The hotel company has other rules that specify response times and handling standards for all employee activities. This way, measurement becomes more feasible. In one hotel, the company saved $750,000 by investing $52,000 in quality.

Out of "good idea boards" came ideas like recycling, which resulted in $62,000 of savings in the first year, or the wearing of weight-support belts, which reduced medical costs by $100,000 a year.

Finally, Ritz-Carlton uses a highly quantitative approach to measuring and monitoring quality. Each employee has specific performance goals, each activity is benchmarked, and all activities are incorporated into a detailed daily quality report for each hotel.

The process is eminently applicable to banking, particularly to service-oriented institutions. Ritz-Carlton's core vision principles, the importance of customer satisfaction, empowerment of employees to make decisions, and an intense commitment to quality management are all clearly applicable to commercial banks.

Ritz-Carlton learned that when senior managers personally communicate a strong vision and set of principles to employees, and give them the confidence, freedom, and authority to act, workers take full responsibility and do what is necessary to satisfy customers. □

Letters to the Editor

Sears Deal Creates Conflict of Interest For Rights Group

To the Editor:

The Aug. 10 article "Sears Hiring Civil Rights Group to Scrutinize Its Lending for Bias" [page 2] uncovers a shocking conflict of interest.

As reported, a Washington nonprofit organization [the National Fair Housing Alliance] was about to sign a contract with Sears Mortgage Corp. and was talking with other mortgage lenders and banks about "advice on fair lending."

The story also noted that the alliance just won a $1 million contract from the Department of Housing and Urban Development to "look for lending bias by mortgage lenders in three undisclosed cities."

Playing Both Sides

So with the right hand the group seeks to collect fees from lenders for fair lending guidance, while with the left hand it receives $1 million from HUD to root out lending bias.

The laws of human nature seem to suggest that the left hand will be aware of what the right hand is doing.

Can anyone see this housing group blowing the whistle on a financial firm that has hired it? Congratulations.

HUD Secretary Henry Cisneros should look into this matter before fair lending gets a bad name, to ensure that those hired to test for bias don't fail a conflict-of-interest test.

Kenneth A. Guenther
Executive vp, president
Independent Bankers Association of America

Real Estate Law — A Complete Introduction for the Non-Lawyer

Mortgage lending has an impact on your bank well beyond your legal department. Does your staff know the key legal issues involved in mortgage lending? Do they know the proper forms for real estate transactions, and how to use them?

AIB's *Real Estate Law* leads your staff step-by-step through real estate transactions — so they can put their knowledge to work in your bank right away. Call your local AIB chapter today to find out how you can enroll your employees in AIB's *Real Estate Law* course.

AIB programs are offered through a national network of 450 chapters and study groups. For more information, call your local AIB Chapter, or call AIB's Information Line at **(202) 663-5153.**

Real Estate Law is also available as a self-paced Correspondence Study course.

Other Real Estate Courses Available Through AIB:

- Real Estate Appraisal
- Real Estate Loan Documentation
- Real Estate Finance
- Residential Mortgage Lending

Bank Stock Table Explained: The table lists all publicly traded banks with at least daily composite stock prices at 4:30 p.m. (unless otherwise noted) in the New York, American and NASDAQ markets. Included are the 25 largest publicly traded thrifts as measured by the market value of common shares outstanding, (As of June 30, 1993) the market value count for banks was $1,000 and for thrifts was $500. The 52 Wk Hi and 52 Wk Lo columns list the 52 week high and low prices for the stock. The PE column is the ratio of the current stock price divided by the trailing four-quarter earnings per share. Earnings are calculated for latest annualized period. Data is used for companies with less than four quarters of data. Mkt. Sz. is the market value of the current day's closing price by the stock's issue value, expressed as a percentage. Bids and asks is adjusted for stock splits and stock dividends greater than 5%. Chg. is the change in the closing price from the previous day's close. Footnotes: **H** for high, **L** for low, **NO** for New Issue and **Theft Indexes:** A weighted average of the top 225 banks in market capitalization and the top 25 thrifts in market value, respectively. **Highlights** show largest percent gainers/loses in price and two volume leaders and shows stocks most actively traded by volume as a percentage of average shares traded daily over the past year.

Midlantic Gets 'Buy' Rating as Wall Street Sharpens Focus on N.J.'s Top Survivors

By GORDON MATTHEWS

Wall Street continues to focus on the major banks of New Jersey, where acquisitions this year have sparked takeover fever.

On Wednesday, Mabon Securities Corp. opened coverage of the six largest remaining independent banks in the state, and gave a "buy" rating to Midlantic Corp., Edison.

Stocks

UJB Financial Corp., Princeton, recently the hottest New Jersey banking stock, is rated "hold" by Mabon.

UJB was also cut to "neutral" from "buy" on Wednesday by Dean Witter Reynolds Inc. because of its strong price gains.

Before Wednesday, UJB shares had risen 20% since July 20.

Strategy Session at UJB?

Midlantic shares gained 12.5 cents on Wednesday to $25.125, while UJB was down $1.375 to $29.75.

UJB's stock was wrapped in uncertainty as the bank's board reportedly mulled a new strategic plan that might affect the bank's status among investors as a prime takeover target.

The bank declined to comment on the board's agenda for its Wednesday afternoon meeting.

"Recently, merger announcements and strong second-quarter results have sparked a rally" in the New Jersey banks, wrote Anthony Polini and Michael Doppelt of Mabon in a report released this week.

"Most stocks appear fully valued, based solely on their fundamental appeal," they wrote.

Also ranked "hold" were First Fidelity Bancorp., Lawrenceville, the state's largest bank; Summit Bancorp, Summit; Valley National Bancorp, Clifton; and Citizens First Bancorp, Glen Rock.

'Well on the Way'

The Mabon analysts said they recommended Midlantic as a "buy" because "the turnaround is starting to blossom" and because this stock is attractively valued.

Management, led by chief executive Garry J. Schceuring, "has clearly demonstrated that Midlantic is well on the way to recovery," they said.

The bank suffered huge real-estate-related losses of $5.22 per share in 1990 and $14.38 per share in 1991, suffering heavily at the end of New Jersey's 1980s boom.

The company earned 8 cents per share in 1992 and $1.28 per share in the first half of 1993.

At Bank Since 1991

Mr. Schceuring arrived at Midlantic in April 1991 after having served as vice chairman of Continental Bank Corp., Chicago, during that company's turnaround.

The Mabon analysts think shares of Midlantic could hit $36 by yearend 1994.

If an acquisition deal should be struck, they estimated, the takeover price would be in the low to mid-40s.

Trading at 135% of Book Value

Currently, the stock trades at 135% of book value and only 5.8 times 1994 estimated earnings of $4.35 per share.

Mr. Polini and Mr. Doppelt noted that by this yearend, nonperforming assets will have dropped 60% at Midlantic in two years, that its capital ratios are strong, that the bank still has $190 million in tax credits worth $3.76 per share, and that pretax earnings will likely boom from a currently depressed level.

Bank of N.Y. Deal Stirred Pot

Speculation about takeovers in New Jersey has been stirred by Bank of New York Co.'s recently completed $560 million acquisition of Maywood-based National Community Bancs. and CoreStates Financial Corp.'s pending $312 million deal for Constellation Bancorp, Elizabeth.

WEDNESDAY'S MARKET

Falling interest rates again cast a pall over major bank stocks as stocks in general moved higher.

NationsBank Corp. was off 50 cents to $51, and Barnett Banks Inc. fell 37.5 cents to $45.

Some banks rebounded from recent weakness. Banc One Corp. rose 12.5 cents to $52.125. Citicorp advanced 62.5 cents to $33.

Imperial Credit Industries, a mortgage banker, slumped $1 to $15.25 after being downgraded to "source of funds" from "neutral" by analyst Sy Jacobs of Alex. Brown & Sons Inc. □

Long-Term Interest Rates Reach New Lows as the Bond Rally Resumes

Markets

After a one-day respite, the bond market rally resumed on Wednesday, sinking long-term interest rates to new lows.

Stocks soared, with the Dow Jones industrial average and Nasdaq composite index setting records. The dollar was mixed.

The yield on the 30-year bond flirted with 6.25% but met resistance at that level. In late trading, the bond yielded 6.26%, down from 6.31% on Tuesday.

Impetus from Japan

Rate changes were less sharp in the intermediate sector.

Ten-year notes yielded 5.68%, off 2 basis points; five-year notes yielded 5.03%, down 3 basis points; and two-year notes yielded 3.96%, down 2 basis points. The bond-equivalent yield on three-month Treasury bills was 3.04%, down 2 basis points.

John Canavan, market analyst at Stone & McCarthy Research Associates, said good bidding in Japan overnight provided a firm tone for the market, causing U.S. dealers to cover shorts set up during Tuesday's drop in bond prices.

Treasury Issue Expected

He said the market also was aided by reports that municipalities had bought about $1 billion in Treasuries and unconfirmed rumors that the Federal Reserve was likely buying Treasuries.

The gains came despite the prospect of new issuance by the Treasury next week. The Treasury said it will sell $16 billion of two-year notes on Tuesday and $11 billion of five-year notes on Wednesday. These amounts were unchanged from July.

Strength in consumer issues again bolstered stocks. Pharmaceuticals gained after Roger Altman, deputy Treasury secretary, said he did not expect the White House health care plan to include mandatory price controls.

The Dow gained 17.88 points to 3,604.86. The Standard & Poor's 500 rose 2.91 points to 456.04, just shy of the record 456.33 set in March. And the Nasdaq composite index advanced 3.81 points to 734.82.

In late New York trading, the dollar was at 101.55 yen, up from 101.10 on Tuesday, and at 1.6795 German marks, down from 1.6931.

— Bart Fraust

NationsBank Adds To Debt Offering

CHARLOTTE, N.C. — NationsBank Corp said it was increasing by $50 million its 10-year subordinated note offering because of strong demand.

The issue, which now totals $600 million, is part an offering that also includes $400 million of senior notes.

Both portions of the offerings were part of a $4 billion shelf registration for debt securities and preferred and common stock previously declared effective by the Securities and Exchange Commission.

The 10-year, noncallable subordinated notes have a coupon of 6.50%. Merrill Lynch & Co. is lead manager.

Moody's Investors Service announced late Thursday — after the offering was priced — that it had upgraded NationsBank debt. — Reuters

Minority Banks Seen Lagging In CRA Arena

By ROBERT B. COX

You'd think banks and thrifts owned by minorities would do a better job of lending to low- and moderate-income people within their communities than a white-owned bank in the suburbs.

But that doesn't seem to be the case, according to a study of Community Reinvestment Act data by a private consultant, and a Federal Reserve analysis of home lending patterns at minority banks obtained by the *American Banker*.

Minority banks and thrifts, on average, scored far lower on their CRA ratings than did all other banks, according to a study by William M. Cunningham, a Washington consultant who analyzes CRA ratings for corporations looking to work with minority financial institutions.

"You would expect minority banks to blow everybody else away with outstanding ratings, but they actually have worse than average CRA ratings," said Mr. Cunningham.

Richest Singled Out

A separate analysis of Home Mortgage Disclosure Act data found that minority banks, while they make overwhelmingly more housing loans to minorities, are singling out the richest segment of their communities for a greater degree than all other banks.

Applicants earning 120% or more of median family income accounted for a full 60% of all applicants for mortgage loans at minority banks. The average for all banks was 53%.

"Minority banks had a fairly high income group of borrowers," said Fed economist Glenn Canner, who analyzed the conventional home purchase loan data of 80 randomly selected minority banks.

Minority bankers – like their mainstream brethren – complain that enforcement of CRA has unjustly focused on paperwork and detracted from their ability to make loans.

Flaws Seen in CRA

"CRA is statutorily flawed, and is incapable of being an agent of change for poor neighborhoods without modification," said William T. Johnson, president of Omni Banc Corp., River Rouge, Mich. Mr. Johnson recently made a bid to buy Indecorp, Chicago, the nation's largest African-American-owned banking company. Mi-

In a Banner Second Quarter, High Marks for Ohio Banks

By SAM ZUCKERMAN

Is there something in the air that makes Buckeye State banks so good?

The second quarter was a banner period for the nation's largest bank companies – the 59 with assets over $10 billion. Strong margins and sharp improvements in credit quality caused returns on assets and equity to soar during the period, according to the *American Banker*'s quarterly roundup of performance ratios.

But nowhere did banks do better than Ohio. When the companies were divided into size categories, institutions from that state topped the charts.

Among megabanks with more than $70 billion of assets, Banc One Corp., Columbus, won top honors with a return on assets of 1.53% for the quarter.

For superregional banks with assets of between $20 billion and $70 billion, Cleveland's Society Corp. led the pack with a 1.52% ROA.

And Cincinnati-based Fifth Third Bancorp notched a sparkling 1.79% ROA, best among large regional bank companies with assets of between $10 million and $20 million.

Repeat Performances

The pacesetting performance of the Ohio bank companies is hardly surprising. Each led its size category in ROA a year ago.

"They each have their unique stories," Keefe, Bruyette & Woods analyst Joseph Duwan said of the three banks. But, he noted, strong margins and excellent credit quality are common threads.

There were plenty of other

Private Mart To Get Piece Of Stephens Buyout Deal

By WILLIAM GOODWIN

NationsBank is turning to the private placement market to absorb a portion of a $500 million underwriting commitment backing Stephens Group's planned purchase of Donrey Media Group.

Stephens, based in Little Rock, Ark., said late last month that it agreed to buy a "controlling interest" in Donrey but did not elaborate on the size of the investment, the purchase price, or how it would be financed.

Price Close to $1 Billion

But Stephens and its affiliates are said by sources to be buying all of the media company for nearly $1 billion.

A Donrey spokeman said Thursday that the companies would not comment beyond the original statement.

Sources said NationsBank's tactic of turning to the private placement market is aimed at stretching out the amortization.

Privately placed debt often carries longer maturities than banks are willing to accept.

There was also speculation that NationsBank might be shifting about trying to raise $500 million of acquisition debt sole-

NEWS *briefs*

Glenfed Holders Back Reorganization Plan

GLENDALE, Calif. — At a special meeting of Glenfed Inc., shareholders narrowly approved a reorganization plan aimed at recapitalizing the company's Glendale Federal Bank unit, fending off a federal takeover.

The company said on Thursday that 52.8% of its shares were voted in favor of the plan and 14.4% were voted against. Separately, enough debtholders and preferred stockholders accepted the company's offer – to exchange their holdings for newly issued common stock – to allow the reorganization to proceed.

Meanwhile, a U.S. appeals court has granted Glendale Federal's request for a rehearing on an earlier decision against the California thrift in its lawsuit over treatment of acquisition-related goodwill.

The latest ruling means the entire U.S. Court of Appeals for the Federal Circuit will review a May 1993 decision by three appellate judges that reversed a lower-court order in favor of Glendale Federal.

Glendale, a unit of Glenfed Inc., sued the federal government, claiming it had reneged on an agreement to allow goodwill from government-sponsored acquisitions to be counted as regulatory capital.

OCC Plans to Ease Some Capital Rules

WASHINGTON — The Comptroller of the Currency is planning to drop capital requirements for some assets backed by cash.

The agency, in a plan to be published this week for public comment, is proposing to drop the capital requirements for securities lending and repurchase agreements and certain collateralized letters of credit. The OCC said these transactions "pose virtually no credit risk, and only minimal operational risk."

Currently, under risk-based capital rules, banks must put these assets in the 20% risk-weighting category.

Huntington Raises Its Dividend by 10%

COLUMBUS, Ohio — Huntington Bancshares has increased its quarterly dividend by 10%, to 20 cents a share. The dividend is payable on Oct. 1 to shareholders of record on Sept. 13. Huntington has $15.7 billion of assets.

First National of Georgia to Buy Metro

GAINESVILLE, Ga. — First National Bancorp said it had signed a letter of intent to acquire Metro Bancorp of Douglasville, Ga.

The company said Metro shareholders may elect to receive $4 in cash or 0.2 share of First National common stock for each Metro Bancorp common share.

First National Bancorp has $2 billion of assets. Metro Bancorp has $135 million of assets.

Provident Bankshares Restates Its Results

BALTIMORE — Provident Bankshares said it had determined that a change in accounting for purchased-mortgage servicing rights should be retroactively applied and that results for the first and second quarters should be restated.

Net income for the first quarter 31 has been restated to $870,000, or 14 cents a share, from the previous $1.6 million, or 25 cents a share. Net income for the second quarter was restated to $2.6 million, or 40 cents a share, from the previous $1.9 million, or 29 cents a share.

Earnings for the first six months were unchanged.

The briefs were compiled from staff and wire reports.

OTS Unveils Rules on Public Sale Of Minority Stakes in Thrifts

By ROBYN MEREDITH

WASHINGTON — The Office of Thrift Supervision on Wednesday released regulations that tell some depositor-owned savings associations how to structure sales of minority stakes to the public.

The regulations, which take effect Sept. 20, are aimed at mutual holding companies, a recently created corporate structure for thrifts that combines the attributes of mutual ownership with those of stock-owned companies.

Mutual holding companies allow federally chartered mutual thrifts to sell minority shares of stock to the public. At the same time, the thrift creates a holding company for itself that holds a majority of the thrift's stock and remains a mutual – or depositor-owned – institution.

Structure Offers Flexibility

Wendy B. Samuel, regulatory counsel at Savings and Community Bankers of America, said thrifts that have used the mutual holding company structure "have been very pleased with the flexibility – they have gotten the result that they wanted."

The OTS views mutual thrifts converting to stock-owned institutions – whether using the new MHC structure or through a standard stock conversion – as one way for the thrift industry to raise capital.

Chris Lewis
A step against fraud

Consumer groups praised the new OTS rules for safeguarding depositors' interests by stipulating that they have the right to buy stock before management, and by requiring independent appraisals of the company's value.

"It is injecting some fairness where there was a great potential for rip-offs," said Chris Lewis, director of banking and housing policy at the Consumer Federation of America. The OTS rules help to "limit the windfall any initial stock purchasers would reap from fraudulent appraisals," he said.

The MHC rules parallel those that govern standard conversions in that they set limits on the amount of stock thrift executives can buy and allow the mutuals' depositor/owners to buy stock before management.

Previously, some thrifts got OTS permission to let management buy large amounts of the new stock before the depositor-owners were allowed to buy shares.

Although this is the first regulation governing a MHC structure for federally chartered thrifts, the OTS had already approved 20 applications from thrifts with $7 billion in assets for such deals at the end of July. The agency took each application on a case-by-case basis.

Most Pending Deals on Hold

However, since July, when the Internal Revenue Service said it would review the tax liability of thrifts that converted to MHCs, most of the pending deals have been put on hold.

"The IRS says that the way they have been done in the past ...makes it taxable," said Bob Freedman, the partner in charge of financial institutions at Silver, Freedman & Taff, a Washington law firm. The IRS is reviewing how it will treat bad-debt reserves – the main tax break for thrifts – in MHC transactions.

The OTS has met with the IRS to discuss how MHCs will be taxed, said John C. Price, acting assistant director for policy at the OTS. □

Liberty of Ky. Spurning New Group for MAC

By MATT BARTHEL

A group of midwestern banks looking to form a large automated teller machine network lost a second potential member earlier this week.

Liberty National Bancorp, an early participant in the Midwest group, has instead decided to join the MAC network. The Louisville, Ky.-based company will maintain its membership in the regional Quest ATM system, displaying both MAC and Quest logos on its automated teller machines.

Liberty National is the second defection in the last month from the Midwest group, which now consists of 13 banks, including First Chicago Corp. and Norwest Corp.

In late July, Provident Bank broke from the circle to join the Jeannie network, which is owned and operated by another Cincinnati company, Fifth Third Bancorp.

Autonomy Seen as Factor

Experts are split on what effect, if any, the defections will have on the Midwest study group's talks. However, most agree that Liberty National and

One issue: the ability to operate one's own ATMs.

Provident were at least partially motivated by a desire to be able to operate their own ATMs.

The still-forming Midwest network, which has tentatively taken the name Electronic Transactions Inc., will likely require that the ATMs of its equity holders be "driven" by the network.

ATM driving is a processing function that determines such things as the look of an ATM's display screen and the range of tasks that the terminals will perform.

'A Huge Hurdle'

"For some banks that have made an investment in computer equipment to drive their ATMs, handing over [the function] to a network is a huge hurdle to get over," said Richard Westelman, a senior consultant at Dove and Associates in Boston.

Its approach to ATM driving is one of the fundamental ways that Electronic Transactions differs from MAC, which experts say would be its primary competition in a number of states, including, Ohio, Kentucky, and Indiana.

MAC became a model for the electronic funds transfer industry when it became part of Electronic Payment Services Inc., a Wilmington, Del.-based joint venture formed last summer by CoreStates Financial Corp., Banc One Corp., PNC Bank Corp., and Society Corp.

MAC rules do not require its owning institutions to process with the network, although ob-

More Technology News
Pages 18 and 19

servers believe that the four bank owners will eventually let the network drive their ATMs.

Condition of Ownership

Electronic Transactions, on the other hand, is making network ATM driving a condition of ownership.

The driving business is a huge part of the network's planned revenue stream – and one of the ways the network will measure each bank's equity share.

"The way that you will get equity in ETI is to sign a long-term processing contract, and you will allow ETI to drive your ATMs at a market rate," said Phillip A. Parker, a Star Banc Corp. executive vice president and a spokesman for the Midwest group.

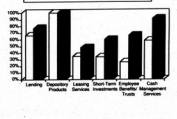
A report on the results of three months of meetings between the 13 remaining Midwest banks is expected by the end of this month.

Mr. Parker also noted that early versions of the report, which is being written by Speer & Associates Inc., an Atlanta-based consulting firm, indicated that Electronic Transactions should allot a significant sum of money for the research and development of new electronic banking products.

If all of the remaining 13 institutions in the study group buy into the network, Electronic Transactions would have almost 10,000 ATMs in 20 states. □

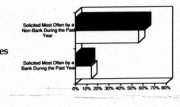
How Much More Corporate Business Will You Lose to Non-Banks?

Small businesses use many services in addition to credit, particularly depository and investment products. The business potential is significant and taking these companies' business for granted would be a mistake.



Non-banks now market aggressively to small businesses and middle market companies. And their products and services often are rated superior to or better priced than those offered by banks.

In fact, 80% of middle market companies that chose a new provider last year selected a non-bank.



Do you know how to successfully compete in the small business and middle corporate market segments? And, what's at stake? PSI's *Corporate Services Research Program* is the premier information resource available to financial services organizations for understanding business opportunities within small and mid-sized business markets.

CoreStates Taking Strategic Gamble on N.J. Thrift

By KAREN GULLO

Trade-offs are a fact of life in any acquisition of a troubled bank.

In the case of CoreStates Financial Corp.'s planned acquisition of Constellation Bancorp., gaining a stronghold in strategically important New Jersey is a prize for which CoreStates' bankers will pay dearly.

On the face of it, the deal is a stock swap valued at $320 million, or two times Constellation's book value. But analysts say that with costs associated with Constellation's loan problems, Philadelphia-based CoreStates will actually pay closer to three times book – a hefty price for a troubled bank.

Trade-Off
CoreStates asset quality before and after Constellation acquisition; dollars in millions

	Before	After*
Nonperforming loans	$243	$379
Foreclosed real estate	62	109
Total nonperforming assets	$305	$488

*As of June 30 on pro forma basis

Source: CoreStates

Benefits Offset Cost

CoreStates bankers admit that the deal is costly, but say the benefits of the acquisition are worth the price.

"The trade-offs were at the heart of the decision," said Jorge Leon, vice president in charge of mergers and acquisitions, in a recent interview.

The acquisition, announced last week, will give CoreStates a leading share of consumer deposits in the attractive middle section of the Garden State.

When CoreStates merges Constellation's $2.3 billion in assets and 49 branches into its existing New Jersey subsidiary, it will become the state's fourth largest banking organization, with $6.5 billion in assets.

But these prizes aren't cheap. Nearly 10% of Constellation's assets are nonperforming. The acquisition will add $183 million in nonperforming assets to CoreStates' books on a pro forma basis, bringing its ratio of nonperformers to total loans plus foreclosures from 1.90% to 2.73%.

Adding to Loan-Loss Reserves

To cover the problems, CoreStates will add $107 million to loan-loss reserves and charge off $41 million of nonperformers and $38 million of foreclosed real estate.

Dennis Shea, an analyst at Morgan Stanley & Co., estimates that these charges, combined with the other restructuring costs and potential capital contributions that may be necessary to shore up the New Jersey bank, bring CoreStates' total investment in Constellation up to approximately $446 million, or nearly three times the New Jersey bank's book value.

"We find this particular deal economically unexciting and symptomatic of the extraordinary premiums being offered in recent mergers," wrote Mr. Shea in a recent report on the transaction.

At least one other bidder agreed. First Fidelity Bancorp walked away from the deal because it wasn't willing to pay such a high price, said Anthony P. Terracciano, Fidelity's chairman and chief executive officer.

Mr. Jorge said CoreStates has taken steps to make sure all risks have been identified and has laid plans to deal quickly with Constellation's problems.

No Hidden Problem Credits

First, Mr. Jorge says that all problem credits have been unearthed. CoreStates has looked at Constellation's loan files twice – once during the bank's last year and again over the last few months. More than 50 officers reviewed 85% of the portfolio, leaving the bank confident that it has identified all the problem credits.

"We really think we have this one nailed down," said Mr. Jorge.

Second, the bank is already in discussions with several buyers about the sale of $50 million to $100 million of nonperforming assets. CoreStates retained Merrill Lynch & Co. to review the reality portfolio and put together packages for accelerated disposition. Mr. Jorge said the bank hopes to complete a sale as soon as the acquisition closes early next year.

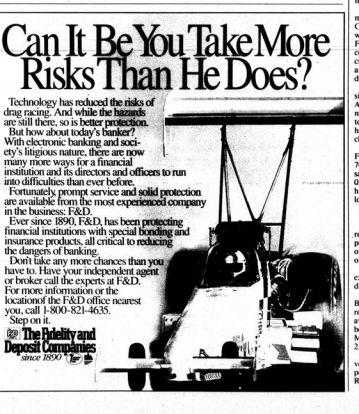
CoreStates also plans to sell Constellation's sizable mortgage servicing operation, which is deemed nonstrategic.

The New Jersey bank services a $2 billion portfolio of residential mortgages.

CoreStates walked away from mortgage servicing in the 1980s, and has no intention of reentering the business, said Mr. Jorges. CoreStates will probably write down a small portion of the mortgage portfolio when the acquisition closes, then sell it as quickly as possible.

With such portfolios fetching around 1% of the total servicing contracts, CoreStac can expect to realize about $20 million from the sale.

CoreStates estimates that with the disposition of the mortgage business and the assets earmarked for quick sale, Constellation will contribute $29.4 million in earnings in the first year of the merger. □



Ohio Banks Ranked High In Banner Second Quarter

Continued from page 1

standouts. A total of 12 companies – two megabanks, six superregionals, and four large regionals – recorded ROAs above 1.30% for the quarter. A year ago, just five banks were above that level.

One noteworthy case was Milwaukee's Firstar Corp., No. 2 among large regionals with a 1.58% ROA.

Turning It Around

Even last year's laggards did well. Citicorp fared worst among megabanks, but its 0.79% ROA was more than 4x its performance of a year ago.

Among superregionals, Shawmut National Corp., Hartford, Conn., quintupled its ROA, while Wells Fargo & Co., San Francisco; First Interstate Bancorp, Los Angeles; Fleet Financial Group, Providence, R.I.; and First Chicago Corp. nearly doubled their ratios.

Few institutions experienced significant declines in returns. Among the superregionals, Minneapolis-based First Bank System saw its ROA more than halved due to merger-related charges.

Among large regionals, San Francisco-based Union Bank – 70% owned by Bank of Tokyo – saw its ROA drop to 0.65% from 0.81% a year ago because of higher provisions for loan losses.

Bankers Trust Tops in ROE

Analysts increasingly look to return on equity as a measure of performance as the income and other off-balance-sheet sources of revenue gain in importance.

Several bank companies with extensive wholesale operations did very well by that measure.

Boosted by fat trading profits, Bankers Trust New York Corp. registered a lofty 26% return on average equity for the quarter, best among megabanks. J.P. Morgan & Co. was next with a 23.4% ROE.

First Chicago, helped by hefty venture capital gains, led the superregional pack with a 20.8% ROE.

Last year, First Chicago's 9.05% second-quarter ROE put it 23d among the 27 bank companies in its size category.

Another Chicago bank, LaSalle National Corp., topped large regionals with a 25.74% ROE.

Lower Credit Costs a Key

Banks profits are soaring in large part because the gap between the cost of funds and earnings on interest-bearing assets is at the widest levels in memory.

But interest margins appear to have peaked. In the most recent quarter, lower credit costs have been a key engine of profit growth.

"Among the major driving factors in bank profitability, the most significant is the decline in nonperforming assets," said Reid Nagle, president of SNL Securities.

"That has freed up a significant amount of assets that are now earning interest."

Three wholesale banks with wide-ranging sources of noninterest income and low loan-to-deposit ratios posted the best second-quarter credit quality numbers.

Big Jump for First Chicago

J.P. Morgan had a 0.22% ratio of nonperforming assets to total assets, the lowest among megabanks. Republic New York Corp.'s 0.46% ratio led superregionals. And State Street Boston Corp. was the standout superregional bank, reporting a 0.26% ratio.

Thanks to bulk asset sales, First Chicago registered one of the most notable improvements in credit quality – jumping from 18th to fourth in nonperforming-asset ratios among superregional banks.

Not surprisingly, Wall Street's assessment of the bank companies is closely linked to their performance.

Banc One's 242.1% market-to-book-value figure was the highest among megabanks. And Fifth Third led its large regional class at 298%.

Minneapolis-based Norwest Corp., with 265.5%, led superregionals.

Sources of Asset Data: American Banker quarterly earnings roundup and **SNL Securities.** **American Banker** has changed its reporting panels. The only criteria for inclusion in a panel is now asset size at the end of the performance period.
Mega banking companies are banks that have assets— rounded to the nearest billion dollars— of $70 billion or more on June 30.
Superregional banking companies are banks with assets between $20 billion and $70 billion on June 30.
Large regional banking companies are banks with assets between $10 billion and $20 billion on June 30.

Definitions and Methodology

Data Sources: Data are provided by **SNL Securities,** Charlottesville, Va. The **SNL** data were taken from two sources: (1) the **SNL Bank Database,** which contains GAAP financials on market and per share data on all publicly traded commercial banks and bank holding companies; and (2) the **SNL Bank Securities Monthly,** which contains the stock price information needed for this survey. In addition, data from **American Banker's** quarterly earnings roundup are also used.

A listing of the 39 banking companies in the study appears above. The companies are divided into three peer groups: peer group 1 — nine mega banking companies; peer group 2 — 27 superregional banking firms; and peer group 3 — 23 large regional banking companies. In the table above, entitled **Performance Study Peer Groups,** the companies are listed in order of their asset size on June 30, within their respective peer group.

In the table appearing on page 5, within peer groups the banks are ranked by three measures of performance: the return on average assets, the return on average equity; and nonperforming assets as a percentage of total assets. All performance ratios, for the current quarter, are calculated on an after accounting change basis. Data for the prior previous quarter **have not been restated** for subsequent mergers or changes in accounting principles.

The return on average assets is net income after taxes and extraordinary items divided by average assets for the period.

The return on average common equity is net income after taxes and extraordinary items minus preferred stock dividends divided by average common shareholders' equity for the period.

Nonperforming assets ratio is nonperforming assets as a percentage of end of period assets. Nonperforming assets are the sum of nonaccrual loans, restructured loans and other real estate owned net of reserves.

Market-to-book value is the stock price on June 30, divided by the book value per share on June 30.

The price earnings multiple is the stock price, as defined above, as a multiple of fully diluted earnings per share.

The dividend yield for the second quarter is the indicated annual dividend for the second quarter as an annualized percentage of the June 30 price.

The group **means** are **unweighted** means calculated by **American Banker** by summing all of the values within a peer group and dividing that number by the total number of observations. The **median** is obtained by finding the midpoint of the array of values.

All rankings, means, and medians for 1992, are for the current report panels"

EXECUTIVE *changes*

Bank of America Names Buhler, Its Canada Chief, a Senior VP

Bank of America, San Francisco, has named **Fred Buhler** a senior vice president.

Based in Toronto, Mr. Buhler, 53, will continue as president of **Bank of America Canada,** where he is responsible for all of the corporate banking activity for the bank's Canadian operations.

Mr. Buhler has headed the bank's wholly owned Canadian subsidiary since July 1992, and reports to **Barbara Z. Otto,** group executive vice president of the Latin America and Canada division.

Ms. Otto noted that the promotion reflects the parent bank's recognition of both Buhler's international banking expertise and accomplishments and Bank of America's strong commitment to the Canadian market. **— Franklin Smith**

NEW ENGLAND

BANK OF BOSTON has named **Robert Garty** director of sales in Massachusetts for its private bank.

Robert Garty

Mr. Garty was formerly a vice president of sales for Chase Manhattan's private bank, where he managed a staff of 20 salespeople responsible for providing a full array of products and services to high-net-worth individuals.

Before he worked at Chase, Mr. Garty was director of investment management services at United Jersey Bank.

Catherine Elder has been named director of lending at the private bank.

Catherine Elder

For the past 12 years, she has worked in several divisions at Bank of Boston. Most recently, Ms. Elder was the team leader for southern Europe in Bank of Boston's foreign multinational division.

FLEET BANK of Massachusetts, Boston, a unit of Fleet Financial Group, said **Deborah Lawrence-Swallow** has joined the bank as vice president in the commercial banking division. She is responsible for loans and banking services for middle-market companies.

Ms. Lawrence-Swallow joined Fleet from BayBanks Inc., Boston, where she was vice president in charge of banking services for midsize to large corporations.

David N. Grenier has been hired as a vice president in the managed asset division. He was formerly with First N.H. Bank in Manchester.

Carol A. Sexton has been promoted to vice president in the bank's consumer banking division. She manages sales and customer service at seven branches in the Worcester region.

She joined Fleet from BayBanks, where she had management responsibility for 10 branches in Worcester.

MIDWEST

NBD BANK, Fort Wayne, Ind., has named **Martha Z. Crane** regional Community Reinvestment Act officer.

In her new post, Ms. Crane will be responsible for maintaining the bank's current "outstanding" rating.

ABN AMRO North America Inc., Chicago, announced several appointments in its capital markets and trade finance groups.

Robert Buhler has joined the bank as senior vice president of ABN Amro Holding's capital markets originations group, responsible for syndications, short-term asset sales, private placements, and tax advisory functions.

He also will comanage the asset securitization unit.

Mr. Buhler was with Canadian Imperial Bank of Commerce as a corporate senior vice president and senior managing director, responsible for all capital markets functions in the United States.

Tracy Turner has become senior vice president of the private placement group, with responsibility for marketing private placements with hedging products.

Mr. Turner previously worked for Canadian Imperial Bank as managing director of the private placement group.

George Radakovich has joined the bank as senior vice president of the derivatives sales group. Mr. Radakovich was also with Canadian Imperial Bank, where he was managing director for the interest rate management group.

Kristen Fletcher has joined ABN Amro USA as senior vice president of the structured trade finance group. She will lead a team responsible for marketing and structuring complex trade finance transactions using a wide range of capital-markets-driven techniques.

Ms. Fletcher had been a senior vice president and manager of the structured trade group for Standard Chartered Bank in Los Angeles and First Interstate Bank.

Michael Stoddard has joined as a vice president in the structured trade finance group, responsible for managing originations, structuring syndications, and executing complex trade finance packages.

He had been a vice president in structured trade finance at Standard Chartered Bank in Los Angeles and First Interstate Bank. □

Minority Banks Lag in CRA Arena, Study Finds

Continued from page 1

nority borrowers are also more likely to have flawed credit histories, making the job of lending especially difficult for minority banks, 58% of whom are located in neighborhoods where more than half of residents are minorities according to the Fed data.

"Regardless of whether we are minority owned or not, we are regulated by the same regulators who examine majority institutions," said Ron Thigpen, executive vice president at Family Savings Bank in South Central Los Angeles. "People with poor credit histories who can't prove that they will be able to repay their loans will not get a loan."

What's more, minority banks are on more precarious footings than all other banks: This year six minority banks have failed, accounting for almost 20% of the 32 bank failures.

NEWS ANALYSIS

The average weighted return on assets for minority banks was just 0.58%, and average return on equity was 5.53% in the first quarter, according to an *American Banker* analysis of data provided by Sheshunoff Information Services. The average ROA for community banks was 1.26% and ROE was 14.29% at the end of the first quarter.

Instability Cited

"Because many [minority banks] are not stable, they are not in a position to effectively reach out with the kinds of creative lending that is required to rebuild communities," said Mr. Johnson.

Minority bankers share the concerns of many community bankers who say regulatory bias makes it harder for community banks to comply with regulations such as CRA. No minority banks have more than $2 billion of assets.

Fewer Poor Applicants

"We are in a competitive business, and the larger banks have more resources than we have and can afford large signs and plenty of circulars," said Richard T. Greene, president and CEO of Carver Federal Savings Bank, a $320 million-asset Harlem thrift.

According to the Fed data, minority banks are also attracting fewer poor applicants for housing loans. Applicants with household incomes less than 100% of the median accounted for only 30% of all applicants at minority banks. At all other banks the rate was higher, at 35%.

The minority banks are also turning away a greater percentage of poorer applicants from their communities than all other banks. Denial rates for those applicants under 80% of the median family income median were 36% at minority banks, and 33% at all other banks.

Minority banks, however, do serve neighborhoods with great percentages of low- and moderate-income applicants. While poorer neighborhoods accounted for 10% of areas served by all banks, they accounted for 31% of the neighborhoods served by minority banks.

Wealth Is Relative

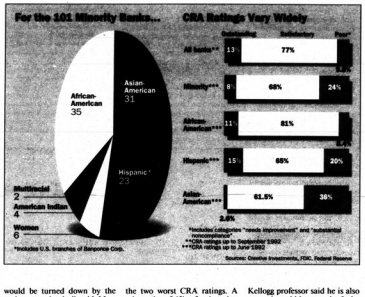
Part of the difference, said minority bankers, is explained by the fact that the median family income varies between neighborhoods and cities. An upper-income family in a predominantly minority inner-city neighborhood, for example, might earn substantially less money than an upper-income family in the suburbs.

inner-city banks tend to lend to the richest members of the community.

"We are dealing with a community that by and large makes only 60% of the average family income, so we inevitably end up" with borrowers whose credit histories are poor, said Steve Turner Jr., president and chief executive of Tri-State Bank of Memphis, and chairman of the National Bankers Association, a trade group representing minority banks.

Others suggested that minority banks accept loans from some minority borrowers who – because of their race – might be rejected at nonminority banks.

"Those upper-income blacks would be turned down by the mainstream banks," said Marcus Alexis, a professor of economics at the J.L. Kellogg School of Management at Northwestern University.



Asians Fare Worse

CRA performance also appears to vary between minority banks and thrifts, with Asian banks faring much worse than African-American and Hispanic banks, according to Mr. Cunningham, whose firm is Creative Investment Inc.

While 13% of all banks and thrifts received outstanding CRA ratings in the two-year period ended September 1992, only 8% of minority banks received such ratings in the two-year period ended June 1992.

Among the minority institutions, 15% of the nation's Hispanic banks and 11% of African-American banks received the highest CRA grade. Only 2.6% of Asian banks received outstanding ratings.

'Needs to Improve'

Nearly 10% of all banks received "needs to improve" or "substantial noncompliance," the two worst CRA ratings. A whopping 24% of minority banks were given such low CRA ratings.

But among the minority groups, only 8% of African-American banks received the two lowest grades, while 20% of Hispanic banks and 36% of Asian banks received low ratings.

The Asian-American banks "serve a tight-knit, well-defined community," sharing a similar language and culture, said Mr. Cunningham. "They don't make a lot of extra efforts to go outside their community."

"It is more related to culture than anything else," said one Asian-American banker, who like most of the Asian-American bankers contacted for this article, asked to remain anonymous.

Room for More Loans

Some minority bankers concede that there may be room to make more loans to lower-income borrowers in their communities.

"Part of the issue is being sophisticated about how to make loans," said Mr. Alexis. The Kellogg professor said he is also preparing a bid to acquire Independcorp, the Chicago-based black banking company.

"Many of the minority bankers may be disposed to lend to low-income borrowers but don't have the techniques to do it efficiently."

Others question whether they are being held to a higher standard because they are minority banks. Indeed, minority banks have differing mission statements: Some claim to have a special obligation to extend credit to poor borrowers; others say that obligations to shareholders override any claims of social responsibility beyond those of mainstream banks.

Beyond the Bottom Line

Alpha Johnson, chief executive and president of Commonwealth National Bank, a black-owned institution in Mobile, Ala., said, "Our mission goes beyond the bottom line: We have to serve the low- and moderate-income people in our community." Mr. Johnson's bank recently received a $350,000 capital infu-

Calif.'s Hawthorne Pins Hopes on New Chief

By TERRENCE O'HARA

Scott Brawly, the new chief executive of Los Angeles-based Hawthorne Savings Bank, has to deal with more than $200 million of nonperforming assets, the weak Southern California economy, and the 33-year legacy of his predecessor.

He's just thankful he doesn't have to deal with a capital problem.

"Thrifts either have plenty of capital and no problem assets, or no capital and lots of problem assets," Mr. Brawly said. "Notwithstanding our asset quality problems, we have an enviable capital and reserve base."

Mr. Brawly, 39, took over as chief executive of $999 million-asset Hawthorne on July 14. It's a job that for 33 years was held by Vernon D. Herbst, who opted for retirement after a damning federal examination in which the Office of Thrift Supervision threatened to fine him and his board if changes weren't made in Hawthorne's management and internal controls.

Hawthorne has had a series of run-ins with the OTS since 1990. In December of that year, the agency directed the thrift to cease origination of non-owner-occupied single-family loans because Hawthorne's problem construction loans soared that year.

In February 1991, Hawthorne consented to a cease and desist order calling for it to become "comprehensive regulatory compliance strategy."

Penalty Assessed

In December 1992, the OTS ordered Hawthorne to limit its loan originations to owner-occupied single-family permanent loans only. But last year, the OTS told Hawthorne's board that it had failed to comply with the order. In March 1992, the OTS assessed a $20,000 penalty against the thrift.

The problems with the regulators came to a head in March as the OTS completed an examination. In its March 5 examination report, the OTS said "the future viability [of Hawthorne] was threatened by perceived inadequacies in the board of directors and management, deteriorated asset quality, and moderate-to-high interest rate risk."

The thrift's leader retired after a series of run-ins with the OTS.

The report called on Hawthorne to strengthen its management and improve its internal controls. The OTS indicated that it would consider assessing money penalties against each of the directors.

First Loss Ever

Because of the examination, Hawthorne's holding company posted a $22.1 million loss in 1992, its first-ever annual loss. Herbst retired March 31.

Though Hawthorne's capital remains strong, with risk-based capital equaling 11.27%, nonperforming assets remained at an alarmingly high $211.9 million on March 31, or 10.9% of total assets. More than $100 million of nonperformers are foreclosures. The thrift rebounded with a $1.6 million profit in the March quarter.

Mr. Brawly, a former executive vice president of Fidelity Federal Bank FSB and a former chief executive of Valley Federal Savings and Loan, said he plans to put in new senior executives for most operating areas.

"We'll be staffing a special asset group with seasoned professionals," Mr. Brawly added. "That's something this thrift hasn't had until now."

He said the board of directors hasn't changed since he came on board – yet.

"It's too early to evaluate how the board will change," he said. □

Study of CRA Finds Minority Banks Lag

Continued from page 8

sion from NationsBank Corp.

"We are operating a commercial bank that's a minority financial institution in the United States," said Arnoldo Cisneros, senior vice president at International Bank of Commerce, Laredo, Tex. "The only distinguishing feature is that our stock is Hispanic owned."

Sometimes, however, minority banks put themselves into the spotlight by taking advantage of government and corporate programs designed to increase deposits, said Mr. Cunningham, who analyzed the CRA data.

Minority banks are less stable than mainstream ones.

"When we deposit funds in a bank, we expect that bank to invest in the community," said Marj Halperin, spokeswoman for Illinois state treasurer Patrick Quinn, an active supporter of minority banks.

"Many of these banks turn around and say, 'Support us because we are minority,' " said Mr. Cunningham. "But the implicit assumption behind a lot of these minority deposit programs is that you are helping out the community by helping out the minority financial institutions. That assumption may not hold entirely." □

New England's Ranks Thinned as U.S. Membership Grew

By JAMES B. ARNDORFER

While credit union membership is rising nationwide, several New England states have been bucking the trend.

Massachusetts, Rhode Island, and Connecticut were the biggest losers. Total credit union membership for those three states fell to 2.8 million in 1992, a 14.5% dive since 1989, according to statistics compiled by the Credit Union National Association, an industry trade group.

Nationwide, membership increased 5.5%, to 63.9 million during those years.

"I'd suspect the attrition is over by now," said William Hampel, the trade group's chief economist. "If the economy comes around, I have no reason to say it will continue."

New Hampshire's membership in 1992 was 293,000, down 0.5% from 1991, but up 0.07% from 1990. Maine and Vermont posted solid membership increases in the same period.

Hardest-Hit State

Rhode Island experienced the largest loss. In 1993 the Ocean State had 255,000 credit union members, down 11.4% from 1992 and 41.5% from 1991.

The decline can be largely attributed to the Jan. 1, 1991, failure of the Rhode Island Share and Deposit Indemnity Corp., a private insurance company that insured deposits of credit unions and cooperative banks.

In the fallout, four of the state's largest credit unions, unable to merge or get reinsured, were forced to liquidate.

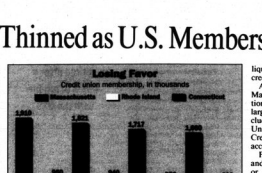
Initially 30,000 people were stranded without access to $735 million in deposits. Currently $55 million of deposits belonging to 18,000 people remains frozen, said Anthony Somerfield of the Depositors Economic Protection Corp., which is managing the liquidation.

Another 33,000 people were struck from the rolls when Northeast Savings in Hartford, Conn., purchased assets of three Rhode Island credit unions.

'People Lost Faith'

Resentment against credit unions runs high, said Connie Thornton of Warwick, who still is awaiting a share of her deposits from the liquidation of Rhode Island Central Credit Union.

"A lot of people lost faith in credit unions," said Ms. Thornton, who founded a depositor Bailout Recovery Association, which claims 300 members. "A lot of people lost faith in any sort of financial institution."



Membership in Massachusetts credit unions was 1.7 million in 1992, down 3.2% from 1991 and 8.8% from 1990.

Unemployment a Factor

The recession was a major factor in the decline. The state's unemployment skyrocketed to 9% in 1991, when the national average was 6.8%.

"When somebody becomes unemployed sometimes it becomes harder to maintain a relationship with the credit union," said Robert Kimmett, spokesman for the Massachusetts CUNA Credit Union League.

The recession also spurred liquidations and mergers. Members were forced to seek relationships with other financial institutions.

Federal Groups Liquidated

Massachusetts felt ripples from the Rhode Island crisis, too. Not wanting to follow in their neighbors' footsteps, privately insured credit unions converted to federal insurance. Those that didn't qualify were liquidated or merged into other credit unions.

Also depleting the ranks in Massachusetts were the liquidations in 1990 and 1991 of several large federal credit unions, including Blue Hill Federal Credit Union and Wollaston Federal Credit Union, which together accounted for 62,000 members.

Frequently in liquidations and mergers, dual membership or overlaps would be struck from the books.

Connecticut Group Absorbed

In neighboring Connecticut times were just as tough. Membership in 1992 stood at 900,000, down 0.5% from 1991 and 4.5% from 1990.

In 1991, the 27,000-members of the troubled Community Service Credit Union in Groton, which served Navy and Coast Guard personnel and community groups, were swallowed by Navy Federal Credit Union of Arlington, Va. As in other out-of-state mergers, members of Community Service are now considered members of the Virginia credit union.

"They were not as strong as they wanted to be in reserves. It was questionable if they could continue," said Robert Foster, Navy's director of operations. □

Industry Profits Jumped 25% in First Half

By JAMES B. ARNDORFER

Federally insured credit unions earned $3.5 billion in the first six months of the year, up 25% from the corresponding period of 1992, according to the National Credit Union Administration.

The 12,500 institutions weighed in with a 1.5% return on net income to average assets, compared with 1.4% at year-end 1992 and 1.3% at midyear 1992.

"Even with difficulties in certain sections of the country and certain sections of the economy, overall the numbers are excellent," said Robert Loftus, vice president of public and congressional affairs for the NCUA, the regulatory agency.

Credit unions improved profitability largely through lowering their dividend rates to 3.1% for the midyear, from 3.9% at year-end 1992.

As a result, capital grew for the seventh consecutive year. The net capital ratio, which is the total of regular reserves, other reserves and undivided earnings, moved up to 8.5%.

Loans increased 3.5% to $144.5 billion for the midyear, compared to a 4.6% loan growth for all of 1992.

Charles W. Filson, president of the credit union consulting firm Callahan and Associates, expects the number to increase substantially by the end of the year.

Rise in Confidence Seen

"Now that the [Clinton administration's] economic program is behind us, confidence will pick up," he said.

"I think people were concerned over whether the taxes in the program were going to hurt them. Now they see it affected a narrow group."

First mortgage loans remained the largest loan category at 21.4% of the total.

The loan delinquency rate fell to 1.1% for the midyear, from 1.4% in June 1992.

Deposits increased 3.6% to $241.4 billion. The loan-to-share ratio remained constant from yearend 1992 at 60%.

And as loan growth kept pace with share growth, credit union investments slowed to a 5.1% increase to $112.9 billion, compared with a 19.3% increase in the first half of 1992. Assets grew 4.2% to $269.3 billion. □

Regulator Preparing to Ban Low-Balance Accounts

Faced with major opposition from consumer groups as well as bank and thrift trade associations, the National Credit Union Administration is poised to ban so-called low-balance accounts under its version of the Truth-in-Savings regulation. The NCUA has decided that it's impossible to calculate an annual percentage yield for such accounts.

Capitol Notes

By ED ROBERTS

Truth-in-Savings requires federally insured depositories to make that calculation for all savings accounts so that consumers yardstick for comparing rates at various institutions.

Under the low-balance method, a financial institution advertises one rate of return on a savings account (or share account for credit unions) but only pays the rate on the lowest balance in the account during the interest period (dividend period for credit unions).

Under a variation of that method called a "rollback," a depositor earns interest or dividends on money placed in the account during the first two weeks or so, as long as that money remains untouched for the rest of the month.

The accounts run afoul of Truth-in-Savings rules.

If any funds are withdrawn, the depositor earns no interest on the account. Money placed in the account after the two-week period also earns no interest. But institutions advertise the rate as though it applies for the entire month.

60% Use the Method

These kinds of accounts are used widely by credit unions. A recent survey by the Credit Union National Association, the industry's largest trade group, found that more than 60% of the nation's 13,900 credit unions used some variation of the low-balance account.

The Federal Reserve Board, in drafting its regulation implementing the Truth-in-Savings law, prohibited banks and thrifts from future use of these accounts. The staff of the NCUA will recommend that its three-member board also outlaw them when it votes for a final rule on Sept. 9, according to top agency officials. The board is expected to take their advice.

This will be a real problem for the 1,500 small credit unions that use these accounts exclusively. The regulators say they will assist the institutions in converting their accounts. □

U.S. Central's Medium Note Gets Top Ratings

By JAMES B. ARNDORFER

A new medium-term note program being developed by the U.S. Central Credit Union has received excellent ratings from four rating agencies.

Three rating agencies assigned their highest long-term debt rating to the program: Standard & Poor's (AAA); Fitch (AAA); and Thomson BankWatch (A++).

Moody's assigned its second-highest rating (Aa1).

Combined with the company's short-term ratings, the

The company is now one of the highest-ranked depository institutions.

new ratings make U.S. Central one of the highest-rated depository institutions in the world, said Kevin Keller, a spokesman for the credit union.

Morgan Guaranty Trust Co. of New York is the only domestic company with equivalent ratings.

U.S. Central, a corporate credit union with $27.1 billion of total assets as of June 30, 1993, developed the program in anticipation of credit-union lending needs, Mr. Keller said.

Although credit union lending is currently in a slump, U.S. Central "sees a need now — one narrow in scope," Mr. Keller said.

"We have identified a core group [of credit unions] that may be in the 80 percent-to-90 percent, loan-to-deposit ratio that are very active in mortgage lending," he said.

Mr. Keller said no date had been set for the note's release.

A medium term note gives issuers flexibility similar to commercial paper, but with terms that may range from nine months to 30 years.

Southern Upstart Soaring in Loan Production

By PHIL ROOSEVELT

When it comes to pure heat, few mortgage leaders can match Resource Bancshares Mortgage Group. It simply sizzles.

Started from scratch just four years ago, the Columbia, S.C., company is on track to produce more than $4.5 billion of mortgages this year. That should easily put it among the top 50 players in the country.

The company, which went public in May, has achieved its heft by specializing in "correspondent" mortgage banking, the fastest growing segment of the industry.

Rather than run a costly branch system, Resource gets its loans through a network of 233 banks, thrifts, and mortgage companies. Small feeder lenders like these have proliferated in the wake of the thrift crisis and a mortgage banking shakeout in the the late 1980s.

Resource is "the right company in the right place at the right time," says Joseph A. Jolson, an analyst at Montgomery Securities, San Francisco.

The company specializes in "correspondent" mortgage banking.

The rapid growth, however, is also raising some eyebrows.

Industry veterans privately question whether the upstart has what it takes to weather a serious spike in interest rates. If Resource ever crashes, they warn, the fallout could hurt the many other mortgage banks that have gone public since the beginning of last year (See related story, facing page).

Big Paychecks at Top

Then there's the matter of executive pay. Resource's co-vice chairmen, David W. Johnson Jr. and Lee E. Shelton, each pulled down more than $1.6 million in cash compensation last year.

That topped the paychecks of such mortgage heavyweights as James A. Johnson, chairman of the Federal National Mortgage Association ($1.1 million), and James F. Montgomery, chairman of Great Western Financial Corp. ($1.4 million).

Resource defends the payouts as the just rewards for creating a valuable mortgage bank from the ground up. With its stock recently trading at $10 – up from $8.75 at the offering – the company has a market value of more than $100 million.

Backed by Venture Capital

Indeed, Resource was born with entrepreneurship in its blood. It is a child of Resource Bancshares Corp., a small-bank holding company backed by Patricoff & Co. and other heavyhitting venture capital concerns. Resource Bancshares still owns 42% of the mortgage unit.

Edward J. Sebastian, founder of the parent company, recruited Mr. Johnson – an alumnus of Bear, Stearns & Co. – to start the mortgage unit in 1989.

Mr. Shelton signed up two years later, fresh from leading a spectacular expansion of BarclaysAmerican Mortgage Corp. Christopher C. Bowen, another Barclays man, rounded out the management team as chief financial officer.

While the executives had the background to run a full-service mortgage company, they quickly narrowed their focus to correspondent lending.

Seized an Opportunity

No other company was serving that market exclusively, they recall, and more and more small lenders were looking to sell their production to bigger players. A number of the feeder companies were small operations set up by survivors of failed thrifts and restructured mortgage banks.

"Everybody talks about service but this is all we do," says Mr. Shelton. "If a correspondent calls to talk with our company, they'll probably speak with David or myself – not a whole bunch of regional representatives."

"We don't compete against our correspondents," he adds. "A lot of companies that are involved in correspondent lending are also involved in retail and may, in fact, have branch offices in the same towns as the correspondents."

In addition to steering clear of retail lending, Resource avoids mortgage brokerages, preferring to deal with companies that have more capital.

So far, Resource has been reselling all its new loans and most of the related servicing rights. As a result, its servicing portfolio stands at a relatively small $1.2 billion.

Vulnerable to Rate Hike?

Some observers maintain that this leaves Resource vulnerable to rising interest rates. As rates rise, they say, Resource will face dwindling loan volume and won't have substantial servicing fees to fall back on.

Mr. Shelton, however, is unfazed. For one thing, he says, Resource intends to steadily increase its market share in correspondent lending, meaning a drop in industrywide lending won't necessarily diminish the firm's own volume.

Moreover, Resource is steadily building its servicing business. In fact, that was one of the main reasons for going public.

As a unit of a bank company, Resource had been subject to stiff capital requirements for servicing, said Mr. Sebastian, who heads Resource Bancshares Corp. With that company now holding only a minority stake, the capital rules no longer apply, he said.

Mr. Jolson of Montgomery, whose firm was lead manager of the public offering, figures the servicing portfolio will hit $4.4 billion by the end of next year.

As for executive pay, it has been reigned in somewhat by a compensation plan that took effect with the offering. Mr. Sebastian, however, offers no apologies for last year's payout to the two vice chairmen.

"Like I always tell people, I wish they'd made twice as much," he says. "The company, instead of being worth a $100-plus million, might have been worth $200 million." □

Sadly for you, politicians in Washington agree on something.

Lawyers, legislators and lobbyists in Washington—people who've made careers out of being contrary—all are declaring the same thing these days: that government's relationship with the secondary mortgage market is going to change drastically.

They all know about HUD plans to toughen enforcement, new pressures on Fannie and Freddie, and the revival of Ginnie Mae as a major player in the market. And if you want more evidence, look to Capitol Hill, where Congress is toying with mortgage bankers subject to the same regs as commercial banks.

How should you react? You could wax nostalgic—and get clobbered by the government and your competitors. Or you could read *The Mortgage Marketplace.*

Every Monday, in less time than it takes to finish your morning coffee, *The Mortgage Marketplace* tells you about the new rules and ideas that could keel haul your secondary operations. It names the biggest mortgage company participants in Ginnie, Fannie and Freddie issues. And it scans the horizon to determine what types of loans, and borrowers, that now are considered exotic could soon enter the pipeline of conforming loans.

There's no debate—new regs are coming. What's still at issue is whether you'll be ready for them.

Sample us for free! Just call sales representative Celia Benjamin at (800) 733-4371 or write to us at 1325 G St., N.W., #900, Washington, D.C. 20005.

Mortgage Marketplace

Shares of Five Companies Confounding the Stock Pickers

By JAMES H. SAFT

Stock pickers have had a hard time in dealing with the five largest mortgage companies to go public since the beginning of last year.

Strong movement, both up and down, has been characteristic of the group, whose members are Plaza Home Mortgage Corp., Margaretten & Co., American Residential Mortgage Corp., North American Mortgage Co., and Fleet Mortgage Group Inc.

The stocks of the five, all of which went public between January and October 1992, are trading at least 20% above or below their initial offering prices.

Margaretten Was First

Much of the stocks' fate has been ruled by interest rate movements and the perceptions, or misperceptions, of the investment community.

Margaretten, based in Perth Amboy, N.J., was the first of the five to go public. It was offered for $20 a share on Jan. 29, 1992.

All are trading at least 20% above or below the initial offering price.

The shares came to market at a time of great enthusiasm for mortgage stocks, says Gareth Plank, an analyst at Mabon Securities Corp. "There was refinancing fever and Countrywide Funding Corp., at the time the only publicly traded mortgage stock, was red hot." The stock has never exceeded its offering price of $20 and rests today at about $14.50.

NationsBanc Deal Cited

Several analysts, including Peter Treadway of Smith Barney, believe that Margaretten has suffered from its decision to buy NationsBanc Mortgage Co. of Virginia from NationsBank.

Though Bruce W. Harting of Salomon Brothers believes the move has positive long-term implications, most agree Margaretten bought servicing at close to the top of the market.

Ironically, the poor performance of Margaretten's stock may have contributed to the success of some of the other mortgage offerings.

'Very Attractive Valuation'

"Margaretten laid the foundation for North American Mortgage to come out at a very, very attractive valuation," said Mr. Plank. That initial offering, on July 8, 1992, was at $11.50 a share. The stock now trades at around $27.

The company has exceeded most analyst estimates.

Next out of the gate was Fleet Mortgage Group, offered for $23 a share on July 31, 1992.

According to Mr. Jacobs, Fleet went for a high price because, "the bond market had rallied like mad all through August and Wall Street thinks that low rates are good for mortgage companies."

Hurt by Heavy Prepayments

But lower rates proved to be poison for Fleet because of heavy prepayments.

Fleet Mortgage's stock, which trades at around $17.25, also suffered from recent changes in the way the company accounts for excess servicing rights.

American Residential Mortgage, first offered on Aug. 14, 1992, at $13 a share, has performed well, trading now at around $20 a share.

Mr. Jacobs thinks that the company's balance between originations and servicing has put it in good stead for a variety of interest rate environments.

Plaza Home Mortgage Corporation, of Santa Ana, Calif., the last of the five to go public, is smallest in terms of market capitalization. Its stock, first offered at $6.50 a share on Oct. 2, is now trading at around $9.

Mr. Plank relates Plaza's low offering price to the fact that it came to market when it appeared interest rates might rise. □

A Mixed Bag
Price changes in selected mortgage stocks since their IPOs

Despite Art Crash, Some Banks Remain in Picture

By MICHAEL O'D. MOORE

Banks thrived on the art boom of the 1980s. They made loans on art, mounted exhibitions, acquired art, and advised their clients about purchases and sales.

Then, as the economy weakened in the late '80s, the art market tanked. Objects that had commanded millions of dollars a few years earlier sold for just a fraction of those prices. Banks jettisoned or pared down art activities.

Today, only a few banks remain committed to art services and exhibitions.

But these stalwarts swear by art, calling it a vital part of their private banking programs.

"It's been a very successful hook to get us into new clients and new referrals," said Katharine E. Bouckley, who heads Citibank's art advisory services for the private banking unit.

Even banks that have pulled back from the field still recognize that knowledge of art is valuable.

As a result, they are retaining consultants to make sure their people can discuss, say, that Andy Warhol hung in a client's hallway.

What follows are profiles of the art programs at two banks — Citibank and Chase Manhattan Bank, plus a look at some of the consulting services available to banks.

* * *

Chase Gets Mileage From Role as Curator

The importance of art to Chase Manhattan's international private banking unit is visible to clients as they walk through the door of the Sixth Avenue offices in New York.

Greeting them are paintings hung to mimic an art gallery exhibition.

Off the main hall, conference rooms have smaller installations around a regional or genre theme.

The exhibit was recently installed by the director of Chase's art program, Manuel E. Gonzalez.

With 13,000 bank-owned works to choose from, Mr. Gonzalez assembled a Who's Who of domestic and foreign artists including David Salle, Antonio Lopez Garcia, and Mr. Warhol.

Hook for Referrals

Already the works are paying dividends.

One client recently visited the office just to show a friend one of the works. That makes for good referrals, said Maria Elena Lagomasino, senior vice president in charge of international private banking.

Chase is making prodigious use of art to build business outside the United States.

Mr. Gonzalez, together with Lisa Phillips, curator of the Whitney Museum of American Art, assembled a collection of photographs that has been traveling around Central and South America.

How effective has it been?

'A Household Word'

On a trip to Monterrey, Mexico, a year ago, Ms. Lagomasino found that Chase Manhattan was not well known.

Things quickly changed, however, after its Photoplay exhibit opened and attracted 1,000 to 1,700 visitors daily to the Museo de Arte Contemporaneo de Monterrey.

"By the time I landed there Chase Manhattan, was a household word." she said.

Chase also has other exhibitions. It recently installed a technological exhibit in Brooklyn, N.Y., and opened a gallery in Kohuo, Japan, at the community's request.

The bank's art is considered one of the premier collections in the country. The 13,000 works were assembled over the past 34 years.

Most of those works are in Chase's banking offices, Mr. Gonzalez said.

B: ·ing Less

The bank is not acquiring works as fast as in the past, but Mr. Gonzalez said it continues to purchase works by younger,

Scott Peeler

E. WILLIAM JUDSON, left, says his warehouse's business with banks has peaked. "It's still very civilized," says warehouse director Thomas Pelham, bottom right: "We're not the repo men of the art world." Above right, artworks are being stored and crated.

Where Repossessed Masterpieces Come to Roost

By MICHAEL O'D. MOORE

Lawyers for a big bank recently called Judson Art Warehouse and asked the Queens, N.Y.-based company to repossess work of art that had served as collateral for a loan gone bad.

Two days later a big, air-conditioned truck was rumbling over the broken streets of Manhattan toward an uptown restaurant, accompanied by a warrant-carrying marshal.

Art handlers quickly photographed and packaged the paintings. By day's end they would be catalogued and safely stored in cavernous Judson warehouse just across the East River from the United Nations.

Common Occurrence

In the weak economy of the past few years, bank repossessions of art have become increasingly common. Judson prides itself on carrying out the work with style – avoiding the pitched conflicts with onetime owners that often arise in repossessions of automobiles and other items.

"It's still very civilized – we're not the repo men of the art world," said warehouse director Thomas Pelham.

In fact, repossession is just one of the services the warehouse provides to banks such as Citibank, Banker's Trust, and Chase Manhattan.

Its "more positive" services include collection storage, estate viewings, and arrangements for traveling exhibitions.

For instance, Judson is handling all the travel arrangements for Chase's Photoplay exhibit, now traveling around South America and Latin America.

They are discreet, they are good, and I can trust them," said Manuel E. Gonzalez, director of Chase's art program.

Judson provides safekeeping to 130,000 works of art – more than any other warehouse in the country, it says. Most of works stored are paintings and sculpture, but furniture and other objects also find their way to Judson.

Just from Long Island City, however, never makes it into the building. This 125,000-square-foot warehouse is immaculate.

It is also cool. Even on a blistering summer day, the temperature will be 68 to 70 degrees, with a humidity of 45% to 55%.

In a special viewing room, Mr. Pelham and owner E. William Judson pause to discuss art and banks. Behind them are a Rubens and a De Kooning, repossessed for bank clients.

Today, banks account for about 20% of the warehouse's business. That source of the business peaked in 1991, Mr. Judson said.

The surge from banks came with more repossessions and the storage of art securitizing loans, Mr. Pelham added.

From Paint to Paintings

Mr. Judson bought the building, a paint warehouse, believing its East River location would make it a good investment. But the real estate market didn't cooperate and he contemplated other uses.

As landlord to many of New York's most prestigious galleries, he recognized their need for quality storage, he said. In 1985 he opened the old warehouse to store paintings instead of paint and hired Mr. Pelham, who was assistant director of Leo Castelli Gallery in Manhattan's trendy SoHo district.

As the art market slumped in the late 1980s, many works began looking for the warehouse. To meet the demand, in 1990 Judson bought an old ball-point pen factory next door, increasing storage space by 25%.

Of all the warehouse's services to banks, repossession is one of the most unpleasant, Mr. Pelham said.

At the uptown restaurant, Judson employees tried to be quiet as the marshal and restaurant owner argued over the repossession. Eventually, they left in the sandwich in that situation," Mr. Pelham said.

Continued from page 14

developing artists.

"To me, the art collection is not a separate part" of the bank, Ms. Lagomasino said.

"It's part of the tapestry of Chase."

* * *

Citibank Pares Back But Is Still Committed

Citibank's art advisory service, part of its private bank, was introduced in 1979 and built a reputation in the 1980s.

The unit is organized into estate, loan, and advisory segments. It has five full-time art historians on staff, despite widespread staff cuts at Citibank in the past few years.

Some observers maintain that Citibank does less overall with its service than five years ago.

"They've really pulled back," said Daniel P. Davison, chairman of the American branch of

Only a few banks remain committed to art services and exhibitions.

Christie's auction house.

Ms. Bouckley, in charge of the unit for about 18 months, wouldn't specifically discuss staff levels or the extent of art activities. But the service is here stay, she said.

Hanging In

"Banks seem to come in and out of the market," she said, "but they don't have the breadth of commitment to the business that Citibank has."

Her unit provides or arranges for services to maintain art collections. And Citibank is always busy in lending against artwork, she said.

The art historians' primary responsibility is to stay abreast of market changes. It's a task complicated by the wild price gyrations of certain artists and movements since the bubble burst at the end of the decade.

"Watching the market has been difficult," Ms. Bouckley said. "It's been something we've had to do very seriously."

Objective Advice

A solid grounding in market issues helps the private bankers give objective advice to clients about their art collections and purchases, she said.

If a client wants a particular artist's work, the bank tries to ensure that the price purchased is the best available for the money, she said.

"We look at every art advisory client as someone who we educate, making them comfortable with the art that they wish to buy."

* * *

Finding a New Role In Post-Crash Era

Though Citibank and Chase are continuing their art activities, the 1990s have brought a new restraint toward art at many banks.

"It is seen as one of the ostentatious activities that they can't be involved with if they are going to be 'lean and mean,' " said Lynne Sowder, a Chicago-based consultant who served for several years as director of art at First Bank Systems.

But even when a bank cools its art lending or relegates its own collection to the back room, bankers still have a variety of reasons for learning about the subject.

Margaret Mathews-Berenson, a New York-based consultant who has worked with several large banks, said she is often called upon to give crash courses to bank executives.

Brushing Up

Recently, a top executive at large bank realized he needed some firepower for conversations with fellow museum members in New York. He got it in several trips to the Metropolitan Museum of Art with Ms. Mathews-Berenson.

The simple goal is for the executive "to be seen not as a philistine, but as someone who is knowledgeable," Ms. Mathews-Berenson said.

And bankers will always have estate work with the collections of deceased clients. Christie's, for instance, does a brisk business providing auction services to banks, said the auction house's Mr. Davison, who used to be chief executive of U.S. Trust Company of New York.

Because of their role in helping manage large estates, banks mean "not only a very substantial portion of our business, but also the best," Mr. Davison said.

Much of the artwork squirreled away in mansions has been so long off the market that it is fresh, he explained.

About one-third of Christie's business is through banks, Mr.

The stalwarts say art is a vital part of their private banking programs.

Davison said. And lately, much of that business comes from "distress sales."

"We're in an economic downturn," he said. "And when friends are death, divorce, and bankruptcy."

The price crash in artworks hasn't been all bad, Mr. Davison said. It has restored a sense of reality, he believes.

"Art is not an investment," Mr. Davison said. "It's a purchase." □

First Bentonville Deal Clears a Fed Hurdle

LITTLE ROCK, Ark. — Worthen Banking Corp. said the Federal Reserve Bank of St. Louis had approved its application to acquire First Bentonville Bancshares.

Worthen said the acquisition was subject to a 30-day waiting period and approval by shareholders of First Bentonville, based in Bentonville, Ark.

Worthen said the acquisition should be completed by the end of the third quarter. The company announced in April that it agreed to acquire First Bentonville in a transaction valued at about $14 million. □

BankAmerica Names Matus to Oversee Private Bank, Investment Management

By DEBRA COPE

Gary J. Matus has been named executive vice president and head of private banking and investment management at BankAmerica trust services at BankAmerica Corp.

Mr. Matus, 45, had been senior vice president in charge of the San Francisco-based bank's global entertainment and media industries group since 1989.

In his new post, Mr. Matus will oversee management of individual investment portfolios totaling $20 billion. He will be based in Los Angeles and will report to Peter McPherson, group executive vice president for the asset management group.

12,000 Wealthy Clients

BankAmerica provides financing, domestic and international investment, asset management, and personal trust services to more than 12,000 high-net-worth individuals. It operates 22 private banking offices in the United States.

Mr. Matus began his career at BankAmerica in 1972 as a trainee in the world banking division. He later moved to Colgate Palmolive Co. in New York, working in product management and marketing.

Mr. Matus will run portfolios totaling $20 billion.

He then went to Security Pacific Bank. He held several management positions in the U.S. and abroad, and in trust services, private banking, and corporate banking. He rejoined BankAmerica in 1989.

Mr. Matus earned a bachelor's degree and a master's degree from California State University at Los Angeles. He also holds a master's in international management from the American Graduate School of International Management.

* * *

First Interstate Bancorp has increased its Westcore family of mutual funds to 21 by adding a blue-chip growth fund.

The new fund is for investors "willing to accept moderate to aggressive risk," said Peter D. Glidden, portfolio manager with the Los Angeles banking company.

The Westcore Growth Fund aims to invest mainly in U.S. companies with strong financial characteristics and growth prospects, Mr. Glidden said.

Up to 10% of its holdings will consist of foreign securities and American Depositary Receipts, which are securities that represent shares in foreign stocks or bonds.

First Interstate began offering the fund earlier this month through hundreds of branches in 11 western states. The Westcore family, with $1.8 billion in assets under management, is also offered through outside broker-dealers.

Alps Mutual Funds Services, Denver, is administrator and distributor for the Westcore funds.

Star Launches a Counterattack in Direct-Mail Wars

By LISA FICKENSCHER

Star Bank Corp. of Cincinnati is fighting back.

Issuing cards mainly in Ohio, Kentucky, and Indiana, Star began to feel squeezed by the low-interest-rate direct-mail solicitations of national competitors like Wachovia Corp. and Signet Banking Corp.

Pricing

Today, Star Bank begins its counterattack. Direct mailings to most of its current customers offer a standard Visa or MasterCard at prime plus 3.9%, currently 9.9%, if they transfer $1,000 in balances from other cards. Gold cards would be at prime plus 2.9%, or 8.9%.

Star is waiving annual fees for the first year and includes purchase protection in the package.

"We are very much a leader in our market, so our strategy is to save what we have and to get some of the attrition back," said Collin McKenney, senior vice president of Star's card services group.

In April, after four months of steady decline in sales, the bank sent a survey to 1,000 customers who had not used their cards since Christmas. A crisp $1 bill was tucked into each envelope as an incentive to participate.

At least 500 customers said they had not used their cards because the interest rate was too high and they believed their credit lines should be larger.

In response, Star Bank will increase a cardholder's credit line by the amount of debt transferred to the account.

Lower rates, higher credit lines, and fee waivers are being offered.

"When we saw our customers leaving for lower-rate cards, we decided to compete mainly on the basis of interest rates and annual fees," said Ms. McKenney.

Varied Menu

The new rate applies to the entire account, including current customers' old balances. And unlike programs that treat balance transfers as cash advances, Star's gives a 25-day grace period before interest accrues.

Star's mailing comes in several versions.

A customer with a 14.5% standard card (prime plus 8.5%) with a 25-day grace period and $20 annual fee will be offered the 9.9% rate for the year, and thereafter if the balance is at least $2,000. Similarly, a customer with a 13.5% card (prime plus 7.5%) with no annual fee or grace period can go to 10.9% (prime plus 4.9%).

Star also offers gold card options. A customer with a 13% card with a $40 annual fee and 25-day grace period would be offered the 8.9% rate. After a year, the credit balance would have to be at least $3,000. A 9.9% rate is offered to gold holders paying 12.5% and no annual fee.

New customers, to be solicited in the fall, would be eligible for all of the introductory rates.

Hopes Pinned on Fee Waiver

Star Bank, 74th in card loans at the end of the first quarter, hopes to make hay on its fee waiver. Signet and Wachovia, respectively 17th and 18th, charge annual fees on low-rate cards.

An official at Wachovia said it is looking at ways to lower its $49 annual fee and $30 and $10 more on gold cards.

Star's War

How low-rate offers stack up

		Interest rate	Annual fee
Star	Standard	9.9%* (prime plus 3.9%)	$20 (waived first year)
	Gold	8.9%* (prime plus 2.9%)	$40 (waived first year)
Signet	Standard	9.9% (fixed)	$18
	Gold	NA	NA
Wachovia	Standard	8.9% (prime plus 2.9%)	$30
	Gold	8.9% (prime plus 2.9%)	$49

* Requires $2,000 balance transfer

* * *

Rocky Mountain Bankcard System is the latest issuer to dangle a zero interest rate offer.

To build its card loan portfolio, now less than $1 billion, the Denver company is waiving finance charges through December on balances that customers transfer in.

The transfer incentive was announced along with a new variable-rate structure that will result in lower finance charges starting in November.

The rate for purchases with standard cards will be prime plus 9.9%, or 15.9%. The rate on gold cards would be 1 percentage point less. The rate for cash advances would be prime plus 11.9%.

First Bank System Inc., Minneapolis, recently acquired Rocky Mountain through purchase of its parent, Colorado National Bank.

— Stephen Kleege

* * *

Fleet Financial Group Inc. said its Fleet Bank unit forgave MasterCard and Visa interest for people affected by the Midwest floods, as well as deferring payment-due dates for 30 days.

The Rhode Island-based company said it extended the deadlines for 12,000 customers in Missouri, Illinois, Minnesota, Wisconsin, Iowa, Kansas, North Dakota, and South Dakota.

A. Christian Fredrick, senior vice president, said the bank used print and radio advertising to announce its offer while postal service was disrupted in the affected areas. □

Visa, Toys R Us in Tuition Sweepstakes

In an effort to attract back-to-school shoppers, Visa U.S.A. has teamed with Toys R Us Inc. to offer a scholarship sweepstakes.

Visa said it expects its sales volume in the stores to rise 20% during the promotion. Another objective is to promote education, the card association said.

A total of $40,000 will be awarded during the six-week sweepstakes, which runs through Sept. 13.

Automatic Entry

The program will be advertised throughout the chain. Shoppers automatically enter the sweepstakes each time they use a Visa card at any of the 538 stores.

Prizes can run into scholarship awards, which will range from $1,000 to $20,000, to help pay for elementary, high school, college, or continuing education programs. — Bethlee Tolosa

HIGH YIELD REPORT

lets you *hear the heartbeat and feel the pulse* of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt

IN AN AGE OF DRAMATICALLY declining long-term interest rates, the *American Banker*'s weekly *High Yield Report* delivers money-making tips on high-yield investment opportunities.

This newsletter keeps a close eye on major court proceedings, and legislative and regulatory developments. Each issue features barometers of market size, bellwether pricing tables, a forward calendar, reports on filings, and the results of new-issue sales.

No longer considered the arena of "junk bonds," the high-yield market is rapidly gaining respectability as it is closely tracked by this objective, succinct weekly letter.

If you must know what's "ticking" in the heart of the high-yield market, HIGH YIELD REPORT is a must read every week.

Read it free for 4 weeks!

MasterCard Teams Up with Nescafe USA for a Contest

By MICKEY MERCE

Almost every week, it seems, MasterCard International's name shows up in another Sunday newspaper insert.

The one on Aug. 8 was a joint promotion with Nescafe USA Inc., trumpeting their joint sponsorship of the "Anywhere in the World" sweepstakes.

MasterCard is looking for synergy, in this case between two independently powerful brand names. The sweepstakes brings together two corporations with global promotional ambitions.

Mava Heffler, MasterCard's vice president of U.S. promotions, said Nescafe approached MasterCard last year at-at a different idea, then eventually agreed to do the sweepstakes.

Alliances

In their strategic alliance, which is not connected to any other MasterCard promotion, no money exchanges hands, Ms. Heffler noted.

Nescafe is allowed to use the MasterCard name and logo in its coffee advertisements.

The coffee company distributed 49 million freestanding newspaper inserts, plus introduced five million product displays in supermarkets — for the MasterCard just happens to be aggressively promoting card usage.

Nescafe will put in the MasterCard accounts of each of 10 grand-prize winners $10,000 to finance a trip anywhere in the world.

MasterCard is looking for synergy, in this case between two independently powerful brand names, in a contest that brings together two companies with global ambitions.

"It's really expanding MasterValues coupons into food stores, which is our strategic objective," Ms. Heffler said.

MasterCard and Procter & Gamble are co-sponsors of the 36-city "Soccer Blast" this fall, a lead-in to the 1994 World Cup, of which MasterCard is a corporate sponsor. When consumers use MasterCard, they will get a free U.S. National Soccer Team pin.

Procter & Gamble will feature MasterCard in newspaper inserts to promote a range of soccer merchandise. Only MasterCard payments will be accepted.

"We've decided that strategic alliances are a smart, efficient, and effective way to do business," Ms. Heffler said. □

Visa Project Aids Meals on Wheels

By MICKEY MERCE

Visa U.S.A. is working with 11 Los Angeles-area restaurants again this year to raise money for Meals on Wheels, the group that provides meals for the disabled and home-bound.

Through Oct. 9, Visa will make a donation every time customers use Visa cards at the participating restaurants, including Wolfgang Puck's Spago.

A message about the Visa donation will be printed on menus and at the point of sale.

A Reputation Enhancer

Servers will wear pins promoting the campaign.

The effort is related to Visa's sponsorship role in the 11th Annual American Wine and Food Festival on Oct. 9, which also raises money for the Wolfgang Puck Charitable Foundation.

Thomas C. Edwards, Visa's vice president for travel and entertainment marketing, said such cause-related marketing helps merchants by increasing customer traffic and enhancing their local reputation.

EDS Walks Tightrope as Friend and Foe of Banks

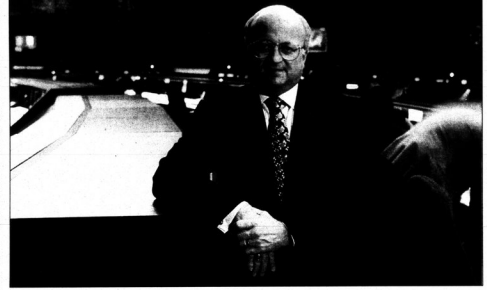
By BARTON CROCKETT

Few nonbanks, and no technology companies, have made as many incursions into the financial industry as Electronic Data Systems Corp.

Through aggressive salesmanship and acquisitions, the Plano, Tex.-based computer services company has built a billion-dollar business in technical corners of the financial industry that were once banks' exclusive domain.

And even though some bankers fret about a computer company treading on so much of their turf, EDS has a squadron of loyal customers that are tickled to do business with the vendor.

"I have tremendous admiration for them," said John B. McCoy, chairman of Banc One Corp., of Columbus, Ohio, which both competes with EDS and is one of its biggest customers.



LESTER M. ALBERTHAL says EDS' reputation as a bully stemmed partly from the early hard-charging culture created by Ross Perot.

Other Avenues

EDS is best known as an outsourcing company – the firm founded in 1962 by former International Business Machines Corp. salesman Ross Perot, who later sold the vendor to General Motors Corp.

But EDS does a great deal of business outside traditional outsourcing, including consulting, systems integration and electronic funds transfers.

EDS had net income of $636 million on revenues of $8.2 billion last year. About an eighth of the revenues came from the financial industry, primarily from outsourcing, check sorting, ATM switching, and credit card processing services for about 5,000 banks, thrifts, and credit unions.

In these areas, EDS' influence is considerable.

2 Top Thrifts Are Clients

Among other ventures, it runs computers and check sorting machines for the country's third- and fourth-largest thrifts, World Savings and Loan Association in Oakland, Calif., and First Nationwide Bank of San Francisco.

EDS also runs the computers of two large commercial banks, First Fidelity Bancorp., Lawrenceville, N.J., and Signet Banking Corp., Richmond.

A contract inked earlier this year to install 4,000 automated teller machines in 7-Eleven stores will make EDS the country's second-largest owner and operator of ATMs, after BankAmerica Corp.

GM's MasterCard Venture

EDS is also the country's fourth-largest processor of debit transactions, a business built on EDS' 1989 purchase of an ATM switching unit from Automatic Data Processing Inc., of Roseland, N.J.

EDS also runs the computers for GM's new MasterCard program. This deal has made EDS the country's fourth-largest processor of credit cards for banks, with 7.5 million accounts. EDS also authorizes some 900,000 MasterCard transactions daily, more than any other company.

"EDS is a leader in the whole bank services arena," said Coley Clark, group executive of EDS' financial industry unit, which employs more than 7,000 people.

Not surprisingly, EDS has gotten this large by making many of its bank customers extremely happy. Among them – State First Financial Corp. of Texarkana, Ark., which has been an EDS client for more than 20 years.

"We think its a great relationship, and wouldn't change it for anything," said Howard M. Qualls, president of the $720 million-asset holding company.

Above and Beyond

First Fidelity is also among its satisfied customers. Executive vice president Donald C. Pfaffenbach praises EDS for its flexibility in dispatching — at no extra cost — more than four times the initially agreed-upon number of technicians to handle a data center consolidation.

But, despite its successes, EDS is also dogged — company officials say unfairly — by a reputation for bullying customers.

And while such criticism could be expected from computer executives that lose their fiefdoms to EDS, sometimes it comes from EDS' staunchest allies, like Banc One chairman Mr. McCoy.

In a speech earlier this year at an IBM-sponsored bank technology conference, Mr. McCoy chided EDS for using hardball negotiating tactics over restructuring an outsourcing contract in Texas.

In a Corner

The contract called for EDS to run computers for units of MCorp that Banc One acquired in 1991. Banc One thought the contract was too expensive, and wanted out, Mr. McCoy said.

But EDS officials vetoed those plans, by threatening to dump computer tapes on Banc One without allowing for an orderly transition, Mr. McCoy said.

EDS and Banc One officials later said that Mr. McCoy's account was inaccurate.

"John would probably like to take that back," said Donald L. McWhorter, president of Banc One, who was directly involved in the talks with EDS. "EDS never said they would pull the plug or any such thing," Mr. McWhorter added.

Still Friends

Apparently, the tough negotiations over that contract haven't tainted the two companies' relationship with one another.

For example, Banc One signed a five-year contract in 1992 to have EDS run computers for Banc One's entire Texas franchise. Banc One is also teaming with EDS and Integrated Corp. of Minneapolis in a $100 million, 10-year project to build and install sophisticated new banking software, called the Strategic Banking System.

Nonetheless, Mr. McCoy has a warning for potential EDS customers.

"You've got to cross your t's and dot your i's," Mr. McCoy said. "You shouldn't do something on a handshake with them."

Dispute with NationsBank

Rumblings of another dispute have also emerged, in this case, between EDS and NationsBank. Similar to the Banc One situation, this dispute concerned the termination of an outsourcing agreement EDS had with National Banchares Corp. of Texas, which NationsBank acquired in 1990.

To resolve the dispute — which was never made public — NationsBank and EDS agreed to private arbitration.

M. Arthur Gillis, a bank technology consultant in New Orleans, said he was called in to testify on the reasonableness of a threat EDS made to be uncooperative in delivering vital computer tapes to NationsBank.

NationsBank, through a spokesman, Ellison Clary, declined to comment on the arbitration. But Bobby Grisham, the EDS executive who oversees the vendor's business with big banks, said that Mr. Gillis' account was wrong.

EDS never threatened to be uncooperative in delivering computer tapes, he said. Instead, the dispute centered on how much EDS should be paid.

Mr. Grisham added that arbitration resolved the issue fairly.

Mr. Grisham said that EDS continues to enjoy a good relationship with NationsBank, and does some consulting work for the bank.

Mr. Clary concurred: "We view EDS as a company with a lot of capability, and that's why we do business with them."

Lester M. Alberthal Jr., who took over as EDS' chairman and chief executive after Mr. Perot left in a highly publicized dispute with GM management, said that criticism that EDS bullies customers, while inaccurate, is nothing new.

He said the reputation stemmed partly from EDS' early corporate culture, imbued by Mr. Perot, where the company embraced a militaristic work ethic, and was "hard charging" and "egotistical."

Mellowing Trend

But Mr. Alberthal said that over the past decade EDS has softened the edge.

"I and every executive in our company are very focused on customer satisfaction," he said.

Mr. Grisham added that EDS regularly helps banks end out-

Intuit Inc. Hopes to Allow Banking via TV

By DEIDRE SULLIVAN
Special to the American Banker

Intuit Inc., announced that it is working on a system to allow consumers to operate personal finance software on their television sets.

Based in Menlo Park, Calif., Intuit is best known for its personal computer-based financial software, called Quicken, that has sold more than 5 million copies since its introduction in 1984.

To develop this new system, Intuit is working in partnership with the EON Corporation, in Reston, Virginia. EON was previously known as TV Answer, Inc.

The system would be used for personal finance.

Interactive TV

Using wireless transmission technology, EON is pioneering an interactive television service that turns televisions into two-way communications devices.

Paul Sturiale, a spokesperson for EON, said interactive television will have its debut sometime in the early part of 1994, and that a more specific roll-out schedule will be determined by the Federal Communications Commission sometime next month.

At that time, the FCC will begin issuing regional licenses for wireless interactive video and data Services.

The arrangement between Intuit and EON represents an agreement to develop products and services to be used within the context on interactive television.

Specific Uses Outlined

According to Sheryl Ross, a spokesperson for Intuit, the two companies anticipate that consumers will soon be able to use the television to reconcile and update accounts, check transactions, and review the financial performance of selected accounts.

These activities would take place within the context of a Quicken-like program tailored for use on the television.

Although no banks are involved in the development efforts, Ms. Ross said that Intuit is receptive to the idea of creating alliances with banks."

Other Relations Established

Intuit has already established a relationship with Meridian Bancorp, the $12 billion holding company in Redding, Pennsylvania for home banking services via interactive TV.

Using EON's system, Meridian Bancorp customers will be able to use their televisions to check their accounts, transfer funds, and pay bills. The service is expected to be introduced sometime in 1994.

sourcing contracts of acquired institutions without dispute.

"We couldn't be in business if we beat up on customers," Mr. Grisham said.

But in its ATM and credit card processing businesses, EDS continues to raise the eyebrows of those who view the company as a competitor.

Formidable Threat

EDS has emerged as a formidable threat in such banks as Synovus Financial Corp. and Banc One in the credit card processing business, and, in the ATM busiaess, to Electronic Payment Services Inc., a joint

EDS does a lot of business besides outsourcing.

ATM processing venture of Banc One, CoreStates Financial Corp., PNC Bank Corp. and Society Corp.

"Some see EDS as a tremendous competitor in the industry," said Richard Lyons, executive vice president of Internet Inc., Reston, Va., which runs the Most ATM network.

Yet, despite the potential for conflicts of interest, the vendor appears to not be suffering from its image.

"The competition doesn't concern us at all," said Banc One's Mr. McWhorter. "For a long time we've realized that its not a perfect world where we've got no competitors."

Yet EDS is sensitive to concerns customers may have about competing with the vendor, Mr. Alberthal said.

"All professional service companies have to deal with this," he said. □

NationsBank Tornado Aid

PETERSBURG, Va. — NationsBank announced that it was committing $50,000 for relief and to help rebuild those areas in and around the city that were damaged by tornadoes. NationsBank will match donations made by two local relief efforts.

Industry's Recent Boom Masks Structural Problems

Few banks are attaining a sustainable competitive advantage these days. A substantial number have lost and are continuing to lose market share and, with it, fundamental earning power.

Without the prospect of economic growth to support them, many bankers are bedazzled by wide margins and captivated by cost cutting, both of which can actually diminish long-term prospects. Mergers and acquisitions only hide the problem.

More than half of the 100 largest banks in the United States reported either a decline in loans or an increase that didn't keep pace with inflation in 1992. Their largest corporate customers have long since gone the way of the capital markets. Their smallest retail clients are served equally well outside the banking system.

Handwriting on the Wall

Mortgage loans, credit card debt, automobile leases, and other homogeneous products are easily originated and financed elsewhere. Money-cen-

Mr. Miles is managing director of Waypoint Associates Ltd., a consulting firm in Wayzata, Minn.

ter, regional, and community banks have seen the lights go out at the high end of the loan spectrum and know that they are flickering at the low end.

Conventional wisdom has it that everything else – installment loans, small-business credit, receivable and inventory finance – will never leave their sights.

Nothing could be further from the truth. Interim construction lending, long the domain of the banking industry, is fast moving to "the street." Real estate investment trusts are coming back, this time without the leverage that the banks themselves provided in the 1970s. Well-capitalized pawn shops, no less, are thriving as intermediaries.

Easy to Raise Debt, Equity

In the Midwest, where seller financing on single-family homes is a rarity, nonbank intermediaries aggressively seek to discount contracts for deed. Medium-size companies have no difficulty raising quasi-debt and quasi-equity.

A lumber company here recently floated $10 million in subordinated term debt at a 10%

BIG CORPORATE *customers have long since gone the way of the capital markets, and the smallest retail clients are served equally well outside the banking system.*

yield by selling it off in $2,000 pieces through a second-tier investment house. A country bank privately placed noncumulative, nonconvertible preferred stock to help it through some rough times.

On the liability side of the balance sheet, the situation is also dim. Most new money is migrating into stocks and bonds, mutual funds, money-market accounts, and other instruments which have nothing, per se, to do with banks.

Deposits Drain Away

As with loans, over 50% of the top banks in the country saw their deposits either fall or not match the meager rate of inflation last year. As with loans, regional and community banks also see deposits slipping away.

Still, profits are way up. Net income rose over 100% and the market value of almost all major banks increased by at least 25% in 1992. However, this growth was generally uninspired.

Revenue increases were driven by wider spreads brought about by declining interest rates. Cost of funds fell faster than interest income, and bankers, through no effort of their own, enjoyed the benefit.

And what about costs? The top 100 banks experienced an overall decline in bad debt provisions of 19% in 1992 and it is well known that operating expenses trended downward, though with all the acquisition activity taking place it's hard to compute.

Cost Cutting Has Limits

Expense control is a logical strategy, arguably the only strategy if a bank is losing assets and deposits, margins notwithstanding. The problem is, productivity can't be managed forever by reducing expenses.

At some point, those reductions become self-perpetuating. Lower expense leads to lower income leads to lower expense. Without investment, the cycle eventually disappears into thin air. A number of divisions within banks – equipment leasing, as but one example – are generating safe and attractive returns in great markets.

However, because management cowers from risk or is caught up in restructuring, these businesses are denied resources by all but the most enlightened GE Capital, notable among

Develop a Strategy Now to Capture Fast-Growing 'Mature Adult' Market

Over the next 18 years, the "mature adult" market – people over 50 – will increase by about 50%, while the under-50 market will increase by only 1%.

Bankers would be wise to affirm or reaffirm their approach to this growing market. Unfortunately, most who target the older market segments take a programmatic or tactical, rather than a strategic, approach to increasing market share.

But age changes alone, as highlighted in the considerable attention to demographic trends, are not the appropriate focus.

Beyond 'Senior' Programs

Bankers have developed a frame of reference about the aging marketplace that too often causes them to focus on the development of "senior" programs as their sole method of serving this significant group of customers. But this approach is costing them market share.

Rather than designing services based on the age groups in a given market – programmatic or tactical approach – bankers should concentrate on developing strategies to improve customer satisfaction across all of their current services provided.

Such strategies will come only by better understanding the behavior of the mature adult and applying that knowledge to current business and marketing decision-making.

A New Paradigm

David B. Wolfe, a noted expert on the business implications of an aging marketplace, has called for a new paradigm based on psychodynamic research.

"Psychodynamics theory," says Wolfe, "is based in human

Mr. Gilmartin is president Coming of Age Inc., a consulting firm in Glen Ellyn, Ill.

CONCENTRATE *on improving customer satisfaction with all of the current services.*

development concepts, principally following the ideas of Carl Jung, Abraham Maslow, and Erik Erikson on human development processes and stages."

Bankers who take the time to understand the behavior of the mature adult and the findings of life-stage and lifestyle research, as well as the findings of split-brain, chronological vs. cognitive age research, etc., will significantly increase their chances of success in an aging marketplace.

Through a process that changes their frame of reference regarding the mature adult, and the frame of reference of employees, bankers can make significant progress and improve their position in an aging marketplace.

Key Questions

To begin changing the frame of reference about a segment that makes up 60% to 80% of a bank's business, bankers might consider asking the following questions:

• Has our bank critically and strategically thought through its vision, goals, strategies, priorities, and potential contributions to set a direction and sense of purpose?

• Are we integrating the implications of an aging marketplace into our vision, goals, and strategies as well as into your Total Quality Management and/or Continuous Quality Improvement efforts?

• Is leadership collaborating

But age changes alone, as highlighted in the considerable attention to demographic trends, are not the appropriate focus.

Beyond 'Senior' Programs

Bankers have developed a frame of reference about the aging marketplace that too often causes them to focus on the development of "senior" programs as their sole method of serving this significant group of customers. But this approach is costing them market share.

Rather than designing services based on the age groups in a given market – programmatic or tactical approach – bankers should concentrate on developing strategies to improve customer satisfaction across all of the current services provided.

Such strategies will come only by better understanding the behavior of the mature adult and applying that knowledge to current business and marketing decision-making.

A New Paradigm

David B. Wolfe, a noted expert on the business implications of an aging marketplace, has called for a new paradigm based on psychodynamic research.

"Psychodynamics theory," says Wolfe, "is based in human

CONCENTRATE *on improving customer satisfaction with all of the current services.*

development concepts, principally following the ideas of Carl Jung, Abraham Maslow, and Erik Erikson on human development processes and stages."

Bankers who take the time to understand the behavior of the mature adult and the findings of life-stage and lifestyle research, as well as the findings of split-brain, chronological vs. cognitive age research, etc., will significantly increase their chances of success in an aging marketplace.

Through a process that changes their frame of reference regarding the mature adult, and the frame of reference of employees, bankers can make significant progress and improve

their position in an aging marketplace.

Key Questions

To begin changing the frame of reference about a segment that makes up 60% to 80% of a bank's business, bankers might consider asking the following questions:

• Has our bank critically and strategically thought through its vision, goals, strategies, priorities, and potential options to set a direction and sense of purpose?

Are we integrating the implications of an aging marketplace into our vision, goals, and strategies as well as into your Total Quality Management and/or Continuous Quality Improvement efforts?

• Is leadership collaborating

Aging Market Will Require New Strategy

Continued from *page 20*

to shape a culture that makes superior service as natural as thinking? In larger banks, has a leader surfaced and been empowered to champion the necessary vision, goals, and strategies of a mature-adult market improvement initiative? (In smaller banks the president is the "champion.")

• Have we begun developing an organizational culture to support the belief that the service-delivery staff are the most important people in the bank – since it is they who contact the customer? Do we understand that the environment we create for the staff is the world they will create for the customer?

• Do we know our internal capabilities, and have we declared war on bureaucracy?

• Have we begun analyzing our organization's service delivery or distribution system, with the goal of responding to the life satisfaction needs of this population?

• Do we know the needs, wants, and desires of an aging marketplace? Have we identified the service gaps through qualitative and quantitative research?

• Have we taken the time to acquire and apply our knowledge of an aging marketplace to operations management and to service planning and decision making?

Do we continue to use the age of the target market as the determining factor for service development or modification? Or do we use life-stage and lifestyle research to determine our approach to service development and improvement?

• Are we questioning our current approach to communicating with the mature adult? Do we consider perceptions, values, behaviors, and physical changes of the target market in our deliberations? Have we considered the age of those in our organization responsible for communications to the mature adult market?

Generation Gap

Generally, younger staff members have difficulty emphathizing with mature adults. Are we including members of the mature-adult population in our service design, delivery, and communications development process?

Bankers cannot continue to practice what they consider to be "tried and true" methods to attract and retain customers. The physiological, psychological, and behavioral changes brought about by the aging process demand a significantly different management and marketing approach than is currently being practiced by many bankers. □

Industry Boom Masks Problems

Continued from *page 20*

many other nonbank competitors, is distancing through the night while most banks have yet to open their eyes.

Merger Misconceptions

Acquisitions keep the illusion alive. Based on widely available formulas and active markets, most banks can bought and sold "fully priced." It's no secret that high premiums are justified by the costs that can be stripped out following purchase. Sellers get enriched in the process.

Employees get terminated or are left to do more with less. Shareholders get diluted; stock prices don't move up much. Executives get to announce that they are building the "franchise" even though, as we have seen, the underlying trends tell a much different story.

In a study of 134 bank mergers the Fed, not too long ago, found that nine out of 10 did no better than they could have as stand-alone institutions.

What is keeping this whole thing together? Probably blind loyalty.

Even though many customers were abandoned by their banks over the last five years, more than a few continue to pay 18% for credit card accommodations or for overdraft protection. Many accept 2% for their savings balances or as earnings credit for services not directly billed.

Manufacturers pay 2% over prime to finance Fortune 500 receivables. Mortgage companies leave big bucks on the table to get their inventories financed ostensibly with their own escrow balances, by banks. Governmental admonishments and sagging stock prices suggest that regulators and shareholders are beginning to question the reality of all this.

So where does the industry go from here? Those who haven't taken advantage of the near-term opportunities should do so with full understanding of the limitations.

Those who have exhausted this potential, should invest to evaluate markets to assess competitive position and to develop and implement plans to recapture share through better products, marketing, and service.

Those who have decided that they can't "beat 'em" should "join 'em," either by selling out to another bank or repositioning their business to confront nonbank competition head-on, even if it means giving up the charter. □

Royal Bank of Scotland Sees Easing In Bad-Debt Provisions, an Exec Says

Reuters

EDINBURGH — Bad debt provisions are trailing downward in an environment of slow economic improvement, said Robert Speirs, finance director of Royal Bank of Scotland Group PLC.

"We expect to see bad debt provisions falling off, but we don't want to be complacent because another downturn in the economy would give us a problem," he said in an interview.

Mr. Speirs said he believes the recession had bottomed out, but did not see a real acceleration in recovery.

"We are coming out slowly, and there are statistics," he said.

May Stimulate Recovery

There was still concern over any real "push" behind the economy, which might need a further interest rate reduction to stimulate recovery.

"We think an interest rate cut may be needed," he said. "Our balance sheet is positioned so that a cut of one percentage point would not have a significant long-term impact."

Mr. Speirs said Royal Bank's five-year Columbus Project was moving along on target, with 3,500 job reductions envisaged by the end of 1997.

"It will give us some early wins and some cost reduction overall," he said.

In areas like its Direct Line car and house insurance group and its Citizens Financial subsidiary in the United States, more staff would be added,

More staff will be added in the U.S. subsidiary Citizens Financial.

He said Royal Bank had less fat to trim than its competitors and had more to do on the income side of its cost-income ratio.

"The big caveat is that we are not just going for growth for its own sake," he said. "We are looking for quality growth and have systems in place to review the loan book in great detail."

Mr. Speirs said once the objectives were achieved, Royal Bank could derive an incremental benefit from its smaller size, which enabled it to maintain shorter lines of communications and extend its growth programs to the entire retail bank.

He said the bank would be returning to the capital markets occasionally, but did not require any capital now.

"We raise it when the opportunity exists basically because it exists and we like to stay in those markets," he said.

Assets Expected to Grow

Recent capital raisings had been earmarked for Direct Line and Citizens Financial, he said. He expected Citizens Financial to expand significantly in the next three years.

"Citizens' assets have increased to $7 billion now from $3 billion when we bought it in 1988, and we expect them to grow to $10 billion in the next three years," he noted.

Growth is expected to come primarily through acquisitions in Connecticut, Rhode Island, and Massachusetts, he said. This is Citizens' base of operations.

"We haven't ruled anything, unexciting bank," Mr. Speirs said. "We don't want to do that." □

MAF and Anchor, Choice Takeover Targets, Win 'Buy' Recommendations from Analysts

By GORDON MATTHEWS

Two thrifts that are viewed as takeover targets in desirable markets received "buy" recommendations from Wall Street on Thursday.

MAF Bancorp, Clarendon Hills, Ill., got the nod from Piper Jaffray Inc., Minneapolis, as "a high-quality thrift" whose franchise also makes it attractive to buyers.

Anchor Bancorp, Hewlett, N.Y., was endorsed by Salomon Brothers as a thrift in a turnaround mode. Salomon cited Anchor's recent capital-raising moves and dealings to cations in New York, New Jersey, and Florida.

Banks have acquired thrifts at a record pace this summer. The banks view as cheap alternatives to banks for either entry into or expansion in fast-growing markets.

Prices Get Boost

Speculation about which institutions may be the next targets has boosted share prices of the thrifts. MAF shares are up 48% this year, while Anchor's are ahead 63.5%.

In late trading on Thursday, MAF stock was unchanged at $32, while Anchor shares were up 62.5 cents to $15.125.

Piper Jaffray analysts Steven R. Schrold and William H. Ryan said MAF, the parent of Mid America Federal Savings Bank, draws 46% of its deposits and even more of its mortgage originations and noninterest income from DuPage County, a suburb of Chicago.

DuPage is ranked among the fastest growing counties in the nation and also boasts among the highest per-capita incomes.

Several large thrifts in the Chicago area have been acquired in recent years. Earlier this year, ABN Amro Bank announced an agreement to buy Cragin Financial Corp., a thrift holding company.

In the quarter ended June 30, MAF reported net income before extraordinary items of 91 cents per share, a 38% increase over last year. Its nonperforming assets are a low 1.26% of DuPage area.

'Bright Future'

The Minneapolis analysts say they did not think MAF's current price, at 8.4 times their

1994 earnings estimate of $3.60 per share, "reflects the extremely high franchise value of the company or its strategic mortgage banking operations in the DuPage area."

'Bright Future'

Anchor Bancorp has "a very bright future," said analysts Bruce Harting and Ronald Thompson of Salomon Brothers. It is well capitalized "and is among the few thrifts in the country to successfully implement an acquisition strategy."

That strategy has provided it with market shares in the suburban New Jersey market outside New York as well as in the city itself, where Anchor has big operations with a Brooklyn and Queens. It focuses on serving lower-middle and middle-class customers, they noted, and in so doing faces less competition than banks serving more affluent areas.

"We believe that after 15 consecutive quarters of solid profitability, despite regulatory restraints, Anchor is well positioned to build solid earnings momentum," they said.

Moreover, Anchor is "squarely in a position to fill a vacuum" for an acquisitive bank or thrift in the Northeast. Anchor operates 43 offices in New York and 23 in New Jersey as well as several in Florida.

Regarding a positive acquisition, they noted that its current top management owns only 3% of shares outstanding "and has demonstrated it is shareholder-oriented," meaning takeover efforts would get serious consideration.

Last month, Anchor raised $67.8 million in capital through a stock offering, giving it enough equity to free its thrift from regulatory restraints. The new capital brought its leverage ratio above 5%, the requirement for a well-capitalized thrift.

THURSDAY'S MARKET

Major bank stocks were mostly lower again on Thursday as investors continued to worry about the impact of falling interest rates on banks. In late trading, J.P. Morgan & Co. was off $1.25 to $73.125, Mellon Bank Corp. was down $1 to $55.625, and KeyCorp was off $1 to $37.875. □

NationsBank Taps Private Market In Donrey Deal

Continued from *page 1*

ly in the bank loan market.

Depending on the level of interest coverage in the transaction, $500 million "could be a big swallow for banks," one media lender said.

The deal, though, is said to be conservatively structured, with roughly equal parts of debt and equity financing.

Many banks that specialize in leveraged buyout companies have lots of liquidity because some of the bank companies have been tapping the capital markets to pay off bank debt.

Depending on investor demand, the size of the private placement is expected to amount to around $100 million.

Remainder to Be Syndicated

NationsBank will syndicate the remaining $400 million or so in the bank loan market, beginning next month, sources said.

Pricing of the bank loan was not disclosed. Sources said that the borrowing rate – far less than 200 basis points over the London interbank offered rate – further indicates that the deal is not highly leveraged.

Based in Las Vegas, Donrey owns 53 newspapers, five cable television systems, and 11 outdoor advertising plants.

Stephens, a holding company for the Stephens family of Little Rock, is the parent of the brokerage firm of the same name.

Jackson Stephens, the company's chairman, was the financial backer of the Clinton presidential campaign last year.

Donrey, like Stephens, is private-ly owned. □

Rush for the Long Bond Continues

The Markets

Investors continued to register concern on Thursday about a scarcity of long-term Treasury securities, sending yields on the government's 30-year bond into record territory again.

At 5 p.m. in New York, the 30-year bond yielded 6.21%, down from 6.25% on Wednesday. Long-term yields are down about 35 basis points in the last month.

"There has been a scramble for long-term paper," among insurance companies, pension funds, and arbitrageurs, said Douglas Schindwolf, economist for Smith Barney, Harris Upham & Co.

10-Year Notes

Yields also fell on other maturities. The 10-year notes yielded 5.61%, down from 5.67%; five-year notes yielded 4.95%, down from 5.01%; and two-year notes yielded 3.91%, down from 3.94%.

The Treasury last week issued $11 billion of 30-year bonds. But this was the last sale of this maturity for six months, setting off the rush to buy the issue.

In the past, the government had sold the bonds every quarter, but it is limiting the supply of 30-year Treasuries to bring down the government's cost of borrowing.

'Enhanced Security Value'

Typically, investors are willing to pay a 5-basis-point premium for the new issue over the older 30-year Treasury, Mr. Schindewolf said. But the spread is now 15 basis points, reflecting the "enhanced security value" of the new issue.

In addition, investors are bidding up prices of 30-year bonds on the belief that the spread between 10-year and 30-year securities – which has narrowed by about 15 basis points to 55 since last week – will continue to narrow, said Mark Grant, managing director of Rodman & Renshaw.

The strength of the 30-year bond is not based on fundamental economic factors, and that has pushed some market participants, said Kathleen Stephansen, senior economist at Donaldson, Lufkin & Jenrette Securities Corp. "Whenever that occurs, it raises the possibility of a major correction," she warned.

The Dow Jones industrial average rose 7.27 points to a record 3,612.13. The dollar rose to 105.89 yen from 101.60 on Federal Reserve purchases. □

Merrill Lynch Analyst Raises Red Flag About Prospects for Banking Industry

By RICHARD LAYNE

The banking industry is in decline, said Judah Kraushaar, an analyst with Merrill Lynch & Co.

Mr. Kraushaar sees significant overcapacity in the industry and less regulated competitors eating banks' lunch. Without the fillip of exceptional net interest margins, it is questionable whether most banks could earn acceptable returns on shareholder equity, he said.

Those that can generate high ROEs are the best bets, he said.

While Mr. Kraushaar is far from bullish, he and his team of Merrill analysts, including Sandy Flannigan and Livia Asher, like J.P. Morgan & Co., Mellon Bank Corp., First Union Corp., Fleet Financial Group, and National City Corp.

The last two have been labeled "fallen angels" – stocks that have tumbled from investor grace.

Wall Street View

Q.: In the past, you have been more bearish than many analysts, but in recent conversations I have noticed signs of bullishness. Am I reading you correctly?

KRAUSHAAR: Bullishness may be a slight overstatement. I think we are a tad more constructive on the group, but I'm not prepared to say this is the time to have an overweighting in bank stocks.

We were very concerned from the second half of last year through the spring of this year that there was too much optimism about bank stocks. Great spreads aside, this is still not a great business.

A large number of investors who had not been in these stocks for years, if ever, were playing them for an accelerating-earnings story. We felt uncomfortable that that story was sustainable.

Q.: So why the newfound confidence?

KRAUSHAAR: The issue of margin sustainability is out in the marketplace. The improvement in credit costs has happened faster and more significantly than I expected. I feel comfortable that some managements are getting more flexibility to manage their earnings by drawing down their loan-loss reserves.

I was concerned about a real resurgence in inflation. Now, it is difficult to see inflation coming back in a hurry.

As long as that remains the case, I think interest rates will stay under control. So being in financial companies, and banks in particular, offers good relative earnings performance. And bank stocks are about 10% below their previous peaks.

Michael Gaudry

JUDAH KRAUSHAAR, an analyst with Merrill Lynch, says banks that can generate the best returns on equity are the best bets.

Now the question becomes, can you get a new burst of enthusiasm, a new type of buyer or theme that can push the stocks higher? I'm still cautious on that front.

Q.: So what do you look for?

KRAUSHAAR: We like companies that can differentiate their earnings growth and return-on-equity performance going forward.

These companies have to do least one of the following things right.

They either have to have a decisive expense advantage, especially if they are in commodity businesses.

Or they have to have unusual revenue-generating possibilities. That comes from having niche businesses that they got into early and which have some entry barriers.

Both of these types of companies, however, have to show discipline in making acquisitions. They can't overpay.

Q.: So, who do you like?

KRAUSHAAR: We like one money-center bank, J.P. Morgan, which we feel is a differentiated-revenue story, and four regional banks: Mellon, First Union, Fleet, and National City.

Mellon is also a differentiated-revenue generator. The rest have material cost-reduction opportunities that have not been recognized in the marketplace.

Q.: Why Morgan?

KRAUSHAAR: For the two-year period ending in December 1992, J.P. Morgan was one of the worst-performing bank stocks.

In the past two years, Morgan has pursued an aggressive strategy to shift its product mix. There were heavy costs associated with that. It spent heavily to build a lead in derivatives, to broaden the emerging-markets franchise, and to develop full-fledged underwriting capabilities.

Morgan has completed the bulk of its spending to get into these nontraditional products. Now the payday is at hand.

In the second quarter, even if you took out trading and other market-sensitive income, the bank had close to 10% revenue growth. That's the high end of the industry.

This company can demonstrate a fully-taxed 17% return on equity on a long-term basis. The stock is trading around $72. I think this company could be a better than $105 stock by the end of 1994.

Q.: How about Mellon?

KRAUSHAAR: Mellon was especially aggressive in addressing credit problems early. But there is still a drag from credit costs that is masking a very high ROE. Over the past two years, if you stripped out the credit costs, Mellon has demonstrated a better than 16% ROE in its basic businesses.

This is also a company that has been in the forefront of shifting its business mix from spread-related to fee-based income. The acquisition of the Boston Co. accelerated that. Before some expected divestitures, noninterest income for Mellon will be 50% of revenues. That is nearly twice the industry average.

The average bank share trades at 170% of book value. Mellon is about 140% of book. Our price target is the near $80 by the end of 1994. [Mellon shares were trading at $56.50 Thursday afternoon.]

Q.: Is Fleet a classic "fallen angel?"

KRAUSHAAR: Fleet was an analyst favorite through most of the 1980s. Now the stock trades at 1.55 times book, below the group average.

Investors were worried about the New England economy, the publicity around the finance company, and the value of the mortgage company, which has been hurt by a step-up in refinancings.

But what the market has not focused on is that the company has shifted gears and is focusing on what it must do.

Fleet a year ago was among the first banks to pursue the bulk sale of bad assets. It has announced a meaningful expense-reduction program. It is making headway in integrating the Bank of New England. And it is working its way through problems at the mortgage company.

Fleet will emerge as a low-cost producer. It also has an unusual diversification of its franchise out of traditional banking and has geographically diversified out of New England.

Our view is that Fleet two years from now will demonstrate an ROE north of 17% and will no longer trade at a discount to the group. [The company's ROE in the second quarter was 14.08%.] Our 12-month price target is upper 40s.

First Union is a similar story: cost reduction, nontraditional earnings stream, and an inherently high ROE. First Union has been misunderstood because of the economics of its acquisitions in the past. Our price target is around $65 by yearend 1994. [The shares were at $43.625 late Thursday.]

Q.: National City seems to be another company that has fallen into disfavor.

KRAUSHAAR: National City used to be a high performer and a low-cost producer. Then they took their eyes off the ball. They suffered from two large acquisitions they made in the last five to six years. What I like about this company is that it's waked up to the fact that it's fallen from grace.

In the last 1½ years, management has worked diligently at cost cutting. I think reported expenses will be flat in 1993 and 1994, which means earnings will probably grow to the tune of a 15% compound rate, without having to rely on declining credit costs.

National City's ROE will be back to 17% or 18% in 1993 and 1994. [The company's return on equity in the second quarter was 14.80%.] This should be trading at mid- to upper 30s by 1995. □

NEWS *briefs*

Bank South Boosts Its Quarterly Dividend

ATLANTA — Bank South Corp. raised its quarterly dividend to 8 cents from 4 cents, payable Oct. 1 to shareholders of record Sept. 15.

Bank South's dividend was reinstated in February after having been suspended in July 1991.

LaSalle Gets 'Satisfactory' CRA Rating

CHICAGO — LaSalle National Bank said it has received a "satisfactory" rating for its compliance with the Community Reinvestment Act.

Last year, LaSalle had received the lower rating of "needs to improve."

The bank, which has more than $7 billion of assets, is a unit of LaSalle National Corp., a subsidiary of ABN Amro Holding that operates seven banks in the Chicago area.

Chase Sets Date for Redeeming Preferred

NEW YORK — Chase Manhattan Corp. said it will redeem all of its 6.75% series B preferred stock and all its 7.60% series C preferred stock on Sept. 24.

The company said there are 260,273 outstanding shares of its series B stock, and 270,096 outstanding shares of its series C stock.

The redemption price is $100 a share plus accrued dividends to the redemption date of $1.33125 a share, or an aggregate of $101.33125.

Chase said the redemption price of the series C preferred stock is $100 a share plus accrued interest of $1.49889 a share, or an aggregate of $101.49889 a share.

The company, which will act as the redemption agent, said total proceeds will be about $54 million.

Citicorp to Redeem Subordinated Notes

NEW YORK — Citicorp said it would redeem on Sept. 17 its 8.15% subordinated notes due Jan. 15, 1997, at 100% of par plus accrued interest. Currently, $200 million is outstanding on the issue, the company said.

First Banks Deal for a St. Louis S&L Gains

CLAYTON, Mo. — First Banks Inc. said it entered a definitive agreement to acquire all outstanding stock of American Home Savings and Loan Association of St. Louis for $1.50 a share in cash.

The company said that, as previously announced, American Home will merge with its unit, First Bank – A Savings Bank, following the transaction.

First Bancorp of Ohio Declares 2-for-1 Split

AKRON, Ohio — First Bancorp of Ohio declared a 2-for-1 stock split payable Sept. 13 to shareholders of record on Aug. 30.

The company also declared a 23.5 cent dividend on post-split shares with the same pay and record dates.

The new rate is equivalent to 47 cents on the presplit shares, a 9% increase from the 43 cents the company had been paying.

The briefs were compiled from staff and wire reports.

Correction

The headline for an article Friday about CoreStates Financial Corp.'s planned acquisition of Constellation Bancorp, mistakenly identified Constellation as a thrift. It is a commercial banking company.

Also, CoreStates' vice president in charge of mergers and acquisitions, though correctly identified in first reference as Jorge Leon, was thereafter misidentified as Mr. Jorge.

OTS to Post Its Capital Standard For Thrifts with High Rate Risk

By ROBYN MEREDITH

WASHINGTON — Thrift regulators will unveil today a rule they have worked on since 1991 that will force thrifts subject to above-normal interest rate risk to raise capital.

The rule, which takes effect next July, would affect less than half of the industry if it were applied today, and would require just 22 thrifts to raise $43 million in capital or reduce their rate risk in order to comply. Small, well-capitalized thrifts are exempted from the new Office of Thrift Supervision rule.

The other banking agencies have also been writing new regulations to incorporate rate risk in commercial bank capital standards, and hope to publish their regulations by September.

John Robinson
Risk is part of the business

John Robinson. OTS West Region director-designate. "But they have to control it."

Under the new rule, a thrift must prepare for a 2% shift in interest rates if it would decrease the market value of the thrift's assets by more than 2%, the threshold the OTS set as "normal" rate risk. A savings association's minimum risk-based capital requirement will go up by 50 cents for every $1 in losses the thrift would suffer above that threshold.

Although the new regulations require thrifts to guard against rate risk by holding more capital, industrywide capital levels would not necessarily increase. The reason: Regulators plan to drop from 4% to 3% the amount of core capital thrifts must hold.

"What we are trying to measure is the change in the present value of the institution's portfolio," Mr. Robinson said. Now, well-capitalized thrifts must hold 4% core capital and 8% risk-based capital to guard against future losses.

To test thrifts' interest rate risk exposure now, the OTS requires most thrifts to fill out forms each quarter called consolidated maturity and rate schedules. The forms ask for 600 pieces of information about the thrift's assets and liabilities, and are sent to the OTS electronically.

Under the new rule, thrifts will fill out the same forms, and will get back analyses from the OTS about how the market value of their institution would change if interest rates dropped or rose by up to 4%, plotted out in 1% increments. Thrifts with above normal interest rate risk would have six months to set aside more capital or reduce their risk.

Thrifts with less than $300 million in assets that also hold at least 12% in risk-weighted capital would remain exempt from reporting the detailed financial information the rule relies on to determine rate risk.

If the rule were effective now, only $11 of the industry's 1,923 thrifts would be required to fill out the complicated forms. □

3,000 Banks Affected

The bank rules are expected to affect only 3,000 midsize banks holding about 10% of the industry's assets, and will not be effective before December 1994.

The rules for thrifts are more stringent than those for banks. OTS officials said that is because S&Ls inherently have more interest rate risk because their portfolios include more fixed-rate, longer-term loans.

"We are not trying to tell them they should not take any interest rate risk, because they have to – it is part of their business," said

MortgageFlex Software Adapted for OS/2

By JEANNE IIDA

A popular software package for mortgage lending has been upgraded to run on International Business Machines Corp.'s advanced operating system for personal computers.

Most mortgage origination systems use Microsoft's DOS operating system or Novell's NetWare. MortgageFlex Systems Inc. says OS/2 provides faster response.

Bankers' interest in the IBM PC operating system, called OS/2, was revived this spring, when the computer company released its latest version of the software. Operating systems control a computer's basic functions.

The new version of OS/2 performs processing tasks more quickly than computers using systems, said E. Lester Dominick, president of MortgageFlex Systems Inc., Jacksonville, Fla., a vendor of mortgage lending software.

MortgageFlex has three software modules – mortgage application processing, interest rate risk management, and point of sale loan origination using laptop PCs – that have been adapted for use with OS/2, Mr. Dominick said.

The MortgageFlex software, which already runs on Unix and DOS operating systems, has been installed at about 70 institutions. The company has about 22% of the market of major mortgage originators, according to Mr. Dominick.

GE Mortgage Capital, a subsidiary of General Electric based in Raleigh, N.C., is using the MortgageFlex loan origination software to allow real estate agents to file applications remotely. Huntington Bancshares, which has said it is committed to using OS/2 throughout its organization, is reportedly also interested in the software.

Battle Taking Shape

Most of the existing mortgage origination systems run on Microsoft Corp.'s DOS operating system or, when PC networks are used, Novell Corp.'s NetWare. Mr. Dominick said the advantage of running on OS/2 is that those banks that are committed to the operating system can use this software and get much faster response times than if they were using DOS.

As banks move software away from the mainframe and onto networks of personal computers, a battle is shaping up among IBM's OS/2, Microsoft Corp.'s Windows NT software, and networking software from vendors like Novell.

Today, about 90% of the 805,000 desktop computers in banks run on operating systems from Redmond, Wash.-based Microsoft, compared with about 5% that currently run OS/2, according to the 1993 *American Banker/Ernst & Young* survey of technology in banking.

But a larger number, 12%, of banks use OS/2 on the server, the computers that acts as hubs on networks to store files or communications software. Another 59% run Microsoft's DOS, and 4% run Microsoft's Windows software, according to the survey.

"Banks are saying they like OS/2 on the server," said Greg Schmergel, a consultant with Tower Group, Boston.

"There's been an interesting reversal," said Mr. Dominick. "Three or four years ago, all the big banks wanted OS/2 applications. Then, about 18 months ago, all we heard is Windows. But since OS/2 version 2.1 came out, there's been a resurgence of interest in OS/2."

But Mr. Dominick also said that once all the pieces are available, his company will convert the software to run on Windows NT as well.

The software has modules to handle the origination and sale of residential mortgage loans, called the Residential Lending System; a rate-risk management system, called Advanced Secondary Marketing System; and a system for loan origination at the point of sale that can be used by real estate agents to prequalify and take the loan application for potential home buyers. □

NCR Financial Enterprise Architecture

The Advantages Of Massively Parallel Computing In The Financial Enterprise.

NCR's Financial Enterprise Architecture (FEA) offers a visionary blueprint for financial institutions to create a flow of information and solutions across the enterprise. One of the key technology enablers within FEA is NCR's massively parallel processing (MPP) solutions.

Parallel processing machines use hundreds of microprocessors to break down tasks into smaller pieces that can be processed simultaneously (at performance in excess of 10,000 MIPS), dramatically speeding up transaction times and complex queries.

On-Line Complex Transaction Processing (OLCP)

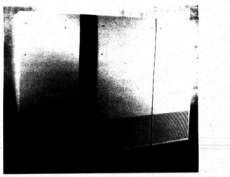
Most banks already have such an overwhelming amount of data that it is difficult to access selective information that supports decision-making. Plus, that data is usually isolated in disparate systems and software across the enterprise.

However, with MPP, On-Line Complex Transaction Processing applications are possible. OLCP combines high volume transaction processing with larger, data intensive applications to dramatically improve real-time analysis of enterprise business data. OLCP environments are characterized by concurrent OLTP, decision support, complex processing and ad hoc query processing.

OLCP applications can provide bankers with actionable information for competitive benefits, including:

- **Real-time transaction analysis,** to help determine appropriate action for customers with complex investment, CD or loan decisions that require rate and options analysis.
- **Real-time availability of transaction/household data,** versus summary data, to create new products or services. For example, a marketing program query asking for all single income households with $50,000+ incomes, savings of $10,000+, and specific transaction parameters.
- **High volume credit card transaction analysis,** to identify customer patterns and other criteria that can eliminate fraudulent use.
- **Real-time availability of credit history reports,** to support risk management analysis.
- **Strategic decision support,** to help banks evaluate the most profitable directions to pursue, which areas of business to move into or leave, where to locate branches, and what level of service and automation is needed in each location.

There are more ways the sheer computing power of parallel processing can help you create answers out of your mountains of data. Phone 1 800 CALL NCR today, or talk to your NCR representative.



NCR's System 3600 and DBC/1012 have helped NCR gain an 80% share of the commercial parallel processing market.

Shawmut's Overstrom Sees Light At End of Tunnel in New England

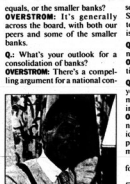
By JED HOROWITZ

No region of the nation has endured the current economic slowdown longer than New England. But Gunnar S. Overstrom, president and chief operating officer of Shawmut National Corp., the region's third-largest bank company, sees signs of revival.

Shawmut's profits soared back to respectability in the last two quarters, primarily because problem assets are under control, expenses are down, and interest rate margins are wide. Now, Mr. Overstrom says in the interview below, the company is focusing on revenue growth, with a strong emphasis on fee-based products.

Mr. Overstrom, 50, who also is president of Shawmut's lead banks in Hartford, Conn., and Boston, earned undergraduate, law, and graduate economics degrees from local colleges, and joined a Connecticut bank now owned by Shawmut in 1975.

He was named chief financial officer of Hartford National Corp. in 1979 and chief executive of Connecticut National Bank in 1988, the year it merged with Shawmut.



Q: How is the New England economy looking today? What are your customers telling you?

OVERSTROM: There's every indication that we've either bottomed or will bottom here very shortly. I just completed quarterly reviews of all of our business lines, and the fascinating thing is that we're finally seeing some loan demand in our core middle-market banking activity. We've had a runoff in that portfolio for a number of years now.

Our people sense that the decline bottomed in June, was up slightly in July, and, given where we've come from, picked up in August.

In the consumer banking sector, we have see some growth in home-equity lending and our auto finance business. And our mortgage activity is just booming. We're the No. 1 home-equity lender in New England and the leading indirect auto lender in Connecticut, so I think we're a pretty good proxy for activity on the consumer side.

We're a lot more positive today than we have been in some time.

Q: Now that you have the leeway to focus a little less on credit quality, are you and other banks competing more vigorously by lowering prices or credit standards?

We sense more competition in our marketplace both on credit and on price. It's not surprising that it happened, but it's surprising that it's happening so quickly.

We think it's kind of foolish. What typically happens when you compete on price is the bank ends up the loser.

It's a bit irrational, but we've always been willing to compete on price if that's the appropriate competitive reaction.

Q: What about the credit side?

OVERSTROM: We are not going to be persuaded to modify our credit standards to meet the competition where we think they are doing something inappropriate.

Q: Are you talking about your equals, or the smaller banks?

OVERSTROM: It's generally across the board, with both our peers and some of the smaller banks.

Q: What's your outlook for a consolidation of banks?

OVERSTROM: There's a compelling argument for a national consolidation. New Hampshire [where Shawmut is waiting for approval to buy New Dartmouth Banks] is already a consolidated state.

Q: Is anything going on right now in terms of due diligence?

OVERSTROM: There's a lot of activity.

Q: Let's switch to revenues. Can you elaborate on why you are moving so aggressively into selling mutual funds?

OVERSTROM: Our strategy recognizes the changing demographics and the clearly significant opportunities in the money-management business.

The fastest-growing product for us today is clearly the mutual fund opportunity. We've met or exceeded our expectations since we've launched the mutual fund activity back in February. We've added more mutual funds, we've added more salespeople dedicated to sales of the product, and each week that goes by we add more money under management.

Q: How many salespeople do you have?

OVERSTROM: We have 100 dedicated salespeople, whose sole responsibility today is to sell mutual funds. As we roll out our annuity products later this year, they will sell those, too. We expect to hire at least 20 more salespeople by yearend.

Q: Are all sales done out of the branches?

OVERSTROM: Eighty-seven people are in our branch system, and 13 licensed salespeople are in our private banking unit.

Q: When do you expect to roll out the annuities?

OVERSTROM: In the fourth quarter.

Q: What kind of product will you offer?

OVERSTROM: Both the variable and fixed-rate annuity.

Q: Are you looking at selling money-management products nationally?

OVERSTROM: That may be a longer-term opportunity, but right now we're going to focus on New England.

In our institutional money-management activities, we do have a national effort taking place, selling defined benefit and defined contribution plans, that is going quite well.

Q: Is the growth potential greater on the retail or institutional management side?

OVERSTROM: The market is growing much faster on the consumer side. You see very slow growth in demand for defined benefit or defined contribution, with defined benefit growing negatively. The institutional business is a market-share game for us since there is not a growing market.

Q: Can you buy market share?

OVERSTROM: You mean make acquisitions? We've looked at buying institutional money managers, and continue to.

Q: How is your mortgage business progressing?

OVERSTROM: Activity is at re-

cord heights. We think that will continue for a couple more months, but at some point the refinance business will be over.

The mortgage business is cyclical, to be sure. Originations go up and down based on housing activity and interest rates. But what the market seems to miss is that the true-quality profit stream from in mortgage banking comes from the mortgage servicing portfolio.

We've just crossed $6 billion-plus in our servicing portfolio. We've been the market leader in originations for some time. We would like to expand that business. We like the business.

Q: You sound like you've made a new commitment there.

OVERSTROM: We think we can selectively make acquisitions of mortgage bankers and mortgage brokers, and we also see opportunities to grow internally.

Q: How will you grow internally?

OVERSTROM: By opening up mortgage banking offices where we might not have a branch.

Q: You've been a strong middle-market and retail bank, but you've recently pushed into national corporate lending by hiring some seasoned bankers. Why now?

OVERSTROM: We recognize an opportunity. Many of the money-center banks that were active on-balance-sheet lenders have reduced their appetite for corporate loans and have become much more investment bankers or brokers than traditional commercial banks.

They've taken some capacity out of the system.

Also, while we expect New England to stabilize and then grow, we think the rates of growth will be moderate. We need to find alternative sources of asset generation or income that allow us to grow faster. National lending lets us diversify our loan portfolio out of a given region, and it gives us the ability to attract people with skills and talents in another sector.

Obviously, the goal is to get not only the loan relationship, but to cross-sell other banking services. We're a nationally known cash-management bank – the leading one in New England – and have a national reputation in certain fields, such as servicing the insurance industry.

Q: Will you open loan production offices?

OVERSTROM: No. We've added at least three or four lending people in Boston, and a syndication capacity in Stamford, Conn. We will continue to add resources as long as the market can accept that the business offers an attractive return for our shareholders.

Q: Speaking of shareholders and balance sheets, do you have any plans to go back into the capital markets?

OVERSTROM: Our capital is growing very quickly and we have excess liquidity. So, barring acquisitions of any significant size, we don't see the need to go to the capital markets today. We feel we can meet our growth needs through internal asset generation.

Q: Are your credit problems behind you?

OVERSTROM: Our nonperforming asset ratio [as a percentage of total loans and foreclosed property] is 3.3%, so that issue really is behind it. Our reserve coverage is 170% of nonaccruing loans. The outflows of nonaccruals have exceeded the inflows for the last six quarters. So we're in very good shape.

Our company is now focused on growing revenues, growing our franchise, improving our financial performance, and growing our stock price.

Q: Are you at the point where you don't need to take a provision against loan losses?

OVERSTROM: At this time we are not talking about that. But our reserve is so large that we did not take any significant provisions in the last quarter, and don't expect to near term.

Glenfed Shows Bailout Alternative

Continued from page 1

be stressed.

Glendale expects to complete its reorganization by Sept. 24, the thrift said. The plan includes merging the holding company, Glenfed Inc., into a subsidiary of the thrift.

In addition, current bondholders and preferred stockholders will exchange their securities for common or preferred stock, recovering roughly half the face value of their holdings. Existing common shareholders will get only about 2% of the thrift's newly issued equity, reducing the value of outstanding shares to less than 40 cents.

The key was lining up standby investors.

The newly raised capital includes a $250 million rights offering to current shareholders at a subscription price of $9 per share. And Glendale is selling $175 million of preferred stock yielding 8.75%, convertible to common stock at $11.70 a share.

Key to completing the rights offering was lining up agreements with standby investors to buy common stock not bought by existing shareholders. About 15 institutional investors committed between $10 and $30 million to the offering, wellplaced sources said.

"The [investors] have been through four or five [financial institution] turnarounds" in California and elsewhere, said an individual close to the deal.

The First Boston Corp. and Friedman, Billings, Ramsey & Co., a small Washington, D.C., investment bank, will collect between $15 million and $25 million in fees, sources said.

NEWS ANALYSIS

IT'S REGISTRATION DAY AT THE COLLEGE FINANCIAL AID OFFICE. IF YOU HELPED CREATE THIS SCENE, YOU'RE IN BUSINESS.

BY PROVIDING EFT SERVICES, YOU HELP FAAS ELIMINATE LONG LINES AND PAPERWORK – WHILE BRINGING IN BUSINESS FOR YOUR BANK.

In financial aid offices across the country, the "Registration Day Crunch" is becoming a thing of the past. Students no longer line up in the halls waiting to take care of their loans. Financial Aid Administrators are thankful for the reduction in paperwork, and as a result, banks that offer EFT are getting more business.

Today's FAAs are so convinced of the benefits of EFT that many are directing students only to lenders who offer the service. Lenders without EFT no longer get referrals from those FAAs.

To make sure your bank is at the top of FAA's preferred lender list, talk to the dedicated teams of EFT experts at Sallie Mae. We meet the many and varied needs of all types of colleges and universities. And our experience is unmatched as we continue to implement EFT coast to coast.

Your Sallie Mae Sales Representative can tell you more. Why not call today? Start now to help your clients end the Registration Day Crunch, while you build business for your bank.

Boatmen's Buying Bank That Really Delivers

By PETER SCHOENKE
Special to the American Banker

Marketing

BOATMEN'S BANCSHARES WILL INHERIT a high-profile community banking operation if its takeover of First Amarillo Bancorp. is approved.

The question is: Will the St. Louis-based company keep a unique service that the Texas bank recently put in gear?

Last month, Amarillo started delivering banking services to its customers' doorsteps. After applications for loans and new accounts are taken over the phone, bank employees deliver prepared papers to customers' homes for their signatures.

"In the past some banks have had this for special customers," said Sharon Brown, senior vice president of marketing at First Amarillo, "but our purpose is to begin the total shift to total banking by phone."

The program, known as the "Ultimate Fast Offer," began six weeks ago as a promotion for new checking accounts. But Ms. Brown said the bank will offer almost all of its services for delivery.

But the delivery service is not for everyone. Ms. Brown said that about 60% of customers have chosen to drop in at the bank because the forms are prepared and they know they won't have to wait in line.

UFO SIGHTING: Print ads help customers identify First Amarillo's "Ultimate Fast Offer."

The service builds on a program Amarillo started in 1991 – a mobile branch in a double-decker bus, "Bob the Bankwagon," which features an automated teller machine and a full-service teller.

"The Amarillo market is very competitive, and we've had to work hard to keep introducing new products and services," Ms. Brown said. "The public is so barraged by different bank promotions that we needed something really unique."

First Amarillo saw its share of deposits in the Amarillo area grow to 30.4% in 1992 from 26.2% in 1991, widening its lead in the market. As of June 30, its return on average assets was a healthy 1.7%

Says Takeover Won't Change Approach

These results were strong enough for Boatmen's Bancshares to agree in July to purchase the bank in a stock swap valued at roughly $175 million.

Don Powell, First Amarillo's chairman and chief executive, said the takeover will not change the bank's aggressive community banking approach.

Chris Williston, president of the Independent Bankers Association of Texas, agrees.

The deal will be "as transparent as any merger can be as far as business as usual," he said.

Mr. Powell likens his bank's delivery services to those pioneered by Domino's Pizza. "Looking at what First Amarillo did, I think the same is going to be true in banking through the telephone and television," he said.

And this step toward the future has also been relatively inexpensive, he added. Thirty drivers, drawn from among the bank's 400 employees, perform the deliveries – often on their way home or to lunch. All bank officers are required to make two or three deliveries per week, Ms. Brown said.

A Unique Situation

Mr. Williston, the trade group president, said he does not see home delivery as the wave of the future, viewing the program rather as a reaction to the unique spread-out nature of Amarillo's metropolitan area. Elsewhere, he said, the higher concentration of ATMs would undercut the appeal of the program.

But the program might have repercussions beyond the marketing gains. Mr. Powell said the bank already has seen an increase in the number of homebound customers who previously would have found it difficult to open an account. And he hopes the program will reach into areas that have few banking services.

The program also "is helping us in changing the mindset of our employees to make everything easier for the customer," Ms. Brown said.

Mr. Schoenke writes for the Medill News Service.

Q: What type of positions are you trying to fill?

ORSON OLIVER
President
Mid-America Bancorp
Louisville, Ky.

We've gone outside the industry. We just hired a fellow to run our commercial loan operation, who has no lending experience. We also just hired a new general counsel. The only relationship he had with a bank was his checking account. He was the general counsel with Brown Williamson Tobacco.

We needed a general counsel and this guy has one of the finest legal minds I have ever worked with. He has given a whole new perspective to running a bank as a business instead of just a bank.

The way we view the world of banking today is things are changing so rapidly that if we become aware of a very good person that has a special expertise we are willing to talk with him. To compete in today's marketplace we've got to be more agile than the big guys. □

WILLIAM C. ENLOE
President
Los Alamos (N.M.) National Bank

None. We are just on hold as far as employees go. It's not a freeze, we are just replacing turnover. They are bookkeeping, teller, and secretarial-type positions.

We are in a one-industry town, Los Alamos National Laboratory. When they are hiring we have turnover. That's how it works; it's real simple.

It is not our officers, it is the secretaries, bookkeepers, and tellers. We are close to them in the pay area, but not in benefits: five weeks' vacation, 100% of their medical insurance, which includes life insurance.

It is a constant battle when they are hiring to keep good employees with the bank. Private business just can't compete. □

WILLIAM R. FURBEE
President, chief executive
Equitable Savings and Loan
Sterling, Colo.

We recently added an executive vice president, who does everything the CEO does in his absence and functions as the chief lending office.

Our economy is the brightest in the country. We are a $150 million-asset company, and we are lending $100 million a year. We are going gangbusters.

We have to pretty well stay staffed up. There have been two others [hired], a branch office supervisor and a construction lending person. We intend to do more construction loans than we have done in the past.

The construction person comes from a large bank, Banc One, the executive vice president came from a small bank in Denver, and the branch supervisor was outside banking, although she had 27 years in banking. □

Most Unemployed Bankers Seek Bank Posts

By BILL ATKINSON

It takes more than tough examiners and truckloads of government regulations to force an unemployed banker to find a new line of work.

A study of 1,162 unemployed bankers who received outplacement assistance from Philadelphia-based Right Associates, shows that less than 10% opted for jobs outside of banking.

Of the 110 bankers who did so, 21% remained in a field related to banking, meaning they either took jobs at smaller banks or regulatory agencies, or became consultants to banks. Others became consultants (22%), entered the sales field (22%), joined nonprofit firms (13%), and entered the insurance industry (5%).

Making the Most of Skills

"Most of the people say they are going to capitalize on their existing skills," said Joseph T. Smith, chief operating officer with Right, who noted that he was not surprised by the number. "There is instability in every industry. The individuals whom we work with . . . don't want to leave the industry where all of their skill sets are."

The study by Right, "Career Transitions in the Banking Industry 1990-1992," examined the careers of bankers who received outplacement services from the firm.

In a study of 1,162 bankers, fewer than 10% changed fields.

Jobs Take Longer to Find

Unemployed bankers who were under 40 years old were most likely to find jobs more quickly than bankers over 40, according to the study. In 1992, it took a banker under 40 years old 27 weeks to find a new job, compared with 29 weeks for bankers between 40 and 49, and 35 weeks for bankers between 50 and 59.

The time required to find a new job increased from 1990 to 1992. The average increase was 5.6 weeks for bankers under 40, 3.4 weeks for bankers between 40 and 49, and 4.9 weeks for those aged 50 to 59.

Of the group of 1,162 bankers, 49% increased their income, 35% maintained income, and 46% saw their income decreased. Bankers under 40 were slightly more successful in getting raises than their older colleagues, the study said. Older bankers generally are paid higher salaries because they have more work experience.

Though the industry is contracting, Mr. Smith said banks are looking for people skilled in marketing and sales, in technology, and in launching new products.

He also said bankers who were once with larger institutions are finding homes with community banks.

"There is a great deal of appeal for the smaller, boutique banks that offer a great deal of personal attention," he said. □

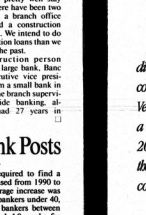
HIS CREDIT CARD COUNTERFEITING DAYS JUST BECAME NUMBERED.

Now, Visa's PaymentService 2000 helps stop magnetic stripe counterfeiting.

On April 1, 1993, Visa scored a direct hit against magnetic stripe counterfeiters. The Visa® Card Verification Value (CVV) Program, a key feature of PaymentService 2000, served notice to criminals that an all-out attack on counterfeiting had begun.

This major step forward allows Visa card issuers to validate that the contents of their cardholders' magnetic stripes have not been altered by counterfeiters.



Percentage of worldwide transactions checked by CVV.

In just three short months, the Visa CVV Program has allowed issuers to enjoy saving more than $30 million in potential counterfeit losses if the full open-to-buy had been compromised.

A value encoded in the stripe counterfeiters.

As transactions checked by CVV increase, Visa Members worldwide can anticipate even greater savings.

The message has been sent. Visa Members have a new weapon: CVV. Now, the guys who counterfeit stripes may soon be wearing them.

WHAT DO MEMBERS SAY?

"In the first few months of implementation, we have identified as much as $1.7 million of open-to-buy that had the potential of being fraud."
— John Totten, Senior Vice President and Chief Technology Officer, FirstCard

"Using CVV, we have blocked over 800 accounts, saving our institution millions in potential losses."
— Art Desloges, Director of Security Services, Citibank US Card Products

"Since CVV has been in place, we have significantly reduced our losses and are catching counterfeit card activity in less than a day."
— Michele Shalmon, Security Supervisor, Great Western Bank

"We have already experienced important savings since we implemented Visa's CVV Program."
— Rick Scully, Vice Chairman, First U.S.A. Bank

PAYMENTSERVICE 2000
Results you can bank on.

Show the regulators you're certifiable. 1-800-456-2340.

Regulatory compliance is driving many bankers crazy these days. Constant changes, the push-pull of compliance vs. safety and profitability, and mixed messages from government entitites have many bankers longing for a simpler time.

That's why we've brought you the **Sheshunoff.. Regulatory Compliance Certification Program.**

This self-paced, in-bank training program is divided into 5 modules. Each module covers a single key area of compliance in detail, and is completed with an exam sent to us for grading.

Current modules are **Requirements of the CRA; Lending Requirements:** Truth in Lending, RESPA, HMDA, Flood Disaster Protection and National Flood Insurance Act; **Discrimination:** ECOA, Fair Credit Reporting Act, Fair Housing Rules: **Deposit Disclosure and Interest Rate Requirements:** Regs CC, D, Q, and TIS; and **Bank Secrecy Act, EFT Act, Right to Financial Privacy Act, Reg O** and **ADA.**

The modules are sent to you in any order you choose. Each includes a manual with all the information you need, plus a full year of Updates.

When all 5 modules are completed, your participant will be certified as a Sheshunoff Compliance Officer. You can be confident that he or she has the skills your bank needs. And you'll receive a Certificate suitable for framing and hanging in your bank to show the regulators that you've recognized and met the serious, demanding challenges of compliance.

So get certified and stop letting compliance drive you crazy. For more information on this proven, affordable, self-paced, modular approach to better compliance, call 1-800-456-2340.

Vendors and Agents Can Help You Track Down Waste

To learn about a bank's "spending culture," you don't need expert auditors. You can just talk to the people who sell to it and examine what is bought from them.

Sometimes you can learn of poor practices by accident. I was talking to an Amtrak agent who told me about the individual who regularly bought a first-class Metroliner ticket from Baltimore to Washington when for a quarter of the cost he could have taken a regular coach train that takes six minutes longer.

I asked where the traveler works. A major New York bank, I was told.

Weekly Adviser

By PAUL NADLER

One solution to this waste of bank money is to have an auditor go over every check the bank issues. But a companion step that some community bankers suggest is for management to get on friendly terms with the purchasing agents and vendors who sell the supplies that the bank buys.

Don't Be Obvious

Naturally a bank officer can't call up a purchasing agent and ask "Has my staff been buying unnecessary supplies?" or "Have my people been paying more than they should for services and goods you provide?"

Any purchasing agent who responds to those queries with specific examples of waste is bound to lose this account. You can be sure that the people who buy the supplies in the bank will find othes suppliers as soon as they find that the present agent is a snitch.

But there are positive ways that the same results can be accomplished.

Invite Them to Lunch

One positive step is to call in the manufacturers' reps and sales agents who service the bank and let them go through the organization to see if the bank is up-to-date.

Sit down with these reps, preferably at an informal lunch. Hear what they have to say about what the bank can use in the way of new products and services, or about where the bank's approach and equipment is obsolete because of new developments. You can learn a lot.

Purchasing agents say yhey love to tell the managers how the bank can become more efficient, as this cements the relationship.

An Executive Responsibility

Why does top management have to become involved?

Sometimes this is needed simply because the employees who now do the ordering do not feel they should take initiative, but should simply follow the orders issued to them when they took over the responsibility.

In other instances, the top management can see opportunities from discussion with manufacturers' reps that the staff people could not glean out of a discussion, due to their limited expertise and responsibility.

Get on friendly terms with the folks who sell what the bank buys.

Even in many of those cases where the manufacturers' rep knows that the bank has been ripped off by its own employee, it is likely that the rep will either talk directly or allude to the problem in an informal meeting.

A good rep knows that if the bank is being taken advantage of by its purchasing people, eventually this will be found out. Then the bank is likely both to fire the employee and break the relationship with the rep who allowed this to happen.

Cultural Issue

Finally, the managers of the bank must take the attitude that talking to the reps and salespeople is not just a case of looking for dishonesty.

Rather it involves probing to see if the entire bank culture needs changing.

How many banks have found that the staff looked at telephone calls as a free good until management found that they were getting so out of hand – like calls to Aunt Minnie in Hawaii – that the bank had to develop a system of control?

Talking to the people who service the bank can root out such attitudes in other areas of the organization to the benefit both of the bank and of the people who sell it the goods and services it uses. □

Unisys check imaging delivers the competitive magic of tomorrow.

Today.

To picture the advantages of check imaging, picture the check imaging solutions Unisys already provides.

No one more effectively applies imaging technology to the mission-critical work of check processing. Our Unisys InfoImage IIPS system is an advanced, fully-featured solution that integrates readily with banking's computer environments, enabling you to protect your existing investment.

With a customer focus and decades of industry experience, we've designed check imaging to support not only an image statement application; but a truly comprehensive solution–including our breakthrough Proof of Deposit application and its substantial cost savings. Unisys check imaging even helps you create revenue-generating services such as payable-through drafts and account reconcilement.

Our fully-functional check imaging solutions are available today, not sometime down the road. And with two years of success, they're user proven–bringing you the benefits of advanced technology, not the risks. Benefits we've already brought to banking leaders such as Comerica, Signet Bank, Huntington Banks, and others.

Call us at 1-800-874-8647, ext. 174. Ask how check imaging from Unisys can help improve your financial picture now.

North American's Chief Dodges Prepayment Bullet

By EDWARD KULKOSKY

People in the News

IN A RESTAURANT IN DALLAS almost 20 years ago, Lainie Kazan was singing and some businessmen in the front row were celebrating boisterously. Ms. Kazan asked them what the occasion was.

"Why, we've just introduced the biggest carwash machine in the world," their leader replied.

Terrance Hodel was also in the audience that night, and he says he thought to himself, God, am I lucky to be in the mortgage business.

Today, Mr. Hodel, 50, is president and chief operating officer of North American Mortgage Corp. of Santa Rosa, Calif. He joined the company in 1979 when it was called Wells Fargo Mortgage Co. And he is still utterly delighted to be in mortgages.

"Last year was the most extraordinary year I've ever had in the mortgage business," he said. "Our originations grew so much that we've reached a level that we never even dreamed of in the past. And we went public at the same time."

This year hasn't exactly been a downer for Mr. Hodel, either. Securities analysts have become enamored of North American's stock, and the shares have been riding high, trading recently at about $26.50. The company went public at $11.50 a share last year.

In the second quarter, the company earned a record $13.1 million, up 67% from profits in the quarter a year earlier. For the first half, profits have climbed about 50%. And loan originations continue to soar, reaching about $7 billion in the half, up about 40%.

Terrance Hodel

North American has also managed to escape, at least in part, the prepayments that have been plaguing the mortgage business this year as the obverse of the refinancing boom. And Mr. Hodel says modestly that a certain amount of luck was involved.

"Our theory is that our main business is producing a servicing contract," he explains. "It's an investment decision whether or you want to keep that contract or sell it. We want to remain flexible."

'We Made the Right Choice'

That investment decision last year was to sell about 40% of its servicing. And currently, it is selling 40% to 45%. The sales have helped insulate North American against a severe prepayment drain.

"In retrospect, we made the right choice," Mr. Hodel says. But we now intend to further build our servicing portfolio."

Limited Effect on Earnings

Mr. Hodel adds that much of the retained rights are on loans originated by North American. Since such rights are not carried on the books as assets, the runoff has only limited impact on earnings.

One of the secrets of North American's success has been its aggressive at telemarketing, and Mr. Hodel says he is expanding those efforts: "Basically, we have added loan officers and added systems. And we are doing more outbound calling – you know, those people who always call you at dinner."

Ginnie Mae Remics Seen Bringing Tiny Price Cut on FHA, VA Loans

By SNIGDHA PRAKASH

WASHINGTON — Lenders expect Ginnie Mae's proposed Remic program to slightly reduce the cost of Federal Housing Administration and Veterans Administration home loans.

William R. Godfrey, senior vice president of All Pacific Mortgage Co., estimated that the Remic – the acronym stands for real estate mortgage investment conduit – would cut the discount points that borrowers pay on government loans by a quarter of a point.

John S. Philips, senior vice president of Crestar Mortgage Corp., agreed.

That decrease – about $250 on a $100,000 loan – would also slightly raise the volume of government-insured loans, lenders said. "It's not enough to get too excited about. It's what it is – a quarter of a point," said Mr. Philips.

New Authority

Ginnie Mae securities are pools of loans insured by the Federal Home Administration and the Veterans Administration.

Earlier this month, Congress gave the Government National Mortgage Association new authority to issue Remics.

Remics are made by pooling pass-through mortgage-backed securities and carving up their cash flow into securities with many different maturities.

The Federal National Mortgage Association and the Federal Home Loan Mortgage Corp. each pool their securities into Remics. In addition, Fannie Mae and Freddie Mac have also issued Remics made up of Ginnie Mae securities.

"What a Remic allows you to do is chop up cash flow to meet different investor needs. There-

The saving would come to about $250 on a $100,000 loan.

fore, you increase demand for the underlying security," explained Debbie Cohen, vice president of MBS capital markets at Fannie Mae.

Higher demand for Ginnie Mae securities will pull up their price and push down the interest rates that consumers pay on the loans that make up the securities, said Ms. Cohen.

Further Changes Foreseen

In addition to cutting loan rates, the Remic should lead to some changes in the underlying Ginnie Mae security, said Robert O'Toole of the Mortgage Bankers Association. The trade group is discussing these with Ginnie Mae staff, but Mr. O'Toole declined to elaborate.

The next announcement from Ginnie is likely to come in the form of a request for bids to run the Remic program.

With only four additional staff members budgeted to administer the new Remic, it appears that most of the sophisticated financial modeling and administration of the program will be done outside the government agency.

A Role for Other Agencies?

The obvious choices would be companies such as Fannie Mae, Freddie Mac, and Wall Street firms that are heavily into the Remic business.

Ms. Cohen, who is a chief architect of Fannie's Remic program, would not comment on whether Fannie Mae is talking to Ginnie Mae about running the new Remic.

Freddie Mac officials were not available for comment.

Once Ginnie Mae requests bids to run the Remic program, it will likely be another four to five months before a company is chosen and submits a detailed Remic plan to Ginnie Mae, Mr. O'Toole said.

"Unfortunately, I think they're going to get bogged down in contracting," he said. "Our feeling all along is that it's a good thing, and they should get on with it." □

Second Insurer Unveils Plan to Cut Closing Costs

By JAMES H. SAPT

Mortgage Guaranty Insurance Corp., Milwaukee, announced last week a premium payment plan that will enable borrowers to sharply cut closing costs.

The plan will allow consumers to pay only one month's mortgage insurance premium at closing, as opposed to the payment of a full year's premium heretofore been Mortgage Guaranty's standard.

Mortgage insurance is typically required on mortgages with down payments of less than 20%. It insures the lender for the difference between the actual down payment and 20%.

GE Capital Mortgage Insurance Corp., Raleigh, N.C., inaugurated a similar program in late June.

Under the program, borrowers will make monthly mortgage insurance payments as part of their monthly mortgage payment.

Mortgage Guaranty is following a trail blazed by a GE unit.

Mortgage Guarantee feels the program, which would be available to all its customers, could cut by up to 95% the amount of cash needed by consumers at closing.

GE's program is available only through lenders that have computer-to-computer access to GE Capital Mortgage.

Both Fannie Mae and Freddie Mac, the secondary-market agencies, have approved the program, which is expected to be available starting Sept. 1. □

First Tennessee to Enter Top Ranks With Purchase of MNC Subsidiary

Continued from page 1

the MNC unit to overcome stiff competition, Ronald Terry, chairman of First Tennessee National, said there were at least 30 other bidders.

What's more, Maryland National Mortgage may not be the last mortgage-industry acquisition First Tennessee makes. "We'd like to expand outside our originations business outside of the Mid-Atlantic and Midsouth," said Mr. Terry.

The buyer would join the top 50 in originations.

Boost for Fee Income

The purchase will add considerably to the bank's fee-based income. Noninterest income, generated largely by the company's bond, trust, and check-cashing departments, provided about 40% of total revenue last year.

With Maryland National Mortgage's 1992 results factored in, the proportion of total revenues derived from noninterest income would have been 47%.

"It's a good strategic acquisition with a neutral near-term effect," said Peter Tuz, an analyst with Memphis-based Morgan Keegan & Co. Mr. Tuz said he believes the purchase will have a negligible effect on 1994 earnings as First Tennessee tries to expand the MNC unit's servicing portfolio and originations.

Mixed Reaction

John Leonard, an analyst at Salomon Brothers, also sees the acquisition as a sound strategic decision, though he had a mixed reaction to the company acquired and price paid.

Mr. Leonard said he thinks that the relatively high average coupon, around 8.25%, of Maryland National Mortgage's servicing portfolio may leave it vulnerable to prepayments.

"Also," he said, "there was not as strong profitability as I might have liked to have seen, given the positive environment for mortgage banks."

In buying Maryland National Mortgage, First Tennessee will get a company that originated $3.3 billion of mortgages last year. The figure for first-half 1993 was $1.3 billion.

Maryland National operates offices in Maryland, Pennsylvania, New Jersey, Virginia, Delaware, and Colorado.

First Tennessee's mortgage unit originated $500 million last year. It had a servicing portfolio of $2.3 billion.

The price is subject to adjustment for certain assets and liabilities at closing, according to a First Tennessee statement. □

Interest on 30-Year Fixed Loans Falls To 7.11%; 15-Year Rate Dips to 6.69%

The national average interest rate on 30-year fixed-rate, mortgages plunged last week to 7.11%, from 7.19% last week and 7.24% two weeks ago.

Preliminary figures from a weekly survey by HSH Associates of Butler, N.J., also showed that points charged on such loans averaged 1.27%, down from 1.37% last week.

The Washington, D.C., area again had the lowest rate, falling below the 7% mark to 6.98%, from 7.06% a week ago.

Minneapolis Points Are Low

Minneapolis was the most expensive area at 7.24%, down from 7.28%, but showed relatively low average points of 1%, essentially unchanged.

The national average for 15-year fixed loans was 6.69%, down from 6.73%, while one-year adjustables averaged 4.32%, down from 4.35%.

— Edward Kulkosky

Wilmington Trust Offers FmHA Loans

WILMINGTON, Del. — Wilmington Trust Co. said it has been named an approved lender in Delaware for residential mortgage loans guaranteed by the Farmers Home Administration.

Under the program, individuals and families with low or moderate incomes may qualify for 100% financing to purchase or build a house in a rural area, which is a defined population center of 10,000 people or less.

All of Sussex, most of Kent, and a portion of New Castle Counties are eligible for these loans.

This program is designed to help people who lack the down payment normally required by most conventional mortgage loans.

Mortgages originated by Wilmington Trust and guaranteed by the administration do not require a down payment and are at fixed interest rates for terms of 30 years.

Job Is to Educate, Financial Planner Says

Few banks have financial planners on staff. Portage National Bank, a $100 million-asset community bank in Portage, Pa., is an exception.

In January 1992 the bank recruited James H. Campbell Jr., a certified financial planner who had been a trust officer for five years at Mid-State Bank and Trust, Altoona, Pa.

His mission at Portage: to build a trust department from scratch by helping customers set and reach long-term financial goals. Under his leadership, the bank has built its trust business to more than $40 million on assets under management.

Mr. Campbell recently chatted with freelance writer Deidre Sullivan about how financial planning fits in at his bank.

Q&A

Q: Financial planners are something of a rarity at banks. How did you arrive at Portage?
CAMPBELL: I've worked in other areas of financial services industry. Frankly, I liked the way banks did business. The level of trust and comfort that the average person has with a bank is high. They have confidence walking in the door.

"In many cases, people are better off with CDs."

At a bank, the financial planning process doesn't seem so sales driven. It should be solution driven. This means allowing that client to go other parts of the bank, or elsewhere if they have to.

Q: What kind of customers do you serve?
CAMPBELL: We concentrate on investment accounts. My role is to take a customer from "What is your concern or problem?" to the solution.

That's where financial planning comes in. Customers usually come to my office [through referrals from] lending officers, consumer loan officers, and our customer service representatives. The employee who gives us a referral that results in closed business can receive an incentive payment.

Q: When you say trust, are you serving high-net-worth individuals or a broader range?
CAMPBELL: We serve a range. The minimum investment to open a trust account is $25,000. In many cases, we've attracted money or retained dollars that would have gone out to mutual fund companies.

Q: Are mutual fund companies, then, your biggest competition?
CAMPBELL: Definitely. They have the ability to put a lot dollars into advertising and information pieces that illustrate what kind of yields are available.

Sometimes people go out and buy funds, but they don't know what they are getting into.

Our job is to try to educate people. In many cases people are better off with certificates of deposit. We help them clarify their objectives.

Q: Do you sell financial planning as a stand-alone service?
CAMPBELL: We don't offer it as a service per se, although we have helped a few customers in this way. We consider financial planning a foundation for all activities in our trust department.

If someone comes in with a concern, we use those skills that financial planning gives us to arrive at a solution. Sometimes it means that they shouldn't work with us and we accept that, too.

We help customers "clarify their objectives."
James H. Campbell Jr.
Portage (Pa.) National Bank

We are currently working on a program that will allow us to do more comprehensive planning. But we want to avoid going out and buying a computer program from one of the vendors. We want something that is more customized to what we feel is appropriate.

Q: If financial planning undergirds trust, how do you communicate this to different segments of your customer base?
CAMPBELL: We haven't segmented our communications efforts to a high degree, because we are so new. Frankly, there is a lot of business out there that we could go after without having to do that type of advertising at this time. That is somewhere down the road.

Q: How have you been received so far?
CAMPBELL: I think very well. If you look at the cross-section of our accounts, you'll see smaller, middle, and larger accounts.

We feel very comfortable with the fact that we've often got multiple accounts with the same family or person. This means we are doing something right. □

Your customers will soon be convinced that this is a checkbook.

Let us explain. You see, while the banking industry has recognized the potential of debit cards, your customers are not necessarily familiar with their benefits. So to make sure they fully understand what debit cards offer them, we've taken a couple of important steps.

First, we've changed the name of the Visa® debit card to the Visa® check card. Now, from the name alone, consumers will have a better idea of what the card is and how it works at the point of sale.

Visa Check Card gains momentum

And second, we're introducing "The New Shape of Checking," a comprehensive nationwide consumer education initiative. Simply put, this program is designed to help you educate your customers about the what, where, why and how of the Visa check card and Interlink® service.

A blend of public relations and promotional efforts, the program will feature a consumer handbook on responsible use of the Visa check card and Interlink, new modules of our Choices and Decisions educational materials which focus on Visa check card and Interlink, and consumer advocacy forums to advance consumers' awareness and understanding of how these services work.

We're also helping members educate their customers on a local level.

To achieve that goal, we've created "The New Shape of Checking" member kit.

Included in the kit are an 18-month marketing support schedule, sample consumer advertising materials, a program brochure, in-branch promotional support and a video explaining the Visa check card and Interlink educational programs.

When your customers discover through this program how convenient Visa check card and Interlink are to use, they will seem as simple and indispensable as the common checkbook.

So, to help get your customers interested, order "The New Shape of Checking" member kit today—just call 1-800-VISA-311. Or, for more information on how to become a Visa check card or Interlink issuer, call your Visa Member Relations Account Executive at 703-827-8404 in McLean, Virginia, or at 415-570-2120 in San Mateo, California.

Either way, take advantage of "The New Shape of Checking" program. Both you and your customers will find it very convincing.

Shawmut Revving Up 2 Tax-Free Money Market Funds

By KALEN HOLLIDAY

Catering to consumers' cravings for tax-free products, Shawmut Bank will roll out two new municipal money market funds next month.

"There has been a lot of demand in tax-exempts," said Robert Shurman, Shawmut's senior vice president for mutual funds. Mr. Shurman credited President Clinton's tax program with spurring the bank's decision to expand its product line.

To meet customers' needs, the Boston-based bank will introduce the Shawmut Massachusetts and Shawmut Connecticut Municipal Money Market Funds at the end of September.

The bank launched intermediate municipal income funds for Massachusetts and Connecticut customers in June.

Mr. Shurman expects that "more and more people will start moving toward tax-free investments," especially after seeing how the new tax plan affects them.

Annuities Planned

While customers may not recognize the benefit of shelters until tax time, Shawmut wants to be ready when they do.

The bank is scheduled to offer both fixed and variable annuity funds in the fourth quarter, Mr. Shurman said.

Federated Securities Corp. is the principal distributor for the banks' funds.

Wall St. Investor Services Offering Chase Family

Wall Street Investor Services has added Chase Manhattan Bank's Vista family of mutual funds to its product list and is in discussions with about a half dozen other banks.

Wall Street Investor, which sets up mutual fund marketing programs in banks, began offering the Vista funds in February without fanfare. It marks the first time that the New York company has offered bank-managed funds to its 60 client banks.

The Vista funds were chosen because of the impressive returns they have delivered in recent years, said Eric Alexander, Wall Street Investor's executive vice president.

"They've certainly garnered consumer awareness because of their performance," he said.

Among the banks that Wall Street Investor is talking with is U.S. Trust Company of New York, which acts as investment adviser to the UST Master Funds.

Multiple Channels

For its part, Chase sees the agreement with Wall Street Investor as a natural extension of already ambitious marketing efforts.

Chase offers its funds through a number of internal channels, including in branches through a marketing agreement with GNA Corp., Seattle.

Externally, Vista funds are available through CoreLink, a Concord, Ca., third-party marketer that recently signed up its first two bank clients. CoreLink includes among its product offerings bank-run mutual funds, including Vista, that are distributed by its chief investor, Concord Financial.

Brokerages such as Charles Schwab and Smith Barney also offer Vista funds.

Wellington Is Subadviser On 2 Midlantic Products

Midlantic National Bank has selected Wellington Management Co. to serve as subadviser for two of its Compass family of mutual funds.

Wellington will provide investment management advice for the Compass Equity Income and Compass Growth funds. Midlantic, based in Edison, N.J., serves as investment adviser for the funds, part of its Compass family of 15 funds.

Wellington, based in Valley Forge, Pa., advises more than 100 mutual fund portfolios with $75 billion in assets, including several funds distributed by the Vanguard Group, also of Valley Forge.

As subadviser for the two Compass funds, Wellington will be responsible for selecting equity securities that meet Midlantic's investment objectives for the funds.

Track Record Cited

Barbara Z. Parker, head of Midlantic's trust and financial management division, said Wellington was chosen because of its "long-term track record of delivering solid investment performance in all types of markets."

The Compass funds, launched in 1988, have $2 billion in assets under management. They are offered through licensed representatives located in all of Midlantic's branches. More than 10,000 investors own shares in the funds.

Midlantic uses subadvisers on three other funds: Fisher Investments for the Agressive Equity fund; Seligman Henderson Co. for the International Equity fund; and Morgan Grenfell for the International Fixed Income fund.

The bank is a subsidiary of Midlantic Corp., a $13.8 billion-asset holding company.

Banc One, Fifth Third Plan Major Tests Of Cobranded Cards at Supermarkets

By LISA FICKENSCHER

The separate worlds of supermarkets and credit cards are merging fast, and two Ohio banking companies are at the forefront of the movement.

Early this fall, Banc One Corp. plans to begin testing MasterCard and Visa cards in 60 midwestern supermarkets in a joint venture with Advanced Promotion Technologies, a Pompano Beach, Fla., electronic marketing company.

Meanwhile, Fifth Third Bancorp and the Kroger Co., the nation's No. 1 supermarket chain, will test-market a cobranded MasterCard in Texas. Mailings to consumers began Aug. 16, according to an official at the bank.

Marketing

The two approaches utilize different technologies and offer different cardholder incentives. But each card is unique in that it will give customers benefits for using it outside of the cobranding partnership.

They are also raising the intensity of the bank-supermarket courtship, which until recently revolved mainly around check-cashing relationships and debit card systems.

"There is a tremendous amount of banking going on at supermarkets," said Jerome Svigals, publisher of *Smart Cards and Comments*, a newsletter in Redwood City, Calif. "For instance, more transactions like check cashing occur at supermarkets than banks."

Mr. Svigals believes it is significant that Banc One, historically a bellwether of credit card innovation, sees supermarkets as a next frontier. It is also incorporating cards with computer chips inside – the "smart cards" that Mr. Svigals advocates – into its program with Advanced Promotion Technologies.

RETAILING SMARTS: This Advanced Promotion Technologies device can read cards with embedded chips.

Fertile Ground

The $286 billion supermarket industry is attractive to banks because it is the biggest merchant category that is not significantly penetrated by credit cards. In all, 39% of supermarkets accept credit cards, up from 17% in 1989. Research indicates that at least 20% of supermarket shoppers would use a credit card to pay for their purchases.

Supermarkets, on the other hand, are drawn to bank cards in order to remain competitive with nonfood retailers. Grocery chains, especially those with large "super stores," have expanded into nonfood lines such as electronic appliances, cosmetics, clothing, and other products for which consumers are accustomed to paying with credit cards.

The growth in supermarket credit-card usage, for food or other merchandise, also dovetails with the move to debit transactions using regional automated teller machine cards or systems operated by MasterCard or Visa.

The supermarket card of Bank One Columbus – the first U.S. MasterCard or Visa with the computer chip – will be co-branded with Advanced Promotion Technology's Vision Value Club.

Data for 'Micromarketing'

The existing Vision Value card tracks frequent-shopper points and accumulates data on customer preferences that stores use for "micromarketing." For example, a buyer of a given brand of laundry soap might get a coupon to encourage the purchase of a related brand of bleach.

Frequent-shopper points can be applied toward a free gift from a catalogue. The gifts range from sunglasses to bicycles, which would cost 82,500 points.

Twenty points are granted by the manufacturer for every dollar spent on a participating product or brand. APT adds one point to every dollar spent at the store.

Banc One will also give a point for each dollar spent anywhere on its more widely usable MasterCard and Visa cards.

The Vision Value card was tested in 1989 and is currently established in five supermarket chains in Ohio, Alabama, Minnesota, Wisconsin, New Mexico, Iowa, and Illinois.

Thousands of Stores Targeted

Nearly 800 more stores have committed to install the computer terminals necessary to read the smart card. The venture hopes to sign up several thousand stores nationwide.

APT is responsible for keeping track of the total number of points, but Bank One tallies the points earned outside of the participating stores, passing the information along to APT.

In a slightly different approach to retaining customers, the Fifth Third-Kroger card is geared toward rewarding loyalty with free groceries instead of catalogue gifts.

"There is more instant gratification with our program," said Tim Ballinger, senior vice president of Fifth Third Bank in Cincinnati.

Kroger cardholders can earn up to $500 in store rebates. These can be redeemed immediately at the point of sale or can be taken in a lump sum at the end of the year and spent in any way the customer chooses.

Customers will also receive coupons for Kroger merchandise in their monthly credit card statements.

And by the end of the year, Mr. Ballinger expects an electronic couponing program to be in place, which will automatically give discounts for promotional items when a bar code that is swiped over the scanner.

Banc One gives frequent-shopper points that can be exchanged for a gift from a catalogue.

Outside Merchants

The bar code also allows consumers to accumulate rebates without actually using the credit card to pay for groceries at Kroger stores.

Kroger has negotiated relationships that would give its cardholders discounts rebates for using selected merchants, such as a hotel chain or car rental agency.

The card comes in two versions – gold at 2.9% over the prime rate and silver at 8.9% over prime. Neither has an an annual fee.

Bank One is not yet disclosing its pricing, but an official said it will be offered with and without an annual fee. □

Looking to Enroll New Customers, AT&T Woos the College Crowd

By MICKEY MERCE

AT&T's giant credit card unit has joined the ranks of issuers who will be courting America's 12 million college students when they arrive for classes in the next couple of weeks.

AT&T Universal Card Services Corp. recently contracted with Philadelphia-based Campus Dimensions Inc. to set up promotional tables at more than 550 colleges and universities across the country.

Viewed as Growth Area

The Jacksonville, Fla.-based credit card arm of American Telephone and Telegraph Co. is counting on its no-fee-for-life offer and some unique educational features to be as attractive to students as its no-fee cards have been to the general population.

AT&T's representatives will be competing with national issuers – such as Citicorp, Household International, and Chase Manhattan Corp. – that regard college campuses as one of the few remaining fertile areas for account growth.

"It's the best market for rejuvenating the business," said Stephen Szekeley, vice president, credit card research, at Tampa, Fla.-based PSI. "The college student of today is a good credit card customer."

AT&T's college student cardholders will receive information on how to build credit history and on the importance of paying monthly bills. They will be shown how to calculate payments based on annual percentage rates, and what grace periods and credit lines are.

Trying to Foster Responsibility

"It's important that they learn to use [credit] responsibly," said Dotti Schechter, senior vice president of credit card marketing at AT&T.

She said AT&T has set the minimum payment on revolving accounts higher – 2.5% of the balance instead of 2.1% – to help students who choose to revolve their debt to pay off balances sooner.

Initially, she said, new college cardholders will be granted limited lines of credit, with the ceiling rising as students establish solid payment histories. At the first sign of delinquency, AT&T Universal Card will send out a customized letter reminding the student of the importance of good credit.

Like AT&T's standard cards, the AT&T Universal MasterCard for students has no annual fee and a 15.9% variable interest rate. The card also functions as a calling card and automated teller card.

College students were targeted first in 1978 by American Express Travel Related Services.

Over time, American Express found students to be some of its best and most loyal customers, a spokeswoman said. Because American Express charge card customers pay their balances in full, she said, there's no danger of a student spending to the limit and paying minimum balances.

Students will get information on building credit history and on the importance of paying monthly.

Bank card issuers initially saw limited potential in college programs, thinking profits would be too slim because students had limited funds and would carry small balances.

But that view has changed, said Bernard Pasierb, senior vice president of Financial Reserve Corp., an East Haven, Conn., firm that has marketed cards to students for American Express, Chase, and Chemical Banking Corp.

"Over time the major issuers have become confident with the risk associated with the market."

Rather than do mass mailings, many issuers set up booths and take-one displays in bookstores and common areas and on bulletin boards. Students are more likely to become interested in the product this way, Mr. Pasierb said. "You're getting to them where they live, where they go to school."

'Can They Handle It?'

But there is a downside. "They are being inundated with a lot of offers," he said. "Yes, it represents a fertile market, but as people start getting presented with more offers, the question becomes, Can they handle it?"

The cost per card is higher at the outset, Mr. Pasierb said, because students move around a lot. Also, issuers may lose some customers who sign up just for the promotion then cancel their cards.

Overall, however, he said credit card programs for college students can be profitable – and establish banking relationships that last for a lifetime. □

MasterCard, Visa Turn Up the Volume in Debit Marketing

By STEPHEN KLEGGE

The public relations war over who has the best debit card program escalated last week with competing announcements by MasterCard International and Visa USA.

MasterCard staged the first transcontinental purchases with its Maestro card, underscoring the advances it has made internationally in a joint venture with Europay International.

Visa responded by announcing that volume on its debit cards in the United States had reached one million transactions a day – underscoring the fact that its programs here are larger than MasterCard's.

Maestro Acceptance Tested

With the cameras rolling, R. Bernard J. van Eldik, the chairman of Europay International, toured Osage Beach, Mo., Tuesday, using Maestro cards issued by banks in Holland to make purchases at a McDonald's, a Benneton store, and a Baskin-Robbins outlet. The chain outlets in the resort community are conducting a test of Maestro acceptance.

The online debit unit of MasterCard hopes to close the gap on Visa's competing Interlink program, which is more than twice Maestro's size in acceptance by U.S. merchants.

The Maestro card is tops in Europe, while Interlink sets the pace here.

The message is that merchants who accept Maestro will attract business from overseas tourists.

Big European Customer Base

"There is a huge customer base coming from Europe, and they would like to use" their Maestro cards, Mr. van Eldik said. The program is "taking off very rapidly" in Latin America, Australia, and Kuala Lumpur among other places, he said.

Maestro formed a joint venture with Europay a year ago that has linked together local debit programs to "internationalize" an existing market, said Mr. van Eldik.

He was chairman of Maestro International until last Monday, when MasterCard International president Alex W. Hart assumed the title.

Europe Leading U.S.

Maestro now reports that banks have committed to issue 100.4 million of its cards, including 66.2 million in Europe.

Mr. van Eldik said online debit cards have advanced more rapidly on the continent than in the United States.

One reason is that credit cards are more exclusive there, and the option of deferred payment is less of a factor in the consumers' shopping choices, he said.

Security Is Found in PINs

Consumers consider it an advantage not to have to carry cash, and they like the security of using personal identification numbers to draw on their checking accounts for purchases, he said.

Mr. van Eldik said 220,600 of the 276,800 point of sale terminals that permit Maestro acceptance are in Europe. About 9,600 U.S. merchant outlets have agreed to accept Maestro.

MasterCard cited the strong gains it has made on the international front through its joint venture with Europay, while Visa pointed to its million domestic transactions a day.

Peter Gustafson, a Visa senior vice president, said visitors from Europe already use their offline Visa Debit cards for 67,000 transactions a day in the United States. He said the cards have the advantage of wider acceptance than an online card.

"The traveler from Europe could be using a Maestro card at a fast food restaurant, but that doesn't exactly hit the home run" that the offline Visa card does, Mr. Gustafson said.

MasterCard offers an offline card – the MasterDebit card – but the association is emphasizing the online product.

Visa said the use of its debit cards had doubled in two years to reach the million-sales-a-day threshold. Visa offers an offline card that is accepted at all the merchant outlets that accept Visa credit cards, as well as the Interlink brand of online cards accepted at about 20,000 outlets in the U.S..

Banks have issued 32 million offline Visa Check and online Interlink cards, and projects 100 million of its cards will be in circulation by the end of 1996. □

WASHINGTON *Monday*

A weekly feature

CEO of the Community Preservation Corp. Tries to Build on His Institution's Success

Michael D. Lappin is president and chief executive of the not-for-profit Community Preservation Corp., which he says is the nation's biggest building operation for low cost.

The organization, which is based in New York City, was founded in 1974 and currently is sponsored by 50 banks and insurance companies.

The institution hasn't suffered a loss, and it has helped to rehabilitate and build 34,000 units of housing with more than $1 billion in public and private investment. It also is managing a loan consortium of 86 banks in upstate New York.

Mr. Lappin visited the American Banker *bureau last week while in Washington trying to persuade agencies such as Fannie Mae and Freddie Mac to guarantee the loans underwritten by his operation and others like it.*

Q&A

Q.: You have quite a few foreign banks as sponsors, don't you?

LAPPIN: That's a recent development. We opened up membership about four or five years ago.

Q.: How does one join up?

LAPPIN: You have to make a contribution and then you have to participate in our credit facilities – a $144 million construction credit facility and a permanent credit facility.

The minimum contribution to is $15,000, plus $450,000 of each line of credit. Chemical Bank is our largest investor. They provide about $30 million.

Q.: Who are your customers?

LAPPIN: Small borrowers, lots of recent immigrants who own, say, a 40-unit dilapidated building in the South Bronx and want to renovate it. We not only provide credit, but help obtain timely approval by the building departments and other help.

Q.: That sounds like a lot of work. How many people do you have working for you?

LAPPIN: Forty. In many cases, public subsidies are available for the borrower, and we try to link these subsidies when proper.

There also are various tax abatements, and we understand them and weave them into the underwriting. We also do all the negotiating with the various public agencies that administer these diverse programs.

Michael D. Lappin
Heads "one-stop shop"

What we've done – and this is key to our success – has been to create a one-stop shop, where we work with the government and try to work many of these things out in advance.

For example, there is a program where the city will put in below-market money – in a secondary position to private money – to fix up old apartment houses.

So rather than the owner going to the city to make a separate application, we basically handle the application for them.

And there's a single commitment where we commit our funds and the public funds at the same time. There's a single closing. And there's one engineer that approves the requisitions. The public deposits all the funds with us. And so we manage that process for the city.

Q.: What rates do you charge on the loans?

LAPPIN: Market rates. The underwriting is conventional underwriting. It's bankable underwriting. A lot of our guys [bankers] say it's the best real estate portfolio in town.

We borrow from the banks at prime and lend at prime plus two. We price long-term financing off of Ginnie Mae.

Q.: Do the banks participate because they're trying to comply with the Community Reinvestment Act?

LAPPIN: It's a reasonable way to invest. Part of the reason may be CRA. But most tell me, "do what's best for the community."

Q.: Explain the lending process.

LAPPIN: We use the $144 million line of credit for construction loans. Simultaneously, we'll do a permanent takeout. The source of that can be the banks, in which case we'll issue them a privately placed mortgage-backed security, an unrated piece. A second source used a lot now is public pension funds.

New York City and New York State, together, have committed to purchase up to $550 million of whole loans from us on a forward basis if they get the State of New York Mortgage Agency, our local credit enhancement agency, to ensure these loans, which they do very readily.

They also commit at the date of construction to lock in a rate. The rate for a project that will be completed two years from now is 820 [8.20%] or 830 for 30 years, fixed-rate paper. It's a terrific deal.

Q.: What are you asking for down here in Washington?

LAPPIN: We think there is a way of doing nationally what we're doing in New York to allow pension funds and insurance companies and large institutional investors to purchase on a forward basis.

The institution has helped rehabilitate and build 34,000 housing units.

There are other organizations like ours around the country that do an excellent job but can't get long-term holders for this paper. That's what we're asking Freddie and Fannie about.

Also, if we had Freddie and Fannie, our institutional investors would take a lower yield.

PEOPLE

Lawyer for Thrift Trade Group Moving to Post at Fannie Mae

Wendy B. Samuel, regulatory counsel at Savings and Community Bankers of America, will be taking her briefcase to Fannie Mae at the end of the month.

On Aug. 30, Ms. Samuel will start work as the director of legislative analysis at the Federal National Mortgage Association. She will be working with the lobbying staff, analyzing proposed legislation, and drafting congressional testimony.

The trade group has not yet named a successor.

Ms. Samuel has worked for the thrift group for seven years, having worked at the National Council of Savings Institutions when it merged with the U.S. League of Savings Institutions last year to become SCBA.

Wendy B. Samuel will be director of legislative analysis.

Before that, she worked for nine years at the Federal Home Loan Bank Board writing regulations.

* * *

C. Howie Hodges stepped down as director of the ABA's Center for Community Development on Friday. He's left the trade group after six years to take a political post at the Commerce Department.

Right after Labor Day, he'll become assistant director for program development, in the department's minority business development agency.

Mr. Hodges had been under consideration for the post for seven months, a real roller-coaster ride of an experience, he said.

Deciding to leave the American Bankers Association was tough, he said, but giving up a "maybe a once-in-a-lifetime opportunity to serve" would have been even tougher.

The ABA has two executive search firms looking for a replacement to head its center, which works with bankers to improve their community lending initiatives.

* * *

Claire Buchan, who was a deputy assistant secretary for public affairs at Treasury during the Bush administration is in Downers Grove, which is a real place in Illinois, not a post-election mind-set.

She's now vice president of communications for ServiceMaster, a new position.

ServiceMaster owns and franchises businesses like Terminix, ChemLawn, and Merry Maids.

Crossland Deal Includes a Hefty Raise For FDIC's Caretaker Chief Executive

Richard Kraemer is about to get a big raise.

Mr. Kraemer, 49, is the man the Federal Deposit Insurance Corp. picked to run Crossland Federal Savings Bank when it nationalized the Brooklyn thrift in January 1992. He signed on for $200,000 a year, plus a $100,000 bonus.

Though upper bracket, it wasn't a flashy salary by Big Apple standards. But, then again, he was working for Uncle Sam.

Now the government is selling Crossland to a group of institutional investors, and it has worked out a deal with the private-sector owners that gives Mr. Kraemer $450,000 with annual bonuses up to $225,000, which is enough for a pretty fair lifestyle, even in New York.

The Inside Line

That's not all. According to the FDIC's prospectus for Crossland, if the investors sell the thrift, Mr. Kraemer gets a golden parachute equal to three years' salary and bonus, or more than $2 million.

Financial Inducements Needed

The FDIC's director of resolutions, Harrison Young, said the FDIC had to offer lucrative employment contracts to Crossland's top executives in order to keep them.

Richard Kraemer
Protected against downside

"It was hard to get people to stay at or come to Crossland," Mr. Young said.

He added that Mr. Kraemer would have to pay substantial taxes on his parachute income. "It's not quite the bonanza it looks like," Mr. Young said.

If Crossland is not sold but Mr. Kraemer is fired without cause or quits for good reason, then he will be paid a lump sum equal to 150% of his base salary multiplied by the number of years left in his contract. That could amount to a payment of more than $2 million.

When the deal is completed next week, Mr. Kraemer also will get the option to buy 238,660 shares or 1.72% of the recapitalized and privatized Crossland.

And what if Mr. Kraemer is disabled while employed by Crossland? The thrift must pay him $225,000 a year or half of his current base salary, whichever is greater, until he reaches the age of 65.

Mr. Kraemer, chairman and chief executive, is not the only Crossland official protected by the deal.

Promotion to President

George Kondos, Crossland's executive vice president since March 1992, will become president of the thrift when the transaction is concluded. As a result, Mr. Kondos, 45, will see his annual salary rise to $250,000 from $175,000. He, too, will be eligible for annual bonuses equal to half his base pay, or $125,000.

If the investors sell Crossland, Mr. Kondos also gets a golden parachute. His totals two years' salary and bonus, or $750,000.

And Mr. Kondos will get stock options to buy 83,300 shares or 0.6% of the company.

Mr. Kondos' employment contract runs for two years. If he is fired during that time or quits with good reason, then Crossland must pay him up to $750,000, depending how much time is left in his contract.

Opinion

Front Row on Washington

By Jim McTague

Let Congress Heed Lesson Of Double-Dealing Bias Testers

The mortgage-lender testing fiasco at the Department of Housing and Urban Development raises serious doubts about the government's hiring of outside contractors to do its police work.

As the Office of the Comptroller of the Currency readies a program of its own, it ought to seriously consider hiring its own testers or some local government agency to do what amounts to an undercover investigation.

If the Comptroller's office lacks the expertise to train testers, it could hire outside firms to do the work. This approach would help prevent the outrageous conflict of interest that has cropped up in the HUD program.

As discussed in this column last week, a group called the National Fair Housing Alliance was hired by HUD for $1 million to send testers masquerading as homebuyers into banks and mortgage companies in several cities to uncover discriminatory practices.

Testers Advising on Testers

The noble aim of the program has been subverted because the Alliance simultaneously has been negotiating with mortgage lenders like Sears to provide educational and technical services designed to protect them from testers.

(This reminds me of the kid with a rock offering to protect your windows.)

HUD informed me last week that it was looking into the complaint. In a prepared statement, Roberta Achtenberg, assistant secretary for fair housing and equal opportunity, said the Alliance has been asked for information on its talks with Sears, "so that a determination can be made as to whether any activities undertaken or proposed by NFHA would violate any FHEO policy."

Ms. Achtenberg defends testing in general because "it has

GOVERNMENT agencies need to approach fighting loan bias in a way that avoids the outrageous conflict of interest that has cropped up in the HUD program.

proven to be a most reliable and effective means of investigating whether a mortgage lending organization discriminates on the basis of race, color, religion, national origin, sex, familial status, or disability."

She also sees merit in the work of antibias consultants : "Education and technical assistance to mortgage lenders is also critical to ensure that they are aware of the Fair Housing Act's coverage so they can avoid taking discriminatory actions."

But, she adds, "The regulations governing this funding require that neither the testing organization nor individual testers hold any 'specific bias or conflict of interest which would prevent or limit his or her objectivity or fairness.' "

Many Questions Unanswered

We're glad HUD is looking into this, and we hope Congress will stick its nose into the affair too, because there are a lot of unanswered questions.

The Alliance was awarded the contract in late December, during the final days of the listless Bush administration. (This is a reason why former HUD Secretary Jack Kemp should be remembered as a good Congressback.) There was no press release and other bidders had to call to find out about it. No one had been promised. Why the secrecy?

The final paperwork wasn't completed and the Alliance didn't get its money until May 28. During the intervening period, the new HUD secretary, Henry Cisneros, announced that he would strengthen the testing program; and yet the Alliance was negotiating with Sears and claims HUD knew all about it.

How much did HUD really know and approve?

Ridding the industry of bias is a worthy goal. The crusade should be conducted in noble fashion. Congress should not permit the government's effort to degenerate into either a shakedown or a bounty hunt. □

Instead of Complaining, Banks Should Look on the Bright Side of CRA

Although the banking industry's compliance with the Community Reinvestment Act has become the subject of intense government scrutiny and heated public debate, not much of anything said is positive.

While community organizations condemn the industry's track record of lending to low-income and moderate-income groups, the industry complains of both overregulation by the federal and state governments and virtual blackmail by community organizations protesting bank applications.

Regulatory agencies have criticized banks' CRA efforts and have significantly beefed up CRA enforcement. State legislatures (including New York's) have enacted mini-CRAs to encourage lending to the underprivileged.

Where's the Beef?

Articles and editorials appear daily debating the pros and cons of federal CRA policy. No one seems to believe that CRA is producing any significant results.

Congress seems gridlocked on CRA, which has become a political hot potato. Members of Congress who urge deregulation and relaxation of CRA are dismissed as unsympathetic to the needs of underprivileged Americans and as catering to a banking industry that has enjoyed record profits in recent times.

Worse, they risk alienating a voting constituency that condemns a perceived credit crunch and demands a responsive, consumer-oriented banking industry. Those members who urge heightened enforcement of CRA are accused of unfairly persecuting a banking industry already burdened by an enormous load of recent legislation and regulation.

Flurry of Bills

The Clinton administration and Congress continue to press for major CRA reform, although there is no consensus on what "reform" is appropriate. A flurry of CRA bills have been introduced this term, each advocating a different approach.

Various congressional sub-

SECTION 233 of FDICIA actually rewards banks for CRA efforts with a financial incentive for "greenlining."

committees are holding hearings to scrutinize the industry's compliance with CRA. Members of Congress lament the current state of affairs and urge their individual concepts of CRA reform.

Many of the proposals dwell on the negative aspects of CRA — more regulation, tougher examinations, higher penalties. These proposals seem to favor a bigger CRA stick compelling banks to lend more in underprivileged areas.

CRA is widely touted by bankers as the single most costly regulation imposed on the industry. Given the cost of the current CRA structure and the complaints over its inefficiency, is there any movement toward constructive CRA reform? If Congress is really serious about a positive CRA, it ought to put its money where its mouth is.

In a long-overlooked provision of the Federal Deposit Insurance Corporation Improvement Act of 1991, Congress agreed to do just that. Section 233 of the FDICIA, part of the Bank Enterprise Act, actually rewards banks for CRA efforts by creating a direct financial incentive for banks to "greenline," or extend credit in an identified economically troubled geographic area.

In this respect, section 233 represents a welcome carrot among the many sticks waved by Congress, the administration, and the regulatory agencies.

The act, comprising several isolated provisions within FDICIA, was the result of a bipartisan amendment to that legislation. Section 233 was written by Rep. Floyd H. Flake, D-N.Y., and Rep. Thomas J. Ridge, R-Pa. Added in the House Banking Committee in 1991 HR. 6, section 233 survived a floor challenge by Rep. Willis D. Gradison Jr., R-Ohio.

Although the Bank Enterprise Act survived the challenge by the narrowest of margins (205-204), the act ultimately died when HR 6 itself failed in November 1991.

The Bank Enterprise Act was reborn when it was added, at the insistence of the House of Representatives, to 1991 S 543, the bill that became FDICIA.

A Big 'Carrot'

Described by Rep. Ridge as a "market-oriented, incentive-based approach" to CRA re-

There Is Some Good News on CRA Front

Continued from page 18

form, section 233 provides a direct financial reward to a bank that increases its lending in financially disadvantaged communities.

The act authorizes a deposit assessment credit equal to 5% of the bank's increase in qualifying loans (subject to a maximum credit of 20% of the bank's total deposit assessment). Section 233 also provides for the creation of a five-member Community Assessment Credit Board to administer the program.

Rep. Ridge argued that this federal investment in CRA would reap hundreds of millions of dollars in new investment activity in financially disadvantaged communities.

Funding Prevented

For some inexplicable reason, a bipartisan Congress that backed the Bank Enterprise Act's "carrot" approach to CRA chose never to implement it.

A loophole in the act prevented that section 233 would not become effective "until appropriations are specifically provided in advance." Congress never appropriated those funds. At most, in a July 1992 report, the House Committee on Appropriations recommended a meager $1 million "to begin preliminary study, design, and development of the Bank Enterprise Act."

Congress never explained why it neglected to fund its latest CRA reform legislation when it received bipartisan support from its members. It seems that, perhaps for political or budgetary reasons, Congress was willing to pass section 233 and take credit for CRA reform, but is not willing to fund it.

A bill introduced July 22 in effect told Congress to put up or shut up. The bill, HR 2707, in form, extends 233 provides a direct financial reward to a bank that increases its lending in financially disadvantaged communities.

Rep. Ridge argued that this federal investment in CRA would reap hundreds of millions of dollars in new investment activity in financially disadvantaged communities.

Funding Prevented

For some inexplicable reason, a bipartisan Congress that backed the Bank Enterprise Act's "carrot" approach to CRA chose never to implement it.

A loophole in the act prevented that section 233 would not become effective "until appropriations are specifically provided in advance." Congress never appropriated those funds. At most, in a July 1992 report, the House Committee on Appropriations recommended a meager $1 million "to begin preliminary study, design, and development of the Bank Enterprise Act."

Congress never explained why it neglected to fund its latest CRA reform legislation when it received bipartisan support from its members. It seems that, perhaps for political or budgetary reasons, Congress was willing to pass section 233 and take credit for CRA reform, but is not willing to fund it.

A bill introduced July 22 in effect told Congress to put up or shut up. The bill, HR 2707, in form, extends 233 provides a direct financial reward to a bank that increases its lending in financially disadvantaged communities.

The bill seeks $382 million in funds – the same amount originally sought by the Clinton administration's community development proposal. HR 2707 directs $191 million – half of the total package – to fund the Bank Enterprise Act. The remainder would be used to fund a network of community development financial institutions.

CONGRESS NEVER explained why it neglected to fund its latest CRA reform.

HR 2707's funding of section 233 would provide for an immediate and tangible financial stimulus to aid financially distressed communities.

Banks serving such communities would have a significant financial incentive to increase lending in those communities, without enduring an additional layer of regulation. Section 233 seems to create an appropriate compromise to the controversy between those who urge less (or, at least, no further) regulation of banks and those that urge greater lending in financially distressed communities.

New Powers Proposed

HR 2707 contains several other significant provisions. Banks providing financial services to financially distressed communities would be provided insurance and securities powers. In addition, the bill provides for a safe harbor that immunizes banks from a CRA protest if the bank has received a CRA rating of "outstanding."

The bill also would create substantive regulatory performance-based standards for rating a bank's compliance with CRA.

The bottom line for Congress should be: Any legislation that leads to increased investment in financially disadvantaged communities is a positive CRA reform. By funding section 233, HR 2707 should do just that.

Before it invests in any more CRA sticks, Congress should ask itself whether the investment in these sticks will lead to a comparable increase in community investment. □

Credit Suisse Reports Pretax Profit Up 67%

ZURICH — Credit Suisse, the main banking unit of CS Holding, said its pretax profit for the first half of the year rose 67%, to $1.6 billion.

The increase resulted from "favorable conditions" in the securities and foreign-exchange markets and from declining interest rates, the company said.

Included for the first time were the results of Swiss Volksbank, which Credit Suisse acquired earlier this year.

Separately, Swiss Volksbank said that its pretax profit rose 50% in the first half, to $171.6 million, including $18 million in extraordinary income derived from the takeover by Credit Suisse.

Credit Suisse said it expected "good" gross results in the second half of 1993, though the "need for provisions will again be substantial." □

PROFESSIONAL EMPLOYMENT OPPORTUNITIES

INTERNET
Systems for Financial Strategies

The leading supplier of international banking systems is seeking to fill several exciting positions made available by recent sales success in the Americas. Interested individuals should be prepared for the challenge of working in a fast-paced and rapidly evolving industry.

Project Manager

Professional Project Managers with strong analytical skills and a proven track record within a high profile financial environment. Candidates should possess a minimum of 5 years experience.

◆◆◆◆◆

Banking Consultant

Solid back office experience in a Treasury or Capital Markets environment with in-depth knowledge of related banking products.

◆◆◆◆◆

Technical Consultant

Analyst/Programmers with a minimum of 2 years experience on Tandem systems, preferably within a financial environment.

◆◆◆◆◆

Based in Chicago, at Internet's Corporate Headquarters, you will be part of a professional implementation team providing on-site support to customers in the Americas, with some opportunity for international travel.

Internet offers a competitive compensation/benefits package commensurate with experience. Please mail or fax resume, indicating position of interest and compensation history, to **Employee Services, Internet Systems Corporation, Two Prudential Plaza, 42nd Floor, Chicago, Illinois 60601, Fax (312)540-7444.** eoe m/f/d/v

---

PADCO, Inc., an international housing and urban development consulting firm, and others specializing in USAID projects in Central Europe, has immediate openings in the following positions. Bank International assistance programs are identifying qualified candidates to fill intermittent (a few weeks each) and medium term (3 to 6 months) consulting positions in construction lending. The requests are predominantly for assignments in Eastern Europe, but interested candidates for other geographic regions are encouraged to present resumes as well.

Positions will vary and in-depth expertise in commercial real estate finance, especially residential construction lending is needed. Candidates should demonstrate knowledge of all aspects of construction lending from program and product development and design through origination, servicing and loan management. PADCO, Inc. is currently looking to fill one long-term (2 year) position in Poland, and three medium-term positions in Bulgaria. Consultant fees/stipends vary with position and experience. Individuals interested in these positions should submit a resume to:

PADCO, Inc.
Attn: EE/Construction Lending
1012 N. Street, N.W.
Washington, D.C. 20001
No calls will be accepted.

First Bank System Debt Ratings May Rise After Moody's Review

Moody's Investors Service said Friday it might upgrade First Bank System Inc.

"The review will focus on the company's improved asset quality and the likely further development of its retail franchise — especially its substantial esoteric deposit base," Moody's said.

Under review are the Minneapolis company's A3 senior debt, Baa1 subordinated debt and preferred stock, and Prime-2 commercial paper.

Earlier in the week, Standard & Poor's Corp. raised senior debt to A from A-minus, subordinated debt to A-minus from BBB-plus, and preferred stock to BBB-plus from BBB. The outlook was revised to stable from positive.

The agency said the upgrade reflected the Minneapolis company's successful acquisition strategy and strong capital levels.

The rating agencies took the following other actions last week:

Credit Ratings

Asahi Bank: Moody's Investors Service downgraded this Japanese bank, citing deterioration in asset quality. Senior debt, long-term deposits, and long-term letters of credit were cut to A2 from A1.

Subordinated debt was lowered to A3 from A2, and shortterm deposits were dropped to Prime-2 from Prime-1.

"The bank's exposures to distressed real estate and nonbank borrowers (including its own nonbank affiliates) remain high in relation to its capital,"

One focus of the examination will be on First Bank's improved assets.

Moody's said. Asahi Bank, based in Tokyo, has $245 billion of assets.

Bank of Hawaii: Moody's assigned Aa3 and Prime-1 ratings to the company's new bank note program. It said the ratings reflected good earnings and asset quality and the bank's dominant market position. Moody's noted that Bank of Hawaii is active in most sectors of Hawaii's economy, which depends on tourism and construction.

"Such concentration is seen as a risk factor," Moody's said. But the agency added that the bank's real estate exposure is confined to moderately priced residences and to smaller and diversified commercial developments.

Barnett Banks Inc.: Citing the company's improved asset quality and earnings, Moody's upgraded senior and subordinated debt and preferred stock. Senior debt was raised to A3 from Baa1 and subordinated debt and preferred stock to Baa1 from Baa2. Subsidiary bank ratings were affirmed at A2.

"The company has worked through its previous poor asset quality in Florida, resulting in significantly reduced provisions," Moody's said.

BayBanks Inc.: IBCA Ltd. upgraded long-term debt to BBBplus from BBB and short-term debt to A2 from A3. Long-term debt of the lead bank, BayBank, was increased to A-minus from BBB-plus.

"In light of BayBanks' continued progress, particularly with respect to capital and operating earnings, we are raising our ratings," IBCA said.

Christiania Bank: IBCA raised this Norwegian bank's long-term rating to A-minus from BBB-plus. After suffering heavy losses in recent years, Christiania Bank is now showing a decline in nonperforming loans and posted a profit in the first half of this year.

Daiwa Bank: Moody's may downgrade this Japanese bank's long- and short-term ratings of Daiwa Bank Ltd. in light of the bank's announcement that it will acquire Cosmo Securities Co., a distressed securities company. About $1.4 billion of longterm debt is affected.

Moody's said that it would evaluate the potential impact of the acquisition on the bank's core earnings. Under review are A1 senior debt, long-term deposits, and long-term letter-of-credit ratings and the A2 subordinated debt rating.

HFC Bank: IBCA Ltd. assigned an A1 rating to guaranteed short-term debt and an A2 rating to unsecured short-term debt of this British unit of Household International Inc

Long-Term Credit Bank of Japan: Moody's lowered senior debt to A3 from A2, citing deterioration in the bank's loans to real estate developments and nonbank financial institutions.

"Major losses are likely, and additional problem exposures could emerge," Moody's said.

The short-term rating also was lowered, to Prime-2, from Prime-1. Like other large Japanese banks, Long-Term Credit Bank has been hurt by loans to housing finance companies, which have been rocked by depressed home prices in Japan.

NationsBank Corp.: Moody's Investors Service upgraded senior debt to A2 from A3, subordinated debt to A3 from Baa1, and commercial paper to Prime-1 from Prime-2. Long-term deposits of subsidiary banks were confirmed at A1. Senior unsecured debt of the subsidiary C&S/Sovran Corp. was raised to A2 from Baa1.

For MNC Financial Inc., a Maryland bank holding company being acquired by NationsBank, senior unsecured debt was increased to A2 from Ba3; subordinated debt to A3 from B2, and preferred stock to A3 from B2. The upgrades occurred after the Charlotte, N.C., company priced a $1 billion, two-part offering of senior and subordinated debt.

The agency noted that NationsBank has significant shares of most major markets in the Southeast and Texas. It added that NationsBank's aggressive acquisition strategy — the company is buying MNC Financial Inc., Baltimore, as well as a number of nonbanking companies — are one cause of concern.

"Major acquisitions increase uncertainty and add to risk, especially in the area of systems and controls," Moody's said.

It added that capital levels are thin in light of the company's diversification into unregulated nonbanking businesses.

Shawmut National Corp.: The Hartford, Conn.-based company received upgrades from Thomson BankWatch and IBCA, with both agencies citing improved asset quality and strong core capital and earnings. BankWatch boosted senior debt to BBB from BBB-minus, and long-term letter-of-credit ratings to BBB-minus from BB-plus, and preferred stock to BB-plus from BB.

IBCA raised the long-term rating to BBB-plus from BB-plus and the short-term rating to A2 from A3. BankWatch said that Shawmut's outperforming assets declined 36% in the second quarter and that remaining nonperformers are covered by reserves.

"The work is not complete, however," the agency added, noting that nonperforming assets remain 3.84% of loans and foreclosed property.

In addition, BankWatch said Shawmut would be challenged by the New England economic environment and the pending acquisition of New Dartmouth Bank, Manchester, N.H.

Southern National Corp.: Thomson BankWatch affirmed the Lumberton, N.C., banking company's preferred stock at BBB-plus. BankWatch noted that the recent definitive agreement to acquire First Savings Bank, Greenville, S.C., will boost Southern's market position in that state to third place.

Southern National's "ability to realize cost savings from First Savings and compete more effectively in the South Carolina marketplace bode well for the franchise," BankWatch said.

Citicorp to Issue $350 Million of Preferred Stock

By DAVID SIEGEL

Citicorp, attracted by low interest rates, will launch a $350 million issue of preferred stock this week.

The noncumulative stock will initially carry a dividend of about 7.5%, according to a capital markets source. Merrill Lynch & Co. is lead manager.

Foreign Banks Attracted

Preferred-stock dividends are based on long-term interest rates, so the recent drop in the yield on the 30-year Treasury bond gives Citicorp the chance to cut its borrowing costs.

The proposed dividend is 50 basis points lower than that offered on Citicorp's previous offering of preferred stock in May.

On July 15, Moody's Investors Service raised the rating on Citicorp's noncumulative preferred stock from a junk grade of Ba2 to an investment-grade Baa3.

This also contributed to the lower borrowing rate.

The drop in long-term rates is also attracting foreign banks' attention. Britain's Midland Bank PLC reportedly is set to issue about $200 million of preferred stock in mid-to-late September, and a number of other European banks are deciding whether to follow suit.

Firstfed Michigan Corp. Splits Stock 3 for 2

DETROIT — Firstfed Michigan Corp. said it had declared a 3-for-2 split of its common stock, payable Sept. 20 to shareholders of record on Sept. 1.

The company also declared a dividend of 12 cents on post-split shares, with the same pay and record dates. The new rate is equivalent to 18 cents on the presplit shares, an effective increase from the 17 cents the company was paying. □

As Long Bond Loses Grip on Role, 10-Year Note Assumes Center Stage

Continued from page 1

bond.

Mr. Westbury asserted that recent price action proves his point. The 30-year has traded in its own world in the last few weeks, outperforming the rest of the Treasury issues, which posted more moderate gains.

"The bond has recently taken on a life of its own and left the rest of the market behind," he said. "If you want to pick an issue in the market that is a better proxy for illustrating all issues, it's definitely not the bond. The 10-year is the clear choice."

Bonds

Market analysts hold a similar view for mortgage-related securities. Because of refinancings, the average life of a 30-year mortgage is about 10 years, so most analysts believe that a 10-year note would allow for easier comparisons to be drawn between the two maturities.

"I already use the 10-year as my benchmark," said David Lereah, chief economist at the Mortgage Bankers Association. "The 10-year note is more closely tied to mortgages, and I look at it to see what the mortgage market will do in the future."

Though agreeing that the 30-year issue has become a pleasure saur in a still-evolving market, some believe that the five-year note may also be a contender for benchmark status.

A Vote for 5-Year Note

Joseph Liro, chief economist at S.G. Warburg & Co., said the five-year would be an ideal

10-years are benchmarks in France, Japan, and Germany.

benchmark because of the frequency with which the issue hits the market and its tendency to lead the market in times of heavy trading.

"The five-year note gets auctioned monthly, and if you look at most big market moves they have been led by the five-year," Mr. Liro said.

Shift in the Front

And the Treasury has shifted the bulk of its debt to the front end of the market, he said, noting that the average duration of a bank portfolio is around five years. Both of those factors make the five-year a logical candidate for benchmark, he said.

Still other analysts believe market dynamics have already forced a move away from the 30-year bond as participants monitor the issues that best match their investment goals.

Steven R. Ricchiuto, chief economist at Barclays de Zoete Wedd Securities, said that increasingly segmented investors are focusing on different issues.

A Number of Candidates

"There has been over time the emergence of a number of issues which could be considered benchmarks," Mr. Ricchiuto said, noting that large funds tend to watch the 30-year issue, while foreign investors use 10-year notes. Banks, he said, tend to follow the five-year note.

Those observers agree that it will take some time before the market fully embraces a new benchmark. "The question isn't if the market will accept a new benchmark, it's more a question of when," Mr. Westbury said.

Lower Rates Prompted Selloff of Bank Stocks

By RICHARD LAYNE

Bank stocks fell last week, as ongoing long-term interest rates renewed investors' concerns about bank profits.

In the five trading days ended last Thursday, the *American Banker* bank stock index dropped 1.62%. The Dow Jones industrial average, however, rose to record highs last week, gaining 1.21%. On Friday, the blue-chip average edged up, gaining 3.35 points to 3,615.48. Bank stocks were mixed.

Stocks

With the yield on the 30-year Treasury bond falling below 6.25%, the lowest level in 16 years, investors worry that banks will get lower yields when they reinvest in the securities.

Since the cost of funds has remained steady, the lower yields would squeeze net interest margins and potentially reduce income, these investors argue.

Bank analysts disputed that argument. They said that banks do not typically invest in 30-year bonds. Banks are more likely to buy two-year Treasury notes, and the spread between the yield on that security and three-month certificates of deposits remains relatively strong, they said.

Nonetheless, money managers and analysts expect trading in bank shares to be flat until after Labor Day.

"I think bank stocks will move sideways until then," said Robert Bonelli, executive director of the Ernst Financial Group.

Earnings Boost

After Labor Day, trading volume will come back, and banks will begin hinting at their third-quarter earnings. Analysts expect another quarter of high profits.

In a recent report, Thomas Hanley, an analyst with First Boston Corp., said he expects bank stocks to "firm and do well in anticipation of the strong earnings results" that the industry will report for the third quarter.

Some analysts and money managers said that last week's decline in bank share prices is not the beginning of a prolonged selloff, such as occurred in April.

"I don't think this is a major move for the stocks," said David Berry of Keefe, Bruyette & Woods Inc.

In April, bank stocks fell an average of 18% in about eight weeks. That selloff, too, was caused by fears about margins, though in that decline, a feared rise in short-term rates sparked the worries.

Last week's tumble was mild by comparison. Trading volume was light, not all bank shares fell, and some stocks that lost ground had posted big gains earlier this year, giving investors a chance to take profits.

Bank Shares Dip

Percent change in stock prices

*Weighted average of top 225 banks as ranked by market capitalization
Source: SNL Securities

First Interstate Bancorp's shares lost 5.7% to $59.875. And Keycorp's shares fell 3.6% to $37.875.

The money-center banks, though, were a mixed bag. Citicorp's shares, which have been among the strongest performers this year, were flat, closing at $32.75. But Chemical Banking Corp.'s shares were hard hit, falling 5.1% to $39.375.

Talk of Bid for UJB

In Chemical's case, though, money managers said the shares slid because they believe the bank will try to bolster its New Jersey presence by making a bid for Princeton-based UJB Financial Corp. The worry is that Chemical will overpay, as other banks have, for recent New Jersey acquisitions. A Chemical spokesman wouldn't comment on market speculation.

• Whether UJB is up for sale, however, isn't clear. At a meeting last week, the board of directors was set to consider a restructuring plan aimed at boosting profitability – an action that can be interpreted in different ways.

One way is that the bank plans to remain independent, a stated goal of chairman F. Joseph Semrod. The other is that the bank is spracing itself up to demand a high premium in a takeover. □

Decline in Interest Rates Slowed Down On Profit Taking Following Bond Rally

The decline in interest rates slowed on Friday, as investors booked profits from a week-long rally in government bonds.

At 4 p.m., the yield on the 30-year Treasury bond was at 6.22%, up 2 basis points from late Thursday. But over the week, the bond lost 12 basis points in yield.

The Markets.

The spread between the current-coupon and the previous on-the-run 30-year Treasury remains unusually wide. At 4 p.m., the older issue was 15 basis points higher in yield. Typically, there is a 5-basis-point difference.

The Treasury has cut back 30-year bond offerings to twice a year.

The wide spread reflects "the scarcity value" of the newer issue, analysts said. The Treasury, in a move aimed at cutting its borrowing costs, has cut back 30-year bond offerings to twice a year from quarterly.

Notes Were Unchanged

Intermediate Treasuries were flat amid concern about this week's scheduled sale of $16 billion in two-year notes on Tuesday and $11 billion in five-year notes on Wednesday.

Ten-year notes yielded 5.61%, unchanged on the day and down 9 basis points on the week; five-year notes yielded 4.95%, up 1 basis point on the day, but down 9 on the week; and two-year notes yielded 3.91%, up 2 basis points on the day, but down 5 basis points on the week.

On a bond-equivalent basis, three-month Treasury bills ended the week at 3.04%, up 2 basis points on the day, but down 2 on the week.

The closely watched spread between 30- and 10-year Treasuries widened to 61 basis points from 55 earlier in the week.

Spread May Narrow Further

The spread has shrunk sharply from mid-May, when it was about 90 basis points – and market analysts think the spread still has room to narrow further.

John Lonski, senior economist at Moody's Investors Service, said that the spread typically is about 30 basis points at this point in economic recoveries.

"The spread is still wide from a historical perspective," he said.

Thus, if the economy continues to struggle and inflation remains under control, long-term yields could slide to as low as 6% by the end of September, he said.

Wells Economist Concurs

Gary Schlossberg, economist at Wells Fargo & Co., agreed that rates have room to drop further.

He noted that on a real basis, that is, subtracting the inflation rate, long-term yields are currently about 3.7%. The real yield should be closer to 2.5% to 3%, he said.

No major interest rate moves are expected this week. On Wednesday, the government will report on durable goods orders for July – and that is the only major economic report due out this the week.— **Bart Fraust**

BankAmerica May Be Mulling Credit Card Exit

By STEPHEN KLEGE

BankAmerica Corp., which helped invent the bank credit card, may be contemplating a retreat from that increasingly crowded field.

As BankAmerica officials discuss ways to reinvigorate their card business, analysts say that a sale or spinoff is at least in the backs of strategists' minds.

"I personally think they're seriously questioning whether it's a business they want to stay with on a long-term basis," said Judah Kraushaar, bank analyst at Merrill Lynch & Co.

Such a retreat would be monumental given the size of the business – the card portfolio had $7.6 billion of outstandings on June 30, No. 6 among bank issuers – and BankAmerica's place in credit card history.

NEWS ANALYSIS

The BankAmericard, the first nationally distributed bank credit card, gave rise in the 1960s to the national association that eventually became Visa U.S.A. and Visa International. When Visa adopted its current name in the mid-1970s, the rights to the BankAmericard name reverted to Bank of America.

BankAmerica officials recently told analysts that credit cards contributed only 5% of earnings in the second quarter, off from 40% in early 1989.

Demographics Wrong

To be sure, part of the story is that profits from other business lines are rising while credit card growth is leveling off.

But "it sounded like they were considering partially or totally exiting the business," said an analyst who asked not to be identified by name.

"They're finding that the business doesn't have the right demographics," the analyst said, noting that consumers are trying to pay off their debts.

The analyst also pointed out that 70% of BankAmerica's cardholders are in California, where the poor economy has contributed to a charged-off ratio of 6.17%, significantly higher than the national average.

BankAmerica officially declines to comment on its strategic planning. There is speculation that it will soon respond to recent market-share gains by nonbanks and others targeting affluent customer segments by introducing an enhanced product, possibly tying a credit card to other bank services.

Mutual S&L Execs Profit From New Charter Laws

By ROBYN MEREDITH

WASHINGTON — Before taking Milwaukee's Guaranty Bank public, its executives changed the institution into a state-chartered savings bank, allowing them to buy more shares of the hot stock than the depositors who owned the institution.

If Guaranty had kept its federal charter, the executives would have been allowed to buy roughly 30% of the stock. But Wisconsin laws set no such limits, and the company's management doubled its share to 65% of the stock sold in the oversubscribed initial offering.

As in most initial public offerings, the 790,000 shares sold on March have fared well. The executives and other initial buyers bought shares for $10 apiece. A few shares changed hands last month at $12, and offers have since been made for $13 – with no sellers.

New State Laws

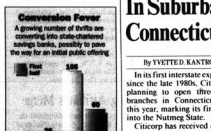
The deal was possible under new state law in Wisconsin that covers the conversion of state-chartered mutual savings banks – which are owned by their depositors – into publicly traded companies.

Wisconsin law and similar rules that six other states have recently put on their books or are now considering allow management to take much larger stakes in mutual-to-stock conversions than the 25% to 35% allowed for federally chartered thrifts.

Initial public offerings of stock, particularly in conserva-

Conversion Fever

A growing number of thrifts are converting into state-chartered savings banks, possibly to pave the way for an initial public offering



tively appraised businesses, are famous on Wall Street as one of the fastest ways for investors to make money. Thrift insiders are claiming more and more of the shares in these initial public offerings, avoiding federal limits on their purchases by converting their savings and loans into state-chartered savings banks.

Advocates–of the new state laws say that stock conversions add to the net worth of the thrift industry and improve its financial stability because the money paid for shares is added to an institution's capital.

They favor the more liberal stock purchase rights under state laws because they permit mutual thrifts to reward executives' service with profits.

And they say the state rules let thrifts save money on supervisio-

Citi to Open 1st Branches In Suburban Connecticut

By YVETTE D. KANTROW

In its first interstate expansion since the late 1980s, Citicorp is planning to open three retail branches in Connecticut later this year, marking its first foray into the Nutmeg State.

Citicorp has received approval from the Office of Thrift Supervision to open three full-service branches of Citibank FSB in affluent Fairfield County, a spokeswoman confirmed.

Citibank FSB is a California-chartered thrift subsidiary through which Citicorp conducts its consumer banking outside of New York.

'Delayed Our Presence'

"Given the condition of the company, we've delayed our presence" in Connecticut, the spokeswoman said. "But it's time to move on."

The nation's biggest bank company delayed all expansion plans in 1991 because of mounting real estate problems that reduced its earnings, stock price, and capital to extremely low levels.

It continues to operate under a memorandum of understanding with federal regulators that requires it to consult with them on operational issues, including significant acquisitions or other forms of expansion.

But Citicorp is on the re-

NEWS *briefs*

Peoples Bancorp of Worcester Holds Talks

WORCESTER, Mass. — Peoples Bancorp of Worcester, the holding company for Peoples Savings Bank, said that it was engaged in preliminary talks with a potential buyer.

Peoples Bancorp has total assets of $913 million and 3.3 million common shares outstanding. The company's stock was up 2½, to 34¾, in afternoon trading Monday on the Nasdaq system.

Dime Files for $100 Million of Preferred

NEW YORK — Dime Savings Bank of New York said it filed with the Office of Thrift Supervision for a public offering of $100 million of noncumulative preferred stock.

The bank said it intended the stock to qualify as Tier I equity for regulatory capital purposes.

Dime said that as of June 30, its leverage-capital ratio was 5.53% and its risk-based ratio was 9.29%, each greater than OTS requirements for that date. The bank said it must meet a 10% risk-based capital-ratio target by Dec. 31, 1994.

Society Corp. Banking Affiliates Merge

CLEVELAND — Society Corp. said it had completed the merger of its two Ohio banking affiliates, Society National Bank of Cleveland and Society Bank and Trust of Toledo. The merged institution, Society National Bank, has $21 billion of assets and 300 offices throughout Ohio.

With the merger, the banks are now running on a single operating system. As a result, customers throughout Ohio can conduct banking transactions at any Society National Bank office.

Society National Bank is an affiliate of Cleveland-based Society Corp., which has $26 billion of assets.

Start-Up Bank Wins Approval from OCC

NEW YORK — Waterhouse Investor Services Inc. has received preliminary approval from the Comptroller of the Currency to establish the Waterhouse National Bank.

The bank would be its wholly owned subsidiary. Waterhouse said preliminary approval was conditioned on receipt of Federal Deposit Insurance Corp. and Federal Reserve Board approvals as well as other conditions. Waterhouse said it expected the bank to be operational in early 1994.

The company said the establishment of the bank would allow it to offer expanded financial services and products. The bank will offer cash-management accounts, credit cards, and other retail-loan products.

Commercial, Industrial Loans Off in Week

NEW YORK — Commercial and industrial loans on the books of the nation's large banks fell $2.48 billion in the week ended Aug. 11. That contrasted to a gain of $3.25 billion in the preceding week. These figures exclude bankers acceptance and commercial paper.

Arundel Gets Irvington Federal from RTC

WASHINGTON — Baltimore-based Arundel Federal Savings Bank took over Irvington Federal Savings Bank in Glen Burnie, Md., from the Resolution Trust Corp., the agency announced Monday.

The RTC paid Arundel Federal $2.8 million to take Irvington's $27.6 million of insured deposits and $22.9 million of assets. Irvington had assets of $30.8 million and liabilities of $31 million when it failed in February 1992. Arundel Federal has $207 million of assets.

The briefs were compiled from staff and wire reports.

Consumer Groups Warn Congress Against Easing Curbs on Banks

By CLAUDIA CUMINS

WASHINGTON — Six prominent consumer groups have warned Congress that any regulatory relief for the banking industry would threaten important consumer protections and engender stiff opposition from the public.

In a letter last week to Sen. Donald W. Riegle Jr., D-Mich., chairman of the Senate Banking Committee, the groups attacked the banking industry's effort to roll back burdensome laws, saying such action would "break faith with the American people."

Michelle Meier
Don't "break faith" with public

'Trojan Horses'

"We urge that you oppose all industry-led efforts to weaken taxpayer, consumer, and community reinvestment protections and that the Trojan horses of "regulatory burdens," "excessive paperwork,' and 'credit crunches' be stopped at the committee gates," the groups wrote.

"It is essential that safety and soundness and consumer protections remain in place," they wrote, "and that the Congress resist the temptation to shortsightedly alter, shift, and diminish regulatory policy and short-sighted industry demands based on little more than paper-thin anecdotal evidence about 'regulatory burdens.' "

The letter was signed by Michelle Meier of Consumers Union, Deepak Bhargava of Acorn, Chris Lewis of the Consumer Federation of America, Susanna Goodman of Public Citizen's Congress Watch, Ruth Susswein of Bankcard Holders of America, and Ed Mierzwinski of U.S. Public Interest Research Group.

"The great majority of the members of Congress don't agree with them," said Ed Yingling, chief lobbyist for the American Bankers Association. Most of the lawmakers have stated their support for some sort of regulatory relief, he added.

The consumer advocates sent the letter in anticipation of the busy congressional season that begins in September. When they return after Labor Day, lawmakers are expected to consider a number of banking-related proposals. These include, smallbusiness securitization, fair credit reporting, and reverse redlining measures.

The proposal most closely watched by banking groups, though, will be the President's community development financial institution package. And some worry that prominent Republicans – led by the Senate panel's ranking minority member, Alfonse D'Amato of New York – could hold up the bill, unless regulatory relief provisions are incorporated into it.

"I don't think there's any secret that senators on the committee are talking about putting some regulatory relief measures onto the community development bill," Mr. Yingling said.

But the consumer groups remain hopeful that they can forestall such efforts.

"The industry's well-financed campaign about 'regulatory burdens' is an echo of the drum beat of the deregulatory mania of the 1980s that left us with a wrecked savings and loan industry and a weakened banking system," they said in their letter.

"The hundreds of billions of dollars in costs to the insurance funds and the taxpayers are still being totaled," they added. "The American taxpayers have owed the assurance that this will not happen again." □

Colorado National Expanding Its Fleet Of ATMs in 7-Elevens

By MATT BARTHEL

Colorado National Bank has signed an agreement with Southland Corp. to install automated teller machines in 122 more 7-Eleven stores in Utah and Missouri.

The bank already has 157 ATMs in 7-Elevens in those states.

The deal follows a recent announcement that Electronic Data Systems Corp., Plano, Tex., a unit of General Motors Corp., would install about 4,000 machines in 7-Elevens in other areas.

These moves – together with Boatmen's Bancshares' deal this year to place 150 ATMs in Wal-Mart Corp. department stores – **The plan illustrates bankers' new interest in non-branch locations.** as well as dozens of other recent cash machine installations by other institutions at hospitals and office complexes – provide growing evidence of bankers' new-found fondness of out-of-branch ATM locations.

Looking for Opportunities

"Most banks, at least the strong ones that are really working, are looking for new electronic banking opportunities," said Ann Schmitt, vice president of Colorado National Bank's ATM network.

"Off-premise ATMs, if the location is a good one, ultimately make a lot of sense."

According to a recent *American Banker* survey, the number of off-premise ATMs installed by the top players in electronic banking increased by 18% in 1992 compared to 1991.

And there are indications this trend will continue.

Although experts say branches in the U.S. are virtually saturated with ATMs, the *American Banker*/Ernst & Young 1993 survey of technology in banking found that banks plan to add 11,000 ATMs by 1996 to the current base of 89,000. The majority of these new installations are expected to be in nonbranch locations.

The attractions are obvious. First, the machines offer bankers a way for banks to extend basic banking services to their customers without the expense associated with adding branch offices.

Second, off-premise ATMs can be a boon to transaction volume, provided a banker installs the machines in the right locations. Convenience stores are a recent favorite site, and shopping malls and office buildings are also receiving their share of new installations.

Support Can Be Costly

But there are also drawbacks to the off-site locations. Some tellers and branch personnel cannot service the machines as they do in-branch ATMs, off-premise terminals often require a bank to hire a service company to handle such tasks as collecting deposits and replenishing cash.

As a result, off-premise ATMs can be up to three times as expensive to support as in-branch terminals. Many find that the new source of transactions is worth the increased support costs.

Other institutions have found that off-premise ATMs are no more expensive to support than those at branch locations.

"Most of our branch ATMs are drive-ups, so we already use a third party to support them," said John Smith, executive vice president at Hibernia National Bank, based in New Orleans. "It wasn't a very large jump to have the company service off-site machines."

Potential for Savings

It costs $600 to $900 a month to support each of the bank's 94 ATMs, Mr. Smith estimates. But several developments may reduce those costs over time.

The most important is a new generation of teller machines that feature larger cash dispensing cartridges. Since the new machines can be stocked with more cash, replenishment trips become less frequent.

The newer ATMs also typically contain personal computers that streamline the terminals' journaling functions. This speeds the process of balancing the ATM, Mr. Smith said.

Hibernia already has almost 20% of its ATMs installed in off-premise locations such as hospitals, and it is in the process of hammering out a deal to install ATMs in a convenience store chain in the New Orleans area.

"All things considered, it's a good way just to get the bank's name out there," Mr. Smith said, noting that many banks try to woo new customers with their off-premise ATMs by printing out coupons for bank services along with transaction receipts. □

Tri Counties Installs Fiserv System

By DEIDRE SULLIVAN
Special to the American Banker

Seeking a simultaneous boost in back-office productivity and customer service capabilities, Tri Counties Bank in Chico, Calif., has installed Fiserv Inc.'s Comprehensive Banking System.

For the past several years, the $500 million-asset Tri Counties' programming staff had been maintaining a customized software package in-house. "The situation with our old software got to the point where we couldn't keep up making the system adjustments to comply with new regulations," said Debra Howell, the loan production manager at Tri Counties. "We couldn't make enhancements. It was too time consuming and labor intensive."

Streamlined Programming

Ms. Howell said the primary reason why Tri Counties chose Fiserv was because the Fiserv system, which runs on an International Business Machines Corp. AS/400 midrange computer, enables the bank to create installment loans, commercial loans, or any other type of loan using the same programming tools.

"The default parameters are the same for all loans, so our programmers don't have to go into the system and set up anything new," Ms. Howell said.

In addition, the new system enables Tri Counties to offer an automatic escrow service to its mortgage customers. In the past, providing this type of service had been an operational problem.

Ms. Howell explained that the bank never considered escrow accounts but when it merged with another community bank three years ago, Tri Counties assumed the obligation of serving more than 75 escrow customers.

To Offer Escrow Service

"Under our old system, we had to go in and manually do the escrow accounting and it was time consuming," she said. Under the new Fiserv system, the function is performed automatically. Ms. Howell said that, in the coming months, the bank will offer escrow as a service to new mortgage customers.

The California bank expects improved productivity and customer service.

The Fiserv system also offers a range of customer service benefits. The system enables front-office personnel to pull up a consolidated record of an individual customer's banking activity. "If a loan officer needs to move from a savings account screen and into a trust record, he or she can do it in seconds and then go right back to the original screen," Ms. Howell said.

Ms. Sullivan is a freelance writer based in New York.

Scottish Bank's Rhode Island Unit Hires a Lehman Bros. Merger Pro

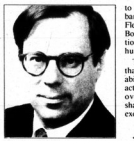
By YVETTE D. KANTROW

Further signaling its intent to expand, Citizens Financial Group in Providence, R.I., has tapped Bradford B. Kopp, an investment banker for most of his career, as chief financial officer.

Mr. Kopp, 41, joined the company last week as an executive vice president, after a 12-year career at Lehman Brothers in New York.

Most recently a managing director in the investment bank's financial services group, Mr. Kopp has raised capital for both commercial and savings banks and has handled numerous mergers and acquisitions.

"Now I get to be on the other side," he said.



Bradford B. Kopp
"We want to expand"

On the Acquisition Trail

The merger and acquisitions experience should prove handy at Citizens, a subsidiary of the Royal Bank of Scotland PLC that is hot on the acquisition trail in Massachusetts and Connecticut.

Citizens has been given the mandate by its parent to more than double its $4.5 billion of assets to $10 billion by the end of 1995.

"It's a very exciting place to be," Mr. Kopp said. "There is all this capital in Scotland that's available to build the bank."

With Royal Bank's $60 billion in assets, Mr. Kopp said, Citizens has the firepower it needs to compete with New England banking behemoths such as Fleet Financial Group, Bank of Boston Corp., and Shawmut National Corp., which are also hungry for acquisitions.

That kind of capital more than makes up for Citizens inability to do a stock-swap transaction, he said. (Because of its overseas parentage, Citizens shares do not trade on an exchange.)

Some Prefer Cash'

"Having a high stock price would be an advantage," Mr. Kopp conceded, "but some people do prefer cash."

Citizens is currently digesting Boston Five Bancorp and New England Savings Bank, a failed Connecticut thrift. The two will add $2.5 billion of assets to Citizens and, according to Mr. Kopp, turn the bank into the nation's 50th largest.

"We have our hands full right now, but we want to expand," Mr. Kopp said. □

Texas' Guaranty Federal Buying San Antonio S&L

By JOHN RACINE

DALLAS — Already the largest Texas-owned financial institution in the state, Guaranty Federal Bank is about to get even bigger.

The Dallas-based savings bank said late Friday that it agreed to acquire $416 million of assets and assume $378 million of deposits from First Federal Savings Bank in San Antonio.

The $42 million cash deal, expected to close by yearend, has been approved by stockholders of VBFSB Holding Corp., First Federal's parent company.

'Very Enthusiastic' About Market

The acquisition would give Guaranty Federal nearly $9 billion in assets. The thrift is the largest locally controlled financial institution operating exclusively in the Lone Star State.

"Because of the explosive growth in the tourism and high tech industries in the greater San Antonio area, we're very enthusiastic about the San Antonio market," said Robert F. Adelizzi, chairman of Guaranty.

The growing San Antonio market is poised for even more explosive action because of an anticipated increase in trade with Mexico should the North American Free Trade Agreement go into effect.

Second Deal This Year

The pending acquisition is the second to be announced by Guaranty Federal this year. The savings bank reached a definitive agreement in February to acquire American Federal Bank of Dallas, which has $1.7 billion of assets, from Lone Star Technologies.

John Rowley, a spokesman for Guaranty Federal, said the savings bank would continue to look for healthy Texas institutions to buy. The company, owned by Temple-Inland Inc., a Diboll, Tex.-based wood and paper products company, operates in some 72 cities east of Interstate 35, which divides the state.

Guaranty focuses primarily on consumer mortgage lending in Texas, and also has a national profile in the mortgage finance business.

Citicorp Moving into Connecticut

Continued from *page 1*

bound, and apparently ready to make more investments in its powerful retail franchise.

In Connecticut, the banking company is seeking a toehold in southern Fairfield County – an important extension of the hotly competitive New York City metropolitan market.

Rivals Already There

Two of Citicorp's bigger rivals have already staked out a presence in the area, one of the nation's wealthiest. It also borders New York's Westchester County, another affluent suburban region.

Chase Manhattan Corp. entered Fairfield County two years ago when it bought two failed Bridgeport banks. New Jersey's First Fidelity Bancorp. edged in this year with its purchase of Northeast Bancorp., a troubled company with 68 branches in the county.

While Citicorp's presence will be tiny, observers said its impact on Connecticut's banking scene is likely to be significant.

In California, Florida, and other states in which Citicorp has small branch networks, the company has aggressively marshaled technology and specialized marketing programs to make strong inroads with affluent individuals.

'Will Notch Up the Level'

That strategy could play well in Fairfield, where the average annual household income is $65,853.

"This will notch up the level of sophistication of competition in Fairfield County," said Les Dinkin, president of NBW Consulting Group in Westport. "The banks will have an aggressive new competitor on the block to contend with."

Citicorp's Connecticut branches will be located near the Westchester border in Cos Cob, Stamford, and Greenwich. But now that it has a toehold, Citicorp is likely to move quickly to establish more outposts in a state that is undergoing rapid consolidation of its banks.

Smaller Institutions Vulnerable

With much of Connecticut mired in a recession, many smaller institutions are vulnerable to, or eagerly courting, takeover. Earlier this month, First Fidelity agreed to buy Greenwich Financial, a thrift-holding company with seven offices near Citicorp's planned branches.

The Citicorp spokeswoman would not comment on the company's long-term plans in Connecticut.

"We'll start here and take it one step at a time," she said. □

BankAmerica Expands Responsibilities Of Vice Chairman Michael Rossi

SAN FRANCISCO — BankAmerica Corp. said Monday that it has expanded the responsibilities of vice chairman Michael E. Rossi, handing him the reins of its large commercial banking group and many of its private banking and trust businesses.

Mr. Rossi, 49, also will retain responsibility for BankAmerica's international trade banking division and its real estate special attention assets management unit. He will relinquish his job as head of credit policy, which he has held since 1990, to Jack L. Meyers.

Mr. Meyers, 50, is a group executive vice president who had directed the commercial banking activities that were transferred to Mr. Rossi.

Mr. Rossi will now run the investment management group, which includes mutual funds, private banking, and personal trust. The group had been overseen by Peter McPherson, who was director of Third World debt restructuring.

Mr. MacPherson, 52, announced that he will become president of his alma mater, Michigan State University. □

The American Institute of Banking
Shaping the Future of Banker Education™

Invest in Your Bank's Future Today with the American Institute of Banking

Successful bankers like you are enrolling their employees now in Fall classes at their local American Institute of Banking (AIB) chapter.

Why AIB?

AIB offers you and your employees:

■ High-quality, cost-effective, banking-specific training and education

■ A solid foundation in banking combined with practical applications to the job

■ Convenient, local delivery of nationally developed courses through one of more than 450 AIB Chapters or Study Groups

■ A wide variety of program options, from innovative evening seminars to traditional multi-week course offerings focused on these vital areas of your bank:

- Compliance
- Marketing and Sales
- Corporate Banking
- Retail Banking
- Management
- Plus, core courses in accounting and other banking fundamentals

"I started taking AIB courses ten years ago when I was a junior officer, right out of college. I've taken a dozen classes, each one has helped me in the specific area I've worked into. I'm now an executive officer of a local bank."

James D. Wilkson
Vice President
Missouri State Bank & Trust

Sign Up Now

There's still time to enroll your employees in classes for Fall 1993. **For more information check your local listings for the AIB Chapter near you, complete and return the coupon below, or call the AIB Information Line at (202) 663-5153.**

Yes! I want to invest in my bank's future. Send me more information about AIB's programs and services right away!

Central Fidelity Copes with the '90s by Slashing Costs

By KENNETH CLINE

Company Focus

"That's one of the few live plants that we still have around the bank," says Lewis N. Miller Jr., pointing to the miniature Japanese bonsai tree sitting on a table in his office.

Mr. Miller, president of Richmond-based Central Fidelity Banks Inc., said the bank recently did away with its plant servicing contract, thereby saving about $150,000 a year statewide.

In its place, employees were provided with their own watering cans or asked to make do with artificial plants.

"A nickel here, a nickel there, sooner or later it adds up," Mr. Miller said nonchalantly.

Low Efficiency Ratio

But the sentiment has become one of Central Fidelity's bedrock credos. The company is obsessed with saving money.

In fact, its efficiency ratio, which measures the percentage of operating revenues eaten up by noninterest expense, was 54.58% last year, the fourth lowest among the nation's larger banks.

Lewis N. Miller Jr.
"A nickel here, a nickel there"

"In Central Fidelity's case, it's very much an expense control story," said Anthony R. Davis, a bank analyst at Dean Witter Reynolds Inc., in New York. "They don't waste any motion."

Central Fidelity earned $7,749 per employee in the second quarter, compared with $6,400 for the typical bank followed by Dean Witter, according to Mr. Davis.

A Rough Decade

Mr. Miller dates Central Fidelity's fixation on cost control back to 1989, when he and chairman Carroll L. Saine started thinking hard about the future of the banking industry.

"We realized the '90s weren't going to be good for banks," Mr. Miller says. "To continue to be profitable and to grow, you were going to have to be efficient – get more out of what you've got."

To encourage its employees to buy into the cost-scrimping regime, Central Fidelity makes heavy use of financial incentives.

Last year, after employees succeeded in keeping controllable expenses flat, they received two separate 2% increases in salary.

Added Incentive

The incentive this year is even richer. Under the new "Four for 4?" program, each of the bank's 3,500 employees will receive a 4% boost in salary if the bank is able to get its efficiency ratio below 50%.

Since the ratio dipped to 48.98% in the second quarter, Mr. Miller feels certain the goal can be achieved for the full year.

Its efficiency ratio was 54.58% last year, ranking it No. 4 among its peers.

Unfortunately for Central Fidelity, its strenuous efforts have not won it any kind of premium in the stock market. The bank company's shares sell at a 10% discount to the typical regional bank stock followed by Dean Witter, Mr. Davis said.

Nonperformers Remain High

He cited credit problems related to commercial real estate in the Washington, D.C., area as a "continuing cloud" over the company. At a time when other banks are working down their nonperforming assets, Central Fidelity made no dent in its $112 million of nonperformers during the second quarter.

"Central Fidelity has sort of brought up the rear in this cycle in terms of credit recovery," Mr. Davis said. "They've had problems longer than most banks we follow. Efficiency is just one piece of the puzzle."

Historically a middle-market lender with little razzle-dazzle in its strategy, Central Fidelity has lagged behind the industry in its ability to generate fee income.

Fees accounts for less than 20% of revenues, putting Central Fidelity in the bottom quartile for banks its size. However, it made a major effort to correct that deficiency last year by forming a new mortgage subsidiary and launching a mutual funds and annuities sale drive.

Mr. Miller says Central Fidelity is striving to achieve the averages of its peers in fees. But he is not planning on any major changes in his overall strategy.

"We'll never be in the top rank of fee-earning banks," he said without apology. □

"Please find out about this structured finance deal and get back to me."

At 78, Pohlad Still Enjoys 'Romance' of the Deal

By ROBERT B. COX

At 78, most bankers are thinking more about the next Social Security check than the next acquisition.

Not Carl Pohlad, president of Marquette Bancshares.

After more than a half-century in banking, he has amassed an empire of three dozen community banks spanning 10 states, a baseball team that has won two world championships, and a personal fortune estimated at close to $1 billion.

But Mr. Pohlad, who is five years older than the Pope and 31 years older than the President, hasn't considered stopping. In fact, he has just embarked on an acquisition spree that is likely to lead him far from the Twin Cities – through Texas and eventually to California.

'A Long Range View'

"At Carl's age, you would not think he would be looking at things that might not be good five years from now," said Norman Jones, a friend who is chief executive of Metropolitan Financial Corp., a Minneapolis-based regional thrift company. "But Carl always has a long-range view."

When Mr. Pohlad sold the Twin Cities franchise of his bank holdings, Bank Shares Inc., to First Bank System for $240 million last year, many observers figured he would sell the whole lot and head for a leisurely retirement.

Instead, Mr. Pohlad and his executive posse refocused their strategy to acquire small community banks in secondary towns and cities throughout the 10 states they are in, and in others they find appealing.

Known for Baseball

"All the major banks in the country are staking out their territory today," Mr. Pohlad said last week in a rare interview. "We are doing the same thing in a smaller, private way."

A household name in Minneapolis, Mr. Pohlad is less well-known for his banking expertise than his ownership of the Minnesota Twins, who were threatening a move to sunnier climes when he acquired them in 1984. But banking has been the core of the gray-haired executive's empire. His network of 37 community banks, if merged, would create a company with $3.5 billion of assets and 95 offices. Mr. Pohlad also owns $250 million – nearly 9% – of First Bank System stock, and more than $20 million of Metropolitan Financial's shares.

NEW HORIZONS: Well-established in Minneapolis, Carl Pohlad is looking to expand in the West and Southwest.

Mark Luinenberg

Some Disappointments, Too

While most of his investments have been successful, Mr. Pohlad has had his share of disappointments. Early this year, MEI Diversified, a concern with interests in hair salons and medical products in which he had a controlling stake, filed for bankruptcy protection.

Two years earlier, he sold more than 600,000 shares of TCF Financial Corp. just before the market for thrift stocks took off and TCF tripled in value.

And Mr. Pohlad, who calls deal-making "romance," was jilted in his three largest takeover attempts. In 1989 he tried to buy Texas American Bancshares, Fort Worth; and National Bancshares, San Antonio, which would have boosted his Texas holdings to nearly $10 billion. Early this year he and investor Irwin Jacobs tried to raise their 10% stake in Peoples Westchester Savings Banks of New York to full ownership of the $1.8 billion thrift – but offered just $30 per share, a bid handsomely topped at $44 by New Jersey-based First Fidelity Bancorp.

'On the Cheap'

"Carl Pohlad likes to buy things on the cheap," said Piper Jaffray Inc. analyst Steven R. Schroll. "Today you don't buy banks on the cheap unless they have a lot of problems."

Still, "his small community bank strategy is sound, and will be, like most of Carl's endeavors, a success," said Richard Kovacevich, president and chief executive of Norwest Corp.

Over the past decade only two of the Pohlad banks have posted a loss – and those were modest. The average return on assets for the dozen Marquette banks in Minnesota was a healthy 1.4% last year.

The banks are controlled by the Pohlad family directly or through 15 separate holding companies. While they are not centralized and have different names, the Pohlad family exacts efficiencies through its Marquette Consulting Corp.

Through the shell company, Mr. Pohlad and other officers at Marquette offer their many disparate banks centralized functions including auditing, loan review, and compliance.

The career banker said he does not exclude the possibility of merging all of the institutions, conceding: "Maybe some day we will put them all together." Nor does he rule out selling some of his family's share in the chain of banks: "We will continue to give it consideration."

But for now, Mr. Pohlad and the officers of Marquette are focused on doing deals. They are scouting aggressively in the Midwest, Arizona, Texas, and New Mexico, where the Pohlads currently own institutions.

"If we don't think we can achieve $1 billion of assets, we don't have too much interest in a given market area," said Mr. Pohlad.

Since selling the Minneapolis

Pohlad Sets His Sights on Risky California Market

By ROBERT B. COX

California may be half a continent away from Minneapolis, but it is likely to be acquisitive banker Carl R. Pohlad's next step.

"We are looking very aggressively in California," said Mr. Pohlad, majority owner of 37 community banks throughout the country, including Twin Cities-based Marquette Bancshares. Since staking out territory in Texas two years ago, Mr. Pohlad has been steadily moving West, buying banks in Arizona and New Mexico, with plans to grow assets in those states to as high as $1 billion.

Mr. Pohlad is now looking for "well-established community banks" outside California's major metropolitan areas with assets from about $200 million to $500 million.

But California does not come cheap, nor does it come without risk.

Acquisition Costs Remain High

Nonperforming loans comprised a troubling 4.34% percent of gross loans at California banks as of March 31, according to Sheshunoff Information Services. In Mr. Pohlad's home state of Minnesota, problem loans were just 1.35% of gross loans, lower than even the 2.9% national average.

Asset-quality woes have done little to lower the cost of acquiring Golden State banks. Hungry acquirers paid an average 185% of book value for California banks over the last four quarters, according to SNL Securities in Charlottesville, Va. The national average was lower, at 170 percent of book.

And early this month, First Interstate Bancorp raised the stakes by paying a hefty 2.55 times book value for the $2 billion-in-assetsSan Diego Financial Corp.

"We won't pay that much," demurs Thomas A. Herbst, executive vice president of Marquette.

Mr. Pohlad remains optimistic. After all, he's bought his share of troubled banks and turned them into profitable institutions. And with 30 million residents and an economy that he believes has bottomed out, he feels the potential is great.

"Two years ago I would have never had the slightest interest in the state," he said. "Now I think there is a place for community banking in smaller areas in California."

Deals Still a Thrill For Carl Pohlad, 78

Continued from *page 7*

franchise last year, the Pohlad group has picked up three community banks in Texas, two in Minnesota, and one in New Mexico, plus a South Dakota thrift, and has opened a private bank in Minneapolis – adding a total of $700 million of assets.

The Pohlad group recently reached – but has not yet announced – agreements to buy a $30 million-asset bank in Denton, Tex., and a $100 million-asset bank near Houston, as well as a $75 million-asset bank in western Wisconsin.

Perhaps most surprising, however, Mr. Pohlad is looking at about six banks in California alone: "Where there is trouble there is opportunity," he says.

Mr. Pohlad was baptized into banking during the Depression as a collector for an Iowa finance company. "It's easy to make a loan but it takes a genius to collect on it," he says.

To keep asset-quality problems to a minimum, Marquette Consulting takes Mr. Pohlad's underwriting ground on the road – training staff continually at all locations.

"People that are part of the Pohlad organization know that earnings are not the number one priority – asset quality is," said Thomas A. Herbst, an executive vice president at Marquette.

'They Are Family Oriented'

The banker also tries to provide ample incentive for employees throughout the company – though none of the salaries approach the $31 million, five-year deal star Twins outfielder Kirby Puckett signed prior to this season.

"It's a real good organization to work for," said Pauline Nygaard, a vice president at Farmers State Bank of Cut Bank in Montana. "They are family-oriented which means a lot around here."

Mr. Pohlad's "family" at the banking company consists of executive vice presidents James O. Pohlad (Carl's son), Mr. Herbst, and Albert J. Colianni Jr., and chief financial officer Jann Ozello Wilcox. Mr. Pohlad declined to name his successor.

"I might live forever," said Mr. Pohlad, whose 101-year-old mother attends every Twins home game. "The secret of age is that you have got to keep busy." □

PIPELINE / *By Ed Kulkowsky*

Home Loan Stocks Get More Attention

With originations continuing to soar, mortgage banking stocks have getting more attention from Wall Street. Analysts initiated coverage on three last week. The score: one "buy," one "neutral," one "sell."

Gordon Gray at PaineWebber Inc., New York, weighed in with opinions on Fleet Mortgage Group, a "buy," and Countrywide Credit, "neutral." He sees a buying opportunity in Fleet following its recent writedown of servicing rights. On Countrywide he is biding his time, waiting for the market to fully discount an expected slowdown in refinancings. He expects to make Countrywide a "buy" if that should happen.

A 'Sell' Rating

At Mabon Securities in San Francisco, Gareth Plank kicked off coverage of Margaretten & Co. with a "sell."

Said Mr. Plank: "It's a fine company, but in retrospect the price on their acquisition of servicing from NationsBank was a bit too lofty. They bought $7 billion with a weighted average coupon of 9.3%. I see a tremendous refinancing drain coming. The premium paid will have to be adjusted downward."

And if rates rise? "Mortgage bank stocks will be shunned by investors in that environment, as they have been historically."

* * *

One mortgage company that took some lumps last week was Imperial Credit Industries, Santa Ana Heights, Calif. It was given a "sell" rating by Sy Jacobs, an analyst in New York with Alex. Brown & Sons, Baltimore. Mr. Jacobs had previously been neutral on the stock. The reason for the change: a rising stock price despite a decline in originations.

The shares were trading at about $14 at the end of the week, down from about $16.25 before Mr. Jacobs issued his report.

* * *

Some observers were scandalized and alarmed recently when the U.S. government decided to issue the 30-year bond only twice a year.

Thinking About the Long Bond

To understand why they were flustered, you have to understand that the "long bond" is to fixed-income fanciers what the Dow is to the equities crowd: the basis if imperfect shorthand for discussing the state of the market. And lately, the long bond has been on everybody's lips because its price has been rising inexorably.

But now, the talk is that the 10-year issue may become the new standard, and "long bond" may disappear from the argot.

Does anybody in the mortgage business care? Only a little.

"It's like losing an old friend," says David Lereah, chief economist for the Mortgage Bankers Association. But he isn't shedding any tears. "The benchmark isn't really anything technical," he says. "And most mortgage people have been looking at the seven-year and the 10-year anyway"

John Prince, head trader at Freddie Mac, agrees:

"People tend to equate the 30-year bond in their minds with the 30-year mortgage. But the performance of mortgage securities on the yield curve is more related to the seven- or 10-year. If the 30 were gone, we think we would be unscathed in terms of liquidity or performance on MBS issues."

Lenders Worry that Low Rates Will Fail to Spur Homebuyers

By JAMES H. SAFT

Interest rates on home loans are starting to push below the 7% mark, and refinancings continue to soar as a result. But mortgage lenders are worried that no matter how low rates may go, originations for purchases will stay flat.

A survey of lending rates by HSH Associates of Butler, N.J., shows that average 30-year fixed rates in many cities are hovering around 7% – which means that many lenders are already offering mortgages below that figure.

No Strong Pickup

Boston, according to preliminary findings, has the nation's lowest average rate, at 6.96%.

Yet despite some of the lowest rates in the country, lenders in Boston report no strong pickup in purchase-related lending.

"We're trying to attract some new loans and not just refinancings, but it's tough," said Richard Grane, president and chief operating officer of Hyde Park Savings Bank in Boston.

"The rest of the country may be coming out of a recession, but we've lost a lot of jobs."

Those comments were echoed by Steve Deardorff, vice president of CTX Mortgage Co., Dallas, where the average 30-year fixed rate was 7.03%.

Economic Worries Cited

"We're surprised the lower rates haven't spurred new purchase activity," he said. "It's really a reflection of people's concern about the economy."

Philadelphia is another metropolitan area with low rates – an average of 7.02% – and there the story is no different. Banks see lower rates bringing about the predictable refinancings.

"We're getting the people I call the procrastinators, people who missed the last two waves of refinancings and are now coming out of the woodwork," said Joseph Murphy, vice president at Frankford Bank in Philadelphia.

Public Seen as Jaded

It may simply be that consumers, used to ever-falling rates, have become jaded.

Peter Treadway, an analyst with Smith Barney Shearson Inc., thinks that 7% is not a particularly important barrier psychologically.

"It may cause some people to come to market, but its not like 10%," he said.

Orlando has the highest 30-year fixed rates in the nation, averaging 7.23%.

Next is Minneapolis, at 7.19%. □

Sadly for you, politicians in Washington agree on something.

Lawyers, legislators and lobbyists in Washington—people who've made careers out of being contrary—all are declaring the same thing these days: that government's relationship with the secondary mortgage market is going to change drastically.

They all know about HUD plans to toughen enforcement, new pressures on Fannie and Freddie, and the revival of Ginnie Mae as a major player in the market. And if you want more evidence, look to Capitol Hill, where Congress is toying with mortgage bankers subject to the same regs as commercial banks.

How should you react? You could wax nostalgic—and get clobbered by the government and your competitors. Or you could read *The Mortgage Marketplace.*

Every Monday, in less time than it takes to finish your morning coffee, *The Mortgage Marketplace* tells you about the new rules and ideas that could keelhaul your secondary operations. It names the biggest mortgage company participants in Ginnie, Fannie and Freddie issues. And it scans the horizon to determine what types of loans, and borrowers, that now are considered exotic could soon enter the pipeline of conforming loans.

There's no debate—new regs are coming. What's still at issue is whether you'll be ready for them.

Mortgage Guaranty Led in the 1st Half

By JAMES H. SAFT

Mortgage Guaranty Insurance Corp., Milwaukee, captured the top spot in new insurance written in the first half of this year, with policies on $15.8 billion of mortgages. It is believed to be the first time in several years that the company has held the top rank.

Mortgage Guaranty, or MGIC, surged past GE Capital-Mortgage Corp. ($14.5 billion) by posting a 36% increase over volume in the period in 1992. GE, which held the top spot in 1992, had a 12% increase, to $14.5 billion.

PMI Mortgage Insurance., of San Francisco, saw its volume of new insurance shoot up to $11.2 billion, a 36% increase. United Guaranty Corp., the Greensboro, N.C.-based mortgage insurer, enjoyed an even steeper ascent, registering $6.8 billion, a whopping 41.7%.

Refinancings, Low Rates

Most observers attribute the strong volume largely to low interest rates and the resulting high level of refinancings.

"A lot of these numbers are coming off the high level of originations," said James S. MacLeod, senior vice president of Mortgage Guaranty. While Mr. MacLeod believes that market share is a "nice measure, the ultimate measure is the quality of business on the books."

One reason for Mortgage Guaranty's increased market share, according to Mr. MacLeod, is its increasing efforts to share risk management information with mortgage lenders.

Regional Slumps Hurt GE

Why the loss of market share by GE? Martin Heck, president of GE Mortgage, said, "You need to look at the distribution of where we're strong geographically. We're strong in the Northeast and West Coast, areas which are currently having severe recessions."

Both PMI and United Guaranty pointed to an increased amount of pool insurance business.

Though pool insurance volume is not counted as part of mortgage insurance volume, it has the effect of bringing in business. "If you're doing a lot of pool insurance for a customer, they are more likely to give you their other business," said Claude Seaman, senior vice president of PMI. Mr. Heck has high hopes for GE Mortgage's monthly payment plan, an innovation GE pioneered earlier this summer.

Whether monthly payments will provide GE with a competitive advantage is unknown.

Others Follow Suit

Mortgage Guaranty launched a similar product last week. And United Guaranty Corp. president Charles M. Reid and Mr. Seaman of PMI both indicated that their companies are hard at work at developing their own versions.

Monthly billing is expected to generate new business, especially among first-time homebuyers, by cutting the amount of money needed to close.

One issue mentioned by officials at all four mortgage insurers is that the unprecedented volume is placing stress on operations. "It's volume like we have never seen, and we've had real pressure to keep turnaround time low and service up." □

3 Still in Race for Empire of America

By JAMES H. SAFT

The bidding for Empire of America Realty Credit Corp. has been narrowed from seven potential buyers to three, according to sources.

They are said to be Wesav Mortgage Corp. of Scottsdale, Ariz., Household Commercial Financial Services of Prospect Heights, Ill., and an unidentified investor. Wesav officials declined to comment. Bankers from Empire and Household did not return calls.

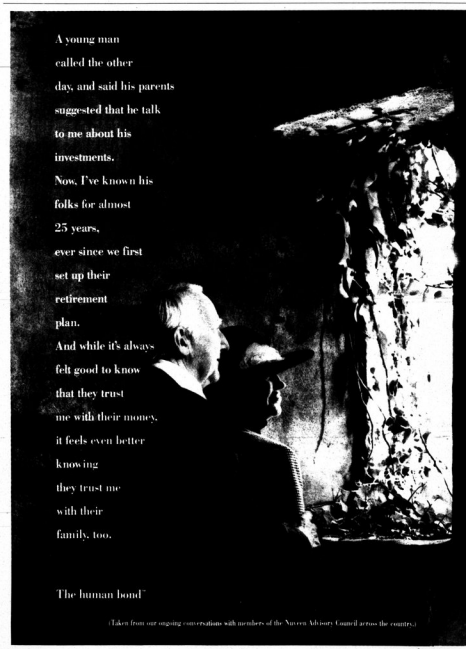
The finalists are said to be performing due diligence. A winner is expected in early fall.

Expansion Potential

Wesav, a unit of First Western Corp., is thought to be interested partly because of the opportunity to branch into a new geographic area.

Household Commercial has also been known to be looking for a property to expand its mortgage banking operations. It was a strong bidder for the mortgage banking properties of Sears, Roebuck & Co. earlier this year. PNC Bank Corp., Pittsburgh, was the winner.

Buffalo-based Empire originated some $4 billion in mortgages last year and has a servicing portfolio of about $6.8 billion. The company was bought from the Resolution Trust Corp. for $40 million in 1991 by Carbadon Corp., which is a joint venture of Cargill Inc., Gordon Investments, and a venture capital pool affiliated with Prudential.



Training Firms Rush to Share in Funds Boom

By KAREN TALLEY

Training companies are jumping on the investment-product bandwagon at banks.

A cottage industry is springing up to help banks license salespeople, learn more about investment offerings, and target customers.

Training companies range from operations like Omega Performance, San Francisco, with scores of employees, to one-person or two-person shops, like Sales Acceleration Systems, Beaverdam, Va. And some big mutual fund companies, such as Van Kampen Merritt, have set up separate units to offer banks training for a fee.

Payback Hard to Evaluate

Bankers says these programs can indeed be helpful – but the financial return is hard to pinpoint.

James McCoy, vice president at Signet Financial Services, Richmond, Va., lauds training Omega supplied to a couple of hundred platform people.

A cottage industry is springing up to help market investment products.

The program, which costs about $475 a person, has helped Signet direct more qualified leads to sales representatives, Mr. McCoy said. But exactly how much new business the training has yielded is "real hard to track" because of other factors that may affect sales, he said.

Some firms that provide comprehensive sales support to banks, including training, scoff at the idea of programs that provide only training.

Niche Training

"Our client banks find it's really not necessary to go to those sources, because their needs are met by us," said Robert Burke, director of education at Invest Financial Corp., Tampa.

R. Scott West
Says firm's approach is unique

But suppliers of stand-alone training programs maintain that their offerings are necessary in an increasingly competitive market. And each company points to a particular niche it serves.

"This is another level," said R. Scott West, director of financial institutions at Van Kampen Merritt, which modeled its program after Xerox's training methods. "We tap into resources that banks aren't going to get anywhere else."

Lou Harvey
Says fly-by-nights won't last

Mr. West said the Xerox strategy, which concentrates on identifying customers needs as a way of selling more products and those that are most appropriate, is unique to banks.

While Van Kampen is a known name, industry observers warn that the lure of potentially easy money will surely entice some fly-by-night operations to enter the fray.

Banks may get burned. But some experts – among them Lou Harvey, president of Dalbar Financial Services, a financial consultant in Boston – are confident that phony firms can't last long.

"If people are not well trained, it becomes obvious pretty quickly," Mr. Harvey said. □

Unit Trust Sales Up Sharply in Half

Some $667.7 million flowed into unit investment trusts in June, bringing their sales at the first half of the year to $4.62 billion. This compares with $4.26 billion for the first six months of 1992, according to the Investment Company Institute in Washington.

Unit investment trusts are investment companies that buy fixed portfolios of bonds or stocks. — **Karen Talley**

Choosing Funds? Check Their Staffs, Experts Say

By KALEN HOLLIDAY

As banks wade deeper into the mutual fund business, they face a sometimes bewildering array of choices.

Selecting which mutual funds to offer to customers is one of the most crucial decisions a bank faces. It can be a mind-boggling chore, especially for banks that are new to the business.

Experts say that in assessing potential mutual-fund providers, banks should look carefully at the size of the companies' sales and support staffs, as well as their qualifications.

To be sure, bigger is not always better.

"Quality counts more than quantity," said Kurt Cerulli, principal of Cerulli Associates, a consulting company in Boston.

Solid Indication

Nevertheless, how many people a fund company has selling to and supporting banks is widely considered a solid indication of its commitment to the bank marketplace.

A sales staff with experience in the bank environment is a major asset to bankers, Mr. Cerulli said, since the bank sales process is different from selling to insurance or brokerage companies.

For instance, he noted, the success of a bank's sales efforts

Bigger is not always better, but it can indicate a level of commitment.

can depend heavily on the mutual fund representatives' ability to get referrals from bank tellers and loan officers. Solid sales support from a mutual fund company can help foster cooperation between the key players.

Fund companies also play an integral part in training bank representatives about their company's products and services. In the brokerage business, that type of training is not so necessary, Mr. Cerulli said.

"The level of hand-holding is a lot higher" when salespeople work with banks, he said.

In an informal survey of some of the biggest mutual fund companies that sell their products through banks, the *American Banker* found big differences in the way sales forces are structured.

The most noticeable differences are what companies call bank salespeople and how they break down their sales staff, making it difficult to determine

Nishan G. Vartabedian
Has biggest bank sales force

Kurt Cerulli
"Quality counts more"

Thomas Ryan
Gets help from nonbank side

exactly how many employees sell exclusively to banks, and who does what.

A number of companies that are acknowledged leaders either would not or were unable to provide data by press time. These companies include Massachusetts Financial Services, Federated Investors, and Capital Research and Management.

One reason given was fear that competitors would "stretch" numbers to appear more impressive.

Reluctance to provide data also reflects the sensitivity of this information.

While this makes straight numerical comparisons difficult, there were some clear leaders.

Fidelity in the Lead

Of the companies that did provide data, Fidelity Investors boasts the largest sales force dedicated to banks.

The Boston-based firm has 40 representatives stationed in nine cities, according to Nishan G. Vartabedian, executive vice president for the bank services division.

The figure includes 11 "external wholesalers," who visit banks to provide support services.

Each is assisted by an "internal wholesaler" counterpart.

John Nuveen & Co. weighed in with the largest number of so-called dedicated wholesalers.

The Chicago-based company has 19 such employees, who focus exclusively on providing sales support to banks that sell Nuveen funds. In addition, four sales associates provide support from the firm's homebase. That is a sizeable chunk of Nuveen's total sales force of 85.

Another Chicago-based company, Kemper Financial Services, followed closely, with 15 dedicated representatives, including a national sales manager, out of a total of 48 salespeople.

Double-Duty Salespeople

Eaton Vance reported 13 regional representatives, or wholesalers, and a senior vice president, assisted by 13 marketing representatives. But these 27 salespeople do double-duty, serving both banks and independent broker-dealers. The Boston-based company manages over $10 billion in assets and derives about a quarter of its sales from banks.

Colonial Mutual Funds also has 13 of its 37 wholesalers in the bank sales channel. The Boston-based company manages about $9 billion for investors.

Franklin Resources, Inc. has eight regional wholesalers in the bank channel out of a 33-person sales staff.

The San Mateo, Calif.-based company has more than $57 billion of assets under management. About a quarter of its sales are to banks.

Pioneer Group has only five wholesalers devoted to thebank channel, but it uses the resources of its 36-person sales force "to help supplement our bank sales effort," said Thomas Ryan, vice president of bank marketing at the Boston-based company.

Using "cross-channel wholesalers" allows Pioneer, which manages about $7 billion in assets, to compete with bigger players, Mr. Ryan said.

tives, regional sales representatives, sales associates or assistants and inside wholesalers.

Telemarketers who work in the bank environment often play a more important role than their colleagues who service brokerage firms, Mr. Cerulli said.

For example, he noted, they tend to have phone conversations that are two or three times longer.

Often a bank representative who calls into a telemarketer has a client sitting in his office and needs immediate answers to a series of questions, Mr. Cerulli explained.

Telemarketers in the bank channel must be well-trained to meet the bankers' needs, he said. "They are almost a part of the face-to-face process."

Of the companies polled, Kemper has the largest internal department devoted to bank sales, with 14 people to field inbound calls, six to place outbound calls, and four marketing representatives. Banks account for about 70% of Kemper's sales.

Expansion Plans

While most of the companies polled said they planned to expand their bank sales forces if bank sales increase, only Oppenheimer Management Corp. and Nuveen stated definite growth plans.

Nuveen plans to add between two and four people next year, according to Mr. Cantro.

Oppenheimer has only 12 outside wholesalers, but they appear to be the one to watch. The New York-based company, which manages over $18 billion of assets, has grand plans.

"With the caveat that there's not a major change in the rate bank sales are growing, we plan to double our sales force by the end of 1994," said Bruce C. Dunbar, senior associate in Oppenheimer's public affairs department. □

Telemarketers

Several firms, including Colonial, Franklin, and Eaton Vance, match each wholesaler with an internal counterpart.

These telemarketers, as they are known inside the industry, have a variety of titles including regional marketing representa-

Eaton Vance to Add 5 Portfolio Managers

Eaton Vance Corp., a Boston-based investment management company, said it was picking up five portfolio managers from Invesco Management and Research Inc., also of Boston.

The portfolio managers, who oversee $1 billion in private accounts for Invesco's Gardner and Preston Moss division, will move to Eaton Vance on Oct. 1. Eaton Vance currently manages $13 billion of assets for institutional clients and mutual funds.

Anti-Amex Restaurant Eats Its Words

By KAREN EPPER

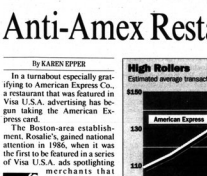
In a turnabout especially gratifying to American Express Co., a restaurant that was featured in Visa U.S.A. advertising has begun taking the American Express card.

The Boston-area establishment, Rosalie's, gained national attention in 1986, when it was the first to be featured in a series of Visa U.S.A. ads spotlighting merchants that "don't take American Express."

That campaign was instrumental in Visa's effort to be perceived as the No. 1 card in the prestigious travel-and-entertainment segment long dominated by American Express. It also helped Visa distinguish its strategy from that of the rival bank card association, MasterCard International.

Restaurateur Rosalie Harrington said she wasn't afraid to play favorites any more. Now the restaurant that gained fame for not taking American Express is poised for another turn in the limelight for changing its mind.

"Customers were asking to use the American Express card, and I didn't want to lose business," Ms. Harrington said. "It was a smart business decision to take the card, and we already can see a big difference in the bottom line."



Ms. Harrington said it is too soon to provide any concrete results. She added that the prospect of an "attractive advertising campaign" dangled by American Express was a big factor in her change of heart.

"Her decision to accept American Express is symbolic of our efforts in winning back merchants," said an American Express spokesman.

Reeling from a protest by merchants – centered in Massachusetts – against its premium pricing, American Express retaliated two years ago with discounts to merchants that automated their transaction processing. The company also lowered – to $500,000 from $1 million – the minimum annual charge volume for merchants to qualify for cooperative marketing funds.

Big Spenders

An advertising campaign in the restaurant trade press currently targets Visa-accepting restaurants.

American Express argues that restaurants lose revenue by refusing to accept its cards, because Amex holders tend to spend more than bank card users.

The marketing push is reportedly paying off. American Express signed up 50,000 new merchants in the first seven months of 1993.

Visa isn't about to give up the anti-American Express campaign after one high-profile defeat.

The Boston eatery Rosalie's is now accepting American Express, to great fanfare.

"You win a few, you lose a few," said Visa U.S.A. president H. Robert Heller. Visa officials fondly point out that the association leads by a wide margin in merchant acceptance, with 10.4 million locations compared with American Express' 3.4 million worldwide. □

B of A Said to Mull Exiting Credit Cards

Continued from page 1

go & Co. adopted such a cross-selling strategy with a credit card offering credits toward the closing costs of a mortgage loan.

Market analysts expect such tie-ins to gain momentum as banks try to fend off new entrants like American Telephone and Telegraph Co. and General Motors Corp. that dangle attractive pricing and rebate offers.

NEWS ANALYSIS

Another possibility being mentioned is that the bank might begin printing cardholders' photographs on their cards – a security technique that has been adopted by Citicorp and Banc One Corp.

And it seems likely the California-based bank will soon adapt its "Banking on America" advertising theme to card products, observers said.

But Mr. Kraushaar said once chargeoffs decline, a sale "is not out of the question." The portfolio might be too large for most competitors to absorb, but a spinoff to investors could accomplish BankAmerica's objectives, he said. □

Travel Gains Are Seen Despite Poor Economy

Business travel will increase despite a weak economy and the unfavorable tax provisions recently signed by President Clinton, according to a poll of corporate travel managers.

Half of the 400 travel managers surveyed in the Business Card by the Gallup Organization Inc. said the tax legislation reducing the allowance for business meals and entertainment will have no impact.

Most travel managers – 73% – said they expected the average length of business trips would remain the same.

Robert Levaro, vice president of commercial card products for Visa International, said the economy and legislation represented difficult obstacles, but added: "This research clearly indicates they will not hinder further growth."

MasterCard's 'Purchasing Card' Could Open Up Lucrative Market

By STEPHEN KLEGE

Targeting an area that generates up to $400 billion a year in transactions, the card will enable managers to streamline billing and accounting by reducing the paperwork.

Credit cards for corporate purchasing departments, like the one unveiled last week by MasterCard International, could open a whole new category of merchants to the bank card industry.

MasterCard officials said its "purchasing card" would create an opportunity for banks that process card sales for merchants to sign new clients with an average transaction size four times the MasterCard average.

Targeting a market that generates up to $400 billion a year in transactions, these cards – also known as procurement cards – enable corporate purchasing managers to streamline the billing and accounting for smaller transactions by reducing paperwork.

The cards are handed out to the employees responsible for buying the supplies. Managers are able to control purchasing activity by setting spending limits on each employee, and are provided with daily reports on purchasing activity.

The vendors of supplies and equipment often are wholesalers that would not otherwise accept credit cards.

A MasterCard spokesman listed Fischer Scientific Co., Electronic Data Services, and the State of Colorado as examples of nontraditional merchants that accept cards in existing procurement programs.

Visa U.S.A., which also has targeted the procurement market, said its research showed only about 40% of the merchants that procurement managers deal with currently accept Visa cards.

Senior vice president Peter Gustafson was quick to point out that the same research shows that only about 8% currently accept the cards of American Express Co., which also is going after the procurement business.

MasterCard's said its program allows the client to receive more detailed daily reports than earlier procurement cards.

Processing Terminals Upgraded

MasterCard has upgraded its processing terminals in stores to cue the merchant to enter a purchase order number when a procurement card is used. This helps the processor to deliver detailed daily reports to the purchasing manager, including important tax-related information.

Total System Services Inc., Columbus, Ga., is the first processor certified to handle MasterCard purchasing card transactions. The second-largest nonbank processor of credit card accounts, Total is controlled by Synovus Financial Corp. □

HIGH YIELD REPORT

lets you *hear the heartbeat and feel the pulse* of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt

IN AN AGE OF DRAMATICALLY declining long-term interest rates, the *American Banker*'s weekly *High Yield Report* delivers money-making tips on high-yield investment opportunities.

This newsletter keeps a close eye on major court proceedings, and legislative and regulatory developments. Each issue features barometers of market size, bellwether pricing tables, a forward calendar, reports on filings, and the results of new-issue sales.

No longer considered the arena of "junk bonds," the high-yield market is rapidly gaining respectability as it is closely tracked by this objective, succinct weekly letter.

If you must know what's "ticking" in the heart of the high-yield market, HIGH YIELD REPORT is a must read every week.

Read it free for 4 weeks!
Just fax your letterhead to 212-943-7852, or call Hans Winberg at 800-407-0241

Cards Still Have an Upside, Salomon Says

The following is excerpted from a Salomon Brothers report, "Credit Cards – Are Diminishing Profits Inevitable?" It was written by analysts Samuel G. Liss and Mary A. Rhei and published in July.

Revolving consumer debt – a proxy for credit card spending – is accelerating, even while other Federal Reserve data imply that the consumer base is delevergaing.

We believe that judgments on consumer debt trends often are misleading, given the frequent exclusion of home mortgage debt from calculations. Convenience and relatively short-term cash flow needs drive credit card usage.

Credit cards historically have not played a significant debt-consolidation role, although we sense that this may be changing. Increased penetration of credit cards at convenience points of sale – such as food outlets, gas stations, and the health-care sector – offers ample fuel for receivables growth. Regardless of source, however, it is clear that cumulative credit card purchases still total well below 20% of total U.S. consumer consumption.

Fragmented Market

The card marketplace (charge, revolving credit, and debit) continues to be fragmented and has started a renewed growth mode.

The overall marketplace stands to benefit from continued penetration by revolving and debit card issuers into convenience payment channels. Annual consumer payments to federal, state, and local agencies – such as the U.S. Postal Service – represent an extraordinary untapped arena.

Annual growth for credit card receivables had been 10% to 15% in 1988-90. It contracted to 6% in 1991 and reaccelerated to 8% to 10% in 1992. The contraction in 1991 appears to have directly reflected the economic environment and dropoff in consumer confidence.

Co-Branded Efforts

Segmentation-marketing efforts intensified in 1992, and co-branded efforts – including AT&T, regional telephone companies, and automobile/truck manufacturers – are generating account-acquisition success. Strategic objectives differ among these sponsors, which is one issue that drives the intensified competition. Another result to note is the share boost won by MasterCard, relative to Visa, given its acceptance of cobranding efforts.

We expect credit card receivable-balance growth to continue to reflect shifting consumer behavior, perhaps impending easy translation from industrywide, or even company-specific, transaction volume growth to receivables growth. Part of this forecasting challenge is anticipating further shifts in consumer payment behavior as well as spending patterns.

Even so, we expect overall receivables growth to return to a 10%-plus rate in 1993. We expect double-digit receivables growth through at least 1995.

One unknown is the impact of consumer tax rates, which, when translated into impeded income growth, can dampen consumption. This has been noticeable in the several weeks since the Clinton administration put forward its proposals.

Cards still account for well below 20% of U.S. consumer consumption.

Growth Hard to Forecast

Consumers' sensitivity to finance charges, which has been raised by predatory marketing activities, has promoted a pronounced shift in marketing strategy by revolving card issuers. The mix of low-rate teaser finance charge rates with a nominal or no annual membership fee, combined with aggressive marketing for balance transfers, has made specific company receivables growth forecasting more difficult.

We are quite apprehensive about the extraordinary asset growth fueled by balance transfers, primarily because those particular card members present a much larger propensity for reliance upon existing credit assessment.

This contrasts with a more traditional 24-month to 36-month seasoning process. We are unsure whether these strongly perceived credits will exhibit anticipated usage behavior. For now, however, it is clear that asset growth and net interest spread are accelerated materially with successful balance-transfer marketing.

Growth potential for individual issuers relies on the acquisition and retention of active customers. Yield, fees, volume, and usage all drive the consolidated revenue growth generated from credit card consumer accounts.

Market-share shifts that are occurring reflect on the aggressive marketing techniques and consumer sensitivity to a wider array of variables than historically has been considered.

Membership fee and credit line are no longer the sole critical consumer-motivating variables. □

Commercial Realty Needs New Wellsprings of Capital

As the nation's economy emerges from recession, the demand for commercial real estate is slowly increasing in many markets. However, the real estate industry will not regain its former vitality until it has reliable sources of capital for purchases, refinancings, improvements, and development.

Where can the real estate industry turn for capital?

Don't look to once-active sources like banks, S&Ls, and insurance companies, which were badly burned in the late 1980s and early 1990s and now face strict regulations regarding real estate loans. Most will avoid commercial real estate for another decade.

Pressures on Pension Funds

If some financial institutions or insurance companies do make real estate loans in the 1990s, they will cautiously demand plenty of equity, prelease buildings, and top-notch locations, thereby shutting out many worthwhile transactions like undervalued or distressed properties.

Pension funds will not come to the rescue, either. In fact, many pension funds will become net sellers – not net buyers – in coming years. Americans are living longer and retiring earlier. In coming years, the baby boomers, whose "leading edge" members turn 46 and 47 this year, will place unprecedented burdens on pension funds.

According to some real estate professionals, the best source of new capital will be offshore foreign investors. Hong Kong and Taiwan buyers have become important players in some markets.

Mr. Lamming is president of Royce Co., a real estate brokerage firm in Los Angeles.

Banks in Good Position to Capitalize On the Current Popularity of REITs

Banks may be helped with their thornier real estate problems by an interesting paradox that has unfolded on Wall Street.

In the mid-1980s, with both real estate and the stock market approaching new heights, the time looked right for a boom in real estate investment trusts (REITs). Unlike limited partnerships, REITs offered investors a chance to participate in real estate without sacrificing liquidity or worrying about the IRS challenging the tax shelter benefits.

But the boom never occurred. Although many publicly traded REITs were established, usually with generous current yields, most REIT shares were consistent underperformers in a surging stock market. Wall Street never truly got behind REITs, remaining skeptical of the high values assigned to their underlying assets.

Now for the paradox: With real estate in a deep slump today and the stock market lodged on a plateau, REITs suddenly have found new respect on Wall Street. It's hardly a mystery, however: Investors are starved for high yields, and property owners are desperate for ways to reliquefy. And there is a general perception that real estate has nowhere to go but up, even if not immediately. Thus, the REIT now flourishes.

What does this mean to banks? The link between real estate and banking suggests several ways in which lenders can take advantage of the REIT's rebirth. For one thing, would-be REIT sponsors hold great promise as potential buyers of banks' higher-grade foreclosed real estate.

The reason is that many real estate owners with midsize port-

Opinion

BANKS, THRIFTS, *and insurance companies, badly burned in the late 1980s and early 1990s, will avoid commercial real estate for another decade.*

ready transformed many communities, particularly in the greater New York City area, South Florida, Southern California, and the San Francisco Bay Area.

As more cash-rich immigrants settle in the United States, and many earlier immigrant arrivals accumulate wealth, their capital will have a greater impact on many of the nation's real estate markets, not only in established communities like Chinatown in New York or Koreatown in Los Angeles but also in other well-regarded or promising locations throughout the nation.

Tax Inducements

A third source of real estate capital, probably the largest of all, will be syndications. Although the Clinton administration will impose tax increases on the well-to-do, it is also discussing significant changes in the tax code, such as passive loss provisions and deferral of federal taxes on income realized upon the cancellation of certain real estate debt.

If enacted, these measures will once again make real estate investments more attractive as well as reduce the effective high-income tax rates.

In essence, the Clinton administration might reintroduce some of the provisions that created the tax shelter business of the early 1960s. These measures will encourage people to form syndications and invest capital in real estate in order to reduce their taxes.

The increased real estate activity, if historical patterns hold true, will also have a healthy multiplier effect on the economy, encouraging investment in facilities and equipment and creating jobs.

Expensive Lessons

All these investors have come to the United States with deep pockets and great expectations, plus the confidence that they could purchase, develop, and manage properties better than their American counterparts. And most of these investors eventually have gone home a lot wiser and poorer.

Today's Hong Kong and Taiwan-based buyers need not suffer large losses like previous offshore investors, provided that they learn from the others' mistakes. If, however, the Hong Kong and Taiwan buyers reduce or halt their investments in the coming years, what offshore investors will take their place?

Not Enough Capital

The Japanese are unlikely participants because they are now mired in recession. The Germans are just as unlikely because they are spending unanticipated billions on the reunification of their nation.

SYNDICATIONS and tenants-turned-owners are new sources.

Besides their come-and-go tendencies, offshore investors simply cannot provide the enormous volumes of capital required for a well-functioning commercial real estate industry. Just to replace the capital introduced by the Japanese in the late 1980s would require over $10 billion.

Nor do offshore investors typically have long-term interests in American communities at heart. They usually care about profit primarily, not the impact of their investments on our nation's homes, businesses, and economy.

In many markets, three sources may provide the needed funds – in addition to offshore investors.

One source will be office and industrial tenants who decide to buy a building rather than continue to rent space. Earlier this year, for example, Kental, Young & Logan, a law firm, purchased the high-rise Union Bank Building in downtown Long Beach from LaSalle Partners for $5.4 million. That was reportedly one-fourth the price LaSalle had paid to purchase and renovate the property several years ago.

A second source of capital will be cash-rich immigrants who have settled in many parts of the nation and are now investing in local real estate, particularly in office and industrial properties, smaller shopping centers, hotels, and apartment buildings.

Through their investments and hard work, they have al-

REITs Offer Fresh Opportunities

Continued from *page 15*

folios would love to recapitalize with a REIT but lack the critical mass to satisfy the investment banks. Generally, Wall Street won't look at a portfolio much below $150 million, nor will it allow a sponsor to meet the minimum by acquiring junk.

Motivated Buyers

This turns potential REIT sponsors into highly motivated buyers. They are looking for deals in which they can finance the purchase at two or three points below their cap rate on the property, which, under current conditions, leaves room for somewhat better-than-average prices for the seller.

The assumption is that a successful REIT offering – made possible in part by the acquisition – will allow the sponsor to pay off existing debt and restore a healthy balance sheet.

Therefore, banks with quality foreclosed realty, especially multifamily housing and retail, should be aggressively marketing to midsize property owners.

Of course, banks also can help would-be REIT sponsors by financing acquisitions from other types of sellers. The same logic applies: The lender will add a quality loan to its portfolio if the borrower is comfortable below its cap rate and can pay off debt by selling stock.

But there are two big underwriting caveats: Be sure the property is a high-grade investment and look for ownership that has recognized professional management skills. Wall Street is less likely to bring to market a REIT that lacks either of those attributes.

A third way for banks to participate in the REIT boom is by offering credit lines to existing trusts for new acquisitions. This can be a prudent and profitable activity, since the mortgages are cross-collateralized, and lenders can still dictate conservative loan-to-value and debt-service-coverage provisions.

Some lenders might wonder if banks might themselves be sponsors of REITs, packaging their better-quality REO for Wall Street's consideration. The answer, I believe, is no – at least not for the time being.

Continuity of Management

Investment banks look on REIT formation as the act of recapitalizing an existing business with continuity of management. Even if a bank hired a top professional manager for its proposed REIT, that probably wouldn't satisfy Wall Street's insistence on management with a history tied to the core of the property portfolio.

Therefore, an equity REIT formed by a bank for the purpose of property disposition is unlikely anytime soon. (However, insurance companies that traditionally have owned and operated real estate equity portfolios may be in a better position to sponsor an equity REIT).

Mortgages, on the other hand, may present a different picture, since there is no property management factor. Lenders might want to consider restructuring selected mortgages, adding equity participation features, and sponsoring a publicly traded REIT to which the loans would be sold.

These are some of the ways in which banks can benefit from the new interest in REITs. Of course, a spike in interest rates would hurt REITs in the short run. ❑

PROFESSIONAL EMPLOYMENT OPPORTUNITIES

REGIONAL BRANCH EXECUTIVE

SunBank/Gulf Coast, $1.7B in assets, located in Sarasota, Florida has an outstanding career opportunity for a Regional Branch Executive. This individual will be responsible for developing and implementing long range strategic goals for our branch network including: cultivating a sales culture, building deposits, increasing loan volume while ensuring loan quality, rewarding excellent customer service, training and employee recognition and development. In addition, demonstrated project management skills as well as a commitment to community involvement required. A qualified candidate will have 3-5 years of progressive experience, with a business degree preferred. SunBank offers a competitive benefit program and salary commensurate with experience.

For confidential consideration, please submit resume to:

J. Parritt
P.O. Box 2138
Sarasota, Florida 34230.
Equal Opportunity Employer

SALES EXECUTIVE

American Banker/Bond Buyer seeks entrepreneurial sales executive to produce banking conferences for the American Banker/Bond Buyer newspaper. Responsibilities will include all aspects of program management including selling sponsorships. Individual will have a minimum of 3-4 years experience in the banking industry. BS/BA required. Please send resume w/salary history to:

Box 704
c/o American Banker
One State Street Plaza
New York, New York 10004

Executives at Mutual S&Ls Profiting From New State Laws on Charters

Continued from *page 1*

ry and filing fees because states charge less than federal regulators do for overseeing federally chartered institutions.

But consumer groups are crying foul over the practice, because mutual thrifts are owned by their depositors and because capital could be raised by selling shares to depositors instead of executives. The institutions' directors and officers are charged with the legal responsibility to look after the depositor/owners' best interest.

Unfairness Seen

"Managements of mutual institutions are walking away with very handsome deals for themselves at the expense of the mom-and-pop depositor base of the mutuals," said Chris Lewis, director of banking and housing policy at the Consumer Federation of America.

Robert J. Warren, a senior vice president at Ferguson & Co., a Dallas-based consulting firm, said, "The trend on those stocks is that once they convert, go up 25% to 30%."

Office of Thrift Supervision regulators govern all federally chartered thrifts as well as state-chartered savings and loans that convert to stock form, but they do not govern state-chartered savings banks. The federal rules set limits on the amount of stock that thrift owners can sell, and allow account holders to buy stock before the insiders.

"We have to live with the rules the state level, the regulations differ fairly dramatically," said Jonathan L. Fiechter, acting director of the Office of Thrift Supervision. "It is our effort to make sure that everyone is treated fairly."

FDIC to Scrutinize Laws

As a result, Mr. Fiechter said the OTS has asked the Federal Deposit Insurance Corp. – which serves as a secondary regulator for state-chartered thrifts – to look into the new state savings bank laws, North Carolina, Wisconsin, New Jersey, Ohio, Pennsylvania, Illinois, and Indiana – to see if they have the same problems.

"Regulatory arbitrage does not make sense in this area," Mr. Fiechter said. "So what we have done is approach the FDIC . . . and suggest that the two agencies work together to come up with a common approach to dealing with these conversions," he said.

An FDIC spokesman would not comment on the trend, except to say, "The staff is developing some proposed guidance for the [FDIC] board to consider."

Eric Luse, a partner at Luse Lehman Pomerenk & Schick, a Washington, D.C.-based law firm that has quarterbacked many such deals – including Guaranty Bank's – said, "These deals all increase capital, and I don't think insider participation is a safety and soundness issue at all."

'A Question of Equity'

Besides, he said, "right now, everybody is pointing to management purchases because there is a strong market. Where were all these complainers three years ago?"

The OTS' Mr. Fiechter said that although states seem to be competing with the federal government for who can offer more attractive stock conversion regulations, the situation is not a repeat of the 1980s, when state and federal regulators competed to offer more generous deals to the savings and loans they regulated. "There are no safety and soundness concerns raised here," Mr. Fiechter said. "It is more a question of equity."

Mr. Luse explained that stock conversions using a state savings bank charter have merits in their favor. "There is regulatory flexibility, which means that you have more flexibility in structuring the transaction and setting insider purchase limits," he said.

Exams Cost Less

The company can also save money on regulatory examination and assessment fees, Mr. Luse said. "If you flip over to a savings bank [charter], the OTS is no longer your regulator, and therefore you don't pay the OTS assessments," he said. "For the companies that are $250 million or more [in assets], the differences can be fairly significant."

In addition, state-regulated thrifts have greater flexibility to decide what the company is worth when selling stock for the first time. "There is a perception that the appraisal at the federal level is going to be a tougher appraisal," Mr. Luse said.

If the company's value is set too high in an initial public offering, not all of the shares may be sold. But if the company is undervalued in the appraisal, it won't get the full benefit from the sale of its stock, and initial stockholders will realize quick gains as the stock price shoots up.

Privately, investment bankers and financial advisers familiar with the trend of mutual thrifts

Lawmakers Aggressively Soliciting Conversion Business

By ROBYN MEREDITH

WASHINGTON — Lawyers seeking to drum up business are actively wooing the executives of mutual savings and loans, offering to help them quickly change their charters to take advantage of looser regulations in certain states on initial public stock offerings.

"The lawyers do a lot of soliciting of thrifts around the country to get their business," said Eric Luse, a partner at Luse Lehman Pomerenk & Schick, a District of Columbia-based law firm that works on such deals.

Jonathan L. Fiechter, acting Director of the Office of Thrift Supervision, said, "In the last year and a half or so, there has been a group of attorneys that have begun to market the advantages to management of converting from mutual to stock under the individual states rather than under OTS rules."

Spelling Out the Differences

An Illinois lawyer, Daniel C. McKay 2d of Vedder, Price, Kaufman & Kammholz's Chicago office, sent a letter to potential customers in February that contrasted Illinois' then-proposed looser laws with OTS rules. The regulations became final in June.

"The Illinois commissioner of savings and residential finance is in the final stages of publishing the conversion to stock regulations for Illinois savings banks. The final draft is in the process of review by a committee of which I am [a] member, and I thought you may be interested in some of [the] differences emerging between the savings bank regulations and the Office of Thrift Supervision" regulations, Mr. McKay wrote.

"A savings bank converting to stock form will now know before the offering that at least 50% of the stock will remain in friendly hands (20% for ESOP [employee stock ownership] and management plans, 20% priority in the subscription offering for directors and officers, and 10% set aside for the stock option plan)," Mr. McKay pointed out in the letter.

"With the number of Illinois institutions that have converted to an Illinois savings bank to date, I would expect that many will take advantage of these new regulations when issued."

Calls to Reporter

A reporter was surprised to get four unsolicited calls over the course of two days from Washington lawyers and lobbyists who had heard *American Banker* was writing about such conversions.

All were active in the stock conversion business – some structuring deals under federal rules, some under state rules – and wanted to ensure that their profits would not be ended by bad press.

State-chartered savings banks have traditionally been found in New England, but the 1989 thrift bailout law allowed them for the first time in other states. Illinois began allowing state savings bank charters in 1990.

Under the state's new stock conversion rules for savings banks, mutual thrift executives and other employees would be able to double their ownership share if they convert to a state-chartered savings bank before they go public.

Big Opening for Insiders

Insiders could claim nearly half the company after conversion and could control the entire institution within a few years if they carefully structure the deal. The OTS limits stock repurchases to 10% annually.

For instance, Illinois savings banks would be allowed to buy back 60% of outstanding stock within three years of going public. This means that the thrift executives that held on to their stock could own the institutions outright after a few years by using the thrift's new capital to buy back its own stock.

The Illinois plan would both raise the amount of stock given to a management recognition plan to 5%, from OTS' limit of 3% to 4%, and let the plans provide every depositors for buying new stock.

Also notable: the Illinois proposal would allow directors, officers, and other employees to buy up to 20% of the offering before depositors are allowed to buy any stock, if the deal is oversubscribed.

Paula Jung, general counsel and deputy commissioner of the Illinois Office of the Commissioner for Savings and Residential Finance, said the new rules are needed "to provide a vehicle to capitalize institutions via stock."

Illinois tried to give thrift directors and officers more of a stake in these deals because they are required to hold the stock they get for three years, she said.

"Our concerns are very bottom-line – we want to see the institutions survive, and one of the incentives to survival is to make sure the people involved have a significant stake and a significant risk," Ms. Jung said.

When asked why the proposed Illinois rules varied from the OTS rules, Mr. McKay, the lawyer and member of the state review committee, said Illinois wanted to ensure that. "If there are going to be changes, we are going to skewhis to the people that built the institutions up – that is, the managers and the local depositors."

Executives of mutual savings and loans are being wooed by lawyers offering to make them rich.

OTS Limits Insiders' Slice, Gives Others First Crack

By ROBYN MEREDITH

WASHINGTON — To help protect the depositor/owners of mutual thrifts, the Office of Thrift Supervision has regulations for stock conversions – and in contrast to initial public offerings in other industries – decides who is allowed to buy stock and in what order.

Chris Lewis

Consumer Federation of America. New rules governing the stock conversion of state-chartered savings banks "have reversed that order," he said.

Under OTS rules, tax-qualified employee stock ownership plans have first priority to buy up to 10% of the stock in the offering.

Established Depositors Second in Line

The second priority goes to thrift depositors who had accounts at least three months before the thrift adopted a stock conversion plan. Under OTS rules, individual depositors may not buy more than 5% of the total stock offered.

Then management and other account holders – including borrowers as well as more recent depositors – may buy stock, but are also limited to buying 5% each. If the offering has not sold out by then, the thrift may sell stock to the public.

Under OTS rules, so-called management organization plans – which typically are gifts of the new stock for up to two dozen thrift executives – may not account for more than 3% to 4% of the stock offering. And unlike some new state laws, OTS rules do not give such plans, which vest over five years, priority in the stock sale.

Buying stock in an initial public offering can be very profitable, so people often want a big piece of the more stock than is available.

OTS rules limit the amount of stock S&L officers and directors as a group are allowed to buy in the conversion to 25-35%, depending on the thrift's assets, and give account holders the right to buy stock before the insiders.

Under federal laws, "management takes a back seat to depositors," said Chris Lewis, director of banking and housing policy at the

S&L Executives Reaping Profits From New Laws on Charters

Continued from page 17

changing their charters to state savings banks before selling stock said the state rules attract-ed managements that were motivated primarily by profits.

They said the state deals were known for the more liberal appraisal rules and for allotting

Gerald J. Levy
"It's what America is about"

management the right to buy more stock.

But half a dozen of those advisers refused to talk publicly about the trend, because, they said, they did not want to hurt the lucrative business they had built around such deals.

In Guaranty's case, appraisers set the book value of the company before the conversion at $16.6 million. The thrift, which has $375 million in assets, had $19.8 million in capital before it sold stock, and now has $26.8 million in capital.

Executives of the company and its subsidiaries who bought stock include Guaranty's chief executive Gerald J. Levy, who was a chairman of the now disbanded United States League of Savings Institutions.

Mr. Levy, who has worked at Guaranty for more than 30 years, defended the large management purchases allowed in the stock sale. "I just wanted to buy a piece of my company that I helped create," Mr. Levy said.

Insiders are claiming more shares in initial public offerings.

"It's what America is about."

He said two other family members bought Guaranty stock in the deal: his son, Douglas S. Levy, who is the thrift's president, and his daughter, Jill Belconis, the president of one of the company's two mortgage subsidiaries.

But some don't see it quite that way. "This is the classic case of an S&L insider getting away with murder at the expense of consumers, and everybody in this town knows who Jerry Levy is," said Consumer Federation's Mr. Lewis.

Mr. Levy was chairman of the U.S. League from November 1985 to November 1986.

Trustco Hikes Payout, Sets 2-for-1 Stock Split

SCHENECTADY, N.Y. — Trustco Bank Corp. said it had increased its quarterly dividend to 45 cents presplit, from 40 cents.

The company said the higher dividend is payable Oct. 1 to shareholders of record on Sept. 3.

Trustco also said its board had approved a 2-for-1 stock split.

The additional shares will be distributed Nov. 19 to shareholders of record on Oct. 15, according to the company.

Trustco said its board intended to increase the dividend on the newly split shares to 25 cents in the fourth quarter, the equivalent of a 50 cents quarterly dividend on a presplit basis.

Alabama's Colonial To Take 7 Cent Charge

MONTGOMERY, Ala. — Colonial BancGroup Inc. said it would record a charge of 7 cents a share in the third quarter because of debt redemption.

But the company added that the move, in which new debt with a lower interest rate was taken on, would raise fully diluted earnings by 2 cents to 3 cents a share for the remainder of the year and by 6 cents to 9 cents a share in 1994.

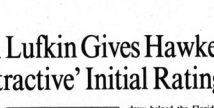
Donaldson Lufkin Gives Hawkeye A 'Very Attractive' Initial Rating

By GORDON MATTHEWS

Donaldson, Lufkin & Jenrette Securities Corp. has opened coverage of Hawkeye Bancorp. with a "very attractive" rating, saying the Iowa bank is well managed and a takeover candidate.

"Hawkeye is steadily raising return on assets, and it ranked No. 1 in asset quality in our latest quarterly survey" of 65 bank holding companies, banking analyst Frank R. DeSantis Jr. said Monday.

Stocks



The stock price of the Des Moines-based bank, whose shares suffered from volatility during this summer's disastrous midwestern floods, was ahead 12.5 cents, to $18.625 a share, in late afternoon trading Monday.

The analyst said he thinks the stock could reach $23 within 12 to 18 months, which would be a 24% gain from its current level.

Mr. DeSantis predicted that the flooding's long-term impact on Hawkeye would be minimal, though the Des Moines area was especially hard hit. "Iowa is estimated to have sustained $750 million in crop losses, which is less than 2% of gross state product," he said.

Moreover, the analyst noted, "flooded areas must be rebuilt, which will help the Iowa economy much like Hurricane Andrew helped the Florida economy."

Thus, he saw no major impact on the bank company's earnings.

Hawkeye, with assets of $1.8 billion, is the largest publicly traded, independent bank in Iowa. It ranks third in market share behind the affiliates of Norwest Corp., Minneapolis, and Firstar Corp., Milwaukee.

Takeover Prospects

Mr. DeSantis said he would not recommend buying the Iowa bank's shares on takeover sentiment alone, "but the long-term appeal of Hawkeye to an outside institution cannot be ignored."

Iowa banks are eligible to be acquired by banks in Minnesota, Wisconsin, Illinois, Missouri, Nebraska, or South Dakota – contiguous states that offer reciprocal acquisition opportunities.

"Notably absent in Iowa is First Bank System [Minneapolis], which would be a logical buyer, and we think that Banc One [Columbus, Ohio] would also view Hawkeye as an attractive way to enter the Des Moines market once state law permits," he said.

Meanwhile, Mr. DeSantis said, Hawkeye's biggest competitive advantage is focusing on business relationships and communities "that are too small to matter to the market leaders."

Mid-1980s Restructuring

The bank has come a long way since 1985, when it was near the brink of bankruptcy from heavy loan losses. Nonperforming assets that year hit a high of 8.7% of loans and foreclosed real estate.

Since a debt-restructuring effort in 1987, the bank is healthy again. Its nonperformers were a minuscule 0.74% of loans and foreclosed real estate at June 30.

Hawkeye earned 1.24% on assets during the second quarter, versus 0.96% on average for banks its size, according to Keefe, Bruyette & Woods Inc. Its efficiency ratio – gross operating expenses divided by fully taxable revenue – was 63%, versus 63.8% for its peers.

With expense control a priority for Hawkeye's management, Mr. DeSantis said, he believes that overhead ratio could fall below 60% in two years, "which would result in 5% earnings growth without any revenue growth."

The analyst said the stock could reach $23 in 12 to 18 months, a 24% gain.

MONDAY'S MARKET

Bank stock prices were mixed to lower.

Wells Fargo & Co. led gainers, advancing $1.375 a share, to $112.50 in late trading, but other California banks fell. BankAmerica Corp. slid 37.5 cents, to $45.375, and First Interstate Bancorp declined 62.5 cents, to $59.25.

Other gainers were KeyCorp, up 75 cents, to $38.625 a share, and J.P. Morgan & Co., 50 cents, to $73.375.

But Bankers Trust New York Corp. was down 50 cents a share, to $78.75, and Bank of Boston Corp. declined 37.5 cents, to $24.125. ❑

Interest Rates Rise As Profit Taking In Bonds Continues

Long-term interest rates rose slightly on Monday as profit-taking continued after last week's bond rally.

At 4 p.m., the price of the 30-year Treasury bond was down about ¼ to 100²⁹/₃₂, boosting the yield to 6.23% from 6.21% on Friday.

The Markets

Prices of other current-coupon Treasury issues held steady. The price of the 10-year note was unchanged to yield 6.21%; five-year notes fell 1/32 to 101⁷/₃₂, increasing the yield to 4.97% from 4.95%; and two-year notes dropped 1/32 to 100³⁰/₃₂, raising the yield to 3.94% from 3.91%.

In the bill sector, the government auctioned a total of $25 billion of three-month and six-month bills at respective average discount rates of 3.02% and 3.12%. The three-month bill was down 1 basis point from last week's auction, while the six-month rate was unchanged.

The Treasury today is scheduled to sell $16 billion of two-year notes. In when-issued trading, the notes yielded 3.98%. The Treasury will follow on Wednesday with $11 billion of five-year notes.

Profit taking also weighed on stocks. The Dow Jones industrial average fell 9.50 points to 3,605.98. The Standard & Poor's 500 index lost 0.93 to 455.23. The Nasdaq composite index fell 0.11 to 730.85.

Power Vacuum At the FDIC Enters 2d Year

By BARBARA A. REHM

On Friday, Andrew C. "Skip" Hove Jr. marked one year as acting chairman of the Federal Deposit Insurance Corp.

No one at the agency celebrated the milestone.

In fact, Aug. 20 was a day of mourning for many – the one-year anniversary of Chairman William Taylor's unexpected death. That's when Mr. Hove, 59, stepped up to the chairman's job from vice chairman.

Friday also was a frustrating reminder of how long the FDIC has been without a full-fledged chairman. "I had no idea it would be this long," Mr. Hove said.

NEWS ANALYSIS

He said the thought of quitting had crossed his mind but he has assured the White House he will stay on until the Senate approves another chairman.

The FDIC has had six acting chairmen in its 60-year history, but none for as long as a year. The second longest run – John Heimann in 1978 – served six months and 21 days.

The Bush Delay

The first five months of delay in naming a chairman was understandable. President Bush did not nominate someone when Mr. Taylor died because the presidential election was looming and he knew a Democratic Senate would not approve a Republican President's pick.

Because Bill Clinton had a shot at unseating Mr. Bush, the Democrats were not about to fill political posts with Republicans.

Mr. Bush's loss added another couple of months to the wait because Mr. Clinton did not become President until late January.

Why no one has been selected in the past seven months, however, is a mystery.

Clinton's Turn

On his first day in office, Mr. Clinton named a comptroller of the currency – Washington lawyer Eugene A. Ludwig. Everyone figured a permanent FDIC chairman would be picked quickly, but Mr. Clinton apparently cannot find one who suits him.

That's not for a lack of candidates, however.

At least 15 people have been rumored as potential heads of the agency: Arkansas bankers Bill Bowen and Bill Brandon; Washington lawyers Jerry Hawke, Chuck Muckenfuss, and

Appetite for BayBanks Stock Expected to Remain Strong

By RICHARD LAYNE

Shares of BayBanks Inc. have been sizzling this summer, and money managers said the heat is still on.

Shares of the Boston bank are up 24% since mid-June.

That's a bigger gain in the period than all but two regional banks, Constellation Bancorp, Elizabeth, N.J., and First Eastern Corp., Wilkes-Barre, Pa.

Both signed merger agreements recently, Constellation with Constellation Financial Corp. and First Eastern with PNC Bank Corp.

"The shares are inexpensive considering the strong consumer franchise of the bank," said Paul von Kuster, senior vice president at Perseverance Capital Management, a unit of Norwest Corp. in Minneapolis.

Stocks

Even with the summer run-up, BayBanks' shares are cheap. They were up 50 cents Tuesday to $48.50, which is 1.3 times book value – one of the lowest multiples among regional banks.

Merger Talk Seen as Factor

If the shares traded at 1.7 times book value – the group average – the price would be around $60, analysts said.

The bargain-basement price is only one of the reasons for the stock's climb this summer, said money managers and analysts.

BayBanks has told analysts that it has ruled out a merger. Analysts believe it would be open to offers at the right price.

Earlier this month, Dennis Shea, an analyst with Morgan Stanley & Co., repeated a "buy" recommendation on what he considers the "No. 1 regional."

At the same time, he increased his earnings estimates on BayBanks by 25 cents in each of the next two years.

Mr. Shea forecast earnings of $3.10 a share in 1993 and $4.10 per share in 1994.

'The L.L. Bean of Banking'

Last year, BayBanks earned $3.57 a share, about two-thirds of which came from securities gains. "BayBanks is the purest consumer marketing company I follow, the L.L. Bean of banking," he said.

No other bank, for example

Card Scams And Forgery Widespread At Big Firms

By BARTON CROCKETT

Check and credit card scams are among the most common types of fraud at large U.S. companies, according to a recent survey by an international accounting firm.

The firm, KPMG Peat Marwick, determined that one-sixth of large American companies were victimized by check forgery last year, and nearly one in seven fell victim to some form of credit card fraud.

'Serious and Growing Problem'

"These statistics show that fraud is a serious and growing problem, and an issue that requires greater management attention," said Michael D. Carey, director of KPMG Peat Marwick's forensic accounting unit in New York.

Three hundred and thirty companies, most with annual revenues or assets greater than $1 billion, responded to the survey. Twelve percent were financial services companies.

Two-thirds of the respondents said they were aware of at least one fraud at their company in 1992.

Nearly a quarter of the respondents said that fraud had cost their companies' more than

NEWS *briefs*

B of A Offers $100 Million of Euronotes

LONDON — BankAmerica Corp. launched $100 million of floating rate Euronotes due Sept. 1, 1998, at a variable issue and reoffer price through a sole manager, Kidder Peabody Securities Co.

Interest floats at 25 basis points above the six-month London interbank offer rate for dollars.

Separately, the San Francisco-based bank company said it would redeem a total of $327.4 million principal amount of debentures on Sept. 24.

Wells Fargo to Redeem 8.60% Debentures

SAN FRANCISCO — Wells Fargo & Co. said it would redeem on Oct. 1 all of its 8.60% debentures due 2002. The redemption price will be 102.03% of the principal amount of the debentures plus accrued interest to the redemption date.

2 Ex-Hibernia Officers to Pay Filing Fines

WASHINGTON — Two former officers of Hibernia National Bank in New Orleans agreed to pay the Office of the Comptroller of the Currency a total of $33,000 in fines to settle charges that they filed inaccurate call reports.

Thomas A. Masilla, the bank's former chairman, agreed to pay $17,000. Jay B. Capouch, a former senior vice president and manager of the loan control division, agreed to pay $16,000.

The OCC alleged that they bore some responsibility for eight inaccurate call reports filed by the bank between June 30, 1989, and March 31, 1991. According to the OCC, the levels of past due and nonaccruing loans were underreported by as much as $42 million one quarter. Income was overstated by $4 million in another quarter.

The bank refiled accurate call reports after the two men resigned, the OCC said.

1st Commercial to Buy Clinton Bancshares

LITTLE ROCK, Ark. — First Commercial Corp. has executed a letter of igtent to acquire Clinton Bancshares of Clinton, Ark. Terms were not disclosed.

Clinton State Bank, the operating subsidiary of Clinton Bancshares, has $64 million of assets.

F&M's Bid for Park Ridge Backed by Fed

KAUKAUNA, Wis. — F&M Bancorp. said the Federal Reserve Board approved its acquisition of Park Ridge Bancshares. Terms of the transaction were not disclosed.

Park Ridge Bancshares, based in Stevens Point, Wis., has assets of $27 million, F&M said.

RTC Discloses Corporate-Debt Holdings

NEW YORK — The Resolution Trust Corp. said that its portfolio of junk bonds and various corporate debt obligations had a face value of $293.3 million.

The RTC said it also had 89.3 million shares of preferred and common stock, including warrants; 20 limited-partnership interests; and $132 million of highly leveraged transaction-loan interests.

The RTC has sold more than $101.3 million of debt and 8.6 million shares of preferred stock, common stock, and warrants, and $91.8 million of highly leveraged transaction-loan interests this year. The RTC's total high-yield sales since inception in August 1989 exceed $8.2 billion.

The briefs were compiled from staff and wire reports.

Amsouth Wins Approval from the Fed To Acquire Small Florida Bank, Thrift

Dow Jones

WASHINGTON — The Federal Reserve Board has approved applications by Amsouth Bancorp., Birmingham, Ala., to acquire a small thrift and a small bank in Florida.

Amsouth Bancorp., through its Pensacola subsidiary, Amsouth Bank of Florida, was cleared to acquire certain assets and assume certain liabilities of Mid-State Federal Savings Bank, Ocala, Fla.

Amsouth, with total consolidated assets of $11 billion, is the sixth-largest commercial banking organization in Florida, controlling deposits of $1.5 billion.

Mid-State is the 17th-largest Florida thrift institution, controlling deposits of $653.8 million.

Amsouth also was given approval to acquire Charter Banking Corp., St. Petersburg, Fla., and its subsidiary First Gulf Bank, Gulfport, Fla.

CRA Objection Fails

Charter Banking is the 68th-largest commercial banking organization in Florida, controlling deposits of $102.6 million.

The Fed approved Amsouth's acquisition of Charter Banking over the objection of a citizens group that said the Alabama company did not adequately serve the banking needs of inner-city residents of Birmingham under conditions of the Community Reinvestment Act. The Fed, however, said that Amsouth had taken steps to increase credit availability in areas of low and moderate, and that its Birmingham branch earned an "outstanding" rating in a recent CRA evaluation. □

Power Vacuum at FDIC Enters Year Two

Continued from *page 1*

NEWS ANALYSIS

Ricki Tigert; Banc One executives Kenneth Eaton and Ann Hall; New Hampshire lobbyist Chris Gallagher; New York regulator Derrick Cephas; former Connecticut State Treasurer Frank Borges; regulator-turned-banker Larry Connell; Texas lawyer Jeff Hurt; Washington analyst Karen Shaw; former money-center banker Tom Johnson, and Boston Fed President Dick Syron.

It's not as if no attention has been given the FDIC by the White House, either. President Clinton himself announced in May that he intended to nominate Mr. Gallagher.

So he did not – and everyone who ever had a bad thought about Mr. Gallagher has aired it, dimming his chances.

There have been many other false starts. So many, in fact, that plenty of people have quit speculating.

Ludwig Criticized

As the only Clinton bank regulator, Mr. Ludwig is being criticized quietly for not getting the White House to fill the other regulatory posts.

In addition to FDIC, the Office of Thrift Supervision has had an acting director – Jonathan Fiechter – since Dec. 4, when Tim Ryan resigned.

If Mr. Clinton does not nominate new bank regulators soon, Mr. Hove and Mr. Fiechter could remain in their jobs until 1994.

Congress will need time to hold hearings and confirm the nominees, but lawmakers are scheduled to adjourn in early October. □

Card Scams, Forgery Found Widespread At Big Companies

Continued from *page 1*

$1 million, while 40% reported losses of $100,000 to $1 million.

The most common type of fraud was misappropriation of funds, reported by 20% of the respondents.

Check forgery and credit card fraud were the second and third most common types of fraud, followed by false invoices, theft, and automated teller machine fraud.

Employees Dismissed

Three-quarters of those companies that detected a fraud dismissed an employee. More than two-thirds of the companies reported a fraud to the police.

Only 43% of the companies that detected a fraud initiated a civil action to recover losses.

The survey respondents attributed 56% of the frauds to poor internal controls, 44% to collusion between employees and nonemployees, 40% to management overriding internal controls, and 17% to collusion between employees or managers.

Increase Expected

Two-thirds of the respondents said they expected the incidence of fraud to rise in 1993.

Factors cited as contributing to the increase included economic pressures, a weakening of society's values, and the growing sophistication of criminals.

Mr. Carey said that banks can help to minimize corporate fraud on two fronts.

First, financial institutions can maintain vigilant controls to keep themselves from falling victim.

Banks can also be on the watch for fraud at their clients, particularly customers receiving loans where banks are required to do due diligence.

"Nearly half of the frauds could have been discovered earlier or prevented if the red flags that existed had not been ignored," said Mr. Carey.

Before taking his current post in November, Mr. Carey was assistant director of the London's Serious Fraud Office.

Nearly half of the survey respondents said there were "red flags" that pointed to the possibility of fraud at their company that either were ignored or not acted upon quickly enough.

The warning signs included changes in an employee's lifestyle or spending habits, unusual banking activities, a decline in employee morale, and exceedingly large corporate expenses or purchases. □

Forgery hits one big firm in six, card fraud one in seven, a survey indicates.

Banctec Acquires a Nynex Subsidiary That Develops Funds Transfer Software

Banctec Inc., a leading supplier of check processing systems to banks, announced this week that it has acquired an electronic funds transfer software firm from Nynex Corp.

The acquired Nynex unit, Lerous, Pitts & Associates, develops and sells software to financial institutions, retailers, and other companies involved in the processing of payments of debit and credit cards.

Lerous, Pitts had revenues of $4 million last year, Banctec officials said. Terms of the sale were not disclosed.

Promising Market

For Dallas-based Banctec, the acquisition marks an entrance into a market that is expected to expand dramatically in the coming years, as more consumers demand electronic payment mechanisms from retailers.

Clearwater, Fla.-based Lerous, Pitts currently has installed software supporting about 150,000 point of sale terminals. — **Matt Barthel**

Visa Introduces PC-Based Software For Analyzing Credit Card Business

By JEANNE IIDA

Visa International has introduced personal computer-based software to help bank executives analyze their credit card businesses.

The software, called Visa Vue, pulls together data on market share, customer spending patterns, and the reliability of the bank's credit card processing systems.

Visa said several banks are testing the software, but association officials declined to name them.

Easier Availability

Visa has made this information available to member institutions on request, and for a fee, before now. Visa's back-office systems upgrade, the Payment Service 2000 initiative, has enabled the organization to make the information available more easily.

"This is information that is costly for bank executives to get from their own data-processing departments," said Pat Edwards, vice president of information services at Visa.

Visa is marketing two products to member institutions. Software called Market Advantage gives a snapshot of a Visa member's issuing or merchant business, and compares it to the overall marketplace.

Comparisons Can Be Made

For example, bankers can compare the size of charges made by their gold card customers with charges made on cards issued by competing banks.

Another package called Performance Plus lets members review the performance of their product lines and the reliability of their systems. The software monitors chargebacks, and point of sale and automated teller machine authorizations.

Bankers can review how many transactions were declined in a given month, by card type. They can also review how their authorization rates for gold cards compare with the average authorization rates in the region.

A Deterrent to Fraud

Members can view chargeback data, and identify and review the merchants where chargebacks occurred. Visa says this ability can help members cut down on merchant fraud.

The information is updated each month. Members can receive the data in one of three ways. Visa can send a personal computer diskette containing the month's data. Or, members can dial into Visa's host computer and download the data, or Visa can distribute it via electronic mail.

The software runs on personal computers that support International Business Machines Corp. and Apple Computer Inc. □

It Takes Commitment to be a Winner

Success is only obtained through hard work and total dedication to a goal. At TSYS, we understand that kind of commitment. That is why we are developing a system that will revolutionize card processing. This new generation of card processing services, called "TS," will offer new levels of operating systems, superior customer service functions and highly flexible reporting systems to improve your efficiency, service and profitability.

To find out how TS, along with our unique commitment and depth of experience, can provide winning solutions for your operation, call the TSYS Marketing Division at (706) 649-2300.

A Who's Who of Wall Street Investors Supporting Glendale Federal's Recap

By SAM ZUCKERMAN

SAN FRANCISCO — Equity commitments from a prominent group of money managers, including several turnaround funds, were key to the success of Glendale Federal Bank's recapitalization, according to a list obtained by *American Banker*.

The financial reorganization of the nation's fifth-largest thrift, which was announced last week, hinged on getting investors to buy unsold shares in a $250 million rights offering to current shareholders.

That offering is the biggest part of the recap by the subsidiary of Glenfed Inc. The standby investors include 21 groups acting on their own behalf or for accounts they manage.

Tiger Management Corp., the New York City hedge fund, committed the largest amount – up to $30 million. Mutual Se-

Some top money managers played a crucial role.

ries, a New Jersey mutual funds group, will put in as much as $28 million.

Committing up to $10 million were: Merrill Lynch Global Allocation Fund, the Bass Brothers, West Highland Capital, Omega Advisors, Strome-Susskind & Co., Wellington Management Co., Investment Advisors Inc., and Boston Co.

Pledging up to $1.5 million were: First Boston Special Situations Fund, Merrill Lynch Phoenix Fund, Perry Partners, West Broadway Partners, FAC Capital Management, Carl Marks & Co., Third Avenue Fund, Ryback Management Corp., Ethos Capital Management, Furman Selz, and Arnhold and S. Bleichroeder.

The exact investment amounts depend on the extent to which current shareholders exercise their rights to buy additional shares. □

Star Banc's CFO Resigns to Join an Insurer

By STEVE KLINKERMAN

The chief financial officer of Star Banc Corp. has resigned, opening the way for the company's new chief executive, Jerry A. Grundhofer, to make his first senior management appointment.

The Cincinnati-based banking company said Tuesday that Gust J. Totlis left to join a Midwestern insurance company. Mr. Totlis had been chief financial officer since he joined Star in 1985.

Timothy J. Fogarty will assume Mr. Totlis' duties "on an interim basis," Mr. Grundhofer said in prepared remarks.

Mr. Fogarty is a senior vice president and member of the powerful management committee at Star, which has $7.4 billion of assets.

Departure 'Not Disruptive'

Mr. Grundhofer, a former top officer of BankAmerica Corp., joined Star Banc this summer with a mandate to preserve the bank's independence and accelerate its growth.

The departure of Mr. Totlis "should not be disruptive" since Star Banc is stable and delivering solid profits, said Fred Cummings, a banking analyst with McDonald & Co., Cleveland.

"The main implication is that Mr. Grundhofer gets to install a senior officer of his own choosing," Mr. Cummings said.

Mr. Totlis was not a contender for the chief executive's slot prior to the appointment of Mr. Grundhofer, according to sources at Star. They added that his departure was voluntary. □

Are You Considering a Fourth Quarter Non-performing Loan/REO Sale?

If so, consider this:

- A well-managed, competitively bid portfolio sale is the way to achieve your highest price.
- To ensure a year end closing, the sale process should begin soon.
- The market for distressed real estate assets is strong with hundreds of investor groups competing for deals.

If you would like advice on your portfolio, call the only firm that has handled over $5.5 billion in non-performing loan and REO sales in the past two years.

We have generated offers for non-performing loan and REO pools from over 400 different investor groups. We can market your assets quietly to a select group of buyers or openly to the numerous bidding groups that may have interest in your portfolio.

New House of Cards

Chemical Banking Corp. is moving ahead with its plan to acquire Shell Oil Co.'s credit card portfolio.

The latest evidence: Chemical bankers are scouting properties east of New York City in Queens and on Long Island to house a combined Shell-Chemical card operation, sources said.

The banking company currently runs its card business from the Long Island community of Hicksville. But it would outgrow that facility with the purchase in October of Shell's four million credit card accounts, the sources said.

The new digs will house several hundred new customer service and collections staff members that Chemical will have to add to its current payroll in Hicksville of 1,300 people.

Chemical, which plans to issue a MasterCard or Visa card cobranded with Shell, could add up to $1 billion of receivables to its $5.78 billion card portfolio, industry experts said.

The exact amount depends on how many current Shell customers would opt for a Chemical-issued card.

If the deal goes through, the biggest loser is likely to be First Data Resources, which was hired by Shell last year to perform data processing, card issuance, and customer service functions. — **Karen Gullo**

Great Expectations

Count on a dividend increase from Shawmut National Corp. in the next several months.

"Our expectation is we will raise the dividend," said Gunnar Overstrom, president of Shawmut, New England's third-largest banking company.

"The only question is whether it's later this year or in the early part of the following year."

Analysts are not surprised that Shawmut and many of its regional cohorts will begin lifting their payouts to shareholders. Most cut or eliminated their dividends several years ago as they struggled with real estate induced capital shortages.

Now, said Thomas Theurkauf, who follows Shawmut for Keefe, Bruyette & Woods, the company is likely to return to its historical payout ratio of 35% to 40% of earnings.

The bank's current annual dividend of 40 cents a share comes out to just about half that percentage. Given the fact that the New England economy remains sluggish, Shawmut will work to return some capital to shareholders.

"There's room for a pretty hefty payout ratio because there is little balance-sheet growth," Mr. Theurkauf said.

— **Jed Horowitz**

Take a Letter, Senator

Five banking groups blanketed Congress with 535 letters last week in an effort to save off the powerful insurance industry lobby.

Sen. C. Dodd

The insurers are hoping to persuade Congress to overturn a recent court ruling allowing banks to sell insurance nationwide from towns with fewer than 5,000 people. At least one senator has already publicly endorsed the insurance agents' agenda.

In a three-page letter dated Aug. 10, Sen. Christopher Dodd urged Senate Banking Committee chairman Donald Riegle, D-Mich., to close the "town-of-5,000 loophole."

"I believe policy changes in this area are properly the province of Congress, not the regulators," wrote Mr. Dodd, a Democrat from Connecticut, which is home to many large insurance companies.

As word of the Dodd letter spread, bankers started a letter-writing campaign of their own. Every senator and congressman received a letter last week from five bank trade associations.

"We urge you to oppose those insurance interests who seek to reverse these court decisions," the letter said.

"The banking industry views this as a matter of utmost significance; one that it will defend strongly."

In addition to the American Bankers Association, signers included the Association of Banks in Insurance, the Association of Reserve City Bankers, the Conference of State Bank Supervisors, and the Consumer Bankers Association.

UJB's Barrie H. MacKay Is Dead at Age 55

Barrie H. MacKay, director of corporate communications for UJB Financial Corp., died Aug. 15 of a heart attack.

Mr. MacKay, 55, joined the company, based in Princeton, N.J., in 1989. He created the bank's annual reports and directed media relations, internal communications, and investor relations activities.

Previously, he was vice president and deputy division head of corporate communications at Shawmut Bank, lead bank for Shawmut National Corp.

Mr. MacKay is survived by his wife and two daughters. □

EXECUTIVE *changes*

Amsouth Names Sloan D. Gibson To Head Consumer Bank Group

Amsouth Bancorp. elected **Sloan D. Gibson 4th** as executive vice president and head of the consumer and business banking group at its Birmingham, Ala.-based subsidiary, Amsouth Bank.

Sloan D. Gibson 4th

He will be responsible for consumer services, investments, loans and compliance, marketing, and business banking, as well as the company's customer information center. In addition, he has been named co-chairman of Amsouth's operating committee.

Mr. Gibson had been senior vice president/general banking group.

Also, **W. Michael Graves,** executive vice president and regional executive of Amsouth's central Alabama region, has been named head of its Alabama banking group and a member of the holding company's management committee.

W. Michael Graves

Mr. Graves will have executive responsibility for all 100 Amsouth bank offices in 20 Alabama cities, excluding greater Birmingham.

In another promotion, Amsouth elevated **E. W. Stephenson Jr.,** who runs its consumer banking and marketing division, to senior executive vice president and chairman of Amsouth Bank of Florida.

E.W. Stephenson

Alfred W. Swan Jr. will continue as president of Amsouth Bank of Florida and will assume the additional title of northwest area executive.

— **Franklin Smith**

SOUTHEAST

FORTUNE BANK, Clearwater, Fla., has promoted **Maria Neher** to senior vice president, retail banking.

Maria Neher

Ms. Neher was formerly senior vice president, regional manager for 17 Fortune branches in Pasco, Hernando, and northern Pinellas counties.

In her new post, she will oversee the bank's network of 46 full-service banking offices in eight Florida counties.

MIDDLE ATLANTIC

EUROPEAN AMERICAN Bank, Uniondale, N.Y., has promoted **John P. Schwartz** to chief financial officer.

John P. Schwartz

Mr. Schwartz oversees financial reporting for management and regulatory purposes while counseling executive management on financial control and profitability.

Stephen J. Stellhorn has been promoted to group senior vice president of European American's treasury department.

S.J. Stellhorn

Mr. Stellhorn has overall responsibility for the bank's investment sales and trading functions, foreign exchange, and asset/liability management.

NEW ENGLAND

STATE STREET BANK and Trust Co., Boston, said **Susan K. Frank** has joined the bank as its western regional marketing director while **Kimberly A. Person** has been named eastern regional marketing director.

Ms. Frank will work in the San Francisco office and Ms. Person will be working in the Arlington, Va., office.

WEST

SANWA BANK California, Los Angeles, announced new senior vice presidents at the bank.

They are **Christine Larson,** senior vice president and manager of consumer lending, and **Patricia J. Smith,** senior vice president and manager of corporate communications.

Patricia J. Smith

Christine Larson

Ms. Larson, who joined Sanwa Bank in February 1991, has been vice president and division sales manager for branch offices in metropolitan Los Angeles.

Ms. Smith was formerly a vice president and account group manager for Smith/Fischer Partners Inc., Los Angeles. She also has been director of corporate communications for Blue Cross of California in Woodland Hills. □

2 Insurers Pooling Loans For Sale to Farmer Mac

Agriculture

By ROBERT B. COX

WHAT DOES WALL STREET have in common with America's farmers?

Well, not much, except that they are now linked by two programs that pool and securitize farm loans and sell them to investors.

Units of Prudential Securities and Travelers Corp. have separately teamed up with the Federal Agricultural Mortgage Corp. to offer bankers a means of pooling long-term, fixed-rate agricultural loans secured by real estate.

The insurers were certified by Farmer Mac years ago to start up such programs, but they have done so only recently.

The programs make it easier for individual banks and their borrowers to access capital markets through Farmer Mac, allowing them to better compete with Farm Credit System banks.

"Banks are now able to offer long-term, fixed-rate loans without having the interest rate risk on their books," said John M. Blanchfield, who manages the American Bankers Association's ag division. Participating bankers will essentially act as loan originators, retaining loan servicing rights without setting aside the capital required for loans on their balance sheets.

John M. Blanchfield

The programs are a boon for banks with liquidity problems, proponents say. In addition to selling new loans to the companies, banks can sell existing loans while still collecting servicing fees.

Banks must qualify as originators for the two programs and must be stockholders of Farmer Mac. They also must adopt the uniform underwriting standards accepted by Farmer Mac.

Under a Travelers Realty Investment Co. program, bankers first get approval for loans from the insurer's field offices and simultaneously fund the loan and sell it to Travelers at closing.

The Hartford-based insurer then warehouses the loans until it has from $75 million to $100 million that it can securitize. So far the company has purchased roughly $50 million in loans from its six participating banks.

The Prudential Securities Secured Financing Corp. program has bankers shifting loans to regional subpoolers, or aggregators, who then send the loans on to offices of Equitable Agri-Business.

The Equitable Co. unit acts as Prudential's central servicer, reviewing credit underwriting and loan appraisals and performing billing and collection functions. Prudential has signed up seven banks and hopes to pool and securitize $40 million in loans this year.

Farmer Mac created by the 1987 Agricultural Credit Act, raises funds on the capital markets and purchases the loans from the program poolers. This allows bankers to compete on rates with Farm Credit banks, which also dip into capital markets for funds.

"We are going to the same market as the Farm Credit System," said Michael A. Martin, a Travelers vice president. "This should help banks compete with the Farm Credit System."

Banponce in Takeover Talks With Pioneer Bank of Chicago

By ROBERT B. COX

CHICAGO — Shifting demographics have made a Chicago community bank the acquisition target of an aggressive Puerto Rican banking company.

Last week, a senior official of Banponce Corp., San Juan, confirmed reports that the bank was considering the acquisition of Pioneer Bank and Trust Co., Chicago.

"We have talked to [Banponce] and other people as well," said S. Michael Polanski, Pioneer's president.

"Our hope is that it [the acquisition] happens in 1993," Jorge Marchand, Banponce senior vice president, said last week.

Demographics a Factor

While it might seem surprising that a Puerto Rico-based bank would buy a small community bank, a quick glance at Pioneer's customer demographics offers some explanation.

Hispanics accounted for 44% of the population in Pioneer's Humboldt Park neighborhood, according to the Community Lending Fact Book, published by the Woodstock Institute, a Chicago firm that tracks lending patterns.

There are a large number of Hispanics in Pioneer's neighborhood.

"Usually we like to enter new markets going through the Hispanic market first," said Roberto Herencia, senior vice president and chief of credit in the United States.

Greater U.S. Presence Sought

Banco Popular, with assets of $10.5 billion, has been aggressively expanding in the United States. At the end of 1992, it operated 30 branches in New York City, one in Chicago, and one in Los Angeles.

"We have been trying to expand our presence in the U.S. market," said Mr. Herencia, who is based in Chicago. "Illinois is a place we have been looking into."

Pioneer is a healthy bank with one branch. Return on average assets was about 0.90% at the first half of the year, said Mr. Polanski, president of the 80-year-old bank.

Numerous Acquisitions Made

The average return on assets for community banks was 1.25% for the first quarter of the year.

Over the last three years, Banponce has made numerous acquisitions of branches from the Resolution Trust Corp. and from the Israel-based Bank Leumi. Banponce also gained a number of New York branches when it acquired Banco de Ponce in 1990. □

Poughkeepsie Savings Wins 'Buy' Rating On Strength of Improved Asset Quality

An analyst has pinned a "buy" rating on shares of Poughkeepsie Savings Bank, citing a reduction in asset-quality problems at the $710 million-asset thrift.

"We believe that the shares are an attractive investment for accounts willing to speculate on the ongoing improvement in the fundamentals," Frank J. Barkocy wrote in a research report released last week.

Mr. Barkocy, an analyst at Advest Inc., Hartford, Conn., also called the bank a possible "takeover target" in the report.

Nonperforming assets at June 30 were $48.6 million, or 6.9% of total assets, compared with $76.2 million, or 10.9%, at year-end 1992. The bank, which was operating under a "prompt corrective action" directive, raised all capital ratios in June and is now designated "well-capitalized" by the Office of Thrift Supervision.

* * *

Suburban Bankshares, Lake Worth, Fla., said it lost $84,000 in the second quarter, versus net income of $6,000 a year ago.

The banking company lost $66,000 for the six months of the year, versus earnings of $404,000 the same time in 1992, according to its Aug. 18 release.

John Dorland, president and chief executive of the $172 million-asset bank, said the quarterly loss was attributable to the high level of nonperforming assets, and a reduction in net interest margin.

Nonperforming assets totaled $13.4 million as of June 30, down 4.3% since Dec. 31. Mr. Dorland, who was named president July 1, expects nonperformers to continue to decline in the second half of the year.

He also expects Suburban Bank's capital levels to continue to rise: tier 1 capital stood at 4.60% in the quarter, while risk-based capital was 5.91%, and leveraged ratio was 3.50%.

Mr. Dorland said Suburban is negotiating a revised offer to merge with Command Credit Corp., a Long Island, N.Y.-based credit card marketing and service business.

* * *

In an effort to further strengthen its capital, $1.8 billion-asset Citfed Bancorp, Dayton, Ohio, offered $40.25 million in subordinated notes last week.

The issue has an 8.25% yield and comes due Sept. 1, 2003. It was underwritten by Chicago Corp. and McDonald and Company Securities. □

Four Steps for Success with Technology: Select, Install, Implement, and Audit

By PETER D. LOUDERBACK
CCI, Morristown, N.J.

The mainframe computer, whether operated in-house or by an outsource vendor, and all of today's personal computer applications are widely considered to be the heart of a bank.

Deposit and loan products are delivered by automated systems. Computers track how well the bank is doing. A variety of special needs in departments such as marketing and human resources are satisfied by main-frame and PC technology. Automated teller machines, the automated clearing house, and point of sale systems have added a new dimension to the delivery of banking services. Recently, imaging, home banking, and automated voice response are getting attention, and all from the Israel-based Bank Leumi. Banponce also gained a number of New York branches when it acquired Banco de Ponce in 1990.

Comment

Management must understand the nuances of the systems life cycle.

It has become incumbent upon the banker – particularly the community banker who has traditionally been removed from technology decisions – to understand how computers affect the business now and how they will in the future.

There are four critical points that will define success or failure: (1) selection of the system, (2) installation, (3) post-installation implementation, and (4) biannual technology audits.

The Selection

The overall approach to making the right decision – look at a number of solutions, select two to three for intensive review, drive a hard bargain, and go with the winner – is well-known. My recent experience with community bankers on deposit and loan processing systems suggests the importance of reinforcing the following points.

Select a solution to support the needs of the business rather than operating the business to take advantage of the system. The system is a means to an end rather than the end itself. Selecting a computer system is somewhat like selecting a car. Any one of many models will get the buyer from here to there. The variables – comfort, features, color, style, price, and service – are important personal considerations.

Likewise, most systems solutions will solve any bank's basic needs. Its strategic needs should guide the evaluation and selection process.

The bank's strategic plan and direction should drive its selection criteria. Growth, deposit and loan product mix, customer mix, and locations are some of the issues that will need to be explored and then documented for the vendors.

I also suggest keeping the selection process as simple as possible. Cut the number of vendor candidates to two or three as quickly as possible. Talk to some users of the systems being considered. Expect to negotiate on price – there will be discounts.

Don't underestimate the cost of changing vendors. Training alone will involve everyone in the bank and is usually very expensive. After taking a careful look at the alternatives, it may make more sense to spend some money improving the current system rather than changing.

Installing the System

A critical six to eight months is needed to prepare for installing a new system. Procedures and reports will change. Equipment will be ordered and installed. Everyone from tellers to directors will need to be trained to deal with the new system.

Yet the need to operate the old system while learning the new system will necessitate concentrating only on the basics.

I see the selection and installation process as comparable to the way I have bought and initially used a VCR. Prior to going to the store I did some homework, studying which products were rated best, what features I wanted, where I could get the best price. I went to the store on a Saturday afternoon, bought the VCR, picked up a movie, and arrived home to install the unit.

I learned and mastered the basics of operating the unit from the manual. The toughest challenge – connecting the cable box, the TV, and the VCR – was not covered adequately in the instructions. Busy signals when I called the cable company only increased my frustration. Finally, with no help from the manual or the cable company, I tried every alternative until one worked.

I was so intent on watching the movie that I never read the more complicated parts of the manual about fine-tuning, high fidelity recording, the tape timer, and other features.

Patience Required

Banks take the same impatient approach when installing a new system, which is all right only if there is a plan to revisit the manual" after installation and take full advantage of the advanced features and functions that were so appealing when encountered during the selection process.

The conversion period is a demanding time for two principal reasons. The technical staff is most often limited to one or two, and they are extremely busy selecting options, installing equipment, learning the system, tackling the unexpected, and other related jobs.

Also, the amount of time available for clerks, tellers, and management to learn the new system will be limited because the current system must be attended to while studying the new one.

Yet the conversion period is an opportunity to clean up sloppy, time consuming, unproductive procedures and avoid burdening the new system with old procedures.

For example, products should also be reviewed and obsolete ones eliminated. It makes no sense to go to the trouble of engineering the new system to handle discontinued deposit and loan products just because a few customers still use them.

The conversion period is also an ideal time to evaluate the bank's management reporting structure. There are often too many reports – those that are distributed are not used, and those that are used contain too much data. Changes made as a result of installing a new system can be an effective way to add credibility to the new system.

The Implementation Process

This phase is often given short shrift. Typically, the six- to eight-month installation period leaves the bank and its employees exhausted, or at least ready for a breather. But the people often never get back to reading the "manual" and miss out on desirable features and functions.

The bank probably has cut corners during conversion and now needs to revisit the completion of procedures, additional training of employees, development of better reports and forms, and other productivity related issues.

The community bank may have a difficult time freeing the resources to address post-installation issues. Recognize that the issue needs to be addressed and build it into the overall implementation plan. The system's

The system is a means to an end, not the end itself.

full value will not be realized unless this gets the attention it deserves.

Biannual Audits

There is no such thing as a stable environment in the use of technology. Personal computer and mainframe systems are constantly changing as a result of a number of things ranging from system upgrades and software releases to the installation of special purpose systems and/or equipment. The potential problems include:

- Failure to keep up with new releases. In the case of in-house systems, the user is responsible for installing any new software and preparing to use the new features and functions.

Banks that rely on an outside servicer must also adjust procedures to take advantage of the changes. Problems develop when a bank fails to keep up with the new releases and training staff to take advantage of them. Once you fall behind it is difficult to recover.

- Failure to use special-purpose systems that have been purchased and installed. There are literally hundreds of such systems for community banks to satisfy specific objectives, and bankers are not reluctant to spend money on these systems. The problem is that they are often not utilized.
- Failure to train new employees to use the system. Many community banks employ the "buddy system" – an experienced teller will train a new one. A mortgage originator will train a replacement. Over time this is bound to result in shoddy practices being passed on from trainer to trainee.

Critical Elements

The proper installation and use of PC and mainframe technology is critical to the success of a community bank. Management must understand the nuances of the technology life cycle.

The importance of selecting the right system and an attentive vendor cannot be overstated. But the installation and post-implementation phases also need concentrated attention if the value of a system is to be fully realized. □

Oversight Office Seen Likely to Win Funds For Hiring Staff of 60

By SNIGDHA PRAKASH

WASHINGTON — How independent will the new Office of Federal Housing Enterprise Oversight really be?

The answer may come soon from the Senate Appropriations Committee. The head regulator, Aida Alvarez, has asked for funds to hire a staff of 60 to regulate the Federal National Mortgage Association and Federal Home Loan Mortgage Corp.

A Senate panel is considering a request to double HUD's projection.

The panel's response could well determine whether Ms. Alvarez can rely on the office's own resources to fulfill its congressional mandate.

The staff she is seeking would be twice as large as the Department of Housing and Urban Development projected last year when Congress created the regulator's office.

'Not Going to Fight It'

Though some on Capitol Hill worry that Ms. Alvarez is presiding over a ballooning agency, observers like her chances of getting the extra money.

"My sense is, if the Congress isn't paying for it, they're not going to fight it," said a Republican House staff member.

Ms. Alvarez said she expected to pay her staff at rates comparable to those paid by other regulatory agencies in Washington. She also hopes to use headhunters to hire financial talent from Wall Street, if she can do that within the budget.

She expects to hear by mid-September from the Senate on the funding request. She has hired five staffers so far.

In addition to the $5.7 million already budgeted for the 1994 fiscal year, Ms. Alvarez has requested $1.3 million for the year beginning Oct. 1. She also has $3 million intended as start-up costs for the 1993 fiscal year. ☐

Stock Analyst Sees Long-Term Value In Holding Mortgage Banking Shares

Wall Street has been paying increasing attention to mortgage banking stocks as a result of the protracted boom in originations. One analyst, Gary Gordon of PaineWebber Inc., initiated coverage of two mortgage banks last week: Countrywide Credit Industries, which received a "neutral" rating, and Fleet Mortgage Group, rated a "buy."

Q&A

American Banker's *mortgage editor, Edward Kulkosky, talked with Mr. Gordon about the new coverage.*

Q.: Many people think the mortgage business may be peaking right now. Is this a a good time to start covering mortgage stocks?

GORDON: Yes and no. Short-term, it's not. If interest rates stabilize, there will be something of a shakeout in the business. The mortgage banking industry will be originating most of the country's loans going forward. Working with [Fannie Mae and

"It's going to be extremely tough for thrifts to win back market share."

Freddie Mac], they have developed a system that is more cost-efficient than that of portfolio lenders, thrifts, or commercial banks over the long term.

Q.: Who will the winners and losers be in the shakeout?

GORDON: The winners will be those who rely most on loan servicing. When refinancing slows, servicing becomes more profitable. The losers will be those who rely on loan production.

Q.: Where does that leave portfolio lenders like the thrifts?

GORDON: I think it's going to be extremely tough for thrifts to win back market share. Since the last period of heavy demand for [adjustable-rate mortgages], in 1988, we have had a big buildup in competition. Countrywide will be all over the product when the time comes. And plenty of mortgage brokers will be competing against the thrifts.

Q.: Is there any ray of sunshine for the thrifts?

GORDON: If anything, the situation may get worse. The commercial banks are building their presence in mortgage banking, and they have tremendous capital resources. There's not much else [in the way of loan demand] out there for them right now. And the mortgage banks have been pretty much distracted by refis. They will focus a lot more on ARMs when the time comes.

Q.: Do you like any other mortgage stocks?

GORDON: No. I'm neutral on everybody else but Fleet. I also follow Plaza, Imperial Credit, and North American.

Q.: Another analyst downgraded Imperial to a sell last week. Are you hanging in?

GORDON: Yes. Imperial has some unique things going that could help. One is a loan that allows people that don't quite qualify for Fannie or Freddie to get a mortgage. And they have found investors willing to buy such loans. ☐

BancPlus Mortgage to Issue Debt

By JAMES H. SAFT

BancPlus Mortgage Corp. of San Antonio, Tex., is embarking on a refinancing campaign that will include the sale of $150 million of notes and the syndication of $475 million of new bank debt.

The company has filed a registration statement with the Securities and Exchange Commission for $150 million of senior notes due 2003. Donaldson, Lufkin & Jenrette and J.P. Morgan Securities Inc. will lead the sale.

The sale will occur within 90 days, said Herbert Carrel, president of parent BancPlus Financial Corp.

Proceeds from the offering will be used to retire existing bank debt as well as 11.5% subordinated notes due 2001, according to the SEC filing.

Separately, Bank of New York and Banc One are syndicating for BancPlus a $475 million package of bank loans.

BancPlus' credit includes a $400 million mortgage warehouse loan priced at the London Interbank Offered Rate (Libor) plus 150 basis points.

Mortgage warehouse credits are used to provide short-term funding for mortgages awaiting sale into the secondary market.

The company will also receive a $75 million, seven-year loan to finance planned acquisition of servicing rights, according to bankers familiar with the deal. That credit, priced at Libor plus 250 basis points, contains a provision that may increase the deal to $100 million.

Bank of New York and Banc One are seeking underwriters for the credit. ☐

Homebuying Surge Indicated by Poll

A poll by Fleet New York, a subsidiary of Fleet Financial Group, Providence, R.I., found that a significant jump in homebuying may be on the horizon.

The poll, conducted in New York State, found that while almost half of those surveyed did not own a home, two-thirds said they would like to buy one soon.

"Significantly," the poll said, "many of those who plan to purchase a home have high enough incomes to make their dreams a reality."

"As a result, as much as 12% of the current adult population of the state could be added to the ranks of prospective new homebuyers in the next five years," the poll found.

Sadly for you, politicians in D.C. agree on one thing.

People who've made careers out of being contrary are declaring that the government's relationship with the secondary mortgage market is going to change dramatically. They all know about HUD plans to toughen enforcement, new pressures on Fannie and Freddie, and the revival of Ginnie Mae as a major player. And if you want more evidence, look to Capitol Hill, where Congress is toying with mortgage bankers subject to the same regs as commercial banks.

How to react? You could wax nostalgic—and get clobbered by the government and your competitors. Or you could read *The Mortgage Marketplace.*

Every Monday, in less time than it takes to finish your morning coffee, *The Mortgage Marketplace* tells you about the new rules and ideas that could keelhaul your secondary operations. It names the biggest mortgage company participants in Ginnie, Fannie and Freddie issues. And it scans the horizon to determine what types of loans, and borrowers, that now are considered exotic could soon enter the pipeline of conforming loans.

There's no debate—new regs are coming. What's still at issue is whether you'll be ready for them.

Assessing the California and Boston Market Meltdowns

By KARL E. CASE
McLean Professor of Economics
Wellesley College

There is great concern on the minds of many today about the decline in home values in the Northeast and in California. After experiencing tremendous losses in Texas and Alaska in recent years, mortgage holders and guarantors are watching developments with a worried eye.

The newly booming $100 billion mortgage-backed-securities industry is facing falling ratings and nervous buyers. California and the Northeast make up 25% of the country in population and labor force, but because values are high, the two regions account for much more than 25% of the total mortgage debt.

Of course, regional declines and rising unemployment lead to increases in mortgage delinquency rates, but foreclosures, claims, and losses don't rise dramatically unless collateral values drop as they have in California and the Northeast. Thus, in predicting losses, home price information is critical.

Median Sales Prices Used

Unfortunately, good information on home prices is difficult to come by. For years we were forced to rely on "median sales prices," whose ups rise and fall with the mix of properties that happens to sell period by period.

A drop in collateral values in both areas has accelerated loan foreclosures.

with no appreciation or depreciation of property values.

New techniques can now accurately measure price changes by looking at actual transactions and checking for earlier sales of the same home. Such data are now available for most of the country.

Since the most dramatic movements in home prices have been in Los Angeles and Boston, the discussion below is based on repeat-sales data on 748,000 properties in Los Angeles County and 42,000 properties in greater Boston.

California 'Frenzy' Faded Fast

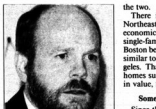
On June 1, 1988, the *Wall Street Journal* carried a front-page article about the "frenzy" in the California housing market. At its peak, prices were rising 3% a month!

Overall from the peak of the market in early 1990, prices more than doubled.

Since the second quarter of 1990, prices have been falling, and they show no sign of bottoming out. The biggest declines in California have been in properties over $230,000. Since the peak of the market, higher-priced homes have dropped nearly 23%, and half of that decline has come in the last year. As of the end of June, prices continued to slide.

Lower Price Range Fell Less

The lower price range has declined somewhat less. Single-family homes in the lower tier show a drop of 6.3% during the past year. Not surprisingly, properties in the middle tier show declines that fall between the two.



Karl E. Case

There is better news in the Northeast despite continuing economic woes. The pattern of single-family price declines in Boston between 1988 and 1991 is similar to the pattern in Los Angeles. That is, the higher-price homes suffered the biggest drop in value, falling just under 19%.

Some Price Gains Made

Since the 1st quarter of 1991, prices in Boston have shown some improvement. All three tiers showed increases during the spring of 1991 and again in 1992. In both cases, these increases were erased during the fall.

Surprisingly, over the past two years, despite some improvement in spring, the lower-priced properties have continued to drift downward at a rate of about 3% a year.

As of the end of June, lower-priced properties are down 7.8% from their peak, middle-tier properties are down 12.7% and higher-tier properties are down 11.5%. This is the opposite of the pattern in California.. ☐

First Colonial Helps Small Banks Sell Funds

By KAREN TALLEY

First Colonial Bankshares just can't get enough of the investment products business.

The Chicago company, which has been selling mutual funds and annuities through its 16 subsidiary banks since 1987, is now marketing the products through smaller banks in its own backyard.

First Colonial has signed up three banks since starting to beat the bushes for outside business in January.

This is a rare strategy for any sized bank, let alone a community bank like First Colonial, which has $1.6 billion of assets.

Roach Johnson

CONFIDENT STRATEGIST: Bette B. Daniels, center, chairman of First Colonial Investment Services, says it's only a matter of time before her company's strategy snares more banks as brokerage clients.

Formidable Rivals Faced

By promoting its mutual-fund marketing program to smaller banks, First Colonial is going up against some formidable rivals. The distribution business is dominated by third-party marketing firms such as GNA Corp., Invest Financial Corp., and Essex Corp., which specialize in setting up mutual-fund and annuities sales programs for banks. In addition, regional brokerage firms have carved out a niche by serving community banks.

But First Colonial believes it has an edge in placing its brokers in bank lobbies.

"We're bankers talking to bankers," said Bette B. Daniels, chairman of First Colonial Investment Services, the bank's in-house broker/dealer.

"We know how we wanted things done in our own banks, and are offering the very same to other banks," she said.

A More Equitable Payout

Perhaps most important, First Colonial gives banks control of programs by having the banks approve prospective brokers and control all marketing, Ms. Daniels said.

Moreover, the payout to banks can be more equitable than marketing firms or brokerages offer, Ms. Daniels said. Banks keep a straight 30% of commission revenue, with First Colonial receiving the balance to cover operating costs and generate a profit.

Not surprisingly, profit is indeed the motivation behind First Colonial's initiative. This year, the bank company projects net income of $1.5 million from $4.3 million in gross commissions from investment product sales.

Economies of Scale

It costs First Colonial about $60,000 to bring a bank on line. This covers start-up compensation for a broker for the first six months, a computer terminal, access to on-line research materials and ongoing marketing support.

Economies of scale should increase profits as the bank signs up more clients, Ms. Daniels said. First Colonial sees more brokers generating dollars to offset operational costs for software and automatic quotation systems.

The network arrangement with other banks is a natural for First Colonial, Ms. Daniels said.

"We supply other services to banks through correspondent agreements," she said. "Why not take that approach as a broker/dealer?"

Hinsbrook Bank Signs Up

One of the first banks to sign up with First Colonial was Hinsbrook Bank and Trust in Willowbrook, Ill.

The $58 million-asset institution approached First Colonial because it was less than satisfactory experiences with independent broker/dealers during the prior two years.

Since joining with First Colonial in April, Hinsbrook's program has had its ups and downs, including the recent departure of the broker heading its program. But Hinsbrook's president, Robert Buhrke, is not discouraged.

"We like working with a community bank that knows our problems and business," he said.

A Matter of Time?

First Colonial also has marketing agreements with two institutions that are part of Hibanc Corp., a holding company First Colonial plans to buy.

Ms. Daniels believes it's only a matter of time before First Colonial's new marketing venture snares even more banks as brokerage clients.

C. Paul Johnson, chairman of First Colonial's holding company, agrees.

"There is customer demand for mutual funds and annuities, and these products are a very significant part of our non-interest income," he said.

Taking the Initiative

Mr. Johnson, a former air force fighter pilot and a dyed-in-the-wool entrepreneur, is no stranger to taking initiatives.

He used some of his fortune to buy $65 million-asset Colonial Bank in 1972. Through a series of acquisitions, he built First Colonial into a $1.6 billion asset organization.

Mr. Johnson embraced Ms. Daniels' idea of First Colonial adding another business unit, and agreed to seed it with $100,000.

Ms. Daniels joined First Colonial in 1987, with a solid background in retail and community banking under her belt.

Initially, Ms. Daniels headed programs that the bank operated with assistance from regional brokers Wayne Hummer & Co., Chicago, and Stephens, Inc., Little Rock, Ark.

Two years ago, she helped the bank company launch its own brokerage subsidiary.

"We believed there were better profits to be made and we also wanted greater control of the products we offered," Ms. Daniels said.

Challenges Will Be Faced

First Colonial's broker/dealer "is the first company I ever started," Ms. Daniels said. But the bank's entrepreneurial environment "supported me every step of the way."

Now, Ms. Daniels faces the challenges of growing a business from the foundation she's laid. And this has required constant tinkering.

First Colonial discovered early on that a securities license doesn't necessarily make a broker a good salesperson. "We made some mistakes in hiring," Ms. Daniels said. "Some people had strong product knowledge, but difficulty closing sales."

First Colonial also found out that the way brokers are compensated makes a difference in the way they sell investment products.

"Brokers were very comfortable with the base salary we initially paid them, and productivity wasn't increasing at all," Ms. Daniels said.

Now, brokers are compensated solely on their production, a change that has helped step up product sales, Ms. Daniels said.

In another measure to beef up volume, First Colonial uses investors, giving middle managers, platform people and tellers $25 for each referral that results in an appointment with a broker.

Grappling with these and other issues has, if anything, increased Ms. Daniels' enthusiasm for the investment program.

"I'm having a great time," she said. "This has been the highlight of my career." □

IF YOU'RE NOT WORKING WITH US,
YOU MAY BE PLAYING OUT OF TUNE.

To grow your mutual fund assets through your retail branch network, you need experienced marketing, distribution, and operational support...all perfectly attuned...with financial-retail mutual fund experts and its full symphony of marketing, teleservicing, and advanced shareholder services will help make you a successful player in America's fastest growing industry. For a first overture, call John Florence, at 508 855 4887.

First Maryland Enters the No-Load Mutual Fund Arena

By KALEN HOLLIDAY

Joining the growing number of banks that offer no-load mutual funds, First National Bank of Maryland has introduced a fee-free fund family.

First Maryland decided to launch no-load funds to "leverage our branch distribution network" and establish an "equal footing with other companies that offer mutual funds," said Jennifer Lambdin, a senior vice president and investment officer with the bank.

Initially, the Baltimore-based bank's Ark funds will be made available only to customers who have established trust, custodial, or money management relationships with the bank.

First Maryland plans to make these funds, which include a selection of money market, fixed-income, and equity portfolios, available to customers through its branches.

"We will have a retail class of shares in the next six months, pending SEC approval," Ms. Lambdin said.

At a Glance: The Ark Funds

Funds:	7
Assets:	$500 million
Investment adviser:	First National Bank of Maryland
Sponsor and administrator:	Fidelity Distributors Corp.
Transfer agent:	U.S. Trust Company of New York

Right now, the funds offered are a trust class of funds which by definition must be no-load, Ms. Lambdin said.

99% Conversion Rate

First Maryland has about $500 million of assets in the Ark funds, which were launched in June. The assets all came through the conversion of trust accounts.

The bank had about a 99% conversion rate on the variable net-asset funds, she said. Of the $800 million of money market assets, about $300 million is in the Ark money market, she said.

Keeping Funds at Home

By introducing its own no-fee fund family, First Maryland hopes to stem the tide of money from the bank to mutual funds.

"It's no secret that money has been flowing out to mutual funds," Ms. Lambdin said. "We wanted the capability to keep business in-house."

With 70 years' experience managing money, First Maryland has ample ability in this field, Ms. Lambdin said.

Instead of sweeping money into funds managed outside, the bank can keep the business at-home. Also, "we wanted more control," she said.

From the trust side, creating the Ark funds enables First Maryland to better compete with other companies that offer mutual funds, Ms. Lambdin said. Specifically, the change gives trust customers daily liquidity and the ability to look up their holdings in newspapers.

The bank has about $500 million of assets in the funds.

Demand Seen

There also has been demand from retail clients, Ms. Lambdin said. When the bank expands the products to retail customers, it will have the ability to charge a load, she said. A decision about whether to charge fees to other customers has not been made.

When the funds are introduced to First Maryland's non-trust customers, the bank plans to use direct mail, posters, and other advertising techniques. Salespeople will be compensated on a commission basis.

The Ark Funds now include a Treasury money market, a tax-free money market, income, growth and income, and capital growth portfolios.

The company would like to expand and perhaps include a tax-free bond fund, an international fund, and others, Ms. Lambdin said.

What's in the Name

The name "Ark" was chosen for the funds because it combines symbols used by both the state of Maryland and Allied Irish Banks PLC, the bank's parent company.

Maryland's symbol is the ark and dove, and the ark is an ancient Celtic symbol that Allied Irish uses as its corporate logo, Ms. Lambdin said.

And there was another reason. "Ark is at the beginning of the alphabet," making it easier for customers to find in newspapers' increasingly crowded mutual fund listings, she said with a laugh.

First Maryland's assets, as of Dec. 31, 1992, were about $6.8 billion. The 187-year-old bank has $24.4 billion of assets under administration, with $2.4 billion under investment management at the end of last year.

Fidelity Distributors Corp. acts as administrator and distributor for the funds. U.S. Trust Company of New York is the transfer agent. □

Choose The Best.

"For our proprietary mutual fund program to succeed, we've got to choose the best partner – one who can help us grow our assets.

We're bringing in SEI."

It's a partnership. And it goes way beyond just administering your proprietary funds.

At SEI, our number one goal is growing your assets. We do this through our superior marketing and distribution expertise and our integrated technology solutions. Backed by our proven legal, accounting, and operations capabilities.

But our support doesn't end there. We'll develop customized plans and programs for you. Our investment experts will help structure products that meet your customers' needs. We'll even provide direct sales support — if you need it.

SEI administers and distributes more than 100 portfolios for major proprietary fund complexes. We're partners to BANC ONE (Helmsman Fund), SunTrust Banks (STI Classic Funds), Union Bank (Union Investors Fund), and many other industry leaders.

Growing your assets and improving your profits is what our partnership is all about. Which is why your goal should be: Choose The Best!

About SEI

SEI has been dedicated to creating comprehensive investment programs for over two decades, focusing on the following areas:

Investment Products and Programs ($35 billion in assets): mutual funds, proprietary funds, annuities, and bank-wide investment programs.

Full Planning and Consultation Services: marketing planning, program definition and implementation, as well as full training and sales support.

Investment Management Technology: trust accounting, defined contribution recordkeeping, mutual fund accounting, and retail support systems.

For more information, call 1-800-DIAL-SEI (342-5734).

Ruling Means Insurance Powers Fight Is Over – and the Banks Have Won

By DAVID F. FREEMAN JR.
Arnold & Porter
Washington

The insurance industry realized its two worst nightmares on Friday, July 16.

First, the floodwaters of the Mississippi and its tributaries broke through levees along that mighty river, adding further to the billions in dollars of losses suffered by insurance underwriters in recent years from various natural disasters.

Second, the U.S. Court of Appeals for the District of Columbia Circuit in Independent Insurance Agents of America v. Ludwig upheld the power of national banks with branches in small towns to sell all forms of insurance as agents to customers nationwide.

Comment

This court decision opens the way for bold new competition by national banks in retail insurance agency activities, including sales of such diverse products as fixed and variable annuities, property and casualty insurance, and life and health insurance.

National banks have two sources of power to sell insurance:

• The "incidental powers" clause of the National Bank Act, which the Comptroller of the Currency has determined authorizes national banks in any location to sell certain forms of banking-related insurance, such as annuities and credit life.

• Section 92, which authorizes national banks located in towns of 5,000 or fewer persons to sell any type of insurance.

The D.C. Circuit decision involved only section 92.

No Limits

At issue was whether a national bank could sell insurance only in the town of 5,000 or nationwide. The court ruled the latter.

The court declined to limit the insurance customer base of small-town national banks to persons located in the small towns, as the Independent Insurance Agents had urged, because "we have found no specific congressional intent to restrict the geographical reach of the insurance sales authorized by section 92."

The court noted that "a world of microchips, communication satellites, fax machines, direct mail and telephone solicitation, and all other technologies and techniques" now enables a nationwide business to be conducted "from every hamlet."

The result of the court's decision should be increased competition in the insurance agency business, greater availability of insurance products for customers, increased convenience, and lower costs for consumers.

Phantom Regulation

Before you start flipping through Title 12 of the U.S. code to find section 92, be forewarned: It is not there.

Section 92 was enacted in 1916, but sloppy punctuation led to its removal from the Code in 1952, on the theory that it had been accidentally repealed in 1918.

The Comptroller's office, Congress, and the banking industry nonetheless continued to operate as though section 92 was still good law. In reliance on section 92, national banks located in small towns for years have sold insurance to customers in those small towns.

In 1984, U.S. National Bank of Oregon asked the Comptroller's office to allow the bank to

The insurance industry's litigation strategy has backfired.

sell insurance from a small town to customers located elsewhere. The agency approved the proposal in 1986.

The Independent Insurance Agents brought suit, but lost in the district court.

On appeal, the D.C. Circuit held that section 92 was no longer valid law in light of the 1918 "accidental repeal".

In June, the Supreme Court reversed the D.C. Circuit, finding that section 92 had not been repealed, and sent the case back to the D.C. Circuit to determine the meaning of section 92.

On remand, the D.C. circuit decided on July 16 that the reanimated section 92 authorizes national banks in small towns to sell insurance to customers nationwide.

Other Suits Pending

The lawsuit is one of many filed in recent years by the insurance industry against the Comptroller's office and Federal Reserve Board attempting to restrict competition from banks.

Currently pending are lawsuits in the Sixth Circuit involving states licensing of national banks as insurance agents, and the Fifth Circuit involving the power of national banks to sell annuities as "incidental" activity.

Other recent decisions are a June decision by a New York state appeals court holding the New York state-chartered banks have power to sell annuities under the 'incidental powers' clause of the state's banking law, and a 1992 decision by the Second Circuit that section 92 by implication limits the incidental insurance powers of national banks.

Strategic Error

Like the securities industry lawsuits against the federal banking agencies in the 1970s and 1980s, the insurance industry's litigation strategy has backfired.

The insurance agency powers of banks have been clarified and strengthened rather than limited as the insurance industry had hoped.

Now, rather than focusing on the few narrow forms of insurance that the Comptroller's office has determined are incidental to banking, a national bank can simply open a branch office in a small town and market any type of insurance from that office to anyone, anywhere.

Historic Ruling

The D.C. Circuit decision has transformed the pending battle over the incidental insurance powers of national banks into little more than a rear-guard action.

An appellate decision means that a national bank can simply open a branch office in a small town and market any type of insurance from there to anyone, anywhere.

The decision opens the way for national banks to "export" insurance agency sales from one small town to customers nationwide.

It mentions directly mail and telecommunications, as well as "all other technologies and techniques" – which presumably could include a traveling sales force of bank officers based in the small town calling on customers in other towns and states.

The 1978 Supreme Court decision in Marquette National Bank v. First Omaha Services Corporation opened the way for national banks "located" in one state to market credit cards in other states using the interest rates of the bank's home state.

In much the same way, the recent D.C. Circuit decision clears the path for a similar move by banks to sell insurance products on a broad geographic basis.

State Power Limited

Many states take the position that a bank and its employees must be licensed by the state insurance regulator in order to sell insurance to customers in the state. Many states refuse to grant such licenses to banks.

David F. Freeman Jr.

National banks, however, are chartered by the federal government and get their powers from federal law.

A long line of judicial and Comptroller' office decisions interpreting the Supremacy Clause of the U.S. Constitution preclude the states from requiring national banks to obtain a state license to conduct business or otherwise exercise "visitorial powers" over national banks.

Barring congressional action to reverse 150 years of federal court precedents limiting state authority to regulate federally chartered banks, state efforts to restrict national bank insurance agency activities through licensing requirements inevitably will fail.

Review Unlikely

The Independent Insurance Agents have the option of seeking Supreme Court review of the D.C. Circuit decision.

It appears unlikely, however, that the Supreme Court would reverse the decision. The court receives thousands of petitions each year and has time to hear only a select few cases.

Typically those cases involve matters of national importance involving a split in authority between two or more courts of appeal. No such split exists here.

A trade association's challenge to a Comptroller's decision that has been upheld on two levels of appeal in the federal courts is an extremely unlikely candidate for review.

Moreover, the court of appeals decision is a rather straightforward application of well-settled principles of statutory interpretation and deference to the authority of a regulatory agency.

Bit if the Supreme Court were to devote its limited resources to reviewing the case, it very likely would uphold the decision. □

Brokers' Pay Surged Last Year As Volume and Prices Climbed

By KAREN TALLEY

Retail brokers' average earnings rose 18%, last year, to $116,510, according to the Securities Industry Association.

The average for institutional brokers climbed 14%, to $271,495, the New York-based trade group said.

The association, which represents some 700 securities brokers and investment banking firms, based its findings on gross earnings of sales representatives at 69 firms, including several bank brokerage units.

Lively Year

Increased market activity and higher stock prices propelled commission revenue, said Jeffrey Schaefer, a senior vice president.

Retail brokers saw their fourth consecutive earnings gain. The average last fell in 1988, the year after the market crash, to $71,309, from $93,959 in 1987.

Production also rose last year, to record levels. The median on the retail side rose to $197,523 from $173,467, while median institutional production climbed to $508,857 from $421,926 in 1991.

The rise averaged 18% for retail brokers and 14% for institutional.

Different for Banks

The figures, although including some bank representatives, are probably a bit high for many financial institutions, industry observers say.

The survey bases its findings mainly on commissions, while banks often have more varied compensation arrangements. These can include a flat salary or a salary/bonus combination that can supply less compensation than commissions.

But bank reps make up ground when it comes to getting more generous benefit packages, said Robert Bosserman, managing partner of Sales Acceleration Systems, a Beaverdam, Va., consulting firm.

Benefits at banks can typically add 30% to 35% to base salaries, Mr. Bosserman said.

Bruce Wheeler
Bulking up

Mellon Hiring Brokers For Mutual Funds Push

Mellon Bank Corp. is stepping up sales of mutual funds and annuities in branches.

The $36 billion-asset company, based in Pittsburgh, is hiring brokers to bulk up a program that currently has fewer than 100 investment representatives covering 450 branches in Pennsylvania, Maryland, and Delaware.

Mellon will employ the new brokers as personal investment consultants with InvestNet, the bank's in-house broker dealer.

Mellon is looking primarily for representatives with broker credentials from the National Association of Securities Dealers.

Holders of this brokers' license can sell individual stocks and bonds as well as mutual funds and annuities.

Wide Search

The bank is finding staff at brokerages, financial planning firms, insurance agencies, and in its own ranks, said Bruce Wheeler, executive vice president for regional banking, who is charge of the building.

Mellon "listened to our customers" in deciding to broaden its investment product thrust, Mr. Wheeler said.

Focus on Laurel Funds

Customers were looking for alternative investments in the low interest rate environment, he said.

Mellon, like other banks, found customers weren't rolling over their certificate of deposit.

Mellon's Laurel family of nine mutual funds serves as a cornerstone for the increased retail selling effort.

Laurel funds, which include stock and bond offerings as well as several money market funds, have $2.4 billion of assets under management.

Mellon may also begin offering retail customers some of the 19 mutual funds managed by Boston Co., Mr. Wheeler said. Boston Co. funds have $1.4 billion of assets under management.

Mellon acquired Boston Co., a Boston-based mutual fund distributor, earlier this year for cash and stock worth $1.453 billion.

Mellon also offers annuities and products from a preferred list of five mutual fund families.

The bank is taking great pains to make sure that customers are sold the most appropriate products, Mr. Wheeler said.

Training Program

To avoid potential problems, brokers go through a bank-designed training program and are also required to provide information about clients' investment needs and risk tolerances.

This benefits customers as well as the bank, which recognizes that regulators are paying more attention than ever to banks' investment programs, Mr. Wheeler said.

Money Funds' Assets Rose Slightly in Week

Money market mutual fund assets rose to $581.49 billion in the week that ended Aug. 18, the Investment Company Institute reported.

That is a slight increase from $580.15 billion the prior week.

Retail assets grew to $392.39 billion, a $3.19 billion increase.

Gains were notched in both the taxable and tax-exempt categories. Institutional assets slipped to $189.1 billion, a $1.86 billion decline. Taxable fund assets fell, which tax-exempt fund holdings rose. — **Debra Cope**

T. Rowe Price Tries Seminars Aboard Luxury Cruise Ships

By MICHAEL O'D. MOORE

T. Rowe Price thinks a little sea duty for its personnel is a good way to bend the ears of well-to-do prospects and clients.

The Baltimore-based mutual fund company packed two of its employees off on a two-week luxury-liner cruise on the Mediterranean earlier this summer to tutor passengers on its products.

The plum assignment – directing three seminars – fell to T. Rowe Price vice president Steven E. Norwitz. After the seminars drew a total of 600 passengers, the company signed up Mr. Norwitz for another tour of duty in October.

"It's a good opportunity for us, being no-load direct marketers, to meet customers face to face," said Mr. Norwitz. He added that customers didn't confine their questions to the seminar periods, but came up to him anywhere on deck for information.

Since each passenger pays $4,000 to $20,000 for the two-week cruise, every passenger is a potential big ticket worth talking with, he said.

For the upcoming cruise, T. Rowe Price has extended an invitation to its existing customers to find a berth, sea-legs, and investment advice aboard *The Crown Odyssey*.

Seminar topics will look at issues such as developing retirement investments, investing for tax-free income, and calculating the impact of President Clinton on various investments. □

"Wipe that silly grin off your face, Dingle. This is a hostile takeover."

Many situations in life need to be taken seriously. And prudent investors know that making an investment decision is one of those times.

MasterCard Revving Up Its Campaign For Government to Accept Card Payments

By LISA FICKENSCHER

MasterCard International is out to conquer government.

By the end of the year, the New York-based association expects to be armed with convincing evidence from two pilot programs that will show skeptical government officials how their agencies can benefit by accepting credit cards.

In the meantime, to prepare for the marketing onslaught, MasterCard has taken internal steps that include the appointment in May of David M. Lewis as vice president of government acceptance.

People in the News

Emphasizing MasterCard's commitment to the cause, Mr. Lewis said, "We have had dedicated staff working on these issues for the past 18 months."

Governments have come around slowly to acceptance of credit cards for anything from postage stamps to traffic fines, partly because agencies are reluctant to pay the processing fees that conventional merchants are accustomed to bearing.

Legislative Proposal

To cover costs, some agencies want to pass along the merchant fees to the cardholders, but association rules make that difficult.

Rep. James P. Moran, D-Va., introduced a bill in May that would prohibit credit card issuers from limiting the ability of federal, local, and state governments agencies to charge fees. The bill has been referred to the House Banking Committee's subcommittee on consumer credit and insurance, but no hearing has been scheduled.

In June, 555 post offices in Dallas, Orlando, and Washington began accepting Visa, MasterCard, and Discover cards in preparation for a national rollout. There are 33,000 post offices in all, with $25 billion in annual sales.

Moreover, consumer make more than $300 billion a year in payments to governments, and credit cards are used in only 1% of those sales.

New Frontier

Mr. Lewis said the climate is ripe for credit card acceptance to spread to governments, which like supermarkets are viewed as a new frontier by both MasterCard and Visa U.S.A.

"Government agencies are in tough financial shape," Mr. Lewis said. "They are very anxious for any kind of revenue, and they need to cut costs."

Another plus for credit card acceptance in the public sector is the fact that government agencies want to be more like their private-sector counterparts by providing better service.

Several agencies on the state, local, and federal levels have developed initiatives without prodding by the associations.

For example, the motor vehicle departments of seven states (California, Michigan, Indiana, New Jersey, Illinois, Wisconsin, and Oklahoma) are accepting card payments. Some have installed self-service kiosks, and others allow payment by phone.

Toll Collection Systems

Several cities are collecting tolls using technology that allows vehicles to pass through tollgates without having to stop. A computer-encoded tag in the vehicle's front window provides the information to draw funds from a designated account. Mr. Lewis said research shows that credit cards would be the preferred form of account.

> **"Government agencies . . . are very anxious for any kind of revenue, and they need to cut costs."**
> **David M. Lewis**
> *MasterCard International*

New Jersey and New York toll highway authorities are currently involved in rolling out the system, marketed in some places as "E-Z Pass." Other states are adapting the basic concept of automatic vehicle identification to their own uses.

More than 300 agencies affiliated with the U.S. Treasury Department, including the U.S. Mint, are accepting bank cards.

The tougher part will be conveying the merits of plastic to other agencies nationwide.

Last fall and winter, MasterCard started pilots with the New Jersey Division of Law and Public Safety and the California Department of Motor Vehicles.

The New Jersey pilot involves payments for traffic violations. The results are expected to illustrate how credit cards can save governments money, provide more efficient service, and in some instances boost revenues.

The most receptive areas of state governments so far have been the drivers' license and registration bureaus, the agencies responsible for collecting tolls and fines, and the public transit systems.

IRS Legislation

On the federal level there has been some discussion about the Internal Revenue Service's accepting credit card tax payments. Enabling legislation is currently before Congress.

Some of the benefits to agencies, as outlined by Mr. Lewis, are decreased labor expenses, quicker reimbursements, increased collections, the elimination of bounced checks, and a reduction in cash handling and transportation costs.

For example, many parking and traffic-violation tickets are never paid. MasterCard maintains that more offenders would pay if offered the convenience of using credit cards.

Although Mr. Lewis is not ready to reveal the results of MasterCard's tests, he promises that a financial model for government agencies is forthcoming, and other pilots may be launched. In the meantime, his responsibility, plain and simple, is "to implement a strategic plan which convinces government agencies to use credit cards." □

Verifone Delivers Its 3 Millionth System

REDWOOD CITY, Calif. — Verifone Inc., the leading manufacturer of terminals for authorizing and processing card transactions, reported the delivery of its three millionth system.

> **The company shipped its first system in 1982.**

The milestone device, a Tranz 380, went to Cardway Processamento, which provides card processing services for Banco Nacional in Sao Paulo, Brazil.

Opportunities in Latin America

The U.S.-based terminal manufacturer has been making significant strides overseas. It views Brazil as a "virtually untapped market" for its transaction automation systems.

"As with many Latin American countries, there are significant opportunities for automated payment-processing in Brazil," said Roger Bertman, vice president and general manager of Verifone's network systems division.

Verifone, which had 1992 revenue of $226 million and has installed systems in 70 countries, shipped its first system in 1982, its millionth in Finland in 1989, and its two millionth to France in 1991.

Pushing into New Markets

Verifone's rapid growth has come from pushing into new businesses and markets. It now centers on the retailing, health care, and government sectors.

Moving beyond traditional, on-line transaction processing in industrial-country markets, the company is active in developing countries and is pursuing emerging domestic opportunities, including electronic benefits transfer, prepaid cards, and smart cards.

Filling a payment-processing void, Verifone recently introduce Omnicheck, a point of sale check reader, which allows retailers to verify the transactions electronically. It also formed Verigem, a joint venture with French-owned Gemplus Card International, to develop smart cards — plastic cards enhanced with computer chips.

— Jeffrey Kutler

Centura Banks to Unveil A Hybrid Visa Debit Card

ROCKY MOUNT, N.C. — Centura Banks Inc. said it planned to unveil Pocket Check, a product that will combine the features of a direct-debit transaction card with conventional automated teller machine access.

Pocket Check is a version of the Visa Check card, formerly Visa Debit. It can be used at any point of sale that accepts Visa cards, and purchase amounts or ATM withdrawals will be deducted from a checking account.

> **The chairman is Gary Roboff of the NYCE network.**

manager of retail operations and electronic banking.

■ Dan Cunningham, president of Gemplus Card International Corp., a French-owned manufacturer of smart cards and card-reading terminals.

■ Deborah D. McWhinney, senior vice president of Bank of America and head of its consumer electronic banking division. She was a product manager when the Versatellar ATM network was introduced in 1979, spent six years in the world banking division, and has been managing ATM networks since 1986.

All were named to vacant seats on the EFT Association's 26-member board. The chairman is Gary Roboff, acting chief executive of the NYCE ATM network.

Natwest Plan for Town Affinity Card Creates a Flap

By STEPHEN KLEEGE

Residents of a Long Island, N.Y., town are resisting a proposal to raise revenue by offering credit cards.

In an affinity program with National Westminster Bank USA, North Hempstead, population 210,000, would receive $5 for each card issued to residents.

Meanwhile, cardholders would be allowed to apply up to 1% of their purchase amounts toward local taxes. The rebate calculation would be similar to that on Dean Witter, Discover & Co.'s Discover credit card.

Residents Booed Proposal

But some North Hempstead residents and consumer advocates booed the proposal when it was aired at a recent hearing.

According to an article in the newspaper *Newsday*, the response was in protest of the proposed 15.9% interest rate, even though it is below the 17.3% national average.

Some critics say the marriage of governance and marketing sets a dangerous precedent.

"This kind of program encourages people to incur debt. I don't think this is a wise way for government to cut taxes," said Richard Kessel, the state Consumer Protection Board's director.

He added that the program would tend to favor the rich, who are able to charge more and pay off their balances without incurring finance charges.

> **The town would receive $5 for each card issued to residents.**

A spokesman for Town Supervisor Ben Zwirn said North Hempstead is likely to go ahead with the card once the State Comptroller's Office completes a review that was requested by one of the town's board members.

A spokesman for Natwest said it was too soon to provide other details about the program.

Potentially Lucrative Market

Card marketers see governments as a potentially lucrative outlet for affinity programs, which play on cardholders' loyalty to a given organization or cause.

MBNA Corp., the Delaware banking company that is the largest affinity issuer, has been marketing to states, but is emphasizing the loyalty factor, not strong usage incentives like Natwest's.

Countering Mr. Kessel's criticisms, Michael Auriemma, a card marketing consultant who is not involved in the North Hempstead promotion, said that fears about revolving debt are overblown, and that the wealthy are not the only ones who could benefit. The rich might charge more on their cards, but their taxes are higher, he said.

Mr. Kessel, who plans to run against Mr. Zwirn in the Democratic primary for Nassau County executive, said he did not expect to raise the credit card as a campaign issue. □

EFT Association Names 5 to Board

WASHINGTON — Michael L. Douglas, chief operating officer of Electronic Payment Services Inc., and four other prominent executives have been elected to the board of the Electronic Funds Transfer Association.

Mr. Douglas, formerly of PNC Bank Corp., became the No. 2 officer of EPSI when it was formed last year as a joint venture of PNC, CoreStates Financial Corp., Banc One Corp., and Society Corp.

Also joining the board were:

■ Peter Gustafson, senior vice president of Visa U.S.A. He is responsible for the card association's debit products, automated teller machine network, and supermarket card-acceptance programs.

■ David E. Donaldson, first vice president of Comerica Bank in Detroit, where it was formed.

By Paul S. Nadler

Lenders Less Accommodating To Tax-Dodging Entrepreneurs

To get a better understanding of why we have so great a budget deficit, visit a mortgage bankers meeting and talk to any member about the problem of arranging home finance for the self-employed.

Simply put, a great many self-employed work "off the books," meaning, of course, they operate a cash business and report only a small fraction of what they earn to the Internal Revenue Service.

As a result, when they come in for a mortgage, their reported income is way below what they earn, and they are not eligible for a home loan.

Upset at Being Rejected

Many mortgage lenders report these potential borrowers scream, "I earn an awful lot more than this statement shows. Do you have any idea how much I make and how easily I can finance this mortgage?"

The response of one mortgage banker was, "Do you know how much I can raise my income too if I report you to the IRS?"

Up to now, these members of the "underground economy" have been able to have it both ways: They report small income so they can pay a small tax bite, yet they have used "no-income mortgages," which rely on a substantial down payment and no examination of income levels, to secure the loan.

But banks don't like to accept no-income loans anymore.

First of all, banks know how hard it is to obtain control of the collateral if a home borrower defaults. And second, banks do not want to have real estate owned on their books anyway.

Since banks today are relying on earning power far more than on collateral to back all mortgages – both primary and home equity loans – this makes the individual who operates a cash business and underreports income far less attractive as a candidate for a mortgage than would be the case were he to report what he honestly earns.

And with more and more Americans now leaving large business, due to downsizing and streamlining, and entering the world of the independent entrepreneur, this willingness of so many individuals to use the underground economy bodes ill for government tax collections.

It helps explain why so many observers would prefer a national sales or value added tax or a higher gas tax as the basic sources of increased government revenue. These proponents feel it would be more easily collected than is an income tax levy in a nation of expanding individual entrepreneurship.

Long Mortgages

Another development I learned about at this recent mortgage bankers meeting I attended is that a number of bank and thrift mortgage lenders are going back to making 15-year and 30-year fixed-rate loans and adding them to their portfolios instead of selling them in the secondary market.

"I thought they had learned their lessons," I said. "Didn't bankers realize," I asked, "that making long-term fixed-rate mortgages and funding them with short term liabilities that can soar in cost is a certain recipe for disaster when rates rise again."

But I was told that a number of banks have such liquidity that they want to put the money out and will gamble on rates not rising enough to make these fixed mortgages unattractive. On top of this, these banks report that they have adequate capital today, so if the market does turn against them, they can write off part of their losses with no problem whatsoever.

30-Year Loans in Favor

Implicit in this policy is the recognition that the customers like long-term fixed-rate mortgages and are even moving from 15-year to 30-year loans to cut the monthly interest and amortization charges.

But I do not feel that the function of capital is to provide comfort to a bank that wants to accommodate its customers by adopting an unsound lending policy.

If the customer wants a 30-year loan, either sell it immediately or don't make it in the first place. After all, 30 years is a long time. Think of what your bank was like in 1963 – what its asset and liability policies were and how much volatility in interest rates lay ahead.

Above All, Jobs

These are the issues that mortgage lenders are buzzing about. But at the conference I just attended, all agreed that the key to their industry's immediate future is not interest rate levels, it is jobs.

Without employment for one or both breadwinners in the household, no level of low interest rates is going to attract a family to take out the commitment of a new mortgage, unless both the borrower and the lending bank or thrift have serious mental problems that have not been resolved. □

The product manager may not be doing a good job of keeping management informed on the state of the business and on key issues affecting, or likely to affect, the business.

Role Remains Unclear

The role of the product manager in the organization may still not yet be fully understood by all functions. The role of the product manager in product development and pricing and sales support is clearly understood, in most instances. However, the broader role of the product manager in the business may not really be recognized.

The product manager may not be fully "on top of the business" (i.e., knowing what is happening and why it is happening in all parts of the business at all times). The manager may not feel as responsible for achieving business results as he or she should feel.

In some instances, the product manager sees the figures, but does not act aggressively to fix

The Training of Product Managers Needs Greater Attention from Banks

Product management has been prevalent for 10 to 15 years in retail banking and cash management, and for a shorter time in other fee-based areas and private banking. But the function has not been performing at an optimum level, which raises concern in senior management.

The product manager is still having trouble developing an effective annual business plan. We are talking here about the capacity of the product manager to (1) analyze the state of the business, (2), based on this analysis, recommend objectives, strategies, and plans to move the business ahead, and (3) make a cogent, compelling case for his or her recommendations.

The product manager (and the entire function) is still learning how to have meaningful dialogue with sales personnel on the state of the business and on key strategic issues. There is plenty of contact with sales on specific customer issues, operating problems, technical questions, etc., but limited dialogue on strategic matters.

In the fee-based service business, there may be a "duality," with product management moving in one direction and sales, perhaps, moving in a somewhat different direction. In the retail business, "duality" can develop because of lack of effective dialogue between product management and marketing staff and/or between product management and the branch system.

THOUGH MANY *problems in developing product management have been resolved, there is work to be done in training.*

Mr. Wichman is president of William Wichman Associates, a banking and insurance consulting firm based in Cincinnati.

Product Manager Training Needs Attention

Continued from page 18

problems or capitalize on opportunities. Management has to take the lead, which is not the way the system is supposed to work.

Landscape Has Changed

It should be noted that product management today is markedly different than product management in the early 1980s, when there usually were not enough people, nor the right people, and often limited knowledge of how the product manager should operate.

Today, product management is established, and working reasonably well. There are more people – and stronger people – in organized roles.

They have broader responsibilities and they are making a significant contribution to the business. However, as noted, there are still important areas where improvement is needed.

In the beginning, there was not only limited understanding of the concept at the senior management level but, at the operating level, first-line management did not have a clear vision of the role of the product manager. This, of course, had a negative impact on the training and development of the product manager.

IF PRODUCT *management is not operating optimally, the cost to the bank can be significant.*

While many of the historical problems relating to the development of product management have been resolved, there is still plenty of work to be done in the training area.

It should be recognized that the product manager has great responsibility, but limited authority. Consequently, many factors must be right in the operational equation if the product manager is to contribute fully to the development of the business.

Today, training in some banks tends to be sporadic and fragmented, and does not give the product manager a perspective on the total job.

Training tends not to put enough emphasis on how the product manager works and interacts with the rest of the organization.

Effective Training

There is more to the training of a product manager than acquired knowledge of specific subjects. The effectively trained product manager has developed in-depth understanding of the concept, his or her role, and a real conviction about how he is expected to operate.

Effective training requires what might be termed a "total system" approach. Training cannot be excellent on just basic classroom instruction or seminars or other fragmented approaches. The following elements must be present:

• An emphasis on on-the-job training, with the product manager "learning by doing" in real-world situations.

• Training must be day-by-day, week-by-week, month-by-month. No one is going to learn product management with a continuous training effort by the direct supervisor.

The product manager cannot work or be trained successfully unless an appropriate operating process for product management is in place. The proper operating process has a great deal to do with training.

As an example, it is obvious that the product manager will learn about the state of the business, then the product manager is going to be effective in analyzing and understanding the business.

TRAINING *in some banks tends to be sporadic and fragmented and does not give perspective.*

In the same vein, effective product management requires that, within reasonable limits, the product manager be able to have meaningful dialogue with his or her business. The senior manager who participates actively in this type of dialogue will contribute greatly to the development of the product management function and increase the contribution of the function.

The senior manager who does not have this kind of dialogue will impede the development of the function.

It is worth spending significant management time and resources on training. If the product management function is not operating optimally, because of weaknesses in the training area, the cost to the bank can be significant.

A Big Impact

The product management group can and should have a significant impact on the marketing effectiveness and profitability of the bank. The product manager should lead in establishing strategic direction, developing products, pricing, and – importantly in the marketing area – providing appropriate support to sales.

On the latter, it can be argued that effective sales support and developing an effective dialogue between product management and sales and/or branches can have a major bearing on the effectiveness of the sales resource. □

STAY ALERT

Whether you're a trader in asset-backed securities, Third World bank loans, or a public financier, your success depends on your knowledge of every little change in the industry you're in.

Track the policies and patterns shaping your business with the online editions of the industry publications that alert you to events before they happen:

Fed Says Its Grip on Economy's Rudder Remains Firm

By STEPHEN A. DAVIES
The Journal of Commerce

JACKSON HOLE, Wyo. — Federal Reserve officials believe they remain well equipped to fight inflation and guide economic growth, despite massive changes in financial markets that have reduced the role of banks as suppliers of credit.

Speaking last weekend at a two-day conference on monetary policy sponsored by the Federal Reserve Bank of Kansas City, Fed officials also signaled that they intend to continue to take a wide variety of financial and economic indicators into account when setting short-term interest rates.

Participants, who included central bank officials, academic economists, and Wall Street fund managers, generally agreed the Fed can implement monetary policy without major problems despite the increased complexity of financial markets.

"The bottom line is the Fed can still tighten and ease by changing [short-term] interest rates," said Mickey D. Levy, chief economist for NationsBank.

"What has changed because of financial innovations is not the Fed's ability, to use intermediate targets to achieve its inflation objectives. That has become more difficult."

Banks' Far Less Special'

Federal Reserve Board Chairman Alan Greenspan, in opening comments, said that increased competition for deposits from money market mutual funds and higher-yielding stock and bond funds has made banks and thrifts "far less special than they once were."

Mr. Greenspan said rapid growth in commercial paper markets and increased competition from finance companies have cut banks' share of short-term and intermediate-term credit in business "to little more than half."

Banks remain the primary source of credit for small business, but even that role could be scaled back if Congress passes legislation to securitize small-business loans, he said.

Can Still Influence Rates

Given such changes, he said, "the fairly direct effect that open market operations once had on the credit flows to business and home construction is largely dissipated."

Still, he said, the Fed retains its ability to influence short-term rates, although the desired effect on U.S. goods and services "may take longer to achieve larger movements in rates."

The stampede by investors from bank certificates of deposit to stock and bond funds led Mr. Greenspan to announce last month that the Fed is no longer targeting growth in the M2 measure of money.

M2 includes currency, savings and checking accounts, and certificates of deposit under $100,000.

M2 "may well become more useful again over time" to policymakers, Mr. Greenspan said, but in the meantime the Fed will have to rely more heavily on economic and financial indicators in setting rates.

The Federal Open Market Committee voted last month to maintain the Fed's bias toward raising short-term rates, according to minutes released Friday.

Over the same period, pension and trust funds, investment companies, and insurance firms boosted their combined share of household assets from 34.1% to 49.3%.

Conference participants agreed that the diminished role of banks in financial markets, globalization of trading in securities, computerized communications, and growth of new products such as derivatives, all

Fed Grip on Economy's Rudder Remains Firm, Conferees Told

Continued from page 21

create a challenge for central bankers in executing monetary policy.

Severa warned that the Fed may find problems that could prove nettlesome to Mr. Greenspan and his colleagues.

'Much Greater Risk Takers'

"Households in the U.S. are becoming much greater risk takers," said Henry Kaufman, president of Henry Kaufman & Co.

He said consumer spending may prove to be much more volatile now that households are putting more of their savings in stock and bond funds instead of federally insured deposits.

In the event of a big market drop, that could put a brake on spending and the economy that "poses a significant problem" for the Fed in executing monetary policy, he suggested.

Leonard Santow, managing director of Griggs & Santow Inc., said he has seen more and more investors reaching for yield and going for junk bonds.

These funds do not have much cash and will have to be sold if the bonds are called in a market downturn, he warned. "The world doesn't go one way forever," he said.

Conference participants were less interested in discussing the changed financial environment and more interested in discussing the fine art of Fed-watching — second-guessing the central bank's view of the economy and the prospects for inflation.

In his testimony, Mr. Greenspan said the Fed will be placing new emphasis on real interest rates, or rates adjusted for inflation.

Tracking Rates 'No Panacea'

But David Kohn, director of the Fed's monetary affairs division, told the conference that tracking real interest rates "is no panacea." One problem, he said, is measuring inflation expectations in order to calculate any equilibrium level for rates.

Moreover, he said, the most relevant rates for spending by consumers and business are in the intermediate-term and long-term maturities, where the Fed's influence is weakest.

Benjamin Friedman, a professor of economics at Harvard University, endorsed the Fed's multi-indicator approach to setting monetary policy but suggested it would be useful to monitor the spread between Treasury bill rates and commercial paper rates, which are typically higher.

Economist research has shown that a widening gap between rates on commercial paper and Treasury bills typically precedes a recession, the same way a flattening Treasury yield curve does.

But even the paper-bill method can sometimes send "false signals," said Mr. Friedman.

Allan Meltzer, an economics professor at Carnegie-Mellon University, argued that the Fed would be better served by setting monetary policy if it used a rule based on growth of the money base.

The monetary base consists of currency in circulation plus bank reserves and is a long-standing favorite of monetarists who oppose the Fed's more discretionary approach to policy.

'You're Wrong,' Greenspan Told

Mr. Greenspan at one point asked Mr. Meltzer whether reliance on a complicated rule would not essentially be the same as what the Fed does now, drawing a startling "you're wrong" reaction by Mr. Meltzer and a charge that policymakers are trying "to fool markets."

Mr. Greenspan politely responded that he "would love to continue the debate" but was unable to do so.

Conference participants listened keenly to the exchange, but for the most part seemed to side with Mr. Greenspan. Jacob Frenkel, governor of the Bank of Israel, said the chief rule now guiding the Fed is the need to cope with the pace of change.

"In this rapidly changing world, formulas that are done by 30 mathematicians cannot really substitute for good judgment and solid analysis of fundamentals," he said.

There was a pretty broad endorsement of a policy based on a spectrum of indicators," said Roger E. Brinner, executive research director for DRI/McGraw Hill.

"M1 or M2 is not going to be replaced by real interest rates but by inflation, GDP growth, employment growth, and anything else the Fed feels is relevant to gauging future inflation potential," he said.

BayBanks Shares Likely To Remain in Demand

Continued from *page 1*

sends customers a catalog of services from which they can pick and choose.

But the biggest marketing strength comes from the bank's automated teller machines, 1,000 of them in eastern Massachusetts alone.

Partly because of that electronic network, BayBanks has a relationship with one out of every two households in that area, Mr. Shea said.

No other regional bank dominates its consumer market to that degree.

The franchise may be powerful, but the bank's performance has been weak. In the second quarter, return on assets was 0.6% and return on equity 8.6%.

Hurt by Nonperformers

Bad real estate and other loans continue to depress the bank's results. At the end of the second quarter, the bank had $153 million in foreclosed real estate and $156 million in nonaccruing loans, according to First Boston Corp.

Shares of other New England banks with comparable levels of bad loans, however, trade at higher multiples to book value.

Peers Have Higher Multiples

For example, Shawmut National Corp.'s stock trades at 1.6 times book value.

Analysts said there is no reason for the gulf between the two banks' trading multiples.

"Those two stocks should be moving in lockstep," said Thomas Hanley, an analyst at First Boston.

One reason for Shawmut's higher multiple may be that Mr. Hanley and other analysts consider it a likely takeover target.

BayBanks' shares have only recently benefited from similar speculation. But Mr. Hanley said he does not expect the bank to accept a bid until either late 1994 or 1995.

When and if BayBanks does strike a deal, Mr. Hanley said, the price per share should be $88, or 2.25 times an estimated 1994 book value of $39.07.

Stocks

Shares of the Boston-based banking company have gained 24% since mid-June.

TUESDAY'S MARKET

Bank stocks rallied Tuesday, in step with a rising overall market. The Dow Jones industrial average closed up 32.98 points to a record 3,638.96.

J.P. Morgan & Co.'s shares jumped $1 to $74.375, Citicorp's $1 to $33, NBD Bancorp's $1.25 to $32.875, Bank of New York Co.'s $1 to $54.25, and Wells Fargo & Co.'s $3.75 to $116.75.

UJB Financial Corp.'s shares fell $1, to $28.875. The stock, which ran up significantly this year based on takeover rumors, has backed off recently as investors have been taking profits. An article in *The New York Times* on Tuesday threw more cold water on speculation that the Princeton, N.J., company would soon be acquired. □

United Financial of S. Carolina Lifts Payout

GREENWOOD, S.C. — United Financial Corp. of South Carolina Inc. said its board approved a regular quarterly dividend of 8 cents, payable Oct. 1, to shareholders of record Sept. 10.

The company said that as a result of the 3-for-2 stock split distributed last month, the dividend represented an effective increase of 50% from the 5.3 cents that would have been paid on postsplit shares under the old rate. □

$16 Billion Sale of 2-Year Notes Spurs a Rally in the Bond Market

The Treasury Department successfully auctioned $16 billion of two-year notes on Tuesday, sparking a rally in the government securities market.

The average yield on the notes was 3.94%, versus 4.26% at the previous auction, on July 27.

The yield was at the low end of expectations," said Astrid Adolfson, economist at MCM MoneyWatch.

Prior to the start of bidding, the notes were yielding 3.96% in when-issued trading.

Indicating the strong demand, bids exceeded accepted offers by a ratio of 3.49 to 1.

In the last year, the average "bid-cover ratio" for two-year notes is 2.4 to 1, said William Sullivan, money market economist at Dean Witter, Discover & Co.

Market analysts said the strong auction reflected big demand from municipalities, which use the notes to back municipal bond defeasance programs.

Short-Term Rates Seen Low

In addition, recent signs of weakness in the economy have convinced investors that the Federal Reserve will not raise short-term interest rates now.

Thus, investors can buy shorter-term securities without fear of a Fed-induced price drop.

"The data have been so weak that people are no longer afraid of a tightening," Ms. Adolfson said.

Mr. Sullivan said strong demand from banks also supported the auction.

Bond Prices Buoyed

The rally in bond prices, which stumbled in the last two trading sessions, got new life from the auction.

At 4 p.m., the price of the 30-year bond was up ⅝, lowering the yield to 6.19% from 6.22% on Monday. Most of the gains occurred after the auction, when Treasury bond futures prices hit contract highs.

Prices of current-coupon intermediate Treasuries also moved up.

10-Year Note Gains

The price of the 10-year note rose ½, lowering the yield to 5.55% from 5.60%. Five-year notes - of which a new issue will be launched today – rose by about ⅜ in price. Their yield fell to 4.87% from 4.96%.

The bond-equivalent yield of the one-year Treasury bill fell to 3.36% from 3.40%.

Mr. Sullivan thinks that market participants may be returning to yield-curve-steepening trades.

For months, traders have been buying longer-term securities in anticipation of a flattening of the yield curve.

Low Yields Lift Stocks

Low yields in the bond market pushed up stocks prices. The Dow Jones industrial average climbed 32.98 points to a record 3,638.96. At the same time, the Standard & Poor's 500 index rose 4.54 to 459.77, and the Nasdaq composite index advanced 4.25 to 735.11.

The Markets

Strong demand by municipalities was seen as fueling the auction.

The dollar was mixed as the foreign exchange market awaited Thursday's Bundesbank meeting. Some traders and economists think the German central bank will lower interest rates at that meeting.

The currency finished at 103.63 Japanese yen, up from 103.05, and at 1.6775 German marks, down from 1.6835.

Abbey National, Baring in Swaps Venture

Dow Jones

LONDON — The commercial bank Abbey National PLC and investment bank Baring Brothers & Co. said they agreed to form a joint venture to provided risk-management services in the currency and interest-rate swap and option markets.

Swaps and Options

The new operation, to be called Abbey National Baring Derivatives, will be established as a branch of Abbey National Treasury Services, a wholly owned division of Abbey National, at Baring Brothers' London offices.

Abbey National said the venture has been 18 months in preparation and should be able to start trading next month.

Initially, it will offer interest rate and currency swaps, interest rate options and swap options in pounds sterling, dollars, German marks, and other main currencies of Organization for Economic Development and Cooperation nations.

Use of Bank's Credit Ratings

Abbey National said it will fully and unconditionally guarantee the obligations into which the venture enters, giving it the benefit of the commercial bank's credit ratings.

Currently, those are AA by Standard & Poor's Corp. and Aa2 by Moody's Investors Service Inc.

Guaranteed Results!

When you choose Dearborn's Securities Exam Training, you can be sure of the results you'll get, because they're guaranteed!*

Look at some of these advantages:

Flexible schedules. Every month Dearborn offers more than 200 classes at more than 30 locations. We can even arrange special classes in your office if you've got at least 15 students.

Professional instruction. No one can teach the ins and outs of the securities industry like a true professional, and Dearborn's instructors are bona fide pros with years of securities industry experience.

To get your results, guaranteed, give us a call at (800)621-3395 and we'll rush your schedule of products, services and classes nationwide.

Glendale Federal Wager Paid Off For the OTS

By ROBYN MEREDITH

The Office of Thrift Supervision last week won a billion-dollar gamble on one of the thrift industry's long shots, the struggling Glendale Federal Bank.

June 30 was the date regulators had set for Glendale, the nation's fifth-largest thrift, to raise capital or face the possibility of seizure. But when that summer day rolled around, the OTS took a different, more risky course – it extended the deadline for the money-losing, undercapitalized thrift to Aug. 31.

The high-stakes bet paid off on Aug. 19. That is when the Glendale, Calif.-based thrift leased Wall Street into injecting $425 million in new capital, letting the bank meet its OTS-imposed goals and then some. (See related article on page 3.)

Most elements of the deal are scheduled to close today.

The OTS decision to give Glendale more time was a handicapper's nightmare.

If the OTS had sent $17.9 billion-asset Glendale to the Resolution Trust Corp., it would have hurt the already bruised California economy and cost taxpayers about $3 billion.

A Peril for All Thrifts

The S&L industry feared even worse: If Glendale failed and Congress saw that the OTS had let the RTC, the cost of that single failure would have threatened the industry's reborn federal deposit insurance fund, causing premiums to soar to the point where thrifts feared they wouldn't be able to compete with commercial banks.

But if Glendale were allowed to live and the OTS was later forced to shut it down, the delay might cost the government even more – because the thrift had lost money for the past six quarters.

Congress, which has passed laws to ensure the early closure of troubled banks and thrifts to avert such losses, would have skewered the agency.

Climate Has Improved

"We are very fortunate that the capital markets were in our favor," said John F. Downey, deputy director of regional operations at the OTS.

The situation wouldn't have been possible just a few years before. But now the business environment even for borderline thrifts is better, because wide interest rate spreads have im-

Fifth Third Lures Short-Sellers Betting Highflier Is Due for a Fall

By GORDON MATTHEWS

Shares of Fifth Third Bancorp have attracted heavy short interest recently as some investors bet that the high-priced stock is going to fall.

Some analysts say the short interest may represent a sign that some investors think bank stock prices have peaked or are faltering.

Banks have recently fallen behind the pace of the stock market on worries about the profit impact of falling interest rates.

Others view the short interest activity as the work of arbitragers after an acquisition deal by the Cincinnati bank.

Short interest is essentially a wager that a stock's price will fall. It represents shares borrowed on the hunch that the loan can later be repaid at a lower price.

From mid-July to Aug. 13, short interest in Fifth Third's stock totaled 839,850 shares, the National Association of Securities Dealers reported this week.

The short interest represented 22 times Fifth Third's average daily share volume, the 18th-highest multiple among over-the-counter stocks in the month and the highest among Nasdaq-traded banks.

The 22 multiple was a large jump from 12 in July.

Holding Steady

Fifth Third's share price was steady in the period covered by the survey. On Aug. 13, it closed at $54, down from $54.50 on

Gonzalez, B of A Want CRA to Cover Nonbanks

By CLAUDIA CUMMINS

SAN ANTONIO — The chairman of the House Banking Committee and the chief executive of BankAmerica Corp. both want financial institutions other than banks to comply with the Community Reinvestment Act.

The anti-redlining law currently applies only to banks and thrifts insured by the Federal Deposit Insurance Corp. Most of them complain that the law is excessively burdensome.

"Why should other credit-granting institutions be exempt?" said committee Chairman Henry B. Gonzalez, D-Tex., in an address Tuesday to 300 bankers at a conference sponsored by the Federal Reserve Bank of Dallas.

Wider Reach Sought

He said the law should be amended to apply to credit unions and nonbank banks such as mortgage and insurance companies.

"I want to take advantage of this interest now in community banking and say, 'What about their role?' " Mr. Gonzalez said.

Speaking at the same conference, Richard M. Rosenberg, the chairman and CEO of BankAmerica, echoed the congressman's view.

"The government should recognize the vast resources that nonbank financial institutions, which are not bound by the Community Reinvestment Act, bring to the CRA arena," he said.

The 'Big Tent'

"As part of any consideration of banking reform, Congress ought to consider expanding the scope of CRA to bring these institutions under its umbrella."

And the government should look beyond banks if it really wants to make a difference in the inner cities and in minority neighborhoods, he said. Mutual funds, finance companies, and commercial paper markets should be included in the "big tent" of the reinvestment act, he said.

Hearings on a longer reach for the law are scheduled in the House for next month.

Obligation Seen

"There is no question that most of these institutions benefit indirectly from FDIC deposit insurance, just as banks benefit directly," he said. "Yet, because they are free from the regulations which are rapidly making the banking industry irrelevant

NEWS *briefs*

Fed's Lindsey Pleased with Inflation Fight

SAN ANTONIO — Federal Reserve Governor Lawrence Lindsey, one of the Fed's most outspoken inflation fighters, said there is good news on the inflation front, citing low figures in reports the past three months.

The inflation figures, he said, are "very gratifying." Mr. Lindsey's remarks came one week after the most recent meeting of the Federal Open Market Committee, of which he is a voting member.

Mr. Lindsey predicted only a small change in second-quarter gross domestic product growth of 1.6%, annualized, when a revision by the U.S. Commerce Department comes out in early September.

Many economists believe that the . vision will be downward because of a large trade deficit in July. Mr. Lindsey, however, said trade in investment equipment will offset up to one-third of the trade deficit.

"It will be small, the changes they will be making overall," Mr. Lindsey said.

He spoke Tuesday night in San Antonio at a Dallas Federal Reserve Bank conference on community development.

Shawmut Gets Upgrade on Senior Notes

NEW YORK — Fitch Investors Service Inc. said it has upgraded the ratings on $250 million of senior notes issued by Shawmut National Corp.

Fitch said the upgrade reflects the improved financial condition of the New England-based banking company.

The agency upgraded the notes to BBB-minus from BB-plus. Affected are $150 million of 8.875% senior notes due in 1996 and $100 million of 8.125% senior notes due in 1997.

Unionfed Financial's Offering Clears SEC

BREA, Calif. — Unionfed Financial Corp. said its registration statement for a proposed rights offering has been declared effective by the Securities and Exchange Commission.

The company is seeking to raise at least $37.5 million in an offering to investors, directors, executive officers, and shareholders to comply with a regulatory order to boost its capital. That directive requires the bank to achieve 5% leverage, 4% Tier 1 risk-based capital, and 8% total risk-based capital ratios by Sept. 23.

The company also said the Office of Thrift Supervision approved its sale of branches with about $180 million of deposits to California Federal Bank. The branch sale is part of an OTS-approved capital restoration plan and is expected to be closed no later than Friday, the company said.

BB&T Buying Mutual Savings of N.C.

WILSON, N.C. — Mutual Savings Bank of Rockingham County said it received approval from the North Carolina Savings Institution Division to convert from a state-chartered mutual savings bank to a state-chartered stock savings bank and become a unit of BB&T Financial Corp.

Mutual Savings, based in Reidsville, N.C., said it will be merged or consolidated with Branch Banking and Trust Co., a unit of BB&T, after the acquisition.

Under the conversion plan, BB&T will offer up to about $8 million of common stock at various prices to certain members of Mutual Savings in a subscription offering and to residents of North Carolina's Rockingham County in a simultaneous community offering.

First Citizens of N.C. in Acquisition Deal

RALEIGH, N.C. — First Citizens Bank, a unit of First Citizens Bancshares, said it has agreed to acquire the Bank of Bladenboro. The terms were not disclosed.

First Citizens, which has $5.3 billion of assets, said the acquisition would allow it to expand its statewide franchise and strengthen its presence in the new market area of Bladen County. The Bank of Bladenboro has about $22 million of assets.

The briefs were compiled from staff and wire reports.

Glendale Federal Bet Paid Off For Office of Thrift Supervision

Continued from page 1

proved the outlook for earnings.

Large numbers of thrifts, even troubled institutions, have been able to raise capital as a result.

"This is the largest by far of any private recapitalization effort," said Stephen J. Trafton, chairman and chief executive officer of Glendale and its parent company, Glenfed Inc.

It took Glendale months to win regulators over to the view that the thrift might be able to pull off a deal if given enough time, people familiar with the deal said.

NEWS ANALYSIS

Some observers are reluctant to give the OTS that much credit, saying that the agency couldn't work up the nerve to put Glendale down, and instead placed heavy bets that the long-shot deal would work.

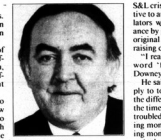
Between late December 1992 and now, 64 problem thrifts with $53 billion in assets raised capital through a recapitalization, merger, acquisition or added to capital through retained earnings.

Of those, 31 thrifts with $42.4 billion in assets have been recapitalized through an infusion of capital, according to the OTS.

Reception Was in Doubt

Many analysts and consultants were convinced earlier this month that OTS had miscalculated the mood of investors and that the deal would never fly.

Glendale's reception on Wall Street was considered touch-and-go because of the deal's size and the thrift's location, square in the center of the rocky California economy.



John F. Downey
"We are very fortunate"

The Glendale deal stumbled when Calfed reported bad second quarter earnings and fired its chairman, which drove its stock down.

Many investors associate Glendale with Calfed because it

The decision to give Glendale more time was a handicapper's nightmare.

too is a large California thrift that attempted a recapitalization.

Although some criticized the OTS for being too lenient on Glendale, the agency apparently wasn't unnerved.

"We didn't expect it to go down, and it didn't go down," Mr. Downey said.

Mr. Downey agreed that the industry's condition is much different than it was during the S&L crisis, but he remains sensitive to any suggestions that regulators were exercising forebearance by pushing back Glendale's original June 30 deadline for raising capital.

"I really take exception to the word 'forebearance,'" Mr. Downey said.

He said the word does not apply to today's thrifts because of the difference between now and the time of the thrift crisis. Now, troubled thrifts are either making money or will soon be making money.

And management teams at thrifts are generally better than just two years ago, when S&L reform legislation was signed into law, he said.

Equal Treatment

He said all troubled thrifts have gotten the same treatment from the agency. The OTS since spring has been encouraging thrifts to tap capital markets as soon as possible while Wall Street is so receptive to their stock.

The OTS will only work with institutions if it believes there is a "better than 50% chance of the institution achieving its fully capital levels, Mr. Downey said.

Mr. Trafton, naturally, agrees with the regulators' policy of giving troubled institutions the time necessary to turn around by themselves.

When undercapitalized thrifts' conditions are improving, "every effort should be made to achieve a private recapitalization of those companies, and I think that we ought to go slow in our drive for burial with public money," Mr. Trafton said. □

Home Loan System Membership Tops 4,000

WASHINGTON — Membership in the Federal Home Loan Bank System has topped 4,000, the Federal Housing Finance Board said on Wednesday.

Favorable Loan Terms

The increase is largely due to an escalating number of commercial banks joining the Home Loan Bank System. The system had 3,217 thrift members in 1989, when commercial banks, credit unions, and insurance companies were allowed to join.

The government-sponsored enterprise provides advances to its member institutions on flexible terms and at rates close to those on Treasuries. Members must buy stock in the system to join, and most thrifts are required to belong.

U.S. Bancorp Upgrading Dealer-Finance System

By BARTON CROCKETT

To accommodate strong growth in its auto dealer finance division, U.S. Bancorp plans to install a $1 million computer system.

Over the past year, the Bellevue, Wash.-based unit has nearly doubled its monthly automobile loans, to $65 million. Lending is expected to grow another 20% this year, forcing the division to buy new computers, said Michael Luiten, senior vice president of the unit.

"We're looking for a way to become more productive, to control fixed costs as well as increase production," he said.

Michael Luiten
Planning for growth

He said the dealer finance division of U.S. Bancorp, a $20.8 billion-asset bank holding company in Portland, Ore., is among the 30 largest indirect automobile lenders in the country. Its loans are originated by dealers, but booked by a bank.

For years, U.S. Bancorp has used a mainframe computer to manage this business. But Mr. Luiten said the division has squeezed all the economies of scale it could out of this machine, and needs a new system.

The new computer system consists of software from Credit Management Solutions Inc., of Columbia, Md., running on a Hewlett-Packard Co. midrange computer hooked over a telecommunications network to personal computers in bank offices in Oregon, Washington, California, Idaho, and Nevada.

Goal Is Higher Productivity

The system is slated for installation in the first quarter of next year. It is intended to make the 120 employees of the dealer finance division more productive.

For example, with the new computer system, an underwriter should be able to produce an average of about $4 million loans a month, instead of the $2 million a month average with the older computer system.

A $1 million setup is to be installed early next year.

new system. Instead, staff will be retained and redeployed to accommodate the growing business.

Credit Management, a small, privately held vendor, has sold its dealer finance software to a handful of banks, including NationsBank, Charlotte, N.C., and Boatmen's Banchares, St. Louis.

Mr. Luiten said he visited the NationsBank dealer-finance operation, one of the largest in the country, and was impressed with what he saw.

Mr. Luiten also said he examined Credit Management's financials and found them to be acceptable. "We think they're going to be around for a while," he said. "Otherwise we wouldn't be doing a seven-figure investment with them."

The U.S. Bancorp contract is a boon for Credit Management, especially since it comes on the heels of what president James DeFrancesco called "a 22-month ordeal" to buy back a major stake in the company from the Resolution Trust Corp.

The RTC obtained the stake from Perpetual Savings Bank, Vienna, Va., when the troubled thrift, which had owned the asset, was put into the RTC's accelerated resolution program. □

Metropolitan Prunes Branches To Clear the Way for Expansion

By STEVE KLINKERMAN

Norman M. Jones is betting that efficiency gains and acquisitions will energize Metropolitan Financial Corp. and preserve its independence. But experts say success is far from guaranteed for the sprawling Minneapolis-based thrift.

Mr. Jones, chairman and chief executive of the $6.9 billion-asset company, believes divestitures and branch closings already under way can restore profits to levels he considers satisfactory.

Company Focus

Norman M. Jones
Says it is buy or be bought

What is more, he is adopting an audacious stance on acquisitions. He believes Metropolitan should buy banks and sell their thrift-based products through his 190 branches.

"I don't know why it wouldn't work," he said in an interview last week.

Mr. Jones said his plans are motivated by a buy-or-be-bought banking environment. To ensure independence, he wrote in Metropolitan's 1992 annual report that the thrift must attain a "critical mass" of $10 billion.

Anemic Stock Price

But getting there is another matter. With Metropolitan's stock trading at book value, Mr. Jones has a severe bidding disadvantage in stock-swap deals.

Indeed, the company's low stock price and profitability have heightened its potential to be taken over. Despite good asset quality and capital, Metropolitan delivered a weak 0.77% return on assets last quarter.

"Norm runs a class act and wants to remain independent, but Metropolitan without question is a desirable target," said Kenneth Puglisi, an analyst at Chicago Corp.

Mr. Jones, who is viewed as a one-man show, reclaimed the chief executive's post one year ago. Subsequently, the company's president and executive vice president resigned. They have not been replaced.

Mr. Jones, who at Feb. 1 owned 2.7% of Metropolitan's stock, said he reclaimed the reins because the thrift needed strong guidance in an uncertain climate. "With all this merger activity, I decided it was better to be back as CEO," he said.

Regulatory Adviser

In the two years before his return, Mr. Jones monitored Metropolitan from the chairman's office, spending spare time as a regulatory adviser. He still serves as chairman of the Savings Association Insurance Fund Advisory Board.

At Metropolitan, Mr. Jones quickly asserted his vitton. In an unorthodox move this spring, he tried to buy National City Bancorp, a Minneapolis bank with $550 million of assets. Despite a preliminary agreement, the deal fell apart. No official explanation was given, but analysts speculate that the thrift could not withstand dilution from a stock swap nor goodwill from a cash purchase.

Mr. Jones, who is earning base pay of $400,000, says he is not retreating from his bank-buying strategy. One barrier will be lifted this fall, when Metropolitan spins off a thrift brokerage and a title company to shareholders. It then will have legal clearance to build multiple charters.

The Base One Model

Mr. Jones said he envisions scooping up banks and operating them under a multicharter holding company, "like Banc One." At the same time, he is cutting costs. Metropolitan said in the first quarter that it would close 17 branches.

At an operational level, acquisitions should be fairly routine for Mr. Jones, who has engineered almost 30 buyouts over the past decade.

Analysts, however, warn that spiraling takeover prices could put a crimp in his plans.

"The question is, what price would Metropolitan have to pay for that rite of passage," said Bruce Harting, a thrift analyst at Salomon Brothers Inc.

Succession at Issue

A further concern, analysts say, is whether Mr. Jones, who will turn 63 soon, has a management team capable of running an expansionist operation.

"There is a question about management succession and development at Metropolitan," said Steven R. Schroll, an analyst at Piper, Jaffray & Hopwood, Minneapolis.

But Mr. Jones says perceptions that he runs a one-man show "are wrong." He claims to be building a strong team of managers who can run the company when he leaves. □

Chase Payment Services Combined Under Talbot

By KAREN GULLO

Chase Manhattan Corp. has tapped Deborah Talbot, the head of its U.S. private banking business, to run a newly formed unit specializing in global payments services.

In her new post, Ms. Talbot, a senior vice president and 11-year veteran of Chase, will oversee the delivery of cash management, trade finance, and payments clearing to customers in 30 countries.

The newly combined unit integrates traditional cash management services with another unit specializing in servicing importers, exporters, and other institutional banking customers.

Ms. Talbot, who ran private banking for two-and-a-half years, is being succeeded at the post by F. Daniel Prickett, who joined the New York bank in March. Previously, he was an executive vice president in charge of investment management and trust at Boston Co.

Chase said it combined the cash management and institutional banking groups to gain efficiencies from merging operations and integrating sales, product management, and customer service functions.

A Chase spokesman said the bank is not reducing staff as a result of merging the two groups. The new global payments unit has 1,600 employees.

The new unit is part of Infoserv. Chase's transaction services division. Ms. Talbot will report to Michael Urkowitz, the executive vice president who runs Infoserv.

Thomas Hayne, the senior vice president who headed the global institutional banking group, has been appointed to a new post. As senior client executive at Infoserv, he is responsible for managing relationships with banks and financial institutions that use Chase's transaction services.

Deborah Talbot
Heads staff of 1,600

Susan Schoon, a senior vice president who was in charge of global cash management, will now run marketing for all Infoserv businesses.

As part of the new alignment, Chase has merged all marketing functions for Infoserv into a single organization. □

BB&T Selling Branches to N.C. Bank

Dow Jones

WILSON, N.C. — BB&T Financial Corp. agreed to sell two branch facilities and related loans and deposits in Cleveland County, N.C., to Carolina State Bank of Shelby, N.C.

Terms were not disclosed.

BB&T Financial said the sale of the branches is expected to be completed before the end of November.

BB&T Financial said it intends to acquire, subject to regulatory approval, Old Stone Bank & Trust Co. in late August or early September.

In order to obtain regulatory approval for this acquisition, BB&T is required to divest itself of about $17 million of deposits in Cleveland County.

BB&T said it will achieve this divestiture through the sale of Old Stone's Boiling Springs office and Branch Banking and Trust Co.'s South Dekalb office in Shelby to Carolina State Bank.

Carolina State Bank will be receiving the branch facilities, about $12 million of deposits in the Boiling Springs office, and about $5 million of deposits in the South Dekalb office, BB&T added. □

Get MOHR information about profitable banking in the 90's.

Two years ago, breakthrough research by MOHR Development, the recognized leader in sales, service and leadership training for banks, defined five key issues for profitable consumer banking in the '90s. Now follow-up research–conducted jointly with the *ABA Banking Journal*–examines consumer banking's progress in addressing those issues, including:

- creating a high performance sales culture
- integrating sales and service
- translating market segmentation into front-line action

MOHR Development's all-new report highlights critical gaps between the industry's acknowledged priorities and its actual practices. It also draws important conclusions about how to close these gaps, and points the way to more profitable banking.

Glendale's Trafton: The Possibility Of Failure 'Never Crossed My Mind'

By SAM ZUCKERMAN

Stephen A. Trafton appears to have done what few believed he would be able to do – save Glendale Federal Bank.

Based in economically devastated Southern California and dogged by regulators, the thrift faced long odds until it announced last week that its $425 million recapitalization was successfully under way.

Mr. Trafton's success at engineering an exceedingly complex financial restructuring at the eleventh hour for his $17.9 billion-asset thrift, is a testament to the force of his personality.

Q&A

At 46, Mr. Trafton has plied his trade as a financial specialist for 25 years at banks and thrifts. He joined Glendale's former parent company, in 1990 as chief financial officer.

He took the No. 2 job a year later, vaulting past Glenfed's previous chief operating officer, Keith P. Russell. In 1992, he was named chairman and chief executive officer.

The Seattle-born Mr. Trafton is a controversial figure. Some regard him as a tireless and inspirational leader who has kept Glendale's morale high under tough conditions.

Others describe him as a bully who browbeats his staff and coldly cuts jobs. But no one denies the singlemindedness that he has brought to the task of turning Glendale around.

In the interview below, conducted only a few days after he declared success on the recapitalization, Mr. Trafton gives his views on the outlook for Glendale.

Q.: Did you ever have doubts that Glendale would survive?

TRAFTON: The question of surviving has never crossed my mind. I would add rather quickly that clearly we have a long way to go.

My biggest concern is that we could stay focused on the financial aspects, the recapitalization aspects for long and not focus as intently as we need to on the marketing aspects of the company to cure the core earnings.

We have been reading from a different script than other people have been reading from. The script in the past for major troubled institutions has been a slow floundering and then death by deregulation and regulation. That same script was being prepared for this institution. We absolutely refused to read from that script.

Q.: Does your reorganization mean that Glendale Federal's capital problems are solved?

TRAFTON: This transaction goes a long way toward meeting the final objective as far as capital is concerned – the 5% and 10% [core and risk-based capital] requirements called for under the supervisory action agreement with the Office of Thrift Supervision.

Clearly we want to achieve the 5 and 10 at the earliest possible date. We have to [do it] by December 1994. If, however, at any time we touch 5 and 10, then the agreement is considered completed and there are no other ongoing requirements.

Q.: Glendale has posted losses for six consecutive quarters. When will you return to profitability?

TRAFTON: What we have been aiming to achieve is a consistent, sustainable improvement in asset quality and core earnings quarter by quarter.

As we look ahead, we expect that the September quarter will show some further improvement from the prior quarter, and the December quarter further improvement still. By the time we get to the March quarter, we hope to cross into positive territory.

We believe that the earnings stream can be rebuilt. The core base is there: the 215-branch franchise, one of the strongest franchises in California, and the Washington franchise, which is an incredibly strong bank. The Florida franchise is certainly substantial and profitable.

Q.: But you have put 23 western Florida branches up for sale. Do you intend to exit Florida altogether?

TRAFTON: The Florida sale represents a strategic option that we want to pursue. It is consistent with our philosophy that we want to pursue contiguous market areas for efficiency.

Q.: What is your plan for restoring earnings?

TRAFTON: It is multipart. One will be continued sustainable improvement in the overall asset quality of the institution. No. 2 is continuing to drive the efficiencies of the institution.

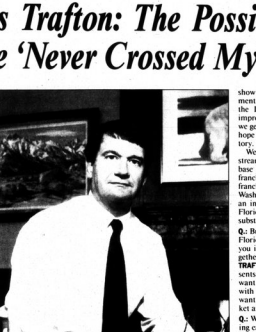
The third side of the equation is basic improvements in our single-family lending capability. We have focused our loan production on a purely retail basis from our branch system. We are prepared to implement a dealer-based lending program.

We at one time were active in the multifamily lending market, and we shut that down. There are now good values in that marketplace and, we plan to reopen that business line.

The fourth area is the development of the fee-income stream. We will have a much more intense focus on the sale of our brokerage and insurance products within our branch system and through a new telemarketing effort.

And we are exploring a number of strategic alliances for services that we hope to develop in tax planning, tax preparation, and estate planning through the branches.

Q.: Now that you have recapitalized, would you consider selling the thrift?



Todd Finch/Los Angeles Business Journal

STEPHEN J. TRAFTON, CEO of Glendale Federal, managed a do-or-die recapitalization. But he says his work has only just begun.

TRAFTON: Our goal is not to sell, but over the next three to five years to develop along two lines. One line is to build core earnings so that we can demonstrate a superior return to our investors. And the other path is to continue to develop franchise value.

Q.: Why in the middle of your recap effort did you switch from Goldman Sachs to First Boston as your investment banker?

TRAFTON: Goldman Sachs played a very important role in the original development of our strategic plan and in the initial negotiations with our bondholders. But we felt that First Boston had more experience in this type of transaction.

Q.: Glenfed common shareholders got only a 2% ownership stake after the recap, reducing the value of their shares to less than 40 cents. Was that the best you could do for them?

TRAFTON: The new money got about 10% of the bank. That was necessary in order to achieve a rate of return sufficient to pay them for their new investment.

The remaining three [classes of] holders needed to negotiate the remaining 20% of the bank. The bondholders and preferred shareholders clearly had a priority claim. The board and management did everything they could.

But clearly the significant dilution for the common shareholders was required in order to attract enough new money to recapitalize the bank.

Q.: Will Glendale's new owners change the makeup of the board of directors?

TRAFTON: The board should reflect the broader ownership of the institution. We will be working to achieve that representation.

Q.: As you change the board, are you worried that the new directors could fire you, as happened to Jerry St. Dennis after he engineered a similar turnaround at California Federal Bank?

TRAFTON: The answer is no. I have never lost sight of the fact that we would have to make a basic shift from recapitalization to regeneration of the core earnings stream. My work is really just starting. I would hope to a great extent that the investors came in because of my vision of the bank going forward.

Q.: Suppose the recap had failed. Did you have anything else up your sleeve?

TRAFTON: What would we have done next? I don't know. I would have thought of something. □

Florida's Bay Bank Battling SouthTrust, Regulator

By BILL ATKINSON

Bay Bank and Trust Co. dodged the auction block last week after its owners agreed to pay off a $4.4 million loan to SouthTrust Bank of Alabama within 45 days.

The Panama City, Fla.-based bank was scheduled for auction Aug. 16 because the John Christo family, Bay Bank's owners, are behind on loans totaling $7 million, SouthTrust attorney Jesse H. Austin 3d said.

"I'm still here," said John Christo 3d, Bay Bank's vice chairman and former president.

Mr. Christo, his father, John Jr., and the bank's holding company, Florida Bay Banks Inc., are plaintiffs in a $60 million lawsuit against SouthTrust – a unit of South Trust Corp. – and Florida's top banking regulator, Gerald Lewis. The suit alleges the two have conspired to seize the $153 million-asset bank.

Gerald Lewis
Put bank on notice

John Christo 3d
Vows to continue fight

'The Piper Must Be Paid'

SouthTrust has countered that the bank has filed "false and fraudulent" call reports. And the state banking department alleges that the Christos have violated insider lending laws.

"There comes a time in every case when the piper must be paid," SouthTrust said in court documents. "In this case, that time is now."

John Christo 3d said he is working to repay the Birmingham-based bank, but he declined to say where he would get the funds.

Mr. Christo said the bank is worth $14 million based on a recent appraisal by Alex Sheshunoff & Company Investment Banking, Austin, Tex.

Owns 97% of Voting Stock

If the Christo family can't pay off the loans, SouthTrust will foreclose and auction Bay Bank on Sept. 30. The Christo family owns 97% of the voting stock of Florida Bay Banks.

At least five banks – including First Union Corp., First Alabama Bancshares, and Union Planters Corp. – have shown interest in Bay Bank because it holds a hefty 26% of deposits in the Panama City market.

This is the latest chapter in a bitter feud that pits the Christos, a prominent business family in the panhandle, against Southtrust and Mr. Lewis, who is publicly elected.

The Christos' suit, filed in January in the U.S. District Court for the Northern District of Florida, alleges that Mr. Lewis is retaliating against the family because it refused to contribute $25,000 to his 1990 reelection campaign.

The suit claims that Mr. Lewis is trying to "destroy the reputation" of the family because it backed the efforts of a member of Florida's House of Representatives to impeach the comptroller earlier this year.

Claims Comptroller Took Gifts

"We are dealing with a bad guy," John Christo 3d said. "He has given me holy hell. I am not the most perfect person in the world, by any means, but I sure don't deserve what I'm getting from him."

Mr. Christo also claims that Mr. Lewis has taken gifts from the family, such as a cases of vodka and Cuban cigars, and accompanied the Christos on hunting trips, free of charge. When the relationship cooled in 1990, they said, Mr. Lewis hammered the bank with tough examinations.

Terence McElroy, a spokesman for Mr. Lewis, denied the allegations that Mr. Lewis has taken gifts from the Christos. He also denied that the comptroller had singled out the Christos for harsh treatment.

"The suggestion that it is some sort of 'vendetta is absurd," he said. "We believe these guys, John Christo Jr. and John Christo 3d, have operated this institution in an unsafe and unsound manner, and have snubbed their noses" at the regulatory process.

'That Is Preposterous'

As far as the allegations that Mr. Lewis is in cahoots with SouthTrust to seize the bank, Mr. McElroy said, "Absolutely not. That is preposterous."

The rift widened in 1991 when the state conducted an examination of Bay Bank, which regulators say turned up a number of violations. In addition to the bank being under-reserved and falling short of specific capital targets, examiners said, a loan to John Christo Jr., Bay Bank's former chairman, and another to JCJ Irrevocable Trust – of which he is guarantor – were in violation of Regulation O, the insider lending rule.

Two $425,000 loans did not receive proper board approval and were made on terms "more favorable than the average person would get," said Terence M. Straub, a director of the division of banking.

Mr. Christo disputed the charges that the loans violated government banking laws.

Cease and Desist Order

State examiners concluded that the bank was engaged in unsafe and unsound practices. In October, the bank entered into a written agreement with the state, and by yearend it had lost $1.5 million.

The Federal Deposit Insurance Corp. is also pursuing a cease and desist order against the bank, for alleged unsafe and unsound banking practices and violations of insider lending laws, according to a spokesman for the agency.

In March 1992, Mr. Lewis' department fined Bay Bank $67,494 for the previous year's examination, and it took steps to throw the Christos out of banking altogether. The Christos disputed the fine, claiming it was "retaliatory and discriminatory," and they have since been fighting the removal action.

The Christos argued that Mr. Lewis' term "unsafe and unsound" was "loosely and inconsistently" applied and had a vague and uncertain meaning. They contend he has used "secret" enforcement rules.

Mr. McElroy said allegations that the banking department uses secret rules are not true.

Besides fighting with the regulators, the Christos have also been at odds with SouthTrust. In the summer of 1991, Florida Bay Banks Inc. defaulted on loans from SouthTrust totaling $7 million, according to court documents. SouthTrust didn't foreclose because the Christos said they would raise funds or sell the bank. The same year, Bay Savings Bank, a West Palm Beach thrift in which John Jr. was a primary investor, failed.

SouthTrust Financed Purchase

The lending relationship between the Christos and SouthTrust went back to 1983, when the bank loaned John Jr. and the family funds to buy Bay Bank. The loan was secured by 100% of Bay Bank common stock. It also made John Jr. and the JCJ Irrevocable Trust loans that today total $2.5 million, and are secured by 51% of the holding company's preferred stock.

"These loans have been in default and have been past due," said SouthTrust's Mr. Austin.

In documents filed this month in federal court, SouthTrust alleges that Bay Bank submitted fraudulent call reports. It says bank numbers don't provide reserves for loans owed to the bank by John Jr. and the JCJ Irrevocable Trust. SouthTrust said the FDIC and Florida's banking department have classified as loss or doubtful $1.6 million out of $2.4 million in loans to John Christo Jr. and the trust. Another $869,000 in loans to John Jr. have been classified by the state as substandard, court documents show.

"As a result, all call reports which Bay Bank has filed since June 1992, with the Federal Reserve on a quarterly basis ... have been false and fraudulent," SouthTrust alleges.

The court document also said that John Elsasser, the former chief financial officer of Bay Bank, refused to sign the call reports unless specifically directed by bank management. He is no longer with Bay Bank.

SouthTrust contends Bay Bank's failure to properly reserve for potential losses has overstated the bank's equity position and earnings by $1.2 million.

Says Bank Is on the Mend

Mr. Christo denies that the bank filed false call reports.

He says the bank is on the mend after posting earnings of $416,000 for the first six months of the year. But it has been hit with the defections of several executive officers and directors. And the acting president, Frank Wood, has not been approved by the FDIC or Mr. Lewis.

Mr. Christo said he is considering converting Bay Bank to a national charter.

How long will he keep up the fight?

"Till I die," he said. □

Pennsylvania Banks Seek Eased Rules On Consumer Loans

By PHILZAHODIAKIN

Pennsylvania bankers hope their state will simplify a package of consumer lending rules by the end of this year's legislative session.

A bill to eliminate an 18% interest rate limit on credit cards already has passed the state Senate.

The bill also would deregulate bank lending below $50,000 for all but student, first lien, and homebuying purposes. It was sponsored by state Sen. Eugene Scanlon, and written by the

A bill to eliminate a rate cap on credit cards has passed the state Senate.

Pennsylvania Bankers Association – which has led this fight for more than 10 years.

But the Pennsylvania Association of Community Bankers, whose members increasingly are offering credit cards, also wants to see the measure enacted.

The limits have driven more than 5,000 banking and other jobs to neighboring Delaware, says Frank Pinto, president of the community bankers association.

Moreover, he says, "Even if we make just 25 basis points more, we're just recycling the money. We have new members, and earning more means more reinvestment in their communities."

Pennsylvania's banking secretary, Sarah W. Hargrove, supports the concept of simplification but would like similar revisions to the state's motor vehicle finance and other consumer lending rules, says Paul Wentzel, Ms. Hargrove's executive assistant.

"They're all a mess," says Mr. Wentzel. "We have eight or nine antiquated usury statutes, and they're a very strange patchwork.

"If you finance a rug that won't be nailed to the floor, it's governed by the Goods and Services Installment Sales Act, and you might pay 1.5% a month.

"If you finance a wall-to-wall carpet, it's governed by the Home Improvement Finance Act, and the rate might be 14%. It's very confusing for the banks, let alone the borrowers."

Threat to Consumers Seen

Although Ms. Hargrove wants sweeping simplification, her department still will lobby for the bill, Mr. Wentzel says.

Lobbying against the bill during House deliberations will be Senate majority whip Leonard Bodack, who backs simplification, but worries that "the simplification proposed by the bankers might destroy 60 years of consumer protection," says the senator's administrative assistant, Charlie Wilson.

"It's more what the measure doesn't say that's the threat. It would allow banks to impose any interest rates they want; to charge anything they want for services or bounced checks; to demand immediate loan repayments even if a borrower hasn't defaulted; to eliminate grace periods, and require any collateral they want – like a house for a refrigerator loan."

Greater Uniformity

Mr. Wentzel says the opponents of the bill are technically, but not practically, correct.

He also believes that sweeping revisions would afford more uniform lending agreements.

"It would make things more user friendly from both sides. When the laws were changing, back in the 1980s, the small banks had to have attorneys explain the changes to them."

The Senate passed the bill in a 29-to-19 vote on June 21. The Business and Economic Development Committee of the House, which returns to work Sept. 27, will be next to debate the bill. □

He's the ABA's Point Man on Money Laundering

By ROBERT M. GARSON

When bankers faced the "death penalty," they put John J. Byrne on the case.

In its first incarnation, the 1990 legislative proposal would have required regulators to revoke a bank's charter, without a hearing, if an institution or its employees were convicted on money laundering charges.

When the dust settled two years later, the industry and Mr. Byrne had won a significant victory. Though the death penalty remained, the law included a number of safeguards and even a long-sought "safe harbor" to shield banks from privacy lawsuits when they report suspicious customers.

'A Lot of Emotion'

"We were afraid back then that we were going to lose," Mr. Byrne said. "There was a lot of emotion surrounding the issue when the bill was introduced."

For nearly a decade, Mr. Byrne has been the American Bankers Association's point man on money laundering and white-collar crime, the lobbyist who deals with lawmakers who write the laws and the regulators who implement them.

In between, he teaches classes on money laundering regulations at two ABA schools each year and speaks at conferences. He even ventured to Eastern Europe a year ago to explain the ins and outs of money laundering to Polish authorities. In addition, he is the trade group's specialist on environmental law.

Getting Along

Living with the money laundering laws will never be easy, Mr. Byrne said. But he suggested a number of things bankers can do to make their lives a little easier.

First, he said, establish a relationship with the local office of the Internal Revenue Service's Criminal Investigations Division, as well as local and state police.

Getting in touch with IRS authorities is a lot easier in small towns with few banks than in big cities, Mr. Byrne said, but the effort is worth it no matter where you're located.

Heeding Warnings

"It will help you stay up to date on changes in patterns of illegal activity and you'll get a quicker response" when you need to talk to authorities, he said. And when something goes wrong, "you may get the benefit of the doubt," Mr. Byrne added.

The effort will also help in the event that bank ever faces the loss of its cheer because employees engaged in money laundering. Under the provisions of the 1992 death penalty law sponsored by Rep. Frank Annunzio, D-Ill., and Rep. Chalmers P. Wylie, R-Ohio, past cooperation with law enforcement authorities is a factor regulators are required to consider.

Second, bankers should listen carefully when regulators criticize their compliance efforts.

"A lot of the recent Treasury penalties were levied on banks that were warned their compliance efforts were poor, but who didn't clean up their act," Mr. Byrne said.

Finally, the ABA counsel said, bankers should pay close attention to the more technical areas, such as Treasury's explanation of what kind of businesses are entitled to exemptions from requirements for reporting cash transactions. The rules are by no means obvious.

Didn't Seek Career

Consider: Among the businesses automatically entitled to exemptions are convenience stores, auto-supply shops and sports arenas.

By contrast, businesses which cannot be exempted without permission include churches, auto repair shops, and ferries.

Though money laundering regulation turned into a career path for Mr. Byrne, he hadn't given it much thought when he joined the ABA in 1984. In fact, the banking industry as a whole was paying almost no attention to the cash reporting requirements that had been on the books since 1972.

Pivotal Events

All that changed with two events. First, the director of the President's Commission on Organized Crime singled out the industry in 1984 by declaring that each bullet fired at a drug agent had been financed by a bank that turned a blind eye to money laundering.

A few months later, in March 1985, the issue moved to the front pages when First National Bank of Boston copped a plea to a felony count of failing to report $1.2 billion in foreign, interbank currency transactions.

The issue quickly got hot on Capitol Hill and within law enforcement circles. "There were all these proposals flying around and nobody at the ABA had any expertise," Mr. Byrne recalled.

Mr. Byrne, then a lawyer working on election law, was drafted to fill the void.

Into the Political Arena

Mr. Byrne, his wife, Sue, and their three children live in suburban Virginia, where he divides his time among jogging, coaching youth soccer, and civic activities. And he has managed to carry his work in money laundering over to the political world.

A Democratic candidate for the Virginia Assembly, Mr. Byrne wants to attack gun control by requiring gun dealers to report suspicious customers to authorities, much as banks are now required to report suspicious cash transactions.

What's good for banks, he reasoned, ought to be good for gun dealers as well. □

John J. Byrne

Age: 37

Born: Flushing, N.Y.

Home: Centreville, Va.

Title: Senior federal legislative counsel, American Bankers Association

Interests: Running and civic affairs

Next goal: To win a seat in the Virginia Assembly

Battle Lines Form on Threshold for Appraisals

By PETER SCHOENKE
Special to the American Banker

WASHINGTON — When Jasper Plant Foods in Jasper, Ind., needed to mortgage four fertilizer plants worth $750,000, there were two area banks willing to provide the loans.

But there was one problem: The loan required an appraisal, but there are no appraisers in the Jasper area who are qualified for fertilizer plants.

The company got around the problem by importing an appraiser and a consultant, but that added $7,000 to the cost of the loan.

"That money is right down the tube when the deal is already done," said Michael J. Hochgesang, president of the fertilizer company.

Mr. Hochgesang was so angry, he sent this congressman a letter which the congressman, in turn, passed on to the Federal Deposit Insurance Corp.

It was added to hundreds of comments from people who favor a proposal that would only require certified appraisals for properties worth $250,000 or more — up from the current $100,000 threshold. A decision on the proposal is expected in the fall.

The proposal is part of President Clinton's campaign to spur lending.

Taxpayer Protection Sought

The proposal is opposed by consumer groups and the real estate industry, which argue that for every good loan that might be lost, more will be gained protecting taxpayers, who must ultimately cover losses, from risky loans.

"It's a shocking example of history repeating itself," said Bernard J. Fountain, president of the Appraisal Institute, which certifies the people who make certified appraisals. "In essence, the proposed rule frees banks and thrifts to conduct business without constraint and without requiring that they adhere to sound loan-making practices — at the taxpayer's expense," he said.

Raising the real estate appraisal requirements is part of President Clinton's campaign to spur lending.

The same proposal would also exempt business loans of less than $1 million from appraisals if real estate is not the primary source of repayment.

Too Low for Some

While the banking industry welcomed the changes, some comment letters to the federal regulatory agencies expressed disappointment that the requirement had not been raised higher.

"We feel strongly that it should be $1 million," wrote Roman J. Gerber, executive vice president and general counsel of Banc One Corp., Columbus, Ohio.

A substantial amount of lending under $1 million is for one-family to four-family residential properties and loans to small businesses where overall loss experiences have been relatively moderate, Mr. Gerber wrote.

The National Association of Realtors supported separate thresholds for commercial property and endorsed a $250,000 limit for small business.

But Stephen D. Driesler, a realtors association senior vice president, wrote that raising the $100,000 threshold for residential property would make federal financial institutions "a hiding place for residential real estate loans that cannot withstand a professional appraisal."

The lack of official appraisals would allow lenders to manipulate property values to favor selected borrowers, critics said.

The change would remove 85% of loans secured by one-family to four-family residential properties from the appraisal requirement, the Consumer Federation of America estimated.

But banks said that kind of reduction would have a dramatic effect on loans, especially for smaller banks.

Mr. Schoenke writes for the Medill News Service.

Wire Transfer Rules Drawing Rave Reviews

By ROBYN MEREDITH

WASHINGTON — Bankers are ecstatic about the new wire transfer regulations they will be asked to comply with starting next year.

"This new regulation is nothing revolutionary. It is responsible banking," said Jane L. Weston, vice president and senior attorney at Citibank.

The Federal Reserve Board on Aug. 13 issued for public comment proposed regulations that would require banks and nonbank financial institutions to keep records for five years of the international wire transfers they send and receive.

Domestic Transfers Excluded

Bankers had been worried that the new regulations would cover domestic and international transfers, and would contain onerous reporting requirements as well.

Last year, 270,000 wire transfers worth $800 billion were sent on an average day over Fedwire.

Under the proposed regulations, institutions would not be required to report the information they collect to the government unless the transfer raises suspicions of illegal activity.

"This new regulation is . . . responsible banking."
Jane L. Weston
Citibank senior attorney

Won't Lead to New Cases

Wire transfer records can't lead the government to new cases, Ms. Weston said. "What they can do, if property maintained, is provide evidence after a case has begun," she said.

Comments are due Oct. 4 on the new rules.

The government believes the regulations will help it track laundered money by leaving a paper trail of all money wired abroad. Investigators can check the records in suspicious cases.

Under the proposed rules, the bank that originates a wire transfer abroad must keep records of the name and address of the sender, the amount of money, the date it was sent, and all payment instructions received — such as the account number and the name of the bank the money is being sent to.

In addition, if the sender gives such information, the originating bank is required to keep a record of the name and address of the person to receive the money.

A bank that receives the wire transfer must keep a copy of the payment order on file. If the person receiving the money has a deposit account or a loan from the bank, the bank must keep account records in a retrievable form.

If the person receiving the wire transfer payment does not have an account at the bank, it must obtain and record the receiver's name, address, and social security number, alien identification number, or employer identification number, or note the lack of such a number in the record.

When the bank delivers the funds in person to a nonaccount holder, it must verify the receiver's name and address.

If there is an intermediary bank involved in the wire transfer, it must retain a copy of the transfer order it receives from the originating bank before passing the transfer on to the recipient bank, under the proposed rules. □

Tax Law Provision May Lead to Rise in Bankruptcies

WASHINGTON — A change in the tax code could be an incentive for money-losing corporations to declare bankruptcy by yearend, a possible nightmare for bankers trying to work out troubled loans.

Congress is ending special tax treatment for stock-for-debt swaps for corporations that declare bankruptcy after Dec. 31.

That provision allows companies in Chapter 11 to offer creditors an equity position in return for debt forgiveness – with no tax consequences if the stock is worth less than the face value of the loan.

For example, if a company owes a bank $100,000 and goes bankrupt today, it can offer the bank stock worth maybe $20,000 because of the company's depressed condition. There's no tax, even though the company comes out $80,000 ahead on the transaction. Banks accept such swaps as a last resort.

"It's not a free lunch, but a fresh-start concept for troubled companies," says accountant Robert L. Bernsen, head of Bernsen & Co.

In order to avoid the change in the law, borrowing companies that are in trouble will look to file for bankruptcy so they retain the stock-for-debt option under the old rules, according to Henry Ruempler, a tax expert with the American Bankers Association.

— Jim McTague

B of A or Countrywide: Who's No. 1 in Calif.?

By EDWARD KULKOSKY

Who's the top mortgage originator in California?

Is it Bank of America, as shown in the accompanying table? Or Countrywide Credit Industries, whose Countrywide Funding unit is in fourth place?

Countrywide also has another unit, America's Wholesale Lender, that ranks No. 23, and together they would put the parent in third place, a hair behind North American Mortgage.

Countrywide, though, maintains that it is easily No. 1.

Variations on Lender of Record

The difference of opinion arises from the definition of an origination. The figures in the table were compiled by TRW Redi Property Data of Riverside, Calif., a unit of TRW Inc. The company's information source is filings of trust deeds, which bear the name of the lender of record, at county courthouses.

Countrywide and others work with networks of brokers that in many cases close loans in their own names but receive concurrent funding from the mortgage banks. The mortgage banks count these as originations, but TRW Redi's numbers put them under the broker's name.

Thrifts, on the other hand, close virtually all their loans in their own names. And a spokesman for No. 2 North American said it follows the same procedure.

Banks, Thrifts Losing Ground

But even using TRW Redi's conservative standard, the figures confirm that the state's banks and thrifts are rapidly losing market share in originations to the mortgage banking companies.

Bank of America had an especially large drop in share, to 3.56% from 5.66%. A spokesman for the bank attributed the dip to the distractions of the Security Pacific merger, some staffing adjustments in wholesale lending, and a special promotion in 1992 that was not repeated this year. He said the company expected a return to normal in the second half.

As portfolio lenders, thrifts have been reluctant to originate the fixed-rate loans that borrowers currently prefer.

Pasadena-based Countrywide, the biggest mortgage bank, showed a drop in share in the state but this was largely because it began originating under an additional name, America's Wholesale Lender, this year. It has also been pushing geographic diversification and has been growing faster in California than elsewhere, according to Gerald L. Baker, managing director for loan production. □

California's Top Mortgage Lenders
As recorded on trust deeds

Rank, Last year		Amount ($Millions)	Market share in first half 1993	1992
1	Bank of America	$3.92	3.56%	5.66%
5	North American Mortgage	3.60	3.26	2.84
3	Home Savings of America	3.06	2.77	3.29

10-Year Mortgage Securities Much in Demand

By JAMES H. SAPT

Portfolio lenders and investors in mortgage securities both have an appetite for 10-year fixed-rate mortgages.

In fact, demand for this type of paper is such that Fannie Mae and Freddie Mac pay 15-to 20 basis points more for 10-year mortgages than equivalent 15-year paper, according to secondary-market executives.

"If I'm selling 6.25% wholesale pass-throughs, I'll get 100.64 or so for 10-years and 100.46 for 15-years," said Paul Miller, senior vice president at CrossLand Mortgage Corp., Salt Lake City.

Favored by Consumers

Julie Bone, a product manager at Freddie Mac, thinks that investor appetite for shorter-term paper is driving the appetite for 10-year fully amortizing mortgages.

Some bankers also believe that 10-year, fixed-rate mortgages have different prepayment profiles that may make them more attractive than longer term securities.

The repayment schedule has the effect of making holders of 10-year mortgages less interest-rate sensitive and less likely to refinance, according to Joseph Krul, chief financial officer of Standard Federal Savings Bank, Troy, Mich.

More than 15% of Standard Federal's mortgage originations are 10-year, according to Mr. Krul, and all of that is kept on the company's books.

No Strong Secondary Market

NationsBanc Mortgage Corp., Dallas, offers a jumbo 10-year, fixed-rate product despite the fact that there is no well-established secondary market for the paper. "Our parent, NationsBank Corp., takes the paper on its own books. Because of its shorter duration, it fits well in the balance sheet," said Daniel Hellams, senior vice president of NationsBanc Mortgage.

Fannie Mae seems to like 10-year mortgages for its balance sheet as well. So far this year, the secondary-market company is on a pace to buy for its own books over 10 times more 10-year paper in 1993 than in 1992, according to Dan Nicoll, director of product acquisition at Fannie Mae. Fannie also buys odd lots of 10-year mortgages that are then securitized and sold to investors.

Freddie Mac does not purchase 10-year mortgages for its own books, but has seen an increase in the amount securitized in the past several months, according to Ms. Bone.

Steep Increase

Though this type of product still represents only a minuscule portion of Freddie Mac's total volume, the recent percentage increase has been steep, according to Ms. Bone.

No matter how willing investors are to buy these mortgages, the market depends ultimately on the consumer's willingness and ability to undertake 10-year mortgages. □

Sadly for you, politicians in Washington agree on something.

Lawyers, legislators and lobbyists in Washington—people who've made careers out of being contrary—all are declaring the same thing these days: that government's relationship with the secondary mortgage market is going to change drastically.

They all know about HUD plans to toughen enforcement, new pressures on Fannie and Freddie, and the revival of Ginnie Mae as a major player in the market. And if you want more evidence, look to Capitol Hill, where Congress is toying with mortgage bankers subject to the same regs as commercial banks.

How should you react? You could wax nostalgic—and get clobbered by the government and your competitors. Or you could read *The Mortgage Marketplace.*

Every Monday, in less time than it takes to finish your morning coffee, *The Mortgage Marketplace* tells you about the new rules and ideas that could keel haul your secondary operations. It names the biggest mortgage company participants in Ginnie, Fannie and Freddie issues. And it scans the horizon to determine what types of loans, and borrowers, that now are considered exotic could soon enter the pipeline of conforming loans.

There's no debate—new regs are coming. What's still at issue is whether you'll be ready for them.

Thrifts Challenging Plan to Kill Them Off

John F. Maher
Cites role as portfolio lenders

Joe Ferguson
Emphasizes community focus

Paul A. Schosberg
"You'd have to reinvent them"

By CHRISTOPHER NOBLE

Should the savings and loan industry continue to exist? Does it serve a useful function? Can it ever recover from the cataclysm of the 1980?

The answer to all three questions is no, according to a report issued recently by the National Commission on Financial Institutions Reform, Recovery, and Enforcement.

The report, released after nearly two years of work, says one sure way to prevent another S&L disaster would be to simply do away with the industry.

It recommends forcing all thrifts to convert to commercial bank charters and suggests that all federally insured institutions come under federal rules that would supersede any state regulations. The Federal Deposit Insurance Corp. would be the sole agency charged with chartering, insuring, and regulating insured institutions.

This isn't the first time the destruction of the thrift industry has been proposed. Others have said that the secondary market and mortgage banking render savings and loans useless. The S&L disaster of the 1980s is frequently held up as proof that the industry is corrupt and hollow.

Vital Contribution

But defenders of the industry say killing S&L's is not the answer. They argue that community-based mortgage lending still provides services and loan products that no one else will. As such, the thrift industry still has a vital role to play in the country's housing finance system.

"Having a group of financial institutions interested in serving the residential real estate markets is in the national interest," said John F. Maher, president of Great Western Financial Corp., Chatsworth, Calif.

Mr. Maher asserts that thrifts, as portfolio lenders, are important because they make nonconforming loans that the secondary market would never touch. The thrift industry "has an appetite to be in the market no matter what the market conditions."

Joe Ferguson, president of Stephens Federal Savings and Loan in Toccoa, Ga., said the consolidation in the thrift industry had produced a large majority of community-focused savings and loans.

He said these institutions will continue to survive because they serve a niche the secondary market cannot. "Until everybody is banking at Citicorp or Bank of America, there's always going to be a need for community bankers."

Darlene Dolzani, chief executive at Schuylkill Savings and Loan Association in Schuylkill Haven, Pa., said people would continue to seek out small thrifts for the service they provide.

"People come to me for loans when they've been jockeyed around by the big banks," she said. Paul A. Schosberg, president of Savings and Community Bankers of America said the industry is still important for many of the same reasons.

"They have strong capital, good management, and they subscribe to a value system supported by the American people," he said. "If you could 'do something' about the 2,000 thrifts you'd just have to reinvent them." □

Fleet and Citi Find Money Fund Trading By ATM a Success

By KAREN TALLEY

Fleet Financial Group and Citicorp said investors are giving the thumbs-up to programs that enable them to trade shares of money market funds through automated teller machines.

Both banks initiated programs last year in which customers use ATMs to buy and sell shares and check balances of bank-managed money market funds.

Today ATMs account for 20% of all transactions by investors in Citibank's Landmark money market funds. And Fleet reports that money market holders use ATMs for several thousand transactions a month.

"It's something we thought they would want," said Citicorp spokeswoman Maria Rullo. "We're very happy with the amount of usage."

Peter Herlihy

Customers cannot make their first purchase of shares through ATMs because these transactions require a prospectus. But the programs have enabled the banks to spread the word that mutual funds are part of the mainstream banking business.

Citibank began offering ATM access to customers in the New York metropolitan area last October, and has now rolled the service out in seven states.

Customers have access to four money market funds through 1,800 ATMs in seven states.

Fleet takes a somewhat broader approach to the bank's four Galaxy money market funds. Customers can use Fleet's own ATMs, or any ATM that's part of the Cirrus or NYCE networks, said Peter Herlihy, a vice president with Fleet Investment Services, the Rhode Island bank's investment arm.

Both Fleet and Citibank are closely watching a new initiative by Wells Fargo & Co. that allows the San Francisco bank's customers to trade stock and bond funds at ATMs.

More Complicated than Mere ATM Access to Funds

This is more complicated than merely allowing ATM access to money market funds, which invest in short-term debt, such as government securities. Shares of money market funds are fixed at $1.

In contrast, Mr. Herlihy said, customers may not realize that stock and bond funds fluctuate in value, and trades could trigger taxes.

Citibank already allows customers to check the balances of their stock and bond funds, and Fleet is looking into a similar service for next year.

But Mr. Herlihy does not see Fleet following Wells' example by allowing customers to trade and redeem stock and bond funds through ATMs.

This type of service is at odds with investment strategies for stock and bond funds, which are typically positioned as long-term investments. "Adding this element of liquidity is almost contradictory to the way these products should be approached," Mr. Herlihy said.

Q: Is there an important place for ATMs in the sale of mutual funds?

MARY M. STERN
Executive vice president,
Society National Bank
Cleveland

There will be a growing importance as the bank mutual fund market develops on the retail side.

I like to think of the process as two steps. The sales process through banks will be "high touch."

In other words, there will be a high level of customer interface with trained, educated people for the sale.

As for the service level, while it will be equally high, it will be a more high-tech type of delivery.

Customers are going to demand the convenience of ATM access to mutual funds as they purchase them through the bank channel. ☐

CHRISTOPHER MAXWELL
Executive vice president
Keycorp
Albany, N.Y.

I'm strongly in favor of ATM access for mutual fund transactions and information. The concept promotes an increase in savings that is beneficial to the economy.

ATMs are also a significant convenience for the consumer. But I think it's important that the use of ATMs not interfere with the full disclosure requirements that are manifested through prospectuses.

I don't think initial mutual fund purchases through ATMs are appropriate, because these funds must be accompanied by a prospectus. But subsequent adjustments and purchases, such as moving money from one fund to another, could easily be accommodated this way. ☐

RICHARD S. WHITE
Senior executive vice president
Premier Bank
Baton Rouge, La.

There is a place for ATMs in this area, but we haven't fully thought out all the implications.

Certainly every time you sell securities, there are all types of rules and regulations. Prospectuses and very definite kinds of financial information need to be passed to the purchaser at the initial sale.

In sale and in consulting-type situations, it would be hard to work in an ATM environment and still comply with all the rules and regulations. But once the sale has been made and an account has been set up, there may be a role for ATMs in making additions or deletions.

But I think much of that kind of transaction activity can best be handled with the 1-800 number on the telephone. ☐

First Forest City's Merger with Centura Clears a Hurdle

ROCKY MOUNT, N.C. — First Savings Bank of Forest City received approval from state banking officials to convert to a stock savings bank from a mutual savings bank, and to become a wholly owned subsidiary of Centura Banks Inc.

As reported in March, the two banks agreed to merge, pending approval by a majority of First Savings Bank's eligible members and regulators.

Centura said the Administrator of North Carolina Savings Institutions approved the conversion of First Savings.

$13 Million of Shares

Centura said it would offer about $13 million of its common shares in a subscription offering to eligible members of First Savings and in a simultaneous community offering to residents of Rutherford County, N.C.

Centura said the offerings were scheduled to conclude Sept. 16, and it expects the merger with First Savings to be completed in October ☐

HIGH YIELD REPORT

lets you *hear the heartbeat and feel the pulse* of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt

IN AN AGE OF DRAMATICALLY declining long-term interest rates, the *American Banker*'s weekly *High Yield Report* delivers money-making tips on high-yield investment opportunities.

This newsletter keeps a close eye on major court proceedings, and legislative and regulatory developments. Each issue features barometers of market size, bellwether pricing tables, a forward calendar, reports on filings, and the results of new-issue sales.

No longer considered the arena of "junk bonds," the high-yield market is rapidly gaining respectability as it is closely tracked by this objective, succinct weekly letter.

If you must know what's "ticking" in the heart of the high-yield market, HIGH YIELD REPORT is a must read every week.

Read it free for 4 weeks!

Eaton Vance Betting on Hub-and-Spoke

By KALEN HOLLIDAY

In the race to be master of the mutual fund universe, Eaton Vance is converting its entire fund family to the hub-and-spoke structure.

The mutual fund company's move will allow banks to put their own names on the funds.

As the first mutual fund company to adopt the hub-and-spoke, which was developed by Signature Financial Group, Eaton Vance is hoping that banks will latch onto these funds in place of establishing proprietary products.

Trimming Expenses

Under the hub-and-spoke structure, mutual fund assets are managed as a single pool, or hub. Shares in funds, or spokes, that invest in the central pool can then be offered to investors at different prices.

The spoke funds share the investment objectives of the hub, but each has its own board of directors.

Fund companies can shave their expenses by managing assets in a single pool rather than setting up separate funds for institutional, trust, and retail investors.

'More Attractive'

By October, the Boston-based mutual fund company, which has more than $12 billion of assets under management, plans to restructure all of its 57 funds, said William J. Kearns Jr., director of Eaton Vance's hub-and-spoke effort. Already nearly 40 have been converted.

"We've found a niche in the bank marketplace," Mr. Kearns said. "We can bring private labeling to banks, do it at a low cost, provide revenue, and make it more attractive from a distribution point of view," he said.

Although the break-even point varies from bank to bank, "it is significantly lower having a hub-and-spoke fund than a proprietary fund," Mr. Kearns said.

Also, spoke funds can have smaller asset-sizes to be profitable because banks save in management and legal fees, he said.

Keeping Control

Since spokes take on the appearance of private label funds, banks can substitute them for proprietary funds while retaining ultimate control of the assets.

"It's a way for banks to enter a market they might not be able to gear up for on their own," said David Nadig, senior consultant at Cerulli Associates in Boston.

Instead of creating their own funds, banks can latch onto one of the 36 tax-free funds Eaton Vance offers. Banks get a higher yield and are able to launch the fund sooner in today's market environment, Mr. Kearns said.

Typically, it takes six to nine months to register a new fund, whereas Securities and Exchange Commission turnaround time for new spokes is between 90 and 120 days.

A Downside

Private labeling has drawbacks. "The major thing banks are giving up is the investment management fee," Mr. Nadig said. "In the long run, that's where the money is."

"Most banks have the critical mass needed," which can be developed by converting trust assets into the funds, Mr. Kearns said. However, he added, they may run into trouble maintaining a high level of sales the second year.

Under the structure, mutual fund assets are managed as a single pool. Shares of funds that invest in the central pool then can be offered to investors at different prices.

Although no customers have signed on yet, they are close to closing two or three deals with banks, Mr. Kearns said. "Banks are our hottest market," he said. "They are jumping into the market and we would like to be there to help them."

Generally the best-suited banks for hub-and-spoke are banks of $5 billion or smaller, said Mr. Nadig. However big banks, with about $20 billion, can use spoke funds to fill in gaps, he said. "It's the rent-versus-build argument."

While the small and medium-sized banks need the most help, the funds are attracting attention from large players such as Citibank, Mr. Kearns said.

Banks need about $15 million to break even and an additional $10 million to $15 million a year afterward to succeed with private labeling, Mr. Kearns said.

Banks are allowed to put their own names on the funds.

Divining the future is not all that hard when you have

THE REDEMPTION REPORT

Calls and prerefunded bonds are scheduled to drain the yields out of portfolios at a faster and faster pace in the third quarter. With ***The Bond Buyer Redemption Report,*** *you can anticipate redemptions well ahead of the actual events.*
If you want to know when your bonds will be called away, this report has the answer.

We published the first such book in history for the first quarter of 1993. Buyers received instant access to the entire universe of called and prerefunded bonds in one volume.

And now you can get the third-quarter volume, a 916-tome chock full of information on which, how much, and when. Here's a sample listing:

AK ANCHORAGE ALASKA TEL REV — *Total Amount Redeemed :* $8,465,000.00
TEL REV BDS
Series: 1983 — *Issue Amount:* 9,000,000
Sale Date: 08/24/83 — *Dated Date:* 09/01/83

Secured Credit Cards Losing Fly-by-Night Image

By LISA PICKENSCHER

The market has attracted some of the industry's biggest players, as well as smaller ones that stress their reputability.

Secured credit cards, once regarded as the murky fringe of the card business, are taking on an air of legitimacy that has regulators heaving sighs of relief.

The cards, which appeal to people who need to establish or reestablish a good credit history, used to be marketed mainly through newspaper classifieds or in the wee hours on television.

It was a low-risk, low-profit business for smaller card issuers.

Some were simply interested in building assets quickly; others were guilty of misallocating the deposits that served as collateral for the credit lines.

But in recent years, the secured market has attracted some of the industry's biggest players, and smaller ones that stress their reputability. All are on a constant search for untapped niches in a saturated market, which has led them into secured-card issuing.

The forces of good seem to be winning. The business has won a stamp of approval from the Federal Reserve Board's Consumer Advisory Council, which looked into the business and saw no reason to step up regulatory oversight.

"Secured cards have a history of being marketed in questionable ways, but I haven't seen those old late-night television ads for at least two years," said Michael Ferry, a member of the advisory council. Mr. Ferry is an attorney for a legal aid program in eastern Missouri.

Regulators are keeping a watchful eye, however, to make sure the industry stays on the straight and narrow.

Just how many secured cards are in use is a matter of speculation.

RAM Research, a credit card tracking service in Frederick, Md., said that using official bank data it has verified 100 secured credit card programs, with 700,000 active accounts in all.

But the actual number is probably much higher – perhaps five million or 10 million – said Robert McKinley, RAM's president.

MasterCard International estimates that the potential market is 26 million consumers – 14 million widows, divorcees, and immigrants; and four million to six million who are bad credit risks.

Bells Are Ringing

The consumer affairs division of the Federal Reserve Bank of

Some issuers misallocated collateral.

Philadelphia reports it is fielding more calls than ever from consumers who want to know which banks are offering secured cards.

"Most of the calls are from people who can't get credit," says an official at the bank.

The growth in the secured card business, and concern that it targeted vulnerable population segments like recent immigrants and the poor, led Federal Reserve governor Lawrence Lindsey last year to ask for a report from the Fed's consumer advisory panel.

In June, the council said it saw no need to make formal recommendations. It found that the potential for consumer abuse had abated and that the industry was doing an adequate job of self-regulation.

The entry of big names like Citicorp, Fleet Bank of Massachusetts, and Signet Bank of Richmond, Va., have combined with guidelines of the MasterCard and Visa associations to set the favorable tone.

Singled out for concern in the advisory council's report were third-party marketers who solicit customers for banks, and catalogues that deceptively advertise "gold cards" that can only be used with those catalogues.

'900' Numbers Banned

Some marketers and catalogues were using expensive "900" number systems to solicit card applications. Some also charged high up-front processing and application fees.

The credit card associations have addressed this problem by forbidding the use of pay-per-call "900" numbers. Marketers, among other restrictions, are also required to register with the

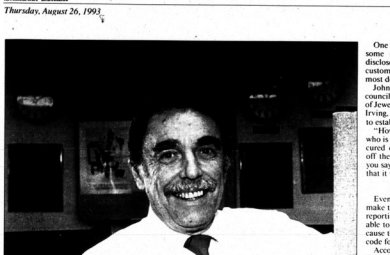
CONFERENCE, SEPT. 19-22.

FIRST DATA RESOURCES.
QUALITY, OUR COMMITMENT TO EXCELLENCE.

CJ&W-070R1993



Marty Katz

ROBERT M. BOUZA, president of credit card operations at Key Federal Savings in Maryland, will head a MasterCard forum that will consider whether a card's being secured should be reported to credit bureaus.

Continued from page 16

card associations and submit their consumer literature for review.

But the third-party marketers have not gone away. Their latest wrinkle is the sale of life insurance in exchange for a secured line of credit.

For example, National Credit Card Services Association of Waltham, Mass., a marketing agent for banks, has relationships with Ocean Independent Bank of Ocean, N.J., and Key Federal Savings Bank.

Key Federal, in Owings Mills, Md., is a pioneering issuer of secured cards and has built a sizable consumer credit business around them.

The association offers a Visa card with a credit line ranging from $500 to $1,000, which is secured with a cash life insurance policy.

'A Longer-Term Investment'

Richard Wirth, an attorney for the association, said, "We don't associate ourselves with credit repair" programs, which promise to "beat the system" and get credit for people who have filed for bankruptcy.

"We tell our customers that this is a longer-term investment, that it takes years to build up cash value," Mr. Wirth said.

Consumers are given the option of purchasing new life insurance with, say, $50 premiums, or they could use an existing policy with sufficient cash value as the collateral for a line of credit. In the latter case, the bank is responsible for collecting the collateral if the customer defaults. In the former, National Credit Card Services Association guarantees the issuer does not lose money if the customer defaults.

For a secured card through the association, consumers must pay a $39 processing fee and $5 in monthly membership dues, in addition to the $35 annual credit card fee to the bank.

A federal panel says the industry is doing an adequate job of self-regulation.

"This seems like a very expensive way for a consumer to avoid a down payment," said Mr. McKinley, "especially when some programs require as little as $250 for a line of credit. Furthermore, in terms of pricing secured cards are now almost in line with unsecured cards."

Mr. Wirth said most of the association's customers would not qualify for a regular unsecured card.

The extra layer of fees typically charged by third-party marketers have contributed to the perception that secured cards are a rip-off.

Credit Reporting Issue

While the Federal Reserve Board accepted its advisory council's findings, members of the council say they will continue to monitor the secured phenomenon. Similarly, the Office of Thrift Supervision plans to form a group to look at the secured card business, said an agency spokesman.

One unresolved issue troubles some observers: Some banks disclose to credit bureaus that a customer has a secured card, but most do not.

John Skinner, a Fed advisory council member and president of Jewelers Financial Services of Irving, Tex., said it is important to establish a disclosure policy.

"How do you rate a consumer who is delinquent and whose secured deposit is tapped to pay off the balance?" he said. "Do you say the debt was paid off or that it was delinquent?"

New Code System

Even if some banks wanted to make this distinction, the credit reporting agencies would not be able to accommodate them, because their systems don't have a code for secured cards.

According to the Associated Credit Bureaus in Washington, banks that have been reporting secured cards as such have to mark off a general category called "secured line of credit," which does not make it clear that the card is secured.

This will change when a revised coding system is introduced early next year, to include secured cards for the first time. Credit bureaus will then encourage banks to make the necessary distinction.

Denny Dumler, chairman of the Fed's advisory panel and chief executive officer of Rocky Mountain Bankcard System in Denver, said, "We concluded that if a bank has factual information it should report it."

On the other hand, regulators are still concerned about what effect reporting a secured card will have on a consumer's ability to establish credit, Mr. Dumler said.

Banks are concerned, too. If a customer's credit rating is hurt by reporting a card as secured, then the product loses one of its attractive features.

"The whole idea is not to report the cards as secured," said Jeannette Williams, MasterCard International's director of marketing.

Concern About Guarantees

Robert M. Bouza, president of the credit card operations at Key Federal Savings Bank, believes that the real issue is deeper than whether banks should report secured cards.

"I have a problem with the issuers that are guaranteeing a credit card," he said.

"Key Federal accepts only 65% of its secured-card applicants, and for half of the people we reject we can't verify basic information like employment and residence," Mr. Bouza said. "So where do they go after they are turned down by us?

"People who want to beat the bank with some kind of fraud can do that in a guaranteed environment."

Signet Bank has ads that say, "If you think you can't get a credit card, think again. Now, because their systems don't have a code for secured cards.

According to the Associated Credit Bureaus in Washington, banks that have been reporting secured cards as such have to mark off a general category called "secured line of credit," which does not make it clear that the card is secured.

This will change when a revised coding system is introduced early next year, to include secured cards for the first time. Credit bureaus will then encourage banks to make the necessary distinction.

Denny Dumler, chairman of the Fed's advisory panel and chief executive officer of Rocky Mountain Bankcard System in Denver, said, "We concluded that if a bank has factual information it should report it."

On the other hand, regulators are still concerned about what effect reporting a secured card will have on a consumer's ability to establish credit, Mr. Dumler said.

Banks are concerned, too. If a customer's credit rating is hurt by reporting a card as secured, then the product loses one of its attractive features.

"The whole idea is not to report the cards as secured," said Jeannette Williams, MasterCard International's director of marketing.

Concern About Guarantees

Robert M. Bouza, president of the credit card operations at Key Federal Savings Bank, believes that the real issue is deeper than whether banks should report secured cards.

"I have a problem with the issuers that are guaranteeing a credit card," he said.

"Key Federal accepts only 65% of its secured-card applicants, and for half of the people we reject we can't verify basic information like employment and residence," Mr. Bouza said. "So where do they go after they are turned down by us?

"People who want to beat the bank with some kind of fraud can do that in a guaranteed environment."

Signet Bank has ads that say, "If you think you can't get a credit card, think again. Now, because their systems don't have a code for secured cards.

A Secured-Card Sampler

	Application fee	Annual fee	Interest rate	Credit percent
American Pacific Bank, Aumsville, Ore.	—	$30	18.9%	100%
Associates National Bank, Wilmington, Del.	—	45	18.9	90
Bank One, Lafayette, Ind.	—	35	19.8	60-100

*Also offers card at 15.00% with $35 annual fee.
**Also offers card at 13.9% with $20 annual fee.

The latest wrinkle: credit lines secured with life insurance policies.

The issue of credit bureau reporting.

In the meantime, MasterCard will soon release a study that it describes as a comprehensive manual for banks in the secured business. It will outline different ways banks could market their products, and who the potential customers are.

According to MasterCard, people who have never established credit represent one of the greatest areas of opportunity.

MasterCard also sees a growing interest in a product for high-income people who could qualify for an unsecured card but chooses a secured product to increase his credit availability or otherwise get a better deal.

Among banks that have taken the plunge by offering secured card programs, the competition is heating up. Generally, the cards' interest rates are higher than average, and credit lines range from 50% to 125% of the associated deposit.

Recently, Signet Bank and First Consumers National Bank of Portland, Ore., began offering credit lines up to 150% of the security. Fleet Bank of Massachusetts is offering a secured card with a very competitive 13.4% interest rate; and United Bank of Philadelphia, a recently organized minority bank, offers credit lines of $100 in excess of the amount on deposit.

Higher Profit Margins

As more banks enter the secured arena, analysts expect price competition will resemble that on standard cards. Interest rates could continue to come down and annual fees disappear.

That may not be too costly to issuers, as profit margins are actually higher on secured cards. The Consumer Advisory Council reported that the cost of funds is lower, and that 90% of secured card balances generate finance charges, versus about 70% in the unsecured market. □

When Banks Bet Against Rates, Shareholders Rarely Win

Does the extra net interest income generated from lengthening maturities when the yield curve is sloping upward create shareholder value?

Unfortunately, the answer is almost always "no." In some banks, the extra net interest income isn't enough to offset the extra risk, and shareholder value is actually destroyed.

How can this be? The logic is a simple application of the "no free lunch" rule of the financial markets.

Flaw in the Logic

Let's assume that all investment portfolio securities are Treasury securities. Bank A decides to "stretch for yield" by selling $100 of three-month Treasury bills from its portfolio and buys $100 in 10-year Treasury bonds.

On a mark-to-market basis, the value of the bank's assets has not changed. It sold something worth $100 and bought something worth $100. Nothing has changed from a shareholder value point of view (if we ignore the risk of bankruptcy).

If, instead, Bank A had held onto the three-month bills, shareholder X could have created the "new Bank A" by holding the stock of "old Bank A" and replacing $100 of three-month Treasury bills in her fixed income portfolio with 10-year Treasury bonds.

Since X can duplicate "new Bank A" by herself, there is no reason to pay more for the stock of "new Bank A" than she would for the stock of "old Bank A."

But, some bankers will argue, new Bank A's net income will be higher, its price-earnings ratio will be unchanged, and therefore new Bank A's stock price must be higher than old Bank A's stock price.

The flaw in this argument is the statement that the price-earnings ratio stays the same – unless all shareholders are stupid, the price-earnings ratio has to drop.

A Riskless Arbitrage

The risk of the organization has gone up, so the price-earnings ratio must decline. If this were not the case, there would be a riskless arbitrage that shareholder X and even retail investors could pursue.

How? It's easy. Let's assume Bank B takes the same strategy as old Bank A: it is identical in all respects and holds $100 in three-month bills. New Bank A holds the $100 in 10-year Treasury bonds.

Let's assume that the yield on three-month bills is 4% and the yield on 10-year bonds is 8%. How does X make money if the (pretax) price-earnings ratio on both banks is 10? If that is true, then the market value of new Bank A is $40 higher than Bank B (10 times the extra $4 per year in income – we ignore taxes).

X does the following:

1. She buys all of Bank B stock for $Y.
2. She shorts $100 in three-month bills and receives $100.
3. She takes the $100 and buys 10-year Treasury bonds.
4. She sells Bank A shares short and receives $Y plus $40.

On a net basis, X has a perfect riskless hedge and keeps the $40. Therefore, either the price-earnings ratio of new Bank A must be lower than the price-earnings ratio of Bank B or Ms. X and others like her can easily become billionaires.

Cases of Value Creation

When does lengthening the bank's assets relative to liabilities create shareholder value? It creates shareholder value in only three circumstances. First, it creates value if the longer-term maturity asset can be purchased at less than its fair-market value. Shareholder value goes up by the amount of this discount to fair-market value.

Needless to say, there aren't any legal discounts in the Treasury market.

The second circumstance when lengthening assets makes sense is when a longer-maturity asset portfolio reduces the interest rate risk borne by the bank. The shareholder value goes up by the amount that the expected cost of bankruptcy goes down.

The third circumstance where lengthening the bond portfolio makes sense is if the bank is better at predicting interest rates

See **WHEN** *next page*

THE ONLY WAY *banks create shareholder value by taking more interest rate risk is when they're buying assets at a price lower than their true value.*

Mr. van Deventer is president of Kamakura Corp., an asset-liability banking and risk management firm based in Los Angeles and Chiganki, Japan.

Alliances with Asset-Based Lenders Can Benefit Banks and Customers

A mid reports of record bank profits, many analysts are claiming that the "credit crunch" has ended.

Banks, with improved profitability and stronger balance sheets, are increasing their traditional lending.

They also are looking at asset-based lending as a way to complement their existing finance offerings and expand their base of middle market customers, who make up the majority of asset-based borrowers.

However, creating or rebuilding an asset-based lending function is not simply a matter of restructuring an organization or refocusing management's attention on a previously overlooked area.

Costly Commitment

In fact, a successful asset-based lending operation requires a significant investment in four areas:

- Experienced people for originating, underwriting, and monitoring the loans.
- Internal systems and technology for the complex task of monitoring and analyzing borrowers' financial and collateral performance.
- The time of senior management that might be more productively used in other areas of the bank.
- Establishing a separate organization within the bank with a different culture, or lending philosophy.

An Alternative

Understandably, these investments also require a commitment by the institution's management to dedicate critical financial resources to this area.

Clearly, not every bank has the resources, professional talent, time, and skill to create an effective and profitable asset-based lending group.

There is an alternative, however, for banks who want to take advantage of asset based lending opportunities – develop a participating relationship with an established asset-based lender.

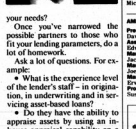
Such an alliance can help a bank retain or strengthen a customer relationship by arranging for credit where traditional bank lending guidelines preclude extending it.

Is it a case, both the bank and the customer benefit.

Homework to Do

What type of banks will benefit from theses alliances? For example, is their geographic presence local, regional or national? Is their lending orientation based on the same principles as yours? Do they have a particular industry specialization or do they fit the profile that meets your needs?

NOT EVERY *bank has the resources to create an effective and profitable asset-based lending group of its own.*



Once you've narrowed the possible partners to those who fit your lending parameters, do a lot of homework.

Ask a lot of questions. For example:

- What is the experience level of the lender's staff – in origination, in underwriting and in servicing asset-based loans?
- Do they have the ability to appraise assets by using an in-house appraisal capability on a national basis?
- Is their write-off history at an acceptable level? Have they weathered the most recent economic downturn?
- Do they have a research department devoted to developing and maintaining an understanding of their customers' industries?
- What type and frequency of information will you as a partici-

Asset-Based Lenders as Bank Allies

Continued from *page 18*

pant receive in order to track the loan's performance?

- Do they have state-of-the art technology, such as local area networks and loan servicing systems, to effectively and efficiently monitor their portfolio and transmit and report information rapidly? After all, in this business, timing is often crucial.
- Do they have a rating system with high integrity that rates credit and collateral on each loan's performance?

Once you've narrowed the prospects through these questions, do some fieldwork.

Spend a day with the lender's loan servicing staff to see how they will handle your customer or prospect. Ask for a sample

BANKS CAN *retain relationships with customers who do not qualify for traditional lending.*

loan underwriting package with all supporting documents.

In effect, you want to determine how well they do their homework.

Also, meet and talk with the loan workout people – they're the ones you'll have to rely on to get out of a loan in the unlikely event the borrower fails.

And finally, ask for references, both of current customers and of other banks with banks with whom they have participation relationships.

The more homework you do, the better the quality of your decision and choice of asset-based lending partner.

Everybody Gains

Establishing a strategic alliance with an asset-based lending specialist presents a "win-win" situation for a commercial bank and its customers.

The bank gains the ability to enhance its customer service portfolio without a significant expenditure of time, effort and financial resources.

Its customers benefit through the ability to achieve all their banking and finance needs from a single source. ❑

When Banks Bet Against Rates

Continued from *page 18*

than the marginal shareholders, like X. Some bankers believe their bank is smarter than shareholders.

As Dave Barry would say, I am not making this up.

The burden of proof on this issue rests with the bank. Where is the bank that has the courage to do the following: take a $500 million interest rate bet and then publish a press release announcing that the bet has been taken because of the bank's superior forecasting ability?

The resulting change in the bank's stock price will tell the bank whether or not the market thinks its belief is correct.

How does a CEO tell whether his strong-willed asset-liability manager or Treasury manager can predict rates as well as he says he can? As a practical matter, during the CEO's tenure in office, he won't have enough information to ever answer that question.

IN SOME BANKS, *the extra net interest income isn't enough to offset the extra risk.*

In my career at two of the 10 largest banks in the United States and one of the largest American securities firms, I've met 32 traders who thought they could predict interest rates.

The first year, 16 were wrong and lost their jobs. In the second year, eight of the 16 remaining were fired for the same reason.

During the third year, four of the eight bet wrong and left. In the fourth year, two more disappeared, and only one was left after five years. But that trader had been right five years in a row. Was he smart or was he lucky? No one can say for sure.

If the trader himself were positive that he was smarter than the market, he should have been trading for his own account.

The Risk Factor

Every senior banker has a lot of self-confidence in his understanding of interest rates and money markets. Nonetheless, the bank's ability to create shareholder value by taking more interest rate risk is when they're buying assets at a price lower than their true value.

If the bank believes it can predict interest rates, it should create a fixed-income investment management department. That way, only those who believe in the bank's forecasting ability will gain or lose, and shareholders won't be harmed in the process.

STAY ALERT

Gonzalez, B of A Chief Urge Extension of CRA to Nonbanks

Continued from *page* 1

in this country, they are benefiting at the banks' expense."

"As major providers of credit, I believe these institutions have an obligation to help meet the increasingly critical credit needs of distressed communities," he said.

Both the congressman and the banker urged the industry to be more positive about the reinvestment act.

Criticism for Both Sides

Mr. Gonzalez faulted both regulators and bankers for failing to live up to the congressional intent of the law.

Regulators have not enforced the law consistently or aggressively, while bankers have discounted it as a regulatory irritant, rather than a tool for social change, he said.

"Not many banks currently see CRA as a process of useful self-examination," he said. "Most see it as a pestilential requirement to have so many community meetings and document such and such outreach effort – a kind of file-stuffing requirement."

Instead, Mr. Gonzalez said, the act should be "a little watchdog on the corner that reminds us all that the cornerstone of sound banking is the humble, hard toil of working with your neighbors, to see how best to serve the community."

'Real Benefits'

"If CRA means anything, it means making sure that banks do all they can to serve their communities. It means making sure that loan decisions are fairly evaluated. It means making sure that banks understand there are opportunities in their own back yards," he said.

"I am not talking about credit allocation," he said. "I am not talking about using CRA to force banks to make bad loans – for a bad loan does nobody any good. I am, know, er, suggesting that CRA properly used will identify real opportunities with real benefits for everyone concerned."

Regulators Seen as Lax

Mr. Gonzalez also charged that regulators are not doing their jobs properly.

"Despite its simplicity, enforcement of the CRA has been lacking," he said. "The proliferation of more expansive fringe bankers like pawn shops and check cashers, show that insured financial institutions are ignoring a large part of the demand for financial services."

"As a result of passive enforcement, community groups have taken the lead in enforcement, using the CRA process to bring bankers to the table to discuss community lending," he said.

Opportunity or Burden?

Mr. Rosenberg said the reinvestment act should be viewed as a business opportunity, not a compliance headache.

Successful banks have learned that the act can be successful only when lenders stop thinking of it as a regulatory burden and take a more affirmative approach, he said.

"Many banks now see CRA as an opportunity, but others continue to see it as onerous and burdensome," he said. "To every cloud, however, they just don't get it."

"I've watched the Community Reinvestment Act grow from a well-intentioned but vague piece of legislation into a major cornerstone of banking regulation," Mr. Rosenberg said. "Although we can debate different aspects of the CRA, no one can deny that it has helped raise the quality of life in communities all across the United States.

"With the scope and the intent of community reinvestment being reevaluated, it is important for banks to demonstrate that we can jump ahead of the compliance curve by developing CRA programs of creativity and substance – programs that translate into real benefits for the community," he added.

Fundamental to that approach, at BankAmerica, is viewing community reinvestment as a way to add business and market share.

"Bankers that get into the market with a profit motive will invest the time and resources to make the right deals and ensure safety and soundness," he said. "Those without a profit motive are unlikely to make the types of investments needed for the long-term success of a CRA program."

Mr. Rosenberg also noted the increasing trend of potential customers scrutinizing lenders' CRA ratings before doing business with them. BankAmerica recently gained significant new business from a major health care firm after the firm hired a consultant to investigate the bank's community development record.

Government as 'Enabler'

Mr. Rosenberg also called on the government to become an "enabler" of community lending, as opposed to just the enforcer of the legislation, through tax credits, inclusive government programs, and "safe harbors" for banks with outstanding CRA ratings.

"The President's community development bill is a very small step in the right direction," he said. "There is more the government can do in the way of incentives and regulatory reforms that will encourage mainstream financial institutions and existing agencies to significantly expand their community reinvestment activities." □

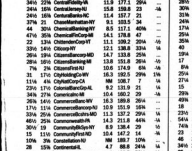
Bank Stock Table Explained: The table lists in alphabetical order daily composite stock prices at 4:30 p.m. (unless otherwise noted) for the 225 largest publicly traded banks as measured by the market value of common equity as of March 31, 1993, and for the 25 largest publicly traded thrifts as measured by the market value of common equity as of December 31, 1992. The 52-week high and low stock price for banks was $34.75 and $24.00 for thrifts; $244.20 and **$2.50 IN Ed:** the moving 52-week high and low closing stock prices for the stock. The PE ratio is the latest 12 months' net stock price divided by the trailing four-quarter earnings per share, adjusted for latest announced earnings. The ratio is omitted for companies with less than four quarters of data. **Mkt. Cap.** is the latest 12 months' net stock price multiplied by the number of shares outstanding, expressed as a percentage. **Stk Yld** is based on announced earnings and dividends. **Last:** The price at which the stock last traded. If no trades for the day, the bid is listed. **All Bank and Thrift Indexes:** A weighted average of the top 225 banks in market value and the top 25 thrifts in market value, respectively. **Chg:** Change in closing price from previous day. **Footnotes:** pf-preferred; wt-warrant; cv-convertible; nv-new issue; nm-not meaningful; nd-not available; ? - unknown. **Data sources:** **SNL SECURITIES,** Charlottesville, Va. 804/977-1600, produced the tables; Thomson Financial News Network, Vienna, VA, provides SNL with the daily prices.

Libor Swap Yield Curve



Wednesday, August 25, 1993

Data source: Chemical Bank, New York

Description of table: For lenders and borrowers in the interest rate swap market, the London interbank offered rate swap yield curve is the benchmark rate by which participants, when arranging the exchange of fixed- and floating-rate cash flow streams of different maturities. For example, a fixed-rate lender holding a one-year fixed-rate loan and wishing to swap into floating would pay the one-year rate at the end of a year in exchange for a floating-rate payment stream, usually three-month Libor, paid and reset quarterly.

Fifth Third Attracting Crowd of Short-Sellers

Continued from page 1

July 15. Late Wednesday, the shares were trading at $52.875.

Short-playing is risky because losses can quickly mount if a stock rises rather than falls. In that case, short players must buy the stock as quickly as possible to cover their positions. The coverage ratio reveals that risk.

The total short interest position in Fifth Third has grown 9% since mid-June, when it totaled 771,000 shares.

"I'm not too surprised," said Joseph A Steven of Stifel Nicolaus & Co., St. Louis. "Some people think it is time in the market cycle to get bearish on the banks, and Fifth Third is at the very high end of the valuation scale."

Fifth Third shares trade at 16.5 times estimated earnings this year. It is the only major bank stock whose valuation matches the price-to-earnings ratio for the Standard & Poor's 500 stock index.

Mr. Steven said he did not think the short interest was a statement about riskiness at Fifth Third itself.

"They have a tremendous long-term earnings record, and it would be hard to make a case for betting against them," he said.

Short interest generally has been setting records in the over-the-counter market. It rose 5.2% in August to 587.4 million shares, the seventh straight month in which a new high has been set.

'August Doldrums' Blamed

P. Michael Brumm, chief financial officer at Fifth Third, said Wednesday the short interest was small in contrast to the Ohio bank's 60 million shares outstanding. He blamed the jump in the coverage ratio to lower trading volume during the "August doldrums."

Arbitragers may be trying to capitalize on a recent deal by the bank.

He also noted that Fifth Third's pending acquisition of Tristate Bancorp., a Cincinnati thrift, probably has invited speculation by arbitragers, since the all-stock deal has a fixed exchange ratio.

In such a situation, arbitragers play the market in both stocks, usually by selling shares of the acquiring institution and buying those of the seller.

Thomas D. McCandless, an analyst at Paine Webber Inc., agreed that Fifth Third's acquisition is a possible reason for short interest activity.

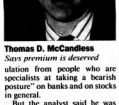
"The arbitragers may see it as a way of locking in a risk-free rate of return," he said.

Unusual Timing

But he noted that this kind of activity in stocks usually occurs much closer to the time a deal closes.

Mr. Brumm said the acquisition, announced on July 2, is not likely to close until December. Fifth Third will pay about $68 million in stock for the thrift.

Mr. McCandless also said the short activity may reflect "spec-



Thomas D. McCandless
Says premium is deserved

ulation from people who are specialists at taking a 'bearish posture" on banks and on stocks in general.

But the analyst said he was not concerned about the outlook for Fifth Third.

"The company remains a premier growth company of the banking industry and deserving of its premium valuation," he said.

WEDNESDAY'S MARKET

MBNA Corp., the credit card issuer, led the way on Wednesday as bank stocks extended their recovery from recent weakness.

MBNA was up $1.50 to $34.25, a new yearly high, in late trading. BankAmerica Corp. was up 50 cents to $46.625, First Union Corp. rose 62.5 cents to $45.625, and National City Corp. gained 75 cents to $25.875.

Boatmen's Bancshares moved up 62.5 cents to $60.75. Mellon Bank Corp. advanced 75 cents to $57.625.

On the losing side, Banc One Corp. was down 25 cents to $40.125, and Chemical Banking Corp. was off 25 cents to $40.125. □

Tenn. Thrift Sets Stock Split

KINGSPORT, Tenn. — Heritage Federal Bancshares said its board has approved a 3-for-2 stock split.

The split is to be accomplished through a 50% stock dividend to be distributed Sept. 30 to stockholders of record on Sept. 8. Cash will be paid instead of fractional shares. Heritage Federal has 1.6 million common shares outstanding. □

5-Year Note Gets Average Demand Following Big Response to 2-Years

The second leg of the Treasury Department's fund-raising effort this week met only average demand.

The tepid response to the new issue of five-year notes on Wednesday contrasted with the enthusiastic one given to the previous day's two-year note sale.

"It was a little bit of a reality check," said Douglas Schindewolf, money market economist for Smith Barney, Harris Upham & Co. "The market had been on fire."

The Markets

The $11 billion in five-year notes were awarded at a yield of 4.87%, about what traders had expected just before the Treasury began the auction Wednesday afternoon.

Nonetheless, the auction rate was the lowest ever for the five-year note.

At the previous auction, on July 28, the auction yield was 5.25%.

Bids exceeded accepted offers by a ratio of 2.6 to 1, virtually the average result over the last several auctions of this security. Tuesday's two-year sale received a "bid-cover" ratio of 3.5 to 1.

The auction rate was the lowest ever for the five-year note; the "bid-cover" ratio was average.

Government Securities Prices Gain

Prices of government securities gained after a short retreat just after the auction.

The price of the 30-year bond was up ¼, lowering the yield to 6.17% from 6.19% on Tuesday. Over the last month, the yield on the long bond is down about a quarter point.

Ten-year notes were up ⅜, and the yield fell to 5.50% from 5.54%. Two-year notes gained ⅛, lowering the yield to 3.87% from 3.91%. The bond-equivalent yield on the three-month Treasury bill was unchanged at 3.03%.

Report Spurs Short-Lived Surge

John Canavan, market analyst at Stone & McCarthy Research Associates, said rumored purchases of two-year, three-year, and five-year Treasuries by the Federal Reserve provided early support for the market.

The day's economic data had little lasting impact.

The Commerce Department reported that new orders for durable goods fell 3.8% in July, the biggest decrease since December 1991. The market initially rose on this indication of weak economic growth.

But bonds fell back once news spread that the decline was due to a drop in aircraft orders. Without the drop in transportation orders, durable goods rose 1.3%, economists said.

Adding to the negative tone in the bond market, the government reported that sales of existing homes in July rose 5.4%.

Blue-Chip Stocks Remain Strong

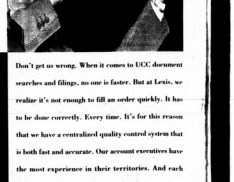
Offsetting these reports, however, were comments by Federal Reserve Board Governor Lawrence Lindsey, one of the fiercest inflation fighters on the Fed, that he was happy with the latest inflation numbers.

Blue-chip stocks again were strong, led by airline issues. The Dow Jones industrial average gained 13.13 points to a record 3,652.09. The Standard & Poor's 500 index rose 0.36 to 460.13. But the Nasdaq composite index lost 1.49 to 733.65.

The dollar gained against the German mark on speculation that the Bundesbank will cut interest rates at its meeting this morning. The dollar finished at 1.6842 marks, versus 1.6790 on Tuesday.

— Bart Fraust

IT'S GOOD TO BE FAST, BUT IT'S MORE IMPORTANT TO BE ACCURATE.



Don't get us wrong. When it comes to UCC document searches and filings, no one is faster. But at Lexis, we realize it's not enough to fill an order quickly. It has to be done correctly. Every time. It's for this reason that we have a centralized quality control system that is both fast and accurate. Our account executives have the most experience in their territories. Loan Standards Eased in Quest For High Yields

By WILLIAM GOODWIN

Bankers, hungry for high-yielding loans, are loosening their lending standards for leveraged buyouts and recapitalizations.

For one thing, amortizations are getting "back-ended," meaning the bulk of the repayments are coming in the later years of the loan.

Banks are also becoming more liberal about debt and interest-coverage ratios and are requiring less equity in deals that they help finance.

"All of your leverage indices are getting a little more aggressive," said Thomas Bunn, head of loan syndications at NationsBank Corp. in Charlotte, N.C.

News Analysis

Deal firms have taken notice.

"We saw how Specialty Foods got financed, and wondered how it cleared the bank market," said John Hine, partner at the Dallas buyout firm Hicks, Muse & Co.

Mr. Muse was referring to a collection of specialty food brands bought last year by Texas billionaire Robert Bass and other investors for over $1 billion.

Loans, Junk, Debentures

The buyout is being financed mainly with bank loans and junk bonds, including $319 million of debentures and preferred stock, which are a form of so-called interest-deferred securities.

Widely used — and abused — in the 1980s, interest-deferred securities enable borrowers to postpone interest payments for a number of years.

Detractors view the securities as ticking time bombs on a company's balance sheet.

Even some members of the bank group backing the Specialty Foods deal describe it as an aggressively capitalized, 1980s-style buyout. Chemical Bank is lead bank on the $540 million loan.

Banks Get Paid First

The bank debt is scheduled to be paid off before the discount bonds start paying interest and principal, which is one reason why the banks went along with the deal.

But even as recently as six months ago, that might not have been the case.

Indeed, the gradual reappearance of interest-deferred securities in buyout financing is a further sign that the deal market could be on the verge of over-

Fed's Lindsey Says CRA Reform Could Boomerang

By CLAUDIA CUMMINS

SAN ANTONIO — Federal Reserve Governor Lawrence B. Lindsey warned on Wednesday that unless carefully crafted, reform of the Community Reinvestment Act could create more problems for the banking industry than it solves.

While changes in the rules are needed, he said, bank regulators must avoid pushing the law so far that it becomes a tool for credit allocation.

"Will more specific guidance by Congress or the regulators in fact generate the desired result – equal access to credit for all creditworthy Americans?" Mr. Lindsey asked. "The best I can say is, maybe."

Local Solutions Favored

"But certainly, whatever we decide will have a price," he added. "National solutions to local problems generally cost more in time, resources, and money than local solutions to local problems."

Mr. Lindsey made his comments at a community investment conference sponsored by the Federal Reserve Bank of Dallas. The Fed governor is a lead player in the CRA reform effort that was initiated by President Clinton last month.

Historical Comparison

Regulators have until the end of the year to refocus the law on actual loans made in low-income areas.

Lawrence B. Lindsey
Against asset allocation

In his luncheon address – held just before regulators convened their second public hearing on CRA reform – Mr. Lindsey compared the impact of a poorly re-crafted CRA to the experience of Philadelphia's Bank of North America, which was chartered in 1782.

After complaining that the bank was not lending enough to them, farmers convinced the legislature to repeal the bank's charter and replace it with a more restrictive one, Mr. Lindsey said. This act caused the bank to falter, leading to an economic slump throughout Pennsylvania that hurt the farmers the regulation was designed to help.

"I think there are some important lessons to be drawn from this early experience," Mr. Lindsey said. "First, political su-

Wider Reach Feared for Market Value Accounting

BY JIM MCTAGUE

WASHINGTON — Accounting experts are advising all banks to comply with a new FRS rule requiring mark-to-market accounting by securities dealers.

Bankers will have to designate which assets they hold for sale by Sept. 9. They would then have to compute unrealized gains and losses on those assets for 1993.

Though the tax impact is expected to be minimal for most banks, some groups complain of a compliance nightmare.

Many bankers thought the provision would affect only banks like Bankers Trust and J.P. Morgan, which are heavily engaged in the securities business. But the IRS is applying the regulation to loans and other bank assets as well.

Worse than Expected

"No one thought they'd be this vigorous," said Henry Ruempler, the American Bankers Association's resident tax expert.

Knowledgeable sources said the IRS and Treasury will issue a more authoritative statement as early as next week to clarify the rule.

It is expected to note that

A High-Tech Dealmaker

THROUGH AGGRESSIVE acquisitions, George D. Dalton has transformed Fiserv Inc. from a regional data processing firm into one of banking's top suppliers of computer services. His latest deal could pay off big for investors.

NEWS *briefs*

Citicorp Issues Card-Backed Securities

NEW YORK — An issue of Citicorp asset-backed certificates totaling $798 million was priced in two parts.

Goldman, Sachs & Co. was lead manager of a $750 million senior class of certificates. Citicorp Securities Markets Inc. was lead manager of a $48 million subordinate class of certificates.

The sellers of the MasterCard and Visa credit card receivables were Citibank South Dakota and Citibank Nevada. The loan servicer is Citibank South Dakota.

The loans were issued in a soft bullet structure through a special-purpose vehicle, Standard Credit Card Master Trust I 1993-2. The $750 million in senior certificates was priced to yield 5.97%, 50 basis points over the Treasury's 10-year note.

The $48 million subordinate class was priced to yield 6.20%, 74 basis points more than the Treasury's 10-year note.

Pioneer of N.C. Gets Nod for Capital Plan

ROCKY MOUNT, N.C. — Pioneer Savings Bank, a unit of Pioneer Bancorp, said it received a directive from the Office of Thrift Supervision conditionally approving its capital plan.

In a press release, Pioneer said the prompt-corrective-action directive supersedes the previously executed supervisory conversion agreements with the OTS and requires that the bank achieve capital compliance by being acquired on or before Sept. 10.

The company said that as provided by the bank's capital plan, it is pressing forward with its previously announced merger with Raleigh-based First Citizens Bancshares Inc.

Pioneer said stockholders are scheduled to vote on the merger Sept. 9.

S&P Rates Glendale Preferred as CCC

NEW YORK — Standard & Poor's Corp. said it has assigned a CCC rating to Glendale Federal Bank's $175 million noncumulative convertible preferred stock Series E.

S&P said it has also raised its ratings on the bank's uninsured CDs.

The ratings "reflect the anticipated successful completion of a corporate restructuring plan that will raise $425 million in equity for the savings bank and return the bank to regulatory capital compliance," S&P said.

They ratings also reflect the bank's "relatively high level of nonperforming assets, which have severally hindered operating results for the past three years."

Credit of 3 Big French Banks Downgraded

LONDON — IBCA Ltd., the European credit rating agency, said it has downgraded the ratings of three major French banks: Banque Nationale de Paris, Credit Lyonnais, and Banque Paribas.

Banque Nationale de Paris' long-term rating was lowered to AA from AA-plus, while its short-term rating remained unchanged at A1-plus.

The long-term credit ratings of both Credit Lyonnais and Banque Paribas were lowered to A-plus from AA-minus, and their short-term ratings to A1 from A1-plus.

Bisys Group to Acquire Meyer Rate Survey

LITTLE FALLS, N.J. — Bisys Group Inc. said it signed an agreement to acquire Meyer Interest Rate Survey of Calabasas, Calif.

Terms were not disclosed.

Bisys said the acquisition is not expected to have a material impact on its fiscal-1994 results.

Bisys said Meyer gathers information on deposit and loan products offered by over 3,000 banks, thrifts, and credit unions. Alan F. Meyer, the acquired company's founder, is to remain its chief executive after the acquisition.

The briefs were compiled from staff and wire reports.

Trade Groups, Experts Sound Warnings On the Reach of Mark-to-Market Rule

Continued from *page 1*

banks that just make loans and hold them will not be affected. Banks that frequently sell mortgages into the secondary markets will have to comply. Banking trade groups were swamped with inquiries after informing their members that the IRS provision might extend to more typical banks as well.

The American Bankers Association, which alerted its members by fax last Thursday, said it received 600 phone calls that day and hundreds more on Friday.

IBAA Fighting Back

Kenneth Guenther, executive vice president of the Independent Bankers Association of America said the IRS rule is a disastrous proposal, and he began waging an all- out campaign to have the rule delayed for further discussion.

In a priority letter fired off Wednesday to Treasury Under Secretary Frank Newman, Mr. Guenther said the controversial section of the law applies to "dealers in securities" and doesn't refer to banks.

"It provides no notice and little if any support for an extension of technical and banks some compliance requirements to the nation's community banks."

Farm Loans Cited

In a letter to his members, Mr. Guenther said the rule would negatively impact bank loans to small businesses and farms. He also complained that the IRS rule is inconsistent with a mark-to-market statement recently issued by the Financial Accounting Standards Board.

"If community banks are forced to report under two different systems, it will further strain their modest resources and add to their regulatory burdens," he complained to Mr. Newman.

"People can't play totally dumb on this," said Marc Levy, a partner in Arthur Andersen's federal tax practice here. Mr. Levy said last year's vetoed tax bill contained an identical provision and its legislative history contained illustrations showing that banks would subject to it.

Early Warning

And Mr. Ruempler said a Treasury official warned that it would apply to banks in a speech to lawyers earlier this year.

"Still, it's safe to say not many of the potentially affected taxpayers realized this was out there or that it could apply to them," Mr. Levy said.

Mr. Levy said the IRS might eventually clarify the law and the way it applies to banks.

"It's not that involved. Just make sure you can say on any given day in your general ledger which assets are held for sale and which are not."

The easiest way for most banks, he said, is to state that every security is held for investment or not for sale, unless otherwise stated. □

Lindsey Says CRA Reform Could Backfire

Continued from *page 1*

pervision of bank lending practices is nothing new, and may be an inevitable part of a democratic society."

'Harmful to Society'

He added, "The second lesson of history is that moving in a purely political direction of banking, or heavy-handed credit allocation, is not only bad for banking, it is harmful to society as a whole."

These lessons must be kept in mind in the CRA debate, he said.

"CRA is part of a long-standing balance between the need for some political oversight of the lending process and the problems that result if such oversight becomes excessive," the Fed governor said.

"We must bear in mind that because political oversight is at best a blunt instrument, striking an appropriate balance between constructive oversight and overburdening regulation will inevitably be a difficult task."

In his speech Mr. Lindsey also warned bankers that if they don't shape up their minority lending records, regulators and lawmakers are likely to step in with more heavy-handed rules.

Wages of Discrimination

"As long as behavior exists which seems outrageous to reasonable individuals – and that includes any amount of discrimination – the threat of legislative and/or regulatory action, with all of its attendant burdens, remains likely," Mr. Lindsey said.

"The prospective regulatory burden which might result from not solving this problem is potentially enormous, so it can only be left of bankers to eliminate both the practice and the perception of discrimination," he added.

Finally, Mr. Lindsey warned bankers that as the focus on minority lending intensifies, reliance on statistical analysis of lending data will grow stronger.

"Statistics have played a major role in our consideration of the mortgage discrimination problem to date," he said. "Their role as an enforcement tool is just now beginning, and is likely to increase dramatically in the years ahead."

The Justice Department, in particular, has relied heavily on statistical models in analyzing bank's minority lending. But Mr. Lindsey, once a Harvard economics professor, warned that the this approach has its limitations. □

Mr. Lindsey indicated banks need to improve minority lending.

BayBanks Shifting to Unisys for Imaging

By JEANNE IIDA

BayBanks Inc. has signed a multimillion-dollar contract with Unisys Corp. to install an imaging system for its check processing operations.

BayBanks will convert its check processing operations from International Business Machines Corp. equipment to Unisys in order to move more quickly to image capture technology for processing deposited checks.

By eliminating most manual handling of checks, image capture technology is expected to reduce costs by 35% to 40% at banks that process large volumes of checks.

Republic Converting

BayBanks is the second major bank to move to the Unisys imaging system after using IBM check processing technology. Republic National Bank said last month that it would turn over its check processing operations to Systematics Financial Services Inc., which is converting its New Jersey processing center from IBM equipment to the Unisys system.

The bank wants to further automate check processing.

IBM's check image processing project is months behind the Unisys program. While IBM is now in the final phases of testing its image capture system for deposited checks at several banks, several Unisys customers, including Huntington Bancshares, Comerica Inc., and Signet Banking Corp., have had image systems in production since the middle of last year.

"Certainly we considered IBM and NCR," said Robert Hunt, managing director of BayBank Systems Inc., the processing arm of the Boston-based bank. "The key factor in our choosing Unisys was to have someone who'd worked out the bugs" in the technology.

"We felt more confident the conversion would go smoothly with Unisys," Mr. Hunt added.

High-Profile Test Case

"Everyone will be anxiously looking at this conversion [from IBM to Unisys] as a laboratory to see how easily it can be accomplished," said Stanley E. Militko, a banking consultant at Littlewood, Shain & Co. in Exton, Pa.

BayBanks, which processes an average volume of 1.5 million checks a day plans to install the Unisys InfoImage item processing system. The system eliminates most manual handling by automatically reading the amount on a check.

BayBanks also is the first bank to plan to incorporate the handling of automated teller machine deposits into an image capture system. The bank will work with Unisys to develop software that captures the amount keyed in by a customer at an ATM, and compares it with the amount captured on the envelope deposited at the ATM.

More Technology News
Pages 16 and 17

Extensive Retail Franchise

That capability will allow BayBanks to streamline its ATM deposit-posting function, which already is centralized in a single location. Many other banks perform this function in the branches.

BayBanks, with assets of $9.8 billion, has an extensive retail network of over 200 branches and 1,200 ATMs. BayBanks operates its own ATM network, called X-Press 24.

The bank employs dozens of proof operators in a central location who handle ATM deposits, matching check amounts with the amount keyed into the ATM and then sending the checks to reader/sorters.

When the ATM software is developed, Unisys will be able to market the system to other banks, officials said.

BayBanks has already had some success with image capture technology. Last year, the bank installed software to produce statements with images of checks rather than the checks themselves. BayBanks, which does not charge a fee either for image statements or for returning checks, now issues some image statements to about 100,000 customers monthly.

While Mr. Hunt declined to specify cost savings, he said the percentage of statements containing errors had been reduced from 1.2% to 0.2%. □

Amsouth Chief Doesn't Want Heir to Be Apparent

By KENNETH CLINE

In promoting two executives to vice chairman, Amsouth chairman John W. Woods is preparing a careful course to retirement. But he also seems to have ensured an interesting succession contest for the Alabama bank company.

People in the News

Mr. Woods and his board appointed C. Stanley Bailey and C. Dowd Ritter – the former from the corporate office and the latter from the line-of-business side – to vice chairman posts last month. The promotions signal that the bank has strong bench strength, Mr. Woods contended in a recent interview.

"I've had my turn at bat," said Mr. Woods, who is 62 and has been chief executive since 1972. "I'm going to move on to other things at age 65 and turn it over to the younger ones."

Seats on the Board

The question is: Which of the younger ones?

Mr. Bailey and Mr. Ritter, both of whom also became directors of Amsouth, would not comment on the succession question.

Mr. Bailey, 44, was senior executive vice president and chief financial officer of the Alabama company. Mr. Ritter, 45, was senior executive vice president in charge of retail banking at Amsouth, which has $11.1 billion of assets.

In his new role, Mr. Bailey will oversee corporate finance, Amsouth's mortgage subsidiary, and private banking. Mr. Ritter will continue to oversee the subsidiary banks in Alabama, Florida, Tennessee, and Georgia, and also run commercial lending, consumer and business banking, and human resources.

Still Undecided

"Clearly, the two of them are in a position that nobody else is in," Mr. Woods said. At the same time, he insisted that "no choices have been made" regarding his successor.

C. Stanley Bailey
Point man for expansion drive

C. Dowd Ritter
Retail banking dynamo

John W. Woods
In no rush to choose

Lewis Kennedy

At least one board member denied any tensions in the dual-chairmanship role or a need to designate a chief executive-elect.

"Until it's necessary, it's stupid to make a decision like that, and it's not necessary yet," said Herbert A. Sklenar, a board member who runs a construction materials company in Birmingham. "They're members of a strong team and view themselves as part of a team."

But bankers at competing banks in Birmingham, who asked for anonymity, were inclined to give the nod to Mr. Ritter because of his line experience.

An Amsouth employee for 24 years, Mr. Ritter has at various times headed branch administration, Amsouth's north-central Alabama region, and, ultimately, all retail banking operations.

"For a company with their commitment to grow, you need that kind of leadership," said one Birmingham banker.

The case for Mr. Bailey, who came up on the operations and finance side of the company, rests in his role as point man on Amsouth's highly visible expansion effort.

Buying Spree

Since June 1992, Amsouth has embarked on a campaign of acquisitions in Florida, Georgia, and Tennessee that will have added over $3 billion in assets when all pending deals are completed. The push is arguably the most important strategic move in the holding company's 21-year history.

Mr. Woods was good-humoredly evasive when asked why he didn't simply assign things by designating a single heir apparent.

"I think I've got a few good years left, and if I pick somebody too soon, they might run me off," he said with a laugh.

More seriously, he said that he needed to quickly appoint a company insider to Amsouth's 27-person board because of the unexpected retirement decision of William A. Powell Jr., the corporation's vice chairman and president. Mr. Powell said he will retire one year early on Aug. 1 because of health problems.

No Time for Grooming

Mr. Woods indicated that did not give him time to groom a successor.

"Had Bill [Powell] stayed his full time, we might have waited a little longer," said Mr. Woods, who will retire as chairman in 1996.

But he suggested that he could tip his hand on a successor well before then, perhaps by stepping down from his chief executive post before his official retirement. "The choice for the next CEO will be made well before I walk out the front door," Mr. Woods said. □

Shawmut Buying Mass. Thrift for $180 Million

By YVETTE D. KANTROW

Acquiring Peoples Bancorp of Worcester will make Shawmut the market share leader in New England's second-largest city.

Shawmut National Corp. on Thursday said it will buy Peoples Bancorp of Worcester, Mass., for about $180 million in stock.

The acquisition will give Shawmut the largest retail market share in Worcester, the second-largest city in New England. Peoples, a thrift holding company with $913 million in assets, operates 23 branches in central Massachusetts.

The planned price represents 1.76 times Peoples' book value. Analysts described the price as high but justifiable. Because the deal is an in-market acquisition, it should enable Shawmut to realize substantial costs savings, they said.

'A Clean Thrift'

"It's a good in-market acquisition of a clean thrift," said Michael Mayo, an analyst at UBS Securities, who noted that Shawmut has slightly more branches than Peoples in Worcester.

Following the announcement Thursday afternoon, Shawmut's stock fell $1, to $23 per share, while People's soared $9, to $47.50.

Under the agreement, each share of Peoples will be exchanged for shares of Shawmut valued at $52 a piece.

Peoples, which went public in 1986, remained profitable throughout the New England downturn. For the first six months of this year, the thrift company reported net income of $5.65 million, or $1.67 a share.

Second Deal of Year

Shawmut chairman and chief executive Joel B. Alvord said in a press release that the deal, which is expected to close in the first quarter of 1994, should become accretive to earnings per share during the year.

The Peoples acquisition is the second announced by Shawmut, New England's third-largest banking company at $25 billion of assets, this year.

In March, Shawmut agreed to acquire New Dartmouth Bank in New Hampshire for $143 million.

Sources close to the company, which is based in Boston and Hartford, Conn., said it also submitted rejected bids for two Connecticut thrifts this year, New England Savings Bank and Society for Savings. Rhode Island-based Citizens Financial Corp. acquired New England Savings, a failed thrift. Hartford-based Society was purchased by Bank of Boston Corp. □

EXECUTIVE *changes*

Shawmut Hires Warren Smith To Run Connecticut Urban Unit

SHAWMUT BANK, Hartford, Conn., has hired **Warren Smith** as a senior vice president to manage its newly formed urban business banking group in Connecticut.

Mr. Smith, 44, joins Shawmut from Boston Bank of Commerce, New England's largest minority-owned bank, where he had been president and chief operating officer since 1990.

He will oversee bankers in five cities who provide banking services to small businesses in poor and moderate-income neighborhoods. He will report to **Jan Miller**, senior vice president in charge of small-business banking at Shawmut.

Mr. Smith joined Boston Bank of Commerce in 1984 as senior vice president and senior loan officer. He began his banking career as a corporate analyst for Connecticut Bank and Trust in 1973. — **Franklin Smith**

Warren Smith

NEW ENGLAND

FLEET BANK of Massachusetts, Boston, a unit of **Fleet Financial Group**, has promoted **Joni A. Stone** to vice president of private banking, with special responsibility for calling on corporate executives and entrepreneurs in Greater Boston.

John A. Wolff has been promoted to vice president in Fleet Bank's commercial real estate division. He is responsible for the management and origination of commercial real estate, including construction loans.

MIDWEST

FIRST of America Bank Corp. promoted **Samuel G. Stone** to senior vice president and treasurer. He had been a vice president and director of corporate planning at the Kalamazoo, Mich.-based bank company.

Mr. Stone joined First of America's flagship subsidiary in 1972, serving as an analyst, portfolio manager, and, eventually, head of the bank's trust department. He assumed his responsibilities as director of corporate planning in 1983.

NBD BANK, Fort Wayne, Ind., has appointed **Don Schenkel** senior vice president of sales and marketing.

The executive, who has over 27 years of experience in retail lending, sales, and management, spent 19 years with Lincoln National Bank as senior vice president. He was responsible for retail lending, branch administration, marketing, facilities and property at Lincoln.

MARSHALL & Ilsley Corp., Milwaukee, named two presidents of its subsidiaries.

Mary L. Birnbaum took the post at Marshall & Ilsley Trust Co. and **David W. Schulz** at M&I Investment Management Corp.

WEST

WEST ONE Bancorp, Boise, Idaho, has appointed **Scott C. Benner** senior vice president and chief investment officer in the trust division of West One Bank Idaho.

He was formerly with First Interstate Bank in Los Angeles as vice president and director of taxable fixed-income in the trust area.

MIDDLE ATLANTIC

NATIONAL Westminster Bank NJ, Jersey City, has named **Stacy Loyle** a vice president. He is manager of the bank's Northfield branch office, overseeing business calling, office staff, and operations.

SOUTHEAST

WACHOVIA CORP., Winston-Salem, N.C., has elected **Janet C. Boyst** as senior vice president of **Wachovia Operational Services Corp.**, Charlotte.

She had been regional operations manager for remittance processing services.

Also appointed as senior vice presidents at Wachovia were: **Jane M. Beasley, F. Richard Harmon Jr.,** and **David A. Stevens.**

Ms. Beasley is chief dealer for Wachovia's foreign exchange group in Georgia, North Carolina, and South Carolina.

Mr. Harmon is manager of the corporate trust group and has responsibility for stock transfer and bond trustee services in those states.

Mr. Stevens supervises retail banking for **Wachovia Bank of North Carolina's** Forsyth County operations.

WEST

BANK OF CALIFORNIA, San Francisco, hired **Peter R. Butcher** as executive vice president and chief credit officer.

Mr. Butcher had been with Ameritrust Corp. and Society Corp. in Cleveland. He had been executive vice president and chief credit policy officer at Ameritrust before it merged into Society.

Peter R. Butcher

He also has worked for Midland Bank PLC, London, holding management positions in England, Canada, and the United States. Before that he worked in San Francisco at Crocker National Bank when it was owned by Midland Bank.

Spokane's Sterling Aims To Reopen Branch 'Shells'

By TERRENCE O'HARA

The megamergers in the Pacific Northwest have left a fair number of branches boarded up. But a Spokane, Wash., thrift has devised a way to capitalize on the situation.

Sterling Savings Association calls its current branching strategy "neutron de novos."

"The neutron bomb leaves the buildings intact but the people are all gone," said William Zuppe, the thrift's chief executive. "Neutron de novos are just the shell of the branch, and all the people and money have vanished."

On July 30, Sterling bought six branches that have no core deposits and no staff. It's a kind of hybrid branch acquisition strategy: Not exactly de novo, and not exactly buying an existing branch – because the selling bank has already abandoned the location.

William Zuppe

Yet the strategy will allow Sterling to cheaply enter the Seattle retail market by buying an established banking location. It will take more time, however, to rebuild the business in conformance with Sterling's retail strategy.

The six branches, which will bring Sterling's network to 19, are all at sites closed down by Keycorp since the Albany, N.Y.-based company acquired Puget Sound National Bank in January.

"We feel it is a good strategy for us because there's a lot of unsettledness out there in the consumer community about the changes going on because of these mergers," Mr. Zuppe said.

"We rely on intense consumer service, what we call 'hometown helpful.' [The branches] will be a drag on earnings for a while, but it allowed us into the greater-Seattle marketplace and we felt it was a good time to invest in the future."

Heidi Stanley, head of branch operations for Sterling, said the thrift looked at 19 Keycorp properties originally, and cherry-picked the best six. "We've always been an institution that takes advantage of opportunities like this," she said.

In its 10 years, Sterling has been successful with a variety of expansion strategies. It started in 1983 with $2 million in capital, and now has $1.1 billion of assets. It has grown its franchise through de novo branching and government assisted transactions, both before and after implementation of the Financial Institutions Reform, Recovery, and Enforcement Act. It has even overcome capital deficiencies in all three regulatory categories brought about by the 1989 law.

Confident of Wooing Keycorp Customers

Ms. Stanley said the new offices are being "painted green," referring both to Sterling's colors and the remodeling and branch setup process. Although she wouldn't make a prediction, she said she is confident the branches can reattract a strong core deposit and loan base left behind by Keycorp.

Charlotte Chamberlain, a thrift analyst at Los Angeles-based Wedbush Morgan Securities, said Sterling's strategy has been right on target.

Ms. Stanley said there are still dozens of branch properties on the market left over from the Keycorp-Puget Sound and BankAmerica-Security Pacific mergers, and Sterling is actively being pursued as a purchaser.

Golden Gate Bank to Be Bought By Client Who'll Pump In Capital

By ROBERT B. COX

Golden Gate Bank, a San Francisco-based private bank, has signed an agreement to be acquired by one of its longtime banking clients.

In agreeing early this week to purchase the $72 million-asset bank, Leo K. W. Lum, a San Francisco investor and former banker, agreed to infuse Golden Gate with badly needed capital.

Private Banking

The bank will be acquired by Pacific Rim Bancorp, a bank holding company established by Mr. Lum to complete the transaction.

Suffering from Downturn

Golden Gate is the healthiest of a troika of banks specializing in private banking in San Francisco that has suffered from the severe economic downturn affecting the Golden State. The other two are Pacific Bank and Bank of San Francisco.

"The state's economic problems have kind of hit us like a virus out here," said James R. Woolwine, Golden Gate's president and chief executive.

Golden Gate, though it posted a loss a loss of $2.3 million in 1992, earned $178,000 in the first half of 1992. The bank's return on average assets was about 0.5% for the first half of the year.

By contrast, Bank of San Francisco posted a $4 million loss for the second quarter. The $312 million-asset bank ousted its second chief executive in two years, and its chief investor has pumped $32 million of capital into the ailing institution.

Pacific Bank, with $505 million of assets, lost $4.3 million in the second quarter. The bank brought in a turnaround specialist as chief executive, and has engaged an investment banking firm to raise $25 million of capital.

Boost Required

Golden Gate – acting under an administrative order from the Federal Deposit Insurance Corp. and state banking authorities – needed to raise capital.

Though terms of the deal were not disclosed, Mr. Lum agreed to put double the amount of capital required by regulators, Mr. Woolwine said. Mr. Lum will replace Sharon M. Croom as chairman of the bank. Along with her husband, George, Ms. Croom was the bank's majority stockholder.

Mr. Lum, a client of Golden Gate since 1985, was chief executive of Global Union Bank, New York, and Summa International Finance Co., Hong Kong. He also held senior positions in the domestic and international offices of Mellon Bank Corp. and First National Bank of Boston.

California's woes have hurt the bank, which is under an FDIC order.

Mr. Lum plans to continue Golden Gate's private banking strategy, said Mr. Woolwine. "With the additional capital, he plans to grow the bank and make sure the problems are behind us," Mr. Woolwine said.

Thrifts: Free Up Affordable-Housing Funds

By BILL ATKINSON

For months, the Savings and Community Bankers of America has been prodding Eugene A. Ludwig, the comptroller of the currency, to put in place a 1991 law that would reduce the capital thrifts would have to hold against multi-family residential housing loans.

The Savings and Community Bankers organization, which represents 2,000 savings institutions, says if Mr. Ludwig would sign off on the rule it would free up more funds and spur savings institutions to make more affordable-housing loans. The lobbying effort hasn't yet paid off. The following letter is an excerpt of the correspondence sent to Mr. Ludwig from Paul A. Stevens, president of the organization.

Washington Mailbag

I am writing to urge you to lead the federal banking agencies in taking a timely and important step that could help ease the credit crunch and make more funds available for affordable housing.

This step simply involves carrying out the directive of section 618 of the Resolution Trust Corporation Financing, Restructuring, and Improvement Act of 1991, which provides a capital-related incentive to depository institutions to increase lending for multifamily housing.

By failing to promulgate the required rule, the agencies have missed a valuable opportunity to help achieve the dual objective of increasing general credit availability and addressing affordable-housing needs.

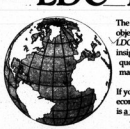
Because statutory and regulatory capital pressures push insured depository institutions away from making multifamily housing loans, the credit crunch in that sector of the economy is exacerbated. I am sure you would agree that a substantial portion of the nation's affordable housing must be addressed in the multifamily sector.

The final rule is long overdue. I hope this proposal will have your most serious and sympathetic consideration.

Paul A. Stevens
President
Savings and Community Bankers of America
Washington

Opportunity is Spelled LDC DEBT REPORT

Emerging Markets are risky, notoriously inefficient, known for changing rules and limited public disclosure. Knowing what's really going on spells the difference between opportunity and loss.



The *American Banker*'s weekly *LDC Debt Report* delivers the most accurate, objective, succinct information available on emerging-market debt. *LDC Debt Report* provides the astute investor with news, reviews, and strategic insights. The popular Market section summarizes each week's developments, quoting bid and offer prices for 26 developing-country loans and 18 emerging-market Eurobonds. It also tracks the performance of selected equity markets.

If you must know what's going on in key emerging markets, recent trading, economics and politics, the World Bank, and more, LDC DEBT REPORT is a must read every week.

Read it free for 4 weeks! Just fax your letterhead to 212-943-7852, or call Hans Winberg at 800-407-8241

Equitable Federal Confident Stock Offering Can Bail It Out

By BILL ATKINSON

Ailing Equitable Federal Savings Bank, Wheaton, Md., is seeking to raise $6 million in a public offering.

The $196 million-asset mutual is converting to a federal stock savings bank under close government supervision because it does not meet two out of three capital requirements set by the Office of Thrift Supervision.

The thrift will use proceeds from the sale to bring itself into capital compliance.

"Our investment bankers . . . say it's [the offering] going quite well," said Equitable president Gordon N. Luckett. "I do not think we will contend it."

Shares Offered at $10

Equitable began offering 600,000 shares at $10 each on Aug. 10. It expects to net from $4.5 million to $5.2 million from the sale. The offering expires Aug. 31. Stock is being sold to management, employees, depositors, and the community. The offering is being underwritten by Capital Resources Inc.

As of June 30, Equitable was $1.13 million short in meeting the core capital test, and $4.30 million short on the risk-based capital requirement. Equitable needs $4.5 million to reach capital compliance.

The thrift is operating under government agreements because of its capital deficiencies.

'Watching the Store'

"Government regulators are watching the store," Mr. Luckett said. "They have been good to us so far."

He hopes Equitable will follow other area thrifts that have successfully raised funds. Washington Federal Savings Bank, Herndon, Va., recapitalized itself in June by raising $15.3 million, and Ameribanc Savings Bank, Annandale, Va., raised $35 million last December.

"I would be surprised if it [Equitable's sale] wasn't immensely successful," said Ameribanc president David Campbell.

Investor Confidence Rising

Mr. Campbell said public offerings he is aware of in the area are oversubscribed because investors have more confidence in the economy and the industry.

Lewis Sosnowik, a broker with Koonce Securities Inc., Rockville, Md., said there are better deals than Equitable.

He recommends Home Federal Savings Bank, a healthy Washington-based thrift that is selling for $9.50 a share.

"Basically, what they [Equitable] are saying is let's see if the public will bail us out," Mr. Sosnowik said.

The Wheaton, Md., mutual thrift plans to use proceeds from the $6 million sale to bring itself into capital compliance.

Hurt by Construction Loans

Equitable's problems stem from commercial construction lending. Nonperformers climbed to $19 million in 1991, or 7% of assets. The thrift lost $718,000 for its fiscal year ended Sept. 30, 1992, and $3.1 million in fiscal 1991.

Because of the problems, Equitable's auditors last year raised doubts about the institution's ability to survive.

Equitable's management has made strides in correcting problems. The thrift earned $315,000 for its six months ended March 31. Nonperforming assets have been trimmed to $11.7 million, or 5.17% of total assets. And construction and development lending has been discontinued.

Mr. Luckett said Equitable will focus on one-family to four-family home loans. "I think we are going to be fine," he said. "We still have to work out the balance of our problem assets. Like anybody else, we have to go forward from here."

Bankers' Bank to Drop Fed as Its Securities Custodian

By JAMES B. ARNDORFER

In anticipation of new daylight overdraft regulations, the credit union industry's largest bankers' bank will stop transferring up to $22 billion in securities through the Federal Reserve Bank of Kansas City.

In October, Overland Park, Kan.-based U.S. Central Credit Union will move its securities, which have a par value of between $20 billion and $22 billion, to an undisclosed custodian charged with shifting them to and from U.S. Central.

U.S. Central is the Kansas City Fed's second-largest securities transfer customer, moving between $700 million and $1.3 billion in securities a day through the Fed.

Revenue Loss Called 'Minor'

Barry Robinson, a Kansas City Fed spokesman, said the facility would suffer some "minor" revenue loss, and the effect on the Federal Reserve System would be "zilch."

Last year the Kansas City Fed made $48.3 million in fees from securities transfer services. Mr. Robinson did not say how much came from U.S. Central.

"It's a minor portion of a smaller revenue [for the Fed] service," said Mr. Robinson.

Under U.S. Central's new relationship, the custodian's reserves would absorb any overdrafts stemming from unexpectedly large securities purchases by U.S. Central's affiliates.

Would Be Subject to Penalties

If U.S. Central were to keep the securities in the Fed, in which it holds no reserves, it would have no cushion against overdrafts and would have to pay penalty fees.

"We wouldn't have undertaken this initiative absent the daylight-overdraft issue," said U.S. Central president James R. Bell, who stressed that he has been happy with the Fed's service. In a move toward consolidation, U.S. Central also is placing between $15 billion and $17 billion of securities currently under another private-sector custodian with the new one.

James R. Bell
Seeks to avoid overdraft fees

Working through 42 corporate credit unions, U.S. Central acts as a custodian for about $2B billion in securities held by other credit unions. U.S. Central and the other corporate credit unions also hold about $9 billion in securities on their own.

3 Years in the Making

Roughly 24,000 securities, chiefly government and agency securities, are in U.S. Central's safekeeping.

U.S. Central made the decision three weeks ago. It had been discussing what to do since 1990, when the Fed announced it would be changing its daylight overdraft policy.

U.S. Central and the Kansas City Fed will will maintain their wire funds transfer relationship, Mr. Robinson said.

Beginning April 14, 1994, the Fed will impose a penalty on daylight overdrafts by banker's banks that do not hold reserves. Under a proposal currently out for comment, banker's banks would pay a higher penalty fee than regular banks and not be eligible for a cap.

Avoiding Overnight Overdrafts

The Fed's announced goal is to eliminate the threat of overdrafts that would cause it to extend credit overnight.

Although the Fed has not yet determined a penalty rate, it has decided such fees will be levied.

"We have been growing our business lately, and we would not be able to do so" under the Fed's overdraft policy, Mr. Bell said.

U.S. Central has not incurred overnight overdrafts, he added. Mr. Bell also said determining how many daylight overdrafts U.S. Central has made in the past would be impossible.

U.S. Central is acut.ly sensitive to daylight overdrafts. Security purchases made by corporate credit unions for delivery to U.S. Central hit its transaction account at the Fed. Because U.S. Central can't predict when those debits will appear, it has no way of ensuring enough money will be available to cover the purchases -- short of overfunding its transaction account. Because U.S. Central does not hold reserves it would incur an overdraft.

U.S. Central would be particularly vulnerable to overdrafts early in the morning, when it is still awaiting the return of funds invested in overnight money markets.

Under U.S. Central's new relationship, the custodian's reserves would absorb any overdrafts without any extra charge to U.S. Central. ❑

Realtor-Turned-Regulator Jumps Into Supervision with Both Feet

By DEAN NEALSON

WASHINGTON — When Shirlee P. Bowne was appointed vice chairman of the National Credit Union Administration's three-member board in October 1991, she said she didn't know much about credit unions.

But Ms. Bowne, 57, who was president of her own real estate brokerage company in Tallahassee, Fla., was a quick study.

"She's one of our most active board members," said Mike Riley, director of the Office of Examination and Insurance, a division of the NCUA. "She does her homework. Speaking from the field side, she's done a lot of studying."

Realty Background a Plus

H.C. Klein, chairman of the National Association of Federal Credit Unions, said Ms. Bowne's background was a plus.

"I've noticed that we've not had a lot of complaints on real estate since Shirlee came on board," he said.

Mrs. Bowne got the credit union regulatory post in part because she was a bigwig in the Florida Republican Party, having served as its treasurer. Her term runs until April 1997.

She said the key questions facing the industry in the future include the field-of-membership question and the impact of the recently enacted Truth-in-Savings law.

High Implementation Costs

Ms. Bowne (pronounced bo-NAY) said the implementation costs of Truth-in-Savings regulation for credit unions are likely to be quite high.

Shirlee P. Bowne
Has done a lot of fieldwork

"The regulation will take a lot of their time and attention," she said.

Ms. Bowne doesn't see this law as the onset of a period of excessive regulation, however, and she cited a study that showed "burdensome!" regulation of credit unions wasn't a problem.

Mrs. Bowne says Truth-in-Savings will be costly to implement.

"We sent out a survey to 1,300 credit unions to find out what regulations hamper their business and don't help the consumer. We received 63 replies, few of which were about NCUA regulations," she said.

Ms. Bowne attributed that low number to the NCUA's frequent review of regulations and its attempts to eliminate unnecessary ones.

There is a great deal of pressure to keep costs down, Ms. Bowne said, citing the NCUA's goal to keep credit unions "safe and sound."

Against Single Regulator

She doesn't pay much attention to talk of establishing a single "supervisory" agency for both banks and credit unions.

"Credit unions would not benefit," she said. "Maybe some of the other groups would."

She also cited the high level of confidence in the credit union industry as a reason there won't be any major changes in its regulation.

"The incident in Rhode Island was the only big blip," she said, referring to the collapse of that state's private credit union insurance fund in 1990.

Mr. Nealson was a summer intern in the Washington bureau.

Trade Group Adds to Staff

The National Association of Federal Credit Unions has added two staff members.

Patricia E. Finkbohner has been named director of membership and will help director Janet Miles recruit credit unions.

Elizabeth V. Williams has been hired as exhibition and advertising manager. ❑

Former Exec of Private Insurer Is Charged with Theft by R.I.

By PETER SCHOENKE
Special to the American Banker

Former Rhode Island Share and Deposit Indemnity Corp. president Peter A. Nevola faces up to 66 years in jail and $33,000 in fines on allegations that he stole money from his former employer through campaign contributions.

The state of Rhode Island, which is prosecuting the case, alleges that on 12 different occasions Mr. Nevola was over-reimbursed for campaign contributions or paid for contributions he never made from 1987 through 1990. Mr. Nevola allegedly gained $7,650 from the "scam."

"These allegations are another example of the sort of insider's benefit and greed that prevailed at RISDIC," said Rhode Island Attorney General Jim Reilly. "Nevola not only personally benefited from this scam, but he did so at the expense of RISDIC, and ultimately the depositors who funded RISDIC."

Mr. Nevola, who was reached at his home in Cranston, declined to comment, and referred calls to his attorney.

Latest Prosecution

The allegations against Mr. Nevola are the latest in the attorney general's attempt to find and prosecute those accountable for the Jan. 1, 1991 failure of the private insurance company that insured deposits of credit unions and cooperative banks. The insurer's collapse led to the liquidation of four of the state's largest credit unions, which were unable to merge or qualify for federal insurance.

A special state commission to study the collapse recommended civil action against 50 people, seven companies, and a law firm. The state has already won a judgment against Joseph Mollicone Jr., the former president of the now-defunct Heritage Loan and Investment Co., who was convicted in April of 26 counts of embezzlement and totaled 13 million. Six more individuals involved in the collapse are scheduled for trial this fall.

The investigation has reached Mr. Nevola before. Mr. Nevola and Joseph Bellucci, former chairman of the insurer and president of the former Providence Teachers Credit Union, were acquitted last year on charges of bank fraud and conspiracy.

The latest charges include six felonies of obtaining money under false pretenses, including one that accuses Mr. Nevola of receiving money for campaign contributions made in the name of his wife and 14-year-old daughter. Mr. Nevola will be arraigned on September 1.

Mr. Schoenke writes for the Medill News Service.

Rogers Wins Commissioner's Post in Texas

By JAMES B. ARNDORFER

Robert W. Rogers, deputy commissioner of Texas credit unions since March 1988, has been named commissioner over three other finalists.

The eight members of the Texas Credit Union Commission unanimously voted for Mr. Rogers.

Mr. Rogers, who starts immediately, will be the chief regulator for Texas' 302 state-chartered, federally insured credit unions, which hold assets of $6.6 billion.

Switch to Federal Insurance

He succeeds John Hale, who resigned on July 1 amid controversy over his handling of the conversion of state-chartered credit unions from private to federal deposit insurance. The conversion process began in January 1991 and was finished in May 1993. All Texas credit unions are federally insured.

James Ratzman, director of examination and supervision for the Texas Credit Union Department, said Mr. Rogers was the natural choice.

"I'm not surprised at all," Mr. Ratzman said. "He's a very capable person with quite a bit of experience in credit union management and regulation."

James Williams, senior vice president of the consulting firm

Mr. Rogers played a key role converting Texas groups to federal insurance.

Ferguson & Co. and a Texas commission member during the '70s, said Mr. Rogers' close involvement in the conversion process played a role in his getting the nod.

"He has the experience of having been through the thick and thin of a situation [the conversion of state-chartered credit unions to federal insurance] that will be a vital concern," Mr. Williams said. "I would think the commission would want someone with historical perspective to take the reins."

In 1977 Mr. Rogers began working as a state examiner for the department. By the time he left in 1980 he was a supervisory examiner. From 1980 to 1988 he worked as an executive for three credit unions, including a stint during 1984-88 as president of UARK Federal Credit Union, which serves the University of Arkansas in Fayetteville. In March 1988 he returned to the Texas department as deputy commissioner.

All four finalists, selected from a list of 13 candidates, were interviewed by the commission on Monday.

The three other finalists were Barbara Clore, president of Associated Industries Credit Union of Deer Park and former chairman of the Texas Credit Union League; Alan Ford, president of THD Seven Credit Union in San Angelo; and Sharon Moore of Dallas, former examiner with the Texas Credit Union Department.

Prudential Woos Small Groups

By JAMES B. ARNDORFER

Prudential Securities Inc. has created a product aimed at small to midsize credit unions.

The mortgage-backed securities -- called "CUBs" for Credit Union Bonds -- have stated maturities of 10 years and are tailored for credit unions.

While large credit unions have participated in the collaterized mortgage obligation market for a long time, smaller ones haven't, noted Ann Kazel, a spokeswoman for Prudential.

Backed by Fannie, Freddie

"They would like this security for its safety, its liquidity and its yield," she said, mentioning the three main concerns credit unions have when making investments.

The bonds have the security of being backed by the Federal Home Loan Mortgage Corp. and the Federal Pational Mortgage Association.

The yields are greater than those on U.S. Treasury securities or triple-A-rated corporate bonds of comparable duration, Ms. Kazel said.

They cannot extend beyond the stated average life. Also, they cannot extend past the stated final maturity of 10 years.

"Credit unions prefer shorter investments," Ms. Kazel said.

Stringent Guidelines

CUBs were designed with Federal Financial Institutions Examination Council rules in mind.

The National Credit Union Administration adopted these more stringent guidelines -- used by banks and thrifts -- to replace its own rules in July.

The first offering, on Aug. 2, represented $3.2 million of a $750 million CMO issue -- and it was sold out, according to Ms. Kazel.

1st Tennessee May Have Found Bargain in MNC Unit

By EDWARD KULKOSKY

Details of First Tennessee Bank's $115.6 million acquisition of Maryland National Mortgage Corp. may have seemed like good news to potential sellers of mortgage assets

NEWS ANALYSIS

when they were announced on Monday. The price seemed to put a fairly hefty value on the originations business.

But First Tennessee may actually have struck a shrewd bargain.

Judging from the details of the balance sheet the bank is acquiring, the price looks to be much more in line with other recently announced deals, such as PNC Bank Corp.'s purchase of Sears Mortgage Group and the GE Capital acquisition of Shearson Mortgage.

A Rare Glimpse

The unit of Baltimore-based MNC Financial Inc. appears to be a good fit with First Tennessee's strategic objectives.

The bank, a unit of First Tennessee National Corp., distributed a presentation on the deal to security analysts after its announcement on Monday.

The unusually detailed document provided a rare view into how the valuation of a mortgage business is determined.

Doyle W. Bradsher, executive vice president of First Tennessee and head of its mortgage business, confirmed in the presentation that the bank had valued MNC's $3.9 billion servicing portfolio at about $40 million.

This would leave about $75 million for the originations business. But the analysts also were told that the MNC unit's balance sheet had some assets that offset the purchase price, including investment securities (see accompanying table).

Valuing Originations

The company's figures put the value of the originations business at $25 million to $30 million and assigned a value of $45 million to $50 million to these other assets, referred to as "adjusted net worth."

Mr. Bradsher conceded in an interview that the additional assets could not necessarily be separated from the originations business.

But the value of the originations business was clearly something less than $75 million.

Anatomy of a Deal

Assets and liabilities of Maryland National Mortgage being acquired by First Tennessee; dollars in millions

ASSETS	
Cash/cash equivalents	$1
Investment securities	35
Assets held for sale	411
Loans	24
Intangibles	6
Other assets	27
TOTAL	504
LIABILITIES AND EQUITY	
Borrowed funds	$421
Other liabilities	23
Equity	60
TOTAL	504

Source: First Tennessee

In fact, the valuation may well have been even lower but for First Tennessee's determination to lock up the deal.

Growing the Core Business

"This is part of a strategy we developed over last few years of acquiring banks and trying to grow our core business," said Mr. Bradsher.

"We are trying to emphasize fee income in business lines we think we can compete in effectively. Some we are already significant in, such as bonds and check clearing."

He also said mortgage banking had been targeted as a business to be in. "We've been in it for 30 years and we understand it," he said. "But you can only grow so much internally."

Employees to Remain

First Tennessee plans to keep MNC's present management in place and to retain all 762 of the unit's employees.

One source familiar with valuations in the mortgage business took this as an indication that First Tennessee believed the originations business would be a profit center rather than merely a way of accumulating servicing rights.

He also said the $40 million price attributed to the servicing portfolio might be high. Given its average interest rate of 8.4%, he said, vulnerability to prepayments remain high and the lifespan of the income stream could be short.

Mr. Bradsher said there would be one significant change in business strategy. He said First Tennessee would retain almost all the servicing rights on loans it originates.

The unit had previously sold the bulk of its rights – about 71% last year – to bolster its short-term profits.

Getting What It Wanted

Pro forma figures provided by First Tennessee showed the unit lost $6.6 million pretax on operations last year and had financing costs and amortization of intangibles amounting to $14.2 million, giving it a pretax loss of $20.8 million.

The sale of servicing produced a gain of $33.1 million, resulting in pretax income of $12.3 million and net income of $7.3 million.

The deal, First Tennessee said, would help it to use excess equity in its core banking business more effectively and further diversify its sources of fee income.

So it clearly is getting what it wanted for a price it believes to be favorable. □

American Residential Opens Inner-City Branch in San Diego

By CHRISTOPHER NOBLE

American Residential Mortgage Corp. has opened the first of several inner-city branches that it is planning as part of a bid to increase its lending to minorities across the country, the company announced.

La Jolla, Calif.-based American Residential said the opening of the branch last Friday in San Diego was the first move in its "fair lending initiative," which is designed to underscore its commitment to minority borrowers. Six other branches are planned.

"American Residential is pleased to take a leading role" in helping minorities to own homes," said John Robbins, American Residential's chief executive, at the branch's opening ceremony.

The office has been set up as a community-based operation and will recruit its staff of about 10 from the neighborhood it serves.

Mr. Robbins said the idea was to create an environment in which minorities can feel comfortable.

"We're down there to be part of that community – to participate and be a good citizen, not just to make loans," he said.

Mortgage bankers have increasingly been adopting the philosophy that they can do well by doing good.

Mr. Robbins cited projections by the Mortgage Bankers Association of America that 40% of all loan originations in the next decade will come from minority applicants.

He said that until now, little attempt had been made to market mortgages to minorities or to create lending office environments "tailored to minority audiences."

The company expects minorities to be a big source of loan growth.

The office has been operating with a skeleton staff for about a month. It is expected to reach full operating strength before the end of the year, a spokeswoman said.

In addition to lending, the branch will hold seminars on the responsibilities of home ownership. It will cooperate with community organizations to promote homebuying. It will also offer a variety of low- and moderate-income loan products.

Mr. Robbins said American Residential has a responsibility to help inexperienced borrowers navigate the complicated process of buying a home.

"The office will offer the education and our loan officers will give the extra time and special attention that research shows many minority applicants require."

To Offer All Loan Products

"American Residential wants to be at the forefront of this effort," Mr. Robbins said.

"We're confident that we have the education and loan programs, the people and the settings that will welcome minority applicants to the concept of home ownership."

The branch will offer all 40 of American Residential's loan products but will feature the Community Partners program created by the Federal National Mortgage Association.

Community Partners offers loans with a low down payment to inner-city borrowers whose income does not exceed the area's median.

American Residential said it plans to open similar branches soon in Oakland, Calif.; Philadelphia, and Denver. Other offices will follow, the company said. □

Sadly for you, politicians in D.C. agree on one thing.

People who've made careers out of being contrary are declaring that the government's relationship with the secondary mortgage market is going to change dramatically. They all know about HUD plans to toughen enforcement, new pressures on Fannie and Freddie, and the revival of Ginnie Mae as a major player. And if you want more evidence, look to Capitol Hill, where Congress is toying with mortgage bankers subject to the same regs as commercial banks.

How to react? You could wax nostalgic—and get clobbered by the government and your competitors. Or you could read *The Mortgage Marketplace*.

Every Monday, in less time than it takes to finish your morning coffee, *The Mortgage Marketplace* tells you about the new rules and ideas that could keel haul your secondary operations. It names the biggest mortgage company participants in Ginnie, Fannie and Freddie issues. And it scans the horizon to determine what types of loans, and borrowers, that now are considered exotic could soon enter the pipeline of conforming loans.

There's no debate—new regs are coming. What's still at issue is whether you'll be ready for them.

Firms Help Lenders Assess Environmental Risk

By JAMES H. SAPT

As mortgage lenders become increasingly concerned about toxic-site liability, two small firms are attempting to provide early warning systems for environmental risk.

Environmental Data Resources, Birmingham, Mich., and Toxics Targeting, Ithaca, N.Y., both provide environmental risk management services to mortgage bankers and secondary investors.

Toxics Targeting maintains a data base of 13 types of government-reported toxic sites in the southern tier of New York, said Walter Hang, the company's president.

The company compiles local, state, and Federal data and provides clients with detailed maps and reports on sites up to a mile from a specified address.

Assessing Risk

Mortgage providers may elect to use Toxics Targeting at two important junctures, said Mr. Hang.

First, at the time the mortgage is underwritten, lenders may compel prospective homeowners to purchase a report as part of due diligence.

Second, and more important, some banks obtain environmental risk management reports if they are forced to take title because of default. If a report showed that the property was near a potentially hazardous site, a more thorough on-site investigation would be launched.

Banks or other title holders can be held liable for the cost of toxic cleanup.

Such cautious behavior may be necessary because banks that hold title to seized properties for extended periods run the risk of being held to have engaged in management. If such a property includes a toxic waste site, the bank or holder of the title may become liable for the cost of cleanup, according to Mr. Hang.

Maps and Data

The company's services also are used by investment banks to check commercial and residential properties underlying pools of mortgage securities.

Environmental Data Resources provides a similar service on a nationwide basis.

The company offers to lenders and secondary-market professionals the EDR-Radius Map, a package of maps and environmental risk data gathered from public sources. The service is available for $200 to $300.

The company, along with minority investor Dun & Bradstreet Corp., plans to roll out a software product in the fall that will be able to be used as a screening tool for large numbers of loans. The service will provide users, typically investment banks screening secondary pools, with a summary of information.

Financial Appraisals

Bold Property Information System of New York City also sells risk containment information to the mortgage industry.

The company specializes in guiding clients through the jungle of the New York cooperative and condominium market.

Bold provides about 750 appraisal reports a month on co-op and condominium financial risk to banks, said Melissa Chefec, director of marketing at Bold. Bold provides reports only on property in the New York City area. □

Fannie Financing Affordable Homes

WASHINGTON — Fannie Mae will invest in a $50 million loan commitment made by Residential Funding Corp. to finance more than 1,550 affordable single-family homes throughout California.

The loan is to a development partnership that includes the California Public Employee Retirement System, known as Calpers, and Hearthstone Advisors. Calpers is one of the largest public pension funds in the nation, with some $70 billion in assets.

Greg Schultz, executive vice president of Minneapolis-based RFC, said: "The home building industry in the United States has been devastated by the withdrawal of banks and savings and loans, and we are pleased with the opportunity to be able to provide credit facilities to the home building industry."

The loan will finance new single-family home developments in California intended primarily for first-time and second-time homebuyers.

The funds can be used to build homes with a sales price that will allow for a mortgage that does not exceed Fannie Mae's 1993 limit of $203,150.

Fannie Mae will purchase from RFC, the lead agent, a 50% interest, up to $25 million. The pilot program, developed with the assistance of the National Association of Home Builders, helps provide lenders a secondary-market outlet, through Fannie Mae's investment, for loans to builders.

HIGH YIELD REPORT

lets you hear the heartbeat ...

...and feel the pulse

of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt

This objective, succinct, weekly newsletter delivers money-making tips on high-yield investments.

Marketing One Thrives Helping Banks Sell Funds

By KEITH DuBAY

When Paul Patsis took over Marketing One in 1989, he had trouble on his hands.

The Portland, Ore., company, set up to market mutual funds and annuities through thrifts, was hemorrhaging red ink as clients fell victim to the S&L crisis.

At its most troubled, in 1989, Marketing One lost $3 million. "I can't even say that without getting a lump in my throat," Mr. Patsis said.

But that's in the past.

Dramatic Turnaround

Since joining Marketing One as chief executive officer, Mr. Patsis has engineered a remarkable turnaround.

He came to the 10-year-old company from Colonial Penn Insurance Co., where he was president.

Under Mr. Patsis' guidance, Marketing One sold more than $1.9 billion in mutual funds and annuities through 100 client banks last year.

This comes after Mr. Patsis set Marketing One on a course of courting commercial banks, which a few years ago were just starting to get into the investment products business.

He changed the company's thrust, deciding to concentrate primarily on mutual funds.

Mutual funds now account for about 80% of Marketing One's sales through banks.

Hungry for High Returns

Annuities, though offering higher commissions, were less attractive to customers craving the higher returns of stock investments, he said.

Mr. Patsis also set about cleaning house. He found the company crippled by a severely bloated payroll in which dozens of middle managers clogged the organizational structure.

The former regime thought nothing of spending $1 million to fly 200 S&L executives to luxury resorts for lavish conferences, Mr. Patsis said. "We were fat, dumb, and happy."

Mr. Patsis did away with the CEO conference and jettisoned more than 60 positions, many of them middle management.

All told, Marketing One now has 125 employees, and about 300 brokers on its payroll. Another 400 brokers are employed by banks using Marketing One's program.

Mr. Patsis said his goal was to place more people on the customer contact level and fewer on the executive level.

Also, where possible, Mr. Patsis decentralized Marketing One's operations to allow speedier service to clients.

For example, the company's eastern regional servicing operation in Philadelphia has a regional vice president with authority to make most day-to-day decisions.

In the old days, the East Coast representative would call a mid-level executive who might get back with an answer in a few days, Mr. Patsis said.

Checks and Balances

Mr. Patsis also instituted sharp checks and balances to keep down costs at the restructured company. Gone are the days when salesmen could offer clients special deals without a thought about what it would cost, Mr. Patsis said.

Now, the company's number crunchers approve every deal.

As a result, profits in 1992 were the second best in the company's 10-year history, said Mr. Patsis, though he declined to give specific figures.

Marketing One can keep some secrets. The company is privately owned by Jupiter Industries, Chicago, and Head Insurance Investors, New York. The partnership purchased Marketing One and its sister company, Integon Life Insurance, from troubled Southmark Corp., Dallas, in 1990.

Marketing One includes Integon products among the annuities it offers to banks.

$250 Million Threshold

Marketing One primarily targets banks with more than $250 million in assets.

Smaller institutions simply can't support the rigorous training and extensive service that customers receive, company officials say.

In addition to products, clients can receive distribution, clearing, information support, product due diligence, advertising, and training services from Marketing One.

The company's client roster, spanning 37 states, includes Wells Fargo & Co. in California and First Fidelity Bancorp. in New Jersey.

First Fidelity is a plum Marketing One landed in June. The marketing company is now recruiting about 200 sales representatives to handle the Lawrenceville, N.J., bank's expanded investment products program.

Growing Demand Seen

First Fidelity is among the growing swell of financial institutions that sold $12 billion of investment products in 1992.

Mr. Patsis compares the sales figure to financial institutions' $2.4 trillion deposit base and says there is room for growth on the investment products side.

If banks penetrate 1% of that market, there would be $24 billion of business, he said. "You could say we're halfway there."

To help banks boost their business, Marketing One is nudging clients to stay in touch with changing times.

Marketing One sales manager Reid Reichert said employees can take a page from their lives to identify changing needs. For instance, he said, he had planned to retire from the bank he worked at previously with the proceeds from his past five years' salary. Those five years paid him the biggest paychecks of his career.

Like many others, his situation provided an opportunity for a bank to get involved with his financial planning. The challenge is to incorporate retirement planning into bank's investment products programs, Mr. Reichert said.

"There's a whole industry that has been springing up around that," he said.

Mr. Reichert also believes banks should be offering investment products to a larger customer base.

"The bank market has not been able to drop itself down to the 50-to-55-year-old who's still in the accumulation stage, as opposed to the customer who's in the distribution stage," he said.

These and other untapped venues offer almost unlimited opportunities for banks in the investment products business, Mr. Patsis said. "It's just begining."

And that means organizations like Marketing One should continue to thrive, he said. "The future looks bright for third-party marketers. Banks don't have the staff or time to develop an expertise in this area." □

PAUL PATSIS, above, CEO of Marketing One, sees a lot of room for growth in investment products sales at banks. At right, instructor Leslie Andre does some role playing to show how to sell to customers.

American Banker's *"Ranking the Banks"*

Training Is Marketing One's Selling Point

By KEITH DuBAY

Marketing One points with pride to its training programs.

These sessions, for brokers and other bank representatives, help the Portland, Ore., company distinguish itself from the pack of third-party marketers, officers say.

Training traffic is heavy at Marketing One's headquarters, where most of the courses are held.

Last year the company trained 1,200 people, including many involved in a large program rolled out by Wells Fargo & Co., San Francisco.

Demand Has Accelerated

In all, 5,000 brokers and bank employees have been trained by Marketing One during the last 10 years.

Most of the training came in recent years, as banks stepped up their investment- product programs.

To keep pace, Marketing One recruits licensed brokers and helps them hone their skills and adapt to the bank environment.

"We think we have a benchmark training program," said company spokesman Michael Maher. "It's something the larger clients demand."

Marketing One offers a variety of training programs.

Variety of Programs

Sales reps can cover mutual funds or annuities in four-day sessions, or come in for eight-days and receive training in both investment product areas.

Marketing One has seven-day sessions for administrative assistants and five-day programs for sales managers.

Last year, the company booked 3,000 nights worth of hotel rooms to accommodate the crush of bank representatives taking these courses.

Bank brokers make up the lion's share of those undergoing training, and Marketing One tailors its approach to them.

A Softer Sell

The company sensitizes brokers to the softer-sell cultures of banks.

This is especially important since many brokers do not come from banks.

Brokerage firms used to supply most of Marketing One's recruits for bank programs, but now they account for just a quarter of trainees.

Also represented are brokers from other bank investment-products programs and insurance sales representatives.

Cooperation Pays Off

One key area Marketing One focuses on is branch relations, or teaching brokers how to win over the rest of the bank staff to their cause.

Brokers receive three times more referrals in a cooperative branch than in one that's hostile to the broker's presence, a Marketing One study found.

"A branch can literally kill them," said assistant training manager Lisa Schmitt. "It's a whole different ball game" for brokers that come from wirehouses.

If they "come in with a knock-down, high-sell attitude, it won't work," Ms. Schmitt said. "Branch people typically are protective of the customers."

Sales representatives should not push customers who don't feel confident with investment products, instructor Leslie Andre told a recent seven-member class.

Time Limits Set

Brokers should also wrap up sessions with customers in a specific amount of time, she said.

Class members took her advice to heart. "It's a lot more structured," said Dan Frydrych, who serve as a sales rep at a thrift in Arizona.

But Mr. Frydrych firmly believes banks are the place to be. "There are a lot of people in banking who believe this is an evolution. You've seen mutual fund assets exceed bank deposits."

Access to More Clients

Paul Sweeney, a broker at a midsize Florida bank, is making the transition from a brokerage background. He finds it "a bit awkward," but adds, "it's easy access to a lot of clients. The name recognition is real good, and there's a degree of flexibility."

Karin Cummins was a customer service manager for a small savings and loan in Sequim, Wash. "I was burned out," she said.

She decided to switch to selling mutual funds and annuities, because "I missed the customer contact." □

A key area Marketing One focuses on is branch relations, or teaching brokers how to win over the rest of the bank staff to their cause.

Last year the company trained 1,200 people, many from Wells Fargo.

"Please find out about this structured finance deal and get back to me."

AT&T to Refine Its Marketing Through Artificial Intelligence

By STEPHEN KLEGGE

JACKSONVILLE, Fla. — AT&T Universal Card Services plans to refine its credit card marketing systems with so-called artificial intelligence.

"Definitely within the next year, we'll be using AI tools," said Leslie Palmer, vice president of emerging technologies at the credit card unit of American Telephone and Telegraph Co.

With artificial intelligence, "you can do it faster, you can do it better, and you know your results are going to be consistent," Ms. Palmer said. "If you can get an improvement, even a couple of points' improvement, that's significant dollars."

Frontiers

AT&T is looking to artificial intelligence systems, which are programmed to mimic human reasoning, as another potential edge in crowded business where it is already a major player.

After three years, AT&T Universal Bank ranks second among MasterCard and Visa issuers, with 16 million credit cards in circulation.

CUTTING EDGE: Leslie Palmer sees artificial intelligence giving AT&T a potential edge in the crowded credit card market.

Hunt Pioneered Techniques

David K. Hunt, who recently took charge of the AT&T card business, was widely expected to use advanced technology to build card balances. He pioneered the use of similar techniques as head of Signet Banking Corp.'s card unit.

Experts say any computerized decision-making program could be considered "artificial intelligence," but add that the tools Ms. Palmer is contemplating would allow a marketing department to make subtler distinctions than the credit-scoring models that already are in widespread use.

Various types of advanced programming and networking – neural networks, fuzzy logic, and pattern-recognition programs – allow the computer to say not only "yes" or "no," but also "maybe," said Jerome Svigals, an electronic banking consultant in Redwood City, Calif.

The people in the "maybe" category make up "a very important part of the population," he said. They represent a "significant opportunity" for anyone with the tools to identify good risks who might have been rejected under more rigid systems.

"If you're looking for a market segment that would include all 25- to 35-year-olds with an income of $100,000, then that would exclude, in a normal program, 20-year-olds who make 150,000," Ms. Palmer said. "You want to be able to say not strictly 'yes' or 'no,' but assign grades so you know you're getting all the people who would accept that service."

Ms. Palmer said AT&T would enhance its internally developed software with artificial intelligence products from a growing number of outside vendors.

"If we purchase a neural network, that software would be run on whatever hardware we have," she said. "Then the business people would go through and evaluate the parameters they want to put in their software package."

Mr. Svigals said the move is in keeping with AT&T's reputation as an innovator willing to commit resources to build its business.

More conservative players "like to see the technique being used on 10 million people over a 10-year period" before trying it, the consultant added.

"They could be left in the dust. When these new techniques come to the market, you can't wait." □

Visa to Fight Fraud With Neural Network

By JEFFREY KUTLER

Visa International is teaming up with a leader in neural network technology to combat fraud.

Visa said it signed a strategic agreement with HNC Inc. to develop a system to monitor merchant transactions and identify those that entail the most risk.

Roger Peirce. Visa's executive vice president for delivery systems, said the partnership will combine Visa's "core systems capabilities [with] the premier technology available for fighting credit card fraud."

Roger Peirce

Mr. Peirce described HNC as "an industry leader in neural network applications and credit card control services [and] a logical partner for Visa."

Neural networking, a form of artificial intelligence, employs a "learning" technique to predict probabilities. The Visa system, due to be available next year, would examine large numbers of past transactions, both legitimate and fraudulent, to be able to flag questionable items.

"By using neural networks to its full extent, Visa will be able to provide superior risk analysis for its members," the San Mateo, Calif.-based card association said.

Fight on Other Fronts

The effort follows other neural network projects at Visa, including the International Points of Compromise, or IPOC, program that helps identify merchants that may be selling or giving account information to counterfeiters.

Another program, Central Deposit Monitoring, matches merchant activity with sales-draft laundering characteristics to identify nonconforming merchant deposits.

Visa uses the results to support law enforcement agencies and legislatures in efforts to fight and deter the increasingly costly problems of counterfeiting and other types of fraud. Worldwide merchant fraud cost $689 million last year, according to *The Nilson Report*.

The Visa-HNC risk detection system would assign a risk score to each transaction authorized in the VisaNet global networks.

Predicting Misuse

HNC, which is based in San Diego, will integrate the risk score into its Falcon system, which many card issuers use to identify and prevent fraud at the cardholder level. It determines the probability of fraud on each card authorization by comparing it with the cardholder's purchase patterns and the latest trends in credit card fraud.

HNC introduced Falcon last September and said it has reduced the fraud losses of major card issuers.

"With this new system, members will be better able to assess risk at the point of transaction and, therefore, make more informed authorization decisions," Mr. Peirce said.

Michael A. Thiemann, executive vice president of HNC, called the agreement "another example of our commitment to solving tough business problems through the application of cutting-edge technologies."

IBAA Says Members Have Edge in Cards

By MICKEY MERCE

Community bankers are proving to be formidable in price competition against national credit card issuers, according to a report from IBAA Bancard.

The card affiliate of the Independent Bankers Association of America says its members charge lower annual fees and interest rates than regional and national banks.

The 1,600 banks in IBAA Bancard, which have joined to obtain group pricing and other benefits, collectively rank 29th among Visa card issuers and 40th among MasterCard issuers.

Pricing

Average annual fees on IBAA Bancard standard cards is $15.38, compared with the August weighted average for national issuers of $16.84 as compiled by RAM Research Corp., Frederick, Md.

Average rates in the IBAA program are 14.67%, compared with 17.24% for national issuers.

IBAA Bancard statistics show that smaller issuers lag in average balances but their delinquencies as a percentage of outstandings are lower than national issuers'.

"The numbers show that our bankers are able to consistently offer better pricing than their national counterparts," said Sarah Brachman, communications associate for IBAA Bancard.

"Generally, smaller issuers tend to offer a plain vanilla card that doesn't offer a lot of enhancements," which allows for competitive pricing, said Robert B. McKinley, president of RAM.

Low Overhead

Banks that work with the IBAA have the advantages of shared costs and experience, Mr. McKinley added. Their overhead is low and they do not spend much on marketing, relying more on word of mouth.

"There's a lot of ways they can cut corners," Mr. McKinley said. "They can also be conservative in the amount of credit they offer."

Independent bankers "can make their own pricing decisions," Ms. Brachman said. "Our banks can afford to be creative. They often have a personal relationship with their customers. They know if they're creditworthy, so they can give them a better rate."

Best Rate in Town

In July, First Merchants Bank, a $600 million-asset institution in Muncie, Ind., began issuing standard MasterCard and Visa cards with no annual fee and a 14.88% annual rate. Its Visa gold has no annual fee and a 13.56% rate.

"Our rate is the best in town, other than the credit unions," said Jeff Parsons, sales manager for bank cards. "Frankly, we think it's pretty darn competitive with the national banks."

Mr. Parsons said that in two months, through direct mail and local advertising, the bank has opened 2,500 accounts, with $2 million in receivables. Customers like the pricing and the bank's service, he said.

Another bank reports similar success, despite having an annual fee.

The $56 million-asset American National Bank in Kennewick, Wash., offers a Visa classic with an $18 annual fee and a Visa gold at $25. Both have a 13.92% annual percentage rate.

"We lose to the credit unions," said Becky Freemire, a customer service representative. "But we're competitive with local commercial banks." □

CANNY ACQUIRER: Fiserv Inc.'s George D. Dalton has assembled one of the top three data processors for banks and thrifts.

Fiserv's Strategy for Rapid Growth

By MATT BARTHEL
Second of a Series

To at least some observers, it's hard to tell if Fiserv Inc. is a technology company or a hard-charging investment bank.

Since its founding in 1984 by George D. Dalton and Leslie M. Muma, the computer services company has purchased or otherwise acquired no less than 45 firms operating in more than 20 states.

This growth-by-acquisition strategy, which continued this month with Fiserv's agreement to purchase two Mellon Bank Corp. outsourcing businesses for $67 million, has transformed the company from a small regional provider of data processing into a diversified $322 million company that furnishes financial institutions with it a vast array of industry-specific technology, software and computer services.

Fiserv's dealmaking has made it one of the top companies in the business of running computer systems for banks and thrifts, along with General Motors' Electronic Data Systems Corp., Marshall & Ilsley's M&I Data Sevices Inc., and Alltel's Systematics Financial Services Inc.

Doubts Allayed

Some bank technology insiders have been doubtful that Brookfield, Wis.-based Fiserv could absorb companies as quickly as it has acquired them.

But according to customers and Wall Street analysts, Fiserv has succeeded.

"The company has done brilliantly in digesting the most recent of its acquisitions," said Stephen T. McLellan, a first vice president in Merrill Lynch & Co.'s San Francisco office. "The biggest challenge it has now is in holding the hands of its acquired clients to make sure they don't leave during the transition."

The basis for Fiserv's success appears straightforward. In sizing up possible acquisitions, Fiserv executives closely examine how the target company's products and services can complement their existing businesses.

> **"If we don't want the management, we don't buy the company."**
> **George D. Dalton**

But Mr. Dalton, Fiserv's chairman and chief executive, said that as important as products and services are, the leadership in place at an acquisition target figures perhaps most prominently in his decision to move towards buying the company.

"If we don't want the management, we don't buy the company. It's as simple as that," Mr. Dalton said.

From all outward appearances, this strategy is paying off. Fiserv has grown from $21 million in revenues in 1984 to $332 million at year end 1992. Net income has risen steadily, more than doubling since 1988 to $22.9 million. In addition, earnings have risen from 50 cents a share in 1988 to $1 at yearend.

Making the Good Better

Analysts say the heavy emphasis Fiserv places on finding companies with quality management has a lot to do with how it has brought so many disparate pieces together successfully.

When Fiserv buys a business, the analysts said, it does so with the intention of trying to improve upon what is good in the business rather than trying to revamp the companies according to some overriding plan from the mother company.

This approach has several advantages. First, and perhaps foremost, it typically avoids putting the customers of acquired companies through conversions to new software or hardware.

Conversions can be notoriously messy, and bankers go to extremes to avoid them. Since the vast majority of Fiserv's customer growth has come from its acquisitions, keeping post-acquisition customers happy and in place has been a crucial part of Fiserv's success.

Avoiding Conversion

"We were very pleased to know that we would not have to go through a conversion," said Scott Smith, president and chief operating officer of the $1.5 billion asset Fulton Bank in Lancaster, Pa. Fulton Bank was a data processing customer of Mellon Bank Corp. until Fiserv bought the Mellon units earlier this month.

"Our customers have already experienced a conversion from some of our own merging, and it's something we wanted to avoid putting them through again," Mr. Smith said.

The second advantage to Fiserv's acquisition strategy is that it brings with a vast array of products, ranging from traditional outsourcing services, core accounting software that banks can run themselves, electronic funds transfer products, and check processing services.

Wall Street analysts say it is this diversification strategy that will be most important to Fiserv for attracting the new business essential to the company's continued growth.

"Investors like to see internal growth on top of the business added through new acquisitions," said Patrick Burton, a transactions services analyst at Piper Jaffrey Inc. based in Minneapolis. "That [Fiserv's] growth to date has been mostly due to acquisitions may be the only knock against the company from an investor's perspective."

Thumbs-Up from Market

Mr. Burton noted that Fiserv's stock has done well fol-

Continued from page 16

lowing its most significant recent purchases of the data processing units of Mellon Bank Corp. and the Basis Information Technologies Inc. unit of First Financial Management Corp.

Both of these companies ranked among the 10 largest bank data processing companies in the U.S., according to M. Arthur Gillis, an independent consultant based in New Orleans.

Despite all the financial computer activities in which it engages, Fiserv's core business clearly remains data processing services, which it provides mainly to smaller institutions.

In terms of sheer numbers of customers, Fiserv is the second-largest provider after, Electronic Data Systems, of data processing services for both commercial banks and thrifts with asset under $500 million, according to Mentis Corp., based in Eden, Md.

Steady at the Helm

At first blush, a large customer base combined with a wide variety of computer services and hardware platforms would appear to be a management nightmare.

Shopping Spree

Basis Information Technologies Inc.	97
Feb. 1991	
Citicorp Information Resources	70

Source: Fiserv Inc. and industry estimates

The reason this is not the case, Fiserv's George Dalton says, is because of the company's belief in retaining the managers of its acquired companies.

After more than 40 acquisitions, including those of the technology units of Citicorp and Mellon Bank Corp., Fiserv has lost only three top officers from its acquired companies. "One retired, one died, and one just didn't work out," Mr. Dalton explained.

By retaining officers who already know their business, Fiserv frees itself from direct management over the acquired companies. The managers of each of these Fiserv units are accountable for their profits and losses, which drives the units to maximum efficiency.

Citicorp Orphan

At the same time, the strategy has its perks for the acquired companies.

As part of larger organizations, many of the companies that Fiserv has bought did not historically have access to the funding for technical upgrades and other purchases that are such an integral part the data processing business.

Citicorp Information Resources, which Fiserv acquired in February 1991, was in such a situation. CIR gathered more than $100 million each year in revenue but was just a tiny part of Citicorp, which boasted more than $200 billion of assets.

"We were clearly not important to [the parent company] at all – we didn't even make it into the annual report," said Frank Martiri, president of the Fiserv division dealing with IBM hardware and the former head of Citi Information Resources.

Enhanced Responsiveness

The upshot of this lack of recognition, Mr. Martiri said, was that the CIR unit – which specializes now as before in computer products and services for International Business Machines' AS/400 midrange computer – could not get funding for technical upgrades that were necessary to allow it to compete.

> **Fiserv has lost only three top officers from among the more than 40 companies it has acquired, its CEO says. "One retired, one died, and one just didn't work out."**

"The worst thing that you can say to a client is 'You have to wait while I go to corporate for an answer,'" said Mr. Martiri. "That's not something we have to do anymore."

As Mr. Martiri indicated, data processing customers do not want to wait for enhancements to their services. And from all indications, they have not had to do so – a fact which analysts feel bodes well for Fiserv's future.

Bank of North Texas, a $375 million thrift institution based in Fort Worth, has been a customer since October.

Fiserv "seems to be working hard to continue to modify the system that we're on, to meet our needs," said Vikki L. Pier, the bank's chief financial officer.

"We have put in some requests for enhancements that are being addressed as a priority," she said. Fiserv is "receptive to suggestions – which is all I can ask for." □

New York State Arms Itself To Address Future BCCIs

On July 26, New York's Gov. Mario Cuomo signed into law a bill embodying the state Banking Department's program for supervision and liquidation of foreign bank branches and agencies.

These banking law amendments are of special interest to state-licensed offices of foreign banks. But the law is perhaps of even greater concern to those who deal with those offices, as it calls for rethinking some presuppositions about branch responsibilities.

Spar Was Committee Report

The amendments are largely the outgrowth of the 1992 Heimann Committee report which examined the adequacy of the state banking department's supervision of foreign bank offices in the aftermath of the BCCI and Banco Nazionale del Lavoro scandals.

PROTECTION *will be given to customers who seek the benefits of New York regulation by specifying "New York branch" in their documentation.*

The Heimann report largely gave the department a clean bill of health.

"The more notable provisions in the amendments cure some statutory deficiencies the department perceived during its experience in closing BCCI's New York agency, one of its few litigated branch insolvencies in recent decades.

In that case, there were more than sufficient assets to satisfy claimants against the New York-licensed office.

Next time, the department realized, it might not be so lucky.

Prior Practice Formalized

The amendments in part embody what had previously been supervisory practice and understanding — and they very much reflect a supervisory standpoint.

A number of the amendments impose or tighten regulatory requirements.

For instance, agencies are made subject to asset pledge and lending limit requirements previously applicable only to full branches.

Also, branches and agencies must keep records identifying their and other offices' transactions and must notify the department of changes in control.

Section 606(4) of New York's banking law has long provided for a preference in a branch or agency liquidation for those who could demonstrate that their transaction was "had with" the New York office.

Now, however, the superintendent will not even consider a claim unless the underlying documentation specifies that it was with the New York office or if it appears on the branch's or agency's own books.

Those books and records must now indicate which transactions are for its own account and which are for other offices (certainly including "shell" branches) of the institution.

The banking superintendent's jurisdiction over assets is much broader: all property of the foreign bank that may be found within the state, whether designated as a New York office asset or not. On this score, the law was unchanged by the amendments.

Furthermore, the amendments impose a turnover requirement for all such assets and, subject to an important but limited exception to be discussed here, restricts setoff rights in connection with such a turnover to only New York liabilities of the branch or agency.

Other amendments are also inspired by the bankruptcy model, such as the superintendent's new express power to repudiate or assume executory contracts and an automatic stay.

Asymmetrical Approach

The statutory approach amounts to treating the branch or agency as a separate bank on the liability side, but as a combined entity with other branches on the asset side.

The asymmetry of this approach can only be justified from the point of view of an especially aggressive insolvency receiver whose tasks are to gather assets, assess claims, and assure equality of treatment across the claims which pass muster.

Left in the cold will be those who dealt with the bank as a global enterprise, particularly if they held balances in New York accounts to the credit of non-New York offices of the insolvent bank.

These will be subject to turnover.

The banking department made a policy decision that the potential adverse effect of this rule on correspondent banking in New York is outweighed by the perceived need to protect those customers who implicitly sought the benefits of New York regulation by specifying "New York branch" in their documentation.

The setoff restriction is at the heart of the scheme, and probably its most controversial provision.

In England, for instance, setoff is compulsory in insolvency situations, and of course setoff is reserved (albeit with some restrictions) under the U.S. Bankruptcy Code.

The department at least partially heeded the concern of bankers who of late have been entering into so-called "global netting" agreements, either separately or as part of master swap agreements.

The amendments replicate, although perhaps not fully, the favored treatment of so-called "qualified financial contracts" — interest rate and currency swaps, caps, collars and various other derivative or hedging instruments — in liquidation under Federal bank laws, notably the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 and the Federal Deposit Insurance Corporation Improvement Act of 1991.

Broadly speaking, the purpose of all of these provisions is to validate the termination and netting provisions of qualified financial contracts and to carve them out of automatic stay, selective repudiation, and preference rules that would otherwise apply.

While netting is not the same as setoff, they are closely related.

Netting agreements have become prevalent risk-reduction tools in the industry and are receiving increasingly concrete encouragement by supervisors, including most notably the Basel Committee on Bank Supervision.

Giving full effect to cross-border netting cuts a large hole in the "ring-fence" set up by the setoff restriction, however.

Repudiation Restricted

The outcome is a set of lengthy qualifications to the repudiation-of-contracts provision and setoff restriction in the case of qualified financial contracts, which were thrashed out between the department and a working group of the International Swap Dealers Association.

In these cases, the net termination amount payable in either direction is the lesser of the amount derived through operation of the applicable global netting agreement or a net amount calculated by reference to New York-only transactions.

A counterparty of a New York branch will benefit from this formula only if it has a greater loss on its transactions with the insolvent bank on a New York office-only basis than globally.

This provision can potentially diminish a counterparty's turnover requirement; it will not increase a claim.

Bank Deposits Issue

Notably, the New York Clearing House attempted (very late in the legislative process) to redefine "qualified financial contracts" to include bank deposits.

This was rejected by the department, but the issue may resurface when regulations are drafted.

The banking department can be relied on to apply its liquidation law in the insolvency of a state-licensed branch or agency.

However, the application of New York law where there is federal involvement (such as the Comptroller as liquidator or the FDIC as receiver) is not well settled.

Since the federal insolvency regime for foreign banks adopted New York's ring fence approach as part of the Foreign

LEFT IN THE COLD *in insolvency could be those who dealt with a bank on a global basis.*

Bank Supervision Enhancement Act in 1991, New York's influence will probably continue to be felt.

Confrontation Inevitable

There will eventually occur a confrontation with bank supervisors overseas who believe (as was argued unsuccessfully in the BCCI case) that there should be a centralized, presumably head office-based insolvency procedure for international banks.

In the meantime, those who manage New York licensed branches and agencies, as well as those at other institutions who monitor and assess the risk level associated with dealing with them, have much to study.

THE STATE *has beefed up its laws on foreign bank branches and agencies. In the BCCI case there were enough assets to satisfy claimants. But next time, officials realized, there might not be enough.*

Mr. Smedresman is a partner in the New York office of the Watson, Farley & Williams law firm.

THE BANKERS' ASSOCIATION FOR FOREIGN TRADE
Introduces
ACCESS TO EXPORT CAPITAL

Access to Export Capital (AXCAP) is a comprehensive and flexible database which will serve as a national inventory listing banks and government agencies involved in trade finance and the respective services each offers. Exporters will reach a trade specialist, via a toll free number, who will pinpoint the specific trade finance need and provide the exporter with a list of banks which offer the respective services. BAFT is currently mailing the Bank Registration Form to over 1,000 banks. To register for AXCAP or to receive more information, please contact Eric Price at:

1-800-49AXCAP

Brokerages Seen Stronger than Banks

By RICHARD LAYNE

Brokerage houses are in a better position than banks to take advantage of the current market and economic environment, according to Alison A. Deans, an analyst at Smith Barney Shearson Inc.

Ms. Deans has been a brokerage analyst for eight years and a money-center bank analyst for 3½. Her top picks among banks are Bankers Trust New York Corp. and Chemical Banking Corp., but she said she is biased toward brokerages such as Merrill Lynch & Co. and Morgan Stanley & Co.

A low-rate, slow-growth environment favors brokerage businesses because they are asset managers and traders. In addition, she said Merrill and Morgan Stanley have a detailed knowledge of the expenses and profitability of their business lines, which only Bankers Trust among money-center banks can match.

Investors have begun to embrace brokerage stocks. In the past two weeks, brokerage stocks are up 10% to 15%, said Ms. Deans. Bank shares have been sluggish. On the year, brokerage stocks are up 40%, while bank stocks are up 9%.

Q.: Why do you prefer brokerages to banks?

DEANS: It has been a great couple of years for recovery stocks, but over the next couple of years, the way to play financial services is to invest in those companies that will show meaningful growth that is genuine growth, not recovery growth. Bank stocks have been strong because of earnings recovery, while brokerage stocks show great revenue potential.

To be effective competitors in the financial service industry over the next couple of years, companies have to be low-cost producers, profitability oriented, and very competitive. We see more of that in the brokerage industry.

There's some skepticism about banks. Have these companies genuinely changed? To some degree, they haven't proven themselves yet.

Q.: What makes this a better time for brokerage?

DEANS: We think loan growth is going to be relatively sluggish. We also think that deposit rates can stay this low for a long period of time, fueling a tremendous amount of money moving out of short-term investments – bank savings accounts and money-market accounts – into longer-term investments.

Edward Lozzi/Bloomberg

SMITH BARNEY'S ALISON DEANS says low rates and slow economic growth favor asset managers and traders.

Brokerage firms and asset managers are the primary beneficiaries of that. Merrill Lynch, for example, has proven to be one of the most effective asset gatherers worldwide, with over half a trillion dollars in assets.

Q.: Are brokerages more consciously than banks?

DEANS: Merrill created a management information system that allowed them to monitor all the expenses tied to businesses by customer and by product.

All of a sudden, a person running a broker desk was aware of the cost of all those phone lines, all the support staff, all the office space. They could make decisions on that information. Morgan Stanley and Bear Stearns and PaineWebber have similar systems.

Merrill Lynch disappointed shareholders all during the 1980s, when they never brought the benefit of being No. 1 to the bottom line. At the height of the bull market in the brokerage industry in the 1980s, Merrill only achieved a 15% return on equity. Morgan was at 30%.

Now Merrill has a 30% return on equity, and the stock has quadrupled off its low.

Of the banks I follow, only Bankers Trust has that type of system. Bankers Trust focuses on expenses. They were cutting costs when their earnings were healthy several years ago. They are expanding headcount slower than their businesses are growing.

Citicorp sounds as if it is doing something along those lines. The same with Chemical.

If Citicorp does what Merrill Lynch did, then the shares are the investment of a lifetime. If they don't, you've made your money in that stock.

Q.: Has Chemical become a new company?

DEANS: What has impressed me about Chemical has been the top-line growth.

During a time when there should have been disruption from the merger [with Manufacturers Hanover Corp.], they have been experiencing net growth.

Chemical's loan portfolio hasn't suffered the same degree of runoff as we've seen with the other national lenders. They've increased their middle-market market share by close to two percentage points, and their retail market share is up close to a percentage point.

That suggests to me that the merger has been pretty well executed, particularly because this is a tough environment for top-line growth for the industry.

The other important aspect is that they are clearly a top player in the wholesale businesses – capital markets, global trading, loan syndication. They are a quality player. And I've found that these trading profits are far less volatile than some of the other firms'.

In addition, their profitability return on equity is in the mid-teens right now, and even if you fully tax it, it is in the low teens and approaching mid-teens.

I think Chemical could be a $50 stock in 12 months. The stock was trading at $40.125, off 12.5 cents Thursday afternoon.]

Q.: But some investors are still skeptical, right?

DEANS: There's still a tremendous amount of skepticism out there that this is the same old management. Will it be able to cut costs? Will they ever become a strong player in the banking business?

Chemical still gets a money center tipple. The market on the book is 135% versus 175% for a regional. The P/E on this year's earnings is nine times. The average regional's is 11-12 times earnings.

People are not seeing a dramatic decline in expenses. Chemical came through with the cost cutting they promised, but nothing more.

Q.: What do you like about Bankers Trust besides cost control?

DEANS: I think they are an underappreciated company.

If you look at the price-to-book multiple and the P/E multiple, J.P. Morgan & Co. does better. I think Morgan is a great franchise. But its performance is not as wide as the difference in the stock multiples suggests.

I think over the past several years, Bankers Trust has had less volatility in per-share earnings, higher return on equity, and the mix of revenues has been less from investment gains than Morgan. Bankers Trust gets a much higher percentage of earnings from trust fees and has much slower expense growth.

Bankers Trust does not focus much investor attention on those trust businesses, but they are one of the largest master trust banks, one of the largest banks in 401(k) plans, one of the largest domestic players in passive asset management. These are high profit-margin businesses.

My price target: low 90s. [The shares traded $78.875 Thursday afternoon, off 37.5 cents.] ☐

Recovering Whitney Increases Its Dividend For Second Time in '93

By GORDON MATTHEWS

Whitney Holding Corp., whose stock has made impressive gains recently, raised its dividend for the second time this year.

Whitney shares were up 75 cents to $37 in late trading on Thursday after the New Orleans-based company said it will increase its quarterly payout to 20 cents per share from 15 cents.

The dividend was restored in January after a two-year omission while the bank dealt with huge losses stemming from a deep and protracted recession in Louisiana.

Stocks

The stock has advanced 26% so far in the third quarter, making it one of the best performing bank issues. And it is ahead 51% this year on top of the 50% appreciation the stock registered in 1992.

"They're enjoying an excellent year, heading toward $4 [a share] in operating earnings," said Peter W. Tuz, analyst at Morgan Keegan & Co., Memphis. "I expect to see faster than average dividend growth at Whitney as they bring the payout ratio back into the 30% [of earnings] range over the next few years," he said.

Increase 'No Surprise'

"A recovery can get momentum very quickly once everything is in place," said Henry J. Coffey Jr., bank analyst at J.C. Bradford & Co., Nashville. Thus, he said, the second dividend increase was "no surprise."

Interest in Whitney was whetted last month when Premier Bancorp of Baton Rouge secured a toehold in New Orleans by acquiring Alerion Corp., an Italian-owned private bank.

Banc One's Approval Assumed

On Wall Street, it was quickly assumed the deal had at least the tacit approval of Banc One Corp., Columbus, Ohio, which owns an option to buy Premier by July 1995.

Analysts reasoned that Banc One, with its goal of being no less than third in any market, might speed up its purchase of Premier and then acquire one of the three large New Orleans banks.

"There is an argument for each one," said Mr. Tuz.

Besides Whitney, with $2.9 billion of assets, the city's major players are First Commerce Corp. and Hibernia Corp.

Investor interest in Whitney was also stirred last February when the bank's biggest shareholder, BIL (Far East Holdings) Ltd., Hong Kong, unloaded its 12% stake, amounting to 835,871 shares.

Whitney once ranked among the most profitable major banks in the South, tallying a peak return on assets of 1.89% in 1982.

It was also the most conservative and old-fashioned, focusing on wholesale banking and affluent clients while eschewing mass-market efforts and advanced technology.

Huge Losses in 1989

But in 1989, problem real estate and energy loans prompted huge losses.

By mid-1992, the nonperforming loans peaked at 14.91% of total loans and foreclosed real estate. By this June 30, the ratio was down to 6.42%.

Meanwhile, Whitney's business strategy and focus have been broadened by William L. Marks, chairman and chief executive officer, who arrived in late 1990 from Amsouth Bancorp, Birmingham, Ala.

The bank is lifting its payout a nickel, to 20 cents a share.

THURSDAY'S MARKET

J.P. Morgan & Co. was the top gainer among bank stocks, rising $1.25 to $76.125 in late trading. Other banks posted more modest gains as stocks in general were little changed.

Chase Manhattan Corp. was up 62.5 cents to $34.625, Core-States Financial Corp. was ahead 62.5 cents to $34.625, and Mellon Bank Corp., strong in recent days, improved 62.5 cents to $58.625.

The top loser was Shawmut National Corp., off $1 to $23 after announcing it will acquire Peoples Bancorp of Worcester. Marshall & Ilsley Corp. fell 50 cents to $23.25 and Fifth Third Bancorp 50 cents to $52.50. □

Government Bonds Continue Rally On Cash Influx from Refinancings

Government bonds rallied on Thursday, as the market continued to benefit from refinancing activity in other markets.

The sharp drop in interest rates has led to refundings of municipal and corporate bonds and prepayments on mortgage-backed securities.

The Markets

Money from these markets has flooded into Treasuries.

"Cash is being forced into the market," said Charles Lieberman, money market strategist for Chemical Securities Inc.

"The discussion is no longer if the rally can continue," said Astrid Adolfson of MCM MoneyWatch. "It's how low can yields go."

'In Its Own Little World'

At 4 p.m., the price of the 30-year bond was up over a point, sinking the yield to a record 6.09% from 6.16% on Wednesday.

"[The 30-year] is in its own little world," said Alan Levenson, money market economist for UBS Securities. "It's not trading off the fundamentals."

Market analysts said the long bond is also being supported by portfolio managers who need longer-term securities to meet preset duration targets for their holdings. "There is a stretch for yield," Mr. Levenson said.

Jobs Report a Stimulus

In addition, analysts said, the bond gained on a private research report released on Thursday that predicted big employment losses as a result of President Clinton's health care reform proposal.

The job losses would mean reduced inflation, a positive for the bond market.

Analysts said Brazilian government purchases of long-term U.S. Treasuries were another positive factor in the market.

The 30-year Treasury, used as a benchmark for long-term mortgages and other rates, is in the midst of historic show of strength. The yield has plunged about a half percentage point since mid-July.

Besides being awash in cash from refinancing activity, the bond is benefiting from increased evidence of weak economic growth and low inflation.

The Labor Department reported on Thursday that new claims for state unemployment insurance rose 8,000 in the latest week, the latest sign of a sputtering economy.

Prices of other Treasury coupon issues also rose on Thursday, though not as sharply.

Ten-year notes advanced about ½, lowering the yield to 5.43% from 5.49%; five-year notes rose ¼, dropping the yield to 4.79% from 4.92%; and two-year notes gained 1/32, lowering the yield to 3.83% from 3.84%. The bond-equivalent yield on the three-month Treasury bill was unchanged at 3.05%.

Dollar Plunges

The strength in the bond market was somewhat surprising given the plunge in the dollar on Thursday. The currency fell after the Bundesbank left interest rates unchanged. Germany's central bank had been expected to lower rates. The dollar finished in New York at 1.6660 marks, down from 1.6848.

Stocks were flat on profit taking. The Dow Jones industrial average lost 3.91 points to 3,648.18. — **Bart Fraust**

Bankers Loosen Their Lending Standards

Continued from *page 1*

heating.

So far this year, $3.8 billion of deferred-interest securities have been offered in the public junk bond market, compared to just $1.59 billion in the first eight months of last year, according to Securities Data Co. More of these high-yielding securities have also been sold in the private placement market.

NEWS ANALYSIS

Interest-deferred securities take various forms. Payment-in-kind, or PIK, securities initially pay interest in the form of additional securities. Zero-coupon bonds, sold at deep discount to face value, pay no interest until maturity, when the bonds are redeemed at face value.

Some discount bonds start out as zeros and then begin paying cash interest after several years.

Investors purchasing such securities gamble that the borrower either will be better able to pay back the debt in the future, or will sell off assets to cover payments.

Not Panning Out

As recent history shows, such bets often failed to pay off.

Roughly 25% of the 230 issuers that defaulted on bond payments in the past three years were companies that had undergone a leveraged buyout, and many were financed in part with interest-deferred securities, said Jerome Fons, an economist at Moody's Investors Service Inc. a major bond-rating agency.

Indeed, the bankruptcy courts have been littered in recent years with cases involving companies that loaded up on these securities.

In recent months, investors in the junk bond market appear to have brushed aside any concerns about the risks associated with these securities, as they scramble

Repayments are coming in later years.

for higher yields in today's low-interest-rate environment.

A Red Flag

No matter how you slice it, financing a buyout or recapitalization with the help of these securities signals that the deal does not work based on the borrower's historical cash flow, said Joseph Rizzi, senior vice president for structured finance at Dutch-owned ABN Amro Bank in Chicago.

"We really look at these things as the scarlet letter of corporate finance," he added.

Other bankers take a less severe view, but most agree that the use of PIKs or discount bonds raises a red flag.

"It clearly calls your attention to the [capital] structure" of the deal, said Mr. Bunn at NationsBank.

Not Quite Like '80s

Despite the increased use of these securities in recent months, bankers and others are quick to point out that while more aggressive than just six months ago, the deal market today is a far cry from the 1980s.

"I still haven't seen it get to the point where somebody shows up with a dollar and a half and a good story and can borrow a bunch of money in the high-yield market, and banks will accept that," said Mr. Muse.

"The overall credit quality and structure [of deals] is much stronger than it was in the 1980s," said Ted Virtue, managing director in charge of high-yield capital markets and loan syndications at Bankers Trust New York Corp.

Sense of Caution

But bankers are also on guard against their own impulses.

"If we go back to allowing very aggressive leverage on the balance sheet and hockey-stick projections, it's going to be the 1980s all over again," Nations-Bank's Mr. Bunn said.

Added Continental Bank's Dennis Amato: "My sense is that it hasn't reached crisis proportions, but if the trend line continues in terms of aggressiveness, we'll probably repeat some of the problems of the late 1980s." □

Sources of data: American Banker survey and banks' yearend earnings releases. Top 100 earners based on net income for banks and bank holding companies. Net income is income after taxes, loan loss provisions, minority interest, and before preferred dividends and extraordinary items, unless otherwise noted. Net income is reported by principal bank or holding company. The 1991 net income has not been restated for 1992 mergers or changes in accounting principles. Adjusted net income is net income excluding nonrecurring items such as gains (losses) from sales of buildings, branches, subsidiaries, securities sold to settle loans or debt; proceeds from equity/debt swaps; and venture capital profits (losses). For 1991, changes in accounting principles are not included in adjusted net income unless noted. Profitability ratios are based on adjusted net income wherever possible. Return on assets is not income, as defined above, divided by average assets. Return on equity is the return on average common equity.

Please note: profitability ratios published here may differ from ratios reported in the March 15th Performance Review. The latter is based on net income after extraordinary items. (c)— A multibank holding company. (d)— A one-bank holding company. * Net income for 1992 includes a $114.5 million charge for restructuring and loan loss provisions. ‡ Total equity capital. (†)— Rank lacks would have, if data had been available last year.

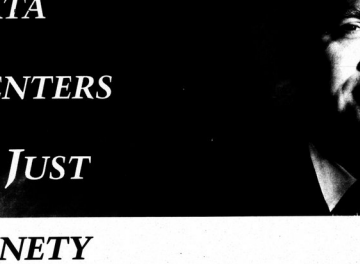
"WE MERGED FOUR DATA CENTERS IN JUST NINETY DAYS!"



Robert P. Keller
President, CEO
New Dartmouth Bank
of New Hampshire

"Most consolidations of this size take, at bare minimum, four months, sometimes as long as a year. With Systematics' help, we were able to do it in less than three months.

"For us to hold on to customers from three different institutions, it was critical to present the image of a unified bank quickly. This could not have been accomplished without first taking care of the data centers.

"We don't have all the numbers yet, but we conservatively estimate that, since the conversion, total non-interest expenses, compared to non-interest expenses of the predecessor institutions, have been decreased by approximately 50%."

Data Sources: Data are from SNL Securities, Charlottesville, Va., and *American Banker*'s annual performance update. Panel groupings, ranks, and summary statistics were compiled by *American Banker*. Please note, that the 1991 data have not been restated for mergers or changes in accounting practices. For comparative purposes, the 1991 ranks, means and medians are for the current, 1992 panel. (†) — Bank was in the "Large Regionals" peer last year. (*) — Bank had assets less than $10 billion in 1991. (**) — Acquired by Bankers Trust Co., April 1992. (***) — Acquired by Society Corp., March 1992. (****) — Acquired by Comerica Inc., June 1992. (†) — Citicorp, in its nonperforming loans, includes consumer mortgage loans that are 90 days delinquent but not yet charged off. At Dec. 31, these loans amounted to $3.1 billion, or 23% of the company's nonperforming assets. Many other banks in the listing do not include these loans among nonperformers. However, in the case of Citicorp and by every other bank, the inclusion of these loans would not significantly affect nonperforming asset ratios. Compiled by American Banker. Copyright, 1993.

1992 Capital Ratios of the Top 100 Banking Companies

Top 100 Banking Companies Grew by 5% Last Year

By SAM ZUCKERMAN

The assets held by the nation's 100 largest banking companies jumped by 5.1% last year, while the rest of the industry shrank by 4.2%, according to an *American Banker* survey.

As a result, the share of assets for the top 100 surged by two full percentage points, to 71.0%, the survey found.

Mergers fueled most of the asset increase. The biggest gainer: Detroit-based Comerica Inc., which grew by 84% with its acquisition of Michigan rival Manufacturers National Corp.

Comerica now ranks as the nation's 26th-largest banking company, up 16 positions from yearend 1991.

Among other big movers were NBD Bancorp. of Detroit, up seven spots to No. 17; SouthTrust Corp. of Birmingham, Ala., up nine to No. 46; and Pittsburgh-based Integra Financial Corp., up 10 spots to No. 52.

The survey of the top 100 also found that:

- Net income soared 147%, to $20.2 billion from $8.2 billion in 1991.
- Ninety-five companies reporting organizations declined by $44.8 billion, to $1.018 trillion.

Overall, banking assets grew by 2.2% last year, or $75.2 billion, to $3.506 trillion.

The 50 largest banking companies were all in the black, and only two failed to boost profits.

corded profits, compared with only 86 in 1991.

- Tier 1 capital rose 21%, to $161 billion from $133 billion.

Assets at the top 100 grew by $120 billion last year, to $2.488 trillion. That 5.1% growth rate was up from 1.4% in 1991.

By comparison, the assets held at other commercial banks fueled by expansion into Indiana via three acquisitions.

Among other banking companies that grew significantly through acquisitions were Ohio-based Banc One Corp., which climbed four notches to become the eighth-largest company; Pittsburgh's PNC Bank Corp., which jumped from 15th to 10th place; Minneapolis' Norwest Corp., which edged into 15th place from No. 17; and Florida's Barnett Banks Inc., which jumped to No. 18 from No. 20.

Several deals announced in 1992 did not close by yearend and are not reflected in the top 100 ranking. These include Banc One's acquisition of Phoenix's Valley National Corp. and Albany, N.Y.-based Key Corp's purchase of Puget Sound Bancorp in Tacoma, Wash.

Most institutions sharply improved profitability.

The average return on assets for the top 100 was 0.92%, compared with 0.63% in 1991. Return on equity also rose significantly, to 12.49% from 7.97%.

The higher returns on equity were recorded despite significantly higher capital levels and a resulting reduction in earnings leverage. In response to regulatory and marketplace pressures, bank companies continued to build capital at a rapid clip.

Assets of the top 100 jumped 5.1%, while the rest of the industry shrank.

The average ratio of Tier 1 capital to risk-adjusted assets for the group rose from 8.46% in 1991 to 10.03% – well above the regulatory minimum. The average leverage capital ratio, considered the most important measure for regulatory purposes, increased to 7.12% in 1992 from 6.22%.

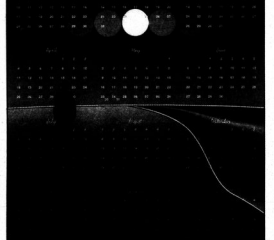
The performance improvement stemmed from declining interest rates and diminishing loan problems. Especially impressive was the return to profitability in 1992 by most of the major banking companies that lost money in 1991.

The 50 largest banking companies were all in the black, and only two – First Chicago Corp. and Portland, Ore.-based U.S. Bancorp – failed to boost profits from 1991 to 1992. U.S. Bancorp's earnings fell only because it adopted new accounting standards for employee retirement benefits.

For 1991, nine of the top 50 companies, including Citicorp, the largest, registered losses.

Other companies that returned to profitability in 1992 included First Interstate Bancorp; Bank of Boston Corp.; Chicago-based Continental Bank Corp.; MNC Financial Inc.; and Signet Banking Corp.

Even Edison, N.J.-based Midlantic Corp., recognized a year ago as one of the most troubled major banking companies in the country, eked out a $7 million profit in 1992 after losing $543 million the year before. □



Understand the forces of nature in consumer credit risk.

You can't control the forces of nature. But with the power of technology, you can understand the forces of *human* nature and use this knowledge to benefit your bottom line.

American Management Systems (AMS) understands the importance of managing consumer credit risk, with a focus on customer profitability and relationship management. Like human nature, these issues aren't one dimensional. As a result, you need a sophisticated decision support framework that melds effective risk strategies with the means to execute, measure and refine credit policy over time. And that requires innovative thinking on risk, along with the tools, technology and expertise to make it come alive.

For over a decade, AMS has been recognized as the industry's full service credit management consultant. This means we don't just build the credit and behavior scoring models that predict risk. We address other factors that drive performance, such as developing effective credit policy and re-engineering credit operations to get the most of every level of the organization.

And, at AMS, we put all the powers of technology to work for your organization. Not only with custom-based strategic technologies, but through our flexible, package-based systems relied upon by the world's most sophisticated credit processors. Such as ACAPS® which more organizations use to support credit approvals than any other mainframe-based system. And with Strata,™ AMS's most recent offering, we put the same level of sophistication to work in the customer management and behavior scoring area.

At AMS, we understand how the forces of human nature influence consumer credit risk. And we know how to harness the strength of technology to your benefit. To see how we can put this powerful combination to work for your organization, call Barbara Bones at (415) 595-4600.

Average Takeover Premium Rose Sharply Last Year

By GORDON MATTHEWS

Bank merger premiums jumped last year, driven by a scarcity of banks in attractive markets.

For the 10 largest deals unveiled in 1992, the average price was 1.98 times the book value of the banks bought. That's up from 1.5 times book in 1991.

The total value of merger deals fell sharply last year, to $14.3 billion from $21.2 billion. But 1991 was dominated by blockbuster deals, such as BankAmerica Corp.'s acquisition of Security Pacific Corp.

A Way to Enter Markets

Many of the big mergers announced last year involved the acquisition of banks that provided the last major means of entry into their markets.

The year's biggest deal, Banc One Corp.'s acquisition of Valley National Corp., Phoenix, for $1.24 billion in stock, is a notable example. As the last major independent bank in Arizona, Valley commanded a premium of 2.2 times book value.

Most observers see that trend accelerating.

"There are really not that many banks in the $5 billion to $15 billion in assets category left around the country to be acquired now," said Frank Suozzo, analyst at S.G. Warburg & Co. "And wherever there are, as in Virginia or Alabama, you are going to see pressure mounting."

The fourth quarter was the most modest of the year in terms of price and volume. The largest deals carried an average premium of 1.6 times book value.

The total value of deals announced in the quarter fell to $2.9 billion, versus $3.6 billion in the comparable period last year.

Biggest Deal in Northwest

The largest deal announced in the fourth quarter was the planned purchase of Pacific First Financial Corp., Tacoma, Wash., by Washington Mutual Savings Bank, Seattle, for $663 million in cash, or 1.75 times book value.

From a premium point of view, the most expensive deal of the quarter was the proposed acquisition of Colorado National Bancshares, Denver, by First Bank System Inc., Minneapolis, for $528 million in stock.

At 2.1 times book value, it was the only transaction of the period whose price represented twice book value.

For 1992 as a whole, however, three of the top five deals and six of the top 10 carried price tags exceeding twice book value, generally viewed as the high-watermark for bank mergers.

One Impetus for Mergers

Many on Wall Street think a major ongoing impetus for mergers will come from the need to find a way to increase earning assets.

With the economy and lending activity still sluggish, mergers represent one of the few sure-fire ways to build assets.

"A continued lack of loan demand will force banks to seek other means to post volume gains, and the system has the capital required to pick up the pace of consolidation," said Thomas H. Hanley, an analyst at First Boston Corp.

Prices Deemed Fair

And not everyone views the merger prices being paid today as excessive.

"I don't think prices have increased that much in relation to the stock market," said H. Rodgin Cohen, partner in the New York law firm of Sullivan

Peggy Turbett/American Banker

H. Rodgin Cohen

Merger prices not excessive

& Cromwell. "The premiums have grown in terms of book value because acquirers and targets are both trading at higher multiples to book."

Mr. Suozzo of Warburg noted that the superregional banks, which are the main acquirers, are trading at about 1.9 times book on average. That is considerably higher than their valuation in mid-1986, during the initial interstate acquisition binge, he said.

"The improvements in value give the superregionals the ability to pay a higher price with less dilution" for their own shareholders, the analyst said.

But he quickly added that "dilution remains very much an issue" in bank mergers.

He noted that the premium level last year was influenced by the activity of Banc One. The Columbus, Ohio, superregional has one of the most highly valued bank stocks and is thus able to comfortably offer top dollar for other banks.

Besides the Valley National acquisition, the Ohio superregional struck two other deals that ranked among the top 10 last year: its purchase of Team Banchares, Dallas, for $785 million in stock, or 2.4 times book, and of Key Centurion Banchares, Charleston, W.Va., for $355 million in stock, or 1.75 times book. □

Data sources: American Banker survey and data from the Federal Reserve Board's monthly E.16 release, *Changes in Status of Banks and Branches*. Table describes the holding of the mergers and acquisitions of other deposit-taking institutions made by the top 300 banks in deposits during 1992. The acquiring banks are listed in geographic order. Name and location changes among the top 300 are also reported. Acquisitions are listed chronologically, with the most recent listed first. Dep. Rank is the deposit rank of the acquiring bank on Dec. 31, 1992. **Deposits acquired:** The latest available deposit figure for the institution prior to its acquisition. When branches are acquired, only the deposits in those branches are reported. (+)— A major acquisition of branches. (§)— A major sale of branches. (‡)— An affiliated, or related institution. That is, the acquired institution was owned by the acquiring bank's parent bank holding company at the time of merger. (†)— A thrift institution. (*)— A purchase and assumption transaction. (*)— Crestar Bank, NA, Washington, D.C., Crestar bank Maryland, Bethesda, and Crestar Bank, Northern Virginia, NA, acquired portions of Perpetual Savings. (*)— Changed its name from Manufacturers Hanover Trust Co. to Chemical Bank on Dec. 15. And then changed charter and title from Southtrust Bank of Atlanta on May 1. (*)— Formerly Sovran Bank/Maryland. Changed title on 1/1/93. (*)— Acquired the bank from Midlantic Corp., Edison, N.J. (*)— North Fork Bank and Trust Co. was merged into Southold Savings Bank. Southold then converted its charter from a savings bank to a commercial bank and changed its name and location. (*)— During the fourth quarter. Banc One Corp., Columbus, Ohio, acquired Team Bancshares, Inc., parent of Team Bank. (*)— Acquired by Texas Commerce Bancshares, Inc., Houston, from the FDIC on 1/27/93. (*)— Texas Commerce Bank, NA, Houston, from the FDIC on 1/27/93. (*)— Bank was acquired by Seattle-First National Bank, an affiliate. To meet the requirements of the federal regulators, divestiture of branches was required. Key Bank and West One Bank acquired the branches divested.

Data Sources: American Banker survey, annual reports, and federal-regulatory reports of income for banks and holding companies. Total trust income is gross operating income of the trust department from all fiduciary services. Non-operating credits are excluded. Total operating income is gross interest income plus gross noninterest income. Number of asks is the number of subaccounts, or trusts, that the trust department handles. Does the trust company to the question: *Do you have affiliated investment adviser subsidiaries?* Foreign Trust Ops: The response by company to the question: *Do you conduct trust operations outside the U.S.?* (b)—Restated by *American Banker* for major 1992 acquisitions. (b)— Restated by the bank for major 1992 acquisitions. (c)— Restated by the bank for 1992 acquisitions. (d)— Restated by *American Banker* for major 1992 acquisitions. (e)— Owned by a foreign bank. (f)— On Feb. 13, acquired four former *First City Bancorp. of Texas* banks (Beaumont, Dallas, Houston, and Midland) with trust income of approximately $30 million. Had the merger taken place in 1992, Chemical would have ranked 6th with trust income of $391 million. (h)— In process of acquiring Ameritrust Corp., which would rank 6th with $391.5 million in trust income. (n)— On May 21, acquired *The Boston Company* from *Shearson Lehman Hutton Inc.* If the merger had taken place in 1992, Boston Safe would have ranked 5th with trust income of $453.9 million. (k)— Restated 1991 data for the mergers of Security Pacific Corp., Los Angeles, and Valley Capital Corp., Las Vegas. (l)— Restated 1991 data for mid-year merger of *American Bank Corp.*, Baltimore. (m)— Acquired Valley National Corp., Phoenix, at the end of the first quarter. If the merger had taken place in 1992, Valley would have ranked 64th with trust income of $133.8 million. Restated for 1991 data for mergers. (p)— Restated its 1991 data for mergers, the largest of which was *INB Financial Corp.*, Indianapolis. (q)— Restated its 1991 data for the merger of *Merchants National Corp.*, Indianapolis. (r)— Acquired, along with its parent, *The Boston Company*, by *Mellon Bank Corp.* on May 21. If the merger had taken place in 1992, Boston Safe would have ranked 5th. (s)— Restated its 1991 data for the merger of *First Florida Banks, Tampa.* (t)— All trust activities are performed by *Security Trust Co. NA*, Washington, D.C. Its trust income would rank 7th with trust income of $453.9 million if the merger had taken place in 1992. (u)— Restated its 1991 data for the merger of *Central Trust Co., Rochester, and Endicott Trust Co.*

Trust Revenues Grew by 10% at Top 100 Last Year

By MICHAEL O'D. MOORE

Trust revenue at banks climbed sharply last year, allaying fears that growth had stalled in this important area.

The top 100 banks in the field posted an aggregate 10.57% jump in trust revenues, marking only the second time in five years that the growth rate has double digits, according to an *American Banker* survey.

In 1991, the increase had been less than 7%, setting off a round of soul-searching in the industry.

Experts say that last year's pickup was caused mainly by appreciation of assets in a strong investment climate.

Managed assets at the top 100 grew 13.39% in 1992, increasing the base on which fees are levied. Also bolstering income was intensified marketing of mutual funds.

Continuing Rise Foreseen

In a significant mood change from 1991, bankers and analysts now expect continued growth in the trust business, driven by the aging population and new successes in mutual funds, which often are run from trust departments.

"Overall, our view is that trust, for a number of demographic reasons, will continue to be one of the major areas of growth in banking," said Robert Tetenbaum, executive vice president of First Manhattan Consulting Group.

For the top 100 banks in the field, trust already has become important to their bottom line. In 1992, trust businesses accounted for nearly 5% of the group's operating income, more than double the share of 1983, the survey found.

Much of the increase in trust business grows and as more assets are concentrated, Tetenbaum says. Gerald Schneider, senior vice president in charge of trusts and estates at Chase Manhattan Corp.

Shifting in the Ranks

The survey found that J.P. Morgan & Co. remained the leader in trust revenues last year, pulling in $786 million. That amounted to nearly 8% of the New York company's total operating income.

Meanwhile, Citicorp pushed aside Bankers Trust New York Corp. to take the No. 2 spot—by a margin of just $18 million.

In another shift at the top of the rankings, Northern Trust Corp. jumped from No. 10 to No. 7, passing Chemical Banking Corp., Mellon Bank Corp., and NationsBank Corp.

The Merger Factor

Elsewhere in the rankings, many of the increases resulted from mergers and acquisitions. And more such gains are occurring this year.

For example, if Mellon Bank Corp. had acquired the Boston Co. in 1992, instead of this year, it would have ranked fifth in trust revenue and third in discretionary assets. Instead, it ranked 10th and sixth respectively.

Likewise, if Chemical's acquisition this year of units of First City Bancorporation of Texas had taken place in 1992, Chemical would have ranked sixth in trust revenue and 10th in discretionary assets. Instead, it ranked eighth and 11th respectively.

Gains from Fund Sales

Some banks have been gaining trust assets from the sale of homegrown mutual funds, which soared in popularity amid a nationwide boom in the funds.

NBD Bancorp, which posted a large gain in trust revenue and

Gail Schneider
Upward trend will continue

assets, expects its proprietary mutual funds, the Woodward Funds, to add 10% to 15% to trust revenue this year.

"The dynamics are good for trust operations for a variety of reasons," said Richard L. Foerstering, NBD's first vice president for trust business product development. "Banks are getting very good at broadening their product lines principally through proprietary funds."

'Aging of the Population'

Proprietary funds give banks the ability to better compete in the 401(k) market, he said, while trust departments have long offered commingled funds, mutual funds have fewer marketing restrictions.

Chase, posting results that were typical of the top 100, reported that its trust revenue increased by 8.5% last year.

"We are seeing a greater interest in trust primarily through the aging of the population and the more complex issues related to money management," said Ms. Schneider.

Last year, she said, Chase had more charitable trusts established as aging customers looked to leave gifts – a trend she expects to continue.

Chase also has seen growth from business owners who cash out and create trusts. □

Take the path to greater competitiveness.

With a partnership, others share your cost and risk.

In 1990, for the first time, three major banks joined FTI and IBM to pool their resources in financial investments. The result is Global Financial Accounting–the *first and only* full function, new technology software for your investment management, trust, global custody, and fund accounting needs.

Now, in 1993, we have more partnerships underway, building new Corporate Actions, Financial Instruments, Pricing, Customer Information, and Access Security software. By joining one of these partnerships, you can save time and money, too... while getting the strategic software you need to operate your global finance business.

Tomorrow's new technology can work for you today.

- Relational data base management systems give end users the flexibility to access the data they need.
- Full lifecycle CASE technology provides platform independence and reduces maintenance costs.
- Information engineering methodology, along with object-oriented analysis and design principles, provides a structured method to develop applications... and allows high re-use of objects.

The intelligent workstation and graphic user interface helped us develop Investors Information Workbench,™ which makes portfolio management and account administration more efficient and productive.

Open architecture is the winning strategy for the 90s.

Our open application architecture gives you a blueprint to buy *and* build the solutions you need. You're no longer locked into a buy *only* or build *only* strategy.

What's more, our data and process models (such as our pace-setting Trust and Securities Industry Relational Data Model and Data Base) provide a shared data base and the "core" back office applications you need to rejuvenate your systems and applications. That means you have a solid, streamlined foundation on which to truly differentiate your products and services to your customers.

Get more details.

Call Dan O'Brien, FTI's Senior Vice President, in New York at (212) 912-6300. He'll show you how to become more competitive by addressing client needs *and* reducing costs.

Data Source: American Banker survey. Discretionary (managed) assets are assets of accounts over which a company is authorized to make or recommend investment decisions. Market value of assets under management includes all trust assets includes discretionary assets and nondiscretionary assets; nondiscretionary assets should exclude corporate trust assets. Data are not all-bank data with deposit and foreign subsidiaries. (a) — Restated by American Banker for major acquisitions in 1992. (b) — Restated by the bank to include the trust assets of Boston Safe Deposit & Trust Co. that had been included in survey. (c) — Owned by a foreign bank. (d) — Data for 1992 publication on June 30, 1993. (f) — Bank company would have had, if data had been available. (g) — Gain in managed assets attributable to a reclassification of nondiscretionary assets as discretionary assets. The 1992 data are preliminary and subject to revision by Federal Reserve. (h) — Data as of 1991 date for the mergers of Security Pacific Corp., Los Angeles, and Valley Capital Corp., Las Vegas. (k) — On May 21, acquired The Boston Company Inc. and its subsidiary, Boston Safe Deposit & Trust Co. If the merger had taken place in 1992, Mellon would have ranked 3rd in terms of market value of $134.5 billion. (l) — In process of acquiring MNC Financial, Inc., Baltimore. (m) — Data as of 1991 date for the merger of Valley National Corp., Phoenix, Ariz., and Arizona Bank, Phoenix. (n) — Acquired by Bank One Corp. of Columbus, Ohio, effective Jan. 1, 1993. (o) — Data as of 1991 date for the merger of First City Bancorporation of Texas, Houston, and Texas Commerce Bancshares, Houston. (p) — Data as of 1991 date for the merger of Boatmen's Bancshares, St. Louis, and Central Bancshares of the South, Birmingham, Ala. (q) — Data as of 1991 date for the merger of Deposit Guaranty Corp., Jackson, Miss., and Trustmark Corp., Jackson, Miss. (r) — Data as of 1991 date for the merger of Wilmington Trust Co., Wilmington, Del., and Rodney Square Management Corp., Wilmington, Del. (s) — Data as of 1991 date for the merger of Bessemer Group, Inc., Woodbridge, N.J., and Bessemer Trust Co., New York. (t) — Data as of 1991 date for the merger of Dauphin Deposit Corp., Harrisburg, Pa., and Commonwealth Bancorp, Norristown, Pa. (u) — Data as of 1991 date for the merger of Fourth Financial Corp., Wichita, Kan., and Bancshares of Kansas, Inc., Hutchinson, Kan. (v) — Data as of 1991 date for the merger of Liberty Bancorp, Inc., Oklahoma City, and Liberty National Bancorp, Inc., Louisville, Ky. (w) — Data as of 1991 date for the merger of Northeast Bancorp, Inc., New Haven, Conn., and Hartford National Corp., Hartford, Conn. (x) — Data as of 1991 date for the merger of Summit Bancorp., N.J., and Valley National Corp., Phoenix, Ariz. (y) — Data as of 1991 date for the merger of Wachovia Corp., Winston-Salem, N.C., and First Atlanta Corp., Atlanta. (z) — Data as of 1991 date for the merger of Wells Fargo & Co., San Francisco, and Crocker National Corp., San Francisco. (#) — Restated 1991 data for the merger of American Commerce Bancshares, Inc., Nashville, Tenn., and Hamilton Bancorp, Inc., Chattanooga, Tenn. — Acquired by Banc One on March 31, 1993. (+) — Owned by a foreign bank. (†) — Data for 1992 publication on June 30, 1993. (‡) — Bank company would have had, if data had been available. (aa) — Gain in managed assets attributable to a reclassification of nondiscretionary assets as discretionary assets. The 1992 data are preliminary and subject to revision by Federal Reserve. (bb) — Restated 1991 data for all-bank basis. (cc) — Restated 1991 data for the merger of American Commerce Bancshares, Inc., Nashville, Tenn., and Hamilton Bancorp, Inc., Chattanooga, Tenn. — Acquired by NBD on March 31, 1993. (dd) — Restated 1991 data for the merger of Bessemer Group, Inc., Woodbridge, N.J., and Bessemer Trust Co., New York. (ee) — Restated 1991 data for the merger of Dauphin Deposit Corp., Harrisburg, Pa., and Commonwealth Bancorp, Norristown, Pa. (ff) — Restated 1991 data for the merger of Fourth Financial Corp., Wichita, Kan., and Bancshares of Kansas, Inc., Hutchinson, Kan. (gg) — Restated 1991 data for the merger of Liberty Bancorp, Inc., Oklahoma City, and Liberty National Bancorp, Inc., Louisville, Ky. (hh) — Restated 1991 data for the merger of Northeast Bancorp, Inc., New Haven, Conn., and Hartford National Corp., Hartford, Conn. (ii) — Restated 1991 data for the merger of Summit Bancorp., N.J., and Valley National Corp., Phoenix, Ariz. (jj) — Restated 1991 data for the merger of Wachovia Corp., Winston-Salem, N.C., and First Atlanta Corp., Atlanta. (kk) — Restated 1991 data for the merger of Wells Fargo & Co., San Francisco, and Crocker National Corp., San Francisco. (ll) — Restated 1991 data for the merger of Wilmington Trust Co., Wilmington, Del., and Rodney Square Management Corp., Wilmington, Del.

Data source: SNL Securities, Charlottesville, Va. Description of the table: a listing of 100 banking companies with the largest market capitalization Mar. Cap. a market capitalization, which is computed by multiplying a bank's common shares outstanding by the closing market price of the bank's stock on June 30, 1993. For most banks in the list, shares outstanding are as of March 31. Wherever possible, SNL or American Banker have adjusted shares outstanding for common stock issued during the second quarter. % Chg. 3/93 Percentage change in market capitalization from March 31, 1993 to June 30, 1993. Mar. Cap./Assets is market capitalization on March 31 expressed as a percentage of total assets on September 30 (*). Shares outstanding have been adjusted by American Banker to account for common stock issued during the second quarter

Copyright American Banker 1993.

Data source: SNL Securities, Charlottesville, Va. The 1991 data have been restated for major acquisitions in 1992. Description of the table: A listing of 100 banking companies with the largest market capitalization. Market capitalization, which is computed by multiplying a bank's common shares outstanding by the closing market price of the bank's stock on December 31, 1992 and 31, 1991. Mar. Cap./Assets is market capitalization on December 31 expressed as a percentage of total assets on September 30 (*). Shares outstanding have been adjusted by American Banker to account for common stock issued during the fourth quarter. (**) – Total is for the top 100 on December 31, 1992; market capitalization on December 31, 1992, market capitalization 41.97% from $170,744 on December 31, 1991

"EDS helped us attract thousands of new customers."

—William G. Hegg, President, CEO
Sacramento Savings Bank

Sacramento Savings Bank uses technology to deliver top products and superior service.

EDS

"With the expertise and support of EDS, we introduced unique new products that attracted thousands of new customers," says William G. Hegg, president and CEO of Sacramento Savings Bank.

Hegg adds, "One of our new products was so popular it met its first year sales goal in only three months and accounted for a $40 million dollar increase in deposits." The product, called Portfolio Plan, clusters five certificates of deposit (CDs) into a single account. Pooling the CDs allows the bank to offer higher interest than the competition by simplifying record-keeping, reducing costs and facilitating asset/liability management.

Customized information technology automatically tracks the five CDs and delivers a single, accurate itemized report to each customer each quarter.

"EDS also helps us efficiently expand our resources," says Hegg, "allowing us to bring acquisitions into our network with no disruption of services.

"Giving customers legendary service is our top priority. EDS helps us achieve that goal."

Innovative applications of technology help companies attract new customers with superior products and service. EDS is the world leader in applying information technology. To find out how we could help you, write to EDS, Financial Industry Group Marketing, 5400 Legacy Dr., B5-2B-15, Plano, TX 75024. Or call (800) 433-4055.

Data source: Data provided by Sheshunoff Information Services Inc., Austin, Texas. Data for 1991 have been adjusted for subsequent bank acquisitions. Banks are ranked by the amount of commercial real estate loans on the books of non-owned real estate loans plus unsecured real estate loans. Unsecured commercial real estate loans include domestic construction and land development loans, loans secured by nonfarm nonresidential property, loans secured by nonfarm nonresidential property, loans secured by multifamily residential property, loans secured by other real estate owned by the bank. It is the book value (not to exceed fair market value) of secured commercial real estate — other than bank premises — owned or controlled by the bank and its consolidated subsidiaries. Included in commercial and industrial loans and in all other loans. Noncurrent commercial real estate loans include total commercial real estate loans that are 90 days or more past due or on a nonaccrual basis. Total noncurrent commercial real estate loans as a percentage of total commercial real estate loans outstanding, and total noncurrent as a percentage of equity capital. Change in total assets, 1991-92. Total commercial real estate loans as a percentage of total assets. (a) Bank of America NT&SA and Bank of America National Trust & Savings Association. (b) The 1992 data include branches and real estate assets acquired from Security Pacific Bank of New York. The 1991 data have not been restated for the acquisition. Foreclosed Realty Holdings Shrank Nearly 5% in '92

By STEPHEN KLEEGE

Banks reduced their holdings of foreclosed real estate last year for the first time in 13 years, according to an analysis in *American Banker*.

The results, reflecting aggressive sales of bad assets, provide evidence that banks are extricating themselves from the commercial real estate quagmire.

The "other real estate owned" line on the industry's ledger – representing foreclosed property – fell nearly 5% to $23.5 billion. It was the first decrease since 1979.

Noncurrent Loans Down

At the same time, noncurrent real estate loans – those past due at least 90 days or on nonaccrual status – fell to $27.2 billion from a peak of $31.9 billion at the end of 1991. It was the first year-to-year decline since 1988.

Analysts said banks were helped by lower interest rates. The lower cost of money made real estate more appetizing to investors and made it easier for borrowers to refinance and keep their loans current.

In addition, many banks are better positioned to take the losses needed to sell devalued real estate holdings.

"Keep in mind that the banks have been very busy over the building reserves. That means they have considerable flexibility in working with buyers," said Sandra J. Flannigan of Merrill Lynch & Co.

Indeed, real estate chargeoffs rose to $8 billion in 1992, from $7.7 billion in 1991.

Citibank, one of the largest holders of commercial real estate loans, managed to reduce noncurrent loans by $400 million, to $2.8 billion. But noncurrent loans equaled 32% of equity capital, compared with 43.1% at the end of 1991.

The Citicorp unit charged off $1.1 billion in 1992, more than twice the 1991 total.

Up and Downs in California

Also noteworthy, especially considering the poor economic conditions in California, was First Interstate Bank of California, which reduced its portfolio of seized property to $46 million from $127 million.

The main unit of Los Angeles-based First Interstate also reduced noncurrent loans, to $273 million from $401 million.

First Interstate's success stemmed partly from lessons learned in the bank's ill-timed expansions into Arizona and Texas in the 1980s. Analysts said First Interstate recognized the decline in California early and responded aggressively.

Problems continued to mount for First Interstate's California neighbors. Noncurrent loans at San Francisco-based Bank of California rose to $560 million – equal to 100% of equity capital – from $470 million at the end of 1991.

At Wells Fargo Bank, a $128 million reduction in foreclosed property was offset by a $259 million increase in noncurrent real estate loans.

Northeastern Woes

Meanwhile, although problems seemed to recede in the Southeast, the burden remained heavy on some northeastern banks.

New Jersey-based Midlantic Corp., for example, still had noncurrent loans equal to 71% of equity capital, even after reducing noncurrent loans by $163 million and foreclosed real estate by $112 million.

The balance-sheet cleansing was progress for banks but did little for construction and development loans, said Steven Wechsler, president of the National Realty Committee, which represents lenders, builders, and developers in Washington.

Bank holding of these risky loans declined by 23.4% last year, to $78.7 billion. That followed smaller reductions in some preceding years, when banks were still making loans under commitments made in the 1980s, Mr. Wechsler said.

"We see the seeds of a future recovery, as the market tries to come back to some equilibrium," Mr. Wechsler conceded.

But he argued that capital for real estate was only slightly easier to come by, and he applauded efforts by the Clinton administration to make it easier for banks to refinance loans.

Not surprisingly, the trends were more pronounced for those banks that did most of the real estate lending.

The 100 biggest real estate lenders reduced their total real estate loans by 4.5%, to $181.7 billion. The industry as a whole scored a 3.9% reduction, to $383.4 billion.

The bigger lenders sustained most of the chargeoffs, too. The top 100 charged off 3.5% of all real estate loans, compared to 2.1% for the industry at large.

Steven Wechsler
Sees the seeds of recovery

Gather market share.

HARVEST TIME

Which is better: customers paving more fees? Or more customers paying fees? For long term profitability, the best plan is to gain new customers and control larger market share. FISI-Madison's checking growth strategy will help you to do it.

You'll attract core bahs-boom customers with an average age of 37, ideal prospects for credit products. You can expect $1 in loans for every $1 in deposits this strategy brings in.

What's more, FISI-Madison's growth strategy earns you fee income right from the beginning.

Today over a third of all financial institutions use FISI-Madison checking accounts. Why? Because they achieve goals: new customers, retained customers, higher cross-sales and new fee income.

Go ahead, ask for proof. Our numbers look good. They'll look even better on your bottom line.

Call now and find out what results your institution could expect. We're even giving away something free if you do.

FREE OFFER

Data Source: Data provided by Sheshunoff Information Services Inc., Austin Texas, from its data base of the federal regulatory report of condition. Data for 1991 have been adjusted for subsequent bank acquisitions made on a pooling-of-interests basis. Total Consumer Loans are the sum of 1-4 family mortgage loans, home equity loans, credit card loans, and other consumer loans. 1-4 Family Mortgage loans are loans secured by 1-4 family residential properties. First and second mortgage loans are included, but home equity loans are excluded. Home equity loans are revolving, open-end loans secured by 1-4 family residential properties and extended under a credit line. All other consumer loans are loans to individuals for household, family, and other personal expenditures. Included in this category are credit card loans and other consumer loans. Credit card loans include all accepted extensions of credit to individuals for household, family, and other personal expenditures arising from bank credit cards or special prearranged overdraft plans. Other consumer loans include single payment loans, installment loans, and all other consumer loans. Consumer Loans as the ratio of total consumer loans to total loans: Total loans are net of unearned income.

Totals for the Top 300 (in $ billions)

Data Sources: Data provided by **Shandwick Information Services Inc.**, Austin Texas, from its data base of the federal regulatory report of condition. Data for 1991 have been adjusted for subsequent bank acquisitions made on a pooling of interests basis. **Total Consumer Loans** are the sum of 1-4 family mortgage loans, home equity loans, credit card loans, and other consumer loans. **1-4 Family Mortgage loans** are loans secured by 1-4 family residential properties. First and second mortgage loans are included, home equity lines are excluded. **Home equity loans** are revolving, open-end loans secured by 1-4 family residential properties and extended under lines of credit. **All other consumer loans** are loans to individuals for household, family, and other personal expenditures. Included in this category are consumer loans to purchase autos, mobile homes, and recreational vehicles. Also included are all other extensions of credit to individuals for household, family, and other personal expenditures arising from bank credit card or check credit plans and other revolving credit plans. **Other Consumer Loans** are all other consumer installment loans and single payment consumer loans. **% of total loans** is the ratio of total consumer loans to total loans. **Total loans** are Loans and leases, net of unearned income. **(a)**—Bank was formed on Oct. 31, 1992, when the FDIC seized the former *First City Texas-Houston, NA*. The bank was then sold by the FDIC to *Texas Commerce Bank, NA, Houston*, on Jan. 27, 1993. The 1991 data are for the former *First City Texas-Houston, NA*. **(b)**—The 1991 data are for the former *North Fork Bank and Trust Co.* of Mattituck. **(c)**—The former *Southeast Savings Bank, Florence*, was converted from a savings bank to a commercial bank and changed its name and location. The 1991 data are combined data for both institutions.

Card Loans Fell Last Year for First Time Since 1981

By STEPHEN KLEEGE

For the first time since 1981, commercial banks' credit card loans shrank last year as refinancing home-equity consumers moved to reduce their debt burdens.

Total card loans outstanding fell by 1.9% to $134.4 billion, according to *American Banker*'s annual survey of consumer lending.

Meanwhile, banks' total consumer loans, including mortgages, grew by 3.2%, to $849.3 billion. The growth rate was up from the 2.4% of 1991 but was still meager compared with the double-digit increases of the 1980s, which made the loans the major contributor to bank profitability.

The 1992 data showed mortgage loans grew by a respectable 8.2%, to $390.1 billion, and home equity loans rose 4.3% to $73.3 billion.

Consumer Thrift

But even those growth figures reflected consumer frugality. Bankers report that many customers were refinancing their homes and using the proceeds to pay down more expensive loans, or using home equity loans – with their tax-deductible interest – to replace other forms of borrowing.

"In 1992, the consumer market we just about flat," said Donald W. Grigsby, executive vice president at Shawmut National Corp., which sold its credit card business in 1991.

The people who borrowed money, he said, were generally drawing on lower-cost lines secured by homes.

In any event, the credit card decline was far less severe than in 1981, when an energy crisis and ballooning interest rates caused a collapse in outstandings to $11.45 billion from $29.9 billion.

In the wake of loan-loss declines in energy and commercial real estate, banks have shifted their commitment to consumer loans, which they continue to regard as a more profitable business line.

"The attractiveness of consumer lending is in its dispersion of risk within a wide base of customers, demographically and geographically," said David W. Glazer, president of statewide retail banking at Banc One, Texas.

Shift to Consumer Loans

Although the pace was glacial, the banks did manage to shift their weight toward consumer and away from commercial loans. While the ratio of total consumer portfolio grew 3.2%, total loans, including commercial, were declining by 1% to $2.03 trillion.

At Dec. 31, consumer loans accounted for 40.63% of total loans held by the top 300 banks, up from the 39.71% a year earlier.

The fastest-growing consumer portfolio, for example, at Corp.'s lead bank in Minneapolis, did not reflect a pure increase in loan demand. Norwest leapt to 10th place in the rankings, from 38th, as its portfolio bulged by 192% to $6.9 billion.

"The lion's share of the growth came from new family adjustable-rate mortgages," said Charles D. White, Norwest banking group treasurer.

Mr. White also said that some of the growth in Norwest's portfolio in Minnesota and at a credit card unit in Iowa came about because credit card and automobile loans that were sold as securities a few years ago were maturing and returning to the balance sheets.

Similarly, at Bank One, Texas, the 187% growth in the home

David W. Thomas
Risk is dispersed

equity portfolio represented purchases of loans from out-of-state lenders, not new lending by the bank. Mr. Thomas pointed out that home-equity lending is illegal in Texas.

The *American Banker* survey, based on data from regulatory reports, also showed continued consolidation in the bank consumer lending business.

Growth of consumer assets at the top 300 banks, at 6.4%, was double that of the industry at large. Consumer lending rose even faster – 7.26% – at the top 100 consumer-lending banks.

BankAmerica Corp.'s main unit in San Francisco again topped the lending rankings, with its lead over No. 2 Citibank of New York, partly as a result of its merger of Security Pacific Corp. Bank of America held $48.8 billion of consumer loans, up from $36.2 billion a year earlier. Citibank Citicorp's flagship grew less than 1%, to $28.9 billion.

Chemical Banking Corp.'s lead unit in New York jumped to third place, from eighth. A spokesman said the company's merger with Manufacturers Hanover Corp. was not a factor.

About $2 billion of the growth represented a growing mortgage business, he said, and a significant portion of the remaining increase was due to moving a credit card operation to New York from Delaware. □

OUR INTEREST IN THE ITALIAN MARKET STARTED 500 YEARS AGO.

We are a bank whose origins date back to 1459 and all assets are in good of our centuries of activity in Italy. But to be equal to our history and tradition, we are also aware of the continuous need for development and innovation.

Banco di Sicilia S.p.A. today operates as a diversified group, being in a position to offer a full range of financial services and capital complement, a wide range of banking products and financial services from mortgage loans to leasing, from factoring to unit trusts, from banking to consultancy transactions.

In particular, as already through our network of over 300 branches in Italy and four branches abroad - London, Paris, Frankfurt, New York - plus a representative office in Singapore and a subsidiary Banco di Sicilia International S.A., Luxembourg.

Through this network, as ever it gives confidence competitive services to the business activity of foreign companies in Italy, as well as of Italian companies abroad.

Data source: All data provided by **Sheshunoff Information Services Inc.**, Austin Texas. A **large community bank** is an FDIC-insured commercial bank that accepts deposits and makes loans between **$50 million and $1 billion** on Dec. 31, 1992. The bank may be independently owned or owned by a holding company whose consolidated total assets are less than $1 billion on Dec. 31, 1992. The bank must be profitable in each of the last three years 1990-1992 U.S. bank subsidiaries of foreign banks are

excluded. **Return on Average Assets and Average Equity Capital** net income for the year before extraordinary items divided by average assets or average equity capital and pre-tax income per employee **Loans as a % of Assets** loans divided by total assets. **Asset Growth Rate** the percentage change in assets over the period Dec. 31, 1989, to Dec. 31, 1992. **Nonacc. Loans as a % of Assets** loans past due 90 or more days plus loans on a nonaccrual basis divided by total end-of-period assets. **Net income:** income after taxes but before extraordinary items **Full-time Equiv. Staff** the number of employees at the end of the year as reported by the bank. **Pre-tax Op. Inc. Per Empl.** each bank's net income for the year divided by the number of employees at the end of the year. **Overhead ratio** is overhead expense as a percentage of average total assets. **Overhead Ratio Rank** is bank's rank based on its overhead ratio.

Data source: **Sheshunoff Information Services Inc.**, Austin, Tex. **A small community bank** is an FDIC insured commercial bank that accepts deposits and makes loans and had assets **less than or equal to $50 million** on Dec. 31, 1992. The bank may be independently owned or owned by a holding company whose consolidated total assets are less than $1 billion on Dec. 31, 1992. The bank must be profitable in each of the last three years. 1990-1992 U.S. bank subsidiaries of foreign banks are excluded. **Return on Average Assets and Average Equity Capital:** net income for the year divided by the number of employees at the end of the year, respectively. **Overhead as a % of Assets:** overhead expense divided by average total assets. **Loans as a % of Assets:** total loans divided by total assets. **Asset Growth Rate:** the percentage change in assets over the period. **Net Income:** income after taxes but before extraordinary items. **Net Income Growth:** the percentage change in net income over the year divided by the number of employees at the end of the year. **Full-time Equivalent Staff:** the number of employees at the end of the year. **Pre-tax Operating Income Per Employee:** net operating income for the year divided by the number of employees at the end of the year. **(1)**— Owned by a multibank holding co. **(*)**— The 1992 data are for 5,509 banks with assets less than $50 million on Dec. 31, 1992, and the 1991 data are for 6,037 banks with assets less than $50 million on Dec. 31, 1991.

Compiled by American Banker, Copyright 1993.

The 100 Most Profitable Small Community Banks

Based on the return on average assets for 1992. The banks are listed geographically in order of their ROA within states and have been ranked by their return on average equity capital and pre-tax income per employee (dollar amounts in thousands)

Data source: **Sheshunoff Information Services Inc.**, Austin, Tex. **A small community bank** is an FDIC insured commercial bank that accepts deposits and makes loans and had assets **less than or equal to $50 million** on Dec. 31, 1992. The bank may be independently owned or owned by a holding company whose consolidated total assets are less than $1 billion on Dec. 31, 1992. The bank must be profitable in each of the last three years. 1990-1992 U.S. bank subsidiaries of foreign banks are excluded. **Return on Average Assets and Average Equity Capital:** net income for the year before extraordinary items divided by average assets and average equity, respectively, **by ROE Rank**. The return on average equity rank for the 100 most profitable banks in ROA. **Pre-tax Op. Inc. Per Empl.:** pre-tax operating income for the year divided by the number of employees at the end of the year. **Inc. P.E. Rank:** The 1992 pre-tax operating income per employee rank for the top 100 community banks in ROA.

Compiled by American Banker, Copyright 1993.

Top 100's Productivity Leaders

Based on pre-tax operating income per employee ($'000

Assets Fall at Thrifts as Consumers Shun Adjustables

By EDWARD KULKOSKY

Assets at the nation's major thrifts fell by 6% last year as consumers shunned the group's mainstay product – adjustable-rate mortgages.

The top 300 thrifts saw their assets drop to $768 billion from $817 billion in 1991, an *American Banker* survey has found.

Though the group's assets have been shrinking since 1988, the principal reason in earlier years was insolvencies.

Painful Adjustment

Now, with the industry getting back on its feet, the shrinkage is stemming more from problems in generating new loans, analysts say.

Many big thrifts specialize in adjustable-rate mortgages, but consumers have been flocking to fixed-rate models, eager to lock in the lowest rates in 20 years. Fixed-rate mortgages are the forte of mortgage companies.

"The problem is that a lot of people don't want ARMs," says Gary Gordon, a thrift analyst at PaineWebber Inc.

Mortgages made at adjustable rates fell to about 20% of total mortgages last year, continuing a long decline. In 1988, adjustables accounted for nearly 60% of all new home loans.

To be sure, the big thrifts are showing some clear signs of renewed health.

Capital Rose

Fat interest-rate spreads on their portfolios helped the top 300 thrifts build their total capital by about 14% last year, the survey said. The lack of asset growth, however, remains a source of concern.

H.F. Ahmanson, the nation's largest thrift company, and Great Western Financial Corp., the second largest, each have suffered substantial declines in their share of their mortgage market.

Ahmanson dropped from No. 2 among all mortgage originators in 1990 to No. 8 last year, according to the newsletter *Inside Mortgage Finance*. Over the same period, Great Western fell from No. 3 to No. 12.

The drop in interest rates was not the only culprit.

Competition Increasing

Thrifts' efforts to book adjustables are also being hampered by increased competition for the loans by mortgage banking companies like Countrywide Credit Industries. These players have been seeking to take advantage of an increasingly developed secondary market for adjustables.

To some extent, the lending slowdown at thrifts reflects tightened credit standards.

"A lot of the loan growth in the 1980s was a result of underwriting standards that the thrifts don't use anymore," says Mr. Gordon.

For example, many thrifts have stopped offering "low doc" adjustables, which required little documentation of a borrower's income. In addition, many have begun to require bigger down payments than in the past.

Richard Deihl, chairman of Irwindale, Calif.-based Ahmanson, appears to be content to let others write fixed-rate mortgages. Roughly 75% of the company's mortgage originations are adjustables, just the reverse of the industry-wide pattern.

"We're portfolio lenders and we don't want to hold fixed-rate loans at low rates," he says. "We've been through a cycle previously where the industry got caught in a squeeze and we don't want that to happen again."

Richard Deihl
Keeps marketing focused

Mr. Deihl says Ahmanson is managing to originate such a high percentage of adjustables because it kept its marketing efforts focused on the product and because the California market has a somewhat stronger appetite for adjustable loans than the country as a whole.

Some other key developments in the thrift industry last year:

- Core capital increased by more than 19% at the top 300 thrifts and by 12% for the industry as a whole.
- The total number of thrifts shrank to 2,350, from about 2,600 in 1991 and almost 3,000 in 1990.
- Thrifts controlled by Resolution Trust Corp. dropped to 81, from 91 and 179 in the two preceding years, and their assets declined sharply as well.
- The thrifts with the highest capital ratios were mostly smaller institutions, usually with conservative investment policies and low loan-to-deposit ratios.
- Of the 15 thrifts with the worst total-capital ratios, 13 were already in the hands of the RTC. Of the 50 thrifts with the worst total-capital ratios, the biggest was Glendale Federal Bank, No. 5 in assets. □

TS². So Far Ahead Of The Competition, Who Knows If They'll Ever Catch Up.

Now there's a revolutionary new card processing system available from Total System Services, Inc.℠ that offers you power and performance far beyond any system you've ever experienced before. Unlike others, TS² is not merely an enhancement of an existing system, but a totally new generation of card processing services that enable you to meet the constantly changing needs of your operation with full confidence. And because it was developed with extensive client input, TS² gives you unparalleled levels of operating systems, customer service functions and reporting capabilities thus offering you more flexibility than any other cardholder system in the world.

To find out how TS² can dramatically improve your service and profitability, call the TSYS Marketing Division at (706) 649-2300. And get ahead of your competition with the new spectrum of card processing services from Total System Services, Inc.℠

U.S. Economy Seems Stuck In First Gear

By STEPHEN A. DAVIES
The Bond Buyer

WASHINGTON — What you see is what you get.

Increasingly, the economy under President Clinton is looking very much like the one inherited from President Bush. Economists say things are gradually getting better, but not quickly, and many are comfortable with forecasts of mild growth that continue through this year and 1994.

"There's very little sense of momentum building in most sectors right now," says Laurence H. Meyer, president of a forecasting firm in St. Louis.

ECONOMIC OUTLOOK

"This is still a very struggling economy."

The theme of slow growth is likely to be reinforced by two events this week. On Tuesday, the Commerce Department is slated to release a revised estimate for gross domestic product in the second quarter that some analysts expect could show growth as low as 1%, down from the unimpiring 1.6% reported last month.

The main reason for the revision is the merchandise trade deficit, which stunned financial markets and the Clinton administration by jumping to $12.1 billion in June. The 44% increase from $8.4 billion in May means the trade sector was weaker than expected.

Manufacturing Weak

The trade figures highlighted the ongoing weakness in manufacturing as exporters find that business is drying up in Europe, which is in recession, and in Japan, which is scraping bottom.

The second event that will underscore the sluggish nature of the recovery is the midyear budget review, now late, that is due to be issued by the administration.

While the report is expected to produce a smaller deficit estimate for this year than the forecast issued in February, the word is already out that the administration is now expecting growth of only 2.1% in 1993. That would be down a full percentage point from the 3.1% estimate released earlier.

High Hopes

It is becoming increasingly apparent that Mr. Clinton's hopes for a reviving economy, while not being thwarted, are taking longer to achieve than the administration expected when it

Banks Lose A Bid to Block Credit Union Expansion

By JAMES B. ARNDORFER

A federal judge in Michigan has upheld a decision by the National Credit Union Administration last March to dramatically expand the membership base of a Michigan credit union.

Four Michigan banks had filed a suit to block the change in the 9,000-member credit union's field of membership from a geographic area of 16,000 people to one of between 47,000 and 48,000 in a county of about 75,000.

The decision appears to support a liberal interpretation of the common-bond definition used by the NCUA to determine who may belong to a credit union. Under the law, credit union members must share some common interest.

'A Subjective Concept'

"It's a significant case for credit unions and the agency in that the court recognizes a field of membership is a subjective concept," said James Engel, the NCUA's deputy general counsel. "It supports that the NCUA acted reasonably and our intention is to continue to interpret the field of membership the way we have."

Judge Wendell Miles of the U.S. District Court for the Western District of Michigan in Grand Rapids denied the banks'

Fed Says Relief Plan Hasn't Loosened Credit

By CLAUDIA CUMMINS

WASHINGTON — The credit-crunch relief package put forth by President Clinton last March has failed to increase lending to small and medium-size businesses, according to a Federal Reserve report released Friday.

A majority of senior loan officers surveyed by the Fed said that not only has the new low-documentation basket of loans been ineffective, but the new appraisal, accounting, and exam provisions are expected to have little impact as well.

"The survey responses suggest that the [credit availability package] has not had a substantial effect on the supply of credit to small and medium-sized businesses, although many respondents expect it to do so in the future," the report said.

Few Implemented Programs

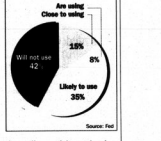
Only a handful of those surveyed said they have implemented low-documentation loan programs, the cornerstone of the President's initiative. And most of those that have taken advantage of the program said they probably would have made the loans anyway.

The Fed gathered the information from special questions included in its quarterly survey of 78 senior loan officers. In general, the survey found that banks have continued to ease terms and standards and have seen increased loan demand from businesses and consumers.

Last March, President Clinton called on the regulators to ease

A Tepid Response

Use of program permitting less documentation for some loans, based on survey of 48 eligible banks



the credit crunch by cutting documentation red tape on loans made to small and medium-size businesses.

Regulators said the plan would make it easier for bankers to make "character loans," freeing up billions of dollars in lending.

Appraisal Standards Eased

The plan allows healthy banks and thrifts to carry a basket of small-business loans with minimal documentation. In addition, it eases real estate appraisal standards, streamlines the agencies' appeals and exam procedures, and clarifies certain accounting rules.

Of the 48 lenders surveyed that were eligible for the minimal-documentation loan pro-

Wesbanco in Deal for First Fidelity of W.Va.

WHEELING, W.Va. — Wesbanco Inc. and First Fidelity Bancorp of West Virginia said they had agreed to merge in a transaction valued at $70 million.

The companies said the agreement called for Wesbanco to exchange 0.9 common share for each common share of First Fidelity with First Fidelity becoming a unit of WesBanco. The two companies said the merger would be accounted for on a pooling-of-interests basis.

They said as part of the agreement, holders of First Fidelity series A 8% cumulative preferred stock would be issued Wesbanco series A 8% cumulative preferred stock convertible into Wesbanco common stock.

First Fidelity has executed an option agreement giving Wesbanco the right to purchase up to 19.9% of First Fidelity's common shares outstanding.

First Fidelity, with $308 million of assets, operates four banks in north central West Virginia. Wesbanco, which has $1 billion in assets, runs 10 banks in West Virginia and one bank in Ohio.

Glenfed Completes Elements of Recap

GLENDALE, Calif. — Glendale Federal Bank said it had completed major elements of its recapitalization that would result in the issuance and sale of $451 million of new equity securities of the bank.

The Glenfed Inc. unit said the recapitalization steps included the previously-reported merger of Glenfed into a unit of Glendale Federal and the exchange offer for Glenfed debentures.

Glendale said it also had completed the reclassification of the bank's outstanding preferred stock and the issuance and sale of $201 million of the new series E preferred stock of the bank.

Wells, Insurer Revise Gottschalks Credit

FRESNO, Calif — Gottschalks Inc. said it finalized financing agreements with Wells Fargo Bank and Teachers Insurance and Annuity Association.

The retailer said Wells Fargo and Teachers Insurance will provide it with $85 million of revolving credit through June 30, 1994, and $30 million in term loans due in 1996.

Wells Fargo will increase the store's existing credit facility from $79 million to $104 million, and Gottschalks will restructure terms on $11 million of senior notes held by Teachers, the company said.

Citi to Redeem 8⅛% Notes Next Month

NEW YORK — Citicorp said it would redeem on Sept. 27 its 8⅛% notes due July 1, 2007, at 100.27% of par plus accrued interest.

Currently, $105.6 million is outstanding on the issue.

Keystone Purchase of WM Bancorp Advances

HARRISBURG, Pa. — Keystone Financial Inc. signed a definitive agreement to acquire all the outstanding stock of WM Bancorp of Cumberland, Md.

As reported, Keystone plans to issue 1.67 common shares for each of the approximately 1.4 million shares of WM Bancorp outstanding.

The transaction, subject to shareholder and regulatory approvals, is expected to be completed by the first quarter of 1994.

The briefs were compiled from staff and wire reports.

Public Hearings on CRA Reform Open Floodgates of Dissension

By CLAUDIA CUMMINS

SAN ANTONIO — Bank regulators hoped to hold public hearings to gather constructive advice on reforming the Community Reinvestment Act. But at their second hearing last week, they got a lot of grief instead.

The four agencies asked community groups, public advocates and industry officials for specific recommendations on how to refocus the law on actual lending, on what new objective factors should be included, and on what consideration differences in bank size and community should be given.

What did they get? You didn't tell us soon enough you were holding this meeting. . . You haven't allotted us enough time to speak our minds. . . If you really wanted to make a difference you wouldn't have met in this upscale hotel. . . This just proves you aren't serious about reform.

Some Meaningful Suggestions

Surely, the regulators have heard some meaningful, informed, and substantive suggestions from many of the meeting participants.

But the harsh criticism and verbal attacks they have suffered left some regulators wondering whether they might have caught less flack if they had gone about their reform in a more private manner.

The second of seven CRA hearings was held Wednesday at the Wyndham Hotel, about twenty minutes outside of downtown San Antonio. A conference hall there was packed with several hundred onlookers, at least for the first few hours.

The agencies were represented by Fed governor Lawrence B. Lindsey, acting chairman of the FDIC Andrew C. Hove, special advisor to the Comptroller Konrad S. Alt, and deputy director for regional operations of OTS John Downer.

Cheers and Jeers

The four men sat together at a table directly facing the panelists, on a dais before long tables of spectators.

Throughout the meeting, community representatives cheered their panelists — and even occasionally jeered the regulators.

Many of the bankers — some who had just attended a Federal Reserve CRA conference in the same room — sat, arms crossed, stony-faced while the public advocates spoke, and enthusiastically applauded their own, when the bankers' turn came.

After being flooded with requests to testify, the agencies heard testimony from 44 people — only a quarter of them bankers — in just under four hours. Allowing time for the 14 panels to set up, that left only three to five minutes for most speakers.

Several of the panelists spent most of their allotted time chiding the regulators for their inaction and lack of concern. They complained about the location, saying that instead of meeting with "the elite" they should have met in the inner city.

They complained that the hearing was at 2 p.m., when most people were at working. And they groused that the regulators don't reach out to the inner-city groups.

Lou Miller, chairman of the African American Chamber of Commerce, even complained that the regulators were not looking interested enough in what he was saying – a tough task for anyone over the course of four long hours.

Short on Time

One banker, Michael L. Allen, wrote in from Carrizo Springs, Tex., saying he was too busy making loans to come to the hearing. After his statement was read by a stand-in, community activists complained that this was typical of bankers' not taking CRA seriously.

In response, during his allot-

A No-Show Makes a Big Impression With Cautionary Note for Regulators

WASHINGTON — The regulators heard from 44 people in San Antonio last week, looking advice on reforming the Community Reinvestment Act. While they heard from a diverse group, bankers responded perhaps most enthusiastically to an absentee.

Michael L. Allen, president of Union State Bank in Carrizo Springs, Tex., was scheduled to testify during the second panel. He never showed up, but asked a fellow banker from Happy, Tex., to present his testimony, Mr. Allen wrote:

"I see from the tentative agenda that I am one of the very few bankers you have to listen to today. Also, I note that I represent the smallest bank.

"Please, Be Careful"

"Please take note that the vast majority of banks that you gentlemen regulate are small community banks. Community banks with only one bank and one community to succeed or fail with their respective community.

"Where are they? I am not with you, nor are all those other community bankers, because we are in our banks, making loans to the people of our communities.

"We do not have the time to come to your hearing during banking hours. We do not enjoy big staffs or specialized people to deal with your regulations.

"Your regulations [including CRA] are an increasing problem for today's community banker.

"So please, be careful – we community bankers are the scurrying mice and you regulators are the dancing elephants."

— Claudia Cummins

Electronic Data Systems To Acquire Ampersand

By BARTON CROCKETT

Electronic Data Systems Corp. has agreed to buy a small but fast-growing supplier of personal computer software for bank branches.

By signing a letter of intent to acquire Ampersand Corp., of York, Pa., for an undisclosed sum, Plano, Tex.-based EDS – a unit of General Motors Corp. – hopes to boost its PC capabilities in the banking industry.

"Its strategically a very important purchase for us," said Tim Ryan, a vice president in EDS' large financial institutions' unit.

About an eighth of EDS' revenues of $8.2 billion last year came from computer services to banks, including running banks' mainframe computers and check sorting machines, managing their ATMs, managing their credit card systems, and doing consulting and systems integration work.

A Shift to PCs

EDS' traditional strength has been in mainframe technology. But as PC usage soars and mainframe usage flattens, EDS offi-

EDS hopes to boost its PC capabilities in the banking industry.

cials want to do more work with the desktop machines.

In banking, that means selling and installing PCs and software for branch automation, one of the hottest areas in bank technology.

According to the *American Banker/Bottomline* 1993 technology survey, about a third of all tellers, and more than half of all customer service representatives have PCs on their desks. In three years, nearly all tellers and customer service representatives are expected to have PCs.

Platform Systems

Ampersand sells PC software that helps tellers balance their cash drawers, and so-called platform software that helps customer service representatives open accounts and sell bank services.

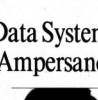
The company has more than 100 clients running Ampersand software in 14,000 branches.

Other leading suppliers of teller and platform software for PCs include Olivetti North America Inc., Argo Data Resource Corp., International Business Machines Corp., Systeme Corp., and Unisys Corp.

Ampersand's biggest customer is Keycorp, Albany, N.Y., which runs the vendor's teller and platform software in nearly 900 branches.

A Windows Opportunity

Other big customers include Boatmen's Bancshares Inc., St.



Dale Smith
Will continue to run unit

Louis, and U.S. Bancorp of Portland, Ore.

Ampersand is also one of the first branch automation vendors to develop software for Microsoft Corp.'s Windows operating system.

Ampersand's president, Dale Smith, said that last year his company had revenues of about $2.5 million and pretax profits of about 20% of revenues. He added that Ampersand's revenues have grown about 35% in each of the past three years.

Mr. Smith and Mr. Ryan said that no management changes or layoffs at Ampersand are planned.

Instead, Mr. Smith will become an EDS product manager, and will run the Ampersand business out of its current offices, with the same 24 employees who now work at the vendor.

Money for Expansion

EDS will provide capital to allow Ampersand to expand, and EDS will also help with support, and install Ampersand

Ampersand Corp. software is run in a total of 14,000 branches.

-software.

Ampersand customers welcomed the sale, as long as Ampersand's management stays in place.

"We've really had a good relationship" with Ampersand, said Robert Tucker, Keycorp's generation manager of technical operations. "We don't expect it to do anything but get better because of the additional resources available" to Ampersand. □

Bankline Launches Midrange Software To Help Small Banks Document Loans

By DEIDRE SULLIVAN
Special to the American Banker

Bankline MidAmerica Inc., a banking systems developer based in Lenexa, Kan., has introduced a loan documentation product for community banks. The new software is designed to run in coordination with Bankline's Solv family of community banking systems based on NCR Corp. midrange computers.

Bankline's president, John French, reported that six community banks that use Solv have recently installed the new loan documentation product.

The software provides prequalification, origination, document preparation, as well as the tracking and closing for all types of loans. The program also computes annual percentage rates, fees, insurance premiums, and payments, as well as producing amortization schedules.

Bankline uses forms provided by Bankers Systems Inc., a St. Cloud, Minn.-based provider of bank documents and forms. "Bankers Systems insures that the forms are in continual compliance with all laws and regulations. They give us the updates and we pass the information and the changes to the customers," said Mr. French.

Unlike personal-computer-based documentation products that reside in a single user's terminal, the Bankline system runs on a host computer, enabling multiple users to access it. With a host-based system, banks can reduce the number of steps involved in approving and then booking a loan, Mr. French said.

"With the system on the host the information gets keypunched once and then it's right there on the system," John Bourgeois, executive vice president of First American Bank and Trust, a community bank with $250 million in assets located in Vasherie, La.

Prior to installing Bankline's product, First American had been using a PC-based system to serve 13 branches.

Burning Up the Fax Machine

"There was a lot of faxing between the one person who did the key punching and the loan officers," said Mr. Bourgeois. Also, with the old system, after a loan was funded, the documents were routed to the loan operations office to be rekeyed into the system and then booked. He said that with the Bankline system, booking takes place automatically, as do updates to the bank's general ledger.

In addition to increased efficiency, Mr. Bourgeois reported that First American has reduced paper and mailing costs. "We don't have to reorder forms, because the forms are on the system," he said. "The whole process is a lot simpler now."

Crestar Pumps Up Its Retail Muscle For Strength to Fend Off Predators

By KENNETH CLINE

RICHMOND — The words "Crestar" and "takeover" fit together as naturally as soup and sandwich in the minds of many bank analysts.

But Richard Tilghman, chairman and chief executive of the largest bank based in Virginia, thinks people have the formula backwards: Crestar Financial Corp. is going to do the acquiring.

In a recent interview, Mr. Tilghman showed no inclination to wave the white flag, even though his company has recently been overshadowed on its home state by intruders from North Carolina.

"We're going to keep on keeping on," Mr. Tilghman said in a recent interview.

Rallying the Troops

Nevertheless, the threat from giants such as NationsBank Corp., First Union Corp., and the quiescent but potentially dangerous Wachovia Corp. caused Mr. Tilghman to give a pep talk to employees late last month.

"These banks are not invincible," he said. "NationsBank and First Union may exceed Crestar in overall size and geographic scope, but where it matters to us, in our markets, we're right up there with them."

Indeed, Crestar, which has $12.2 billion of assets, has the potential to become so profitable that it would be extremely expensive to buy.

The bank has the potential to become too profitable to be acquired.

Its 307 branches in Virginia, the District of Columbia, and southern Maryland constitute the second-largest banking franchise in the region.

Loan Growth Seen as Key

"Their real challenge is to get out there and beat the bushes to grow some loans and increase their market share, primarily on the retail side," said Dean Witter analyst Anthony R. Davis.

Crestar's problem, however, is that it has been a sluggish earner and does not have much time to reverse its course. The company's push for profitability also faces a major handicap: a sluggish Virginia economy that continues to produce lackluster loan demand.

Mr. Tilghman, though, insists he has plenty of potential to exploit, even with the slow economy. His game plan: to invest nearly $30 million in branch automation equipment during the next two years as a means to increase loan production and sales of mutual funds and trust services from Crestar's widespread branch network.

David Brewer

RICHARD TILGHMAN, Crestar's CEO, plans to invest nearly $30 million in branch automation equipment during the next two years to boost loan production and sales of mutual funds and trust services.

He says that all customer service representatives and tellers will be equipped with personal computers. Crestar also intends to make major upgrades of its mortgage and consumer loan systems.

Customer Service Drive

Another key tool in the strategy is a back-to-basics customer service and marketing effort. The company has laid out the following goals for its consumer sales efforts:

- A one-day turnaround on all loan applications in its consumer finance area. It currently takes at least two days for a customer to learn if a loan has been approved.
- A new emphasis on telephone service. Telephone centers in Richmond and Norfolk will be expanded to 24 hour-a-day operation. Mr. Tilghman also said he will investigate telephone- and PC-based home banking.
- A push to sell mutual funds. In May, Crestar's securities subsidiary began selling its own family of funds, the CrestFunds, through its branches. The nine funds currently have $1.6 billion of assets, but are expected to grow rapidly.

Crestar also intends to maintain its traditional role as one of the biggest middle-market lenders in Virginia. But Mr. Tilghman is betting that retail banking is the key to competing against NationsBank and First Union.

"What we want to be is the bank to the household," Mr. Tilghman said, adding that he wants to push core checking, transaction, and savings accounts. "Our desire is to establish a basic business relationship with a family or business and take care of their core deposit and borrowing needs."

Disruption from Takeovers

Most analysts believe Crestar can make headway – precisely because of the new competition. NationsBank bulldozed its way into Virginia and Washington in 1992 with the acquisition of C&S/Sovran Corp., Virginia's largest bank. First Union followed this year with its purchase of Dominion Bancshares Corp.

The disruptions caused in local operations by those acquisitions could be useful to Crestar if it moves quickly, analysts said.

"There's a good opportunity for the indigenous Virginia banks to take market share in the wake of the moves by NationsBank and First Union," said Dean Witter's Mr. Davis. Crestar's target market for scoring gains lies in the relatively affluent greater Washington area – the District of Columbia, northern Virginia, and southern Maryland. Median household income in the region is $54,000, compared with $33,000 for the U.S. as a whole.

Business Goal Set

James Wells 3d, president of Crestar, is heading a task force aimed at bringing Crestar's share of loans, trust fees, and securities-related businesses in greater Washington up to the 9.4% level of its deposit share there. (Crestar's deposit market share is second only to NationsBank.)

The task is harder than it sounds. Although nearly half Crestar's branches are located in greater Washington, many were acquired from insolvent thrifts, which provided deposits but few assets.

Washington also has contributed the largest slice of Crestar's problems. Like most of its competitors, the bank got caught up in the overheated real estate market in the nation's capital in the mid-'80s.

Ahead of the Curve

By the third quarter of 1991, Crestar's nonperforming assets soared to $417 million, or 5.7% of loans and foreclosed realty.

In the past few years, credit problems have come under control. Nonperforming assets totaled $163 million at the end of this year's second quarter, representing 2.24% of loans and foreclosed real estate.

Profitability has improved too, though it's still not up to pre-recession levels. After posting a return on assets in 1992 of 0.67% – down from 0.97% in 1989 – Crestar has rebounded. In the second quarter of this year, it earned $33.7 million, for a 1.09% return on assets.

Throughout the crisis of the last few years, Mr. Tilghman, 52, a career Crestar employee, has maintained a steady hand on the bank's tiller. Analysts credit him with initiating a smart strategic shift in 1987, the year he became chief executive.

Shift to Retail

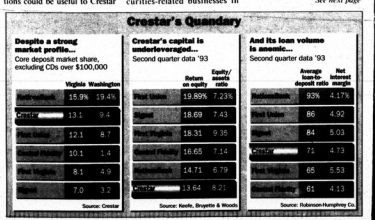
At that time, under its former name, United Virginia Bankshares Inc., Crestar was known as the leading commercial lender in the Old Dominion. Mr. Tilghman, unhappy with the company's reliance on wholesale funding, steered the company to the retail side.

He also pushed for more consumer loan production out of the bank's expanding branch network in Washington.

"The shift in strategy toward retail, and the diversification, was the correct thing to do," said Sandra J. Flannigan, an analyst at Merrill Lynch & Co.

"If they had stayed as com-

See next page



Continued from *page 4*

mercially oriented as they were, given the current lack of business loan demand, they would not have been able to deal as effectively as they have with the commercial real estate problem."

Mr. Tilghman, who came up through the commercial lending ranks, imposed the shift in a typically cautious and deliberate manner, according to bankers and analysts. "He is very prudent and detailed in his analysis," said Mr. Davis, who followed Crestar for many years as a Richmond-based analyst.

The new strategy's success is demonstrable. Core deposits now fund 140% of Crestar's loan portfolio, compared with 86% in 1987. Consumer loans (including credit cards) as a percentage of the entire portfolio rose to 54% from 41%.

But Mr. Tilghman concedes that more work needs to be done. Consumer loans as a percentage of assets are only 10.7% (excluding credit cards), ranking the company in the third quartile of regional banks followed by Lehman Brothers.

Its average loan-to-deposit ratio remains a relatively low 71%. And its return on equity of 13.36% for the first six months lagged its regional peers.

Those numbers and the slow economic recovery in Virginia mean that Crestar cannot expect a soaring loan demand to pull it to new heights anytime soon. Instead, analysts said, Crestar's best protection against takeover may be making its own acquisitions.

Capital Raised

The company raised $97 million in new capital last October just for that purpose, boosting its equity-to-assets ratio to a sturdy 8.22%. Robinson-Humphrey estimates Crestar could support $2 billion in additional assets without having to raise any more capital.

Although Crestar was outbid by First Union for $4.6 billion of assets sold by Washington's First American Banks Inc. earlier this year, it continues to wage acquisition battles.

"We're in a target-rich environment," said C. Garland Hagen, executive vice president of the company's investment banking operations and its point man for acquisitions. He said there are 80 banks and thrifts controlling $15 billion in deposits in the greater Washington area alone.

In the meantime, Crestar must continue to dodge the inevitable takeover speculation, which most commonly pairs it with Wachovia, the only North Carolina superregional that has not yet entered Virginia.

Crestar, with its excellent branch network, "remains a logical entry vehicle into Virginia," said John Coffey, an analyst at Robinson-Humphrey in Atlanta.

Mr. Tilghman dismisses that kind of talk.

"I would think that people who speculate about us as a takeover target are basically analyzing the financial feasibility of such a transaction and not necessarily its desirability," he said. □

First Fidelity Moves to Expand in Pennsylvania

By KAREN GULLO

First Fidelity Bancorp. said it will buy First Peoples National Bank, a closely held community banking company in northeastern Pennsylvania, for $19.6 million in cash.

The New Jersey-based company said it also is buying Bank-Vest Inc., a privately held company that owns 70% of First Peoples.

The two-branch bank, which is located in Edwardsville, has $102 million in assets and $84 million in deposits.

Under terms of the agreement, BankVest's stockholders will receive $214 a share, or $13.8 million in total.

2.17 Times Book

Holders of the remaining 30% of First Peoples will receive 2.17 times BankVest's book value. a First Fidelity spokesman said.

Upon completion of the deal, the bank will be merged into First Fidelity Bank Pennsylvania, which operates 187 branches in eastern Pennsylvania.

The New Jersey company agreed to buy First Peoples, a two-branch bank in the northeastern sector of the state.

$465 for each common share, or a total of $5.8 million.

The purchase price represents

First Fidelity, New Jersey's biggest bank, has total assets of $32.2 billion. Its Pennsylvania unit controls $9.9 billion of assets and $7.6 billion of deposits.

Rapid Expansion

The company has been an aggressive acquirer in the past two years, expanding rapidly in New York, New Jersey, and, most recently, Connecticut.

In Pennsylvania, it has expanded primarily in the Philadelphia area. First Fidelity acquired the Pitcairn Private Bank in suburban Jenkintown in April. In 1991, it bought Atlantic Financial Corp., which has 29 branches in and around Philadelphia.

IT'S REGISTRATION DAY AT THE COLLEGE FINANCIAL AID OFFICE. IF YOU HELPED CREATE THIS SCENE, YOU'RE IN BUSINESS.

BY PROVIDING EFT SERVICES, YOU HELP FAAS ELIMINATE LONG LINES AND PAPERWORK – WHILE BRINGING IN BUSINESS FOR YOUR BANK.

In financial aid offices across the country, the "Registration Day Crunch" is becoming a thing of the past. Students no longer line up in the halls waiting to take care of their forms. Financial Aid Administrators are thankful for the reduction in paperwork, and as a result, banks that offer EFT are getting more business.

Today's FAAs are so convinced of the benefits of EFT that many are directing students only to lenders who offer the service. Lenders without EFT no longer get referrals from those FAAs.

To make sure your bank is at the top of FAA's preferred lender list, talk to the dedicated team of EFT experts at Sallie Mae. We meet the many and varied needs of all types of colleges and universities. And our experience is unmatched as we continue to implement EFT coast to coast.

Trust Vehicle Geared For Smaller Banks

By PHIL ZARODIAKIN

Finance

DAVID BERNARD, president of June 4th Corp., says the name of his financial firm commemorates the standoff in Tienanmen Square.

His newest offering, a hedged preferred stock fund, also shows an interest in the less powerful. It allows small-bank Davids to offer a proprietary investment vehicle ordinarily offered only by banking Goliaths.

The product is intended for trust departments seeking to beat the yields of certificates while maintaining liquidity and safety of principal. Moreover, it's set up to allow small banks to wrap their names around the fund – thus enhancing their image, says Mr. Bernard.

He adds that June 4th would offer geographic exclusivity to trust departments investing in the fund.

Double-Hedging Strategy

The fund buys preferred stock in utilities to capture its dividends, and double-hedges the portfolio with Treasury puts and a second set of utility preferreds purchased with the purpose of selling them before they shed their dividends.

"The strategy has been around forever," says Mr. Bernard. "What we're doing is taking a fund for institutional investors and turning it into a retail vehicle for small-bank trust departments.

"If big banks want to start a fund, they just go the 50th floor, start a new money management operation, give it a name, print a prospectus, and offer the fund. Small banks don't have that many floors, and starting a fund is out of the question for them."

A trust department would have to invest at least $2 million to $4 million in the June 4th fund, which is traded by the firm, but held, in the name of the bank, by PaineWebber Inc.

So far in 1993, says Mr. Bernard, the strategy has posted a 3.10% yield, or 125% more than comparable certificate rates.

Thomas M. Catteli, vice president and senior trust officer at $75 million-asset Maine Bank and Trust Co., Portland, says, "It seems like they have to work awfully hard for a modest increase in certificate yield, and we wouldn't be interested in any fund that turns over frequently and requires a management fee greater than 80 to 100 basis points."

An investing bank can put its name on the June 4th Corp. stock fund.

He adds that "a lot of banks are understandably worried about disintermediation, and there's a bit of desperation for attaining higher yields, but I think it's a passing fad – and I think I'd have trouble explaining this strategy to an elderly widow."

John Kautz, chief investment officer for $725 million-asset United National Bank, Plainfield, N.J., says the June 4th fund "is a great idea, but the preferreds don't have a mandatory sinking fund, and I don't think you could have a perfect hedge without paying, far too much of a premium."

Mr. Bernard says, "It's technically correct that the preferreds don't have a sinking fund, but we're trading them every 46 to 50 days, and as you're repurchasing, the preferreds are marked to the market yield." He agrees that a "perfect hedge" would be prohibitively expensive, but maintains that "in the last 10 years, investment managers haven't lost a penny of principal with the double-hedged strategy."

Heavier Regulation Predicted

Marshall Davidson, a managing director of Rothschild Inc., New York, warns that funds like June 4th's will be more heavily regulated in the future, and adds:

"In general, this results in capital fleeing to unregulated areas. This makes it harder for banks to break even with their services, so, small banks, in particular, have to find ways to trim their fixed costs and turn them into variable costs. I think you'll see a lot more products like this fund in the future."

The Office of the Comptroller of the Currency issued a July 19 warning against private labeling for uninsured retail products – requiring banks to "conspicuously disclose" the originator of the products, according to Lee Cross, a spokeswoman for the agency.

Mr. Bernard says June 4th "is not like a mutual fund company that offers a common fund and puts the name of different banks on it. The fund is managed by the trust department of the bank, and traded by June 4th in the name of the bank."

Q: How is your relationship with your board of directors?

CARROLL MARKLEY
Chief executive
Patriot National Bank of Reston
Reston, Va.

A lot of the problems people have with bank boards of directors are perception more than actuality.

If you have a board that is truly involved with a bank, then there should not be a concern, because they clearly understand what management is doing and aren't in the dark. If something happens, they should know what it is before it happens.

You'll always make some bad loans, but if management has the relationship set up properly, there won't be surprises.

The relationship has changed because of what's happened in banking in recent years. A lot of directors did not know the legal obligations that came with the job, and too many executives never thought of letting them know of the ramifications of their position. □

KEVIN GAGE
President
Bank of Darien
Darien, Conn.

We're a start-up bank, so for the first few years the board was very involved, even in the day-to-day management.

Now they are becoming less involved in the day-to-day stuff and leaving more of it up to me. I think that's as it should be.

They're like a group of consultants, with different business backgrounds. They hired me to do a job, and they look to me to tell them how to implement the strategies that we've come up with.

But they don't take everything I say and approve it. They are very detail-oriented and very involved, especially on the credit side.

We haven't had trouble attracting people from the community, and we have plenty of quality directors. I think that's extremely important. □

AL JONES
Chief executive
American National Bank
Corpus Christi, Tex.

I've had a consistently wonderful relationship with my board.

They are much more involved and participatory than they were five or six years ago. They became more involved at my prodding.

It's just imperative now that they are involved in the basic policy decisions of this bank.

They are a wonderful resource for this bank. They are most involved at the committee level, such as the loan, finance, and risk management committees.

I know that there's a perception out there that it's difficult to attract good directors, but for a community bank that is involved in its community, it's easy to attract very competent directors. They're willing to take the risk. □

Recruiting Directors May Be Getting Easier

By TERRENCE O'HARA

Bank directors have had a lot to be nervous about over the last four years, especially at community banks.

Experts in director and officer liability issues suggest, however, that the stigma of being a bank director has lessened as banks' fortunes have risen.

However, fears of being a director remain.

Mark Rosen, a former Federal Deposit Insurance Corp. lawyer now working for Aetna Life & Casualty Co. in its directors and officers insurance unit said that anecdotal evidence suggests banks are having more luck at attracting quality directors now than a year ago.

'Worse for Smaller Banks'

"It's still worse than it was five years ago," Mr. Rosen said. "And worse still for smaller banks. Depending, that is, on the condition of the institution."

An unscientific survey conducted by the American Bankers Association at February's Community Bankers Conference showed less banker angst over their ability to attract qualified directors.

About 30% of the 95 bankers that responded to the survey said they have had difficulty in finding directors in the last year. About 22 percent of the respondents said that at least one of their directors had resigned or not stood for reelection because of concerns over personal liability.

Earlier Survey

That differs with a survey by the *American Banker* done two years ago indicating three out of four banks with less than $1 billion in assets were having trouble finding qualified directors.

But Josiah Hatch, a lawyer with the Washington office of Gibson, Dunn & Crutcher, said fear of personal liability still pervades community bank board rooms. Concern over regulatory exemption provisions in directors and officers insurance policies and tough policy statements from regulatory agencies in recent months about director culpability are the main reasons.

"I haven't noticed directors' fears going away at the community bank level," Mr. Hatch said.

Weighty Tome

Mr. Hatch, along with fellow Gibson, Dunn lawyer John Olson, recently published an 800-page treatise on director and officer liability. Mr. Hatch said the pair felt a comprehensive text was needed for both lawyers and laymen who deal with the increasingly complex subject.

"People haven't been reassured by the policy decisions issued by the Office of Thrift Supervision and the Federal Deposit Insurance Corp. in recent months," Mr. Hatch said.

"The insurance ramifications of the strict liability propounded by the regulators is worrisome to people." □

HIS CREDIT CARD COUNTERFEITING DAYS JUST BECAME NUMBERED.

Now, Visa's PaymentService 2000 helps stop magnetic stripe counterfeiting.

On April 1, 1993, Visa scored a direct hit against magnetic stripe counterfeiters. The Visa® Card Verification Value (CVV) Program, a key feature of PaymentService 2000, served notice to criminals that an all-out attack on counterfeiting had begun.

This major step forward allows Visa card issuers to validate that the contents of their cardholders' magnetic stripes have not been altered by counterfeiters.

July 13%
June 11%
May 8%
April 6%
Percentage of worldwide transactions checked by CVV.

In just three short months, the Visa CVV Program has allowed issuers to enjoy saving more than $30 million in potential counterfeit losses if the full open-to-buy had been compromised.

A value encoded in the stripe outsmarts counterfeiters.

As transactions checked by CVV increase, Visa Members worldwide can anticipate even greater savings.

The message has been sent. Visa Members have a new weapon: CVV. Now, the guys who counterfeit stripes may soon be wearing them.

WHAT DO MEMBERS SAY?

"In the first few months of implementation, we have identified as much as $1.7 million of open-to-buy that had the potential of being fraud."
— John Totten, Senior Vice President and Chief Technology Officer, FirstCard

"Using CVV, we have blocked over 800 accounts, saving our institution millions in potential losses."
— Art Desloges, Director of Security Services, Citibank US Card Products

"Since CVV has been in place, we have significantly reduced our losses and are catching counterfeit card activity in less than a day."
— Michele Shalmon, Security Supervisor, Great Western Bank

"We have already experienced important savings since we implemented Visa's CVV Program."
— Rick Scully, Vice Chairman, First U.S.A. Bank

Set Goals Before Taking the Public-Relations Plunge

Community bankers often ask, "Should I hire a public relations consultant?"

The reason is simple: There are plenty of them around. In fact whenever you find someone who has left a job as a reporter on a newspaper or as a media newscaster or commentator there is a likelihood he or she will set up as a public relations consultant.

But before even thinking of hiring a consultant, the community bank's board and officers should ask them selves: What do we want a public relations program to do for us?

Weekly Adviser

By PAUL NADLER

This is an issue that affects larger as well as community-size banks. For often, PR professionals report that they have been hired, but they and their clients end up unsatisfied with the results of their work simply because they were not given specific marching orders.

First of all, public relations people state emphatically that PR is not marketing. It is less specific than that.

What are some of the goals that a PR program can try to achieve?

Blowing Their Own Horn

First, let's face it. In some organizations – both banks and nonbanks, large and small – the CEO's basic goal, whether he admits it or not, is to aggrandize himself and get his name in print.

If that is what you honestly want, then a PR professional can be of considerable help. For they know how to get stories picked up by the media, and how the CEO can do things that will get the media's attention.

But if your goals for PR are different, then maybe a public relations professional is not so important to success.

Touting the Stock

Some organizations look to PR as a way of hyping their stock. This is important to them because it both makes shareholders happy, including employees with option plans, and it helps keep the stock at a price that will facilitate mergers or acquisitions.

The higher the price-earnings ratio, the less you pay in dilution when acquiring another bank and the more you get for your own bank if you sell.

Here PR may not be as effective as sitting down with the market makers and pitching your stock to them. Sometimes the best PR approach is simple honesty.

The market maker has to put a lot of his own capital into making a market in your stock if you want any liquidity. And he doesn't want any "surprises" that wipe out consumer demand and thus reduce the value of his investment.

In small towns a PR firm can do a lot to burnish a bank's image.

Working with the market maker, developing a dividend reinvestment plan to create demand for your stock, and giving the market maker an opportunity to bid on equal terms with anyone else on your other investment business for the bank portfolio and trust operations are more valuable than any PR campaign could be in boosting the aggressiveness of the market maker in positioning and touting your stock.

What about generating a feeling of good will for your bank in the community? In smaller towns this is more important than in larger ones since everyone knows the bankers. And the ones who help the community are generally favored over those who take a more impersonal "business as usual" attitude.

Here a PR consultant can be of great value. But before spending money to hire one, the banker should grill the adviser about his ideas for helping improve the bank's image.

This is the key. PR people do not earn their keep by merely sending out press releases. And they are not needed if your goal in PR is just a higher stock price.

We would love to hear some of your ideas as to how PR has helped or not helped your bank. And I'll also give some of mine as to what I think public relations can do to help in image building and, yes, even boosting your personal image and stature in the community.

HUD Draft Rule Could Derail Tough Law on Escrow Interest

By SNIGDHA PRAKASH

WASHINGTON — A new rule drafted by the Department of Housing and Urban Development will reduce escrow payments for some borrowers.

But the rule will not address the hot issue that strikes fear in the hearts of mortgage lenders: whether interest should be paid on the accounts.

Mortgage servicers collect monthly payments to cover real estate taxes, insurance, and other expenses for which homeowners are liable. Presently, the servicers keep any interest earned.

Henry Cisneros
Hasn't signed off on rule

Would Slash Servicing Profits

A requirement to pay it out to borrowers would substantially reduce servicing profits.

Opinion is divided in Washington over whether HUD's action would help or hurt the chances for a tough new law requiring payment of interest.

The chairman of the House Banking Committee, Rep. Henry Gonzalez, D-Tex., introduced such a bill last year.

The industry hopes that HUD's rule will take the wind out of Rep. Gonzalez's sails.

'No Longer a Need'

"I would venture to say that if HUD takes the leadership it should take, there is no longer a need for the Gonzalez legislation," said Warren Lasko, executive vice president of the Mortgage Bankers Association.

One Republican House staffer suggested the industry's hopes may be realized. "Once the regulation comes out, if it plays well in Peoria, then I don't think Gonzalez is going to have a leg to stand on to push the legislation," he said.

But consumer advocates felt the rule would open the door for more reform.

'A Moving Target'

Mortgage servicers would be required to calculate escrow so that a prescribed low balance is reached each year. That balance could effectively be three months' payments.

However, HUD officials emphasized the draft rule was "a moving target," and the department's policymakers, including Secretary Henry Cisneros, have not signed off on it.

The proposed rule will be published in the *Federal Register* by late October, one official said.

Different Treatment

The rule treats existing and new escrow accounts differently, a HUD official said. Existing accounts would have to meet new requirements as well, the official added, declining to elaborate.

Major companies such as Pasadena, Calif.-based Countrywide Credit Industries are already complying with the more stringent accounting method servicers would have to adopt.

But for others, the change in accounting would incur new operational costs, said Mr. Lasko.

Might Increase Pricing

"We operate at a lower cost because of high volume," said Stanford Kurland, senior managing director of Countrywide.

"For a banker that has a smaller margin, [the change] might increase pricing up front. It makes them less competitive," Mr. Kurland said.

In addition to earning interest, servicers also use the escrow funds to get lower loan rates from banks that compete for the escrow accounts.

Large purchasers such as Countrywide drive the servicing market, and they will not be ment's policymakers, including

Existing-Home Sales Rise for 3d Straight Month

By CHRISTOPHER NOBLE

Sales of existing single-family homes in the United States rose 5.4% in July from the June level to a seasonally adjusted rate of 3.88 million, the National Association of Realtors said Wednesday.

The jump was much larger than expected and brings home sales to their highest annualized rate all year. The increase was the third straight monthly advance and followed a revised 1.7% gain in June. The rate is up 14.8% over a year ago.

The median price in July was $109,200, compared with $109,300 in June and $102,800 in July of 1992.

Falloff in Northeast

Sales gained in all parts of the country except the Northeast, where they fell 1.8%, to 560,000. In the West, sales leaped 9.5% to 810,000, while in the Midwest they rose to 1.05 million, an increase of 9.4%.

In the South, meanwhile, volume rose 3.5%, to 1.46 million.

"Summer generally is busy, but this is extraordinary," said William S. Chee, president of the Realtors' group. "More and more 'sold' signs are going up."

Officials of the Realtors' group attributed the jump to "extremely low mortgage rates," which have fallen to 25-year lows in recent weeks.

The ranks of first-time buyers have surged in recent months. Also, low home prices, low mortgage rates, and more aggressive marketing of Federal Housing Administration and VA loans have been factors.

Plaza Executives Kiss Big Bonuses Goodbye

People in the News

By CHRISTOPHER NOBLE

THEY SAY ALL GOOD THINGS must come to an end. Brenda Lynn, vice president of loan production at Plaza Home Mortgage Corp., knows exactly what they mean.

During 1991 and 1992, Ms. Lynn was paid annual bonuses by a simple formula tied to volume.

Since she works for one of the fastest-growing mortgage banks in the country, the result has been astonishingly fat pay envelopes.

In 1991, Ms. Lynn received a base salary of $115,000 and a bonus of $743,886. But that amount was a pittance compared to her 1992 compensation. Loan origination volume broke all the records around the country last year, and Ms. Lynn's pay merrily followed suit. Her base salary rose to $150,000 and her bonus climbed to a mind-numbing $876,264.

William E. Moffatt, head of secondary marketing, had compensation that mirrored Ms. Lynn's. In 1991 his salary was $96,000 and his bonus $540,000. Last year, while his salary remained unchanged, his bonus shot to a stratospheric $905,466.

Plaza's business took off when it went public a little over a year ago. Santa Ana, Calif.-based Plaza is now among the top 20 mortgage originators.

Brenda Lynn

For the first six months of 1993, the company wrote $3.4 billion in loans and had a servicing portfolio of $3.4 billion in June. The company expects to originate between $8 billion and $10 billion in loans this year and expects to retain about 50% of those loans for its servicing portfolio.

But the bonus bacchanal, at least for Ms. Lynn and Mr. Moffatt, appears to be coming to an end. Beginning this year, the two executives will receive bonuses to be decided by Jack French, Plaza's chief executive.

"Unfortunately, it's over," Ms. Lynn said with a rueful laugh during a recent telephone interview. "I expect to get a much smaller bonus this year."

Something of a Windfall

Ms. Lynn said she never expected to make as much money as she did in the last two years. She said she and Mr. Moffatt both viewed the massive bonuses as something of a windfall.

"We both kind of look at it as like we had a couple of really great years and we were real happy that that happened to us, but we were realistic. We didn't want to price ourselves out of the industry," Ms. Lynn said.

Ms. Lynn, who is unconcerned by the industry chatter over her astronomical earnings, pointed out that the compensation plan was not her idea and added she was not the only head of production paid on a commission basis. Other heads of production make more, but do not have to disclose their salaries since they work for privately held companies, she said.

Plaza is forging ahead. Analysts remains confident, and Ms. Lynn said the company was seeking to diversify out of California to lessen its vulnerability to the economic slump in that state. Today, 70% of Plaza's loans originate in California. Ms. Lynn said the company plans to bring that down to 50%.

There's no debate—new regs are coming. What's still at issue is whether you'll be ready for them.

■ Mortgage Marketplace

Sadly for you, politicians in Washington agree on something.

Lawyers, legislators and lobbyists in Washington—people who've made careers out of being contrary—all are declaring the same thing these days: that government's relationship with the secondary mortgage market is going to change drastically.

They all know about HUD plans to toughen enforcement, new pressures on Fannie and Freddie, and the revival of Ginnie Mae as a major player in the market. And if you want more evidence, look to Capitol Hill, where Congress is toying with mortgage bankers subject to the same regs as commercial banks.

How should you react? You could wax nostalgic—and get clobbered by the government and your competitors. Or you could read *The Mortgage Marketplace*.

Every Monday, in less time than it takes to finish your morning coffee, *The Mortgage Marketplace* tells you about the new rules and ideas that could keelhaul your secondary operations. It names the biggest mortgage company participants in Ginnie, Fannie and Freddie issues. And it scans the horizon to determine what types of loans, and borrowers, that now are considered exotic could soon enter the pipeline of conforming loans.

Ginnie Adjustables Likely to Show Stable Prepayments

By ERROL MUSTAFA
Vice president, mortgage research
Prudential Securities Inc., New York

The following article is adapted from one that appeared in the Aug. 20 issue of Prudential Securities' "The Mortgage and Asset-Backed Market Review."

Many investors now fear that an increase in short-term rates, together with a flattening of the yield curve, could result in a significant rise in refinancing of adjustable-rate loans into fixed-rate mortgages.

In this event, there could be a significant increase in prepayments for conventional adjustable-rate mortgages.

Investors who are concerned about such a possibility should consider the slower-prepaying Ginnie Mae adjustables market. Within this market, prepayments are expected to remain relatively stable, even for newly originated, fully indexed 5.5% and 6% coupons.

Comment

Holding Steady

In contrast to the fixed-rate market, the last two years have seen relatively stable prepayments for most sectors of the ARM market.

Ginnies are particularly insensitive to long-term rates.

One of the factors that has kept ARM refinancing activity light over the last 2½ years has been the decline in primary-market mortgage rates for ARMs, which has closely tracked the decline in 30-year fixed rates.

In fact, the current spread between Freddie Mac's survey of 30-year fixed and one-year adjustables is currently more than 260 basis points, well above the three-year and five-year historical averages of 243 and 213 points.

Causes for Stability

If the spread between 30-year fixed and one-year adjustable rates remains at or close to current levels, we expect ARM prepayments to remain stable for the following reasons:

• *Many homeowners who take out ARMs are attracted by the low initial teaser rates that typically are offered for the first year.* They include first-time buyers and others who are unlikely to refinance into a higher-coupon fixed-rate product unless short-term mortgage rates are comparable to long-term rates.

• *The surge in ARM prepayments in the spring of 1991 satisfied much of the refinancing demand from those wanted to lock in fixed-rate loans below 10%.*

• *Much of the outstanding ARM securities come from mortgages that were originated from mid-1987 through early 1989, when the adjustables' share of primary-market originations was above 50%.* These loans currently have four to six years of seasoning and should show fairly stable prepayments.

Other Possibilities

If, however, the curve flattens significantly and short-term rates rise sharply, we would expect the following:

• *Prepayment speeds on both fully indexed convertible and nonconvertible one-year CMT ARMs would increase substantially.* However, for seasoned convertible ARMs, we would expect speeds to increase much more than nonconvertible speeds as the conversion option to a fixed-rate mortgage is exercised.

The agency's mortgagers are less likely than others to refinance.

• *Adjustables indexed off the six-month Treasury bill or CD rates should be among the first sectors of the market to experience a significant increase in prepayments.*

This is because, in a rising interest-rate environment, the semiannual coupon-reset feature of these ARMs would result in a more rapid adjustment to higher rates for borrowers with these mortgages compared to those with those that reset annually.

Conversely, those that reset every three or five years are likely to experience a more delayed increase in prepayment rates.

• *Prepayment speeds on adjustables indexed to the cost of funds and on Ginnie Mae ARMs would likely increase less than those on conventional CMT or CD ARMs.*

• Ginnie Mae mortgagers in general tend to be less sensitive to refinancing opportunities than conventional mortgagers.

As a result, their prepayments historically have been less volatile, as well as slower, than prepayments on conventional ARMs.

Liberty, Chasing Youth Market, Goes to Class

By KALEN HOLLIDAY

In a bid to capture more of the youth market, Liberty Financial Corp. is going back to school.

The Boston-based mutual fund company, which manages $31 billion of assets, launched a program last week to educate young investors about money matters and increase awareness about investment options for children.

Coinciding with the introduction of its Young Investor Program, Liberty announced it was lowering account minimums for custodial accounts for the Stein-Roe family of no-load mutual funds to $500.

The funds are managed by Stein Roe & Farnham, a Chicago-based subsidiary of Liberty Financial Companies.

Lower Minimums

Liberty also eliminated minimums on custodial accounts for the Liberty Financial funds, allowing investors to open a custodial account for just $50.

"While the industry trend is to raise new account minimums, we have lowered our minimum to help kids invest," said William P. Rice, director of corporate communications for the Liberty Financial Cos.

And getting children to invest and save is central to the Young Investor Program.

Liberty is developing products, materials, and educational seminars to introduce young people to the basic principles of money, economics, and investing.

Teaching Them to Save

The program is geared toward teaching children about money early so that they will develop good savings and investing habits, Mr. Rice, who is in charge of the program, said.

Age 3 is not too soon to start, he added.

"The youth market is our future," said James M. Grant, senior vice president for marketing at First National Bank of Chicago.

"Banks have historically been very active in teaching kids about money," Mr. Rice said.

"We want to start teaching them about savings and investing. That is where we can make a difference."

Liberty officials have talked to both small banks and some large money center banks about offering the seminars in their branches. Banks have reacted very positively to the program, Mr. Rice said.

Several Benefits

Educating young investors "will increase mutual fund sales and raise Liberty's visibility," Mr. Rice said.

But there are big benefits for banks that target children, too. "It's not going to hurt their CRA requirements," Mr. Rice, said referring to banks' obligation to reinvest in their communities.

After evaluating results from a Harris/Scholastic Research survey, Liberty commissioned in May, the company found there was a need to improve children's understanding about financial issues.

The company is developing products, materials, and seminars to introduce young people to the basic principles of money, economics, and investing.

About 88% of the children surveyed said they had "learned everything they know about finance and investments from their parents," according to the poll.

Helping Hand for Parents

To help parents, Liberty has published the "Young Investor Parents Guide" which it plans to make available in bank branches.

The 50-page book covers topics such as the value of money, financial planning basics, saving and investing, financing college, and giving minors stocks and mutual funds.

Harris/Scholastic Research, a division of Louis Harris & Associates, interviewed 1,389 students in the eighth to twelfth grades at public, private and parochial schools in the United States.

The survey measured students' attitudes toward and experiences with money and investments.

Knowledge is Power

"It is no surprise to us that the more knowledgeable students are about money, the more likely they are to save and invest," said Kenneth R. Leibler, president of Liberty Financial Companies.

So, the theory goes, education can increase business for companies that sell investment products.

Based on survey results, however, Liberty may have a long way to go before teenagers flock to mutual funds.

Growth of Mutual Funds

While the survey found that 64% of the high school students polled understand stocks and 44% know about bonds, only 22% could define a mutual fund.

"It is interesting that students are least knowledgeable about mutual funds," said Porter P. Morgan, investment strategist at Liberty Financial.

Mutual funds have become "the investments of choice for millions of Americans in the last decade, particularly for first-time investors," he said.

"I think that mutual funds are a great way to introduce kids to the stock market and saving," said Neale S. Godfrey. Ms. Godfrey is the author of "Money Doesn't Grow On Trees: A Parents Guide To Raising Financially Responsible Kids," to be published next year, and "Kids Money Book."

Lack of Marketing

Banks are very interested in attracting families and are becoming much more sophisticated in their marketing, Ms. Godfrey said.

However, few banks have focused their marketing efforts on children.

Banks are not interested in attracting them "because young people are low-balance high-maintenance customers," said Dale Bradley, assistant to the president at Young Americans Bank in Denver.

The bank serves customers under age 22. Nearly 93% of their 16,000 customers maintain savings accounts, Mr. Bradley said. "Our customers, as a trend, are saving," he said.

Although mutual funds are not sold through the bank yet, "it is in the cards," Mr. Bradley said.

A Similar Course

Young Americans Bank, which manages about $9 million of assets, has also introduced a program to teach high school students about mutual funds.

"We would absolutely support this type of program" Liberty has launched, he said.

Some banks have developed savings programs for children, including First Chicago, the nation's 10th largest bank.

First Chicago's First Generation program, which has 64,000 customers, allows children to open a fee-free savings account with just $1.

Chemical Bank, New York, is also returning to the classroom. This fall, a Chemical employee will teach a course in financial planning at George Washington High School in New York.

The curriculum includes lessons on savings and investment alternatives. □

Helping children invest

Fund Consultant Offers a Gauge For Cash Flow

By MICHAEL O'D. MOORE

A new tool is available to banks struggling to assess the affect of various mutual fund sales changes, including the newer back-end loads, on cash flows.

Strategic Insight, a New York-based mutual fund consulting firm, introduced the software program, "Evaluator," in April.

Banks and mutual fund companies have been using the program to identify how regulations, economic conditions, and business factors could affect their programs over long periods, said Philip L. Herzog, senior vice president at Strategic Insight.

What most scenarios of back-end loads have shown, he said, is that banks will often have to wait up to eight years to recoup fees paid to brokers up front.

Difficult Chore

Calculating the cash flows longhand can be a nightmare. Each investment has to be individually tracked as loads are levied over time. Then, the aggregates must be compiled. Making the task more difficult is the overlay of regulations and economic variables, he said.

Evaluator considers all those factors simultaneously. Bankers may enter as many as 170 variables into the program to see how various sales levels, and regulation requirements, will play out.

The program generates graphs to compare variations on the business plan. To develop the program, Strategic Insight had two to four people working for 14 months.

The company brought in bank and mutual fund CEOs to help determine the appropriate projection needs, he said.

To give customers more load options, more banks have been developing funds with back-end loads.

ATM Habit Seen Hurting Sales to Younger Set

By KEITH DuBAY

Do-it-yourself electronic banking might aid the bottom line, but it may also be keeping potential investment products customers out of the bank, experts warn.

Now that the younger generation has been trained to use automatic teller machines, direct deposit, telephone balance inquiries, and other labor-saving devices, there's little reason for them to walk into a bank.

If bank investment departments want to sell them mutual funds and annuities, they've got to find a way to get them back in door, industry executives and consultants say.

Habits Formed

"The banks are doing the best they can to push customers out of the branches," said Paul Pasis, chairman and chief executive officer of Marketing One, a leading third-party marketer of bank investment products based in Portland, Ore.

"The banking industry, through the ATMs and '800' numbers, has given the customer the ability not to come into the bank," said David Nardozzi, director of Marinedge, the investment products division of Marine Midland Bank, Buffalo.

Some industry executives maintain that banks are still not perceived by the younger generation as a place to invest in equities, annuities, and other products more creative than a certificate of deposit.

"There is an apprehension that those are products and skills that banks don't have. And on the whole, banks have done a lot to dispel that," said Reichert, Marketing One's sales chief.

Cross-selling to absent customers isn't easy.

Follow-Up Calls

Marketing One has a follow-up program where a previous customer or person who has been in contact with a bank's investment products department receives a telephone call from a sales representative.

Marketing One also sends fliers to customers who have inquired about investing, notifying them that a salesperson will follow up by phone or in person.

Like most of its rival companies, Marketing One also promotes informational seminars for customers. Such seminars typically focus on investment basics, explaining, for instance, what annuities are or how fixed-income investments work.

The seminars can introduce customers to products or even to the brokerage's sales force in the hopes of turning a sale.

Typical Customer

Most in the industry agree that the typical bank investment-products customer is a longtime depositor, aged 53 to 65. By and large, they are inexperienced investors who look to a bank to provide a sense of security in an unfamiliar area.

Richard B. Ross, president of Investment Marketing Corporation of America in Northfield, Ill., estimates that banks aren't reaching the two-thirds of bank depositors who are younger and better educated.

Mr. Ross sees a clear demarcation between the younger group and the "scared, older" group of people who have not traditionally been investors.

So far, banks have done well selling mostly fixed investments to older customers because they trust banks more than brokerages. But that strategy won't be enough, Mr. Ross said.

A Harder Sell

"The banks have taken the cream off the market," Mr. Ross said. "They have taken the easy customers as interest rates have declined and people looked for higher returns.

But, he added, "the cream is gone, so now they have to look to the rest of the market."

Mr. Ross advises banks to adapt different approaches to different groups. If a bank is doing a seminar for younger people, "it's not based on estate planning. It's based on how you're going to fund your kids' educations," he said.

The way to approach yuppies is to get them interested in a specific offer, he said.

Customized Programs

For example, a direct mail campaign on education funding should include a promise to develop a special program for the individual customer. For the best customers, use a more direct approach over the telephone or in person.

"You can't talk about a hot stock, or investments in general. You have to develop a package. If you come in, I'll give you this, show you this alternative." □

Richard B. Ross
Says banks need new strategy

HIGH YIELD REPORT

lets you hear the heartbeat ...

...and feel the pulse

of a market accounting for over $250 billion of publicly held corporate debt — and a behemoth of distressed bank debt

This objective, succinct, weekly newsletter delivers money-making tips on high-yield investments.

Keeps a close eye on major court proceedings, and legislative and regulatory developments.

Features:
☞ Barometers of market size.
☞ Bellwether pricing tables.
☞ A forward calendar.
☞ Reports on filings.
☞ Results of new-issue sales.

If you must know what's "ticking" in the heart of the high-yield market,
HIGH YIELD REPORT
is a must read every week.

No longer considered the arena of "junk bonds," the high-yield market is rapidly gaining respectability as it is closely tracked by the American Banker's weekly

What Is Your Best Weapon For Combatting Attrition?

By STEPHEN KLEGGE

Like most commercial banks that offer credit cards, Barnett Banks Inc. faced a serious problem with the advent of competition from national marketing powerhouses.

A Counteroffer Strategy

American Telephone and Telegraph Co.'s Universal card and Sears, Roebuck and Co.'s Discover card were luring away customers with rebate and discount offers, while highly efficient specialists such as MBNA Corp. and Advanta Corp. were targeting segments of the traditional banks' customer base with customized offers.

By September 1991, Barnett customers were canceling their card accounts at a rate of about 17% annually. The southeastern regional, based in Jacksonville, Fla., reasoned that the credit card was an important item on the menu of financial services offered through its branch system. It decided to fight back.

Barnett set out to find ways to discourage customers from switching to competitors' cards. Barnett's counteroffers could be customized, sources said, ranging from the waiver of a fee to a discount at a local restaurant.

At a time when the banking industry faced added competition from the likes of General Motors Corp. and General Electric Co., the bank's attrition rate has been dropping sharply. The most recent attrition rate is about 9.6%, said Dennis Cluley, senior vice president of customer service.

A Trend

Wary of divulging any secrets to competitors, Mr. Cluley declined to say what his most effective tools are. But he indicated that the bank decides what to do only after a review of the profitability of each account.

While few have created dedicated units to fight attrition, Barnett's move represents a trend, as seen in the comments below.

A. CHRISTIAN FREDRICK
Senior vice president
Fleet Financial Group
Providence, R.I.

Our most effective tool against attrition is to intercept people who call us and write us to cancel their card. We take a quick look at account profitability and, if appropriate, offer to waive the annual fee.

We've tried gift certificates and other promotional items, but all our research continues to show that the No. 1 reason for card cancellation is the annual fee. If it's an unprofitable account, we let it go. The calculation of profitability involves a grid of revolving debt and purchase volume. We've cut our attrition rate by about one third. □

MARILYN L. COOPER
Senior vice president
Keycorp
Albany, N.Y.

Excellent customer service. It's understanding what your customers want, responding in a timely fashion, and correcting any problems that might arise to their expectations. We call customers back to find out why they're closing their card.

If it's a problem, we correct it right away. We might explain other products we have that may be more to their liking. When we get customer complaints, we look into them all. We find out what caused the problem, and if it's a problem with infrastructure, we correct that. □

JAMES M. COSMAN
President
BayBanks Credit Corp.
Boston

We moved to a variable APR in spring 1993 of prime plus 7.9% for gold and prime plus 8.4% for classic. Many free benefits, typically available only to gold cardholders, are also extended to classic.

We find the personal touch goes a long way for customer retention. Since we issue credit cards primarily in our local market, Massachusetts, we are able to offer outstanding personalized service, both in-branch and 24 hours a day via telephone.

Next month, our customers will be able to link their credit cards with the cards that access ATMs, allowing them electronic payment capability. □

IT'S A SNAP: Customers can drop in unannounced to get photographed for Bank One Arizona's cards.

Banc One Unit Joins The Photo Card Trend

By LISA FICKENSCHER

Bank One Arizona has joined the handful of institutions printing customers' photographs on credit cards, and it is raising the ante by putting the photos on debit cards as well.

The program will begin Sept. 7, 17 months after Citibank became the first major bank card issuer to adopt the technique.

Fraud Seen Deterred

Citibank claims the photographs have deterred credit card fraud. Bank One Arizona is also emphasizing the anticrime and personal-identification aspects, though it is clearly seeking a marketing and public relations payoff as well.

The initiative is likely to spread to other units of Ohio-based Banc One Corp., which have issued a total of about eight million credit cards.

Bank One Arizona has more than a million credit card and checking customers eligible for the optional photo program.

The bank is putting both the customer's picture and a digitized signature on the front of each card. The customer's actual signature will still be written on the back of the card.

Using technology from Polaroid Corp. of Cambridge, Mass., and DataCard Corp. of Minneapolis, the bank will keep the photos and signatures in computer storage so that the cards can be reissued automatically.

Endorsed as ID

The Arizona bank said its photo card has been endorsed by the prosecutor's office of Maricopa County (Phoenix) as a substitute for drivers licenses when retail merchants verify checks.

Besides Bank One Arizona and Citibank, at least three other banks have come out with similar products.

In June, the lead bank of Citicorp moved the photos from the back to the front of its cards, making it easier for merchants

Bank One Arizona Puts Photos on Credit, Debit Cards

Continued from page 14

to verify a customer's identity. Citibank also added the digitized signature on the front.

No Appointment Necessary

Unlike Citibank, which requires customers to mail their photographs, Bank One Arizona will take pictures during business hours in all its 205 branch offices. No appointments are necessary. Two photos will be produced, one of which will remain at the branch.

Sweepstakes Promotion

Virlea Mays, vice president and project director for Bank One Arizona, said that with both the signature and photo on the front, "our cards will actually be cobranded with our customers."

Bank One Arizona will promote the program with advertising and a sweepstakes. A customer who comes in for the picture-taking is automatically entered, and can win prizes ranging from Polaroid cameras to a Hollywood vacation.

More than a million customers are eligible for the option.

Bankers say photo cards give customers a greater sense of security. But some experts have raised questions about how effective they really are. "Photo cards are a sales gimmick. That is the number one reason banks offer them," said Donald D. Drummond, executive director of the International Association of Credit Card Investigators.

Merchants' Cooperation Vital

The card's effectiveness depends on how conscientious a merchant is about matching the photo with the cardholder.

Some store clerks do not even verify signatures carefully, so the photo is just another way to encourage scrutiny.

Citibank's advertising claim, "If you lose it, no one can use it," rings hollow if merchants don't cooperate.

John W. Westman, president of Bank One Arizona, said the personalization makes the cards "safer and easier."

"This is our opportunity to demonstrate how serious we are when we say we'll do whatever it takes to meet our customers' needs," Mr. Westman added.

'The Ultimate in Convenience'

"Our customers are getting the protection and recognition they want and deserve, and merchants are receiving immediate proof of identification," said Ms. Mays, the project director. "Secondly, with this new technology, we are able to provide our cardholders the ultimate in convenience and worldwide cash availability."

The program is likely to spread to other Banc One units.

The Polaroid-DataCard system, which Citibank and others also use, integrates the photo and signature into the card production process. Once the photos are scanned and converted to digital form on magnetic tape, DataCard's 9000 Series system produces 350 cards an hour. □

Christmas Surge Failed to Spur Consumer Debt

By STEPHEN KLEGGE

Last year's holiday spending surge is looking more and more like an abberation, according to economist Allen Sinai.

The American Express Consumer Debt Index, which Mr. Sinai introduced earlier this year, fell for the second straight quarter in the period ending June 30, reflecting continued belt-tightening by Americans.

Holiday Upturn

The index had ticked up in the fourth quarter, as consumers loaded holiday purchases onto their credit cards.

Mr. Sinai is chief executive of Economic Advisers Inc., the affiliate of Lehman Brothers that produces the index.

The index of eight measures of consumer indebtedness stood at 216 on June 30, 20% below its peak in the second quarter of 1992, but still 26 above its low point near the start of the 1980s economic expansion.

Signs of Health

Although a falling index indicates a declining appetite for credit, it also indicates a healing process in the marketplace, Mr. Sinai said.

"The creditworthiness of households is steadily improving.

"The risk of loan losses and delinquencies is becoming less and less."

But he estimated it may be two and a half years before consumers are ready to take on enough new debt to fuel a strong economic expansion.

The Private Market ...

PEOPLE

Ludwig on Martha's Vineyard, but Not with the Chief

By JIM McTAGUE

He didn't appear in any of the photos of **President Clinton** from Martha's Vineyard, but Comptroller of the Currency Eugene A. **Ludwig** was vacationing on the island last week with other high-bracket Democrats.

Unlike the President, Mr. Ludwig was not a renter. He owns a house at the resort.

The comptroller is planning a big speech on Sept. 13 at a conference for the bank customers of Merrill Lynch. We're told it will be of major interest to the banking industry.

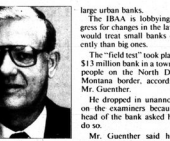
* * *

Only 199 more botched missions like the $980 million Mars Observer and NASA will approach the former Federal Home Loan Bank Board for incompetence.

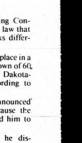
* * *

A rivalry is developing between two of the government's least impressive bureaucracies, the Resolution Trust Corp. and the Department of Housing and Urban Development.

Both surmise that **Vice President Al Gore** and his task force to reinvent government may recommend consolidating the country's multifarious property-



Eugene A. Ludwig
Planning big speech



Stanley G. Tate
Touring RTC offices

liquidation operations under one roof. Both are vying for the business.

The RTC has a leg up in that there is proposed legislation introduced by Senate Banking Committee Chairman **Donald Riegle,** D-Mich., that would create a demonstration program to sell 50 multifamily houses that have been repossessed by HUD.

Sources say the RTC's affordable housing employees need the project to justify their continued existence.

A HUD official said that his department has more experience liquidating properties and is much better suited to the job.

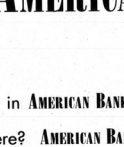
"The RTC has trouble getting their ducks in a row," he said.

* * *

Meanwhile, **Stanley G. Tate,** the man the President nominated to head the RTC, is out visiting the agency's field offices with little warning, surprising most employees.

He lets the office heads know just a day or two ahead of time that he's coming and wants to meet with the senior staff because he doesn't want them spinning their wheels on special preparations to impress him.

He showed up in Atlanta two weeks ago and in Dallas last week, and plans to visit all the offices before he's confirmed to get an overview of the RTC's operations.



Kenneth Guenther
CRA field tester

Los Angeles will remain off the visit list while its head, **H.A. Felton,** is recovering from an illness, an RTC spokesman said. Next stop? Mr. Tate doesn't want to advertise it.

* * *

Speaking of surprise visits, **Kenneth Guenther,** executive director of the Independent Bankers Association of America, recently conducted his own field test to see how bank examiners from the Federal Deposit Insurance Corp. were scoring small banks on compliance with the Community Reinvestment Act.

Mr. Guenther believes that small, rural banks should not be held to the same standards as large urban banks.

The IBAA is lobbying Congress for changes in the law that would treat small banks differently than big ones.

The "field test" took place in a $13 million bank in a town of 60, people on the North Dakota-Montana border, according to Mr. Guenther.

He dropped in unannounced on the examiners because the head of the bank asked him to do so.

Mr. Guenther said he discussed the 12 factors used by examiners to judge banks on CRA.

* * *

Timothy Ryan, former director of the Office of Thrift Supervision, will be among the speakers at the Savings and Community Bankers of America meeting in New Orleans in November. Mr. Ryan now works for J.P. Morgan , and has relocated his family from Virginia to the Upper East Side of Manhattan.

* * *

The IBAA has hired lawyer **Peter M. Kravitz** to lobby the Senate. Mr. Kravitz had been running his own law firm, and his clients included Savings and Community Bankers of America.

OTS Halts Imaginary Sports Leagues And Calls Foul Against Some Players

By ROBYN MEREDITH

Now that there are no more Charlie Keatings to torment, regulatory watchdogs at the Office of Thrift Supervision are turning inward.

After a rigorous six-month investigation, they've broken up an office pool on imaginary baseball and football games and punished six players.

The OTS employees were running fantasy football and baseball leagues off-premises and after hours. Occasionally, during work, they'd send each other E-mail messages about the previous day's results. The OTS said that constituted gambling and a misuse of government property.

Last week, David A. Sjogren, a manager in corporate securities, and Peter A. Hull, a paralegal in information services, were suspended for 14 days without pay for their activities.

Four other employees, including two lawyers, were issued permanent letters of reprimand.

A 'Witch Hunt'

In the course of the investigation, OTS interviewed 20 staff members for between 15 and 45 minutes each and held numerous meetings with senior management to discuss the matter, according to Chuck Smith, an attorney at Baltimore-based Ober, Kaler, Grimes & Shriver , which represents the OTS union and one staff member in appeals of the matter.

"They had two high-ranking lawyers conducting this witch hunt," Mr. Smith said. "I can't fathom the amount of money that has been wasted on this."

Mr. Smith says his fees have reached the $10,000 mark. OTS will have to pay them if he wins his case.

The OTS won't reveal its costs, but staff lawyers were on the case for six months, Mr. Smith said.

Agency Calls It Gambling

"The agency has determined that fantasy sports are gambling," Mr. Smith said. The staffers were told their crime was misusing OTS time, equipment, and supplies by sending the occasional electronic messages to discuss their off-premises sports action.

"We are not talking great expenditures of *time*, and we are not talking extensive use of equipment," said Mr. Smith.

A former banking regulator said the OTS action "just cuts to the issue of do you reprimand somebody for calling their wife every night to say they are on their way home and [accuse them of] using government property for personal use."

Winner Got $100

The OTS confirmed the internal investigation, but refused to provide more information. "I just don't want to get into the details about it," a spokesman said.

In fantasy leagues, players choose individual baseball or football players from professional teams to make up an imaginary team. They earn points when their players score touchdowns or hit home runs or rank among the leaders in fielding.

Each participant in the two OTS leagues paid $40 at the beginning of the season, and top finishers divided the proceeds, with the winner getting about $100, Mr. Smith said.

A Few Still in the Game

The OTS investigation centered on the 1992 season. This year, there are still a few diehard players left in the OTS leagues, Mr. Smith said some have quit and the rest are more careful.

"They make sure that they don't talk about it, they don't do anything about it – they don't even joke about it in the building," Mr. Smith said.

Gonzalez Sees CRA as Spur To Positive Action by Banks

House Banking Committee Chairman Henry B. Gonzalez was keynote speaker last week at a community reinvestment conference in his home town of San Antonio, Texas, hosted by the Federal Home Loan Bank of Dallas. Here are excerpts from his address.

Like the ancient Gaul of Caesar's "Commentaries," San Antonio has always been divided into three economic and racial parts. When the city received its first municipal charter in 1837 – the year following the Texas-American War – the city's first mayor was not named Garcia or Sanchez or Gonzalez.

He was John Smith. And not unlike other cities, the Anglo or Creole elite had the power to allocate development resources in a town largely of poor Mexicans.

For example, when former Mayor Bryan Callaghan 2d brought municipal progress to San Antonio, he paved and lighted the streets, brought water lines in, built the city's first jail . . . and set up a modern transit system.

Mayor Callaghan's improvements existed mainly to facilitate the interests of the elite crust.

I remember all to well arriving on the city council at a time when the water board didn't have the slightest concern about entire downtown neighborhoods with no water supply at all. Those in power simply did not find in necessary to serve everyone equally, and as a result, some were not served at all.

Many Policies Tried

Our banking system unfortunately works in much the same way. Like San Antonio's old elite, many institutions see the only sound "business decisions" as those that benefit . . . certain classes of people.

The Federal Government has tried many policies to reverse and arrest patterns of urban decline. However, none of these policies work unless there is private capital available to enable sustained growth to occur.

And that is where the Community Reinvestment Act comes in . . . It means making sure banks do all they can to serve their communities.

I'm not talking about credit allocation. I am not talking about using CRA to force banks to make bad loans, for a bad loan does nobody any good. I am, however, suggesting that CRA properly used will identify real opportunities with real benefits for everyone concerned.

Comment

By Robert E. Braun

How to Bulletproof Compensation Programs

Four years after the enactment of the Financial Institutions Reform, Recovery, and Enforcement Act, financial institutions continue to feel the backlash of the excessive practices of some bank and thrift owners.

In particular, federal legislation adopted over the past several years has given banking regulators increasing authority to take significant actions against financial institutions.

This is not limited to formal and informal agreements with an impact on the operations of the institution; it also includes the authority to revoke deposit insurance and close banks despite the apparent financial condition of the institution.

Another area of related and related area in which regulators have taken an increasingly active role is in the compensation of directors, officers and employees of financial institutions.

Unfortunate Timing

This emphasis comes at a time when more institutions are forced to merge and re-group, and to rely more heavily on the dedication of every level of personnel. Banks that are re-structuring also must attract and retain quality employees.

As the banking and thrift industries consolidate, every employee can be essential to the ultimate success of a bank or thrift.

This is particularly important for institutions that are carrying out restructuring programs, are subject to formal agreements or cease and desist orders, or are under other regulatory scrutiny.

Delay Entails Dangers

Recent regulatory proposals and cases brought by the Resolution Trust Corp. and the Federal Deposit Insurance Corp. make it essential to establish appropriate compensation plans before an institution becomes severely troubled.

There is probably no financial institution executive, accountant or lawyer that does not face, on a daily basis, some repercussions of the Federal Deposit Insurance Corporation Improvement Act of 1991.

While some provisions had immediate impact, others depend on enabling legislation or regulation and are only now challenging the banking industry.

'Golden Parachutes'

One provision gaining widespread recognition is section 18(k), which allows the FDIC to

Mr. Braun is a partner in the financial institutions department of Jeffer, Mangels, Butler & Marmaro, Los Angeles.

prohibit or limit any "golden parachute" payment or indemnification payment.

The act defines a golden parachute payment as:

"Any payment, or agreement to make any payment, in the nature of compensation" contingent on the termination of affiliation and received "on or after the date on which the institution is insolvent, a conservator or receiver is appointed for the institution, or the institution's appropriate federal agency determines that the depository institution is in troubled condition," has been assigned a rating of 4 or 5 under the Uniform Financial Institutions Rating System, or is subject to a proceeding initiated by the FDIC to terminate or suspend deposit insurance.

Other Considerations

The law also requires the FDIC to prescribe factors to consider in taking action to prohibit such payments. These factors include whether there is a reasonable likelihood that the payment is part of any abuse by an insider or whether there has been a violation of law.

On Sept. 24, 1991, the FDIC proposed regulations to implement section 18(k).

That regulation severely limits the ability of an institution to provide for compensation payments.

Permitted Cases

In essence, it limits them to the following conditions:

- Where an individual is hired for the specific purpose of "saving" the institution;
- Where it is part of a plan of downsizing; or
- Where the institution has adopted this as part of a nondiscriminatory ERISA-based defined benefits plan.

While each of these situations is understandable, none face the need of many institutions to attract and retain employees during troubled times.

For example, if an institution has already slimmed down its personnel significantly and believes that its senior management is able to carry out a plan of restructuring, it would be unable to provide those individuals the security that they could receive even modest severance compensation.

This, in turn, can lead to a high turnover of personnel just at the time that the institution needs it.

In the author's experience with the FDIC, the agency takes an extremely strict view of section 18(k) and the proposed regulation.

Court Frees FDIC

On Feb. 17 the United States Court of Appeals for the First Circuit held in Howell v. Federal Deposit Insurance Corp. that the FDIC was not required to honor the terms of employment agreements which provided for severance payments to two executives.

In that case, Eliot Savings Bank made agreements in 1988 with its executive vice president and other officers promising them severance pay in case of their termination by the institution, and reaffirmed that agreement in a letter agreement in 1989.

While the agreements did not alter the "at will" nature of the employment relationship, they specifically provided severance payments in consideration of the officers' "willingness to remain" in the bank's employ.

Eliot Savings Bank failed and was closed on June 29, 1990, with the FDIC appointed as receiver. Within two months, the officers were terminated, and then made administrative claims for their severance benefits, which the FDIC disallowed.

The district court and the court of appeals determined that, notwithstanding the plain intent of the contracts entered into by the executives, the 1989 reform act prevents an employee from collecting severance benefits since they do not constitute direct compensatory damages.

Parallel Ruling

In a strikingly similar decision, the United States District Court for the District of Columbia held in Office and Professional Employees International Union, Local 2 v. FDIC that employees fired by the FDIC after receivership of a bank were not entitled to severance pay under a collective bargaining agreement, even though the FDIC had not exercised its statutory power to repudiate the collective bargaining agreement.

The court relied, in large part, on the theory that the 1989 law requires damages to be measured when the receiver is appointed, and not when the agreement is repudiated.

The courts held that the employees' severance claims were contingent at the time of insolvency, since they could mature only on an action by the bank or the receiver of the bank.

This case is particularly significant because, on its face, it appears to be the sort of agreement that the FDIC Improvement Act validates – a nondiscriminatory, broad-based benefits agreement.

Since the individuals who were to benefit from these provisions – tellers, receptionists and other line personnel – are essential to the operation of a bank, the FDIC's determination can have a chilling effect on the ability of a bank to attract and retain people to serve in these positions.

Stemming the Tide

The trend established by the Howell and Office Professionals cases may have been stemmed by the recent decision of the United District Court for the District of New Jersey in Malcom Maras v. Metrobank for Savings and Metrobank Financial Group.

In the Maras case, the district court faced a claim by a former officer of Metrobank under a settlement agreement and release which terminated Mr. Maras's employment with Metrobank and provided for yearly payments through 1994.

Thirteen months after entering into the settlement agreement, the Office of Thrift Supervision appointed the Resolution Trust Corp. as receiver for Metrobank and, shortly after that, disaffirmed the settlement agreement.

Mr. Marsa sought to recover the remaining payments owed

Bulletproofing Bank Compensation Programs

Continued from page 18

him under the settlement agreement, and his fees and costs in the case.

The district court made several important findings in deciding that the RTC was liable for damages equal to Mr. Marsa's accrued benefits under the agreement.

Rights Were Vested

First, the court found that "Marsa's rights to payment under the settlement agreement were vested at the time the RTC was appointed receiver and therefore could not be impaired by any purported disaffirmance."

The court held that the rights under the agreement were vested because they were not subject to a condition precedent.

Even more strikingly, the court rejected the RTC's argument that it was entitled to disaffirm the contract under the receiver's avoidance powers under the 1989 law and regulations. Importantly, the disaffirmance did not prevent Mr. Marsa from obtaining damages.

Citing the Howell case, the court said that repudiation would be treated as a breach of contract giving rise to an ordinary contract claim. Since Mr. Marsa's claims were not contingent, he could recover payments owed to him.

As can be seen from the cases outlined above, federal laws and regulations affect not only the overreaching plans which characterized abuses in the 1980s, but also those which appear to compensate employees and management officials on a modest but meaningful basis.

These limitations can ultimately thwart the institution's ability to attract and retain its most important asset – the individuals who protect shareholder and depositor values.

The first thing a bank can do is to consider its employment, compensation and severance plans as early as possible. Because of the potential problems facing nearly all financial institutions, no bank or thrift is immune from the possibility of regulatory action.

Early Action Advisable

An undercapitalized or troubled bank will have significantly greater ability to develop appropriate compensation programs than an adequately capitalized bank or thrift. As a result, taking action now may be the only proper step.

Boards of directors must consider who at the institution is essential for the continued growth and success of the institution.

The board should then develop appropriate compensation plans that contemplate the actions that regulators may take involving an institution's internal activities.

Under current economic conditions, employment security and severance compensation may be appropriate incentives to attract and retain personnel, and adopting programs before a deterioration in financial condition may be key in ensuring the enforceability of the plan.

All these may make it possible to adopt effective programs.

To enhance the type of plan adopted, a board should consider REGULATORS *have taken an increasingly active role in compensation.*

or placing the initial decision-making in the hands of an independent board committee with the authority to call upon their own experts and counsel to avoid even the appearance of self-dealing.

These experts will provide valuable advice in crafting plans that are effective from the point of view of employees and professional management, and meet the rigors of regulatory scrutiny.

Finally, management and boards of director must pay more thought to the type of plan adopted.

As is clear from the Office and Professional Employees case, an essential factor may ultimately be the extent to which benefits under employment plans vest before any receivership or conservatorship action.

While initially more expensive, creating a fully funded, ERISA-qualifying plan may provide a more attractive and more effective employment incentive. The approach of creating fully vested benefits, as seen in the Marsa case, should also be considered to ensure that benefits are provided.

Each of these steps will send a clear message to management and regulators that the institution is prepared to approach today's challenges with all of the tools available to them. □

Small Investors Pay $335 Million To RTC for Nonperforming Loans

By ROBYN MEREDITH

WASHINGTON — The Resolution Trust Corp. last week auctioned 11,200 nonperforming loans to small investors for $335 million.

The loans had a book value of $672 million.

The two-day auction, held in Kansas City, Mo., was the first under the RTC's small investor program, designed for purchases of $1 million or less to spend. About 750 people attended.

On the first day, the RTC sold $211 million, mostly in residential loans. On day two, the agency sold $124 million in packages of mostly commercial real estate and consumer loans, the RTC said.

Small Investors 'Have a Place'

"This auction shows that small investors definitely have a place at the RTC's table of investment opportunities," Lamar C. Kelly, RTC senior vice president for asset management and sales said in a statement.

"We are also pleased that this auction achieved the highest single dollar amount that we have recovered in a nonperforming loan auction to date."

The RTC said it recovered an average of 50% of the outstanding principal balance for all the loans at last week's auction. It has auctioned about $2.3 billion in nonperforming loans since June 1991.

Action at OTS

Separately, the Office of Thrift Supervision on Thursday announced that a Los Angeles court had appointed a receiver to manage the assets of a former S&L executive the OTS believes violated banking regulations.

The OTS seeks $40 million in restitution from Thomas Spiegel, the former chief executive officer of failed Columbia Savings and Loan Association in Beverly Hills, Calif. The agency also seeks to ban Mr. Spiegel from banking.

The OTS argued that a receiver was needed because Mr. Spiegel was dissipating his assets by spending as much as twice the monthly $17,000 in living expenses he was allowed.

Public Hearings on Reform of CRA

Continued from page 2

ted five minutes. J. Pat Hickman, president of Happy Banc-shares, Inc., said he was proud that the industry cared: he had spent $400 on airfare and $1,500 on charts just for the meeting.

Even those with constructive advice had problems. As John Hennenberger, director of the Texas Low-Income Housing Information Service learned, three to five minutes only leaves enough time to get through about four of your 12 recommendations without being cutoff.

A Weighty Question

The regulators painstakingly enforced the time limits, relying on a timekeeper in flash sweeping signs to the participants ("two minutes remaining." . . . "one minute remaining."). They were so concerned about keeping the meeting moving, in fact, they asked almost no questions.

The first substantive question wasn't asked until the 13th panel. And that came after the panelist chastised the regulators for not asking any.

When they started, the agencies thought the tough part of planning the seven hearings would be picking the dates and the cities, and coordinating the top regulators' busy schedules. But with two meetings down and five to go, that may have turned out to be the easy part. □

Court Upholds Credit Union Regulator on Expansion

Continued from page 3

claims that the NCUA didn't follow its own rules in approving a charter that would have expanded the membership base of Portland Federal Credit Union.

The institution is a federally chartered community credit union based in the city of Portland in Iowa County. On March 1, 1993 NCUA approved a charter that expanded its membership base in Iowa County.

'Wasn't a Common Bond'

Michigan bankers cried foul.

"We showed that there wasn't a common bond [for the expansion]" by pointing out that, among other things, there were different area codes and political jurisdictions in the affected area, said Michael Magee, president of Independent Bank in Ionia, one of the four plaintiffs.

Helped by marketing data and surveys, the NCUA prevailed by arguing that the roughly 75,000 people of the rural Michigan county did view themselves as a distinct community.

Four Michigan banks had sued to block a change.

Michael Crotty, deputy general counsel for litigation for the American Bankers Association, which assisted the banks in the case, remains unconvinced.

"The requirement is is that the community is well defined," he said. "Just because they draw a map [of the common bond expansion] that's well defined? You can draw a map of the Milky Way and call it well defined."

The original suit named the NCUA and Portland Federal as defendants, but in June Judge Williams dismissed the credit union as a defendant at the same time he ruled that the banks had standing to bring suit. □

Slow Growth Appears To Be Order of the Day

Continued from page 1

took office in January.

The powerful forces retarding growth are the same ones that dogged the Bush administration. They include slow growth abroad that depresses demand for U.S.-made goods and services, defense cutbacks, overbuilt commercial real estate

ECONOMIC OUTLOOK

and corporate restructurings that continue to put people out of work.

On top of that, businesses in general are fighting fierce global competition and using advances in computers and communications to become more efficient.

Once bright spot is that consumer spending has held up as well as it has. John Silvia, chief economist for Kemper Financial Services Inc. in Chicago, notes that retail sales are up a respectable 6.1% compared with a year ago.

Modest Growth at Best

The flood of mortgage refinancings is helping to put cash in people's pockets even though personal income has not been going up much, he says.

Still, prospects for growth through the end of 1994 are not very impressive. Economists belonging to the Public Securities Association recently estimated that GDP will rise 2.6% this year and 2.9% next year.

At NationsBank Corp., analysts figure that job growth will pick up slightly to about 200,000 a month and bring down the jobless rate from the current 6.9% to 6.5% by the end of the year.

Next year, they calculate slightly slower job creation of 150,000 per month, enough to bring the jobless rate down another notch to 6%.

Inflation in Check

This is not an inspiring outlook, but it has its good side. The prospect of slow but steady growth should keep inflation low, which in turn should keep interest rates low.

Low rates in turn have been a powerful tonic for the booming stock market and help to support long-term growth by keeping down costs for businesses and households.

It may not be the best of all worlds, but it seems to be the best we can get. And it may not be a bad thing, after all.

The Bond Buyer is a sister publication of the *American Banker*.

Fed Says Credit-Crunch Plan Hasn't Boosted Lending Yet

Continued from page 1

gram, only four – 8% – have taken advantage of the plan, extending about $140 million in loans.

Each of the banks told the Fed. though, that they would have made most or all of these loans even without the new program.

Another 15% of those eligible said they are in the process of implementing the low-docs documentation program, and 35% told the Fed they may do so in the future.

'Great Confusion'

"The small-business basket has not been working," said Kenneth Guenther, president of the Independent Bankers Association of America. "Every report we have received from our bankers is that there is great confusion out there."

The administration says there hasn't been enough time to see the full impact of the change.

"It's going to take some time," said Lee Cross, a spokesman at the Comptroller's office. "It's not surprising we haven't seen a big impact yet."

While most of the provisions have been in place since June, the new appraisal rule – a key element of the package – has not yet been finalized. The final appraisal rule is not expected for at least several more weeks.

About 60% of those surveyed said they expect the higher appraisal thresholds for both real estate and small businesses to leave loan standards and terms unchanged.

Some 40% said the new thresholds would allow lenders to ease standards; about 25% said it would allow them to ease terms.

But some in Washington are more optimistic that the appraisal rule, once implemented, will increase lending.

"What they've done on the appraisal front does help," Mr. Guenther said.

The Fed survey also found that:

❖ 93% expect changes in appeals and complaint procedures to have little or no effect on lending.

❖ 84% expect clarification of "other assets especially mentioned" to have little or no effect.

❖ 73% believe changes in "other real estate owned" financing rules will have negligible impact.

❖ 71% said improved exam procedures would have little or no effect on lending. □

Rise in Banking Prices Beats a Record Week For Dow Industrials

By GORDON MATTHEWS

Bank stocks outperformed the Dow Jones industrials last week, though the blue-chip average hit record highs.

In a turnaround from the previous week, banking issues improved 1.63% in the five trading days ending last Thursday, besting the 1% gain in the Dow during the same period.

Three of the stronger performers in the period were Signet Banking Corp., up 6.3%; Mellon Bank Corp., up 4%; and BayBanks Inc., up 3.1%. Late Friday, Signet shares were at $33; Mellon's at $57.75, and BayBanks' at $49.75.

Bank stocks were down on Friday in line with the broad market in sluggish late-summer trading.

Commenting on the gain for the week, Lawrence R. Vitale of Bear, Stearns & Co. said: "As the long bond kept falling and people decided the stock market would probably keep going up, the banks started to look like bargains again."

Despite their strength over the past two years, almost all banking shares still trade at a discount to stocks in general on a price-to-earnings basis.

When the latest downdraft in interest rates began three months ago, banking stocks initially weakened on investor fears about the impact on earnings. But they were later pulled along by a strong overall market and now seem to have resumed a market leadership position.

'We've Been Very Busy'

"There's a lot of interest and we've been very busy," with clients, Mr. Vitale said. "You

Two of the stronger performers in the period were Signet, up 6.3%, and Mellon, up 4%.

would think people would be on vacation, but our morning meetings have been full."

Another analyst, Gerard S. Cassidy of Tucker Anthony Inc., said bank earnings appear secure in contrast with profits at technology and pharmaceutical companies.

"In talking with institutional investors, they say they are comfortable with their holdings of bank stocks and view them as a safe haven," he said.

Coming Employment Report

But Mr. Cassidy said these investors are not adding to positions, except during periods like the recent price weakness.

This week, stock trading will be dominated by anticipation of the government's August employment report, due Friday, which will be a fresh indicator of the economy's strength and direction.

Despite their rebound last week, bank stocks still face dangers ahead if rates remain low and the economy stays weak, Mr. Cassidy said.

"I think the political risk factor is rising," said the analyst. "How long is it going to escape

attention that the banks' prime rate is still 6% when you have the 30-year [U.S. Treasury] bond rate nearly at that level?"

Pressure on Loan Rates

"And look at the prime rate in relation to the federal funds rate," he said.

"Historically, the spread between those rates is 175 basis points, but it is now 300 basis point," he said. The Federal Reserve's target for the fund rate is currently 3%.

Banks have not cut the prime rate because previous cuts did not spur fresh loan demand, he said. But they can probably expect jawboning from the Federal Reserve and others for another prime-rate cut soon, he said.

A prime-rate cut would accelerate a downward repricing of bank assets.

For the past two years, banks have thrived in an environment in which their liabilities were repricing downward.

Banks' cost of funds, especially for deposits, has fallen far faster than returns on their assets.

That trend caused net interest margins to widen to highly profitable levels.

The wide margins, together with falling costs for problem loans, have been the impetus behind record earnings and surging stock prices for banks over the past two years. □

Roundup of Credit Rating Changes

The rating agencies took the following actions last week:

Commerzbank: Moody's may downgrade the Aa1 senior debt rating of this German bank.

"The review will primarily focus on the effects of the current German recession on the bank's domestic asset quality as well as on the sustainability of current core earnings," Moody's said.

First Bank: Thomson Bank-Watch assigned TBW-1 short-term and A-plus subordinated debt ratings to this Minneapolis bank unit of First Bank System.

The rating applies to a recent $100 million issue of 12-year subordinated notes.

BankWatch said the rating is a full notch higher than the subordinated debt rating of the holding company. It said First Bank provides the majority of income earned by the holding company.

A recent change in Minnesota law should enhance the bank's earning power. The change allows First Bank System to consolidate eight banks located outside of Minnesota into the Minneapolis unit.

Glendale Federal Bank: Standard & Poor's assigned a CCC rating to the thrift's $175 million issue of noncumulative convertible preferred stock.

"Ratings reflect the anticipated successful completion of a corporate restructuring plan that will raise $425 million in new equity for the savings bank and return the bank to regulatory capital compliance," Standard & Poor's said.

A recent change in Minnesota law should enhance First Bank's earning power.

It added that the rating also reflect Glendale's high level of nonperforming assets.

Shawmut National Corp.: Fitch upgraded senior debt to BBB-minus from BB-plus, citing improving credit trends. Fitch said nonperforming assets declined $862 million in the 12 months ended June 30, lowering its nonperforming asset ratio to 3.84% from 10.35%.

Capital remains below peer levels, but improved during the past 18 months, Fitch said. High overhead is one concern. Another is the bank's increasing reliance on wholesale funding.

"While this practice is not uncommon, the extent to which Shawmut has inflated its balance sheet through such activity raises some concern, particularly when most regional banks are building capital and aggressively pursuing more stable core deposits," Fitch said.

Washington Mutual Savings Bank: Moody's upgraded longterm deposits to Baa1 from Baa2 and preferred stock to Ba3 from Ba1.

"The upgrades are based on [Washington Mutual's] demonstrated good profitability, strong capital and reserves, and good asset quality," Moody's said.

It added that the recent acquisition of Pacific First Federal Savings Bank enhances Washington Mutual's consumer banking operations in Washington and Oregon.

Moody's said that an element of risk is an interest-rate mismatch related to the bank's strategy of retaining fixed-rate mortgages, its exposure to multifamily real estate, and the outlook for weaker economic growth in Washington.

Bond Prices Fall in Sluggish Trading After Rally

Government bond prices declined on Friday, as the market took a breather after rallying much of last week.

Market analysts called the decline a minor correction.

"Given the thinness of trading, the credit market was vulnerable to being in an overbought position," John Lonski, senior economist at Moody's Investors Service, said.

At 4 p.m. Friday, the price of the Treasury's 30-year bond was down ¾, raising the yield to 6.13% from 6.09% on Thursday. The yield, though, is down from 6.21% at the start of the week.

Other Treasury coupon issues also moved lower. The 10-year note lost more than ½, increasing the yield to 5.50% from 5.41%. Five-year notes lost ¼, to yield 4.86%, up from 4.77%. And two-year notes fell ⅛, raising the yield to 3.91% from 3.82%.

The bond-equivalent yield on the three-month Treasury bill rose to 3.10% from 3.05%.

Several reports on the economy are due out this week. The most important will come Friday, with the release of the August employment report. Economists are expecting moderate growth between 120,000 and 150,000 nonfarm jobs.

"If the jobs report provides additional evidence of mediocre economic expansion, the yield on the 30-year Treasury bond could easily move below 6.10%," Mr. Lonski said.

Other major reports due out this week include: new-home sales, scheduled for release today; and second-quarter gross domestic product and consumer confidence, scheduled for Tuesday.

The rise in bond yields hurt the stock market. The Dow Jones industrial average lost 7.55 points to 3,640.63. The Standard & Poor's 500 index fell 0.5 to 460.54. But the Nasdaq composite index gained 2.69 to 734.08.

The dollar fell to 103.70 yen from 104.35 and to 1.6635 marks from 1.6675. □

MANAGEMENT STRATEGIES

USING INFORMATION TO INCREASE PROFITS

Affinity and Efficiency Drive USAA Federal's Banking Business

BY BRIAN HELLAUER

Oscar Williams

TAKING AIM: In keeping with USAA's military-officer base, bank CEO Jack M. Antonini has a strategy – "to focus on the services our members need the most and request the most."

ALTHOUGH IT HAS $4 billion of assets and 2.1 million customer accounts, USAA Federal Savings Bank keeps such a low profile it could be called the Stealth Bank.

The banking subsidiary of the San Antonio-based insurance and financial services concern maintains only a single branch. USAA built its banking franchise upon the loyalty of its more than 2.4 million regular and associate members, primarily active-duty or retired U.S. military officers and their families. As an association, USAA distributes profits to regular members in the form of insurance policy dividends and other allocations.

THE BACK OFFICE: SYSTEMS

Members conduct the bulk of their business with the association by mail or over the telephone. Since its 1983 startup, USAA's banking operation has taken advantage of improvements in retail delivery systems and supporting technology to broaden its horizons.

USAA's credit cards, which carry a low interest rate – currently 12.5% – and no annual fee, remain its stock-in-trade. It has more than 1.8 million cards issued and more than $2.3 billion in outstanding balances. But the company now offers a full range of other lending and deposit products as well.

"Part of our long-term goal is to be the focal point of financial transactions within" the company, said Jack M. Antonini, president and chief executive officer of the bank. "Customers having some sort of banking relationship with us helps us to facilitate that goal."

Careful, deliberate planning has been the hallmark of USAA since Robert F. McDermott, a retired Air Force general, took the controls of the privately held company in 1969. Under Gen. McDermott, who stepped down as chief executive in 1992, USAA has grown from $200 million of assets under management to $28 billion.

Gen. McDermott focused on improving USAA's customer service, employee productivity, and product offerings. By most accounts, he has been extremely successful on all fronts. USAA is frequently cited by consultants and the business media for its superior use of technology, and in a recent edition of "The 100 Best Companies to Work for in America," it placed in the top 10.

"There's a tremendous amount of true long-term planning that goes on in this company," explained Mr. Antonini, a veteran banker who joined USAA in 1985. "Most public companies don't have that luxury."

The bank's performance has

Profit Program Provides Signet a Better Read on Its Customers

BY JULIE MONAHAN

A NEW AUTOMATION tool is letting Signet Banking Corp. see its customers in a new light.

Since January of this year, the $12 billion-asset company has been using a profitability analysis program that gives marketing and sales executives a more intimate transaction-by-transaction history of every customer. The system, called Harvest, can also measure the performance of individual products and lines of business.

Having the system has paid off for Signet, which reported a 50% second-quarter gain of $40.4 million. Net interest income rose 22% to $129.8 million in the second quarter of this year.

While the Richmond, Va.-based company could measure profitability before, the analyses were time-consuming and restricted to individual products and business areas.

"We wanted to make our management information system more actionable," said David Knellinger, Signet's vice president of management information systems. "Our old system produced good report cards that showed historically what was going on, but we couldn't relate it to the customers who were causing the effects."

Signet's credit card division had been using a customer-driven system similar to Harvest for several years. After observing how that business was thriving, Signet realized that much could be gained from migrating a similar system across all businesses.

But such a step would be complicated for the bank, which has about 240 branches in Virginia, Maryland, and the District of Columbia.

Nevertheless, Signet took a giant step forward in 1989, deciding to outsource its data processing. The bank believed that by replacing existing International Business Machines Corp. and Unisys mainframe applications with an integrated banking system supported by an outsourcer, it would save money and stay on top of emerging technologies.

In 1991, Signet signed a contract with Electronic Data Systems Inc. to install and maintain Software Alliance's Reliance 2000 Integrated Banking System.

After hearing Signet's idea for the cross-business profitability product, EDS enlisted the aid of Software Alliance, and the three parties went to work.

The challenge in creating Harvest lay in the bank's diverse systems applications.

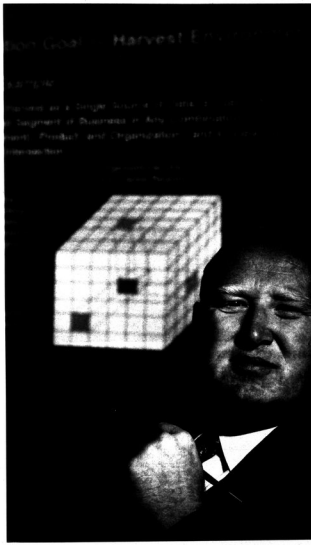
"Reliance 2000 is the cornerstone of most of our customer information," Mr. Knellinger said, "but we also had to pull data from our homegrown systems for commercial loans, leasing, and general ledger."

It took about a year of standardizing data files and creating data access paths to get the system up and running.

Here's how it works today: Harvest creates a customer information warehouse – structured on IBM'S DB2 relational data base – which helps tie together information from Signet's various applications systems. Before the data is available for analysis, it's reconciled against the general ledger to insure accuracy.

From there, the bank's 40 business analysts, each representing a particular line of business, use a stand-alone companion product called a data dictionary to write queries from their PCs for the information they want. Copies of the reports are then passed along for further analysis in spreadsheet form to marketing, sales, or product management staff.

"Harvest has done a good job of looking at revenues, expenses, and returns on an internal basis," said Anthony Davis, an analyst with Dean Witter. "It's showing where they're making money and where they're not making money."



Jay Paul

MEASURING UP: **"Now we can examine a customer from three months ago to what he's doing today," says Signet Banking Corp. VP David Knellinger.**

Signet can now measure and influence change

Software Alliance is now marketing a generic form of Harvest, called Insight, to other banks.

Mr. Knellinger said that Harvest takes customer analysis beyond the limits of a standard customer information file.

"In the customer information file, we can see a customer's account and what other accounts are in the household," he said. "But Harvest can be used for trending purposes. Now we can examine a customer from three months ago to what he's doing today. We can measure change as well as influence change."

Harvest also increases productivity. Producing the less comprehensive profitability analysis reports of the past required manual input of data into spreadsheets – a process that could take three months. With Harvest, better information is available faster: usually within a week, sometimes within hours.

Having a bankwide view of a customer's total relationship also increases operating efficiency. Previously, a product manager may have looked at a customer's file and wondered why service charges were not being paid. With Harvest, managers can quickly see if a customer has multiple accounts that make him eligible for a fee waiver.

Of course, the system also helps ensure that Signet collects the fees it's entitled to.

Karin Harrison, cash management product manager, says this has already helped Signet increase revenues, though specific figures are unavailable.

"In cash management, we found that there were cases where we were doing work for a customer, but the service was not passed on to our billing system," she said.

Now it takes 15 minutes to pull the information together and ensure that customers are accurately billed.

The cash management area has also used Harvest to track volume and revenue for individual products and develop highly targeted prospect lists for cross-selling.

Taking it one step further, Signet uses Harvest to determine how well promotions work. After a targeted mailing, Signet's marketers track how many customers sign up for the service.

"We can go in and segment customers by age, maturity dates, transaction type, and account type," said Deborah May, a business analyst. "This helps us monitor product profitability and gives us the ability to measure change month by month."

Harvest also has potential to help the bank develop new products. The system, for example, can generate a report showing what businesses a particular branch's commercial customers are involved in. If the report shows the branch is top-heavy with retailing accounts but the region is predominantly a manufacturing base, Harvest can help management identify the need for new products that specifically target the untapped market.

With a system like Harvest, Signet should continue to reap good fortune. □

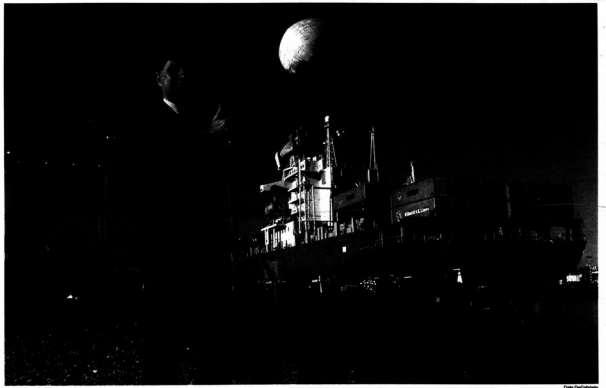
Corporate Banking: Trade Finance



Dale DeGabriele

ON THE BALL: **Technology helped Bill Glassford set up a successful international banking shop at West One's Seattle unit.**

Boise Noise: How West One Worked Its Way to the World Stage

BY PATRICIA A. MURPHY

BILL GLASSFORD IS A man who enjoys a good challenge. And now he's got one.

In June 1992, West One Bancorp asked Mr. Glassford to create an international banking unit from branches and assets the Boise, Idaho-based bank holding company acquired from Security Pacific Bank of Washington.

The assignment seemed daunting for a number of reasons. Not only did West One have little recognition in the international business community, it had no systems or procedures to support international operations.

In its 125-year-old history, West One maintained the stance of most bank holding companies, purposely avoiding foreign assets and operations.

Mr. Glassford took only three months, however, to lay the groundwork for a successful international banking shop, based at West One's Seattle affiliate.

"We were very, very lucky," said Mr. Glassford, senior vice president and manager of West One's international division.

The unit, he said, was profitable in its first month of operation, September 1992. Within three months, it was handling an average of 1,000 documentary transactions a month and receiving 2,000 international wire transfers a month.

It took more than luck, however, to create a successful international banking unit from scratch. Technology helped.

International trade finance, by its nature, is a paper-intensive operation. Issuing a letter of credit, for example, requires a constant shuffling of paper, as well as checking and double-checking documentation and other forms for accuracy. A single, small mistake can result in significant financial liability for the issuing bank. By automating the process, banks eliminate the potential for errors.

"You could not run anything other than the smallest international banking department without the computer systems to back it up," said Bernard Lunn, senior vice president of Kapiti, a New York-based supplier of banking software.

When Mr. Glassford set to work staffing and procuring hardware and software to support West One's new operation, he didn't have to look very far. The staffers he picked were mostly former colleagues, either from Security Pacific, where he had worked prior to joining West One, or from Rainier Bank, for which he worked prior to its 1989 takeover by Security Pacific.

The software that was chosen consisted of two Kapiti systems Mr. Glassford and his colleagues had used in the past. One automated the letter of credit process while the other automated foreign exchange operations. West One runs both systems on an IBM AS/400 midrange computer.

"We knew [the software] worked well and we liked it," said Mr. Glassford.

And, Mr. Glassford suggested, had the bank's staff been forced to learn the nuances of both new hardware and new software systems, it never would have been able to accomplish a seamless transition of customers from a Security Pacific to a West One shop.

"When West One bought the Security Pacific portfolio we had to convince customers that business would continue as usual. We didn't want them to see a diminution of service," explained Mr. Glassford.

The total cost of setting up West One's international shop – hardware and software combined – was about $1 million.

But the return on investment is considerable. In addition to being in a position to better meet its customers' foreign trade needs, West One also gains an opportunity to better manage its capital.

Take letters of credit. Although these instruments are a form of lending, they are considered more secure than traditional loans because they are backed by specific import or export products. Consequently, the capital allocation required by regulators is less for letters of credit than if the same money were lent outright to a company for a domestic project.

"It's a selling point to senior management," said Bob Frank, a former international banker who is senior vice president at the New York consulting firm New Alliance Corp.

To increase revenue from the international trade business, Mr. Glassford has begun actively pursuing correspondent relationships with banks in the Far East. "I can't do enough of that," he said.

The process of building correspondent relationships was particularly difficult at first because of West One's Boise home base, Mr. Glassford conceded.

"It doesn't create a lot of comfort for someone in Bangkok," he said.

Nevertheless, the effort has met with success; at last count West One had correspondent relationships with about 1,000 overseas bank offices.

West One currently focuses on four lines of business with its international division: letters of credit, foreign exchange trading, international business banking, and international services. Two of those business lines are geared toward generating profits: FX trading and international business banking. The other two lines of business are designed more as support functions, Mr. Glassford said.

Today, the lion's share of West One's international business is handled out of the $1.5 billion-asset West One Bank Washington. But plans already are in the works to extend international capabilities to units in Idaho, Oregon, and Utah.

"We're hoping to give them more tools with which to go after their markets," said Mr. Glassford.

As for the Washington bank, Mr. Glassford is eager to expand its international product offerings. Plans now on the drawing board include foreign-student banking services and Vietnamese remittances.

"I've got 100 ideas, I just don't have the time to go after them all," he said.

But given the opportunity, Mr. Glassford likely will implement many of the ideas he now has percolating.

"In this job I've been able to shape the direction of the bank," he said. □

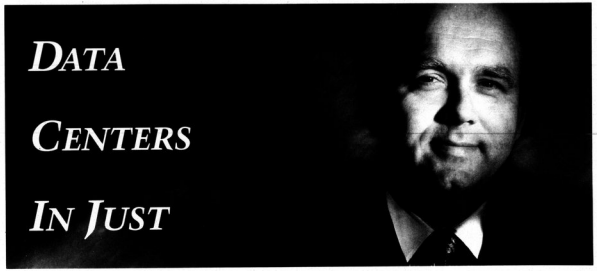
"We Merged Four Data Centers In Just Ninety Days!"



Robert P. Keller
President, CEO
New Dartmouth Bank of New Hampshire

"Most consolidations of this size take, at bare minimum, four months, sometimes as long as a year. With Systematics' help, we were able to do it in less than three months.

"For us to hold on to customers from three different institutions, it was critical to present the image of a unified bank quickly. This could not have been accomplished without first taking care of the data centers.

"We don't have all the numbers yet, but we conservatively estimate that, since the conversion, total non-interest expenses, compared to non-interest expenses of the predecessor institutions, have been decreased by approximately 50%."

The Back Office: Consolidation

In Merger Traffic, Bank One Rockford Believes Slower Is Better

BY DEIDRE SULLIVAN

NOWADAYS, THE success of a merger is often measured by how quickly it took place. But a bank in Rockford, Ill., has taken an alternative approach.

"I guess you could say that we've created our own assimilation model, one that's a lot slower that most," said R. Richard Bastian 3d, chief executive officer of what is now Bank One Rockford. "We purposely violated the rules that say slam everything together; take all the damage up front and then do the cleanup later."

The slow pace of mergers has worked well for the bank – first as it merged four separate banks within one bank holding company and then when it became part of the Banc One family.

The story behind Bank One Rockford is set within the context of Illinois, one of the last states in the country to permit multibank holding companies and full-scale branch banking as it's known in states like New York and California.

More than 90% of the customers polled said that they were extremely happy with how the assimilation was handled

In 1990, when regulations were loosened and banks were permitted to expand their mandates, executives at Bank One Rockford – known then as First Community Bancorp – took a careful look at their franchise. What they saw was Rockford, the second largest city in Illinois, and their institution – a $650 million holding company operating four separate banks. Because of the onerous banking law, those banks had different names and performed different functions.

For example, operating just a few miles away from the $500 million-asset flagship, First National Bank and Trust, was a sister institution, the First Community National Bank of Rockford, a community bank with $100 million dollars of assets.

Executives at the holding company made a decision to merge the two institutions.

"We were really dealing with one market and it didn't make sense to offer one customer base community banking services and then offer another set of customers something else," said Mr. Bastian. "In terms of maximizing market dollars and improving our service, combining the banks made sense."

Senior management at First National Bank and Trust decided that they would take 18 months to consolidate the two banks.

Technology integration was not the key challenge; the systems issues were minimal because both banks had outsourced their back office processing to M&I Data Services Inc. Management's chief concerns were customer acceptance and employee participation.

"Eighteen months may seem agonizingly long but in a service business when you've got customers coming in and validating or invalidating the affiliation, we felt that it was appropriate to take our time," said Mr. Bastian.

Key to his approach was developing a communications program that supported decision-making from the bottom up.

"We communicated to the press, to our directors, to frontline personnel, to customers, so that each group would be equipped with information," explained Mr. Bastian. "Tellers, for example, were briefed in advance so that they could answer customer questions and help customers with their concerns. Managers were briefed to answer employee questions as well."

Communications also played an important role in implementing changes at the consolidated bank. Frontline employees, for example, were vested with responsibility for improving the way they did their jobs.

"When we knew a teller system change was going to be implemented, a committee of tellers got together to decide what the best method would be," said John Murphy, senior vice president and director of communications at First National and now at Bank One Rockford.

Mr. Murphy also reported that after the assimilation, account loss was minimal. In a bank survey, more than 90% of the customers polled said that they were extremely happy with how the assimilation was handled and would continue their banking relationship as usual.

Six months after this intrabank assimilation was finished, the remaining two institutions were merged into the fold and First Community decided the time was right to find a merger partner, a larger bank with a wide range of products and services that could be leveraged into the Rockford community.

"The same reasons that drove us to consolidate also brought us to the altar, so to speak," Mr. Bastian said. "To serve our shareholders and customers and to provide our employees with ongoing opportunity, we thought we should really begin looking at affiliating with a larger company."

It just so happened that with the loosening of the state banking laws, Banc One had moved into Illinois in 1992. Both parties were interested in becoming partners, so yet another merger began.

"Although Banc One was clearly the larger partner, both institutions learned from each other as we went on," said Mr. Bastian.

A chief concern was customer acceptance of the merger

Again, a formal communications program was orchestrated and information was provided to the press, senior management, line employees, and others. Banc One distributed a 41-page conversion booklet to all First Community customers to let them know what was going to take place. Employees worked together in committees to study and make recommendations on issues such as pricing policies.

"The program that First National had in place and the care they show their people is perfectly in sync with our approach," said Tom Cartwright, chief financial officer of Banc One Illinois Corp., Banc One's Springfield-based holding company for its Illinois banks.

Since the merger was formalized in May, the newly named Bank One Rockford has introduced mutual funds and brought in Banc One's corporate finance and capital market group services. Banc One Illinois Corp., on the other hand, is modeling its real estate mortgage program on Bank One Rockford's procedures. The Rockford unit boasts the highest mortgage penetration in the region.

"This share and compare philosophy is the strength of the Banc One merger strategy," said Francis X. Suozzo, a bank analyst at S.G. Warburg & Co., New York. "One of the key reasons why Banc One's profitability goes up after mergers is that the acquiring bank implements the best practices of the bank that has been acquired and vice versa."

Mr. Murphy said that in the coming months, Bank One Rockford would slowly introduce additional Banc One products and services.

"The timing may be a little long, but Banc One is always careful about making sure that a smooth integration takes place," said Mr. Suozzo, the analyst.

"Now we are offering the standard Banc One product line," said Mr. Murphy. "But we won't offer anything new until our house is completely in order. The wait is longer, but we've learned that the results are better. The customer is happier." □

BREAKING THE MOLD:
Under sculpture collector R. Richard Bastian 3d, Bank One Rockford created its "own assimilation model."

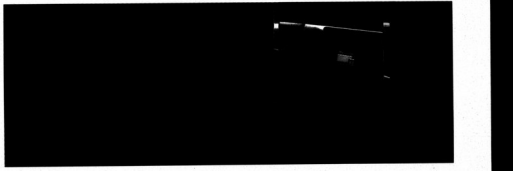
The one secure investment more than 60% of U.S. financial institutions agree on.



Most U.S. financial institutions agree that an ATM isn't just a purchase, it's an investment. That's why more than 60 percent of those that have ATMs have invested in ours.

At InterBold® we've always built our ATMs to last. But since we're continually developing new technologies, we made them adaptable, too. Years ago we created the industry's first and only modular ATMs that could be upgraded without changing the housing. Today these ATMs are still yielding dividends for their original investors. And our latest line of modular ATMs, the i Series™, also promises unsurpassed growth potential.

But we do much more than protect your investment. With more than 130 years of security expertise, we make sure your ATM is secure, too. Our service organization responds 24 hours a day, 305 days a year. And all of our service engineers are trained to maintain everything from electronic components to security features. So you can make one call for all of your maintenance needs.

It's no wonder the majority of U.S. financial institutions use our ATMs. They know their money's in a secure investment.

The Back Office: Systems

Affinity and Efficiency Drive USAA Federal's Banking Business

Continued from page 1A

been stellar, with a 1992 return on assets of 2.6% and a 24.2% return on equity. The bank consistently receives ratings of "A+" and "Superior" from Sheshunoff Information Services Inc. and IDC Financial Publishing Inc., respectively.

Mr. Antonini said value and service are the keys. "To be able to offer a good price you have to have low costs," he said. "Direct mail and serving customers from a single location has worked great for USAA. So we decided to use that same philosophy."

Part of that success also can be attributed to quick membership acceptance of new USAA offerings. "We try to focus on the services our members need the most and request the most," said Mr. Antonini.

For example, in 1984 the bank sent out 240,000 preapproved credit card applications in an effort to get the program off the ground. Within weeks, it had opened more than 120,000 accounts – an astounding 52% response rate. Such direct mail efforts usually aim for a 5% to 10% response.

The company's use of technology, said Mr. Antonini, is integral to such efforts.

Once the company decided to enter the banking business, management didn't spend a lot of time developing basic applications. USAA's credit card processing and mortgage servicing operations are handled by outsourcing firms. The bank also will move its core deposit and lending functions to a third-party arrangement later in the year.

The bank's data processing staff is augmented by an information services division that supports all of USAA's business units.

As the technology backbone of USAA, the division has amassed a formidable amount of computing and telecommunications power, which is managed and measured with drill-sergeant precision. On the whole, the corporation processes an average of 12 million transactions and 318,000 phone calls each day.

USAA was the first company to implement a large-scale image processing system. The system, used in the company's property and casualty division since 1988, eventually became the basis of International Business Machines Corp.'s ImagePlus product for storage of electronic documents. However, the bank currently does not use this system, employing image only for signature verification and archival storage.

While new technologies play an important role, the heart of USAA's information systems consists of two mainframe-based applications – a customer information file and a corporate-product data base.

"Everybody at USAA adheres to a number of guidelines associated with those files," said Harry H. Richardson, a bank assistant vice president. "Those are the two key elements to help us give a common look and feel to the customer."

When a customer calls any USAA division, the customer service representative first validates and updates the information residing in those files.

This bit of housekeeping also provides USAA with more accurate data to use for its frequent cross-selling forays.

Regulations prohibit USAA's business units from sharing financial data. "The walls that need to be erected are erected. At this point, we use what we're allowed to use," said Keith L. Myers, senior vice president, operations, at the bank.

Instead, the company taps the customer and product data bases for prospects. Members with insurance policies covering older cars may receive a mailing promoting auto loans. A customer with a big-ticket homeowner's policy is probably a candidate for a home equity line of credit.

USAA also used its easy access to customer information to fine-tune lending operations. According to Mr. Antonini, about one million members are preapproved for auto loans, based on their history with the company. Another source of leads is USAA's vehicle information service, which provides members with detailed data about late-model cars.

"They're telling us they're in the market for a car loan when they tell us they're in the market for a car," said Mr. Antonini. "When we send them this package, it also includes the notice that they're preapproved for a car loan from us. That's a level of service they really enjoy. They don't even have to go through the hassle of giving us basic information for an application."

Customers who aren't preapproved can still obtain a car loan in less than 10 minutes with a single phone call. USAA developed a system with an automatic interface to the various credit bureaus.

"As soon as we enter the member's number, the system goes out and does the credit bureau screen," Mr. Antonini explained.

Still, Mr. Richardson said USAA is still "trying to get down and really understand" what it can and can't do with its data. "We'd like to break down some barriers," he said, in order to get a better overall financial view of USAA members.

Cross-selling is not the only task assigned to USAA's data bases, though. "We empower our employees so that they're more intelligent and able to answer customer's questions more quickly and conveniently," said Mr. Antonini.

Since most customer service is handled over the phone, USAA places great emphasis on making queries as painless as possible for both parties. Incoming phone calls are typically answered in three rings or less. On-line computer transactions have a response time of less than two seconds.

"The objective is to have all the information readily available to that rep to be able to service the customer," said Mr. Myers. "With what we've developed internally we're able to do that."

USAA continually fine-tunes such so-called legacy systems, but it is also preparing for the next generation. All of the business units within the company are in the midst of a three-year program to develop a blueprint for the future.

"You don't go into hundreds of millions of dollars of legacy systems and start taking them apart," said Mr. Richardson. But, he adds, future development efforts will use the client/server model, supported by IBM's OS/2 operating system and fourth-generation programming languages.

To date, bank management has used the USAA philosophy and infrastructure to develop a successful lending business, much of which is funded by commercial paper. To keep that business growing, and maintain a balance in funding, management is now focused on building its deposit base, which currently stands at $1.3 billion.

Although USAA does not market to the general public, except on a limited basis in the San Antonio area, its banking and brokerage services are available to consumers at large. More than 25% of its deposit customers are nonmembers.

"Every time there was a name change on one of the institutions in San Antonio, you couldn't get into our lobby for the next week," said Mr. Antonini.

Bankers in the San Antonio area, though, characterize USAA's impact on the local market as minimal.

Getting USAA members to move their deposit business to the bank is another matter. "It took a while to develop the reputation and the rapport that already existed within USAA," Mr. Antonini said.

Deposits from members have been growing slowly for the past several years, but early in 1992 USAA stepped up its efforts to attract deposits.

Part of that effort involved updating its delivery systems. In May, the bank introduced its Check and Cash Card, the first ATM card with both on-line and off-line debit capabilities.

The standard card is tied to MasterCard International's Maestro on-line debit program. It can currently be used at about 18,000 merchant locations worldwide.

For customers with overdraft protection tied to their checking accounts, the card also carries a MasterCard logo and can be used anywhere MasterCard is accepted. Currently, roughly half of USAA's 60,000 ATM cards have debit capabilities.

The debit card access, said Mr. Antonini, is part of a bigger package. By the end of the year, USAA customers also will have access to electronic bill payment and improved voice response systems, as well as consolidated statements using image technology. "We've rolled it out kind of cautiously, but it's all part of a larger package that we'll market fairly aggressively once we have each of these elements in place," Mr. Antonini said.

Mr. Antonini also foresees a closer relationship with USAA's investment management company. "The goal is to be able to marry the two together and being able to present a [Merrill Lynch] cash management account-type of a product with the various USAA products that are available," Mr. Antonini said.

For the time being, USAA is finding that its stealthy presence and untraditional banking structure is not a hindrance. "The bank is saying, 'there's no reason we can't offer products and services to my customers just like any other bank,'" said Mr. Richardson. "What makes us think we can't be a virtual bank?"

In the age of virtual corporation, USAA looks like the type of institution that may give its more traditional brethren a very noticeable headache. □

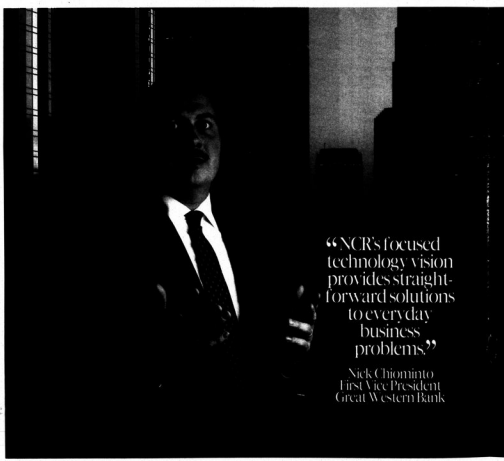
NCR's Financial Enterprise Architecture.

Delivering Business Solutions Across The Enterprise.



NCR has built a reputation on helping banks solve business problems. Solving them on a enterprise scale is the next step.

NCR's Financial Enterprise Architecture (FEA) is a flexible, scalable solution blueprint designed to help you guide your technology investments to those that most effectively align with and support your business objectives. In other words, technology driven by the business of banking, rather than vice versa.

More importantly, FEA encompasses the expertise needed to create and maintain these solutions as enterprise systems. No other company today is better positioned to provide you with the depth of products, the breadth of expert consultation and the range of services that your enterprise systems will require.

With NCR as your strategic partner, you can build your existing information system into an environment that can span the far reaches of your enterprise, to help you manage rapid change for success in a heavily competitive, global arena.

Contact your NCR representative, or phone 1-800 CALL NCR, and ask for a copy of our extensive Financial Enterprise Architecture brochure.

Why Image Hasn't Become a Part of the Process at Most Banks

EXECUTIVE VIEW

By Diogo Teixeira

PAPER PLAYS AN overwhelming role in banking. Banks' externally originated correspondence, files, reports, and payment documents probably total some 60 billion to 70 billion pieces of paper each year.

Although the value of these many bits of paper is high, the cost is also high and the interest in converting to the "paperless office" is almost eternal.

Mr. Teixeira is president of the Tower Group, a consulting firm in Dover, Mass.

Image processing is the only technology that can replace this stream of paper on a one-to-one basis. By scanning paper documents, processing interactions can be transferred to the computerized images.

This technology is unique because encoded data is not generally created or, in many cases, even wanted. Once indexed and filed, the images exist primarily to be read or accessed by bank workers.

Image technology is not new. In the late 1970s, it was used in remittance processing. By 1982, Banc One was experimenting with the capture of payee information to be returned on Merrill Lynch cash management account statements. Today, checking statements returned with images are not even leading edge.

It is accepted that image technology has the potential to cut the cost of item processing data entry.

For example, Ohio's Huntington Bancshares Inc. uses Unisys' check courtesy amount read algorithm to read 41% of its checks without manual data entry with an error rate of only 0.9%.

Image technology is also used relatively routinely in wholesale lockbox, customer correspondence, consumer credit application processing, signature verification, and mortgage custody applications.

It will soon be incorporated in automated teller machines, to help customers see what they have deposited. And it may even capture signatures at point-of-sale terminals to help stem the rising tide of chargebacks.

Yet, many doubts remain. The fact remains that image technology is far from prevalent. Most industry desks do not have image-equipped terminals or access to software applications that process images.

The cost benefits have really not been proven and the amount of paper flowing in and out of banks continues to increase. No industry-specific application packages yet employ image technology. No third-party processors offer image services.

As this year's *American Banker*/Ernst & Young technology survey showed, implementations of image technology consistently lag expectations.

Three factors have contributed to slower levels of image implementation.

First, extensive reengineering or redesign of today's workflows is often not anticipated, so the conversion period is longer, slower, and less beneficial than planned.

Second, banks have looked for value-added applications to make images produce customer revenues in addition to cutting back-office costs. Yet, success has been rare.

And finally, generally unforeseen implementation and technical problems have arisen.

Bank workflows are almost always determined by the flow of paper. To replace the paper while maintaining the workflow is like paving the cowpath.

Instead of a linear progression of work from one workstation to the next, imaged work can be broken up, stored, and accessed only when and where needed.

For example, doing item processing with imaging requires a very thorough workflow redesign. Encoding is done at the end – instead of the beginning – of the proof process. On-us checks do not have to be encoded.

The order in which items are sent to the amount-entry function does not depend at all on the order of the items themselves. Various software algorithms can now assist in balancing blocks of items that previously could only be done manually.

In file folder applications, would otherwise.

Unexpected technical issues are a fact of life. There are no standards yet for exchanging images within or between banks. Mainframe-based image systems may be at variance with some banks' plans for a more open, distributed approach. Some workflow software is relatively new and not suitable for banks' high volume needs. Especially in the payment system, the documents themselves (checks, deposit slips, cash-out tickets) are quite old in design and are simply unsuitable for an image-technology dominated world.

For example, there are no standards for checks. Yet if prioritizations and short-term work queue adjustments require new job descriptions and new clerical organization.

If proper controls are present, parallel actions can be taken by geographically dispersed production workers, speeding completion. Real-time tracking and measurement of workers can lead to productivity pay and/or real-time matching of workflows with job skills.

Workflow software that helps index, monitor, and retrieve images – and control the rate at which all employees work on them – is becoming an integral part of all banking image applications.

It is easy to be overly optimistic about workflow redesign. The best new workflows may not be discernible until well into the implementation process.

In the beginning, costs and time may actually go up due to conversion and adjustment problems. Improving productivity may depend upon extraneous events, like redesigning a bank's forms so that they support the new workflows.

In short, there is a generalized learning curve that the industry must follow to make effective use of image technology. It's not as easy as it looks.

Image technology is a back-office cost-cutting tool. But the technology will progress further and faster when images can contribute directly to revenue production. Many ideas have been proposed, but progress in this area to date has been very slow.

Some ideas we've heard include:

- Linking corporate account analysis customers to the image system to get back bulk or online transmissions of check images.
- Restructuring retail checking accounts to offer three tiers of service and price: no checks returned; images of checks returned; the real checks returned.
- Addition of data to retailers' proprietary payment documents that would then be captured with the image technology and sold back to the retailer.
- Credit card chargeback systems that capture images of paper sales drafts to resolve chargeback disputes without requiring direct merchant effort.

To date, however, the aggregate payoff from these ideas has been low. No outright sales of images to customers have occurred. Many wholesale and corporate customers are themselves not yet invested in this technology. Image interchange capabilities are still ahead.

Better customer service is a real enough but soft benefit, but is difficult to quantify. Moreover, too many of the potential ideas come from the payment system, while most banking image applications are of the back-office file folder type. While it very likely that additional value-added applications will be found, in the interim banks will continue to move more slowly than they

Most bank desks do not have image-equipped terminals or access to software applications that process images

there were, the speed of implementing end-to-end item processing would be improved substantially, along with the benefits and the ease of conversion. This one step could do more than anything else to make check image technology work better.

Some image applications remain expensive, especially those that require extensive transmission facilities. When very high levels of low-cost bandwidth become available, the industry may see a real uptick in the speed at which geographically dispersed branches or back-offices begin to make use of this technology.

The bottom line is that image moves more slowly than generally expected because paper displacement is such a new way to do business. Paper is literally ingrained in the way we think about everything. For example, most courts accept only a paper document as legal proof. This is only now beginning to change.

We are literally suffering from failure of the imagination – failure to really understand what to do to take advantage of this innovative approach.

We will undoubtedly improve in this area and image will yet become a commonplace technology on bankers' desks. Yet until that happens, bankers should be careful and search for only applications offering the highest payoff. As always, a thorough understanding of the business, the current workflow and the technology will be one of the keys to future success. □

TOTAL SYSTEM

"Taking card processing services to a higher power"

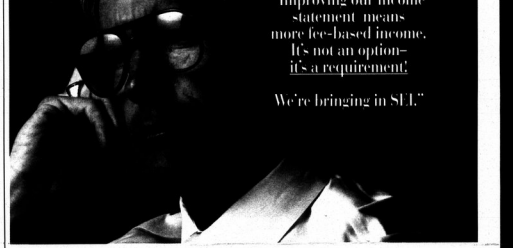
Improve Your Profits.



"Improving our income statement means more fee-based income. It's not an option– it's a requirement."

We're bringing in SEI."

It's very basic. To keep your profits growing, you need more fee-based income. And to stem the outflow of your depositors' money, you need investment programs.

And you need those programs now! SEI can deliver a variety of investment programs and services for your individual and corporate customers. Through your branches, brokerage, private banking, and trust departments. One or all.

And we'll help you with all the program components – the products, the marketing, the distribution, and the technology you need to support these programs cost-effectively.

We'd like to be your partner in building your fee-based income. Because we both have the same objective for your bottom line: Improve Your Profits!

About SEI

SEI has been dedicated to creating comprehensive investment programs for over two decades, focusing on the following areas:

Investment Products and Programs ($35 billion in assets): mutual funds, proprietary funds, annuities, and bank-wide investment programs.

Full Planning and Consultation Services: marketing planning, program definition and implementation, as well as full training and sales support.

Investment Management Technology: trust accounting, defined contribution recordkeeping, mutual fund accounting, and retail support systems.

For more information, call 1-800-DIAL-SEI (342-5734).

The Back Office: Customer Service

Imaging System Saves Imperial Bank Space, Time, and Money

BY WILLIAM PESEK JR.

IT'S NO SECRET that most banks are highly protective of their public image.

But with the help of new technology, banks can use computer-generated images to make a better impression on their customers.

Chuck Porter

STORAGE STORY: Imperial Bank VP Richard J. Hatten shows how imaging diskette stacks up against the equivalent amount of data on paper.

Imperial Bank, Los Angeles, for example, is using a new PC-based document imaging and archival system that allows it to eliminate microfiche and paper-based filing systems.

But more important than reducing operating costs, the system allows the $3.3 billion-asset bank to reduce response time for client and internal information requests.

Like many commercial banks, Imperial has had to make some hard choices about the way it accesses vital information.

For most banks, the options are usually to hire additional staff and install extra phone lines, or to adopt new systems to do the job with existing employees.

Retrieving account information via paper or microfiche used to take several minutes and slow down the process of answering queries.

Imperial's new software has enabled the bank to improve productivity, eliminate paper and microfiche costs, and avoid hiring more operational staff.

"It now literally takes seconds to find information that used to take several minutes,"

By reducing costs of microfiche, paper, and storage, the system is expected to pay for itself within 12 months

said Richard J. Hatten, vice president and systems consultant at Imperial.

"The ability to retrieve data quickly, efficiently, and cost-effectively is crucial to both internal operations and customer service."

The system, called PCI/Reports Archival 4.0 and developed by Monroe, N.C.-based Protocorp International, creates the ability to interface with virtually all of the bank's computers.

"The ability to retrieve data quickly, efficiently, and cost-effectively is crucial to both internal operations and customer service."

The system, called PCI/Reports Archival 4.0 and developed by Monroe, N.C.-based Protocorp International, creates the ability to interface with the bank's computer system.

Now Imperial's employees can use the system to search a 200-page report for a specific dollar amount and find the desired information in five seconds or less.

Mr. Hatten said the rise of the "just-in-time purchasing" inventory strategy is a compelling example of the need for increased response time to customer inquiries.

"Optical storage systems drastically reduce the storage requirement and make banks drastically more efficient in the accessing of information," said William T. Gregor, who is senior vice president, financial service practice, at Cambridge, Mass.-based Gemini Consulting Inc.

Optical storage units drastically reduce a bank's storage space requirements, Mr. Gregor said, saving time formerly spent on transferring data to microfiche.

Another feature of the PCI/Report systems is software that uses the excess processing capacity on a personal computer network to perform data compression.

Imperial expects a quick turnaround on its initial investment.

Because the software has diminished the need for microfiche production, paper, file cabinets, supplies, and off-site storage space, Mr. Hatten expects the system to pay for itself within 12 months.

"We have found that the cost of implementing the system is offset by eliminating other costs," he said.

"It will be entirely paid for by the [productivity] and operating costs we're saving," Mr. Hatten added.

Since installing Protocorp's document imaging system in early July, Imperial has taken on a tall order: to reduce by 90% the amount of paper reports generated.

"Every major application we process that generates computer reports is going onto optical storage. That's the goal," Mr. Hatten said.

So far Imperial Bank has used the optical storage system only in its research departments. The next step, Mr. Hatten said, is to give the rest of the bank access to optically stored information.

"We want to give everyone in the bank who needs the information access to it through the system," he said.

Imperial's new system also safeguards against errors because information is extracted from the on-line data base and archived directly to the optical storage server.

As a result, auditing and accounting tasks can now be completed without much difficulty, Mr. Hatten said.

And because the software is run in a Windows environment, Imperial has found it to be easy to work with.

Once the data is found, the "cut and paste" function allows it to be moved from the body of a report or transaction directly to another application like spreadsheets or word processing.

Security is another feature. With the software, Imperial Bank can control report distribution with built-in security measures.

One reason why more banks of Imperial's size haven't embraced optical storage technology is the cost of the systems.

Expenses include purchasing or leasing the system, maintenance, supplies, cartridges, and application development.

Despite all its advantages, there are still some snags to be worked out of optical storage technology.

The bank's employees can now search a 200-page report for a specific dollar amount and find the desired information in five seconds or less

Perhaps the biggest question is one of legality. There has long been discussion in the industry over whether optically stored documents are an acceptable substitute for hard copy, especially in court proceedings.

But because Imperial's system is an optical storage type called write-once, read-many – in which a document cannot be altered after it has been transferred to the disk, the technology is gaining the legitimacy of formal documents, Mr. Hatten said.

The relative newness of the software has also been a barrier, experts say.

But Mr. Hatten said that as the technology evolves, huge storage volumes and quicker response times will make optical storage an increasingly viable choice in the 1990s.

"We'll also be ahead of the curve in the area of document storage," he said. □

Consumer Banking: Delivery Systems

HOW DO YOU MAINTAIN service quality when customers are getting their products delivered electronically?

CATHERINE CORBY
Director of delivery systems
Barnett Banks Inc.
Jacksonville, Fla.

YOU HAVE TO REDEFINE SERVICE quality. For example, we pay a lot of attention to ATM downtime. This is an issue that gets our top executives' attention. We are striving for no downtime.

Another thing we watch is how many calls we lose over our telephone-banking lines because a customer was kept holding too long.

For every new delivery channel, we create a new level of service standards, measure them, and make sure we keep them. ■

GAYLON HOWE
Vice president
Wachovia Corp.
Winston-Salem, N.C.

YOU HAVE TO LOOK AT THE consumer's needs. If a consumer is using an ATM, he's doing so because he wants to. We don't believe that the electronic delivery methods take away at all from the customer's ability to call a person or visit the branch in person. But the need for convenience and lack of spare time are driving customers today to find quick, easy ways to do the things they need to do. They're discovering new ways to make their lives easier.

With Wachovia's personal banker strategy, we allow a customer to bank with us in whatever way is convenient for his lifestyle. We set the stage so our customers know that they have a relationship manager whom they can go to with problems or concerns.

But we've also positioned ourselves so that our customers would have more access to their accounts. That's what our research said the customers wanted. ■

JOHN RUSSELL
Vice president
Banc One Corp.
Columbus, Ohio

YOU HAVE TO DEVELOP A perceptible service difference. You can't implement electronic delivery successfully without upgrading the quality of your service people. You have to take your people's competence up to the next level. Bank employees will have to become less order takers and more financial planners. ■

RON BRACO
Vice president
Chemical Banking Corp.
New York

CHEMICAL WORKS REAL HARD AT that. Quality service, whether it's through the branch, an automated teller machine, or a personal computer delivering home banking, is of utmost importance to us.

We monitor customer satisfaction and we respond if things are not working the way they're supposed to. And we do lots of focus groups with our customers.

In some ways, electronic services like ATMs and PCs are easier to monitor because we can find out about it and respond to it quickly. We don't have to wait for customers to pick up the phone and let us know that they have a problem. ■

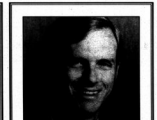
WILLIAM M. RANDLE
Senior vice president
Huntington Bancshares
Columbus, Ohio

OUR APPROACH HAS BEEN TO redefine banking as access to information, not access to a physical location.

In our customer focus groups, questions and concerns about service are more problematic to the bankers than to the consumers.

Consumers find access to bank products via the telephone a rewarding experience. They like using the voice response, because it allows them to do their banking at any hour.

That's how you improve service: by improving accessibility. That's how consumers define service. ■



FREDERICK A. WHITE
Principal
First Annapolis Consulting
Annapolis, Md.

THAT'S A CHALLENGE, ALREADY, with the ATMs, technology is depersonalizing service. Though consumers love the convenience, it's weakened consumer loyalty. Most consumers pay more attention to their regional network – whether it be NYCE or MAC or another – than to their bank.

Banks have done a lousy job so far. What they have to do is reinvent the relationship banking strategy. Wachovia has done a good job with this. Each of their customers has a personal banker. The customers may not talk to them every day, but when they have a problem, they know that person is there to help them. ■

FAITH B. POPCORN
Chairman
BrainReserve Inc.
New York

PEOPLE TODAY JUST DON'T HAVE the time. They're overworked and overburdened. Banks that offer 24 hour service – through interactive television perhaps – are offering an especially important service. People are getting more comfortable with technology, and I think banks have to offer these services for their customers. It's a new way of thinking about service. ■

New Products

EON-Intuit System to Let Viewer Do Finance Tasks

A system that will allow consumers to use personal computer financial programs through their television sets is being developed by EON Corp. of Reston, Va., and Intuit Inc., of Menlo Park, Calif.

Consumers will be able to use their televisions to perform tasks such as organizing personal finances, reconciling and updating accounts, checking outstanding transactions, and reviewing accounts. Pricing has not been determined yet, but services might be offered by banks as part of other home-banking packages.

Service is expected to be rolled out in the fall, once the Federal Communications Commission begins issuing licenses for interactive video and data services in New York, Los Angeles, Chicago, Philadelphia, Boston, San Francisco, Washington, Dallas, and Houston.

EON, formerly TV Answer Inc., is working on technology that would allow consumers to play along with television sports and quiz shows, respond to news polls, and conduct banking interactively.

Intuit develops personal finance software, including the Quicken finance program.

Platform Version For Lotus Systems

Responding to the bank downsizing trend, CyberResources Corp. made its loan collection and recovery software available on an IBM platform.

Many banks are switching from mainframe systems to a distributed computer environment. The company expects the move to different hardware will result in a demand for new systems.

The systems, CyberCredit and CyberRecovery, have been installed in institutions such as Bank of America, Citibank, Wells Fargo, National City Bank, and Liberty National Bank, Louisville.

CyberCredit is an automated on-line collections tracking system that generates reports and manages records. CyberRecovery is a debt-recovery application aimed at increasing charged-off debt recovery and reducing collection times. It lets the user track asset allocations and workers' costs.

CyberResources is based in Mountainside, N.J.

Pierce Unit Offers MICR Desk Printer

Troy, a division of Pierce Companies Inc., a manufacturer of magnetic ink character recognition printing systems, has introduced a desktop laser printer for branches or home offices. It produce new account checks, payment books, and any other document requiring MICR – complete with the customer's name and address.

In addition to the MICR coding, the system provides overlays, logos, graphics, fixed and variable text, and signatures. It prints at a rate of 10 pages a minute. It can trace the origin of unauthorized or fradulently issued documents, using proprietary technology.

Depending on the number of options selected, the printer costs about $5,000.

Troy is based in Santa Ana, Calif.

Voice Processor Available for PCs

Syntellect Inc. has introduced a PC-based voice processing system.

The system allows a bank customer using a touch-tone telephone to retrieve balances, pay bills, and transfer funds.

Named VocalPoint I, the system is based on an Intel-equipped PC running under the OS/2 operating system.

The system is completely modular and may be expanded from four to 24 lines. It is available immediately, starting at $17,000 per module.

Syntellect is based in Phoenix.

ACT Upgrades Citydesk System

ACT Financial Systems released a new version of its information integration and distribution system, Citydesk 2.1.

Most of the enhancements relate to the user interface, offering more flexibility and control in presenting and manipulating market data. A number of functions that provide a quick view of data without requiring costly feed capacity also have been added.

The program handles both digital and video feeds, and is used globally in more than 80 dealing rooms. It supports multiple workstation environments including MS-DOS, Windows 3.1, OS/2 Presentation Manager, and Motif under Unix. Clients can mix and match different operating environments on the same dealing room network, sharing a common set of data feeds.

The U.S. headquarters of ACT Financial Systems are in New York. □

How Fast Can You Stop Credit Fraud?

Trans Union
555 West Adams Street
Chicago, IL 60661-3601

Phone: 312/466-7773
Fax: 312/466-7990

It's time for action! Tell me how I can keep potential credit frauds off my books.

Name: _____
Company/Institution: _____
Address: _____
City/State/Zip: _____
Phone: _____

How Fast Can You Mail In This Coupon?

Almost every minute of every day, someone commits credit fraud. So before you approve anyone for credit, you need to know certain facts . . . fast!

Is the information in the application the same as that in the applicant's credit file? Is a creditor's inquiry just one of a recent flurry of credit activities? Has the address, phone number or social security number ever been used to receive a credit card or merchandise fraudulently? Is the location really a rental box, a vacant lot or a prison? Is the social security number valid?

A discrepancy in any of these areas could signal an intent to commit fraud. That's why this coupon can't wait. We will rush you the facts about the most powerful credit fraud preventatives available today. They're part of the security that comes with a Trans Union credit report . . . and the best protection you can have against credit fraud. The sooner you send for the facts, the sooner you can put these powerful fraud-fighters to work for you.

Contracts

GE Credit Union in Ohio Signs Up for Jeanie ATMs

General Electric Evendale Employees Federal Credit Union and Midwest Payment Systems have signed a contract in which Midwest Payment will provide Jeanie automated teller machine services to the Cincinnati credit union's members.

Members will be able to use the more than 1,100 Jeanie machines and more than 4,500 Money Station ATMs.

Midwest Payment Systems is an affiliate of Fifth Third Bank, a unit of Fifth Third Bancorp, Cincinnati.

Systematics Inks Two Agreements

Orange County Bank of Paoli, Ind., signed a software agreement with Systematics Financial Services Inc., Little Rock, Ark. With $76 million of assets, Orange County Bank operates two branches in Indiana.

The bank will be leasing a relational data base geared to community banks. It runs on the IBM AS/400.

Fortune Bank of Clearwater, Fla., has signed a long-term outsourcing and software agreement with Systematics. Fortune Bank has assets of $2.7 billion and 46 branches in Florida.

Outech to Process For Union of Mo.

Union Bank, Kansas City, Mo., will hand over its data processing to Outsource Technology's service bureau. The conversion is scheduled for November.

Outech, a data processing service bureau headquartered in West Des Moines, Iowa, will assume data processing support for all deposit, lending, customer information, and financial management functions at Union Bank.

ABN Amro Unit Expands License

LaSalle National Bank, Chicago, has agreed to purchase a worldwide license for a bank planning, reporting, and analysis software system from Bancware, Braintree, Mass.

LaSalle, which currently uses the software for financial planning and asset/liability analyses, is purchasing the expanded license for use by its subsidiaries and parent corporation, ABN Amro Bank of the Netherlands. ABN Amro will use the software in various financial planning functions, including asset/liability management and forecasting.

U.S. Tennis Open To Use Hypercom

Hypercom Inc., a manufacturer of card-activated point-of-sale terminals, and NationalCard Processing Systems Inc., a third-party processor headquartered in Englewood, N.J., won the contract to provide hardware and services at concessionaire locations within the USTA National Tennis Center in Flushing Meadow, N.Y., during the 1993 U.S. Open Tennis Championships Aug. 24-Sept. 12.

Phoenix-based Hypercom will supply terminals and receipt printers for merchandise shops and stands.

Bisys Signs Up 2 Florida Banks

Florida's Independent Bank of Ocala signed a multi-year data processing contract with Houston-based Bisys Inc.

After investigating several systems, the $30 million-asset commercial bank chose Bisys for its ability to automate the bank's mortgage and lending services. About 65% of the bank's business is residential mortgage lending. The bank expects to have the new system completely implemented by late fall 1993.

In addition, Madison Savings and Loan Association, Palm Harbor, Fla., also signed a data processing services agreement with Bisys. Madison is a $140 million-asset community bank. The transition should be completed by fall 1993. □

If an image is worth a thousand words, imagine what imaging is worth to you.

Your strategic picture. Like the strategic pictures of businesses and governments around the world, it's what Unisys had in mind when we designed our InfoImage family of imaging solutions.

The benefits go beyond savings from enhanced productivity. For InfoImage solutions not only enable you to capture documents electronically, move them throughout your enterprise, and gain simultaneous access to them. Whatever your business and whatever it's built on—checks or claims, correspondence or blueprints or signed authorizations—InfoImage solutions also help you create marketable, revenue-generating new services.

As a leader in imaging technology, we know that advanced solutions do not consist of technology for technology's sake. We begin with a careful understanding of the customer's needs and objectives. And our InfoImage Professional Services recognize that an imaging solution isn't a solution unless it's integrated into the customer's existing systems.

Whether you're in finance, government, travel, telecommunications or any other service industry, call us at 1-800-448-1424, ext. 139. Ask how our imaging solutions can help improve your business picture today.

VOL. CLVIII NO. 167 Tuesday, August 31, 1993 138th year

Victory on Fees In California Could Backfire

By STEPHEN KLEEGE

Credit card issuers in California may soon win relief from a tough state law on late fees, but it could be a costly victory.

A plan to inoculate banks against a plague of fee-related class-action suits is reportedly being negotiated in the California Senate Judiciary Committee, where a deregulation bill had stalled earlier this year.

Banking lobbyists, who had previously insisted on letting the market set fees, have reportedly conceded that they could live with a $15 cap. The average late fee nationwide is $11.11, according to RAM Research Corp. of Frederick, Md.

NEWS ANALYSIS

California bankers figure a cap sanctioned by the state would at least keep them out of court. Though they have charged only $3 to $5 per delinquency, they have been forced in class actions to return millions of dollars under a state law that requires them to show that their penalties are comparable to the costs incurred.

Compromise Likely

Banking lobbyists are still trying to tie the deregulation bill to a less controversial measure, in hopes of moving it out of the judiciary committee and onto the floor of the Senate. It's more likely, however, that the industry will have to reach a compromise with state Sen. Bill Lockyer, the judiciary panel chairman, whose chief aide has suggested a cap of about $6.

The banking lobby also is submitting statistics from banks with multistate credit card operations to show that delinquencies are lower in states where banks are permitted to charge higher fees. Skeptics have noted that state-by-state figures by the American Bankers Association show no correlation.

But even a partial victory by California banks could be costly for the industry as a whole. Federal lawmakers who have watched fees rise as credit card rates have declined could take easing of California's rules as a further reason to impose some nationwide.

Job issue

In making their case, California bankers warned that existing law could cause thousands of card-related jobs to migrate to more lenient states. Their arguments echoed those that helped overturn late-fee laws in Vir-

Citicorp Issues $350 Million Of Preferred

By DAVID SIEGEL

Citicorp issued $350 million of preferred stock on Monday, taking advantage of low interest rates to increase its capital.

The 14 million shares of noncumulative depositary perpetual preferred stock were offered through underwriters led by Merrill Lynch & Co.

The dividend yield is 7.50%, a half percentage point lower than Citicorp paid on a preferred stock issue in May.

The reduced borrowing cost was attributed to lower long-term interest rates, on which preferred stock dividend yields are based. Improved credit rat-

2 Ailing Florida Thrifts Bought by B of A Vet

By ROBYN MEREDITH

WASHINGTON — A company headed by former BankAmerica Corp. president Thomas A. Cooper took over two troubled Florida thrifts on Monday in a $108 million transaction.

Mr. Cooper's TAC Bancshares merged the two institutions into a $1.8 billion thrift based in Miami with 25 branches in southeast Florida.

Both of the troubled thrifts – Chase Federal Bank, in Miami, and Financial Federal Savings and Loan of Dade County, in Miami Lakes – had been mutuals, or depositor-owned, until Monday.

Because the thrifts were undercapitalized, federal regulators permitted them to convert to stock ownership without the participation of depositors and borrowers. All of the new stock was then sold to TAC Bancshares.

Gray Ousted

As a result of the deal, Edwin J. Gray, the former federal thrift regulator, lost his job as president and chief operating officer of Chase Federal Bank. Mr. Cooper's group ousted other top officers.

Mr. Gray, who was chairman of the Federal Home Loan Bank Board from 1983 to 1987, said that since he joined Chase in 1987 he has increased its capital levels and cut expenses, precluding the need for a federal bailout of the troubled thrift.

The New Chase Federal

Chief executive	Thomas A. Cooper

*To be cut by 20%

Mr. Cooper will be the chairman and chief executive officer of the new thrift, called Chase Federal. It becomes the fifth-largest thrift based in Florida.

Rather than being a traditional full-service bank, Mr. Cooper's company will attempt to hold down operating costs by targeting "the mass consumer household – a very focused, traditional thrift kind of household," he said.

Its core business will be providing checking and savings accounts, certificates of deposits, and home and education financing for families with incomes under $60,000.

"We think that is the part of the market that is growing the fastest," he said.

Fifty-nine-year-old Chase had $1.15 billion in assets before the

NEWS *briefs*

PNC Buys Deposits to Help Minority Bank

PITTSBURGH — PNC Bank Corp. said it has assumed approximately $35 million of deposit liabilities from United Bank of Philadelphia to help that bank acquire two branches of a failed thrift from the Resolution Trust Corp.

As a result of the transaction, one Philadelphia-area office of the failed Home Unity Federal Savings and Loan, with $35 million of deposits, became a PNC Bank branch. Two others, with $65 million of deposits, opened Monday as United Bank offices. Home Unity was based in Lafayette Hills, Pa., and had $500 million of assets.

The $100 million of assumed deposits went for a premium of $7,007.

PNC is an investor in the $40 million-asset United Bank, a minority-owned institution that opened last year. The novel RTC transaction followed discussions of ways PNC could provide further assistance to United.

Nine other Home Unity offices, with $263 million of deposits, went to Sovereign Bancorp of Wyomissing, Pa., and became part of the Sovereign Bank branch network. And a $23 million office in the Fishtown section of Philadelphia went to Prime Bank, a subsidiary of Prime Bancorp.

RTC Readies Big Sale of Nonperformers

WASHINGTON — In what may be its last jumbo sale for a while, the Resolution Trust Corp. said it expects to sell a $400 million to $500 million package of nonperforming assets in early November.

No other big asset sales are in the pipeline after this package, code named N-4, according to Larry Bloom, acting director of the office of securitization.

Mr. Bloom said the agency is funding an asset-sales program for smaller investors and reassessing the program for larger ones.

The RTC accepted bids for N-3, a $324 million portfolio of troubled assets, on Aug. 17. The results won't be public until the agency closes with the winning bidder at the end of September.

MasterCard Loses Round in Discover's Suit

NEW YORK — A federal district court has kept alive Dean Witter, Discover & Co.'s bid to issue credit cards through the MasterCard International system.

The decision was procedural, and the case is still to be decided.

MasterCard had asked the court to declare that it could refuse to grant membership to Dean Witter without violating antitrust laws. Dean Witter had filed a motion listing ways in which it said MasterCard had violated the rules. The judge, Louis J. Freeh, rejected MasterCard's bid to toss out that motion.

Dean Witter, the former Sears, Roebuck and Co. unit that issues the Discover Card, applied for permission to join both the MasterCard and Visa associations. The bank card groups said no, contending that it would be unfair to allow a competitor into their payment systems.

Dean Witter prevailed against Visa U.S.A. in a jury trial in Salt Lake City, and Visa will file briefs Wednesday in its appeal to the U.S. Circuit Court in Denver. MasterCard said it intends to continue to stand its ground.

Northeast Federal Completes Realty Sale

HARTFORD, Conn. — Northeast Federal Corp., the parent of Northeast Savings, said it has completed the previously announced sale of $30.4 million from its real-estate-owned portfolio.

The sale will reduce pretax earnings in the current quarter by about $750,000, Northeast said. The company had recorded a $6 million loss provision in the second quarter in anticipation of the sale.

The briefs were compiled from staff and wire reports.

Court Slams Lid on Annuity Sales In Texas, Louisiana, Mississippi

By ROBERT M. GARSSON

A federal appeals court in Houston ruled last week that banks cannot sell annuities in towns with populations greater than 5,000.

The decision, which came in a case involving a subsidiary of Charlotte, N.C.-based Nations-Bank Corp., affects banks only in the U.S. fifth circuit, which is made up of Texas, Louisiana, and Mississippi.

It would not reach beyond the fifth circuit unless the comptroller of the currency "decides to acquiesce nationwide," said Ronald Glancz, a Washington lawyer who has followed the case.

It was not possible to learn Monday whether either the comptroller or NationsBank would appeal the decision.

Key Points of Ruling

- **Annuities are** a type of insurance product.
- **National banks are** prohibited from selling insurance, including annuities, in towns of more than 5,000.
- **Annuity sales are not** an incidental power necessary to carry on the business of banking.

A Hot Product

Annuities are an increasingly profitable and popular product for banks, and the insurance industry has battled hard to keep banks out of the business. An effort to negotiate an agreement on interstate branching last year faltered in part because banks were unwilling to give up annuity powers.

The fifth circuit decision appears to conflict on key points with a ruling by the second circuit court of appeals, which held that banks can sell insurance anywhere from branches or offices located in towns of under 5,000. The conflict could open the door to an appeal to the Supreme Court.

In reaching its decision, the court concluded that annuities are a form of insurance, taking exception to a finding by the comptroller of the currency.

On March 21, 1990, Robert L. Clarke, who was then comptroller, authorized annuity sales for national banks, arguing that while "annuities have historically been a product of insurance companies, they are primarily financial investments."

However, the three-judge appellate panel described annuities as "the mirror image of life insurance."

Michael F. Crotty, who oversees litigation for the American Bankers Association, disagreed with the court's reasoning.

"Federal law talks about insurance but does not define it," he said. "The fact that it is regulated by state laws is not controlling."

In the absence of clear guidance in federal law on the subject, "it was not unreasonable for the comptroller to construe annuities as something other than insurance," he added.

Once the panel concluded that annuities are an insurance product, it went on to hold that national banks are prohibited from selling insurance in towns of more than 5,000 persons. Because Congress authorized bank insurance activities in smaller towns, the court reasoned, it barred them in larger ones.

The court also held that annuities are not one of the "incidental powers" that can be authorized because they are necessary to the business of banking.

Mr. Glancz noted that because the court had already struck down annuity powers because of the insurance argument, it was unnecessary to take up the incidental power issue.

Still, Mr. Crotty expressed surprise that the court took so "parsimonious a view of incidental powers." □

Opportunity is Spelled LDC DEBT REPORT

Emerging Markets are risky, notoriously inefficient, known for changing rules and limited public disclosure. Knowing what's really going on spells the difference between opportunity and loss.

The *American Banker*'s weekly *LDC Debt Report* delivers the most accurate, objective, succinct information available on emerging-market debt. *LDC Debt Report* provides the astute investor with news, reviews, and strategic insights. The popular Market section summarizes each week's developments, quoting bid and offer prices for 26 developing-country loans and 18 emerging-market Eurobonds. It also tracks the performance of selected equity markets.

If you must know what's going on in key emerging markets, recent trading, economics and politics, the World Bank, and more, LDC DEBT REPORT is a must read every week.

Read it free for 4 weeks! Just fax your letterhead to 212-943-7852, or call Hans Winberg at 800-407-8241

Electronic Invoicing Up 30% in First Half

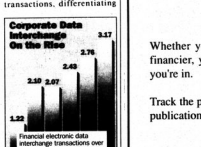
By MATT BARTHEL

The number of corporate electronic payments transmitted along with data on what was being paid rose 30% above the year-earlier level in the first half, according to the National Automated Clearing House Association.

Experts believe that the growing corporate interest in such so-called electronic data interchange services will spur more financial institutions to accept these types of transactions.

About 30 banks currently provide financial EDI services to their cash management clients.

The clearing house association, based in Herndon, Va., tracks three types of electronic transactions, differentiating them according to the amount of additional information that can be sent along with each type of transaction.



The most sophisticated of the payments, known as CTX transactions, grew in number by 126% in the first two quarters of 1993, according to the association. Less complex transactions, known as CCD+ and CTP, showed flattening growth rates of 25% and 21%%, respectively.

CTX, which uses a computer-to-computer communications standard known as X.12 that is rapidly becoming the accepted form for payment data, allows almost 10,000 characters of addenda information with each payment.

'The Format of Choice'

This compares with CCD+, which is by far the most accepted format for electronic payments, which allows only 80 characters per payment.

"CTX is moving from being a startup payment format to the format of choice for corporations engaging in electronic data interchange," said Stephen Lewis, director of network communications at the clearing house association, which has representatives from 40 automated clearing houses.

Mr. Lewis said the CTX format, which experts said is the format on which future EDI acceptance hinges, is expected to show active growth in the coming years because of the wealth of information that can be sent along each electronic payment.

"If a company were invoiced for 50 different items from another company, there can be a single payment accompanied by addenda records explaining what the payment covers" he said.

Easier Record Keeping

In addition, since CTX is in the X.12 format that most corporations' computers can automatically read, information about CTX payments credited or debited to the corporation's account can be downloaded directly from the bank's computers to those of the corporation. This can eliminate large amounts of a company's manual record keeping.

Although the total volume of of CTX transactions is still relatively small – about one-tenth of the quarterly traffic of 2.8 million CCD+ transactions – the increased interest in more standardized EDI products bodes well for bankers who have been hesitant to invest in technology that would be rendered obsolete as standards changed, experts said.

The financial benefits of electronic payment systems for companies are significant, experts said. According to the Denver-based EDI Group, it costs about $8.33 to make a per-based company-to-company payment versus about $3 for an electronic transaction over the clearing house network.

Although many banks offering EDI services have had trouble thus far making money from the business, many experts feel that profit opportunities will arise as CTX becomes more accepted and greater numbers of corporations begin to demand the service. □

Bank of Boston Seeking Bigger Piece of the Pie In Stagnant Connecticut

By YVETTE D. KANTROW

From the Regions

CONNECTICUT REMAINS mired in a recession, but R. Nelson Griebel is undaunted.

As chief executive of Bank of Boston Connecticut, Mr. Griebel is leading a beefed-up charge by New England's biggest bank company into a state where it has been a minor player.

In July, Bank of Boston completed its acquisition of Society for Savings Bancorp. in Hartford, and gave Mr. Griebel responsibility for what is now Connecticut's fourth-largest bank.

His position is not enviable, since the state remains in economic stasis. According to the Bureau of Labor Statistics, jobs are growing at a slower rate in Connecticut than in any other state.

Mr. Griebel, a 17-year Bank of Boston veteran, is the first to admit that there are not many short-term opportunities to build revenue. But he said he believes that Bank of Boston Corp. can be an agent of change not only in Connecticut but throughout New England.

Bank of Boston "has the capability in Connecticut and in other parts of the New England region to be a catalyst," he said, citing a $6 billion credit initiative that the company launched five quarters ago.

Bank of Boston Corp. already has generated some $4 billion in loan commitments to businesses across the region, including $1 billion in Connecticut.

The Connecticut number is likely to increase in October, when Bank of Boston imports its small-business banking program to the state. "We want to be a more aggressive provider to small-business needs," Mr. Griebel said.

Hi, Society

Bank of Boston's new Connecticut profile, after purchase of Society for Savings

Headquarters:	Hartford
CEO:	R. Nelson Griebel
Assets:	$4.8 billion
Deposits:	$3.4 billion
Branches:	59
Employees:	1,400

Source: Bank of Boston

For now, the executive is busy integrating Society, a $2.4 billion savings bank with a strong retail franchise, into Bank of Boston Connecticut. The merger creates a bank with $4.8 billion of assets, $3.4 billion of deposits, and 59 branches.

In Hartford County, home to Connecticut's state government and its major insurance companies, Bank of Boston almost tripled its branches to 29 from 10 – making it the county's third-largest bank.

Indeed, Bank of Boston Connecticut already has relocated its corporate headquarters from Waterbury to Hartford, the same town from which its Massachusetts rival, Shawmut National Corp., runs its Connecticut operation.

The Society for Savings name, however, will remain on the newly acquired branches until the end of the first quarter of 1994, Mr. Griebel said, noting that integration of the two institutions' systems won't be completed until then.

Mr. Griebel is particularly enthusiastic about the strong retail selling culture of Society, which he hopes to instill at other Bank of Boston Connecticut branches.

"Society has adopted a much richer and deeper sales culture than we have," Mr. Griebel said. "Our focus for so long in the branches has been to provide deposit services. We now have a great opportunity to be more sales-oriented."

The change also gibes with Bank of Boston Corp.'s efforts to alter its historical focus from corporate banking to one that also puts strong emphasis on consumer and small-business banking.

Mr. Griebel will be able to monitor the new approach closely, since Bank of Boston is adopting "The Exchange," a Society program that offers proprietary mutual funds through its Connecticut branches.

Mr. Griebel is simultaneously gunning for more growth in the Nutmeg State. Bank of Boston has only two branches in Fairfield County – an affluent area that borders New York's Westchester County – and the executive wants more.

"We clearly have stated our desire is to be better represented in Fairfield County than we are today," Mr. Griebel said, adding that Bank of Boston is examining "all of the potential steps" it can take to build there.

Shawmut Made Peoples Bancorp An Offer Too Good to Refuse

By YVETTE D. KANTROW

When Shawmut National Corp. approached Peoples Bancorp of Worcester with a buyout offer, the thrift's management was almost as surprised as Wall Street would prove to be when the deal was announced.

Woodbury C. Titcomb, president and chief executive of the Massachusetts thrift, said Monday that a sale was the last thing on his mind – until Shawmut approached him with a takeover offer less than two weeks ago.

Unlike many of its competitors, Peoples, which has $913 million of assets, was relatively unscathed by the New England downturn and was not seeking a rescuer.

"We were not in the business of selling this bank," Mr. Titcomb said in a telephone interview. "The proposal they made to us was out of the blue."

It also was too good to refuse. Shawmut agreed to pay $180 million in common stock for Peoples, or 1.76 times the thrift's book value.

Woodbury Titcomb
Deal came "out of the blue"

'Did Its Homework'

The thrift's stock soared $9 on the news last Thursday, to $47.50, and was trading at $48 Monday afternoon.

Several analysts said the price was high for a New England savings bank – even for an apparently healthy one.

"I'm mixed on whether or not it was a good deal" for Shawmut, said Gerard Cassidy, an analyst at Hancock Institutional Equity Services. "I think they overpaid for it."

But the fact that the deal was done quickly, Mr. Cassidy said, indicates that "Shawmut did its homework from outside and was comfortable with what it saw."

Peoples earned $5.65 million, or $1.67 a share, during the first six months of the year. Moreover, its ratio of nonperforming assets to total assets was a slim 50 basis points.

Because the deal is an in-market acquisition, Shawmut should be able to realize substantial savings, analysts said. Moshe Orenbuch, who follows Shawmut, New England's third-largest bank company, for Sanford C. Bernstein & Co., said in a recent report that Shawmut can cut annual expenses at Peoples by 45%, or $12 million.

He estimated that the thrift should contribute $13 million to $14 million to Shawmut's bottom line in 1994.

Mr. Orenbuch added that Shawmut can easily realize more savings by bringing Peoples' deposit prices in line with its own.

The company has been dropping its deposit rates more aggressively than its competitors. Mr. Orenbuch estimated Shawmut would save $1 million after taxes for every 20 basis points it shaves from Peoples' rates. □

AMERICAN BANKER/*Bank Rate Monitor's*™

Consumer Money Index

Personal loan rates and fees

Here are the personal loan rates and fees being charged by selected large banks and thrifts nationwide on August 24. The rates are those offered to the general public for a $3,000, unsecured personal loan, with a fixed rate and a 24-month term. During the past eight weeks, the trend of these rates has been declining. The eight week trend is based on the rates being charged by the ten largest banks and thrifts in the ten largest markets. The highest rate reported over the period was 15.59% on July 6-12. The lowest rate reported over the period was 15.54% on August 9-23.

The American Institute of Banking
Shaping the Future of Banker Education™

Invest in Your Bank's Future Today with the American Institute of Banking

Successful bankers like you are enrolling their employees now in Fall classes at their local American Institute of Banking (AIB) chapter.

Why AIB?

AIB offers you and your employees:

- High-quality, cost-effective, banking-specific training and education
- A solid foundation in banking combined with practical applications to the job
- Convenient, local delivery of nationally developed courses through one of more than 450 AIB Chapters or Study Groups
- A wide variety of program options, from innovative evening seminars to traditional multi-week course offerings focused on these vital areas of your bank:
  - Compliance
  - Marketing and Sales
  - Corporate Banking
  - Retail Banking
  - Management
  - Plus, core courses in accounting and other banking fundamentals

"I started taking AIB courses ten years ago when I was a junior officer, right out of college. I've taken a dozen classes, each one has helped me in the specific area I've worked into. I'm now an executive officer of a local bank."

James D. Wilkson
Vice President
Missouri State Bank & Trust

Sign Up Now

There's still time to enroll your employees in classes for Fall 1993. For more information check your local listings for the AIB Chapter near you, complete and return the coupon below, or call the AIB Information Line at (202) 663-5153.

Yes! I want to invest in my bank's future. Send me more information about AIB's programs and services right away!

Notion that Banks Are Overreserved Is Hard to Swallow

By LINDA STROMBERG
Director of bank equity research
Howe Barnes Investments Inc., Chicago

Comment

In what may later be termed the banking world's version of "Believe It or Not," it appears that the federal regulators, specifically the Comptroller of the Currency, are now concerned about banks' overreserving for loan losses.

Mind you, these are the same regulators that a few years ago mandated the massive reserve policies of the past. These guardians have put the industry and its auditors on notice to expect scrutiny of "excessive" reserves. Violators could be assessed a penalty if a bank continues to reserve without "good reason."

In our opinion, this is absolutely unbelievable. Are we to expect penalties for excess capital next?

We can think of two possible motivations behind this change. First, the Clinton administration would like this economy, which is supposedly out of recession, to start acting the part.

Peggy Turbett/American Banker

Linda Stromberg

In order to rev up our struggling economic engine, banks should be making loans. If financial institutions are reserving, that money is not out in the money supply where it can incrementally multiply.

Lending Can't Be Forced

Of course, the flaw in this theory is that the banks do not necessarily have to lend, especially if there aren't good credits to be booked.

Banks could stock away the excess cash in government securities, mortgage-backed securities or, heaven forbid, exotic new derivative products.

Second, who benefits from this policy reversal? For the most part, small and medium-size banks and thrifts have been building fortress balance sheets by adding to both capital and reserves.

Generally, the balance sheets of the money-center banks are far inferior to those of their smaller brethren in this regard.

Tonic for the Credit Crunch

If the money-center banks have been exercising their clout with the government to exact regulatory relief from "excessive" reserving, this change may dovetail nicely with the government's need to remove the supposed credit crunch and hopefully jump-start the economy.

Here too the theory is flawed. Doesn't anyone remember South America?

In our opinion, having a rainy-day fund in whatever form is not only conservative but prudent. Moreover, most financially sound banking institutions are finding it difficult to utilize their capital.

Loan Demand Lags Behind

The money is in the coffers, but loan demand is nonexistent. If there was loan demand, a financial institution with "excess" reserves could actually be in a position to make more loans.

We find it interesting that the regulators are getting involved in this issue, since excess reserving has traditionally been the province of the Internal Revenue Service (which generally feels every one is hiding money).

Although no economic benefit is derived from moving the excess reserves from the balance sheet to the income statement, we may see some upward price movement in those financial stocks when the move occurs. This would be due to higher earnings being reported. □

TCF Buys Assets, Deposits from RTC

MINNEAPOLIS — TCF Financial Corp. said it bought the assets and deposits of First Federal Savings and Loan Association in Pontiac, Mich., from the Resolution Trust Corp.

TCF, which has $5.1 billion of assets and 130 banking offices in Minnesota, Illinois, Wisconsin, Michigan, and Iowa, said it paid a premium to the government of $14.5 million for First Federal's 15 offices and $231.5 million of insured deposits.

First Federal's loan portfolio and remaining four offices were acquired by other financial institutions.

The new offices will be operated as TCF Bank Michigan. Robert L. Orffeus, previously manager of First Federal, will manage TCF Bank Savings, and several former First Federal employees will join TCF.

Brooklyn Thrift Thrives Amid Ethnic Diversity

By PHIL ZAHODIAKIN

Independence Savings Bank, a $2.3 billion-asset mutual thrift, is preparing to open a new main office on a Brooklyn, N.Y., block that's packed with heavyweights.

Citicorp, Chemical, Chase, Marine Midland, National Westminster, and European American are just a few of the big New York City players already on Montague Street in trendy Brooklyn Heights.

Independence's base is a salad bowl of ethnic neighborhoods that stuck by it during difficult times in the early 1980s. However, it is the thrift's adaptation to modern urban banking, and not just neighborhood loyalty, that has enabled it to thrive in the 1990s.

'Spreads Had Dried Up'

In 1986, when director Charles J. Hamm, a career adman, was named president and chief executive, Independence had eight branches in New York City and on Long Island, held $1.1 billion in assets, and earned $18.7 million – not a bad return.

But "spreads had dried up, and we were below capital adequacy," says Mr. Hamm. "We were at 4%, and the FDIC asked us to develop a plan that would put us up to 5% or 6%."

Thus, former chief executive and current chairman William A. Levin spent his last years as CEO "defending the bank by shrinking it."

As worrisome as the capital ratio was the loss due to death or out-of-area retirement of up to 1,000 depositors annually at each mature branch.

But the bank last year added nearly $800 million in deposits by buying eight former branches of Long Island City Savings Bank and the State Savings Bank in Queens.

It earned $51 million in 1992, and its capital ratio stood at a healthy 13.1%.

"We had to grow the bank to position ourselves for the 21st century," says Mr. Hamm. But that's not easy "when you have to speak eight languages and your markets are growing at 0%."

Gabe Palacio

INDEPENDENCE SAVINGS BANK's Charles J. Hamm, center, with employees who speak the languages of its neighborhoods. "Our niche is new or 'middle' Americans," Mr. Hamm says.

Hired for his expertise in marketing and strategic planning, Mr. Hamm earmarked $5 million for capital outlays aimed at increasing productivity.

But growth was the goal, and aware that "inward growth in a mature, overbanked urban environment meant a long, long road," Mr. Hamm in 1987 priced up certificate and money market rates.

The result was 2% growth at a few branches – and a $5 million pretax loss. "At that time, there weren't any studies showing that the pricing strategy would fail," Mr. Hamm says.

Plenty of Competition

What was certain, however, was that Independence "had to expand its avenues of profitability, and that meant expanding our expertise in a wide range of services," Mr. Hamm said.

"We were in competition with finance companies, mortgage and insurance brokers, and commercial and savings banks – you name it.

"We had to be sensitive to what people need most of the time," he added. "We went into credit cards, doubled our ATMs, and started a commercial lending operation.

"Our niche is new or 'middle' Americans. They want banks to help them participate more fully in the pursuit of happiness."

This pursuit often means starting and running a small business. Mutuals traditionally are not small-business lenders, but Mr. Hamm persuaded his board to pursue the opportunity.

'Strong Profitability'

"If handled properly, small-business lending with variable rates offers strong profitability, and I felt it would significantly expand our lending expertise."

One way Independence pursues sole proprietors and other small businesses is by developing relationships with business brokers. The Russian community, for example, "tends to go through business brokers to find loans when they want to break into unfamiliar markets."

But there are many other immigrant groups in Brooklyn.

To bank this "mosaic," as Mayor David Dinkins describes New York's diverse population, Mr. Hamm developed merchant associations patterned after immigrant lending societies.

"We set up a $100,000 fund for lending to the associations, which are made up of businessmen in each community, like the Arab groups right here," he said, referring to the current Court Street headquarters, "and we rely on these associations to screen their borrowers for us."

Of course, Independence also screens borrowers, but Mr. Hamm admits that loans to immigrant merchants are slightly less-well backed than a typical business loan. However, "The borrower has a lot of peer group pressure on him, and that's a greater moral instrument than the note itself."

Such lending and strong support for the New York Mortgage Coalition and Community Preservation Corp. have led to an "outstanding" Community Reinvestment Act rating.

Lending Where Branches Are

Joseph Margano, executive vice president and mortgage officer, says Independence has been a CRA lender all along.

In Newkirk Plaza – a "mom and pop mall" – the Independence branch has been a significant lender to the Caribbean community. "You have to lend where your branches are, or the areas go down," Mr. Margano said. "That's why we're lending here and that's why we're spending infinite hours persuading the merchants to keep their storefronts neat."

Mr. Margano, like Mr. Hamm, is a Brooklyn native. He attended New Utrecht ("Welcome Back Kotter") High School, and rode the New Utrecht ("French Connection") Avenue elevated to his ushering job at the Loew's Oriental Theater on 86th Street.

Independence has two branches on 86th – the heart of Bensonhurst – where the elevated runs above bustling sidewalks and hundreds of storefronts. Which one of those paint stores employed that kid with "Saturday Night Fever"?

The Changing Scene

Mr. Margano shrugs as he points out a franchised audio outlet.

"There used to be a shop there that sold the best egg cream in Brooklyn," he says. "Best in the world, really. Sandy Koufax would stop in all the time. I think he'd be mad if he saw what happened to it."

In Bensonhurst, especially along Prospect Parkway, Independence holds millions in multifamily mortgages. In fact, Mr. Margano says, the thrift last year "was one of the top five multifamily lenders of any consequence in New York City."

'Hands-On Appraising'

Among its multifamily assets, none are nonperforming. Of its $1.4 billion in mortgages – 55% of them multifamily – just 42 notes totalling $5 million are in foreclosure, with OREO valued at $1.2 million.

Warren Heller, president of Veribanc, a Wakefield, Mass., analysis firm, says this level of nonperformance is negligible. Mr. Morgano says hands-on appraising is the key.

"I don't just drive by a property," says Mr. Margano. "I take the elevator to the top, walk

CEO Urges Stock Sales to Staff, Depositors Only

By PHILIP ZAHORCHAKIN

Mutual savings banks should be allowed to sell stock to employees and depositors, says Charles J. Hamm, president and chief executive of Brooklyn's Independence Savings Bank.

Thanks to the promise of big profits for depositors, mutuals have been going public at a brisk rate. Mr. Hamm believes that selling stock only to employees and depositors – "modern mutuality," as he puts it – would preserve mutuals as community banks.

Once a mutual becomes public, shareholder profits become a far higher priority for the board, he says.

Dale A. Arnhood, a Wheaton, Ill.-based consultant to financial institutions, says the shareholder exclusivity proposed by Mr. Hamm "is advantageous when you have strong management, and there isn't any outside interference. But it requires a unique set of circumstances to work well.

Management Deficiencies

"For the most part, management at mutuals isn't as strong as it is at stock companies," Mr. Arnhood continues. "Mutual boards are more like boards of trustees. They don't really involve themselves in management. They're passive, they aren't critical, and that doesn't work anymore."

As a mutual holding company, Independence is allowed to issue stock to depositors – but only up to 49% of total equity, says Michael Schussler, assistant general counsel to the New York State Banking Department.

He argues that the "current arrangement for mutuals is imperfect because you have a valuable asset with no owner." To demonstrate that mutuals in New York do not have well-defined ownership, he notes New York law "says what happens when other kinds of banks are liquidated, but not if it will say, 'except in the case of a mutual.'"

Phil Calaco, senior thrift analyst for SNL Securities, Charlottesville, Va., says the stock prices of converted mutuals have not been increasing as fast as they were last year, but says the market for conversions is as hot as ever.

Just ask Mr. Hamm.

"We're one of the best mutuals around, and I've been offered $5 million, $10 million just to start the ball of conversion rolling. But our mission isn't making profits. It's providing profitable financial services to our communities."

For Independence, Strength Lies in Ethnic Diversity

Continued from *page 7*

around the roof, and head back down, one floor at a time, knocking on doors. There's no substitute for old-fashioned appraisal methods."

'Infinite Patience'

Customers at Independence are sometimes old-fashioned themselves. At one Bensonhurst branch, for example, the teller lines "could easily, easily hold 200, 250 people.

"But they stand there with infinite patience, even when the Social Security checks come in. It's a happening. And the same thing happens with paychecks. We've tried telling working people that they have direct deposit available to them, but they just aren't interested."

Needless to say, there are plenty of Italian-speaking platform people, a fact noted on the door. At the other branches, instead of "Si parla Italiano," the promises of fluency are in Spanish, Greek, Yiddish, French, Korean, Japanese, Lebanese, and Croatian.

Playing to a Strength

Mr. Hamm, who developed the Mean Joe Greene ad for Coca-Cola, says he intends to keep playing up neighborhood ties. Not surprisingly, his marketing role at the bank is hands-on – and profits have been growing during his tenure.

At yearend 1991, Independence was returning 10.7% on capital; one year later, 17.87%. Its return on assets, 0.90% at yearend 1991, was 1.24% at yearend 1992 – and up to 1.28% at the end of the first quarter.

Though pleased with those numbers, Mr. Hamm singles out a couple of others to make a point. "In 1985, we paid $3.4 million in taxes. In 1992, we paid $23.8 million. That's a lot of money. We want people to know about our commitment to community banking. But people tend to forget the power of community banks in terms of the taxes they pay."

For a community bank that opened for business in 1850, that's a lot of commitments and a lot of taxes. □

PIPELINE/ *By Edward Kulkosky*

Originator Seeks Edge Through Speedy Service

There seems to be plenty of lending business for everybody these days. That doesn't mean mortgage originators are anything less than fiercely competitive. But price competition can only take you so far, and many lenders have been trying to find other ways to attract borrowers.

One way is through fast service, and Ryland Mortgage Co. of Columbia, Md., has taken that route with a fax-based service offered through real estate brokers.

The borrower fills out a short form and checks off several boxes. The form is faxed to Ryland, and a preliminary approval is returned within five minutes to those who qualify.

There's no charge to the broker or borrower.

Encouraging Response

Ryland achieves the high-speed response through a link with Equifax Inc., the Atlanta-based credit reporting agency. "We've just been offering the service for six weeks," a Ryland spokeswoman said. "The response so far has been very good."

Creative Solutions, an Atlanta-based software company, provides the product to Ryland. Charles Goetz, chairman of Creative Solutions, said the product is attractive to real estate agents because it weeds out people who do not qualify for loans.

* * *

Another competitive marketing angle: low-cost closings. Some lenders already have seized on the reduced up-front payments for mortgage insurance now being offered by General Electric and Mortgage Guaranty Insurance Corp. to drum up business.

Among them is Ross Mortgage Corp., Oak Park, Mich., which is promoting Mortgage Guaranty's plan in its service area.

"We predict that this innovation will open up home purchases to many more well-qualified individuals and families," said Tim Ross, president.

* * *

When the folks at Boston's Shawmut Bank announced last week that they would be kicking off a new marketing campaign soon, they meant it literally.

A charitable program it calls "Making Points for Homes" will begin with the kickoff of the New England Patriots football team's opening game next week.

The bank, a unit of Shawmut National Corp., Hartford, Conn., will be giving $100 for each point scored by the Patriots this season to Neighborhood Housing Services. The group is dedicated to improving housing in low-income and moderate-income neighborhoods.

The program will be trumpeted on radio, in newspaper and magazine ads, and in a fan newsletter. A spokesman said the bank hopes to stimulate awareness of Shawmut as a source of home loans and other types of consumer credit.

The price may be right. The bank expects to give away between $22,000 and $25,000 this season, which means it is guessing at a wimpy average of about 15 points a game.

Pulse of the Market

30-Year Rate's Plunge, to 6.96%, Has Industry Scratching Its Head

By CHRISTOPHER NOBLE

Like a lead weight in a vacuum, the national average interest rate on 30-year fixed-rate loan continued its plunge, dropping through 7% to its lowest level in 25 years.

Driven by the 30-year Treasury bond's remarkable rally, the rate fell to 6.96% last week, according to HSH Associates of Butler, N.J.

"This is as good as it's going to get, I think," said Terrance Hodel, president of North American Mortgage in Santa Rosa, Calif.

Indeed, nobody in the mortgage industry is sure just how low rates may fall. Certainly, no one expected them to get this low. After all, the last time interest rates were at this level was in the summer of 1968, and at the time they were at a post-World War II high.

In June 1968, the Federal Home Loan Bank board index for home sales listed the average rate on a 30-year fixed-rate mortgage at 6.97%. In July, it rose to 7.10%.

Paul Paquin, an economist at the Federal National Mortgage Association, said there was no way to know whether rates have bottomed out.

Driven by the bond rally, the rate fell to a 25-year low.

"I'm an economist. But I don't have the slightest idea what interest rates are going to do and neither does anybody else."

Mr. Paquin said that the economy in the 1960s was "an entirely different world."

Home Sales Jump

Meanwhile, the precipitous drop in interest rates fueled a big jump in July in sales of existing homes, according to the National Association of Realtors. The jump to 3.88 million for the year brings the sales to their highest annualized level in 1993. The rate for July was up 14.8%.

The 3.7% jump was much sharper than expected, and is one of the few bright signs in an otherwise flat national economy, experts said.

The combination of low interest rates and a slight decrease in the price of an average home helped spur the increase, officials of the Realtors association said.

"Summer generally is busy, but this is extraordinary," association president William S. Chee said in a written statement. "More and more 'sold' signs are going up."

The average price of a home in the United States in July was $109,200, down from $109,300 in June and up from $102,800 a year ago. □

Sadly for you, politicians in D.C. agree on one thing.

People who've made careers out of being contrary are declaring that the government's relationship with the secondary mortgage market is going to change drastically. They all know ab ut HUD plans to toughen enforcement, new pressures on Fannie and Freddie, and the revival of Ginnie Mae as a major player. And if you want more evidence, look to Capitol Hill, where Congress is toying with mortgage bankers subject to the same regs as commercial banks.

How to react? You could wax nostalgic—and get clobbered by the government and your competitors. Or you could read *The Mortgage Marketplace*.

Every Monday, in less time than it takes to finish your morning coffee, *The Mortgage Marketplace* tells you about the new rules and ideas that could keel haul your secondary operations. It names the biggest mortgage company participants in Ginnie, Fannie and Freddie issues. And it scans the horizon to determine what types of loans, and borrowers, that now are considered exotic could soon enter the pipeline of conforming loans.

There's no debate—new regs are coming. What's still at issue is whether you'll be ready for them.

Mortgage Marketplace

United Mortgage for Sale by Investors

By JAMES H. SAPT

United Mortgage Corp. of Minneapolis, Minn., is on the block, according to sources familiar with the company.

Bear, Stearns & Co. is believed to be representing the owners.

Active Originator

Miller & Schroeder Inc. and Marshall Financial Inc., Minneapolis-based investment companies, led the group that bought the company for about $100 million from the Resolution Trust Corp. in late 1991.

Unlike Foster Mortgage, another property sold by the RTC that was recently resold, United has been able to originate enough new loans to keep pace with servicing runoff, according to mortgage bankers familiar with the company.

As of July 31, United Mortgage had a servicing portfolio of $3.9 billion. The company originated $1.7 billion in 1992.

On Dec. 31, 1991, the day it was sold by the RTC, the company had a servicing portfolio of $3.8 billion.

First Tennessee National Corp. is paying $115.6 million for Maryland National Mortgage, which is virtually the same size as United. But First Tennessee says a strong balance sheet affected the pricing. One source said the same might not be true of United.

Calls to Miller & Schroeder and United Mortgage Corp. were not returned. Bear Stearns officials declined to comment.

Minn.'s Metropolitan Automates Underwriting

By JAMES H. SAPT

Metropolitan Federal Bank of Edina, Minn., has begun to use an automated home-loan underwriting system, according to Bell Trebilcock, vice president.

The system, which uses software from Cybertek-Cogensys Judgment Systems software, will use a "case based" form of artificial intelligence.

Case-based systems employ human mentors to train the system to make decisions in an attempt to replicate the thought processes of an experienced underwriter.

Covers More Loan Decisions

This type of system will allow mortgage originators to use automation to make decisions on a higher percentage of loans than systems which use "if . . . then" logic, according to Joseph Filoseta, president of Cybertek-Cogensys.

Metropolitan wants to use the system to underwrite and approve a substantial portion of its business. "Our goal is to automatically underwrite 65 to 70% of our total loan volume with the system," said Mr. Trebilcock. The bank will use the system for mortgages with loan-to-value's of less than 70%.

Mentor System

Software systems like Cybertek-Cogensys' are often called expert systems because they use a professional's experienced in the field as a mentor.

The program is fed examples by the mentor that illustrate his or her decision-making process.

The mentor lists questions considered significant in evaluating a mortgage application. The mentor then enters a long series of examples of responses to the questions and makes a decision for each.

These decisions for individual questions aggregate into situations that would mirror the situation of an actual mortgage applicant.

Prints an Explanation

Once a base of situations is entered, the program is able to make decisions on situations not encountered in its judgment base and evaluate them based on its "confidence" that the mentor would agree.

At the end of every mortgage application decision the system prints an explanation of how and why it arrived at its conclusion.

Users continue to update information into the judgment base so that the decisions reached can reflect changing market conditions. From an originator's standpoint, the main advantage of automation is an increase in efficiency.

10 Times or More Faster

Whereas an underwriter may take up to 45 minutes to evaluate a loan, the computer system will do the same work in three seconds to three minutes, according to Mr. Filoseta. The program may also be used as a tool by which beginning underwriters may become familiar with the way expert ones make decisions, Mr. Filoseta added.

Cybertek-Cogensys' artificial intelligence system is used by a number of other mortgage providers, including B.F. Saul Co., Chevy Chase, Md., Home Savings of America, Irwindale, Calif., and Great Western Bank, of Beverly Hills, Calif. □

Bankers are Bullish on Mutual Funds

Core Customers May Flee If They Lose Principal

By PAUL H. ALLEN

Although banks are moving rapidly into the mutual funds market – and with greater success than ever – I hope the surge won't prove detrimental to the banking industry's greatest competitive edge: its core customer franchise.

Viewpoint

I also hope it doesn't lead to the creation of a supplemental (rather than complementary) cost structure that could involve a complex restructuring when the markets turn south.

Federal Reserve Chairman Alan Greenspan helped save the U.S. banking industry through management of short-term interest rates. There was, however, a price to be paid: Savers provided a massive subsidy for the cleanup of banks' problem assets.

Yet during the early 1980s, they were conditioned to rely on

Low savings rates have pushed consumers into riskier investments.

the cash flow associated with high interest rates to fund their day-to-day needs. In our current world of 2% to 3% savings rates, core customers have been forced to disintermediate from their traditional deposit home – the banks.

Long-Term Trend

This merely reflects an acceleration of a long-term trend. In 1983, bank time deposits and mutual fund assets totaled $1.8 trillion, with banks holding an 84% share. By March of this year, the market had grown to $3.75 trillion, but the banks controlled just a little over 50%.

Banks faced the dilemma of "getting on the boat" or losing the funds to outsiders and, because of low credit demand, were awash with liquidity from core deposits.

Working first with mutual fund companies as third-party providers and later through sales of proprietary funds, banks have amassed a 10% to 15% share of mutual fund holdings. In the year ended June 30, bank proprietary funds grew 36%, far outpacing the 23% for overall fund growth.

Do Customers Know the Risks?

There are, nonetheless, risks associated with this foray into fund sales.

Mr. Allen is chairman of Aston Limited Partners, a bank investment and operations restructuring firm in New York.

Paul H. Allen

Do bank customers truly understand the risk to their principal associated with their investments? However much bank sales staff insist they are explaining risk, I remain unconvinced.

Perhaps the strongest competitive advantage of banks has been customer inertia. Over 60% of small-business owners (sales less than $5 million) have similar long-term relationships. These relatively unsophisticated customers have always relied on the protection of principal (legal through Federal Deposit Insurance Corp. insurance, and de facto in bank failures).

In chasing current bond and stock fund yields, I believe that customers have implicitly – not consciously – taken on market and principal risk.

Chain Reaction

When rates rise, bond fund principal will be lost, and equity markets will drop from current high valuations. At that point, there are going to be a lot of angry bank consumers and small-business owners. They are a different type of investor than traditional mutual fund purchasers, being more reliant on cash flow from their savings.

It's true that bank funds are still dominated by less interest-sensitive money market funds (over two-thirds of bank-managed funds, as estimated by Lipper Analytical Services), yet that still leaves $29 billion in equities and $24 billion in fixed-income funds under bank management – a source of significant downside potential for customers.

Meanwhile, I am convinced that the banks are creating an incremental cost structure driven by the top of the market (in terms of trading/purchase volumes) that will be hard to dismantle in a downturn.

For example, there are three approaches to fund sales that banks have taken: (1) creating new, supplemental costs in a dedicated fund sales force for proprietary funds; (2) selling such funds through their traditional platform staff; and (3) retaining a "variablized" cost structure by selling through the staff of third-party providers.

Each approach has its pros and cons. The first maximizes returns from funds and keeps a distinct cost structure that can be taken down (a la brokerage houses) when volumes decline. The second takes the full return and can appear to achieve economies of marketing expense through "piggybacking" off existing sales resources – but at the expense of complexity in terms of future downsizing.

Dismantling the Structure

The third gives up return to the third-party supplier, but if the relationship is properly structured it is the easiest to unwind and may offer some protection against customer anger and franchise erosion.

Moreover, many banks are creating a new back-office cost structure to service fund sales and management. This may consist of distinct, severable expenses, or a "hand-aid" adjustment to existing systems. The concern about dismantling these costs in a market downturn also arises here.

While banks have faced the dilemma of either accepting core deposit runoff or jumping on the mutual fund bandwagon, I do not think they have properly weighed the risks I have outlined. I am nonetheless confident that there is a role for banks in these markets but that it must be properly structured:

- **Sales force management:** Many bank purchasers of mutual funds are unsophisticated market investors and need exceptional sales guidance in understanding core/incipal risk. If not properly structured, volume targets and incentives for sales staff may run counter to this responsibility.
- **Customer portfolio management:** Linked to sales force management is a premium that should be placed on helping customers with timing and stop-loss management.
- **Cost management:** Banks should be planning how to restructure the incremental costs

The downside potential has to be spelled out.

of mutual funds marketing, research, and back-office support in the event of a market pullback.

It would be fortunate if the new investment products' cost structures became another "loss leader" for the banks (perhaps like discount brokerage costs in the mid 1980s).

- **Proprietary/third-party fund balance:** To satisfy each of these points, an explicit decision on the tradeoffs of return/risk from the balance of proprietary and third-party funds needs to be made. □

Mark S. Casady
Concord Financial Group

Mr. Casady joined Concord Financial Group this month as senior vice president and national sales manager. The company, headquartered in New York, sponsors and administers mutual funds for eight client banks, including Barnett Banks, Chase Manhattan Corp., and U.S. Trust Co. In his new post, Mr. Casady will lead efforts to expand sales of the banks' proprietary funds to institutional customers, such as corporations and pension plans.

Career track: Worked for past 11 years at Northern Trust Co. in global custody accounting and investment services. Created capital market portfolios for the Benchmark mutual fund family

Vital statistics:
Age: 32
Education: BS, Indiana University
MBA in finance, DePaul University

Concord Hires Mark Casady To Run Institutional Sales

By KALEN HOLLIDAY

Concord Financial Group Inc. has hired Mark S. Casady away from Northern Trust Co. to manage its newly expanded institutional sales force.

The New York-based mutual fund company is building up its institutional sales force to include a new Mid-Atlantic regional office, based in Pittsburgh, and increased staff for its offices in Boston, Chicago, and Smyrna, Ga.

Richard E. Stierwalt, chief executive at Concord, praised Mr. Casady as "a proven sales executive."

Broadening Client Base

With Mr. Casady at the sales force's helm, "Concord will have one of the strongest institutional sales teams in history," Mr. Stierwalt said in announcing the appointment.

Mr. Casady plans to broaden Concord's client base. "They've done a great job with big banks like Northern Trust and second-tier banks like NBD and Bay-Banks," Mr. Casady said. Now, he plans to target smaller banks as well as other institutions, such as hospitals.

With more than $30 billion in mutual fund assets under administration, Concord is the largest administrator and distributor of bank-related mutual funds, according to company officials.

Seeking More Assets

Concord's institutional sales force has raised more than $16 billion of assets for its bank partners' mutual funds.

By expanding its sales force and hiring Mr. Casady, the company is gearing up to raise additional assets. "These changes reaffirm Concord's commitment to raising assets for our partners' mutual funds," Mr. Stierwalt said.

Mr. Casady, who was in charge of mutual fund strategy at Northern Trust, said he thrives on growth.

He plans to target smaller banks and institutions such as hospitals.

Fast-Paced Environment

At Northern, "I was always in a very fast-paced environment," he said. "You become addicted to that. I looked at Concord and said: 'Here's a chance to be in a business that's really growing fast.' "

Mr. Casady will continue to work in Chicago, although he did "toy with the idea of moving" to New York," where Concord has headquarters.

"Firms in New York are on the cutting edge," Mr. Casady said. "They have their ears to the ground as to what's happening in the market."

After Northern, which is in a "fairly protected environment," Mr. Casady said he likes "the whole sense of being caught up in the market" at Concord. □

Marketer Urges Reviews with Customers

By KAREN TALLEY

In an unusual move, Wall Street Investor Services is urging its bank clients to call thousands of customers back into branches to review the investment products they bought there.

The New York firm, which sets up mutual fund and annuity sales programs for banks, made the recommendation in letters last week to chief executives and investment program managers at the 60 banks it serves.

"It is essential that those who invest in mutual funds make informed choices and understand what they are buying and from whom," says the letter from chief executive Denis P. Kelleher.

Form of Education

In an interview, Mr. Kelleher emphasized that the request is not a "recall." Rather, it is a way for sales representatives to educate customers about how possible market shifts would affect their investments.

Banks have been under pressure from regulators to step up disclosures to customers about the risks of investing in mutual funds. Reviewing investments with customers, Mr. Kelleher said, is a way for banks to show regulators that they are equipping customers to deal with a possible market downturn.

Denis P. Kelleher
Says plan is not a recall

In its mailing, Wall Street Investor included a proposed letter that sales representatives at banks can send to investors.

An Investment 'Checkup'

The letter reminds customers that factors such as risk tolerance, financial goals, and investment expectations were discussed when they made their initial investments.

But, it adds, "Just as you go to the doctor periodically for a physical checkup, you need to review your mutual fund investment against these changing factors from time to time."

A banker who received one of the first letters said he was surprised by the request, but believes it makes sense. "It's unusual, but it's a good idea," said Mark Stevens, vice president of financial services at F&M Financial Corp., a $128 million-asset banking company in Granite Quarry, N.C.

In a separate letter, Wall Street Investor's compliance director, Richard Cumiskey, asked investment-program managers to revise disclosure forms and other information customers receive.

"It is essential that all our bank programs amend their materials," the memo stated.

Money Well Spent, Firm Feels

Wall Street Investor says the materials must incorporate specifics that regulators are calling for, including language stating that investors risk losing principal on mutual fund investments.

The outreach has already cost the firm about $15,000, including costs to reprint some of its own marketing literature, but directly comparable to Pacific Service's campaign.

The credit union was able to break even on its Visa program within 7½ months, rather than the year that had been forecast.

"We attribute its success to a clear focus on our target market, a better-than-market product, and attention-getting mailings," said Noelle Fischer-Herbert, senior vice president of marketing among credit unions that see a golden opportunity in credit cards.

By the end of 1992, 33% of the 13,000 credit unions were marketing credit cards to their members, up from 29% in 1991 and continuing a steady rise. But those offering credit cards tend to be larger and account for 80% of total U.S. credit union membership, according to Credit Union National Association spokesman Jerry Karbon.

In other words, eight out of every 10 of the 64 million credit union members can get a credit card from the institution they belong to.

RAM Research Corp. of Frederick, Md., said Digital Employees Credit Union in Massachusetts was the fastest-growing card issuer in the first half of the year. Its portfolio rose 85% to $49 million.

LMSC Federal Credit Union in California ranked second, increasing 82% to $28.3 million.

Ms. Fischer-Herbert at Pacific Service said pricing may have had more to do with its Visa program's success than the members' affinity through their workplace. Pacific Gas and Electric. The interest rates are 14.9% on standard cards and 13.9% on gold cards. There are no other fees if holders maintain a balance or purchase items monthly.

An Automatic Edge

Still, marketing experts say the high degree of loyalty among credit union members gives these institutions an automatic marketing advantage over bigger, more impersonal organizations.

"Credit unions are a natural affinity group," said Keith Floen, senior vice president and manager of card programs at the Credit Union National Association in Madison, Wis.

"One phenomenon of credit unions is that they have a very truncated process – they tend to have a very focused philosophy," said Bob Wilcox of Wilcox & Associates, the agency that worked with Pacific Service on the marketing plan. "We can run a project with as high a level of profitability because decisions are made quickly and cleanly."

$10 Billion Outstanding

Credit unions remain a relative small market force. Together they represent about $10 billion in outstanding balances, or about the equivalent of BankAmerica Corp.'s operation, which is the sixth largest in bank cards.

Credit unions' total consumer installment credit totaled $94 billion at yearend 1992, making up 13% of a $753 billion market. The credit unions were dwarfed by commercial banks' $332 billion, or 44% share. About half the credit union outstandings were in auto loans.

"Banks will argue that credit unions are taking a bite out of their business," said Mr. Karbon at the Credit Union National Association. "But in credit cards, nontraditional products like AT&T [Universal Card] and the Discover Card are making much bigger inroads."

Mr. Floen expects the popularity of credit unions' cards to grow, building on the institutions' close ties with members. There will also be increasingly attractive pricing and rate offers, he said. □

California Credit Union Hits Pay Dirt with Cards

By KAREN EPPER

The credit card success of Pacific Service Employees Credit Union is the latest evidence that there is still room for small issuers.

Using the services of a San Francisco advertising agency and prescreening techniques similar to those available to the industry's biggest players, the credit union has signed 7,000 cardholders, who have brought $10 million in outstanding balances.

Not much by the standards of a Citicorp or BankAmerica, but a significant piece of new business for the $400 million-asset institution that is chartered to serve employees of Pacific Gas and Electric Co.

21% Sign-Up Rate

In a 16-month direct mail campaign, Pacific Service attracted 21% of the members it targeted. Ordinary credit-card mail solicitations generally solicit about a 5% monthly response, though this figure is not directly comparable to Pacific Service's campaign.

The credit union was able to break even on its Visa program within 7½ months, rather than the year that had been forecast.

"We attribute its success to a clear focus on our target market, a better-than-market product, and attention-getting mailings," said Noelle Fischer-Herbert, senior vice president of marketing for Pacific Service, which is based in Concord, Calif.

Pacific Service is not alone among credit unions that see a golden opportunity in credit cards.

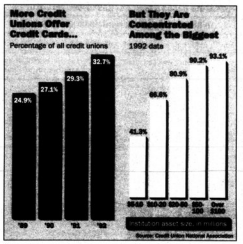
By the end of 1992, 33% of the 13,000 credit unions were marketing credit cards to their members, up from 29% in 1991 and continuing a steady rise. But those offering credit cards tend to be larger and account for 80% of total U.S. credit union membership, according to Credit Union National Association spokesman Jerry Karbon.

In other words, eight out of every 10 of the 64 million credit union members can get a credit card from the institution they belong to.

RAM Research Corp. of Frederick, Md., said Digital Employees Credit Union in Massachusetts was the fastest-growing card issuer in the first half of the year. Its portfolio rose 85% to $49 million.

LMSC Federal Credit Union in California ranked second, increasing 82% to $28.3 million.

Ms. Fischer-Herbert at Pacific Service said pricing may have had more to do with its Visa program's success than the members' affinity through their workplace. Pacific Gas and Electric. The interest rates are 14.9% on standard cards and 13.9% on gold cards. There are no other fees if holders maintain a balance or purchase items monthly.



An Automatic Edge

Still, marketing experts say the high degree of loyalty among credit union members gives these institutions an automatic marketing advantage over bigger, more impersonal organizations.

"Credit unions are a natural affinity group," said Keith Floen, senior vice president and manager of card programs at the Credit Union National Association in Madison, Wis.

"One phenomenon of credit unions is that they have a very truncated process – they tend to have a very focused philosophy," said Bob Wilcox of Wilcox & Associates, the agency that worked with Pacific Service on the marketing plan. "We can run a project with as high a level of profitability because decisions are made quickly and cleanly."

$10 Billion Outstanding

Credit unions remain a relative small market force. Together they represent about $10 billion in outstanding balances, or about the equivalent of BankAmerica Corp.'s operation, which is the sixth largest in bank cards.

Mr. Floen expects the popularity of credit unions' cards to grow, building on the institutions' close ties with members. There will also be increasingly attractive pricing and rate offers, he said. □

Command Credit Buys Franklin Credit and Leasing

By KAREN EPPER

Command Credit Corp., a developer of secured credit card programs, said it has completed its acquisition of Franklin Credit and Leasing Corp.

Franklin, based in Plainview, N.Y., provides leases and serves as a loan broker in financing of heavy construction equipment, airliners, ships, barges, and other equipment.

Command, based in Rockville Centre, N.Y., said it hopes to use Franklin's credit and leasing expertise to broaden Command's range of services.

Command, based in Rockville Centre, N.Y., aims to broaden its range of services by tapping Franklin's credit and leasing expertise.

Incorporated in 1988, Command has struggled to enter the secured card business, in which cardholders leave a deposit as collateral for a line of credit. The company has accumulated capital, however.

Command chairman William G. Lucas and Franklin chairman Robert Pascuzzi issued a joint statement that said the acquisition will greatly enhance the capacity of both companies.

Mr. Lucas said Franklin will maintain "virtual autonomy" as a wholly owned subsidiary.

"There will be a great deal of cross-selling of services by the marketing groups of each company," Mr. Pascuzzi said. His company could offer Command's credit card services in addition to leasing options.

Change to Former Merger Deal

On another expansion front, Command said it will amend its Feb. 11 merger agreement with Suburban Bankshares, parent of the $170 million-asset Suburban Bank in Lake Worth, Fla.

Command plans to invest an additional $2 million, or $6 million in total, to purchase 85% of the Florida company.

Previously, the transaction was structured as a "50-50 swap." That approach did not require "change in control" filings with regulators but would have given Command firm control over management.

The added funds will provide Suburban with the capital it needs to meet demands of the Federal Deposit Insurance Corp. The agency has imposed a cease-and-desist order that requires it to raise capital, boost loan-loss provisions, and hire a new chief executive.

Command said it has informed regulators of its amended offer and is in the process of preparing a formal application for change of control with the Federal Reserve Board and state regulators. □

Victory on Fees in California Could Backfire

Continued from page 1

ginia and Colorado.

Consumer advocates have long complained that the states are ratcheting regulations down to the "lowest common denominator."

NEWS ANALYSIS

An aide to Rep. Charles E. Schumer, D-N.Y., said that complaint is now certain to be raised in upcoming hearings on Mr. Schumer's proposal to require more prominent disclosure of credit card fees.

Consumer advocates argue that penalties of $5 to $6 are sufficient to keep potentially delinquent borrowers in line. They note that borrowers continue to pay interest on the delinquent balance in addition to the penalty. The critics accuse bankers of trying to turn penalty fees into a profit center.

"Our initial thinking is to focus on disclosure," the Schumer aide said. "If we see late fees are getting egregious, maybe that's something that needs legislation."

Interstate Rivalry

The bidding among states for card jobs has been going on for more than a decade. New York State has lost more than 20,000 jobs to states such as South Dakota, Nevada, and Delaware that had no usury laws and more favorable business climates.

Pressure could rise for national controls if the state eases a law that has forced return of millions of dollars in card delinqency fees.

More recently, Virginia accommodated Signet Banking Corp.'s expansion plans by lifting its late-fee restrictions. Colorado Gov. Roy Romer last year approved a $15 cap on late fees – a bill he had vetoed two years earlier – in hopes of attracting jobs to his state.

In California, it is unclear how much consumers benefit from the late-fee restriction, which is contained in a civil statute on unlawful liquidated damages. Bankers point out that about 50% of cards in the state are issued by out-of-state banks.

Bankers argue that stiff late fees on customers who abuse credit make it easier for out-of-state banks to offer low rates.

"The credit card industry was born in California in 1958, and it will die here unless the Legislature moves now to let the market, not judges, determine credit card pricing in California," the state bankers association declared earlier this summer after a judge ordered First Interstate Bank to refund $13.9 million to cardholders in the largest class-action award to date.

Such warnings carry considerable weight amid the Golden State's stubborn recession. Indeed, local newspapers' opinion columns have sympathized with the banks. And the banks' position has been endorsed by local economic development agencies and groups representing black and Hispanic bank employees.

But in the past, the bankers have sometimes exaggerated the threat of job migration. This could undercut their credibility as they try to negotiate a cap – or later when they try to convince Congress that no national consumer-protection standards are needed.

In one example, the California Bankers Association contradicted its own research in its response to the First Interstate court decision when it asserted that some 20,000 jobs were at stake. Only 4,500 of the 22,000 direct credit card jobs might be moved, according to the study, which was underwritten by Visa U.S.A.

'Nobody Knows for Sure'

James A.Clark, the association's vice president of state government relations, admitted that "nobody knows for sure" how many jobs might leave the state as a result of the unfavorable late-fee law. But he pointed out that New York State officials were skeptical of job losses, too, and didn't lift usury ceilings until it was late.

Critics accuse bankers of trying to turn penalty fees into a profit center.

Proponents of deregulation point out that San Francisco-based Bank of America Corp. is issuing all new cards from a facility in Phoenix that employs about 1,500. An operation less than one-third that size remains in Pasadena, Calif., servicing only older accounts.

While Robert B. Sznewajs, executive vice president of Bank of America's credit card division, argued forcefully for deregulation, he also said the late fee was just one element in the bank's location decision. "The legal environment is important, the work force environment is important, the quality of life is important," he said.

Philip G. Heasley, executive vice president of retail products at First Bank System Inc., Minneapolis, argued that the regulatory environment is "the No. 1 factor" in the competitiveness of a credit card operation. But he indicated that late fees were not much of a factor in the decision to move some jobs to Colorado. □

How to Make Sales Training Pay Off for Your Bank

Bankers spend money on sales training because they expect a decent return on the expenditure. If the returns don't materialize, the bankers criticize the training and blame the trainer.

In the majority of cases, they're looking in the wrong place for the cause of failure. Most often, they should examine their own institutions, because without doubt the leading cause of disappointing sales results is the absence of an effective sales culture within the bank. Without the right kind of culture, even the best sales training won't help.

A Sales Quiz

Unfortunately, many bankers who say they have a sales culture do not really have an effective one. Where does your bank stand? Take a quiz. Confirmation of a productive sales culture

A PROCESS-DRIVEN *approach to sales management is the glue that holds a sales culture together.*

requires a "yes" answer to all of the following questions.

- Has the CEO delivered a sales-culture mission statement, delineating senior management's policies to foster interdivisional cooperation and customer-sharing?
- Have sales goals been assigned to every line manager?
- Have line managers assigned sales goals to the sales staff?
- Is everyone – managers and staff – required to track actions and revenue results daily.
- Along with positive reinforcement, is there consistent daily and weekly accountability?
- Are incentive compensation and recognition programs, tied to specific sales goals, in place?
- Have job descriptions been written in the expectation that sales-related responsibilities as prospecting, financial profiling, and cross-selling?
- Has the bank installed a time-management system to increase opportunities to sell?

The Process Approach

If all the answers are yes, you might have a valid sales culture. But whether your sales culture is successful depends on how the bank handles the sales-management process. A process-driven approach to sales management is the glue that holds a sales culture together, and here are the ingredients that make the glue sticky:

Vision. Every manager, from the CEO down to the branch managers, must set and internalize a vision for the manager's unit of responsibility. To internalize the vision means to make it a part of the everyday life of every banker; the vision must get bankers to think of achieving goals they normally would not consider and must set action and revenue goals with deadlines.

Mission statement. The mission statement specifies expected levels of actions and performance.

Goal management. A manager must set goals for his or her unit and for every banker in it. Goals specify actions, dollar volume of business, and deadlines. Managers must track results daily and follow this rule: Inspect what you expect.

Action planning and action goals. Managers at every level should have an action plan spelling out goals for specific actions, such as the daily number of prospective customer contacts, referrals, financial profiles, and the like.

Minimum daily action plan. Every banker, every day, must commit to a specific amount of time dedicated to business-development activities.

Individual sales and service plan. Every banker's daily plan includes a schedule of specific activities to develop business, and managers too should have their own daily action plans. Furthermore, managers should review plans and actions daily.

Sales and service management plan. The philosophy of the sales management plan is that you operate on a weekly sales cycle – you zre "born on Monday and die on Sunday," and are reborn the following Monday. Each Monday begins with a sales meeting throughout the week a manager holds daily debriefings, coaching sessions, and clinics for specific problems, and demands accountability. The following Monday's begins anew.

Sales meetings. Sales managers must hold a sales meeting every week, preferably on Monday. Set a 15-minute limit and restrict discussion to one hot, revenue-generating topic that will increase revenues within 48 hours.

Sales rounds. Managers hold workshops in which bankers assist each other in solving sales problems. They also cross-pollinate with their peers.

WITHOUT DOUBT, *the leading cause of disappointing sales results is the absence of an effective sales culture. Without the right kind of culture, even the best sales training won't help.*

nate their best practices.

Accountability and Reinforcement. Managers right up to the CEO must debrief their direct-reports on sales results and follow up quickly with the appropriate response – positive reinforcement or appropriate coaching and counseling.

Publishing results. Managers at every level should publish sales results to create positive peer pressure. Publicly praise the achievers but avoid publicly criticizing the nonachievers.

Look Outside for Help

This 11-point sales-management process ensures that bankers will alter their behavior and continuously practice what they learned in training. Without it, performance typically regresses to pre-training levels.

The emphasis on sales culture and on management does not minimize the importance of the training itself. To say that the training should be of the best quality is to say the obvious, but that doesn't help identify good sales training. Here are specific pointers that will help.

First, it's necessary to go to an outside specialist because most bankers don't know what constitutes an effective sales culture. Additionally, internal training too often is concerned with user-friendly training methods rather than bottom-line results. Typically the attitude of the internal training department is: "Results are not our responsibility. It's up to the line divisions to get results." The right training vendor will be as dedicated to getting results as to teaching techniques.

Hire a vendor who can customize a program for your bank and for your individual business lines.

The Curriculum

The trainer's syllabus for retail banking, commercial banking, trust banking, and investment management should include:

Current sales-culture research and evaluation, including compensation and recognition programs.

A sales-management culture-change process that extends from the top down and from the bottom up, with accountability at every level.

Individual sales plans and sales-management plans.

Motivation, time-management and, when necessary, even stress management.

Consultative relationship selling.

Consultative, service-driven telecounseling (as opposed to product-specific telemarketing).

Account segmentation to identify the 20% of customers who provide 80% of the revenues.

A needs-analysis, consultative profiling approach for the entire customer base in commercial banking, trust banking and upscale investment management. For retail accounts, however, the needs-analysis profiling approach typically applies to the top 20% only.

Consultative miniprofiling for the balance of accounts in retail banking.

Proactive and reactive cross-selling of all divisions' services.

Select a program with plenty of interaction built in, including real-world role playing by the trainees, realistic consultative scripting clinics, objections clinics, closing clinics, a hiatus during which the techniques are applied, and a debriefing.

The training should take the bankers to progressively higher levels of education as skills improve and experience grows.

And select a trainer whose presentations are entertaining as well as educational. A bored trainee learns little.

Attaining and maintaining an effective sales culture is not easy, but bankers must ask whether they have a choice in this era of diminished opportunities for loan and deposit profitability and of increased competition for fee business.

A return on investment of 1,000% on the cost of training is attainable if the training is done right and within the right culture. The cost of training in that case is not an expense; it is an investment with a worthwhile payoff. □

European 'Universal Banks' Profiting with Narrower Focus

Reuters

AMSTERDAM — Europe's broad-based "universal banks," whose global ambitions were killed by the recession of the early 1990s, are reaping the rewards of refocused strategies.

Analysts point out that the soaring trading profits at the big Swiss banks, which followed months of European currency turmoil, are being repeated across the Continent.

Part of this success has come from a quiet redefinition of the meaning of the term "universal bank."

The designation used to imply a desire to be all things to all clients — a global institution offering retail banking, insurance, securities, and investment banking services.

But as the cost of taking on the competition in home markets has sunk in, banks have pulled in their horns and are streamlining their empires to match the needs of clients.

Deutsche Bank Stands Out

A classic example of the newly refocused universal bank is Deutsche Bank of Germany.

It makes no effort to duplicate its range of domestic services elsewhere and concentrates on employing its financial might in international capital markets where it can use its balance sheet and distribution network to win lucrative business.

Deutsche Bank still provides the full range of banking services for big corporate clients, but since the recession began to bite it has tailored its operations to make better use of resources and target products it can sell to clients, analysts said.

"You develop a niche you can sell worldwide," said Roel Gooskens, head of equity research at Van Meer James Capel.

Bonanza Days

For universal banks, with their big trading operations, the strategy meant bonanza profits when Europe's currency grid disintegrated, said Lehman Brothers analyst Alison Deschars.

"They took the proper view that they could not be in all markets, but focused on what they can do profitably," she said.

The only real exception to this rule has been HSBC Holdings PLC, the London-based parent of the Hongkong Bank Group, whose acquisition strategy in advance of the Chinese control of Hong Kong in 1997 has made it probably the only truly global bank in the world, analysts said.

Part of bankers' early reluctance to surrender the vision of a global one-stop shop for financial products was the belief that they could chain clients to their firms through sheer convenience.

No Mass Desertions

But when big banks have pulled out of a particular sector, they have not suffered the mass desertion by customers that was predicted by those opposed to the changes.

"You cannot deny that by pulling out of a business you reduce the number of products on offer, which can make it harder to attract new customers," said one senior British banker whose firm walked away from the Eurobond market in the late 1980s.

"You develop a niche you can sell worldwide."

Roel Gooskens
Van Meer James Capel

"But if you've got good relationship products, then the clients will stay."

In any case, big corporations often prefer to take advantage of the competitive market for financial services and shop around.

Organizational Hurdle

If there is a force for change within the universal banks, it is the organizational nightmare of melding the disparate cultures of commercial and investment banking.

Commercial and investment bankers don't think alike or look alike, and getting them to coexist is a supreme challenge.

Creating an "exploded" structure like Swiss giant CS Holdings — a holding company that embraces different independent firms that cross-sell products but retain their individual cultures – is a reasonable solution, analysts said.

This may have been what Spain had in mind when five state-owned financial institutions were merged into a single conglomerate, Argentaria.

"Argentaria is a good demonstration of the potential for creating an umbrella structure that maximizes the benefits of providing a range of services without getting tempted by an unwieldy organization," said another analyst. ❑

merger, and 60-year-old Financial Federal had assets of $650 million. They have a combined 400 employees, and Mr. Cooper said he planned to pare that total by about 20%, mostly by consolidating back office operations.

Mr. Cooper brought his own management team to the new institution. Donald Baker, formerly of Bank of New England Corp., will be executive vice president and chief financial officer.

Also joining as executive vice presidents are Lawrence Trapp and Richard Hessinger, who formerly worked with Mr. Cooper at the failed Goldome Federal Savings Bank in Buffalo.

Mr. Hessinger will be responsible for asset management, consumer lending, and mortgage banking, while Mr. Trapp will be Chase's treasurer, Mr. Cooper said.

Among those who lost their positions in the merger, along with Mr. Gray, are Financial Federal's chief executive officer, Raymond Gussand, and Chase Federal's chairman and CEO, Charles L. Clements Jr., who is retiring after 41 years at the thrift.

Rates Fall on Report Of Weak Home Sales

Interest rates fell on Monday, as a weak report on home sales caused government bond prices to rally.

At 4 p.m., the price of the 30-year Treasury bond was up more than ½, lowering the yield to 6.11% from 6.12%.

The Treasury's 10-year note was the flavor of the day, rising about ½ in price. The yield fell to 5.44% from 5.48% on Friday.

Five-year issues rose ¼, cutting the yield to 4.79% from 4.83%. Two-year notes were up about ⅛, reducing the yield to 3.84% from 3.87%.

T-Bill Yields Down

On the short end, the Treasury auctioned a total of $24 billion in three-month and six-month bills at respective average discount rates of 3.02% and 3.11%, down from 3.07% and 3.12% at last week's auction.

The bond market, which has been rallying for the past several weeks on mixed real world economic growth, benefited from a Commerce Department report showing that sales of new homes plunged last month.

The 3% decline to an annual rate of 629,000 sales was the biggest drop since March.

The yield on the 30-year Treasury bond fell to 6.11% from 6.12%.

In addition, the June gain, originally reported as an 11% increase, was reduced to a 3.3% rise.

Trade Deficit Worse

Adding to the bad economic news, the Commerce Department also reported that the U.S. merchandise trade deficit widened to $34.39 billion in the second quarter, the biggest trade gap in five years.

Market analysts expect the Commerce Department today to announce a reduction in the rate of growth in gross domestic product in the second quarter, originally reported at 1.6%.

Economists at Chemical Securities Inc. noting that the trade deficit was badly underestimated, are looking for a downward revision to 1.2%.

Strength in the bond market led stocks. The Dow Jones industrial average gained 3.36 points to 3,643.99. The Standard & Poor's 500 rose 1.36 to 461.90. And the Nasdaq composite index surged 3.31 to 737.38.

The dollar finished at 1.6715 German marks, up from 1.6635, and at 103.75 yen, unchanged.

— Bart Frueh

Chester Valley Sets 5% Stock Dividend

DOWNINGTOWN, Pa. — Chester Valley Bancorp declared a 5% stock dividend and its regular quarterly cash dividend of 8 cents, both payable Sept. 24 to shareholders of record on Sept. 10.

The company said the cash dividend was based on the $419,000 earnings of Chester Valley, parent company of First Financial Savings Bank, for the quarter ended June 30 and would be paid on shares held before issuance of the stock dividend.

Bear Stearns Analyst Drops Bancorp Hawaii To a 'Neutral' Rating

By GORDON MATTHEWS

Bancorp Hawaii, one of a handful of bank stocks that have fallen this year, lost its "buy" rating from Bear, Stearns & Co.

Analyst Lawrence R. Vitale on Monday lowered the shares to "neutral," citing slower earnings growth and a modest rise in nonperforming loans in the sluggish Hawaiian economy.

Stocks

Bancorp Hawaii was ahead 25 cents to $42.75 in late trading but is 3.3% behind its yearend level. In contrast, the *American Banker* index of bank stocks is up 9.3% this year.

The stock trades at 135% of book value, versus an average of around 170% for regional banks.

Mr. Vitale said he cut the rating with reluctance.

"This is an excellent bank, and I still see growth in my [earnings] model, but [the state of] Hawaii right now has stopped in its tracks," he said.

Although Hawaii's jobless rate is relatively low at 5%, the crucial tourist business has been hurt by the economic recessions in both California and Japan, which usually provide large numbers of visitors.

Tourism accounts for 40% of the state's economic activity. Mr. Vitale said he is concerned that a slow economy would dampen balance-sheet growth for the bank.

Realty Market Has Cooled

Moreover, the real estate market has cooled, and some loan problems have resulted.

Nonperforming assets rose to 1.52% of loans and foreclosed real estate on June 30 from only 0.78% a year earlier.

"It appears that some of the California problems have finally reached Hawaii," the Bear Stearns analyst said.

Nonperformers are expected to rise only slowly, and the bank is equipped to deal with them, he said.

So far, most of the rise has been due to a few large credits, but he said he expected further chargeoffs in this area.

The loan-loss reserve equaled 127% of nonperformers at midyear, down from 280% a year earlier and 154% at yearend.

Earnings Estimates Cut

The analyst cut his earnings estimates to $4.70 per share from $4.85 for this year and to $4.90 from $5.25 for next year.

The bank earned $4.88 per share last year and $2.33 in the first six months of this year.

Annual earnings growth has slowed to 4% to 5%, Mr. Vitale said, compared with a 13% compound annual rate of earnings growth over the past 15 years. In that period, the dividend has grown at a 9% rate.

Bancorp Hawaii had assets of $12.7 billion on June 30. Its main subsidiary is Bank of Hawaii.

The company dominates Hawaii, with nearly 50% of the banking market. It has few in-state competitors and a growing Pacific Rim franchise, with offices in Tokyo, Seoul, Hong Kong, and Singapore, as well as Guam and other Pacific islands.

The shares trade at a below-average 135% of book value.

The economies of both Hawaii and Guam are underpinned by military bases, which have become more important as the United States has closed or reduced bases in other areas, notably the Philippines.

Bancorp Hawaii is among seven of 49 banks tracked by Bear Stearns that have posted stock-price declines this year.

The others are First Hawaiian Inc., NBD Bancorp, Comerica Inc., Bank of Boston Corp., U.S. Bancorp. of Oregon, and CoreStates Financial Corp.

MONDAY'S MARKET

Bank stocks were mostly mixed to lower.

Barnett Banks Inc. was down 62.5 cents to $46, Meridian Bancorp. was down 37.5 cents to $32, and First Union Corp. was down 50 cents to $44.625 in late trading.

The biggest gainer was MBNA Corp., the credit card issuer, ahead 87.5 cents to $35.125. Shawmut National Corp. rebounded by improving 87.5 cents to $23.75. BankAmerica Corp. rose 37.5 cents to $47, and Bankers Trust New York Corp. rose 62.5 cents to $79.50.

Citicorp Issues Preferred Stock, Taking Advantage of Low Rates

Continued from page 1

ings for Citicorp were also cited.

In July, Moody's Investors Service upgraded Citicorp's noncumulative preferred stock to an investment-grade Baa3 from a junk-rating of Ba2.

Capital raising has been an important part of Citicorp's blueprint for recovery. The bank has issued $675 million of preferred stock this year and $1.3 billion of subordinated debt, according to Securities Data Co.

Capital

Citicorp has mainly used proceeds from the subordinated debt offerings – which can be used to beef up Tier 2 capital – to refinance higher-cost issues.

The bank wants to increase its capital ratios to levels closer to those of its peers. Citicorp had a 5.63% Tier 1 capital ratio in the second quarter; the average for money-center banks tracked by First Boston Corp. was 8.91%.

Raising capital has been an important part of Citicorp's recovery plan.

Adding to Tier 1 Ratio

Monday's issue will add approximately 17 basis points to the Tier 1 capital ratio, said a Citicorp official. Chairman John Reed has said publicly that the bank wants the Tier 1 ratio to reach 6% by yearend, up from 4.90% at yearend 1992.

Management is also aiming to raise the debt ratings of the subsidiary Citibank into the double-A levels, from the current single-A levels.

The preferred stock issued Monday is not callable for five years and is rated BBB-minus by Standard & Poor's Corp.

CAPITAL MONITOR

First Bank, Minneapolis, hit the capital markets on Monday with a $100 million issue of subordinated bank notes.

Proceeds of the 10-year issue will be used to refinance outstanding intercompany debt, said David Grandstrand, senior vice president.

The issue was priced to yield 6.12%, or 65 basis points over 10-year Treasury notes, Donaldson, Lufkin & Jenrette Securities Corp. was lead manager.

Mr. Grandstrand said the bank entered a swap agreement to pay a rate of around 40 to 45 basis points over the three-month London interbank offered rate, now 3.25%. The $125 million of intercompany debt carries a floating rate, but has a minimum rate of around 5.25%, he said.

He added that the bank's issue of $100 million of subordinated "step-up" notes earlier this month was also to refinance the outstanding debt.

* * *

Elsewhere in the capital markets, Bank of Nova Scotia is expected to raise $250 million of 15-year subordinated debt today.

"Are Small Trades Foreign to Your Foreign Exchange Dealer?"

Since establishing itself 40 years ago as Manfra, Tordella & Brookes, Inc., MTB has continued to set the industry standard in providing banks of **any size** with complete foreign currency and exchange services for trades of **any size.**

- Physical delivery of over 120 currencies
- Next day service, nationwide
- Up-to-the minute market quotes
- Drafts
- International Wire Transfers
- Forward Contracts
