Miss a Day

"We were given a half-hour to evacuate," Means said. By the end of that day, he said, the water reached 10 feet 6 inches on the first floor.

First Bank was the state's only institution displaced by the flooding.

Means and his staff had planned for the worst. Means had already shopped for a new site on higher ground in St. Joseph. By 10:30 p.m., most of First Banks' equipment and records had been moved into an empty former savings and loan branch in St. Joseph.

By 11 a.m. on July 27, with its computers up and running, the bank opened for business in Missouri and was offering limited deposit services.

"Most of our employees had relocated to St. Joseph to escape the flooding anyway." Means said.

"We were proud that we were able to open on Monday. We didn't even miss a day. We took it as a challenge."

Eager to Get Home

First Bank could be in Missouri for a while. Although the water has receded, and First Bank's building was been drained, it will take two months, Means said, to dry the place out and finish revovations.

"It's pretty much a gut job," Means said. "We have cleanup crews going, and we may be able to move in before the actual work is done."

Means is eager to get back into Elwood, population 1,275, and start rebuilding.

"One thing is for sure," he said. "No matter what, our bank is going to be a leader in getting back into this town." □

Development Bank In Portland, Ore., Owes Life to Lawsuit

By TERRENCE O'HARA

CRA

NOT MANY BANKS HAVE BEEN capitalized with the settlement proceeds of a lawsuit.

But then, not much about the genesis of North/Northeast Portland Development Bank (In Organization) has been typical.

"I've never heard of anything like it," said James Vitarello, a Washington, D.C.-based consultant on community reinvestment financing and regulation. "The idea, as far as I can tell, is unique."

North/Northeast Portland Development Bank is seeking a chief executive to bring it from the idea stage to the formative stage. The bank's mission will be like that of South Shore Bank of Chicago, the model for community development banks; the idea is to serve ethnically and economically diverse region of north-northeast Portland.

In the next six months, the bank's organizing committee will hire a chief executive and begin beating the bushes for money to complete the bank's capitalization. The bank hopes to open by the end of next year, says Jeana Wooley, one of its organizers.

It may well be the first time that a bank has ever been formed because of a dispute involving electric bills.

In the early-1980s, the giant Portland-based utility company Pacificorp was sued in a rate case brought by several Oregon community and environmental groups. Pacificorp lost the lawsuit two years ago, when it settled the case for $4 million.

Michael Henderson

Pacificorp proposed that instead of paying back the disputed rate money through minuscule refunds to existing customers, it funnel the funds in a lump sum to the northeast Portland community, where Pacificorp's electric customers are concentrated.

Some of the $5.1 million settlement went to existing foundations. But $1.7 million, the largest chunk, went toward establishing a community development bank; the state requires $5 million in capital to start a bank.

The $1.7 million was the only part of the settlement money earmarked for a venture that didn't already exist, according to Ed McNamara, head of the Neighborhood Partnership Fund, an arm of the Oregon Community Foundation, which was responsible for implementing the development bank idea.

"We were picked because neither Pacificorp nor the plaintiffs in the lawsuit felt they were qualified or objective enough to find out if this idea was feasible," Mr. McNamara said.

Organizing Committee Formed

After a feasibility study found that a development bank would actually work in the community, the foundation shifted responsibility for the bank to an organizing committee of eight residents and businesspeople. Michael Henderson, executive vice president of the utility, led the committee.

Ms. Wooley, a member of the bank's organizing committee and a specialist in public-sector development, said the $1.7 million left in the Pacificorp settlement fund will become about 20% to 25% of North/Northeast Development Bank's equity.

She said the organizing committee will most likely make up the bank's board of directors. Pacificorp has also agreed to match $1 for every $3 raised by outside investors, bringing to the total Pacificorp commitment to $2 million.

'We Were Lucky'

That equity will be owned in a form of "community shares," the ownership structure of which has yet to be worked out, Ms. Wooley said.

She said the organizers are confident that at least $5 million can be raised from local investors, corporations, and, hopefully, banks.

"We were lucky, because we had a pot of dollars," Ms. Wooley said. "What we've got to do is present our case to those in the community that are still tentative – the banks and financial community."

Proposal to Cut Red Tape in Farm Lending Is Greeted Coolly by Agricultural Bankers

By TERRENCE O'HARA

The Farmers Home Administration wants to create a Certified Lender Program to replace the Approved Lender Program for its guaranteed farm loans.

The program would greatly reduce the paperwork for certified lenders on loans of less than $50,000. To be certified, lenders would have to have made at least five guaranteed loans in the previous two years.

By this week, two dozen lenders had commented on the proposal, almost all of them small rural banks and thrifts. Active Farmers Home Administration lenders think the rule would not apply to most of their loans, while less-active lenders think it is too restrictive.

Agriculture Mailbag

I am a good lender and represent a good bank. I have used FmHA guarantees over the last 18 years. Do not exclude the smaller banks from participating in the certified lender program by requiring a number of loans written in the past two years.

Earl Zimmerman
President
Wabasso State Bank
Wabasso, Minn.

Most of our FmHA loans average $150,000 and we feel that while it is probably a must that we transfer to CLP lenders when our present approved lender program expires, we will have almost no loans of your proposed $50,000 and below.

This would necessitate our filing the usual long form on applications. This would increase our paperwork by many fold.

C.A. Patout
Chairman and chief executive
Gulf Coast Bank
Abbeville, La.

I am wondering if the proposed rules include a typographical error? After reading "guaranteed loans of $50,000 or less," I didn't even bother to read all the rest of the proposed rules and regs. At $500,000 or less, we might consider applying for CLP status.

Roland Narr
Senior vice president
State Bank of Young America
Young America, Minn.

I have reviewed with great difficulty the Certified Lender Program interim rule. I am very disappointed with this program. Its mission to streamline the application process is wide of the mark.

What American agriculture and my customers need is a simplified process for amounts considerably in excess of $50,000.

[The CLP] is worthless to American agriculture and the banks who hope to serve their customers. It is a bureaucratic attempt that appears to comply with Congressional mandate, but in fact does not.

Horace Eaton
President
First State Bank and Trust
Hollis, Okla.

FmHA has limited CLP status to the top 16 percent of FmHA lenders who are holding 60% of the current agency portfolio. How does this encourage new lenders to use the program?

Michael Granlund
Vice president
Walhalla State Bank
Walhalla, N.D.

S&L Veteran Sounds a Warning on Interest Rate Risk

Q&A

Skip Martin, president and chief executive of Pocahontas (Ark.) Federal Savings and Loan Association, is worried that small savings and loans, wowed by low interest rates, don't have a plan to manage the mismatch between their assets and liabilities.

He doesn't expect a wave of failures, but says S&Ls could get hurt if they don't mend their ways.

For Mr. Martin, 44, S&L is in the blood. A thrift executive all of his working life, he follows his father and grandfather as head of Pocahontas Federal, which has $166 million in assets.

An outspoken director of the Savings and Community Bankers of America, Mr. Martin shared his views in an interview with American Banker *reporter Bill Atkinson.*

Skip Martin
"A real bad feeling"

Q: How big of a problem do we have with thrifts getting mismatched?

MARTIN: I hope that we all learned our lesson from interest rate risk back in the '80s, but I have a real bad feeling in my gut that we didn't.

Things have been so good lately that we may have forgotten. I think a lot of people are getting severely mismatched in this loan environment, and they may not have a plan in place to correct it.

Q: Do you expect failures?

MARTIN: No. I think there will be a mad scramble of people trying to learn things real quick. What a lot of institutions are doing is

I think a lot of people are getting severely mismatched in this environment.

extending their CDs, thinking that is going to protect them against rising interest rates.

The problem is their customer can come in and call those deposits away from them so they really haven't hedged against interest rates going up.

Q: How conservative are you?

MARTIN: Most brokers think I'm ultraconservative. My board thinks I'm a screaming liberal. I manage my gap as if interest rates are going to go up.

It is so tempting to get mismatched right now and throw everything out the window and say, "Gosh, I hate to live on this 4% spread."

Everytime you are matched you take income out of your pocket, and who wants to do that.

I'm concerned that the smaller institutions are depending too much on TB 13 (Thrift Bulletin 13) modeling. It's the Office of Thrift Supervision bulletin that tells them when liabilities and assets reprice.

Q: What's so bad about TB 13?

MARTIN: It's good; it's just not complete. Thrifts still need to hire somebody to model their institutions on a computer simulation..

Q: Do you have any other worries?

MARTIN: The portfolio lender is almost going to become a thing of the past. We are almost going to have to make a choice as to whether we are going to have a niche portfolio lenders or secondary market lenders.

Q: Why?

MARTIN: Are there enough nonconforming loans out there for me to survive? It is always difficult to completely change your approach to business. But the portfolio lender is going to find it harder and harder to keep their loan portfolio up. My point is that I think there are going to be fewer and fewer loans held by portfolio lender-type institutions. We are going to have to start making more conforming secondary market loans. I am fighting this battle out with myself.

Q: Any predictions about the future?

MARTIN: I'm afraid the Savings Association Insurance Fund premiums are going to go up and the Bank Insurance Fund [premiums] are going to go down, and that is going to lead to unfair competition.

Q: Why will SAIF premiums go up?

MARTIN: There are still some brain-dead institutions out there. So there are still probably going to be some hits to SAIF, not huge ones. □

We'll save you money. We could save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division, to get every Monday the data you need to face the regulators.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... which agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 10% discount, so you'll be saving money even before you get the first issue. After that, how well you use the information before this year's exam could decide whether you're around next year.

Jepsen Proud of His Uneventful Reign, Which Began as the Thrift Crisis Flared

By JAMES B. ARNDORFER

Roger W. Jepsen says his proudest achievement as the nation's chief credit union regulator is keeping his agency out of the headlines.

Mr. Jepsen, whose eight-year term as chairman of the National Credit Union Administration board ended Aug. 2, came aboard at the beginning of a banking and savings and loan crisis. But Mr. Jepsen managed to avoid the storm.

"We went through the same economic downturns as banks and S&Ls, but we always kept ahead of our problems," he said.

Marketable Skills

An amiable, soft-spoken man, Mr. Jepsen plans to remain in office until a successor is chosen, which may be as late as December. His future plans are still undecided.

"I'm not going to stop working," he said. "I possess a combination of age and experience that provides me with marketable assets" either to do consulting work or to join a corporate board.

He's been a hands-off manager at the NCUA.

"I see myself as a facilitator," he said. "My involvement is to support my staff in any way I can to get the mission done - reviewing decisions and granting my stamp of approval."

Term in the Senate

Perhaps one reason for Mr. Jepsen's leadership by delegation lies in the amount of credit union experience he had before President Reagan appointed him to NCUA board chairman in 1985 – none.

The last job Mr. Jepsen held was U.S. senator from Iowa, from 1979 to 1985.

Mr. Jepsen inherited an agency some say was in turmoil. His predecessor, Edgar Callahan, created a new regulatory landscape by recapitalizing the National Credit Union Share Insurance Fund and expanding field-of-membership regulations.

He also slashed the agency's budget and the number of examiners and staffers to the point where some said the NCUA was rendered ineffective.

Staff Built Up

From the start, Mr. Jepsen increased staff. In 1986 the agency's board voted to add 205 examiners over two years. The agency spent more on training, and to increase the examiners' efficiency, and technology was upgraded from "pencil and eraser to laptop computers tied to a mainframe" in 1987.

"We led the way in that," Mr. Jepsen said. "Other agencies had antiquated technology to a degree. We did it completely."

This remodeling was what the NCUA needed, said Herbert Yolles, the agency's controller. "He picked the agency up and gave it what it needed to be an effective regulator," he said.

Fewer Failures

Mr. Yolles notes the decline of deposits held by problem-case credit unions and the decrease of failures in recent years under Mr. Jepsen. The number of deposits held by problem credit unions total 2.4%, the lowest since 1977.

Charles Fihson, president of the consulting firm Callahan & Associates and NCUA director of examination and insurance under Mr. Callahan, denies the

Mr. Jepsen sharpened examiners' skills.

charge leveled by many NCUA officials that Mr. Callahan had gutted the agency.

"It's nonsense to say it [the NCUA] wasn't an efficient regulator," he said. "There's a tendency in government agencies to measure their status by the size of their staff and their budgets. It's the nature of the beast."

Despite the expenditures, the NCUA was caught off guard when Franklin Community Federal Credit Union went under in 1988. The low-income credit union listed about $2 million in assets when it failed, but manager Lawrence E. King Jr. and some associates had accepted about $40 million in unrecorded funds from depositors.

The insurance fund suffered a record $38 million hit from the failure, but the fund wasn't threatened.

In the years that followed the Franklin disaster, Mr. Jepsen stressed safety and soundness even though credit union managers grumbled.

A 1992 survey by the Credit Union National Association found that 70% of federally insured credit unions said examinations were tougher. And many credit unions felt they were being micromanaged by NCUA examiners.

"Examiners were overzealous in putting limitations on the ability of credit unions to make loans based on character," said Perry Dawson, president of Suncoast Teachers Federal Credit Union. "They wanted us to verify the employment of members, the income of members whether or not we knew that person for 15 or 20 years. They wanted us to verify everything."

Mr. Dawson added that the agency has moved to encourage loans in recent months due to appeals from the industry, and he applauds that decision.

Rep. Jim Leach, R-Iowa, a member of the House Banking Committee, said it was the Jepsen administration's tough policies that gave Congress reason not to intervene.

"He insured the independence of the system by upgrading standards so that the industry wasn't in danger of becoming a liability to taxpayers and so the industry operated with standards more comparable to thrifts and banks."

Disaster in Rhode Island

The collapse of the Rhode Island state insurance fund in 1990, also largely through fraud, caused another panic in the credit union industry. The NCUA had no obligation to guarantee the deposits of the credit unions there, but went in to help sort out the mess.

"Our role was one of a professional coordinator coming in at the request of the government to lend the professional expertise we had and offer guidance in rectifying the problems they had," Mr. Jepsen said.

Rhode Island Gov. Bruce G. Sundlun closed 35 credit unions and the NCUA agreed to insure 22 of the remaining ones, although some wanted the agency to do more.

Federal Insurance

The agency went on to convert credit unions in other states, notably Texas, to federal insurance.

Despite these scares, the industry as a whole grew during the Jepsen years. In 1985 credit unions had about 51.7 million members with assets of $137.2 billion; at yearend 1992, 64.7 million people belonged to credit unions and assets stood at $271.4 billion.

"It used to be that credit unions were seen as the poor second cousin to banks," Mr. Jepsen said. "Suddenly credit unions are thought of as competition. That's a compliment." □

Rep. Bill Orton
Calls hike "clearly justified"

Funding Hike Asked for Low-Interest Loan Plan

By JAMES B. ARNDORFER

Rep. Bill Orton, D-Utah, has introduced a bill that would more than quadruple funding for a program that offers low-interest loans and technical assistance to credit unions with low-income memberships.

The Credit Union Community Development Enhancement Act of 1993 would increase the fund to $25 million from the current $6 million.

The additional money will come from $382 million allocated for community development financial institutions by the Clinton administration.

'Strong Track Record'

The Community Development Revolving Loan Fund, administered by the national Credit Union Administration since 1990, offers short-term, low-interest loans. Interest from those loans goes toward technical assistance for the institutions.

"This approach is clearly justified, given the strong track record of the credit union community development lending under this program," Rep. Orton said last week when he introduced the bill.

He said it is intended to be an amendment to the community development bill when that legislation is marked up in the Banking Committee.

Trade Group Initiative

The proposal follows a letter sent out two weeks ago by David A. Miller, chairman of the National Association of Federal Credit Unions.

In it, he suggested the $19 million funding increase and the earmarking of loan interest for technical assistance.

The first suggestion matches a provision in a bill introduced by Sen. Bill Bradley, D-N.J.; the second matches provisions in proposals presented by Sen. Alfonse M. D'Amato, R-N.Y., and

In Arkansas, a Tale of a Tiny Institution That Couldn't

Call it piling on, if you will.

Tiny United Christian Credit Union of Pulaski County, in Little Rock, Ark., was sinking fast.

With just $11,600 of assets, run by part-time volunteers and only a post office box as a mail drop, the credit union was already struggling to pay a $2,700 fine levied by state regulators.

Then along came the feds – the National Credit Union Administration in this case – who had regulatory authority over this state-chartered credit union by being its deposit insurer.

The federal regulator worked with the tiny credit union for two years to get its financial records in order so the credit union could file its call reports, as all federally insured financial institutions must do.

But United Christian still failed to file, in one case going eight months without doing so.

Finally the regulator gave up on United Christian and low-

The federal regulator worked with the tiny credit union for two years to get its financial records in order. But eventually officials gave up on it and lowered the boom.

ered the boom – a $15,000 fine for failing to file the semiannual disclosures.

The fine, of course, which exceeded the total assets of the institution, was too much, and ended up forcing the credit union out of business.

Friend in a High Place

Not even the intervention of President Clinton, the state's governor at the time, could save the little credit union. Calling on the ties of the local community, United Christian, which served 30 churches in the Little Rock area, subpoenaed the governor to testify on its behalf before an administrative law judge.

The President, however, was involved in a campaign at the time, and was too busy to testify. So he sent an upper-level aide instead.

The administrative law judge was so impressed, it seems, that he levied a fine of $1,000 for each day the credit union was late on its call reports – a total of $51,400. Upon reflection, the credit union administration board chose to reduce the fine by two-thirds.

End of the Line

As it turned out, the reduced fine was too much for the little credit union to bear, and state regulators were forced to shut it down.

Officials with the federal regulator insist their intention was not to force the credit union out of business. They point out that they worked with the credit union's officials for two years and even assisted them in arranging a system to allow them to file proper and timely call reports.

Don't ask me what the moral of this story is, but it probably has something to do with evolution and the future of such small financial institutions in this world of growing financial sophistication and regulatory requirements. □

Fund Hike Asked For Loan Program

Continued from page 8

Rep. Floyd Flake, D-N.Y.

"What we wanted to do was point out that if Congress was concerned with community development that one expedient move would be to increase funding for the revolving loan fund," said David Lehm, director of legislative affairs for the trade group.

'World Open Up Lending'

Since the NCUA began administering the fund, $7.8 million has been disbursed to 47 institutions. Per $1.8 million has been repaid on schedule, and about $280,000 in interest has been collected.

"If additional funding were provided, it would open up lending once again and additional interest would go to technical assistance for credit unions" said Ron Lewandowski, president of the NCUA Central Liquidity Fund and chairman of the revolving fund.

Last year, slightly more than $1 million was available to the fund, Mr. Lewandowski said, while requests totaled around $1.9 million.

The maximum amount of the loans is $500,000, and they carry 2% interest. □

Boatmen's Splits Stock 2-1

ST. LOUIS — Boatmen's Bancshares declared a 2-for-1 stock split and increased its quarterly dividend 10.7% on presplit shares to 62 cents from 56 cents.

Boatmen's said the split and dividend are payable Oct. 1 to shareholders of record on Aug. 31. □

Chase's Strategy For Getting Bigger: Make Smaller Loans

By PHIL ROOSEVELT

In the world of mortgages, Chase means jumbo. Jumbo loans. Super jumbos. And all in jumbo quantity.

Thanks to its strength in high-balance mortgages, Chase Manhattan Corp. has consistently ranked among the nation's top originators and servicers of home loans.

Chase, however, is now going downscale. In an effort to boost its share of the total mortgage market, the New York giant has begun a pronounced push for loans below the jumbo level – that is, smaller than $203,150.

Last month, Chase acquired a Louisiana company that specializes in government-insured mortgages, long a staple of middle America. And other Chase units are stepping up their production of nonjumbo conventional mortgages.

"We have a very good position in the jumbo market and we're going to continue to grow it," said Fred B. Koons, who heads up Chase's mortgage businesses. "But you're also going to see steady growth at the lower end of the market."

Rising Share

This year, loans smaller than jumbos are expected to account for nearly one-third of Chase's mortgage production, up from about 15% in the past few years. The company's total originations, meanwhile, are on track to exceed $13 billion, up from $9.4 billion last year.

In addition to increasing lending volume, the move to smaller loans should make Chase less susceptible to the special peril of jumbos: high prepayment rates.

When interest rates fall, jumbo borrowers are often the first to refinance, because the cuts in their monthly payments can be very large. As a result, payoffs of existing loans have been nipping at Chase's $35 billion servicing portfolio for more than a year.

Looking to the Future

Though acknowledging this problem, Chase officials say it was not the impetus for the expansion. Rather, they say, the strategy stems from Chase's view of how the mortgage industry's long-running consolidation will play out.

When the current refinancing boom ends, Chase says, a big shakeout will follow. That, in turn, will accelerate a division of the industry into two camps: a handful of huge lenders with scale economies and a large number of small companies with strong local ties.

"The midsize players are going to get their brains beat out," said Robert Hunter, head of consumer financial services for Chase Manhattan.

Chase, he and others said, firmly intends to be one of the mega-lenders. But it doubts it can do that without moving beyond jumbos, which account for just one of every five new mortgages industrywide.

'We Can't Limit Ourselves'

"If we're going to be part of the consolidation, we can't limit ourselves to that 20% of the market," Mr. Hunter said.

The job of making the expansion happen rests squarely on Mr. Koons, who has been head of Tampa, Fla.-based Chase Home Mortgage Corp. since 1987.

His responsibilities were recently expanded to include Troy & Nichols – the Louisiana acquisition – and Personal Financial Services, a Chase unit that specializes in super jumbos, which are greater than $350,000.

His approach, he says, will be to boost customer referrals among the three units while allowing each to retain its individual focus. Troy & Nichols, which wrote $1.3 billion of loans in the first half of the year, will even keep its name.

In recent weeks, the 49-year old executive has been barnstorming the country to sell his plans to Chase's 3,100 mortgage employees. Last Thursday, for instance, he addressed salespeople in Dallas, where Chase Home Mortgage, Personal Financial Services, and Troy & Nichols each has offices.

In the Spotlight

As Mr. Koons proceeds with this balancing act, rivals will be watching closely.

"Everything I've ever heard is that Fred is a top-notch player," said Joe K. Pickett, chairman of Bank of Boston Corp.'s mortgage unit. "When he does something, I sit up and take notice."

Indeed, Chase's mortgage business enjoys a sterling reputation in the industry and on Wall Street. Last year, when more than a dozen mortgage companies went public, analysts speculated that a spinoff of Chase's mortgage operations could fetch more than $2 billion.

The business, to be sure, has lost some of its luster because of the run-up in mortgage prepayments. Chase Manhattan Corp. said revenue from all its fee businesses fell 6% in the first quarter, to $367 million, primarily because of writedowns of mortgage servicing assets.

Reputation for Service

Still, few people question Chase's prowess in mortgages. The company's customer service is considered outstanding, with some applications turned around in just one or two days, including appraisals. And Chase's credit quality has held up exceptionally well.

"Chase is viewed as producing about the highest-quality mortgage loans out there," said Ira Wagner, a director in the mortgage-backed securities department of First Boston Corp.

As of June 30, 3.5% of the mortgages serviced by Chase were past due by 30 days or more. The industry norm is about 4.3%, according to a March survey by the Mortgage

Chase Packaging Others' Loans as Securities

By PHIL ROOSEVELT

Chase Manhattan Corp. is doing more in mortgages than expanding its originations. It also has become the latest company to get into the business of packaging other lenders' loans as securities.

Chase is trying to sign up 20 top lenders for its "conduit" program, said Sam Cooper, president of Chase Mortgage Finance Corp.

Up to $2 Billion of 1994 Loans Anticipated

He said the program should handle $1.5 billion to $2 billion of loans next year, mainly jumbos.

Several companies, including Countrywide Credit Industries and Meridian Bancorp, have started conduits in the past year

The bank hopes to sign up 20 top lenders.

to tap increased investor demand for privately issued mortgage securities.

The big draw of these securities: higher yields than on paper issued by government-sponsored secondary market agencies.

Sharing a Competitive Advantage

In starting a conduit, Chase is, in effect, sharing with rivals one of its greatest competitive advantages: sophisticated securitization capabilities. In the first half of this year, it bundled more than $2 billion of its own jumbos into securities.

Mr. Cooper, whose unit handles the securitization, cites some compelling reasons to open up the service to other lenders. For one thing, Chase will be able to spread its fixed costs over a greater number of deals.

More Clout on Wall Street

In addition, the increased issuance should boost the unit's clout among Wall Street dealers, he said.

Lenders sell jumbos to conduits because these loans, by definition, exceed the $202,300 maximum for loans that can be sold to the government-sponsored secondary market agencies.

"We have a couple of lenders signed on, and we're following up on four or five leads right now," Mr. Cooper said. □

A Jumbos King Thinking Smaller

Continued from page 10

Bankers Association of America.

Solid credit quality has been crucial to Chase's success, because it has helped build demand for the company's loans in the secondary market. Like the big California thrifts, Chase generally holds the adjustable-rate mortgages it writes and sells the fixed-rate models.

Securitization Program

Since most of Chase's loans are too big to sell to the government-sponsored secondary market agencies, Chase sells a sizable amount under its own securitization program. In the first half of this year, the company issued more than $2 billion of mortgage securities. (See related story on this page.)

Mr. Koons, meanwhile, is clearly excited about the prospect of guiding Chase into the brave new world of mortgage banking. As he sees it, big lenders like Chase have only begun to realize their potential.

"There are some scale benefits available than we as an industry have achieved," he says. "We have underinvested in technology, both in servicing and originations."

'The Payback Will Be There'

However, he said, that is starting to change because the emerging breed of mega-lenders is taking a more strategic view of their businesses. "It looks like the investments will follow, and the payback will be there," he said.

But first, the industry may have to cope with some tough times. Once the refinancing boom stops, he says, the industry will undergo a shakeout every bit as severe as one that occurred after interest rates spiked in 1987.

"You're going to see a lot of companies lay off a lot of people, and other companies are going to sell themselves," he says.

Mr. Koons, however, fully expects to find some opportunity in the upheaval. And in the meantime, he says, he is quite content. "I'm just plodding along building my originations capacity."

Divining the future is not all that hard when you have
THE REDEMPTION REPORT

Calls and prerefunded bonds are scheduled to drain the yields out of portfolios at a faster and faster pace in the third quarter. With ***The Bond Buyer Redemption Report,*** *you can anticipate redemptions well ahead of the actual events. If you want to know when your bonds will be called away, this report has the answer.*

We published the first such book in history for the first quarter of 1993. Buyers received instant access to the entire universe of called and prerefunded bonds in one volume.

And now you can get the third-quarter volume, a 916-tome chock full of information on which, how much, and when. Here's a sample listing:

NationsBank Leads in Diversity of Funds

By DEBRA COPE

When it comes to managing institutional mutual funds, no bank has broader horizons than NationsBank Corp.

As of June 30, the North Carolina powerhouse was running $9.1 billion of funds for pension plans, corporations, and other institutional investors, according to data compiled for the *American Banker*.

NationsBank's institutional funds run the gamut from equities, to taxable bonds, to tax-exempt bonds. In each of those categories, NationsBank holds a solid lead over other banks.

Changing Times

While the company trails BankAmerica Corp. and PNC Bank Corp. in total institutional assets, those companies derive their strength mainly from money-market funds, according to the data from Lipper Analytical Services Inc.

The breadth of NationsBank's strategy underscores the changing nature of the institutional side of the bond fund business.

More than a decade ago, some banks began offering institutional funds as an outgrowth of their corporate money management activities. Money market funds were about the only product around.

With $5.4 billion in money market funds, NationsBank lagged behind PNC, with $16.4 billion; BankAmerica, with $14.2 billion; and fourth-place Northern Trust Co., with $6.1 billion.

Increasingly, banks are rolling out long-term stock and bond funds in a bid to compete for retirement plan assets, such as 401(k) programs.

Quarterly Rankings

The accompanying chart, showing the top 25 banks in institutional funds, is the third in a series that will be published quarterly by the *American Banker*.

On Wednesday, the *American Banker* published a ranking based on banks' combined retail and institutional fund assets at the end of the second quarter. On Thursday, the newspaper spotlighted retail funds.

Banks are launching more products to compete for 401(k) funds.

The data show that banks managed $102.6 billion in institutional fund assets at midyear. That's a healthy 54% of the banking industry's total $190.9 billion in fund assets.

In other highlights, the data showed:

- The leaders, PNC and BankAmerica, held nearly 30% of the institutional mutual fund assets managed by all banks.
- Money market funds totaled $80 billion, or 78% of bank institutional fund assets. In all, 15 banks had at least $1 billion in institutional money market assets.
- Equity funds were the second-largest category, with $12.6 billion in assets. NationsBank had $1.8 billion in institutional equity funds. Three other banks – SunTrust Banks Inc., First of America Bank Corp., and Comerica Inc. – had at least $1 billion in such funds.
- Taxable fixed-income funds took third place, with $9.1 billion in institutional assets. The leader was NationsBank, with $1.5 billion.
- Tax-exempt fixed-income funds claimed the least institutional assets: $1.9 billion. Again, NationsBank took first place, with $461 million.
- Alone among the top 25 banks in institutional funds, PNC's assets declined during the 12 months. □

Bank Attorneys Study Fund Issues

By KAREN TALLEY

Amid growing scrutiny of bank mutual fund activities, the Consumer Bankers Association has formed an ad hoc committee of attorneys from some of the leading banks in the fund business.

The group, which has met several times since the spring, includes attorneys from about 20 large banks, including Chemical, Chase Manhattan, Barnett, and Wells Fargo.

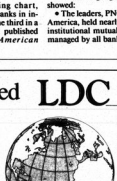
"This is meant as an information exchange between the different banks," said Joe Belew, the association's president.

"It helps us stay attuned to compliance, regulatory, and legal issues involving this retail area."

Right now, the group is reviewing the Office of the Comptroller of the Currency's recent guidelines on mutual fund sales by banks.

Opportunity is Spelled LDC DEBT REPORT

Emerging Markets are risky, notoriously inefficient, known for changing rules and limited public disclosure. Knowing what's really going on spells the difference between opportunity and loss.



The *American Banker*'s weekly *LDC Debt Report* delivers the most accurate, objective, succinct information available on emerging-market debt. *LDC Debt Report* provides the astute investor with news, reviews, and strategic insights. The popular Market section summarizes each week's developments, quoting bid and offer prices for 26 developing-country loans and 18 emerging-market Eurobonds. It also tracks the performance of selected equity markets.

If you must know what's going on in key emerging markets, recent trading, economics and politics, the World Bank, and more, LDC DEBT REPORT is a must read every week.

Read it free for 4 weeks! Just fax your letterhead to 212-943-7852, or call Hans Winberg at 800-407-8241

Allmerica's 440 Financial Grows into a Major Player

By KEITH DuBAY

In 1990, when Larry Renfro left his post to join Allmerica Financial, it wasn't just anybody taking another job.

Mr. Renfro was manager of systems and mutual fund operations at giant Fidelity Investments. And he had been recruited by John F. O'Brien, who was Fidelity's No. 2 executive before leaving to run Allmerica.

In his new berth, Mr. Renfro himself began hiring away key executives from other mutual fund companies to build a new fund distribution and servicing unit – 440 Financial Group, based in Worcester, Mass.

The unit distributes, administers, or services $21 billion of fund assets.

'Fidelity West'

Many of the hires, such as Robert Lageyey, executive vice president at 440 Financial, had as much as 25 years in the business. In fact, so many came from Fidelity that 440 is sometimes called "Fidelity West."

But the company has also recruited talent from other mutual fund companies, such as the Vanguard Group. Mr. Legasey, 44, had worked for both Fidelity and Vanguard.

In three short years, 440 Financial has grown to 600 full-time employees and has snagged

In three years, it has grown to 600 employees and has 18 clients.

18 clients – including such big names in the fund business as T. Rowe Price, Invesco, Fleet Financial Group, Stein Roe Farnham, and Wells Fargo.

Revenues were $35 million in 1992. The unit distributes, administers, or services $21 billion in mutual fund assets, including a chunk of bank proprietary funds. It ranks 14th among administrators of bank-related funds, according to Lipper Analytical Service.

Many Kinds of Service

Contracts run the gamut. The company provides clients with counting for eight of its clients and telemarketing and transfer agency services for the same number. Other duties include administration, cash management, distribution, shareholder services, and prospectus printing and mailings.

Clients can mix and match services. For example, Fleet Financial Group uses 440 as administrator, distributor, fund accountant, marketer, and transfer agent for its Galaxy funds.

Among nonbank providers of mutual funds, T. Rowe Price turns to 440 Financial for cash management and telemarketing services. Invesco taps its customer service and telemarketing expertise, and Neuberger & Berman uses its fund accounting and transfer agency services.

Other clients include AMR Investment Services, Bankers Trust, Chubb Investments, Hawthorne Group and National City Corp.'s NCC Funds.

Big Expansion on the Line

The telemarketing and telephone servicing business of 440 Financial has expanded outside the mutual fund business. For example, 440 services a national flower-ordering network, 800-Flowers.

"A big day for us here on the telephones is 85,000 calls," Mr. Legasey said. The number of part-time telemarketing employees can range to 1,800 during holidays or other crunch periods.

A typical telemarketing contract is to handle night, weekend, and overflow calls for T. Rowe Price and Invesco.

When Denver-based Invesco experienced explosive growth in 1990, it saw an ad in an Investment Company Institute journal and called on 440 Financial to handle the heavy telephone information request volume.

Now 440 Financial has become Invesco's "second site" and also does information processing, statement preparation, and telephone sales for the no-load mutual fund family.

Galaxy Marketing

In marketing Fleet Financial's no-load Galaxy Funds, which have about $3.9 billion in assets, 440 Financial has played a crucial role.

Thomas Howe, executive vice president and manager of Fleet Investment Services, said Fleet moved its distribution and administration from Boston Co. because 440 Financial could provide comparable service in addition to shareholder service and marketing.

Mr. Howe, 440's largest client, likes the attention paid to his funds. "What they've got is a staff with centuries of mutual fund experience, even though it's only three years old," he said. "They have the expertise in hardware, software, and overall experience."

Group of Heavyweights Begins Task Of Promoting Use of Smart Cards

Continued from page 1

transit usage, smart card systems are at some stage of exploration by the banking, health care, and government sectors, among others. Theoretically, with enough cooperation and effective standards, a single card could become almost as "universal" as a MasterCard or Visa credit card.

MasterCard International and Visa International, which have done their share of research on card technologies, have joined the Smart Card Forum.

"Our objective is to foster communications across industries and the public sector that will result in North American market trials of smart-card-based payments and information services within a few years," said Ms. Allen.

NEWS ANALYSIS

Not only has Citicorp changed its tune on technology sharing. It is winning praise by association as the Smart Card Forum has reached the incorporation stage and is preparing for its first open membership meeting on Sept. 30-Oct. 1 in Tysons Corner, Va.

Jerome Svigals, a Redwood City, Calif., technology consultant and longtime smart card advocate, called the group and its strategy "very constructive."

Toward an Open System

"Conceptually, it's right," said Ben Miller, a close observer of the technology as publisher of *Personal Identification News*, Silver Spring, Md. "They are cooperating and moving toward an open system."

"The key word is 'interoperability,'" said MasterCard vice president Lawrence Ladouceur, citing a term that the Smart Card Forum has adopted as most descriptive of its goal.

"Some of the issues the forum is addressing," he said, "could bring pressure [on standards-setting committees] to finish standards that aren't finished, or to create the standards we need for this technology to work."

The Smart Card Forum is even being praised for not stepping on the toes of other constituencies.

"They have been open in their communications," said Sean Kennedy, president of the Electronic Funds Transfer Association in Herndon, Va. He said the Smart Card Forum has avoided competing with the EFT Association's advanced card applications group, in which Ms. Allen has participated.

"Our agenda is more educational and networking in nature, while they want to get at the business issues involved in creating an open environment," Mr. Kennedy said. "They want to be a catalyst to move the technology along" – an intent that the EFT group can endorse.

"Cathy Allen has made it clear that they don't see this as an ongoing trade association – they see a finite life to it," Mr. Kennedy said.

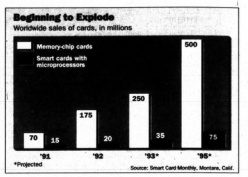
Not an Easy Task

But none of the forum participants are under any illusion that their work will be easy.

In its first press release on Aug. 4, after a series of meetings dating back to last year, the forum said it remains "in the formation stage, focusing on user needs and analysis of business specifications for smart cards."

"The smart card industry is ready to mushroom," said Rich Mandelbaum, chief scientist at AT&T's smart card systems unit. "The market needs exist and the technology is proven. By expediting the implementation of this technology, the Smart Card Forum can help achieve the widespread use of smart

See SMART-CARD next page



Smart-Card Group Launched

Continued from page 14

cards in the U.S."

Other joiners – paying $1,000 to $15,000 – include Bank of Montreal, BayBanks Inc., Mastercard Technologies Inc., the Washington Post Co., Toshiba America, the U.S. Treasury, and Verifone Inc.

Most of the member technology companies make or cooperate in smart card systems; the banks and other potential users have done early-stage research.

The group sees some sense of urgency for technical standards. It is projecting that 1.25 billion prepaid, or stored-value, chip cards – for telephones, vending machines, highway toll collections, and the like – will be issued worldwide by 1995, and payment volume will reach $20 billion by 2000.

The MAC network is conspicuously absent.

The forum has committees in several areas: payments, financial and information services, telephony, electronic benefits transfer, and health care.

"They have literally hundreds of technical, political, business, and system hurdles to get to an open system," said Mr. Miller, the newsletter publisher.

He listed two immediate needs: getting MAC to join and naming an executive director to replace PSI, the Tampa, Fla., research firm that has been providing administrative support.

MAC may be reluctant because of the head start with prepaid cards it has gotten through a test in Philadelphia. Regardless, Mr. Miller said the naming of a strong executive director is crucial, and has been appropriately postponed until a permanent board is installed. □

Citibank Is Shedding Individualistic Image

By JEFFREY KUTLER

Catherine A. Allen, who ushered the Smart Card Forum through its formative stages, personifies a change sweeping through Citicorp.

Speaking a language of cooperation between companies and across industries, Ms. Allen indicates that Citicorp has shed its historical insistence on calling its own technological tune.

The harmony emanating from the Smart Card Forum has attracted about 30 dues-payers, including leaders from financial services and high technology.

Another 30 have shown an interest in joining. Along with another Citicorp-initiated banking research project called Fintech, it tends to disarm any remaining criticism about Citicorp's being arrogantly out of touch with market preferences.

'Times Have Changed'

"Citicorp is participating because times have changed," Ms. Allen said in a recent interview. "Cooperation is necessary for common industry standards."

Standards would dispel confusion, allowing cards equipped with computer chips to be used in multiple applications, say, telephones and banking machines.

In promoting this movement, Citicorp has indeed come a long way. The automated teller machines it designed in the 1970s utilized a card-reading system called Magic Middle, developed by Citicorp and incompatible with the prevailing industry standard of magnetic-stripe cards.

Reed Changes Direction

In recent years, Citicorp has revamped its ATMs and cards to conform to networking stan-

Membership in the Smart Card Forum is one example of the new approach.

dards. It joined the Cirrus ATM system and is considering dropping its last taboo by joining the NYCE regional system.

Ironically, the Magic Middle and the go-it-alone strategy were originally championed by the technology group under John S. Reed, Citicorp's current chairman. He and his chief technology officer, Colin Crook, have changed direction.

"The technology strategy in the bank now is in line with global availability," said Ms. Allen, vice president of business development and strategic alliances in Mr. Crook's office of the senior technology officer.

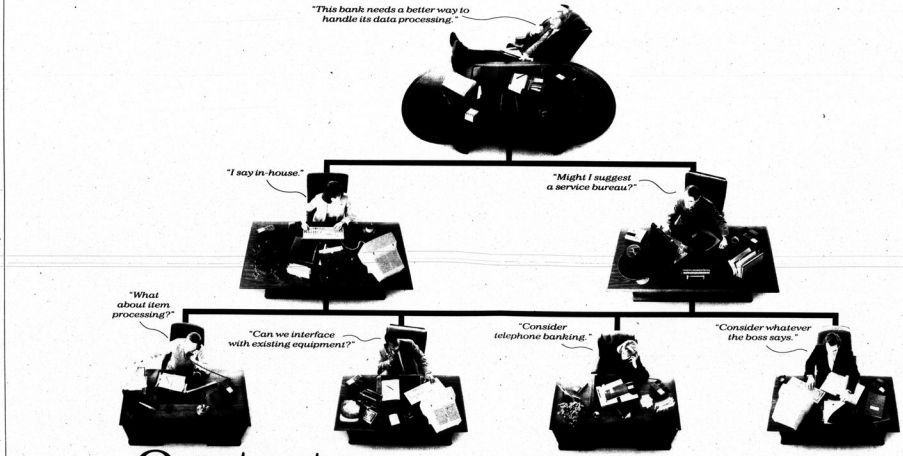
Industry Standards Sought

"We are working with groups like [the Smart Card Forum] to promote the adoption of industry standards," Ms. Allen said.

Each forum member has self-interests but has opted for group action.

Ms. Allen has been praised for keeping lines of communication open with other interested parties, like the Smart Card Industry Association and Electronic Funds Transfer Association.

That kind of effort can only help later when the Smart Card Forum approaches the highly structured national and international committees that write technical standards. □



Our structure fits your structure.

FIserv data processing solutions are already working in over 5,400 financial institutions. Worldwide. Because we're structured to offer multiple solutions, ranging from in-house, service bureau, resource or facilities management to performance analysis, electronic banking, item processing, business forms and card management.

We have whatever you need. We do whatever it takes.

We're the fastest-growing independent data processing company focused on the financial industry. And with more than 5,900 dedicated employees, FIserv has earned one of the highest client retention rates in the industry. Our clients like the way we do business – we combine experienced, highly-traiged people with the latest technologies. We concentrate on solving problems, just like yours.

To find out more call 800-872-7882. You won't find another financial data processing company that is structured any better to fit your structure.

Industry's Emphasis On Deterrence Seen As Curbing Robbers

By BARTON CROCKETT

The number of bank robberies and related crimes dipped last year from the record level of 1991, according to data recently published by the Federal Bureau of Investigation.

The decline – the first since 1985 – indicates that new efforts to deter such crimes are paying off, said Gale Evans, chief of the FBI's violent crimes bureau in Washington.

"The banking community has recognized this as a problem.

The decline was the first since 1985.

and they've taken steps on their own" to correct it, Mr. Evans said.

Concern over bank crime peaked in 1991, when 9,810 robberies, burglaries, and larcenies were committed at commercial and savings banks, savings and loans, credit unions, and armored carrier companies – the highest number since the FBI began compiling the data in 1934.

In 1992, the FBI counted 9,512 of these crimes.

The data show that the bank crime capital of the country is California. According to the FBI, there were 3,401 bank robberies, burglaries, and larcenies in the Golden State in 1992.

New York was second with 664 incidents, followed by Florida, with 527.

Quick Getaways a Factor

Mr. Evans said that California is susceptible to bank crime because its extensive freeway system gives robbers an easy means of escape.

Gang violence, and the rising popularity of "takeover crimes," where robbers use guns or intimidation to control a bank, are also fueling the problem.

Banks are fighting back, including Bank America Corp., which was hit with a whopping 744 robberies in 1992.

A series of initiatives to beef up bank security – including installation of bulletproof windows called "bandit barriers," the hiring of more guards, and the posting of rewards – has contributed to a 43% decrease in the incidence of crime at Bank-America so far this year, said Deborah Jacob, a senior vice president and director of the bank's security services.

"We're really proud of the results we've seen," she said.

Losses have dropped 43%, while the recovery of stolen cash has risen 65%.

Among the methods Bank-America is using to recover money is inserting "dye-bombs" in packets of bills. When activated by radio, the devices explode in clouds of red ink that stains money and clothes.

But even though the incidence of bank crime declined last year across the nation, losses continued to mount. According to the FBI, $68 million was taken last year during bank crimes, up from $66 million in 1991.

More than 170 Injuries

And less of the loot was recovered in 1992 – approximately $10 million, compared with $11.5 million in 1991.

There continued to be a human toll.

More than 170 people were injured during bank crimes last year, the highest number since 1987. There were 18 fatalities, and 118 hostages were taken.

The most frequent cause of injury during bank crimes was an unprovoked action by a robber, the FBI reported.

The perpetrators in 60% of those committing bank crimes are eventually caught, Mr. Evans said.

ACT Trading Software Revamped for U.S.

By DEIDRE SULLIVAN
Special to the American Banker

ACT Financial Systems has adapted its trading software, popular in Europe, to better serve North American financial institutions.

The Citydesk information distribution and management system allows traders to customize the way data appear on their computer monitors.

ACT has headquarters in Birmingham, England, and offices throughout the world. Its products are installed at over 400 companies in 15 countries.

According to Rick Milde, ACT's U.S. sales manager, Citydesk was designed with the needs of European traders in mind. Most of ACT's clients are in the United Kingdom and Western Europe, where the focus is on trading fixed-income instruments.

A Focus on Equities

Mr. Milde said that because trading volume in the United States was heavily weighted toward equities, ACT upgraded its system accordingly.

"Equity traders are used to looking at information and handling it in different ways than a fixed-income trader might," he said. "So we've adapted to the

Citydesk was designed for European traders.

system to better meet the equity trader's need."

He said, for example, that equity traders often like to see simultaneous streams of real-time data on the screen, so ACT built in that particular capability.

"We also found out that equity traders wanted what we call a "drag and drop" function. This involves highlighting the data from one application and bringing into another application," he said.

ACT has also announced that a version of Citydesk is now available on the new Windows NT computer operating system from Microsoft Corp.

Multitasking Capability

Though previous versions of Citydesk used Microsoft's original Windows environment, ACT officials wanted to take advantage of Windows NT's ability to control numerous software applications at the same time; a process called "multitasking."

"One criticism of Windows is that you couldn't perform multitasking functions," Mr. Milde said. "For instance, you weren't able to do multiple calculations simultaneously at one workstation. The new Windows NT changes all of that."

Mr. Milde also said that by supporting Windows and Windows NT on the same network, Citydesk offers a migration path to new technology while protecting a bank's investment in existing systems.

Ms. Sullivan is a freelance writer based in New York.

Sadly for you, politicians in Washington agree on something.

Lawyers, legislators and lobbyists in Washington—people who've made careers out of being contrary—all are declaring the same thing these days: that government's relationship with the secondary mortgage market is going to change drastically.

They all know about HUD plans to toughen enforcement, new pressures on Fannie and Freddie, and the revival of Ginnie Mae as a major player in the market. And if you want more evidence, look to Capitol Hill, where Congress is toying with mortgage bankers subject to the same regs as commercial banks.

How should you react? You could wax nostalgic—and get clobbered by the government and your competitors. Or you could read *The Mortgage Marketplace.*

Every Monday, in less time than it takes to finish your morning coffee, *The Mortgage Marketplace* tells you about the new rules and ideas that could keep haul your secondary operations. It names the biggest mortgage company participants in Ginnie, Fannie and Freddie issues. And it scans the horizon to determine what types of loans, and borrowers, that now are considered exotic could soon enter the pipeline of conforming loans.

There's no debate—new regs are coming. What's still at issue is whether you'll be ready for them.

Sample us for free! Just call sales representative Celia Benjamin at (800) 733-4371 or write to us at 1325 G St., N.W., #900, Washington, D.C. 20005.

Bisys Buys Barclay Group, a Specialist in 401(k) Servicing

By MATT BARTHEL

In a deal valued at $10 million, Bisys Group Inc., a Little Falls, N.J.-based computer services firm, has purchased a company specializing in servicing investment products.

The acquired company, Barclay Group of Ambler, Pa., handles record keeping and account administration related to the 401(k) plans of about 2,000 companies. Barclay was a subsidiary of Ethyl Corp., Richmond, Va.

The 401(k) programs in place at these companies are usually the products of brokerage houses, insurance firms, or mutual fund companies.

But an increasing number of banks are selling 401(k) products to their corporate and retail clients.

Latest Market Cited

And while most of the institutions currently engaged in this business are large organizations that have the resources to handle the related record keeping and account administration inhouse, Bisys believes there is a latent market for third-party servicing of the 401(k) plans sold by smaller banks.

"People are now putting the money they used to keep in savings accounts [at banks and thrifts] into qualified contribution plans," said Bobby Jones, vice president in business development at Bisys.

Mr. Jones said the market Bisys intended to target with its new 401(k) services – financial institutions with under $2 billion in assets – is largely untapped. Figures from Access Research Inc. in Windsor, Conn. suggest that this is true.

Access found that about 82% of businesses with more than 1,000 employees currently have 401(k) plans in place. By contrast, only about 20% of companies with between 100 and 500 employees have plans, and only 9% of companies with fewer than 100 staffers offer 401(k).

Bisys believes that the 400 small and medium-size banks using its other computer services are eager to sell 401(k) products.

Bisys bought Barclay on the hunch that the 400 small and medium-size banks that make use of Bisys' other computer services are eager to sell 401(k) products to these smaller businesses but have been unable or unwilling to handle the attendant administrative duties.

Barclay's business is focused on companies with 1,000 or fewer employees with a concentration on businesses with less than 500 staffers.

At least one banker believes that Bisys has made the right move.

"We are active in the cash management business, and not being able to offer a 401(k) product has always been something that made it hard for us to effectively compete for business with larger institutions," said Joseph Matlock, president and chief executive officer of Franklin Federal Bancorp, a $1.6 billion federal savings bank based in Austin, Texas.

"Having the ability to offer 401(k) type products to our corporate base and our retail customers is something that absolutely interests us."

Once the Barclay acquisition is complete, Bisys will be able to handle a wide range of 401(k) activities on behalf of its banking clients.

When a bank representative finds a company that wants a 401(k) plan, Bisys draws up a proposal with the bank. Upon acceptance of the proposal, Bisys takes over full administration and record-keeping responsibilities.

This includes things such as producing and mailing participant statements and doing daily valuations of the funds within each plan.

Bisys also will convert the company from an old 401(k) plan to a new one, if necessary. In addition, Bisys can process loans from the 401(k) plan on behalf of the bank. □

CoreStates Turns To Systematics

CoreStates Financial Corp. has agreed to license two software packages from Systematics Financial Services Inc.

Philadelphia-based CoreStates said it had signed a five-year deal for software and support related to Systematics' advanced-loan system and its information-management system. Little Rock, Ark.-based Systematics will handle the installation of the software, training of the bank's employees, and scheduled upgrades to the system.

The value of the transaction was not disclosed.

The deal is part of the $23.7 billion-asset bank's push to standardize the products and services it offers through its 280 branches in Pennsylvania and New Jersey.

Space is extremely limited, please register early!

GENERAL • INFORMATION

REGISTER IN WRITING OR BY PHONE
To register by phone, call Nancy Nikolic at (212) 943 – 2221, or by fax (212) 943 – 4842.

REGISTRATION FEE
- Regular fee: $695.00
- Subscriber fee: $645.00 (*The Bond Buyer*, the *American Banker*, or any American Banker • Bond Buyer newsletter)
- Special banker rate: $595.00

Please make checks payable to American Banker • Bond Buyer Conferences and include the name of the attendee(s) on the face of the check.

We also accept Visa, MasterCard and American Express.

Payments must be received two weeks prior to the conference.

CANCELLATION POLICY
You may send a replacement at any time at no additional charge. Cancellations must be in writing. We regret that no cancellations will be accepted within 14 days of the conference.

DISCLAIMER
We reserve the right to change or replace speakers without notice.

FOR FURTHER INFORMATION
Please contact Brendan Doran at (212) 943 – 8633 or fax (212) 943 – 7852.

TRAVEL AGENCY
Garber Travel
1001 East Touhy St.
Des Plaines, IL 60018
Phone: (800) 447 – 4166
Or fax: (708) 827 – 8239

For your convenience, Garber Travel has been designated as the official travel agency for this conference. Attendees are responsible for their own hotel arrangements.

HOTEL ACCOMMODATIONS
We have reserved rooms at the Essex House at the discounted rate of $185 per night. Please call the hotel on or before Sept. 2 to receive this special rate. Be sure to identify yourself as an American Banker conference attendee. If you book your air reservations through Garber Travel, they can make your hotel reservations at the same time.

Essex House
160 Central Park South

By William J. Kilberg and Mark Snyderman

Government Shouldn't Be Going After 'Deep Pockets'

Private litigants look for the "deep pocket." When an injured plaintiff searches for a source of compensation, "whoever can afford it" suffices.

Our government has a higher obligation. It must act fairly and in the public interest. Yet too often, government litigators, bent on winning cases and collecting awards, abdicate that responsibility.

And when the courts reject their expansive theories, government agents do what few private litigants can: They turn to Congress to change the law.

A recent Supreme Court decision limiting recovery in some lawsuits brought on behalf of employee benefit plan participants threatens to derail certain of the Department of Labor's litigation.

New Class of Defendants

In response, the department has enlisted Sen. Howard Metzenbaum (D-Ohio) to push through a bill that not only would undo the Supreme Court's decision, but would create whole new classes of defendants.

The proposed legislation is a reflexive response to a perceived need that does not exist. Worse, the bill is anticompetitive and certain to drive up the cost of services provided to employee benefit plans, to the long-term detriment of plan participants.

Under the Employee Retirement Income Security Act of 1974, those who exercise discretion over the funds in an employee benefit plan are fiduciaries of the plan and held to a strict duty of care. Those who breach that duty are liable to make up to the plan all resulting economic loss.

Common-Law Twist

In recent years, some courts have read into Erisa a common-law theory that persons who are not fiduciaries, but who actively assist in a fiduciary breach, may share liability.

In Mertens v. Hewitt Associates, the Supreme Court held that recovery in such "knowing participation" suits is limited to plan assets that the nonfiduciary may have obtained as a result of participating in the breach.

Unlike fiduciaries, nonfiduciaries are not liable for all economic loss to the plan resulting from the fiduciary's misconduct. The Mertens court also questioned whether Erisa supports a claim against nonfiduciaries at all, though the court reserved judgment on that issue.

The Department of Labor reacted quickly. Fearing that the limitation on relief in knowing-participation suits would hinder its efforts to collect money from unwitting deep pockets, the department drafted new legislation to overturn the result of *Mertens*.

Out of Control

That fact is unhappy enough, for there is little reason to believe that the Mertens decision will be a detriment to employee benefit plans. But those whose job it is to enforce the law, given this opportunity to write it, could not control themselves.

As originally drafted, the department's bill not only would establish with certainty a claim for knowing participation by a nonfiduciary, but would have enlarged available damages for all Erisa claims to include not only lost benefits, but compensation for nonmonetary loss and punitive damages.

The department also took a little for itself. The bill mandated a 5% civil penalty to be paid to the government every time a private plaintiff succeeded in an Erisa suit.

Foiled at the Last Minute

Sen. Metzenbaum attempted to append the bill to the Senate's version of the budget, quietly and without hearings. The business community lobbied hard and, with the assistance of Sen. Nancy Kassebaum of Kansas was able to prevent this last-minute amendment. The resulting compromise is a narrower bill that will be the subject of future hearings.

Unfortunately, the new bill is almost as bad as the original. Gone are the punitive damages and damages in excess of lost benefits, but the bill expands value and poorly drafted, and, in one sense, revolutionary in its expansion of liability. The department continues to seek its pound of flesh.

The bill outlaws knowing participants in a fiduciary breach. The bill does not define "knowing." Unlike the common-law cause of action, which required an active furtherance of the breach, the Department of Labor in its litigation has sought liability against those who only involvement is being in the vicinity of the breach and having significant financial resources.

Thus, the department has gone after the providers of medical and dental services on the theory that their prices were too high. According to the department, these doctors and dentists participated in a breach of duty by selling services to plan fiduciaries who overpaid with plan funds.

The participation was "knowing" because the providers knew what price they were charging. This is a remarkable reading, and an incredibly inefficient way to achieve cost control over medical and dental services.

Perhaps we can rely on the courts to reject the department's interpretation of "knowing participation" But the department's legislation has a fallback provision to achieve the same result.

Under Erisa, anyone who provides services to a plan is a "party in interest." Erisa currently prevents a plan fiduciary from purchasing services from a party in interest for more than "reasonable compensation."

Erisa imposes no liability on the party in interest in such a situation. The new bill would enforce a party in interest to disgorge lull profits from a transaction with a plan if the party in interest charged the plan more than "reasonable compensation." The reasonableness of a service provider's fees are to be determined after the fact, in court.

TOO OFTEN, *government litigators, bent on winning cases and collecting awards, abdicate their duty to promote fairness.*

THE LABOR *Department has gone after doctors and dentists on the theory that their prices were too high.*

To aid service providers in conforming their behavior to the law, the Department of Labor's regulations offer this gem: Reasonableness "depends on the particular facts and circumstances of each case."

The real danger in the new provision goes well beyond the vagueness of "reasonable compensation" The party-in-interest rule, should it become law, would make every benefit plan service provider a guarantor of fiduciary conduct.

A service provider would be liable even if the provider charged the plan its customary rate for such services, and even if the provider was unaware that someone else charged less.

A service provider – such as a doctor, lawyer, or accountant – ordinarily deals at arm's length with those to whom services are provided; the provider is not the protector of its customers when setting fees.

If the Department of Labor has its way, this way of doing business no longer will suffice when providing services to an employee benefit plan. Service providers will have an affirmative obligation to ensure that the plan is not paying "too much" for services.

Unwelcome Consequences

This new rule is sure to have several pernicious consequences. Many service providers simply will cease doing business with benefit plans; the marginal cost of the potential liability will not be worth it.

Other providers will be forced to raise their prices or reduce the quality of services to offset the costs of dealing with plans. Ironically, the brunt of price increases will be felt by the provider's nonplan customers, as raising prices to benefit plans only increases the chance of liability.

Finally, some service providers may try to reduce their risk of liability by engaging in anticompetitive behavior. Once a service provider sets a low price for services, other providers realistically must fear that any higher price will be deemed unreasonable.

Threat of Collusion

To prevent the inevitable race to the bottom, many providers may be induced into collusion. In the end, all of this behavior will cost employees and retirees, both in and out of plans.

The Department of Labor appears to care little about these long-term consequences. Doctors, lawyers, and accountants have money, and employee benefit plans need it.

And so the Department institutes legislation that will add to its redistributive arsenal. This kind of short-sighted self-interested thinking is to be expected from hired-gun litigators. The government should know better. □

Reader Forum

The American Banker welcomes points of view on issues of interest and importance to the banking industry. Please direct letters to Jeffrey Kutler, assistant managing editor, *American Banker*, One State Street Plaza, New York, N.Y. 10004.

Mr. Kilberg, former solicitor of the Department of Labor, is managing partner in the Washington office of the law firm of Gibson, Dunn & Crutcher. Mr. Snyderman is an associate with the firm.

Europe's Rate System Meets Reality

The second major crisis to hit the European exchange rate mechanism in a little less than a year – this time focused mainly on the French franc – was yet another demonstration of the adage that you cannot fool all of the people all of the time.

But you may, as the saying also notes, fool all of the people some of the time. The rate mechanism did hold together for more than five years – from January 1987 until September 1992 – as a system of essentially fixed exchange rate relationships.

There were no currency realignments, in large part because the markets came to believe the system could be maintained for an indefinite period.

Credibility Lost

However, once the market perceived that exchange rate relationships were inconsistent with underlying economic conditions, and once there was any doubt about a country's will to do whatever was needed to keep its rate in line, credibility was lost.

It then became practically impossible – either through domestic policy adjustments or official exchange-market intervention – to maintain the system in face of the massive shifts in private funds.

When it is not even clear that policy authorities in the various participating countries have the same priorities, defense of the system becomes even more difficult.

To many European countries, a mechanism with rigid rate relationships was a way station toward the more basic goal of a common currency and common central bank.

Maintaining rigid exchange rate relationships was a means of enforcing the convergence of domestic policies and economic conditions needed before implementation of a common currency.

Britain's Motives

Clearly, not all of the key countries were wholeheartedly behind that ultimate goal of a common currency.

In my view, the British had joined the rate system basically for their own domestic purposes of restoring balance and international competitiveness to their economy, not because they were particularly enchanted with the idea of moving toward a common currency.

When the market forced the politicians to realize their exchange-rate policy had outlived its domestic usefulness, it was something of a blessing for the British economy.

The French were also using the rigidity of the rate mechanism in discipline their domestic economy and reduce inflation, and in addition to enhance the relative stature of France and the franc in Europe and the world. But unlike the British, they seemed to believe strongly in the drive toward a common currency.

That attitude was derived from political as much as economic imperatives. Politically, it was a way of restraining the independent influence of Germany by distributing power to broader European institutions.

Germany's Troubles

As the underlying political objective of the drive toward a common currency gradually became understood in Europe, considerable resistance developed because of fears that nations not only would lose more economic sovereignty than expected but also would see much of their traditional political and social authority eroded.

The recession that was prolonged and deepened in Europe by the inflationary impact on Germany of the unforeseen merger of East and West Germany made political problems even worse.

In Germany itself, the political and monetary authorities may have had divergent views. The independent German central bank's overriding concern is domestic price stability.

As a result, even apart from any doubts it might have about the desirability of giving up the

D-mark for a common currency, as an institution it must have felt it could give only limited consideration to the impact of its policies on the other

PROFESSIONAL EMPLOYMENT OPPORTUNITIES

Consultants
Financial Services

The biggest names in business know ours.

With the well-respected name of KPMG Peat Marwick behind you, you'll have the opportunity to work with the world's most prestigious Financial Services clients. We have immediate openings with our Regulatory Consulting team of experienced professionals.

Regulatory Reporting

This position requires either experience in the establishment of procedures and the preparation of required regulatory reports in a banking organization or concentrated experience in working with regulatory reports in a financial regulatory agency, i.e. Federal Reserve, OCC, FDIC, OTS or New York State Banking Department. Excellent communication skills and knowledge of computers are essential. New York location preferred.

Regulatory Compliance

To qualify for this position, you must be an acknowledged expert in the area of safety and soundness/compliance compliance for financial institutions with experience in policy development in the compliance area. Field examinations experience for a financial regulatory agency would be desirable. Excellent communication skills are essential; Washington, DC location preferred.

Please send your resume and salary history, indicating position desired to: Director of Human Resources, BHA Box 191, 555 Madison Avenue, NY, NY 10022. No phone calls please.

KPMG Peat Marwick
Management Consulting

KPMG Peat Marwick is an equal opportunity employer, believing that diversity contributes to our team strength—MF/D/V

JUNIOR BANK REGULATORY ATTORNEY

National Westminster Bancorp, one of the top 30 bank holding companies in the U.S., seeks a legal professional to function as part of a 3-person bank regulatory team in a substantial in-house legal department.

Experience must include:

- 3-5 years with a regulatory agency, law firm or financial institution
- At least 2 years in the legal division of the Board of Governors of the Federal Reserve System or a reserve bank
- Handling the Bank Holding Company Act, Bank Merger Act, International Banking Acts, applications and Regulations K & Y

Experience with non-traditional bank products such as securities and insurance would be beneficial.

We offer a fully competitive salary, attractive benefits and the high visibility and advancement potential of an industry leader. For prompt, confidential consideration, please fax or forward resume to:

Human Resources, Dept. MBW,
National Westminster Bancorp, 10
Exchange Place, Jersey City, NJ 07302.
FAX: (201)547-7135. We are an equal opportunity employer.

PROFESSIONAL EMPLOYMENT OPPORTUNITIES

Internal Auditor

Outstanding Management Career Opportunity In Commercial Banking

We're a high performing, top-rated, $440 million commercial bank with a history of strong, carefully planned growth and a unique style of doing business. To continue this enviable trend, we're seeking a highly qualified New York Metro Area resident to head up our expanded Internal Audit Department.

To qualify, you should have a B.S. in Finance or related area (M.B.A. and/or CPA a plus), 5 years' audit experience, at least 3 of which should have been in a supervisory/management capacity; well-developed analytical and organizational skills; and experience with PC based audit programs and spreadsheet applications. In addition, a successful track record of planning audit programs, managing and coaching staff, plus analyzing problems and recommending appropriate changes to management and the Board is expected. You should also be able to offer the exceptional communication skills and proven expertise required for successfully interfacing with all levels of management, the Board of Directors, external auditors, and regulators.

This position reports to top management and the Board, and carries an attractive compensation and benefits package attuned to your experience and anticipated contributions. For confidential consideration, send your resume, with salary requirement, to: Vice President, Director of Human Resources, Department-IAB, Hudson Valley National Bank, P.O. Box 189 Centuck Station, Yonkers, New York 10710. We are an equal opportunity employer m/f.

European Rate System Bumps Up Against Reality

Continued from *page* 21

countries.

The burden of adjustment was then left to German fiscal policy or to realignment of the European rate mechanism. The various conflicting political and economic attitudes and objectives were simply too much for the system to bear. Perhaps it could have held together longer without the shock of German unification.

The Value of Flexibility

But there are always economic and political surprises in the world. A certain degree of exchange rate flexibility – though not necessarily freely floating

NOT ALL *of the key countries were wholeheartedly behind the ultimate goal.*

rates – generally helps nations and the world economy absorb such surprises more smoothly.

What Europe has now is a floating rate system within very wide bands. That ought to permit economic policies that will move it out of recession more quickly.

There is no reason to rush back into rigid bands. Indeed, in terms of locking markets together, a common currency is preferable to rigidly fixed rates, because it does not depending on fooling the public that rate relationships can be held indefinitely.

In any event, the decision on fixed rates or a common currency should wait until the time when economies have converged at high levels of employment and reasonably low inflation rates.

The attempt to use the rate mechanism to force convergence was clearly counterproductive. But Europe also needs time to think harder about the whole process of economic and political unification, now that the basic issues have surfaced and are much more clearly before the public. □

Liberty to Purchase Tulbancorp of Tulsa

TULSA, Okla. — Liberty Bancorp Inc. said it has signed a letter of intent to buy Tulbancorp Inc. and its wholly owned subsidiary, Bank of Tulsa, in exchange for stock.

Terms were not disclosed.

The Bank of Tulsa has total assets of $69 million, deposits of $63 million, and net loans of $51 million.

Liberty said the acquisition was expected to be completed by yearend, pending regulatory and corporate approvals. □

AUG 13 1993

Citi Lending Czechs $400 Million to Complete N-Plant

PRAGUE — Citibank will lend the Czech power company CEZ some $400 million to complete the Temelin nuclear power station in southern Bohemia, said the Prague director of Citibank, Karel Swoboda.

The money will finance U.S. Westinghouse Electric Corp.'s upgrade of a four-reactor Soviet nuclear design begun in 1986 but never completed. The Czech government awarded the contract to Westinghouse in May.

"The energy derived from this plant will permit them to deemphasize somewhat the coal-fired plants," Mr. Swoboda said.

A U.S. government official close to the project has said that the U.S. Export-Import Bank will guarantee 85% of the loan, or about $340 million.

Mr. Swoboda said the agency is involved in underwriting the loan in concert with the Czech government "and other European institutions."

"For us, this is a major financing," he said. "It is a package to be done in cooperation with Citibank Prague, Citibank London, and Citibank U.S."

Westcorp Unit's Shift of Capital Is Approved

IRVINE, Calif. — Westcorp Inc.'s Western Financial Savings Bank unit received approval from the Office of Thrift Supervision to include the 8.5% subordinated capital debentures due 2003, and issued on June 24, in its total capital.

The bank said it would redeem on Sept. 10 all $52 million of its previously issued 11% subordinated capital debentures due in 1999.

The bank said that its capital position would end up as 7.48% in Tier 1 capitalic capital, 7.48% for core capital, and 16.18% for risk-based capital.

BANK CALL NOTICES

UJB Shares Volatile On Talk of Takeover

Continued from page 1

Banks of West Paterson. A spokesman for Bank of New York had no comment.

"Bank of New York could probably pay a [share] price in the low 40s for UJB and take only 2% dilution [in earnings per share] in the first year," said Anthony M. Polini, a banking analyst at Mabon Securities Corp.

T. Joseph Semrod
Favors independence

"That would not be a huge price to pay," he said, noting that such an in-market merger could result in enormous cost savings. It would also provide Bank of New York with a huge market share in the affluent suburbs of Bergen County adjacent to New York City.

A Surefire Option

Many other banks have been considered possible UJB suitors. "You have 11 of the largest 25 banks in the country headquartered within 200 miles of Princeton," noted Anthony Davis, a bank analyst at Dean Witter, Discover & Co.

Acquisitions present one of the few surefire options banks have for increasing revenues.

"We are still not seeing enough loan growth to compensate for the [net interest] margin pressure banks are feeling, particularly if interest rates fall further," said Mr. Davis. .

'Looking for Other Means'

"So superregional banks are out looking for other means to grow their earning assets, and acquisitions are an obvious option." he said. And New Jersey currently is the prime area of consideration.

Besides the New York City banks, the list of possible suitors includes CoreStates Financial Corp., Philadelphia; PNC Bank Corp., Pittsburgh; Fleet Financial Group, Providence, R.I., and New Jersey's largest bank, First Fidelity Bancorp., Lawenceville.

CoreStates recently enlivened New Jersey banking stocks by announcing it would buy Elizabeth-based Constellation Bancorp. for $312 million, a price exceeding 2.5 times that bank's tangible book value per share.

'The Hottest Spot'

Earlier, Bank of New York's deal for National Community had set the pace with a price exceeding twice book value.

"New Jersey is by far the hottest spot on the map for bank consolidation right now," said Mr. Davis.

T. Joseph Semrod, UJB's chairman, president, and chief executive, has affirmed the bank's desire to remain independent. He is currently leading a study of the bank's business lines and may unveil a revised strategy for the future in September. □

Bankers Trust Recruits 2 Specialists To Launch High-Yield Investment Unit

By YVETTE D. KANTROW

Bankers Trust New York Corp. on Monday will launch a unit to manage high-yield investments for its clients, the company said.

The new "global high-yield asset management unit" will oversee client portfolios in junk bonds, mezzanine debt, and bank loans of U.S. and foreign corporations.

The New York bank company, the nation's seventh largest, recruited Stephen Freidheim and James Tucker to run the unit.

Solid Credentials

The two men most recently worked at Nomura Corporate Research and Asset Management, where Mr. Freidheim was head trader, director of research, and a member of the board of directors. They were previously with Kidder, Peabody's high-yield assets management subsidiary, which was run by Mr. Tucker.

Mr. Tucker also has worked at Kidder's investment banking unit, where he specialized in merchant banking and international transactions.

'Tremendous Opportunities' Seen

At Bankers Trust, Mr. Tucker will oversee structuring and marketing of high-yield products, as he did at Nomura.

Bankers Trust said the new unit will be part of its Global Investment Management division, which has $155 billion of assets under management. About $65 billion of that is in actively managed fixed-income portfolios.

"The U.S. high-yield market is moving from recovery over the past two years toward becoming a permanent part of the American capital markets," said Ivan Wheen, managing director and head of Global Investment Management.

"We see tremendous opportunities for investors in both the U.S. and the rapidly expanding foreign high-yield corporate and sovereign debt markets."

Collateralized Bond Pioneers

Mr. Freidheim, a graduate of Yale University, will be responsible for portfolio management and trading.

He and Mr. Tucker, a graduate of Harvard law and business schools and a former lawyer at Sullivan & Cromwell, helped create the first public collaterized bond obligation in 1989 when they were at Kidder, Bankers Trust said.

The pair has since created more than $4 billion worth of high-yield structured investment products, according to Bankers Trust. □

THE MARKETS

Thin Bidding at Treasury Auction Pushes Long Bond Yield to 6.44%

A disappointing auction of new 30-year bonds on Thursday took some steam out of the credit markets.

The U.S. Treasury awarded $11 billion of new bonds at an average yield of 6.33%. But auction results were seen as disappointing, given the 2 basis point difference between the average yield and the high bid. The yield of the new bond rose to 6.36% on a when-issued basis after the auction was completed.

The outstanding 7⅛% 30-year bond was yielding 6.44% late Thursday afternoon, up from its record-breaking 6.42% yield on Wednesday. Among shorter-maturity government securities, only three-year and five-year notes showed any rise in yields. The three-year yield rose 1 basis points to 4.44%, and the five-year rose 1 basis point to 5.13%.

A report Thursday said that produce prices fell 0.2% in July and that retail sales rose 0.1% in July and a revised 0.2% in June cheered investors.

Stock prices slid. The Dow Jones industrial average fell 14.26 points to close at 3,569.09. — David Siegel

"Mortgages, Securitization & Your Portfolio"

A Series of Secondary Mortgage Market Conferences

These conferences are designed to explore the current opportunities and options in the secondary mortgage market. This conference is ideally suited to CEOs, Mortgage Managers and Secondary Market Managers involved with the creation and securitization of mortgage product. Topics will include:

- Whole Loan Analysis - Secondary Market Value
- Mortgage Portfolio Management
- Legal, Credit and Rating Issues Involved in Asset Securitization
- The Portfolio Impact of Market Value Accounting
- Opportunities in Mortgage Servicing
- Investing in the Secondary Marketing

Featured speakers include representatives from:

Standard & Poor's
Wendover Funding, Inc.
Dearden, Maguire and Weaver, Inc.
Andy Davidson & Co., Inc.
Connecticut Mutual Life Insurance Co.
KPMG Peat Marwick
GE Capital
Teachers Insurance and Annuity Assoc.
First Buckingham Group

September 30th–The Boston Harbor Hotel
Boston, Massachusetts

Ft. Lauderdale, FL — February 1994
New York, NY — May 1994

B of A Decides Against Buying Premier System

By JEANNE IDDA

When it comes to choosing the right computer systems, bankers sometimes find that political considerations can be just as important as technical ones.

That seems to have been the case last week, when BankAmerica Corp. decided to end seven-month-old discussions with Premier Solutions Ltd., a Wayne, Pa.-based vendor of accounting and reporting software for trust and global custody, in favor of using a system developed in-house.

BankAmerica – which since 1991 has been shopping for a single replacement for its multiple, disparate systems for institutional and master trust and custody – had narrowed its options down to Premier or an in-house system.

Premier's software was viewed by many B of A bankers as the quickest way to get the most advanced technology for the bank's trust operations, where competition has been increasingly cutthroat over the past few years.

NEWS ANALYSIS

Earlier Disaster

A move to Premier would have been controversial however, because BankAmerica had already blown $80 million on a previous version of the company's software that the bank failed to get running in 1988.

But since that fiasco, Premier has had several successful installations of its revamped software, restoring most of its credibility with bankers.

Despite early indications that it was leaning toward Premier's software, the bank couldn't pull the trigger. Last week BankAmerica officials told staff members in New York that the bank will revamp its own trust software, called Gclear, which was originally installed by Security Pacific Corp. four years ago, before the two banks merged.

Other In-House Systems

BankAmerica officials also said they will continue in-house development of software for accounting for securities in different currencies and generating customer reports.

By building in-house, BankAmerica will probably spend more than the tens of millions that an off-the-shelf system to handle institutional, master trust, and custody would have cost, according to trust experts.

Why did BankAmerica do

FDIC Faces Tough Questions On How It Handled Crossland

By BARBARA A. REHM

WASHINGTON — Now that the Federal Deposit Insurance Corp. has finally unloaded Crossland Federal Savings Bank, the agency faces some tough questions about how it chose to deal with the failed thrift.

Banking law requires the FDIC to sell or liquidate in the cheapest way possible. At issue will be how the FDIC concluded that last week's unusual sale met that requirement.

The agency can expect to be second-guessed with the following questions:

Was it right to nationalize Crossland when the Brooklyn thrift failed in January 1992, or should the agency have sold it off right away?

Was the agency right to have sold the $5.3 billion-asset thrift to institutional investors last week, or should it have sold Crossland to rival Anchor Savings Bank?

More specifically, is the FDIC being too optimistic when it estimates it will have to pay out only a net $28 million under its loss-sharing deal with investors?

Lots of Gray Areas

These are tough questions mainly because – as in all big failed bank deals – the calculations are complicated, and only FDIC has all the numbers. Black-and-white answers are not easy to find in bank resolutions.

House Banking Committee Chairman Henry B. Gonzalez, D-Tex., intends to send a formal investigation request to the General Accounting Office today or Tuesday, his staff said Friday.

Peggy Turbett/American Banker

Harrison Young
Confident he was right

The Crossland saga began on Jan. 24, 1992, when the thrift failed and the FDIC decided to run it on its own rather than sell it off or shut it down. This May, the FDIC said it wanted to convert Crossland to a stock institution in a public offering to institutional investors – something the agency has never done.

Rival Bids

But then Anchor, and others, emerged as bidders, so the FDIC decided to let the two sides bid against each other.

With offers in from investors and Anchor, the FDIC decided late Thursday night to go with the public offering, issuing 12 million shares in Crossland to

Morgan Leads Eaton's Deal For Unit of Westinghouse

By DAVID SIEGEL

NEW YORK — Morgan Guaranty Trust Co. has been tapped to arrange $1.1 billion in loans to finance Eaton Corp.'s purchase of a Westinghouse Electric Corp. unit that makes electrical devices.

The deal is the latest in a string of acquisitions this summer providing fresh business for lenders. Many of the acquisitions are related to the sale or spinning off of subsidiaries by companies that are narrowing their focus.

John Carmont, treasurer of Cleveland-based Eaton, said Morgan will provide some of the funds itself and syndicate the rest of the loan on a best-efforts basis. He declined to comment on the financing terms.

'No Concerns'

"We have very strong bank relationships, so we have no concerns about whether the money's there or not," he said.

"We expect closing toward the end of the year, so we have a considerable amount of time," he said.

The financing represents new business for Morgan, which declined to comment. Eaton arranged its current $100 million in bank credit lines itself, rather

News *briefs*

Barnett Banks Selling Student Loan Units

JACKSONVILLE, Fla. — Barnett Banks Inc. said it had signed a letter of intent to sell BTI Services Inc., its student loan servicing unit, and the Barnett Higher Education Loan Program, its student loan origination division, to Union Bank and Trust Co. of Lincoln, Neb.

Terms were not disclosed.

Barnett said BTI services a total portfolio of more than $4 billion in student loans and guarantee agency assets for various clients, including Barnett. Over the last two years, the loan origination division has booked about $400 million in new student loans, the company said.

The Florida banking company said its 1993 earnings would not be impacted and that the transaction "should enhance future results."

Under the agreement, Barnett Higher Education will continue to originate new student loans in Florida and Georgia for Barnett's portfolio and BTI will service them. The two units will remain in Jacksonville with the current staffs in place, Barnett said.

The sale is subject to the execution of a definitive agreement and due diligence, the company said.

Macy Credit Facility Extended, Modified

NEW YORK — R.H. Macy & Co. said it reached an agreement to extend and modify its current debtor-in-possession credit facility with a group of 30 financial institutions.

Macy said the facility was extended through Aug. 1, 1995, from its original expiration date of February 1994.

In addition, the facility's maximum availability was cut to $550 million from $600 million. Macy said the reduction was "due to effective cash management and the anticipation of lower cash requirements" and said it "reflects the progress the company has made in implementing the expense reduction initiatives of its five-year business plan."

Also, the revised credit facility now includes covenants relating to the company's earnings before interest, taxes, depreciation, and amortization that are calculated on a trailing 12 months basis. The old pact had covenants based on such earnings calculated on a single-quarter basis.

The company noted that should a plan of reorganization be confirmed prior to August 1995, the debtor-in-possession financing would be terminated and replaced by a working capital facility.

Calfed to Buy 4 Union Federal Branches

LOS ANGELES — California Federal Bank will purchase about $180 million in deposits from Union Federal Bank.

The transaction, subject to regulatory approval, is scheduled to close Aug. 27. Other terms were not disclosed.

California Federal will acquire and operate two Union Federal branches, while deposits at two others will be consolidated with nearby California Federal offices.

Calfed said that as of Aug. 30, its new customers will have access to its full line of financial services.

First Fidelity Acquires Village Financial

LAWRENCEVILLE, N.J. — First Fidelity Bancorp. announced that it had completed the acquisition of Village Financial Services Ltd., the parent of the nine-branch Village Bank, of Port Chester, N.Y.

The briefs were compiled from staff and wire reports.

Correction

An Aug. 12 article on Arkansas Bankers' Bank misstated the maximum interest rate banks can charge under the Arkansas usury law. It is 5% plus the federal discount rate.

FDIC Faces Tough Questions On How It Handled Crossland

Continued from *page 1*

about 50 investors for $23.50 a share. That raises $282 million.

The FDIC will also receive the proceeds from the sale of $50 million in subordinated debt by Crossland. That brings the total to $332 million.

According to a source working for Anchor, its bid came in about $10 million below the securities sale. The FDIC refused to disclose Anchor's bid or, for that matter, a list of the investors.

Harrison Young, who as the agency's resolution director engineered the securities sale, was confident the agency made the right choice.

'A Great Deal'

"This is a great deal for the FDIC. The public offering won pretty clearly," he said Friday. "But it was not by an enormous margin."

Mr. Young calculates the FDIC's $889 million tab this way: The FDIC put in $1.2 billion into Crossland. It is making back $332 million in cash plus on million warrants, which were valued at $8 a piece or $8 million. That brings the cost down to $860. But FDIC added back in $11 million being paid to its investment bankers and another $28.8 million it expects to pay under the covering net losses on assets.

Crossland is the agency's

L. William Seidman

Lonnie Krafft

Sees investors betting on resale

eighth-most-expensive bank failure ever.

The big outstanding question is whether the FDIC is underestimating how much it will have to pay out under its five-year loss-sharing agreement with the investors.

Crossland's $2.7 billion in troubled assets are covered by the loss-sharing deal. Under the deal, the FDIC will pay 80% of the loss on those assets after a $179 million reserve is eaten up. The agency is figuring its total cost will be $28.8 million, a meager amount of such a large portfolio.

"I think the net chargeoffs are going to be a lot more than $179 million," said Bert Ely, a banking consultant who has tracked the deal. "That means the FDIC is going to be writing checks."

Clearly, the loss sharing was the linchpin for investors.

"Without that, we would have no interest," said Ray Garea, who bought into the deal on behalf of Mutual Series Fund Inc., in Short Hills, N.J.

Former FDIC Chairman L. William Seidman agreed that the investors are "fairly well guaranteed on the downside.

"It's very hard to value [the deal], because they've guaranteed so much in the way of assets," Mr. Seidman said. "The whole bet is they [the investors] can sell it to someone else for more."

The FDIC figures net chargeoffs will exceed the $179 million threshold amount by $36 million. The FDIC will pay 80% of that or $28.8 million.

Mr. Young said many of the assets have already been written down substantially. But he added: "I wouldn't argue with anybody who would say, , the number might be higher. It might be lower. There's no certainty."

Loss sharing "takes a deal that I was sort of unexcited about and made it attractive," said Jim Schmidt, manager of the John Hancock Freedom Regional Bank Fund in Boston. But he added: "Odds are they won't come into play, but if it falls apart, it's a backstop."

Mr. Schmidt estimated he could double his investment in three years. ☐

We'll save you money. We could even save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... which agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 10% discount, so you'll be saving money even before you get the first issue.

AMERICAN BANKER'S Regulatory Compliance Watch

Varied Services Planned For Tennessee National's Test of Home Banking

By BARTON CROCKETT

First Tennessee National Corp. will offer a wide range of services next year when it and a BellSouth unit test-market home banking. Consumers will be provided with computerized telephones.

The test will be one of the first in which home banking will be coupled with advanced telephone services.

Experts say that such a combination is key to the success of screen phones, a new type of de-

It will be one of the first tests combining home banking and advanced phone services.

vice with electronic displays to help consumers obtain information services.

'A Really Good Opportunity'

"We see this as a really good opportunity to meet the consumer demand for convenience," said Susan Terry, the vice president who is leading the test for First Tennessee.

First Tennessee is teaming with BellSouth Telecommunications Inc., a unit of Atlanta-based BellSouth Corp., in the test, which is scheduled to run from April through August.

First Tennessee will give the phones to 500 customers living in the Nashville area who will use the phones free of charge to check account balances, move funds, pay bills, buy from catalogs, and obtain a wide range of advanced telephone services.

Comparison Shopping

One such service is caller identification, in which the caller's name and number are displayed on the telephone's screen so people can see who is calling before they pick up.

Ms. Terry said the phone company will hand out screen phones from three vendors – US Order Inc., a Herndon, Va.-based unit of Worldcorp.; Northern Telecom Ltd. of Mississauga, Ontario; and National Semiconductor Corp. of Santa Clara, Calif., – to determine which phone consumers prefer.

US Order also will process home shopping and bill payment transactions for the test.

Ms. Terry said that following the test, First Tennessee expects to make the home banking service available across the state.

"Our feeling now is that we'll go ahead, although we want to measure the research [results] very closely," she said.

Citicorp, Huntington Bancshares Inc., and MNC Financial Corp. are among the handful of institutions that have either tested or delivered home banking through screen phones.

Similar Test at Barnett

But thus far, only Barnett Banks Inc. has tested a service in which consumers access both home banking and advanced telephone services from screen phones. And the Jacksonville, Fla.-based company's test, launched in June, involved fewer than 100 households.

Over time, experts expect screen phones will be able to access more combinations of banking, advanced telephone, and other services.

"I don't think home banking by itself will support screen phones," said Michael Grisham, a computerized-telephone expert in New York.

Variety Needed to Justify Cost

Mr. Grisham, who left American Telephone and Telegraph Co. in February after developing a screen phone AT&T canned last year, said that for the device's cost to be justified, consumer many in the trust industry were surprised that the vendor was even being considered, even though other big banks such as Chemical Banking Corp. and Bank of Montreal had already chosen its system.

Several sources said the technologists in the bank, headed by Marty Stein, feared they would risk their jobs if the bank again installed Premier software that proved faulty. However, a spokeswoman for the bank said that was not a factor.

The bank had second thoughts about the trust software

"Although they probably had several logical reasons for not choosing Premier, I'm sure the political consequences of selecting that system were not overlooked," said Hal McIntyre, managing partner of the Summit Group, a bank consulting firm based in New York and New Jersey.

For its part, Premier was also said to have had its own concerns about taking on too big a project. The vendor was said to have limited the discussions to global custody, even though BankAmerica was looking to replace nearly all its trust and custody systems.

Starting Small

Had a contract been signed, Premier would initially have converted only about 500 accounts, from a global custody system inherited from Security Pacific in New York, one in London, and a third, smaller system administered in Australia, the sources said.

Perhaps as important was that the BankAmerica trust executives didn't have the support of the securities processing staff, many of whom are former Security Pacific employees, sources said.

In its haste to consolidate the two banks, BankAmerica has alienated many former SecPac employees upon whom it still must rely to make the transition to a consolidated operation, sources close to bank said.

NEWS ANALYSIS

B of A to Forgo Premier System

Continued from *page 1*

it? According to several people who participated in the talks, Premier's champions – Lee Harbert, senior vice president, and Richard Griffith, executive vice president of global securities services – had several problems.

One was the complexity of melding the operations of two such different businesses and cultures as BankAmerica's and Security Pacific's.

Each bank served different types of customers, with BankAmerica's corporate clients requiring different kinds of accounting and reporting than Security Pacific's Wall Street clientele.

Another Fiasco Feared

Given BankAmerica's unpleasant experience with Premier, many in the trust industry were surprised that the vendor was even being considered, even though other big banks such as Chemical Banking Corp. and Bank of Montreal had already chosen its system.

Several sources said the technologists in the bank, headed by Marty Stein, feared they would risk their jobs if the bank again installed Premier software that proved faulty. However, a spokeswoman for the bank said that was not a factor.

The bank had second thoughts about the trust software

"Although they probably had several logical reasons for not choosing Premier, I'm sure the political consequences of selecting that system were not overlooked," said Hal McIntyre, managing partner of the Summit Group, a bank consulting firm based in New York and New Jersey.

4th Financial Travels Local Roads to Build Empire

By JOHN RACINE

WICHITA, Kan. — Fourth Financial Corp., which has amassed 15 acquisitions in the last 16 months, may be getting more mileage out its ambitious acquisition program than any other bank around.

"When we started this we said this was a one-tank-of-gas program," said David L. Strohm, an executive vice president who oversees acquisitions for the Kansas company. "We said that anywhere we can get to on one tank of gas, we'll go there."

In Kansas, Oklahoma, and Missouri, one tank apparently goes a long way.

Fourth Financial, the parent of Wichita-based Bank IV, has nearly doubled its asset size to $7.3 billion since 1990. And its executives say they aim to add $2 billion of new assets annually over the next few years.

Tight Focus

In the process, the bank has developed a reputation not only as a savvy acquirer but also as an extremely focused one.

Most analysts praise Fourth Financial for solidifying its already dominant position in Kansas, while almost overnight building itself into the third-largest bank company in Oklahoma, a heavily fragmented market.

The drive has been stimulated by the liberalization of interstate banking laws in Kansas on July 1, 1992. The law creates expansion opportunities in all of Kansas' bordering states except Iowa.

For all its ambitions, however, Fourth Financial itself is frequently mentioned as a takeover candidate. Indeed, some analysts say its rapid market expansion only increases its appeal to certain out-of-state giants, such as Minnesota's Norwest Corp., Ohio's Banc One Corp., or St. Louis-based Boatmen's Bancshares.

Not Ready to Succumb

Boatmen's is the most frequently mentioned acquirer because of interstate restrictions on the other two companies.

Nevertheless, most observers say Fourth Financial has more empire building to finish before it succumbs to another company.

"It can still grow quite a while, maybe 70% more, before it would become too large to be acquired," said Steven Schroll, senior bank analyst at Piper Jaffray Inc. in Minneapolis.

But Jerry Swords, president of Swords Associates Inc., a Kansas City, Mo.-based bank consulting firm, sees a day of reckoning coming soon. "They'll either get to the $10 billion-asset size or they'll be acquired," he said.

Beside the Point

Such talk is a distraction to Darrell G. Knudson, the chairman and chief executive officer of Fourth Financial. The executive, who joined the company from First Bank System Inc. three years ago, said he doesn't stay awake at night worrying about whether his company will be acquired or remain independent.

"We think it's a mistake to have a focus on either one," he said during a recent interview. "We won't slit our wrists if we don't reach $10 billion by 1995, because that's not our objective."

What drives Mr. Knudson and his top managers is avoiding the loan problems that stung them in 1990. That year, Fourth Financial's profits plummeted 49% from the previous year and its return on assets plunged 60% to 0.47%.

The cause: big provisions related to 13 commercial real estate loans (known internally as the "dirty baker's dozen") to long-standing customers in Kansas.

Diversification Drive

Since then, the company has installed rigorous credit standards and pursued its diversification plan. The drive for diversification is circumscribed by the company's credit process – its standards are superimposed on the portfolios of acquisition candidates – and by certain size requirements.

Fourth Financial says its primary targets are leaders in their home markets with assets ranging between $100 million and $500 million of assets.

Another factor driving Fourth Financial is the fact that its home state is becoming uncomfortably crowded since the interstate prohibitions were relaxed.

Since last year, about $5.8 billion of bank assets have been acquired in Kansas, according to SNL Securities.

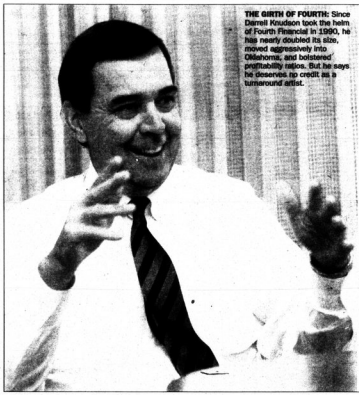
Missouri banks have been the most aggressive, focusing predominantly on banks in affluent Johnson County, Kansas, which borders Kansas City, Mo.

In-State Expansion

Fourth Financial itself has been an active acquirer – picking up some $526 million of assets in the Sunflower State since April 1992 and cementing its status as the Kansas' biggest bank. Its in-state growth was assured when Kansas lawmakers last spring raised the cap on deposit market share of any one bank from 12% to 15%.

The legislators rejected a measure that would have limited out-of-state bank holding companies to the 12% deposit cap. Observers say the decision was a significant victory for Fourth Financial. Lawmakers guaranteed the Kansas bank's viability as a buyout target while giving it room to add another $1.5 billion in assets.

Nevertheless, Fourth Financial's biggest appetite has been in neighboring Oklahoma, where it is concentrating on acquiring healthy banks in a region that is strongly rebounding from its oil bust days.



THE GIRTH OF FOURTH: Since Darrell Knudson took the helm of Fourth Financial in 1990, he has nearly doubled its size, moved aggressively into Oklahoma, and bolstered profitability ratios. But he says he deserves no credit as a turnaround artist.

No Status Quo for This CEO – Knudson Aims to Grow

Darrell G. Knudson was not looking for a retirement job when he was persuaded in 1990 to give up the No. 2 spot at First Bank System Inc. and become chairman and chief executive of Fourth Financial Corp.

"What I was interested in was growing a company, not getting out there and maintaining one," said Mr. Knudson, who rose from teller to vice chairman during his 34 years at Minneapolis-based First Bank.

Won't Take Credit for Turnaround

The soft-spoken 56-year-old executive says he deserves no credit as a turnaround artist.

Despite Fourth Financial's quick return to health since his arrival – profits more than doubled in 1992 to $53.2 million and are on course to beat that mark this year – the executive insists the bank was fundamentally strong when he took over three years ago.

Today, he spends most of his time thinking of ways to expand the company's market share as it fights off neighboring intruders such as Boatmen's Bancshares.

His prime strategy for doing this is to acquire community banks, which he sees as the keys to winning market share in Kansas and Oklahoma.

"I think the local community bank is as powerful a competitor as you will find," he said.

That thinking has become part of the bank's culture. Every bank that hoists a Bank IV banner quickly learns to impose a regimen of staff training, with a focus on cross-selling products and services.

Outlocaling the Locals

"As Darrell likes to say, it's hard to outlocal the locals – but we try," said Gordon Greer, a longtime Oklahoma community banker who is now chairman of Bank IV Kansas.

"The competition is going to be tougher, but we thrive on that."

— John Racine

See next page

Continued from page 4

Almost No. 3 in Oklahoma

In the past 18 months, the company has announced plans to buy about $2 billion of assets in the Sooner State. Upon completion of all the deals, Fourth Financial would be the third-largest financial institution in a state where 430 banks divide about $29 billion of assets.

The move fits the one-tank philosophy. Fourth Financial's Oklahoma empire is centered in Tulsa, a city closer to the company's Wichita headquarters than is Kansas City.

Mr. Strohm, the acquisition czar at Fourth Financial, said the bank is less than halfway toward its goal of accumulating $4.5 billion in the state.

"Fourth Financial sees the opportunities for the greatest growth is in Oklahoma," said Kay Lister, a bank analyst with Keefe, Bruyette & Woods Inc. in New York City.

Deposits Retained

Indeed, the Bank IV name that goes up on the Oklahoma branches appears to have been readily accepted in the state. The company said it has retained nearly 99% of all acquired deposits.

The company is itself seen as a takeover target.

Not all the news is good, however. Fourth Financial's efficiency ratio – which measures noninterest expenses, excluding foreclosure costs, as a percent of revenue – stands as high as it was in the days of 30 some banks. Corporate-wide, Fourth Financial in the second quarter spent 66.5 cents for every $1 of revenue – up 2% from a year earlier.

The bank and analysts say the expense problem reflects overstaffing that Fourth Financial acquired banks are consolidated and efficiencies are realized. The company maintains that it integrates the computer operations of its acquired banks into its own system within 90 days.

"What a customer sees won't be affected," said Mr. Strohm. "It's what's behind the tellers where we have changed things."

Eastward, Ho!

Fourth Financial recently began another major stage of its expansion strategy – moving eastward into Missouri. It said on July 16 that it will buy Great Southern Bancorp., a Springfield-based thrift with $515 million of assets.

Observers expect the move to be followed by a slew of statewide purchases in Missouri. However, it is not clear if the company will push into the already heated St. Louis marketplace or focus on Missouri's western border, which abuts Kansas and northeastern Oklahoma.

St. Louis is tempting – more populous than all of Kansas – but it would stretch Fourth Financial's one-tank rule.

"We don't worry about how big we can be," said Mr. Knudson. "We worry about how effective we can be in the individual markets we serve. For the next couple of years we're kind of busy with what we've already got started."

Bidding Wars

Fourth Financial's pricing strategies for its acquisitions have been generally well received by investors, but some analysts are afraid that bidding wars with neighboring banks may be tilting the company to overpay.

Many of the bank's early acquisitions involved small banks that were not courted by other suitors.

Mr. Swords noted that the healthy institutions Fourth Financial has been buying in Oklahoma lately drew high multiples over book value.

In June, for example, Fourth Financial said it would buy Western National Bancorp in Tulsa, which has $212.5 million of assets, for $34.2 million. That equates to about 2.74 times Western's book value, according to SNL Securities.

Mr. Strohm asserted that his company's deals have not diluted earnings or shareholder value.

"I don't think that overall the general prices have been bid up," he said. "We've seen multiples in the 1.75 to 1.9 times range, but we have not seen many ozone prices."

Republic Buying London's Mase, A Bullion Bank, from Westpac

NEW YORK — Republic National Bank of New York said on Friday that it has agreed to buy Mase Westpac Ltd., a gold bullion bank based in London.

The purchase price was not disclosed. Mase, a unit of Australia's struggling Westpac Banking Corp., is one of five London banks that set the price of gold there every day.

Republic National, with $18.5 billion of deposits, is owned by $36 billion-asset Republic New York Corp. The bank is an active trader of precious metals and a dealer of gold and silver in the retail markets.

Meanwhile, shareholders of Commerce Banc Corp. in Charleston, W.Va., approved the bank's merger with Huntington Banchares of Columbus, Ohio. The stock swap deal, valued at about $155 million, is expected to close this quarter.

Also, Onbancorp's application to buy Franklin First Financial Corp., a thrift based in Wilkes-Barre, Pa., was approved by state regulators in Pennsylvania and New York. Onbank is based in Syracuse, N.Y. The merger, valued at about $138.4 million, is expected to close this quarter.

Community First's Acquisition Machine Is Zeroing In Again

By ROBERT B. COX

Mergers

ATTENTION COMMUNITY BANKERS: Donald Mengedoth and Community First Bankshares are on an acquisition binge and they may be coming to your small town.

If you run a community bank with $45 million to $100 million of assets in a town of 10,000 people somewhere in the upper Midwest, you may be a prime target for Mr. Mengedoth's hungry acquisition machine.

The Fargo, N.D.-based super community organization already has announced three acquisitions this year – in Minnesota, Colorado, and North Dakota – and is scouting for prospects in Montana, Wisconsin, and Iowa.

"We will announce more acquisitions this year, you bet," the 49-year-old chief executive said in a telephone interview.

Community First is the creature that emerged from Mr. Mengedoth's risky 1987 leveraged buyout of $620 million in rural banking assets from his former employer, First Bank Systems. Since then, the bank has grown to $1.2 billion of assets through acquisitions of community banks.

In its annual report, the company counted as possible targets 3,000 community banks in a 10-state region stretching from Colorado to Wisconsin to Montana. Earlier this year the bank raised $20 million of equity on the stock market to fuel its takeover drive.

Donald Mengedoth

"We started out with the strong belief that community banking in small to medium-sized midwestern communities was excellent business," Mr. Mengedoth said.

"We had observed that these banks had unique relationships with their customers."

But many of the small communities where Community First has offices – and in the areas it is targeting – are actually experiencing little or no population growth. In order to grow, the bank needs to make acquisitions.

"The markets they are in are not growing," said Steven R. Schroll, bank analyst at Piper Jaffray Inc., Minneapolis, the investment bank which brought First Community's stock public.

"They are small, rural towns with static – if not shrinking – populations."

While the bank looks at dozens of deals, it goes ahead with less than 5% of them. Right now the bank is conducting due diligence on two institutions, which it declined to identify.

Shops for Bargains

Because the markets Community First targets are often too small for the larger Midwest acquirers like Banc One Corp. and Norwest Corp., Mr. Mengedoth is often able to pick up banks for only a 10% to 50% premium to book value.

Community First generally knocks out the back-office operations of acquired banks to cut down on costs, and introduces its own products and services – some of which might not have been available at the acquired bank.

But Mr. Mengedoth is adamant about keeping management in place. He says good management is one of the attributes he looks for in acquirees.

"On the coasts, customers are used to dealing with branches, but as you get out into the more rural communities the idea of local ownership and commitment to the community are integral functions," he said.

Customers want to talk to the president in those communities when they come in to ask for a loan to send their kids to college."

Maryland Thrift Wins Right to Convert

WHEATON, Md. — Equitable Federal Savings Bank said it had received Office of Thrift Supervision approval to convert to federally chartered stock savings bank from a federally chartered mutual.

An offering of up to 600,000 shares was priced at $10 a share and will expire on Aug. 31, Equitable said. The shares are being offered to customers and the general public.

Equitable had assets of $192 million as of June 30, a spokesman said. — **Dow Jones**

Q: When do you think small-business lending will pick up again?

WILLIAM P. HAYES
President
Kishacoquillas Valley National Bank
Belleville, Pa.

Our small business loans are up about 16% in the last year. The demand has been fairly steady. Those businesses that are confident their revenue streams are big enough are taking advantage of interest rate environment.

And some of those that aren't are taking the opportunity to restructure their balance sheets and refinance their existing debt.

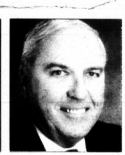
Once the uncertainty about tax rates is resolved, we will see an increase. It's not only economic issues that business owners are worried about, but policy issues also. □

STEPHEN DUFILHO
President
Bank of San Antonio
Texas

There is still demand for credit to small businesses, particularly in our area of the country.

However, the quality of the prospective borrowers' balance sheets and income statements has been seriously affected by the poor economic conditions experienced in the late 1980s. The economic crises we endured over the past five-plus years has caused a number of changes, creating barriers to lending.

It will take some time, perhaps even years, for these bad memories to fade and our lending standards to be readjusted to accommodate these credit requests and hopefully permit character loans once more. □



JAMES RYAN
Chief executive
Bank of Walnut Creek
Walnut Creek, Calif.

I don't think it's going to pick up until business people have some kind of confidence in terms of the administration in Washington.

Clinton is going to have to make some real steps toward reducing the deficit. If he doesn't, inflation is going to go up and interest rates will soar and people just won't want to borrow.

I don't know that when the tax situation is resolved it's going to stimulate anything. If anything, it will retard it. Here in California, we have to wait until the economy turns around before anything happens to stimulate loan demand. □

For California's Truckee River Bank, SBA Lending Has Been a Bumpy Ride

By TERRENCE O'HARA

Small-business lending is the lifeblood of Truckee River Bank, Truckee, Calif.

But Truckee's small-business lending not only relies on the economy, but also on the generosity of the federal government. That reliance caused loan funding problems earlier this year, and is likely to cause problems next year as well.

Since 1986, the $170 million subsidiary of Sierra Tahoe Bancorp has developed a profitable niche in Small Business Administration lending in Northern California.

Agency Funding Dries Up

As Congress debated the appropriations bill for the SBA this spring, the agency was without funding between April and June. Nonetheless, Truckee River Bank funded almost $8 million in SBA loans.

With the SBA unfunded, Truckee River couldn't put the guarantee credit enhancement on the loans, and package and sell them on the secondary market. Truckee River's liquidity position became tight as a result.

"We were in a position to manage the liquidity problems," said William Fike, chief executive of Sierra Tahoe. "Now we are still converting those loans that we made and selling them."

The SBA was provided with $175 million in guarantee funds, which leverages into $3.2 billion in SBA-enhanced loans to small businesses nationwide.

'Preferred Lender' Status

Truckee River is the second-biggest SBA lender in California and the fifth-largest nationwide, and is a coveted "preferred lender," meaning it can underwrite its own SBA loans without approval from the agency. Truckee River Bank has a $375 million SBA servicing portfolio.

The demand for SBA loans will surely outstrip its current funding, Mr. Fike said. Agency funding tentatively earmarked for 1993, $155 million, is less than for 1992.

The SBA hopes that with underwriting and securitizing changes, however, SBA lending will keep pace with this year's $6.8 billion.

Still, the changes could put a damper on Truckee's growth, since demand for SBA loans is expected to be twice as strong next year as the California economy recovers, Mr. Fike said.

Competitive Pressures

On top of funding pressures, the Northern California market for SBA lending is increasingly crowded, with both bank and nonbank lenders jumping into the niche Truckee first carved out for itself seven years ago.

SBA originations in 1992 at Truckee were $46 million, down slightly from 1991. Mr. Fike said that this year the pace of loan origination at the bank is down slightly as well.

But he added that Truckee won't compromise its underwriting standards because of pricing pressures.

"A lot of the institutions getting into SBA lending don't understand the kind of resources you have to devote to it," he said. "It takes a real commitment to do well at it in the long haul." □

What Next for Successful CEOs Whose Banks Are Sold?

Weekly Adviser

By PAUL NADLER

One career trap that perplexes a number of top community bankers is what to do next if they are so successful that their bank are sold out from under them.

Granted, all evidence indicates that the good community bank does not have to sell out. Economies of scale are not large enough to force a bank to be acquired to gain greater efficiency.

The personal strengths and community attitude of the community bank makes it a superior competitor in the local market. Flexibility, unwillingness to make quick decisions, and the skill to handle people as individuals usually give the local bank a major advantage of service superiority over its larger competitor.

But there is such a thing as "an offer you can't refuse."

If an offer from some other organization or group of individuals is far above the current market price of the bank, the directors have a legal obligation to consider it, and the CEO who does not bring such an offer to his board is also looking for legal trouble.

So frequently one hears a CEO lament, "I did my job, I built the bank. The offer that we received

A good CEO is not automatically out of a job when his bank is sold.

made the shareholders rich and to a degree made me rich, too. But what do I do now?"

Of course a good CEO is not automatically out of a job when his bank is sold. Just the opposite is usually the case: The acquirers want him to stay, to help keep the bank on the successful path that made it so attractive as an acquisition candidate in the first place.

In some instances the deal is even predicated on the CEO remaining to run the bank for the new owners.

But all too often the new golden rule applies: He who provides the gold makes the rules.

Mr. Nadler is a contributing editor of *American Banker* and professor of finance at the Rutgers University Graduate School of Management.

Send Us Your Ideas

Weekly Adviser is a forum for community bankers to share their concerns, problems, and solutions. You can participate by writing to:

Paul S. Nadler

Somonl, N.J. 07981

Responses will be printed in the column.

And a top CEO often finds himself struggling to retain his enthusiasm or even his desire to come to work when he no longer is the boss and must take direction from someone else.

Sometimes bankers have died suddenly, forcing the bank to go outside for a new leader because the deceased CEO kept things so close to the vest that no one on staff was qualified to succeed him.

All too often the new golden rule applies: He who provides the gold makes the rules.

Most Act Responsibly

But most CEOs take their responsibility seriously and arrange to generate maximum shareholder value, even if it means that they must themselves make a drastic career change.

What do they do?

Some go out and take over another bank in an effort to start at the bottom and do it all over again.

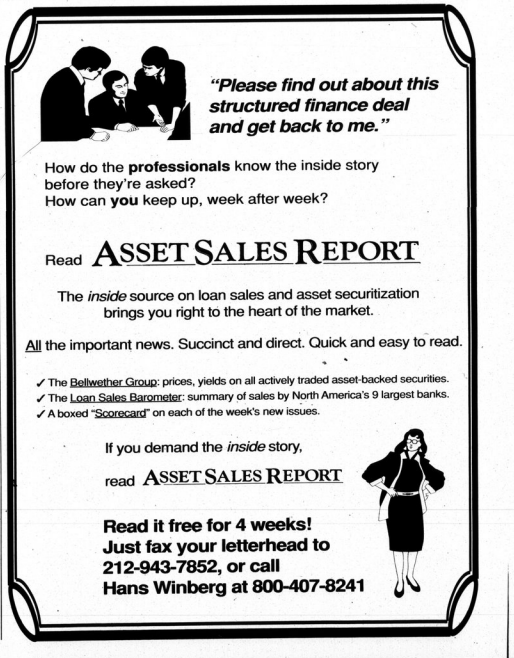
Some stay, bite the bullet, and decide they will be rich even if not as happy as they were in the past.

Some leave banking altogether. They go into another industry or they manage a small hotel or do something that is so different from banking that they can forget for days at a time that they had been a bank CEO, with all the power and glory that this entailed in the community and in the bank.

Maybe there are different routes that ex-CEOs who have been too successful can take.

The Weekly Adviser would love to hear from you at the address printed below.

Your experience and suggestions may be of great use to other community bankers who have had to choose between trying to keep their job by discouraging buyout offers and doing what they felt was best for the bank's shareholders, even though it nipped their own successful careers in the bud. □



American Residential Bulks Up to Survive

People in the News

By CHRISTOPHER NOBLE

AS MORTGAGE INDUSTRY veterans go, John Robbins is one of the most authentic on the scene.

As founder and chief executive of American Residential Mortgage Corp., La Jolla, Calif., Mr. Robbins has taken his company from anonymity to national prominence not once, not twice, but three times over the past decade.

American Residential's agreement two weeks ago to buy Fort Worth-based Foster Mortgage Co. is his latest move to secure a bright future for the company.

He started the company in 1983 as a unit of the old Imperial Savings. It was sold in 1988 to First Nationwide Bank, a unit of Ford Motor Co. When Ford threatened two years later to shut down or sell the company, Mr. Robbins and his management team pooled their money and organized a buyout.

Last year, Mr. Robbins led the company in going public, a move that has proved spectacularly successful and has firmly reestablished American Residential in the upper ranks of the mortgage industry.

"We certainly had times when the long-term outlook was a little bleak," Mr. Robbins said about the company's past.

John Robbins

While American Residential's purchase of Foster's $3.5 billion in servicing and its large servicing center in Fort Worth is puny compared with other recent servicing deals in the industry, it fits well with Mr. Robbins' plans.

By tripling the company's servicing capacity to $90 billion and bringing its current portfolio to almost $14.5 billion, the deal gives American Residential the space it needs to be a major player in the rapidly consolidating mortgage banking industry.

Mr. Robbins said buying Foster was just the first step along a five-year road to a $50 billion servicing portfolio and a position at the top of the mortgage servicing industry, two things he feels are essential for the company's survival.

And he sees more deals in American Residential's future. "To get to $50 billion, it's going to take a combination of both acquisition and originations."

Foster Is a Strategic Fit

American Residential is one of the country's largest originators, and buying Foster puts it in range of the top ranks of the country's servicers, too. "We targeted Foster for a lot of reasons. They have good people, they have a platform up and operating that has the capability to go to 500,000 loans without requiring any additional space, and it's in a tax advantaged state compared to California."

The 500,000-loan capacity translates into about $60 billion in servicing. Coupled with American Residential's $30 billion capacity in its San Diego facility, the sky's the limit for the immediate future.

Servicing is important to American Residential, Mr. Robbins said, because when originations ease after a rise in interest rates, it will provide a long-term source of funds.

"They are an annuity stream that gets more valuable as interest rates rise. We want to grow that annuity stream to the largest possible extent that it can be grown."

Interest on 30-Year Fixed Loans Falls To 7.19%; 15-Year Rate Dips to 6.73%

The national average interest rate on 30-year fixed-rate mortgages fell last week to 7.19%, from 7.24% a year earlier.

Preliminary figures from a weekly survey by HSH Associates of Butler, N.J., also showed that points charged on such loans averaged 1.37%, unchanged since last week.

The declines were across the board. The Washington, D.C., area continued to have the lowest rate, 7.06%, down from 7.12%. Minneapolis remained one of the most expensive areas at 7.28%, down from 7.35%. Points charged on loans remained basically stable.

The national average for 15-year fixed loans was 6.73%, down from 6.82%, while one-year adjustables averaged 4.35%, down from 4.4%. Edward Kalkosky

Executives' Fears of a Down Cycle Hurt Recruiting, Drive Salaries Up

By CHRISTOPHER NOBLE

The refinance boom that has taken the industry to unheard-of heights is also giving mortgage executives the jitters – making recruiting difficult and driving salaries up.

"A lot of people are very wary about where they go and what jobs they take," said Peter Hall, with the San Francisco-based executive search company Chartwell Partners.

Busy Time for Headhunters

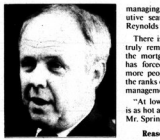
Executive searchers trying to meet the needs of an industry notorious for its boom-and-bust cycles are having a busy year.

And although the current boom has created heavy demand for new workers, those doing the searches say the industry's track record has made some executives leery of getting into the mortgage game or changing jobs.

"This business has been very cyclical, with people getting hired in busy times and fired in slow times," said David DeWilde, also with Chartwell Partners.

Inflation in Salaries

"Candidates want to know about the long-term stability of the company and what sort of protection they'll have in the post-refi era."



David DeWilde
Says candidates seek stability

The timidity among executives has led to an inflation in salaries as mortgage companies struggle to attract new talent and hold on to the people they already have, said Mark Springer, who runs his own executive search company in Southern California.

Paradoxically, while the end of the refinance boom will surely cost some people their jobs, executive search companies will likely do well during such a period, as mortgage lenders scramble to adjust to new market conditions.

Demand High at Lower Levels

"We always thrive on change," said J. Nicholas Hurd, managing partner with the executive search company Russell Reynolds Associates.

There is no denying that the truly remarkable expansion in the mortgage lending business has forced companies to hire more people, especially among the ranks of lower and mid-level management.

"At lower levels the demand is as hot as it was in 1986," said Mr. Springer.

Reason to Think Twice

But Mr. Springer said there is good reason to think twice about jumping into the mortgage finance industry during a boom.

After the last boom, which occurred in the mid-1980s, many executives hired to handle the surge in business were promptly laid off.

"They're all mortgage brokers now," Mr. Springer said.

Slowing the Searches

Mr. Springer said that many mortgage companies have begun to slow their searches in anticipation of an ending to the refinance madness that has gripped the industry.

"The street-smart companies are looking at 1994 and putting off big staffing moves until they figure out what's coming," Mr. Springer says. □

Consumers Warned on Paying a Bogus Bank

By CHRISTOPHER NOBLE

What's in a name? For some borrowers, it could be plenty. Like their monthly mortgage payment.

Immediate Payment Sought

Last week, World Wide Financial Services and the Mortgage Bankers Association of America released a statement warning consumers not to send their mortgage payments to Worldwide Mortgage Bankers, a bogus mortgage bank in San Antonio.

"Worldwide Mortgage Bankers is not to be confused with Birmingham, Mich.-based World Wide Financial Services, one of the fastest-growing mortgage lenders in Michigan," it read in part.

Number of Victims Unknown

The MBA said homeowners reported receiving in recent weeks notices from Worldwide Mortgage Bankers telling them they should immediately send their payments to Worldwide.

Worldwide apparently has no shame. The letters were addressed to "Dear Valued Customer," and went on to say a new coupon payment booklet was on the way, but that in the meantime they should just send in a payment in the enclosed, self-addressed, stamped envelope.

Both the MBA and World Wide Financial said it was almost impossible at this time to tell how many homeowners had fallen for the ploy. □

Home Loan Banks Wielding New Clout

A recent government study of the Federal Home Loan Bank System holds some big implications for the mortgage business, says Peter Treadway, an analyst at Smith Barney, Harris Upham & Co.

Mr. Treadway discussed the report by the Congressional Budget Office in an advisory for investors.

In an excerpt from his report follows.

Verbatim

In order to generate earnings, the federal Home Loan banks have begun to use their agency status in the debt markets to buy mortgage-backed securities.

From zero at the end of 1987, mortgage-backed holdings by the Home Loan banks grew to $22.8 billion by yearend 1992.

If this trend is allowed to continue, the banks will prove to be deadly competition for the nation's thrifts – the banks' own nominal owners and the very institutions they are supposed to be helping – and will reduce the value of the "duopoly" of Fannie Mae and Freddie Mac.

The reasoning here is simple: The Home Loan banks are using their agency status in the debt markets to raise funds at roughly 25 basis points over Treasury and reinvest them in the mortgage-backed market at roughly 70 basis points over Treasury.

Another Enterprise

This form of risk arbitrage, by definition, creates a third government-sponsored enterprise that is buying mortgages and funding at agency rates in the capital markets.

Arbitrage activity could squeeze mortgage margins.

If this trend persists, we will have to start referring to Fannie and Freddie as "triopolists" rather than "duopolists." It is true that Fannie and Freddie will benefit, inasmuch as their mortgage-backeds are bought by the Home Loan banks.

But, from the viewpoint of their shareholders, this positive is probably outweighed by the fact that, with the Home Loan banks as a third mortgage-buying enterprise, mortgage spreads will be driven down further and Fannie and Freddie's own portfolio growth and/or spreads will necessarily be lower than they otherwise would have been.

Same Goes for Thrifts

This also applies to the thrifts that will be directly competing with their Home Loan bank "subsidiaries." And the positive side for Fannie and Freddie might eventually go away anyway.

Longer term, as the Home Loan banks' mortgage-backed portfolios grow, one might logically expect the banks to develop their own expertise and launch their own mortgage-buying programs for portfolio.

There is one group of winners in all of this: the mortgage bankers. From their perspective, having another government-sponsored monster to which they can feed mortgages in the secondary market is a dream come true.

Freddie Seeks Eased Reporting Rules

By SNIGDHA PRAKASH

WASHINGTON — Freddie Mac spoke softly but made many of the same points as Fannie Mae in its response to HUD's new targets for low-income housing loans.

Tone of Letter

In a letter sent last Wednesday to the Department of Housing and Urban Development, Freddie Mac stressed that factors outside its control affect the supply of low-income housing and its capacity to meet HUD's goals.

Like Fannie Mae, Freddie Mac asked HUD to relax some of the rigorous data collection and reporting requirements outlined in last month's rules. HUD will use the data to monitor Fannie and Freddie's compliance.

Though the issues raised were similar, the tone of Freddie's letter was somewhat "tamer" than Fannie's, said Chris Lewis, director of banking and housing policy at the Consumer Federation of America.

Congress directed Fannie Mae and Freddie Mac last year to ensure that 30% of the housing units financed by loans they purchase be for low-income and moderate-income people, and that 30% be in central cities.

Goals Vary Slightly

HUD told Fannie Mac, formally the Federal National Mortgage Association, and Freddie Mac – the Federal Home Loan Mortgage Corp. – that they must meet those goals in 1994. For 1993, the low-income and moderate-income goal for Freddie was 28%, and the central city-goal was 26%.

Those goals were two percentage points higher for Fannie. □

Banks Trail the Competition in Equity Fund Assets

By MICHAEL O'D. MOORE

Bank's equity fund assets account for only 15% of assets under management at the 103 banks that manage mutual funds.

By this key measure, banks lag far behind the mutual fund industry as a whole, which has 35% of assets in equity funds, according to the Investment Company Institute.

"I don't see them catching up anytime soon," said Avi Nachmany, a partner in Strategic Insight, a New York-based consulting firm.

Institutions a Big Factor

Banks have $29.4 billion in equity funds according to a ranking compiled by Lipper Analytic Services Inc. for the *American Banker*.

A table of results was published in last Wednesday's edition. The accompanying chart lists the 10 banks with the most equity-fund assets under management.

Mr. Nachmany said most of the equity growth at banks has come from institutional clients and from trust conversions.

And he doesn't expect that to change. Retail customers aren't shaping up to be the driving force behind equity sales at banks, he said.

Source of Growth

Instead, growth will continue to be tied to annual growth in trust and institutional business.

NationsBank Corp., Charlotte, N.C., was first in equity assets of $1.9 billion as of June 30. That was 17.9% of the total assets of $10.5 billion.

SunTrust Banks Inc. of Atlanta came in second with $1.8 billion in equity assets, an impressive 53% of the $3.7 billion in fund assets for which SunTrust is investment adviser.

Consumers Diversify Assets

Third place went to First of America Corp., Kalamazoo, Mich. Its equity assets of $1.4 billion accounted for 36% of total fund assets, close to the mutual fund industry average.

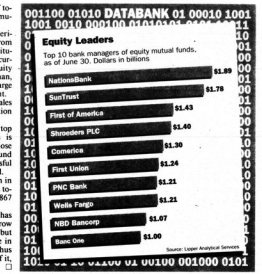
While much of First of America's equity assets came from trust conversions and institutional clients, about 53% of current retail sales are in equity funds, said William Shauman, senior vice president in charge of retail product development.

"It's really the whole sales process and the diversification of customer assets," he said.

Absent from the list of the top 10 banks in equity funds is Chase Manhattan Corp., whose Vista Growth and Income Fund is arguably the most successful bank-run equity fund around.

The fund had $335 million in assets. That's 39% of Chase's total equity-fund assets of $867 million.

Outstanding performance has helped the Vista fund to grow dramatically in recent years, but it started out with very little in institutional money and thus has a tougher climb ahead of it, Mr. Nachmany said. □



Annuities for Teen Dinosaurs

Variable annuities are ready for prime time. Just ask Robbie Sinclair.

Robbie who? Why, the teenage dinosaur on the ABC-TV series "Dinosaurs," that's who.

On a recent episode of the popular show, Robbie defeated his father, Earl, in a gladiator-style contention to become the family's "Supreme Male."

To secure the title, he had to prove his command of the dinosaur wisdom embodied in a thick manual. His sister, Charlene, drilled him.

The very first question? "What are three tax advantages of a variable annuity?"

Robbie didn't know the answer, but some wags at Cerulli Associates, Boston, had a few suggestions for *American Banker*.

- Capital gains may be deferred until the late Jurassic age.
- The death benefit preserves value in case a meteor strikes.
- Payouts can be annuitized until extinction.

— Karen Talley

ROBBIE: The TV dinosaur dealt with annuities on recent episode.

Wells Fargo Lets Customers Use ATMs To Buy and Redeem Its Equity Funds

By MICHAEL O'D. MOORE

In an apparent first, Wells Fargo Bank has made it possible for customers to buy and redeem shares of its proprietary equity mutual funds at automated teller machines.

The San Francisco-based bank announced last week that it has added the unusual capability to all but 40 of its 1,700 ATMs.

Consultants say making information and transaction capabilities available through ATMs is crucial to convincing customers that bank-managed mutual funds are a core product, not a sideline.

Tricky Business

A handful of banks have made it possible for customers to trade shares of proprietary money-market mutual funds over ATMs.

However, executing equity and bond fund trades by ATM is much trickier.

Whereas money market mutual funds are traded at a constant price of $1 per share, equity and bond fund shares fluctuate in price from day to day.

Price variation has deterred banks from offering the feature.

That makes for difficulty in squaring a redemption with the closing price posted later in the day. Consequently, banks have shied away from allowing ATM transactions for equity and bond funds.

Built-In Delay

To overcome the problems, Wells allows only 80% of a holding to be redeemed on any business day.

The cash from the sale is credited to a linked checking account of the customer's choice. The money is typically made available two days after the transaction, according to a 13-page pamphlet Wells Fargo sent to its customers.

The lag allows the bank to make the transaction and square any accounting differences.

In purchasing shares, customers may only add to existing accounts. To make new investments, they must purchase shares the old-fashioned way.

Wells Fargo customers may access up to 10 accounts over ATMs.

One of Wells' major competitors, Bank of America, is studying which investment-product capabilities to add to its ATMs. □

SEI Starts Its Own Fund Family for the Small Investor

By KALEN HOLLIDAY

After more than three years of playing stepparent to the proprietary mutual funds of banks, SEI Corp. has given birth to its own fund family.

With the launch of its Pro-Vantage Funds, the investment-services firm is marketing retail mutual funds under its own name for the first time. However, the funds will be managed by outside advisers.

The ProVantage Funds include equity, fixed-income and money market offerings, and will be sold through financial intermediaries, including banks and financial planners.

Focus on Lower-End Investors

Officials at SEI, which is based in Wayne, Pa., said they created the fund family to meet the needs of a wider range of investors, particularly those with less to invest.

"Over the years, we've had a lot of requests for products that would meet the needs of people other than high-net-worth investors," said Bert Dalby, marketing manager for ProVantage.

"What's critical now in terms of timing is that non-bank marketers have become aware of the needs of this group," said Richard E. Lieb, president of SEI Investment Services.

The move allows SEI Corp. to target a wider range of investors.

Based on the theory that there is a "huge need" for top quality funds, SEI decided that "limiting ourselves to the high end of the market wasn't the right thing to do right now," Mr. Dalby explained.

'Packaging Solutions'

As a mutual fund sponsor that administers more than $37 billion in assets, SEI has helped client banks establish and operate mutual fund families.

In creating its own retail offerings, SEI is "packaging investment solutions," especially for smaller clients who do not have proprietary funds that meet all of their customers' requirements, Mr. Lieb said.

The firm's larger clients, which include Banc One Corp., SunTrust Banks, Midlantic Corp., and United Jersey Banks, do not need SEI's mutual funds, Mr. Lieb said.

So SEI is gearing its products primarily toward small and medium-sized banks. Although Mr. Dalby would not specify which banks had signed on, he said the firm had four or five clients and about 25 additional strong prospects.

One selling strength being promoted is the funds' superior management, an advantage SEI portrays through the ProVantage name.

The funds "provide access to top institutional investment managers who typically require $500,000 to $5 million to open an individual account," Mr. Lieb said. Now these managers are available, "for as little as $1,000 per initial investment."

Tony Gray, who established his reputation at SunBank Capital Management, will be running SEI's Capital Appreciation Portfolio.

Data Base Selects Advisers

Other managers include Arthur Schwartz of Weiss, Peck & Greer Advisers and Wellington Management Company's Paul Kaplan.

The key difference between SEI's funds and others is the use and selection of outside managers.

Richard E. Lieb
Champion of small clients

To select advisors, SEI uses the company's investment performance data base. The data base includes information on more than 1,000 money managers with more than $450 billion in investable assets.

Mr. Lieb worries that some clients may think their territory is being invaded. "We believe it's a mistake for banks to say: 'You're competing with us,'" he said. "They are still thinking they're selling CDs."

Nonbank mutual fund providers, such as Fidelity and Merrill Lynch, are their real competition, he said.

Initially, SEI's family includes eight of its 30 institutional-class funds. Fees for the funds range from no load for money market funds to 5% for equity funds.

More funds are planned for the future. "As we better understand the needs of our clients, we'll try to offer integrated and packaged solutions," Mr. Lieb said.

ProVantage's marketing manager anticipates introducing additional tax-free products within a year. □

Card Cobranding: Is It Really Revolutionary?

By LISA FICKENSCHER

Through the strategy known as credit card cobranding, General Motors, General Electric, and AT&T have led an invasion into what was once exclusively banks' territory.

The new entrants were abetted by partnerships with banks that issue MasterCard or Visa cards on their behalf.

While some bankers have been disturbed by the trend, warning that the industry is giving away one of its last bastions, others see the cobranding idea as neither new nor threatening.

2d Fiddle or Equal Billing?

Jerry Crail, president of Wachovia Corp.'s credit card unit, says standard bank cards are, in a sense, already cobranded because they have a bank's name alongside that of MasterCard or Visa.

Some card bankers have decided it is better to try to control their cobranding destiny by aligning themselves with popular nonbank companies.

Some warn that the industry is giving away one of its last bastions. . . .

In one approach, Household Bank, which is owned by a nonbank finance company, willingly played second fiddle on the General Motors MasterCard. Citibank has equal billing with Ford Motor Co. on their joint Visa card.

Either point of view seems to have validity. The bottom line, analysts say, is that like it or not, cobranding is having a major impact, will not go away, and banks must find ways to live with it.

Building Brand Loyalty

The annual attrition rate among credit cardholders is approaching 15%. Card-hopping is epidemic as consumers' search for the best deal overruns any sense of institutional loyalty.

"There is no such thing as a one-size-fits-all credit card," said Michael Auriemma, a card consultant with Auriemma Consulting Garden City, N.Y., who sees cobranding as a way for card-issuing banks to build loyalty. "We will see a lot of segmentation as consumers continue to choose cards that offer something that is important to them."

To be sure, not everyone agrees on whether cobranding is the inevitable future for banks.

. . . But others see the cobranding idea as neither new nor threatening.

But one thing is certain, says Corey Stone, a consultant with Easton Consultants of Stamford, Conn.: "Cobranding takes the card to new places and the practical result is that it makes the bank card business even more competitive."

Mr. Stone also believes that cobranding will change the way payments are made, particularly in the health care and supermarket businesses. As more alliances are forged, and as they sell advanced payment services to consumers, cards will displace personal checks and cash.

Wells Fargo Bank's California Advantage card is perceived as an ideal single-bank response to the controversial value-added approaches of the cobranded cards, such as General Motors' popular auto rebate program.

Wells Fargo's California Advantage card, which offers rebates toward the cost of Wells mortgage loans, proves that banks can compete in this sweepstakes without taking on a partner. □

JERRY D. CRAFT
President
Wachovia Bank Card Services Inc.
Atlanta

The Visa and MasterCard marks, in our view, are already a form of cobranding, so we have focused primarily on distinguishing between the two.

When you go to an additional partner, one of them is going to be left out.

We want a relationship with our customers where we have more control at our level instead of sharing that with outside entities.

Cobranding is not new. It has been around since the initial stages of credit cards. □

ROBERT M. BOUZA
President
Key Federal Bank
Owings Mills, Md.

I am anti-cobranding, even though we have offered a cobranded secured and unsecured credit card for the past four years.

I started offering an S&H green stamps card, because Key Federal wouldn't have to spend any money on direct advertising and marketing.

But cobranding creates temporary, limited profits, and banks are generally at the end of the leash in terms of getting profits. We have to split everything with the marketing partner. □

ROBERT H. BURKE
Chairman
Bank of New York Delaware
Newark, Del.

We are currently looking for an appropriate partner, but we haven't found the right situation yet.

We feel that most of the cobranded products are failures. The danger of such an offering is pricing it right and giving the consumer real versus perceived value.

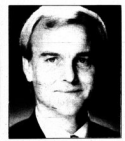
I do think cobranding will be very important in the future. It is the next step from affinity cards. □

DIANNE STIGALL
Senior vice president
Union Planters National Bank
Memphis

We have a cobranded product with the Louis Rukeyser's Wall Street Club, because we saw the benefits it would offer to us by increasing our market share.

I would encourage bankers who are considering such a product to step to the forefront. Otherwise the nonbank companies are going to take over.

So much has been written about banks' not being innovative enough. We need to prove those conjectures wrong. □



TIM BALLINGER
Senior vice president
Fifth Third Bank
Cincinnati

Fifth Third is offering a cobranded product with the Kroger supermarket company, because we see the credit card business getting very focused.

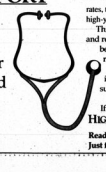
The trend in the industry has been toward cobranding of one form or another.

What we've done with our card is to build on a relationship that is already strong – that of Kroger and its customers.

Cobranding is a reality that won't go away, and I don't think banks can ignore it. □

HIGH YIELD REPORT

lets you *hear the heartbeat and feel the pulse* of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt



IN AN AGE OF DRAMATICALLY declining long-term interest rates, the *American Banker*'s weekly *High Yield Report* delivers money-making tips on high-yield investment opportunities.

This newsletter keeps a close eye on major court proceedings, and legislative and regulatory developments. Each issue features barometers of market size, bellwether pricing tables, a forward calendar, reports on filings, and the results of new-issue sales.

No longer considered the arena of "junk bonds," the high-yield market is rapidly gaining respectability as it is closely tracked by this objective, succinct weekly letter.

If you must know what's "ticking" in the heart of the high-yield market, HIGH YIELD REPORT is a must read every week.

Read it free for 4 weeks!

Armed Forces Bank Shifts to Tiered Rates

By STEPHEN KLEEGE

The Armed Forces Benefit Association unveiled a tiered pricing schedule under which personnel whose credit histories are less than spit-shined can qualify for its cards.

The tight underwriting required for its 12.5%, no-fee credit cards has forced the association's bank to reject 72% of applicants.

Pricing

The bank hopes the addition of two new cards, with slightly higher interest rates, will decrease rejections to 57%.

The association, based in Alexandria, Va., has issued 112,000 credit cards, through AFBA Austin Bank in Colorado Springs, Colo.

The bank's main mission is to provide financial services to military families and federal employees, but it accepts applications from others.

Rates as Low as 8.9%

Under the new pricing, customers with "superior" credit records will qualify for an 8.9% introductory rate.

AT EASE: AFBA hopes looser standards will reduce rejections.

After September 1994, this card converts to a floating rate of prime plus six percentage points with a floor of 12.5%. There is no annual fee.

A second bank of customers, with merely "excellent" credit records, would receive a no-fee card at prime plus seven points and a floor of 13.5%.

"Good" credit risks could get cards with a $20 fee and a rate of prime plus nine. The minimum interest rate would be 15%.

The cards, either standard or gold, offer a 25-day grace period on purchases.

A bank spokesman said that all three levels of card are less expensive and harder to qualify for than the national average.

* * *

Banc One Corp. is testing a Visa Gold Card that carries no interest charges on purchases made through the end of the year.

Analysts said such offers could proliferate as issuers try to stimulate usage in a weak economy.

Similar to Signet Promotion

"Some economists are predicting a slow Christmas shopping season and this may prompt issuers to offer special pricing incentives," said Robert B. McKinley, of RAM Research Corp., Frederick, Md.

The Banc One offer entails a $20 annual fee and, effective in January, a finance charge on unpaid balances of prime plus 9.9 percentage points, currently 15.9%.

Waivers of finance charges are not unprecedented. Signet Banking Corp. has tested a similar promotion to lure balances from competitors.

The card from Banc One's Columbus bank offers a 25-day grace period. There are penalties of $15 for late payment and exceeding the limit, and a transaction charge of $2 to $15 for cash advances. □

Consumer Money Index
Personal loan rates and fees

Here are the personal loan rates and fees being charged by selected large banks and thrifts nationwide on August 3. The rates are those offered to the general public for a $3,000, unsecured personal loan, with a fixed rate and a 24-month term. During the past eight weeks, the trend of these rates has been declining. The eight week trend is based on the rates being charged by the ten largest banks and thrifts in the ten largest markets. The highest rate reported over the period was 15.59% on June 14th and July 6-12. The lowest rate reported over the period was 15.57% on June 21-28.

EXECUTIVE *changes*

USbancorp Chooses Dunkle As Chairman and Chief Exec

Terry K. Dunkle

Terry K. Dunkle, president and chief executive officer of **U.S. Bank**, Johnstown, Pa., has been designated to succeed **Clifford A. Barton** as chairman, president, and chief executive officer of the bank's parent company, USbancorp.

Mr. Barton has held the top position for the past six years.

Mr. Dunkle has more than 30 years of banking experience.

He joined U.S. Bank in 1988 and developed and implemented a restructuring program that included the sale and consolidation of branch offices, realignment of staff, and a strong emphasis on asset quality.

Louis Cyrkar has been designated to succeed Mr. Dunkle as president and CEO of U.S. Bank.

Mr. Cyrkar is currently senior vice president and head of the bank's commercial and retail banking units.

Louis Cyrkar

He, too, has more than 30 years of banking experience – 24 of them with the former Equibank of Pittsburgh, where he rose through the ranks to become senior vice president in commercial lending.

In 1991, he was promoted to senior vice president and head of both the commercial and retail banking groups at U.S. Bank.

The USbancorp board will take formal action on the two appointments before Mr. Barton's retirement, which is scheduled for Jan. 31.

— **Franklin Smith**

MIDWEST

MID AMERICAN National Bank and Trust Co. of Bowling Green, Ohio, has named **Charles Parcher** as its vice president of commercial lending.

Charles Parcher

His responsibilities include developing commercial business for the bank.

MIDDLE ATLANTIC

CREDIT SUISSE USA, New York, has appointed **Moez Jamal** as a member of senior management and as group executive of its treasury group.

Mr. Jamal was previously sector head of international products and equities for Credit Suisse London.

LEHIGH VALLEY BANK, Bethlehem, Pa., has appointed **James F. Duggan 3d** administrative vice president of real estate loan services.

He is responsible for managing the bank's real estate portfolio, including delinquency monitoring, compliance issues, loan growth, and real estate support for commercial lenders.

He was vice president of commercial real estate at First Valley Bank also in Bethlehem.

CHESTER VALLEY Bancorp, Downingtown, Pa., has promoted **Anthony J. Biondi** to executive vice president.

He was secretary-treasurer, and has been chief financial officer since 1987.

Chester Valley, the parent company of **First Financial Savings Bank** in Downingtown, also appointed **Kelly L. Lawrente** as assistant vice president of the thrift.

ASLK-CGER Bank has appointed **Jacques Thys** as executive vice president and general manager of its New York branch.

The bank, whose full name is Algemene Spaar-en Lijfrentekas/Caisse Generale d'Epargne et de Retraite, is based in Brussels.

Mr. Thys succeeds **Jacques Putzeys**, who has returned to Brussels to become president of **Codep Bank**.

SOUTHEAST

SEI CAPITAL Resources, a unit of **SEI Corp.**, Wayne, Pa., said **K. David Wheeler** has joined its Atlanta office as a vice president and manager of SEI Capital's newly formed southern-region team.

John Dickson will be managing director of the Atlanta office and will continue to focus on advising pension funds in the southern region.

The southern region team will consist of the firm's Atlanta and Houston offices. **Daniel D. Trethik** has been named manager of the Houston office.

SOUTHWEST

FROST NATIONAL BANK, San Antonio, announced four promotions to the rank of senior vice president – those of **Tom Collier, James B. Crosby, Cliff McCauley,** and **C. Marvin Rickabaugh.**

Mr. Collier works in the technical planning area. His three colleagues are in commercial lending.

Promoted to vice president were **Linda Douglas,** mortgage servicing; **Beverly Edwards,** private banking; **Gayle A. Gagnon,** trust administration; **Vaughnell Gray,** nonbulk statements; and **Darlene Seisor,** cash management.

The bank also promoted four employees to the rank of assistant vice president: **Mary Keeton** in special projects, **Gloria M. Navarro** in customer information files, **Mark G. Retzloff** in financial planning, and **Debra A. Sul** in consolidated loan operations.

Frost National is a unit of **Cullen/Frost Bankers.** □

Shift in Thrift Business Predicted

Trade Group Head Sees Consumer Loans Gaining

On July 1, Savings and Community Bankers of America named Robert R. Davis its chief economist and director of research. Previously, Mr. Davis ran Davis Financial Consultants, a New York-based financial consulting firm.

Before that, he worked for the New York Mercantile Exchange, the Commodities Futures Trading Commission, the Joint Economic Committee, and Chicago's former Harris Bank.

He tells Washington bureau reporter Robyn Meredith that the thrift business will become more consumer-loan driven.

Robert R. Davis

American Banker: What do you see as the future of thrifts?

Robert Davis: I guess one of the things that I want to say is that the traditional core business is still a good business. Housing finance is important. The needs for housing finance in the future and the public policy for housing finance may adjust to fit the times.

As time goes by, housing will remain important, but it will probably diminish somewhat.

And what will replace that will be consumer and community banking. What we are going to see will not be a watershed change, but a relative shift.

You will probably see relative growth in the portion of consumer-credit-oriented transactions on the balance sheets of savings institutions.

I expect to see a greater diversity in the industry, and more institutions finding niches that have nontraditional components.

AB: You have talked about new products for the thrift industry, but in the future do you also see more consolidation, and in what form?

RD: There will be significant consolidation. There has been consolidation from the economic fallout of the last few years, and that is going to continue.

AB: Do you see more banks acquiring thrifts?

RD: I think it is going to be sort of an equal mix.

AB: Thrifts are highly profitable now, but what will happen when interest rates change?

RD: Part of the challenge is to run one's operations so that you do very well in the good years and do sufficiently well in the bad years, and there is no reason why a depository institution can't do that.

There is good management in this industry. ..those institutions plagued by bad management did not survive.

AB: What public policy will SCBA push for in the future?

RD: The public policy that the organization wants to see – and I believe will see – is one that continues to place an emphasis on organizational arrangements that promote home ownership.

It wants to see public policy that also is community oriented. That is already part of public policy. We have an interest in reminding policymakers of that policy.

That's the reason we're here, to ensure that that environment exists so the important transactions for families and individuals can continue to be served by healthy financial institutions. □

OCC Expanding Scope Of No-Document Lending

The comptroller of the Currency is greatly expanding the universe of national banks that can make small business or farm loans without the documentation that ordinarily is required.

At President Clinton's urging, all the regulatory agencies decided in March to allow well-capitalized banks and thrifts with good managers – those with Camel ratings of 1 or 2 – to make a certain amount of small-business or agricultural loans that cannot be criticized by examiners if they lack the usual paperwork.

The Inside Line

The so-called basket of no-documentation loans may not exceed 20% of a bank's total capital, and individual loans may not exceed $300,000.

The OCC went one step further last week and said 3-rated national banks that are improving may apply for the right to make these loans without worrying about documenation.

Adding 3-rated banks will extend the new policy to 95% of all national banks, said Susan Krause, the OCC's senior deputy comptroller for bank supervision policy. The OCC promises to respond to any 3-rated bank requesting the right to make these no-documentation loans within 30 days.

The other regulators are in agreement with OCC but have not moved to expand their programs yet.

Waiting for 'Specifics'

The goal of the original proposal and OCC's expansion is to spur lending, OCC officials promised New England lawmakers in July that they would broaden the program because that region does not have many well-capitalized banks.

Allowing merely adequately capitalized banks to take advantage of the program may prod more banks to make more loans in hard-hit areas like New England.

Then again, maybe not.

"I don't know of anyone in the state that is using it," said Gerald A. Little, president of the New Hampshire Bankers Association. "People are saying we're waiting for more specifics on how we should deal with it."

Mr. Little made clear that his members appreciate the president's concerns and the regulators' efforts. But he said banks in New England "have been through regulatory hell in the last year, and are averse to adding much risk to their balance sheets right now."

— Barbara A. Rehm

Cut in U.S. Backing of SBA Could Curb Loans by Banks

By PETER SCHOENKE
Special to the American Banker

Legislation reducing government backing for the Small Business Administration's main loan program could force lenders to cut off marginal borrowers, bankers say.

"There is a real concern that some banks will curtail their SBA loans," said Scott Wilfong, senior vice president of First National Bank of Maryland.

The bill, which President Clinton was scheduled to sign late last week, was intended to make limited SBA resources go a bit further.

Guarantee Reduced to 70%

The idea was to provide businesses with smaller loans without increasing the budget deficit.

The agency doesn't actually lend money, but uses its funding to provide guarantees that eliminate much of the risk for banks, thrifts and others that lend to small business.

The new law reduces the government loan guarantee to 70% from 80%, for most small-business borrowers.

Rates and Fees Will Rise

It also limits guarantees on real estate loans above $155,000 to 75%, down from 85%, and imposes a fee of two-fifths of 1% on loans sold to the secondary market.

"The crafters of this proposal are trying to sell this as good for small business because the SBA program won't run out of funds," said Anthony R. Wilkinson, president of the National Association of Government Guaranteed Lenders Inc.

"What they are not saying is at the same time it will increase interest rates and increase fees," he said.

Marginal borrowers would feel the greatest impact of pending legislation.

Demand Problem is Seen

Under pressure to reduce the deficit, lawmakers said they would not be able to provide enough money to meet the growing demand for SBA loans.

At the same time, there is pressure to make more loans to help get the economy going.

The agency expects to guarantee up to $9 billion in loans in fiscal 1994.

Using an 80% guarantee, the agency would have been able to back only $3.2 billion in loans.

Mr. Schoenke writes for the Medill News Service.

PEOPLE

Schumer's Bank Aide Heads Across the Hill

Courtney Ward, the highly regarded banking aide to Rep. **Charles E. Schumer,** D-N.Y., is making the long walk across Capitol Hill from the House to the Senate to become staff director for the securities subcommittee headed by **Sen. Christopher J. Dodd,** D-Conn.

The current staff director, **Martha Cochran,** is expected to join the Clinton administration, either as a member of the Securities and Exchange Commission or in a Treasury Department post. She was on vacation last week and could not be reached for comment.

Mr. Ward has worked nearly five years for Rep. Schumer, first as an aide on a budget committee task force headed by the New York lawmaker, and more recently as Rep. Schumer's banking aide.

In addition to focusing on securities issues, Mr. Ward said he expects to deal with the full range of banking committee subjects, from housing to insurance.

Sen. Dodd is best known to the banking industry as the insurance industry's No. 1 advocate in the Senate.

* * *

Comptroller of the Currency **Eugene A. Ludwig** tapped Texas bank examiner **Sam Golden** to be the agency's ombudsman.

Eugene A. Ludwig
A case of pressophobia?

Last spring, Mr. Ludwig promised that he would appoint an ombudsman to investigate bankers' complaints about examiners.

Mr. Golden, who will remain in Houston, is respected by bankers in Texas, according to **Chris Williston,** president of the Independent Bankers Association of Texas.

"He is man of great intergrity and fairness," Mr. Williston said. "The general feeling of Texas national banks is one of sheer jubilation."

Mr. Golden, who has been with the agency 19 years, faces an uphill battle just getting bankers to use his services. It isn't that banks have nothing to complain about, it's that they fear examiners will retaliate if they file appeals.

* * *

Speaking of **Mr. Ludwig,** he hasn't given a single on-the-record news interview to detail his banking agenda. His invisibility has become a big joke in journalism circles. One industry magazine showed Mr. Ludwig with a bag over his head, and rumors circulated last month that he had a bad case of pressophobia. A spokeswoman said he is not afraid of reporters, he just doesn't want to give interviews before he's fully acquainted with the issues. That's a first for Washington. Mr. Ludwig, she said, is studying up and plans to become more accessible after Labor Day.

* * *

William J. Cunningham, former chief of staff to **Rep. Joseph Kennedy 2d,** D-Mass., has joined State Street Business Group Inc. has senior vice president. He will head the investment banking group's federal relations division.

* * *

Richard J. Miller is the new general counsel for the American Institute of Certified Public Accountants, succeeding **Donald J. Schneeman,** who will stay on as secretary and senior counsel until he retires next year. □

As Ethics Watchdogs Sleep, HUD Signs Up Bias 'Testers'

The Clinton administration's crusade against racial bias by mortgage lenders will not be slowed down by inconsequential matters like ethics.

A case in point is the $1 million contract that Henry Cisneros and the Department of Housing and Urban Development recently awarded to the nonprofit National Fair Housing Alliance to "test" bankers for bias in three cities over a 13-month period.

At the same time the alliance's scalp hunters are masquerading as minority loan applicants on behalf of HUD, the organization is hawking an educational program to banks and other mortgage lenders so they can avoid bias suits.

A Blind Eye

In fact, the alliance announced last week that it was on the verge of signing a nationwide contract with Sears Mortgage to purge its operations of biased underwriting standards and train the troops to be even handed. (I would bet the farm that Sears Mortgage has locations in all three cities targeted by the HUD investigation.)

For some peculiar reason, the ethics police at HUD didn't view this arrangement as the blatant conflict of interest that it is.

HUD's response, when I brought the situation to their attention last week, was to feign ignorance and confusion. (At least, I hope they were feigning.)

A double-assistant something-or-other in Roberta Achtenberg's office (she's the assistant secretary for fair housing and equal opportunity) said HUD had no idea that the alliance was playing for both the offense and the defense.

Shanna Smith, director of programs for the alliance, told me later that her group had been talking to Sears for nearly eight months and that she had told the HUD-ites all about it.

Minor Details

Perhaps their memories are being affected by this town's obscene August humidity.

Or maybe, since the mandate for HUD's test on mortgage bias emanated from Mr. Cisneros and Ms. Achtenberg, the foot soldiers are not focusing on petty details like prohibiting the testers from working for mortgage companies too.

Ms. Smith, who sounds sincere if somewhat naive, told me that no conflict exists because subscribers to her group's educational and self-testing program will not be immune from investigations and suits from the alliance members doing the testing.

(The alliance farms out the testing work to member groups in the cities that are not directly connected to the educational program. But the alliance oversees the operation and signs the checks.)

She doesn't buy my argument that bankers might buy the educational service in the belief that they would be immune from the HUD sting operation.

Carrot and Stick

I listened to a tape of a spiel Ms. Smith gave June 23 at a conference sponsored by the Consumer Bankers Association, and the program sounded like pretty good protection to me.

"You're wasting time with self-testing," she began. " Most programs won't protect you from suits."

She added, "I am extremely concerned that the testing you are doing won't go to the core of what is a civil rights or a fair-housing act violation, and that you in fact might be spending a lot of money on mystery shops per-type of activities with the illusion that you are protecting your institution from a fair-housing act challenge. I'm here to tell you that these programs aren't going to protect you from our perspectives."

She said the bankers that the alliance was working with Sears and that the group hoped to duplicate the arrangement with other lenders.

Action Needed

She then said by way of a warning. "One violation of the act is enough to bring a lawsuit. We don't have to prove a pattern of practice."

HUD in the least ought to investigate the alliance's pending arrangement with Sears, ASAP.

Better yet, it ought to amend the testing contract and prohibit the alliance from working for any mortgage lender in the test area during the 13 months the program will be in effect. □

AT THE SAME time scalp hunters are masquerading as minority loan applicants, the organization is hawking an educational program to banks and other mortgage lenders.

When Recruiting Future Execs, Look for Skill in Juggling Complexity

Behind the success of Operation Desert Storm was primary management research that could have a significant impact on how banks recruit.

Banking in North America has gone through arduous changes in the past decade, and more is coming. It takes truly competent managers to capitalize on the opportunities and challenges that lie ahead.

Recruiting and promoting this capability will be critical to maintaining a competitive edge.

It is no longer simply a matter of recruiting for today's job. Banks must recruit and promote for the future.

Therefore, banks need more reliable means of forecasting a candidate's potential.

Career-Path Appreciation

In 1988, the United States Army Research Institute released a report on research that assessed various methods used for determining who will rise in the Army officer corps and who will not.

The institute examined one method of predicting management potential and compared it to the other techniques most commonly used.

It concluded that this new method, known as "career-path appreciation," clearly exceeded the others in its capacity to predict the level of work a person would be capable of performing five to 10 years into the future.

Differences in Potential

Career-path appreciation does not rely solely on intelligence, gender, cultural background, personality traits, or personal values.

Rather, it is based on the fact that humans mature at different rates in their ability to handle complexity.

Despite the common belief that anyone can be a corporate CEO, some will never be able to handle complexity at levels enabling them to assume middle and senior management positions.

Elliott Jaques, a renowned management scientist and visiting professor at George Washington University, developed the concept of individual growth curve capability to handle work complexity.

It is upon his theories that career-path appreciation is founded.

It appears that most managers can learn to be accurate as the career-path appreciation process in predicting employee potential.

How this process works and why it quickly becoming a popular method of forecasting management potential is already documented by banks employing it in Canada.

DESPITE the common belief that anyone can be a CEO, some people can never handle complexity well enough even for jobs in middle management.

How It Works

Other companies have started to go beyond this to develop management capability to use Prof. Jacques' techniques.

What are the steps required for a manager to use career-path appreciation successfully?

The first is to develop an understanding of his or her own organization relative to work complexity.

The second is to accurately assess the complexity of the work that the manager is recruiting for, according to the criteria Prof. Jaques has designed. Then you will be able to determine an applicant's actual operating capacity and derive the basis for forecasting potential.

A Bottom-Line Issue

This technique requires considerable expertise. But once in place, it can transform the predictive reliability of a bank's human resource planning system.

Talent-pool development and management succession planning are of no small importance when it comes to what lies ahead for the banking industry.

Techniques like these offer significant improvements in a bank's bottom-line operations. □

PROFESSIONAL EMPLOYMENT OPPORTUNITIES

Internal Auditor

Outstanding Management Career Opportunity In Commercial Banking

We're a high performing, top-rated, $440 million commercial bank with a history of strong earnings, carefully planned growth, and a unique style of doing business. To continue this enviable trend, we're seeking a highly qualified New York Metro Area resident to head up our expanded Internal Audit Department.

To qualify, you should have a B.S. in Finance or related area (M.B.A. and/or C.P.A. a plus); 5 years' audit experience, at least 3 of which should have been in a supervisory/management capacity; well-developed analytical and organizational skills; and experience with PC based audit programs and spreadsheet applications. In addition, a successful track record of planning audit programs, managing and coaching staff, plus analyzing problems and recommending appropriate changes to management and the Board is expected. You should also be able to offer the exceptional communication skills and proven expertise required for successfully interfacing with all levels of management, the Board of Directors, external auditors, and regulators.

This position reports to top management and the Board, and carries an attractive compensation and benefits package attuned to your experience and anticipated contributions. For confidential consideration, send your resume, with salary requirement, to: Vice President, Director of Human Resources, Department-IAB, Hudson Valley National Bank, P.O. Box 189 Centuck Station, Yonkers, New York 10710. We are an equal opportunity employer m/f.

Fitch to Review One of Barclays' Ratings

NEW YORK — Fitch Investors Service Inc. has placed Barclays Bank PLC's AA long-term rating for structured transactions under review for a possible downgrade, the New York-based rating agency announced.

Structured transactions include letters of credit and liquidity facilities for asset-backed commercial paper programs.

Fitch said it put Barclays under review after estimating that the bank will continue to suffer from problem loans in nearly all categories.

"The burden of addressing loan quality problems may limit the bank's competitive position and responsiveness to an economic upturn," Fitch said in a statement.

London-based Barclays last week reported a $1.05 billion increase in provisions for problem loans and large charges against U.S. assets for the first half of this year.

Union of Switzerland Earnings Jump 89%

ZURICH — Union Bank of Switzerland said its first-half group net profit rose 89% to SR440.0 million, from the corresponding period of 1992. Analysts had expected an increase of 35% to 50%.

Cash flow rose 58% to $1.5 billion, while assets increased 9% to $189.6 billion.

Provisions, value adjustments, and depreciation remained high at $698 million, up nearly a third from the year-earlier level, with the bank blaming "doubtful debts and country risks."

Get Maximum Profit From Your Lease Portfolio
Colonial Pacific leasing offers **top dollar, competitive rates and prompt funding.**
Selling to Colonial gives you the advantages you want:
❖ Non-recourse arrangements.
❖ We do all future billing and collecting.
❖ Your customers never pay quality care.
❖ We refer all repeat inquiries to you.
Selling your portfolio makes good business sense:
❖ Eliminate credit risk and administrative cost.
❖ Free up your capital for other investments.
❖ Maximize profits with maximum spreads.

Credit Ratings

By DAVID SIEGEL

The ratings agencies took the following actions last week:

Bank of New York: Thomson BankWatch affirmed the bank's issuer and debt ratings and said the bank completed the purchase of National Community Banks Inc. Bank of New York's issuer rating is B, its short-term rating is TBW-1, its senior debt rating is A, and its subordinated debt rating is A-minus.

California Federal Bank: Thomson BankWatch downgraded the preferred stock to CCC-plus from B-minus. Thomson cited Calfed's $45.5 million loss in the second quarter and said further losses due to asset valuation writedowns were possible.

First USA Bank: Moody's Investors Service Inc. assigned to First USA Bank ratings of Baa2 for long-term deposits, Prime-3 for short-term deposits, and Ba1 for its recent issue of 7.65% subordinated notes due 2003.

The ratings incorporate the bank's significant position within the credit card sector and the good credit performance of the bank's credit card portfolio. The ratings also reflect the company's relatively modest capital base, its reliance on purchased funds and credit card securitizations for funding, high double leverage at the bank holding company level, and the bank's holding company.

Other factors considered include the expectation that the company's main businesses will be pressured by competition, and that its high profit margins could be subject to erosion.

National Community Banks Inc. Standard & Poor's Corp. raised its ratings on National Community's series B 7.75% cumulative convertible preferred stock to double-B-plus from BB-minus.

The upgrade follows the completion of the acquisition of National Community by A-rated Bank of New York Co. Each outstanding share of National Community's Series B preferred stock has been converted into one share of Bank of New York's class A 7.75% cumulative convertible preferred stock.

Thomson BankWatch raised National Community Bank's issuer rating to B from C/D, and short-term ratings to TBW-3 from TBW-3, due to Bank of New York's purchase of the bank.

Shawmut National Corp.: Duff & Phelps Credit Rating Co. upgraded Shawmut National Corp. and its lower-tier holding companies, Shawmut Corp. and Hartford National Corp., as well as the ratings of its two subsidiary banks, Boston-based Shawmut Bank and Hartford-based Shawmut Bank Connecticut.

The senior debt rating of Shawmut Corp. and Hartford National was raised to BBB from BBB-minus. The subordinated debt rating of Shawmut National Corp., Shawmut Corp., and Hartford National Corp. was upgraded to an investment-grade BBB-minus from a junk rated BB-plus. The preferred stock rating of Shawmut National Corp. was raised to BB-plus from BB.

The long-term deposit rating for Shawmut Bank and Shawmut Bank Connecticut was upgraded to BBB-plus from BBB, while the short-term deposit rating was reaffirmed at Duff-2.

The rating upgrades recognize the continued improvement in the underlying fundamentals of the corporation, including earnings, asset quality, capitalization, and liquidity.

The progression in the recovery from severe asset-quality problems has evolved from a position of identifying and containing loan problems to one of building core earnings power and establishing a sufficient structure to improve the organization's competitive position, the agency said.

Signet Banking Corp.: Standard & Poor's Corp. affirmed its BB-plus subordinated debt rating of Signet Banking Corp. S&P also affirmed its BBB/A-2 rating for uninsured CDs of Signet Bank Virginia and Signet Bank Maryland, which are backed by assets backed by letters of credit.

The agency revised and withdrew the bank's ratings outlook to "positive" from "stable." The outlook revision reflects Signet's continued progress in disposing of its large book of troubled commercial real estate assets, as well as strong operating performance achieved funds purchased and securities sold under agreements to repurchase in domestic offices of the bank 1,998,147

STOCKS

Countrywide Drops After Lower Rating

By GORDON MATTHEWS

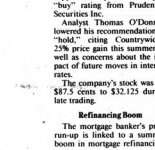
Shares of Countrywide Credit Industries, the nation's largest mortgage banking company, slipped Friday after losing a "buy" rating from Prudential Securities Inc.

Analyst Thomas O'Donnell lowered his recommendation to "hold," citing Countrywide's 25% price gain this summer as well as concerns about the impact of future moves in interest rates.

The company's stock was off $87.5 cents to $32.125 during late trading.

Refinancing Boom

The mortgage banker's price run-up is linked to a summer boom in mortgage refinancings



– the fourth such surge in the last two years – as interest rates have steadily fallen.

"Most of the positive impact of the current mortgage refinancing boom is already reflected in the share price," Mr. O'Donnell said.

"Even if rates remain at current levels, or below, and the boom continues, [price] upside in Countrywide will likely be limited, near-term," he said.

Up in March, Down in May

On the other hand "a rate rise, by slowing [home loan] production, could put downward pressure" on Countrywide shares.

The stock surged last March, after a significant decline in long-term interest rates began, presaging a new round of mortgage refinancings.

But in May, when investors feared inflation was rebounding and rates might rise, Countrywide shares fell sharply.

They began climbing again after the scare passed and have risen through the summer as economic indicators have remained sluggish.

New Drop in Some Rates

While rates are hard to predict, the continued sluggishness in the economy and low level of inflation indicated last week by government reports has prompted a new decline in some rates.

Mr. O'Donnell said the low interest rate environment that stimulates mortgage refinancings and production of new loans also carries risks for the earnings of mortgage bankers because it increases the run-off of loans from the servicing portfolio and accelerates amortization of servicing rights.

Risk Seen as Offset

Mortgage bankers have two main sources of earnings: from the origination of loans and their sales into the secondary market, and from servicing loans for a fee.

Over the past three quarters, Countrywide has offset the risk to earnings from portfolio run-off by assuming a higher rate of amortization in its $69.2 billion servicing portfolio, Mr. O'Donnell noted.

But other analysts say the company is still trading at a discount to its rapid earnings growth rate.

Other Views

Analyst Sy Jacobs of Alex. Brown & Sons Inc. has a "strong buy" rating on the stock. He said Friday he was "as bullish as ever," believing Countrywide will fare even better against competitors if rates rise.

Mr. O'Donnell acknowledged that, longer-term, Countrywide is in an enviable position as the mortgage industry leader.

The company is admired on Wall Street for using its economies of scale and advanced technology to apply pricing pressure and gain market share from competitors.

Record Year Expected

During some periods over the last two years, the stock has ranked among the better-performing issues on the New York Stock Exchange

The company has said it is on track to produce $40 billion in home loans this year, up 30% from last year's record pace. Within five years, Countrywide hopes to seize 6% of the nationwide mortgage market, as measured by originations. It has 3.8% currently.

FRIDAY'S MARKET

Shares of UJB Financial Corp. rose Friday in another session of volatile and active trading sparked by takeover speculation about the Princeton, N.J., banking company.

In late trading, UJB was up 25 cents to $31.875, another 52-week high. Volume of 571,200 shares was 2.5 times normal. □

DEALS

Morgan to Lead $1.1 Billion Financing For Eaton Purchase of Westinghouse Unit

Continued from *page 1*

than though an agent bank, Mr. Lamont said.

Pittsburgh-based Westinghouse announced last week that it will sell its electrical distribution and industrial control manufacturing businesses to Eaton, a diversified manufacturer, for $1.1 billion.

Could Fall Through

Eaton's purchase could fall through if Siemens AG decides to make a competing offer for the Westinghouse assets, under a right of first refusal the German company has from a 1989 contract with Westinghouse.

Other companies that are arranging loans for recently announced acquisitions include Louisiana Land and Exploration Co., the Toronto Group of Arkansas, and Quorum Health Group Inc. of Nashville, Tenn.

Supports Pending Purchases

Louisiana Land has a fully underwritten credit of $790 million, said a banker. Morgan is the lead manager of the credit, and Chemical Banking Corp.'s Texas Commerce Bank and NationsBank are co-managers, said a spokeswoman for the New Orleans-based company.

The financing supports the company's pending purchases of oil and gas assets from Nerco Inc. for $353.7 million in cash, and North Sea oil assets from British Gas Exploration Production Ltd. for $232 million in

Morgan will provide some of the loan itself and syndicate the rest.

cash. Some of the debt will be refinanced, said the spokeswoman, who declined to elaborate.

NationsBank Banner

NationsBank Corp. is rumored to have underwritten a financing of around $400 million to $500 million for the Stephens Group's purchase of the Donrey Media Group.

Donrey is a privately held company based in Las Vegas with newspaper, cable television, and advertising holdings. Its market value has been estimated at $950 million. Stephens Group is the parent of Stephens Inc., a Little Rock-based brokerage firm, as well as other holdings of the Stephens family.

Stephens and Donrey representatives declined to comment on the price or financing of the acquisition.

Amsouth Tapped

Quorum has tapped Amsouth Bank to lead a $275 million bank line to support the group's $335 million cash purchase of 10 hospitals from Charter Medical Corp. according to Bob Yaeger, chief financial officer. Amsouth currently leads an unused $100 million line, which has five other banks in it, he said.

Terms of the new facility have not been finalized, but it is expected to be a three-year revolving credit that will convert to a four-year term loan, with a borrowing rate expected to start around 225 basis points over the London interbank offered rate, subject to change based on the company's leverage, said Mr. Yaeger. □

Bankers Trust Fills Top Syndications Job

By YVETTED. KANTROW

Bankers Trust New York Corp. has appointed Ted Virtue head of its loan syndication department, which has been operating without a leader since the departure of Morgan St. John in May.

Mr. Virtue, 33, will run the unit while retaining responsibility for the company's high-yield capital markets department.

Both businesses reside in Bankers Trust's global investment bank division.

Mr. Virtue joined Bankers Trust in 1990 as a vice president and was named a managing director the following year.

He took over the high-yield capital markets division in 1992.

A Long Commute

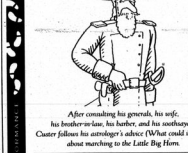
Mr. St. John, 36, had been running loan syndications for less than a year when he stepped down for personal reasons in May.

During his tenure, he commuted between his Los Angeles office – where he had been co-head of structured finance for the bank – and New York, where the syndications desk was based.

In Mr. St. John's absence, loan syndications was jointly managed by three of his former subordinates.

A Bankers Trust spokesman said the trio will now report to Mr. Virtue, who will report to Yves de Balmann, one of the heads of Bankers Trust's global investment bank. □

Footnotes in History



After consulting his generals, his wife, his brother-in-law, his barber, and his soothsayer, Custer follows his astrologer's advice (What could it hurt?) about marching to the Little Big Horn.

Firstar Completes Takeover

MILWAUKEE — Firstar Corp. has completed its acquisition of Bank of Athens in Wausau, Wis.

Terms were not disclosed.

Firstar said it will combine Bank of Athens' six central Wisconsin locations with its own operations in that area next February. □

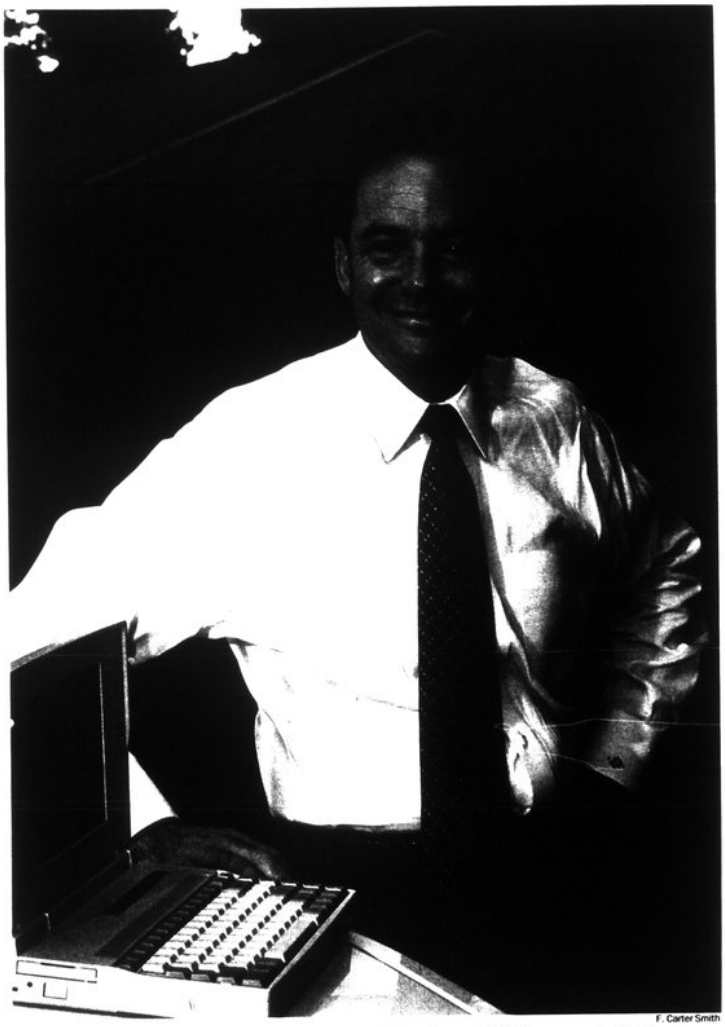
Community Banking Technology Survey

USING INFORMATION TO INCREASE PROFITS



F. Carter Smith

GOING UP: **Houston's Tanglewood Bank anticipates a 10% increase in data processing costs this year, says executive VP Jerome Simon.**

Technology Tab Getting Bigger at Smaller Banks

BY BRIAN HELLAUER

COMMUNITY BANKS are welcoming new technology with open arms – and an open checkbook.

Spending on information technology in community banks, defined as bank holding companies with less than $1 billion in assets, will total an estimated $1.25 billion in 1993, a 12% increase over 1992.

The information comes from the *American Banker*/Ernst & Young 1993 Community Banking Technology Survey, conducted by the Tower Group, a Dover, Mass.-based consulting firm.

THE BACK OFFICE: SYSTEMS

While the $1.25 billion figure represents only a small fraction of the industry's overall annual technology expenditures of $15.3 billion, spending in community banks is growing at nearly twice the annual rate of the industry as a whole.

Likewise, the number of people employed in community bank technology functions is expected to grow from 10,200 this year to slightly more than 12,000 in 1996, an annual growth rate of 6%.

By contrast, employment in the technology sector for the entire industry is expected to grow only slightly in same period, after declining at the beginning of the decade.

The forces shaping the community banking environment – robust net interest margins coupled with increasing competition from regional banks and rising regulatory costs – are driving many smaller banks to beef up their spending on hardware, software, and personnel.

"A lot of institutions are bringing up systems that the larger banks have had in place for years," said Warren Heller, research director of Veribanc Inc., a bank rating firm based in Wakefield, Mass.

Community banks, added Mr. Heller, are playing catch-up not only with their larger competitors, but with other small businesses as well.

The latest branch automation systems now found in many community banks resemble something "your local auto-parts store has probably had for 10 years," he added.

Still, Mr. Heller sees the upward trend as a positive sign. "Spending on technology is part of the cost of retooling. The implication is that the people that are buying are knowledgeable and making excellent purchasing decisions. That's what it's all about," he said.

Banks with less than $1 billion in assets are often perceived as less technologically sophisticated than their larger counterparts. But in many cases, community bankers are installing systems that match or even surpass those in place in larger institutions.

Applications based on image technology, which have been slow to catch on in larger banks, are at the top of the shopping list for many community banks.

Used in item processing, customer service, signature verification, and other applications, imaging systems are designed to improve the workflow and reduce the flow of paper through a bank's branch or

WHAT DO YOU WANT, A GUARANTEE?

In the uncertain world of systems development, it's wise to ask for some solid assurances–like a fixed price and guarantee of your satisfaction. Which is what you can expect when Broadway & Seymour designs and builds your large bank applications. We'll begin by establishing a fixed price for each project up front so you'll know exactly what it will cost upon completion. Plus, we'll stay on the job at no extra cost to you until you're absolutely satisfied with the results. Fact is, we're the only systems development company to offer such a guarantee against runaway projects. And you won't find a more responsive group to work with than our expert staff. So find out all the ways we bring applications development down to earth. Call Don Jeffries at 800 BSI-WATS (274-9287).

APPLICATIONS DEVELOPMENT IS NO LONGER BUSINESS AS USUAL.

Community Banks Join PC Revolution: More Units, More Uses

BY WILLIAM PESEK JR.

ALONG WITH WHITE pillars out front and classic furniture in the lobby, community banks will soon have another standard feature: personal computers.

The *American Banker*/Ernst & Young 1993 Community Banking Technology Survey indicates that small banks are purchasing personal computers at almost the same rate as larger banks, indicating that small asset size doesn't necessarily translate into technological timidity.

The survey found that there will be about 103,000 PCs installed in community banks by the end of 1993 and at least 151,000 by 1996.

"There's an increasing trend toward the use of PCs in community banks," said Randall B. Grossman, manager of information technologies at Gemini Consulting Inc., Cambridge, Mass.

"The question for small banks has moved from 'Should I use PCs?' to 'Why shouldn't I use PCs?' "

Community banks are using PCs for a wide range of applications. And the machines are being used not only by programmers, tellers, and platform personnel. Small banks also are likely to use PCs to run core deposit, loan, and accounting applications.

Clearly, community banks are better suited than large banks to the use of PCs for mission-critical applications at the present time, because the processing volumes of the smaller banks are much lower.

In the case of some banks, a single 486 PC can handle the requirements of an entire institution. Others might require several PCs linked using a local area network. But in both cases, such an arrangement provides a glimpse into the future for all banks, as PCs assume a more important role in banks of all sizes.

"We're using PCs because the technology is moving in that direction and advances in the mainframe have reached a plateau," said Lee R. Gibson, executive vice president at Southside State Bank, Tyler, Tex.

The $377 million-asset bank has departed from the strategy used by most institutions its size and purchased a core banking system that runs on PCs. Southside uses software from Perot Systems Inc. to run a local area network of personal computers, replacing a system that ran on an NCR Corp. midrange computer.

The new system is designed to give customer service representatives a comprehensive picture of customers' banking relationships. Southside will be able to expand its range of retail products, as the current system limits the number and complexity of products – such as certificates of deposit and money market accounts – that it can offer.

Like most community banks responding to the latest *American Banker* survey, Southside State Bank's PCs use Microsoft Corp.'s venerable DOS operating system. According to the survey, community banks use more than 84,000 DOS-based PCs. Coming in second, with 10,000 units, is Microsoft's Windows operating environment, a graphical user interface which sits on top of DOS.

By 1996, small banks will likely be using 86,400 DOS machines and 50,000 that run Windows.

Still, it's far too early to conclude that PCs have replaced the mainframe at banks. The American Bankers Association's annual survey of banking automation showed that banks with between $300 million and $1 billion in assets still favor mainframe software for their on-line retail applications.

But despite the rising power of the personal computer, about 60% of financial institutions with less than $1 billion of assets still use a mainframe or midrange computer to drive "dumb" terminals at the branch.

One reason for this, Mr. Grossman asserts, is the fact that converting from a host computer to an LAN can be a major headache, causing many smaller banks to steer clear of this strategy.

Another community bank that has made a big move over to PCs is Glenview State Bank, Glenview, Ill. The $500 million-asset institution has expanded the network of PCs used by its platform personnel from 10 to 150 in the last couple of years. The bank, which is currently does core processing on a mainframe, is in the process of moving all mission-critical functions over to the personal computer.

"We set a goal early on that we didn't want to lose any of the functionality when we moved from mainframe to PC," said Ron Gafron, management information systems director at Glenview. "That functionality is beginning to show up."

Functionality and flexibility are vital components of Glenview's customer services campaign. The core of the community bank is the individual customer relationship. Therefore, getting PCs on the front line supporting that type of relationship is the primary goal.

"The customer service platform is mission critical for small banks," Gemini Consulting's Mr. Grossman said.

Glenview's mortgage processing business in particular has reaped benefits from the use of PCs. With refinancing in vogue, the bank now handles four times as much volume with the same staff levels, Mr. Gafron said.

"Our people are getting much more done with PCs," he said.

While Houston-based QuestStar Bank relies on a mainframe, it turned to Fiserv Inc. to automate its platform area with a microcomputer-to-mainframe linkup to make the system more useful. That saves the bank the trouble of having to input the same information over and over.

Previously, a clerk opening a new account would take down the information by hand, then type it on a signature card. The information would go to the data processing area to be entered onto the mainframe, but would have to be typed once again for a new-accounts report.

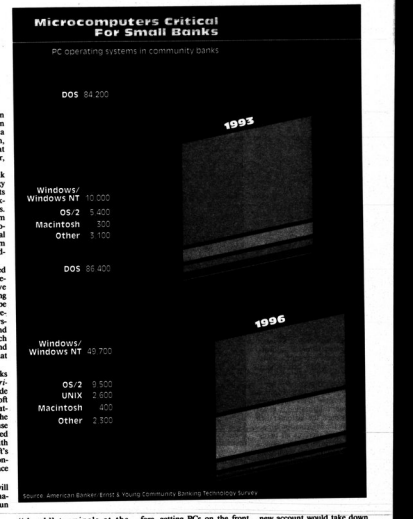
"PCs have allowed our loan and new-account platform people to do things faster and easier," said Tim O'Brien, the bank's executive vice president of operations and finance.

QuestStar has also made wide use of local area networks that link each branch's computers and terminals. With the LANs, information moves quickly, giving the main bank-office more control and scrutiny over each day's loan originations.

"With PCs we're gaining better access to information and maximizing it," Mr. O'Brien said.

PCs have yet to become the norm in the community bank arena, but according to the latest *American Banker* survey, they are definitely in the game to stay.

"In the future, PCs are going to be used everywhere in community banks," Mr. Grossman said. □



How the Survey Was Conducted

THE ARTICLES IN this publication analyze and report the results of the *American Banker*/Ernst & Young 1993 Community Banking Technology Survey, conducted by the Tower Group. The survey, containing many detailed questions on banking technology, was delivered to the chief executive officers at 1,200 selected bank holding companies with under $1 billion in assets.

Seventy-eight surveys were returned. The statistical validity of the results will vary based on the number of respondents who answered any particular question, the degree to which their interpretation of the question was consistent with others', the structure of the particular question, and the degree to which the distribution of the respondents answering the question is representative of the population at large. □

PCs will even power some back offices

Consumer Banking: Branch Automation

Computers Allow Branch Staff to Focus on Customer

BY PATRICIA A. MURPHY

WHEN IT COMES TO customer service, most community bankers believe that the personal touch goes a lot further than simply automating branch workers' jobs.

But now they are finding that some well-placed technology can actually improve that person-to-person approach.

The proliferation of inexpensive personal-computer hardware and sophisticated software has contributed significantly to employee productivity, freeing up branch workers to spend more time with clients.

PC technology "keeps us in compliance [with federal regulations] and it keeps us accurate," said Ann Lee Suttles, senior vice president of Oklahoma Bank, a $118 million-asset institution based in Oklahoma City.

Before it recently introduced PCs into its main office and single branch, said Ms. Suttles, Oklahoma Bank's customer service representatives used typewriters to detail information on new accounts – information that later had to be rekeyed into various computer systems.

Now, with personal computers accessible to all employees, customer information is keyed in only once; the customer then reviews the information for accuracy and receives all necessary regulatory disclosures within minutes of opening an account.

By working with PCs, the bank also benefits because it has access to all the basic information gathered during that initial account-opening session, streamlining subsequent dealings with customers.

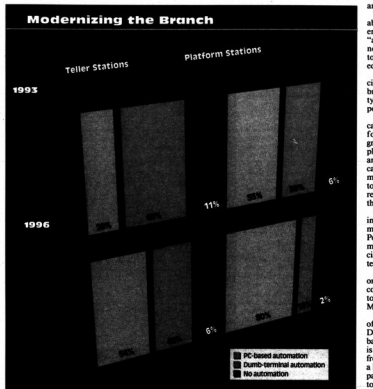
The experiences of Oklahoma Bank closely resemble those of a growing number of smaller institutions, as illustrated by key findings of the *American Banker*/Ernst & Young 1993 Community Banking Technology Survey.

Only 6% of community banks today have no type of automation in the platform area, and all but 2% expect platform stations to be automated by 1996, according to the research, conducted by the Tower Group, a bank technology consulting firm based in Dover, Mass.

Most of the platform systems in place today at community banks rely on PC technology – 55% of those banks responding to the survey use PC-based automation in platform operations; 39% use "dumb" terminals connected to mainframe or minicomputer systems.

Teller automation is still less dependent on PC technology, the survey indicates – 60% of the community banks participating in the survey use dumb-terminal automation at teller stations, 29% use PC-based systems, and 11% have not automated their teller stations.

The survey covered a broad array of technology topics and elicited responses from 78 institutions, each with assets of less than $1 billion.



For many community banks, the move to automation is a response to competitive pressures. As larger banks begin moving into the traditional market strongholds of community banks, most are deploying technology that helps enhance the personal touch that community banks have become known for, said Greg Schmergel, vice president of the Tower Group.

Computer systems enable tellers to instantly access information on customers, for example, and to expedite routine transactions like the depositing of checks.

"As the big banks do that, it becomes more important for the community banks to make sure their technology keeps up with what is possible," said Mr. Schmergel.

"Once you've experienced the one-minute check deposit, you get really fed up with 10-minute transactions," he said.

More to the point, however, the 10-minute transaction is a situation no bank can endure and expect to remain profitable, particularly a community bank that lacks the financial backing of a large holding company structure.

"We have to serve our customers efficiently and bring profits to the bottom line," said Ms. Suttles of Oklahoma Bank.

"We don't have a big brother or big sister upstream who can take care of us."

And the best way to achieve that goal, community bankers say, is through customer convenience.

Hannibal National Bank in Hannibal, Mo., is a case in point. The $85 million-asset institution has found itself serving an aging clientele. But it is eager to expand its presence among younger consumers, who demand more convenience than their elders, said Jerry Trower, the bank's president.

Bankers that have automated their branches report they can expand business without adding staff

"Loans and fee-based services are the keys to profitability, and as a rule, older people don't need loans or go in for fee-based services," said Mr. Trower. "To get more customers, we had to add convenience" to the bank's service mix.

Toward that end, Mr. Trower said, Hannibal National, which always operated out of one location, has installed automated teller machines at two local convenience stores that enable customers to access their accounts remotely. And the bank is in the process of building its first branch office.

Strategies such as this are what will keep community banks in business, even as big banks continue spreading into markets that have been the traditional strongholds of smaller banks, said William T. Gregor, senior vice president and director of Gemini Consulting Inc., Cambridge, Mass.

"The biggest competitive advantage community banks have is that they can comfortably fit themselves into the specific community with its idiosyncracies and its social structure," said Mr. Gregor.

The objective is to design bank operations efficiently, and automation provides community bankers everywhere with the means for achieving that goal.

Bankers who have deployed automated systems in their branch operations report that they are able to expand business without adding staff.

"Automation will allow us to serve a lot more customers with the same number of people we have now," Ms. Suttles said.

With a staff of 57 working in four facilities, Oklahoma Bank as of June boasted $2.03 million in assets supported per employee, up from $1.99 million at yearend 1992, said Dewey Milby, executive vice president and chief financial officer.

"Ten to 20 years ago it was about $1 million in assets per employee," said Mr. Milby, "and I believe 10 years from now we're going to have to go to $3 million [in assets supported per employee]."

Over and above general efficiencies, an important facet of branch automation is the ability to improve cross-selling opportunities.

The software used in a typical platform or teller system, for example, can be programmed to alert branch employees that a customer they are working with has a certificate of deposit that is about to mature and to advise that customer on options available for reinvesting that money with the bank.

"You can't just open a checking account in a bank and make money any more," added Joe Petruzella, vice president of marketing at BancTec Financial Systems, a Dallas-based technology firm.

"The whole key is to have one customer with four accounts, rather than four customers with one account each," Mr. Petruzella said.

What is the bottom-line cost of all this added functionality? Depending on the size of a bank and the extent to which it is being automated, anywhere from a low of about $30,000 to a high of about $1 million. The payback period is typically 18 to 36 months, again depending on the specific circumstances.

The investment made by the Bank of Walnut Creek, Walnut Creek, Calif., is at the low end of the spectrum. According to Lee Wines, executive vice president, the $115 million-asset institution spent about $30,000 on new hardware and software to automate teller and platform functions at its headquarters and three branch sites in the late 1980s.

"When we installed it, our payback was in improved efficiencies and reductions in errors," said Mr. Wines. "We felt there was a 24-month payback on it."

This year's survey shows that the growing requirements of community banks with regard to technology are in keeping with what John O'Malley, chief operating officer of Orlando-based branch systems supplier Systeme Corp., sees in the marketplace.

"A lot of it is driven off of what the bank perceives to be its strategic direction and the tools necessary to achieve its goals," said Mr. O'Malley.

And for community banks these are important perceptions.

"When you're dealing with community banks, all of these investments [in people and technology] are strategic," said Mr. Gregor, the consultant.

"With large banks, you can make a half dozen different investments, and if some don't work you can fall back on others. These investments are much more critical for community banks," he said. □

"WE WANTED A LONG-TERM TECHNOLOGY PARTNER."

Jay C. Lent
Exec. Vice President & Chief Financial Officer
The New Milford Bank & Trust Company
New Milford, Connecticut

"There's more to selecting a software system than how well it computes interest rates. We put our trust in a company with financial superiority and a proven commitment to the highest standards of service.

"Systematics' Horizon software, specifically designed for the IBM AS/400 platform, certainly gets the job done, but we were more interested in where they were taking the system. There is no limit to the products we can offer today, and we know that Systematics will grow along with us.

"You expect the salespeople to be good, but we found everyone on the Systematics team to be first-rate.

"I wanted this technology decision to take us into the next century. With Systematics, I know we made the right choice."

The Back Office: Systems

Small Banks Find Imaging Systems Give Competitive Advantage

BY WILLIAM PESEK JR.

CHECK IMAGE technology is often regarded as the province of large, high-volume banks. But now community banks are beginning to get the picture.

Already several banks with assets under $1 billion have become the first in their markets to offer check image statements – which contain miniature pictures of checks rather than the checks themselves – to their retail customers.

The *American Banker*/Ernst & Young 1993 Survey of Technology in Banking indicates that community banks will be focusing more on imaging. The survey shows 15% of community banks – defined as any bank with less than $1 billion in assets – expect to have imaging capability by the end of 1993, with 24% setting their sights on 1995.

For community banks, the possible benefits of check imaging are many, including lower operating and postage costs, better customer service, and improved marketability.

"Small banks have moved quite aggressively to use imaging technology," said Charles W. McDonough, a partner with Andersen Consulting in Detroit. "The key challenge for community banks is to offer the same services of the larger banks while keeping the personal touch part of their own offerings."

Raising the level of customer convenience is key. Community banks have realized that in today's climate, a familiar face behind the teller counter and toaster giveaways may no longer ensure that customers will keep coming back. Like those consumers who bank with the big guys, community bank customers are demanding convenience and heightened service.

A possible solution for some aggressive but modestly-sized banks – particularly those battling encroaching superregionals – is imaging.

"Institutions looking to get an edge are finding that check imaging just may be it," Mr. McDonough said.

New technology, he noted, allows small banks to return images of checks to customers rather than the actual document, store images for archival purposes, retrieve images in response to customer inquiries, and provide images for use in signature verification.

"The bottom line of our bank is to serve customers better, and getting them the information they need faster is a big part of that," said H. Leigh Ballance Jr., president and chief executive officer at Unity Bank and Trust Co., Rocky Mount, N.C.

Unity was the first bank in North Carolina to offer image statements to its checking account customers. This puts the $145 million-asset bank ahead of neighboring mega-institutions such as First Union Corp., Wachovia Corp., and NationsBank Corp., which have yet to offer a similar service.

Unity uses imaging as a way to demonstrate its technological leadership and show that it is at least as progressive as bigger banks in the market.

"Imaging checks has allowed us to differentiate ourselves from the other banks in the area," said Mr. Ballance.

Unity purchased a PC-based imaging system from Broadway & Seymour, Charlotte, N.C. The system, called Echo, was developed from software purchased from Document Solutions Inc.

Cost savings from the imaging program fund the bank's no-fee checking product. According to Mr. Ballance, that has translated into a gain of 1,500 new accounts since the system was installed in February. The average balance for those accounts is $528.

While Unity's system is already up and running, many community banks are still looking for a check imaging system to give them the same edge.

"There are a tremendous amount of benefits to check imaging in banks our size," said Terry W. Goettsch, director of information processing at TransFinancial Bancorp., Bowling Green, Ky.

The $370 million-asset institution, which has been toying with the idea of check imaging for about a year, is currently looking at software from Albuquerque-based G.G. Pulley & Associates Inc., which provides document processing software for International Business Machine Corp.'s AS/400 line of mid-range computers.

Mr. Goettsch thinks Pulley's SuperStmt application will enable the bank to reduce the costs of statement preparation and mailing, while providing other marketing and fee income opportunities. Though no contract has yet been signed, TransFinancial is moving toward a decision.

"If everything falls into place and the cost benefits are there, we'll be up and running before 1994," Mr. Goettsch said.

With community banks currently keen on imaging technology, bank technology vendors alsoare jockeying for position.

"Small banks have moved into imaging faster than I personally had expected," said Doug S. Halvorsen, marketing manager at IBM. "Thus, we are expediting our plans to get into that imaging market."

Earlier in the year, IBM extended the availability of its check imaging system to the AS/400 line, enabling banks of all sizes to use the technology. Previously, the company's imaging system was available only for its mainframe computers.

Also seeking more community bank customers, Dayton, Ohio-based NCR Corp. has combined two of its products to give smaller institutions access to imaging technology. NCR's 7780 reader/sorter system, combined with its System 3000 computer, offers small banks a way to enter the world of check imaging.

Some smaller banks without check imaging capability are using the technology in other areas. Many are buying additional hardware to store images of paper documents on optical disks and installing software that enables tellers and customer service staffers to access those images using desktop computers.

According to the survey, 8% of community banks have already installed such applications, called file folder imaging systems. A total of 18% of the banks surveyed plan to have file folder imaging in place by the end of the year. Looking ahead, 41% of community banks have penciled in 1995 for their foray into file folder imaging.

Interestingly, this is an area where many small banks are ahead of the curve. Most larger financial institutions, even those with advanced check image applications, are still years away from implementing similar archiving and research systems for other operations.

The main reason community banks are on the cutting edge of this activity: the smaller volumes involved make testing and implementation much simpler.

One bank that has gone this route is American State Bank, a $135 million-asset institution in Sioux Center, Iowa.

By taking advantage of a check image's portability, American State is significantly reducing paper use and speeding up customer check inquiries, said Beverly J. Jensen, a vice president and cashier.

Powell, Wyo.-based First National Bank was one of first community banks to use an optical storage unit. Back in 1989, the $102 million-asset bank searched for a way to archive documents like checks, mortgage applications, and new account applications.

"We had too many piles of old paper reports around, and we wanted to find a way to get easier access to documents and respond quicker to customers' needs," said Bob Sanson, vice president of data processing.

Unable to find an existing system to meet the bank's needs, Mr. Sanson built his own. With an initial $32,000 investment, the bank is now optically storing documents.

It's clear that check imaging has yet to achieve critical mass. But the survey results indicate – and industry observers agree – that image will increasingly become the fashion in the industry.

"Imaging is the industry's new point of focus," said Mr. McDonough of Andersen Consulting. □

Some inside information on i Series ATMs that has everyone talking.

What's inside this ATM has everyone talking. Talking electronically, that is. That's because i Series™ ATMs are available with a variety of processors, providing an open system for flexible, self-service solutions.

You can select one of our OS/2 processors that allows you to integrate i Series ATMs into any system that supports OS/2 work stations.

Integrating i Series ATMs with your existing ATM network, branch platform and host system can genuinely impact your bottom line.

By offering traditional transactions on self-service terminals, tellers are free to market other revenue-producing products and services.

Customers appreciate the convenience of using self-service terminals. Plus, by offering a variety of products and services on your ATM network, you can increase ATM usage and generate additional fee-based revenues.

You also will reduce operating expenses by consolidating line costs and sharing data.

Only InterBold® has the resources and expertise to provide total systems integration, including security. All from one supplier. And all serviced by one organization.

Call InterBold at 1-800-999-3000 and ask for more information on our total systems integration solutions. We can really give you something to talk about.

Outsourcing Levels Playing Field for Community Banks

BY WILLIAM PESEK JR.

FACING A GROWING horde of competitive pressures, small banks are increasingly turning to technology vendors to handle back-office processing tasks.

The *American Banker*/Ernst & Young 1993 Community Banking Technology Survey shows that outsourcing is again on the rise, with a hefty number of community banks having taken the plunge and hired outside help.

The survey also shows small banks are finding that partial outsourcing – farming out specific lines of business – may be useful. Many banks with $1 billion in assets or less also see partial outsourcing as a quick way to add a new product offering.

For example, a community bank can open a trust department and process accounts in a matter of days just by signing a contract.

"Outsourcers are giving smaller banks the tools to keep up with their larger competitors," said M. Arthur Gillis, president of Computer Based Solutions Inc., New Orleans.

Community banks with in-house systems are finding that the same problems that plague larger banks – keeping up with rapidly changing and highly specialized technological change – affect them, regardless of size or volume. These problems may drive them to outsource particular lines of business in which the technology needs to be up to date.

The survey shows credit card processing topping the list of businesses that community banks have outsourced. Credit card merchant processing tasks have been outsourced by 72% of community banks. Credit card issuance also weighed in at 72%.

Other areas that community banks have outsourced include ATM support, with 64%, and securities safekeeping, with 59%.

"We have outsourced a couple of lines of business because a bank our size would need to add staff and spend more money on maintenance to do them in-house," said Toni Poole, senior vice president at Security Bank, Coos Bay, Ore.

The $108 million-asset bank has outsourced its credit card processing and ATM tasks, keeping other tasks in-house.

Like many small banks, Security found the costs of handling these tasks to be prohibitive, and decided that it could achieve greater economies of scale and a higher level of performance from a service bureau arrangement.

"We don't see the need to reinvent the wheel for bank data processing," said Terry L. Myers, vice president and manager of bank operations at Second National Bank of Warren, Ohio. "Instead, we want to take the best technology available to us and maximize it."

The $620 million-asset bank has outsourced its entire data processing center to Dayton, Ohio-based NCR Corp. The bank has also outsourced its payroll, security, and cleaning services.

The rationale behind the bank's decision is simple. Second National is up against stiff competition in its market, including Society National Bank and National City Bank.

With rivals like that, spending time and resources keeping up to speed with the latest technology was a gamble the bank just couldn't afford to take, Mr. Myers said. "We have to spend our time working on things that are critical to meeting the bank's goals."

The bank, Mr. Meyers added, is comfortable with its agreement with NCR and is likely to sign on for at least two more years in April 1994, when it has the option to cancel or continue the agreement.

That option to cancel has put the ball in Second National's court, Mr. Myers said. "The decision we made with NCR lets us watch what develops. If NCR doesn't have the premier systems that everyone else is using, we'll look elsewhere."

Union Bank and Trust Co. offers another David-and-Goliath scenario. The Montgomery, Ala.-based bank, with $463 million in assets, is up against Amsouth and Central Bank of the South in its prime market.

"When we looked at our systems a few years back, our bank was behind the times," said Lee E. Moncrief, executive vice president. "We realized we'd have to be able to do the same things as the larger banks in our market."

After an intensive search early in the year, the bank decided to outsource its data center to M&I Data Services Inc., Milwaukee.

Bank technology vendors are well aware that more community banks are outsourcing these days.

"We're seeing that community banks [with assets] between $200 million and $1 billion are showing a greater amount of interest in outsourcing," said Paul Bourke, president of Bisys Group Inc., a Houston-based provider of data services to banks.

Fiserv Inc. is another technology vendor that has found community banks a viable marketplace. Of the 984 banks serviced by the Milwaukee-based company, about 90% have assets of less than $1 billion.

"Community banks are interested in outsourcing more pieces of the total pie," said Dean C. Schmelzer, executive vice president of marketing and sales.

Mr. Schmelzer sees a number of potential areas in the market, including electronic funds transfer and item processing.

But while outsourcing is the answer for some banks, it's not for everyone. Some community banks prefer to keep data processing in-house.

The 1993 technology survey showed that 74% of community banks handle at least some of their core account processing in-house, while just 23% are depending on service bureaus.

Capital National Bancorp, Lansing, Mich., is one bank that has employed a do-it-yourself strategy. The $250 million-asset holding company handles all data processing tasks for its four banks.

"Doing our own processing is more cost efficient for a bank our size, and we can be more flexible with product offerings and modifications," said Charles McDonald, vice president of corporate systems at Capital National. "When you become part of a large service bureau, it's difficult to get changes made."

National Bank of the Redwoods is another example. Located in Santa Clara, Calif., the $150 million-asset bank is doing its own data processing.

"We were afraid that we might lose control over our own future," said Patrick W. Kilkenny, president and chief executive. "Staying in-house has given us the flexibility to retain our own information and control the cost in subsequent years."

One hurdle that institutions like National Bank of the Redwoods need to overcome is overcapacity. Because many of the systems that are available today are built to handle the processing needs of bigger banks, some small banks find their computers have too much down time. To address that problem and offset some of the costs of running its own data center, National Bank of the Redwoods acts as a service bureau to four local credit unions.

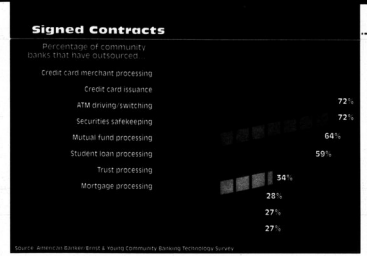
"Processing other institutions has created an income stream to help utilize the overcapacity and reduce costs," Mr. Kilkenny said.

To further control overhead, the bank doesn't keep a team of programmers on staff. Instead, Mr. Kilkenny prefers to work with local programmers on an independent contract basis.

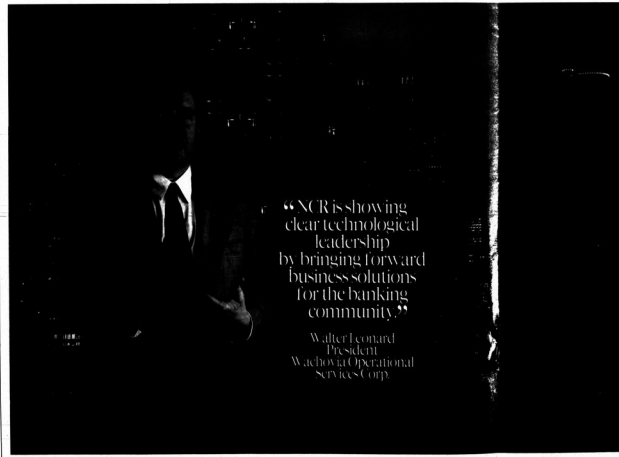
One area National Bank of the Redwood has given local giants like Bank of America and Wells Fargo Bank a run for their money is cash management. The bank is offering an internally developed software program that allows cash managers or small-business owners to make inquiries about the status of their loans and deposits and to transfer funds through their personal computers.

Whether or not they choose to outsource, community bankers have a smorgasbord of options to get an edge in their markets.

"A small bank can now decide more than ever how to control its own destiny," Mr. Gillis said. □



NCR's Financial Enterprise Architecture.



Delivering Business Solutions Across The Enterprise.

Look out across your widespread operations, and consider the benefits of bringing it all together into one fluid, enterprise-wide business solution.

A solution where information – in text, audio, video and image form – flows freely to those that need it. Where customers get instant answers, convenient access and uncompromised service.

A solution where products can be developed and deployed quickly. Where your systems can easily evolve and respond to your business plan. And where real time information from across the enterprise is delivered to you in decisionable form.

NCR's Financial Enterprise Architecture (FEA) is a flexible blueprint that can make this vision real by incorporating the products, expertise and guidance necessary to plan and build your enterprise solutions.

If you would like to learn more about the benefits of having NCR as your strategic partner, contact your NCR representative, or phone 1-800 CALL NCR for a copy of our extensive Financial Enterprise Architecture brochure.

The Back Office: Systems

At Smaller Banks, the Tab for Technology Keeps Getting Bigger

Continued from page 1A

back office.

But large banks have been slow in adopting image technology, believing that the costs of purchasing the systems and restructuring operations outweighs any possible benefits. Vendors also been slow in delivering the high-volume systems big banks require.

However, the equation changes with community banks. There, imaging systems can be driven by inexpensive personal computers, and can handle the volume of work easily.

According to the survey, 24% of community banks will be implementing image technology for checking statements by 1995. In such an application, a bank delivers laser-printed images of checks – rather than the checks themselves – with a customer's monthly statement.

An estimated 41% of the total will be using what is known as file folder imaging. (For more on imaging technology in community banks, see page 6A.)

Imaging applications are often at the top of the shopping list

The year's big push at Tanglewood Bank, a $175 million-asset institution in Houston, involves file folder imaging. In such an application, customer correspondence and other paperwork are digitized and stored electronically. Customer service reps and other bank employees then access the information from their computer screens, rather than wading through paper files.

"We hope to have most of the customer-related information stored on an optical imaging system by the end of the year," said Jerome Simon, executive vice president. According to Mr. Simon, that information includes signature cards, collateral files, and credit files.

The bank also has a second optical storage system that archives management reports.

Users can access images either from desktop PCs or from PCs equipped with oversized monitors and placed strategically throughout the bank.

Mr. Simon said Tanglewood's data processing expenses would probably grow by more than 10% this year, as the bank implements the imaging applications and continues to upgrade its PC hardware.

The 54 PCs used by the bank's 56 employees are connected to both a local area network at each branch and a wide area network which ties the entire configuration together.

The PCs use a Microsoft Corp. Windows-based application for teller and branch functions. It accesses the imaging systems as well as Tanglewood's deposit and loan applications, which are run by the outsourcing firm Electronic Data Systems Corp.

Currently, though, most community bankers are looking at imaging for check processing. "We've been interested in the concept for some time, but it has not been affordable," said Tommy Looper, executive vice president and chief financial officer at Anchor Bank, a $220 million-asset institution in Myrtle Beach, S.C. "We were at the point where we were going to have to replace our current reader/sorter, and imaging is obviously the thing of the future."

Mr. Looper said the bank will spend approximately $400,000 this year to install a system to handle deposited checks, using equipment and software from NCR Corp. and Document Solutions Inc. The system will allow the bank to handle rapid deposit growth without adding additional staff and expense, he said.

"If we installed another [nonimage check processing] system, there would be no payback," Mr. Looper noted. "With the imaging system, there will be a payback within a five-year period." Anchor may install account-statement imaging capability at a later date.

Still, the expense of an imaging system – upwards of $200,000 for a check processing package, $50,000 for a file folder system – means that such projects typically supersede other development efforts within smaller banks.

Installing a statement imaging system "will probably be the biggest thing we do all year," said John Diedrich, an executive vice president at Glenview State Bank, a $495 million-asset institution in Glenview, Ill.

"Part of the reason for installing the system was payback, part of it the philosophy of our owners. Installing this type of technology helps us to keep pace with larger banks," said Mr. Diedrich.

Many banks, of course, are simply upgrading aging equipment. From its headquarters in Greenfield, a town of 20,000 in western Massachusetts, United Savings Bank competes with regional giants such as Fleet Financial Group, Shawmut National Corp., and BayBanks Inc., as well as local thrifts.

Nevertheless, the $216 million-asset bank's recent decision to upgrade its teller and platform equipment was based more on necessity than on competitive posturing. "The system we have in place goes back two or three generations. The printers, the most mechanical portion of the system, are being held together with Band-Aids," said James Neill, a senior vice president at United.

But the bank kept capital expenditures to a minimum for the past several years, Mr. Neill said, because it was increasing its loan-loss reserves.

With its earnings for the first six months of 1993 surpassing those for all of 1992, United's management decided there was no time like the present.

Mr. Neill said the bank signed a new contract in July to install equipment, at a cost of about $400,000. The system, based on Unisys Corp. personal computers and software from Information Technologies Inc. will guide employees through most transactions and facilitate the cross-selling of products.

In the future, Mr. Neill said, United will also be looking into upgrading or replacing its Unisys A1 mainframe and implementing image technology in its check processing area.

Although they may be somewhat insulated from changes in the technology marketplace, smaller banks using data processing service bureaus are by no means immune from pricing pressures. Rio Salado Bank, Tempe, Ariz., has grown to more than $100 million of assets since it opened more than 10 years ago. As it has grown, its data processing costs have skyrocketed.

According to David Fischer, Rio Salado's senior vice president of operations, the bank has grown at about a 30% annual rate over the past four years. But monthly data processing expenditures – tied to the bank's transaction level – have more than tripled, from approximately $8,000 a month in 1989 to $25,000.

As a result, Mr. Fisher said, Rio Salado is working with a consultant to evaluate other data processing alternatives, including in-house solutions.

"If we stay with a service bureau, we'd like to develop some sort of tiered pricing arrangement," said Mr. Fischer. "I know the service bureau has to make money, but not on each single transaction."

Rio Salado is also pursuing a number of strategies to stretch its limited resources. Mr. Fischer is trying to assemble Arizona's community banks into an ATM deposit network. A similar arrangement within the state was disbanded when the banks' ATM processor, Security Pacific Corp., was absorbed by BankAmerica Corp.

While technology expenditures within the community bank segment are climbing rapidly, Mr. Heller of Veribanc points out that community bankers are taking a no-nonsense approach to evaluating systems.

"You don't score kudos for automating. Automating your back office or redesigning your monthly statement doesn't attract customers," explained Mr. Heller. "In fact, it can have the opposite effect if there are snafus."

But with limited resources and looming competition, community bankers can ill afford to ignore the technology wave. As Mr. Looper of Anchor Bank explained, "We're using technology to survive." □

Technology Spending: Community Banks Outpace Bigger Brethren

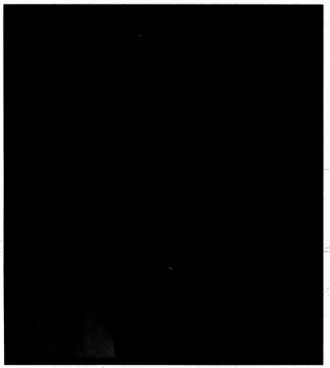
IT TAKES COMMITMENT TO BE A WINNER



Success is only obtained through hard work and total dedication to a goal. At TSYS, we understand that kind of commitment. That is why we are developing a system that will revolutionize card processing. This new generation of card processing services, called "TS", will offer new levels of operating systems, superior customer service functions and highly flexible reporting systems to improve your efficiency, service and profitability.

To find out how TS, along with our unique commitment and depth of experience, can provide winning solutions for your operation, call the TSYS Marketing Division at (706) 649-2300.

TSYS® TOTAL SYSTEM SERVICES, INC.

Improve Your Profits.

"Improving our income statement means more fee-based income. It's not an option– it's a requirement.

We're bringing in SEI."

It's very basic. To keep your profits growing, you need more fee-based income. And to stem the outflow of your depositors' money, you need investment programs.

And you need those programs now!

SEI can deliver a variety of investment programs and services for your individual and corporate customers. Through your branches, brokerage, private banking, and trust departments. One or all.

And we'll help you with all the program components – the products, the marketing, the distribution, and the technology you need to support those programs cost-effectively.

We'd like to be your partner in building your fee-based income. Because we both have the same objective for your bottom line: Improve Your Profits!

About SEI

SEI has been dedicated to creating comprehensive investment programs for over two decades, focusing on the following areas:

Investment Products and Programs ($35 billion in assets): mutual funds, proprietary funds, annuities, and bank-wide investment programs.

Full Planning and Consultation Services: marketing planning, program definition and implementation, as well as full training and sales support.

Investment Management Technology: trust accounting, defined contribution recordkeeping, mutual fund accounting, and retail support systems.

For more information, call 1-800-DIAL-SEI (342-5734).

Roosevelt Bank Taps EDS for Item Processing

St. Louis-based Roosevelt Bank has entered an agreement with Electronic Data Systems Corp., Plano, Tex., for item processing and back-office services, including item capture, exception item processing, lockbox, statement rendition, and print services.

With $3.3 billion in assets, Roosevelt operates 35 full-service offices in Missouri and Illinois.

wholly owned affiliate of the Marshall & Ilsley Corp., a $7.8 billion-asset bank holding company. Both are based in Milwaukee.

Soricon Snares Deal in the U.K.

Soricon Corp. received a $3 million purchase order to supply its check and document readers to a U.K. distributor, Advanced Recognition Ltd.

Deliveries will begin in the third quarter of 1993 and are expected to be completed by the end of the second quarter of 1994.

Based in Boulder, Colo., Soricon's primary markets are point of sale check verification for retailers and check and document processing for financial institutions.

Unisys to Equip Hungarian Bank

The National Savings Bank of Hungary, Orszagos Takarekpenztar, and Unisys World Trade Corp. signed a $57 million contract for an integrated banking system. A Unisys spokesman said it was the largest computing contract ever awarded in Hungary.

Established in 1949 as a state financial institution for consumer banking, the Budapest-based bank is the largest in Hungary, controlling about one-third of the total assets in the country and handling 70% of retail savings and 90% of retail loans.

Based in England, Unisys World Trade Corp. is a subsidiary of Unisys Europe Africa Division.

The banking system includes branch automation applications and production and backup processors. Unisys will also provide product management, training, customization, and branch rollout support. Over 45% of the contract value relates to software and services.

FIS and CCS to Provide Card Data Processing

Florida Informanagement Services Inc., Orlando, and CCS Technology Group Inc., Maitland, Fla., have been selected to provide data processing for a credit card program offered by The Associates, a $24 billion financial services company located in Dallas. □

Firstbank of Ill. Chooses Fiserv

Fiserv Inc., Milwaukee, signed a number of new contracts.

Firsthank of Illinois County, a $1.5 billion-asset bank holding company based in Springfield, Ill., will install Fiserv's comprehensive banking system. Running on IBM's AS/400 midrange computers, the system provides customer relationship management, deposit and loan accounting, and financial accounting and reporting.

Bancahsa, a commercial bank in Tegucigalpa, Honduras, signed an agreement to install the Spanish version of the retail banking system.

Microbilt Signs With a Retailer

Microbilt, a subsidiary of First Financial Management Corp. in Atlanta, signed a contract with Service Merchandise Co., Nashville, for an electronic payment system. The system will electronically capture signatures and process checks and credit cards. It will work in conjunction with Nabanco, another subsidiary of First Financial Management Corp., to provide chargeback processing and fraud protection.

M&I Data to Buy Unit of Barnett

M&I Data Services Inc. has agreed to acquire Barnett Banks' Tampa, Fla.-based correspondent data processing business, Financial Processors Inc. The company is an affiliate of Barnett Technologies Inc., the information technologies subsidiary of Barnett Banks Inc., based in Jacksonville, Fla.

M&I will assume responsibility for all current contracts, equipment, and 160 employees. M&I plans to continue operating item processing centers in Tampa and Miami.

Financial Processors has been in the data processing business for more than 30 years. Its customers are located in the Southeast, primarily Florida and Georgia. M&I is the developer of most of the software that Financial Processors has been using.

M&I Data Services is a

Verifone Software Links PCs to the Point of Sale

Integrating point of sale and backroom information management functions, Verifone Inc. has announced a software application that links DOS-based personal computers with the company's transaction automation systems.

Running on the PC, the new product, PNCPlus, handles credit and debit card processing.

Integrating the Verifone transaction system with the PC eliminates the need to enter payment transaction data more than once, thus reducing errors and speeding transactions. The software can also maintain a complete log of payment transactions.

Prices for the software range from $129 to $169, depending on the volume purchased.

Verifone Inc. is based in Redwood City, Calif.

Omega Program Offers Sales Tips

Omega Performance, a consulting firm based in San Francisco, offers a new program for branch platform staff, called Making Investment Referrals. The program is intended to help stem the outflow of deposits.

The program teaches platform personnel how to link customers with the bank's own investment experts and products. Materials include investment kits containing actual stock, bond, and annuity contract examples; sets of bank-specific mastery cards; a desktop job aid; and a video-tape showing investment scenarios between branch staff and customers. The program costs $475 per participant.

The program was developed in conjunction with First Chicago Corp. Signet Bank and Society Bank are currently using the program.

Interbold Offers ATM Video Add-On

Interbold has introduced two-way video conferencing, between an automated teller machine user and a customer service representative, on an Interbold / series self-service terminal. The system is activated when a customer pushes a button on the terminal.

Though the technology is available, the company has no immediate plans to release the enhancement until market demand for video conferencing increases.

Interbold, based in North Canton, Ohio, is a joint venture between Diebold Inc. and International Business Machines Corp.

ISC-Bunker Ramo Sells Ultrelight PC

ISC-Bunker Ramo released a new portable personal computer. Billed as the Ultraportable PC, the Olivetti Quaderno comes with a 20-megabyte hard drive, an 16-MHz processor, eight-hour battery pack, MS-DOS operating system, voice capability, and integrated accessory software. Built-in software includes word processor, calculator, schedule and phone book, file manager, organizer, and voice manager. The voice processing system provides dictation storage, voice annotation, input, and output.

The 2.2-pound computer measures 8.3 inches by 5.8 inches by 1.3 inches. The computer, floppy drive, carrying case, and printer cables sell for $874.

ISC-Bunker Ramo, an Olivetti company, supplies automation equipment and services. Its U.S. headquarters are in Spokane, Wash.

Computerm Eases Remote Imaging

Computerm Corp. introduced a system that connects mainframe computers to remote IBM high-performance transaction system image devices.

Called the Remote Image Solution, it is designed to support the IBM 3897 image capture system for check processing and the IBM 3800 series image statement printers.

The band width for transmitting image applications over data links can be costly. This system is designed to compress data and keep communication costs to a minimum.

The company's initial testing has demonstrated that a locally attached IBM 3800 printer generated image statements at 100 pages per minute, with some pages containing as much as 120K bytes of data. Without using the compression system, the machine printed 50 to 60 pages per minute.

Users can attach the system to networks over copper wire, fiber-optic cable, microwave systems, or satellite links. The system is completely compatible with all operating systems and applications software and requires no alterations or modifications to existing software.

The system is scheduled to be available in the first quarter of 1994. Pricing will start at $195,000.

Computerm is based in Pittsburgh. □

Introducing FBA Navigator.

At last, retail delivery can point revenue in the right direction.

Enhanced customer service can steer your bank towards an enhanced bottom line. And that's the inspiration behind the Unisys FBA Navigator solution.

The FBA Navigator solution is the first truly comprehensive approach to retail delivery improvement at every level—improvement through business consulting, information technology consulting, planning, new application development tools, and new open platform flexibility.

Experienced Unisys banking experts will help provide solutions promoting the rapid introduction of competitive new offerings at the branch level—revenue-generating offerings responsive to customer needs for accurate, timely information. It all reflects decades of service to banking and our pioneering initiative for business—CUSTOMERIZE. By helping CUSTOMERIZE your organization, Unisys fully extends your information capabilities out to the points of customer contact, turning customer service into a strategic advantage.

What's more, the FBA Navigator solution accommodates a variety of development environments and supports open hardware and software, including DOS/Windows, UNIX, and CTOS platforms. This provides your bank with unsurpassed flexibility to create and deploy CUSTOMERIZED products and services matched to your requirements and existing investments—products and services easy to maintain through advanced, object-oriented programming.

The Back Office: Operations

WHAT TECHNIQUES can small banks use to combat fraud?

TOM D. WILES
Vice president
West Plains (Mo.) Bank

COMMUNITY BANKERS TEND TO believe that the first line of defense against fraud is knowing their customers personally. Unfortunately, knowing your customer is also a disadvantage. It is easier to say no to a stranger.

In my opinion, most bank losses occur because an exception to policy was made for the benefit of a personal friend.

While there is always a valid exception to a basically good rule, banks frequently neglect to establish exception procedures. Authority to make an exception should always be closely controlled. An exception from established procedures should never be made without conscious thought, nor should it be made without accountability. ■

CARROL R. PRUETT
Chief executive officer
Mid-State Bank
Arroyo Grande, Calif.

SMALLER BANKS HAVE A PROBLEM with certain types of fraud detection because they don't have a lot of the more sophisticated technology that larger banks have.

So, they fall back on the personal relationship and knowledge of the customers they're doing business with. For a small bank to protect itself against fraud, it really comes down to the old adage: "know your customer."

Small banks have a big advantage over large banks in this matter because it's not unusual for employees of a small bank to know every customer's name and background. ■

ROBERT W. HAWKINS
Chairman
Southern Commercial Bank
St. Louis

MOST BANKS HAVE MONITORING systems in place. Fraud detection has become very automated, even in smaller banks.

As for money laundering, we don't care if it's proceeds from the church picnic, if it's over the dollar limit it's reported.

Also, we have employees who watch the variances at each teller window. I suppose if the person had a partner within the bank, [fraud] could be done. But we don't have that problem. We're a neighborhood bank; we've been here about 100 years. We hire people we know or people who are recommended by our employees, so it's less of an issue for us. ■

How ArgentBank is exceeding customer expecta

EDS

"EDS helps us give our customers services they might not expect from a small community bank," says Randall E. Howard, president and CEO of ArgentBank, formerly First Interstate Bank of Southern Louisiana. "Our customers are delighted. And so are our shareholders. Our stock soared from $48 to $89 per share in its first nine months on the NASDAQ.

"With EDS, we can offer services that customers frequently expect to find only at much larger banks. Services such as overdraft protection, automated deposit validation and a preapproved credit line activated by simply writing a check. EDS has also helped us better manage rapid growth due to mergers, without disrupting customer service. And they continue to help us better manage costs. For example, in one of our departments they provided us with a way to cut labor costs by more than 200 percent.

"Information technology from EDS is definitely one of the most important tools we have."

Information technology can be a powerful tool for your business, too. EDS is the world leader in applying information technology. To learn how we can help you, write to EDS, Financial Industry Group, Marketing, 5400 Legacy Drive, B5-2B-15, Plano, TX 75024. Or call us at (800) 433-4055.

EDS is a registered trademark of Electronic Data Systems Corporation. © 1993 EDS.

MICHAEL W. SHEFFEY
Chief executive officer
Security National Bank
Maitland, Fla.

THIS MAY SOUND SIMPLISTIC, BUT the best advice is to know your customer. If someone walks in that you don't know, use common sense. For example, if the customer lives all the way across town and wants to open an account with you, ask why. Recently, we had a man come in on a Saturday with $1,000 in cash that he wanted to use to open a new account. We turned him down, and we were one of the few banks in this area that wasn't subsequently hit by a big scam.

You have to educate your platform people and your tellers to pay attention to these kinds of things.

And operationally, you have to have a sound system of holds. ■

JOHN S. SHIVERS SR.
Chairman
Southwest Bank
Fort Worth

I DON'T THINK THE BIG BANKS DO anything differently. Virtually every bank I know has fraud detection programs written into its processing software. These programs catch check kiters and money launderers.

The most prevalent type of fraud most banks are facing is counterfeit securities being put down as collateral for a loan. The way you combat this is checking all the documents to make sure they're not stolen or counterfeit before you accept them. ■

BOBBY P. MARTIN
Chairman
Peoples Bank
Ripley, Miss.

WE HAVE A POLICY THAT OUR tellers, officers, managers, and directors sign a statement that they will not knowingly violate the FDIC regulations – and we set down the violations right there. The penalty for violating the FDIC regulations is automatic firing. If customers ask to break the rules, and they do, our people know to say no. These regulations have teeth in them.

As for check kiting, we don't do this here, but I know of a bank in Texas that puts its customers' fingerprints on the front of the checks they cash. That should deter people who try to forge government checks that they've stolen out of mailboxes. I'm thinking about doing that here because stolen government checks are a big problem. ■

SUSANNE V. BOXER
Chief executive officer
Houghton (Mich.) National Bank

ONE OF THE PRIMARY TECHNIQUES IS to make all your internal people aware of what check kiting and money laundering are.

We have training when we first hire employees, and we have ongoing training in detecting check kiting and money laundering.

We have four branches, so we track all transactions over a certain dollar amount in a seven-day period at each one. All of these transactions are recorded, and then we have one clerk read over all of them to see if one customer's name is repeated. We also train our tellers to pay attention to how many times a customer visits the branch and to record suspicious activity. ■

"EDS helps our small town bank

tions and carving out a profitable market niche.

offer customers big city services."

—Randall E. Howard, President, CEO, ArgentBank
A $540 million regional financial institution
Thibodaux, Louisiana

AMERICAN BANKER

VOL. CLVIII NO. 157 | Tuesday, August 17, 1993 | 158th year

Equity Funds By ATM Seen as Wave of Future

By DEBRA COPE

Wells Fargo & Co. wowed the competition last week by letting customers start trading and selling mutual fund shares at automated teller machines.

The move by San Francisco-based Wells marks the first time a bank has come up with a way to let customers tap stock and bond funds with an ATM card.

Several banks – Citibank and Fleet among them – already allow customers to trade money-market fund shares at ATMs. But these funds trade at a stable price of $1 per share.

It is considered far more difficult for a bank to handle stock and bond fund transactions on ATMs, because share prices fluctuate daily.

NEWS ANALYSIS

Wells won't let customers make their initial fund purchase via an ATM; that requires a prospectus. But cardholders can buy additional shares, transfer money from one fund to another, or sell shares and transfer the proceeds to a bank account.

Now that Wells has come up with a way to handle bond and equity funds in ATMs, other banks that manage mutual funds are likely to follow suit.

But a prominent industry expert has some words of caution: Look before you leap.

Though the gambit could give banks a slight competitive edge, the costs may outweigh the benefits, said A. Michael Lipper, president of Lipper Analytical Services, Summit, N.J.

"It's an interesting marriage of banking technology and mutual funds," Mr. Lipper said. "But I'm not sure I understand the economics here."

Risk of Many Small Trades

For one thing, bank customers might be inclined to make a lot of small redemptions and exchanges. That could prove expensive, and it's not clear who would bear the costs, he said.

In addition, Mr. Lipper noted, customers may not realize that they may have to pay taxes each time they redeem shares in a mutual fund.

Banks that offer ATM services to mutual fund customers would have to redouble their education efforts.

Other concerns include longer lines at ATMs and perhaps a rise in fraud, Mr. Lipper said.

Wells officials could not be reached for comment, but even Mr. Lipper acknowledged that his reservations probably will not deter other banks. □

FDIC Planning to Reduce Its Swollen Work Force

By BARBARA A. REHM

WASHINGTON — After quadrupling its staff during the last decade, the Federal Deposit Insurance Corp. is preparing to slim down.

The agency is working on an early retirement package for as many as 1,100 employees. Another group – 1,000 temporary staffers – will be let go by yearend.

Rumors that a massive reduction in force is coming are being dismissed by senior officials, but they admit that trimming the agency's 15,000-person work force is a top priority.

"This is going to be a huge undertaking," said FDIC research director Roger Watson. "It's easy to grow. It is much harder to shrink. It's not as much fun either."

Record Failures in '80s

The FDIC has been riding a rocket since the mid-1980s, when bank failures started setting records. The agency bulked up its staff and its budget to handle the unprecedented workload.

In May 1992, the FDIC slapped on a hiring freeze. Still, at midyear the agency employed 15,575 people, which is more than four times the 3,504 people employed in 1982.

The agency's Washington staff nearly doubled – to 2,242 – between 1988 and 1992. Two government office buildings once accommodated these

NationsBank Set to Raise $800 Million In Debt Issue

By DAVID SIEGEL

NationsBank Corp. may issue $800 million in debt securities as soon as today, in the largest long-term bond offering by a bank this year.

Proceeds are expected to go toward two major pending deals: the takeover of MNC Financial Inc., a Baltimore bank holding company; and the purchase of $2.3 billion in receivables from U S West Financial Services.

Banks rarely make public offerings of this size. Sales of asset-backed and short-term debt are exceptions.

Two-Part Sale

Market sources said NationsBank's offering will comprise $350 million of three-year senior debt and $450 million of 10-year subordinated debt.

The issue may be increased to as much as $1 billion, they said. Merrill Lynch & Co. will be lead manager for both issues.

NationsBank has become an active issuer in the capital markets this year after announcing a string of cash acquisitions, including the recent U S West deal.

It has completed the purchase

NEWS *briefs*

S&P Sees End to Realty-Based Downgrades

NEW YORK — Real estate exposure is unlikely to result in any further downgrades of U.S. banks' ratings, according to Standard & Poor's Corp.

In its publication *CreditWeek*, S&P said real estate values appear to have bottomed out, even though they are not yet recovering in most markets. S&P noted that the duration of the real estate market downturn has been relatively short, despite its severity.

Significantly, the vast majority of banks have sufficient capital and reserves to cover remaining problems in their real estate portfolios, S&P said.

Northeast Federal Cancels Rights Offering

HARTFORD, Conn. — Northeast Federal Corp. said it had decided not to proceed with its previously announced rights offering and that it was withdrawing its registration statement filed with the Securities and Exchange Commission.

The company, the parent of Northeast Savings, said current market conditions do not justify proceeding with the offering.

NBD to Buy Back Up to 7 Million Shares

DETROIT — Directors of NBD Bancorp authorized the repurchase of up to 7 million shares of the corporation's common stock. Purchases would be made from time to time on the open market or in privately negotiated transactions.

Shares purchased under the authorization, if any, would be used for general corporate purposes, including employee stock award programs, future acquisitions and other appropriate uses. As of June 30, NBD Bancorp had 160,557,393 common shares outstanding.

West Coast Bancorp Holders Defend Board

NEWPORT, Ore. — West Coast Bancorp reported that shareholders voted overwhelmingly against a proposal to remove six of the company's seven directors at an Aug. 11 special meeting, opposing a hostile takeover attempt by Western Bank.

West Coast Bancorp said the proposal, calling for removal of all except one of the company's directors, was submitted by Georges C. St. Laurent Jr., controlling shareholder of Western Bank.

According to an independent inspector of elections, 65.27% of shareholders voting at the special meeting opposed Mr. St. Laurent's proposal, 34.56% voted in favor, and 0.17% abstained, West Coast said.

MBNA Plans Credit Card Unit in Britain

NEWARK, Del. — MBNA Corp. said it would open a subsidiary, MBNA International Bank, to issue credit cards in Great Britain.

MBNA, the nation's third-largest credit card issuer, with nearly $10.6 billion of managed loans, said the unit would open next month in Chester, England, and have a business-development office in London. MBNA has obtained approvals from both the Bank of England and Federal Reserve Board.

MBNA expects to challenge leading British card issuers including National Westminster PLC and Barclays PLC.

Big-Bank Loans Up $3.25 Billion for Week

NEW YORK — Commercial and industrial loans on the books of the nation's large banks rose $3.25 billion in the week ended Aug. 4. That compared with a drop of $1.87 billion in the preceding week. These results exclude bankers' acceptance and commercial paper.

The briefs were compiled from staff and wire reports.

OTS Rejects Lawyers' Pleas To Ease Up on Thrift Attorneys

By ROBYN MEREDITH

WASHINGTON — Thrift regulators are dismissing the American Bar Association's complaints about rough treatment of savings and loan lawyers.

The Office of Thrift Supervision suggested that the lawyers' group is the one that should be doing the soul searching. It was the agency's first formal response to the ABA.

The lawyers "should be doing some self-regulation, not complaining that the banking agencies were trying to enforce banking laws," the OTS' acting chief counsel, Carolyn B. Lieberman, said in an interview Monday.

In a recent speech at the ABA's 115th annual meeting, held in New York, she said the lawyers' group should consider "the extent to which lawyers representing thrift institutions failed to adhere to professional standards and what the profession's response to those failures should be."

Improper Assistance

"While the great majority of banking and thrift lawyers have represented their clients responsibly and professionally, much of the serious wrongdoing that occurred in the savings and loan industry could not have happened without the improper assistance of lawyers," Ms. Lieberman said in the speech.

In January, an ABA working group drafted a report called, "Laborers in Different Vineyards? The Banking Regulators and the Legal Profession." The report criticized enforcement powers that regulators applied against law firms representing depository institutions.

The ABA report was triggered by the OTS' action against the New York law firm of Kaye,

The agency suggested the bar association should self-regulate, not complain.

Scholer, Fierman, Hays and Handler, which agreed to pay $41 million to settle charges involving its work for Charles Keating's Lincoln Savings and Loan Association.

The ABA paper argued that legislation is needed to prevent regulators from issuing asset preservation orders without a judicial proceeding and to force banking agencies to use the court system instead of cease-and-desist orders to secure monetary damages.

But the OTS disagreed: "Congress quite clearly intended that the banking agencies have the power to preserve respondents' assets," Ms. Lieberman told the ABA. Monetary recoveries by the OTS "are available only in the event of the commission of unsafe or unsound practices or of violations of a law, rule, or regulation" or other enforcement actions.

For that reason, "remedying such acts is inextricably related to the government's regulation of banks and thrifts," she said.

The OTS addressed other points brought up in the ABA paper, such as the responsibility of law firms to disclose information about their clients to regulators, and what responsibilities attorneys have to notify an institution's top officers of problems.

"Institutions have a number of disclosure obligations to federal banking regulators," Ms. Lieberman said. "These disclosure obligations are not optional because the institution is represented by counsel."

"It should be understood that breaches of fiduciary duty have long been considered unsafe and unsound practices and can cause significant harm to a thrift institution and its shareholders and depositors," Ms. Lieberman said. "We seriously doubt whether failure to seek correction of what a lawyer knows to be a fiduciary breach could ever be in the best interests of the organization." ❑

2 Techniques May Yield Cut in Card Fraud

By BARTON CROCKETT

A MasterCard International official said two security technologies now under consideration could take a huge bite out of credit card fraud, saving banks hundreds of millions of dollars a year.

The two security measures – personal identification numbers (PINs) and "holomagnetic" cards – could eventually prevent 75% to 80% of fraud losses from thefts of cards and account numbers and from fraudulent applications, said Joel S. Lisker, MasterCard's senior vice president of security and risk management.

The holomagnetic technology enables a bank to encode data on a hologram in addition to a credit card's magnetic stripe.

Protection Technologies

"You could potentially wipe out an enormous piece of fraud with these combined technologies," Mr. Lisker said.

Charging Crime
1992 U.S. bank card and charge card fraud losses

Source: The Nilson Report

PINs and holomagnetic cards are two of a handful of new card fraud-protection technologies under evaluation by MasterCard and Visa U.S.A.

Mr. Lisker said one or more of the technologies would probably be recommended to MasterCard's board of directors later this year or early next year, for implementation over the following three to five years.

A Vexing Problem

Visa is expected to proceed in roughly tandem with MasterCard, Mr. Lisker said.

Card fraud has proven a vexing problem for all card issuers.

According to *The Nilson Report*, an industry newsletter in Oxnard, Calif., card fraud losses in the United States totaled $3.82 billion last year, including $2.65 billion from fraudulent bankruptcies by cardholders.

The newsletter said that bank card issuers lost $572 million from card fraud, including stolen cards and account numbers, counterfeit cards, and fraudulent applications.

Two-Pronged Attack

It is these types of fraud that PINs and holomagnetic technology are designed to stop.

Card thieves would be unable to use stolen cards because they would not know the PINs.

Holomagnetics could stop the remaining counterfeiting problem. Concern over the counterfeiting of cards protected by PINs peaked earlier this year when thieves apparently put an ATM in a Connecticut mall and used the machine to record PINs and account numbers as consumers tried to withdraw cash. Holomagnetic cards could stop this type of fraud because there is no known way to copy them even if PINs are obtained, Mr. Lisker said.

The holomagnetic technology MasterCard and Visa U.S.A. are evaluating was developed by American Bank Note Holographics Inc. of Elmsford, N.Y., along with Kurz Co. of Furth, Germany, and Control Module Inc. of Enfield, Conn.

Mr. Lisker said that the holomagnetic cards would probably be at most only slightly more expensive to make than current cards.

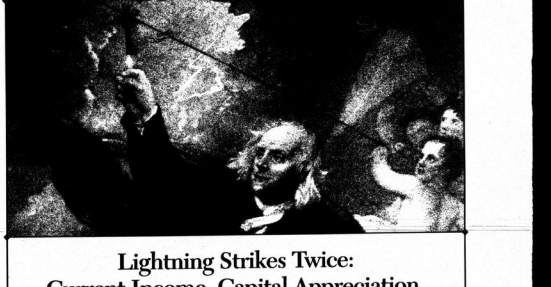
But, he noted, ATMs and point of sale authorization devices would have to be retrofitted to be able to read the data-holograms.

He said the ∠expense might limit installation to merchants at high risk.

Value Is Doubted

Jerome Svigals, an independent consultant and bank card security expert in Redwood City, Calif., said he thought the holomagnetic technology is of dubious value.

Mr. Svigals said thieves would very quickly turn to merchants without the enhanced point of sale terminals. ❑



Lightning Strikes Twice: Current Income, Capital Appreciation.

It seems only natural that Franklin was the first to offer investors a utilities fund.

The Franklin Utilities Fund, well-established for over 40 years, invests in the securities of public utilities, primarily in the country's fastest growing regions. The investment objectives: current income and capital appreciation.

The fund is professionally managed and pays you quarterly dividends.

AVERAGE ANNUAL TOTAL RETURNS†		
10-Year	5-Year	1-Year
13.99%	12.96%	13.92%

For additional information regarding the fund or bank marketing products call:

1-800-342-FUND EXT 1606

†Returns for the period ended 6/30/93 include the maximum 4% initial sales charge and assume reinvestment of dividends at the offering price and capital gain at net asset value. Investment return and principal value will fluctuate so that your shares, when redeemed, may be worth more or less than their original cost. Past performance cannot guarantee future results.

The fund is not FDIC insured, is not an obligation of nor guaranteed by any bank, and involves investment risks, including possible loss of principal. Call for prospectuses containing more complete information, including charges and expenses. Investors should read them carefully before they invest or send money.

Recession Blahs Linger For N. Carolina Banks

By KENNETH CLINE

From the Regions

WHEN IT COMES to state economies, North Carolina's banks have it better than most.

The Tarheel State escaped the worst of the 1990-91 recession and is now showing solid gains, with a surge in manufacturing employment.

A recent Conference Board report predicted that "public and private investment, as well as a favorable business environment, should be helpful in continuing to attract new businesses" to the Carolinas.

But even in the home of such banking stalwarts as NationsBank Corp., First Union Corp., and Wachovia Corp., the recovery seems more sluggish than is typical of post-recession economies.

"Relative to what's happening across the country, I would say we're going a little better," said Richard B. Roberts, executive vice president and treasurer at Wachovia, the third-largest bank company based in the state. "But relative to where in this stage of a recovery one would expect to be, we're probably trailing."

Ted Matney, chairman and CEO of Bankers Trust of North Carolina, an $83 million-asset bank in Greensboro unrelated to Bankers Trust New York Corp., said customers are still nervous and restrained in their borrowing, despite the area's very low unemployment rate of 3%.

"Business hasn't been as good as it could be because of that fear," he said.

Business activity in North Carolina rose 0.8% in the second quarter, for the eighth consecutive quarterly gain since the mid-1991, according to an index compiled by Wachovia. Over the past 12 months, its North Carolina business index has advanced 5%.

Tarheels in the Lead
Employment gains and losses between May 1991 and May 1993

North Carolina	21,700
Tennessee	17,100
Indiana	12,200
Wisconsin	6,100
Georgia	5,700
Michigan	2,500
South Carolina	1,200
Alabama	900
Texas	900
Minnesota	(900)
New York	(81,500)
California	(170,800)

Source: First Union Corp.

Manufacturing led in nonfarm job growth, with a gain of 6.7% for the quarter – compared with a 0.3% decline for the nation as a whole. Year-ago comparisons are similar: Manufacturing employment was up 1.6% in North Carolina but down 2.1% in the rest of the country.

North Carolina "has always enjoyed a very good business climate," said Mark Vitner, economist at First Union Corp., the state's second-largest bank company. "The partnership between government and business is very, very strong, while in other parts of the country that's been lacking."

Indeed, North Carolina's relentless solicitation of new business, particular foreign-based companies, is credited with weaning the state from its traditional dependence on textile and furniture manufacturing.

Between May 1991 and May 1993, North Carolina led the nation in adding factory jobs. While California lost 170,800 and New York 81,500, North Carolina gained 21,700.

Keycorp, with Eye on Expansion, Centralizes Insurance Operations

By KAREN GULLO

Keycorp is making a push to expand its insurance business.

The Albany, N.Y.-based bank announced Monday it has centralized its credit, property, and life insurance operations under one unit.

Stephen K. Heine, general manager of Keycorp's life insurance subsidiary, was named chief executive officer of the unit, called Keycorp Insurance Management Group.

Aiming High

Mr. Heine said Keycorp will seek 20% annual growth for its insurance businesses, which now generate $1.4 million in revenues a month.

The new group is charged with developing business strategies and stepping up sales and marketing efforts across Keycorp's far-flung branch network.

Keycorp sells life insurance to consumers through branches and mortgage lending offices in the nine states in which it operates. The policies are underwritten by life insurance companies, and some are reinsured through a subsidiary, Key Bank Life Insurance Ltd.

The target for Keycorp's insurance businesses: 20% annual growth.

Keycorp also offers property and casualty and life insurance to consumers and small businesses in five Western states through Keycorp-owned agencies. The states – Washington, Oregon, Idaho, Wyoming and Utah – bar state-chartered institutions from directly selling insurance, but allow the banks to sell policies through agencies.

Scouting for Opportunities

"We are investigating what other options exist for offering insurance," said Mr. Heine. "We will be looking at the areas where we are not currently selling insurance to see what we can do to expand the business."

Keycorp will begin targeting customers for its life insurance products through a dedicated sales force, and will step up telemarketing and direct mail campaigns for its property and casualty products. The insurance group currently has 90 employees. Mr. Heine declined to say how many staffers Keycorp plans to add.

The bank is also looking at forging alliances with insurance companies to offer other types of policies to consumers and businesses. ❑

Chicago's Boulevard Puts Itself Up for Sale And Hires Goldman Sachs to Find a Buyer

By ROBERT B. COX

CHICAGO — Boulevard Bancorp, a $1.5 billion-asset bank company based here, put itself up for sale Monday.

The company, which has been dragged down by commercial realty loans, said it had hired Goldman, Sachs & Co. to help it find a buyer.

"We expect to be working with Goldman Sachs throughout the remainder of the summer in evaluating various alternatives," chairman Charles E. Schroeder said in a news release.

Possible Suitors

Boulevard's shares were up $1.50, or 7%, in afternoon trading Monday, to $23.25, a 52-week high. That lifted its market value to $166 million. Its book value was $96 million on June 30.

Analysts cited a number of possible suitors for Boulevard, the 11th-largest bank company in the Chicago metropolitan area.

Four out-of-state regionals already in the Chicago market have previously expressed interest in expanding their market shares: Banc One Corp., Columbus; NBD Bancorp and Comerica Inc., both of Detroit; and Old Kent Financial Corp., Kalamazoo, Mich.

The company has been dragged down by commercial realty loans.

Other suitors might include two local banks, First Chicago Corp. and Harris Bankcorp.

And several players are reportedly interested in entering the market, including Cleveland-based Society Corp. as well as First Bank System Inc. and Norwest Corp., both of Minneapolis.

"Any number of banks are looking to expand in this market, but I don't know if Boulevard would be their first choice," said Kenneth Puglisi, bank analyst at The Chicago Corp.

Nonperforming Assets Hurt

Boulevard has been hampered with nonperforming assets that totaled 5.3% of gross loans at midyear.

That compares with 4.22% for all Chicago banks.

The problem assets have kept profitability low, with return on average assets of 0.47% in the first half of this year. The average ROA for all Chicago banks was 1.28%.

Challenges Confronting the Industry Go Beyond Keeping Asset Quality High

By THOMAS C. THEOBALD
Chairman
Continental Bank Corp.

The following was excerpted from remarks made earlier this year at the corporate banking forum of the American Bankers Association.

Bankers are often seen as incapable of telling a good loan from the next writeoff.

In most market cycles, corporate banking is likely to be viewed as less desirable than mass-market consumer banking. The risks are greater, the vulnerability to economic cycles higher, and the returns more volatile. That's not a combination designed to win over a perpetually skeptical marketplace.

Yet this backward business has recently been able to win investor converts and attract more volume and better terms, but let me cite two related factors.

Verbatim

• Consolidation has put a big dent in the industry's overcapacity, which has long been our single biggest barrier to running a competitive, profitable business.

• Prices, which have never accurately reflected risk, have climbed to more realistic levels.

Creditable Performance

After a disastrous decade, we seem finally to be doing something right. The industry as a whole turned in a record earnings performance in last year. Stock prices boomed, and cynics have stopped comparing us to the S&Ls.

But don't misunderstand me. There are plenty of problems we have yet to face.

The real problem is that we have done such a miserable job of pricing risk.

Asset quality certainly leads the list, if only because it's so visible, so dramatic, and, lamentably, so familiar to regulators and rating agencies. But it's far from the only predator lurking in the woods.

Strategy, expense management, and marketing every may not sound as impressive or even as important, but ultimately they will probably contribute more to our long-term health than the condition of our loan portfolios.

Fighting the Good Fight

Since asset quality will continue to be an important standard by which we are judged, we have no choice but to continue fighting the good fight. Even so, let's not lose sight that what we do for a living involves the evaluation and underwriting of risk.

Inevitably, some of that risk will go bad, but we cannot afford to accept the view that we have automatically done wrong if there is a troubled loan, a loss, or a restructuring.

The real problem is not that we accepted risk in the first place, but that we did such a miserable job of pricing it.

I won't drone on about the fundamentals of credit analysis, internal monitoring systems, and the need to act when assets begin to deteriorate. However, there are things we can address that are more universal – and strategic is one of them.

Know Your Customer

How well you know your customers, their industries, and their specific requirements has a direct bearing on how those assets, and your profits, will respond.

While it's obvious that you should know more about your customers, that's very difficult when your customer base is virtually unlimited by type or size. Achieving real customer focus has not traditionally been well practiced in banking because we have often been geographically driven.

It's also easy to forget the millstone of operating expenses. The problem isn't that credit costs occur – after all, they're a normal part of doing business. It's just that there often isn't a sufficient margin between revenues and expenses to absorb these periodic spikes.

Market Discipline Lacking

Last year, noninterest expense in banking reached $131 billion, five times the amount of chargeoffs. That's a staggering sum, and it's symptomatic of a bigger overhanging problem: Banking evolved in a closed system, without the rigors of true market discipline. As a result, there wasn't the brutal incentive to improve efficiency.

Look at measures of productivity improvement. In manufacturing, productivity grew by 2.7% in 1992, the single biggest increase in 6 years, and approached 5% in last year's fourth quarter.

In stark contrast, productivity improvements in the total services sector increased by a minuscule 0.1% a year for the last decade.

That's not to say we haven't made progress in the last few years – but even after 700 mergers and all the efforts to prune the corporate business back to profitability, we're still overburdened with surplus capacity and excessive costs. And that big into profits will continue to widen the impact of credit costs.

Comparisons Unfavorable

There's no question that if you judge banking by the standards of our best-performing customers, we come up short in terms of strategic differentiation, customer focus, productivity, and marketing savvy. As a result, we are unable to operate at the peak of competitive advantage, quality of service, or efficiency of delivery.

If that's the case, then it's time to learn more from our customers. Without a doubt, the most important lesson concerns the connection between strategy and comparative advantage.

Over the past decade, successful consumer and industrial marketers figured out that by knowing what they do best and then investing their resources accordingly, they're able to deliver quality products to meet real customer needs and do so in a cost-efficient manner.

Some banks have matched best industrial practices, but we all know that many banks haven't.

Knowing Your Strengths

From personal experience, I can assure you it's nearly impossible to make smart resource allocations without first knowing where you have a real comparative advantage. So it follows you cannot optimize efficiency without a clear strategic focus.

Thomas C. Theobald

This isn't a new idea, of course. Some banks, like Bank One, have essentially abandoned corporate banking. Others, like Bankers Trust and Continental, have made it their single focus.

But specialization can be a lot more subtle than these sweeping strategic choices. For example, some have carved out profitable markets by targeting specialized industries: Chemical Bank with transportation companies, the Bank of New York in communications, Mellon with cable TV, BankAmerica with Hollywood, and so on.

One of Continental's targets is the insurance industry: We've found that our specialized insight into their requirements is a competitive advantage in that we can respond faster and more knowledgeably than many others.

Don't Bet the Farm

Don't get me wrong. I'm not advocating that we all bet the farm on one or two industries and hope for the best. But an informed industry focus can be a profitable strategy from both the revenue and expense perspectives.

Industry specialization is only one way to find comparative advantage. Others have targeted sales size or specific products.

The bottom line is that there are huge cost efficiencies to be had by knowing who your customers are and matching your product mix and capacity to those needs. You're spared having to waste resources trying to deliver a full menu of products to customers who may be outside your effective market.

Of course, this is easier to recommend than to do. We have to admit that banks by and large evolved without the discovered need for this kind of focus. Indeed, some argue that it is imprudent not to be widely diversified.

Getting the Facts

But ask your best customers, and they'll be able to give you precise data about principal competitors' profit margins, market penetration, and cost structures. We often can't, mainly because we've had to deal with these questions in more than an approximate way.

Marketing success doesn't come cheap. I've been at this a long time, and I think one of our greatest management weaknesses is a lack of appreciation of how great marketing costs are.

We all know exactly what it costs to process a customer or a stock transfer, but are pretty vague about the costs of identifying target markets, building marketing programs, and implementing them successfully.

For example, an average customer call costs about $2,000, and it takes 18 to 24 months to convert a cold prospect into a customer. Given the costs and time involved, you'd better have a good idea of whom you are targeting! ❑

Kansas Bank Uses Agents to Drum Up Business

By BILL ATKINSON

WICHITA, Kan. — Between Hutchinson and Kingman, Kan., Gary L. Baugh, president of Railroad Savings Bank, powers his 1992 Bonneville on a stretch of highway that's as flat as a tabletop.

Three times a year, the 52-year-old Mr. Baugh burns up the roadways to check in with Railroad's 80 "agents." They are paid a commission by the thrift to scour the state's smallest towns for deposits and loans, allowing Railroad to avoid setting up branches.

"I think I've met them all," said Mr. Baugh, as a cattle truck blasts by with a whoosh. "Nobody has an operation to the extent that Railroad does. That's our niche."

Railroad, which is based in Wichita, has six branches. It is one of a handful of thrifts in the country that use agents, and it

The 80 agents, who get commissions, take the place of branches.

boasts the largest network. Railroad's agents operate in small, dusty towns like Moline (population 900), Norton (3,500), and Dodge City (20,000).

They typically run their own businesses selling real estate and insurance. But for the $421 million-asset Railroad, they act like a statewide branching system offering certificates of deposit, annuities, and home loans.

"Many of these towns couldn't support a full-service branch office," Mr. Baugh said. "That's where the agent really fits in."

ON TRACK: Gary L. Baugh, president of Railroad Savings Bank in Wichita, checks in three times a year with his 80 agents, who sell the bank's products throughout Kansas. Stanley "Bud" Benson, inset, the agent in Kingman, says he knows 90% of the townspeople.

Bill Atkinson/American Banker

60% of Deposits

The agents have worked the small towns so effectively that they have gathered 60% of Railroad's $323.8 million of deposits. And they have originated about 30% of the thrift's $153 million in mortgage loans generated in Kansas.

To boost productivity, some agents are using laptop computers so they can originate loan applications on the road and zap them to headquarters for quick approval.

Low interest rates and the refinancing boom have helped agents generate hefty commissions. Last year, Railroad paid agents a record $1.4 million in commissions for deposit, loan, and annuity originations, up from $865,000 in 1991.

"It's been busy," said Stanley "Bud" Benson, who owns Benson Insurance and Real Estate in Kingman (population 3,200).

$1 Million in Annuities Sales

Mr. Benson claims to know about 90% of the people in town. He isn't a big lender, but he and his two-person staff have drummed up $15 million in deposits in Kingman and Cheney, a smaller neighboring town. Last year, Mr. Benson generated $1 million in sales of annuities for Railroad.

He said the Railroad business brings in $68,000 in commissions last year, well above the $2,000 it generated in 1976 when he bought the business.

D. Cliff Goggans, an agent in Arkansas City, is originating loans at record pace. So far this year he's closed about 100 loans, compared with 90 last year.

"We are well ahead of last year, and we thought last year was a phenomenal year," said Mr. Goggans, who uses a laptop to make house calls.

Agents like Mr. Benson and Mr. Goggans are formidable competitors to local banks.

"They have kind of roughed us up in the last year or so," said John Nye, executive vice president and cashier with First National Bank of Kingman. "We've seen a lot of deposits move from here to, say, Railroad. It's been substantial enough that it has got our at-

Continued from *page 6*

tention."

Railroad depends on the agents as part of a twofold strategy: Agents generate a stable core of deposits – mainly CDs – while the thrift builds fee income by originating home loans in Kansas, California, and Colorado. Most adjustable-rate loans originated in Kansas are kept on the books, and fixed-rate loans are sold into the secondary market. Railroad retains the servicing rights.

"That takes the reliance off the spread," Mr. Baugh said.

Last year, Railroad's RSL Mortgage Corp. in Orange County, Calif., originated $915 million in loans, which were sold into the secondary market. Loan servicing for the year rose to $680 million, up 46% from the prior year.

Respectable Returns

Railroad earned $1.2 million in the second quarter, up 46% from the year-earlier period. It also turned in a respectable 0.94% return on average assets, and a return on average equity of 18.74%.

Agents have worked for the thrift since it was founded in 1896 by a group of railroadmen in nearby Newton. They've stuck by Railroad during good times and bad. Problems surfaced in the late 1980s when several out-of-state commercial real estate loans soured. Mr. Baugh, who was chief financial officer, was named president, replacing Larry Kirchoff in 1988.

Last year, Railroad paid agents a record $1.4 million in commissions.

That year, he boosted Railroad's provision for loan losses, and the thrift lost money two years in a row.

In 1989, the thrift didn't meet its risk-based capital requirements and was forced to file a capital plan with the Office of Thrift Supervision in July 1990.

In January 1991, Railroad raised $6.9 million in a secondary offering and was released from the order. Now, it's considered a "well-capitalized" institution.

Cleansed of Nonperformers

"It's a pretty solid organization," said Raymond Gilmartin, a research analyst with Piper Jaffray Inc., Minneapolis, who is recommending Railroad's stock. "They did a pretty good job of cleansing their portfolio of nonperformers."

Mr. Baugh said Railroad may expand its mortgage banking operations and could start hunting for acquisitions of healthy thrifts. But no matter how big Railroad grows, the agents won't be forgotten.

"They are very important," Mr. Baugh said. "We have always been committed to the agents."

Railroad Fought Hard to Prevent a Ban on Agents

By BILL ATKINSON

During the thrift crisis, the bank worried that agents would be outlawed.

Railroad Savings Bank executives fought with a vengeance to save their network of 80 agents in 1989.

They were worried that federal lawmakers were going to outlaw the agents because many state-chartered thrifts across the country were in trouble.

"It would have been a blow to the rural communities in Kansas," said Gary L. Baugh, president of Railroad.

Railroad executives used that argument to lobby the senators from Kansas: Bob Dole, the Republican minority leader, and Nancy Kassebaum, also a republican. And the thrift converted to a federal charter.

The effort paid off: Federal law went unchanged, saving the livelihoods of agents like Evelyn Freede.

At the ripe age of 72, Ms. Freede is Railroad's most successful deposit-gatherer. She operates out of Norton, Kan.

"I've watched it grow from the days when maybe we had five accounts and maybe three or four loans," said Ms. Freede, who started working for Railroad when she was 28 years old.

"We've got an awful lot of accounts," she continued. "We are ahead of the credit union and one of the banks."

Ms. Freede said the portfolio has held steady over the years, but lately she sees more competition from annuities. She said she's been able to maintain customers because people trust her.

"I don't want to brag, but I try to treat everybody fairly. If you are honest and aboveboard, one customer is going to tell another," she said.

Norton is in northern Kansas, near the Nebraska and Colorado borders. Ms. Freede's customers come from several counties as well as Nebraska to do business with her.

"I've always said the reason we can generate savings is we live in a place where there is no place to spend your money," Ms. Freede said. "It's a small community. They are basically levelheaded savings people."

PIPELINE / By Ed Kulkowsky

Tax Victory on Servicing Still Painful for Sellers

PMSRs sound like a health problem. And for some participants in the mortgage business, that indeed may prove to be the case.

The new federal budget law requires that the cost of PMSRs, or purchased mortgage servicing rights, be amortized over nine years.

That's far longer than the lifespan of most mortgages. But it could have been worse, most executives say, because other intangible assets will have to be amortized over 20 years.

Bad News for RTC?

Still, it's hardly good news: The nine-year schedule seems likely to reduce the value of servicing rights because of the smaller tax deductions available each year.

This reduced value would affect the revenues of those selling loans with the rights attached. That includes large numbers of banks and thrifts.

It also appears to be bad news for the Resolution Trust Corp., which has some big servicing portfolios that it plans to sell – most notably those of Standard Federal of Gaithersburg, Md., and Homefed of San Diego.

15-Year Amortization

The RTC's problem could be especially knotty. James O'Connor, tax counsel for the Savings and Community Bankers Association, says the law requires 15-year amortization of any servicing rights acquired through the acquisition of a whole company.

The idea is to require uniform amortization of acquired intangibles in order to prevent acquirers from assigning excessive values to shorter-lived assets.

The RTC had been planning to market Standard Federal and other properties as complete businesses, and that would presumably trigger the 15-year schedule. But because Standard's portfolio includes much subservicing, which is not affected by the changes, the severity of the impact is unclear.

* * *

That's the cloud. The silver lining: another provision of the budget measure will keep many lenders in the business of originating mortgages for low-income families and selling the loans into the secondary market.

The budget permanently authorizes tax exemptions for mortgage revenue bonds, which are issued by state agencies and other municipal bodies to fund inexpensive mortgages for low-income households. The mortgages, which exceed $1 billion a year, are originated by lenders of all kinds.

'Significant and Positive Development'

Fannie Mae is especially enthusiastic about the permanent authorization. "It's a very significant and positive development," said Larry Dale, executive director of Fannie's national housing impact division.

Fannie has bought about $3.8 billion in such revenue bonds over the last five years.

Freddie Mac said it was also "aggressively" involved in revenue bond programs, but no figures were immediately available.

Pulse of the Market

Adjustable Rates Still Unpopular Despite the Fall in Interest Rates

By CHRISTOPHER KOBLE

Despite the lowest rates ever on adjustable-rate mortgages, the loans remain stubbornly unpopular – and lenders can't figure out how to write more of them.

"It's incredible," said Joe McNally, Mid-Atlantic region manager for NationsBanc Mortgage Corp., based in Dallas, Tex. "We can do adjustables in the 3% area, but fixed rates are so low that people are still leaning toward them."

Last week, lenders were offering one-year adjustables at an average of 4.33%, down from 4.38% the previous week, according to HSH Associates, Butler, N.J.

Tantalizing Rates

The rates are at their lowest levels since the loans were introduced in the early 1980s.

A number of lenders are even offering adjustables at less than 4%. For instance, North American Mortgage Co., Santa Rosa, Calif., offers ARMs at 3.125% and two points, according to HSH.

Borrowers are opting for the certainty of fixed mortgages.

Despite such tantalizing rates, borrowers are overwhelming opting for the certainty of fixed mortgages, which were offered last week at an average of 7.17%.

In June, the latest month for which data is available, only 23% of new mortgages were adjustable, according to the Federal Housing Finance Board. And the share has not risen above 25% in more than a year.

Reluctant to Gamble

As recently as 1988, when interest rates were much higher, adjustables made up nearly 60% of the market.

In those days, with home prices rising, many homebuyers were drawn to adjustables because they knew they could sell their homes at a profit before the rate moved up. But that is no longer true, lenders say.

"I think the world is still conservative," said Mark Lynch head of retail originations with Centerbanc Mortgage Co. in Waterbury, Conn. "People learned the lessons of the '80s and are reluctant to gamble." □

Sadly for you, politicians in D.C. agree on one thing.

People who've made careers out of being contrary are declaring that the government's relationship with the secondary mortgage market is going to change drastically. They all know about HUD plans to toughen enforcement, new pressures on Fannie and Freddie, and the revival of Ginnie Mae as a major player. And if you want more evidence, look to Capitol Hill, where Congress is toying with mortgage bankers subject to the same regs as commercial banks.

How to react? You could wax nostalgic—and get clobbered by the government and your competitors. Or you could read *The Mortgage Marketplace.*

Every Monday, in less time than it takes to finish your morning coffee, *The Mortgage Marketplace* tells you about the new rules and ideas that could keep haul your secondary operations. It names the biggest mortgage company participants in Ginnie, Fannie and Freddie issues. And it scans the horizon to determine what types of loans, and borrowers, that now are considered exotic could soon enter the pipeline of conforming loans.

There's no debate—new regs are coming. What's still at issue is whether you'll be ready for them.

Insurance Start-Up Aims to Capture Share with Low Costs

By JAMES H. SAFT

As Stuart Braman sees it, field representatives of mortgage insurance companies spend too much time in frivolous attempts to win business.

"A lot of them show up in the morning with doughnuts so that mortgage agents remember them," said Mr. Brafman, president of Amerin Guaranty Corp.

Amerin, a start-up operation in Chicago, fields no representatives at all. As a result of the costs savings, Amerin can then offer less expensive insurance.

Leaders Signing Up

The idea seems to be catching on. Mr. Brafman says eight lenders are scheduled to start using the product in the next few weeks, joining Norwest Mortgage, which began offering Amerin insurance in April.

Forty-five other lenders are seeking Amerin's approval to offer the product, he said.

Amerin, headquartered in Chicago, operates on the premise that it can capture a portion of the market by delegating underwriting authority to mortgage lenders.

Its insurance is "lender-paid," meaning the lender pays for mortgage insurance and passes the cost along to the homeowner through a higher mortgage rate.

Independent Underwriting

Mortgage lenders, using underwriting guidelines approved by Amerin, will make underwriting decisions independently.

Mr. Brafman says that the economies engendered by not having a corps of field agents, as well as a streamlined processing and payment process, will allow Amerin to undercut its competition's premiums by roughly 15% to 20%.

Lenders, of course, will have a choice. They can use this as a source of income or, if they want to go after market share, can pass the savings along to the consumer. From the consumers' standpoint, since the insurance is added to the interest rate, it will represent a tax benefit.

A Key to Success

Lender-paid insurance also offers consumers the advantage of lowering the out-of-pocket expense, a point especially important to first-time homebuyers.

Crucial to Amerin's success will be its ability to identify and do business with mortgage lenders, which will turn around higher-than-average quality insurance candidates.

Amerin Guaranty Corp. of Chicago fields no representatives. One analyst thinks it will force the industry to examine its margins.

Amerin is "seeking out lenders with low default rates which do national business and generate volume of good-quality business," according to Mr. Brafman.

Amerin offers its customers two basic types of working agreements.

Under one, mortgage lenders will be be charged under a fixed schedule of rates. The other program will have a lower starting point in premiums, but the lender's loss experience will be examined after four years. Depending on the results, premiums may fall or rise.

Though all agree that it is too early to judge Amerin's success, James Schmidbauer, a mortgage insurance analyst at Moody's, thinks that, at the least, Amerin will force the industry to examine its margins and the way it reaches the customer. □

National City's Portfolio Soars

National City Mortgage Co., Miamisburg, Ohio, is growing rapidly in both originations and servicing, says Dale A. Branham, the company's new chief financial officer.

The unit of National City Corp. produced $2.1 billion of mortgages in the first half of 1993, more than double the volume of a year earlier, Mr. Branham said in an interview.

The company, which services $10.7 billion of loans, plans to expand its servicing to as much as $20 billion by the end of 1996, he said.

Mr. Branham recently was promoted from vice president and controller of the company, which as 25 offices in 11 states.

In his new post, he will be responsible for mergers and acquisitions, compliance, corporate accounting, administrative support, and human resources.

Mr. Branham replaces John W. Mann II, who left to become executive vice president and chief financial officer of Keycorp Mortgage Inc., Albany, N.Y.

— James H. Saft

Divining the future is not all that hard when you have

THE REDEMPTION REPORT

Calls and prerefunded bonds are scheduled to drain the yields out of portfolios at a faster and faster pace in the third quarter. With ***The Bond Buyer Redemption Report,*** *you can anticipate redemptions well ahead of the actual events. If you want to know when your bonds will be called away, this report has the answer.*

We published the first such book in history for the first quarter of 1993. Buyers received instant access to the entire universe of called and prerefunded bonds in one volume.

And now you can get the third-quarter volume, a 916-tome chock full of information on which, how much, and when. Here's a sample listing:

AK ANCHORAGE ALASKA TEL REV — *Total Amount Redeemed :* $8,465,000.00
TEL REV BDS
Series: 1983 — *Issue Amount:* 9,000,000
Sale Date: 08/24/83 — *Dated Date: 09/01/83*

Change in Trust Conversion Law Still Hanging Fire on Capitol Hill

By KAREN TALLEY

Banks will have to wait at least a while longer for a federal law that could boost their mutual fund assets by billions.

The proposed legislation would allow the conversion of common trust funds into mutual funds without exposing trust customers to a big tax bite.

As the law now stands, common trust customers would have to pay taxes on any gains in their portfolios at the time of conversions into mutual funds. The pending measure would change the law so that customers would be taxed only when they sold, at a gain, shares in a mutual fund formed from a trust.

Kathy Anderson
Says Clinton isn't opposed

Common Trust Funds Targeted

The measure targets common trust funds, like those set up for estates and minors.

Some 473 financial institutions oversee 1,770 common trust funds with $136.7 billion in assets, according to the Federal Financial Institutions Examination Council.

James McLaughlin, director for trusts and securities at the American Bankers Association, said that perhaps a third of these funds would convert to mutual funds if the law were passed. But others think the conversion rate could be much higher.

Victim of Circumstances

The measure has drawn little or no opposition since first proposed in 1991 but has repeatedly fallen victim to circumstances.

It was included in a tax plan President Bush twice vetoed for other reasons last year. This year, the measure was part of HR 13, a tax simplification bill introduced in January by Rep. Dan Rostenkowski, D-Ill., chairman of the House Ways and Means Committee.

Could Ride on Tax Bill

But Congress shelved that initiative while working on President Clinton's economic package. The way things stand now, banks and other supporters of the measure probably will have to wait until next year.

"My guess is Congress won't be able to tackle that this year," said Pat Jones, a spokesman for Rep. Rostenkowski.

Some supporters hold out hope for the measure to be attached to a miscellaneous tax bill that Congress may consider before breaking for the year.

This could allow time for a modification sought by smaller banks. They want the proposal broadened to allow common trust conversions into one or more mutual funds; the current bill limits them to one fund.

Customers would be taxed only when they sold fund shares at a gain.

More Choices for Customers

But Mr. Jones isn't optimistic the measure will pass in any form before yearend because Congress will be "consumed" by matters like health care reform and the North American Free Trade Agreement once it returns from summer recess.

Still, many believe it's just a matter of time. The current administration does not oppose conversion, said Kathy Anderson, product manager for the services for mutual funds at KPMG Peat Marwick. "They just have to get it into a less controversial bill."

Bank trade groups say the bill would benefit trust customers by giving them additional investment choices and will help banks hold onto customers who are asking for mutual funds.

Big banks appear to be the biggest beneficiaries, earmarking the assets for mutual funds they already manage. Many of these were started by converting employee benefit, IRA, and 401(k) accounts, which are not subject to immediate tax consequences.

Banks Must Tread Softly

Other banks could use the assets as seed money to help launch their own funds, or to arrange a private label agreement with an outside fund company.

But banks have to tread softly to avoid trampling on their fiduciary duty to customers.

Banks will need customers' permission to convert the accounts and must also make sure that customers know the funds are managed by the bank.

"Banks have to be very careful about this," said Lee Cross, a spokeswoman for the Office of the Comptroller of the Currency. "There's a real potential for customers who don't feel banks have been acting in their best interest to sue them."

OCC Permission Unnecessary

Banks apparently would not need Comptroller's office permission for the conversion.

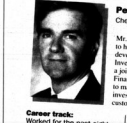
First Chicago Corp. is among the banks planning to go the conversion route while keeping their responsibilities to customers in mind, said Michael Traba, vice president for mutual funds.

First Chicago expects the measure to pass, and has already filed with the Securities and Exchange Commission to convert its 16 common trust funds into bank-managed mutual funds.

Other banks will seriously consider diving in if the proposal becomes law.

"We would absolutely take a very hard look," said Judy Rudnick, product manager for the Harris Insight funds offered by Chicago's Harris Bankcorp. □

DOSSIER/ by MICHAEL O'D. MOORE



Peter M.Wall
Chemical Investment Services

Mr. Wall was recruited last month to head investment research and development at Chemical Investment Services. The company, a joint venture with Liberty Financial Services, has been formed to market mutual funds and other investment products to Chemical customers.

Career track: Worked for the past eight years at Citibank in both credit and investment services. Four years working on strategic planning and financial analysis at Sony Corporation of America.

Vital statistics:
Age: 40

Education: BA, business administration, Rutgers College
MBA, finance, Fordham University

Family: Wife, Patricia, and son Christopher, 6

Home: Huntington, N.Y.

Hobbies: Scuba diving, sailing, reading, and home repair

Recent dives: Two miles off Brooklyn, explored a turn-of-the-century merchant wreck in about 60 feet of water. Visibility was poor because other divers were kicking up silt – not, Mr. Wall hastened to add, because of Brooklyn's water quality.

Current reading: "The World Turned Upside Down" by Christopher Hill and a book on mortgage-backed securities

Chemical Investment Subsidiary Hires a Marketer from Citibank

By MICHAEL O'D. MOORE

Chemical Investment Inc. has hired Peter M. Wall away from Citibank to direct the selection of investments products.

The joint venture between Chemical Bank and Boston-based Liberty Financial Services is starting from square one in developing a list of products.

Mr. Wall, formerly in charge of packaged product research with Citicorp Investment Services, will screen thousands of products before settling on the lineup.

Criteria Must Be Met

"The sole basis for the funds making the preferred product list will be the criteria I and my marketing group set forth," he said.

The first task is to select the mutual fund offerings, said Mr. Wall, who started working on July 14.

The preferred fund families will be selected using 18 to 20 product categories and analyzing for total return, volatility, financial stability, overall risk and other factors. There will be more than three or four families selected, he said.

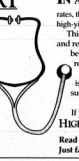
A product Mr. Wall is developing is an asset-allocation account to diversify customer portfolios.

For asset allocation, Mr. Wall wants to focus on a "buy" and "hold" strategy, not on an aggressive market-timing approach.

"It's a long-term investment strategy," he said. □

HIGH YIELD REPORT

lets you *hear the heartbeat and feel the pulse* of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt



IN AN AGE OF DRAMATICALLY declining long-term interest rates, the *American Banker*'s weekly *High Yield Report* delivers money-making tips on high-yield investment opportunities.

This newsletter keeps a close eye on major court proceedings, and legislative and regulatory developments. Each issue features barometers of market size, bellwether pricing tables, a forward calendar, reports on filings, and the results of new-issue sales.

No longer considered the arena of "junk bonds," the high-yield market is rapidly gaining respectability as it is closely tracked by this objective, succinct weekly letter.

If you must know what's "ticking" in the heart of the high-yield market, HIGH YIELD REPORT is a must read every week.

Read it free for 4 weeks!

The Upside and Downside of Selling Mutual Funds

As mutual funds become a bigger part of banks' retail strategies, they are attracting attention from policymakers.

The following article on that trend – written by Michelle A. Clark, an economist at the Federal Reserve Bank of St. Louis – appeared in the summer edition of the Central Banker, *the bank's quarterly newsletter.*

A more detailed analysis will be published in the October issue of the bank's Regional Economist.

Every banking industry trade group seems to be organizing conferences and running stories on mutual funds in its trade publications these days.

Why all the interest? A number of bankers and industry analysts view the provision of mutual funds as a way to stem the flow of deposits – and more important, customers – out of banks and into brokerage and investment houses in this low-interest-rate environment.

Comment

In addition, banks can earn nominal fees by selling third-party mutual funds or more substantial income by offering their own funds.

12% of Outstanding Shares

Although hard numbers on the extent of banks' involvement in the mutual fund business are lacking, a number of estimates exist.

Exercise caution in selling to novice investors.

A recent study by the Investment Company Institute, the mutual fund industry's trade group, found that banks accounted for about one-third of new sales of money market mutual funds and about 14% of new sales of bond and equity funds in the first half of 1993.

That was enough to push banks' share of the business to $175.5 billion, or 12% of the $1.5 trillion in mutual fund shares outstanding in mid-1992. Since then, banks' share of a growing market has probably risen even further.

While mutual funds sales look like a win-win situation from the banking industry's perspective, some observers aren't so sure. Their major concern is that customers may mistakenly believe their investments are FDIC-insured, like deposits.

Guidelines from Regulators

To ensure that customers aren't confused, the regulatory agencies have begun advising banks to produce clear disclosures and to be sure that deposit and investment activities are physically separate.

It's not just regulators who are concerned. Congressional leaders have asked the General Accounting Office to conduct a study on the adequacy of banks' mutual fund disclosures and regulatory supervision, and have urged the Securities and Exchange Commission and the National Association of Securities Dealers to take a closer look at banks' sales practices.

First-time investors are of special interest. The ICI has estimated that 10% of households that own mutual funds began purchasing them in January 1991 or later. No one knows what proportion of those funds was bought through banks, but some believe it is substantial.

Market Fluctuations

The first-timers may not fully understand the risks associated with investments in equity and bond funds.

If the stock market turns down, equity funds will go down in value and if interest rates go up, bond funds will – and equity funds could – decline in value.

Credit risk is also a factor with bond funds, whose market value declines if the credit ratings of bonds in the portfolio are downgraded.

The Backlash Factor

Bank customers accustomed to fixed CD yields could be in for a rude shock if the value of their mutual fund investments – their principal – goes down.

And the more closely associated banks are to mutual funds, especially though a private-label or proprietary relationship, the more likely they are to suffer customer backlash if market prices take a big plunge.

Because the value of a bank's franchise is largely related to its reputation for safety and soundness, it's in banks' interest to exercise caution in selling mutual funds to novice investors.

The bottom line: Banks' entry into the mutual fund business – like any new business – presents risks as well as rewards. □

Michelle A. Clark
St. Louis Fed economist

We'll save you money. We could save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division, to get every Monday the data you need to face the regulators.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... why agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 10% discount, so you'll be saving money even before you get the first issue. After that, how well you use the information before this year's exam could decide whether you're around next year.

False Fears Cripple Collection Efforts, Expert Says

By MICKEY MEECE

William R. Mapother has made it his business to stem the tide of bankruptcies that has been a major concern of credit card bankers and other consumer lenders in recent years.

The Louisville, Ky.-based attorney, president of the Mapother & Mapother law firm, has made a big business out of representing creditors and gives frequent speeches on how to mitigate losses.

In 1979, he opened the Creditors Law Center as a clearing house on bankruptcy information. Mr. Mapother also writes a monthly newsletter and has written a number of books about bankruptcy, fraud, and collections.

In an interview with American Banker *reporter Mickey Meece, he focused on cardholder bankruptcies.*

Q: Why have you specialized in bankruptcies?

MAPOTHER: I have developed a niche for myself in consumer bankruptcy consulting because my consulting and my training seminars save bankers so much money.

The reason they save them so much money is because the bankers are not doing what they need to do to cut their losses.

The fact is they are unaware of what their rights are, and therefore they fail to take advantage of the rights they have.

Q: How can bankers cut their losses?

MAPOTHER: One of the things I promote is trying to encourage your good credit card customers to voluntarily repay in spite of their filing [for bankruptcy protection]. It's a marketing strategy that I use. I've got letters that I have drafted for banks to send to their good customers.

A lot of banks are not doing this, usually because they think that legally they cannot do it, or they think it will not work.

Q: And what have you found?

MAPOTHER: If it's done correctly, it is legal – and the recovery is unreal. I have one bank in this country that is recovering over $100,000 a month on Chapter 7 bankrupts – strictly credit card accounts – by using my four letters.

Q.: So what does this say about consumers – that they are earnest about paying back their debts?

MAPOTHER: What it says about the consumer is:

A) Bankrupts do not change their lifestyle by filing bankruptcy. They still want credit.

B) Credit is difficult to obtain if you have filed bankruptcy, and therefore

C) If you offer future credit to your customer if they repay you, they will repay.

Those three things are the key to my marketing strategy.

Q: Are these letters legal?

MAPOTHER: I've got two court decisions now specifically upholding these letters. One is a circuit court decision, one of them is a very recent bankruptcy decision.

Q: What is the rule of law they are concerned with?

MAPOTHER: The rule of law is called the automatic stay.

When someone files bankruptcy, the creditors are enjoined from trying to collect their debts. So some lawyers say: If you write a letter to the customer saying, "Pay me my debt and I will give you future credit," that's trying to collect – and that's prohibited. That's what they're concerned about.

Banks don't know their own rights, lawyer William Mapother says.

My answer is that my letters are mild letters, not offensive.

Q.: How else can bankers cut their losses?

MAPOTHER: Another thing I talk about is how to offset credit card debt with a checking or savings account. That means the debtor owes on a credit card, he defaults, and the bank takes the money out of the checking or savings account and applies it to the debt.

Basically, that has been ruled illegal by Congress in the Truth-in-Lending laws. There is a way to get around that prohibition. and I teach them how to do it. There is a way of putting a provision in your credit card agreement to avoid the prohibition.

Another thing that I talk about is how to win lawsuits economically. Banks are being defrauded on their credit card accounts, and they are failing to seek to recover. And the reason they are failing to fight back is because of the legal expense.

I have had an ongoing battle with the Visa bankruptcy-reduction program. The program in theory is fine, but in practice it is not working.

It's not working because it is structured in such a way as to be too costly to banks, and therefore banks are reluctant to fight back except in the most egregious cases. By egregious I mean outrageous fraud, usually involving amounts in four or five figures.

I want banks to fight back on $3,000 to $5,000 losses. In the Visa program, the legal fees are so much that banks are reluctant.

Q.: How does the Visa program work?

MAPOTHER: Visa has selected one or more law firms in each state on recommendations from banks. The problem is that these law firms know how to fight fraud, but they do not know how to fight it economically.

I am involved in a case where a law firm in New England has already charged a lot more than the balance on the account. The bank might as well charge the account off. And that's exactly what's happening, and that's why the system is not working.

A creditor gets burned like that once or twice, and you know what happens? Some senior vice president says: Stop fighting fraud.

The answer is obvious – learn to fight it economically.

My rule of thumb is a bank cannot afford to spend in legal fees more than 40% to 50% of the balance – if they have a good likelihood of winning.

Obviously, if there's little chance of winning they're not going to spend 50 cents.

This is common sense to me. The problem with these Visa lawyers is they know how to handle large bank litigation, but they don't know how to handle consumer fraud.

Q.: What's to stop a bank from finding its own lawyers?

MAPOTHER: That's one of the things that I talk to them about. They can find their own attorney.

We're not talking about fighting fraud in your hometown. That's not the problem. The problem is when you have a one-time case in Albuquerque. And that is where the Visa program was designed to help. But the chosen firms are typically not right.

There's work involved in finding the right lawyer. In Louisville, for example, we probably have 1,000 lawyers. There are probably 10 that are good that are fighting fraud, and maybe half of those will work to fight it economically.

You can't just tell a law firm "Do your thing." You can't do that in a $3,000 fraud case.

Q.: What are the bankers' concerns. about credit card fraud? Will they be changing over the next 10 years?

MAPOTHER: What's happened in this country in the past two decades has been a great shift in consumer lending from small loans to credit cards.

In the past, if you needed to buy a refrigerator, you went into a bank or finance company for a loan of $1,000 or $1,500. Today we don't have loans like that. You charge it on a credit card. The consumers are still getting the credit, but we have this enormous credit card debt that we didn't have 20 years ago.

Credit cards are very profitable, but they also bring a lot of losses. My job is to teach people how to cut their losses.

Q.: If these ideas are based on common sense, why aren't more people using them?

MAPOTHER: They [bankers] don't see themselves as needing any help. We're all that way. We frequently don't react to things unless there's a crisis.

The second problem is they think there's nothing else that can be done. That attitude is frequently reinforced by lawyers. The lawyers are not aware of all the things that can be done. □

Nabanco to Process Macy's Point of Sale Transactions

By JEFFREY KUTLER

Merchants

Nabanco has snared another sizable merchant processing contract.

Only weeks after closing the deal to process MasterCard and Visa transactions for Sears, Roebuck and Co., Nabanco said it has signed Macy's, the flagship division of R.H. Macy & Co.

Macy's was the last of the New York-based retailer's divisions not to be using Nabanco for point of sale processing support.

"Nabanco previously processed transactions for the Bullock's and I. Magnin divisions," said Patrick H. Thomas, chairman, president, and chief executive officer of Nabanco's parent, First Financial Management Corp. of Atlanta.

$1 Billion in Volume

"With this multiyear agreement, Nabanco will provide point of sale processing for all Macy's divisions, a contract covering an estimated $1 billion in credit card sales volume," Mr. Thomas said.

R.H. Macy & Co. did $6.4 billion in total sales last year. The company operates 110 Macy's and Bullock's stores, 13 I. Magnin stores, 15 Macy's Closeout outlets, and 72 Aero Postale stores.

Macy has been restructuring after running up a heavy debt load in the 1980s. Like most major retailers trying to boost sales, it gradually came around to accepting American Express cards, and later bank credit cards, in addition to its long-standing proprietary card.

As part of the restructuring, Macy sold its in-house credit card receivables in 1991, then totaling $1.8 billion, to General Electric Co.'s GE Capital unit.

The anticipated $1 billion in Macy credit card sales brings Nabanco's new-contract volume this year to $9 billion, the bulk of it coming from the 1,800 Sears stores and affiliates that began accepting MasterCard and Visa this month.

Nabanco, based in Fort Lauderdale, Fla., is apparently widening the gap over its closest rival, National City Processing Co., a subsidiary of National City Corp. of Cleveland. According to *The Nilson Report*, Nabanco led its industry by handling about $36 billion in merchant credit card sales last year, $2 billion more than Louisville-based National City Processing.

Nabanco has been selling its ability to customize and to combine with other First Financial Management units – including Microbilt, and TeleCheck – to provide value-added point of sale services to merchants.

Rival Wins One

National City Processing did come out a winner in another retailer's credit card decision.

Kaufmann's, a Pittsburgh division of St. Louis-based May Department Stores Co., began accepting MasterCard, Visa, and Discover cards on Monday. National City will provide authorization and settlement services.

Kaufmann's 40 stores previously had been taking only a proprietary card. May, whose other subsidiaries include Filene's, Lord & Taylor, and Robinson's, maintains an aggressive in-house credit program. *The Nilson Report* ranks May third among retailers, behind Sears and J.C. Penney Co., with $2.4 billion in receivables. □

The anticipated $1 billion in Macy credit card sales brings Nabanco's new-contract volume this year to $9 billion, the bulk of it coming from 1,800 Sears stores and affiliates.

Now all of R.H. Macy's divisions will use Nabanco.

American Express Unit Hires an IDS Executive

MINNEAPOLIS — David R. Hubers, senior vice president of finance and chief financial officer at IDS Financial Services, has been named president and chief executive of the American Express Co. affiliate.

The appointment is effective Aug. 1. Mr. Hubers succeeds Jeffrey E. Stiefler, who, as previously announced, becomes president and a director of American Express on Aug. 1.

Mr. Hubers, 50, has been with IDS for 28 years. He will remain in Minneapolis and report to Mr. Stiefler.

Mr. Stiefler will be joining the office of the chairman at American Express in New York. The company's chairman and chief executive, Harvey Golub, formerly headed IDS. □

Customer Relationships Represent Invested Capital

Do we have a new Tower of Babel?

Bankers' "acquisition premiums" are "franchise values" to Wall Street.

To accountants and regulators, they are "intangibles" that appear or disappear according to accounting convention.

To Sanford Rose in one of his "Random Thoughts" columns, they are "customer relationships," with no mention of "intangibles." ("Customer relationships" seemingly suggests more respectability than "intangibles.")

All of these terms, which refer to the same underlying business reality, bring to mind the story of the blind men attempting to describe an elephant.

Image Problem

The earliest valuation studies of bank customer relationships actually adopted the term "customer deposit relationships."

As these valuations were mostly to support tax positions, accountants ultimately prevailed with their own "intangibles" terminology.

Relationship valuations thus seemed to represent accounting and tax "gimmickry" – a perception reinforced by Federal Home Loan Bank Board "smoke and mirrors" accounting.

The accounting and tax applications actually are of only secondary importance. Yet bankers regard precisely the same economic phenomena to be of enormous significance in the guise of "customer relationships" and "relationship banking."

We do seem to have some misunderstanding.

A Crucial Observation

Mr. Rose's main point – that the significance of customers and customer relationships lies in their value characteristics – is enormously important.

Much of the value of a banking enterprise is in relationships. Understanding and measuring those values are therefore fundamental to planning and decision-making. Managing those values addresses the "what" and "for whom" dimensions of economic activity, much as business process engineering addresses the "how "dimension.

It is high time we bring relationship values out of the "intangibles" closet.

Costly Indifference

Valuing banking relationships for tax purposes dates back to the 1970s.

Mr. Morgan is vice chairman of Ferguson & Co., a bank and thrift consulting firm. He is based in Washington.

The tax authorities require valuation reports, but those reports are normally proprietary and often merely "opinion letters." Bankers often seem unaware even of their existence.

Whatever their purpose, analyses of customer relationship values must rely on the same conceptual foundations. Yet bankers commonly dismiss intangibles valuations as an arcane and irrelevant specialty of tax professionals and a handful of valuation consultants.

Banker indifference detracts from the banking context of these valuations while depriving bankers themselves of an important resource for management decisions.

'Franchise Value'

Valuation consulting also tends to be isolated from investment banking and securities analysis. Generally accepted accounting principles, which exclude most intangibles, constrain most financial analysis.

Investment bankers nevertheless must address the market reality of significant premiums that are common in acquisitions of service enterprises.

"Franchise value" is their recognition that premiums represent earnings beyond those attributable to reported assets and capital. It thus represents what valuation consultants measure more precisely as intangibles.

Basic Considerations

A comprehensive values-based decision framework represents a synthesis of several ideas, including some familiar business fundamentals:

• To attract and retain capital essential to long-term survival, the paramount objective of a corporate enterprise must be to maximize shareholder value.

• That objective requires management decision criteria and performance measures that relate directly to shareholder value. Traditional capital budgeting criteria for plant and equipment investment – formulating those decisions in terms of present values of future cash flows – reflect this requirement.

• Any decision affecting future cash flows is an investment decision. Because most management decisions, including those involving customer relationships, are investment decisions, they require application of capital budgeting principles.

• The value of an enterprise always tends toward the net market value of its tangible and intangible assets and liabilities, including customer relationships. Share prices significantly higher than this "true net worth" are a signal to acquire more assets. A converse pattern indicates that new management or asset divestitures would increase shareholder value.

• The net asset value of the enterprise and its dividend value as a going concern must similarly converge. Both represent discounted (present) values of future cash flows. They differ in that the latter includes both the outlays on replacing and perhaps expanding assets and the cash inflows that result from those outlays.

• Concepts and methods for valuing customer relationships have been available for some time. There remains the adoption of familiar statistical techniques to identify the relationships between decision alternatives and relationship value contributions.

• Finally, analyses of customer relationship values require customer information files with levels of sophistication and detail that have become available only in very recent years.

Misleading Yardstick

We are accustomed to enterprise valuations based on ratios of share or acquisition prices to earnings and capital as measured by generally accepted accounting principles.

In services such as banking these measures are particularly misleading, as they record investment in customer relationships as current expense, excluding from recorded assets the capital thus developed.

Corresponding distortions in value conclusions drawn from those measures are unavoidable. They are merely crude approximations, necessitated by deficient measurement standards.

BY DISMISSING *intangibles valuations as arcane and irrelevant, bankers deprive themselves of an important resource for management decisions.*

MUCH OF THE *value of a banking enterprise is in relationships. It is high time we bring relationship values out of the "intangibles" closet.*

The consequent short-term distortions to share prices are a poor basis for longer-term investment and management decisions.

Nevertheless, earnings eventually converge with cash flows and dividend capacity, and thus with the underlying net asset values.

Basing decisions on relationship value concepts and value contribution analysis is only an incipient trend at the present time. Its compelling logic nevertheless suggests growing momentum as competition intensifies.

Without a value-contribution approach to customer relationships, "relationship banking" is mostly a slogan with little substance.

Abandonment of conventional reliance on profit criteria and corresponding performance measures is an essential first step.

THE VALUE *of a bank is greatly distorted when investments in customer relationships are recorded as current expenses.*

Whatever the attributes of generally accepted accounting principles that recommend their use for public financial reporting, they are misleading and potentially pernicious for internal use.

Commenting on the insidious effects, Mr. Rose observed that while 40% to 60% of bank customers are typically unprofitable on the basis of generally accepted accounting principles, and that 70% may represent negative value on a present-value basis.

Thus, seemingly "profitable" customers and services may be eroding shareholder value.

The focus on customers is important. Even value-contribution analysis falls short if applied only to services.

Looking More Deeply

The reality is actually more complicated than this observation suggests:

• Many "unprofitable" customers actually contribute value to the enterprise. Initial losses may simply be part of the investment in developing valuable customer relationships. This pattern is common for credit cards and trust services, for example.

Moreover, because of uncertainties, some relationships with

Customer Relationships: 'Intangible' but Valuable

Continued from page 14

negative value contributions are unavoidable byproducts of developing relationship values.

• Many "profitable" customers represent negative value contributions. Customers, and particularly those that fail to develop significant balances, are often in this category. The volume of business generated may simply be insufficient to recover prior investment in developing it.

A further complication is that many individual customer relationships require services that contribute value, such as deposits, as well as services that often do not.

Many loans, for example, contribute value to the enterprise only indirectly – by attracting and retaining customers for other services, which contribute value directly.

Yet those same types of loans, perhaps priced differently, may be direct value contributors for other customers.

MANY *"unprofitable" customers actually contribute value. Initial losses may simply be part of the investment in developing valuable customer relationships.*

For the most part, banks have scarcely scratched the surface of adapting prices, service offerings, and promotional practices to different customer characteristics.

A "value engineering" decision framework would involve market research and analysis directed to developing more focused approaches to the marketplace.

More effective and creative use of available customer information makes it possible to increase the value of current customer relationships, both by selling more value-contributing services and by increasing the duration of relationships. It also provides guidance in developing programs to attract new customers.

Moreover, for identical reasons, the value criteria that should guide product, pricing, and marketing decisions should also be the bases for assessing entries into new markets – whether de novo or by acquisition – and for assessing and restructuring current programs and activities.

In the Meantime

Few banking organizations are likely to seriously consider wholesale adoption of a values-based decision framework, irrespective of the perverse consequences of the alternatives.

With the recent recovery in bank earnings, there may be little apparent urgency for any substantial change.

Therefore, if only for illustration, here are a few more modest applications of value principles:

In mergers, acquisitions, and divestitures. The premium values exchanged in bank mergers and acquisitions consist predominantly of customer relationships. Nevertheless, acquisition analyses and purchase investigations ("due diligence") rarely consider these values directly. A low-quality depositor base may cause more problems in the long run than deficiencies in a loan portfolio.

Disclosing intangible asset values in annual reports. Whatever the skepticism about the usefulness of information reportable under financial accounting standard 107, an important early step in rationalizing decisions is to develop an understanding of the value characteristics of customer relationships.

In performance assessment of business units and branches. The values suggested by earnings and cash flows should be commensurate with the values of the underlying assets, including particularly the customer relationships. Those values should also be consistent with the value potential of the marketplace.

In identification of customer values. A first step in reformulating product, pricing, and other decisions and strategies is to distinguish between customers who contribute value to the enterprise and those who do not, thus identifying their respective characteristics.

A modest second step is to reprice services or alter service offerings so as to induce customers in the latter group to contribute value or to terminate their relationships.

Banks, like other corporate enterprises, face an investment community that is increasingly cynical about reported financial performance, commitments to building shareholder values, and management ability to follow through on those commitments.

American enterprise must reverse this if it is to realign itself with modern technologies and international market realities. New information technologies already are undermining much of the traditional business of banking. □

Chinese Talk Of Emulating Federal Reserve

Reuters

HONG KONG — China is considering modeling its central banking system on the U.S. Federal Reserve, with reform focusing on the troubled financial sector for the rest of the century, said Zhu Xiaohua, a vice governor of the People's Bank of China.

He said Beijing aimed to limit inflation but could not eliminate it and still achieve high growth.

Mr. Zhu, who was recently recruited to the central bank by Vice Premier Zhu Rongji, was speaking at a closed-door seminar in Hong Kong. A transcript of his speech was published in the Chinese-language *Hong Kong Economic Times*.

"Reform of the financial system will become the core of China's restructuring in the last years of the century," Mr. Zhu told those attending the seminar at Hong Kong Polytechnic.

Austerity Drive

Vice Premier Zhu, who recently took control the central bank governorship, launched an austerity drive earlier this year to cool economic overheating that has brought roaring inflation and chaos in the banking system.

Mr. Zhu, the vice governor, said he was speaking personally, but his remarks indicate that Beijing believes the long-term solution lies not in central directives but in the reform of a financial system that has fallen far behind the fast-developing economy.

He listed a number areas for improving the central banking system. These included "setting up a comparatively independent system for implementing monetary policy to avoid administrative interference."

"If a monetary reform committee is set up, it could use the Open Market Committee of the U.S. Federal Reserve as a model," he said.

Under the U.S. system, governors of 12 regional Federal Reserve Banks meet in the Open Market Committee to decide monetary policy.

The vice governor said China could be divided into several economic zones, but did not specify a number.

People's Bank of China governors from each zone would sit on the committee to direct regional differences on economic policy, Mr. Zhu added.

Beijing faces major problems in forcing numerous provincial authorities to follow central government orders to calm economic development.

Mr. Zhu indicated that dealing with only a limited number of regional central bank governors would strengthen the central bank's financial control over the economy. The vice governor also said China should introduce an interest-rate setting system similar to those in developed nations.

Commercial banks should adapt to the demands of international competition by meeting, in three to five years, basic capital adequacy ratios laid down by the Bank for International Settlements, he added. □

FDIC to Reduce Swollen New Staff

Continued from page 1

Washington staffers, but in mid-1991 the FDIC added the seven-story, 350,000-square-foot Seidman Center at a cost of $129 million.

No Pirn Numbers

FDIC officials said in interviews that they do not know exactly how much the agency needs to be trimmed.

"FDIC today does not have specific targets," said Carmen J. Sullivan, who as the FDIC's director of information resources management is involved in managing the downsizing. "Projecting what your total organizational staffing is going to be cannot be done with much certainty between a year and 18 months out."

The FDIC is working up staffsize estimates on a division-by-division basis. The liquidation division, which will be hardest hit, is due to deliver its reduction estimates this month.

As the FDIC took over more assets from failed banks, the liquidation division mushroomed from 779 people in 1982 to about 6,600 people, or 44% of all FDIC employees.

Largely Contract Workers

Of that total, about 5,250 are contract employees, and 1,000 of these temporary staffers will be let go by yearend, said liquidation director John Bovenzi. Three of liquidation's 22 field offices already have been closed this year.

"The serious downsizing is just starting now for the division," he said. "The decline is clearly going to continue through '94; there will be more office closings and a decline in number of employees. We haven't worked out the specifics."

Not only does the FDIC have too many people, but nearly 1,700 employees at the Resolution Trust Corp. will be transferring to the FDIC, many of them liquidators. The two agencies agreed in February 1992 that the 2,400 people working at the RTC at that time had the right to a job at FDIC when the thrift-bailout agency closes in 1996. So far, 667 RTC staffers have made the jump to the FDIC.

The resolutions division, the agency's newest, will also feel the ax. The division has bulged from 105 in 1991 to 350 today, and there just is not enough work for everyone. By the end of 1994, the resolutions division aims to employ 320 people, but more than 30 people will have to go because room must be made for returning RTC staffers.

The agency has too many lawyers as well. Today, lawyers in their support staff total 2,077; that's up from 105 in 1982. But general counsel Alfred Byrne said he does not expect any cutbacks because his division is doing more work in-house, relying less on private law firms.

At the end of 1990, the FDIC did just 39% of its legal work inhouse. By this May, that figure was up to 58%, Mr. Byrne said.

As major RTC decisions emerge, support areas within the agency will have to cut back as well. For example, Ms. Sullivan's division has 370 workers to provide computer and other support services to a staff of 15,000.

"If that work force were reduced by a third, then do I need 370 employees?" she said. Later in the interview, when asked if she thought the FDIC might indeed be reduced by a third, Ms. Sullivan said, "I just pulled that out of the air."

But a third may not be that far off.

If the early retirement program covers 1,100 people and the liquidation division sheds most of its temporary employees, that's more than a third of the staff.

The division of supervision, home to 1,996 employees, is expected to shrink much, because the RTC will retain responsibility for its banks once a year.

Examination Overkill?

But some people think the FDIC has too many examiners as well.

Kenneth A. Guenther, executive vice president of the Independent Bankers Association of America, said the FDIC is needlessly tying up small banks by sending in eight examiners for three weeks.

"They are parking excess employees in banks via the examination function," he said.

Paul G. Fritts, the FDIC's executive director, denied the parking charge but agreed that banks often get extra examiners because some of them are being trained.

OTS Will Continue to Cut Jobs As Its Personnel Needs Decline

WASHINGTON — Thrift regulators have been downsizing their work force for several years, reflecting the decrease in the number of savings and loans.

The Office of Thrift Supervision employs 2,162 people, down from 3,400 in 1989. The target staff size is 2,119, according to William R. Casey, deputy assistant director for resources management at the OTS.

But while the OTS is just 43 people away from that goal, Mr. Casey said many more staffers will have to leave because the OTS has more people than it needs.

Using Early Retirement to Cut Banks

"Even if we got to 2,119 tomorrow, we would still have to cut Washington staff to get rid of unnecessary positions," he said. "The more you shrink, the more you have a problem fitting the work that needs to be done with the skills that people have." The OTS is using early retirement to reduce its ranks. Under an early out, agency employees can retire at any age with 25 years of service or at age 50 with 20 years of service.

If the OTS's early retirement program does not cull the needed number of staffers, a reduction in force is expected. — Barbara A. Rehm

Bankers Trust Will Manage Wickes Recap

By WILLIAM GOODWIN

Bankers Trust New York Corp. is managing a then-giant recapitalization of Wickes Lumber Co., one of the nation's biggest retailers of building materials.

In a regulatory filing on Monday, Wickes said Bankers Trust's securities subsidiary will lead public stock and note offerings, while BT Commercial Corp. is expected to lead a $135 million revolving credit.

Bankers Trust is a major Wickes shareholder through its investment in a 1988 leveraged buyout of the company.

Raising $42 Million

Wickes filed to offer $100 million of senior subordinated notes and 2.8 million common shares. The stock-and-note offering of stock is expected to raise about $42 million.

Proceeds from the offerings, along with $88 million of the new revolving credit, will be used to retire buyout debt.

Most of the debt consists of loans owed to Citicorp Electric Capital Corp. An existing term loan from GE is priced at two percentage points above the prime rate, and a revolver at 1.5 percentage points above prime.

Terms of the new revolver have not been completed, but pricing is expected to be set at 1.5 percentage points above prime or 3.25 points over the London interbank offered rate. The spread over Libor would fall to 2.5 points after the first year of the three-year credit.

Bank Stock Table Explained: The table lists in alphabetical order the largest publicly traded banks and thrifts. The companies selected for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts in operation as of the market value of all common shares outstanding, as of June 30, 1993. The 52 Wk. Hi and 52 Wk. Lo columns show the highest and lowest prices reached during the trading days of the past 52 weeks, and the closing prices for the stock. PE: the price/earnings ratio. It is the current market price of the stock divided by the trailing earnings per share adjusted for latest announced earnings. The ratio is annualized for banks that have not yet reported earnings for a full year. Mkt. to-to: the market value of the current day's closing price to the stock's book value. Chg.: the change in price from the day before. Cha.: the change in price from the last Friday's close. **Last:** The price at which the stock last traded. If no trades for the day, the latest bid. **All Bank and Thrift Indexes:** A weighted average of the top 225 banks by market value and the top 25 thrifts in market value, respectively, weighted by the number of shares outstanding. Footnotes and two volume indicators: most shares traded and today's volume as a percentage of average volume for the past 65 days.

STOCKS
PNC Wins Upgrade From Dean Witter

By GORDON MATTHEWS

PNC Bank Corp. received a boost on Monday from Dean Witter, Discover & Co., which raised its rating of the Pittsburgh company to "accumulate" from "neutral."

"The stock is attractively valued again," said Dean Witter analyst Anthony R. Davis. And meanwhile, he noted, "PNC's fundamentals continue to strengthen."

The stock was unchanged at $29.625 in late trading on Monday.

Climbing Back
Price per common share of PNC Bank Corp.

An analyst called the shares "attractively valued."

Since June 30, Mr. Davis noted, PNC shares have been "noticeably better" than those of other regional banks – falling 12% while others have edged down an average of 2.5%.

$36 Target Set

The analyst has a $36 price target for the stock during the next 12 months, believing it will sell at 70% of the Standard & Poor's 500 index on a price-to-earnings basis. It currently trades at only 55% of this "market multiple."

That, coupled with the stock's current yield of 4% – highest among the regional banks he follows – puts PNC's potential total return at 28%, Mr. Davis said.

The analyst noted several other favorable factors about PNC.

During the second quarter, the bank's return on equity was 17.5% and its efficiency ratio a trim 52%.

The efficiency ratio is a bank's gross operating expense divided by revenues on a fully taxable basis.

PNC had the second best ratio among the nation's 50 largest banks – behind only Republic New York Corp., according to Keefe, Bruyette & Woods Inc.

Mr. Davis also likes PNC's acquisition strategy, saying the bank has been "disciplined" and limited itself to deals that have added significantly to earnings.

Prudential Analyst Skeptical

But PNC also has its critics.

Last month, George M. Salem of Prudential Securities Inc. said he was "disappointed" in the bank's earnings and cut his rating to "hold."

Earlier in the year, he had dubbed PNC shares as his "single best idea" among banking stocks.

Mr. Salem said an 18-basis-point decline in PNC's second-quarter net interest margin was the worst deterioration among banks he follows.

He expressed concern that net interest income will be flat or even decline.

The Prudential analyst said Monday that he is also concerned that PNC is not well positioned for flat or declining interest rates.

At the end of the second quarter, 45% of the bank's earning assets were composed of investment securities, the highest level among banks he tracks, Mr. Salem said.

Investment securities "reprice" far more quickly than loans and therefore place added pressure on the net interest margin when money market rates are either stable or declining.

Refinancing Risk

Moreover, said Mr. Salem, a substantial portion of PNC securities is mortgage-related and thus vulnerable to rapid prepayment and accelerated amortization as borrowers react to lower rates by refinancing their mortgages.

The Prudential analyst also lacks enthusiasm for PNC's latest proposed acquisition, of First Eastern Corp., Wilkes-Barre, Pa., which has suffered from credit-related problems.

MONDAY'S MARKET

Major bank stocks were mostly lower, apparently in reaction to falling interest rates.

In contrast, other stocks posted gains.

In late trading, Banc One Corp. fell $1.125 to $52.25, NationsBank Corp. declined $1 to $51.875, First Chicago Corp. fell 87.5 cents to $45.625, and Chemical Banking Corp. slipped 75 cents to $40.75.

Analysts said investors are worried that banks' interest income will be hurt by lower rates, especially at banks that had positioned themselves for rising rates.

Among Monday's gainers, J.P. Morgan & Co. was up 50 cents to $74.125 and NBD Bancorp rose 50 cents to $33. □

CAPITAL
NationsBank Set to Raise $800 Million

Continued from *page 1*

of about $2.2 billion of assets from Chrysler First Inc., a finance company, and Chicago Research and Trading, an options firm.

Just under half of the pending $1.4 billion MNC purchase will be made with cash.

At Least $1.5 Billion Needed

Market sources estimated that the bank needs to raise at least $1.5 billion and possibly more than $2.5 billion through debt offerings this year to complete pending acquisitions.

NationsBank has borrowed $1.84 billion in the capital markets so far this year, about equal to its total borrowings in the six previous years, according to Securities Data Co. Its total capital ratio was 11.75% at the end of June.

Yields Uncertain

The superregional held a conference call with bond investors Monday afternoon to discuss its prospects, but did not talk specifically about any upcoming bond offering issue, said a source. A bank spokesman declined to comment.

The likely yields on the two issues could not be determined.

NationsBank's 8.25% nonyear subordinated debt was bid Monday afternoon at 77 basis points over the U.S. Treasuries, according to First Boston Corp.

Separately, MBNA America Bank issued $750 million of five-year credit-card-backed securities. The issue was priced to yield 5.43%, 80 basis points over the five-year U.S. Treasury note.J.P. Morgan Securities was lead manager. □

THE MARKETS
Yield on Long Bond Slips to 6.31%

Interest rates fell further on Monday, as economic fundamentals continued to bolster U.S. government bonds.

In late New York trading, the Treasury's 30-year bond yielded 6.31%, down from 6.34% Yields on 30-year bonds have fallen about 20 basis points in the last week.

"The economic data keep coming in slightly weaker than forecast, and there's no inflation," said Astrid Adolfson, economist for MCM Money-Watch, in explaining the drop in yields.

Interest rates also fell on the short end of the market. The Treasury auctioned a total of $24.6 billion in three- and six-month bills.

Three-month bills were sold at an average discounted rate of 3.03%, versus 3.05% the week before. The six-month bills were sold at 3.12%, down from 3.18%.

Regulators Face Balancing Act In CRA Overhaul

By CLAUDIA CUMMINS

After raising expectations about reforming the Community Reinvestment Act, Comptroller Eugene Ludwig and his band of regulators face the tough task of devising a rule that satisfies both bankers and public advocates.

Mr. Ludwig has pleased bankers by saying he wants to cut the documentation burden of the law. And he has thrilled activists by saying he wants to hold the industry to more objective, rigorous standards of performance.

But between those promises and the final reform, which President Clinton has asked regulators to finish by Jan. 1, lies a long road.

NEWS ANALYSIS

By the end of September, the banking agencies will have held seven public hearings around the country, met privately with both industry representatives and public advocates, and held countless internal meetings on the reform. By mid- to late October, they hope to have a proposal out.

Mr. Ludwig and the others leading the charge – Fed Governor Lawrence Lindsey, FDIC Chairman Andrew Hove, and OTS Director Jonathan Fiechter – recognize the challenge they face in balancing the concerns of both sides.

Not a Panacea

Already, at the regulators' first public hearing last week, Mr. Ludwig tried to dampen expectations.

"I know all the interested parties, banks and community groups alike, have high hopes and high anxieties about this reform," Mr. Ludwig said. "Because of those expectations, I think it is important to underscore here and now that this effort will not produce a panacea for anyone."

"In some respects," he added, "it is bound to disappoint everyone."

Some Common Ground

As demonstrated at the hearing last week, the industry and community activists laid out their demands, the groups so far have found only some common ground. One point both groups absolutely agree on? CRA doesn't work.

Both sides say more explicit guidance on what is expected of lenders is needed. And both fear that excessively rigid standards – explicit formulas for lending, for example – could destroy

Mercantile to Acquire Thrift In St. Louis for $177 Million

By JOHN RACINE

Boosting its retail market share in St. Louis, Mercantile Bancorp. has agreed to acquire United Postal Bancorp. for about $177 million in stock.

The acquisition will add a profitable and growing mortgage business to Mercantile's diverse operations.

It will also provide a sixfold gain for investors who bought stock in United Postal when the $1.3 billion-asset thrift company went public 17 months ago.

Mercantile will pay about $29.54 a share, or 1.9 times the book value of United Postal. The transaction, scheduled to be completed by early next year, is expected to cause minimal dilution in the earnings per share of St. Louis-based Mercantile.

Thrift's Stock Jumps

United Postal's shares jumped $3.50 to close at $26.75 on Tuesday. Mercantile's stock dropped 75 cents, to $48.

Once the deal and two previously announced mergers are completed, Mercantile will have $11.9 billion in assets and operate banks in Missouri, eastern Kansas, southern Illinois, and Iowa.

Analysts said the merger would solidify Mercantile's position as the second-largest retail bank in St. Louis, behind Boatmen's Bancshares Inc., which has $24.6 billion in assets.

"We've always been No. 2; this just strengthens our position," said Thomas H. Jacobsen, chairman and chief executive officer at Mercantile.

A Leading Originator

A major plus for Mercantile is United Postal's growing mortgage operation, which analysts said has been one of the top originators of single-family loans in St. Louis, an economically slow but recovering market.

One reason for its dominance is the thrift's agreement with Gundaker Realtors, the city's largest realty company, to put a loan officer in 25 Gundaker offices. "Obviously, that arrangement gives them first dibs on mortgage business," said James H. Weber, a bank analyst at

BT, Schwab Join Forces To Market 401(k) Plans

By KALEN HOLLIDAY

NEW YORK — Bankers Trust Co. announced Tuesday that it is linking up with Charles Schwab Corp. in a bid to capture a bigger chunk of the lucrative corporate retirement-plan market.

Under the arrangement, Bankers Trust will dramatically expand the number of mutual funds that it makes available to corporate clients who run so-called 401(k) plans for employees. Such plans enable employees to set aside pretax dollars for retirement.

In addition to funds in the bank's BT Investors Funds family, the bank will offer more than 200 no-load, no-transaction-fee mutual funds that Schwab currently offers through its Mutual Fund OneSource Service. That may prove to be a significant competitive edge in the fast-growing 401(k) marketplace, in which product variety is increasingly the name of the game.

Taking On Fidelity

"This offering will compete directly with major organizations, such as Fidelity and Vanguard, who have been able to tout the broadest possible menu of fund choices as a major com-

GRAPEVINE/*Edited by Karen Gullo*

Tirade at UJB

While takeover rumors sweep through Princeton, N.J., the top brass at UJB Financial Corp. is putting the finishing touches on a major reorganization of the bank's lines of business, say insiders.

Scheduled for unveiling next month, the plans call for unprofitable or borderline businesses to be slimmed down or shuttered and investments to be concentrated on healthy areas.

The reorganization may include layoffs and significant job changes for senior UJB officers, sources say. The program is the outcome of a several-months-long study of business line profitability and long-range goals commissioned by UJB chairman T. Joseph Semrod and conducted by Price Waterhouse.

T. Joseph Semrod

Whether Mr. Semrod will get to announce his plans before UJB is taken over is not clear. UJB was the subject of intense takeover rumors last week.

Sources believe a merger with Bank of New York Co. or another Northeast regional bank is in the offing.

UJB officials confirmed last week that the reorganization will be announced in mid-September. They declined to comment on the takeover rumors. A Bank of New York spokesman also declined to comment.

Southern Exposure

Electronic Payment Services Inc. has offered $8 million to buy a small Louisiana-based automated teller machine network, according to a well-placed source.

The acquisition would be the first for one-year-old EPS, a joint venture by CoreStates Financial Corp., Banc One Corp., PNC Bank Corp., and Society Corp. The firm is bidding high for the network, called Gulfnet, which generated $4 million in revenues last year.

But sources say EPS is under pressure from its shareholders to increase transaction volumes and revenues. Expanding geographically would be one way to achieve that goal.

Gulfnet, which is owned by a consortium of 205 banks in the South, operates 2,066 cash machines in Mississippi, Louisiana, Texas, and Tennessee. That puts it right next to EPS' southern region, which extends down to Texas.

Gulfnet is also said to be in talks with one another network, Houston-based Plus.

A Gulfnet official and a spokesman for EPS both declined to comment on the talks.

Team Mates?

Illustrating that the banking business creates strange bedfellows, Northern Trust Co. is reportedly teaming up with Invest Financial Corp. to provide annuities.

Sources say that the two are working on an agreement under which Invest would sell annuities in some Northern Trust offices.

If the agreement goes through, it would be a coup for both companies, albeit a strange match.

Northern Trust, a Chicago-based holding company with $16.3 billion of assets, caters to wealthy clients and has focused on trust and institutional services. The Invest program would mark a shift to the retail arena.

Though Invest has been providing bank clients with investment products since 1982, in its early years it did business primarily with thrifts.

Officials at Northern and Invest declined to comment.

Regulators Face Tough Task In Their Bid to Reform CRA

Continued from page 1

CRA.

Community groups and the banking industry also agree that CRA exams and examiner training need to be revamped. And most want other financial players – insurance companies, investment companies, and mortgage banks, for example – to be brought under the CRA umbrella.

"The law says a bank must help meet the credit needs of the community," said Joe Belew, president of the Consumer Bankers Association. "There ought to be some account taken of who else, besides banks, ought to help."

But beyond that, bankers' and advocates' paths diverge. The industry is hoping for a less burdensome rule, one that requires less paperwork and offers powerful incentives for good behavior.

Eugene Ludwig
Looks to satisfy both sides

Association of America.

Community groups say adequate documentation is crucial, and incentives like exemptions for solid performance are totally off the table.

Greater Role for Public

What is needed, they say, is a greater role for public participation in determining CRA ratings, and greater access to information about the banks.

"As a minimal reform step, the agencies must vastly expand the opportunities for public comment on industry performance," said Chris Lewis, director of banking and housing policy at the Consumer Federation of America, at last week's hearing.

Many groups are even calling for greater disclosure of small-business lending, which could lead to huge new documentation burdens for the industry.

Perhaps above all else, public advocates say a history of "regulator apathy" must be transformed, with the agencies committing themselves to tougher enforcement of the rule, penalizing lenders that don't live up to the law.

Demands and Promises

Bankers and advocates are intimately aware of each others' demands for reform. And they are equally aware of the promises regulators have made to the other. Mr. Ludwig has warned them to take a cooperative stance and keep an open mind about the process.

Nonetheless, both recognize that eventually Mr. Ludwig and his crew will face key decisions that demonstrate their fidelity to either the banking industry or the consumer advocates.

"The president has told the regulators that the result of this exercise has to be in the consumer's interest and in the interest of the communities," Mr. Lewis said. "That's the test."

And according to Mr. Guenther, "the way this is resolved is going to define the Clinton administration and their position on banking issues. This emerges as a very key test." □

NationsBank Issue Increased and Priced

NEW YORK — A two-part issue of NationsBank debt was increased to $950 million from $800 million and was priced Tuesday by underwriters led by Merrill Lynch & Co., according to MCM CorporateWatch.

The first tranche, $400 million of senior notes due Aug. 15, 1996, was priced as 4% at 99.75 to yield 4.842%. The notes were priced at a spread of 46 basis points above Treasurys.

The second tranche, $550 million of subordinated notes due Aug. 15, 2003, was priced at par to yield 6.5%. The notes were priced at a spread of 80 basis points above Treasurys.

Both parts are rated Baa1 by Moody's Investors Service Inc. and A-minus by Standard & Poor's Corp. — Dow Jones

Chase Attempts Sales Via Full-Motion Video

By MATT BARTHEL

Chase Manhattan Corp. has installed a pair of automated banking kiosks that allow customers to meet "face to face" with bank representatives via a video screen.

The kiosks, from Personal Financial Assistant Inc., Charlotte, N.C., are souped-up versions of machines already installed at several institutions, including PNC Bank Corp.

The kiosks allow customers to open accounts, apply for loans, and do a number of other non-cash transactions that require some intercession by a bank employee.

What differentiates the Chase machines from most other Personal Financial installations is

The bank hopes the new technology, which goes beyond still-image video, will spur sales.

that Chase is using full-motion, two-way video in the terminals.

Beyond Still-Life

This means that customers and bank representatives are able to see one another's full movements and gestures as opposed to just the still-life images that appear on the screens of most kiosks in current use.

"We made the decision to go with full-motion video because we feel it's easier to sell," said Robert Lytle, a Chase vice president. "With the still pictures, [customers] are more likely to say, 'What's the big deal?' "

As Mr. Lytle indicated, Chase and other banks are hopeful that the novelty of communicating with a bank representative over a video screen will lure customers into sales discussions.

But even after the novelty of the technology inevitably fades, video banking has some other benefits, bankers say.

Reduced Costs Expected

By allowing loan experts and other personnel to be placed in centralized customer service locations that can be staffed more efficiently than individual branches, video banking is likely to reduce operating costs, bankers feel.

According to Personal Financial Assistant research, a meeting between a customer and bank representative via video screen is as effective a selling opportunity as an actual face-to-face meeting. Both result in sales about 70% of the time, according to Personal Financial, which is owned by the New York Life Insurance Co.

Tests of full-motion video have been on too small a scale for bankers to affirm or refute those claims.

However, Synergistics Research Corp., an Atlanta-based concern that measures consumer opinion on banking technologies, has found that bank customers are becoming increasingly receptive to video banking.

"The environment's better than it's ever been for the introduction of video banking services," said Genie Driskill, a vice president in research at Synergistics.

Ms. Driskill said the company's research also indicates that consumers are more likely to use terminals with two-way, full-motion video than terminals with still pictures only.

Although Chase is in the forefront of implementing full-motion video terminals, the bank is not the only big bank to try out the technology. NationsBank Corp., based in Charlotte, N.C., has also tested Personal Financial kiosks at two sites.

Neither Chase nor NationsBank has yet made a large-scale commitment to the technology, bank officials said.

How It Works

A transaction at one of these terminals would proceed as follows: A customer picks up a phone handset that rests beside the video screen in the banking kiosk. The phone is linked to a customer service representative who can establish a video link with the customer.

Once the video is engaged, the customer service representative leads the customer through the desired transaction by displaying each step in the transaction on the screen.

If the customer wants to apply for a loan, for example, the customer service representative displays the application so the customer can see how the bank employee is transcribing the information that is being verbally relayed.

Some transactions may require the customer to provide identification, so the kiosk is equipped with a scanner that can transmit copies of a driver's license to the customer service representative. This scanner, which resembles a standard copy machine, can also handle larger documents.

At the end of the transaction, a customer receives a printout of all the documents that are filed on his or her behalf. □

A Lockbox System for AS/400 Machines

By DEIDRE SULLIVAN
Special to the American Banker

Arkansas Systems has introduced a version of its lockbox-processing system for community banks.

The Little Rock, Ark.-based software company specializes in development of payment and financial transaction delivery systems for banks and other companies using International Business Machines Corp. computers.

The new lockbox software, called Flexi-Remittance, runs on IBM AS/400 midrange systems with an IBM check reader-sorter. It also can be used with the NCR 7780 reader sorter.

Arkansas Systems is wooing banks already using the computers.

Saw an Opportunity

The new product is designed to serve banks that already process their daily check work using these pieces of equipment. By adding a device to read remittance documents, this same check-processing equipment can run lockbox services.

"We saw an opportunity for smaller banks to leverage their existing investment in technology and better compete with larger banks for lockbox customers," said Hurston Anderson, an executive at Arkansas Systems.

He added that this new version of Flexi-Remittance is designed to process from 10,000 to 20,000 payments a day.

Earlier Version in Use

Mr. Anderson also explained that the new lockbox system is a stripped-down version of a more powerful product that Arkansas Systems has sold mostly to retailers and utilities companies, organizations that typically process tens of thousands of payments each day.

Two banking companies also use the earlier version of the product: Hibernia National Bank, a $4.4 billion institution in New Orleans, and M & I Data Services, Milwaukee, Wisconsin.

According to Lee Nicosia, a vice president at Hibernia, one of the chief benefits of a lockbox system that uses check reader-sorters is speed.

Hibernia uses the new IBM 3892 reader sorter and he said the the check processing department can typically process 1200 lockbox remittances a minute using Flexi-Remittance.

By using this lockbox system, a bank is able to eliminate the need for multiple relationships, Mr. Anderson said.

Ms. Sullivan is a freelance writer based in New York.

How Did Your Software Vendors Do On Their SATs?
*[*Service After The Sale]*

Is your software vendor there for you after the contract is signed? What if you run into a problem — can you make a phone call and get the *right* answer *right away*? What about after 5:00 p.m. and over the weekend? And what about two years down the road when you want to enhance your system to meet new corporate goals?

If you answered "yes" to these questions, you're probably one of the thousands of professionals using an SSI system for electronic funds transfer, securities recordkeeping, retail loan recovery, sale box accounting, mortgage lending, lease accounting, imaging, check processing, vaulting or cash management.

For more than 22 years, institutions of higher earnings, just like yours, have chosen SSI as their software vendor. And for good reason. Our more than 80 software solutions for multiple platforms and client-server environments have routinely accomplished, and often exceeded, the expectations of our customers.

Our company motto, "You that would be greatest, let him be servant to all," (Matthew 20:26), serves as the backbone to all we do. Whether it's designing and documenting software or training and supporting customers, we're committed to our customer's complete satisfaction.

Put us to the test. Call (404) 840-1616 today and ask to see the scores on our SATs.

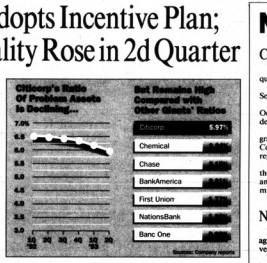
Citicorp Adopts Incentive Plan; Credit Quality Rose in 2d Quarter

By YVETTE D. KANTROW

NEW YORK — Citicorp has adopted an unusual compensation plan for some of its top executives, the company disclosed in a regulatory filing this week.

The plan, adopted last month, grants special stock options to senior managers considered "central to the change and turnaround effort" at the company, Citicorp said.

"It's a very unique, very significant program because the options vest purely on stock price," said Ronald I. Mandle, an analyst with Sanford C. Bernstein & Co. in New York. "It also indicates where management thinks the stock price will go in a five-year period."



Striking Prices

The program, which supplements the company's primary stock compensation plan, grants seven million shares to an unspecified number of executives at a price of $31.75. Fifty percent of the shares vest if Citicorp shares trade at $50 for 20 of 30 consecutive trading days within five years. 75% if the stock reaches $55, and 100% if the stock reaches $60. The stock closed at $32.25 on Tuesday, down 25 cents.

"It's gratifying to see a company establish a program that indicates that its interests is in line with the interests of its shareholders," said Diane B. Glossman, an analyst at Salomon Brothers Inc.

Citicorp's stock price would have to improve at a compound-

Senior managers will be rewarded if the stock does well.

ed annual rate of 13% to reach $60 in five years, analysts said. The stock market overall typically offers investors compounded annual returns of 9%.

In its quarterly filing with the Securities and Exchange Commission, Citicorp also reported that credit quality continued its slow and steady improvement in the second quarter.

Shrinking Nonperformers

Nonperforming assets equaled 5.97% of total assets on June 30, down from 6.19% three months earlier and 6.49% in the second period one year ago.

The filing contains information about asset quality that was not included in Citicorp's previous announcement that it earned $446 million in the second quarter.

Analysts said they were heartened by the continuing, albeit slow, improvement in Citicorp's credit quality, even though its nonperformers remain high compared with those of its peers.

For example, nonperforming assets at Chemical Banking Corp. amounted to 3.34% of total assets on June 30 and 3.15% at Chase Manhattan Corp.

"Some investors would like to see all the problems over by yesterday, but I'm satisfied with the rate of improvement," said Mr. Mandle. "It's clear that they are on the right track." □

Mercantile Expanding St. Louis Franchise With Purchase of United Postal for Stock

Continued from page 1

A.G. Edwards & Sons in St. Louis.

Mercantile operates 31 retail branches in the St. Louis area, while United Postal has 22. Bank executives on Tuesday told analysts they expect to eliminate $10 million, or 30%, of United's annual expense base by yearend 1994. Some 10 to 15 overlapping branches could be closed, they said.

Earnings Estimates May Fall

"The bank thinks [the deal is] going to be nondilutive by yearend 1994," said Mr. Weber. Asked if the transaction will cause analysts to lower their earnings estimates for the first half of next year, he said: "I would say that's a possibility, but I wouldn't say it's a certainty."

For the first six months of 1993, Mercantile reported net income of $55.2 million, for a return on average assets of 1.04%. During the same period, United Postal reported an ROA of 1.43%.

For investors in United Post-

Thomas H. Jacobsen
No. 2 position strengthened

al's initial public offering in March 1992, the deal represents a potential gain of 600%. The stock was initially priced by Stifel, Nicolaus & Co. at $10 a share, but counting a 2-for-1 split would be valued at about $30 a share under the merger.

The Real Winners

"It's an unbelievably huge deal for investors," said Joseph A. Stieven, senior bank analyst at Stifel, Nicolaus in St. Louis, who personally invested in the offering. "You just don't see many like this."

Under the merger agreement, United Postal shareholders will receive 0.6154 share of Mercantile common stock for each share of United Postal stock. Based on Mercantile's closing price Tuesday, the deal has an indicated value of $177 million.

The transaction is Mercantile's third acquisition announced this year. On March 10, the bank said it would acquire Mt. Vernon Bancorp., a $117 million-asset company based in Illinois that is the holding company for First Bank and Trust Co.

On July 29, Mercantile said it would merge with Metro Bancorp., the $378 million-asset parent of the Waterloo Savings Bank in Iowa.

Mr. Jacobsen said the bank would continue to look for acquisitions both in Missouri and in its new markets. "We're looking at building our company with good acquisitions," he said. □

NEWS *briefs*

CoreStates Raises Payout, Sets a Stock Split

PHILADELPHIA — CoreStates Financial Corp. raised its quarterly dividend to 60 cents a share from 54 cents a share.

The dividend is payable Oct. 1 to shareholders of record on Sept. 7.

CoreStates also declared a 2-for-1 stock split, payable on Oct. 15 to shareholders of record on Sept. 15. The new dividend rate is equal to 30 cents a share on a post-split basis.

The company's board also approved a stock repurchase program to buy shares on the open market from time to time. CoreStates said the maximum number of shares that could be repurchased in a year would be 2% of the total outstanding.

CoreStates said the stock purchases would be in addition to those made for its dividend-reinvestment, employee-benefit, and incentive-compensation programs. CoreStates has 58.7 million shares outstanding.

Northeast Federal Finds a Buyer for Realty

HARTFORD, Conn. — Northeast Federal Corp. said it has agreed to sell $30.5 million of foreclosed real estate to an investment banking firm.

The parent of Northeast Savings did not identifier the buyer but did say the sale would result in a pre-tax loss of about $750,000 in the third quarter. Northeast had previously set aside a $6 million provision for losses on the sale, which involves residential properties, most of them in California.

The transaction is expected to close by the end of the month. It will reduce the company's nonperforming assets to 3.84% percent of total assets, down from 4.45% at June 30, the company estimated.

Westcorp's Chief of Auto Finance Quits

IRVINE, Calif. — Westcorp, a thrift holding company, announced on Monday the resignation of Brian MacInnis, 37, executive vice president of its Western Financial Savings Bank unit and chief of automobile finance operations.

Mr. MacInnis will pursue other interests, the company said. Executive vice president James R. Dowlan, 55, his supervisor, will take over direct responsibility for managing auto finance.

Westcorp, which has $2.4 billion of assets, also said William J. Crawford, former California savings and loan commissioner, would be appointed to replace board member David S. Kaufman, who is retiring.

Alan L. Milligan has been appointed a director of the company's thrift unit, succeeding Regan E. Kelly. Mr. Kelly, a senior vice president of the thrift and vice president, secretary, and general counsel of the holding company, resigned to pursue other interests, the company said.

NationsBank Picks Agency for Hispanic Ads

CHARLOTTE, N.C. — NationsBank has selected Houston-based Lopez Negrete Communications to handle its Hispanic marketing and advertising efforts systemwide.

NationsBank said it serves 40 percent of the nation's 10 largest Hispanic markets and 60 percent of the 50 fastest-growing Hispanic areas.

"One of the greatest challenges NationsBank faces is marketing its services to many different cultures represented within the Hispanic community, all of which have origins traced to Spanish-speaking countries," said David S. Carter, director of Advertising Management for NationsBank.

Lopez Negrete Communications is a full-service marketing and advertising agency with capitalized billings expected to exceed $5 million in 1993.

Georgia Thrift Freed of OTS Restraints

NEWNAN, Ga. — Newnan Savings Bank said the Office of Thrift Supervision has terminated the supervisory agreement under which the thrift has been operating.

Newnan said that on the basis of current capital requirements it is considered a "well-capitalized institution" and a profitable operation.

The supervisory agreement had put Newnan under restrictions primarily related to internal policies and procedures, dividend payments, investment in subsidiaries, loan-loss reserves, and growth. The bank is no longer subject to these restrictions.

Newnan said it already meets the fully phased-in capital requirements applicable in mid-1996.

The briefs were compiled from staff and wire reports.

EXECUTIVE *changes*

Citizens Bank of Rhode Island Taps Gormley for a Top Loan Post

Robert T. Gormley has been appointed executive vice president and senior lending officer in **Citizens Bank**'s commercial banking area.

Mr. Gormley will report to **Mark J. Formica**, president of the Providence, R.I.-based bank and will be responsible for commercial real estate, asset-based lending, and community lending."

Robert T. Gormley

He is returning to Rhode Island from Hartford, where he has worked as executive vice president and senior loan officer of Fleet Bank since 1988. During that period he managed 215 people and a $1.7 billion loan portfolio. — **Franklin Smith**

NEW ENGLAND

FLEET BANK of Massachusetts, Boston, a unit of **Fleet Financial Group**, said **Fred N. Manning** has joined the bank as senior vice president in the managed assets division.

Mr. Manning will manage the commercial and industrial loan workout group.

John A. McDonald has been promoted to senior vice president of the bank's assets division.

Promoted to vice presidents were **Michael A. Palmer** in the commercial lending division; **Richard C. Mendall** in the commercial real estate division, **William S. Borrelli** in the private banking division, and **Steven J. Robinson** and **Molly McCombe** in the community banking division.

MIDWEST

HUNTINGTON Bancshares Inc., Columbus, Ohio, has promoted **Debra Dendahl Hadley** to vice president of the regional bank holding company.

Hal G. Baker has been promoted to vice president of the Huntington National Bank and **Thomas J. Davidson** to trust officer of Huntington Trust Co.

James E. Dunlap has been promoted to senior vice president at Huntington National Bank in Toledo.

Mr. Dunlap is currently corporate services division manager at the Huntington's Toledo/Bowling Green city office.

LaSALLE NATIONAL Bank, Chicago, has promoted **David J. Lacheon** vice president and controller.

Mr. Lacheon is responsible for the bank's financial reporting, budgeting, and financial planning and analysis.

He was formerly a senior manager with Ernst & Young in Chicago.

PNC BANK, Ohio, Cincinnati, has elected **Elizabeth M. Clymer, Peggy A. Lewin**, and **Timothy E. Reilly** as vice presidents; **Jeffrey E. Daniher, Bobbie J. Fisher, Deborah S. Hasken, Michael W. Lander, Anita L. Mangold**, and **Brian D. Warren** as assistant vice presidents; and **Pamela A. Brune, H. William Dyken, Lisa L. Gumm, James A. Harmann, Theresa A. Jackson, Christine E. Lenker, Brian J. Nevins, Jeanne L. Schoenberger**, and **Lynn A. Thompson** as bank officers.

MERCANTILE BANK of St. Louis, a subsidiary of **Mercantile Bancorp**, promoted the following people to assistant vice president: **Allen H. Brook**, administration department; **John D. Carruthers**, Mercantile Information Management Co.; **Donald E. Gillum**, administration department; **John W. Heslop**, institutional banking; **J. David Kreitman**, credit administration; **Maureen A. Matz**, administration department; and **Jeffrey G. Williams**, Mercantile Information Management Co.

WEST

FIRST INTERSTATE Bank of California, Los Angeles, has appointed **David M. Garcia** to the new post of vice president and manager of its public communications department.

Mr. Garcia is responsible for supervising news media relations, issues management, and executive communications functions.

He was previously vice president and senior manager in the Los Angeles corporate communications department of Bank of America, subsequent to its merger with Security Pacific.

Becky Shelton has joined the bank as marketing manager and vice president for its trust and private banking group.

Ms. Shelton was formerly with Union Bank in Los Angeles.

SOUTHEAST

BARNETT BANK of South Florida, Miami, has promoted **Clyton Williams** to vice president of credit administration.

MIDDLE ATLANTIC

UJB FINANCIAL CORP., Princeton, N.J., said **Gary F. Lamont** has been named president and chief executive officer of its Hazleton (Pa.) National Bank unit.

Mr. Lamont succeeds **Robert K. Gicking**, who is retiring. Mr. Gicking will remain chairman of Hazleton National Bank through Jan. 15, 1994, to facilitate the transition.

Gary F. Lamont

Mr. Lamont has been with the Hazleton bank since 1989 and was previously executive vice president and chief operating officer. □

First Republic of California Plans a Foray into Nevada

By TERRENCE O'HARA

First Republic Bancorp, San Francisco, plans to buy a thrift and loan in Nevada this year to complement its expanding Las Vegas-based mortgage banking operation.

Willis H. Newton, chief financial officer of First Republic, said the company will use $8 million of the $15 million in subordinated debt it is currently issuing to finance the purchase and capitalization of a small Nevada thrift and loan. Mr. Newton said the company hasn't announced which institution it will buy.

The company's First Republic Thrift and Loan is California's largest thrift and loan. Technically not a savings institution, its federally insured deposit products aren't as diverse as those of a savings and loan.

No Checking Accounts

It doesn't offer checking accounts, only passbook savings and investment certificates. California has a number of thrift and loans, though there are only a handful nationwide.

First Republic's lending activities are almost solely mortgage related. The holding company's thrift and mortgage banking assets total $1.3 billion.

Mr. Newton said that First Republic has had a mortgage banking subsidiary in Las Vegas for years and that the purchase of an insured institution will allow it to tap into the Las Vegas deposit base.

Increasing its retail deposit franchise is one of the company's goals for this year, and it is opening two branches in San Francisco, bringing the total to eight.

"This purchase isn't related to our mortgage banking activities," Mr. Newton said. "We believe Nevada, and Las Vegas, is a good market for deposits."

First Republic isn't the first financial institution to target Nevada's lucrative Las Vegas market. California's superregionals have been the major players in the state for several years.

Besides First Republic, only one other smaller California financial institution has staked a claim inside Nevada. Sierra Tahoe Bancorp, Truckee, Calif., a major small-business lender in Northern California, opened its Sierra Bank of Nevada in Reno in 1990. Sierra Bank of Nevada has been the holding company's only growing business since then.

The impetus for the move is evident. Las Vegas is the only one of First Republic's markets that hasn't been hit hard by the real estate downturn, according to Charlotte Chamberlain, an analyst at Wedbush Morgan Securities.

About 60% of First Republic's mortgage lending is in the San Francisco Bay area, with 24% in Los Angeles and just 15% in Las Vegas. □

Oregon's Western Bank Loses Bid To Take Over Bank of Newport

By PHILIP ZAHODIAKIN

A hostile, yearlong takeover effort by Oregon's Western Bank ended in defeat last week.

The $600 million-asset Coos Bay bank had sought to buy the $132 million-asset Bank of Newport, which is headquartered halfway up Oregon's Pacific coast.

But an Aug. 11 vote by shareholders representing 91% of Newport's equity buried a motion to oust the board.

Although hostile bids by, and for, community banks are rare, the postmortem sounds familiar. The winner downplays the victory, and the vanquished suitor blames dirty tricks.

Classroom for Small Banks

This particular fight was enthralling for small banks, says Newport chairman Jeff Ouderkirk.

"The shareholders meeting was very well attended by community bankers from Oregon and Washington," he said.

"The small banks wanted to see how to shield themselves from similar overtures. They learned that the key is excellent shareholder value and communication."

The motion to remove the Newport board was put before the shareholders by Western's chairman, Georges C. St. Laurent Jr., who holds about 5% of Newport equity.

It was defeated by a 2-to-1 margin, but Mr. St. Laurent says shareholder value for Newport investors is anything but excellent.

"They have a lot of very angry

Jeff Ouderkirk
Denies greenmailing charge

Shareholders buried a motion by Western's CEO to oust Newport's board.

shareholders who wanted the directors to accept our offer," says Mr. St. Laurent.

"They tried to greenmail me, which didn't work; but they got a couple of independent banks to buy out their largest shareholder, which turned the tide against us."

Newport shares are trading at $15 bid, $17 ask. Last fall, and again this spring, Western offered $18 a share or a stock swap valued at $22 a share. Book value is $12.59.

In response to the first offer, Newport said the bid was short.

In April, when the offer was repeated -- and put before the media -- Mr. Ouderkirk said Mr. St. Laurent was interested in Newport solely to sweeten Western's takeover value.

'Might Be in Play'

Newport, says Mr. Ouderkirk, was founded by a Bank of America executive who gave up on money-center banking. He says Mr. St. Laurent would gladly hand over the keys to Western and Newport the moment a big bank tendered an offer.

"He has been greasing the bank very rapidly, and he's unwilling to reveal any long-term strategy, if he has one. Western's stock has been trading at an overheated price, and that suggests to me that Western might be in play."

Mr. Ouderkirk says Mr. St. Laurent was asked to consider an offer for his stake in Newport, but dismisses any suggestion that the offer was sweetened to drive him away. "Our offer was around market value. We know what the banking laws are, and we categorically deny that we were greenmailing anyone."

'We Didn't Buy Any Shares'

As to the buyout of Newport's largest shareholder, Mr. Ouderkirks says, "To our knowledge, no sale has been completed at this time. There may have been shares that traded hands, but the trade was at arm's length from the corporation. We didn't buy any shares."

He adds, "Even if the position held by our largest shareholder was turned over to Mr. St. Laurent, given the margin, it wouldn't have mattered."

Mr. St. Laurent would not say if he will bid for Newport again. □

Chicago's Avondale Angered Depositors When It Chose a Buyout over Going Public

By ROBERT B. COX

CHICAGO — Avondale Federal Savings Bank last week scrapped plans for a public offering in favor of a merger conversion with an Iowa thrift that some depositors are calling a bad deal.

In agreeing to sell out to privately held Central Resource Group, an insurance and financial services holding company based in Des Moines, Avondale angered depositors who argued they could have gotten a better deal by taking the Chicago-based company public.

Terms of Deal Outlined

"This deal is road kill being packaged as a mink coat," said Linda Stromberg, an Avondale depositor and a thrift analyst at Howe Barnes Investments, Chicago. "No one is looking out for the depositors."

The thrift's officials said they had explored both possibilities.

But Avondale officials said they explored a stand-alone conversion and spoke with numerous other banks before agreeing to be acquired by Central Resource Group.

Under the terms of the transaction, Avondale will be merged with Midland Savings Bank, Central Resource Group's $953 million-assets thrift.

Avondale depositors and employees will be offered first crack at Central Resource stock, which will then be offered to depositors of Midland before going public later this year or in early 1994.

Central Resource is the parent company of Iowa's largest residential real estate company and largest residential mortgage originator. The company has a loan origination office in a Chicago suburb.

An 'Excellent Opportunity'

"The merger with Avondale represents an excellent opportunity to expand our franchise in the Midwest," said Alfred P. Moore, president of Central Resource.

"We are going to build a very significant integrated financial services company," said Robert S. Engelman Jr., who will become president of the merged savings and loan, which will have assets of $1.47 billion and will be based in Des Moines.

But some depositors are crying foul. They say that Avondale's management – by forgoing a stand-alone stock conversion – has stripped them of a possibly lucrative crack at

ArgentBank Gets Solid Return from Investing in Staff

Donald L. Peltier, chairman of ArgentBank in Louisiana, had the vision to want everything done exactly right.

He realized that only quality of service and total commitment by each and every employee would bring the performance and results he was looking for.

With Randall E. Howard, president and chief executive officer, Mr. Peltier built a successful super community bank, known until June as First Interstate of Southern Louisiana.

The company, approaching $600 million of assets, weathered 10 recessionary years in its market without a single annual loss. While many other Louisiana banks were suffering or even perishing, ArgentBank earned 1.35% on assets and 15.7% on equity last year, with a 9% capital ratio. It has sustained that performance into 1993 so far.

The secret of success at ArgentBank – which changed its name because it withdrew from the First Interstate Bancorp franchise system – is investment in people.

Attractive Salaries

First, the bank pays well. "We compare ourselves to the best-run banks in the country and pay our people accordingly," Mr. Howard said.

The benchmark banks for salary administration are strong performers and not necessarily in ArgentBank's marketplace.

"You have to pay well to attract the best," Mr. Peltier said.

The bank is willing to pay high salaries to attract the best and brightest.

The bank has given employees the option of retiring at 62, with retirement benefits reduced by only $40 a month from what they would be at age 65.

Clearly, management is attentive to employees, realizing they are the company's most important resource. Time is invested in the people, as well as money.

Breakfast Meetings

During a postmerger integration program, Mr. Howard scheduled breakfasts to meet with every single employee of the newly acquired bank. The practice has evolved into a series of breakfasts with 15 to 20 employees every other month.

As a result, the bank president meets at least once with everyone over an 18-month period. Mr. Howard's degree of accessibility is unique, and his employees indicate they have no fears in dealing with him openly and honestly.

Accompanying the strong bottom line is low employee turnover. More than 30% have been with ArgentBank 10 years or more.

Staff retention is especially critical for super community banks. The employee-customer relationship is key to being attentive to customers and their local marketplaces, which differentiates super community institutions from more distant, impersonal bureaucracies.

Studies have shown that the longer employees stay with a bank, the stronger customer loyalty is. And customer retention gets translated into improved profitability, since customers over time will use more products and services and end up paying more in interest and fees. □

Avondale Depositors Angered by Buyout

Continued from *page 6*

the company's stock before it trades on the market.

Chronology of Transaction

Avondale announced in April that it had asked financial advisors Charles Webb & Co., Columbus, to help it explore a stand-alone conversion.

The company also contracted with Hovde Financial, a Washington-based firm that assists financial institutions in finding mergers and acquisitions partners.

Hovde introduced Avondale to CRG and as many as 15 other banks and thrifts possibly interested in merging, said Steven D. Hovde, head of the firm's Chicago office.

Avondale officials then compared the benefits of the Central Resource merger with a stand-alone conversion, and decided on the former in consultation with Charles Webb.

While officials say they have not yet determined what will underwrite the Central Resource stock offering, the company has a long-standing relationship with Chicago Corp. Charles Webb & Co. also has a informal revenue-sharing agreement with the investment banking firm.

The merger conversion is subject to approval from the Securities and Exchange Commission and the Office of Thrift Supervision. □

Likely Ginnie Mae Chief Expected to Boost Business

By SNIGDHA PRAKASH

WASHINGTON — Dwight Robinson, recently tapped to be the next president of the Government National Mortgage Association, is likely to lead a marked expansion of the agency.

Mr. Robinson's background and ties to federal housing officials suggest that he will work closely with the Federal Housing Administration as it expands its mortgage program, industry officials say. That, in turn, should boost Ginnie Mae's business volume, because most FHA loans are bundled as Ginnie Mae securities.

At the same time, mortgage bankers are looking to Mr. Robinson to quickly get Ginnie Mae into the business of issuing real estate mortgage investment conduits, or Remics. Earlier this month, Congress authorized the agency to issue these multiclass securities.

Marcello Paganelli

DWIGHT ROBINSON, who is a background check away from being nominated, is expected to work closely with the Federal Housing Administration. FHA loans are bundled as Ginnie Mae securities.

No Comment

Mr. Robinson, 40, is currently an affordable-housing executive at the Federal Home Loan Mortgage Corp. The White House has announced its intention to nominate him for the Ginnie Mae post following a background check.

In an interview last week, Mr. Robinson studiously declined to comment on his nomination.

But he did voice support for a move by the Department of Housing and Urban Development to adopt a more activist role in providing housing for lower-income people. HUD is the parent of both FHA and Ginnie Mae.

"HUD's on the right track," he said.

Originations Are Off

Ginnie Mae's main business is guaranteeing securities backed by FHA and Veterans Administration mortgages. But originations of those loans have fallen sharply in recent years, diminishing Ginnie Mae's stature.

Last year, the government-insured mortgages accounted for less than 9% of all new loans, down from 20% in 1980, according to the newsletter *Inside Mortgage Finance.*

As a key architect of Freddie Mac's programs for lower-income people, Mr. Robinson is in a good position to help reinvigorate the government's mortgage programs, mortgage executives say.

Mr. Robinson's appointment would "move Ginnie Mae to being a partner with the Federal Housing Administration," said Robert M. O'Toole, senior staff vice president at the Mortgage Bankers Association.

"This is a fellow who's been on the ground doing the kinds of deals that Ginnie Mae securitizes," added John McEvoy, executive director of the National Council of State Housing Finance Agencies. "He's not some political appointment brought in off the street."

Political Connections

Mr. Robinson, to be sure, is not without Washington connections. As deputy executive director of the Michigan State Housing Development Authority from 1986 to 1990, he worked for Terry DuVernay, now deputy secretary of HUD.

Both men lost their jobs when the Democratic governor, Jim Blanchard, lost the election in 1990. Mr. DuVernay left to work for Gov. Zell Miller, D-Ga., an early Clinton supporter. Mr. Robinson came to Washington to work for Freddie Mac.

Some mortgage executives hope that Mr. Robinson will put the highest priority on getting a Remic program off the ground. Though Ginnie Mae has discussed a Remic program for years, little headway has been made since Raoul L. Carrol resigned as president last November.

"We think that's kind of stalled without a Ginnie Mae head. We'd like to move it forward," said Herbert L. Carroll, chairman of BancPlus Mortgage Corp. in San Antonio.

Remics are backed by basic, pass-through mortgage securities. In theory, a Ginnie Mae Remic program will boost demand for Ginnie Mae pass-throughs, which will allow lenders to offer government-insured loans at slightly lower rates. □

Bank of New York to Arrange $215 Million of Loans for First Franklin

By JAMES H. SAPT

First Franklin Financial Corp. has tapped Bank of New York to arrange $215 million in new bank loans to fund operating requirements and finance the acquisition of servicing rights, according to Steve Dallas, chairman of the mortgage bank.

Separately, Bank of New York and Banc One are syndicating a $475 million bank loan for BancPlus Mortgage Corp. of San Antonio, Tex.

Bank of New York is shopping the First Franklin credit to a number of mortgage-lending specialists.

Seeks Franchise Expansion

The deal will comprise a $200 million warehouse credit – used to fund mortgages awaiting sale – and a $15 million war chest to buy servicing rights.

The $15 million loan is priced at 275 basis points over the London interbank offered rate. First Franklin, which is based in San Jose, Calif., wants to buy servicing rights to expand its franchise outside of California, said Mr. Dallas.

The money would help fund operating requirements.

A General Trend

He said the mortgage warehouse facility will largely refinance existing warehouse lines with investment banks.

Investment banks have moved increasingly into warehouse lending over the past couple of years, often undercutting banks on pricing.

First Franklin chose a bank-led facility partly because Bank of New York was able to pair the mortgage warehouse deal with a competitively priced servicing rights acquisition facility, Mr. Dallas said.

Terms of the Deal

The mortgage warehouse credit will run for 364 days and is priced at Libor plus 162.5 basis points, according to bankers looking at the deal.

BancPlus' credit includes a $400 million mortgage warehouse loan priced at Libor plus 150 basis points.

The company also will receive a $75 million, seven-year loan to finance planned acquisitions of servicing rights, according to bankers familiar with the deal.

That credit, priced at Libor plus 250 basis points, contains a provision that may increase the deal to $100 million. □

Sadly for you, politicians in Washington agree on something.

Lawyers, legislators and lobbyists in Washington—people who've made careers out of being contrary—all are declaring the same thing these days: that government's relationship with the secondary mortgage market is going to change drastically.

They all know about HUD plans to toughen enforcement, new pressures on Fannie and Freddie, and the revival of Ginnie Mae as a major player in the market. And if you want more evidence, look to Capitol Hill, where Congress is toying with mortgage bankers subject to the same regs as commercial banks.

How should you react? You could wax nostalgic—and get clobbered by the government and your competitors. Or you could read *The Mortgage Marketplace.*

Every Monday, in less time than it takes to finish your morning coffee, *The Mortgage Marketplace* tells you about the new rules and ideas that could keelhaul your secondary operations. It names the biggest mortgage company participants in Ginnie, Fannie and Freddie issues. And it scans the horizon to determine what types of loans, and borrowers, that now are considered exotic could soon enter the pipeline of conforming loans.

There's no debate—new regs are coming. What's still at issue is whether you'll be ready for them.

Sample us for free! Just call sales representative Celia Benjamin at (800) 733-4371 or write to us at 1325 G St., N.W., #900, Washington, D.C. 20005.

■ Mortgage Marketplace

Salomon Acquisition Chief Foresees More Consolidation

Brenda White, Salomon Brothers' head of investment banking for mortgage companies, played a role in two of the largest deals this year.

Most recently, she represented GE Capital Corp. in its successful bid for Shearson Lehman Hutton Mortgage Corp. She also represented McAndrews & Forbes in its sale of Troy & Nichols Inc. to Chase Manhattan Bank.

American Banker reporter James H. Saft spoke with her last week.

Q: How strong is interest in mortgage banking assets?

WHITE: I think it's very strong. And the interest is coming from three different sectors: commercial banks, public mortgage companies, and financial buyers.

Q: Could you talk a little more about each group?

WHITE: Commercial banks all seem to be interested in enhancing or establishing their presence in the sector.

The public companies, which have access to the cap markets now, are looking to enhance their presence on the originations and servicing side.

And then we still have some interest from financial buyers — those that have some access to equity capital and are looking to enter the industry. They tend not to be the most competitive in the auctions, but they nonetheless are there.

Q: Will any companies as big as Shearson be sold soon?

WHITE: The problem is is that when you take a look at the list of the top 10 or 25 mortgage banking companies, the majority are committed to the sector.

Q: Are we at the top of the market for deal prices?

WHITE: I don't think we are, because I think that as consolidation continues, the larger players will have more of an edge where they are buying servicing. Therefore prices could strengthen.

"As consolidation continues, the larger players will have more of an edge."

Q: What is that edge?

WHITE: As the largest players get bigger, they are able to service for less and employ technology smaller players cannot afford. This allows them to pay somewhat more for servicing rights.

Q: How interested are acquirers in origination networks?

WHITE: I think there is a tremendous amount of interest in originations today. I think, though, that there is some caution exercised by buyers. They are very interested in volume, but they also want to understand the sustainable volume of a given network.

Q: There have long been rumblings that a big company outside the industry, someone like AT&T, will make an acquisition. Will that happen?

WHITE: Not now, but that could be the next generation of consolidation.

The current round will enable the largest players to employ state-of-the-art technology in a cost-effective way.

Once we get to that point, there may be industrial companies or large utilities that see that they can bring yet more efficiency to the process. Its possible, but I don't see that on the near-term horizon. □

Brenda White
"Prices could strengthen"

First of America Moves into N.C.

KALAMAZOO, Mich. — First of America Mortgage Co. has entered a new market with the acquisition of Pioneer Mortgage Company, a division of Pioneer Savings Bank.

Pioneer Mortgage has five offices, all in North Carolina. They are in Raleigh, Jacksonville, New Bern, Rocky Mount, and Wilmington.

A Small Company

The five-year-old company is relatively small and specializes in government-insured residential loans. No purchase price was announced.

David L. Stimpson, president of First of America Mortgage, a subsidiary of First of America Bank Corp., said the acquisition not only expands his company's market area but broadens its product mix.

First of America Mortgage has retail offices in Arizona, Florida, Illinois, Missouri. Its servicing portfolio is about $6 billion.

Despite the Sizzle, Banks Hold Back From Creating Their Own Utility Funds

By KALEN HOLLIDAY

Investors are getting turned on to utility funds, but banks have been slow to introduce the products into their proprietary families.

Assets invested in utility funds totaled $24 billion on June 30, up from $13.1 billion a year earlier, according to Lipper Analytical Services. The number of funds offered grew from 35 to 48, Lipper found.

And while mutual fund companies report that utility funds have been hot sellers for banks (see article on facing page), only one banking company – Bankers Trust New York Corp. – manages a utility fund.

Pioneering Fund

Bankers Trust introduced its BT Investors Utility Fund last August in response to historically low interest rates.

"We perceived the need for investors to earn higher levels of yield while taking limited principal risks," said Joseph Demmler, vice president for mutual funds at the bank. "The utility fund serves that purpose."

The utility fund currently has $30 million in assets, up from $22.9 million at the end of March. The minimum investment is $5,000.

Others Expected to Follow

For the first half of 1993, the no-load fund posted a 10.02% return. "It's been a very successful fund for us," Mr. Demmler said.

Industry analysts predict that other banks will soon follow Bankers Trust's lead.

Because of the nature of their relationship with customers, "banks will try to beef up some of their conservative equity offerings," said Avi Nachmany of New York-based Strategic Insight, a consulting firm.

Retail Appeal

Utility funds are a good fit because they are relatively safe and pay high dividends, Mr. Nachmany said.

Scott Foster

PLUGGED IN: Bankers Trust manages the only bank utility fund. "We perceived the need for investors to earn higher levels of yield while taking limited principal risks," said Joseph Demmler, a vice president.

"There is a lot of retail appeal."

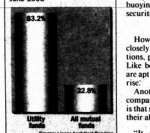
Conservative utility funds are often seen as a first step into owning stock funds.

Since mutual fund companies are having great success in selling utility funds through banks, "the likelihood is good" that banks will offer house brands soon, said Lipper's Geoff Bobroff.

Utility funds have been successful because they provide steady income and seem to be less volatile than other mutual fund products, he said.

Furthermore, the money currently flowing into these funds is buoying prices of the underlying securities.

Power Surge
Percentage change in assets between June 1992 and June 1993



Source: Lipper Analytical Services, Investment Company Institute

Rate Risk

However, the funds' success is closely tied to market conditions, particularly interest rates. Like bonds, utility stock prices are apt to decline if interest rates rise.

Another problem for utility companies, Mr. Bobroff noted, is that state governments restrict their ability to revise rates.

"It makes sense for other banks with a high-net-worth investor base" to introduce utility funds, said Bankers Trust's Mr. Demmler.

However, he said, "you need sophisticated investors to understand the tradeoff between risk and return."

Widespread Interest

As banks scramble to introduce funds to compete with third-party providers, utility funds are gaining recognition.

In studying banks' expansion plans in the mutual fund arena, the Boston consulting firm of Cerulli Associates is finding that banks are looking at adding balanced, municipal, and utility funds to their fund families.

Banks are interested in introducing their own utility funds because "they behave like a bank's usual investment vehicles," said Mary McAvity, a consultant with the firm.

Conservative Diversification

Fleet Financial Group has been considering introducing a utility fund for about a year, said Peter Herlihy, vice president Fleet Investment Services.

"Intuitively, we feel it might make sense for a conservative audience," Mr. Herlihy said.

Fleet is trying to get customers to diversify their investments. "They have too many eggs in one basket," Mr. Herlihy said.

Utility funds are a "nice, conservative way to diversify," he said, but only as part of an investor's portfolio. "I wouldn't recommend putting 100% in utility funds."

Waiting for Customers

But Fleet thinks it should not introduce a proprietary utility fund without a "critical mass" of customer interest, Mr. Herlihy said. And so far, no customers have requested such a fund, he said.

Nor has NBD Bancorp seen any customer demand for utility funds.

The Detroit-based bank has "no plans" for a utility fund now, but may look into it in the future, said Richard Foerstering, first vice president.

Second Thoughts

In the past year, Fleet, like other banks that market proprietary funds, has been looking at diversifying its mutual fund offerings.

"In retrospect," Mr. Herlihy said, adding a utility fund "probably would have been a good thing to do." □

Oppenheimer Names Fixed-Income Chief

Len Darling has been named executive vice president and director of fixed income for Oppenheimer Management Corp.

He joined the New York-based mutual fund company from State Street Research and Management Corp., where he was a co-manager of the fixed-income department.

At Oppenheimer, Mr. Darling, 50, oversees the portfolio managers who run the company's 27 government, municipal, high-yield, and money-market mutual funds. He reports to chief executive Jon S. Fossel.

Fund Firms Say Bank Customers Are Flocking to Utilities

By DEIDRE SULLIVAN
Special to the American Banker

Bank customers are becoming avid buyers of utility mutual funds, according to executives at four fund companies.

Indeed, the move to utility funds represents something of a second investment wave within the bank channel, the executives told the *American Banker*.

Utility funds are catching on as a first step into equity investing for customers who have traditionally favored low-risk investments, such as government bond funds.

"For a bank customer, utility funds are like growth funds with training wheels," said William Ennis, senior vice president and director of the bank division at Colonial Investments in Boston.

1st-Half Return Averaged 11%

In the first half of 1993 the average utility fund returned 11%, according to Lipper Analytical Services. That eclipses the returns posted by many aggressive stock funds.

Colonial's $1.2 billion utility fund is the company's best seller overall. In bank sales, it consistently ranks No. 1 or No. 2 each month, vying for the top spot with a tax-exempt government bond fund.

"Growth funds with training wheels," an exec calls them.

The initial minimum investment is $1,000.

Mr. Ennis expects to see a continued wave of growth. "There are 77 million baby boomers and 25 million retirees. For someone who wants a safe, income-producing product, it's ideal."

In recent months, executives at Putnam Securities in Boston have witnessed an enormous surge in utility fund sales through the bank channel.

Putnam's $1.2 billion-asset Utilities Growth and Income Fund racked up more than $349 million in sales last year. Bank customers accounted for just over a quarter of sales.

In the first half of 1993, bank customers accounted for nearly half of the utility fund's sales of $293 million.

"Utilities offer the bank customer a way to tiptoe into stocks," said Stephen Gibson, director of retail marketing at Putnam. The funds have more in common with fixed-income funds than with equity funds, because they tend not to be very volatile, he said. "Even when interest rates rise, the fund stands still."

In the world of utility fund investing, San Mateo-based Franklin Resources' claim to fame is that it has the most experience. The $3.3 billion-asset Franklin Utility Fund, formed in 1948, has flus provided an annual average return of 13.99% over the past 10 years.

Kent Strazza, vice president and national sales manager for Franklin's bank division, reports that a new wave of banking customers is gravitating to utility funds.

Kent Strazza
Sees new wave of investors

"Bank representatives are going back to their customer who first bought fixed-income funds and they are saying, 'Let's talk equities.'" Mr. Strazza said. "They bring up the subject of utilities.

Like other fund executives, Mr. Strazza believes that utility funds are going to benefit from demographic shifts.

"Our feeling is that our utility fund is perfect for people who are planning for retirement and for those trying to save for their kids' college educations," he explained. "Those markets are booming." The minimum investment, $100, is also a boost.

Mr. Strazza estimates that this year Franklin will sell over $300 million of shares in its utility fund to bank customers, or 25% of its total bank sales.

Joint Advertising

The company is also working with several banks on joint advertising programs to promote the utility fund through the bank channel. Mr. Strazza said that Franklin advertisements are running in the quarterly magazines that banks often send to their share holders.

Come September, Boston-based Massachusetts Financial Services' utility fund will be promoted more heavily in the bank channel, when the firm will start offering a class B share of the fund. Massachusetts Financial started its fund in February 1992 and currently has $33 million in assets under management.

John Riley, a spokesman for Massachusetts Financial, said that the current up-front sales charge makes it difficult for his firm to promote this product through banks.

"Once we offer the new class of shares, we expect a boost in sales," he said.

Ms. Sullivan is a freelance writer based in New York.

Demand The Best.

"Any mutual funds we offer must have top-quality investment management. It's important to our customers and to us.

We're bringing in SEI."

You want top-performing mutual funds that will grow assets and profits for you – and your customers.

Comptroller's Guidelines Stress Clarity Of Information Provided to Customers

By ROBERT M. KURUCZA
Last of two articles

In an Aug. 4 article in the American Banker, *Mr. Kuruczа analyzed the impact of the Office of the Comptroller of the Currency's new guidelines for bank mutual fund sales. In this article, he discusses specific points that banks should address in the investment-product program statements that the Comptroller's office now requires.*

The OCC guidelines stress that national banks should market investment products in a manner that does not mislead or confuse customers as to the nature of the products or the risks involved.

Comment

Bank policies should specifically delineate the locations at which sales will occur. The guidelines contemplate that bank management will take steps to separate the retail deposit-taking and retail investment product sales functions.

Tellers are specifically prohibited from giving investment advice to customers. It is unclear whether tellers can process "passive" sales transactions, such as requests by a customer to redeem shares in a mutual fund sold by the bank.

Avoiding Conflicts

Banks are also strongly discouraged from allowing employees who accept retail deposits to concurrently sell retail investment products. If an employee engages in both activities, this dual role must be disclosed.

It is not certain whether the guidelines are meant to prohibit a bank employee who sometimes works at a teller station from giving investment advice while functioning in an investment products sales role.

The OCC guidelines allow national banks to market investment products that have names that are similar, but not identical, to the bank's name.

Mr. Kuruczа is a partner in the law firm of Morrison & Foerster, Washington. His colleagues Robert G. Ballen and Joseph P. Savage helped prepare this article.

If a product name is similar, the bank must have sales training that minimizes the risk of customer confusion as to whether the product is FDIC-insured.

Assurances that a national bank meets the sales training condition, it will be able to sell mutual funds, including proprietary funds, that have names similar to the bank's.

Common Practice

There are numerous examples today of national banks offering proprietary funds with arguably similar names to the bank advising the fund. Incorporating the adviser's name in some fashion in a fund's name is common in the mutual fund industry.

Most of these banks already have sales training programs which emphasize that shares in the funds are not FDIC insured.

Tellers are prohibited from giving customers investment advice.

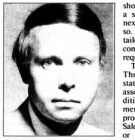
When coupled with the required disclosures described below (which are already prevalent in connection with bank investment product sales activities), the combination of the prophylactic measures should be effective in avoiding any possible customer confusion.

It should be noted that the Federal Reserve Board is of the view that mutual funds advised by a bank holding company or a nonbank subsidiary may not have a name that is similar to that of the holding company or any of its subsidiary banks, regardless of any disclosures intended to minimize confusion.

Moreover, the Fed prohibits employees of state-chartered member banks who accept retail deposits from offering investment advice concerning investment products.

Spelling Out the Risks

When selling, advertising, or otherwise marketing uninsured investment products to retail customers, the Comptroller's



Robert M. Kuruczа

guidelines require national banks to disclose conspicuously that the products offered are not FDIC-insured, are not obligations of the bank, are not guaranteed by the bank, and involve investment risks, including possible loss of principal.

Additionally, where relevant, the bank should disclose the existence of an advisory or other relationship between the bank and any affiliate involved in providing the investment product, and the existence of any early withdrawal penalties, surrender charges penalties, or deferred sales charges.

It is difficult to imagine any banker quibbling about the desirability of these disclosures from a "safety and soundness" standpoint. In fact, knowledgable bankers have been making such disclosures for years.

Thus, many banks already engaged in these activities will find they have to make few if any changes in their disclosures.

The Securities and Exchange Commission also recently directed banks to print a boldface legend on prospectuses for proprietary mutual funds, alerting investors to the funds' uninsured status.

Acknowledging Receipt

The Comptroller's guidelines also state that it is appropriate for a national bank to obtain signed statements from customers acknowledging receipt of these disclosures when investment accounts are opened.

For accounts established before the issuance of the OCC guidelines, a national bank should consider obtaining such a signed statement before the next sale. Most banks already do so. In fact, some get more detailed acknowledgments from consumers than the guidelines require.

The Fed and the Office of Thrift Supervision require, for state member banks and savings associations, respectively, an additional signed customer statement any time an investment product sale is made in a branch. Sales made over the telephone or through automatic investment or "sweep" arrangements should not require a new signed statement before each sale.

NASD Rules Incorporated

Significantly, the Comptroller's guidelines incorporate by reference the Rules of Fair Practice of the National Association

The bank must make clear which of its products are not FDIC insured.

of Securities Dealers with respect to investment products recommendations made to customers.

This seems entirely appropriate for a number of reasons. First, few bankers would disagree that retail securities sales activities by national banks should be subject to the same customer protection requirements that apply to their securities industry counterparts.

Second, the NASD rules are well settled standards that have worked effectively to protect consumers. There is no compelling reason to impose different standards on banks.

Banks should ensure that all investment-product salespersons obtain sufficient information from customers to enable them to make a judgment about the suitability of recommendations for a particular customer, as required by the NASD rules.

Suitability Inquiries

At a minimum, before making a recommendation to a customer, suitability inquiries should be made and responses documented, consistent with the NASD rules concerning the customer's financial status, tax status, investment objectives and other relevant factors.

Registered broker-dealers, including those affiliated with national banks or otherwise involved with bank-related investment product sales programs, are already subject to the NASD rules.

On the other hand, banks themselves are not directly subject to these rules. National banks may find that they have to adjust their existing procedures to some degree.

The Comptroller's guidelines indicate that compensation programs should not operate as an incentives for salespersons to sell retail investment products over a more suitable option, such as an insured bank deposit.

Tellers who receive compensation for referrals should not be compensated on the basis of the "success" of the sale.

Adherence to the NASD suitability standards described above should help achieve compliance with these requirements.

As the Comptroller's Office continues to develop its regulatory regime for national banks that sell investment products, it seems likely that the agency will look to the NASD's experience in interpreting and administering its suitability and other customer protection rules.

Standards for Salespeople

The guidelines impose a series of requirements on national banks to ensure that their sales personnel are properly qualified, adequately trained, and appropriately supervised.

For programs where sales personnel are registered representatives of a broker-dealer or agents of a licensed insurance agency, compliance with the applicable broker-dealer and insurance agency regulations should satisfy the requirements of the OCC guidelines.

However, banks that use unregistered or unlicensed employees to sell investment products may, in some cases, be required to upgrade the skills, training, and supervision of these workers.

Many existing bank investment products programs already use broker-dealer and insurance agent training standards as proxies for the training of bank personnel involved in investment

Chemical Adds 4 Long-Term Mutual Funds

By KAREN TALLEY

Chemical Bank has launched four stock and bond mutual funds, becoming the last money-center bank to plunge into the business of managing long-term mutual funds.

The bank, which already offers six money-market mutual funds under the Hanover Investment banner, is adding two U.S. government bond funds, a blue chip growth fund, and a growth fund of small-capitalization stocks.

Called Critical Step

The money market funds, offered since 1982, have $3.5 billion of assets under management.

"The launch of our bond and equity funds represents a critical step in the evolution of our investment products strategy," said Gary Sherman, a managing director of Chemical's private banking group.

But one industry observer said Chemical should have been out of the starting gate earlier, given that mutual funds have rapidly evolved into a mainstream investment for consumers.

Tax-Free Funds to Be Added

"They're several years behind all the other large banks," said George Salem of Prudential Securities. "At this point, it's a pretty essential service."

In coming months, the bank will expand its lineup by adding a general tax-free fund and a New York tax-free fund.

The proprietary fund family is a key component of the much-ballyhooed program Chemical is rolling out at branches with Boston-based Liberty Financial Services.

Assets on the Increase

Other distribution avenues include Chemical's institutional client base and independent broker-dealers.

Of the four new offerings, Chemical started a U.S. government securities fund and the blue-chip growth fund with about $150 million of assets converted from commingled trust funds. They quietly rolled out the funds this spring, and since then assets have increased by about $15 million.

The two other new funds, a short-term government fund and the small-capitalization fund, were started from scratch and now have about $35 million of assets between them.

Chemical offers the Hanover Investment funds on a no-load basis to IRA and 401(k) plan clients, and with loads to most brokerage clients. The maximum load is 3%. □

"A critical step"

OCC Guidelines Emphasize Clarity Of Information

Continued from *page* **12**

product sales.

The guidelines also require banks to maintain comprehensive compliance programs.

They indicate that the compliance function should be independent of the management of the investment products sales program. At a minimum, the compliance function should include systems to monitor customer complaints and to review customer accounts to detect and prevent abusive practices.

National banks will likely need to adjust their existing compliance activities to meet the various requirements applicable to the bank's nondeposit investment products program.

Alterations Required

To varying degrees, the guidelines undoubtedly will require some changes in existing investment-product sales practices of national banks.

Banks also should be aware that it is likely that there will be further guidance in this area. For example, it is expected that more detailed guidelines on investment products sales practices will be provided to OCC examiners shortly.

Moreover, the guidelines are clearly intended to be dynamic standards that will evolve in response to new developments in the marketplace. In addition, several committees of Congress continue to scrutinize bank investment product activities. □

Centura's Venture Starts Its Operations

CHARLOTTE, N.C. — Centura Banks Inc. and Independent Fiduciary Services Inc.'s joint venture company, MidSouth Financial Services, has begun operations.

As reported in July, MidSouth Financial will provide data processing, operational, and administrative support to banks and other entities that offer trust and other fiduciary services.

Ohio Co. Selling Funds, Annuities at Banks

By DEIDRE SULLIVAN
Special to the American Banker

Ohio Co., which has operated independent brokerage offices for decades, is carving out a new niche by selling mutual funds and annuities through banks.

The Columbus-based company recently signed up two more institutions to a growing program that targets midwest banks, especially those with under $400 million of assets.

First State Bank in East Point, Mich., and Citizens Bank in Martins Ferry, Ohio, will begin offering mutual funds and annuities through Ohio Co. later this month.

Nine Banks Signed Up

With the additions, Ohio Co. has signed up nine banks since beginning the bank program in 1990.

It sets up its own offices inside the banks and hires its own brokers to run the programs.

The arrangement gives bank customers the opportunity to buy stocks, annuities and mutual funds, including some from Ohio Co.'s own family of Cardinal Funds.

It is also a way for the banks to increase fee income. Under a lease agreement, banks typically receive 25% of commissions from product sales.

Midwest banks with under $400 million of assets have been the main targets.

Ohio Co. takes a highly selective approach when targeting banks for its brokerage services, said James Rowlette, vice president and director of marketing.

"We look for a smaller, highly independent bank in trade-center communities."

Shared Philosophy Sought

Ohio Co. wants banks that "share our philosophy of providing highly personalized brokerage services," Mr. Rowlette said.

Each bank brokerage is staffed by a broker with a track record and existing client base.

Brokers at the latest two offices joined Ohio Co. from Prudential Bache and Legg Mason, Mr. Rowlette said.

Experienced brokers give banks and Ohio Co. "a leg up," Mr. Rowlette said. "We don't want to have to train our brokers."

Incentives Bring Business

Also helping brokers are bank employees who receive financial incentives for directing business their way.

"We basically write two checks each month," Mr. Rowlette said. "One for our rent and one to the personnel manager as part of our referral program."

Although the Ohio Co. bank program is growing, getting a foot in the door isn't always easy.

One of the obstacles that turn-key providers like Ohio Co. encounter are banking executives who worry that brokerage services will drain their deposit base.

Study Undertaken

That's one reason why Ohio Co. undertook a study last year to track bank brokerage office sales.

It showed the firm's monthly gross revenues from the bank channel was $866,852.

Of that amount, only $62,000 came from within the bank, Mr. Rowlette said. The rest came from sources that include other banks, brokerages, and new customers.

"It tells us that we aren't the fox in the henhouse," Mr. Rowlette said. "We're really here to both solidify and expand the bank's customer base."

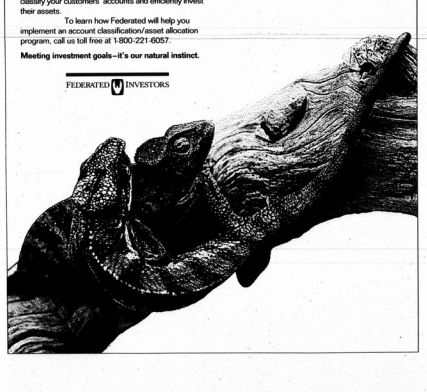
Meeting investment goals--it's our natural instinct.

FEDERATED INVESTORS



Chubb Offers Banks Liability Insurance

The Chubb Group of Insurance Cos. is offering banks protection against liabilities that may arise from their involvement with proprietary mutual funds.

The Warren, N.J., company features the coverage in its new investment company asset protection program.

The program includes liability coverage for fund directors and officers, and errors and omissions coverage for the fund itself and its service providers, like banks.

Combination Coverage

"Adapting to the complex nature of investment companies, these coverages can protect any combination" of the affiliated individuals and entities, said Evan Rosenberg, investment company product manager in Chubb's department of financial institutions.

Often, outside distributers of bank funds argue for this coverage, Mr. Rosenberg said. But more banks are taking it on themselves as a way of ensuring they are covered, he said.

Chubb will write the coverage for funds, unit investment trusts, and offshore funds.

Variable Life Insurance, Annuities Surged in Sales During the First Half

By KALEN HOLLIDAY

Sales of variable life insurance products have hit a record high, and variable annuity sales also are running strong.

In the first half of 1993, net sales of variable life insurance products surpassed net sales for all of 1992 by 32%, according to data released last week by Lipper Analytical Services.

The figure for the first six months – $632.7 million – is higher than for any full year in the past, Lipper reported. Net sales for the first half of 1992 were about $170 million.

Variable Annuity Sales Up 50%

Net variable annuity sales reached $13.2 billion in the first half of the year, up from $8.8 billion in the same period last year, according to Lipper's estimates.

Variable annuities are insurance contracts that provide an income stream. While income payments fluctuate, depending on the value of the underlying mutual funds, the investments are tax-exempt until tapped.

"The passage of the current tax package is going to make tax deferring more important than ever for most individuals," said R.H. "Rick" Carey, publisher of

The tax package makes deferring more important.

the Variable Annuities Research Data Services Report.

Sales are also being driven by the overall growth of the mutual funds industry, consumers' increased needs to save for retirement, and greater product awareness, Mr. Carey said.

"Annuitization is in everyone's best interest," he said.

More People Taking Risks

The dramatic drop in interest rates has pushed more people into taking some kind of risk, said Joseph W. Jordan, vice president of Metropolitan Life's pension and savings center. Variable annuities have a lot of appeal for first time risk-takers, he said.

As the popularity of these products has grown, so has the number of funds offered. There now are about 1,000 variable annuity funds, five times as many as in 1987. "There are a lot of companies designing variable annuities," Mr. Carey said. "It's just a great product."

He expects banks to increase their share of the variable annuity market, noting that bank customers are very comfortable with the product. Ultimately, he predicts, "banks are going to be the biggest distributor."

Mr. Jordan, a board member of the National Association of Variable Annuities , Reston, Va., predicts significant growth in variable annuity sales as more banks come aboard. □

"Tough luck, fellah! All my money is in the Berger 100 Fund and the Berger 101 Fund."

The Berger 100 Fund for long-term growth and the **Berger 101 Fund** for growth and income have both achieved impressive records for over 18 years and are worth consideration for your portfolio. Bankers Trust and Schwab Join Forces on 401(k) Front

Continued from *page 1*

petitive advantage," said Ronald L. Bush, vice president of Access Research, a market research firm in Windsor, Conn., that tracks the 401(k) business.

By teaming with Schwab, Bankers Trust will be able to offer "a nearly unlimited selection of funds, together with their comprehensive, state-of-the-art plan services," Mr. Bush said.

The 401(k) market is attractive because it is "the fastest-growing segment of the retire-

Bankers Trust's 401(k) offerings will balloon.

ment market," said Richard A. Marin, managing director and head of Bankers Trust Retirement Services.

Employees had piled $410 billion into 401(k) plans by the end of 1992, according to Access Research. And that figure is expected to swell to $1.3 trillion by the turn of the century, making the management of 401(k) plans an attractive growth business for money managers, such as banks, insurance companies, and mutual fund companies.

Through its new alliance with Schwab, Bankers Trust plans to target "the largest companies of corporate America and some public entities," Mr. Marin said.

Clearly, 401(k) plans have emerged as "an increasingly important vehicle for accumulating long-term retirement assets," Mr. Marin said. But at the same time, "participants want a broader range of investment options and greater flexibility to achieve individual objectives."

With $105 billion in retirement plan assets under administration, Bankers Trust has been "a leader in the 401(k) industry since its inception," Mr. Marin said. "And this shows our continued commitment to the market."

The bank is working on some new offerings, especially in the risk management area, for the 401(k) market to add to its core product line, Mr. Marin said.

Spreading Its Wings

By brokering funds to the New York bank's top-dower institutional clients, San Francisco-based Schwab will have a chance to expand its reputation beyond the retail marketplace, where it is an acknowledged powerhouse.

"It gets us further into the 401(k) market, a market we've just entered recently," said Harvey Rowan, president and chief executive of Charles Schwab Trust Co.

"The alliance could give Schwab a crack at some large corporations. "For us, it makes the funds that we offer available to a broader base," said Thomas Taggart, a spokesman for Charles Schwab & Co.

"This is our first relationship with a bank in this area," said Mr. Taggart. But he added, "We're not stopping with Bankers Trust."

In addition to providing a broader array of mutual fund products, the alliance with Schwab also provides clients with an IRA rollover benefit, Mr. Marin said.

Money withdrawn from a 401(k) plan is subject to 20% withholding, unless it is are rolled over, or reinvested, directly into an IRA. "We're providing a seamless way to rollover," Mr. Marin explained. □

Upstart N.J. Entrepreneur Challenges The Credit Counseling Establishment

By JEFFREY KUTLER

Alan Franklin, a New Jersey entrepreneur and onetime American Express Co. strategist, is out to shake up the nation's credit counseling establishment.

Mr. Franklin has set up a counseling service in Trenton, N.J., that he says is bringing much-needed innovation to a business that many banks and other lenders view as a bulwark against consumer bankruptcies and chargeoffs.

Arguing that the existing network of lender-supported counseling centers has not kept pace with the avalanche of bankruptcies, Mr. Franklin says he can improve creditors' recoveries while preserving unsecured debtors' creditworthiness and dignity.

"We intervene before the crisis point, putting ourselves in between a debtor and his group of creditors," Mr. Franklin said in a recent interview. "We go to the lenders and provide an incentive for forebearance of interest. We will serve as trustee to guarantee repayment on the debt."

33-Month Plan

Mr. Franklin's organization, American Credit Alliance Inc., develops a payback plan that restores the overextended consumer to good standing with multiple creditors in 33 months. The debtor pays lump sums to American Credit Alliance, which distributes the funds.

The alliance takes a cut for itself – usually 15% – while charging a $15 monthly management fee to each debtor.

The program, licensed last December by the New Jersey Banking Department, is not yet operating at its start-up capacity, which Mr. Franklin estimates is 100 cases a month. He has yet to develop the flow of referrals he desires from unsecured creditors. (A bank card lender, for example, would recommend that a tardy customer call American Credit Alliance for assistance.)

But creditors have cooperated with the repayment programs, and there has been a steady stream of satisfied clients, Mr. Franklin says. He tells of their tears of relief after the ritual cutting up of their credit cards.

If American Credit Alliance succeeds, it will take a bite out of traditional debt collections. That business, Mr. Franklin says, frequently degenerates into a free-for-all in which perhaps one fast or lucky creditor in 10 will recover delinquent debt. He wants all 10 to be in on the negotiation and ultimately satisfied.

Advantage Claimed

"No one has ever approached the collection of debt comprehensively and through negotiation," he says.

He also claims an advantage over the counseling programs of the National Foundation for Consumer Credit and its constituents. They wait for troubled debtors to walk through the door, Mr. Franklin says, while he seeks to be "proactive."

Like the foundation and its local and regional members, American Credit Alliance has not-for-profit status and a volunteer board. In fact, Mr. Franklin says he would like to join the national group and gain its imprimatur.

Lender-supported counseling centers have not kept pace, Mr. Franklin says.

But the establishment looks askance at the upstart.

"I am a little concerned that his motivation may be more profit than anything else," said Luther Gatling, director of the Budget and Credit Counseling Service of New York City.

Mr. Franklin, who says he has high regard for Mr. Gatling, has ambitions to expand in New York's outer boroughs and suburbs – Mr. Gatling's back yard.

Mr. Gatling emphasizes the preconsumer public-spiritedness of national foundation members, and says Mr. Franklin brings a "collection-agent mentality" that will not necessarily be "consumer driven."

Mr. Franklin, 52, views his private-sector background as an asset – and exactly what the credit counseling business needs.

American Express Veteran

He spent 14 years with American Express, ending up in the late 1970s monitoring the bank credit card associations and other competitors of American Express Travel Related Services Co.

He went on to spend a year with Visa U.S.A. in McLean, Va., then went into real estate development in Trenton and later into the debt-collection business, working for both GC Services and Integratec Inc.

Integratec had championed a "proactive" approach to recovering credit card loans, giving debtors relatively gentle nudges when still in the early stages of delinquency. Integratec gained an important endorsement this month when Equifax Inc. bought the six-year-old company for $23 million.

At Integratec, Mr. Franklin worked under co-founder A. Wayne Johnson, another credit industry entrepreneur and ex-Visa executive, who allowed Mr. Franklin to begin the seed research that sprouted into American Credit Alliance.

Mr. Johnson called the alliance idea one of "creative genius," changing the collection business from "delivering ultimatums to delivering options."

"I looked at the 52,000 bankruptcy filings by residents of New Jersey over the last three years," Mr. Franklin said. "Maybe 10% of them really should have been filed."

The sheer volume of bankruptcy filings – after 10 years of rapid rise, they have leveled off nationally at just under one million a year – has been difficult for creditors to manage.

And since bankruptcy courts have become more geared to completing legal procedures than to repaying creditors, the recovery battle is often lost before it starts, especially on small personal and card debts.

The alliance takes a cut for itself while charging a monthly fee to each debtor.

Mr. Franklin says his system has a "win-win-win" potential that ultimately unburdens debtors, creditors, and the bankruptcy system alike.

"I'm taking the consumer's side in collections, but I'm also making the intellectual case that this process is better than the way collections work now," he said.

"Of a credit card debt charged off after 180 days, 91% generally won't be recovered," Mr. Franklin said. "I'm saying that it may be collectible – if the debtor is given an incentive to repay.

"This can be done by promising that the debtor will be debt free and credit will be reestablished after 33 months following a plan that has gotten the approval of the lender."

To accusations that he deemphasizes the "social service" aspect of credit counseling, Mr. Franklin says one of his motivations to do good arose from concern about health care costs. His research showed that hospital bills – even what remains after insurance coverage – frequently drove reliable debtors into default.

Upon discharge, patients often find themselves saddled with overdue mortgage and credit card payments in addition to the hospital bill.

"It's never just one debt that has to be collected – it's the entire circumstance," Mr. Franklin said. "If he can't pay the mortgage, he also can't pay Visa."

Mr. Franklin is currently approaching hospitals, offering to intervene when patients need help developing a comprehensive payment plan. The hospital would send a distressed debtor a letter, as would a bank, suggesting a call to American Credit Alliance's toll-free number. On hospital referrals, Mr. Franklin waives his 15% commission.

Waiting for Lenders

The alliance has gotten one hospital to agree to refer up to 200 accounts a month, but bank lenders have yet to do the same. Referrals also come from state agencies, word of mouth, and the telephone book.

"Alan's problem is to break the mold of the leading institutions, which are geared to the credit-counseling-center mode of operation," said Mr. Johnson. He is currently running Qualinet, an Atlanta customer-service company he founded and sold to First Data Resources Inc. last year.

Mr. Franklin believes his approach can work nationally, either independently or through the National Foundation for Consumer Credit.

"There are enough unemployed bankers that there would be no problem making this work," Mr. Franklin said. "I took out a classified ad, just to get a feel for the market, and I got 50 responses to 'part-time credit counseling, banking background preferred.'" □

Citicorp's Giant Card Portfolio Growing Again, with Ford's Help

By STEPHEN KLEGGE

Citicorp's joint marketing program with Ford Motor Co. helped put the nation's No. 1 banking company back on the credit card growth track in the first half, according to data compiled by RAM Research Corp.

Already the largest credit card issuer by a wide margin, Citicorp increased its card-loan portfolio by 1.41% in the six months, to $36 billion, according to the Frederick, Md., research firm.

Growth in Citicorp's portfolio had been stalled since 1991 as many cardholders deserted for competitors' offerings.

RAM president Robert B. McKinley attributed the comeback to the February launch of the Citibank-Ford Visa card. Competing with General Motors' MasterCard issued by Household Bank, the Ford card provides a 5% rebate on purchases, which can be applied toward a new car.

After a long lull, the No. 1 card portfolio grew by 1.41% in the first half.

The Ford Visa "has more than offset" Citicorp's attrition, Mr. McKinley said, "although it's not a gangbuster program."

Nonbanks Keep Gaining

Also of note in RAM's latest top-10 ranking were continued gains by nonbanks.

MBNA Corp., at $9.9 billion in receivables, jumped past Chase Manhattan Corp. into third place, trailing only Citicorp and the Discover program of Dean Witter Reynolds & Co. Issued by a subsidiary bank, the Discover card had $18.1 billion in outstandings.

MBNA, which was spun off by MNC Financial Inc. in 1991, has found a winning formula in affinity cards, which play on the loyalties of generally affluent consumers who belong to associations or share an interest.

Household Bank, a subsidiary of Household International, was the fastest-growing big issuer, gaining 23.91% in the six months, to $7.1 billion.

But it didn't climb as far up the ranking as preliminary data provided by RAM and Household had indicated. Referring to that data, an Aug. 5 *American Banker* feature on Household said the unit ranked fifth among MasterCard and Visa issuers – a group that excludes Discover.

The final tally for the first half showed that the AT&T Universal card, issued by a unit of Synovus Financial Corp., still had a slim lead over Household, and that BankAmerica Corp. showed unexpected strength in the first half, growing 1.16% to maintain its sixth-place ranking behind First Chicago Corp.

The latest estimates by Household and AT&T suggest the two are in a dead heat in outstandings, with $7.3 billion. □

The Top 10 in Bank Credit Cards
Outstanding loans, in millions of dollars

	Jan. 1	June 30	Change
Citibank	$35,500	$36,000	1.41%
Discover	18,700	18,100	-3.20
MBNA America	9,219	9,896	7.34
Chase Manhattan	8,800	8,600	-2.27
First Chicago	8,542	8,632	1.05
BankAmerica	7,502	7,587	1.16
AT&T Universal	6,600	7,200	9.09
Household	5,713	7,079	23.91
Chemical	5,784	5,774	(0.17)
Bank of New York	4,912	5,222	6.31
All 10	109,270	115,290	5.51

In This Era, Banks Must Offer Risk Management to Clients

Bankers ignore the $7 trillion U.S. derivatives market at their peril.

Bank customers, bolstered by recent accounts of successful class-action lawsuits against corporate hedging practices, are not just requesting effective risk management expertise. They are demanding it.

Banks that don't respond are ignoring one of their most critical fiduciary responsibilities – to protect clients' assets as well as their own – and are setting themselves up as possible targets for litigation.

The recent adoption of Financial Accounting Standards Board rule 115, which will force banks to mark their bond portfolios to market values, coupled with the other economic issues facing banks, exacerbate this situation.

Competition Heats Up

Industrial giants like AT&T, General Motors, and General Electric, along with a bevy of financial service companies, now offer credit cards, consumer loans, mortgages, and other services. They are taking away the banking industry's bread and butter.

With more and more bank customers looking to other institutions to help them manage risk, banks are seeing a steady erosion in their basic business. One can almost feel the vise tightening on the bottom line.

Avoiding Past Mistakes

Banks can dodge this triple threat simply by avoiding mistakes of the past. That means acting sooner rather than later to become expert in risk management technologies, so that clients' needs can be fulfilled and the effects of FAS 115 effectively mitigated.

Hedging – the most effective risk management tool available to reduce financial portfolio risk – is already very much in demand by both individual and corporate customers.

Smaller investors are realizing that derivatives can be tailored to suit their needs, while increasing numbers of corporate clients are already using the derivatives market to manage all types of risks, including those associated with currency, commodities, interest rates, and equities.

Because risk management expertise has not effectively been developed within the banking industry, many customers are unnecessarily exposed or, or worse yet, attempting to do the job themselves. Moreover, the bank's own portfolio is at equal risk.

Hands-On Approach

Bank presidents who want to realize the full potential of hedging must do more than delegate responsibility to the asset-liability management committee. This matter is too important to delegate.

In order to comprehend the rapid changes that are now taking place, they and their boards of directors must achieve a full understanding of risk management and implications of being left behind.

An inadequate understanding of hedging techniques will almost always make senior bank officers and board members timid in adopting the broad risk management policies needed to protect profitability.

If not fully understood, hedging, like any other new concept, can breed fear.

And fear can paralyze even the most aggressive chief executive officer, particularly if the consequences of *not* implementing policies, procedures, and capabilities to apply these techniques to customer and bank assets.

Accounting Changes

The primary issue facing banks today is the change in accounting for "trading securities" and "available-for-sale securities," which under FAS 115 includes any securities that do not meet the strict requirements of the "held-to-maturity securities" portfolio.

Unrealized holding gains and losses for "trading securities" are included in earnings.

But unrealized holding gains and losses for "available-for-sale securities" (including those classified as current assets) are excluded from earnings and reported as a set amount in a separate component of shareholders' equity on the balance sheet.

It's this last provision that poses the greatest challenge to bankers because the market valuation of the bond portfolio is particularly sensitive to interest rate changes.

Even a small increase in long-term interest rates at the end of a reporting period will mean marking down the value of long-term bonds held in the "available-for-sale securities" and "trading securities" categories.

Under FAS 115, that markdown will result in a reduction to the capital account from an unrealized loss in the "available-for-sale securities" account, or directly to income if held in the "trading securities" account.

Market Whims Feared

Bankers are not happy about subjecting the valuation of vital bank capital and income to the volatility of the marketplace, something over which they feel that have no control.

So, as predicted by those who closely follow bank accounting issues, many banks are responding by dramatically shortening their portfolios in the hope of avoiding volatility. As long-term bonds mature, the proceeds are being invested in less volatile, shorter-term instruments.

Stopping short of tagging this practice as a short-sighted way to control portfolio risk, there is little question that it's an expensive practice. Shortening bond maturities may reduce the risk of volatility, but it does so at a very steep price.

HEDGING – THE *most effective risk management tool – is already very much in demand by both individual and corporate customers.*

SMALLER INVESTORS *are realizing that derivatives can be tailored to suit their needs.*

IF NOT FULLY *understood, hedging, like any other new concept, can breed fear.*

Reader Forum

The *American Banker* welcomes points of view on issues of interest and importance to the banking industry.

Please direct letters to Jeffrey Kutler, assistant managing editor, *American Banker*, One State Street Plaza, New York, N.Y. 10004, and include a daytime telephone number.

Letters will be edited and may appear in a Letters to the Editor column or be published separately as commentary.

No doubt, the sizable returns (spreads) banks have been realizing by investing low-cost deposits in high-yielding long-term bonds will shrink dramatically when invested in shorter-term instruments.

Banks don't need to give up the impressive yields on their bond portfolios. They can still purchase long-term bonds and maintain interest rate spreads, but they need to hedge the risk of rising interest rates against their long positions. As Bond Yields decrease, hedging values will offset any losses.

In the Vanguard

Many forward-looking bankers realize that they have the distribution networks, client bases, and balance sheets to support over-the-counter derivatives trading, putting them in an enviable position to provide superior customer service and maintain healthy financial positions.

The problem of how to obtain the hedging expertise they needed was addressed differently by each of five banks cited.

Some purchased hedging expertise outright, such as Nationsbank Corp., the country's fourth-largest banking company, which recently purchased CRT, one of the largest options market-making and trading firms.

Others, like Bankers Trust New York Corp., chose the do-it-yourself approach, building expertise internally to serve their own needs as well as the hedging requirement of their customers.

Three others – Swiss Bank, Chase Manhattan, and Matsui – either formed strategic alliances or purchased derivative arbitrage firms in order to obtain instant hedging expertise.

Fiduciary Responsibility

Protecting the bank and its clients from undue financial risks is a fiduciary responsibility too critical to ignore. Bankers, who, like the rest of us, tend to stick with what they know, are comfortable with their ability to control the credit risks associated with lending.

They also understand how to use asset-liability tools to control the interest rate risks in funding their loan portfolio.

With hedging, bankers can effectively control other financial risks – currency risk, in all its dimensions, and interest rate and security price risk in the investment portfolio – while fulfilling their clients' needs for total risk management services.

But it won't happen by accident. It will take enlightened action, and the time to act is now. □

By Paul S. Nadler

When Employees Quit, Find Out Why

He was one of my best students. He worked all day as an officer at a major bank and then came to class in the evening to get an MBA, earning a solid A from me as well as from my others.

I thought his career at the bank was pretty secure – that is, until I got a note from him saying he had resigned from the bank and had gone into retail brokerage!

Knowing he didn't have a rich family to sell stocks to and knowing how difficult the path to retail brokerage is, I called to find out what happened.

And I am wondering why his bank's management did not do the same as he left.

You Have to Ask

In every exit of a customer or an employee, there is something that the bank can learn, if it is willing to ask questions.

A grocer who spoke at a banker's convention I attended summed it up when he said that he gave $3 to a woman who complained that his store had sold her a rotten Cranshaw melon at that price, when in fact his grocery had not had a Cranshaw mellon in stock for months.

"No one tells you why they stop shopping here, they just don't show up again," the grocer said.

"In most instances, people spend $100 a week here – that's $5,000 a year and $50,000 a decade. Am I going to risk that for the price of one mellon?"

A grocer doesn't have the opportunity to interview people who stop shopping with him. Bankers do.

Yet I have been amazed that even though I have closed several bank accounts in my day, no bank ever took the trouble to find out why.

Straight Talk

If interviewing former customers is valuable, think how much more it could be to learn by interviewing employees who resign, as my student did.

Here was an officer earning a substantial salary who decided to chuck it all and start at the bottom.

What could the bank have done to so alienate him and make him willing to take such a risk, not to mention a major pay cut?

His answer was as follows:

"Most important, we had new management that came in, bringing with it a number of new faces.

"It also brought an attitude: that those on board from the days before the management change can't deliver."

"You're one of the others," meaning one of the people on board before the management change, was the scorning way a top officer had addressed my friend in discussing his role in the bank.

The bank had been broken into a prechange and post-

IN EVERY EXIT *of an employee or a customer, there is something the bank can learn.*

change culture split.

"And even if we hadn't had this split, there were a lot of new people who came in and were placed above me on the ladder, hurting my long-term career path," he added.

As if this were not enough, my student explained that the bank had developed a bell-curve system of compensation, under which each department had just so much more money to distribute in raises each year.

"If I got more than 4%, it would be out of one of my associates' own raises, no matter how good our department was as a whole," he explained.

To me the analogy would be grading on a curve that requires me to flunk 10% of the students, whether they should really fail or not.

My student's other complaints were more specific. They included working for a manager who required reports that involved 70-hour weeks at times, but then she could not make a decision on the data when it was finally presented to her.

It involved working for a manager who had been "Peter Principled" up from the cost control work, at which he was superior, to a managerial position at which he was not.

Every Issue Has Three Sides

Certainly these specifics that he talked to me about are his own viewpoint. And I am sure if I had called these two managers he reported to I would have gotten quite a different story. After all, every issue has three sides: my side, your side, and the truth.

But the key is that, whether his opinion was valid or not, the bank could have learned a lot from hearing it, digging in, and finding out if the same policies and practices were alienating other valuable employees also.

Some bank CEOs answer their own phones. They find this way they can learn information that the staff wants to screen from them, either out of the fear that the CEO will hang the bearer of the bad news or just to keep the work load down by avoiding the need to tackle these sticky issues.

If you can learn a lot merely from answering your own phone, think how much you could learn from lunch with a disgruntled officer who has just given up years of ladder climbing and undertaken a new, difficult career.

For unlike the grocer, you know who your defectors are and you can talk to them to find out what happened. □

Letters to the Editor

Hibernia Sees Opportunities For Lending in the Bayou State

To the Editor:

The Louisiana National Bank takes a more positive view of our state's economy than the way it was portrayed in "Stagnant Economy, Weak Loan Demand Pinch in Louisiana" [July 27, page 6].

Louisiana has enjoyed better times, but there are signs pointing to significant lending and other opportunities for banks that play to their competitive strengths.

DRI/McGraw-Hill and Cajun Electric Power Cooperative Inc. see employment in Louisiana growing 2.7% annually through 1995, compared with 2% nationwide. Residential construction and housing starts are rising as borrowers take advantage of low interest rates.

Louisiana Economy Has Diversified

Also boding well is the fact that Louisiana has become more diversified. Oil and gas contribute only 15% of the state's revenues, down from 40% in 1980.

Manufacturing is expected to revive as the state's lower wage structure and easy access to the Caribbean basin make it attractive to U.S. exporters.

The service industry, approximately 25% of Louisiana's employment base, should grow 3.6% annually over the next two years. There is second only to the state's construction industry, mainly because of New Orleans' convention, tourism, and health service sectors.

On another note, one has to clarify a reference to the state's crude oil to a decline in loans at Hibernia for the 12 months ending last March 31. While the trend was correct, weak loan demand was not the only cause.

Loan reduction was a deliberate strategy begun in 1991 as part of a successful restructuring to improve capital ration, increase liquidity, and reduce risk profiles. We reduced highly leveraged transaction loans, commercial real estate loans, and other single-sided, nonrelationship transactions.

The article and its accompanying chart also failed to note that during the period, Hibernia sold its Texas subsidiary, which accounted for a further loan-portfolio reduction of $589 million.

Thanks to our recapitalization, return to profitability, and improving asset quality, Hibernia is positioned to increase loans. Total loans outstanding rose in the second quarter – the first time that has happened since the third quarter of 1990.

Russell S. Hoadley
Senior vice president, Hibernia National Bank

PROFESSIONAL EMPLOYMENT OPPORTUNITIES

DOUGLAS NATIONAL BANK
is searching for a
DIRECTOR OF RETAIL BANKING

We offer:

- Equal employment opportunity at one of the highest rated banks in America. Douglas National Bank as received an A+ rating from Sheshunoff, a five-star rating from Bauer Financial Reports, Inc. and a Blue Ribbon Bank award from Financial World.
- Comprehensive benefits and salary package.

We would like to hear from individuals who possess:

- a minimum six years of financial institution retail branch management experience.
- A bachelor's degree in Business or a related field with an emphasis on Behavioral Sciences.
- a minimum three years of primary involvement with operating the retail sales, service and operations of a retail bank region, area or division.
- the ability to successfully coordinate division operations and retailing programs.
- the ability to achieve both short and long range objectives for sales growth and maximum market penetration.
- desire to identify with a prestigious organization that has a sound public image and a quality management team.

Successful candidates are individuals who are:

- enthusiastic, creative and ambitious self-starters.
- results and big-picture orientated.
- self-confident in decision making and interpersonal skills.

If you are this individual, please send your resume to:

Attn: Personnel Dept.
Douglas National Bank
P.O. Box 1007

RETAIL BANKING — EXECUTIVE MANAGER, MARKETING AND PLANNING

Our client, based in Kuwait, is one of the leading financial institutions in the middle East. With 32 branches and a dominant retail position, the bank is seeking a senior executive marketing executive, to be based in Kuwait, to run their domestic marketing and planning activities. Reporting to the Head of Retail Banking, the Executive Manager will have overall responsibility for the development and implementation of the bank's marketing strategy.

The ideal candidate should have a minimum of ten years experience at a leading edge retail bank. With broad strategic and tactical experience, this person should be a team player, a good manager, and possess strong communications skills. International experience is a plus; but not required.

A competitive compensation package is being offered which will include a full range of expatriate benefits. If qualified, please submit in complete confidence a detailed resume with current compensation level to the Bank's executive recruiting consultants

Money-Center Yields Are Reaching Parity

By DAVID SIEGEL

After being in the doghouse for several years, bonds of money-center banks have caught up with the rest of the industry.

Ten-year subordinated debt securities of money-center banks now trade at yield premiums of 10 or fewer basis points above issues of other banks with similar credit ratings.

This is a sharp improvement from the extra yield of up to 200 basis points that weaker money-center bonds carried in the secondary market two years ago.

No More 'Money-Center Taint'

"What I think you're seeing here today is there is no longer a money-center taint to these names," said Allerton Smith, analyst at First Boston Corp. "I would say they are on par with their superregional counterparts in terms of spread."

The convergence of yields in the secondary market means money-center banks are no longer handicapped by higher borrowing costs than regional bank issuers when they tap the markets.

The bonds of lower-rated money-center banks such as Citicorp, Chase Manhattan Corp., Chemical Banking Corp., First Chicago Corp., and Continental Bank Corp. have shown the most improvement.

More highly rated money-centers such as J.P. Morgan & Co., Bankers Trust New York Corp., and Republic New York Corp. did not stumble in the 1980s and so have not had a sharp rebound in their bonds.

On Tuesday, 10-year subordinated debt issues of Citicorp, Chemical, First Chicago, and Chase were quoted at 78 to 85 basis points over the 10-year U.S. Treasury note, compared to a 78-basis-point spread for First Union Corp. and a spread of 83 for Fleet Financial Group, according to First Boston.

Triggered by Upgrades

In contrast, at the end of last year, none of those money-centers were trading at a tighter spread than Fleet or First Union, and Citicorp and Chase bonds carried as much as 30 to 50 basis points more yield.

-Upgrades this summer of Citicorp, Chase, and Chemical have triggered the last leg of the rally in money-center bank bonds.

The rating agencies rewarded the big New York banks for the drastic actions they took to recover from sour real estate and Latin American loans, said William King, analyst with Merrill Lynch & Co.

Improvements in earnings, asset quality, and expense control have all contributed to the upgrades, he said.

"The money-centers have *reinvented themselves*," Mr. Smith said.

Change in Focus

He noted that First Chicago, Chase, and Chemical have deemphasized lower margin international-based businesses and focused on more stable and profitable activities.

"A lot of what's happened is that money-center banks in general were downgraded the most in the past, and so now that things are getting better they are among the first to get upgraded in an industry where the fundamentals are overwhelmingly positive," Mr. King said.

He noted, however, that regional banks such as Shawmut National Corp. and Bank of Boston Corp. have not seen their bank bonds rally in tandem with improving credit ratings since 1992. □

Salomon Upgrades Great Lakes Bancorp, Citing Plan to Eliminate Most Goodwill

NEW YORK — Salomon Brothers Inc. analyst Bruce Hartig upgraded Great Lakes Bancorp, Ann Arbor, Mich., to "buy" from "hold."

Mr. Harting cited the company's announcement that it plans to adopt an accounting change in the third quarter that will eliminate most of the goodwill on its books. He said the move should increase the company's 1994 earnings to about $2.50 a share. Mr. Harting had estimated that Great Lakes would earn $2.10 to $2.20, compared with a loss of 9 cents a year earlier.

He also noted that the company's market share is about 15%, while its next closest competitor's share is 8%.

Stocks

Bank Shares Fall on Fears of Flattening Yield Curve

By RICHARD LAYNE

Bank shares tumbled for the second straight day on Tuesday amid investors' concerns that a decline in long-term interest rates will hurt bank earnings.

Bank stocks, which are rate-sensitive, usually do well when the bond market is strong. But that has not been the case this week.

A rally in long-term bonds has sent the yield on 30-year Treasury bonds to about 6.30%, their lowest point in 16 years.

"Some investors are concerned about the yield curve flattening," said Robert Bonelli, executive director of the Ernst Financial Group, a unit of Ernst & Co.

The bank stock declines have been occurring amid gains in the overall stock market.

The Dow Jones industrial average and the Nasdaq composite index both set record highs on Tuesday, with the blue-chip index closing at 3,586.98 and the over-the-counter measure at 731.

Leading the way down were shares of First Interstate Bancorp and Wells Fargo & Co. First Interstate fell $2.875 to $60.625 and Wells was off $2.375 to $111.75.

First Union Corp.'s shares fell $1.375 to $43.75. Bankers Trust New York Corp.'s shares fell $1 to $78.37.

SunTrust Banks' shares-dropped $7.5 cents to $43.25. Barnett Banks' shares fell $1.375 to 45.375. Shares of First Fidelity Bancorp. skidded $1.125 to $46.25.

If the yield curve flattens, investors fear net interest margins will also tighten, eating into earnings.

Fears Sparked Spring Selloff

This isn't the first time that investors have shown concern about bank margins.

Worries about a flatter yield curve sparked a prolonged selloff last spring that dragged down bank stock prices by an average of 18%.

Back then, investors worried that inflation would cause a rise in short-term rates that would raise banks' cost of funds and put pressure on margins.

The fear of a squeeze on net interest margins is well founded, said Thomas Brown, an analyst at Donaldson, Lufkin & Jenrette Securities Corp. Bank investment securities are repricing faster than their liabilities, he said.

But Mr. Brown and other analysts think that although net interest margins will tighten slightly over the next few quarters, the change may not affect earnings.

Growth in lending, for example, could offset shrinking margins.

The extent of margin compression will not as bad as people fear," Mr. Brown said.

Analysts and money managers said that the two-day downturn was not the beginning of another prolonged selloff.

'Wouldn't Be Too Panicked'

"This is not a new downleg in bank stocks," said Judah Kraushaar, an analyst with Merrill Lynch & Co. "I wouldn't be too panicked by two days' worth of selloff."

Money managers said that trading volume has been light, an indication that the panic selling that occurred in April and May is not being repeated.

First Fidelity, for example, lost ground on 192,100 shares traded, which is below its normal daily volume of around 350,000.

When trading volume is that slight, money managers and analysts do not pay much attention to price movement.

"Because of vacations, people aren't around to support price levels of some shares," said Mr. Bonelli.

Indications of Profit Taking

Furthermore, there are indications that some of the selloff represented profit taking and not a rotation out of the sector.

"I don't think we are seeing a rotation out of the sector because then we'd see massive trading volume, like we saw in April and May," Mr. Bonelli said.

Shares of the two big California banks, Wells Fargo and First Interstate, have been among the biggest gainers this year, for example. □

Yields Edge Up As Rally Ends

Interest rates rose slightly on Tuesday, as the weeklong rally in the government bond market came to a halt.

Stocks gained moderately, with the Dow Jones industrial average rising 7.82 points to a record 3,586.98 and the Nasdaq composite index advancing 4.11 points to a record 731. The dollar was mixed.

The yield on the 30-year bond, which had fallen about 20 basis points in the last week, rose 1 basis point from Monday to 6.31% in late trading.

Technical Support

"The market has run out of room to rally," said Charles Lieberman, market economist for Chemical Securities Inc.

He said long-term bonds have been supported by technical factors, noting that last week's sale of 30-year bonds would be the last such issue for six months.

Steve Ricciuto, economist for Barclays de Zoete Wedd, said intermediate Treasury yields rose when the Federal Reserve did not execute an expected "coupon pass," in which it buys medium-term Treasuries.

Notes Also Up

The 10-year note yielded 5.70%, up from 5.67% on Monday; five-year notes yielded 5.05%, versus 5.02%; and two-year notes yielded 4%, versus 3.94%. The bond-equivalent yield on three-month Treasury bills was 3.08%, up from 3.07%.

Small Businesses Shy Away from Getting New Loans

By WILLIAM GOODWIN

Small businesses are shunning new bank loans, despite lower interest rates and easier credit conditions, according to a just released survey by the National Federation of Independent Business.

As of July, when the survey was conducted, just 32% of the group's members said they were borrowing on a regular basis, meaning at least once a quarter. That's the lowest level in the 20-year history of the survey.

The record-low level of borrowing activity reflected general pessimism about the impact of the Clinton administration's economic policies.

Impact of Taxes

A number of the association's members will be directly affected by the higher taxes contained in the administration's recently enacted budget bill, said William Dunkelberg, chief economist of the group and dean of the business school at Temple University in Philadelphia.

Demand is low despite lower rates and easier credit.

"This is just a big blow to the bottom line to partnerships, proprietorships," and other group members, he said.

Small businesses are also worried about added costs associated with the administration's health-care reform proposals, Mr. Dunkelberg said.

Typical Small Business

The Washington-based group represents over 600,000 small businesses, each typically having five employees and annual revenue of $250,000.

One out of every seven employers in the United States is a member of the association, Mr. Dunkelberg said.

Apparent Contradiction?

Credit availability was not an issue for small businesses, according to the latest association survey. Just 3% of respondents cited the ability to obtain financing as their most important problem.

The finding seems to contradict recent Congressional testimony by Federal Reserve Board chairman Alan Greenspan.

"I would scarcely argue that the so-called credit crunch phenomenon is over," Mr. Greenspan told the House Banking Committee last month in his semiannual report on the Fed's monetary policy.

But Mr. Dunkelberg said that if there was a credit crunch, association members would be complaining about it, as they did in the early 1980s.

A survey finds just 32% of companies borrowing on a regular basis.

During that period credit availability consistently was cited by a large percentage of small businesses as their most important problem.

"Our view all along [has been] that there is no credit crunch this time, Mr. Dunkelberg added.

Bankers around the country have been saying for months that slack business lending reflects sluggish credit demand, not an unwillingness on the part of banks to lend.

No Lack of Money Seen

"Every bank in the world is out there beating the bushes for loans," said William Rossman, president and chief executive officer of Mid-State Bank and Trust Co. in Altoona, Pa.

"That's an indication to me that there is a lot of money to be lent if there is a need for it," added Mr. Rossman, who is also president of Robert Morris Associates, a trade association for commercial loan and credit officers.

The average interest rate for short-term loans fell to 8.3% in the second quarter from 8.6% in the first period, according to the National Federation of Independent Business survey.

"I interpret falling rates as a sign that banks are trying to move merchandise," Mr. Dunkelberg said. □

Offering Kemper Mutual Funds does wonders for your peace of mind. We're one of America's largest asset managers with over $60 billion in assets under management and 40 years experience. Our diligent and disciplined Financial Institutions Group is dedicated exclusively to banking. Our full staff and comprehensive services are designed to help you deliver the consistent, long-term performance your clients need to start building their tomorrows today.

Prepayments Start to Haunt Home Lenders

By EDWARD KULKOSKY

The home mortgage industry looks a little like a snake that is swallowing its own tail.

Lenders are feeding voraciously on refinancings – and toting up record origination fees. But as borrowers pay off existing loans, many companies are losing valuable loan servicing assets – and taking hits to earnings.

In recent weeks, the undesirable part of the refinancing boom has started to outweigh the positive aspects for a number of lenders. And with long-term interest rates continually hitting record lows, there's no end in sight to the trend.

Fleet Financial Group of Providence, R.I., highlighted the problems last month when it announced a $100 million charge to earnings in the second quarter because of prepayments at its 80%-owned Fleet Mortgage.

"What happened to Fleet during the quarter proves our point that a lower-interest-rate environment is not necessarily the optimal situation for mortgage bankers," wrote Sy Jacobs, mortgage banking analyst for Alex. Brown & Sons.

Rights Booked as Assets

Fleet is among a group of lenders that hold large quantities of "purchased mortgage servicing rights." Unlike the loan servicing rights that arise from a lender's originations, purchased rights are booked as assets – and must therefore be written down when prepayments accelerate.

(A ranking of bank holding companies with high levels of servicing assets appears on page 12.)

Kevin Race, executive vice president and chief financial officer for Fleet Mortgage, said: "After the second quarter, we decided to use hedging techniques, when appropriate, to protect our portfolio and have actually begun some financial hedging."

Charge to Earnings

Marine Midland Banks Inc., Buffalo, had one of the largest exposures to prepayment risk among bank holding companies as of March 31.

But Ernest A. Morton, executive vice president, reports that he has reduced this exposure by about 60% "by writing a check" in the form of a charge to earnings. He expects to sell excess

Glenfed Says Recap Plan Is on Track

By SAM ZUCKERMAN

SAN FRANCISCO — One day before going to market, Glenfed Inc. officials said they had lined up investors for the thrift company's $425 million recapitalization, lifting the immediate threat of a federal takeover.

On Thursday, the Glendale, Calif., thrift company is scheduled to carry out the most difficult parts of its massive reorganization effort: setting a price on a $175 million offering of convertible preferred stock and signing agreements with standby investors in a $250 million common stock rights offering.

Officials of the $17.9 billion-asset thrift company said on Wednesday they believed they had sufficient commitments from buyers to complete the two transactions.

"We're pretty confident," Richard A. Fink, a chief legal officer, said in an interview.

A Turnaround Play

More than two dozen investors, mainly mutual funds and partnerships, have agreed to be standby buyers in the rights offering at $9 a share, Mr. Fink said. Many have previously made big gains from other financial institution turnarounds, people familiar with the deal

BankAmerica Acquitted Of Price Fixing on Cards

By STEPHEN KLEEGE

A jury in San Francisco has acquitted Bank of America of charges that it conspired with two other California banks to fix credit card prices.

The verdict late Tuesday ended a costly seven-year legal battle and vindicated Bank of America's strategy of not settling the case out of court. A loss could have cost the BankAmerica Corp. subsidiary three times the alleged damages, or $2.8 billion.

1st Interstate, Wells Settled

The other accused companies – First Interstate Bancorp and Wells Fargo & Co. – paid a combined $57 million in settlements last year, even as they strenuously denied wrongdoing.

"In some respects, [the BankAmerica victory] may be the start of a trend where big corporations no longer pay blackmail money just to avoid a jury trial," said Gregory Scott Spencer, senior counsel to the bank.

The attorneys who brought the class-action suit said they are contemplating an appeal.

The suit was filed in 1986 on behalf of people who held cards issued by the three banks between 1982 and 1986. The banks were alleged to have kept credit card rates artificially high since 1966.

Like many big corporations, BankAmerica had been inclined to seek settlements of such claims rather than paying the costs of trials. But by 1986, the bank was beginning to reconsider that policy, according to an official who was there at the time.

Hanging Tough

Within weeks after the price-fixing complaint was filed, "we did a thorough investigation and decided on the principle that they were not going to get a penny out of BankAmerica," a company spokesman said on Wednesday.

According to Mr. Spencer, attorneys for the plaintiffs tried to

NEWS *briefs*

Keystone in Tentative Deal for WM Bancorp

HARRISBURG, Pa. — Keystone Financial Inc. has signed a letter of intent to acquire WM Bancorp of Cumberland, Md., for $69 million in stock.

WM Bancorp, which has two bank subsidiaries, has $350 million of assets and 21 community offices in Maryland and West Virginia.

Keystone Financial said it expected to sign a definitive agreement for the acquisition within a week. The company expects to complete the transaction by the first quarter of 1994.

The would-be buyer has four member banks, all in Pennsylvania – Pennsylvania National Bank, Pottsville; Northern Central Bank, Williamsport; Mid-State Bank, Altoona; and National Bank of the Main Line, Wayne. The company expects to complete the previously announced acquisition of Elmwood Federal Savings Bank, Media, Pa., with $250 million in assets, in the first quarter of 1994.

Calfed Deal for Unionfed Offices Advances

BREA, Calif. — Unionfed Financial Corp. said it has reached a definitive agreement to sell four branches with approximately $180 million of deposits to California Federal Bank.

The branch sales are part of Unionfed's capital restoration plan and are subject to Office of Thrift Supervision approval, said the company.

The sales are expected to close in late August.

Unionfed also said it has set Aug. 25 as the record date for its proposed rights offering – provided its Securities and Exchange Commission registration has taken effect by then.

Citibank to Make Shanghai Its China Base

HONG KONG — Citicorp's Citibank unit said it would make Shanghai the headquarters of its China operations after gaining approval from the People's Bank of China to open a country representative office in that city.

Citibank has had a full branch in Shanghai since 1991 but Hong Kong has been the headquarters for its China business.

"Our move reflects Citibank's long-term commitment to China and our determination to further expand our activities and investments in the country," said Citibank country corporate officer for China, C.P. Cheng.

Liberty Joining MAC Network of ATMs

LOUISVILLE, Ky. — Liberty National Bancorp has signed a letter of intent to join the MAC automated teller machine network.

Liberty, a leading regional processor of ATM transactions, would add its machines to MAC while gaining rights to market MAC services to financial institutions in Kentucky and southern Indiana.

MAC, formally called Money Access Service, gained a foothold in Kentucky last year when it became a joint venture of CoreStates Financial Corp., Society Corp., Banc One Corp., and PNC Bank Corp. The latter two own Kentucky banks.

Liberty, the parent of Liberty National Bank and Trust Co., said it intends to bring 90 correspondent banks with 300 ATMs into MAC. They would give MAC a potential of 680 machines and one million cardholders in the Kentucky-Indiana area. The network has 12,000 ATMs and 28 million cardholders in 16 states.

The briefs were compiled from staff and wire reports.

Correction

A photograph published Wednesday with an article about Western Bank of Coos Bay, Ore., was misidentified. It was actually of Georges C. St. Laurent Jr., the bank's chairman.

Federal Reserve Proposes to Ease Restrictions on Loans to Insiders

By CLAUDIA CUMMINS

WASHINGTON — The Federal Reserve on Wednesday proposed revising rules on bank loans to insiders, hoping to relieve some of its burden on the banking industry.

The proposal, which limits the kinds of transactions that must be considered insider loans under the Fed's Regulation O, responds to industry complaints that the current rules are too strict and, in some cases, unclear.

Industry leaders say the new rules, if approved, will make it easier for banks to comply with insider-lending limits.

"This is a big deal," said Paul A. Smith, senior federal administrative counsel at the American Bankers Association. "They have responded to the reality of the situation and made some significant improvements in the regulation."

"This is a pretty good approach," said Fed Vice Chairman David Mullins. "I feel pretty confident we aren't compromising safety and soundness."

Reg O limits the credit a bank or thrift can extend to its executive officers, directors, and principal shareholders, and their related interests. It also requires lenders to report quarterly on these loans.

The Fed has proposed eight

John P. LaWare
Wants good records kept

changes to the rule. Most important, it clarifies that certain loans only indirectly related to insiders do not meet the rule's "tangible economic benefit" test, and are therefore exempted.

Some lenders have complained that under the current rule, a car loan, for example, could be counted as an insider loan if the car dealer sat on the board. Similar cases involved directors who were real estate developers or who were trying to sell their own homes.

"The new rule makes it very clear that these types of transactions would not be considered Reg O loans," said Karen Thomas, regulatory counsel at the Independent Bankers Association of America.

The Fed's proposal would also free lenders from strict recordkeeping rules. Currently, they are required to keep lists of all insiders, as well as the amount and terms of each insider loan.

Under the new proposal, banks would be allowed to set their own record-keeping procedures, as long as they were strict enough to ensure compliance.

But Fed Governor John P. LaWare questioned whether the record-keeping proposal goes too far, and suggested that lenders might like more guidance.

"It's a little bit like taking the straitjacket off, sawing off the bars on the windows, and unlocking the door," he said, "I'm a little bit puzzled as to why we've gone quite so far."

In addition, the Fed proposed:

- Exempting from the aggregate limit the purchase of certain consumer installment paper.
- Excluding the discount of obligations sold by an insider to the bank without recourse.
- Increasing from $5,000 to $15,000 the threshold for considering credit card plan debt to be an extension of the credit.
- Exempting from special rules for executive directors loans collateralized by U.S. government securities or earmarked deposits for executive officers.
- Clarifying that a home mortgage refinancing is not subject to limits for executive directors. □

We'll save you money. We could even save your job.

With Clinton's appointees promising to turn up the heat on regulatory compliance, bankers can't afford to rely on monthly guides or word of mouth to determine what examiners will do next. That's why you need *Regulatory Compliance Watch*, from American Banker's newsletter division.

Regulatory Compliance Watch is dedicated to the concept that bankers must know what examiners do, not just what the rules say. So we give you pages of charts and anecdotes chronicling the latest twists in policies. *RCW* tells you how to avoid being slapped with fines or punitively low ratings ... which agency is twice as likely to give a failing CRA grade ... and why going to church will help you pass your next examination.

And we give all this advice to first-year subscribers at a 10% discount, so you'll be saving money even before you get the first issue.

Electronic Payment Services Gets New CEO

By JEANNE IIDA

In a management shuffle that appears calculated to speed up its growth, Electronic Payment Services Inc. has tapped Banc One Corp.'s former technology chief as chairman and chief executive officer.

The new CEO, David Van Lear, replaces Douglas Anderson, who has become the electronic funds transfer network's vice chairman in charge of mergers and acquisitions and will report to Mr. Van Lear.

Observers said that the board of directors – which includes Banc One president Donald L. McWhorter and Terrence A. Larsen, chairman and chief executive of CoreStates Financial

Peggy Turbett/American Banker

David Van Lear
Back in technology field

Corp. – felt the organization was moving too slowly in developing technology such as "smart cards" – payment cards equipped with their own computer microchips.

'Had to Do Something Visible'

"There are some very strong personalities on the board, and they felt that EPS had to do something visible," said one banking consultant, who asked not to be identified.

The electronic banking industry was shaken up last year when EPS was formed by CoreStates, Banc One, PNC Financial Corp., and Society Corp. The organization pooled the four banks' automated teller machine and point-of-sale networks – including CoreStates' MAC – thus creating a superregional network partnership.

But since being granted regulatory approval late last year, the company has focused on linking its networks but done little in the way of expanding its membership or geographical reach.

Competition May Heat Up

Meanwhile, a group of midwestern banks is discussing a network alliance, and Citicorp and Mellon Bank are in talks with NYCE, a MAC rival.

According to industry sources, EPS is involved in discussions – both to expand its equity ownership and to acquire other networks. Officials of the organization declined to comment on any talks.

Mr. Van Lear's new positon puts him back in charge of a major technology company, something he had gotten away from in his last assignment at Banc One. "Technology is a real strength for me," he said.

"Historically, he's proven to be competent on the operating side," said Salomon Brothers analyst Diane Glossman.

After four years as president of the automation subsidiary BancOne Services Corp., Mr. Van Lear was promoted last year to president of the company's state-chartered banks in Colorado, Illinois, Kentucky, and West Virginia.

The job was an experiment in creating regional groups of banks at Banc One, Mr. Van Lear said. For the time being, Mr. Van Lear's position at Banc One will not be filled, and the individual banks' CEOs will report directly to Mr. McWhorter.

Before joining Banc One in 1986, Mr. Van Lear was senior executive vice president at American Savings Bank, Los Angeles, and headed Norwest Corp.'s automation subsidiary.

Mutual Agreement

Electronic Payment Services began to look for a new CEO several months ago, after Mr. Anderson and the board agreed to a change in his position, the organization said.

Mr. Anderson has been a key executive at MAC since its formation by CoreStates Financial Corp. in the late 1970s.

And while EPS has been relatively quiet recently, observers said the organization's clout in the industry has not diminished.

"I would not underestimate EPS," said Richard Speer, chief executive of Speer and Associates, an Atlanta-based consulting firm. "It's important to understand they're not another shared network, but an integrated processing company." □

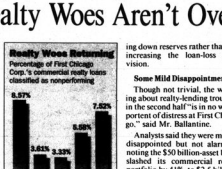
First Chicago, in Filing with SEC, Says Its Realty Woes Aren't Over

By STEVE KLINKERMAN

First Chicago Corp. has sounded fresh warnings about possible further realty loan problems, but officers insist the bank's exposure is small.

In a recent filing with the Securities and Exchange Commission, First Chicago raised the possibility of "upward pressure" on defaults and chargeoffs in its commercial realty portfolio in the second half, citing chronic weakness in the nation's realty markets. The bank regularly issues such forecasts.

The country's 12th-largest banking company last fall segregated more than $2 billion of distressed realty assets into a portfolio marked for accelerated disposition, taking loss provisions of $840 million.



Nonperforming Asset Drop

The cleanup cut First Chicago's nonperforming commercial realty assets to $116 million at yearend 1992 – down 86% from June 30, 1992. By mid-year 1993, however, the case load had more than doubled to $235 million, or 9.1% of gross commercial realty loans.

John Ballantine, chief credit officer, said First Chicago had built loss reserves to 222% of nonperforming loans, and he indicated that potential loan problems would be handled by drawing down reserves rather than by increasing the loan-loss provision.

Some Mild Disappointment

Though not trivial, the warning about realty-lending troubles in the second half "is in no way a portent of distress at First Chicago," said Mr. Ballantine.

Analysts said they were mildly disappointed but not alarmed, noting the $50 billion-asset bank slashed its commercial realty portfolio by 41%, to $2.5 billion, over the last 12 months.

'Base Is Smaller'

"The base is smaller, and First Chicago hopefully is being conservative in its valuations," said Kenneth Puglisi, a banking analyst with Chicago Corp.

First Chicago's earnings have rebounded in recent quarters, driven by falling provisions and massive trading and equity investment gains. First half earnings of $347.6 million equaled a 1.24% annualized return on assets. □

Glenfed Says It Has the Investors for a Recap

Continued from *page 1*

said.

The sources said the preferred offering, underwritten by First Boston Corp. and Friedman, Billings, Ramsey & Co., will also be fully subscribed.

Fidelity Select Home Finance fund manager David Ellison, one of the biggest buyers of thrift stock, said on Wednesday that he had not decided whether to take part in the offerings.

Nevertheless, he said, Glenfed "is going to do the deal."

If the offerings are successful and if other elements of the recapitalization fall into place, Glenfed will meet interim capital targets set by federal regulators.

That could pave the way for a remarkable comeback by an institution that many had written off as dead. And it would mark a personal triumph for Stephen J. Trafton, Glenfed's driven chairman and chief executive, who has fought against long odds to save the ailing company.

"This would be the biggest private rescue ever done of a troubled thrift," noted Allan G. Bortel, president of Dakin Securities, San Francisco.

Skeptics Point to Losses

Even at the last minute, however, some observers remained skeptical that the offerings would be fully subscribed. Glenfed, they point out, has posted operating losses for six consecutive quarters and economic recovery in California, the thrift's main market, is not in sight.

It is management's job "to be optimistic," said E. Gareth Plank, an analyst with Mabon Securities, San Francisco.

The federal Office of Thrift Supervision has given Glenfed until the end of August to complete its stock offerings.

On a pro forma basis, the recapitalization would boost the thrift's core and risk-based ratios to 4.81% and 9.67%, respectively, Mr. Fink said. That would be well above interim targets of 4.5% and 9% that the thrift must meet by the end of September. □

Get MOHR information about profitable banking in the 90's.

Two years ago, breakthrough research by MOHR Development, the recognized leader in sales, service and leadership training for banks, defined five key issues for profitable consumer banking in the '90s. Now follow-up research–conducted jointly with the *ABA Banking Journal*–examines consumer banking's progress in addressing those issues, including:

- creating a high performance sales culture
- integrating sales and service
- translating market segmentation into front-line action

MOHR Development's all-new report highlights critical gaps between the industry's acknowledged priorities and its actual practices. It also draws important conclusions about how to close these gaps, and points the way to more profitable banking.

For a free copy of *Sales, Service and Leadership in Banking: The Gap Between Vision and Reality*, call **1-800-758-7586.**

Turnaround Artist May Be Out in Cold

By STEVE KLINKERMAN

People in the News

FREDERICK A. "RICK" DEAL has engineered the most successful bank turnaround, but now he wonders whether he has a place in a consolidating industry.

President and chief executive of First Eastern Corp., Wilkes-Barre, Pa., he recently sold the reviving unit to PNC Bank Corp. for $330 million, or two times book. The $26.50-a-share price is nearly triple the trading low of last fall, according to data from ILX Systems Inc.

While the payoff undoubtedly endeared Mr. Deal to shareholders, PNC has not asked him to stay with the $2.2 billion-asset operation after it is acquired.

So instead of settling in at a small bank he can run himself, the former Society Corp. officer is considering whether he should rejoin a big banking company.

"The question is whether small operators are becoming dinosaurs," said Mr. Deal, noting that many banks of First Eastern's size are being snapped up by larger rivals.

The issue is more emotional than financial for Mr. Deal, whose severance package at the minimum will include a $560,000 payment, equaling two years' salary. But it speaks to the ranks of bankers preferring to run their own shows.

Toledo Consolidation Turned Heads

Mr. Deal gained notoriety for his turnaround skills when he spearheaded the consolidation of Trustcorp Inc., Toledo, after being placed in charge of the unit by acquirer Society in 1990.

In retrospect, Mr. Deal acknowledged, the support of a strong parent company eased the project. "When you're a senior executive at a major subsidiary of a bank holding company, you just call and say how much capital you need."

That was not the case at First Eastern, which was becoming a candidate for regulatory takeover when he took the reins last fall. It took excursions to London, Milan, Glasgow, Edinburgh, Zurich, and Geneva before Mr. Deal succeeded in a $27 million offering managed by Fox-Pitt Kelton.

Efforts on the home front were hardly less spectacular: Mr. Deal carried out plans devised by First Manhattan Consulting Group calling for branch consolidations and a 12% work force reduction, sold loans and a municipal underwriting unit, cut problem assets, and built loss reserves.

Fruits of His Labors

The results of his handiwork became apparent by midyear 1993. Nonperforming assets were down 28% from a year earlier, loss reserves were up 15.8 percentage points to 85.7% of nonperforming loans, and a 7.04% leverage capital ratio exceeded the 6.5% floor specified by federal regulators.

Wall Street took notice. When First Boston Corp. commenced coverage of First Eastern in June, for example, analysts predicted strong earnings gains and said: "We believe Mr. Deal was the driver behind the turnaround."

But when PNC instigated buyout talks, shareholders were presented with a payoff Mr. Deal was in no position to deliver anytime soon. He negotiated a price with the help of Alex. Brown & Sons, Baltimore.

The deal, to be completed by yearend, will bring big changes. First Eastern will be absorbed into a nearby PNC unit with an eye toward eliminating a third of its annual operating expenses, and Mr. Deal is re-thinking his career goals.

Revised Data Don't Tell Whole Story of Calif. Recession

By DAVID HENSLEY
Analyst
Salomon Brothers

The Bureau of Labor Statistics has released dramatically revised historical data suggesting that California's recession is much less severe than previously thought. This interpretation is mistaken – the focus should be on personal income, not employment.

A recovery is unlikely to take hold in California until the spring of 1994.

The recession in California, which has lasted for more than three years, widely is regarded as the worst in the state's postwar era.

Economic Outlook

Its depth usually is stated in terms of employment. As of May, California had lost an estimated 740,000 jobs, almost 6% of its employment base – far and away the largest decline since the shakeout that accompanied the end of World War II.

However, on June 4, 1993, the Bureau of Labor Statistics released dramatically revised data that reduced California's overall job loss by 25%, calling into question the severity of the state's recession.

Notably, the revision stemmed from a controversial correction for what the BLS contends was chronic overcounting of employment in the 1980s.

A recovery is unlikely to take hold in California until the spring of 1994.

Disproportionate Effect

Although overcounting was a nationwide phenomenon, the BLS attributed 40% of the excess to California, so the adjustment had a disproportionate effect on the state.

Based on the revised data, one might assume that California's recession has been much less severe than previously thought. This is a mistaken interpretation.

The decline in real California personal income since mid-1990 is the steepest since at least 1948. The decline is corroborated by record drops in state taxable sales, real estate values, construction volumes, and help-wanted advertising.

We see continuing weakness in key economic indicators in California: a broad-based decline in employment, flat or lower help-wanted advertising in all major markets, weak retailing, and falling home prices and construction volumes.

Recovery Will Mimic Nation

Those indicators, coupled with severe pressure on the defense sector and expected job losses in local government, virtually ensure that the state will remain in recession well into next year.

A recovery will be slow to develop, uneven, and disappointing.

When a recovery does take hold in California, it likely will be slow to develop, uneven, and disappointing – much the same as for the nation over the past two years. However, the real question concerns the longer term.

The fundamental issue is whether the state's economy will grow according to previous postrecession patterns.

There are two polar views: (1) That the recession reflects an unfortunate confluence of special factors that will not be repeated, and (2) that the recession marks the end of an era in California and growth will be disappointing long after the recovery begins.

The employment revisions seem to support the former view, because they make California's recession look considerably less severe than before. But even if one accepts the employment revisions at face value, the overarching measure of economic performance is personal income, not employment.

Two Basic Questions

There are two issues surrounding the revisions to California employment: whether they make sense, and, if they do, whether they necessarily overturn the conventional wisdom that the severity of this recession vastly exceeds all others in the state's postwar era.

As for whether the revisions make sense, the most important question is why California was assigned such a disproportionate share of the national overcount. The BLS has not published anything on the state-level revisions yet.

However, because total wage and salary disbursements are fixed, one check on the employment data is to see what they imply for average salaries. The revisions result in an unprecedented 1% decline in average nominal salaries in the winter of 1991, which seems implausible. □

Psychic Augurs Well For Chicago's Liberty

By PHILZAHODIAKIN

Marketing

INVITING A PSYCHIC to augur away in a drive-up window worked out propitiously for Chicago's Liberty Bank for Savings.

Liberty staged the three-hour event to promote a new and expanded branch. More than 100 drivers lined up for divination while, inside, disk jockey Dick Biondi heralded the festivities in radio spots.

Linda Sudendorf, who heads marketing for Liberty, said there were many more walk-ins than usual in the days preceding and following the appearances of Mr. Biondi and soothsayer Jai Savin.

The fortune telling, which went for five bucks a pop, was the eighth event the $538 million-asset thrift held to advertise the Lincolnwood office. But promotional costs were reasonable, the fivers all went to a worthy cause, and, in the end, the branch posted a healthy deposit gain.

Previously, the branch was in a leased storefront on the opposite side of the street. Liberty believed the small-bank turf war in Lincolnwood justified its highly visible promotions.

The soothsayer helped boost the branch's deposits by 6.7%.

"We labored over the decision to commit to Lincolnwood with a full-service branch and, once we determined that the market supported an expansion, we wanted to make a big splash," Ms. Sudendorf said.

"There are a lot of small banks in the area, and we really have to try to eat into some of their strength."

All told, the psychic and the DJ – and earlier promotions such as a ragtime band and vintage auto car show, flag day, health and fitness day, kids' day, family photo day, and rock 'n' roll day – increased by $35,000 the $137,500 quarterly marketing outlay for four-office Liberty.

The result for the Lincolnwood office, which had $52 million in deposits before its new site opened July 1, has been a $3.5 million deposit jump – 6.7%.

"We're very pleased with the increase because our Lincolnwood deposits were flat or declining, partly because of declining interest rates," Ms. Sudendorf said.

Liberty wants to be a more prominent player in Lincolnwood because a population shift from the elderly to young couples portends mortgage lending opportunities.

But the promotions were a departure for Liberty, which had positioned itself as a prudent, traditional institution, says Kevin Tynan, president of Tynan Marketing Inc., Chicago.

However, "Liberty isn't a 'Johnny-come-lately' to the community," adds Mr. Tynan, who helped the thrift plan the promotions. "They've had two 'outstanding' Community Reinvestment Act ratings, they have a major investment in bricks and mortar, and we wanted to reinforce our identity with an extended grand opening – not by spending a lot of money."

Liberty did not stretch any banking rules by allowing the psychic to make statements which, in the securities world, just might be interpreted as promissory or inflammatory.

"No one saw him to be an official representative of, or investment advisor to, the bank," said Mr. Tynan. "He doesn't sit on the loan committee."

Buyers That Feasted on Kansas Banks Seen Taking Time Off to Digest Prey

By TERRENCE O'HARA

The blitz of interstate mergers in Kansas, once one of the most fragmented banking markets in the country, has slowed considerably in recent months.

Analysts say out-of-state banking companies have established their long-strategized toeholds in key Kansas markets and are in a holding pattern where Kansas is concerned.

"The big holding companies that made these acquisitions have had a long time to forge these strategies and form some alliances," said Jerry Duggan, head of Duggan Securities Inc. in Kansas City, Mo.

Prime Locations Taken

"The prime locations and the books of business they wanted have long ago been identified and already resulted in transactions," Mr. Duggan said. "The acquirers are going to wait and see how this first round shakes out and take some time to digest."

That could mean a respite from the flurry of merger activity that gobbled up some of Kansas' most valuable community banks.

Intrastate Pace Also Slows

And not only has the pace of interstate mergers slowed, but also that of intrastate mergers as the county seat banks in rural Kansas communities, at least those with the wherewithal, have by and large finished their consolidation.

"In the last three months we haven't had a lot of merger activity," said James Maag, executive vice president of the Kansas Bankers Association. "Here again it's like the interstate situation. About 80% of the in-state mergers since 1988 happened early."

But Jerry Swords, a Kansas City bank consultant, said deals are still there to be done and despite the recent lull, Kansas will be fertile ground for mergers for years.

Lure Said to Remain

"There are still a lot of interested sellers and a lot of interested buyers," Mr. Swords said. "The lure of at least 1.5 times book is still very attractive."

Kansas adopted unfettered intrastate branching in 1990, and

HIS CREDIT CARD COUNTERFEITING DAYS JUST BECAME NUMBERED.

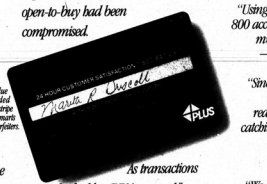
Now, Visa's PaymentService 2000 helps stop magnetic stripe counterfeiting.

On April 1, 1993, Visa scored a direct hit against magnetic stripe counterfeiters. The Visa® Card Verification Value (CVV) Program, a key feature of PaymentService 2000, served notice to criminals that an all-out attack on counterfeiting had begun.

This major step forward allows Visa card issuers to validate that the contents of their cardholders' magnetic stripes have not been altered by counterfeiters.

Percentage of worldwide transactions checked by CVV.

In just three short months, the Visa CVV Program has allowed issuers to enjoy saving more than $30 million in potential counterfeit losses if the full open-to-buy had been compromised.



A value encoded in the stripe outsmarts counterfeiters.

As transactions checked by CVV increase, Visa Members worldwide can anticipate even greater savings.

The message has been sent. Visa Members have a new weapon: CVV. Now, the guys who counterfeit stripes may soon be wearing them.

WHAT DO MEMBERS SAY?

"In the first few months of implementation, we have identified as much as $1.7 million of open-to-buy that had the potential of being fraud."
— John Totten, Senior Vice President and Chief Technology Officer, FirstCard

"Using CVV, we have blocked over 800 accounts, saving our institution millions in potential losses."
— Art Desloges, Director of Security Services, Citibank US Card Products

"Since CVV has been in place, we have significantly reduced our losses and are catching counterfeit card activity in less than a day."
— Michele Shalmon, Security Supervisor, Great Western Bank

"We have already experienced important savings since we implemented Visa's CVV Program."
— Rick Scully, Vice Chairman, First U.S.A. Bank

EXECUTIVE *changes*

Maine Thrifts' Trade Group Elects James Dowe as President

P. James Dowe Jr. has been elected president of the **Maine Association of Community Banks** for 1993-94. He succeeds **Edward L. Hennessey Jr.**, president of **Machias Savings Bank.**

P. James Dowe Jr.

Mr. Dowe has been president and CEO of **Bath Savings Institution** since 1986, when he left Androscoggin Savings Bank.

William J. Ryan, president of **Peoples Heritage Bank**, Portland, was elected vice chairman of the association.

Elected to its executive committee were bank presidents **Rodney J. Normand** of **Sanford Institution for Savings**, **Steven A. Closson** of **Androscoggin Savings Bank**, **William J. Denyer** of **Biddeford Savings Bank**, **Malcolm E. Jones** of **Bangor Savings Bank**, **August Berta** of **Auburn Savings and Loan Association**, **Arthur J. Markos** of **Gardiner Savings Institution**, and Mr. Hennessey.

North Side Deposit Hires Gibson as CEO

Lloyd G. Gibson has returned to his native Pittsburgh as president and CEO of **North Side Deposit Bank**, succeeding interim president Michael Hagan.

Lloyd G. Gibson

Mr. Gibson was president and CEO of Miners and Mechanics Bank of Steubenville, Ohio, and earlier was credit policy vice president at Mellon Bank, Pittsburgh.

— **Franklin Smith**

MIDWEST

FIRST NATIONAL BANK and Trust Co., Kearney, Neb., has promoted **Laurence L. Jepson** from president to board chairman. He remains CEO.

Rick L. Harbaugh has been promoted to president and elected to the board. He remains senior loan officer.

MIDDLE ATLANTIC

INDEPENDENCE Bank of New Jersey, Ramsey, has appointed **John O'Donnell** as assistant secretary in commercial lending.

SOUTHEAST

COMMUNITY First Bank, Jacksonville, Fla., has elected **Victor M. George** as executive vice president for commercial lending. Before joining Community First this year, he was Orange County regional president of First Florida Bank.

SOUTHWEST

BANK of Cherry Creek, Denver, has appointed **Ronald D. Brazda** as vice president of construction lending and **John A. Stedeford** as vice president of commercial lending. □

Merger Fever Sweeping Kansas Takes a Holiday

Continued from *page 6*

not until July 1992 were interstate acquisitions allowed.

The law change set off a whirlwind of deals. Kansas City, Mo.-based United Missouri Bancshares bought 12 banks totaling $1.3 billion in assets, most of them across the boarder in Johnson County, between April and June of this year. Then it stopped.

KBA's Mr. Maag said that in the last four years, triggered by intrastate branching, Kansas

Despite the slow-down, Kansas is still seen as fertile ground for mergers.

lost 140 bank charters. The number of charters, however, stabilized at 490.

According to the Kansas Bankers Association, 27 Kansas banks with a total of $3.5 billion in assets have been acquired by out-of-state holding companies since interstate banking laws took effect.

Hardest Hit Markets

The consolidation wave crashed hardest in the Topeka, Kansas City and Wichita markets. In Wichita, Fourth Financial Corp. has been consolidating its Kansas Bank IV banks and has leapfrogged into Missouri. Mr. Duggan said Bank IV will "have to be in the Kansas City market to keep pace."

That leaves the remaining independent community banks left in Kansas, most of them in rural areas of the state, to go on about their business.

Mr. Maag said that the weather this year will be particularly hard on these banks. The worst flood damage has been limited to the northeast corner of the state on the banks of the Missouri River. But it has still been a wet summer, he said, and most of the wheat harvest was delayed because of it.

"A lot of our economy depends on the agricultural sector," Mr. Maag said. "It's hard to say whether this is going to be a good year." □

HUD's Plan to Spur Low-Cost Mortgages Meets Liberal Critic

By JIM McTAGUE

WASHINGTON — A proposed regulation by the Department of Housing and Urban Development designed to force banks and other lenders to make more low-cost mortgages is proving controversial even among liberals.

Karen Shaw, a staunch liberal with ties to the administration, said it would chase lenders away from the Federal Housing Administration guarantee program.

Ms. Shaw is a Clinton supporter who was once among those considered for the post of chairman of the Federal Deposit Insurance Corp. She also is president of her own company, the Institute for Strategy Development, one of the capital's betterknown financial consulting firms.

Unusual Success

Her rise to the top of an industry dominated by males is all the more amazing considering she has been legally blind from a degenerative eye condition for about the last 20 years.

(A casual observer would never notice. She moves about as well as anyone without the aid of any device and is an avid runner, clipping off as many as five miles a day.)

Ms. Shaw usually doesn't mind government prodding the public sector to do good. However, she said the HUD regulation, which is out for comment until Sept. 13, would:

• Prohibit FHA-approved lenders from setting minimum amounts for the loans they make, and then prohibit them from charging more than two points extra for a small loan, despite the fact they are often more costly to make than bigger ones.

• Give private parties a right of action against all mortgage lenders, which Ms. Shaw said is one of its most troubling features.

"Anybody, even a competitor, can inquire whether an institution's lending practices are in compliance. And all of the sudden you start a process in which underwriting standards, cost functions, even propriety information about salaries and fees, become discoverable."

The HUD regulation implements the 1990 Cranston-Gonzalez affordable-housing law, which Ms. Shaw said the Bush administration ignored but the Clinton administration "quite rightfully" implemented.

But the regulation goes beyond the law.

"It's very troublesome," she said. "It points to the larger compliance dilemma that banks are facing in many areas. Because government hasn't the resources or the political will, or both, to take on social responsibilities, it's turning to the private sector to do it."

Ms. Shaw said that banks are ready victims because their federal deposit insurance makes them "quasi-nationalized companies."

When the government wanted to fight money-laundering, it made banks a law enforcement proxy, she said.

"You're going to see this with flood insurance, too," she predicted, with banks forced to collect all kinds of documentation for mortgage loans in flood plains to make certain the homebuyers are adequately insured.

In the same vein, the HUD regulation would force banks to become the proxies for government social policy by mandating a pricing schedule that is an attempt to force them to make certain kinds of loans.

"Most of the time, this kind of mandated social policy turns out not just to be bad but counterproductive," she said.

While nonbank lenders can just walk away from the FHA, it's a harder choice for banks because the Community Reinvestment Act and Home Mortgage Disclosure Act are forcing them to make more loans in low-income areas. FHA's guarantee on such mortgages remains a very attractive incentive.

Ms. Shaw is advising her clients not to quit the program or write letters to HUD saying flat out that they hate the proposal.

Since the Clinton administration has a concept of social obligation that requires private-sector lenders to work with the government, lenders ought to take a constructive approach and suggest improvements and modifications to the regulation, she said. □

A Quick Test for Lending Bias

By CLAUDIA CUMMINS

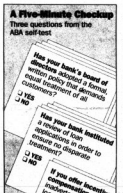
WASHINGTON — The American Bankers Association has developed a 34-point checklist for banks to help them determine whether they may be discriminating against minorities.

The five-minute "Fair Lending Checkup" has been sent to the chief executive officers of all banks in the country as part of the trade group's fair-lending outreach.

Industry Under Pressure

The test covers a broad range of policies and practices that could be discriminatory, including employee training, documentation procedures, advertising, and underwriting criteria.

The test comes as banks and industry associations are under pressure to prove their commitment to ending racial bias, whether intentional or inadvertent, in their mortgage lending.



The questions on the ABA self-test include:

• Has your bank's board of directors adopted a written, written policy that demands equal treatment of all customers?

• Have you instituted a review of loan applications in order to ensure no disparate treatment?

• If you offer incentive compensation, does it inadvertently encourage loan officers to ignore or disregard low-income or moderate-income applicants?

In-Depth Reviews Urged

A "no" or "not sure" response to any of the 34 questions in the test could highlight a potential problem, the ABA says. The trade group urges all lenders to take the test and to conduct more in-depth reviews of their minority lending.

The ABA board recently passed a resolution "reaffirming the industry's commitment to fair lending and ABA's commitment to helping banks ensure a discrimination-free lending environment," an ABA spokeswoman said.

Organized Crime on Rise

"People don't walk into a bank with suitcases full of cash anymore, but financial systems are still infiltrated with illegal money," said Mr. Bruh, who spoke last Friday at a news conference on organized crime.

Organized crime is on the increase — whether it is drug running or smuggling aliens into the United States, and as a result, criminals have plenty of profits to hide.

Such crime "truly makes our global village a dangerous neighborhood," said William Olson, a senior fellow at the National Strategy Information Center, Inc., a Washington-based think tank.

"The banks in the United States are doing a good job generally," Mr. Bruh said. But because financial institutions are not always as careful, Americans "could be defrauded from a great distance."

More Training Seen as Needed

Because bankers were not taught in school about the operation of international financial fraud, greater training is needed, the think tank's report said.

In addition, Mr. Olson called for more cooperation among banks and law-enforcement agencies.

The report is titled, "International Organized Crime: Emerging Threat to U.S. Security." □

Money Laundering Goes On With Ease, U.S. Aide Says

By ROBYN MEREDITH

WASHINGTON — International criminal organizations use American banks to launder money with relative ease, despite the precautions U.S. banks have taken, according to a senior Treasury official.

"Money moves more easily through the world than even drugs," said Brian M. Bruh, director of the Treasury Department's Financial Crimes Enforcement Network. "The governments of the world just do not have the laws on their books" to effectively prevent it, he said.

But the money-laundering situation has improved, and criminals have been forced to use more sophisticated means of laundering their profits, Mr. Bruh added.

Rule Keepers Gain Stature as Cost of Missteps Rises

By BARBARA A. REHM

WASHINGTON — The compliance department used to be a parking place for aging bank officers nearing retirement.

Today, compliance is one of the most challenging departments in banks of all sizes.

"The nature of compliance people has risen dramatically in recent years," said Michael D. Maher, vice president and manager of regulatory compliance at First Bank System Inc. in Minneapolis. "Now management looks for the best person for the job. They are relying on us as advisers. Compliance is truly becoming a profession."

Word From On High

Today, bank compliance officers have more visibility, credibility, and authority. That's occurred, in part, because regulators have demanded it.

Stephen M. Cross, the Comptroller of the Currency's deputy for compliance management, was asked recently by a group of bankers what the biggest problem is at banks with regulatory problems.

"Compliance is not taken seriously at those banks," he said.

"Compliance is not integrated into the basic operations of the bank, and compliance officers are viewed as a fast-track career."

Compliance is celebrating its silver anniversary this year. The Truth-in-Lending and Fair Housing acts were passed in 1968, creating the cornerstones of compliance: consumer disclosure and antidiscrimination.

Rules Run the Gamut

From 1968 through 1977, the government issued regulations covering everything from flood protection and electronic funds transfer to equal credit and community reinvestment. The next decade was relatively quiet; deregulation prevailed, and compliance officers were ignored.

But lax compliance brought on a backlash, and over the past five years Congress has battered banks with new laws and regulations.

The Competitive Equality Banking Act of 1987, the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, and the Federal Deposit Insurance Corporation Improvement Act of 1991 changed the compliance landscape by spawning scores of new regulations. As the rules changed – and became much more specific – the liability for breaking them rose.

Cost-Saving Role

As the cost of noncompliance soars, so does respect for compliance officers. The people who figure out and implement new regulations protect the institution from huge costs.

"In the early days, compliance officers were little Don Quixotes. They spent a lot of time tilting at windmills," said Robert P. Chamness, executive vice president and general counsel at CFI Proservices Inc., a Portland, Ore., company that provides software and compliance assistance to financial institutions.

The compliance department is no longer a backwater.

"Today compliance has taken center stage."

Compliance is so important because so much depends on it.

A bank that fails to follow regulations risks trouble with regulators, customers, and shareholders. Banks that do not abide by the rules face fines, lawsuits, and a cold shoulder from investors.

Barbara A. Rehm/American Banker

Michael D. Maher
Sees greater professionalism

Key to Acquisitions

Banks that want to expand must have high compliance ratings or regulators will not permit acquisitions. Ditto for banks that want to be bought.

With increased importance, compliance is no longer a one-man job that everyone else in the bank could ignore.

In fact, during exams, regulators want to hear from top management about what the bank is doing to ensure compliance. Examiners are even comparing how much the compliance officer is being paid to the chief executive's salary.

This has produced compliance epiphanies for many top managers.

The moment of truth at Chase Manhattan Bank came two years ago during the bank's first Community Reinvestment Act exam since ratings became public, according to Patricia L. Alberto, a Chase vice president.

Integral to Operations

"Compliance is not an adjunct. It's part of everything we do," she said.

Susan K. Martoia, an assistant vice president with Banc One Corp., said the acquisitive Columbus, Ohio, company is so concerned about compliance that employees who go out of their way to follow the rules get bonuses and pay raises.

A president of a Banc One bank was fired because he did not take compliance seriously. "That's been a great example for the rest of our CEOs," she said.

Compliance is becoming more centralized and standardized at larger banks. Mr. Maher said First Bank handles regulatory compliance for 208 subsidiary bank branches from headquarters. "That way we can focus resources and leverage our knowledge," he said.

Chase's domestic compliance force, 26-people strong, has specialists who concentrate on fair lending, fighting money laundering, and CRA.

Responsibilities Farmed Out

But at smaller banks, there are not enough bodies to centralize compliance.

Kate S. Barr handles compliance at Riverside Bank, a $100 million-asset bank in Minneapolis. She also is a loan officer, according to Patricia L. Alberto, a Chase vice president.

Barry Leeds President Steve Roth Dead at 47

NEW YORK — Steve Roth, 47, the president of Barry Leeds & Associates for the past seven years, died last Thursday after a six-month bout with cancer.

Mr. Roth helped develop the bank-consulting and marketing company's mortgage-bias testing programs, which have been used by 80 lenders over the past two years.

Mr. Roth began working with the company's principal, Barry Leeds, in 1977 when the firm was formed.

Before that, he was market research manager at Chase Manhattan Bank.

He received his BA from City University and his MBA from Baruch Graduate School of Business, both in New York City. — Jim McTague

Certification Seen as a Boost to Officers' Credibility

By PETER SCHOENKE

WASHINGTON — With compliance becoming a priority, a new breed is emerging – the certified compliance officer.

"Certification gives credence and some stature to compliance officers," said Carol Pixley, vice president and compliance officer for First State Bank in Livingston, Tex. "If you are going to go into this field, it is another feather in your cap and looks good on your resume."

Both the Institute of Certified Bankers, sponsored by the American Bankers Association, and the Bank Administration Institute started certification programs for compliance officers in 1990.

The ABA program requires three years of work experience in compliance, 80 hours of training over five years, and a letter of recommendation from a senior bank officer. When those requirements have been satisfied, a candidate may take the exam. The ABA offers the exam each year in April and October.

Fewer Hours Required by BAI

The BAI program has the same requirements except candidates need just 25 hours of training. The BAI also tests candidates twice a year.

Both programs require an average of 20 hours of continuing education each year to maintain certification. At the ABA, bankers are recertified every two years for a $75 charge. If they have not met the continuing education requirement, they can take the test again. Recertification at the BAI occurs every three years.

To date, the BAI has certified 600 compliance officers and the ABA 184. But those totals consist mostly of compliance officers grandfathered in. The BAI counts 500 grandfathered compliance officers, while the ABA grandfathered 152. The ABA requires eight years of experience in compliance, and 80 hours of education within five years for its grandfathered candidates.

Leaders in Field Spotlighted

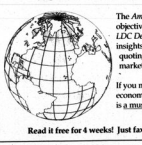
Enrollment in both programs is growing. The BAI gave the test to 90 bankers in June. Eight bankers passed the ABA test in April; 17 more will take it in October. ■

Grandfathering immediately gave the certificates a high profile because it connected the degree with the leaders in the field, according to Jack Adams, corporate compliance officer for CoreStates Bank and chairman of ICB's advisory board.

Ms. Schoenke writes for Medill News Service.

Opportunity is Spelled LDC DEBT REPORT

Emerging Markets are risky, notoriously inefficient, known for changing rules and limited public disclosure. Knowing what's really going on spells the difference between opportunity and loss.



The *American Banker*'s weekly *LDC Debt Report* delivers the most accurate, objective, succinct information available on emerging-market debt. *LDC Debt Report* provides the astute investor with news, reviews, and strategic insights. The popular Market section summarizes each week's developments, quoting bid and offer prices for 26 developing-country loans and 18 emerging-market Eurobonds. It also tracks the performance of selected equity markets.

Prepayments Taking Toll on Home Lenders

Continued from page 1

servicing to Fannie Mae and Freddie Mac where possible.

The prepayment drain has been particularly hard on servicers that have small retail origination networks and thus have limited ability to replace the runoff with new rights.

But even companies with strong origination capacity have been feeling the strain. Countrywide Credit Industries, the nation's largest originator, has been experiencing annualized prepayments in recent months of about a third of its portfolio, double the rate in its fiscal fourth quarter, which ended Feb. 28.

But the company has managed to partially offset servicing writedowns with gains on hedging instruments. In the first fiscal quarter this year, the company reported a gain of about $27 million on Treasury securities, which rise in value as interest rates fall, helping the company to show a hefty gain in earnings rather than a decline.

NEWS ANALYSIS

With interest rates still sinking and prepayments rampant, further hedging gains are being logged in the company's second quarter.

Higher Rates Wouldn't Hurt

Mr. Jacobs of Alex. Brown had this to say about Countrywide:

"The very important point – that lower interest rates are no longer helping CCR's earnings in the short term – is also true in reverse, higher rates would not hurt. Once the market understands that, we expect to see Countrywide's valuation multiples expanding."

David Loeb, Countrywide's chairman, concurs that the currently high originations are probably neutral in terms of reported earnings.

"But long term, the economic effect is beneficial," he said, noting that the average interest rate of the servicing portfolio is coming down. This tends to increase the average life of the mortgages and thus produces a longer stream of servicing income.

Thrifts are also hoping for a rise in interest rates, but for different reasons.

As lenders that hold mortgages, rather than sell them, thrifts generally have only small amounts of purchased servicing rights. And most of their loans are at adjustable rates and thus less likely to be refinanced.

But borrowers have been showing a marked preference for fixed-rate loans. As a result, originations by thrifts have slumped, stunting their asset growth and ceding substantial market share, especially to mortgage banks.

The thrifts reason that a rise in rates will revive demand for the adjustables that have been their bread and butter for many years.

But the top mortgage banks have grown formidably strong in the meantime and have been poaching on the thrifts' territory by getting very skillful at marketing adjustables as well.

So, while low interest rates have already produced an array of winners and losers, it remains unclear whether rising rates will reverse the situation. □

The Biggest Prepayment Exposures At Bank Holding Companies

As of March 31. Dollars in thousands.

Name	Mortgage servicing rights	Excess servicing rights	Total
Citicorp, New York	$121,000	$723,000	$844,000
Fleet Financial, Providence, R.I.	560,140	87,365	647,505
BankAmerica, San Francisco	49,000	381,000	430,000
Chase Manhattan, New York	193,009	124,349	317,358
Marine Midland, Buffalo	120,850	125,597	246,447
Chemical Banking, New York	216,000	23,000	239,000
Bank of Boston	199,251	20,703	219,954
Keycorp, Albany, N.Y.	176,023	22,942	198,970
NationsBank, Charlotte, N.C.	88,632	107,737	196,369

Source: Ferguson & Co.

Mortgage refinancings have forced several companies to take charges to earnings because prepayments have shrunk their servicing rights portfolios.

A large number of others remain vulnerable, including bank holding companies that have mortgage banking units, or that have sold or securitized their mortgage portfolios while retaining the servicing.

Citicorp tops the list of holding companies, with a total exposure of $944 million, most of it from loans it originated but has sold while retaining servicing rights that carry above-normal fees.

The value of the portion of the fees that is above industry norms is carried as an asset and is vulnerable to writedowns because of prepayments.

Purchased mortgage servicing rights are those held by companies that did not originate the loans. They carry prepayment risks that vary with the mix of the underlying loans.

Windsor, 'Kid' from the Suburbs, Making a Move in Chicago

By CHRISTOPHER NOBLE

Look out, Chicago-area lenders. Windsor Mortgage Inc., the new kid in town, means business.

"We're already big, and our intent is to be bigger," said Steven H. Baer, the company's president. "We want to be one of the dominant players in the Chicago area and, frankly, the best."

In June, what had until then been a medium-size mortgage broker based in suburban Wilmette took the final steps to change its corporate spots and become a full-service mortgage banker.

$400 Million Origination Target

That same month, the new entity broke into the ranks of the top 10 Chicago-area lenders.

Windsor, owned by the founders of Koenig & Strey Realtors, a large Chicago-area firm, originated $300 million of home loans last year, one third of which came from Koenig & Strey.

During the first six months of this year, Windsor's 10 branches forged ahead and wrote $181 million of loans. Mr. Baer said he expected to originate as much as $400 million of loans over the full year.

Mr. Baer came to Windsor with 20 years of real estate experience. Most recently, he ran real estate operations at American National Bank in Chicago. He expects to stick close to home. "We will not be a nationwide operation," he said.

Mr. Baer said Windsor's growth would come through opening new branches and honing an advertising campaign to highlight a more upscale and polished corporate image.

'Tremendous Opportunity'

"I think there is tremendous opportunity in the mortgage business. Our vision is to have a billion-dollar origination shop in the next few years," he said.

Windsor Mortgage may well be arriving on the scene at the top of the market, but Mr. Baer said Koenig & Strey, which provides a ready source of loans for Windsor, would guarantee its survival.

Currently, Windsor sells all its loans to correspondent lenders but Mr. Baer said that may soon change. He hopes to build a servicing portfolio to offset the expected decline in originations when interest rates move up. □

Boston Fed's Bias Study Was Deeply Flawed

By MARK ZANDI
Regional Financial Associates
West Chester, Pa.

Mortgage discrimination has been turned into today's most important civil rights issue.

What seemed compelling evidence of discrimination was offered last October by the Federal Reserve Bank of Boston, which studied Boston's mortgage market in 1990.

Viewpoint

The bank purported to show that blacks and Hispanics were 60% more likely to be rejected for a mortgage loan than whites even after differences in financial, employment, and neighborhood characteristics were taken into account.

The alarming conclusion has received widespread attention. But regulators and others fail to appreciate how sensitive the results are to the statistical techniques employed in the study.

In fact, the results are so sensitive to technique that the conclusion seems unfounded.

Price Declines Ignored

A careful evaluation of the study was made possible this spring when the Fed released data on the applications while ensuring that no applicant or lender could be identified.

My analysis employed the same statistical techniques the Fed used. For several reasons, however, the Fed's analysis fails to adequately represent the mortgage lending process.

One critical factor the Fed failed to consider was the state of the economy and housing markets in Boston during 1990.

Home prices were declining. Homes selling at prices among the bottom third during the period fell by 19%. Midpriced homes experienced declines of 9%, high-priced homes only 2%.

With low-priced homes falling more rapidly in value than higher-priced homes, purchasers of lower-priced homes were rejected by lenders more often.

Because black and Hispanic homebuyers generally purchase lower-priced homes, Boston lenders rejected blacks and Hispanics in greater proportion than whites. This was not discrimination per se, but simply good underwriting

The potential rise in foreclosures was a serious concern for Boston lenders, many of whom were under extreme regulatory pressure to reign in runaway credit problems during this period, especially after the failure of the Bank of New England in early 1991. The result was a credit crunch of unprecedented magnitude in the region.

Other Key Omissions

The Fed study also curiously omits other variables important in explaining mortgage-lending decisions. These include whether the applicant's credit history met the lender's guidelines; whether the borrower submitted information that could not be verified; the presence of a cosigner; and the loan amount.

Including these variable in the statistical analysis reduces the rejection rate for a black or Hispanic from 60% greater than a white applicant's to 23% greater.

Wrong Question

Nor does the Fed study make adjustments for what appear to be obvious data encoding errors. One mortgage applicant was listed with a loan-to-value ratio of 946%. Correcting for this and other errors in the initial loan-to-value ratio further reduces the rejection rate for blacks and Hispanics – to 14% greater than a that of white applicants.

Yet another problem arises from the way the Fed chose to measure the degree of discrimination. It sought to answer the question: How would the denial rate for white applicants change had they been treated like a black or Hispanic applicant?

Since the white and minority applicants included in the Fed study had very different characteristics, the study's results are substantially different than if the question was: Would denials for blacks or Hispanics decrease had they been treated like whites?

The whole issue of which question is appropriate could have been avoided had the Fed analysis been performed on a matched sample – one in which white applicants are matched with blacks and Hispanics sharing some key characteristics.

Wrong Turn

The Fed researchers elected not to use a matched sample because they did not want to prejudge the causes of rejection. But having determined the significant factors influencing mortgage lending in their unmatched analysis, it would then seem appropriate to conduct the analysis using a matched sample.

Using a matched sample does away with the impact of race on mortgage lending decisions. The probability that a black or Hispanic will be rejected falls from 14& greater than a white applicant to a statistically insignificant 3% greater.

Thus, by integrating economic conditions into the analysis, correcting obvious coding errors, and using a matched sample, the rejection rate for blacks is just 3% greater than for whites.

I do not know if mortgage lenders discriminated against minority applicants in Boston in 1990 – but neither does the Boston Fed. □

HIGH YIELD REPORT

lets you hear the heartbeat ...

...and feel the pulse

of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt

This objective, succinct, weekly newsletter delivers money-making tips on high-yield investments.
Keeps a close eye on major court proceedings, and legislative and regulatory developments.
Features:
☞ Barometers of market size.
☞ Bellwether pricing tables.
☞ A forward calendar.

Capital Bank Hires Exec with a Flair

By MICHAEL O'D. MOORE

Private Banking

A SEASONED BANKER with a flair for unusual publicity tactics has been hired by Miami's Capital Bank to grow its private banking unit.

Samuel W. Gentry Jr., believes he can double private banking assets under management by the end of 1994. If the bank hasn't reached that target by then, he said, "you'll hear a very sad voice if you call me."

The $1.2 billion bank has $100 million of international private banking assets under management, Mr. Gentry is developing a plan for a new domestic banking unit.

Mr. Gentry, whose last banking job was with Miami's Southeast Banking Corp. before First Union Corp. acquired it in 1991, plans to use relationship managers – point people who introduce clients to product specialists – to improve service.

"Currently, our customer has to go all over the bank" for services, Mr. Gentry said.

Aside from a commitment to relationship management, Mr. Gentry also brings a willingness to try unusual tactics to sell the bank's private services.

In Miami, Mr. Gentry is well known for the year he spent introducing a weekly classical music program featuring the conductor of the Florida Philharmonic Orchestra.

S.W. Gentry Jr.

Sponsored by Southeast's private banking unit, the program was titled Southeast Musical Feast and aired for an hour every Monday night. It was a natural way to promote Southeast's private banking services, he said, because opera aficionados include a fair number of potential clients.

Mr. Gentry said he may try similar ways of promoting private banking services at Capital Bank. "The only image advertising I see doing is participating with the arts and the not-for-profits," he added.

Mr. Gentry's appreciation of opera was an acquired taste.

"I must say that in my mid-20s I though opera was for the birds," he confessed.

His opinion changed more than two decades ago, when he was dragged to a performance of La Boheme in New York City. Luciano Pavarotti and Placido Domingo impressed the young banker. "I was astounded by the clarity of the music projected to an auditorium without any help." he says.

In the intervening years, Mr. Gentry has become a self-proclaimed opera buff.

Ran Management Services Firm

Capital ducked Mr. Gentry away from Corporate Management Advisors Inc., where he had been chief administrative officer since leaving Southeast.

From 1978 to 1981 he was treasurer for Ingalls Iron Works Co. From 1967 to 1978 he had worked for First National Bank of Birmingham/AmSouth.

While the nonbanking jobs were educational, he said he's ready for the challenge of growing Capital's private bank.

"After 25 years in banking I missed it greatly," he said.

Q: Some big banks are organizing their mutual funds into the hub-and-spoke, or master-feeder, structure. How does this work, and is it an effective way to expand your proprietary fund business?

DEBRA McGINTY-POTEET
Senior vice president
BankAmerica Corp.
Los Angeles

The master-feeder structure can give you an immense amount of flexibility to really leverage pools of assets with single investment objectives.

In the old days, you would have to bring up separate portfolios for each one of four or five market segments that have distinctive pricing considerations and distinctive marketing.

This can be expensive. With the master-feeder structure, you can pool that into one portfolio.

If you look at our product mix in the years to come you'll probably still see a combination of series funds, classes of shares, and master-feeder.

However in looking at retail marketplaces, whether those segments are domestic or international, the master-feeder onshore-offshore configuration is a very attractive way to deliver products to the marketplace. □

GEORGE BERNARD
VP and manager of PNC Funds
PNC Financial Corp.
Pittsburgh

Hub-and-spoke is relatively new, so it is tough to make any clear, intelligent decisions here.

When you look at the current structure, you have mutual fund families with classes. The problem with the classes is that it takes away a lot of flexibility with advertising, communications, and even how you run the whole fund family.

The beauty of hub-and-spoke is that at the hub you have core funds and the same board of directors for every fund. Instead of classes, you have separate fund families.

An important consideration is that hub-and-spoke represents a big expense up front.

The key question is: Can that expense be justified by the added marketing flexibility and the ability to target fund families as a stand-alone unit at specific markets?

The jury is still out on that one. □

EUGENE C. PURCELL 3d
VP and manager of trust marketing
Branch Banking and Trust Co.
Wilson, N.C.

Hub-and-spoke offers one possible way to expand, but I don't think it necessarily offers the bank as much flexibility as maybe using subadvisers does.

Let's say you've got five or six banks out there who are using the hub, and each of you are spokes. It would be like having the managers working for all of you.

With a subadviser, the manager is just working for you. My sense is that with a subadviser relationship, you might have more input with the manager and the flexibility to have the type of management that you are specifically looking for in your particular fund.

But I do feel the hub-and-spoke is probably preferable to a situation where you are selling a lot of different outside funds. □

Concord Holding Names Stierwalt Chairman, Blundin Vice Chairman

Richard E. Stierwalt, chief executive of Concord Holding Corp., has been named to the additional post of chairman of the board. William B. Blundin was appointed vice chairman. He relinquished his former title of president.

Both men are founders of the New York-based company, which is the No. 1 administrator of bank-managed mutual funds.

Concord's bank clients include BankAmerica Corp., Chase Manhattan Corp., and Barnett Banks Inc. The company had $29.5 billion of mutual fund assets under management as of June 30, according to Lipper Analytical Services.

2 Banks Hire CoreLink to Set Up Sales Programs

By KAREN TALLEY

CoreLink Resources, a fledgling firm that plans to set up mutual fund and annuities sales programs in banks, has landed its first two clients.

The company, based in Concord, Calif., signed up two Northern California banks, Bank of Santa Clara and Mechanics Bank, and has several other prospects, said Roger Loar, CoreLink's president.

CoreLink was set up four months ago, with principal backing from Concord Holding Corp., a New York company that distributes bank-managed mutual funds.

Concord and other investors capitalized CoreLink with $5 million.

Oversight of Sales Reps

CoreLink will hire, train, and oversee sales representatives over other third-party marketers, said John Rubin, vice president in charge of Mechanics' trust business.

Mechanics senior vice president Steven Barlow had a prior business affiliation with A. Ray Freeman & Co., a broker-dealer for community banks that CoreLink acquired early on.

That connection helped CoreLink get in the door, but did not clinch the sale.

Alumnus of Franklin

"We were very impressed by the caliber of their entire team," Mr. Rubin said.

Roger Loar
Franklin Resources veteran

CoreLink has used some of its capital to accumulate blue-chip talent. Mr. Loar was a senior vice president and chief financial officer at Franklin Resources, a big mutual fund company.

Richard Saalfeld spent 20 years with BankAmerica Corp., and was president of Equitec Financial Group, an asset management firm, before joining CoreLink as chairman.

The two executives say they are eager to go after banks that don't have investment products programs and banks that already work with third-party marketers.

The CoreLink officers won't specify whose marketing programs they feel are most vulnerable, but industry speculation is rife.

Observers say Mr. Saalfeld's former connections with BankAmerica make it a natural for CoreLink to go after annuity business the bank farms out to giant GNA and another, smaller, marketing company, Talbot Financial Services.

But Mr. Saalfeld denies that such plans are in the offing □

Richard Saalfeld
Earned wings at BankAmerica

who will be the backbone for the two banks' first retail "investment-products programs.

In other options, clients can have their own employees get securities licenses and do the selling themselves or they can bring CoreLink's people in-house as they become more comfortable with them, Mr. Loar said.

He concedes that the market is filled with companies that want to sell investment products through banks, but he says CoreLink has two tricks up its sleeve. Among them: plans for a computer system that will create a data base that banks can use to gain immediate 'access to customers' personal histories.

CoreLink also holds out the possibility of building up enough bank clients to create proprietary mutual funds from their pooled assets.

Out of the Mainstream

Among clients' mutual fund choices are bank-run funds that Concord distributes. But CoreLink executives acknowledge they may be walking a fine line by including these non-mainstream bank funds in the product mix.

Banks' proprietary funds "are not something we're stressing over any other groups," Mr. Loar said. "It's up to our clients what funds they sell."

The data base and CoreLink's promise to keep bank customers' names out of the hands of whatever mutual fund company they choose are reasons Mechanics Bank selected CoreLink

BankAmerica Acquitted of Charges It Fixed Card Prices

Continued from page 1

sell the bank on a settlement.

He described their approach as follows: "Your potential exposure is going to be about $2 billion. If you have a 1% chance of losing, give us $20 million, if you have a 2% chance, $40 million."

Accusation Denied

"We said we will not play that game," the BankAmerica counsel said.

Lawrence J. Appel, lead attorney for the plaintiff group, denied making such an offer. "We've never seen it as anything other than a case that needed to be tried and resolved by a jury," he said.

Mr. Spencer characterized the evidence as flimsy: "They tried to take bits and pieces of speeches and memos over a 30-year period and stitch them together as proof of conspiracy."

BankAmerica's legal fees were about $3.5 million, including the cost of in-house counsel, officials said. The plaintiffs could be held liable for only about $25,000 in court costs.

The jury verdict vindicated BankAmerica's strategy of not settling out of court. A loss could have cost the company $2.8 billion.

'Marginal' Claims Decried

Mr. Appel and his colleagues received about $8 million of the settlements from the other banks, while the cardholders in the group made $3 to $30 each.

Mr. Spencer said the case illustrated the need to change California law on summary judgment, which gives the courts little latitude to dismiss "marginal" claims before trial.

The stock market did not seem to react to BankAmerica's good news. The company's shares were up late Wednesday by 37.5 cents to $46.25, in line with the overall market. "Considering what the other banks settled for, I don't think it was a major risk item" for BankAmerica, said Ronald I. Mandle, a Sanford C. Bernstein & Co. analyst.

Some observers also noted that today's wider variety of credit card rates have likely made card price-fixing claims less appealing to litigators.

"If [opportunistic lawyers] see that juries are responsible and not acting emotionally, and that they aren't going to make any money, maybe they'll go away," said H. Robert Heller, president of Visa U.S.A. □

"WITH THE RIGHT TOOLS, IN THE RIGHT HANDS, ANYTHING IS POSSIBLE."SM

The FDR Cardholder Card Processing System is a powerful, precise and versatile tool. Option-driven, with over 10,000 processing options, the FDR system is highly integrated and utilizes such advanced tools as open systems technology. No other card processing system can offer you as many significant and immediate competitive advantages.

Great Western To Join Interlink In Florida

SAN FRANCISCO — Great Western Bank will become the first financial institution to offer Interlink debit cards in Florida, Interlink announced Wednesday.

Great Western, the nation's second-largest thrift, already participates in Interlink in its home state of California, where the network originated. Visa U.S.A., which has owned the debit network since 1991, is marketing it nationally.

Usable at 2 Million ATMs

All 2.2 million Great Western automated teller machine cards can be used to pay for goods and services at any of the 20,000 merchants in the Interlink system.

Once the customer's checking-account balance is verified through a point-of-sale terminal, the money is transferred out immediately.

"We selected Interlink as our national program because of its longstanding experience, top quality, and expanding market presence," said Jerry D. Ollock, senior vice president of operations at Great Western, which is based in Beverly Hills, Calif. Mr. Ollock is a member of the Interlink board.

Including the $36 billion-asset Great Western, Interlink now has 21 million operational cards and is projecting 67 million by the end of 1995. More than 400 financial institutions have committed to issue the debit cards.

Interlink, with several years' head start on MasterCard International's competing Maestro system, processes more than half of direct debit point-of-sale transactions in the United States.

MasterCard, Visa Covering Their Backs in Washington

By MICKEY MEECE

WASHINGTON — In the credit card industry, "Remember D'Amato" resonates like "Remember the Alamo."

MasterCard International and Visa U.S.A. have put troops on the ground in Washington to make sure they don't get blindsided again.

Galvanized by Sen. Alfonse D'Amato's 1991 proposal to cap interest rates, which almost passed into law, MasterCard International and Visa U.S.A. joined with the American Bankers Association and other lobbyists to quash the initial threat.

Then MasterCard assigned public affairs expert Charlotte Rush to head a new Washington office. Visa hired veteran congressional staffer Lamar Smith.

Two Operations, One Message

They operate from separate offices less than a mile apart, but they confer frequently and send the same basic message: Don't tread on us.

If these lobbyists have their way, legislators will think twice about regulating surcharges, requiring more consumer disclosures, or anything else seen as hindering the growth and smooth operation of the bank card business.

The card companies want input into legislation affecting them.

Government meddling "undermines the confidence of the economy and has a real cost to the economy," Mr. Smith said in a recent interview. "My role is to explain that to congressional and administrative policymakers."

"We have a very dynamic industry that offers a wide range of products for consumers," Ms. Rush said. "Our role is to help everybody understand the product so that it can be used and regulated wisely."

Washington Experience

Mr. Smith, 36, is well versed in economic and banking theory. He wrote his doctoral thesis on the public policy implications of electronic fund transfers.

For six years before taking charge of Visa's legislative office, Mr. Smith was Republican staff director of the Senate Banking Committee. Prior to that, the Oklahoma native was chief economist for Texas Commerce Bank.

Both Mr. Smith and Ms. Rush have used the eight months since their respective appointments to learn about their organizations and to put their lobbying skills to work.

Before being named vice president of public affairs at MasterCard, Ms. Rush spent five years as group manager of communications at the conservation group Ducks Unlimited in Chicago. The 42-year-old Ohio native was director of Gulf Oil's Washington office prior to that.

To help her on legislative matters, MasterCard hired Washington insider William P. Binzel, the former Republican counsel for the House Banking Committee's subcommittee on consumer credit and insurance.

Eventually, MasterCard might hire another person to head consumer affairs.

Putting Someone on Scene

Before opting for the in-person Washington presence, MasterCard and Visa relied on the Washington office of Morrison & Foerster, the San Francisco law firm, for legislative and regulatory matters.

"You miss something by never having someone [in Washington] who is actually MasterCard," Ms. Rush said. "We were disadvantaged by that." Officials in the capital "didn't think to call MasterCard. They would think of banks or American Express or Discover. That was really a void we needed to fill."

Now the card associations have a constant presence.

To concentrate their efforts, Ms. Rush and Mr. Smith meet informally each week. Visa and MasterCard have a joint Legal-Legislative Advisory Committee that meets quarterly.

"It's a good deal for our members to have both of us here because we do cover a lot of territory," Ms. Rush said.

Welcomed by ABA

Philip Corwin, director of retail banking for the American Bankers Association, said his organization welcomed MasterCard and Visa into a lobbying arena historically dominated by trade groups.

"It's helpful to have more folks available," Mr. Corwin said. "They can take a different approach. They are specialized."

The ABA is asked to deal with dozens of issues, he said, "but we can't focus every day on credit cards like Visa and MasterCard can."

Pending Legislation

Visa and MasterCard are concerned about a variety of pending legislation affecting bankruptcy, telemarketing fraud, disclosure, and fair credit.

"Clearly, the members are concerned about anything that disrupts the national credit card marketplace," Mr. Smith said.

The two associations have taken issue with both the House and Senate versions of Fair Credit Reporting Act changes.

Many states have begun passing their own fair credit bills, Ms. Rush noted. "We believe there should be strong pro-consumer laws on the books," she said. "But it should be uniform across the country. Otherwise it will increase the cost of credit and it will make it less available for consumers."

Where Agendas Diverge

Despite their similar concerns, there are differences in

Lamar Smith
Says meddling hurts everyone

MasterCard's and Visa's agendas.

For example, Mr. Smith sees Visa's future determined by how well it can protect its technological edge.

"Over the longer term," he said, "we're very interested in expanding the scope of the card, expanding our ability to apply modern telecommunications and data processing to other aspects of the payment system."

A bill that would allow state governments to permit surcharges could derail this path, he said. "I would argue society as a whole suffers if the government artificially puts road blocks in the way of implementing new technologies."

Convincing the Policy Makers

Last summer, MasterCard surveyed government officials and "opinion leaders" about their perceptions and concerns about credit cards.

"We found out, basically, that most people in the administration and Congress did not really want more regulations on the industry," Ms. Rush said. "They felt that market forces really would be the most effective" form of regulation.

The caveat was the card industry had to do a better job of educating consumers, she said.

But the Washington players were skeptical Visa and MasterCard would do this, Ms. Rush said. They asked, "Why would the industry want to teach consumers to shop around for a better rate on their credit card?

"Because at the end of the day anybody in business benefits from a consumer being smart rather than being uninformed," Ms. Rush said. A savvy consumer chooses a product wisely, doesn't get deep in debt, and as a result, doesn't become a chargeoff statistic, she added.

The survey also revealed that politicians on the state and national level were not familiar with the two card associations.

Getting the Word Out

MasterCard responded by orchestrating a consumer outreach program. Ms. Rush prepared materials, including a "Smart Credit Quiz," for members and consumer groups to distribute to consumers.

For its part, Visa has continued its "Choices and Decisions: Taking Charge of Your Life," a consumer education program developed two years ago in cooperation with the U.S. Office of Consumer Affairs and the National Consumers League.

The interactive, multimedia program will be used in nearly 10,000 high schools this fall to teach students how to manage their money, said Stephanie Caracristi, manager of public relations for Visa.

Also, Visa has distributed "Credit Cards: An Owner's Manual," featuring Cathy, the comic-strip character, to Congress and consumers.

Ms. Caracristi said Visa operates these consumer programs from corporate headquarters in San Mateo, Calif. The association also tracks state legislative developments from there.

Visa recently commissioned a study by the University of California-Berkeley, which said California could lose 4,500 of its 21,000 credit card jobs to such states as Colorado, Arizona, and Nevada, if rate caps were imposed.

Jobs as Leverage

Bankers used the study to support their state lobbying and threatened to relocate their card operations. The legislative rate-cap effort was scuttled.

MasterCard reports a similar success story.

In February, MasterCard sponsored a study by DRI McGraw-Hill, Lexington, Mass., to evaluate state business climates for credit grantors. Colorado, for example, was identified as undesirable because it had restrictions on late fees.

After lobbying by Colorado issuers, the state legislature passed a bill to relax the late-fee rules.

"That was a wonderful victory," Ms. Rush said. "We learned something from it." □

"Now that every Tom, Dick & Harry is in the card business, maybe it's time to talk to us about lowering your operating costs."

After 26 banks, 39 million cardholders, 164,000 merchants, 2.5 billion annual card transactions, and 7 foreign countries we've learned a few short cuts to the bottom line.

Frank Talk About Meeting Challenge of Mutual Funds

Let's start with a basic proposition: Banks have to go where their customers are.

Because so many borrowers now use the capital markets instead of banks (at least as their primary funding source), the banks don't need as many deposits as in the past. So it is perfectly natural that the demand for credit will migrate from banks to the mutual funds to be channeled more directly to those who are able to tell their stories to the public markets.

The smart banks want to follow their deposit customers just as many tried to follow their former borrowers – by underwriting more than just loans.

Advisers to the Affluent

Some proactively try to convert their depositors into owners of mutual fund shares. They do so because (1), in the short run, they can make more money as managers of some types of mutual fund (equity and fixed-income) than they can from issuing some types of deposits (the average CD) and (2), in the long run, they need to establish credibility not simply as deposit takers but also as low-cost financial planners and investment advisors to the affluent component of their customer base.

Let's consider each of these points. Don't banks lose money when their depositors move into mutual funds? If they move from a demand deposit, the answer is yes. If they move from a CD, most likely the answer is no, provided the money moves from the CD into a mutual fund managed by the same bank.

The average CD has a relatively high interest cost and a relatively limited term to maturity. So it just isn't very profitable. In fact, our members suggest that the business of issuing CDs actually destroys shareholder value. That is, it helps to depress the stock price.

Managers Make the Money

In contrast, managing an equity fund is generally highly profitable,. That's largely because of the hefty annual management fees (around 1%). And while we expect that such fees will be declining sharply, they are still lofty enough to make managing funds a good business.

So if a bank is able to create the critical mass for an equity fund – about $500 million – then a management strategy should prove attractive even if the result is to cannibalized existing deposits (what banks that can create such a critical mass should do is the subject of a future column). Since most of these deposits are likely to be CDs, the bank should even welcome their departure.

By contrast, encouraging bank CD depositors to move into third-party rather than in-house or proprietary funds that are sold from one's own branch network is not sound strategy (at least, not currently).

That's because, not being the fund manager, the bank gets only a tiny slice of those annual fees. For the most part, its compensation comes from the up-front load. And this usually isn't enough to pay the direct and indirect expenses of a branch sales operation and still provide a decent profit.

Once again, our numbers show that, like the CD business, the practice of selling third-party funds through one's own branches destroys shareholder value. And it will continue to do so until banks negotiate with nonbank fund managers for a bigger (and, I might add, fairer slice of those annual fees.

Customers Want a Plan

Now let me briefly address my second point: the need for banks to establish a credible presence as financial advisors to the affluent. There can be no doubt that, given the mounting threats to their financial futures (uncertain Social Security, less generous private pensions, higher taxes, slowing appreciation of house values, etc.) most middle-class Americans need financial planning services.

An ABA survey showed that while only 3% of retail customers have used a planner at their bank, nearly 40% say they need one and might even be prepared to pay if their bank offered the service.

If banks are to halt the exodus of middle-income customers to competitors, they must offer planning and investment advisory services. And since the conventional wisdom is that you can't sell planning services at a high enough price, smart companies link planning to the provision of mutual fund services.

Witness IDS, which is a highly successful mutual funds company with a reputation as a good planner. In actual fact, only 1% of IDS' revenues come from planning. But by ordering this service, the company unlocks the door to the mutual fund revenues that sustain it.

Selling Information

The inevitable migration of banks into financial planning and investment advisory services for individuals is sympatomatic of a basic change in the nature of what the industry can sell. In the past, banks primarily sold or rented money.

Now, increasingly, they sell or rent information – information to the securities issuer on how to represent his company to the public and information to the rank-and-file investor on how to choose among these financial representations, based on his individual needs and long-term goals. It's all part of the ongoing transition from an economy of borrowers and savers to one of issuers and investors. □

THE MOVEMENT
of banks into mutual funds is part of the ongoing transition from a world of borrowers and savers to one of issuers and investors.

Ritz-Carlton Showing the Way With Highly Polished Service Culture

Ritz-Carlton Hotel Co. won the Malcolm Baldrige Quality Award. In the process, the company effected $50 million worth of savings. How did this service company do it? What are the lessons for our business?

The company set out to improve quality by affirming its commitment to customer-driven service. To do that, it went to the marketplace to identify guest preferences: fluffy towels, people available to direct visitors from the elevator to where they want to go, etc.

The Ritz-Carlton then restructured itself around meeting customers' wants. For example, guests wanted quick turnarounds at the reception desk. Front-desk employees are now empowered to make spending decisions up to $2,000.

Keeping Workers Happy

Guests wanted employees, and the atmosphere in which they work, to be pleasant. The Ritz-Carlton reduced its employee turnover from 110% to 60% to achieve that objective. In addition, it invests $4,000 a year in training each employee.

The quality initiative was driven by the senior leaders of the company. The senior executive group doubled as the senior quality committee, which devised the company's two original quality strategies.

The first involved quality assurance at new hotels. As a facility opens, there is a concentrated and intense seven-day countdown for company's senior management to work side by side with the workers to install the Ritz-Carlton "gold standards" – three simple steps to service, which require 100% compliance with customer requirements.

President Sets Example

The president and chief operating officer communicates the Ritz-Carlton principles to all employees. He personally sets the standard for employee-guest interaction and facilitates development of a vision statement for each work area.

The second quality initiative was the establishment of corporate values and vision, embodied in a company credo, or vision statement; the Ritz-Carlton Basics, which are 20 critical success factors to achieve corporate objectives; and the corporate motto, which is more than just a phrase. It is designed to create a culture that is experienced by customers and employees alike.

The culture change was a suc-

Ritz-Carlton Shows the Way

Continued from *page 18*

cess. In employee surveys, 96% say "excellence in guest services is a top priority," even though Ritz-Carlton has added 3,000 employees over the past three years. In other words, the employees know what the organization's principles and culture are all about.

To continue to understand customers' preferences, Ritz-Carlton uses three outside, national surveys a year as well as its own internal surveys.

It has found that an improvement of 1% in the employee scores reduces customers' dissatisfaction by 22%. This proves that employee satisfaction is the key to guest satisfaction.

Accordingly, management meets with the employees on a regular basis to ensure that they are satisfied – they get good parking spots, locker-room facilities, a security department, late-night escorts for safety, and other amenities – and understand the corporate values.

Empowering people is an integral part of the quality initiatives. In a survey conducted recently by Xerox – another Baldrige winner – employees were asked to answer 960 questions; their answers matched managements' 97% of the time.

Same Wavelength

Empowerment makes sense since employees who are well educated know where management is coming from and will implement its policies day to day.

Ritz-Carlton also relies on specific measurements, for example, the "$1-$10-$100 rule: If we get to a mistake before the guest does, it could cost $1. If we catch it after the guest does, but handle it properly through apologies, etc., it could cost 10 times as much.

But if a departing guest leaves a negative comment card behind, it could cost much more in lost business and bad word-of-mouth. The Ritz-Carlton shoots for 100% customer retention.
