Chopping Back, Banks Focus on Relationships

By BETH HOBOWITT

NEW YORK — It it's broke, fix it – or get rid of it.

That is the philosophy behind the onslaught of announcements about big banks' plans to slash expenses in their wholesale banking sectors. The cuts are aimed at units that offer loans, trading, and investment banking services to corporate customers, real estate developers, and newly humbled takeover artists.

At the same time, most of the banks say they are rediscovering an old concept – long-term relationships are more valuable than short-term deals.

"The '80s were transaction oriented, and the heroes were the product guys in M&A, leasing, and LBOs," said an investment banker at Chemical Bank. "Now that the business is down, they are beefing up relationships."

ANALYSIS: *Follow-up on the news*

In putting the emphasis again on the customer, the banks are announcing restructurings that they say will make them more flexible and responsive to customer needs.

A Push for Cross-Selling

They are breaking up product line fiefdoms – such as structured finance, private placements, and loan distribution – in an effort to prod senior managers to cross-sell services and products.

And they are setting up elite teams of "relationship managers" to call on the top brass of companies in an effort to drum up business for their conventional loan departments.

Clearly, many of the moves are in response to angry investors who are pressuring banks to show they are serious about rebuilding a reliable base of nonretail earnings.

Among the announcements in the past few weeks:

• Manufacturers Hanover Trust Co. united its investment, international, and corporate banking sectors into one "global banking unit" run by seven rather than 17 executives. It also said it will take a "material" one-time restructuring charge this quarter to cover severance pay and other restructuring costs.

• Chase Manhattan Corp. said it will slash more than $300 million of noninterest expenses, primarily in corporate finance, trading, and overseas activities and has not denied reports that it will eliminate more than 3,000 jobs. In an internal memoran-

Sumitomo Readies U.S. Debt Issue

By KELLEY HOLLAND

In what could well prove to be the first in a series of debt offerings by Japanese banks in the United States, a subsidiary of the Sumitomo Bank Ltd. is preparing to issue $500 million of 10-year fixed-rate guaranteed notes.

The issue, which is guaranteed at the subordinated level, is the first of its kind to be approved by the Ministry of Finance since it authorized subordinated loan issuance by Japanese banks in late June.

Sumitomo's issue, described in a June 28 preliminary prospectus, will revive the Yankee market for bank issues. But the new issuance may well siphon off what limited demand there is for U.S. banks' subordinated debt.

"If every Japanese bank decided to do this, God help the subordinated market in the United States," said one capital markets pro.

Goldman, Sachs & Co. will lead manage the Sumitomo issue, and Sumitomo Finance International will be lead manager for a $500 million floating-rate issue to be offered concurrently in the Euromarket.

Historically, Japanese banks

Vulnerable FDIC Fund Stirs Fears on Premium

By BILL ATKINSON

WASHINGTON — The Federal Deposit Insurance Corp.'s bank insurance fund could decline as much as $2 billion by yearend if real estate problems persist and any large banks fail, a senior official at the agency said late last week.

Industry observers fear that such a decline in the fund, already at its lowest level in several years, would force the FDIC to raise its premium again this year, cutting into the banking industry's profits. The premium, currently 12 cents for each $100 of insured deposits, is already scheduled to rise to 15 cents next year. An FDIC loss could force it to go higher.

Burdens Could Mount

The FDIC's $13.2 billion bank insurance fund is under increasing pressure as the nation's real estate market slumps. The troubled Bank of New England Corp. also poses a potential burden to the fund, which insures 13,239 institutions. At yearend 1989, the fund had 70 cents for every $100 in deposits, down from 80 cents a year earlier and $1.10 in 1987.

"The bank insurance fund is declining, and risks in the banking system are mounting," John F. Bovenzi, deputy to FDIC Chairman L. William Seidman, said in a speech to savings and loan executives. "It is difficult to give rosy projections on the adequacy of the bank insurance fund, given that by 1991, the fund may decline from over $18 billion [in 1987] to below $13

CoreStates, Mellon Race for First After Philadelphia Consolidation

By ELLEN MEMMELAAR

NEW YORK — A horse race is developing after a period of banking consolidation in Philadelphia, with CoreStates Financial Corp. and Mellon Bank Corp. neck and neck for the lead in retail market share.

Neither banking company has even 20% of the highly fragmented market. But both are digesting new units and making other efforts to gain an edge.

Many eyes are watching the companies' progress for pointers on how to complete in-state banking mergers successfully.

A 'Happening' Place

"Everything in the banking business today that happens happens in Philadelphia first," said Nancy Bush, first vice president and regional banking analyst at Dean Witter Reynolds Inc. "Intramarket mergers are the way to go. Banks are realizing that it is hard to do an interstate bank merger and actually get money back."

Who will be the winner? Analysts are betting on Philadelphia-based CoreStates.

"They have a very effective strategy for attacking the retail marketplace," said Richard Lawrence, assistant vice president of research at Janney Montgomery Scott Inc., a Philadelphia-based research firm and subsidiary of Penn Mutual Life Insurance Co. "CoreStates will do a very effective job."

The unknown factor in the

Regulation CC: Time Runs Short For Amendment

By KAREN GULLO

NEW YORK — Banking lobbyists are racing against the clock to persuade Congress to ease the limits on holds they can place on deposited checks.

The American Bankers Association, the Consumer Bankers Association, and other trade groups have been lobbying since March to amend the rule, known as Federal Reserve Regulation CC, which took effect in 1988.

An Falls in September

The regulation gets tighter on Sept. 1. Bankers will then have to make funds available on local checks within two business days, instead of the current three, and on out-of-town checks within five days instead of seven.

The bankers want Congress to let them make funds available more slowly on checks deposited in automated teller machines. Saying they would be exposed to fraud and other bad-check losses, some bankers are threat-

PEOPLE *in the news*

William Davis in Same Boat As the Thrifts He Regulates

By TERESA CARSON

LOS ANGELES — William D. Davis, California's new savings and loan commissioner, faces much the same job as many of the institutions he regulates. He must shrink and restructure his department to meet the new demands of the thrift business.

For the past five years, Mr. Davis, 53, has been the chief deputy commissioner. During that time, the number of institutions his department regulates fell from 156 to 88. And since the Financial Institutions Reform, Recovery, and Enforcement Act wiped out any advantages to having a California charter, 74 of the remaining 88 have decided to seek other charters.

Mr. Davis has experience in crisis management. "He is a great guy for the job," says Joseph L. Borda, chairman and chief executive of Westside Savings and Loan Association, Los Angeles. Westside bought a thrift that was under state conservatorship. "He was able to calm the waters there," soothing the badly shaken mortle of the employees, says Mr. Borda.

William D. Davis

Mr. Davis is using those skills as the savings and loan department. This year the department had 147 positions authorized by the state, and next year's budget allows for just 63. But there won't be any layoffs yet because not all of those jobs are filled. Mr. Davis admits that a lot of his employees are looking for work in other government offices with brighter futures.

Worked for Thrifts that Were Taken Over

Mr. Davis also brings broad experience in the thrift industry. He started with Belmont Savings and Loan Association, Long Beach, in 1962. Then he worked for Great Western Bank after it acquired Belmont in 1970. In 1973 he joined Mariners Savings and Loan Association in Newport Beach and worked in a variety of positions until that thrift was acquired by Fidelity Federal Savings and Loan Association, Glendale. He continued to work for the merged company until joining the state savings and loan department.

His experience ranges from marketing to operations, with sojourns in personnel, property management, and several other areas.

Mr. Davis tries to relax by reading, but he admits that he rarely has time for anything but work-related materials. He also likes to garden and get out in his powerboat now and then.

Praise from a Defector

Despite Mr. Borda's praise for the regulator, he is one of Mr. Davis' defectors. Westside has received approval to become a state-chartered commercial bank. The biggest thrift to quit the department was $11.2 billion-asset Coast Savings and Loan Association, Los Angeles, which will become federally chartered.

The defections mean less money coming into 'the department from assessments on the savings and loans. The department's budget will fall from $8.8 million this year to $5.5 million next year. A bill in the California legislature that would have created a single regulator for all types of financial institutions lacked support and died last Wednesday. Industry experts say that is not the end of the issue, however.

Mr. Davis is already transforming the department. He declines to give details but says, "We will not be able to do the full-blown exam process of before." Sounding like many savings and loan executives, he remarks, "We are rethinking the way we do business. We cannot do our job in the same way." □

Corrections

An article on Friday incorrectly described the regulatory status and size of a new lending facility for Zale Corp. The loan, which is for working capital, is not considered by regulators to be a highly leveraged transaction, accordingto Zale. The $300 million facility includes $200 million of commitments that were not due to expire, under an existing agreement, until April 1992. Officials of NCNB Corp., the company's lending agent, also said that the banking group did not "pressure" Zale's co-owners to inject $100 million of new equity. The new facility, they said, was undertaken on the assumption that a previously existing understanding to provide the new equity would be acted upon. The new equity was not a "return" of equity Zale's owners had taken out of the company, as reported. The $140 million that had been upstreamed from Zale to its owners went to pay down debt related to the acquisition of Zale.

■

The ratio of bad real estate loans at Bank of Tokyo Trust Co. was overstated in a table on June 19 (page 22). The table, based on yearend regulatory filings, noted that the bank had reported a ratio of 8.11%. However, the bank sent revised data to regulators on April 17 that changed the ratio to 2.81%.

Bank of New England Plans To Eliminate 95 Branches

By TOM LEANDER

NEW YORK — Bank of New England Corp. said Friday it plans to sell or close more than 95 branch offices by the end of the year.

The sales and consolidations will leave the Bank of New England with approximately 300 branches in Massachusetts and Connecticut at yearend, assuming the company completes its previously reported plans to sell its Maine and Rhode Island subsidiaries by that time.

Bank of New England said it plans to consolidate 39 branch offices in Massachusetts into existing locations and sell 13.

In Connecticut, the plan calls for consolidation of 19 branches and the sale of six.

The company also said it plans to open branches in areas where it has not previously operated, moving some existing branches to better locations.

Bank of New England, one of the nation's most troubled institutions, lost $1.1 billion last year and $46 million in the first quarter.

In April, the bank announced a number of measures aimed at turning around the ailing institution.

They include shrinking the company to around $20 billion in assets at yearend from its current $25 billion, the elimination of 5,600 jobs, and a possible exchange or tender offer for all or a portion of its outstanding long-term debt. □

Fed May Speed Regionals' Entry Into Securities

By ROBERT TRIGAUX

WASHINGTON — In a move that could speed the entry of regional banks into securities underwriting, the Federal Reserve Board on Friday relaxing several of the firewalls that prevent a bank and its securities affiliates from sharing management and marketing resources.

One proposal, on which the Fed will seek public comment for 30 days, would modify the prohibition against management interlocks between banking companies and their Section 20 securities affiliates. Some board members of a Section 20 subsidiary – but not a majority – could also work for the parent bank or bank holding company.

Petitions Received

In a report to the Federal Reserve Board, the Fed staff cited petitions for relaxation of such restrictions from two banking trade groups – the Bank Capital Markets Association and the Association of Bank Holding Companies. They argued that the costs of separate management are particularly burdensome to regional banks.

A number of money-center banks, foreign banks, and large regional banking companies have won Fed approval since 1987 to operate such securities units. These subsidiaries, known as Section 20 units after a section of the Glass-Steagall Act, can underwrite and deal in bank-ineligible securities, including corporate debt and equity, and mortgage-backed and other asset-backed securities.

The Fed also proposed relaxing a prohibition against a bank or thrift's acting as agent for, or engaging in marketing activities on behalf of, its Section 20 affiliate. Earlier this year, the Fed denied a petition by Barclays Bank PLC, London, to use U.S. branch personnel in marketing activities on behalf of its Section 20 subsidiary. □

Regulators Converge on Boston Without Disclosing Their Target

About 170 officials of the Federal Deposit Insurance Corp. were in Boston Friday amid rumors they were preparing a series of bank seizures.

The *Boston Herald* reported that it was likely regulators would seize several smaller institutions, including Elliot Savings Bank, a small thrift.

Rebecca Lane, a spokeswoman for Elliot Savings, said that bank officials expected their institution to be seized. At mid-afternoon Friday, there was still no sign of the FDIC.

Analysts said that 170 regulators was too large a contingent for a series of small thrift seizures. That revived rumors that Bank of New England would be seized.

Spokesman James Dorsey confirmed that 50 FDIC auditors had been poring over the bank's books for more than two weeks. But he termed the examination a "routine checkup" of the bank's asset quality.

"We have been told by high officials at the FDIC that they have no interest or intention of taking our bank," he said.

Seventy of the FDIC regulators were staying at the Meridian Hotel in downtown Boston. They checked in as representatives of "The Who Co. Inc." — **Tom Leander**

First Chicago Lures Jurgensen from Norwest

CHICAGO — First Chicago Corp. said it named William Jurgensen chief financial officer, effective July 16. He will succeed J. Mikesell Thomas, who was named executive vice president of Norwest Bank Minnesota, a unit of Minneapolis-based Norwest Corp. □

Time Runs Short for Amendment

Continued from *page 1*

cining to stop accepting deposits in ATMs.

But with the congressional summer recess about a month away, fears are growing that the law guiding Regulation CC – the Expedited Funds Availability Act of 1987 – will not be changed by Sept. 1. Lobbyists are trying to get the amendment attached to a number of banking bills, none of which have passed both the House and the Senate.

The measure was attached to a Senate housing bill that was passed last week. But a House version of the bill has not been put to a vote.

"The new availability schedule would give banks insufficient time to verify deposits at ATMs not under their control," said Ian Macey, the ABA's federal representative. "It is clearly going to be more risky."

Interbank Deposits at Issue

Banks want to be allowed to delay payments on checks that their customers deposit in ATMs other than their own. Bankers want time to make sure that these interbank deposits are backed by sufficient funds.

Not all banks allow customers to make deposits at other institutions' ATMs. Interbank deposits make up a small percentage of the 63 million ATM deposits made by consumers every month, according to Payment Systems Inc., Tampa, Fla.

But such deposits are common at some large regional networks such as the Chicago-based Cash Station Inc. and Core-States Financial Corp.'s Magnum system. The practice is also widespread in Colorado, where state law prohibits conventional branch banking, and in a few other states that allow only limited branching.

Banks may now treat shared-ATM deposits as nonlocal checks and can hold them for up to seven business days. But if Reg CC is not changed by Sept. 1, banks would have to treat shared deposits as local check deposits and make funds available no later than the second business day after deposit.

Risk of Losses

Banking trade groups say that ATM-owning institutions do not know whether a deposit contains nonlocal checks. Shortening the hold period, they say, will increase the possibility that banks will make funds available on items and later learn they are not backed by sufficient funds.

"Availability legislation has cost us real money," said Richard Hartnack, senior vice president of First Chicago Corp., which is part owner of Cash Station. "If we don't get some relief, we're considering not taking shared deposits."

The Mac network takes about 575,000 to 600,000 shared ATM deposits a month. CoreStates expects close to 7 million shared ATM deposits in its network this year.

"Foreign ATM deposits are an important element to the Mac network," said Richard J. Weiss, vice president for government affairs at CoreStates. "We don't want to get caught in a situation of having to take away this great convenience from customers."

Even if no amendment is passed by Sept. 1, Mr. Welsh said, he is hopeful that one will be passed within a few months of the deadline. CoreStates is recommending that banks in the Mac network continue to take shared deposits in the interim.

Reg CC checks make up three-tenths of 1% of all deposits in Mac," said Christine Will, vice president at CoreStates. "We think it's a fairly reasonable risk to assume compared to what it costs to offer the service."

Colorado banks are threatening to discontinue or put restrictions on all ATM deposits, including those made at their own off-premise ATMs.

"We only open up our ATMs once a day," said Malcolm Jones, president Minibank Switch Network, which is owned by First Interstate Bancorp.'s First Interstate Bank of Denver and United Banks of Colorado Inc.'s United Bank of Denver.

"While we are mostly concerned with our own ATM deposits, there's also a concern of even taking proprietary ATM deposits," said Mr. Jones.

'Not for Sale,' Fiserv Chairman Says As Merger Discussions Fizzle Out

By JEANNE IIDA

NEW YORK — Fiserv Inc., a supplier of data-processing services for financial institutions, said Friday that talks about a potential merger had been terminated.

"This was a mutually agreed-upon decision," said Leslie M. Muma, president of Milwaukee-based Fiserv. Mr. Muma declined to name the other company involved in the discussions.

Under pressure from the National Association of Securities Dealers after its stock jumped one and a half points, Fiserv announced a week ago that it had been approached by another company about a possible merger.

Before that announcement, Fiserv stock was trading at about $26 a share. Amid rumors of a possible sale, the stock jumped to $30 a share.

In a conversation with the *American Banker* late last week, George D. Dalton, chairman of Fiserv, said, "This company is not for sale."! □

Miami Bank to Use Images In Answering Client Queries

By KIM ANN ZIMMERMANN

NEW YORK — To improve customer service, Banco Latino International of Miami will begin using an image-processing system this week to handle inquiries about letters of credit and electronic funds transfers.

"Right now, it takes three people to search for the paper when a customer has a question about a transfer or other transaction," said senior vice president Oscar Marti, "and we can't answer their questions immediately.

"We deal almost exclusively with international customers, so the phone calls back and forth can be expensive on both ends, not to mention the waiting."

One Does Work of Three

Using the new system, one person can handle inquiries from start to finish.

The $200 million-asset bank will use the imaging system to keep all its documents on wire transfers and letters of credit that are now stored on paper. The bank expects to save $40,000 to $50,000 a year in storage and retrieval costs from improving its staff's productivity and averting the need to file paper. The system cost about $130,000.

The personal computer-based system, designed by the Coral Gables, Fla., office of the Laventhol & Horwath accounting firm, is based on image-processing software from Metafile Information Systems Inc., Rochester, N.Y. The software, called Metaview, provides a shell for developing image-processing applications.

Few document-imaging products on the market deal specifically with electronic funds transfers. Banco Latino didn't want to buy a comprehensive imaging system, such as those offered by Wang Laboratories Inc. and FileNet Corp., because cost.

In addition, none of the document-imaging packages on the market would have been compatible with the bank's International Business Machines Corp. AS/400 applications.

"We wanted something very flexible when building this application, and we looked at four or five vendors," said Oscar Vazquez, information systems consultant for Laventhol & Horwath, "but there were no software programs out there that would serve as a shell to let us build a customized image-processing system."

The bank used Laventhol &

"Right now, it takes three people to search for the paper."

Oscar Marti
Banco Latino International

Horwath because it was able to create the system and be running in about six weeks from time of purchase, compared with the six months it would have taken in-house staff, Mr. Marti said.

Banco Latino does not expect to lay off any of its 20 employees who handle customer inquiries.

Paper to Be Destroyed

Mr. Marti said the bank invested in new hardware because its PCs were not powerful enough and lacked enough display areas. The system's $130,000 cost included software, 20 PCs, and an optical storage library from Signet Corp.

For the first six months that the system is in use, the bank will retain its paper documents.

When that question remains on whether documents stored on optical media qualify as legal documents, Mr. Marti said, the bank's counsel has approved destroying the paper. □

COMMENT/ *By Paul Nadler*

Making 'No Doc' Loans: Lenders Repeat Past Errors

"What should we do?" the newly married son of a friend asked me recently. "We can get a fixed-rate mortgage loan for 10% and three points with no need for documentation of earning power or a fixed-rate loan of 10% with no points with documentation."

"Grab the loan with documentation," I replied. "For with the amount you want to borrow, getting a 'no doc' loan would cost you $5,000 up front – that's a lot of money."

"But we don't earn enough for a documented loan to be approved," he said.

"Then why borrow so much, if you can't pay it back?" I asked.

"We hope we will earn more as time goes by, and maybe my mother will help if we don't."

I gave my conclusion: "Try to get your mother to guarantee the loan, if she will, to save the $5,000."

A Familiar Story

But I was thinking, Here we go again. For $5,000 a thrift was willing to make a loan that the individual possibly could not carry, so it was relying on the value of the collateral and on its ability to foreclose and take over the property to make the loan whole. Haven't we heard all this before?

This thrift, and lots of other banks, have missed the lessons of the $500 billion S&L bailout.

First, what are they doing making a fixed-rate loan in the first place?

Didn't the entire mess start when thrifts tried to protect borrowing short and lending long by getting legislation passed that tried to keep savings rates low using interest rate ceilings?

They failed to recognize that when interest rates rise, savings flow to institutions that offer the going rates. So the answer to rising rates is to have a portfolio that can rise in yield as rates rise in the overall economy. Had the thrifts pushed for the powers to become flexible in asset yields instead of trying to fight the tide and keep everyone's savings rates low, the S&L crisis could have been avoided.

Rate Bets Are Bad Policy

If thrift and bank executives feel that today's yields are so great that they should lock in the yields in long-term fixed-rate loans, they have forgotten that a lot of institutions were killed in the past by just such optimistic rate forecasts. Unless the thrift that offered the 10% fixed-rate loan was planning to sell it immediately in the secondary market, it was taking quite a risk, with or without documentation.

I know many readers will say, "This proves that Nadler is an impractical college prof instead of a person in the real world. Certainly we would like to make only adjustable-rate loans, but the public only wants fixed-rate loans. So what can we do if we want to lend?"

My answer is: "If you can't make a loan that doesn't involve possibly getting into trouble, then don't make the loan at all."

As for growth, some institutions have decided that in today's troubled times, they are better off lowering savings rates and remaining static or even shrinking. They think this is preferable to making loans that might be under water if rates rise as the nation pays for the thrift bailout, rebuilds its infrastructure, and meets the developing loan demand in Eastern Europe.

What about "no doc" loans? Obviously, the only reason anyone would want a more expensive loan without documentation would be if he or she couldn't pass the necessary tests.

Does a financial institution really need this poorly based loan?

Haven't we learned that earning power is the only real backing of a loan – that it becomes harder and harder for banks and thrifts to foreclose on property under today's debtor-favoring laws and regulations?

I think of my friend who owns a piece of property that houses a tenant who has not paid rent for three years. When the case finally reached a judge, he said to my friend: "I know you are right. But if I grant you the right to evict, I will make this tenant homeless, and I will not do that. I am turning you down. Go to the appeals court. Let them do the job."

With pressures for rent control, restraints on eviction, and other ways in which the renter or borrower is given preference over the individual who provided capital for the residence, one can understand why fewer people are willing to build rental housing, why rental housing in rent-controlled cities like New York is allowed to crumble, and why lenders should judge the borrower and not just the collateral before making mortgages and home equity loans.

Don't we learn from the past? Don't lenders know that the person who is willing to pay extra for a "no doc" loan is usually a person who wouldn't pass the test if he had to meet regular standards? □

"SOUND OFF"

"As a result of technology, the privacy of American citizens is imperiled more than at any time in our history," Rep. Charles E. Schumer, D-N.Y., said at a recent hearing of the House Banking Committee's consumer affairs subcommittee. He was speaking on proposals to tighten the 20-year-old Fair Credit Reporting Act. Much of the public shares his concern, according to a recent survey by Louis Harris & Associates. American Banker's Linda Corman asked:

How worried should banks be about safeguarding the privacy of their customers' credit records?

■ **Allen L. Lastinger Jr.**
Vice chairman
Barnett Banks Inc.
Jacksonville, Fla.

The confidentiality of the credit and noncredit records of our customers is extremely important. It goes to the foundation of trust that the public has in the banking industry.

How available should credit bureau information be? That's a sword with two sides. It can afford people without easy access to credit, easier access. On the other hand, if we're not careful, the availability of information may work to an individual's disadvantage.

But banks do share information about individuals' credit in an attempt to improve safety and soundness of loans.

■ **Peggy Miller**
Legislative representative
Consumer Federation of America
Washington

- Banks should be quite concerned about protecting consumers' privacy. Clients used to be whom banks addressed, whom banks were concerned about. We're not seeing that kind of sensitivity to clients' privacy anymore. Banks are now geared toward where short-term profits are.

Without more sensitivity to privacy, there could be a backlash. There could be legislation or some means to try to reduce abuses. People are concerned about everything from prescreening to having their names used constantly and sold.

I'm surprised that the smaller banks don't support more privacy laws because they can't take advantage of credit information by selling mailing lists that big institutions can.

■ **Bill Tillman**
Senior vice president
Friendly Bank
Oklahoma City

In recent years, there has been a growing concern, and there have been lawsuits, over improper use of credit information by financial institutions.

We exchange credit information with a lot of different institutions, and it is a growing concern that we're not giving out private information. There is some information we won't divulge unless there is an authorization from a customer, like checking account information.

■ **Craig Ulrich**
General counsel
Consumer Bankers Association
Washington

Banks should be greatly concerned – their clients certainly have expectations that their privacy is going to be maintained. Information is provided to institutions for a specific transaction and not for dissemination far and wide for other purposes.

At the same time, with adequate disclosure, customers authorize that information to be passed on for certain purposes. Again, triggered by their authorization, consumers expect banks to give them a reference, for example, when they are applying to another kind of credit grantor.

But short of an authorization, banks have an obligation to protect information. It's one of the frustrations about the war on drugs. The Justice Department would like to get its hands on financial information that some customers would consider private, and banks are being increasingly caught in the middle.

■ **Alex G. MacFadyen Jr.**
Group vice president
First Citizens Bank
Raleigh, N.C.

Privacy is a real concern. With the computer and its proliferation, once access is gained, information can be shared. That sharing has proliferated. So it's very important that customers' records and account relationships be safeguarded and properly protected and only released with proper authorization.

We are very conscious of the problem and reiterate with regularity the importance of the protection of customers' account histories. The quickest way to lose a job in our bank, outside of stealing, is to be found violating the confidentiality of customers' affairs. □

COMMUNITY RELATIONS

Software Firms Rush to Fill The Need for CRA Reports

By ED LYNCH

A number of companies are rushing to market with products and services to help bankers prepare Community Reinvestment Act reports and pinpoint areas where the reports are deficient.

Interest in the law, which was enacted in 1977, has been reignited because all banks will have to make their CRA ratings public from this day forward. Charles Rice, president of Professional Knowledge Systems Inc., said that CRA is no longer just a compliance issue – it's also a public relations issue.

Banks are naturally paying a lot more attention to their community investment record, Mr. Rice said. "Safe tools that give productive, profitable CRA results are hot."

"We've received a couple of rush orders because auditors were coming in next week to a couple of institutions," said John Drahan, assistant vice president of Fiserv Inc., which is marketing a software package nationwide.

"CRA is no longer just a compliance issue – it's also a public relations issue."

Charles Rice
Professional Knowledge Systems

Mr. Rice's company is at the forefront of the product market. In March, Professional Knowledge Systems introduced a software packge that helps banks locate both federal and private-sector assistance programs.

In the past month, a number of other offerings have also hit the market. The systems promise to assemble bank records and correlate them with census tract information in preparation for regulatory exams. They also highlight low- and moderate-income areas that the bank may have neglected.

Most of the companies said they are focusing on small- to medium-sized banks that may lack the resources or manpower to do the CRA reporting.

Outside Services

Unlike the software vendors, the Financial Institutions Marketing Association has teamed with American Data Resources, a California direct marketing firm, to perform the service outside the bank.

Customers send ADR their magnetic tape records on deposit and loan customers and on loan denials. Using census tract data, ADR analyzes the information, and provides two reports to help the bank monitor performance, prepare CRA documents for examiners, and identify target markets.

The CRA National Performance Assessment and Documentation Program costs $175 for the association's 1,500 members and $250 for nonmembers. Processing costs $8 to $10 for every 1,000 magnetic tape records.

Tom Drogos, executive vice president of the Chicago-based association, said the program allows the time-intensive work to be done quickly without taking time away from the bankers' duties.

Mr. Drogos said the association is targeting 2,000 commercial banks, with assets of $100 million to $2 billion, for the service.

CRA Software Packages

Executives of two financial information companies – Claritas Corp. and Fiserv – said they decided to offer their own programs in response to clients' requests for help in dealing with CRA reports.

In New Haven, Conn., the Fiserv Data Processing Center developed a personal computer-based software package that helps banks collect and report information as required under CRA and the Home Mortgage Disclosure Act. Originally developed for the center's Connecticut clients, the system is now being marketed nationally through Fiserv's 25 regional centers, Mr. Drahan said.

The CRA Market Planner from Claritas Corp. was designed as an application for its Compass desktop marketing system. Compass users will receive the program at no additional charge, said Howard Lax, director of marketing for financial services. The CRA Market Planner will also be sold separately to banks.

First American National Bank in Nashville, Tenn., used the prototype for the Claritas product. Gordon Green, assistant vice president of corporate research and development, said the software allowed the company to identify and map low- and moderate- income areas, break down census tracts, and develop a written report on the bank's CRA performance.

The Fiserv system costs $1,495, but only $995 for banks that already have the company's Datacase software. Claritas' CRA Market Planner sells for $3,995 when it includes census data for one state, $7,500 for two states, and $10,000 for three states or more.

William Murray, senior vice president of client services for Sheshunoff Informations Services Inc., said his company is about to market two CRA-related products geared for banks of all sizes.

The first of Sheshunoff's offerings, due out later this month, will take a bank's CRA-related material and develop reports, maps, and demographics about the market area. The service will cost $695 to $1,295, depending on the size of the institution. □

CoreStates Has Edge, Analysts Say

Continued from *page 1*

race is the possibility of further mergers. During this apparent calm in the storm of consolidation, out-of-state banks are sizing up the market, and small players are looking at combinations to achieve critical mass, analysts said.

Rivals Each Claim 15%

CoreStates and Pittsburgh-based Mellon each claim 15% of the area's retail market. The Fidelity Bank unit of Newark, N.J.-based First Fidelity Bancorp. comes in third with 10%, and PNC Financial Corp.'s Provident National Bank has 8%. Continental Bancorp, which is owned by Midlantic Corp., Edison, N.J., has 5%, and Meridian Bancorp, Reading, Pa., has about 3.5%.

Philadelphia Saving Fund Society makes the top five overall, though the thrift was forced to sell some of its crown jewels to Mellon, reducing its deposit market share to 8%. The thrift has strengthened its capital base but is not expected to take the offensive in the current thrift environment.

Mellon had just a 4% share of the market before surging to the front of the pack with the 54 branches acquired from Philadelphia Saving Fund, a unit of Meritor Financial Group.

Merger Boosts CoreStates, Too

Similarly, CoreStates' merger with First Pennsylvania Corp. in March gave it a big boost, from just 5% of the overall retail market, according to Lacy Shockley, analyst at Smith Barney, Harris Upham & Co.

"Combining with CoreStates put [First Pennsylvania] in the more desirable position," said George Salem, analyst at Prudential-Bache Securities, a subsidiary of the Prudential Insurance Co. of America.

CoreStates expects to realize $89 million in cost savings and increased revenue because of the merger, and its stock has continued to perform well, said Ms. Shockley.

Robert Palmer, chief executive officer of CoreStates, said he will spend the remainder of this year "digesting" First Pennsylvania. That includes closing 29 branches in areas where overlap exists, reducing the company's total to 116.

He stressed, however, that CoreStates remains committed to its retail delivery system. He said the company will open five branches a year for the next several years until it returns to its peak of 145.

The Name Game

A key plus for CoreStates is the decision to place all retail activities under the First Pennsylvania name, said Mr. Salem. In contrast, Mellon Bank quickly dropped the Girard name in favor of Mellon when it acquired Girard Bank in 1983.

"Combining with CoreStates put [First Pennsylvania] in the more desirable position."

George Salem
Prudential-Bache Securities

"It tells you something about who is the dominant player in that market," he said. "Mellon made the mistake of doing away with the Girard name. CoreStates is not about to repeat the mistake that their competitor made." .

Perhaps because of that earlier experience, Mellon announced last week that it plans to retain the Mellon PSFS name in a bid to leverage the value of branches acquired from Philadelphia Saving Fund, even as it changes the names of its other units simply to Mellon Bank.

Like CoreStates, Mellon is focusing on consolidating its acquisition of the past year, said Paul Beideman, senior vice president and head of retail banking. Its goal is to assimilate Meritor's offices into a 120-branch network with limited interruptions by yearend, he said.

Mellon Lags in Loan Quality

By comparison, CoreStates plans to finish combining internal operations by Oct. 1.

CoreStates also has the advantage of a solid loan portfolio, analysts said. At the end of 1989, nonperforming assets equaled just 0.42% of all loans.

Mellon, however, is not out of the woods with its loan problems, observers said. In 1989, its nonperformers declined to 2.21%, from 3.09% a year earlier. Thomas Hanley, an analyst with Salomon Brothers Inc., said he expects the trend to reverse as Mellon's nonperformers rise to 2.39% this year before falling back to 2.22% in 1991.

"In another three to five years, the institution will begin to look like its peers in terms of asset quality," Ms. Shockley said. "In the meantime, it's entirely possible that they will continue to lose market share."

Another obstacle, as Betty Sue Peabody, president and chief operating officer of Mellon Bank (East), told a recent press conference, will be cross-selling loan products to the savings customers that Mellon acquired with the PSFS branches.

Other Players Lack Size

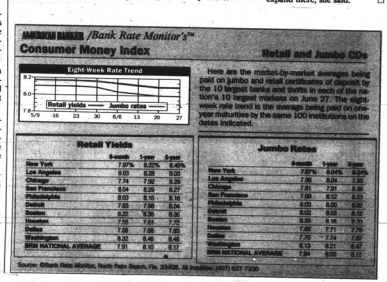
Most other institutions in the Philadelphia market suffer from a classic problem – lack of critical mass, said Ms. Shockley.

First Fidelity will benefit from its new management, said Ms. Bush of Dean Witter. How that will translate into market share remains to be seen, she said.

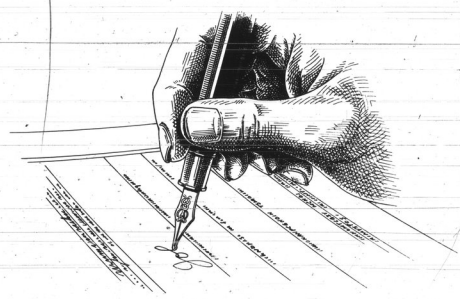
Ms. Bush said she sees smaller players in the five-county area, like Independence Bancorp., as likely to be swallowed up. Meridian is sure to be snapped up in coming months, she said.

Pittsburgh-based PNC "doesn't have a big enough market share to be as competitive as they might be," said Ms. Shockley. But that may spur the institution to restart the intrastate merger wave, she said.

Several out-of-state banking companies are sizing up the market, too, Ms. Shockley said. National Westminster Bancorp. has long said it is interested in the market, and Banc One Corp., Columbus, Ohio, and Bank of New York Co. and Chemical Banking Corp. in New York City are all looking to expand there, she said. □



When you make a loan, more than just a signature is on the line.



Risk. There's no way to avoid it. But there is a way to limit it when you make commercial and consumer loans.

The secret's in having timely information you can trust.

And with leading-edge banking and financial publications from Warren, Gorham & Lamont, you'll stay ahead of changes and on top of innovations in lending and a whole lot more.

Our outstanding line of comprehensive information products covers the *complete* range of banking topics including:

- commercial and consumer lending
- compliance and regulation issues
- treasury and cash management
- banking law
- operations and security
- and financial planning.

2 Fed Governors Look Askance at Testing for Mortgage Bias

By LINDA CORMAN

WASHINGTON — None of the techniques federal regulators are now using to ferret out mortgage-lending discrimination produce foolproof evidence of its existence, an advisory committee to the Federal Reserve Board has concluded.

Although the Fed's consumer advisory council was not unanimous in its recommendation, several members of the group told the Fed on Thursday they consider "testing" the surest method of nailing down the presence or absence of discrimination. The council reports on its work to the Fed several times a year.

Testing is a technique used for years by the Department of Housing and Urban Development and the Federal Trade Commission, with the Supreme Court's blessing, to track down discrimination by real estate brokers and landlords.

"Maybe minorities are going to alternative lending sources."
George C. Galster
College of Wooster, Ohio

Experiences Compared

To test for lending discrimination, two "applicants" would be given identical personas – including credit, employment, and other characteristics relevant to applying for a mortgage. The only difference between them would be that one applicant would be a member of a minority group, a woman, or from another "protected class."

The two testers would then approach the same lender and their experiences would be compared.

Testing received a cool reception from the two governors of the Federal Reserve Board who sat in on the committee's report. John P. LaWare and Martha R. Seger expressed skepticism because of the technique's high cost.

"I'm not sure of the cost-benefit. It would be just prohibitively expensive," Mr. LaWare said.

"Unless it's proved to be foolproof, it's hard to justify the cost," Mrs. Seger agreed. "No one really believes there's a massive problem out there."

Controls Lacking

Committee member George C. Galster, professor of economics and urban studies at the College of Wooster, Ohio, presented the committee's conclusions last week."Existing statistical studies are not definitive (including those done under the Home Mortgage Disclosure Act) because there is always an alternative explanation for results," Mr. Galster said.

The studies "need to control for all the sound business reasons for denying an application. None do."

"No one really believes there's a massive [discrimination] problem out there."
Martha R. Seger

"I'm not sure of the cost benefit. It would be just prohibitively expensive."
John P. LaWare

The mortgage disclosure act studies "compare the number of loans in white neighborhoods versus the number of loans in black neighborhoods," he said. "They don't control the demand from those neighborhoods.

"Maybe there are fewer homes for sale, maybe minorities are going to alternative lending sources."

Disclosure Requirements

The 1975 Home Mortgage Disclosure Act requires lenders to disclose annually the location of their mortgage and home improvement lending by census tract or county in metropolitan areas.

The studies that are now being done under the 1989 revisions to the act will be an improvement, Mr. Galster said, "but they are not a panacea. There will still be no information on an individual's credit history. And, they won't [identify] prescreening because there is no paper trail."

Lenders who prescreen may decline to consider an application before it is even submitted for such reasons as the location of a property or its low price tag.

The revised Home Mortgage Disclosure Act regulations require lenders to report not only the geographical distribution of their loans but also the income level, racial characteristics, and gender of the borrowers in each area.

Costly Procedures

Investigations done by bank examiners are inadequate because they focus on determining the causes of rejected applications, the committee concluded.

"This is not definitive because nonprotected groups may be getting loans under similar circumstances nevertheless," Mr. Galster said. He also said examiners had reported they were unable to complete adequate exams for possible discrimination for lack of time – and their time constraints are increasing.

According to Mr. Galster, a HUD study last summer – involving 5,000 tests for discrimination in housing sales and rentals in 25 metropolitan areas – cost about $2 million.

Despite the high cost, Mr. LaWare noted, Federal Reserve examiners are authorized to use testing. He said it could be potentially useful as a follow-up to refine other studies that raised red flags as to possible discrimination in specific areas.

Mr. Galster said the members of the advisory group who advocate the testing method hope to persuade the Reserve Board governors to adopt more widespread use of testers. They have no plans to seek legislation. □

THE WEEK *ahead*

MONDAY, JULY 2

The Federal Open Market Committee meets today and Tuesday to decide whether to recommend that the Federal Reserve Board change its conduct of monetary policy. Despite the slow growth in the economy and recent signs of additional weakness in some sectors, the committee is not likely to move to ease short-term interest rates, according to most Fed watchers.

A consensus of economic opinion suggests the Fed may move to ease rates by late summer or fall if the economy continues to slow. That is likely to mean a 25-basis-point drop in the federal funds rate, from 8.25% to 8.0%. For now, the Fed's attention remains focused on trying to reduce the inflation rate below 4%.

Congress has adjourned for the Independence Day recess and is out of session for the week. On its return, the Senate and House banking committees have scheduled hearings on U.S. bank competitiveness, the FHA mortgage insurance fund, and affordable housing, among other subjects.

Construction spending figures for May are announced by the Commerce Department.

TUESDAY, JULY 3

No significant events scheduled.

WEDNESDAY, JULY 4

Independence Day: All financial markets and government offices are closed for the national holiday.

THURSDAY, JULY 5

Initial jobless claims for the week ending June 23 are reported by the Labor Department.

FRIDAY, JULY 6

Unemployment figures for June are announced by the Labor Department.

The minutes of the Federal Open Market Committee's May 15 meeting are released. □

INSIDE *the agencies*

FDIC May Owe Failed Thrifts' Borrowers

It isn't often the government doles out rebates, but the Federal Deposit Insurance Corp. recently found it may have to cough up several million dollars to homebuyers with mortgages from failed savings institutions that miscalculated the buyers' interest payments.

Steven Seelig, the FDIC's director of the division of liquidation, said the agency hopes to clear up the mess this year.

"We will have to contact the borrowers and inform them that this is what their new balance is and what their payments ought to be and here is what they are owed for past mistakes," Mr. Seelig said.

The portfolio of adjustable-rate mortgages totals from $300 million to $400 million, Mr. Seelig said. "So far as we know, this is the only portfolio that has this problem," he said.

The FDIC acquired the loans last fall through the Federal Savings and Loan Insurance Corp., which was dissolved after passage of the Financial Institutions Reform, Recovery, and Enforcement Act. As result, the FDIC became manager of the assets, most of which were generated in the Midwest.

The matter was recently brought to Mr. Seelig's attention when an angry thrift customer wrote a congressman who, in turn, contacted the FDIC.

The agency will hire an outside company to work through the loans held in the agency's Chicago office.

"We don't have the staff," Mr. Seelig said, "You are going to have to go back, loan by loan, and work it through day by day. I can't imagine it [the loss to the FDIC] will be more than a few million on the portfolio."

Growth-Report Rule Trimmed. Acknowledging the excessive breadth of a proposed rule requiring banks to report "planned rapid growth" from brokered deposits, secured borrowings, or out-of-territory deposits, the FDIC has adopted a final rule with a narrower focus.

The final regulation requires banks to give the FDIC 30 days' notice only when planning to increase their assets by 7.5% or more during any three months through solicitation, in any combination, of fully insured brokered deposits, fully insured out-of-territory deposits, or secured borrowings.

As originally proposed, banks would have been required to report planned growth by any means that was expected to exceed 9% in any three months.

The agency wants to keep a close watch on bank growth because it has seen a number of banks grow rapidly – fueled by brokered funds – then fail.

The FDIC received 81 comment letters on the proposal, about two-thirds of which were from community banks.

Some institutions agreed on a need to control growth, but slightly more opposed the rule.

24 Enforcement Actions. The FDIC dished out 24 administrative enforcement actions against banks and individuals in May.

Cease-and-desist orders were imposed on eight banks, including Tucson-based Arizona Commerce Bank; First American Bank for Savings, Boston; and Crossroads Bank, Victoria, Tex. Twenty-five enforcement actions were issued in April, including 10 cease-and-desist orders. — **Bill Atkinson**

We wrote the bestselling book on bank data. Then we brought it to the screen. 1-800-456-2340.

Sheshunoff on Diskette puts the world's most complete database of bank information in your PC. Thousands of data items. Ratio analyses. And the reliable Sheshunoff Ratings.

All set up and ready to run with our newly revised Program that lets you do it all with a few function keys. So it's easier to use than ever.

Run custom reports. Download your data to your favorite spreadsheet program. Do detailed analysis that once took hours in a few minutes.

And base every decision on the timely, accurate data that bankers, investment bankers, consultants, corporations, and government agencies have been relying on since 1971.

We pioneered bank data. So no one has worked with it as much as we have, or knows it as well. And no one can give you a faster, easier way to use the best bank data to your best advantage than Sheshunoff.

The most accurate, timely, comprehensive database of U.S. bank financial information in the world. Ready for your PC. Only from Sheshunoff.

Hanover Cuts $744 Million From Argentine Exposure

By JED HOROWITZ

NEW YORK — Manufacturers Hanover Corp. said it expects to reduce its $744 million of Argentine debt to a "de minimis" amount as a result of a debt-for-equity swap arranged last week.

The bank is part of a group that won the bidding to buy a portion of Argentina's state-owned telephone company, **Empresa Nacional de Telecomunicaciones**.

The bank, along with **Bell Atlantic** International and a group of six Argentine companies, will pay $100 million in cash and swap public-sector debt and interest with a face value of about $2.3 billion for a 60% stake in the telephone company.

Manufacturers Hanover said it would arrange a syndicate of financial institutions to provide the cash and debt that will be swapped for the phone company. It did not say how much of the $2.3 billion of debt will be its own, but noted that it expects to own about 16% of the regional phone company after syndication.

As part of Argentina's privatization of several state-owned industries, the nation has restructured Entel into two separate regional companies. The company that Hanover expects to purchase will serve the northern part of Argentina and part of Buenos Aires.

The bank is swapping debt for an equity position in the state telephone company.

"For Manufacturers Hanover, the transaction will allow us to reposition our Argentine portfolio by transforming credits into a tangible investment with the potential for future increases in value," John F. McGillicuddy, chairman, said in a prepared statement.

At the end of the first quarter of 1990, the nation's eighth-largest bank company had $790 million of short-, medium-, and long-term debt outstanding to Argentina. During the first quarter it exchanged about $126 million of loans – valued at about $75 million – for a $51 million equity investment in an Argentine paper company.

Sources said they believed that a rival group of bidders for Entel included **Citicorp** and GTE Corp., which was being advised by **Chase Manhattan** Corp. Both Chase and Citicorp are involved in separate bids to purchase Aerolineas Argentinas, the Argentine national airline. Chase earlier this year bought a 33% interest in a Mexican holding company that owns a 50.1% interest in Corporacio Mexican de Aviacion, a Mexican airline.

J.P. Morgan Negotiating to Sell Netherlands Securities Business

LONDON – **J.P. Morgan** & Co. announced last week it has started discussions to sell its Dutch securities activities and give up its license to operate as a bank in the Netherlands.

Negotiations for the disposal are being conducted between J.P. Morgan Nederland NV, the New York bank's Dutch unit, and the proposed buyer, Van Haften & Co. NV, a subsidiary of **Aegon** NV, the Dutch insurance company.

"J.P. Morgan Nederland, with assets of about $750 million, lost $1.07 million in 1989, according to its president, Tom van Dort.

As part of the disposal, the unit will cease to be a licensed bank, and the company will focus on corporate finance advisory services to Dutch clients, the New York bank said.

The decision to sell the Dutch securities business "is based on the lack of volume in its local trading and securities activities to achieve the necessary economies of scale," it said.

Van Haften will apply for a full banking license.

A Morgan spokesman declined to give the price for the planned disposal, which is expected to be concluded before the end of this year. Regulatory approvals are being awaited, the spokesmag said.

— **John Evans**

Mexico Pushes Privatization

MEXICO CITY — President Carlos Salinas de Gortari sent a bill to the nation's lawmakers that would privatize the banking sector nationalized in 1982 and permit up to 30% foreign investment.

The bill, which is to go to vote in the Chamber of Deputies before July 15, would establish three types of banks with a minimum of 70% held exclusively by Mexicans and foreigners legally resident in the country. Foreign investors would have access to "C" shares, which can account for up to 30% of a bank's shares, according to the bill's provisions.

The bill also cuts barriers to setting up overseas banking branches in Mexico, which are at present prohibitively restricted.

The privatization of many of the nation's 18 banks assures "that Mexicans retain control of the banks and that there is a diverse participation ... that impedes undesirable concentration of decision-making," said a presidential statement with the bill. — **Reuters**

Another Soviet Shortage: Bankers

New Banks Are Springing Up, but Expertise Is Scarce

By JOHN EVANS

LONDON – In Mikhail Gorbachev's beleaguered Soviet Union, perestroika is failing another important test of a modern economy – the creation and management of an effective banking system.

More than 250 banks have sprung up in the Soviet Union over the past two years in a flowering of financial services, a revolution for a nation where checking accounts or loans for individuals have been virtually unknown.

But this expansion conceals deep divisions within the Soviet Union over the future of its banking system.

A Bid for Efficiency

The explosion in bank formations marks a response by the nation's businesses to the inadequacies of the dominating handful of large centralized state banks, despite reforms two years ago to try to make them more efficient, Soviet bankers and economists say.

In turn, these new banks could experience failures because there is simply not enough expertise to run them, many Western's banking reforms and related regulatory and legislative systems are not equal to their task.

William Newman, chief economist of Moscow Narodny Bank Ltd., a Soviet-owned bank in Britain, says bluntly that Moscow's banking reforms have not been successful.

Imposition from Outside

"There has been a strong element of imposition of change by those with little if any understanding of banking," he declares.

Much of the thrust of attempts to modernize Soviet banking, under the reforms introduced in January 1988, has been based on the needs of industry, commerce, and agriculture to become more efficient under perestroika.

The changes initially centered on reconstituting the previous four large state banks into six specialist institutions, including banks for agricultural, housing, development, industry, and savings. But this restructuring just did not go far enough, Soviet bankers now say.

These six banks have often been operated by the staff of the former institutions, limiting the scope for competition, the bankers say. Moscow's banking also remains centralized in old habits, illustrated by its failure to match industry when the latter switched to cost accounting two years ago to try to match the efficiency of capitalist business, they add.

Victor Gerashchenko, the chairman of the State Bank of the U.S.S.R., carried through that reforms were based on conclusions drawn without sufficient consultation with the different echelons of banking.

The result, he says, is that a "top-heavy banking managerial

Observers say Soviet legislation and regulation may not be able to handle the surge in banking effectively.

pyramid is weighing down heavily on grass-roots personnel who have to deal with customers."

Competition Lacking

Another senior State Bank official, Boris Fedorov, charges that "the banks are monopolists in their branches of the economy, and there are no traces of inter-bank competition."

He adds: "The computerization of the banking system progresses slowly, the number of bank branches, considering the size of the country, is insignificant, and wages are lower than the national average."

Soviet business and industry, cramped by the bureaucracy of these six centralized banks, started in mid-1988 to establish its own banks.

Total Has Mushroomed

Since then, the total has rapidly built to the current figure of more than 250, with Soviet cooperatives, enterprises, regions, and institutions rushing pell-mell into banking.

Soviet bankers indicate that since these new banks sprang up, a form of power struggle has ensued in Moscow over how the banking system should develop. The big state banks have put shackles on the newcomers' operations, and their earnings are being jaxed at a punitive 60%.

But Moscow's Ministry of Finance has warmly welcomed them as a way to "liven up banking activity." Spokesman Ilya Kizalgorodski says the big six banks, like their predecessors, "are prisoners of outdated and inefficient banking techniques."

A Source of Vigor

While Moscow Narodny's Mr. Newman concedes that the newcomers may well invigorate Soviet banking, he contends that the potential consequences of this "unfettered competition" have not been understood in Moscow. Even worse, he is doubtful whether there is "sufficient Soviet banking expertise" to run an economy by wire.

Some Soviet economists believe that such mushroom-like growth is to be encouraged as those banks that are efficient will flourish and others "will fail and disappear," he notes.

Danger Is Seen

"Tell that to the enterprise that has risked its funds on deposit with a failed bank," Mr. Newman observes, saying such a survival-of-the-fittest policy is "extremely dangerous."

Meantime, Western banks may unwittingly become embroiled in Soviet banking problems. Some of these newer banks are trying to flex their muscles overseas, including ventures with Western banks, Mr. Newman says.

Price Waterhouse & Co., the international accounting firm that now maintains an Moscow office, believes the Soviets urgently need training in how to set up, run and manage a bank, including greater knowledge about basic credit analysis and liquidity controls.

Mr. Newman goes further, stating that the Soviets badly need pragmatic legislation that would encourage the traditional banking system to be innovative and competitive while at the same time closely supervising the new banks." □

House Pushes Debt Cuts for Poland

By LINDA CORMAN

WASHINGTON — Commercial banks would have to reduce their Polish debt before the United States would contribute to the Eastern European Development Bank, according to conditions included in a House appropriation for the bank.

The provision seeks to avoid having U.S. taxpayers' funds flow back to commercial banks in the form of debt repayments. It is expected mostly to affect German banks, which hold the largest portion of Poland's commercial obligations. They have several billion dollars in loans, while U.S. lenders probably have at most $300 million, a House Appropriations Committee staff member said.

"I don't think this will wildly excite the American banking community," the staff member said. But he noted, "A banker doesn't want to tell you what he holds in his pocket is worthless."

House Approved Funds

The House last week appropriated $233 million for the bank, including $163 million in callable capital, as part of its 1991 foreign aid bill. The measure now goes to the Senate Appropriations Committee, which may not take it up until September.

The House bill makes the appropriation contingent on "final debt adjustment agreements [that] provide comparable treatment of both public and private external creditors." That means commercial lenders would have to reduce the value of their debt at the same rate as governments.

"We're not going to give [to the development bank] to fund German or U.S. commercial banks," said the House Appropriations staffer.

Amount Not Specified

Although it does not specify by how much Poland's $40 billion in commercial and official debt would need to be reduced, the bill draws a comparison with debt forgiveness extended to Germany after World War II.

The measure notes that German reunification has the better financial shape than Poland is now. German debt was reduced by 43% after the war, the committee staff member said.

Fear Stirred On Premiums Of the FDIC

Continued from *page 1*

billion in three years."

In an interview Friday, Mr. Bovenzi said the fund could lose as much as $2 billion this year in a "worst-case scenario." That would drop the FDIC fund to about $11.2 billion at yearend 1990.

"My expectations would be that the fund would lose money, but it depends on what happens in the real estate market and if there are some big bank failures," he said. "It is the same kind of thing we've been saying. We don't expect there will be a dramatic change."

Previously, Mr. Seidman and other FDIC officials said they expect the FDIC to break even or make money in 1990, assuming the agency does not have to deal with any large banks.

Prepared for a Loss

"The yearend 1990 loss may not be that large, but we should not be surprised if it is," said Robert H. Dugger, chief economist at the American Bankers Association, citing industry figures from Ferguson & Co., Mr. Dugger said 479 oil-patch banks with $42 billion in assets have been losing money since 1986. He said many of them may become insolvent in 1990 and next, requiring FDIC intervention.

William C. Ferguson, chairman and chief executive of Ferguson, a consulting company based in Irving, Texas, said Mr. Bovenzi's estimate "shows a [refreshing] amount of realism at the FDIC. But I don't think we have a crisis in the banking industry."

Mr. Bovenzi said it was too early to tell whether banks will have to pay higher insurance premiums.

Looking at the Options

"We are just starting to review the issue and look at our options would be," he said. "The premium rates are set this year and they are scheduled to go up next year. We are doing nothing more than reviewing and making sure we have the best possible feel for which way the fund is going."

"If the fund loses $2 billion, the FDIC would be under strong pressure to raise the premiums," said Robert Litan, a senior fellow at the Brookings Institution in Washington.

Mr. Dugger said that banks can expect to receive a rebate from their higher premiums to the FDIC in the mid-1990s, when the fund was expecting to have $1.25 backing every $100 of insured deposits.

A $2 billion loss to the FDIC would mean the agency could access premiums to banks would probably be pushed back by one to two years, because it could take that long for the fund to return to the $1.25-per-$100 level, Mr. Dugger said.

Mr. Litan is convinced the insurance fund was overstated by $5 billion at the end of 1989 because there were insolvent banks still operating that are not accounted for in the FDIC's yearend figures. □

Bank of Boston Adopts Poison-Pill Plan

By TOM LEANDER

NEW YORK — Bank of Boston Corp.'s board has adopted a poison pill stockholder-rights plan Friday, but insisted that the move was not a response to any known plan to acquire the company.

Under the plan, shareholders will receive a dividend distribution of one right for each common share. The rights would be exercisable only if a person or group acquires 15% or more of Bank of Boston's common stock.

In that event, all holders of common stock, other than the 15% acquirer, could exercise their rights to purchase common shares at a substantial discount.

Analysts dismissed the idea that the antitakeover measure was prompted by a hostile takeover bid to buy out the company. "I

"I don't think anyone is champing at the bit to take over Bank of Boston."

Carole Berger
C.J. Lawrence Inc.

don't think anyone is champing at the bit to take over Bank of Boston.

"All they're trying to say is: We want control of our own destiny," said Carole Berger, an analyst for C.J. Lawrence Inc. in New York.

Meanwhile, the company's directors also voted to exercise their right to opt out of provisions of the Massachusetts controlling-share-acquisitions statute. The statute, adopted last year, provides that any purchase of more than 23% of a company's stock by a single acquirer must be approved by shareholders at a special meeting. □

BankEast Halts Payout Under Its Capital Plan

MANCHESTER, N.H. — BankEast Corp. said that under an agreement with the bank commissioner of New Hampshire and the Federal Deposit Insurance Corp., its BankEast bank will continue a previously adopted capital plan and will not pay cash dividends without notifying regulators.

BankEast will also continue its plan to reduce adversely classified credit and will require extensions of $50,000 of credit to borrowers with adversely classified loans to be approved by the board of director's loan committee.

It said it will also maintain loan-loss reserves at adequate levels. — **Reuters**

Leaner Times Prompt Big Banks to Build Relationships

Continued from *page 1*

dum, it told employees to grit for a radical cultural change that will emphasize "one Chase" in facing the public. The company expects to take most of its restructuring charges this year.

● Bankers Trust New York Corp. fired 10% of its domestic corporate finance professional staff – 75 employees – and installed a 25-person corporate finance group to develop transactions for its leaders and investment bankers. It will be run in New York by one of the bank's leading mergers and acquisitions specialists. Bankers Trust will take a charge for the restructuring this quarter, but it will not be material, a bank spokesman said.

● Chemical Banking Corp. eliminated about 900 positions in the first quarter, more than half in wholesale banking and related support areas, according to a well-placed source. It also combined its investment banking and structured finance units into one sector.

● Bank of Boston Corp. closed its Section 20 securities subsidiary, which was set up primarily to underwrite municipal revenue bonds.

● Citicorp closed the doors on its municipal sales and trading unit, firing 35 people.

In addition, sources expect major surgery in Citicorp's investment banking and corporate lending operations – predicting a new management structure and elimination of many jobs. "I am now deeply enmeshed in corporate banking," Citicorp chairman John S. Reed told the magazine *Manhattan Inc.* in May.

A Citicorp spokesman had no comment on the company's plans.

Citicorp is also believed to have restructured its loan syndications and structured finance areas, which were primarily responsible for originating leveraged buyout loans and selling them to other investors.

It has set up a workout group to restructure leveraged buyout loans made by Citibank and others. And it is slimming its ranks.

"There is a new executive bank that does not have syndication groups set up to push production into the bank system that can now sit there and suggest that they are not in dann need of cuts," said a Citicorp investment banker.

At Continental Bank Corp., which caters exclusively to corporate and institutional customers, a key goal is to help employees – things of its work force – and take a $50 million pretax restructuring charge.

● First Chicago Corp., which some insiders believe is due for a new round of layoffs in its global corporate bank, has launched a new ad campaign titled "First Relationships Last." It depicts chairman Barry F. Sullivan introducing the ad with the words:

"We've always believed in relationships . . . It's a philosophy which few banks adhere to these days, simply because they favor short-term profits over long-term growth."

Jobs Lost in Moribund Areas

"Nobody's phones are ringing, so you've got to do something," said Frank DeSantis, a bank analyst at PaineWebber Inc. "Clearly the wholesale side is No. 1 for restructuring."

Although the banks will take special charges for severance pay and other restructuring costs, they claim they are positioning themselves for long-term earnings.

"In the line groups, we are going to be lean and mean and aligned correctly, concentrating only two things – serving our customers and beating the competition," Manufacturers Hanover president Thomas S. Johnson told bank officers in late May. "We can't afford to staff up for peak periods in any product, industry, or market. If we did, we'd soon spend ourselves into oblivion."

The renewed emphasis on customers at all the banks, of course, is part bluster, part scrambling, and part a recognition of the reality that deal flow has died.

"I'm not sure what all this talk about relationship means," said Christopher L. Snyder, president of Loan Pricing Corp. "If you're going to build business, the most important thing in the world is to make and keep a customer."

Many banks have been "a bit brusque" with their customers, he added, and need to go back and refocus. But he cautioned against falling into the old-time trap of credit leniency, where bankers make iffy loans for customers who increase their interest-free balances with the bank.

Borrowers May Wonder

Borrowers themselves may be suspicious of the new wooing. Citicorp, for example, prided itself in the go-go years off leveraged buyout lending on its ability to be a "common source" capable of representing competing bidders and even, on occasion, the target. It had the money and the staff to set up independent groups, the bank claimed. "That will be a problem in today's environment," conceded one banker.

Some banks, like Morgan Guaranty Trust Co. and Chemical Bank, created special 'customer groups as long as two years ago. □

A Critic of Federal Policy Sees Signs of Easier Credit in New England

By WILLIAM GOODWIN

The debate about whether overzealous bank examiners helped induce a credit crunch in New England is still raging. But now, one of the fiercest critics of the regulators contends that the crunch is almost over.

"I think it is rapidly becoming history," said John Gould, president of Associated Industries of Massachusetts, which represents some 3,000 manufacturing and industrial firms.

In a meeting at the Federal Reserve Bank of Boston in early April, Mr. Gould complained that the Comptroller of the Currency was "driving us right into a recession."

And as recently as a month ago, Mr. Gould was inundated with phone calls from the mainly small firms his organization represents, complaining that their banks were suspending credit lines, calling loans, and jacking up fees.

But since then, the situation has changed dramatically, Mr. Gould said. "We are not now receiving calls from people having credit problems."

State Banks Pick Up Slack

He attributed the turnaround mainly to state-chartered banks taking on borrowers that had been spurned by federally chartered banks subject to rigorous OCC examinations.

The state banks were encouraged by Massachusetts Governor Michael Dukakis to lend to local businesses, and a hot line was established, referring borrowers to some 270 state-chartered banks.

"It seems to have worked," Mr. Gould said.

"We've probably booked some business as a result of calls" stemming from the hot line, said the president of one state-chartered bank in Boston, who asked not to be named.

While the more established companies that Mr. Gould's organization represents may be seeing the light at the end of the credit-availability tunnel, startup companies "are in for heavy sledding for quite a while," said Gordon Baty, a partner at Zero State Capital, Boston.

In the Eye of the Beholder

"I think there's a credit crunch, all right," Mr. Baty said. "It sure feels like one."

The contrasting views of Mr. Baty and Mr. Gould point up what many bankers and experts in the region believe: that the credit crunch – that it is in the eye of the beholder.

"A credit crunch is when banks plainly cannot lend," and "that's not the case," said Allyn Woodward, executive vice president of the Wellesley, Mass., branch of Silicon Valley Bank, a unit of Silicon Valley Bancshares of San Jose, Calif.

At the same time, though, Mr. Woodward said New England banks, plagued by bad real estate loans, are shunning the high-technology sector, creating an opportunity for Silicon Valley, which just opened the Wellesley office two months ago.

Mr. Woodward formerly headed the Bank of New England's technology-lending group. He and two associates joined Silicon Valley in April.

"They certainly are not anywhere near as aggressive today as when we were there," he said of Bank of New England.

Indeed, Silicon Valley is the "only bank around here that seem to be viewing this as an opportunity," said Mr. Baty of Zero Stage, referring to the pullback by New England banks.

One of the high-tech companies the bank may be calling on soon is Laser Science of Cambridge, Mass. Last August, the startup company obtained a $300,000 credit line from First Mutual of Boston, but now the bank is pulling back.

"They basically tore up the credit line and said you don't have one anymore," said John Morrison, chief financial officer of Laser Science.

Gerald Mulligan, president of First Mutual, declined to comment specifically about Laser Science, but acknowledged that the bank is "curtailing credit to customers who we think would be better off with other lenders."

Mr. Morrison said he was told by the bank that it is calling loans it made to a lot of customers because First Mutual was forced by regulators to take additional writeoffs, and now needs to shrink its balance sheet.

"First Mutual took a chance with us a year ago. I don't know of another bank now that would even let me in the door," Mr. Morrison said. □

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the market value of all common shares outstanding. (As of March 30, 1990, the market value cutoff point for banks was $60.6 mil. and for thrifts $121.45 mil.) 52 Wk Hi: Lo the moving high and low prices for the stock. PE: the price-earnings ratio. It is the current stock price divided by the trailing four-quarter earnings per share. Mkt. Bid: the latest quoted price bid for the stock; the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Both values are adjusted for announced earnings and dividends. Chg.: The price at which the stock closed on the previous day. Chg.: The change in the Mkt. Bid and Thrift Indices: A weighted average of the top 250 banks and 50 thrifts, respectively, in terms of market capitalization. Indexed to 1/3/89=100. NA: not available. NM: not meaningful. ... and indicators most shares traded and today's volume as a percentage of average daily volume for the past 65 days.

Data source: **SNL SECURITIES**, Charlottesville, VA 804/977-1600; produced the tables. Financial News Network, Vienna, VA, provides SNL with the daily prices.

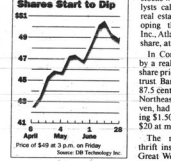
Program's End Saps Strength at First of America

By GORDON MATTHEWS

NEW YORK — The end of a large share repurchase program has taken the steam out of First of America Bank Corp., a mid-western superregional banking company whose stock had been outperforming those of many other banks.

The situation demonstrates how thin the stock market support currently is for even well-regarded bank stocks. "There are no buyers in general right now and no mercy if there's bad news," said Anthony J. Polini, banking industry analyst for A.G. Edwards & Sons Inc., St. Louis.

Bye-Bye Buyback: First of America Shares Start to Dip



Price of $49 at 3 p.m. on Friday
Source: DB Technology Inc.

The Kalamazoo, Mich.-based banking company bought back 1 million of its shares from mid-April through early May. Its stock was further helped by the May rally in bank equities.

Relatively Strong Showing

Two weeks ago, its stock was 10% ahead of its yearend level. It has since lost considerable altitude but still can boast one of the strongest performances of the year within the industry.

Friday, First of America shares traded at $49, or 4.25% above their price of $47 last Dec. 29. By comparison, most major bank and thrift stocks are currently at least 10% below their yearend levels.

"With the repurchase program over, the stock now looks overbought versus the group," said Mr. Polini of A.G. Edwards.

First of America is a $10 billion-asset banking company that has built a statewide franchise in Michigan and also expanded into Indiana and Illinois. It has the largest banking presence in Illinois outside Chicago.

Covering a Share Redemption

The company approved the buyback plan to cover its redemption of preferred stock that converted into 800,000 shares of common stock. The repurchase will increase earnings per share by 10 cents in 1990.

First of America has been attractive to investors because of its good asset quality and community banking orientation, but its target of 11% annual growth in earnings per share has been discounted by the market as unreachable, said Henry C. Dickson, a bank analyst for McDonald & Co. Securities Inc., Cleveland. "Based on our 1990 estimate, the five-year compound growth rate will be 7.1% on originally reported earnings per share," he said.

Recently, First of America has reported earnings on the low side of analysts' forecasts.

* * *

FRIDAY'S MARKET

Major bank stocks mostly slipped in modest trading as investors awaited second-quarter earnings reports. An exception was Wells Fargo & Co., which gained sharply in heavy trading.

Shares of the San Francisco banking company shot up $3, to $79.25, during the afternoon on unconfirmed rumors that corporate raider Warren Buffet had bought a large stake.

Most southeastern bank stocks were weaker on what analysts called investor fears that real estate problems are developing there. SunTrust Banks Inc., Atlanta, was off 62.5 cents a share, at $20.25.

In Connecticut, already hurt by a real estate recession, bank share prices eroded Friday. Citytrust Bancorp., Bridgeport, fell 87.5 cents a share, to $4.75, and Northeast Bancorp, New Haven, had a volatile day, first falling $1.50 and then rising $1, to $20 at midafternoon.

The nation's three largest thrift institutions posted gains. Great Western Financial Corp., Beverly Hills, Calif., gained 25 cents a share, to $18.375, and H.F. Ahmanson & Co., Los Angeles, gained 25 cents, to $20.375. Analysts said the moves were probably related to a front page feature in the *Wall Street Journal* on the penurious management of Golden West Financial Corp., Oakland, Calif., whose shares rose $7.5 cents, to $30.375. □

CAPITAL

Sumitomo Set to Tap Yankee Debt Market

Continued from *page 1*

have had to resort to equity issuance, either through common stock offerings or sales of warrants attached to bonds, to raise capital. That system worked fine until the Japanese stock market showed weakness earlier this year.

Since then, Japanese banks have found investors unreceptive to new equity issues. The banks have also suffered a loss in value of their equity- and real-estate-based hidden reserves. At the end of March, Japanese bank capital ratios were below those of many large American banks.

Recognizing the problem, the Ministry of Finance ruled in June that Japanese banks could raise regulatory capital by issuing subordinated loans. It did not authorize issuance of public subordinated bonds, but it did reserve the right to rule on specific proposals for subordinated debt issuance and left open the possibility that public bond issues would be allowed.

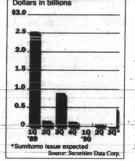
Others May Follow

The upcoming issue by Sumitomo is the result of one such specific ruling, sources said, suggesting that other Japanese banks could receive similar authorization and follow Sumitomo into the subordinated debt market.

In an announcement, Sumitomo said it aimed to strengthen its capital-to-assets ratio to 8.84%, compared with 8.44% at the end of the 1989 fiscal year. This takes it well over the 8% minimum imposed under the guidelines established by the Bank for International Settlements.

Sumitomo is already more strongly capitalized than several of its counterparts, according to data from Thomson Bank-Watch. Sumitomo's equity-to-assets ratio of 5.1% at the end of March is well ahead of the average of about 2.7% for Japan's largest banks.

Is Yankee Issuance On the Rebound?
Dollars in billions



Source: Securities Data Corp.

"The question is, how much will these banks be using up the capacity for U.S. bank debt?" said Matthew J. Grayson, a vice president at Salomon Brothers Inc.

Supply of Yankee Bonds Is Low

The Ministry of Finance ruling comes at a time when the supply of Yankee bonds is low. Commercial banks have been staying away from the Yankee market this year after issuing billions of dollars of notes and bonds in 1989.

"In the past, Yankees offered the best spread over Libor," said Andrew J. Cooley, a managing director at Merrill Lynch Capital Markets, speaking earlier this month. But in 1990, American investors have become so wary of bank securities that issuance in the United States is no longer as desirable.

In addition, swap rates have been low, so banks hoping to swap fixed-rate interest payments for floating-rate payments have been faced with the prospect of floating rates at high spreads over the London interbank offered rate.

As a result, no banks came to market in the first quarter of this year, according to information provided by Securities Data Corp. And so far in the second quarter, issuance has remained under $100 million. The Sumitomo issue is widely believed to be equal in size to the largest subordinated issue ever in the Yankee market.

Price talk on the offering is for a yield of 95 to 100 basis points over 10-year Treasuries. But capital markets specialists said a more appropriate yield would be 110 to 115 basis points over. The most recent comparable deal for a U.S. banking company was an offering by Republic New York Corp. priced at 105 basis points over Treasuries.

With swap rates as low as they are, Sumitomo would only be able to swap into floating-rate payments at about 45 basis points over Libor if it were to swap the fixed-rate payments it will make on the upcoming issue.

That is expensive financing for a bank with double-A ratings. But it is probably less expensive than issuing subordinated loans to Japanese insurance companies, currently the only other way Japanese banks can obtain subordinated capital.

Because the issue is being marketed in the United States, Sumitomo has to provide some disclosure. But the securities are being issued at the bank level, so Sumitomo is able to take advantage of a loophole in American securities law and provide little more information than it would for a deposit note issue.

John Evans in London contributed to this report.

SEMINAR 1

INNOVATIVE CUSTOMER SERVICE AND SALES TECHNIQUES FOR THE NINETIES

July 16, 1990 • The Vista Hotel • New York City
September 10, 1990 • The Vista Hotel • New York City
September 17, 1990 • Century Plaza Hotel • Los Angeles

As the banking environment becomes more competetive, industry leaders view improved customer service as a sollution to retaining market share. But how can your bank achieve such improved service? And as importantly, can quality service be translated into sales? The seminar will address the pressing need for improved customer service and how to implement a service program in your bank. It will also focus on the next step... profiting from quality service through innovative sales techniques, state-of-the-art technology and sales incentives. The industry leaders will address the issue of the nineties...achieving competitive advantage by making your company customer and sales-oriented.

9:00 KEYNOTE SPEECH: EFFECTIVE CUSTOMER SERVICE...THE KEY TO PROFITIBILITY IN THE 90'S
- Profiting from customer service in an age of transition...
- A banker's perspective on past successes and failures... and innovations for the future
- A case study in improving service and sales

Thomas Jacob, *Senior Vice President,* Chemical Bank (NY)
Thomas Jacob, *Senior Vice President,* Chemical Bank (NY)
Joan Miszak, *Senior Vice President,* California Federal Bank (LA)

9:45 TURNING SERVICE INTO SALES...ACHIEVING BOTTOM LINE RESULTS FROM QUALITY SERVICE AND SALES TECHNIQUES
- Creating a competitive advantage through customer service
- Improving service...and controlling costs

John A. Goodman, *President,* Techn. Assistance Research Program (NY)

SEMINAR 2

THE NUTS & BOLTS OF COMMERCIAL LENDING & LOAN PRICING

July 17, 1990 • The Vista Hotel • New York City
September 11, 1990 • The Vista Hotel • New York City
September 18, 1990 • Century Plaza Hotel • Los Angeles

The battle for commercial loan profitability promises trying times for large corporate and middle market lenders. Over the past two decades, the risk in banks lending portfolios has steadily increased. This is not a function of uncontrolled risk-taking, but rather of the banks' necessary response to the need to find assets which will provide acceptable levels of risk-adjusted return. The events of the past few years have shown that many banks have, however, been unable to effectively control the level of risk that they have taken. Unacceptably high levels of loss have taken place in many banks due to a combioation of poor pricing, excessive concentration and the failure to understand the level of risk in a specific loan. Furthermore, new competitors are entering the marketplace scrambling for territory and sparking intense new battles for turf. This seminar reviews how leading-edge banks are beginning to develop new sets of techniques that will give them a competitive edge in the marketplace for controlling their level of loss, and achieving low-risk diversified portfolios.

8:45 CHAIRMAN'S OPENING REMARKS
William T. Gregor, *Partner,* The MAC Group (NY,LA)

RE-ENGINEERING FROM A CUSTOMER POINT OF VIEW

9:00 KEYNOTE ADDRESS: WHAT RECIPE SHOULD YOU USE TO TURN AROUND YOUR COMMERCIAL LENDING BUSINESS?...A CONSULTANT'S & A BANKER'S VIEWPOINT

SEMINAR 3

EFFECTIVE COST MANAGEMENT

July 18, 1990 • The Vista Hotel • New York City
September 12, 1990 • The Vista Hotel • New York City
September 19, 1990 • Century Plaza Hotel • Los Angeles

9:00 CHAIRMAN'S OPENING REMARKS
Patrick J. Leenputte, *Partner,* Price Waterhouse (NY; LA)

9:15 ACHIEVING COMPETITIVE ADVANTAGE THROUGH COST LEADERSHIP
The 1990's showed that cost leadership is a critical success element in all restructured industries. As the pace of restructuring in banking accelerates, winners will emerge based on competitive cost position and related strategic focus. Global finance will come to be dominated by firms obsessed with the twin pursuits of profitability and productivity.
This session concentrates on managing the key noninterest cost drivers of bank performance: 1) business scope and geographic reach, 2) size of workforce and compensation practices, 3) technology spending and investment, and 4) corporate real estate portfolio management.
Charles H. Hobbs, *Senior VP,* Bankers Trust Company (NY)
Charles H. Hobbs, *Senior VP,* Bankers Trust Company (NY)
Eleni Istavridis, *Senior VP,* Bankers Trust Company (LA)

10:00 KEYS TO WINNING THE PRODUCTIVITY RACE
If superior expense control is essential to surviving the merger decade, then how is it accomplished?
This session addresses three key issues for banks concerned about expense control: 1) How good is the bank now and where is the potential for greater frustration? Analysis based on business mix can identify bloated budgets and problem areas; 2) What kind of programs work to bring expenses under control? Experience shows what are the do's and dont's of crafting a program to reduce staff areas, lines of business, branches, operations and systems; 3) What does it take to stay on top? A "coherent organization" and quantitative performance measures can be keys to sustaining a cost effective culture.

11:00 STORIES FROM THE FRONT: HOW MELLON BANK'S COST CONTROLS HAVE LED TO NEW BUSINESS OPPORTUNITIES AND LOWER EXPENSES
Mellon Bank has experienced a great deal of cost cutting in the past decade. Mellon's expertise in this area has shown that you can actually turn a cost center into a profit with the appropriate resources and strategy.
In this session, you will learn how Mellon effectively downsized into a better performing bank. This dedication to cost leadership has helped Mellon develop it's technologies and data processing to the point where these strengths have led to new business opportunities.

12:00 LUNCH BREAK

1:15 *HOW TECHNOLOGY CAN HELP YOUR BANK CUT COSTS WHILE IMPROVING PERFORMANCE*
Commercial banks and financial institutions are wholeheartedly embracing information technology (IT) as a way to achieve competitive advantage. But, while bank IT costs have skyrocketed, banks are cautious to crow about their success. Instead, they suffer from exponential growth in computer spending with almost no impact on their bottom line or market share.
In this session, you will learn how to begin to think about, structure and approach the IT problem in your organization. Learn what technology can do to help control costs and what it cannot do. Analyze how to cut the rising costs of your own IT infrastructure. Most important, begin to understand how you can approach IT complexity without being overwhelmed.

2:15 ELIMINATING EXPENSE THROUGH ACQUISITIONS
If banks merge to achieve economies of scale then why do most mergers fail to meet their expectations? As bank mergers continue to increase, minimizing costs during the integration process has become essential.
While banks of different sizes and market niches will have different merger goals, there is a proper rationale to mergers that will minimize the consolidation process. This session will look at past mergers to critique successful mergers as well as failures. In particular, where can the economies be achieved?... in back office operations/overhead, retail or wholesale operations; data processing and technology or duplication of staff responsibilities. This session provides a framework to minimize the costs of the merger.

3:15 MONITORING THE DOWNSIZING EFFORT THROUGH EFFECTIVE HUMAN RESOURCES MANAGEMENT
- How to retain top performers and employee commitment
- What to cut?...What to keep?...How to do it?

Peter J. Doris, *Senior VP, Right Associates (NY)*
Peter J. Doris, *Senior VP,* Right Associates (NY)
Peter J. Doris, *Senior VP,* Right Associates (LA)

4:15 MEASURING THE IMPACT OF COST ON PROFIT PERFORMANCE AND SHAREHOLDER VALUE...THE ANALYST'S PERSPECTIVE
How does a bank's cost performance effect stock price? In this session, learn how analysts objectively view cost cutting practices and how profit performance is related to effective expense practices and how it effects stock price. What banks have made the right moves and what strategies were responsible for improved profit performance.

5:00 END OF SEMINAR

SEMINAR 4

BANK AND CROSS-INDUSTRY ACQUISITIONS OF THRIFT INSTITUTIONS & SHOULD THRIFTS BE CONVERTING TO BANKS?

July 19, 1990 • The Vista Hotel • New York City
September 13, 1990 • The Vista Hotel • New York City
September 20, 1990 • The Century Plaza Hotel • Los Angeles
September 25, 1990 • The Ritz Carlton • Atlanta
October 9, 1990 • The Ritz Carlton • Chicago

FIRREA has opened the doors to bank acquisitions of thrift institutions and thrift institution conversions to banks. However, it is not altogether clear what this new regulatory flexibility means and whether banks and thrifts should take advantage of these new options. This one day intensive program for bank, thrift, and other business executives, attorneys and consultants focuses on the mechanics and regulatory procedures involved in bank and non-bank acquisitions of thrifts, as well as how and whether thrifts should convert to banks.

9:15 CHAIRMAN'S OPENING REMARKS
Eric Luse, *Partner,* Brownstein Zeidman and Schomer

9:30 SHOULD A THRIFT CONVERT TO A BANK?
- What Are The Advantages And Disadvantages
- A Review Of The Bank And Thrift Charters

Eric Luse, *Partner,* Brownstein Zeidman and Schomer (NY,LA,CH)
Trent Feldman, *Partner,* Kaplan Smith & Associates (AT,LA)
Edward T. Lutz, *Principal,* Lyons Zombeck & Ostrowski (NY,CH)

10:00 REGULATORY HURDLES AND CONSIDERATIONS INVOLVED IN CONVERTING A THRIFT TO A BANK...HOW CAN IT BE DONE & WHAT IS PERMISSIBLE?
V. Gerard Comizio, *Director, Corporate and Securities Division,* Office of Thrift Supervision (NY,AT,LA,CH)
Eric Luse, *Partner,* Brownstein Zeidman and Schomer (NY,AT,LA,CH)
Vernon E. Fasbender, *Director for Analysis,* Comptroller of the Currency (Southeastern District) (AT)
Roy Stovall, *Director for Analysis,* Comptroller of the Currency (Northeastern District) (NY)
Donelle Ward, *Director for Analysis,* Comptroller of the Currency (Central District) (CH)
Daniel Pearson, *Director for Bank Supervision & Analysis,* Comptroller of the Currency (Western District) (LA)

10:45 COFFEE BREAK

11:00 CONVERTING A SAVINGS ASSOCIATION TO A BANK...A CASE STUDY
Samuel J. Malizia, *Partner,* Brownstein Zeidman & Schomer (NY,CH)
James S. Fleischer, *Partner,* Silver Freedman & Taff (LA)
Richard Friedman, *Partner,* Silver Freedman & Taff (AT)

11:30 WHY SHOULD A BANK OR NON-BANK ACQUIRE A THRIFT...A STEP BY STEP REVIEW
- What Are The Economic Advantages And Disadvantages?
- Market/Geographic Expansion And Pricing Considerations

Christopher Guskenbush, *Principal,* Sandler O'Neil & Partners (NY,AT)
Fred D. Price, *Principal,* Sandler O'Neil & Partners (LA,CH)
T. Stephen Johnson, *President,* T. Stephen Johnson & Associates (AT)
John Mingo, *Principal,* BEI Golembe Inc. (NY,CH)
Richard Reibman, *Managing Director,* Dean Witter Reynolds, Inc. (NY,LA)

12:00 EVALUATING A THRIFT ACQUISITION...AN ACQUIRER'S PERSPECTIVE
- Regulatory, Operational & Financial Differences With Banks

Christopher Guskenbush, *Principal,* Sandler O'Neil & Partners (NY,AT)
Fred D. Price, *Principal,* Sandler O'Neil & Partners (LA,CH)
Addison Levi, *Senior Vice President,* Dean Witter Reynolds, Inc. (LA,CH)
Kenneth Reibman, *Managing Director,* PaineWebber, Inc. (NY,AT)

12:30 LUNCH BREAK

2:00 A REVIEW OF THE REGULATORY PARAMETERS & ROADBLOCKS TO BANK ACQUISITIONS OF THRIFTS
- Interstate/Intrastate Banking Issues
- Obstacles Or State Branching Laws & How To Circumvent Them
- Healthy Thrift vs. Failing Thrift Acquisitions

V. Gerard Comizio, *Director Corporate & Securities Division,* OTS (NY,AT,LA,CH)
Eric Luse, *Partner,* Brownstein Zeidman and Schomer (NY,AT,LA,CH)
John Shockey, *Partner,* Milbank Tweed Hadley & McCoy (NY,AT)
John Buchman, *Assistant Deputy Director,* OTS (NY,AT,LA,CH)

3:00 COFFEE BREAK

3:15 WHAT ARE THE STRUCTURAL OPTIONS AND CONSIDERATIONS WHEN ACQUIRING A THRIFT?
- How Should The Resulting Or Target Institution Be Chartered And Insured?
- Holding Company vs. Direct Acquisitions

Eric Luse, *Partner,* Brownstein Zeidman and Schomer (NY,AT,LA,CH)
Peter Bochner, *Partner,* Arnold & Porter (AT,LA)
William J.~Sweet, *Partner,* Skadden Arps Slate Meagher & Flom (NY,LA)

4:15 A BANK ACQUISITION OF A THRIFT...A CASE STUDY
Donald Kaplan, *Managing Director,* Kaplan Smith & Associates (NY,LA,CH)
William Moore, *President,* Trident Financial Corporation (NY,AT)

4:45 TAX AND ACCOUNTING CONSIDERATIONS
- Recapture Of Bad Debt Reserve
- Pooling vs. Purchase
- Use Of Net Operating Loss Carryovers

Roger Teurls, *Partner,* KPMG Peat Marwick (NY)
James L. Spreng, *Partner,* KPMG Peat Marwick (NY)
Douglas McEachern, *Partner,* Deloitte & Touche (LA)
Vincent Lanuza, *Partner,* KPMG Peat Marwick (CH)
Gerald F. Hunter, *Partner,* KPMG Peat Marwick (AT)

5:30 END OF SEMINAR

SEMINAR 5

ASSET/LIABILITY MANAGEMENT

July 20, 1990 • The Vista Hotel • New York City
September 14, 1990 • The Vista Hotel • New York City
September 21, 1990 • Century Plaza Hotel • Los Angeles

9:00 CHAIRMAN'S OPENING REMARKS
Sanford Rose, *Editor,* Journal of Retail Banking
Senior Columnist, American Banker

9:15 INTEREST RATE RISK MANAGEMENT
The management of interest rate risk is fundamental to sound banking practice. Banks can experience earnings, liquidity, and capital adequacy problems, if management is poorly run.
This session will deal with a number of fundamental rules in managing interest rate risk as well as develop an integrated risk management project. You will understand how risk is measured, as well as, what tools are used to measure risk. Learn how to incorporate these tools to increase bank profitability.
Ronald D. Reading, *Vice President,* First Manhattan Consulting Group

10:30 COFFEE BREAK FOR SPEAKERS AND GUESTS

10:45 LIQUIDITY
This session learn to understand what liquidity is. Where you can get it. How much it costs, and how much it is worth. Finally, learn to understand how to measure and manage liquidity.
Peter G. Mantilla, *Vice President,* Bank of New York (NY)
Richard Laiderman, *Vice President,* Bank of America (LA)

11:45 THE USES OF DURATION IN ASSET LIABILITY MANAGEMENT
Technological and analytical developments in the 1990's will significantly enhance the ability to deal with risk. The methodology, tools, and implementation approach provide a more rigorous assessment of market risk.
The specific focus will be to contrast the duration approach with a new approach called risk measurement unit approach. The risk measurement unit approach captures both volatility and non-parallel shifts in the yield curve.
Sanford Rose, *Editor,* Journal of Retail Banking
Senior Columnist, American Banker
Robert M. Mark, *Managing Director,* Manufacturers Hanover Trust

12:30 LUNCH BREAK FOR SPEAKERS AND GUESTS

1:30 OFFICE OF THE COMPTROLLER OF THE CURRENCY AND THE NEW EXAMINATION GUIDELINES
"The OCC has alerted all bankers that they must prudently manage, measure and limit risk, and that enough capital be available to support exposure to such risk."
This session will discuss the OCC's policy on interest rate risk and how active the Office of Thrift Supervision is. The different topics which will be discussed include: risk matrix, gap reports, simulation, and duration.
Jennifer Johnson, *Developer and Administrator,* OCC

2:30 SECURITIZATION...WHEN AND HOW TO USE IT.
- Being able to securitize your own product
- Opening a secondary market
- The 144 Rule with regards to Private Placement

To Be Announced

3:30 LOWER COST OF MARKET AND THE INVESTMENT PORTFOLIO
1990 will be a year when your accounting department must be able to deal effectively with the new AICPA requirements on accounting for debt securities held as assets. A new standard expected to be issued by the AICPA with the support of the SEC and the FASB will require market value determination. The new standard will require allocating security investments among investment portfolio, held for sale, and trading account.
This session will help you understand the new requirements and the techniques required to successfully implement them.
Raymond Perry, *Partner,* Deloitte & Touche

4:30 ASSET LIABILITY MANAGEMENT INTO THE 1990'S.
This session will outline recent advances in the 1) measuring of embedded option risks, 2) measuring volatility risk exposure, 3) measureing index and credit spread risks, 4) integrating value decisions into the management process, 5) integrating risk-based capital guidelines into the risk management process.
Alden Toevs, *Principal,* Morgan Stanley & Co.

5:30 END OF SEMINAR

California Looks Unbeatable in Consumer Arena

By YVETTE D. KANTROW

A booming economy and the ailing thrift industry are fueling a surge in consumer lending in California that is unmatched in any other region of the country.

The consumer portfolios of three of the state's four largest banks grew more than 25% last year, compared with an industry average of 10%. And the surge appears to be continuing this year.

In many ways, the California boom is an exaggeration of a national trend. As the profitability of lending to big corporations declines, commercial banks are restructuring their balance sheets to emphasize consumer rather than business loans.

ANALYSIS: *Follow-up on the news*

But several factors are working together to make the California consumer banking market more dynamic than most. These include:

• A burgeoning population. California's reputation as the land of unlimited opportunity continues to lure young, ambitious, upwardly mobile consumers to its sunny cities.

• A strong economy. Heavy migration to the state has led to rapid job creation, which has enabled personal income to continue to grow. The state represents 12% of the country's economy and ranks eighth in per capita income.

• A tradition for being on the leading edge of consumer products. The same state that gave the country Hula-Hoops, Jam shorts, and Apple computers also spawned bank cards, packaged bank accounts, and Saturday banking hours.

• The state's sick thrifts. The shrinking thrift industry is creating new opportunities for all banks in residential lending. The trend is especially notable in California, which has a disproportionate number of ailing thrifts.

28% Growth

Last year, Bank of America's consumer loans grew 28% to $27.7 billion, catapulting the San Francisco-based institution past Citibank as the nation's largest consumer lender. Citibank's portfolio grew 8%, although loans on the books of some affiliates grew faster.

Consumer loans at San Francisco-based Wells Fargo Bank, the third-largest lender, increased 26.2% to $14.9 billion, while Los Angeles-based Security Pacific National Bank boosted its portfolio 26.4% to $13.9

Bank Stocks: Another Bad Quarter

Percent change in indexes from March 30 to June 29

Source: SNL Securities

Bank Shares Declined by 1.73% In Quarter as Stock Market Rose

By GORDON MATTHEWS

NEW YORK — Despite a merry month of May, major bank stocks again fell woefully behind the performance of the rest of the market in the second quarter. The *American Banker* index of 225 publicly traded banks fell 1.73% in the period, while the market, as measured by the Standard & Poor's 500 stock index, rose 5.3%.

"Bank stock price performance is just plain dogey, and it probably will continue that way for at least the rest of the year," said Nancy A. Bush, a regional bank analyst in New York for Dean Witter Reynolds Inc.

Credit Quality Problems

Banks with credit-quality problems, or those expected by investors to soon announce such problems, significantly dragged down the group in the period just ended.

Miami's Southeast Banking Corp. surrendered 34.5% of its market value in the March-June stanza. Most of the evaporation happened after the bank said it would cut its dividend and sell some assets. It still expects a loss for the quarter and the year because of asset-quality problems.

Another big loser was MNC Financial Inc., Baltimore, which plunged 31% in the quarter after issuing a statement that it expected credit-quality problems to have an impact on second-quarter earnings. The company did not provide any details.

A Star that Fizzled

PNC Financial Corp., Pittsburgh, once a darling among investors in supercharged banks

Bank Victory On Cashing Checks May Be Reversed

By ROBERT M. GARSSON

WASHINGTON — The banking industry's victory over Sen. Howard Metzenbaum's government check-cashing legislation could be reversed next week; two key senators are said to be ready to offer an amendment that incorporates most of the Ohio Democrat's objectives.

Sen. Alan Dixon, D-Ill., chairman of the Senate Banking subcommittee on consumer affairs, and Sen. Christopher S. Bond, R-Ill., the panel's ranking Republican, are expected to offer the legislation as an amendment to the truth-in-savings bill, said industry and congressional sources. That measure is scheduled for committee consideration July 12.

A Mainstream Route

If they cosponsor the amendment, it may prove unstoppable. Sen. Dixon is a member of the Senate leadership, and Sen. Bond was the banking industry's major ally in the floor fight last week that defeated the Metzenbaum legislation. An amendment backed by two would be viewed as mainstream legislation.

Moreover, Sen. Metzenbaum's bill lost on a 55-43 vote, in part because he tried to attach his amendment to a housing bill

Healthy Thrifts Pressured to Sell Realty Ventures

By ANDREW REINBACH

The clock started ticking Sunday on the 60 days that solvent thrifts have been given to sell off as much as $10 billion of assets held in real estate ventures and subsidiaries or submit an acceptable plan of action.

Thrifts choosing to retain those assets will have to deduct them from capital over several years – and come up with the cash to prevent insolvency.

Impermissible Activities

The pressure to sell real estate at a time when many markets are depressed stems from regulations enacted late last year by the Office of Thrift Supervision. In effect, they require thrifts to operate under national bank standards regarding "permissible" holdings.

Among the impermissible activities are real estate develop-

Great Western Is Moving Swiftly To Win New Customers in Florida

By TERESA CARSON

LOS ANGELES — Having become Florida's largest thrift virtually overnight, Great Western Bank on Monday mounted an aggressive marketing campaign for new customers.

Floridians were greeted Monday morning with a folksy radio spot by the actor Dennis Weaver touting Great Western as "good folks to know" and "we'll always be there."

Plenty of Brochures

The thrift's newly acquired branches were sporting its royal-blue GW logo and were chockfull of sales materials. A major television and newspaper advertising campaign is scheduled to be launched later this week.

We want "to become an important player in Florida," said executive vice president Clifford A. Miller.

Late Friday, Beverly Hills, Calif.-based Great Western announced that it acquired 71 branches and $2.1 billion in re-

PEOPLE *in the news*

Ex-Marine Aims to Foster Creativity in CalFed Post

By TERESA CARSON

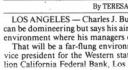
LOS ANGELES — Charles J. Buchta, a former Marine, admits he can be domineering but says his aim as a manager is to encourage an environment where his managers can function creatively.

That will be a far-flung environment in his new job as executive vice president for the Western states consumer unit at the $25 billion California Federal Bank, Los Angeles.

'He Does Not Tolerate Mediocrity'

Mr. Buchta, 48, will be in charge of CalFed's 148-branch consumer banking operations in California, Nevada, and Arizona. He will also head investment services, marketing, and operations – but not the mortgage operation. He will manage about 2,500 employees.

"He is efficient, straightforward, and intelligent," says Lawrence W. Stirling, a vice president at Chase Manhattan Bank, New York, where Mr. Buchta worked in the mid 1980s. "He does not tolerate mediocrity."



Charles. J. Buchta

Before coming to CalFed, Mr. Buchta was an executive vice president at First Interstate Bank of California. He was in charge of the 53 branches in the Los Angeles North area and the personal trust division.

In six years at First Interstate he held a variety of positions in areas including operations, business marketing, and auto leasing.

He also worked for Chase, for Philadelphia-based Girard Bank, and for Citibank, New York.

Mr. Buchta's Interstate colleagues call him "The Marine." He's "a very solid operations guy," one executive says.

Chase colleagues remember him as a regular at the company fitness center. A semifinalist in tryouts for the 1964 Olympics track team, he still runs several miles every day.

Concern For the Homeless

He throws himself with equal enthusiasm into his civic responsibilities.

"Mr. Buchta found us," says Maxene Johnston, president of the Weingart Center Association, which runs a 600-bed hotel and service facility for the poor and homeless in Los Angeles. "He came to us at the end of last year, because he was concerned about the issues [of homelessness]."

He is now on the Weingart board.

Ms. Johnston recalls hours of brainstorming in which Mr. Buchta came up with ways he and First Interstate could help the homeless center. "Twelve cups of coffee later, we had a lot of ideas," she says.

Active Help

First Interstate donated two computers and a used van to Weingart. And the company's program to train Weingart clients for bank jobs is beginning to yield results: Several now work at First Interstate. Other projects are in the works.

Mr. Buchta is also a director of the Alliance of Business for Childcare Development and chairman of the Los Angeles County Childcare Advisory Board.

Mr. Buchta is moving to CalFed in the middle of a major restructuring. The company is shedding business, such as insurance, that no longer fit its strategic plan to become a real estate-oriented consumer bank.

Mr. Buchta hopes to sharpen CalFed's edge in the market. "Our competition doesn't see us as a threat," he says. "In two or three years, we want them to be worried as hell about ['al'fed." □

NEWS *briefs*

NCNB Unit Gets President

DALLAS — Robert B. Lane was named president Monday of NCNB Texas National Bank. He succeeds Kenneth Lewis, named president last week of NCNB Corp.'s General Bank. Mr. Lane, 52, will oversee a network of 230 branches.

TCF to Revamp After Loss

MINNEAPOLIS — After a Federal Deposit Insurance Corp. examination, TCF Financial Corp. announced a restructuring and said it will post a second-quarter loss of about $32 million. It earned $5.5 million in the 1989 period.

The parent of TCF Bank Savings, Minneapolis, said its second-quarter provision for loan and lease losses will be $25 million. Its Texas subsidiary, TCF Banc Savings, will be closed with a writeoff of $13.1 million. — **Reuters**

OTS Eases Thrift Loan Rule

WASHINGTON — The Office of Thrift Supervision on Monday approved a much-awaited rule intended to relax the tough loans-to-one-borrower rule for healthy thrifts.

Thrifts fully meeting their capital requirements will have until Dec. 31, 1991, to limit loans to one borrower to 15% of unimpaired capital. □

OCC Bans 13 from Banking Over $250 Million in Scams

By BILL ATKINSON

WASHINGTON — After an 18-month investigation, the Office of the Comptroller of the Currency, alleging an attempt to defraud several banks of more than $250 million, has banned 13 people from banking.

The action, involving 20 financial institutions in several states and abroad, is the largest single banishment of bankers in any case investigated by the Comptroller, according to an agency spokesman.

Bank and thrift regulators are being encouraged by the Bush administration to crack down on wayward executives and their customers. In response, the regulatory agencies are pushing for longer prison sentences and large restitution awards.

13 Consent to Ban

The Comptroller's office filed no formal charges against the 13 bankers because they consented to their banning. Unlike the Federal Deposit Insurance Corp., the Comptroller lacks litigation authority. His agency can only seek administrative remedies, including civil money penalties and removal orders.

Ralph Sharpe, director of the Comptroller's enforcement and compliance division, said a U.S. attorney's office in Texas is considering a criminal investigation.

If formal charges had been filed, the Comptroller would have alleged that the individuals plotted to take more than $250 million from several of the institutions with schemes resulted in actual losses of more than $2 million.

One plot allegedly involved James C. Barrus, who was said to have posed as head of an inactive thrift holding company, Fidelity Trust & Guaranty Co. of Temple, Tex. He allegedly had no affiliation with Fidelity Trust, but in 1986 and 1987, he signed $64 million in worthless certificates of deposit drawn on the trust company, the Comptroller charged. No deposits had been made to back the CDs.

Another scheme allegedly involved James A. Trodden, who posed as a licensed attorney and signed a letter to Fred L. Harwood, who was said to have posed as head of Mid-America Trust Co. of Dallas.

The letter indicated that the trust company – which was inactive and had only $1,800 in assets – could issue checks that would be "paid" through accounting entries. More than $16 million of worthless checks were issued against the company in 1987, and at least one check was signed by Mr. Barrus, the OCC said.

The schemes resulted in actual losses of more than $2 million.

Mr. Barrus also offered to buy Trust Bank, Hialeah, Fla., with a worthless $30 million check drawn against Mid-America Trust Co.

Another scheme the OCC uncovered involved the use of worthless checks issued by a bank in the West Indies with no known assets, First London Bank, Plymouth, Montserrat. The offshore bank was owned by Owen Yeates.

83 Million Check Rebuffed

In one instance, a supposed $3 million check from the bank was presented in February 1988 by Jedd P. Jones, Bradley J. Jorgenson, and S. Chad Godfrey for deposit in First National Bank of Dayton, Texas, according to the OCC. The Dayton bank lost no money because it didn't accept the check.

A final scheme involved the purchase of existing financial institutions that were then sold worthless or grossly overvalued corporate debentures, the Comptroller stated. □

First City Of Texas Cuts Jobs

By STEVE KLINKERMAN

DALLAS — Following disclosures that its second-quarter earnings would be soft, First City Bancorporation of Texas Inc. said this weekend that it would cut its work force by more than 10% over 12 months.

First City said it would eliminate 700 of its 6,600 jobs by midyear, in a move that will result in annual savings of $20 million to $30 million.

100 to 150 Layoffs

Most of the job cuts will be achieved through attrition, a company spokesman said, but between 100 and 150 layoffs ultimately may be required to meet the target for cuts.

Most of the cuts will occur in First City's back-office operations, which are being consolidated into three computerized hubs to service the company's statewide network of 76 offices.

Much of the payroll saving will initially be offset by the expense of establishing the three servicing hubs.

The Houston-based company said Friday that it would earn between $18.2 million and $23 million during the second quarter, down significantly from the $28.1 million it earned during the same period in 1989.

Problem Assets Rising

The earnings estimate came amid a rapid growth of problem assets at First City, which this spring has seen a number of speculative loans jeopardized as several out-of-state borrowers entered bankruptcy proceedings. Nonperforming assets totalled $200 million at midyear, First City estimated, up from $140 million at the end of 1989.

On Monday, Moody's Investors Service Inc. said it had placed $641 million of First City debt under review for possible downgrade "in response to First City's announcement of an increase in non-performing loans." □

Security to Try Neural Networking

Bank Planning Risk Analysis in Three Departments

By RICHARD LAYNE

NEW YORK — Security Pacific Corp. has made a big commitment to a pet technology of the Department of Defense called neural networking, a branch of artificial intelligence that attempts to recreate how the mind learns.

Having kept its efforts quiet for more than a year, Security Pacific National Bank disclosed plans last week to use neural-networking systems by the end of the year to analyze risks in three departments, No other bank has announced such a large-scale effort for the technology, which holds promise as a decision-making tool.

Security Pacific said it signed a contract a year ago with HNC Inc., San Diego, a leading developer of such systems. The contract calls for the companies to develop neural networks to analyze risks in commercial loans, automobile loans, and bank card portfolios.

A Need for Secrecy

The bank, which would not divulge the contract's value, said it kept the agreement under wraps because it did not want to let competitors know its plans for the technology, which could give it an edge, particularly in risk analysis and scoring.

Banking technologists say the neural network and the expert systems, a technology branch of artificial intelligence, can solve problems that traditional number-crunching computer systems cannot.

Expert systems solve problems by using the knowledge of experts in the form of what-if statements.

Patterns Detected

A neural network solves problems without relying on the programmed knowledge of experts. The software can discern patterns, changing the weights it places on variables automatically. That ability to change is akin to the human ability to learn.

Neural networks are patterned on the neural connections in the brain. The ability to learn makes neural networks appropriate for problems in behavioral scoring and risk analysis, where experts may not provide sufficient knowledge.

Even at the biggest banks, which tend to be technology pioneers, less than half are using expert systems. Banks and other corporations have been experimenting with those systems since the mid-1980s.

Chase Using a System

Chase Manhattan Corp., the first banking company to discuss publicly its use of neural networking, has had success in applying the technology to credit card fraud detection. Other technology leaders, including Manufacturers Hanover Trust Co. and Citicorp, are reportedly examining the technology, with an eye toward finding the right application.

"Every other big bank is looking at it," said Neena Buck, an analyst with New Sciences Corp., Southport, Conn., which follows the artificial intelligence market. "But they won't talk about it. If they let it out, they will lose the competitive edge." That edge comes from being able to perform a task or offer a service the competition can not.

"The technology is too valuable to overlook," said Richard Clements, vice president of Security Pacific Automation Co., the banking company's technology arm.

"Neural nets are where expert systems were in 1984 or 1985," said Craig S. Atkinson, vice president of Manufacturers Hanover. "This is the time to explore applications to gain advantages – you aren't going to wait until the industry matures."

Only in the past couple of years have neural networks come to the attention of corporations. Neural-networking companies primarily sold their systems to the Defense Department and NASA, which funded research and development. Applications for the technology, which can sift through tremendous amounts of data, include radar and signal processing.

> **"Every other big bank is looking at it. But they won't talk about it."**
>
> **Neena Buck**
> *First Sciences Corp.*

Government Role Was Key

Mr. Clements of Security Pacific said the government has helped work the bugs out of neural networks.

Unlike expert systems, neural networks appear to learn from each task. But they learn what they are told to learn. If a neural network is set up to analyze consumer mortgage applications, it will examine each variable in the application and compare it with those in past applications.

The computer already knows whether the bank approved those applications and has determined which variables were weighted more heavily than others. A new application is compared with an old application and a decision made.

"Once the networks are in place and we have a chance to determine the benefits, the use of them should spread," said Mr. Clements. □

East German Telephones Hobble Bank Expansion

By JEANNE IIDA

NEW YORK — As West German banks extended their operations to East Germany in preparation for economic unification last weekend, they had to grapple with an antiquated telecommunications network that inhibited computer communications.

The banks – Deutsche Bank, Dresdner Bank, and Berliner Sparkasse – set up about 500 mobile units in East Germany last week to act as teller stations until more-permanent facilities could be erected.

The banks invested the equivalent of $1 million in a communications technology to link the mobile teller units to home offices through antiquated telephone lines.

The temporary branches communicate with host computers in the banks' home offices through modems, which convert data to signals that can be sent over even outdated phone lines.

This technology often is replaced in the United States and other countries by digital telephone lines. Data does not need to be converted if it is sent over digital lines.

Dresdner Bank used 600 modems to link trailers containing automated teller machines and personal computers to its computer operations center in Frankfurt. The modems, supplied by Racal-Milgo, of Sunrise, Fla., have network management software that lets Dresdner monitor and test the equipment installed in East Germany from the Frankfurt data center.

By law, any equipment that is attached to telephone lines must be approved by the East German government. The West German banks were able to use equipment manufactured in the U.S. because Racal sought approval from the East German authorities late last year.

Joseph Robertson, general manager of Racal-Milgo, said the equipment being used in the mobile branches can be transferred to permanent branches. □

Systematics Signs Pact with Vboss

By KAREN GULLO

NEW YORK — Systematics Processing Corp., a unit of Systematics Inc. that serves Illinois and Wisconsin, has reached an agreement with Vboss Development Corp. to offer its customers Vboss branch automation systems. Vboss is a unit of Valley Bancorp, Appleton, Wis.

The agreement fills a gap for Systematics, which does back-office transaction processing for banks but does not offer the branch automation systems.

The agreement allows banks to contract with Systematics for both back-office transaction processing and branch automation.

Vboss' branch automation system supports document preparation, teller transaction processing, and platform sales. It operates on personal computers or controller-based terminals.

Vboss will build an interface between the system and Systematics' banking applications software. Little Rock, Ark.-based Systematics will market the system as part of its outsourcing contracts. The system costs $595 for each terminal. □

You Take Care of the Forest

Your credit card program can mean a lot to the bottom line of your company. But while you're trying to focus on the big picture, the day-to-day decisions of a credit card operation can tie up large portions of your time.

We'll Take Care of the Trees

At Total System Services, Inc. (TSYS), we take care of those day-to-day credit card operations... freeing you and your personnel to concentrate on the main focus of your business.

So while you're busy mapping your forest, you'll know there's an expert taking care of the trees.

For more information, contact M. Troy Woods, V.P. Marketing, P.O. Box 1755, Columbus, GA 31902-1755, (404) 649-2300.

A Survival Kit For Branch Networks

The three key determinants of bank-branch profitability are scale of operations,' staffing patterns, and product-pricing and product-mix management.

As it is now well known, it is becoming increasingly difficult to operate a branch network profitably unless the average branch deposit size is sufficiently large, perhaps as large as $25 million.

Branch operations are highly scale sensitive: Every doubling in branch size reduces the unit costs of branch operations by some 25%. Scale is also critical in back-office operations: Every doubling of volume will reduce the unit costs of check processing, programming, and data processing by 20% to 40%.

Before the elimination of Regulation Q, it was possible to operate profitably with smaller branches and back-office operations. That's because the ratio of high-profit transactions balances to total deposit balances was much higher than it is today.

Demise of the DDA

Since the mid-1970s, customers have been switching out of demand deposits and savings into increasingly price-sensitive time deposits and money market deposit accounts. From the mid-'70s to the mid-'80s the compound annual growth rate of time deposits amounted to nearly 10%.

From their inception in the early 1980s to the mid-1980s, MMDAs grew at an annual compound growth of more than 90%. By contrast, the growth rate of DDAs and savings accounts has been exceedingly slow; in fact, since the mid-1970s, there has been practically no growth at all in the total of savings balances.

"A good-earning banks, part-timers account for 60% of hours worked."

Allen has analyzed branch workloads, it has found evidence of considerable underutilization of staff.

Twiddling Thumbs

For example, at one representative institution, Booz-Allen found that branch platform personnel spent about 75% to 80% of their time performing reasonably productive tasks and the remaining 20% to 25% of their time doing nothing. That platform personnel haven't enough to do is perhaps understandable. When branches made a lot of small-business and personal loans, they needed a great many platform people.

But most loans have since been pulled out of the branches and administered centrally. Unfortunately, however, platform staffing at many banks is still geared to those bygone requirements. As a result, platform personnel end up either doing nothing or providing excess service.

Need for Part-Timers

Although managed somewhat more carefully than platform personnel, tellers are also underutilized. McMahon finds evidence of 15% to 20% excess capacity among tellers at major banks.

The principal reason is that, despite lip service to the idea of variable staffing – bringing in part-timers to meet peak demands – banks have not yet fully implemented this notion. Utilization of part-time help is still sporadic, depending to a large degree on the whims and predilections of individual branch managers.

A 20% Earnings Gain

McMahon argues that potential savings of 15% of direct branch-network expense (equal to perhaps 20% of branch after-tax profits) are possible if banks make more concerted efforts to pursue full-time staffs by more judicious employment of part-timers, both at teller windows and on platforms. The difference between good- and poor-earning banks, he says, is that at poor-earning ones, part-timers account for only about 10% of total hours worked, whereas at the good-earning banks, the proportion of hours worked by part-timers amounts to as much as 60%.

In order to achieve the level of

CRIME BLOTTER / *By Tom Leander*

St Germain Linked To Target of Probe

Former Rhode Island Congressman Fernand St Germain sought out investments in troubled thrifts for a businessman targeted by a federal probe into a multimillion-dollar alleged fraud, according to a report in the *Boston Globe*.

The Democrat, then chairman of the House Banking Committee, was defeated for reelection in 1988, ending his long tenure as congressional point man for the savings and loan industry.

Mr. St Germain continued his interest in the industry, however, working as a consultant to find S&L investments for Michael Lolicata, a Lincoln, R.I., businessman. Mr. Lolicata is accused in civil lawsuits of cheating investors and banks of as much as $20 million, the *Globe* reported, citing documents filed in U.S. Bankruptcy Court in Boston.

In return, Mr. St Germain received $100,000 to cover the costs of starting up his Washington law office.

Mr. St Germain's involvement with Mr. Lolicata emerged from court papers filed in connection with the bankruptcy of two equipment-leasing companies controlled by Mr. Lolicata, Commercial Management Services Inc. and Financial Equity Services Inc.

Mr. Lolicata is under investigation in an alleged fraud blamed for the failure of Jefferson Loan & Investment Bank of Providence, R.I. The tiny thrift was seized this year.

Fernand St Germain
Former Congressman

The former congressman's efforts apparently led to no transactions, but Mr. St Germain talked with officials of struggling thrifts in Connecticut, Georgia, Florida, Louisiana, and California, according to the bankruptcy court papers.

"I'm just the goat, the sacrificial lamb," Mr. St Germain told the *Globe*. He said the work he did for Mr. Lolicata was minimal.

The FBI is investigating Mr. Lolicata in connection with the collapse of his two companies, including one in which Jefferson Loan & Investment had invested heavily. A federal grand jury in Providence has heard testimony in the case.

Mr. Lolicata could not be reached for comment, and his lawyer did not return phone calls, the newspaper said.

Guilty Pleas in Scam At Car Dealership

Four former employees of Grand Wilshire Group of Companies, based in Glendora, Calif., pleaded guilty last week to fraud charges in a scam that bilked $50 million from Imperial Savings Association, Heller Financial Inc., General Electric Capital Corp., and several small California banks, federal prosecutors said.

Bruce Li, 31, a GWG executive vice president; Ramon Relosa Jr., 44, the company's general manager; Emelita Carino, 39, of West Covina, Calif., who worked for president and chief executive officer Eminiano Reodica Jr. to solicit investors for GWG; and Francisco Villasenor, 53, an accounting manager, admitted their roles in the fraud.

GWG was the third-largest car dealership in the country, with 700 employees and 25 branches in California.

In his guilty plea, Mr. Li admitted telling GWG employees how to use the computer system to gain access to genuine TRW credit reports and then to delete negative credit information about people who had bought cars from GWG.

The falsified TRW reports were submitted by GWG to financial institutions that had extended credit lines secured by car sales contracts.

Mr. Villasenior admitted participating in the alteration of credit reports. They allowed GWG to obtain extended credit lines of up to $300 million, said Assistant U.S. Attorney Ronni B. MacLaren, who is prosecuting the case. The four employees are to be sentenced Aug. 28.

The investigation into fraud at GWG is continuing.

Women Mined Gold From Banks' Trash

Two Seattle-area women have been convicted of check forgery scheme that involved documents and information they picked out of bank trash.

Jane Lunbeck and Julienne Myers each pleaded guilty in a King County court to nine counts of forgery. The King County prosecutor's office said the two collected checks, deposit slips, and other documents from bags of trash taken at night from dumpsters outside bank offices.

Then, using stolen checks and blank deposit slips, the women would deposit forged checks, asking for several hundred dollars in cash on the spot. Usually, they made the phony deposits at bank drive-up windows.

The two reportedly carried out the scam more than 100 times, about half of them at branches of Seafirst National Bank, a subsidiary of BankAmerica Corp. The prosecutor's office said the women were caught after a suspicious teller noted their license number.

In the stolen trash bags, Ms. Lunbeck and Ms. Myers reportedly found items as sensitive as completed signature cards listing Social Security numbers and mothers' maiden names.

"I can't believe the things banks throw out," Ms. Lunbeck reportedly said.

— **Sam Zuckerman**

COMMENT

Continued from *page 4*

personnel savings possible, banks need to take the following steps: (1) senior management must make the necessary commitment to reducing costs; (2) banks must build models that predict required staffing at each branch at given times of the day and given days of the week; (3) human resources departments must develop the capability to find suitable part-timers; (4) involves identifying potential minority-group hires – a step that will not only reduce costs but also help satisfy the bank's affirmative-action requirements); and (4) branch managers must be incented to employ part-time help.

Cross-Subsidized Customers

Another critical element in improving branch profitability is product pricing. Many banks undervalue what there is considerable cross-subsidization among customers.

"Success depends on scale, market focus, and discipline."

It is sometimes argued that the high-balance depositor subsidizes the low-balance depositor, but this is not precisely true. Banks generally charge the very-low-balance customer (deposit under $1,000) a high enough fee to cover at least the direct costs of servicing his account. Where the cross-subsidization occurs is between those with very large balances and those with medium-size balances.

At one typical bank, customers who hold balances of between $1,000 and $7,500 (40% of all accounts) did not generate enough profits to cover even the direct costs of account service. All the profits on this deposit product were generated by the 24% of customers who held balances in excess of $7,500.

Jettisoning Average Pricing

Booz-Allen recommends a differential- as opposed to an average-pricing strategy. The bank needs to raise prices to those customers with balances of between $1,000 and $7,500. Market research and repricing experience suggest that there is a significant opportunity (resulting in a likely increase of as much as 15% in after-tax profits) to lift prices to these medium-balance customers without losing many accounts.

At the same time, it is advisable to reduce prices to the high-balance customers because it is prophylactic: removing the threat that other banks and financial intermediaries will lower their prices on these unsustainably-profitable accounts, thereby luring away customers and leaving the bank with only low-value accounts.

Asymmetric Rewards

McMahon ascribes the failure of banks to implement a differential-pricing strategy at least in part to an asymmetric reward pattern. Those who make pricing decisions are criticized when these decisions lead to a deposit runoff. But they are not often rewarded for initiatives that increase profits. That's because deposit runoffs are highly visible, whereas it is often very difficult to determine where the bank is actually making its money.

The solution to this problem is obvious: Banks must build a management information system that provides data on retail product profitability. Many banks say they have such a system, but often as not the system is seriously flawed.

A final area for profit enhancement is product-mix management. Here the prescriptions are more negative than positive. Banks must resist the tendency to grow unprofitably by transforming high-margin deposit accounts into low- or no-margin ones. When banks try to grow more rapidly than their peers in the same market, they generally must do so by acquiring highly price sensitive CDs and money market accounts. The result is almost always a deterioration in the net interest margin.

McMahon cites the typical case of a bank that launched a CD promotion program that netted over $200 million. Since only 35% of this money was cannibalized from existing accounts, the bank raised 65% in new money. I think we thought that the promotion was a huge success.

"Platform workers spend as much as a quarter of their time doing nothing."

Costs of Cannibalization

In point of fact, it was a dismal failure because the cannibalized accounts – e.g., statement savings and demand deposits – earned much higher margins than did the new CDs. When the noninterest costs of raising the CDs were added to the margin losses, the bank ended up losing a million dollars. And since the margin losses would continue in subsequent years, the loss in shareholder value was considerably greater.

Booz-Allen is convinced that branch networks can be made profitable, but only for those banks with adequate scale, market focus, and management discipline. Banks that would raise earnings on deposits to the breakeven level, identified in our last column as 12 to 15 basis points, or an 8% to 9% return on equity, must at a minimum take the following steps:

- Focus on in-market acquisitions and consolidations.
- Develop models and management information systems that will reveal individual-branch staffing needs and individual-product profitability.
- Make increased decisions about the tradeoff between growth and profits.
- Improve product pricing to minimize or eliminate customer cross-subsidization. □

Citibank Merger Talks End

WASHINGTON — Merger talks have ended without agreement between Citibank, Washington, and United Savings Bank, Tysons Corner, Va., according to the Virginia thrift.

The halt in talks makes unlikely any move soon by the Citicorp unit into the northern Virginia market; it also thwarts United Savings' attempt to recapitalize. □

If your institution issued a million checks last year, you'd be doing O.K.

If you had issued them using our Official Checks you'd be doing about $650,000 better.

Here's why. With American Express' Official Checks, you earn commissions on 100% of your outstandings. And we reduce your back office labor costs. So altogether, you can earn an average of 65¢ more profit on every check you issue.*

Just think, your funds disbursement items including teller, loan, dividend and expense checks could actually improve your earnings.

Call us today at 1-800-458-8677. And make your bottom line look even better.

The American Express' Official Check.

CREDIT UNIONS

With Burkhart Retiring, NCUA Losing Strong Voice

By BILL ATKINSON

For the eight years she has been a member of the National Credit Union Administration's three-person board, Elizabeth F. Burkhart has upheld the traditional values of the credit union movement.

She has pushed for credit unions in low-income neighborhoods, on college campuses, and most recently, in Poland. She has also stressed the importance of retaining volunteers to run the institutions.

On Aug. 17, Mrs. Burkhart will retire and join her husband in Hawaii. She takes a pragmatic view, saying that retirement won't be traumatic. "I generally close the door on what I have done," she said. "It's just another chapter." No one has yet been named to replace her.

But Mrs. Burkhart, 54, will be sorely missed, said Harry Blaisdell, who was once her executive assistant and now works as part-time executive director for the National College Student Credit Union Council.

Elizabeth Burkhart

"She has always stuck up for the little guy – be it a credit union or a credit union member. She is a very strong believer in fair play," said Mr. Blaisdell.

Clifford N. Rosenthal, executive director of the National Federation of Community Development Credit Unions, said: "She didn't always agree with us, and we didn't always agree with her, but I believed she shared our view that serving poor people was the original mission of the credit union movement." The New York-based association represents 100 institutions serving low-income customers.

"She visited many low-income credit unions, from the ghettos of the Northeast to the Navajo reservations," Mr. Rosenthal said.

From Migrant Labor to Marine Corps

Mrs. Burkhart grew up in Donna, Tex., the eldest of 13 children in a family of Hispanic migrant laborers who picked cotton.

"While I was still young we never went outside Texas – we just followed the cotton crops," she said. "The interesting thing about working in the fields is that you quickly learn that you are the master of your fate."

At 13 she began to mold her future, knowing she did not want to spend the rest of her life picking cotton or peeling tomatoes in a factory. She persuaded her parents to let her stay home alone and attend school. In 1954 she graduated from high school and began a two-year stint in the Marine Corps.

She later attended Pan American University in Edinburg, Tex., where she majored in music. She was married in her junior year and then moved to Wichita Falls, Kan., where she graduated with an English degree from Midwestern University in 1968.

For a time, Mrs. Burkhart taught grade school in a ghetto, but the job wore her down and her doctor advised her to retire. She then joined Texas Commerce Bank as a secretary and worked her way into commercial lending. She also earned a master's degree in business administration from Houston Baptist University.

Worked for Bush in 1980 Campaign

Mrs. Burkhart took a leave of absence from the bank to work on the Bush presidential campaign in 1980. Two years later, the Reagan administration appointed her to the NCUA's board.

In charge of expanding the membership of credit unions, Mrs. Burkhart pushed for credit unions on university campuses. But some NCUA district officials resisted the idea, arguing that college students are transient.

"Mrs. Burkhart put their toes to the fire," said Teresa Castro, Mrs. Burkhart's executive assistant for six years. "She said, 'Let's put together a pilot program to see how credit unions would do.' " Today, there are 24 student-run credit unions on college and university campuses.

Earlier this year, Mrs. Burkhart met with an envoy of Polish representatives. She spent two days explaining the checks and balances of the U.S. government, the inner working of the NCUA, and how the regulatory system works.

One of Mrs. Burkhart's goals has been to promote professionalism among examiners by ensuring that they have the right tool for the job, said Mr. Blaisdell.

"I feel we can thank her for the examiners' having laptop computers, training, and computerized examinations," he said. "She was probably the first person to give it the green light, because she understands computers."

Mrs. Burkhart expresses some concern about the future of credit unions. She worries that volunteer staffs are being replaced by professional, salaried employees. She also worries that staffs and directors may become too complacent and not ask enough questions.

"The great value of the credit union in the original sense was that the average worker could learn the skill to direct the credit union," she said. "With a nonprofit you have to constantly be asking questions . . . and hold the CEO accountable." □

California Ahead in Consumer Lending

Continued from *page 1*

billion.

Consumer loans now account for 42.6% of the loans on the books of Bank of America, up from 36.5% at yearend 1989. At Wells they make up 37.8%, up from 33%, and at Security Pacific 36.5%, up from 33.5%.

The other large California bank, First Interstate Bank, had an increase of only 5.4% in its consumer portfolio, to $5.9 billion.

No End in Sight

The surge in consumer lending in California is expected to continue, even if it begins to wane in other areas of the country.

"The attitude of people in the East is that everything is going to hell and you should pull in your horns," said Michael Abrahams, a vice president at Bateman Eichman, Los Angeles. "Maybe some people should, but not out here in California."

The three large California banks are fighting each other tooth and nail for increased market share. Although most bankers say they are not engaging in rate wars, they do spend heavily on advertising and other marketing ploys.

"Customers' expenses in home equity loans and lines of credit are almost always being picked up by the institution," said Gerry Gunn, senior vice president in charge of consumer lending at Bank of America. "Obviously, anytime you do that you have to make sure the product is a longer-term, profitable one."

Dealing in Commodities

Because most consumer loans – credit cards, installment loans, mortgages, and home equity loans – are basically commodity products, there is little differentiation among the banks' offerings.

One exception is the hybrid of a fixed-rate mortgage and an adjustable-rate loan that Wells has used to gain prominence and that banks across the country have imitated. The loan carries a fixed rate for either five or 10 years, whichever the borrower chooses. The rate is then adjusted every six months to an index of rates on certificates of deposit.

Indeed, much of the push in California has been in the mortgage and home equity market. In 1989 mortgage loans grew 49% at Security Pacific, 45% at Wells, and 30% at Bank of America. The industry average was 14.6%.

Meanwhile, home equity loans increased 69% at Security Pacific, 56% at Bank of America, and 11% at Wells, compared with the industry average of 27%.

"Housing has been strong; it's softening some but it's still strong," said Robert Skinkle, regional economist at Wells. About 750,000 people moved to California in 1989, helping the mortgage market burgeon. According to Mr. Skinkle, many of the people who come to the state are young, successful, and ripe for homebuying.

Opportunities from S&L Crisis

Much of the growth in mortgage lending is also attributable to the changing texture of the California banking scene. The thrift crisis has taken its toll in the state, enabling banks to make big splashes in the home lending market. As the cleanup of the thrift industry continues, California's banks could become even larger players in the mortgage game.

Security Pacific, for example, picked up $2.7 billion worth of mortgages last week when it won the bidding for Gibraltar Savings, the largest California thrift under government control. Other California banks could make similar gains when Imperial Savings Association, a $9.6 billion San Diego thrift that is in conservatorship now, and Columbia Savings and Loan Association, an insolvent Beverly Hills institution expected to be seized by the federal government soon, are put on the auction block. Great American Bank, a $15.4 billion-asset California thrift must raise $350 million in new capital or restructure. □

Low-Yield Investments to Fund Low-Cost Housing

By ELLEN MEMMELAAR

NEW YORK — The Dime Savings Bank of New York announced last week that it will channel money to low-cost housing by offering savings products with reduced rates.

The difference between normal rates and the interest paid on these investments will lower the cost of loans made through Dime's community lending program.

CDs and Savings Accounts

Depositors in the Community Partnership Accounts can invest in either a savings account or a 12-month certificate of deposit. The savings account, which normally yields 5.47% interest, will yield 5.25%. Certificates of deposit, which normally yield 7.96%, will yield 7.66%. Minimum deposits are $50 for the savings account, $500 for the CD.

"There are a lot of people in this town who would like to give a little back," said Richard Parsons, Dime president. "This is a way ordinary people can begin to help."

Mr. Parsons said he hopes to attract $50 million to the institution during the next 12 to 18 months from individuals, institutional investors, and community and religious organizations.

The Community Partnership accounts were announced in local newspapers, will be promoted through statement stuffers and branch materials. The accounts are available through the 50 New York branches of the $11.7 billion-asset thrift.

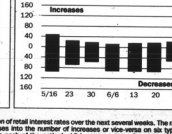
Vermont Bank Was Inspiration

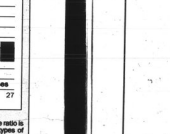
Chairman Harry Albright adopted the idea from Vermont National Bank, a subsidiary of Vermont Financial Services Corp., Brattleboro.

The Dime has a history of involvement in community housing issues, Mr. Parsons said. Two projects helped church groups fund low-cost housing in Brooklyn and in Harlem. □

AMERICAN BANKER /*Bank Rate Monitor's*™

Consumer Money Index — **Latest rate trend: Ratio becoming flat**





Bank Rate Monitor's ratio indicates the probable direction of retail interest rates over the next several weeks. The ratio is computed by dividing the total number of rate decreases into the number of increases or vice-versa on six types of accounts offered by the 10 largest banks and thrifts in each of the nation's 10 largest markets. Example: 100 rate increases and 25 decreases would make a 4-to-1 "Plus" ratio. Or, 100 decreases and 25 increases would make a 4-to-1 "Minus" ratio. Over time, the longer and farther the ratio moves on the Plus or Minus side, the more sustained the current rate cycle is likely to be. When the ratio suddenly moves strongly in an opposite direction, it usually signals the beginning or the end of a cycle. The graph shows how the ratio has moved over the past 9 weeks, and the bar chart shows the actual number of rate increases to decreases used to calculate the ratio. The greater the number of ups and downs, the longer the cycle probably will last.

Tighter Credit Starting to Pinch Construction in Golden State

By ANDREW REINBACH

The California construction market is beginning to cool as lenders stiffen their underwriting criteria, partly in response to calls for credit restraint from the federal government and partly in response to their own fears of overbuilding.

"It's fairly clear that lending criteria seem to have tightened in the past few months," said Carolyn Sherwood-Call, an economist at the San Francisco Federal Reserve Bank. "It certainly seems that real estate is cooling in California."

In the past 60 days, lenders who had been content to make deals with California developers who could put up equity contributions of 10% or less and preleasing of 20% or less have been insisting on as much as 20% in cash – and on having 30% to 50% of a proposed office building preleased. This virtual doubling of loan requirements, said developers, will cut new construction in half.

Housing Permits Down

Ms. Sherwood-Call said that the most recent data indicate that on a seasonally adjusted three-month moving average, housing permits in California are down 14% from a year earlier. The value of nonresidential construction fell 4%.

Until recently, California was the nation's last hot real estate development market. The state's fast-growing economy and population supported rising property prices that contrasted sharply with the real estate economies in most of the rest of the country, which have taken a beating.

But California's real estate market is at "an inflection point," Ms. Sherwood-Call says. And if it eventually shares the problems of the rest of the country, the second-tier commercial banks are the ones that are likely to be hurt most, according to Donald K. Crowley, executive vice president of Keefe, Bruyette & Woods, San Francisco.

"The smaller banks have multiples of exposure to the real estate market that the big banks don't," he said.

Likely Victims

Among the banks facing possible problems, he said, are City National Bank, Beverly Hills, which has 16% of its $4.5 billion in assets in construction loans and 18% in permanent mortgages, and Pacific Western Bank, San Jose, which has 24% of its $1.03 billion in assets in construction loans and 18% in permanent mortgages. These statistics are about average for the second tier of California banks, Mr. Crowley said.

City National's executive vice president for real estate, Jeffrey A. Cove, disagreed. "I think the big banks will have the problems, because they're lending to much more ambitious projects than we do," he said.

The cooling of real estate credit markets is very evident in bank lending to the types of businesses that constitute bread-and-butter real estate deals – a strip center with five stores and grocery, a 10-unit apartment house, or a small office center.

"Three months ago we would have considered a speculative office building with no preleasing," said Adele Kellman, a vice president of the Plaza Bank of Commerce, a San Jose-based bank with $478 million in assets. "But today, while it may still be a maybe, it's much less of a maybe."

Ms. Kellman said her bank's underwriting criteria have become considerably stricter in the past month, particularly in the past quarter. Debt coverage requirements, for example, used to be $1.10 in cash flow for every dollar lent; now it is $1.15 to $1.20. Required equity contributions went from as little as zero to 20% of total costs. The interest rate rose from 10% to 10.5% or even 11%. In general, the bank has reduced its limit on loan-to-value ratio to 60% from 70%.

Small banks like Ms. Kellman's tend to be more aggressive than bigger ones. But the big banks, while insisting that their underwriting has always been exemplary, have not all tightened their lending criteria.

Pacific Western Bank has not changed its underwriting criteria recently, according to Shari Fernandez, senior vice president for real estate construction. She reports that a typical construction loan she makes requires 15% to 20% cash and 1.1 debt coverage, with preleasing requirements decided on a case-by-case basis.

"We tightened our lending criteria five years ago," Ms. Fernandez said. "We didn't think the market would stay as hot as it was."

This does not square with other bankers' experiences, though. Mr. Cove of City National Bank reports that loan volume has dropped 20% to 25% in the past six months.

"We're going into another cycle now," said Mr. Cove. "It's a marketplace where you've got to keep on your toes." He said his bank expects debt coverage of 1.2 or higher, 50% preleasing, and 20% cash – with a coupon floating at 100 to 150 basis points over his bank's prime rate.

Norm for Developers

This is more in line with what developers have been experiencing in the state. "There's much less of an appetite to lend without substantial preleasing or equity, especially the latter," said Michael D. Barker, a principal of Barker-Parrinely Interests, commercial developers based in San Francisco. "And when a developer has to double his equity contributions, he cuts his production in half." Big moneycenter banks such as Wells Fargo, Security Pacific and Bank-America did not respond to requests for interviews.

The lending slowdown may turn out to be the best thing for the California real estate market, which seems to have been booming forever. A construction slowdown will mean less supply, which would tend to support prices and allow the state to avoid a Texas-type price plunge.

But some real estate experts doubt that tighter real estate credit will help. "It may be too little, too late," said Susan Hudson-Wilson, a vice president of research at Aldrich, Eastman & Waltch, a Boston-based pension advisory firm. "All of us are hoping it may not be true, but people are watching those markets very carefully."

Office Vacancies Rise

Office building vacancies are rising in California, and the rate of construction is outpacing employment growth in most of the major California office markets.

This is a clear indication that the office market, at least, has peaked and is heading for tough times; fewer employees means less demand for office space.

In downtown Los Angeles, for example, 1989 office starts were up 3.6%, and completions rose 2.5%. Employment growth, in contrast, grew only 1.6%, according to F. W. Dodge, a construction information firm. And 22% of the city's total office space inventory – six million square feet – is currently under construction.

Los Angeles historically absorbs 900,000 square feet per year.

While California economic growth continues to put the rest of the country to shame, it may not continue at the same high rates of the past decade.

"California is not immune [to economic problems]; it's resilient, but it's not immune," said Gary Luboff, a Los Angeles-based senior vice president at Sonnenblick-Goldman Corp., a real estate services firm. "We're definitely seeing more conservatism, a growing demand for cash – regardless of quality – and a paranoia about office buildings."

All this may mean that the California real estate market is about to join the rest of the nation.

"We may be at the end of a historic [real estate business] cycle, and the pent-up demand may be over," said Michael Beyard, director of commercial development research at the Urban Land Institute, a Washington-based industry group. "California is part of it. I don't see it as distinct from the rest of the country. It will share the problems of the Northeast. And given the sheer size of the market, it would have a real impact on the rest of the markets [in the United States]."

Attractive Place to Live

Of course, not all industry observers agree with those sentiments.

"The real strength of California has been that people want to be there," said Richard Kateley, president of Chicago-based Real Estate Research Corp. "People want to own property and develop and lend in that state. It's an intangible, but that's important in this business, and that will cushion any drop in that market."

In any event, said Mr. Kately, the cooling of the California market means different things to different people. "It's not good if you're a developer or a bank lending officer, but it's good for the industry," he said. □

Ominous Trends in California Office Markets
Construction and vacancies rose in 1989; office employment was weak

	% growth starts	% growth completions	Office vacancy rate	Change in vacancy rate	Office employment growth

Healthy Thrifts Pushed to Sell Realty Assets

Continued from *page 1*

ment projects in various stages of completion in the Southwest. Since those projects will be difficult to unload quickly, it is expected that the thrifts may be forced to dispose of good assets to meet additional capital requirements.

Under the new regulations, the impermissible assets may be kept but must be 100% capitalized by June 1994. They would have to be capitalized to 16.4%, from the current 6.4%, as of July 1; or the thrifts must tell the OTS what they plan to do within 60 days.

Among the assets now on the block are properties valued at $1.9 billion and owned by Landmark Land Co., parent of New Orleans-based Oak Tree Savings Bank. But the company doesn't expect to see that much.

"We're conducting a fire sale with a gun to our heads, so I expect someone is going to get a real deal," said Gerald G. Barton, president and chairman of Landmark.

Bad Effect Seen

"The regulations will clearly force some folks to sell good assets because we're in a bad market," said John Robinson, deputy director of supervisory analysis at the Office of Thrift Supervision.

> **"I expect someone is going to get a real deal."**
>
> **Gerald G. Barton**
> *Landmark Land Co.*

The practical effect for the thrifts will be an accounting wash, since any profits from sale of the good assets will wind up as capital contributions against the bad ones.

The thrifts that hold onto bad assets also "may face classification actions and be forced to write down their values," he added.

No Definitive List

Other assets besides real estate are included in the impermissible-assets category. But what they are is unclear, since, according to Mr. Robinson, neither the OTS nor the Office of the Comptroller of the Currency has a full list of permissible activities.

Mr. Robinson said that at least 10% of the nation's healthy thrifts are affected by the deadline, but that no hard numbers are available. Thrifts seized by the Resolution Trust Corp. are unaffected.

Ivan Faggen, national real estate partner for Arthur Andersen & Co., values the affected real estate at $2.5 billion to $10 billion.

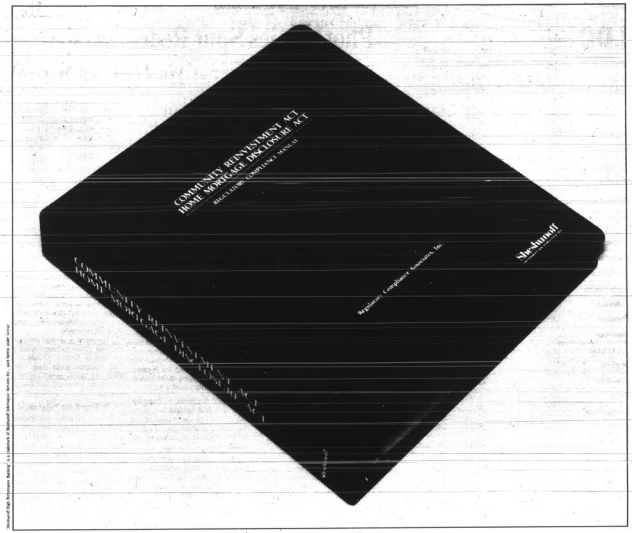
Developers Involved

Many of the assets are joint ventures with developers that are still under development. The thrifts' developer partners will probably not be able to buy out the thrifts, said Mr. Faggen.

"The partners only had [the thrifts] because they needed the money in the first place; the thrift was the financial partner. The problem is they're risk-oriented deals, and there's no market for risky deals today. And it's a tremendous amount of money [to finance]; I don't know where they're going to get it."

Thrifts are unlikely to lend the developer enough to buy them out because that might violate another OTS rule that no one debtor account for more than 100% of a thrift's equity.

Pointing out the financial squeeze on thrifts that the new regulations will cause, OTS' Mr. Robinson said that "Congress understood very well what they were doing. It's the start of a big change in the way the thrift industry does business." □



What the regulators don't tell you. 1-800-456-2340.

Complying with CRA/HMDA is simple. You post your public notice, keep a public file, and file the required HMDA forms. And you act in the *spirit* of the law and actively support your community.

Now what exactly does that last part mean?

Turns out it's not as simple as it seems. The regulators will grade you on your efforts. And your grade will become available to the public in a few months. So anyone can find out how you're doing in this gray area. And use it to challenge your decisions to branch or enter new businesses.

The only way to prevent this threat is to be sure you have a CRA/HMDA program that complies in spirit, act, and deed with the regs. And while the regulators don't tell you how to do that, we do.

The **Community Reinvestment Act/Home Mortgage Disclosure Act Regulatory Compliance Manual** covers it all in one easy-to-read book.

We show you exactly how to structure a good CRA program, develop community outreach programs that meet community needs, document everything, train your people to comply, and audit your program to be sure it works.

There's also a summary of the regs in plain english, a reprint of the regs for your reference, and a review of an actual program in use now at successful banks.

You can be sure it meets the regulators' standards because it's written by a former OCC field officer. And it's published by Sheshunoff Information Services Inc., the leader in high performance banking information since 1971.

Get your copy and make sure you've got a CRA/HMDA program that no one can challenge. Call 1-800-456-2340 today.

Bulgaria Halts Interest Payment

Bulgaria's Foreign Trade Bank, which holds roughly 95% of Bulgaria's debt, has asked commercial bank creditors to roll over principal and interest due for the period June 30 to Sept. 29.

This is the first time Bulgaria has failed to make interest payments. Further, all forms of Bulgaria's debt – long-term, short-term trade financing, and interbank lines – will be affected.

By suspending interest payments, which total $400 million for the rest of the year, Bulgaria has signaled that its problems are deeper than envisioned.

Meanwhile, there is doubt on the precise definition of short-term debt. Bulgaria considers debt maturing in three to four years as short-term, banking sources said. Banks are working to secure accurate data from Bulgaria. — **Paul Kelash,** *LDC Debt Report*

Photocopies Spur Redesign of Notes

Britain Hopes New 'Fiver' Will Foil Color Machines

By JOHN EVANS

HARD TO COPY: New British notes have engraved concentric circles that are designed to make counterfeiting difficult.

LONDON — The Bank of England, guardian of Britain's currency, is confident that it has met the biggest challenge to the integrity of the nation's paper money since a wartime Nazi plot to forge some $800 million worth of pounds sterling.

In a race with a new generation of high-tech forgers, the central bank has just unveiled a new five-pound banknote. It marks the culmination of an intensive program to combat "touch-of-a-button" banknote counterfeiting based on the latest high-quality color laser photocopiers.

The British reckon their new bill, known popularly as the "fiver," is among the most difficult in the world to forge.

Timely Innovation

A metallic strip was introduced in Britain in 1940. It proved a useful anticipation of the production by the Nazi SS in 1942 and otherwise near-perfect forgeries of British notes, using engravers imprisoned in the Third Reich's concentration camps.

In the post-war period, the need to redesign Britain's banknotes was recognized as long ago as the early 1970s, when color photocopiers started to emerge. This followed the patenting in Japan of the world's first color copier 10 years earlier.

Concern mounted at the beginning of the 1980s, when advanced laser color scanners were introduced. But, at a cost of up to $450,000 apiece, the new equipment was largely restricted to commercial printers.

The Price Was Right

Then, in 1987, color photocopying took a "quantum leap" with the introduction of machines such as the Japanese Canon CLC laser copier, costing less than $40,000 and removing the special skills needed for counterfeiting, says a Bank of England spokesman.

The new technology gave the central bank's currency experts "nightmares," he confesses, after officials saw how the new copiers effortlessly produced high-quality reproductions of British bills of all denominations.

Those concerns were justified by 1988, when the first color photocopier forgeries of bills were seized by Scotland Yard.

Hanging Eliminated

The British could no longer depend on one of their old defenses against forgery — the Capital punishment for that offense was ended in 1832 but not before more than 300 individuals were strung up for forging the coins and notes of the realm during a century and a half.

Instead, the Bank of England went out and bought a Canon copier and, in the words of its specialists, started to "fiddle" around with it to discover its weaknesses.

The vulnerability was hard to find, with the ultra-sensitive machine producing 255 tonal ranges to create an almost infinite variety of color mixes.

After two years of experiments, the main answer of the Bank of England investigators has been to produce a bill with intricate concentric engraved patterns – a design that the photocopier blurs and distorts.

In addition, the new "fiver" note is based on 23 pastel shades, a design that was produced with the help of a computer program devised by Britain's main nuclear energy research establishment. These tones, based on an underlying turquoise color, help confuse the copier's built-in computer.

Meantime, a central feature of the bill remains the traditional portrait of Queen Elizabeth II. Her portrait is in gray rather than the sickly green color the designers preferred but decided against.

Defenses Are Vulnerable

British officials acknowledge that with enough time and investment, skilled forgers can partly overcome the new defenses and produce a reasonable facsimile. But they calculate that it would cost the crooks up to $2.50 to forge each $8.50 note, probably an uneconomic proposition considering the steep discounts from face value at which such bills are usually laundered by crime syndicates.

The Bank of England has one final ace in the hole. Built into the new note is an unseen device, one that remains a closely guarded secret. □

OCC Makes Thrift Slash Merger Price

By STEPHEN KLEEGE

NEW YORK — Mid-State Federal Savings Bank was forced over the weekend – after bank regulators took a look at its assets – to reduce sharply the selling price in its merger agreement with First Florida Bank.

In the first such examination in Florida, the Office of the Comptroller of the Currency took a harsher line on reserve requirements for Ocala, Fla.-based Mid-State than the regulators had taken last fall. Mid-State chairman Charles E. Harris said it was a harder line than the OCC takes with national banks.

Required Growth in Reserves

The OCC examiners said First Florida, Tampa, would have to increase reserves by $7.6 million against possible losses on Mid-State assets if it folded the thrift into a national bank subsidiary.

"The OCC is saying, 'We want to make sure you don't track any of that mud in here,'" said analyst Samuel Beebe of Williams Securities Group, Tampa.

Thomas Bascom, OCC manager of internal communications, said it is routine to examine assets of financial institutions being acquired by national banks.

Mr. Baucom denied that Mid-State had been held to a higher standard than national banks.

The examination of Mid-State, by the same team that recently prompted an outcry among Florida banks for requiring that some current loans be classified as nonperforming, led to a hurried series of meetings last weekend. The thrift was able to preserve its sale but only by cutting the price by $11.7 million, or $5 a share, to $22.43.

Mid-State's stock was down $4.25 a share, to $19, at midafternoon Monday. First Florida was at $22, up $.75 cents. These was little trading in either stock. □

American Banker Buys Data Service

NEW YORK — American Banker-Bond Buyer, publisher of the *American Banker*, has acquired Trepp Information Services Inc. and its subsidiary Trepp Pricing Services Inc., which collect and analyze information on asset-backed securities.

"Acquiring Trepp enhances our position as the leading supplier of data and information on publicly traded asset-backed securities and collateralized mortgage obligations," said George W. Landgrebe, president and chief executive officer of American Banker-Bond Buyer.

Richard C. Trepp will continue as president and CEO of Trepp Information Services, which will be part of the Securities Group of American Banker-Bond Buyer, reporting to Executive Vice President Joseph V. Riccobono. □

Congress May Reverse Bank Victory on Check Cashing

Continued from *page 1*

that Democrats were reluctant to jeopardize. Lawmakers will have no such qualms about tying the measure to Truth-in-Savings.

Finally, Sen. Metzenbaum compromised repeatedly to satisfy concerns raised by his colleagues, including Senate Republican leader Robert Dole, who spoke favorably about the amendment. By contrast, bank lobbyists refused to discuss compromise, a stance that was said to have irritated some supporters, including Sen. Bond.

Reevaluation Urged

"The vote was much closer than the industry expected," said Kim Shafer, counsel to Sen. Dixon's subcommittee on consumer and regulatory affairs. "Everyone has to reevaluate their position based on that vote and on Sen. Metzenbaum's willingness to compromise."

Ms. Shafer would not discuss

> **"If Dixon and Bond offer the amendment, I would definitely be nervous."**
>
> **Kenneth Guenther**
> *Independent Bankers Association*

the possibility of a new amendment, except to say she has not been directed by Sen. Dixon to begin work on legislation. Sen. Bond's banking aide declined to comment. The Senate is in recess for the Independence Day holiday.

"If Dixon and Bond offer the amendment, I would definitely be nervous," said Kenneth Guenther, executive vice president of the Independent Bankers Association of America. "Bankers need to get to work on this."

A Final Compromise

Industry sources familiar with the Dixon-Bond proposal that seems to be emerging described it as a milder version of Sen. Metzenbaum's final compromise. That measure exempted banks and thrifts with less than $25 million in assets, as well as those institutions already cashing government checks for noncustomers.

The measure also will permit banks to charge for cashing checks to recover costs, as determined by the Fed, and generate a profit. Sen. Metzenbaum has suggested a 10% profit margin, and a Dixon-Bond amendment may give depository institutions even more flexibility.

The bill is also likely to include a provision mandating a study of whether the U.S. Postal Service's network of offices could be used to cash government checks.

However, the Dixon-Bond amendment would likely go farther in satisfying concerns raised by bankers. First, it would permit banks to require the use of direct deposit for at least some users. Moreover, one knowledgeable source said it would give banks greater latitude to refuse to cash some checks and would not include harsh penalties for failing to comply. □

Great Western Starts Drive to Win New Florida Customers

Continued from *page 1*

lion-asset company bought 13 Florida branches with $700 million in deposits from Carteret Savings Bank of Morristown, N.J.

The acquisitions more than doubled Great Western's Florida deposit base to $6 billion and tripled the number of offices.

Great Western entered the Florida market in 1983.

"We think the acquisitions give us sufficient size to increase our deposit share substantially and improve our home mortgage origination capability," Mr. Miller said.

"It is a good deal for them," said Henry Peltz, thrift analyst at Keefe, Bruyette & Woods Inc., New York. "Great Western is a well-run organization and they are paying a low price for entry."

Great Western paid the RTC $86 million for the CenTrust operations and $3.75 million or a premium of one-half of 1% for the Gibraltar deposits.

The acquisitions "should provide a strong growth opportunity for Great Western once it steps up its marketing and sells a much more trustworthy image to customers" than the prior ownerships, said W. Coleman Bitting, thrift analyst at Kidder, Peabody & Co. Mr. Bitting predicts' Great Western can generate $3.3 billion more in retail deposits by yearend 1991.

Mr. Bitting said Great Western's non-Florida offices hold $90 million in deposits per branch and currently the 154 Florida offices hold only $40 million per branch.

Great Western had tried to buy 63 CenTrust branches for $150 million before the thrift was seized by the government and was willing to pay $100 million.

Great Western will certainly close some of the 154 branches, but chairman and chief executive officer James F. Montgomery said it has not yet been decided how many or which ones will be shuttered. □

Charter's Banks Bide Their Time, Despite Crash of Its Junk Bonds

By STEVEN LIPIN

Despite a drastic drop in the prices of Charter Medical Corp.'s high-yield bonds, the company's bank creditors, remaining cautious, have not begun to clamp down on the company – at least not yet – lenders and analysts said.

Charter Medical, a leading operator of psychiatric hospitals, was taken private in 1988 in a $1.5 billion leveraged buyout. It faces huge liabilities in the next few years, including an increasing amortization schedule for the roughly $700 million that will remain by September of an $880 million bank financing package.

Down the road, experts said, the company may have to restructure its highly leveraged balance sheet, which includes about $1.5 billion in debt, or at least renegotiate its bank lines of credit.

Capital Insufficiency Foreseen

"In our view, the availability of capital may suffice for a year or less," said Roger Gordon, an analyst at Donaldson, Lufkin & Jenrette Securities Corp. "I believe some kind of restructuring of the company's long-term debt is going to have to take place."

Tax increased risk "facing highly leveraged companies with refinancing needs" was a major factor cited Friday by Moody's Investors Service when it downgraded the company's $1 billion in high-yield bonds.

"Meeting future years' bank debt amortization obligations is likely to require external sourcing of funds, which Moody's believes represents higher risk for the company in the present financial environment," the rating service said.

"There's not sufficient cash to make all the bank payments down the road," Sandra Swirl, an assistant vice president at Moody's, said in an interview. "If they can't raise capital, they won't meet bank payments without asset sale."

The Charter buyout, unlike many LBOs, did not envision asset sales. In fact, the company has expanded rapidly since the buyout.

But so far, bank lenders appear to be giving the company breathing room to manage its way out of the problems. "We've been aware of what's been going on," said one Charter lender. "But we have confidence that management's on the right track and will make adjustments."

Banks led by units of Bank of New York Co., BankAmerica Corp., and Wells Fargo & Co. helped finance the buyout; junk bonds financed the rest. Officials of the agent banks declined to discuss the situation.

When the company went private, it arranged a $100 million working-capital facility, a $275 million employee stock ownership plan, and a revolving credit facility that started at $305 million, Ms. Swirl said.

Bank Credits Shrink

The revolving credit is reduced by $60 million to $80 million annually; it is to drop to $398 million in September. In addition, the company must make $50 million in annual sinking fund payments. Ms. Swirl said, reducing that obligation to about $230 million by September. The bulk of the working-capital facility remains outstanding.

Aug. 15, $58.4 million of interest comes due on some of Charter's $1 billion in junk bonds. Also due then is a $28 million principal payment on bank loans.

While all analysts believe the company will make its principal and interest payments in coming months, they are concerned about the need for financing in coming years.

"The market seems jittery about financing," said Ms. Swirl of Moody's, referring to the steep price decline in the company's junk bonds. Added one of the company's bank lenders, "We're not in the position to lend more. We need to see management turn around the situation."

'Financing Plan' Sought

The current bank agreements allow for additional financing, most likely through a sale-leaseback of properties to a real estate investment trust.

The company was said to be considering a $150 million sale to a health-care REIT, but a company spokesman would only confirm that executives were working on a "financing plan," adding "No arrangement has been concluded."

Why the need for additional financing, when most LBO companies try to reduce their debt? Unlike most leveraged buyouts, Charter deal was structured so that additional financing would be needed to fund aggressive growth.

"It was an unusual LBO. At the time, they contemplated to expand hospitals and needed the incremental borrowing," said Ms. Swirl of Moody's. In fact, the company has added 11 hospitals since the buyout.

Additional borrowing by leveraged companies, though, is becoming increasingly difficult in the current skittish financing environment. For its expansion, the company has been investing $150 million to $200 million a year, analysts said.

The good news is that such expenditures should drop next year by as much as 50% as Charter reduces hospital construction, said Ms. Swirl. That will relieve cash-flow pressures.

But the relief is likely to be short-lived. "There should be a cash-flow recovery in 1991," she said, "but the problem is: Free cash flow in 1992 is not sufficient to make scheduled bank payments."

The downgrading was the company's latest setback. The rating service had been placing possible fraud at Charter; the Department of Labor is looking into its ESOP; it had to take a $35 million charge against earnings because of accounting errors, and chronic cash flow to fall 30% this year.

Loss Widens in Quarter

For the second quarter, ended March 31, the company recorded a $67 million loss, compared to an $11.2 million loss in the year-earlier period.

> **"There's not sufficient cash to make all the bank payments down the road."**
>
> **Sandra Swirl**
> *Moody's Investors Service*

After 10% annual growth through most of the 1980s, the demand for medical beds began falling precipitously. Demand for psychiatric hospital rooms "has come to a standstill," an analyst said.

"There's no getting around the fact that it was a disastrous second quarter," said the bank lender. "They may have problems for the whole year."

The company spokesman disputed the negative cash-flow figure, calling it "an inappropriate to discuss cash levels" and beyond saying, "We think the cash flow is adequate."

Restructuring Not Considered

He did say, though, that Charter was not anticipating problems with the bank and was not considering restructuring its debt. He also disagreed with the view that demand for psychiatric care has faltered, saying that "business is fine."

The company's junk bonds, however, seem to be finding little solace. They are trading in the high 30s, against a par value of 100, and Charter's payment-in-kind debentures are quoted at about $10 per $100 of face value. These levels are commonly associated with exchange offers, suspension of interest payments, or bankruptcy, experts agreed.□

Callable on or after July 10, 1993
Price 100%

The debentures of July 11, 1994 and the debentures of July 10, 2000 are redeemable on or after July 11, 1992 and July 10, 1993, respectively, in whole or in part at the option of the Corporation at any time (and from time to time) upon giving notice as provided in the Indenture. The redemption price of the debentures of July 11, 1994 will be 100% of the principal amount redeemed plus accrued interest thereon to the date of redemption. The redemption price of the debentures of July 10, 2000 initially will be a percentage of the principal amount redeemed equal to 100% plus one-half the coupon rate of the debentures, plus accrued interest on the amount redeemed. The redemption price for debentures of July 10, 2000 will decrease on each succeeding interest payment date thereafter to 100% of the principal amount. See Note to Debt Securities information statement dated June 26, 1990 relating to these debentures. The amount payable at maturity will be equal to 100% of the then outstanding principal balance, plus accrued interest

The debentures are the obligations of the Federal National Mortgage Association, a corporation organized and existing under the laws of the United States, and are issued under the authority contained in Section 304(b) of the Federal National Mortgage Association Charter Act (12 U.S.C. 1716 et seq.)

The debentures, together with any interest therein, are not guaranteed by the United States and do not constitute a debt or obligation of the United States or of any agency or instrumentality thereof other than Fannie Mae.

This offering is made by the Federal National Mortgage Association through its Senior Vice President-Finance and Treasurer with the assistance of a nationwide Selling Group of recognized dealers in securities. Debentures will be available in Book-Entry form only. There will be no definitive securities offered

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the market value of all common shares outstanding. (As of March 30, 1990, the market value of bank stocks as a group was $68.6 mil. and for thrifts $121.45 mil.) 52 Wk Hi: the closing 52-week high and low prices for the stock. PE: the price/earnings ratio: It is the current stock price divided by the trailing five-year fiscal earnings per share adjusted for latest announced earnings. Mkt. to Book: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Book value is adjusted for announced earnings and dividends. Chg.: The price at which the stock last traded. If no trades for the latest day, the most recent. Bank and Thrift Indexes: A weighted average of the top 250 banks in market value and the top 50 thrifts in market value, respectively. **Highlights show largest percent gainers/losers in price; and two volume leaders.** Volume as a percentage of today's volume as a percentage of average shares traded daily over the past year.

Data Sources: IDD, Securities, Charlottesville, Va. 804/977-1600, produced the tables. Financial News Network, Vienna, VA, provides SNL with the daily prices.

Bank Shares Declined by 1.73% In Second Quarter as Market Rose

Continued from *page 1*

for investors, plummeted 24.3%, and Dominion Bankshares Corp., Roanoke, Va., which operates in an area previously considered not to have major problems, fell 24.2%.

"I think there are some unpleasant surprises yet to come and the market is bracing for them," said Felice M. Gelman, an analyst in New York for Dillon, Read & Co. "What you're seeing is people beginning to believe that things will continue to deteriorate, with nonperforming assets going up.

"More specifically, it's the dual demons of credit-quality problems and lack of revenue growth," she said. "It's a tough operating environment all around for banks."

Better Environment Awaited

"Before we get relief, we are going to have to get completely through the OCC [Office of the Comptroller of the Currency] examinations of banks, and see a better interest rate environment, which I am not convinced will happen very near-term," said Ms. Bush.

Some banking companies did manage to beat the odds and post strong price performances in the second quarter, but there were often special reasons for the upward movements.

First Interstate Bancorp., Los Angeles, led the way among the top 25 bank stocks, rising 18.4%. But its stock had been deeply depressed and the rally, while partly a response to good first-quarter results, was attributed by most analysts to takeover rumors after a management change.

Takeover Talk a Factor

Valley National Corp., Phoenix, also registered a major gain – 17.25% – off a depressed base as investors speculated on the likelihood that the real estate recession in Arizona has abated and about the takeover possibilities for the state's last major independent bank.

Only a few banks managed gains on the basis of strong earnings and future prospects of increased profitability.

Among them, KeyCorp, Albany, N.Y., which is now reaping benefits from its decision, several years ago to diversify out of the Northeast by acquiring banks in the Pacific Northwest, gained 14.6% during the three months.

Others in this category are Wells Fargo & Co., San Francisco, which gained 13.25%; Bankers Trust New York Corp., which rose 12.4%; and Norwest Corp., Minneapolis, which appreciated by 10.1%.

But indexes tracking price performance of various sectors of the banking industry show that banks at all levels are being buffeted in the equity markets.

New England Issues Weak

New England banks again registered the weakest peformance of the industry, falling 11.5% in the quarter.

Even Midwest bank, which have been among the least devalued in the industry's price slide, declined 0.57%.

Superregional banks, formerly high flyers as a group, managed a 0.52% gain, but money-center banks fell below the line, dropping about 1% in the quarter.

* * *

MONDAY'S MARKET

Bank stocks did not start the first trading session of the third quarter on Monday any better than they finished the second on Friday. They mostly edged down while the overall market rose.

Shares of Citicorp., which fell 1.6% in the second quarter, declined 25 cents, to $22.375. Chase Manhattan Corp., which fell 14.4% in the previous quarter, opened the third quarter down 12.5 cents, to $23.75.

BankAmerica Slips

BankAmerica Corp., which gained 5.3% in the just-ended quarter, was off 25 cents, to $29.375.

A big drop was posted by Citytrust Bancorp, Bridgeport, Conn., which has suffered from heavy real estate-related loan problems. The stock was off 62.5 cents, to $4.25, at midafternoon, or 73% below its 52-week high.□

CAPITAL

Jamaica Savings Makes Most of Conversion

By KELLEY HOLLAND

A weak market for financial stocks has created an opportunity for Jamaica Savings Bank, which last week completed its conversion from a mutually chartered to a public thrift.

The stock market has not been kind to bank equities in recent months, but the current environment suited Jamaica Savings just fine, said Park T. Adikes, chairman and chief executive officer.

"We didn't want to [convert] in one of those markets where you get three times the capital you need."

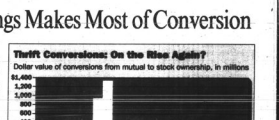
If a thrift gets too high a price for its stock when it converts, it raises too much equity and finds it hard to sustain an acceptable return on equity.

Capital Ratio Raised

As it was, Jamaica Savings Bank, which had $1.46 in assets at the end of 1989, boosted its capital ratios. Before the conversion, the thrift had no worth to assets of 13%. But after going public, Jamaica Savings had about 16% equity capital.

Thrift conversions were commonplace in the mid- to late 1980s after the government first authorized them. A total of 117 thrifts converted between April 1986 and October 1987, according to statistics compiled by Securities Data Corp. The rate of conversions has slowed since then.

But with the current low prices on financial stocks, "you could say this is the ideal time to go public for a company that doesn't need the capital," said Bruce W. Harting, a vice president at Salomon Brothers Inc.



War Chest for Buyouts

Jamaica Savings' unusually high capital ratio does not disturb Mr. Harting. Although it could constrain return on equity over the near term, a strong capital base also makes acquisitions possible – a plus, given the low prices on many financial institutions these days. "What to an outside observer may be too much capital may just be a war chest," he said.

Thrift regulators are eager for thrifts to convert these days, Mr. Adikes said. They want an added layer of insulation between depositors and the thrift insurance fund. But Jamaica Savings has applied to the regulators for authorization to reduce its outstanding equity with a stock buyback program.

Investors apparently welcomed the opportunity to buy into Jamaica Savings Bank. The stock was trading Monday at $13, up $3 from the initial offering price of $10 per share.

MARKET MONITOR

In a continuing push to improve its equity-to-assets ratio, Midlantic Corp. has sold $250 million of securities backed by home equity loans. The floating-rate securities were priced at 29 basis points over the Federal Reserve AA 30-day commercial paper rate, and interest will be paid and reset monthly.

The bank announced it has also completed the sale of about $256 million in credit card receivables to Manufacturers Hanover Corp. at a premium of about $60 million.

VOL. CLV NO. 130 Thursday, July 5, 1990 155th year

Economist Says 'Insolvent' FDIC Is Covering Up

By ROBERT TRIGAUX

WASHINGTON — An economist who was among the first to predict the collapse of the thrift industry now says the Federal Deposit Insurance Corp. is effectively insolvent and commercial banks are in big trouble.

"It's deja vu all over again," said R. Dan Brumbaugh, senior research scholar at Stanford University's Center for Economic Policy Research. He contends that federal bank regulators are masking the industry's ills in much the same way thrift regulators hid S&L problems in the 1980s.

Mr. Brumbaugh, Robert Litan of the Brookings Institution, and James Barth of Auburn University have been hired by a House Banking subcommittee to analyze the health of the FDIC's bank insurance fund.

ANALYSIS: *Follow-up on the news*

After studying public data, the researchers concluded that the fund is insolvent — or on the verge of it. The proof, Mr. Brumbaugh believes, is in confidential FDIC data. However, he charged, the agency is stonewalling the researchers' requests for data.

FDIC Rejects Conclusion

The FDIC flatly rejects the researchers' conclusion. "We simply don't agree that the FDIC fund is insolvent," said agency spokesman Alan Whitney.

"Our supervisory people categorically disagree with the notion that insolvent institutions are left open. Our financial statements are audited annually by the U.S. General Accounting Office and each year we get a statement that says we have accurately represented the condition of the fund."

The FDIC has acknowledged it is refusing to hand over data. But the agency said it is concerned about maintaining control of confidential information.

Mr. Brumbaugh rejected that argument, asserting that the agency is trying to hide the numbers. "Once we have thoroughly analyzed the public data, plus information on the FDIC's problem bank list, the data on money-center banks and selected problem banks, I think it will reveal to the House committee that there is a massive problem among commercial banks," he said in an interview.

Credibility Sought

Mr. Brumbaugh, a former Federal Home Loan Bank Board economist, acknowledged that the researchers' conclusions are

Talman's Profit Projections Cause Investors to Kill Deal

By NANINE ALEXANDER

CHICAGO — Talman Home Federal Savings and Loan Association announced Tuesday that an investor group headed by Chicago banker Harrison I. Steans had terminated its agreement to acquire the thrift because of lower-than-expected profit projections.

The canceled deal means the company will have difficulty raising the capital necessary to comply with the thrift-bailout law. However, analysts said it is unlikely the thrift would be seized because it is still profitable.

The disclosure sent Talman's stock into a tailspin. In late-afternoon trading, Talman's shares were off $2.875 to $4.75 in active trading. A spokesman for Chicago-based Talman said the thrift would continue to "vigorously pursue sources of capitalization."

Higher Funds Cost Blamed

Talman, the nation's 29th-largest thrift, said the lower earnings projections were discovered while Mr. Steans's group was conducting its due-diligence review. The thrift did not give an earnings projection, but said second-quarter profits would be lower than the $4.5 million earned in the first quarter. It attributed the decline to increased cost of funds.

Reached at his home, Mr. Steans said a confidentiality

Citicorp Tells Fed that Law Allows It to Sell Insurance

By LINDA CORMAN

WASHINGTON — Counter-attacking against the insurance industry, Citicorp has told the Federal Reserve Board no legal ground exists to prevent banks' entry into the insurance business under a recently enacted Delaware law.

Citicorp argued that, while the Fed can restrict the insurance activities of a bank holding company's subsidiary, the regulator cannot block such activities by a bank's subsidiary.

Citicorp Acts on New Law

After Delaware enacted a law last month giving state-chartered banks insurance powers, Citicorp began taking steps to underwrite and sell insurance through its unit in the state, Citibank Delaware. Citicorp is the largest of several money-center holding companies able to take advantage of the new authority — and the one most feared by insurance interests.

Several groups led by the In-

Virginia Banks Drop in Market On Realty Fears

By FRED VOGELSTEIN

NEW YORK – The specter of problem real estate loans haunted the bank stocks of yet another state early this week as investors in the four largest banks in Virginia ran for shelter.

Touching off the rout, which clipped upward of 10% or more from the values of the Crestar Financial Corp., Sovran Bank, Dominion Bancshares and Signet Banking Corp. were rumors in the market on Monday that Virginia banks would report lower second-quarter earnings because of problem real estate.

Short Sellers Suspected

There was some speculation that short sellers were spreading the rumors to make a killing by buying back borrowed shares at lower prices.

After the close of trading on Monday, Signet, the hardest hit of the group, confirmed that its second quarter earnings would be "minimal." On Tuesday Signet gained back 75 cents of the $3.75 lost Monday to close at $20. However, other Virginia banks continued to fall.

Richmond-based Sovran.

Pacific Western's Phillip Boyce: $918,000 a Year and Worth It(?)

By SAM ZUCKERMAN

SAN FRANCISCO — His bank does not even rank in the top 300, yet Phillip R. Boyce is among the industry's money-making elite.

The founder and chief executive of San Jose-based Pacific Western Banshares was paid $918,106 in salary and bonus last year, more than Citicorp president Richard S. Braddock and almost as much as Chase Manhattan president Thomas G. Labrecque.

But it is Mr. Boyce's role as investment banker for the $1.1 billion-asset bank that has raised some eyebrows.

The bank's board last year gave Mr. Boyce, 46, a contract to act as advisor and bargaining agent in cases of unsolicited takeover bids. If Mr. Boyce can fetch a price that exceeds 2.5 times the bank's book value, he will be paid a commission that could run as high as $3 million. And he could pocket an additional $15 million to $20 million in stock, golden parachute, and other benefits.

"You have got to pay the race-

Entrepreneurial CEO Gets New Boss in Equifax Deal

By JEANNE IIDA

After making his mark as the entrepreneurial chief executive officer at Telecredit Inc., Lee A. Ault 3d is getting a new boss.

Late last month, the Los Angeles-based payment services company agreed to be acquired by Equifax Inc., a large Atlanta-based credit bureau. But Mr. Ault, who built Telecredit into a leading processor of MasterCard and Visa accounts, said he does not see the change curbing his independence.

"That's going to be worked out in time," said Mr. Ault, Telecredit's CEO since 1968. "And I think the opportunities for the two companies working together are very significant."

"I believe Lee is pragmatic enough to see it can be a advantageous to have a larger partner," said Joseph Stevens, an analyst with the Stiefel Nicolaus & Co. brokerage firm in St. Louis.

While Telecredit had not been looking for a suitor, the merger made sense, Mr. Ault said.

Equifax can help Telecredit broaden its offerings to include credit screening and turnkey credit card services, Mr. Ault said, which would allow smaller financial institutions to manage their own card programs.

> **"The fun of running a business is building it with your employees."**
>
> **Lee A. Ault 3d**
> *Telecredit Inc.*

Telecredit still gets about 80% of its $167 million in annual revenue from its original business, a guaranteeing checks for retailers. Profits from that activity funded expansion into credit card processing, mostly for small banks, thrifts, and credit unions. Equifax sells many of its credit reports to small and medium-sized banks.

Mr. Ault, 33, said he sort of fell into a career. He graduated from Yale University with a liberal arts degree, and after four years as a Marine Corps fighter pilot, he spent nearly five years in Peru and Colombia as general manager of W.R. Grace & Co.'s food business.

"I had no interest in computers or in data processing," Mr. Ault recalled. But a disappointing job in investment banking and a fortuitous meeting with the founder of Telecredit changed all that.

When Mr. Ault became CEO, Telecredit was a $600,000 company. Now, the company has grown to $167 million in revenues and 1,200 employees, and he regrets that he can no longer spend as much time with employees. "The fun of running a business is building it with your employees. Nobody builds anything by themselves."

After its formation in 1961, Telecredit lost money every year for a decade. But it became a technological pioneer. It was among the first to put on-line card-reading terminals in grocery stores, patented a technology to read and write information on plastic cards' magnetic stripes, and recently developed a lottery system.

Telecredit hit rough waters in 1988, when it was forced to take a writeoff of a $25.2 million investment in a subsidiary, Light Signatures Inc., which was unable to succeed in anticounterfeiting technology for financial documents and credit cards.

Mr. Ault closed Light Signatures and refocused on highly profitable payment services. But in early 1989, the board of one of its card-processing customers, a Florida-based credit union association, decided to move its business to First Data Resources Inc., a subsidiary of American Express Co. After months of wrangling, at least 60% of the association's credit unions kept their business with Telecredit.

Through it all, Mr. Ault kept his cool. "I've never seen Lee overreact to anything," said Fred L. Smith, general manager of the Y-12 Federal Credit Union, Oak Ridge, Tenn. Mr. Smith led the group that opted to stay with Telecredit. □

BankAtlantic Cutting Its Staff and Offices

FORT LAUDERDALE, Fla. — BankAtlantic announced a plan to cut 10% of noninterest expenses through staff reductions and the sale of its six banking offices in Dade County, which includes Miami.

BankAtlantic Chairman Alan B. Levan also said BankAtlantic's earnings for the quarter ended June 30 would be substantially improved from the first-quarter loss of $985,000.

About 46 employees in backoffice and support positions were dropped immediately, leaving 800 on the $1.8 billion-asset thrift's payroll.

Seidman, Recovering from Accident, Due Back on Job

WASHINGTON — Federal Deposit Insurance Corp. chairman L. William Seidman is expected to return to part-time work here Thursday following a horseback-riding accident June 20 in New Mexico.

The 69-year-old official, who suffered a separated pelvis and has been undergoing physical therapy, is walking with crutches, an FDIC spokesman said.

Shareholders Sue Fleet

PROVIDENCE, R.I. — Five shareholders of Fleet/Norstar Financial Group sued the company for allegedly failing to monitor its loan quality or to disclose the extent of problem loans, the *Providence Journal-Bulletin* reported. □

Riegle Cites Bank Perils at Hearing

By LOUIS GERHARDSTEIN
Special to the American Banker

WASHINGTON — Sen. Donald W. Riegle, D-Mich., does not want the savings and loan disaster to spread into the banking industry.

"I don't want history repeating itself," the Senate Banking Committee chairman declared during a congressional hearing last Friday on Andrew C. Hove, President Bush nominated Mr. Hove, a Nebraska banker, to fill the fifth slot on the board of directors of the Federal Deposit Insurance Corp.

The problems that will demand Mr. Hove's close attention are the recent decline in the FDIC's Bank Insurance Fund and the lack of scrutiny given to state-chartered thrifts during the last half decade, Sen. Riegle said.

Sen. Riegle noted that the deposits insured by the FDIC, estimated at $1.7 trillion, are resting on an insurance fund of $12 billion to $13 billion. When Sen. Riegle asked Mr. Hove if this concerned him, Mr. Hove responded, "Yes, it makes me uneasy."

Meanwhile, John F. Bovenzi, a senior FDIC official, said the fund could fall by $2 billion in 1990 as banks continue to suffer losses from commercial real estate loans.

Mr. Hove, who is expected to win confirmation, said later in an interview that he would "look very seriously at increasing deposit insurance premiums," but that the decision would depend on the size of the fund. "We can't go through the same problems in the bank insurance fund that we did in the savings fund, where we did diminish to nothing," Mr. Hove said.

If the bank fund continues to decline, Mr. Hove said, "we're going to have to put some money back into it, and the only way to put money back in without going to the taxpayers is with additional premiums."

To emphasize what he sees as the importance of examining the powers of state-chartered financial institutions, Sen. Riegle cited the high rate of failure among state-chartered S&Ls in the late 1980s.

Mr. Gerhardstein writes for the Medill News Service.

Talman Deal Killed by Profit Projections

Continued from *page 1*

agreement would not allow him to elaborate on the announcement. He referred calls to Talman's chairman and chief executive officer, Peter C. Roberts, who was not immediately available for comment.

A source close to the investor group said the announcement from Talman was "reasonably accurate."

The offer from Mr. Steans would have injected $300 million into Talman, bringing it into compliance with the capital standards of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989. The agreement also called for paying Talman shareholders $5 in cash and $5 the unsecured subordinated debt for a total of about $96 million.

OTS Accepted Plan

Its capital plan was accepted in March by the Office of Thrift Supervision, giving Talman until the end of 1993 to comply with the federal bailout law. It was required to suspend its common-stock dividend as part of the agreement.

With $6 billion in assets, Talman had negative tangible capital of about $200 million at yearend, mainly because of goodwill taken on during four government-assisted acquisitions in the early '80s.

But unlike many thrifts being forced to eliminate goodwill, Talman remains profitable, earning $20.2 million last year. It has remained narrowly focused on the basic business of taking deposits and originating home mortgages, and it reports few problem loans.

Analysts had hailed the OTS decision as a sign that regulators were willing to grant some leniency to thrifts that were otherwise healthy.

Henry S. Peltz, an analyst at Keefe, Bruyette & Woods Inc. in New York, speculated that Talman might ask the OTS for additional time to meet the capital requirement.

While he said the acquisition would have solved Talman's problems, he pointed out that an infusion of capital in the current environment will be difficult to find again. □

Corrections

Because of a production error, several paragraphs were cut of order in an article on June 29 ("Bankers Brace for Life in Fishbowl as Era of CRA Disclosure Begins," page 1). For a corrected reprint of the article, write to Matt Barthel, editor, American Banker, One State Street Plaza, New York, N.Y. 10004.

An article on July 3 ("Systematics Signs Pact with Vboss," page 3) misstated Systematics' product offering and terms of an agreement with Vboss Development Corp. Systematics offers its own branch automation system and will not market Vboss' system directly to customers. Under the pact, Vboss will support the full automation system to Systematics' customers in Wisconsin and Illinois.

Citicorp Responds to Insurance Groups' Attack at Fed

Continued from *page 1*

dependent Insurance Agents of America have asked the Federal Reserve Board to consider whether the Delaware statute authorizes banks to circumvent laws such as the Bank Holding Company Act, which the Fed enforces.

"Citibank Delaware is authorized to engage in the insurance activities specified under the new Delaware law and may do so without prior approval from the Board's prior approval," Citicorp's lawyers, from the Washington firm of Sullivan & Cromwell, wrote in a letter to Chairman Alan Greenspan.

"In addition, the Board's Regulation Y specifically authorizes Citibank Delaware to engage through an operating subsidiary in insurance activities authorized under state law for the bank itself, without approval from the Board," the memorandum said.

Regulation Y governs the activities of holding companies.

The Fed is currently reviewing the insurance groups' petition. The insurers want the agencies to prevent Citicorp and other bank holding companies from selling and underwriting insurance nationwide through Delaware subsidiaries.

Citicorp has already placed the assets of an insurance company, Family Guardian Life Insurance, and 22 separately incorporated insurance agencies within Citibank Delaware. The unit plans to continue to sell life insurance and annuities underwritten by Family Guardian and to begin selling and underwriting other insurance products.

Chase Manhattan Corp., New York, also received approval from state authorities to engage in insurance activities through its Delaware subsidiary, said Delaware Banking Commissioner Keith Ellis. He said no other applications are pending under the state's insurance law.

The insurance groups said the act expressly prohibited the subsidiaries of bank holding companies from engaging in insurance activities. None of the exceptions to the prohibition applied in the Citicorp case, the insurance industry petition said.

Meanwhile, the House Banking subcommittee on financial institutions submitted its own request to the Fed to review Citicorp's anticipated entry into insurance activities in Delaware. The Federal Deposit Insurance Corp. also is studying the potential impact of the state law on all banks' safety and soundness.

In a case involving the insurance business of Merchants National Corp., an Indiana holding company, federal courts ruled that the Fed does not have authority to regulate activities of state-chartered banks. The Delaware issue focuses on the Fed's possible jurisdiction over subsidiaries of those state-chartered banks. □

Greasing the Wheels for Avantor

Sovran, C&S Aim for 2 Data Centers After Merger

By KAREN GULLO

NEW YORK — To cut technology costs and prepare for their merger, Sovran Financial Corp. and Citizens and Southern Corp. are each consolidating data-center operations.

These moves are the first step toward forming two large computer centers — in Richmond and Atlanta — to support the merged banking company, which is to be called Avantor Financial Corp.

The combined entity would be the product of the largest bank merger to date, with operations in 11 states and $47 billion in assets. The merger, which is awaiting Federal Reserve Board approval, is expected to be completed in the third quarter.

The data-center consolidations will be completed by the end of next year, according to technology executives at both banks. In the meantime, the banks are working together to decide which equipment they will use in the merged company.

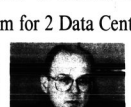
The consolidations are essential to achieving cost efficiencies in supporting the 400-plus branch network and back-office operations of Avantor.

Shared Systems

Sovran and C&S are making headway in two other key technology programs for use when the mergers are complete. A single bank card system that will be shared by both units, and a project to merge automated teller networks.

Sovran, based in Norfolk, Va., is merging four data centers into a single center in Villa Park, Va., outside Richmond. The consolidation will affect an estimated 130 positions, about 60 of which are expected to be relocated to Villa Park.

Computers, disk drives, tape drives, and switches in data centers in Nashville, Norfolk, and Hyattsville, Md., will be sold or moved to the new center.



Larry Hoagland

SQUEEZER: Sovran Financial's John J. Sponski is combining four data centers to prepare for the creation of Avantor Financial Corp.

John J. Sponski, executive vice president for corporate operations and technology, declined to say how many mainframe computers will be phased out or how much the bank will save from the consolidation.

First Fidelity's Example

Other large banking companies that consolidated their data centers have cut technology expenses by millions. For example, First Fidelity Bancorp., Newark, N.J., saved $10 million when it consolidated eight data centers into two.

Mr. Sponski said that 1990 expenses for Sovran's corporate operations and technology unit will total $250 million. The unit includes information management, corporate telecommunications, operations, and general services and facilities.

"The consolidation is a continuing effort to seek out opportunities to improve our level of service and to reduce costs," Mr. Sponski said.

Atlanta-based C&S is continuing a series of consolidations that began last year at its South Carolina and Florida offices. In Columbia, S.C., applications on two mainframes have been merged to a single computer. Mainframe systems are now being merged in Atlanta. The company plans to do the same in Florida next year.

Migration to Mainframes

George A. Budd, manager of operations and technology at C&S, said the data centers in South Carolina and Florida will remain open as service centers, but transaction processing will be handled on mainframes in Atlanta.

"We will continue to have significant operations in Fort Myers [Fla.] and Columbia, but for reasons of strategy and simple economies we are going to operate those off a single data-processing operation in Atlanta," Mr. Budd said.

Technology expenses are slightly less at C&S than at Sovran, Mr. Budd said.

Sovran and C&S have plans to develop a "common set of software for retail and commercial banking. Sovran has established seven study groups to investigate hardware, operating systems, and communications issues that must be dealt with to merge technology for Avantor. Mr. Sponski and Mr. Budd stay in almost daily contact.

But Mr. Budd said that the banks are limited in their ability to put plans into action until the merger is complete.

"There's a limit to how much real cash you can throw around for development," Mr. Budd said. □

Jack Henry Calls Off Talks On Merger with Peerless

By RICHARD LAYNE

NEW YORK — In an unexpected move, software company Jack Henry & Associates has called off merger talks with Peerless Systems Inc.

Jack Henry said Monday it had mutually agreed with Allied Capital Corp. II, to terminate the four-week-old talks, which had no conclusion in sight. Allied owns 25% of Peerless.

Software for IBM Machines

A merger between Jack Henry and Peerless, both of which sell banking software that runs on International Business Machines Corp. computers, would have created a $20 million company with 850 customers, making it one of the biggest providers of complete systems for small banks.

Rodney L. Armstrong Jr., chairman of Richardson, Tex.-based Peerless, said, "Jack Henry was comfortable with the possibility that the definitive agreement might not be reached in the near future." □

One possible sticking point is a lawsuit that Jack Henry has lodged against Unisys Corp. Unisys is suing Peerless over Mr. Armstrong nor Mr. Henry would comment on the suit or divulge any difficulties in the talks.

Jack Henry, which is based in Monett, Mo., originally sold software for IBM computers. But the company switched its allegiance to Unisys and signed a development agreement with the company. When the Unisys alliance fell apart, Jack Henry returned to IBM. Because Unisys defaulted on payments, Jack Henry wrote off $1.2 million in 1989.

Jack Henry had approved the merger in principle, in which Allied stock or cash would have been paid for Jack Henry stock.

In a statement, Jack Henry said the company has no intentions of seeking a sale, merger, or other financial arrangement.

Peerless will continue to look for a potential merger partner as part of its strategy to grow, Mr. Armstrong said. □

Bank South Plans Smart Card Test

By JEANNE IIDA

NEW YORK — This summer, the flagship subsidiary of Bank South Corp. will become one of the first in the United States to test smart cards.

The Atlanta-based bank will use the cards to keep track of hours and days worked by some employees. Smart cards are magnetic-stripe cards with a tiny computer chip that can record data about the cardholder.

The smart card demonstration will involve 250 employees, five bank departments, and a branch office inside a Kroger's supermarket.

Advanced Card Technologies, Atlanta, is supplying the smart cards and computer terminals.

Eventually, the project may be expanded to allow Kroger's customers to use smart cards for point-of-sale purchases, Bank South has 40 Kroger branches.

The employee test will give Bank South and its employees up-to-date information about hours worked and vacation and sick days. The bank's payroll department now works weeks behind using paper-based information.

Employees will insert their cards into reader-writers attached to personal computers at the beginning and end of each day. Paychecks will be generated from the information stored in personal computers. □

WHO'S WHO IN CREDIT BUREAU SCORING...

AND WHO GIVES YOU MORE THAN JUST A SCORE?

There's a big, big difference between the credit bureau that provides you with good risk scores and the one that provides you with more. Because EMPIRICA® is a full service point scoring system that helps you segment and manage the risk in your portfolio. Develop your own custom scorecards easier and faster. Or, if you prefer, choose from a variety of pre-packaged models. Even develop your own risk segmentation strategies. Or, if you're more comfortable with a consultative approach, we'll help you do all of the above. Plus, you'll receive the most accurate, timely credit data available. "Citicorp's Comprehensive Banking System" helped us grow from $200 million to $600 million. Now we're counting on it for the next leap forward."

"We selected the Comprehensive Banking System because we expected it to keep us competitive," recalls Thomas J. O'Shane, president of First Western Bancorp of New Castle, Pennsylvania. "It has."

"With CBS we can originate or enhance new products quickly, keeping us ahead of our competition. With the stability, flexibility and growth capacity of CBS, our founding bank, First National Bank of Western Pennsylvania, has grown from $200 million in assets to $350 million.

"Beyond that, the Comprehensive Banking System software easily absorbed the additional load experienced with our acquisition of Beaver Trust Company. That acquisition nearly doubled our assets to $600 million.

"We are currently negotiating another acquisition which will bring us to over $1 billion in assets. We anticipate that the IBM AS/400® software and Comprehensive Banking System software will take the merger in stride.

"As far as we're concerned, CBS and IBM are the unbeatable data processing combination."

If you would like to know more about the flexibility and reliability of Comprehensive Banking System software or to talk with other bankers using the system, contact Joan Skimmons, Citicorp Information Resources, Four Stamford Forum, Stamford, Connecticut 06901. (800) 243-4222 or (203) 351-4000.

COMMENT/ *By William M. Isaac*

Deposit Insurance Reform Still Faces Impediments

Foreign deposits are not insured under current law and, therefore, no deposit insurance premiums are assessed on them. While that seems fair enough at first blush, small banks correctly note that whenever a large bank has gotten into difficulty, all depositors, foreign and domestic, have been protected.

On its face, this creates an inequity between large and small banks. Two-thirds of Citibank's deposits, for example, are foreign, which means that Citibank — whose parent is Citicorp — pays premiums on only one-third of its deposit base, while a smaller bank with no foreign deposits pays premiums on its entire deposit base.

The large banks counter with two arguments, one not-so-persuasive and one that has merit. The argument that does not impress me is that assessing foreign deposits will make it difficult for U.S. banks to compete internationally.

Premiums Similar to Tax

Deposit insurance premiums should be viewed as a form of tax on U.S. banks. It makes all banks, not just large ones, less competitive against intermediaries that do not pay the tax. At the very least, the tax should be distributed fairly among all banks that derive a benefit from deposit insurance.

This leads me to the large bank argument that has merit. The large banks generally opposed the deposit insurance plan when it was proposed in the 1930s. They argued that a better way to resolve the banking crisis was to implement nationwide banking, rather than to subsidize marginal competitors through adoption of a deposit insurance system.

When the S&L bailout legislation was being debated last year, consideration was given to assessing foreign deposits in addition to the near doubling of the basic premium.

If both measures had been enacted, Morgan Guaranty would have seen its deposit insurance costs increase seven-fold. Morgan could argue persuasively that it would rather see the deposit insurance system, from which it derives only marginal benefit, abolished rather than absorb a tax increase of that magnitude.

Objectively, abolition of deposit insurance would have a far greater negative impact on small banks than on large banks. The large banks are willing to tolerate a depositor protection plan so long as the cost of the plan does not become excessive in relation to the benefit they derive from it.

Assessment Issue Clouded

In the final analysis, the fairness issue on assessment of foreign deposits is not nearly as clear as it seems on the surface. It is a dollars and cents political issue that needs a thoughtful political solution.

The American Bankers Association task force that studied deposit insurance reform and endorsed the "haircut" plan for gan could argue persuasively that it would rather see the deposit insurance system, from which it derives only marginal benefit, abolished rather than absorb a tax increase of that magnitude.

than 11% on small bank failures and much lower on large banks.

An 11% haircut would thus benefit smaller bank depositors at the expense of larger bank depositors. The quid pro quo for this additional small bank subsidy would be continued exclusion of foreign deposits from the FDIC's assessment base. It's not a bad approach, unless someone can come up with a brighter idea.

Too Big to Fail

Some bankers, most notably the leadership of the Independent Bankers Association, are skeptical that a large bank will ever be allowed to fail and, therefore, greet the haircut plan for large deposits with less than total enthusiasm.

One answer would be to make the haircut absolutely mandatory whenever FDIC funds are utilized to assist a bank, no matter how the transaction is structured (i.e., a capital infusion, merger, or liquidation).

That will not be sufficient to relieve the skeptics of all their doubts. They fear that the regulators might circumvent the haircut mandate by having the Federal Reserve provide funding to a troubled large bank ad infinitum in order to avoid the necessity of FDIC assistance and the resulting mandatory haircut.

Prohibit Secured Lending

There is a solution to this problem as well. Legislation could be enacted to prohibit the

THE LOBBYISTS

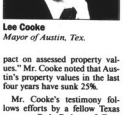
Texas Mayor Says Cities Deserve Break On RTC Properties

Yet another Texas mayor has urged reforms of the way the Resolution Trust Corp. liquidates thrifts. Lee Cooke, mayor of Austin, Tex., told House Banking Committee Chairman Henry B. Gonzalez, D-Tex., at a recent field hearing that local governments want to become more active bidders on selected RTC properties.

Mr. Cooke, representing the National League of Cities's finance, administration, and intergovernmental relations committee, told the panel that in January the league had recommended the RTC take the following steps to make city governments stronger players in the sales arena. It received no response from the agency.

First, the league proposed that the federal government provide discounts of up to 50% on properties of interest to cities and towns. Second, the group sought a federal exemption of municipal bonds for single and multi-family housing from the state-by-state volume caps.

"Over the next year, I believe you will see a flood of concerns and anger by folks like me," Mr. Cooke told the House Banking Committee. "All across the nation, not just in the Southwest, there is a growing fear that the implementation of Firrea will have a far greater impact on cities than at any other level of government, because of the im-



Lee Cooke
Mayor of Austin, Tex.

pact on assessed property values." Mr. Cooke noted that Austin's property values in the last four years have sunk 25%.

Mr. Cooke's testimony follows efforts by a fellow Texas mayor, Bob Bolen of Fort Worth, to seek better ties to the RTC (see The Lobbyists, May 31). Mr. Cooke also suggested that rather than have the RTC implement what he called a "graduated discount dumping policy," the agency should schedule sales of properties for properties that could have a benefit-impact on local economies.

Rural Folk Ignored By Fed, CEO Claims

A.J. Jack King, chairman and chief executive officer of the $60 million-asset Valley Bank of Kalispell, Kalispell, Mont., vented some anger from the heartland as he relinquished his post on the Federal Reserve Board's consumer advisory council last week.

Mr. King, who will not be back in Washington before his three-year term ends this fall, called for an overhaul of the composition of the committee. He said that representatives of urban interests – whether from banks or community groups – dominated the committee.

Mr. King said there ought to be two advisory committees, one composed of representatives from communities of less than 200,000 people and another representing larger communities.

Mr. King's call for changes in the composition of the consumer advisory council was prompted by his discontent with the committee's support for tightening the Community Reinvestment Act. Rural banks are generally in compliance with the CRA and should not be saddled with new regulatory requirements, he said.

Mr. King further called for the elimination of representatives of interests that compete with banks, including those from credit unions, finance companies, and brokerage firms. Discounting the six members representing these industries, eight pushing the interests of the urban underprivileged, academics, and representatives of money-center banks, he concluded that only three of the 28 members spoke for the interests of rural consumers.

* * *

Appraisers Uneasy With Fed Proposals

The Federal Reserve last week became the first federal banking agency to issue proposed guidelines on real estate appraisals, and so far the agency is not winning much support from the appraisal industry.

One element of the Fed's plan, which would require only a license appraiser for appraisals on property valued at less than $1 million, runs contrary to the intent of the recent law requiring certification of real estate appraisers, industry lobbyists contend. "The Fed guidelines could be devastating for the mandated reforms for professional appraisers," says a lobbyist for the appraisal industry.

Few of the reforms of the appraisal industry seem to be occurring without major concerns. For example, provisions of the thrift law that allow states to set up their own agencies to license appraisers are confusing and must be clarified, lobbyists say.

Earl Espeseth, chairman of the appraisal committee for the National Association of Realtors, took his case before a House Government Operations subcommittee in the spring. The law says a state may establish an agency but is silent on how to do it. The deadline for states to comply with the act, and to prevent state appraisers from being disqualified from performing federally related appraisals, is July 1991.

Economist Charges 'Insolvent' FDIC Covers Up Bank Crisis

Continued from *page 1*

not being well-received by the industry.

"All bankers, when they see this assessment of their industry, get mad as hell and conclude people like me are bank-bashers," Mr. Brumbaugh said. But "when the government realizes taxpayer dollars will be needed to close all the insolvent banks, they will try to tax solvent banks as much as they can," he said.

"We are the allies of the profitable banks, though we are perceived as their enemies," Mr. Brumbaugh said.

Data Quest Stymied

The researchers' quest for confidential FDIC data is stalled, Mr. Brumbaugh said the issue is back with the House Banking panel, which ultimately could issue a subpoena for the records. But sources said the financial institutions subcommittee, chaired by Rep. Frank Annunzio, D-Ill., thus far is keeping quiet on the delicate subject of confidential records.

At the FDIC, congressional liaison Beth Climo said the agency will make the data available as long as the researchers are subject to the same stringent rules of confidentiality that government officials must agree to.

Mr. Brumbaugh said that the following points, when considered together, indicate that the fund is insolvent:

• At yearend 1989, 253 banks with $142 billion in assets reported net worths under 3% of capital, well below the 5.5% minimum requirement.

• Some 480 banks with $42 billion in assets have had operating losses every year since 1986. They would have their equity capital eroded by the end of 1990 if they continue to lose capital at the same rates as in past years.

• Another 240 banks had operating losses in 1988 and 1989 and had their equity capital ratio fall from 8.2% in 1986 to 5.2% in 1989.

Given those trends, and accounting techniques that obscure market values, said Mr. Brumbaugh, "it is hard to believe that many of those banks in a market-value sense are not solvent or near insolvency." For the FDIC to exhaust its $13.2 billion bank insurance fund, he said, it would take a loss ratio of only 9% of the $142 billion assets at the 253 poorly capitalized banks.

The "wild card" is the money-center banks, said Mr. Brumbaugh. Given high nonperforming loans and low capital levels, a widespread recession could trigger serious problems that the FDIC could not handle, he said.

President Bush's recent call for higher taxes, Mr. Brumbaugh argued, could precipitate such an economic downturn.

"We are clearly at a point at which, in relatively short order, the taxpayer may have to make a contribution to the closure of insolvent banks," Mr. Brumbaugh said.

"We also are entering uncharted waters. Given the demonstrably weakened money-center banks, only a relatively meager downturn in economic activity can put the bank insurance fund in a situation of no longer being able to observe a money-center problem. And regulators will have to close money center banks." □

Add to that scenario other sectors of weakness that Mr. Brumbaugh said have yet to show up, notably 450 FDIC-insured mutual savings banks in economically depressed New England with $250 billion in assets.

Given that the FDIC expects a maximum loss of $2 billion this year, he said, "it is totally unreasonable for the bank insurance fund to lead us to believe it is closing anywhere near the insolvent banks in 1990 it should."

He concluded: "The only issue is: how much are they covering up – not whether they are covering up.

"We have in place for the first time in 10 years all the factors to make everything worse." □

MFS Regatta

America's most innovative fixed/variable annuity has already attracted $100,000,000 in sales.

COMMENT

Continued from *page 4*

Federal Reserve from lending money to banks and thrifts on a secured basis.

I first suggested this idea when I was chairman of the FDIC. I felt the Federal Reserve's function was to meet the temporary liquidity needs of banks that were capital solvent, not to prolong the lives of insolvent institutions.

The issue came to a head for me when the Federal Reserve indicated it would continue funding a grossly mismanaged and insolvent bank, Penn Square Bank, unless I agreed to protect the uninsured depositors.

If this had occurred, the uninsured depositors would have withdrawn their funds, the Fed advances would have been fully collateralized, and the FDIC would have been left holding the bag.

Fed Can Undermine FDIC

While this did not come to pass at Penn Square, the Federal Reserve has effectively usurped the provision of collateralized funding, to undermine discipline in the banking system and escalate the FDIC's losses.

The banking problems for large deposits endorsed by the ABA is entirely feasible and would represent a vast improvement in the deposit insurance system. It would restore some much needed discipline to the financial system without creating unacceptable instability.

The plan raises issues, to be sure, but none that can't be resolved by intelligent, fair-minded people. The question is not whether we can devise the means to reform the system, but whether we have the will to do so. □

MFS® Regatta is off to a fast start because its remarkable investment choice and flexibility, combined with all the traditional benefits of a tax-deferred annuity, have great appeal for anyone planning to meet retirement income needs through a new investment or a 1035 exchange.

Developed by MFS and Sun Life (U.S.), Regatta's benefits include:

- **Top commission**—the highest we've ever paid.
- **Financial strength**—Standard & Poor's has assigned an "AAA" claims-paying ability rating to Sun Life (U.S.). Its parent, Sun Life Assurance Company of Canada, is "one of the strongest financial institutions in North America," according to S&P, and A.M. Best rates the company "A+ (Superior)" for its financial position and operating performance.
- **Revolutionary product design**—meets virtually any investor need through four special programs: dollar cost averaging; systematic withdrawal; asset allocation; and secured future, which combines the opportunity for capital appreciation with important interest rate guarantees.
- **Investment flexibility**—seven options, including stocks, bonds, and money market securities, and a fixed account with maturity options from one to 10 years.
- **Superior investment performance**—ask us for the numbers.
- **Outstanding service**—from a dedicated team of wholesalers and telemarketers plus our Retirement Plan Services Department and Statistical Services Department.

For more information on MFS Regatta, call Matthew Gannon, Senior Marketing Manager, Banking Industry Insurance Products Department, toll free at

1-800-343-2829, Ext. 6430.

"The financial strength behind MFS Regatta and its great investment flexibility have special appeal for my clients. I've sold $9.8 million in just two months! My best prospects include mutual fund and tax advantaged investment buyers."

MARKETING/ADVERTISING

Focus Shifts to Advertising Aimed at the Newly Wealthy

By ELLEN MEMMELAAR

Back in the days when private banking was entirely synonymous with "old money," institutions landed new clients through referrals. Now that brash entrepreneurs and self-made corporate executives have captured the bankers' attention, advertising is the name of the game.

In the United States, 1.2 million households have more than $1 million in assets, and 80% of these represent "new money," said Jack Avrett, chairman and chief executive of Avrett, Free & Ginsberg, an advertising agency. The private banking market, he said, includes entrepreneurs who recently sold their companies for millions and corporate executives who landed softly with comfortable retirement packages.

"Banks are going to be forced to change their image to some extent, so they don't put off the newly wealthy," said Sandra Oursuoff, publisher of *Manhattan inc.*, a New York business publication that announced in June it would merge with *M* magazine for men. "They have to change their modus operandi from catering to the carriage trade."

United States Trust Co. just signed Avrett Free to develop an advertising campaign with the newly rich in mind.

Similarly, Bankers Trust Co. recently launched an ad campaign with an updated air. Gone are the days of overstuffed leather chairs and graying men talking about exclusivity, said Ann Warburton-Ballek, director of communications for the private bank at Bankers Trust. The bank's ads contain "straightforward prose that reflects the audience and market that we are trying to reach," she said.

> **"You can run ads aimed at millionaires, and the phones will start ringing."**
>
> **John Fisher**
> *Backer Spielvogel*

Even old-line Morgan Guaranty Co. is shelving its three-year-old ads. The private bank group recently signed Backer, Spielvogel, Bates Inc., New York, to create a campaign that will begin this fall and target the nouveau riche, a spokeswoman said.

Taking Off the Elitist Edge

For U.S. Trust, Mr. Avrett is charged with creating ads that make "private banking accessible, less intimidating, less elitist." The challenge, however, does not end there. Private banks must retain a solid image even while openly marketing themselves, Mr. Avrett warned. They have to guard against the "I don't ever want to be a member of a club that I could join" syndrome, he said.

"Customers will come to the bank for emotional reasons," he said. "We try to forge emotional relationships with packaged goods. We have to try to do the same thing for banking services."

Millionaires Are Responsive to Ads

Persuading people with new fortunes to respond may prove less difficult than it appears. John Fisher, senior vice president Backer Spielvogel, said, "You can run ads aimed at millionaires, and the phones will start ringing."

In a study of 600 millionaires, 34.8% reported that they had purchased financial products through the mail, Mr. Fisher said. This percentage is relatively high, he said, and an encouraging sign for financial marketers like private bankers, who are seeking to reach a geographically diverse population.

New-Money Demographics Dictates Choice of Agency

As private bankers shift their sights, their advertising purchases will change as well, observers say. Executives and entrepreneurs are often in big cities and surrounding areas, while old-money clients are spread throughout the country.

National advertising was necessary to reach the old-money segment, but other approaches are more appealing now, Ms. Oursuoff said. "There will be a shift away from national advertising to a more regionalized approach" as the market evolves, she said.

Ms. Warburton-Ballek said target markets for Bankers Trust are Chicago, Los Angeles, New York, and Palm Beach, Fla. Entrepreneurial activity is strongest in the first three cities, and new-money retirees are moving to Florida.

Along with national ads, Bankers Trust is placing regional ads where possible in publications including *The New York Times, The Wall Street Journal, Forbes, Fortune, Business Week, and The Economist.*

Advertising through regional editions is the wave of the future, said Mr. Fisher. But he urges marketers to be aware of regional readership habits.

"These [newly rich] people get exposed to more media than anyone else, including those people in the advertising business," he said. *Fortune* and *Forbes* are read mainly on the East Coast, he said, while *Business Week* is read equally on both seaboards. □

Morgan Guaranty Expands Services

Private Clients Offered Products Used by Institutions

By MAUREEN NEVIN DUFFY
Special to the American Banker

NEW YORK — Morgan Guaranty Trust Co. is forming a global asset management group within its private banking unit.

Through the group, Morgan will offer private bank clients many of the products developed for institutional or corporate clients of J.P. Morgan & Co., its parent. These include junk bonds and private placements.

In some cases, Morgan may "retail or package" such products to meet the needs of the individual investor, said Arthur B. Sculley, who will assume responsibility for the new group. He will also retain his post as managing director of private banking in New York, reporting to David L. Hopkins Jr., head of the private bank.

Focus on Investment Services

The formation of the group signals a "greater emphasis on investment services and the development of new products," Mr. Sculley said. The group will draw together Morgan's investment-related business worldwide, including investment management services, mutual funds, and the three-year-old self-directed investor services.

The private bank concentrates on the highly affluent, limiting its investment management clients to those with accounts of at least $5 million. J.P. Morgan has $85 billion in assets under discretionary management.

Among the products to be offered private investors are private placements (limited partnerships or managed equity pools) for qualified investors, custody products, international real estate investments, and high-yield bonds.

Junk Bond Research

Ten months ago, J.P. Morgan Securities started a research group for junk bonds, and Mr. Sculley said the research has attracted investors from other firms. The high-risk instruments are offered only to carefully screened clients.

Mr. Sculley said the bank also spends "a great deal of time screening the investment itself, from tax and regulatory angles."

"We have strict guidelines as to whom [the higher-risk] products can be shown, with strict follow-up to be sure investors have done their own analysis," he added.

Management Changes

Separately, the private bank will make some changes in management this fall. Harry Barbee, managing director and head of trust and investment management in the private bank, will retire on Oct. 1. He will be succeeded by Jean L.P. Brunel, who has been managing director of J.P. Morgan Investment Management Australia Ltd. since 1986.

Mr. Brunel, who will report to Mr. Sculley, will divide his time between Melbourne and New York until he relocates in January.

As a member of the private bank senior management, Mr. Brunel will be responsible for the group's investment policy worldwide. A graduate of Ecole des Hautes Etudes Commerciales in France, Mr. Brunel earned his MBA from Northwestern University and served for two years as commercial attache at the French Consulate in Chicago.

Since 1976, he has held investment-related positions in Morgan's offices in New York, Tokyo, Hong Kong, and Singapore.

Reflecting on his 35 years with Morgan, Mr. Barbee expressed "mixed feelings" about leaving behind associates. "The potential for growth in the private bank is phenomenal, and Morgan has the best resources in world to do that business – globally."

Asked if the Swiss banks should be threatened, he said, "I think they already are."

Ms. Duffy is a freelance banking reporter based in New York.

Chase Campaign to Integrate Products

By ELLEN MEMMELAAR

NEW YORK — Chase Manhattan Corp. plans to launch a nationwide identity campaign this fall to integrate all its consumer products.

The campaign represents a first for Chase, said Aubrey Hawes, vice president and corporate director of advertising and promotion. It will incorporate mortgages, credit cards, home equity lines, savings accounts, and other products, he said.

"It sounds like they are trying to create an overall retail positioning at the bank;" said Les Dinkin, a Westport, Conn., consultant. "This campaign, in concert with their product-based and retail market-based initiatives, should help them solidify their customer franchise and provide a platform for profitable growth."

Mr. Dinkin said the effort may have another purpose. It "might as much be a rallying cry inside the institution," he said.

In late June, top officers announced a restructuring and plans to cut operating expenses by $300 million a year. In a memo, Chase said it is dissolving its three-bank structure to become "leaner, better integrated, and more market-focused." Management's stated commitment to "one Chase" is apparently the springboard for the campaign.

Citibank, whose parent is Citicorp, is also reported to be planning a multimillion-dollar nationwide campaign for autumn. N.W. Ayer, the bank's ad agency, is said to be working on the multimedia effort. Citibank officials did not return calls for comment late Tuesday.

Chase has already developed a positioning strategy and a slogan for the campaign. □

Bank of Boston Hoping for a Star in Office of the Future

By JACQUELINE EMIGH

BOSTON – At first glance, the interior of the building that houses Bank of Boston's new banking services division looks something like a set from "Star Wars."

Computer cable runs along the ceiling, partly enclosed by a bright yellow cover. The desks have no drawers, some work areas are illuminated with natural light, and see-through wastebaskets are made of wire. There are no private offices — although some work areas are segmented into cubicles – and a robot delivering mail moves about the 250,000-square-foot facility.

Spending in Time of Cutbacks

While a majority of the industry has been pursuing cost-control with near-religious fervor, Bank of Boston has splurged on this office of the future, which handles corporate securities processing and a range of trust functions.

But the bank is betting that there will be a return on its investment: With a little help from the layout — and a Japanese marketing concept called "just in time," it is expecting to recoup some of its outlay through marketing synergies, increased quality control, and cost containment.

"The banking business is a tougher business today," said Richard W. Dalrymple, head of the Banking Service Division, a combination of back and front-offices. "Cost control at Bank of Boston will not be a one-year project."

Emphasis on Fee-Based Income

This strategy – epitomized by the Canton, Mass.-based facility – has solid backing from the bank's senior management. The unit, Mr. Dalrymple said, also represents the commitment of Bank of Boston chairman Ira Stepanian to a greater emphasis on fee-based income.

"We'll always be a heavy lender," Mr. Dalrymple said. "But lending is a risky business. "We need to balance out the lending with more income from other sources."

In Canton, the bank has merged seven securities operations into four so-called product lines: shareholder services, worldwide custody, corporate trust, and institutional and master trust. Helping to make the operation more efficient is the just-in-time approach, a strategy devised by auto makers in Japan to streamline production.

Expediting Transactions

In manufacturing, just-in-time means that suppliers deliver items immediately before the production process, thus avoiding significant inventory build-ups and helping to speed the completion of a product. But in the securities business, Mr. Dalrymple said, just-in-time helps to speed the completion of a transaction.

Instead of working with tangible items. "our employees do things to stock certificates, bonds and other pieces of paper," he said.

In line with the just-in-time approach, employees with similar functions are seated together, Mr. Dalrymple said. Thus, when one step in a process is completed, a person responsible for the next step can immediately grab the baton.

For example, before just-in-time was adopted in the transfers department, employees called "preparers" were in one area, input operators in another, and examiners in a third, Mr. Dalrymple said. If one area worked faster than another, the process would back up.

STATE OF THE ART: Harry Robertson working in Bank of Boston's new large and naturally lighted office space in Canton, Mass.

> **"We'll always be a heavy lender. But lending is a risky business. We need to balance out the lending with more income from other sources."**

Now, however, the department seats workers together under two seating arrangements. One, the "standard line," is shaped like an "H" and uses six employees: two preparers, two input operators and two examiners.

The new arrangement has proved extremely flexible. If a massive work order comes in, or a "crunch" comes up, new seating configurations can be formed almost instantly, Mr. Dalrymple said.

To make this possible, all furniture and computer equipment in the unit are portable. Personal computers and terminals can be shuttled about the office and hooked up through an overhead cable tray that extends throughout the office.

Partly because of the new design and enhanced efficiency, the bank is gaining new business, officials said.

"We've always had good salespeople, a good product, and competitive pricing," Mr. Dalrymple said. "But now our customers are telling us that we are further along than other banks."

Employee Adjustment

Are employees happy with their new surroundings? At first, there was culture shock, said Gail King, a Bank of Boston staffer who helped to plan the move.

Some workers asked: "Where's my drawer?" Ms. King said. Managers complained about having to move from private offices to open-air cubicles. And then there was Mr. Dalrymple's run-in with the robot.

"When I came out of my office one day, the thing almost cornered me," the division chief said.

Nonetheless, officials said, Canton is proving to be a comfortable, efficient place to work. Production staffers work by natural light, which is generally thought to be easier on the eyes. Through the use of wire waste baskets, employees in the transfer department can be sure crucial documents aren't thrown away.

"Canton is not nirvana," Mr. Dalrymple said. But he emphasized that turnover is much lower than studies had projected and that employees seem to prefer the new facility.

"People used to feel that they were either 'back office' or 'front office,' " he said. "Today, they feel they're part of a full-service operation with a common purpose." □

COST CONTROL

Seeking Unexchanged Shares After a Merger

By JOHN SALAK
Special to the American Banker

Mergers have become a way of life in the banking industry. But some shareholders may be a bit behind the times, and institutions are finding that there is often an ocean of small shareholders who never trade in their old shares for new ones.

Unexchanged shares are a record-keeping nightmare that costs banks thousands of dollars annually – a situation that likely will increase as the industry continues to consolidate.

But Chemical Bank has found a way to address the situation. The bank enlisted Shareholder Communications Corp., creator of a program called Postmerger Cleanup Services.

Convincing Shareholders

Under the service, the company helps banks to consolidate their records and reduce expenses by contacting shareholders and persuading them to complete transactions.

Chemical called on Shareholder Communications soon after its merger with Texas Commerce Bank several years ago.

"We were very pleased with the cleanup service. The main point is that they set targets and met them," said John P. Mallon, a Chemical vice president.

Mr. Mallon declined to specify the cost savings or the number of shareholders contacted. However, he said, more than half of the stockholders with unexchanged shares were eventually persuaded to exchange or close out their accounts.

Saved on Hiring Costs

"We could have tried to do it ourselves," Mr. Mallon said. "But it would have meant hiring people. The additional cost would have offset the benefit. Plus, we might not be very good at it."

The cleanup process takes three to four months to complete and costs $30 per account, said Shareholder Communications president Alexander B. Miller. In most cases, he said, the success rate is greater than 60%.

Mr. Miller maintains that the service is well worth the price. The costs of servicing an account of any size runs about $15 a year, he said, adding that under that estimate, the program would pay for itself within two years.

Three Packages Offered

Shareholder Communications offers three cleanup packages. Under one, shareholders are encouraged to complete basic share swaps. Another gives them an option to exchange old shares for cash without paying a broker's fee or dealing with stock certificates.

Under a third plan, Shareholder Communications seeks holders of odd lots (parcels of less than 100 shares) and attempts to buy back their shares. □

HEADHUNTING

Recruiters Say They Can Help Out Even when CEOs Hire Ex-Colleagues

By JEFFREY MARSHALL

In the recruiting arena, interpersonal contacts often carry significant pull.

Bank of New England Corp. chairman Lawrence K. Fish recently phoned an old colleague, D. Bruce Wheeler, and persuaded him to sign on as the new president of its flagship bank.

A similar approach also worked for Anthony P. Terracciano, chief executive of First Fidelity Bancorp, and Thomas Theobald, chairman of Continental Bank Corp. Both men brought several former colleagues into the fold when they took over their respective banks.

Personal Loyalties

Executive recruiters concede that not much in their bag of tricks can match a boss' personal pitch: Chemistry and personal loyalties are key ingredients in forming new management teams. But they say there can be a role for headhunters even when a new chief executive is thumbing through his Rolodex in a quest for candidates.

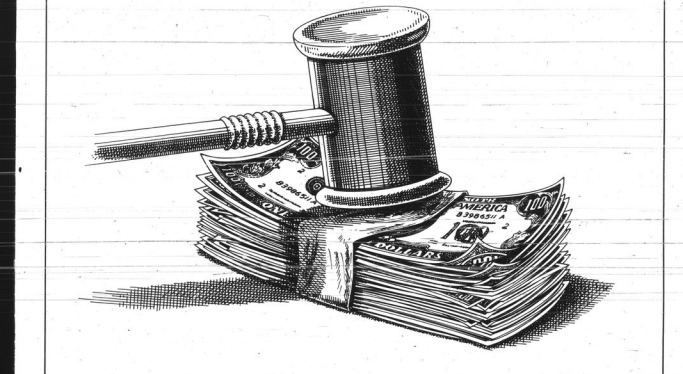
"Especially in turnarounds, you tend to take people with you," said Durant A. Hunter, a partner in Gardner Stone Hunter International in Boston. "You need people you can really trust."

Recruiter as Middle Man

A recruiter might play middle man "if the president wanted to be protected in some sense and not be turned down," Mr. Hunter said. In such instances, an executive might use a recruiter to feel out a prospective employee.

In addition, headhunters can act as advisers in a search for fresh talent, instead of prowling the front lines. Recruiters also work with a chief executive officer in cases where a large institution is seeking to fill an opening near the top of the management hierarchy and a search committee has been formed. □

Some opinions have greater impact than others.



The law is the law. Except when it isn't.

Getting timely analysis and clear interpretation of the latest banking law issues can go a long way toward making you a winner in court–or keeping you out of court altogether.

And with leading-edge banking and financial publications from Warren, Gorham & Lamont, you'll stay ahead of changes and on top of developments in banking law and a whole lot more.

Our outstanding line of comprehensive information products cover the *complete* range of banking topics including:

East Germans Swapping Marks At a Slower Rate than Expected

Reuters

EAST BERLIN — East Germans had withdrawn 4.2 billion marks from savings accounts by noon today, a savings bank association director said.

Horst Oberlaender, director of East Germany's savings bank association, said that around 95% of the applications to swap East marks into West marks in the first phase of monetary union were processed.

"The first conversion operation is practically complete," Mr. Oberlaender said. The central bank said Sunday that East Germans had applied to withdraw 4.5 billion marks, less than the six billion originally predicted.

Mr. Oberlaender said East Germans had shown caution in withdrawing only small amounts. An average of about 840 marks ($50) per person was taken out.

"They withdrew enough to cover their daily needs for the next 10 to 12 days," he said.

Mr. Oberlaender noted that queues at the savings banks were now shorter but he expected another rush next week when savings passbooks were converted into West German marks.

On Sunday, East Germans were entitled to an initial 2,000 marks (about $120), converted at a one-for-one rate.

... by country

JAPAN

Peru's President-elect, Alberto Fujimori, said he had asked Japan to contribute to a $1.8 billion loan that would allow Lima to make a start on paying off its huge foreign debt.

The loan would also open the way for more cash injections to help rebuild Peru's economy, Mr. Fujimori said.

"I hope Japan will enter into a consortium to provide the $1.8 billion loan to help us repay part of our debt to the International Monetary Fund, the World Bank and the Inter-American Development Bank," Mr. Fujimori said.

The framework of the loan was worked out with the IMF by President Alan Garcia, who steps down on July 27. Mr. Fujimori said the Japanese response was "'neither too hot nor too cold' in two days of talks with government and business leaders.

"This was natural given the fact that Peru has been isolated from the international financial community and has taken a confrontational attitude toward international organizations."

In 1985, Mr. Garcia imposed strict limits on how much of Peru's foreign debt the country would repay. Both the IMF and the World Bank subsequently cut off fresh loans to Peru.

"If talks with the IMF are a prerequisite for bilateral financial support from Tokyo, I believe such assistance is just around the corner," Mr. Fujimori said.

Mr. Fujimori said he asked Japanese Prime Minister Toshiki Kaifu to raise the possibility of extending the Brady plan, a U.S. initiative, to Peru when Mr. Kaifu meets leaders of the G-7 nations in Houston.

— Reuters

WEST GERMANY

The economic summit in Houston July 9 to 11 will underscore the commitment of industrial nations to continue their "cooperation" on financial markets, a senior West German government official said Tuesday in Bonn.

The official, speaking to reporters on the condition that he not be identified, was using the usual G-7 language to indicate preparedness to intervene in financial markets.

However, the official also said the currency markets were now relatively stable.

At a meeting of Group of Seven finance ministers in Paris in April, officials had expressed concern about the decline of the yen, which they believed was hampering efforts to reduce international trade imbalances.

The official added the G-7 stance on foreign exchange markets had to be backed up by the economic policies of the G-7 nations – the United States, Japan, West Germany, France, Britain, Italy, and Canada.

The official referred specifically to the need to cut the budget deficit in the United States. This high deficit, he said, was one of the reasons why a gap had arisen between the level of savings and investment funds needed, especially for eastern Europe.

He said West Germany was progressing in its attempts to reduce its current account deficit and noted that West German growth was now being powered increasingly by domestic demand.

Reuters

JAPAN

The flight of investors from the declining Tokyo stock market since April has benefited Japan's big banks. Large-denomination term deposits at the city banks alone grew by about $117 million in April and May.

However, general restrictions on lending growth, especially in real estate lending, have meant that spreads have been smaller than expected. The result is that the city banks are shrinking the portion of their funds raised through the more-expensive three-month certificates of deposit.

U.S.-Japan Accord Opens Doors

New Opportunities Foreseen in Financial Services

By JOHN EVANS

LONDON — Japan's agreement to open its economy will provide new opportunities for U.S. banks, according to Charles Dallara, the U.S. Treasury's assistant secretary for international affairs.

In a telephone interview from Washington, Mr. Dallara said the agreement did not specifically address the issue of access to Japan's markets for U.S. and other Western financial-services suppliers.

"But, indirectly, we feel that the agreement will be positive for foreign banks seeking to operate in Japan," he said.

For example, U.S. corporations seeking to export and make investments in Japan will create opportunities for American banks to provide ancillary services, such as trade finance and advice, Mr. Dallara said.

Widening Access

The United States and Japan signed an unusual accord last week that would allow foreign companies greater access to the Asian country for investment and exports, he said. The pact was struck as the conclusion of the Structural Impediments Initiative between the two countries, negotiations which started last fall with a central aim of cutting Japan's $50 billion trade surplus with the United States.

In a wide range of measures, Japan will review and improve state trade agencies, such as the Fair Trade Commission. It pledged to reinforce penalties for breaches of antitrust laws, to ensure fair trade and business practices.

At the same time, Japan will invest $2,500 billion over the next decade to improve its infrastructure, particularly in housing, ports and utilities, as part of an overall program to step up domestic consumption.

'Keiretsu' to Lose Power

Mr. Dallara stressed that the agreement also aims to erode the power of the "keiretsu," the system by which Japanese companies, their associates, and bankers have built up closely knit corporate relationships. Western nations claim this system unfairly discriminates against their suppliers trying to gain a foothold in Japan.

"We've taken steps to address this issue, including more disclosure and even the requirement for divestment of stockholdings" in certain keiretsu situations, he said.

The United States will continue to press the issue of fairer practices in Japan in the sphere of financial services under the so-called yen/dollar negotiations between the two nations, Mr. Dallara said.

U.S. Team Bargained Hard

A tough-talking U.S. government delegation visiting Tokyo in late May demanded that Japan should abandon its regulation of consumer interest rates, a system which the American side believes helps unfairly subsidize the Japanese banking system.

Japan has deregulated interest rates on deposits of more than 10 million yen – about $65,000 – action akin to the abolition of interest rate ceilings in the United States a decade ago. But it continues to cap banking interest rates on smaller deposits.

The United States asked Japan to remove such controls within one year. The Japanese side protested that it needed at least three years before such deregulation, warning that action before then could cause failures among Japanese banks highly dependent on cheap deposits for their funding.

In Washington, a Treasury spokeswoman said she expects the next round of yen-dollar talks to take place later this year. □

Midland, Hongkong, Marine Link ATMs

By JOHN EVANS

LONDON — Midland Bank PLC, the Hongkong and Shanghai Banking Corp., and Marine Midland Bank have established an international network of about 3,000 automated teller machines spanning three continents.

The network includes 270 ATMs operated in the United States by Marine Midland, a wholly owned unit of Hongkong Bank. Midland has 2,000 machines in Britain, and Honkong Bank has 701 units in Asia. The Asian bank holds a 14.9% stake in the British bank.

"Customers of all three banks can withdraw cash and make balance inquiries from cash machines in the U.K., Hong Kong, China, and the U.S.," Midland said in a statement.

The network will be extended later this year to include the Middle Eastern states of Oman, Qatar, the United Arab Emirates, and Bahrain as well as the Philippines, Brunei, and Thailand.

The network will be extended later this year.

On-line authorization is provided through existing equipment and a satellite connection between London and Hong Kong. A typical transaction using the satellite will take 10 seconds, Midland said.

"This initiative is a further example of the growing business cooperation between Midland Group and Hongkong Bank group," a Midland spokesman said.

Better Branch Links

The Asian bank and Midland have extensively restructured their international branch networks in recent months to foster closer links.

Tony Mattera, a spokesman for Marine Midland in New York, said the international link was a commonsense competitive move "comparable to what other large banks, like Citibank, are offering." Citibank recently signed an agreement to give its customers access to about 20,000 ATMs operated by Japan's largest banks.

Ed Lynch in New York contributed to this report.

Pacific Western's Boyce: $918,000 a Year and Worth It(?)

Continued from page 1

horses," says Mr. Boyce, unabashed.

Pacific Western is one of two remaining billion-dollar independent banks in Northern California. With 26 branches in the affluent Silicon Valley-Monterey corridor, it is one of the hottest takeover candidates in the state.

Although Mr. Boyce officially denies Pacific Western is for sale, his actions seem to indicate that he is willing to talk turkey.

Early this year, sources say, he met twice with Security Pacific Corp. to talk about a sale. But the Los Angeles giant failed to offer enough money, according to the sources. Security Pacific has declined to comment.

Profits Have Soared

Analysts said selling the bank at 2.5 times book is within the realm of possibility.

And for good reason. After several mediocre years in the mid 1980s when return on equity consistently came in under 11%, Pacific Western's profits soared 81% in 1989 to $13.4 million, a healthy 1.33% return on assets and 19% on equity.

Shareholders have fared well under Mr. Boyce's leadership. The stock's 119% rise last year made it the 14th-best performer on the American Stock Exchange. A startup investment in the bank's stock in 1975 has since multiplied more than 16 times. The stock was trading at $11.375, down 37.5 cents, early Tuesday afternoon.

Pact Termed 'Larcenous'

Mr. Boyce's lavish pay and perks combined with his flair for promoting himself and his bank have earned him a measure of notoriety in California banking circles.

"He's been accused of being a real greedy guy," said a former employee, who asked not to be identified.

Investment bankers and others in the securities industry are incensed by his advisory agreement with Pacific Western's board, which makes their services unnecessary. Michael Abrahams, an analyst with Bateman Eichler, Hill Richards, Los Angeles, called it "just larcenous."

Staunch Defenders

But Mr. Boyce also has a legion of staunch defenders, especially among stockholders. They say he should be lauded not as a banker who inherited a going concern, but as an entrepreneur who started the bank.

"He's done quite a good job," said Calvin E. Wong, a partner in Alpha Capital Co., Pacific Western's largest stockholder, with a 5.1% stake. "His compensation arrangement is a matter between him and the board."

Gerry Findley, a bank analyst in Brea, Calif., said, " If you do [what Mr. Boyce has done], you should be rewarded."

Dr. Sidney R. Sogolow, a Pacific Western board member since 1975, conceded that "there may be a question about appearances" regarding Mr. Boyce's salary. "But look where his compensation comes from," the Los Gatos doctor said. "If the bank makes money, he makes money."

Mr. Boyce's base pay is only $230,000; the rest comes from performance incentives, Dr. Soglow noted.

Local Boy Makes Good

Mr. Boyce, who owns 3.6% of Pacific Western's outstanding stock, is the classic local boy who made good. He was raised next to a prune orchard in the San Jose suburbs and went to college at San Jose State University. His father was the postmaster of a Silicon Valley town when agriculture was king and computer chips didn't exist.

Mr. Boyce said his longtime ambition was to become a banker.

"When I was in college, I decided that I wanted to be the president of a bank by the time I was 30," Mr. Boyce recalled. "I made it at 31."

Mr. Boyce loves to tell the story of how he raised seed money for Pacific Western by taking 20 friends to lunch at a suburban San Jose restaurant. "Seventeen people invested," he recalls with a chuckle, and the restaurant tab came to $68.

With a casual manner, an open collar, an enormous bellypink cheeks, and glasses, Mr. Boyce has the air of a genial small-town businessman. But those who have seen him in action say he is a hard-nosed manager who keeps careful track of how different business lines and employees are performing. He has instituted a rigorous incentive program in which compensation is tied directly to an officer's contribution to profit increases.

"He doesn't do banking the way bankers do. He's much more of a practical businessman," said Hoyt E. Wilkinson of First Manhattan Consulting Group.

Pacific Western's chief said that the process of building an organization is more important to him than money. "I love the chase," he said.

The size of his paycheck is "a measurement of success," Mr. Boyce said. "It's far better to have a compensation package that does not make the chief executive bored or take away incentive."

Pay Comparisons

Compensation specialists said Pacific Western's size and performance should be the most important criteria for judging whether Mr. Boyce's pay is appropriate.

"One ought to be looking at

Pacific Western's Boyce: $918,000 a Year and Worth It(?)

Continued from page 1.

what other CEOs of similar size high-performing banks are getting," said Robert W. Miller of the Wyatt Co., a San Francisco compensation consulting firm.

Normally, a chief executive of a high performing bank would be paid about 20% to 30% more than the CEO of an average-performing institution in the same size range, Mr. Miller said.

Others Get Much Less

Chief executives of two other top-performing banks in the San Jose area are paid considerably less than Mr. Boyce:

● Roger Smith of $456 million-asset Silicon Valley Bancshares, which recorded a return on equity over 28% in 1989, collected approximately $440,000 in cash compensation for the year.

● Jack Conner of $468 million Plaza Commerce Bancorp. San Jose, which had a return on equity of more than 23%, was paid about $500,000.

Although their institutions had less than half the assets of Pacific Western, compensation specialists consider the comparisons valid.

Up to 1% of Sale Price

Mr. Boyce's investment banking agreement with Pacific Western's directors has added fuel to the compensation fire. Under the arrangement, Mr. Boyce is to get 0.5% to 1% of the sale price on a sliding scale if the company is sold for 2.5 times book value or more.

Experts say the agreement goes to the nub of the question of a chief executive's responsibilities in a takeover.

Critics of the arrangement maintain that negotiating with a potential acquirers is a normal CEO responsibility.

The board "was most comfortable having Phil represent them," said Victor J. Bacigalupi, a San Francisco lawyer who advised the company. "They wanted to pay him for that work."

"Investment banking is a specialized, highly intensive function. It is not a responsibility inherent in being a chief executive."

Phillip R. Boyce
Pacific Western

Mr. Boyce said his fee is less than outside advisors would get. "Investment banking is a specialized, highly intensive function," he said. "It is not a responsibility inherent in being a chief executive."

Sources familiar with the advisory agreement note that, in addition to giving Mr. Boyce incentive to get a high price for the company, it accomplishes several other goals.

In addition to reinforcing signals that Pacific Western is for sale, they said, the pact channels all bids through Mr. Boyce and indicates that a potential buyer should not come in with a bid of less than 2.5 times book. □

Auction of Mutual Thrifts Could Raise Bailout Funds

By REID NAGLE and KEVIN STIRONE

When Congress begins to tour the landscape for additional funds to pay for the thrift bailout, it may decide to tap the value of the remaining mutual thrift franchises as one source.

Under this scenario, the government would effectively put healthy mutuals up for sale, perhaps setting aside a portion of the proceeds to compensate displaced management.

This potential revenue-raising measure could spell the demise of mutual thrift institutions. In the first round of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, Congress raised deposit insurance fees for both banks and thrifts and seized the surplus capital of the Federal Home Loan banks.

Politically Palatable

In the second round of the reform act, Congress will look for other sources of funds to pay for the mounting cost of the bailout. One option that would be relatively painless politically includes auctioning off remaining healthy mutual thrift institutions, a process that would generate present-value proceeds of $10 billion.

While mutual thrifts technically belong to their depositors, federal and state regulators adopted in the mid-'70s effectively stripped depositors of their ownership rights.

When mutuals elect to convert to stock form, depositors do not receive the accumulated surplus. Instead, if they're lucky, they get to purchase stock at the same price as the public.

Who Owns the Mutuals?

To whom, then, do the retained earnings of mutuals belong? To everyone, it seems, except the depositors. Entrenched managements frequently operate the institutions for their own benefit, insulated from the pressures of disenfranchised owners.

Periodically, an acquirer will be able to tempt the management of a mutual thrift into a merger conversion that enables the acquirer to snare the target by paying management a fraction of surplus it otherwise receives for free.

That was the case recently when Republic New York Corp., a $ 28 billion bank holding company, was able to corral Manhattan Savings Bank by providing management with contracts and benefits valued at around $10 million.

Retained earnings of mutuals belong to everyone, it seems, except the depositors.

Republic walked away with Manhattan's $270 million in equity, leaving Manhattan's depositors with only the right to buy Republic shares at the prevailing market value.

Shrinking Number of Mutuals

At present, there are 2,000 mutual thrifts in the country, including both savings institutions insured by the Savings Association Insurance Fund and savings banks insured by the Bank Insurance Fund. That number is down from 3,500 mutual institutions that existed in the late '70s.

If the government chose to auction off these remaining mutuals, it would most likely find that slightly less than half, or 900 institutions, would have value to well-capitalized bank and thrift acquirers. The remainder most likely will need federal assistance to make them attractive.

If sold at 75% of tangible book value, a conservative estimate even by today's depressed standards, the government would generate $10 billion, a partial down payment toward the escalating bailout costs.

Silencing Managers' Protests

Depositors would lose very little, since they were stripped of ownership rights many years ago. Mutual managers would surely raise a protest, one that might be addressed by setting aside a portion of the sales proceeds to compensate displaced managers.

Even by reserving $1 million for each mutual successfully auctioned, the net proceeds would still top $9 billion.

In the end, the absence of true ownership in the mutual institutions limits the pain of seizure. The government defrays a meaningful portion of the bailout cost, depositors remain insured (although forgoing the opportunity to invest in a mutual's stock conversion), displaced managers are compensated for their trouble, and acquirers obtain healthy institutions at a discount. □

Hanover Expects High Demand for Forstmann Loan

Continued from page 16

later this month.

Hanover and Continental committed $700 million and $300 million, respectively.

On Monday, Forstmann Little said it agreed to pay $44.50 a share in cash for General Instrument, a maker of cable television equipment, and associated companies in New York City.

The purchase price, including assumption of debt, was placed at $1.6 billion.

Buyout Fund Tapped

Forstmann Little will draw $800 million from its buyout fund for the deal. Of that amount, $200 million will be equity financing, with subordinated debt comprising the remainder. The $600 million loans will be over the rest of the purchase price and provide additional funds for working capital.

The loan package will consist of an eight-year $565 million term loan, a $250 million eight-year revolver, a $200 million two-year term loan, and a $150 million two-year revolver.

Hanover's Mr. Baione said he expects to have the complete underwriting group in place by next week and hold a general bank meeting possibly as early as the third week in July.

3-Tier Structure

The syndication probably will be structured in three tiers of commitments, with fees based accordingly, Mr. Baione said.

Manufacturers Hanover has a close relationship with Forstmann Little, recently serving as lead bank for its $625 million buyout of Chrysler Corp.'s Gulfstream Aerospace unit.

Continental Bank was a cogent in the Gulfstream deal, which required $650 million of bank financing. Syndication of the Gulfstream bank loan was substantially oversubscribed.

Speculation on Higher Bid

General Instrument's share price closed Monday slightly above Forstmann Little's $44.50 bid, and continued to trade above the bid on Tuesday, based on speculation that a higher offer might emerge.

One market source noted, however, that General Instrument had been the subject of takeover rumors for several years, and no bidder ever surfaced until Forstmann Little.

If the company accepts a higher offer, General Instrument would pay Forstmann Little a $33 million commitment fee. □

Home Savings of NY Cuts Dividend Rate

NEW YORK — Home Savings Bank, Bayside, N.Y., said it has reduced its quarterly dividend payout to 18.75 cents from 37.5 cents because of persistent weakness in the local and regional real estate markets.

The company said its board will continue to review its dividend policy on a quarterly basis.

Home Savings said its decision is not related to its previously announced agreement to merge with the Bowery Savings Bank, a New York subsidiary of California-based H.F. Ahmanson & Co., and should not adversely affect the proposed transaction.

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banks and the 50 largest thrifts. All ages publicly traded and not headed by a $ symbol have at least 10 million shares outstanding. PE is price/earnings ratio. Mkt. Cap. to bk. is market capitalization to book, and for thrifts, 12/31/89 data. 52 Wk Hi is the stock's 52-week high and low prices for the stock. PE: the price-earnings ratio. It is the current stock price divided by the trailing four-quarter earnings per share adjusted for latest announced earnings. Mkt. to book: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Book value is adjusted for announced earnings and dividends for the quarter in which the stock last traded. If no trades for the day, the latest bid. AB Bank and Thrift Indexes: A weighted average of the top 250 banks as market value and the top 50 thrifts in market value, respectively. Weightings are base-period percentages in price and value and assume indicators most shares traded and today's volume as a percentage of average volume traded during base period.

Data source: SNL Securities, Charlottesville, VA. 804-977-1600, produced the tables. Financial News Network, Vienna, VA, provides DJIA, with the daily prices.

Republic's Focus on Deposits

By KELLY HOLLAND

The best way for a bank to tap the capital markets may be for it to avoid operating like a bank, if Republic New York Corp.'s recent experience is any indication.

Republic issued $100 million in subordinated debt last week after several other banks had already come to market in June. But even as the last in a series of issues, the Republic bonds fared well, trading at a premium after the offering was completed.

Investors may have been reacting to Republic's unusual approach to the business of banking.

Republic makes strategic decisions based on whether implementing them would make deposits more or less secure, not on whether or not they further lending activities, the way most banks do, according to Thomas F. Robards, executive vice president and treasurer of Republic.

"At Republic, the focus has not been to lend," he said. "It's been to borrow."

Low Loan-to-Deposit Ratio

The emphasis on building safety to attract deposits has led Republic to amass a deposit base representing a larger proportion of its assets than many of its peers, and to emphasize asset-building activities other than lending.

Republic's loan-to-deposit ratio was just 30% at yearend, compared with ratios averaging more than 75% for banks with comparable ratings. But it is active in foreign exchange trading and other nontraditional banking businesses.

Building safety also makes it easier for Republic to access the capital markets, considering the performance of its most recent issue.

The $100 million offering was priced with a coupon of 9.5% and sold at a yield 105 basis points over comparable Treasuries. That is a yield spread well below the rates being paid by banks with similar ratings.

Take Bankers Trust New York Corp. That bank issued $200 million of 10-year subordinated debentures several weeks before Republic came to market. The offering was priced to yield 115 basis points over Treasuries, higher than the Republic offering, and market sources have said the bonds have traded in the secondary market at yields as much as 135 basis points over Treasuries.

Lower Funding Costs

Proceeds of Republic's debt issue will be used to further reduce the bank's funding costs, Mr. Robards said. Republic will use part of the proceeds to repurchase some outstanding floating-rate debt now trading at a discount.

Republic tries to match the maturities of its liabilities and assets. In order to keep that match, the bank has swapped the proceeds of its recent debt issue into floating-rate payments.

Swap rates are low right now, making it difficult for a bank to reduce its funding costs significantly using that market. But even so, the all-in cost of the fixed-rate issue was below the cost of keeping the floating-rate notes outstanding, Mr. Robards said.

"Our approach has always been to take capital when it's available," Mr. Robards said.

The conservative funding mix is a hit with analysts. "Based on safety alone, no bank can touch Republic New York," said Charles N. Cranmer, an analyst at Shearson Lehman Hutton Inc., in a recent report.

* * *

Republic tries to match the maturities of its liabilities and assets.

Deposits Come First At Republic

Shares of Virginia Banks Fall on Loan Fears

Continued from *page 1*

which lost $1 Monday, lost another $1.125 Tuesday to close at $26.875. Dominion Bancshares, in Roanoke, closed at $13 Tuesday, down 50 cents. It was off $1 Monday. Crestar was down 25 cents to close at $21.625.

Similar to New England

"The potential exists for a not-too-dissimilar set of events from New England," said Carole Berger, an analyst at C.J. Lawrence, Morgan Grenfell. "For the first time I think you're having validations that the [real estate market in the area] is slipping away," she added.

"I've got to admit that the market down here has weakened since the end of the first quarter," said Anthony Davis, an analyst at Wheat First Securities. "Liquidity is drying up and buyers of properties are not getting financing. Further, the overabundance of office space is not getting any better."

He said his clients are starting to ask him if the situation is going to get as bad as it did in New England.

Crestar Posts Lower Earnings

Adding fuel to the real estate fears was the announcement on Tuesday by Richmond-based Crestar that it too expected lower second quarter earnings. It said it was planning to increase its nonperforming assets from $97.2 million to $125 million. It said it expected lower second quarter earnings but would say how much lower they would be.

In its announcement Monday, which was prompted by the sharp decline in its stock, Signet said nonperforming assets are expected to rise to approximately $150 million, an increase of $45 million over the March 31 level. The $150 million figure is 2 percent of the bank's loans. It said most of the increase was because of souring real estate loans.

Reflects Market Deterioration

It said the increase was decided upon to reflect not only the results of its recently completed Office of the Comptroller of the Currency exam but also overall deterioration in the market during the second quarter. It said its formal earnings report was due in mid-July.

MNC Financial Corp. in Baltimore, which said recently that its second quarter results would be worse than expected, fell 50 cents Tuesday to $11.75.

Not all analysts were downbeat.

Lacy Shockley, an analyst at Smith Barney, Harris Upham & Co., said the Signet and Crestar announcements did not indicate extraordinary problems given the state of the banking industry.

She said both banks' increased nonperforming assets still left them below many banks in the industry.

Bank Issues Continue Fall

While the overall stock market was up, shares of most banking issues continued their fall Tuesday with Wells Fargo & Co. and stocks in Virginia leading the pack.

Wells fell $1.625 to $76.875 as rumors dissipated that investor Warren Buffet had accumulated a large stake in the company.

Corestates Financial Corp. bucked the trend in the bank market, rising $1.25 to $41.25.

The Dow Jones Industrial average was up 12.37 to 2809.08. □

Smaller Lenders Bar MorningStar Restructuring

By STEVEN LIPIN

MorningStar Foods Inc. and its bank group led by Continental Bank have been unable to persuade smaller lenders to go along with a restructuring package that would allow the company to make a June 30 interest payment on its $150 million in subordinated bonds, according to a statement issued by the company.

The company, a dairy spun off from Southland Corp. in a 1988 leveraged buyout, has less than 30 days to persuade recalcitrant banks to extend principal payments on its $135 million in bank loans. The company had a $30 million loan payment due June 25.

That would allow the company to make its bond payment, according to Kenneth Drucker, an analyst at Standard & Poor's Corp. S&P downgraded the company's bonds Tuesday to single-D from triple-C plus.

"The rating reflects Morning-Star's failure to make the July 2 interest payment on its rifted debt, due to its inability to reach a unanimous agreement among its banks for a payment extension on its senior bank debt," S&P said.

If the company does not make its bond payment, holders will put the company into bankruptcy and likely trigger a bankruptcy, analysts said.

Just as smaller participants in the Trump bank syndicate held out for better terms or a buyout by agents, smaller lenders are holding up an interest payment and balking on suspension of bank loan payments. And banks are resisting the company's plans to pay subordinated holders instead of senior creditors.

"A minority of lenders are putting the squeeze on the company," Mr. Drucker said.

MorningStar said Tuesday that a majority of banks have agreed not to accelerate payments as a result of the delayed principal payments, effective through July 30. But changing terms of loans needs approval of 100% of the banks.

Falling profit margins hurt MorningStar when milk prices skyrocketed last year. Cash flow coverage of interest for the year ending Dec. 31 was 0.89%.

Because of weak operations, the company decided to sell assets, although asset sales were not part of the original LBO plans. But the Justice Department has held up sale of its Texas dairy operations. □

Hanover Sees High Demand in Syndication of Forstmann Loan

By WILLIAM GOODWIN

As investors continued to speculate Tuesday about a higher offer for General Instrument Corp., Manufacturers Hanover Corp. — agent bank for Forstmann Little & Co.'s bid — expressed confidence about its ability to syndicate $1.17 billion in bank loans for the buyout group.

"It should play very well," said Thomas Baione, a managing director in Manufacturers Hanover's acquisition-finance department.

The bank loans for Forstmann Little will be priced at 150 basis points over the prime rate, and carry typical fees for loans to highly leveraged transactions, Mr. Baione said.

Hanover and cogent Continental Bank agreed to underwrite almost all of the bank financing, although two or three additional underwriting banks are expected to be added before the loans are brought to market

AMERICAN BANKER Conferences Presents

The New Shape of Retail And Consumer Banking

IMPLEMENTING A WINNING STRATEGY IN A CHANGING ENVIRONMENT

Marketing Tax-Advantaged Annuity Investments in Your Bank

By Alan H. Blank

The United States is witnessing a dramatic change in the way banks approach marketing insurance and investment products to improve the bottom line.

Several factors have created this change. Legal and regulatory restrictions have eased and commercial banks are currently experiencing a new level of competitive pressure. Opportunities are now being explored to capture the burgeoning market in annuities and investment products.

Half of all U.S. financial institutions with deposits greater than $750 million now offer annuities. Another 60 are likely to introduce annuity programs in the coming year. That is one of the conclusions of a recent survey conducted by Kenneth Kehrer Associates, an independent financial consulting firm based in Princeton, N.J.

The survey examined whether large financial institutions were offering various insurance and securities products and whether the institutions intended to introduce new lines of insurance. The survey, published in the March-April issue of the *Newsletter of the Bank Insurance Industry*, included 90% of all banks and thrifts with deposits of at least $750 million.

Existing Programs

Almost three-fourths of the large banks and thrifts indicated that they offer some kind of annuity, investment product, or securities brokerage program.

Almost two-thirds of the 442 institutions surveyed offer some type of retail securities brokerage service. About half of these institutions with securities brokerage programs also sell annuities.

About one-fourth of the institutions that reported some kind of alternative investment programs sold annuities only; 12% sold both annuities and packaged securities products, without offering securities brokerage; 1% sold only mutual funds and unit investment trusts (UITs), without annuities or securities brokerage programs.

Two-thirds of the large institutions with alternative investment programs sell annuities. Thus, about half of all large institutions already have some kind of annuity marketing program.

Annuity Intentions

Table 2 examines the 272 large institutions that report not yet having an annuity program. Two-thirds of these institutions express no interest in annuity marketing at this time.

TABLE 1: Product Offerings in Existing Annuity and Investment Product Programs in Large Financial Institutions

	Number	% of Large Programs	% with Programs
Annuities only	106	17	24
Mutual funds only	5	1	1
Annuities and mutual funds	60	9	13
Mutual Funds, Securities Brokerage with annuities	146	24	33
Securities Brokerage without Annuities	127	20	3
Total	442	74	100

TABLE 2: Intentions of Large Large Financial Institutions About Starting an Annuity Program

	Number	% of Large Institutions	% without Annuities
No interest	180	30	66
Being Studied by Middle Management	27	4	10
Trying to Convince Senior Management	7	1	3
Seriously Evaluating	61	7	15
Total	272	46	100

In 10% of the institutions without annuity programs, the survey found someone in middle management was currently studying annuity marketing. In approximately 7% of institutions without annuity programs, someone in middle management was championing annuities, trying to convince senior management that the institution should offer the product.

In the other 15% of institutions not currently selling annuities, senior management was seriously evaluating starting an annuity program. These institutions had taken such steps as establishing a task force, issuing a request for proposals, initiating a strategic business review or putting an annuity program in next year's budget.

Of the 60 financial institutions surveyed that are seriously evaluating annuities, or where someone is trying to convince senior management to introduce annuities, 39 (65%) are commercial banks.

Twenty-seven of these 60 institutions that are likely to introduce annuities during the next year could do so by licensing their own employees. The other 33 would have to use an outside, unaffiliated third-party concern to employ and manage an annuities sales force in their branches, given state restrictions on licensing financial institutions or their employees.

The 41 institutions most likely to introduce annuities this year (i.e., those classified as "seriously evaluating") will add $3.5 billion to $4 billion in annual annuity sales to the national total once their programs are fully launched. Banks and thrifts sold more than $7 billion in annuities last year, up from $6 billion in 1988.

Why Market Annuities?

The emergence of annuities as an important retail banking product has its roots in the financial services revolution that has been taking place for over a decade. First, spiraling interest rates had a dramatic effect on traditional savings behavior. Then, deregulation of the financial services industry resulted in unprecedented competitive pressures.

Deregulation of deposit products resulted in fair competition for funds among financial institutions. The distinction between banks, thrift institutions, brokerage firms, and insurance companies became blurred.

Large financial services conglomerates began seeking ways to establish as many service/product relations with the consumer as possible. Suddenly, banks and thrift institutions found themselves in direct competition with companies like Sears Financial Network and Shearson-American Express. Banks and thrift institutions found their spread margins shrinking and began to seek fee income to supplement their traditional lines of business.

These radical changes in the marketplace, coupled with the public's increasing skepticism over the long-term dependability and value of Social Security, fueled consumer interest in alternative strategies for managing and building their retirement savings. Traditionally, most Americans had placed the bulk of their savings in savings accounts or cash-value life insurance.

But the turbulent economy of the '60s and '70s (and the "bracket creep" built into the tax rates), left most savers skeptical, if not pessimistic, about these traditional vehicles as a means of providing for their later years.

Consequently, a strong demand developed for new savings and investment products, especially those that were tax-advantaged — that permitted the tax-deferred buildup of an individual's retirement assets or that avoided taxation altogether. More and more, unsophisticated investors now understand and seek the advantage of compounding earnings on a tax-deferred basis.

The 41 institutions most likely to introduce annuities this year (i.e., those classified as "seriously evaluating") will add $3.5 billion to $4 billion in annual annuity sales to the national total once their programs are fully launched. Banks and thrifts sold more than $7 billion in annuities last year, up from $6 billion in 1988.

TO THE READER

Deregulation has changed almost all the rules and formulas for success in retail banking. The growing wave of consolidations in the financial services industry has also radically changed all the consumer aspects of banking.

The articles in this special supplement on the new shape of retail and consumer banking represent the best information on this rapidly changing field that were available to the authors at the time the articles were written. Readers are urged to contact the authors or their own advisers to seek timely updates.

To order additional copies of this supplement, or reprints of individual articles, call Martha Hernandez at 800-367-3989 outside New York or 212-943-4845 in New York State. Fax orders will be accepted at 212-480-0165.

tageд insurance investments.

10 Reasons to Market Annuities at Your Bank

• Other financial services companies – securities firms, insurance companies, even retail stores – are trying to sell your customers products like annuities that compete with your liability products. Many banks are fighting back by offering annuities and other investments to their customers.

• The annuity market is growing dramatically. Last year annuity sales were more than $100 billion, up 23% from the previous year. One insurer estimates that today one out of ever five American adults owns an annuity.

• Studies indicate that consumers want to buy annuities where they bank. In the past three years, more than one million people invested in annuities through banks or thrifts.

• Customers who buy annuities where they bank tend to be between the ages of 45 and 65 with large deposit balances at several banks and thrifts. They are putting some of these deposits into conservative investments with tax advantages.

• Many of your banking competitors are also trying to sell your own "mutual" customers annuities. A typical banking customer has relationships with at least three banks and thrifts. And, these competitors try to talk your customers into buying the annuity with deposits at your institution, not theirs.

• Annuities can provide substantial fee income to your bank. A typical bank makes about $50,000 to $100,000 in annual pretax profits from an annuity program for every $100 million in deposits. That works out to about $10 in annual profits for every household your bank has as a customer.

• Consumer surveys have repeatedly shown that people want to consolidate their financial affairs with one or very few providers. And, they prefer to consolidate where they bank.

• Annuities help build stronger customer relationships by increasing the number of account relationships you have with your customer. Studies have demonstrated that the customer with multiple banking relationships is less likely to close an account or leave the institution altogether.

• Annuities and other tax-advantaged investments fill customer needs that are not met by deposit products. The investment needs of most people can be summarized by the following chart:

Bank deposit products only fulfill one aspect of a customer's needs – an investment with a fixed return without risk to principal. For a bank to meet the other investment needs of its customers, it must offer annuities, mutual funds, and tax-free unit investment trusts.

• To compete with other banking institutions and financial services firms, your institution needs to become oriented to selling as well as providing service.

Banks that have delayed starting an annuity marketing program usually have hesitated for two reasons – regulatory prohibitions or concern over whether annuities would disintermediate their deposits.

Regulatory Constraints

The Bank Holding Company Act and national bank regulations prohibit many commercial banks and their holding companies from being licensed to sell insurance or from owning insurance agencies. And laws in most states prohibit banks from being in the insurance agency business.

But deregulation is proceeding rapidly. The Comptrolier of the Currency has ruled that national banks can sell and receive commissions from both fixed and variable annuities. Various court cases – most notably the Merchants National case – have upheld the right of bank holding companies to own state banks that engage in insurance activities in states where such activities are permitted.

And more and more states do permit all banks – state and national – to sell annuities. Altogether, all banks in 17 states can be licensed to sell annuities, as well as selected banks in another five states. And legislation granting banks insurance or annuity powers is currently under consideration in several other states.

But even if your bank is prohibited from directly marketing annuities, you can still participate in this proven way of enhancing your retail banking business. Almost a decade ago, PAMCO pioneered the development of a program that passes regulatory muster in even the most restrictive states.

PAMCO places its own investment executives in your bank, and the bank controls the marketing. We do the licensed selling of annuities.

Bank income and service fees are substantial, often in excess of what the bank would net if it were allowed to be licensed to sell annuities directly. The company used this approach to launch the very first annuity programs in commercial banks, in institutions as large as Michigan National and as small as La Jolla Bank and Trust.

Because this approach relieves the bank of any financial investment in annuity marketing and minimizes its program-management burden, some banks, and even thrifts, who could legally hire licensed agents directly have asked PAMCO and other similar

Tax-Advantaged Insurance Investments

Tax-advantaged insurance products have become increasingly important, as the public learns of the substantial benefits these products offer in their personal investment programs.

• Tax-Deferred Fixed Annuities. Fixed annuities are tax-deferred savings and retirement income vehicles for individuals. Unique among investment products, the fixed annuity provides customers with the direct benefits of interest rate guarantees without market risk to the principal deposited.

The primary benefit for the customer is that the interest earned from this investment accrues with no current federal, state, or city income taxes. In addition, the insurance company guarantees the principal and interest payments so that, unlike a mutual fund, the customer is not bearing the risk of fluctuations in the bond or stock markets.

The customer pays no fees or commissions to purchase a fixed annuity. Unlike several mutual funds, all of the customer's investment earns interest without a sales fee (load) to decrease the principal amount invested. The insurance company makes its profit from the spread between the rate of return it earns on the invested capital and the rate of interest paid out to the customer.

Annuities provide several payout options, including guaranteed monthly income for life.

• Tax-Deferred Variable Annuities. Unlike a fixed annuity, a variable annuity fluctuates in value and in its rate of return, depending on the performance of the annuity's investments.

In effect, the insurance company fulfills the function of a money manager. Instead of paying the customer a fixed rate of interest, the insurance company manages the customer's money by investing in portfolios that are just like mutual funds.

The insurance company earns a profit by charging its customers an asset-management fee. Most competitive variable annuities offer a choice of different investment options.

Thus, variable annuities afford customers the opportunity to invest in bond or equity funds on a tax-deferred basis.

TAX ADVANTAGES

Risk to Principal	NO	YES
NO	Bank Deposits	Fixed Annuities
YES	Mutual Funds	Variable Annuities & Tax Free Unit Investment Trusts

ALAN H. BLANK
Chairman
PAMCO Securities and Insurance Services

Alan Blank is chairman and co-founder of PAMCO Securities and Insurance Services, a leading provider of turnkey investment product delivery systems for financial institutions throughout the United States. PAMCO is a registered broker-dealer and licensed agency for tax-advantaged life insurance products.

Mr. Blank has a wide range of experience covering 18 years in the marketing of financial products and direct sales. He pioneered the broker-dealer turnkey concept of investment product delivery systems.

Featured in Fortune magazine as an industry leader to watch, Mr. Blank is a recognized industry expert. He frequently serves as a keynote and panel speaker at national financial services conferences and seminars. He has been the subject of interviews by Money magazine, the American Banker, and National Thrift News, and was featured on BPN's "Nation's Business Today."

Mr. Blank's articles on investment marketing have been published by the Banks in Insurance Report, the Financial Institutions Marketing Association (FIMA), and the Bankers Magazine. He is the author of "Investment Product Marketing: Retail Marketing Through Financial Institutions."

Known for his energetic management style, Mr. Blank maintains a personal involvement in all PAMCO programs. He regularly reviews implementation progress, sales performance, and the quality of service offered by his staff at each institution.

Prior to forming PAMCO in 1982, Mr. Blank headed A.M. Blank & Co., which marketed investment annuity programs nationally. Previous positions included experience as a stockbroker for E.F. Hutton and a regional manager with Great Western Savings and Loan Insurance Agency.

A graduate of the University of Bridgeport, Mr. Blank holds a bachelor of science degree in economics and marketing. He is a registered principal with the National Association of Securities Dealers.

Mr. Blank has also joined with Touche Ross (now Deloitte & Touche), Cigna Securities, and other financial services companies to found the National Society of Compliance Professionals. This nonprofit trade association focuses on compliance and regulations issues.

Profitability and Your Branch System: Issues for the 1990s

By Seamus McMahon

Deregulation has certainly taken its toll on branch banking profitability.

The removal of price ceilings (Reg Q) revealed predictable excess capacity and led to increased competition among traditional and nontraditional players. Against this backdrop it's not surprising to witness falling margins and many unprofitable branches (30% nationwide by our estimate).

Nevertheless, we are fundamentally bullish on the branch banking business. Firstly, convenience (ie. physical proximity) clearly retains much of its value with the bulk of consumers – witness plans by direct-mail fund companies to open limited networks.

Secondly, branch banking offers both proprietary channels and a proprietary data base of customer information unavailable to most competitors. Thirdly, branch banking, unlike many competing channels, has traditionally been perceived by consumers as a relationship, multiproduct supplier.

But there's a catch to this scenario. We believe that only well-positioned players who manage capacity and product/customer mix extremely carefully will live to tell a profitable tale.

By well-positioned, we mean branch businesses with the competitive advantages of scale and network density. The impact of scale in lowering unit costs in the branch is well understood.

Larger branches staff more efficiently; every doubling in size reduces unit costs by 25%. It's very difficult to run a sub-$25 million deposit branch without significant slack capacity.

But scale is equally critical in the back office: check processing, programming, data center operations, and customer service all show 20% to 40% reductions in unit costs with each doubling in volume. Retail businesses with both large branches and back offices have significant entrenched cost advantages over their smaller competitors. By our reckoning at most 15 to 20 banks in the U.S. are 'at scale' in their back offices today.

'Branch network density is less well understood but also important in determining branch performance. Experience shows that a bank which – in a defined market – has less than 60% or 75% of its lead competitor's branches is unlikely to get its "fair share" of new deposits.

Continued on next page

Annuity

Continued from preceding page

competitive firms to manage their annuity programs.

Disintermediation

Some bankers fear that marketing annuities is "shooting oneself in the foot." They believe that annuities would cannibalize existing deposits. But PAMCO has developed a program that results in virtually no disintermediation.

Bank and thrift clients have consistently reported almost no disintermediation from annuities because the compensation marketing program has been designed to protect and enhance deposits, not to harvest expiring CDs.

Low disintermediation is achieved because of the way we compensate the investment executives, how we cross-sell deposits, and how we save money that was leaving the bank anyway.

The company's investment executives are paid substantially higher commissions if the sale is funded out of money or deposits at other institutions, not yours. PAMCO's investment executives are trained and compensated to cross-sell deposits and other bank products.

We also train branch contact staff on how to identify customers who are withdrawing substantial deposits in order to make the kind of investment that PAMCO could sell them.

The company's sales process allows investment executives to determine which of a bank's products meet the customer's needs or are competitive with products the customer now uses at other institutions.

Consumers are actively shopping for investment alternatives, and banks are developing investment marketing programs to maintain their market share. Programs such as PAMCO's will enable institutions to broaden their investment product offerings, expand current customer activity, generate new fee income and deposits, and increase profitability. □

Studies indicate that consumers want to buy annuities where they bank. In the past three years, more than one million people invested in annuities through banks or thrifts.

The best choices are made by comparison.

• Generate new income and new deposits.
• Safeguard customer relationships.
• Expand your customer base.
• Expand services with minimal capital investment.

Branch

Continued from preceding page

For example, if your bank has 40% as many branches as your lead competitor in a given market, you are unlikely to get 40% of the deposits in that market. Consumer research indicates a "share of mind" phenomenon: The more prevalent brands tend to crowd out the stragglers.

From an industry respective these two competitive edges, scale and density, will accelerate in-market combinations. Given current excess capacity, consolidation across networks is the only economically attractive way to achieve scale for most banks. And most consolidation benefits are only feasible in-region.

Obviously, branch networks must overlap to allow for significant branch operations consolidation. But even overhead and systems consolidation proves difficult across regions as the demands of responding to different market places grow. And, of course, in-market consolidation of branches allows for increases in network density. The stock market apparently understands these underlying economics. The shares of both seller and acquirer have fared better, on average, in in-market combinations.

Managing Capacity: Variable Staffing Is Critical

The key capacity-management issue in branch banking today is staff utilization. Personnel costs represent 70% of network costs and 40% to 50% of operations expenses.

We have measured up to 40% idle personnel capacity in branch networks. Ironically, equipment and hardware costs are typically managed much more carefully because of the size of the incremental investments.

Personnel costs, by comparison, are more insidious and are typically managed through blanket headcount goals. Careful capacity management of personnel depends on an understanding of the peaks and valleys of demand, particularly in the branches. In fact, although many banks profess to using peak-time staffing, there is very little evidence of effective load-leveling in most networks.

The implementation problems typically fall into five categories.

- Few branch networks have effective MIS to help them model branch or back-office staffing needs by time of day, day of week, day of month, etc.
- Branch and regional managers are not incented sufficiently to overcome their natural reluctance in managing a more complex staffing arrangement.
- Job and skill requirement definitions are typically too narrow to give human resources departments a creative chance to staff to peaks.
- Human resources departments have typically not been given the budgets to research and attract these part-time staff (e.g., housewives, teachers, students, retired people) in sufficient numbers.
- Finally, and most tellingly, senior management in most banks have not yet made staffing to demand a "must succeed" priority, unlike other commodity distribution systems (eg. fast food, gasoline, restaurants).

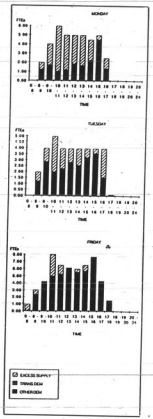
The last point is critical. Some banks across the country have made this peak-time staffing a priority with up to 60% of all hours worked in the branch being generated by part-time employees.

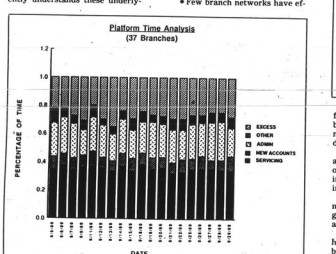
The benefits are enormous: Staffing to demand can increase fully loaded branch profits by up to 20%.

The key steps banks must – and will – take are relatively straightforward:

- Determine true current capacity utilization by time period, using transaction arrival rates, timing, diaries, standard times, etc.
- Develop simple MIS to predict staffing requirements by branch and back-office functional area.
- Focus human resources on finding the most creative sources of part-time staffing: they can do it, given support and leadership from top management.
- Make successful implementation of peak-time scheduling a key performance criterion for branch and network management.

Despite protests to the contrary, staffing to demand is a realistic goal for reducing costs and even increasing service levels, as banks as diverse as First Chicago and Wells Fargo demonstrate. This program is the first critical element in achieving outstanding performance in a well-positioned bank.





Product and Customer Mix: The Dark Continent

The second critical element is product and customer management. Although bankers emphasize the critical nature of customer and product segmentation, they will also generally confess to understanding very little about the nature of the problem or what to do about it.

It is clear for example, that product-mix management is truly pivotal in determining overall branch performance.

For a group of southeastern banks, there is a distinct tradeoff between growth of deposits and the quality of a bank's product mix as measured by weighted net interest margin. The reason, of course, is that rapid growth rates are generally only achievable by "pushing" certificates of deposit, money-market deposit accounts, and other price-sensitive products.

We see two basic challenges in the arena of product and customer management: anticipating customer product usage and minimizing average pricing. Anticipating customer product usage has two key objectives: focused cross-selling/relationship development and minimization of avoidable cannibalization.

Cross-selling programs today are generally passive in nature. Banks train their staff to respond to specific customer interactions with suggestions of incremental product purchases.

An active program relies on highly focused information about that customer's current product ownership, balances, transaction levels, and demographics to predict the next product to be purchased.

SEAMUS McMAHON
Principal
Booz, Allen & Hamilton Inc.

Mr. McMahon is a principal with Booz, Allen & Hamilton Inc. He has broad banking-industry experience covering the wholesale, retail, and capital markets.

Mr. McMahon has worked in strategy, systems, and operations and developed specific expertise in strategic assignments where successful management of technology is critical.

In the credit card industry, Mr. McMahon has helped senior management define an overall business strategy. This strategic plan included the development of key market segmentations and competitor analyses, resulting in the identification of key operations and systems support requirements. Implementation assistance focused on the development of an executive information system to monitor business performance.

For a diversified financial services organization, Mr. McMahon developed a capital markets analysis that identified, sized, and explained the key opportunities for the provision of information services to trading segments. Additional work for this client consisted of an analysis of existing and emerging competitors and the development of a product implementation approach.

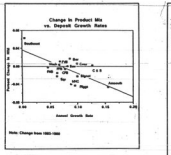
Mr. McMahon has recently helped senior management for large regional banks develop individual strategies for their retail and commercial businesses. Retail strategies have focused on improving branch and product profitability through branch restructuring, product repositioning, and back-office cost reduction.

For the commercial businesses, key elements of the strategies have included determination of relationship and product profitability. Implementation assistance has included development of management tools to optimize the allocation of account-officer time to target customer segments.

Mr. McMahon's information technology management experience at Booz Allen has covered the areas of functional and technical system evaluation, large-scale project management and data-processing strategy development.

Prior to joining the firm, Mr. McMahon was a systems review officer for Chase Manhattan Bank. Earlier Mr. McMahon was a senior consultant in the management consulting division of Arthur Andersen & Co. in Europe. In this capacity he participated in and led systems planning and implementation projects for clients.

Mr. McMahon holds an honors BA degree in economics from Trinity College Dublin and is fluent in German.

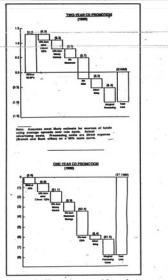


Branch

Continued from preceding page

chased and the likely usage of that product. At least three large financial institutions in the U.S. are currently building data bases of this type. These databases are combined with tailored-distribution programs (branch, mail, telemarketing) to maximize household penetration while minimizing marketing expenses.

These predictive approaches also help minimize avoidable cannibalization of core, high-margin balances. Looking one more time at the diagram showing change of product mix versus deposit growth, it is clear that some banks have achieved respectable growth rates with relatively little deterioration in net interest margin.



The challenge is to avoid marketing CDs, MMDAs, etc., to customers who were not [illegible] likely to purchase them. This point is illustrated by two recent CD programs at a regional bank.

When the sources of new funds were evaluated, the two programs had destroyed significant shareholder value. As illustrated, a relatively small percentage of the funds came from internal accounts. However these accounts all had significantly higher spreads than the CDs.

Reducing average pricing is the other key challenge in product-/customer management.

In most products today there is a significant cross-subsidization of customers. In this example, over 40% of the accounts (i.e., those with balances between $1000 and $7500) failed to cover even their direct costs. The entire profitability of this product was generated by the minority of accounts (24%) who generated 76% of the balances and revenues.

BALANCE RANGE	PERCENT OF ACCOUNTS	PERCENT OF BALANCES
0–$1M	34%	1%
$1M–$5M	32%	13%
$5M–$7.5M	10%	10%
Over $7.5M	24%	76%

Banks have two huge incentives to eliminate this inequality. First, the threat that other banks and financial intermediaries will continue to reduce prices to the unsustainably profitable large-balance accounts, stealing the better customers and leaving the average-pricing banker with the low-value accounts.

The second incentive is opportunity. Market research and repricing experience suggest that there is a significant opportunity (as much as 15% of aftertax profits) to raise prices to these smaller-balance customers without losing many accounts.

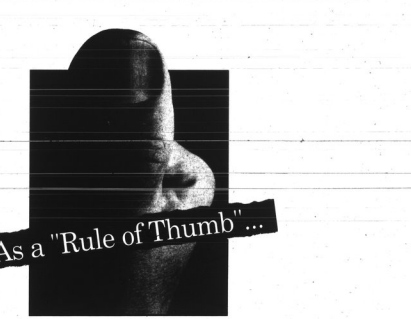
In short, the challenge in product- and customer-mix management is to develop much more insight about which customers are likely to use which products and to estimate their current/prospective profitability and price sensitivity.

We believe branch banking will remain a profitable business for banks with scale, market focus, disciplined capacity, and customer/product management programs. But the need to move on these challenges is urgent.

The performance gap between the lead banks and the "pack" is already significant. In summary, we believe each bank must take action on the five following steps:

- Focus on in-market acquisitions and consolidations.
- Develop real personnel capacity-management programs and MIS.
- Make strategic decisions about the growth/product mix.
- Optimize this tradeoff by beginning to develop predictive customer/product use models.
- Minimize the cross-subsidization inherent in today's pricing structures.

The best banks won't wait; the rest dare not. □



You're better off with the facts.

Ask other marketing companies how annuities products and mutual funds will perform at your institution and you'll probably be given a rule of thumb. Ask Marketing One and we'll prepare our exclusive *Market and Profitability Analyses* for you.

We'll build a database from facts and figures on your own institution. We'll use it to analyze your market base, pinpoint appropriate target segments, factor in disintermediation and identify the financial impact of an annuities program in your institution. Then we'll show you the results – so you can make a decision based on your reality, not on an idealized, hypothetical rule of thumb.

If you'd like to explore possibilities for expanding services and gaining a significant share of the annuities and mutual funds markets, start with a Marketing One *Market Analysis*. Find out in detail – from the company who's put more than 300 institutions into the business – what to expect from sales of annuities or mutual funds and what it will take to achieve them. Not guesses. Not promises. Just facts, and straightforward data analysis.

For full details, call 1-800-632-5678, ext. 146.

Cost-Effective Retailing: The Approach Used by Chemical Bank

By Alan M. Silberstein

Cost-effective retailing is more than just a phrase dreamed up by consultants to justify paying their fees while laying off tellers.

It is a way of doing business that has proved effective in dealing with the whirlwind of change that has been sweeping through our industry.

Banking is an industry in distress. We face increasing deregulation, governmental oversight – in fact, some might say – economic stagnation, and competition from every sector of the economy and every corner of the world.

As a result, our traditional consumer franchise has been eroding. Cities have many more banks than they can comfortably support, profit margins have shrunk, and investors are increasingly unwilling to provide capital to any but the strongest banks.

Chemical Bank has not been immune to these problems during the past few years. But rather than blindly cutting costs and threatening the inherent strengths of our business, we have approached these challenges by continuing to focus on our basic strategy.

We have been committed for many years to a vision of retail banking as retailing – that is, the marketing and selling of financial services to consumers and small businesses. We believe that we have to be retailers before we can be bankers. So we have chosen to deal with the challenges facing our industry by becoming excellent cost-effective retailers, not just "cheap bankers."

We have accomplished this by focusing on three basic strategies of cost-effective retailing:

- Know your customer.
- Make every square foot count.
- Make every person contribute to the bottom line.

Know Your Customer

"Know your customer" is probably the best-known lesson in retailing, but it's one that most bankers don't fully comprehend. We've all been told that market segmentation is a key component of cost-effective retailing, but too many bankers think of their market as a static mixture of average customers. That's a mistake.

To be successful in meeting the needs and demands of our consumers, we need to recognize that there is no "average" customer, only individuals with defined needs.

And these customers don't have to be static. As retailers, we have the opportunity to tailor our services, pricing, and delivery systems to attract and retain the customers we want.

Thus, one of the keys to cost-effective retailing is to learn what different individual customers want – and are willing to pay for – and use that information to choose our customer base and design products and delivery mechanisms tailored to their needs.

For example, every time a customer completes a Chemical application, we obtain a wealth of information about who he or she is, his or her current financial needs, and past banking history. Over time, the customer's transaction patterns provide us with even more information.

We also regularly survey customers, former customers, and noncustomers to determine their banking preferences. That information, combined with broad demographic data, has been the source of some of our most valuable ideas for targeted marketing and product design.

That same information has also helped us determine which customers we want to attract and retain. By tracking the transaction patterns of our customers, and the associated costs of serving them, we have been able to determine which customers are actually our most profitable.

By matching our business to the most profitable customers and concentrating our resources to meet their needs, we have increased our market penetration among those customers, increased their satisfaction with Chemical, and lowered our account attrition.

Another source of information used by Chemical, like many other consumer-driven companies, is our telephone-service line. Customer questions – and, yes, complaints, are often an invaluable way to monitor important trends in the marketplace.

Not only do we have the opportunity to help our customers, but we learn more about what is of immediate concern to them, how we can alter our operations to become more competitive, and what new

> Sometimes we learn that our customers have changed right before our eyes. What was right for a particular customer segment yesterday may not fill its needs tomorrow – or even this afternoon.

products or features might be valuable.

Sometimes we learn that our customers have changed right before our eyes. What was right for a particular customer segment yesterday may not fill its needs tomorrow – or even this afternoon. One key to cost-effective retailing is to recognize when changes have occurred and respond in a timely fashion.

Traditionally in banking, it could take two years or more to implement a new product and, by the time it was introduced, it wasn't new anymore. But, at Chemical, we've invested in technology to reduce the development time for new products and made it cost-effective to serve niche markets.

Our customer-account system is a central data base with a service-plan facility that has been the key to our introduction of new relationship products for consumers and businesses in New York, New Jersey, and Texas. This dynamic system, which links up our deposit accounting, installment lending, and revolving credit systems, has provided both high levels of flexibility in product design and operational support for the new products. It has allowed us, as banking retailers, to respond to opportunities more quickly, and more cheaply, than ever before.

Make Every Square Foot Count

The second basic strategy of cost-effective retailing is to make every square foot count. At Chemical, we've copied other successful retailers and set out to make every square foot that we have a productive contributor to our bottom line.

By evaluating how much each service and activity contributes to the success of our business, and allocating available space based on the relative values of these activities, we are increasing the cost-effectiveness of our entire branch network.

For example, we used to think of every branch as its own miniature bank. As a result, we provided the same (primarily transaction-based) services in every location.

The success of Chemical's pioneering work in self-service taught us that we didn't need tellers and expensive floor space to profitably service customers. Instead, we could use machines to handle simple transactions, freeing staff to concentrate on customer problem solving and cross-selling, and releasing floor space for more profitable activities. And our phone-based services could handle the majority of our noteteller, non-ATM contacts with customers.

By successfully moving customers to alternative delivery systems and moving many operational and nonessential activities out of our prime retail locations, we have significantly altered our use of space.

As a result, we have reevaluated our space requirements, in some cases releasing space, in others reconfiguring or even acquiring additional space where appropriate to support our sales focus.

Chemical has learned to use its branches to sell assets and well-priced liability products, instead of processing transactions – and we've achieved significantly better returns. By repositioning our branches as sales centers, with dedicated salespeople and furnishings appropriate to the consultative selling process, we are maximizing our profit per square foot and improving the cost effectiveness of our branches.

We've been taking this repositioning a step further by tailoring the layouts, furnishings, and even the products offered, to each branch's population and our target market segments. Thus, we have commercial branches that have specialists in small-business loans. Select branches that provide increased privacy and comfort to high-net-worth customers, and Chexpress centers that offload payroll check cashing from branch sales centers to nonprime locations.

We have also created full-service branches that have no tellers but boast a full complement of sales and service specialists. These branches incorporate the latest in self-service technology, including Chemical's proprietary Customer Information Centers.

Since these locations require less space and less staff than traditional branches, we've been able to re-

ALAN M. SILBERSTEIN
Senior Vice President
Chemical Bank

Alan M. Silberstein, senior vice president, is in charge of Chemical's New York consumer banking area, encompassing the nine-county New York metropolitan area.

His responsibilities include administration of sales and service in 200 branches with $15 billion in deposits and over 3,000 employees.

Mr. Silberstein joined Chemical in 1974 and has worked in several divisions of the bank. He was named vice president in January 1976 and director of profit planning in May 1978.

In May 1982 he was named senior vice president in charge of retail operations. In January 1986, he assumed responsibility for the bank's national consumer division, comprising credit card and consumer-finance activities nationwide.

Before joining Chemical, he worked with the New York City Bureau of the Budget and was a design engineer for Ford Motor Co.

Mr. Silberstein was appointed to the Federal Reserve Board's Consumer Advisory Council for a three-year term beginning in 1989. The council advises the board on the exercise of its duties under the Consumer Protection Act and on other consumer-related matters.

Mr. Silberstein serves on the bank's public policy and credit policy committee. He supervises Chemical's Join-A-School programs in New York City. He also serves as a director of the bank's consumer-finance subsidiary, Chemical Financial Services Corp.

He is a member of the branch administration executive committee of the American Bankers Association. Recently, he was elected to the board of directors of the Sy Syms School of Business of Yeshiva University and also the board of the New York City Street Tree Consortium.

He has served on the Master-Card international operations committee and the New York Clearing House Bank operations committee.

His community activities include service as a trustee of the Tenafly, N.J., Board of Education from 1983 to 1986. He has been active in the Harvard Business School Club since 1973 and served as director in 1982-1983 and 1985-1988.

Mr. Silberstein has a bachelor of science degree from the Columbia University School of Engineering, and a master's degree in business administration from the Harvard University Graduate School of Business. He lives in Tenafly, N.J., with his wife, Carol, an attorney in private practice, and their three children.

Chemical

Continued from preceding page

duce our costs without missing a beat in terms of sales and service. But these aren't necessarily our "branches of the future." They are just one of the many branch configurations in our network that we have developed to meet the needs of different locations and customer segments.

Perhaps the extreme case of making every square foot count is our Bank-at-Work program. We've created a portable branch that we call Banking a-la-Carte, which is transported to a workplace to provide full banking services to Chemical customers.

It is a veritable bank without walls, staffed with two tellers and equipped with on-line terminals and a cash dispenser. Because it offloads transactions from the branches to the place of work, it's not only more cost-effective for us but provides better service to our customers as well.

The point to remember is that good retailers don't waste space. With current technologies, almost any location can be used for banking, but the key to cost-effectiveness is to make every square foot count.

Make Every Person Contribute to the Bottom Line

The last key to cost-effectiveness deals with people. In any bank, staff is the biggest category of expense. Therefore, whenever expense cuts are called for, the temptation is simply to squeeze staffing in order to decrease costs.

But one of the great truths that we sometimes forget is that retailing is a people business. Back-office systems, television advertising, and advanced ATMs don't buy banking products – people do. Therein lies a number of important lessons.

When we surveyed our customers a few years back and asked them why they banked with Chemical, we learned that they thought of us as convenient, innovative, safe, and responsive – all of those things that every good retailer wants to be.

But we were also reminded of something that, frankly, a lot of us had taken for granted: Customers banked with us because they liked the people they dealt with.

Our people do more than just sell merchandise or perform services. To customers who deal with us, they *are* Chemical Bank. So we have invested in training and empowering our people so that they are more effective at their jobs.

We have instituted reporting and tracking systems that speed up problem resolution by insuring that customer problems receive the priority they deserve and aren't lost in the crush of day-to-day transactions. By spending time and money to track accurately the patterns and types of customer contacts at our branches, we have been able to schedule both our tellers and our platform staff more effectively than ever before, providing our customers with improved levels of service at lower cost.

On the subject of platform staff, it has been my experience that how those professionals actually spend their day is a great mystery at most banks. Well, at Chemical we've worked very hard to demystify the platform – by measuring what they do, setting individual performance goals, and asserting our will to manage.

As a result, we have reduced and refocused our platform staff and achieved higher levels of sales, both in absolute numbers and cross-sell ratios. And we have improved overall satisfaction.

One of the biggest reasons that we have people in the branches is because banking products don't sell themselves. At Chemical, we have become unabashed salespeople. By spending money on sales training, sales management, and technology, we have been able to increase our effectiveness and improve our profitability.

By now, of course, most bankers are familiar with direct marketing, which increasingly includes telemarketing. Direct marketing is one area where banks have been at the cutting edge of cost-effective retailing – using behavioral modeling and other sophisticated analytical techniques to identify potential customers and develop targeted marketing approaches.

But technology can enhance face-to-face selling as well. At Chemical, we have developed platform computer systems that are powerful sales tools.

Our sales representatives can now access information about every account owned by a prospect and interactively look for cross-selling opportunities. The features of each of our products are easily described and compared with each other, as well as with competitors' products.

"What if" calculations and various options are handled automatically by the system. And much of the drudgery of account opening is eliminated.

LET'S GET TO WORK.

You know more about your business than we do.
You know your needs better than we do.
You care a lot more about the work on your desk than about the technology on your desk.
And, your needs should drive that technology, not vice versa. Make sense?

Good, because that's the revolution that's going on at the new Wang.
We're radically rebuilding our entire company, top to bottom.
We're fundamentally revolutionizing the way every one of our 20,000 people works with you.
Our job is to listen. To watch. To ask questions. To learn.

And then, and only then, to respond to your needs with the best solution possible, as soon as possible.
The new Wang. The first technology company ever organized entirely around your needs. Not our technology.
Got a job to do? Then let's roll up our sleeves.

LET'S GET TO WORK. WANG

Key to Quality Improvement Is Treating Employees as Customers

By Linda Cooper

The key to quality improvement isn't throwing money at a problem.

You need to invest in whatever technology enables fast, easy-to-understand data. Once you know what's happening, you can manage your way out.

That's the premise behind First Chicago Corp.'s consumer affairs/quality department. The department choreographs the bank's quality process.

This process includes conducting primary customer research to identify service expectations versus needs and primary employee research to pinpoint obstacles to quality service. Also included are service measurement, reward and recognition, communication, consulting, and rollout to acquisitions.

Each employee, regardless of rank or function, is expected to "sell" the prospective customer that the First National Bank of Chicago is a good place to bank. Management believes that when employees are given all the essential tools to provide good service – such as accessible, reliable equipment; easy-to-understand products and procedures; and training and support – they can be asked to sell the bank in a consistent manner.

Treating employees as customers gives management 14,000 opportunities to hear about our service and then to improve it.

An analysis of customer satisfaction data reveals that "employee willing to help" is the best predictor of high customer satisfaction. Willingness cannot be mandated. It occurs when employees feel good about their work.

Creating a work environment that fosters this initiative is a constant objective. But how much improvement was needed was not clear initially. Throughout the evolution of the bank's quality approach, the areas with the greatest improvement potential often have been discovered by accident. This was especially true of insights gained from bank employees.

Employee Focus Groups

An interesting project emerged from research on our bank-by-phone product. The product manager wanted to do focus groups, but had no budget. The consumer affairs manager, who was a focus-group moderator, agreed to conduct groups in-house. Corporate employees were used because they were also customers (and "free").

Employees were negative about many aspects of the retail bank, from prices to service perceptions. This was long suspected but not documented. It was likely that these employees were not steering friends to the bank.

Negative word-of-mouth advertising is always disastrous, especially when coming from employees. Without employee commitment, it is unlikely that external customers will receive quality service.

Additional focus groups on employee banking revealed that few employees knew their options. Immediately, solutions to employee-service expectations became a top priority. Employees would have to experience excellent service first-hand before becoming believers.

Another conflict arose between line management and human resources over budget responsibility for employee banking. Line departments had been absorbing the cost of free checking and no-points home mortgage loans, and wanted a change. Human Resources wanted to continue supporting these employee perquisites, but had no budget.

Possible solutions were discussed during employee interviews. In these sessions, employees warned that without incentives, they would not feel compelled to use bank services.

It was ultimately decided to provide a no-minimum-balance checking account with direct deposit and free Skyline checks, and to grandfather home mortgage loan benefits until yearend, then reduce them by 50%. While employees were not completely satisfied, they thought it was a fair compromise.

Selling Bank Services To Employee Customers

To overcome employees' perception of poor service, employee banking ("We put you First, too!") was reintroduced at a bankwide meeting. The presentation and supporting materials were similar to those used with customers.

Rick Hartnack, executive vice president and group head, acknowledged that employee-customers had not always been treated with the same concern as external customers. He asked employees for another chance and explained new service standards.

Part of the collateral material listed common questions about consumer banking and where to find answers. The telephone numbers of the senior managers' direct lines also were published to offer employees additional assistance.

A highlight was a videotape dispelling the myths of customer service (e.g., "we don't want 'little' customers, we don't want to sell loans, ATMs are not reliable, phones are not answered"), featuring senior management playing the roles of customers. One vignette about long waits in teller lines was set to the tune of the "Volga Boatmen."

Customers were jostled, and dropped from exhaustion. At the beginning, a woman had just started reading "War and Peace." By the time she reached the teller, she was on the last page. The group head appeared, wearing a tutu and wings over his suit, portraying an angel repairing ATMs.

Ongoing Employee Listening

The most lasting improvement from early employee discussions was the creation of "2-TALK," a consumer affairs hotline. All Chicago-based employees were asked to call the hotline when they received or heard about poor service.

The 2-TALK calls have helped solve myriad service problems and have provided an outlet for improvement ideas such as getting the rate recording shortened and slowed down, correcting postage-due packages from telemarketing, and providing a service number for debit cards.

If employees leave their name and number, they are informed within 24 hours of the action taken. Similar to the "Let Me Know" surveys with external customers, 2-TALK provides an opportunity to correct perceptions about service.

Eventually, this concept will be extended to include external customers. We also created the rapid action guide, which provided direction for different types of problems. An officer of the day, who wears a beeper, was established to ensure accessibility for nonroutine questions and transactions.

In spring 1990, we sent a service "report card" survey to all Chica-

LINDA COOPER
Vice President
First Chicago Corp.

Linda Cooper is vice president and manager of the consumer affairs/quality department for First Chicago's community banking group.

She has been intensely involved in the design, implementation, management, and measurement of the bank's quality process. The process, developed in the parent bank, is now being rolled out to acquisitions.

Ms. Cooper has published numerous articles on quality, and speaks frequently at quality-industry conferences. In addition to the quality process, she is responsible for two other functions: the action center, which manages escalated complaints, and quality advocacy with senior management on behalf of customers and employees.

In areas where the quality process has been fully integrated, customer-satisfaction percentile ratings have risen from the mid-80s to the high 90s.

In 1988, the First Chicago community banking group won the Tom Peters award for quality programs and the International Customers award for excellence.

Ms. Cooper joined First Chicago to organize its market research department and managed major primary research studies on image, new products, and their delivery.

A graduate of Vassar College with graduate work in psychology, Ms. Cooper began her career in New York on Wall Street and later worked at Executive Search, specializing in the identification of women candidates for high-level management positions. Five years as a marketing consultant followed.

Chemical

Continued from preceding page

When we talk about making every person contribute to the bottom line, we should not forget our customers. In the same way that we've transformed our branch people from order-takers into sellers, we are also enabling consumers to sell themselves.

Our Customer Information Centers allow customers to make balance inquiries and do account transfers; and they allow both customers and noncustomers to review product descriptions, prequalify for loans, and request further information. These units have been so popular that the lines at these information centers are often longer than those at the ATMs.

Recapitulation

Chemical's approach to cost-effective retailing focuses on our vision of banking as a retail business. We have allocated our resources to improve the cost-effectiveness of our branch network. To do this, we have followed three basic strategies of cost-effective retailing:

- We know our customers.
- We've made every square foot count.
- We've made every person contribute to the bottom line.

Knowing our customers means that we have identified who we want our customers to be and determined their needs. We have listened to our customers and refined product features. And, we have anticipated market trends and improved our product-development capabilities.

To make every square foot count, we have provided access to banking services where customers want them, using a wide variety of distribution vehicles. We have positioned our branches to efficiently sell our most profitable products and redesigned our branches to meet the specific needs of our target segments.

To make sure that every person contributes to our overall profitability, we have made the sales process more efficient and effective. We have invested in training and empowering our people to provide superior service, identified our customers' specific service needs, and allocated our tellers and platform staff accordingly.

Cost effective retailing is a creed, not a reaction. It is a way of thinking about where banking is and where it is going.

At Chemical, our commitment to being banking retailers and providing superior service to our customers has led us to expand our sales staff by 35%, while decreasing our total staff by 22% in the past four years. Yet, during the same period, we achieved a 50% increase in accounts and a 200% increase in earnings.

In our eyes, those results have proven the effectiveness of our retailing strategy. □

Key to Quality

Continued from preceding page

go-based employees. Now, employees, our toughest critics, give us satisfaction scores just below those of external customers. A letter went back to these employees with the findings and answers to specific questions and concerns raised, along with a request to continue to alert us to improvement opportunities.

Ongoing Employee Teams

Employee focus groups are used continually to help understand and solve quality problems. Roundtables are held monthly, usually about a specific topic, with representatives from involved areas.

If no conclusion is reached, a second meeting or decision from senior management resolves most issues. Minutes are taken and published and individuals are assigned action steps.

Ongoing Employee Surveys

Every quarter of 1988, all community banking group employees received a dozen questions, along with a letter from the group head, that detailed the previous quarter's results and actions taken. Surveys were coded by work group, exempt and nonexempt employee levels, amount of time spent with customers, and length of bank service.

First-quarter survey questions included: Do you have what you need to do your job? Does the equipment work? Do you have access to it?

Two years ago, messy bathrooms and unreliable elevators were big visible, support the group, etc.).

Three crucial questions are repeated each year:

- Would you refer a friend to work here?
- Would you bank here if you weren't an employee?
- If you were president of the bank, what changes would you make to improve service quality and morale?

These ratings improve each year. The current version of the questionnaire – sent out yearly – contains two parts. The top sheet, which covers the work environment, is sent to consumer affairs upon completion. We ask for identification so we can take instant corrective action.

The second part, which concerns managers and morale, is sent to an external research house for analysis. These sections are color-coded and contain some broad demographics to identify the work group, but not the respondent. (operations and systems units survey their clients separately.)

Name Tags

Good service companies usually have employees wear name tags. After some initial resistance, name tags have become a way of life. As service levels have improved, employees take more pride in their affiliation with the community banking group, and wearing tags is less of an issue.

Since the department's inception, consumer affairs employees

Continued on page 12

concerns. Comments on telephones have diminished greatly. Last year, the copier machines were a major problem.

One solution was to install five new copy machines and rotate existing machines for better coverage. We also produced a cribsheet of all the copier machine functions and how to clear paper jams.

The second-quarter survey addressed employees' views of products, pricing, and relevant communications. Many employees, including some officers, didn't understand our pricing rationale, so we sent an explanation to each community banking group employee.

The third-quarter survey was split between employees serving external customers and those serving internal customers (e.g., systems and operations support, marketing, etc.). Internal support areas were asked what grades the front line would give them, and the front line was asked to grade the service received from these internal suppliers.

These questions were not very well received because many employees did not know which category applied to them; and many were in both groups. However, the survey did reveal a significant gap between how internal support areas thought they would be graded versus how they actually were graded. One solution was to have an internal group consult consumer affairs on how to provide better service to its internal customers.

The fourth-quarter survey addressed employees' satisfaction with their immediate supervisor and senior management. Employees graded managers on their ability to communicate business strategy and their performance on key management practices (e.g., whether they discuss work priorities, appreciate extra effort, are

Seeking New Opportunities in Tomorrow's Payment Systems World

By Roger L. Peirce

"Success breeds success" is a statement we often accept without a second thought.

But futurist Alvin Toffler sees matters a little differently. "The first rule of survival is clear," he writes. "Nothing is more dangerous than yesterday's success."

His point is that, in today's fast-changing business climate, the very strategies, practices, behaviors, and even values that once helped an organization succeed can – and often do – hamper future success.

And his solution is an ongoing process of review, refinement, and renewal – a process based on the belief that success depends not on timeless answers but timely ones.

Today, we are seeing this fact of business life demonstrated quite dramatically in the bankcard industry.

During the '80s, we enjoyed a time of tremendous progress and profitability. But now the '80s are behind us.

As they have passed, so – it seems – have some of the attractive opportunities we've associated with them. Now, we hear a lot more about saturated markets, growing competition, lower margins, and leaner times ahead.

Joel Freidman of Andersen Consulting was inspired to title a recent presentation: "All My Low-hanging Fruit Is Gone and My Pigs are Hungry."

Are Leaner Years Ahead?

Will the '90s be leaner? If we had kept to the traditional success formulas, I would probably have to say yes.

But the good news is that we haven't. We've seen the business realities change, and we've adapted ourselves accordingly. Rather than just trying to squeeze more out of existing veins of market gold, we've identified and are mining new veins. These, we believe, will result in a wealth of new opportunities we didn't even conceive of a decade ago.

The '90s will be decidedly different from the '80s. But, in their decidedly different way, they will also be quite exciting and rewarding.

To set the stage for a look at the new realities and opportunities ahead for our industry, let's begin with a look back at the '80s.

What were the '80s like for the bankcard industry? First, after the first two years of the decade, our members had an excellent environ-

Payment Systems

Continued from preceding page

ment to work in.

Their total income grew significantly. Operating expenses and overhead were reduced and the cost of funds came down and stayed low.

The decade also saw tremendous growth in card sales volume. Gross charge volume for bankcards grew at very robust rates.

Between 1980 and 1989, for example, Visa's U.S. card sales and cash advances grew to $129 billion from $27 billion – nearly a fivefold increase.

As always in our industry, this growth was based on three factors: member issuance, merchant acceptance, and consumer usage. For any bankcard transaction to take place, all three of our constituencies need to buy into the process. And, during the '80s, we saw this happen in a big way.

The number of U.S. bankcards held nearly doubled. In 1981, for example, there were 64 million Visa cards in use. By 1989, there were 120 million. Signing up new cardholders was the primary emphasis of banks in the decade.

During the '80s, the number of U.S. merchant outlets grew significantly. In Visa's case, it went to 2.6 million from 1.8 million – an increase of nearly 50%.

These figures reflect the continued erosion of resistance in many markets – the growing perception that bankcards are an irresistible force, a "historical inevitability."

An excellent example of this erosion of resistance is retail stores. When we first tracked the figures in 1986, 58 out of the top 100 department store chains in the U.S. accepted Visa. Now 82 do. Some of the chains that have come over in the last four years are Macy's, Saks, and Bloomingdales.

Among the top 100 specialty chains, our current figures are even more impressive. Today, 97 of them accept Visa.

During the '80s, the amount people charged on their bankcards each year also increased. In 1980, for example, the average amount transacted on a Visa card was $422 a year; by 1989, it was $1,077. When we factor in inflation, this comes to a 68% increase over the decade.

All of this progress, of course, didn't happen spontaneously. There has been a lot of hard work along the way. Visa's contribution, for example, was enacting significant changes and improvements to all three of its major functions: its organizational structure for setting rules and priorities, its marks, and its systems.

Thinking Globally

With respect to organizational structure, as Visa entered the '80s we restructured to better address the needs of the international marketplace and distribute the financial burden of the corporation

Continued on next page

Highest standard of service.

Highest growth rate.

Payment Systems

Continued on next page

more equitably.

The idea was to establish separate banker boards in each of five regions of the world and give each the power to run its division. The strategy was to think globally while also tailoring our organization to be more responsive to local and regional needs.

We think it greatly helped speed our growth. Indeed, international growth has been so substantial that now U.S. markets now account for over 50% of total sales volume.

During the 1980s, Visa greatly enhanced its marks through consistent advertising. Today, our mark is one of the best known in the world. And today, largely by focusing on our strength of merchant acceptance and positioning ourselves as providing broader coverage than American Express, we're perceived by most people than ever as the best overall card.

The third key component of success is delivery systems. We believe Visa has made dramatic progress here, progress that also had important implications for all our constituencies.

One area where the numbers are quite impressive is authorization control. In 1981, for example, only 16% of all Visa transactions were authorized. By 1989, it was 87%.

One result was that fraud-loss rates were cut in half. But a subtler and more profound result was that it allowed issuers to feel more comfortable granting cards to a broader base of consumers. Bankcards became no longer the instrument of the privileged class.

Increased risk control was enabled through the extensive deployment of electronic terminals, first for authorizations only, then for both authorization and electronic data capture.

As a result, it now takes an average of only five days to post an account after a transaction has occurred. This speedy awareness of transactions not only reduces risk, but reduces float costs. And the accuracy of the process greatly reduces chargebacks, requests for copies, and other operating costs.

As important as reduced risks and operating costs are, another benefit is even more important. Both merchants and cardholders have come to perceive and take advantage of a higher level of service.

Because card transactions are now much easier and more reliable, they are also much more desirable. And, the industry is well positioned to see card usage continue to grow significantly in the '90s.

The bankcard industry has many reasons to be happy about its performance during the '80s. Ironically, though, some of our greatest successes have led to new and growing concerns.

One is issuance. With 120 million Visa cards currently in use and about 150 million adults in the U.S., this translates to many as "market saturation." For years, our members' main focus was growth through issuance. What happens now?

Another concern is merchant acceptance. When 97 of the top 100 specialty stores in the United States already accept Visa, there doesn't seem to be great growth potential here.

There does, however, seem to be plenty of opportunity to increase individual card usage. As mentioned earlier, the average Visa cardholder only transacts about $1,100 a year on his card.

Another issue is the intensifying competition between cards. Right now, for example, we're seeing American Express digging into the mainstream retail markets where we've always dominated.

And cash availability, where banks have always held a unique advantage, is being given to American Express and Discover, as banks open their ATMs to these competitors.

No Reason to Go Hungry

Yes, some of the low-hanging fruit is gone. But there is no reason for any of us go hungry. The low-hanging fruit only represents a very small percent of all the fruit on the tree. And the challenge now is to find the best ways to get at all the rest.

At Visa, we have responded to this challenge by "reconceptualizing," as the business books like to put it. We've chosen to pursue a much broader vision that we think will lead to tremendous new opportunities.

We used to think of ourselves as a credit card organization and our competitors as the other card organizations. Now, we are a "payment systems" organization.

Credit-related products are still a critical part of our business. But now the goal is much more all-encompassing. It's not just to offer a better credit card or to woo consumers away from American Express. It's to become the preeminent payment vehicle in the world – the preferred alternative, not only to other cards, but also to cash and checks.

The possibilities are enormous. Cards today account for only about 15% of all consumer spending in the United States. Cash and checks make up the other 85%.

To understand a market in its entirety, we have to see its components more clearly. To do this, we've developed consumer and merchant segmentation strategies. We find out more about the parts and then mix and match to provide a better solution for the whole.

Consumer Segmentation

Our consumer-segmentation strategy is designed to create broader product offerings and, ultimately, product lines. An evolution beyond the traditional one-card-fits-all mentality, it's one way we are stimulating both card issuance and card usage.

Our Visa Gold and Business cards, for example, have proven to be excellent vehicles in the travel and entertainment market. They offer additional benefits that many of those who hold our Classic card don't necessarily need. And they've helped to make us more competitive with American Express on several fronts.

In the future, we may introduce a card that handles small, fast transactions like parking fees or bridge tolls. It's dependent, of course, on more automation in spe-

ROGER L. PEIRCE
Executive Vice President
Visa International

Roger Peirce joined Visa in 1981 after working 17 years with IBM. While with IBM, he managed contracts to develop several of Visa's major systems.

Mr. Peirce began his career with Visa in the systems development division, taking over responsibility for that division in 1983. In 1985, he assumed responsibility for Visa's risk-management and security division and Visa U.S.A.'s member relations division.

In 1988 Mr. Peirce became Visa U.S.A.'s chief operating officer and assumed responsibility for all U.S. card and travelers check product development and marketing activities.

Currently, Mr. Peirce holds the dual title of executive vice president for both Visa International and Visa U.S.A. He has global responsibility for VisaNet and all related delivery-systems functions.

Mr. Peirce holds a degree in mathematics from San Jose State University.

Key to Quality

Continued from page 9

have been asked to initiate new-business-development conversations with employees at corporate bank levels in other functions. Consumer affairs is an internal resource and no one is forced to use its consulting group, which constantly markets quality.

The staff offers suggestions positioned as "What's in it for the client?" When resistance occurs, the staff tries different tactics.

This approach is paying off slowly, but consistently. In late 1989, consumer affairs was approached for advice by a product manager who had been among the most resistant for more than three years.

Our clients often call us to test our quality-improvement ideas or to brainstorm tactics. Since all consumer affairs employees are in constant contact with other units of First National Bank of Chicago, the quality approach is spread through word of mouth.

Consumer affairs acts as an internal quality advocate for customers and employees (with the exception of human resources issues). Customers are represented in matters involving charges, new products, and major communications.

While every employee is challenged to think like a customer, it's our central focus. We also screen major customer communications for understandability and tone.

Quality issues stemming from employee questionnaires and 2-TALK are either solved or explanation or alternative is provided. We try to eliminate bank jargon and explain the rationale behind changes.

Learning Opportunities

Unlike many organizations involved in quality, the bank did not start comprehensive quality training. Kaset Inc. Customer Service Training, which translates principles into actions, is now part of new-employee orientation. The pilot for the Tom Peters group's "Creating Value for the Customer" is now underway.

"Creating Value for the Customer" helps employees learn how to understand their customers and develop small "wins" for improvement. A problem-solving course was designed and taught by consumer affairs staff. A lot of what other organizations call training, we call education, good manners, creating the right work environment and quick, good communication.

Employees have access to our fairly extensive lending library of videotapes, books, and articles. Consumer affairs also provides a constant stream of ideas and highlights of what other companies are doing, gleaned from research and continual external networking.

We publish "Quality Clips" for book and article abstracts and our own research findings. We publish "Quality Facts" quarterly to each community banking group employee. This lists 10 of the most important facts about our service performance gleaned from our measurement process. We believe these easy-to-remember statistics help employees in "selling" the bank to potential customers.

Cost of Quality

Some of the quality literature says the cost of poor quality is around 25% of revenues. We did not want to position quality as a cost-reduction program. Periodically, we do an analysis. The largest loss – interrupting service to other customers while we fix the problem – can't be measured.

How do you know when you're there? You're never there. Customers' expectations continually rise from service experiences across all industries.

As soon as we back off, we start to see our scores go down. However, the measurement process provides the evidence to all constituencies, senior management, employees, and customers that changes have taken place. □

Payment Systems

Continued from preceding page

cific transaction environments.

And then there's our check-replacement or debit card. A major step in our quest to become a full-service consumer payments system, debit offers excellent new possibilities to everyone in the financial services loop.

Members leverage a natural advantage they have over the non-bank cards. Merchants receive greater security over cash and check. And consumers receive greater utility and convenience. Everyone wins.

To help move us in this direction, we've created the Visa Debit service. In partnerships with lending institutions, we're adding the Visa marks to the face of ATM cards, automatically making them Visa Debit cards.

More than 1.300 financial organizations around the world have already added the Visa logo to more than 20 million ATM cards. In the next few years, we expect this number to grow dramatically. Unlike most checks and other debit cards, the Visa Debit card produces bank income.

Merchant Markets

In addition to consumers, we're also targeting merchant markets. We're focusing on several where we're already a major factor but, where we believe we can improve our standing by addressing unique needs and adding value.

These include direct marketing, department stores, general merchandisers, and T&E. In addition, we're courting huge markets where, until now, we've virtually been nonexistent. Among these are fast food, supermarkets, health care, and telephones.

In the fast food arena, we have traditionally been next to no presence for one reason – speed. In a business where fast is beautiful, the cost for authorization and purchase process has been too slow to make cards attractive.

One solution is an inventive use of technology. We've tested it at selected McDonald's, Wendy's, and Arby's restaurants.

At the point of sale, the card is passed through a stripe reader and immediately checked against a hot-card file. If the card is good, the amount of the purchase is automatically credited to it. Then the authorization is flashed on a video screen in front of the checker.

The entire process is instantaneous: no phone calls, no imprint and signature procedures. Consumers get more convenience and flexibility. And speed-minded merchants get a payment system that's even faster than cash.

A second area we're beginning to concentrate on in a big way is supermarkets. The supermarket and convenience food industry represents an annual opportunity of more than $300 billion in the United States. But Visa currently holds less than 1% of the market.

The barrier we hear most about is the supermarket industry's low aftertax profit margin, typically about 2%. Another barrier is speed of checkout.

Low margins are always a concern. But we've penetrated other areas where low margins are the norm. We don't think this is the main problem.

The solution here could simply be time. Already we can see resistance to bankcards crumbling in many areas. For example, 30% of all supermarkets accept Visa in specialty areas such as pharmacies and bakeries.

The Kroger chain is trying bankcards on a test basis at grocery checkout and more chains accept cards in vacation areas. Safeway at Lake Tahoe is a good example.

Speed of checkout is another very real concern. We're exploring the integration of a solution into the electronic checkout scanners used by 90% of the top chains. This would increase speed and would involve a relatively small technology investment by the merchant.

The Health-Care Industry

A third area of increasing focus is the health care industry, a $160 billion business in the United States in 1988.

Common problems here for consumers have been numerous. They would like to find:

- A more convenient way to pay for services not covered by insurance.
- A better way to pay for services when in a foreign country.
- Any way to speed and simplify insurance payments.

This Visa service would involve a large-scale effort to better integrate the payment function into the entire process. The benefits for consumers, health personnel, insurance companies, and government agencies would be immense. A cumbersome and stress-inducing system would be replaced by a much simpler, smoother one.

We continue to commit to technological development. We are investing about $5 million to link our core transaction processing sys-

The New Branch Bank Office: More Than Just A Pretty Face

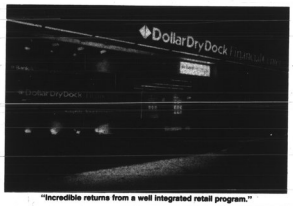
By Andrew J. Atkin

The combined influence of designers experienced in retail-store design and bank executives bent on creating a proactive business culture are changing the face of banking, at least as far as the customer sees it.

Bank customers may not be aware of the internal decisions leading to the alteration of the branch from a mainly transaction-oriented environment to a retail-selling space. They cannot miss, however, the fact that fresh ways of using lobby space, combined with eye-catching visual merchandising, are adding up to a livelier, more informative environment than banking has ever offered.

But the public is far more astute and educated about financial service than ever before. It is fully capable of knowing that cosmetic improvements alone do not alter the true nature of a bank. Customers' difficulties with banks, their reasons for "spreading their financial business around" numerous institutions, and their reasons for leaving a bank are seldom (if ever) related to the way the lobby looks.

So it will take more than changes in the appearance of the branch if the bank intends to develop the kind of customer loyalty that endures over a customer's life passages and impels that retail customer to develop a multifaceted financial relationship with the institution.



"Incredible returns from a well integrated retail program."

A Tool for Communication

In fact, branch design – like sales training or platform automation – is only one of the tools that encourages improved communication between the staff and the customers. Hanging posters and creating a stimulating, comfortable decor may help invite product inquiries from customers. And it may encourage staff to move around and make contact with branch visitors.

Unless, however, the branch's "pretty face" can follow through with the systems and human resources to serve customers effectively and capture their loyalty, the investment in branch alterations can be a disappointment for both the bank and its customers.

In extending our 20-year retail-design business into the banking industry, we have had the opportunity to work with a number of aggressive and innovative retail banks. These institutions recognized that branch design was an important part of their communication and product delivery strategy. In most cases, they brought to us, the designers, a relatively mature understanding of their markets and their own identity.

Nevertheless, we have found that branch design is such an important element of the entire retailing picture that every bank has seen the opportunity to upgrade its staff development and supporting systems to take advantage of the new branch environment.

Five years ago, our challenge was to prove the benefits of retail design. Today that challenge has evolved into fitting the design investment into an integrated retail strategy.

Design alone is not enough. We now are committed to assisting banks to balance their investments in employee development, corporate identity, market analysis, technological support, and the added-value programs that identify them as true business partners to their customers.

In addition to pure design issues, we look for five elements in a high-performing retail banking initiative. Each one is important. Together, however, they add up to more than the sum of their parts, creating an environment of consumer focus and peak bank performance.

The Sustainable Advantage

It is no news that banking services are commodity products. When pricing is competitive within the bounds of profitability, the difference between bank and another's products largely comes down to packaging.

To package effectively, a bank must know two things: What the customer wants and how packaging will affect profitability.

Historically, in banking, packaging has often meant bundling products to serve specialized markets. At times, this has also included "add-ons" such as relationship discounts, added services, club programs, tie-ins of discounts unrelated to banking, and inexpensive benefits such as travel insurance. In many markets, especially with senior citizens, these package programs have been highly successful in attracting deposits and fostering loyalty.

The same concept of promoting the "privileges of membership" has been an extraordinarily successful retail strategy for American Express, which has extended the idea into the upscale middle market. There is no reason why banks cannot seek ways of introducing membership advantages to a number of different customer segments. The results may not only be a point of differentiation, but provide a tangible reason for customers to consolidate accounts.

Membership programs are an extension of the same target-marketing philosophy that should underlie all retail efforts. A segment identity, such as Barnett Banks' Senior Partners concept in Florida, can assist in lifestyle marketing.

Branch staff training should reflect the bank's knowledge of the product-acquisition patterns of key segments. Even merchandising can be segmented within a single branch, with information kiosks branded to reflect the values and needs of each group.

The membership concept can go much beyond these base-line marketing tactics. For example, American Savings and Loan Association of Florida has created a popular video program that it brings (along with bank promotional material) to retirees' clubs and organizations.

A bank serving a college market can improve the prospects of its current customers and cement future loyalties by creating a data base of entry-level jobs among its own commercial customers. A bank serving small business could sponsor a "small-businesses lunch" to foster networking and new business development.

When it comes to traditional

Continued on next page

Payment Systems

Continued from preceding page

tems. This will greatly simplify the way banks process consumer card payments, whether these payments are credit, debit, ATM, or ACH.

Complementing both segmentation strategies and technological development is an intensified industrywide quality-assurance effort. This, we believe, will significantly help to erode resistance to us among both merchants and cardholders.

Visa is focusing on the establishment of specific standards to help improve quality. We're requesting, for example, a clarification of SIC codes for merchant categories and better management of authorization approval and referral rates.

To help facilitate this process, we've committed to:

- Evaluating members on a monthly basis, rating them against our standards and their peer-group average.
- Providing members with more quality-assurance information, such as performance monitoring statistics and quality service measurements.
- Sharing new technological capabilities with members to help them improve services.
- Setting up shared-cost pools of money so merchants are freed from unfair chargebacks and other unpleasant experiences.

No one disputes that the bank-card industry has its work cut out for it during the '90s. The tree is full of fruit, but none of the rest will be quite as easy to pick as the low-hanging kind has been.

One large question remains: How will we look back at the bankcard industry of the '90s?

Cash Is the Competition

I believe that we'll see it as another decade of progress and profitability. Competition between the U.S. bankcards and organizations like American Express, Discover, and JCB will grow.

But, increasingly, we will all define our major competition as cash and checks, not as one another.

To compete more effectively against these traditional forms of exchange as well as each other, we'll continue to better address specific member, merchant and customer needs through more focused segmentation strategies, more capable technology, and higher-quality service.

As we do, more and more people will come to see bankcards as much more than a convenient way to charge meals, clothes, theater tickets, or hotel rooms. They'll see their bankcards as vehicles to pay for phone calls, groceries, health care, bridge tolls, and perform all kinds of transactions they don't usually associate with cards today.

Increasingly, they'll see their bankcards as check-replacement – or debit – vehicles that automatically access accounts to make recurring paymefhs such as the mortgage or the cable TV service.

With all this progress will come continued growth and profitability. Much of this will result from much greater merchant acceptance and consumer usage in the United States.

International growth will be even stronger. Visa's European sales volume is currently growing by 40% to 60%, compounded annually. At this rate, European sales volume will exceed U.S. volume in just two to three years.

As we in the bankcard industry look ahead, it's awesome and inundating. A time of easy opportunity – of all that low-hanging fruit – is quickly receding into memory. A time of tremendous new challenges is before us.

Rather than being intimidated, we in the bankcard industry have become invigorated by these new challenges. They have helped us to see the '80s not merely as a time of easy opportunity but also a time of great development and refinement – a time when we laid down an excellent foundation upon which to build.

They have helped us to see the '90s not merely as an extension of the old, but as a time to explore exciting new payment systems frontiers: debit cards, new merchant segments, the prospect of tens of millions of new cardholders around the world, and much more.

They have helped us pave the way for a much more responsive, responsible industry – one that moves more surely and swiftly to bring members greater profit opportunities, merchants greater security and sales opportunities, and consumers greater convenience, control, and choice. □

New Branch

Continued from preceding page

packaging efforts, that is, adding bells and whistles to commodity services, investments should be made in the most profitable products and segments. Both product design and customer communication should emphasize that loyalty is rewarded.

Just as airlines and hotels reward additional business, banks offer discounted or free services through "premium membership" programs. Value-based program could encourage use of the most profitable products and offer some compensation for referrals of new customers. Costs can be controlled through the use of tie-ins with other retailers or service providers who want access to bank customers.

Obsession with Sales, Service

Enough has been written about managing for quality performance that it seems unlikely that anyone has not gotten the message. But it cannot be said too often. No organization will change unless the change begins at the the top, and the executive management are living role models of the corporate ethic.

Management of high-performing retail operations begins with clearly defined corporate goals and performance evaluation at every level of staffing. A visually effective branch without the supporting management structure is a pretty face without a brain.

Strategy in support of corporate sales and service goals should be developed at the highest levels, and tactics for fulfilling those goals created and revisited regularly throughout the organization.

Sales management is discipline of both quantitative tracking of results and qualitative activities – such as coaching and team-building – that should be understood at the executive level as well as by branch managers. The problems of the salespeople in the branch are the problems of the organization whose profitability depends on retail growth.

The more the organization is committed to the sales process, the more it will learn not only about how to develop its customer-contact people, but how to learn and use information about its customers.

In addition to management support, training is a requirement, not only to provide specific sales-related skills, but to change the expectations and behavior of bank staff. In a retail branch, the staff will increasingly be measured and evaluated on its performance with customers.

As a sales culture is put in place, new values – such as initiative and problem-solving ability – will be prized. These ideas must be introduced in tandem with training on product knowledge and sales technique.

Systems and Technology

The future of retail banking will depend increasingly on technology, especially systems that hold customer information. The point where sales and service come together is when the bank staff can access enough information to anticipate a customer's financial service needs and the tools are available to communicate those options to the customer.

Soon, even self-service technology, such as ATMs may become smart enough to analyze a customer-information file and offer an appropriate sales message with every ATM use. In the meantime, both platform and teller-line automation provide potential for cueing staff on sales opportunities.

Platform automation, particularly has virtually unlimited potential to support the sales process. Various programs now show product information in terms that customers can understand, to cue customer service representatives on lifestyle information about the customers, and to graphically illustrate what-if scenarios to assist in selling.

Any bank that intends to compete on the basis of sales and service should anticipate future investments in technology to support those goals. Both the visible hardware on desks and counters and the hidden infrastructure of power and data lines will impact branch design. Space design that does not consider the inclusion of future technology will quickly become inefficient or obsolete.

Self-Service Terminals

The other major area of branch technology is self-service terminals. There is no question that automated banking will grow in importance as younger bank customers mature.

But any investment today in self-service must be weighed in relationship to the bank's current target markets, and the adeptness and comfort of those segments with computerized hardware. There are certain segments, such as high-end customers, who will

Identify Branch Underachievers and Make Them More Profitable

By James P. Schultz

Narrowing profit margins are forcing the banking industry to take a long hard look at its branch networks and find ways to improve their profitability.

The branch delivery system is more important than ever because consumer acceptance of alternatives such as home banking, telephone banking, and ATM banking has fallen below expectations.

A major challenge facing the banking industry is to identify weak-performing branches, improve them wherever possible, close down those branches that cannot be raised to desired levels, and restructure the distribution and delivery system to maximize return on investment.

Our first move was to decide how the branches were to be measured and compared. Deposit levels, market share (DAP), market potential, and cross-sell are the criteria Urban Science Applications Inc. utilizes for ranking branches.

In the case of branch deposit levels, median deposits are the basis of comparison since a median is less sensitive to extremes than a network that included some very large or small branches.

But the complex, knotty problem of deposit allocation has to be faced first. Often customers open accounts at one branch and then conduct transactions at another branch.

Moreover, when customers change their address, they usually do not reopen their accounts at the bank branch near their new home. However, one would expect any new accounts that were opened would be found at this location.

One possible allocation method is to process transactions from tellers and ATM machines and summarize them by individual household.

> The rising population represented a pool of potential new customers. Past experience has shown that it is far easier to capture an unattached customer than one who must be pried loose from a competitor.

An alternative approach for assigning the deposits of a household considered DDA accounts, the location of the last account opened, and the location of the branch nearest to a given household.

Based on this combination of all the accounts possessed by a household, a primary branch for a household was determined and all the accounts and their related deposits were allocated accordingly. As for market share, branches whose trade-area household penetration do not exceed the average for the bank in the study area are considered as underperforming.

Another way of measuring household market share is performed by using a distance attraction profile (DAP) curve. Here, bank household penetration as a function of distance is measured from each branch. The shape and height of the curves are then compared with the average branch curve.

Market potential can be described in many ways: deposits, households, revenue, to name a few. Perhaps the easiest to describe is households. Simply put, more new households are better.

Using this approach, areas of new construction are typically

Continued on next page

New Branch

Continued from preceding page

probably never want much self-service.

Other areas, such as retiree communities, will not want it until the baby boomers age. So, cost-effective investments in technology should be closely tied with the service demands of the clientele.

Nontechnological systems in support of sales and service are also critical. In one bank where we were contracted for a branch redesign project, we discovered that customers could spend 20 minutes staring across an empty desk, while the customer service representative searched for forms or approvals.

When a customer is ready to sit down and discuss a product, the systems should be in place to expedite the sale. A sitting-down customer offers a priceless opportunity to acquire personal information or cross-sell another product. By wasting that customer's patience, a bank is literally throwing away its investment in the advertising, merchandising, and other attractions that brought the customer into that chair.

To a certain extent, these sales-supporting systems are design issues. Arranging a computer screen so the customer can monitor the data-collection process can be helpful, as is locating printers so the service rep can immediately reach for forms as they are produced. Every CSR should also have information about all bank products, including those that may require referral to another area, within arm's length.

It is equally important, however, to design branch procedures so that each customer contact person can personally provide as many solutions as possible. Automated credit-approval programs can eliminate the need for extended waits on loan applications.

If customer representatives or other service staff are empowered to correct minor problems, customers have the opportunity to develop confidence in their "personal bankers." And if it is not feasible to push the decision-making authority down to the customer contact level, procedures should be streamlined as much as possible.

Product communications can go well beyond in-store merchandising. The principle of merchandising is to provide information in a form that will assist customers through the mental decision to purchase.

Retailers have found that product information associated with lifestyle images is received most effectively by consumers. The link between products and lifestyle can be developed in a variety of methods.

At their best, branch communications have intrinsic value, and become products in themselves. At Dollar Dry Dock savings banks, the huge electronic data walls in each branch not only provide information about bank products, but also financial information from world markets.

The underlying message offered to consumers by these data walls is that Dollar Dry Dock recognizes that their financial services needs extend beyond traditional bank products, and that the "financial centers" have the resources to provide a complete array of financial services.

The challenge of creating a "shopping environment" in the branch may go beyond product-related sales efforts. It may also involve supporting the lifestyle occurrences that trigger the need for bank products.

For example, a bank that seeks college loan customers may also want to provide information about the half-dozen colleges that local high school graduates are likely to attend. A "university specialist" might have information about admission requirements and availability of financial aid.

In the same fashion, a bank seeking to develop its car-loan business may set up an area with information about new cars, used cars, and trade-in values. Or a bank can work with major real estate brokerages to provide information about moving, as well as a newcomer's package with material on loans and depository accounts. Such information services create opportunities to develop new customers or deepen relationships with existing ones.

The most beautifully designed branch is only the environment in which people sell products and services to people. No matter how much visual interest and information the space provides, the message is ultimately carried to the customer by bank staff. And if the staff is not functioning to support corporate goals, the branch is not functioning.

For most of our lifetimes, branch staff have been hired and trained to be reactive order takers. To change them into proactive sales and service representatives requires training, coaching, and incentives. If a bank is going to invest money in the real estate, it has to invest money in the people as well.

Conclusion

Retail operations in bank branches require a comprehensive program of retail strategy, branch design, staff training, merchandising, and a long-term commitment to refining the customer focus.

In the hierarchy of importance to a bank just beginning to recreate itself as a customer-driven retail organization, the first step is to develop a positioning strategy based on evaluations of the consumer markets, the competition, and the bank's own strengths. That strategy will serve as a road map to define the schedule of implementation of all the aspects of the sales-and-service culture.

A beautiful and functional branch designed for retail activity is unquestionably a tremendous asset. Not only will it effectively communicate the bank's product menu and service orientation to customers, but it will enhance the staff's ability to contribute to corporate goals.

It must be remembered, however, that the branch is a profit center. The success of any branch design project is measured by return on investment, and the best return is found when the branch environment is not only pretty but smart.□

ANDREW W. ATKIN
Vice President
Director of Financial Retailing
Walker Group/CNI

As director of financial retailing services for the Walker Group/CNI, Andrew W. Atkin is responsible for developing strategies for banks and insuring that design concepts for the distribution network support these strategies.

After obtaining master's degrees in business administration and architecture from Washington University, St. Louis, Mr. Atkin began his career at Hellmuth, Obata & Kassabaum in St. Louis, where he was director of strategic planning services.

For the past two and a half years at WalkerGroup/CNI he has helped develop retail strategies for a variety of financial services retailers and department and specialty store retailers in the United States, Europe, and the Pacific Rim.

Mr. Atkin is a professor at the School of Bank Marketing of the Bank Marketing Association. He has been a speaker for the Bank Marketing Association and the American Bankers Association.

He is a service member of the ABA, Bank Marketing Association, World Store Advisory Board, National Retail Merchants Association, and the Retail Marketing Society.

Mr. Atkin's project experience includes new retail strategies for First Banks, Minneapolis; HFC Bank/UK, London; Deutsche Bank, Frankfurt; American Savings and Loan of Florida; National Australia Bank and Video Central, San Antonio, and Equity Properties and Development, Chicago. He also developed a national retail prototye for Citicorp Savings and a new department store for Rustan's, Manila.

Walker Group/CNI's financial-institution clients include Citibank, Dollar Dry Dock Savings Bank, Dreyfus Financial Services, Household Financial Corp., American Savings and Loan of Florida, Deutsche Bank, First Bank Systems, and National Australia Bank.

Underachievers

Continued from preceding page

identified as places to be. The issue gets more complicated if one tries to understand the savings habits of household by age of the head of household and household income.

The last criteria for measuring branch performance is the cross-sell ratio. Typically, this ratio is calculated by dividing the number of total accounts by total households. The assumption is that the more account relationships that exist, the stronger the customer tie and higher household balance levels.

When making this calculation, however, one should eliminate all closed/inactive accounts (zero balance). One improvement to this calculation would be to determine the number of product categories a household uses instead. For example, many households have separate DDA accounts for husband and wife, although the household is using only the DDA product category.

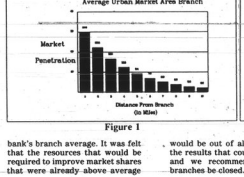

Figure 1

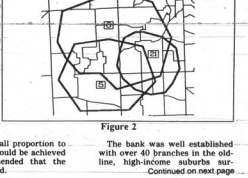

Figure 2

bank's branch average. It was felt that the resources that would be required to improve market shares that were already above average would be out of all proportion to the results that could be achieved and we recommended that the branches be closed.

The bank was well established with over 40 branches in the old-line, high-income suburbs sur-

Overview

USAI undertook such a study for a bank holding company with nearly 175 branches located in a large metropolitan area that included the core city, older inner suburbs adjoining the core city, and new communities in the outer suburbs. Conditions in each of these three areas reflected different stages of development and we had to develop different criteria for appraising branch performance and prospects for each area.

New Outer Suburbs

The bank had 75 branches opened over the last 15 years in the new outer suburban areas. Special criteria were required for new branches located in these high-growth areas. Despite growth for newly opened branches was to be measured against the bank's three-year cycle for previously successful new branches.

The rule of thumb for a successful new branch set the goal at $10 million of deposits within three years. If a branch didn't meet that goal, bank management would consider closure, unless the overall market potential indicated the likelihood of future success.

In this study, the bank had agreed only five new branches in the last three years. Of these, three branches filed to meet the $10 million goal. However, since all three branches were located in areas of high growth, we calculated that the three branches would meet their deposit goal in the fourth or fifth year of operation.

Market potential in these areas would be heavily influenced by the rising population which represented a pool of potential new customers. Past experience has shown that it is far easier to capture an unattached customer than one who must be pried loose from a competitor.

Two other branches showed problems associated with low trade-area potential, that was the result of a combination of too few households, low savings balances, low savings rates, and low median income.

The branches' total deposits were below the bank's branch average, yet the market share of the branch in question was above the

"How effective is your branch network? GAIN"

GAIN was created to:

- Evaluate the performance of branch and other delivery networks
- Aid in identifying optimal branch locations
- Assist you in making comparative analysis between branch and banktrade areas
- Assist you in reviewing and identifying branch network acquisitions and DeNovo branch evaluation
- Help you quantify branch performance criteria

GAIN allows you to combine MCIF Data with external data files to achieve a more accurate reading of your trade area and activity.

GAIN can also quantify and qualify your CRA Compliance.

GAIN is a dynamic geo-demographic software system created by USAI, an international consulting and decision support software company.

Survival Is the Biggest Challenge of Retail Banking in the '90s

By Thomas J. Falciglia

If we, as consumer bankers, had known 10 years ago the effects that technology, regulators, and the market would have on our industry, could we have been better prepared?

I think so. And consequently, I think that we can use that hindsight to prepare for changes yet to come in the '90s.

Perhaps the biggest single challenge facing retail banks in the '90s is a fairly simple one: To survive. That is not as pessimistic as it sounds.

We must be realistic as we look at the carnage of our industry from the '80s, and we can learn from those mistakes by facing our problems clearly.

There are five broad steps to preparing for our future and anticipating some of the changes to come:

- Manage growth while controlling expenses.
- Increase the need for self-service processing.
- Monitor and change our technology infrastructure.
- Rethink our traditional ownership of products and services.
- Adopt a policy of creating levels of service for levels of need.

The first step to survive is to manage growth while controlling expenses. With careful planning and creative thinking this can be accomplished, despite how daunting the task sounds.

Rising Costs of Personnel

We must evaluate where our growth will come from and where we can control our costs. Banks, like other major corporations, have found their major expenses over the past few years have come increasingly from the rising costs of personnel, particularly benefits.

Therefore, in rethinking compensation plans for the future, the concepts of both salary and benefits should be reconsidered. Salary is no longer the only form of compensation that employees weigh or value when looking at a job. Benefits, especially as the work force ages, will become more and more important.

Benefits will be important to the full-time worker as well as to the new breed of part-time employee. The working mother, the semi-retired, and the temporary worker, all consider benefits differently.

Each of these employees gives us as management greater flexibility in structuring our staffing mixes and compensation packages. If we take advantage of the new diversity of the work force, we can save ourselves millions of dollars each year. The success of cafeteria benefit plans must continue during this new decade and be adapted to a changing workforce.

Compensation as it applies to the branch banking system can be re-evaluated. Quality service delivery increasingly relies on back-office staff as well as branch employees.

In structuring awards, we can add an incentive that is truly tied to profitability and includes not only the branch but also the support staff. This way, both branch and support feel they contribute to

Summary

The results of this distribution analysis for the network was conducted in 90 to 120 days. It was easy to implement because it was directly related to the actual customer usage and behavior patterns of the organization.

Through the use of geographic spatial analysis and statistical modeling routines available in USAI's PC-Gain software package, the data could be quantified and presented to management and directors in clear, concise maps, graphs, and summary analysis. □

THOMAS J. FALCIGLIA
Senior Vice President
Manufacturers Hanover Trust Co.

Thomas J. Falciglia's career spans 28 years with Manufacturers Hanover Trust Co. About one-third of that time was spent in branches and another third in staff areas such as operations research, strategic implementation, and systems. For the past eight years he has worked in several branch administration posts.

Mr. Falciglia is currently responsible for one of Manufacturers Hanover's strategic business units, the consumer banking group. That group encompasses all branches throughout New York State, central customer-service departments, and consumer finance (excluding cards and residential).

The group's 3,000 employees service their own customer base of individuals and businesses with total deposits exceeding $12 billion.

Outside the bank, Mr. Falciglia serves on the consumer banking executive committee of the New York State Bankers Association.

JAMES P. SCHULTZ
Director, Client Services
Financial Services Division
Urban Science Applications Inc.

James P. Schultz is director of client services, financial services division, of Urban Science Applications Inc.

Mr. Schultz is responsible for computer modeling, decision support software, and market-analysis studies for financial institutions. He has conducted detailed network evaluations for some of the nation's largest financial institutions, with as many as 150 branches in a study area.

Mr. Schultz joined USAI in 1978 and served in a series of management positions. From 1971 to 1978, he was coordinator of transportation systems, then coordinator of long-range planning for the Southeast Michigan Council of Governments, Detroit.

Previously, he served with New York State Department of Transportation, Buffalo.

Mr. Schultz is a member of the Bank Marketing Association, International Council of Shopping Centers, and Chi Epsilon national honorary civil engineering society. He is a registered professional engineer in Michigan.

Mr. Schultz received a bachelor's degree in civil engineering from the University of Detroit in 1971 and an MS degree in civil engineering from Wayne State University in 1974.

Underachievers

Continued from preceding page

rounding the city. This area was completely built up with no new construction, but total aggregate income was increasing dramatically.

Our studies showed that these customers might be interested in other bank products. We found that it was particularly important to offer these products aggressively, if only to maintain customer's ties to the bank. Loyalty to a particular bank often weakens as household income rises and the number of alternative investment opportunities increases.

We recommended that the bank vigorously pursue a program to improve the cross-sell rate. Cross-sell can be measured by the number of accounts, on average, held by households credited to a particular branch.

An opportunity exists when a branch has many customers but very few products per customer, as was the case in this suburban area. The branches, for the most part, had captured only a small share of the customer's total potential business. In addition, through effective cross-sell, the branch may be able to wean customers away from other banks.

Although some of the branches in the inner suburbs were not performing adequately, we felt that the area's potential was such that every effort should be made to improve their operations. Some of the buildings were inadequate by present-day standards.

We felt that redesigning these facilities would alone be sufficient to upgrade the performance. Six branches were lacking drive-in facilities or off-street parking and they were redesigned to rectify these shortcomings.

A number of the branches that had large deposits were also considered underperformers. They had poor market share and were poor performers when measured against their potential. These branches were candidates for intensive marketing campaigns.

Most branch bank marketing is rudimentary. A typical example of branch merchandising consists of a rate board in the lobby listing daily product interest rates. No advertising or promotions are ever found in the drive-in or ATM vestibules.

To remedy this situation, banks are considering redesigning branches to emphasize the products they offer and how these products help a customer meet the demands of his or her lifestyle. Routine transactions are being handled in the vestibule with ATMs, but tellers are situated at the rear of the branch, which forces customers to walk through the branch and be reminded of the services being offered by the bank.

Core City

The bank had 40 branches within the city. Some of the neighborhoods were being gentrified and presented the bank with many of the same types of growth opportunities as the new outer suburbs.

However, in some of the neighborhoods, growth in new households had ceased and the aggregate income was stagnating. The potential for new business in these areas was limited to seizing business from competitors, a hard undertaking at best.

To make matters worse, many of the branch buildings were old and operating costs were high. Maintenance was expensive and some buildings required new heating or air-conditioning systems.

We advised the bank to close five of the facilities whose performance could not be readily improved and which were located within two miles of other branches. We felt that the closings would not be particularly painful for the customers and CRA compliance would not be questioned, since there were other branches nearby.

Our study allowed the client to compare convenience with the branches in place or closed to determine the effect on depositors. When the branch closings actually did occur, the bank managed to retain 80% of the accounts and associated deposits by replacing them with two downsized transaction centers.

Survival

Continued from preceding page

the bottom line and are rewarded for that contribution.

Creating True Incentives

But the biggest benefit of creating true, profit-driven bonus plans is the return to the meaning of the word incentive. It seems many bonuses that are supposed to be incentives are now taken for granted by staff.

By remodeling the salary/incentive structure, we will have a stronger, more unified work force. There is nothing more productive than a team that works together toward one goal.

If that goal profits the employee as well as the institution, so much the better. And, we will award incentives only where and when the participants have contributed extra value to the corporation.

Since we're talking about controlling costs, another way to manage the cost of personnel is to move our institutions toward self-service banking. How do we do that?

Consider the revolutionary impact of the ATM. In 1980, there were 18,500 automatic teller machines in use in the United States. By the end of the decade, that number had risen to nearly 76,000.

Annual volume for electronic funds transfer went from 2 billion transactions in 1982 to 5.2 billion just seven years later. What does this revolution mean?

For retail bankers, this new acceptance of technology gives us an opportunity to let consumers have even greater control over their banking decisions. If, for example, we expand the capabilities of the ATM, home banking succeeds, our personnel needs will be greatly reduced, and our costs cut. In this way we can grow the business without increasing costs drastically.

Education Is Vital

However, before we rush into huge self-service banking promotions, we should remember that such an effort will depend upon educating the customer from the beginning. We've learned a lot about how to present time-saving features since the introduction of the first ATM.

Do you remember when you wouldn't deposit a check in an ATM because you didn't "know where it was going?" Now, with the benefit of time and education, we not only use ATMs regularly, we are addicted to them.

Education and demonstrations are going to be the keys to increasing acceptance and usage of self-service banking. We should use that knowledge as we introduce more technology or other complex financial innovations to consumers.

Remember, the consumer is smarter now, too. The work force emerging in the '90s first used PCs in grade school, not graduate school. They are more willing to try and more honest in their evaluations of new products.

By the end of the decade, this may result in a total restructuring of the concept of the traditional branch. Our networks are likely to evolve with less full-service branches and more transaction-only centers, and all with self-service devices.

Although we've helped to educate the consumer about new technology in banking, we face another problem. Namely, who will educate us? The choices of what technology to invest in and how to afford it lie before us.

A Winning Strategy

Effective technology management will be a key component of a winning strategy in this decade. A thorough assessment of retail systems should be conducted in view of the business needs of the '90s. Establishing a systems architecture will facilitate implementation.

Businesses have long invested enormous effort in developing structures for managing the people and financial elements of their enterprises. Architecture is the structure for managing the data processing element. It organizes three dimensions of data processing: applications, data, and communications.

At Manufacturers Hanover, we are implementing a new retail architecture that involves:

- Installing new computers.
- Replacing core applications.
- Installing new applications and systems functionality.
- Upgrading service delivery.

This is a very significant investment, but one we are willing to make despite the mandate for cost reduction, because it will provide us with a competitive advantage. It will help us not only to continue to improve our service levels, but it will enable us to integrate new technologies, such as image processing, more easily.

Effective utilization of technology will certainly separate the winners and losers in retail banking in the '90s.

A Break with Tradition

With products and services, as with equipment, we must move away from the traditional, "all

DON'T FIND OUT THE HARD WAY.

Compliance Examinations Update

Last year, over 55,000 banks were declared in violation of regulations. Not deliberate malfeasance, but simply overlooked technicalities—costing hours of documentation time and a fortune in penalties.

Are *you* in complete compliance with all of the legislation and regulation pertaining to your financial institution?

The fact is, you may never know until it's too late. Unless you protect yourself.

Compliance Examinations Update For Financial Institutions is exactly the kind of "early warning system" you need to assist in rapid, safe, cost-efficient compliance. Our editors regularly search out what regulators are looking for–and what they're finding–as well as the very latest developments in legislation. Twice a month, this dependable service gives you practical, on-going guidance on how to detect and resolve these complex problems in your operations—*before* they become violations.

The next twelve months will see thousands of banks cited or sued for failure to comply with Federal consumer protection laws. Make sure you're not one of them with ***Compliance Examinations Update.***

Take advantage of this special opportunity to receive ***Compliance Examinations Update*** FREE for 30 days. Read it and see for yourself just how valuable advice like this will be in your work. Then, you can start your year's subscription for just $225.00 plus postage and handling.

Open, Cooperative Computing: Strategy for Managing Change

By Raymond L. Miolla

Unprecedented challenges lie ahead for the banking industry, brought on by fierce internal competition and an increasingly sophisticated customer pool. In a society that promotes financial awareness and complex money management, every link in the delivery chain must rise to what will be an awesome technological challenge.

Banks, as the direct customer interface, must increase their quality of delivery while simultaneously decreasing unit cost. Integration, it is NCR's belief, will be the hub around which cost-efficient delivery is possible.

Using retail banking as an example, service, sales, and office automation must be integrated into a single system that can accommodate the inevitable changes of technology.

NCR has evolved a long-term strategy to enable its customers to take full advantage of these changes, not fall victim to them. It is called "Open, Cooperative Computing: The Strategy for Managing Change." It means providing customers with a vendor-neutral computing environment based on open industry standards, allowing information resources to interoperate enterprisewide as one integrated system, in a way that is easy to use.

Simply put, NCR's delivery systems will seamlessly integrate customers' systems, networks, and software from multiple vendors into a single, flexible solution. Freedom of choice, ease of expansion, and preservation of investment represent only the immediate advantages.

Open, cooperative computing represents NCR's strategy for the future, yet it is a concept that has shaped NCR's product development since 1981. At that time, NCR made an early commitment to an open-systems direction.

In 1982, the Tower was released, one bf the most successful Unix processors in the world. This commitment has since evolved with every ensuing NCR product, service offering, and method of doing business. NCR is now a company with the products, global presence, and financial clout to deliver its advantages to the end user.

Few functions will enable customers to manage change more effectively in the future than the development of integrated retail delivery systems. New opportunities to do business, new ways of delivering products, and the ability to manage the flow of new technology through a stable retail-delivery system are all possible with open-architecture systems.

Today's NCR systems share a standard platform, wherein financial and office services are integrated to provide total automation in delivering retail services to customers. Such standardization and

RAYMOND L. MIOLLA
Vice President
NCR Corp.

Raymond L. Miolla is vice president of the financial system division for NCR Corp.'s United States Group.

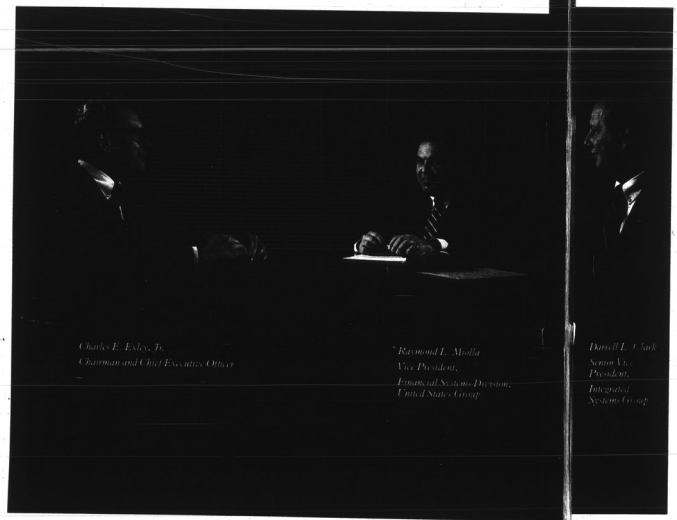
Mr. Miolla joined NCR in 1958 as a marketing representative in Hartford, Conn. In 1965 he was assigned to the company's Dayton, Ohio, headquarters as a commercial banking specialist.

He subsequently held a number of field sales management positions, including New York region director. In this position, Mr. Miolla guided NCR's marketing efforts to major New York financial institutions such as Manufacturers Hanover Trust Co., Citibank, Chase Manhattan Bank, and Chemical Bank.

He became assistant vice president, financial systems, for NCR's Pacific group in 1981. This expanded responsibility included managing NCR's marketing to financial institutions in Canada, Australia, Japan, Malaysia, Singapore, and Hong Kong. Prior to being named to his present position he lived and worked in Tokyo for four years as managing director, marketing for NCR Japan Ltd.

Mr. Miolla holds a bachelor of science degree in marketing from the University of Connecticut.

Our Mission Is To Create Value For You.



Charles E. Exley, Jr.
Chairman and Chief Executive Officer

Raymond L. Miolla
Vice President,
Financial Systems Division,
United States Group

Darrell L. Clark
Senior Vice President,
Integrated Systems Group

Here's What That Means And Why It Matters.

We measure value by our ability to help you achieve success with your customers. To accomplish this end, we need to provide you with complete, innovative solutions that increase customer service while improving your operational productivity.

These solutions have been developed under an NCR strategy called Open, Cooperative Computing. The cornerstone of this strategy is an open architecture, based on industry standards, that allows you to integrate the NCR products you need for success today...while assuring an open, multi-vendor environment that protects your investment for the future.

For example, our open Financial Tower System has revolutionized teller and platform productivity. Our Integrated Retail Delivery Systems will bring a new perspective to customer service...and branch performance. NCR Self-Service Systems will give your customers more depth in the services they can perform themselves. In addition, NCR Imaging Systems for Item and Document Management will provide you with powerful productivity weapons to use in the competitive decade of the '90s.

Open, Cooperative Computing is a strategy that will reshape the future of financial technology. The full benefits of this strategy can give you and your people transparent access to the enterprise-wide resources needed to effectively manage your growth into the next century. If you would like to learn more about the company that can create value for you and your customers, phone 1-800-CALL NCR and ask for the "Open, Cooperative Computing" brochure.

To Know Where You're Going, You Must Find Out Where You Are

By George R. Frerichs

As a consultant in the financial industry, I am constantly approached by bankers wanting to know: "Where am I going?" My response is always: "Where are you now?" Unfortunately, the answer I most frequently encounter is, "I don't know."

This is probably the biggest problem facing the financial industry today. The majority of bankers have no idea where they are now in terms of profits, automation, and comprehensive market-driven sales and merchandising programs.

Bankers don't know where they are and surely don't have strong feelings as to where they are going.

In order to better understand where they're going, bankers must first take action to eliminate the reported 40% of branches that are unprofitable. This streamlining should be accomplished wherever possible through consolidation. If this alternative is not available, relocation or closure is a necessary alternative. In addition:

- They must develop comprehensive automation programs to deliver transactions, account information, product sales support, and other product sales activities.
- They must create – not just talk about – proactive service-/sales programs supported by a well-trained staff that is incented to perform effectively.
- They must reconfigure existing branches or build new branches based on market-driven needs, not home-office dictates.
- They must recognize critical personnel issues that exist in relationship to overstaffed transaction staffing at the expense of more sales and service personnel. They must also recognize those critical personnel issues on the horizon in terms of personnel shortages and the actions that must be taken to ward off this impending disaster.

Obviously, we can always learn from the past. But at this critical juncture, it is more important to focus on the present, to prepare for the future.

Bankers are going to have to zero in on what they do best and what is most profitable. That means focusing on market assessment, not only to cure today's ills, but to supply a base for future growth and profitability.

Market Assessment

The first step in finding out where you are is the comprehensive assessment of your market, on a branch-by-branch basis. Customer draw studies indicating origin, destination, and domicile will provide the necessary information to determine area of influence. At the same time the draw studies are done, customer demographic, psychographic, and product-usage profiles can be derived to further define the character of your customers in that market area.

Studies have proven that increasing relationships with existing customers can double or even triple branch profitability.

Market Classification

Once the market area has been defined, each branch should be classified by environment (i.e., core, subcore, office, rural, etc.). Environmental factors affect customer draw, hours of operation, and level of product and service offering.

Coupling the environmental classification with other factors such as competition, trade-area density, trade-area quality, etc., can help determine future profit potential of the individual branch and its contribution to the distribution system as a whole.

This determination is accomplished through the use of a multiple regression model. The subsequent point score that is generated from the model is used for both existing and potential markets and facilities.

Dollars/Square Feet

This point-score table translates to deposit volume on a dollars-per-square-foot basis. Bankers are now competing with retailers, not only on a financial level, but on a real estate level.

The size and location of existing branches as well as future facilities will be directly affected by the amount of business generated in the space allocated. Each tile on the floor, be it marble or linoleum, will have to justify itself in sales volumes generated. Facilities that are below par can no longer be tolerated. On the other hand, facilities that are functioning well above par are at risk of losing market share if they don't continue to support these facilities through strong service, sales, and automation programs.

The dollars/square-foot measurement also takes into consideration a branch's total profitability picture prior to identifying all recurring costs of operation. In the broad sense, these costs may be developed within three major groups:

- Occupancy
- Improvements
- Operations.

Determining Sales Potential

Once operating costs are determined, further study can enable a banker to find both the market share and household penetration level necessary to determine both breakeven and optimum sales levels for any new or existing facility. In addition, complete asset, liability, and fee-income projections can

Continued on next page

Open Computing

Continued from preceding page

interoperability are the foundation for delivering the adaptability, flexibility, and dependability of service that an increasingly sophisticated customer base will come to expect in this decade.

Self-Service Automation

Banks must reduce their cost of delivery to remain competitive, and self-service devices will become the vehicle to accomplish this. By the year 2000, as much as 85% of all transactions will be self-served, freeing up branch personnel for sales efforts.

In light of the projected trend, NCR self-service machines will become increasingly user-friendly. Machines will be designed as intelligent, virtually recognizing customers by offering the "usual" transaction and giving customers a logical sequence of options based on the first selection.

Ease of operation will prompt customer acceptance of expanded transactions, including stop payments, address changes, check reorders, and loan applications.

NCR's self-service devices will continue to share a common architecture with branch PC workstations and be fully integrated into the local area network.

NCR will continue its development of image-system solutions based on open-systems architecture and industry standards in three product areas: document management, item processing, and office information systems. This approach will give customers the freedom to choose the best vendor for their individual need, enabling them to manage change in their own environment. □

Survival

Continued from page 19

things to all people" banking idea if we want to succeed. We no longer have to provide every consumer with every product and sell every service ourselves.

As we become more knowledgeable about our customers, we realize that they like the idea of one-stop shopping and the convenience of centralized banking. They are not so concerned about who actually designs and services a financial product as they are concerned about where they can get it.

For years, we avoided saying "this is not available in our bank." Today, we don't have to. We sell each other's products and services and thereby create economies of scale.

In this new marketplace, the value-added becomes your own employee. His or her level of knowledge will sell the product. As long as we have employees who understand their target consumer and understand their product, we will have satisfied customers.

My bank sells a number of products that became too expensive for us to continue to produce ourselves. We sell them in our branches, under our name, although we no longer design or service those products. And our competitors across the street are doing the same thing for their customers with our products.

Segmentation of Products

This segmentation of products must continue in order to realize strong profits in the next decade. We all can't economically create, package, promote, and service each type of financial product. We all can trade products and services.

This may sound like we're expanding, rather than contracting. Instead, it is merely a redefinition of the term "financial supermarket."

For example, the A&P sells A&P brand paper towels. They also sell Scott, Viva, and Bounty. And they make money from every sale.

So a banker who sells a product tailored to the international traveler need not necessarily own that product. But the banker's knowledge of the features and services of that product make it more valuable for a consumer to buy it from the most-knowledgeable marketer. If we're going to be third-party vendors, we had better be informed and add value or, as they say, bring something to the table. This will be another of our necessary lessons to learn in the '90s.

Segmentation of products and services will be the most successful when we understand our consumers better. One of our biggest challenges will be tailoring jobs and services toward targeted customers only.

Providing services like Priority Banking is the first step, but the process must be refined considerably. Only those customers who truly need personal attention will be offered it. And only those personnel who need to be trained to handle specific products will receive that training.

Pockets of Expertise

This segmentation of the marketplace and segmentation of the work force will not only eliminate redundancy among our employees, but will create specialized pockets of expertise within the bank. Not every consumer needs to be bombarded with the full range of loan products or savings options.

Not every employee needs to know the specific features of each CD or money-market product. But, when a customer walks in and wants advice on IRAs, there better be an employee available who knows the IRA product line thoroughly.

Consumers, then, receive the information they need and the attention they want – in half the time. One of the ways to achieve this is prescreening.

By collecting information from consumers through a survey at the outset of their relationship with the bank, we avoid unnecessary repetition of information, both financial and demographic. This also gives the bank a profile of the consumers that can be used as their needs change.

We can adjust the customers' profiles as they age, marry, have children, retire, or buy or sell a home. When consumers change, their needs change and the range of products and services that are offered to them should change as well. The key to this will be knowing our customers and giving them only those things they truly need.

By creating categories that are too large or too segmented, we will not provide the best service, nor will we create the most efficient work force.

We are being challenged by our competitors, both foreign and domestic, to use all our creativity and all our knowledge of the marketplace to plan for the future. By managing growth, controlling expenses, monitoring technological change, redefining ownership, and creating a system of customer-driven service, we will create the framework to succeed. □

GEORGE R. FRERICHS
President
George R. Frerichs Inc.

Prior to founding George R. Frerichs Inc., Mr. Frerichs served as executive vice president of RVI Corp. (formerly Robert Vogele Inc.), where he developed that firm's financial and marketing consulting services.

Previous experience included marketing positions with Earle Ludgin Advertising; Batten, Barton, Durstine and Osborne; Leo Burnett Advertising; Abbott Laboratories; Pure Union Oil Co.; and publisher of Chicago magazine.

Mr. Frerichs is a doctoral candidate at California University, Santa Ana. He holds a master's degree in business administration from Northwestern University and a bachelor of science degree in economics from Western Michigan University.

Some of his representative projects include site selection and real estate consulting, target-market, trade-area, and site-evaluation studies for companies in the following industries:

- *Financial, including banks, savings and loans, and credit unions.*
- *Restaurants from coffee shops to fine dining.*
- *Airlines, automotive, food-/drug stores, mass merchandisers, dry goods, hotel/motel, and gas/petroleum outlets.*

Mr. Frerichs has developed and evaluated mathematical models for forecasting sales, profits, and return on investment for old and/or new facilities of the following companies:

Shawmut Bank, Commerce Union Bank, Citibank, Canadian Security Bank, First Bank of South Bend, Talman Federal Savings and Loan Association, Nationwide Financial Services Corp., Western Auto, United Airlines, Bee Discount, Pop Shoppe International Inc., Fieldcrest Mills, Red Lobster Inns of America, Whataburger, Mr. Steak, Samurai, Arby's Inc., Wendy's, and Kentucky Fried Chicken.

His product-development market research and consulting work for a wide variety of clients includes the following types of projects:

- *New-product idea generation.*
- *Concept screening and evaluation.*
- *Product positioning and perception studies.*
- *Prototype in-use studies.*
- *Alternative pricing tests.*
- *Corporate and brand-name development and testing.*
- *Package and logo design.*
- *Development of marketing strategies and plans.*
- *Advertising evaluation.*
- *Test-marketing material.*
- *Regional product introduction.*

Mr. Frerichs' financial marketing services experience includes facility and project feasibility, financial feasibility, comprehensive plan development and evaluation, physical-impact analysis, economic and financial program evaluation, and consultation on long-range strategic planning.

Where You Are

Continued from preceding page

be developed.

From this data, a projected portfolio can be simulated for both existing and new facilities. These projections form the basis for a detailed summary of both deposit and liability potential. In this manner, both existing and potential sites can be compared based on net gross revenue versus operating expenses.

Distribution Prioritization

The results of the evaluation of market potential gives the financial institution the ability to prioritize capital expenditures in terms of profitability for both the individual branch and the system as a whole. The grouping together of branches into market areas will reveal both void areas and areas of overlap.

Future acquisitions or de novo expansion should occur where there are void areas, while consolidation of overlap areas should bring additional capital to the bottom line.

A Decision Matrix

In addition, once the individual facilities have been evaluated, their present performance can be judged in relation to their potential as profit centers. By plotting both point score and existing deposits in a matrix configuration, a complete view of the existing system can be formed. It is the best way to know where you are.

Quadrant I appears to be the quadrant with optimum performance. In truth, this area has a 20% downside risk factor due to its vulnerability to competition. This quadrant demands investment to maintain market share through reconfiguration, merchandising, and service-training to protect existing share.

Quadrant II has the greatest potential for growth, for it signifies a strong market and an underperforming facility. In this category lies the opportunity for revisiting size of the facility, staffing, hours of operation, merchandising, etc.

Optimum dollar return can be re-

Lessons to Be Learned from Airline's Flight Through Deregulation

By Mark Coleman

During the late 1970s and early 1980s, a concept became popular that would literally change the face of the air transportation and financial industries in the United States.

The concept was deregulation. Its effects have been felt by virtually every American. While comparisons between the two industries are numerous, I will focus my attention on the airlines and let you draw your own conclusions.

To understand the airline industry today, it is important to understand the industry before deregulation.

During regulation, the federal government exercised complete and total control over the U.S. airline industry. On the operational side, the Federal Aviation Administration overlooked the airlines' safety and operational practices. This part of the regulatory environment has remained unchanged.

Another body, however, the Civil Aeronautics Board, also exercised complete control over airlines' business practices. Fares, routes, and procedures were carefully scrutinized.

In particular, each new route was subjected to an analysis that lasted on average between six and nine years. Prior to 1978, there was a 25-year period when not a single new interstate airline began service, due largely to the inability to raise the necessary capital to begin service.

If someone wishing to borrow $20 million told you that it would be six to nine years before they even knew where they could fly, your willingness to lend would be greatly diminished.

In addition, no incentive for efficiency existed at airlines because all cost increases were allowed to be passed directly on to the consumer through a "standard industry fare level." Price competition was not only discouraged, it was simply not allowed.

In 1978, Congress overwhelmingly passed the Airline Deregulation Act. For the first time, airlines were free to form, free to choose equipment, free to fly anywhere they wanted and – what you've probably noticed most – free to charge anything they wanted. Over night, this single act transformed the airline industry from a quasi-public utility to a full-fledged marketing industry.

Since deregulation, well over a hundred new airlines have been certified and failed in this new environment. In fact, only two carriers of either national or major size remain from the group that began operations in the post-deregulation period: Midway Airlines, based in Chicago, and America West Airlines, based in Phoenix.

MARK J. COLEMAN
Senior Vice President, Sales and Product Development
America West Airlines Inc.

Mark J. Coleman, senior vice president for sales and product development, joined America West in December 1981.

He has played a key role in the design of the company's marketing strategy. Mr. Coleman is responsible for development of the company's sales and advertising programs.

With more than 20 years of airline marketing experience, Mr. Coleman began his aviation career in 1968 with Western Airlines. He joined Frontier Airlines in 1971 and, by 1981, was director of strategic marketing.

He has a bachelor of science degree in economics and political science from Westminster College, Salt Lake City.

Where You Are

Continued from preceding page

alized through an investment in market and customer positioning opportunities. Unfortunately, the errors of the past have come to haunt bankers who have historically placed the majority of time and money in areas where potential was at its lowest. To make matters worse, this investment was usually made at the expense of those more profitable facilities with higher overall potential.

The branches in Quadrant III are overachieving. This is usually because of a lack of competition. The best thing to do with facilities in this quadrant is to give good service, price fairly, and pray.

Those branches in Quadrant IV with both low potential and low deposits should be considered for closure, consolidation, or relocation. Effective action in this category is strongly recommended.

This category represents branches that are taking management time as well as money. A major pathway to profitability is dependent on management's ability to rid themselves of branches in this category.

Reconfiguration Is Essential

Those areas of the distribution system that warrant capital expenditures should be the first to be converted to a retail sales environment. This includes a reconfiguration of staff functions to provide superior customer service while facilitating the sales function.

Even before entering the facility, customers should know they are dealing with a financial retailer. This means open exteriors with windows for display, excellent signage, and night-time lighting to showcase the branch.

The interior of the branch should also serve to inform, educate, and entertain the customer with open, exciting environments and a "boutique" atmosphere. Retail merchandising concepts, including corporate identity, backlit lifecycle/lifestyle transparencies, posters, and three-dimensional displays will serve to lead the customer through the branch, and serve as sales tools.

Bankers must now concede that transaction servicing will no longer be the primary function of the branch. This philosophical commitment carries with it the responsibility to conduct expanded testing of product and service delivery through automation.

This includes convenient self-service banking in the form of ATMs, 1-800 phone centers, and interactive information terminals for the customer. For the staff it includes platform and teller automation, and a PC-driven customer information file to establish relationships and profitability of households.

A commitment to training and incentives in the areas of sales and service is an integral part of a proactive sales environment.

Segment Customer Base

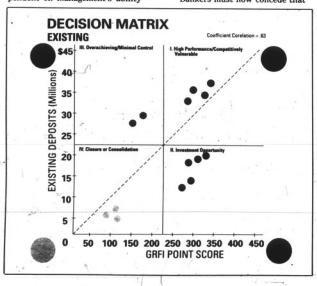
To know where you're going. You have to find your best customers and constantly reward their loyalty. Bankers have to give everyone good service, but they have to show the special customer special consideration. This means developing a series of products and services that have greater perceived value as the banking relationship increases.

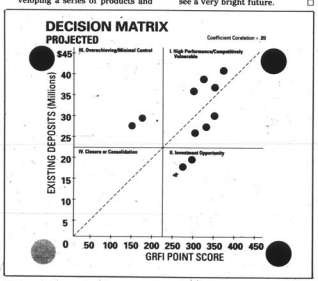
This can be accomplished by setting aside a special area of the bank with special tellers to service the high-balance/high-value customer, and developing a "club" atmosphere. This high-balance/high-value segment probably accounts for 15% of your account base, while making up to 85% of your profits. Treat them nice – this is the reason you're still in business.

Lifecycle/lifestyle product packaging takes existing products and packages them according to the needs of certain groups, while encouraging ever-increasing relationships. A basic "new accounts" package contains six or seven products and services. Imagine being able to cross-sell six or seven products at one time.

The new shape of retail and consumer banking is fit, trim, and ready for the 21st century.

What is on the horizon for the banking industry? For those bankers who invest the time and effort to find out where they are now, I see a very bright future. □





Airlines

Continued from preceding page

A careful look at America West's formation, development, and success, can provide interesting insight for marketeers in the service industry.

The design and development of America West was approached on the basis of a new-product introduction. A strategic model was used to identify the situation, develop conclusions, set objectives, and implement strategies and plans to attack those objectives.

Our analysis indicated that three basic areas should provide the foundation for the successful development of a new airline. First was our decision to concentrate on the Southwest Sun Belt.

This area of the country was experiencing rapid growth and was underserved from an air-transportation standpoint, particularly when compared with major markets on the East Coast. Secondly, an enormous amount of time and attention was spent on analyzing the ingredients of a low unit-cost structure.

Selection of Aircraft

We determined that the selection of the proper aircraft, along with innovative personnel practices, offered the greatest opportunity for gain. Finally, having witnessed the failure of other new airlines, we decided to place a real premium on a high-quality product designed to appeal to the frequent business traveler. This target customer not only flies more often, but is by far the most discriminating customer.

Phoenix was selected as the focal point of the route system, for a variety of reasons. At the time, Republic Airlines, the largest airline in Phoenix, enjoyed only a 20% market share and the top five airlines together had less than two-thirds of the market.

Phoenix had enjoyed a rapidly growing population, which had reached 1.6 million in 1981, now it has a population of over 2 million. It also provided an uncongested, all-weather airport where we believed adequate facilities could be obtained in order to develop a full-blown hub and spoke operation.

In addition, Phoenix was treated primarily as a destination by most of the current airlines; therefore, service patterns generally flowed from their major hub and spoke operations into Phoenix. No attention was given to the local Phoenix resident in terms of their business and pleasure needs.

However, the most important reason for selecting Phoenix was its geographic proximity to California. California had a population of over 27 million people and one out every three air trips west of the Mississippi was to or from California.

Inroads into California

Using Phoenix as an all-weather, uncongested gateway, we believed we could make substantial inroads into the California markets and stimulate local traffic at the same time. Phoenix already ranked 17th

Financial Centers Pay Big Dividends for Dollar Dry Dock Bank

By Linda Lockhart

Once upon a time there was a girl named Alice.

Upon entering a looking glass, Alice became lost in Wonderland. At one point during her journey, she came to a large meadow with many different paths to take.

Not knowing which way to turn, she looked up into a nearby tree and asked a Cheshire cat, "Excuse me, but which way do I go from here?" With a broad grin, the cat looked down on Alice and replied, "It all depends on where you want to get to."

In today's retail banking environment, the decision to operate in a traditional bank setting, a fully self-serviced facility, or an integrated financial center all "depends on where you want to get to." At Dollar Dry Dock, we knew where we wanted to get to: we wanted to redefine the business of banking by offering the broadest range of services available in New York and providing our customers with the ultimate in choice and convenience.

In 1984, Dollar Dry Dock established a future strategy group to review and recommend changes in our retail strategy. The goal was to create a strong, differentiated identity in the competitive New York marketplace while enhancing cross-sell acceptance.

Key Elements

The group recommended that the bank dramatically change the strategic direction of its retail operations. The answer was to be a network of financial centers incorporating four key elements:

- They would be designed to look and function more as sophisticated retail stores than as traditional bank branches.
- They would offer one-stop shopping for a broad range of traditional and nontraditional bank products.
- They would be staffed by carefully trained and supervised sales and service-oriented personnel.
- They would incorporate the best available technology for giving our customers maximum flexibility in conducting their financial business and helping our employees to assist customers.

Converting traditional bank branches to state-of-the-art financial centers is more than a cosmetic change. It requires the careful inte-

Airlines

Continued from preceding page

nationally in terms of passengers destined to or originating from the city (it is now the 10th-largest market).

Schedules were designed to allow passengers on one side of the Phoenix hub to make direct and easy connections to cities on the other side. For example, prior to America West development, passengers in Wichita, Kan., had only a single nonstop flight to Los Angeles International Airport.

Once there, they would rent a car. Travel time to areas more conveniently served by satellite airports could exceed two and half hours.

When America West began, Wichita was offered three nonstop flights per day to Phoenix, where quick connections could be made, allowing access to almost every major market in California. All this at about a third less in price.

This market niche proved to be a powerful stimulant. The level of connecting traffic at Phoenix increased sufficiently so that more and more flights could be added in the local Phoenix markets.

The initial route system consisted of only five cities, but even in our first month of operation, August 1983, we carried 32,500 passengers. Currently the system encompasses over 60 cities and monthly passenger boardings exceed 1.2 million.

Cost Considerations

Turning to cost, the first decision to be made was the type aircraft to operate. At that time most of our competitors were operating the three-engine, three-pilot 727-200. With that in mind, we opted for the twin engine, two-pilot 737-200.

These aircraft were widely available on the world market and even after extensive refurbishment, operated at dramatically lower unit-cost levels than most of our competition. In addition, the 737 is a well-engineered aircraft and can achieve high hours of utilization while remaining safe and reliable.

Also, new versions of the 737 were under development, allowing more passengers to travel greater distances at even lower rates of fuel consumption. Therefore, we knew we could continue to grow without having to move into different types of aircraft with the inherent increases in maintenance cost.

Using that twin-engine, two-pilot philosophy, we have since grown into the use of other aircraft such as the Boeing 757-200 and the Boeing deHavilland Dash 8. Each is technologically state of the art and keeps us a step ahead of our competition.

To understand the importance of this initial decision one has only to consider that fuel is one of the major cost elements for an airline. Since no airline controls either the supply or price of fuel, the only hedge against the future is the selection of aircraft that are more efficient than the competition.

It should be noted that we recently acquired four-engine 747-200 aircraft in order to begin development of service to the Pacific Rim. While you may think this violates the twin-engine concept, the size and range of the 747 dictates its use in the Pacific Rim and Hawaii markets.

Because of its size and range, the aircraft's cost per seat per mile compares favorably with twin-engine airplanes. With the price of an aircraft ranging between $25 million and $125 million, it is not only important that they obtain excellent fuel economy, but that they be highly utilized, maximizing revenue.

With that in mind, we developed a Las Vegas "Nite Flite" pattern that now connects 34 markets coast-to-coast into Las Vegas between 11 p.m. and 1 a.m. This has boosted our fleet utilization to over 12 hours per day per aircraft, compared with an industry average of less than eight. Obviously, the results in greatly diminished unit cost and provides us another competitive edge.

Other than fuel, the greatest single element of expense is in the area of personnel. As we looked at other airlines, we found tremendous opportunities for improvement in this area.

We believed good service would best be provided by owners. Therefore, as a mandatory requirement to work for America West, an employee must purchase 20% of his or her first year's annual base pay in common stock.

The company will finance that amount over a five-year period. We found that ownership changes attitudes in a hurry.

We found that most airlines schedule their people in very tight specialty groups, causing their scheduling to be relatively inefficient. To combat this, we designed a program of cross-utilization.

Each of our customer-service representatives goes through a 16-week training program. They are trained as qualified flight attendants, reservationists, and can perform any customer-serving job at the airport. Given the inherent scheduling flexibility this creates, we believe we have achieved between a 5% and 15% productivity advantage over most traditional airlines.

We also observed that most airlines got into trouble with their employees not in bad times but in good times. During tough periods, employees are normally willing to make tremendous sacrifices in order to "save the company."

When the company is profitable, however, and they don't feel they've shared in that success, they are likely to rebel. America West has implemented a major profit-sharing program, giving 15% of the company's annual pretax profits directly back to the employees in cash on a quarterly basis. While the amount is not large for individual employees, the idea of sharing in the success is a tremendous morale booster.

Successful Innovations

Many other innovative approaches were tried and the results speak for themselves. *Air Transport World*, a magazine of the industry, honored America West with its labor relations award for 1989. Three attempts have been made to unionize America West employees and all have gone down to resounding defeat.

The bottom line of these cost-control strategies can be summarized in three areas. America West's modern, fuel-efficient fleet produces more available seat miles per gallon of fuel burned than any other airline in the world. Our employees are among the four most productive airlines in the world in terms of generating available seat miles per dollar of wages. Finally, America West enjoys the lowest cost per seat mile of any full-service airline in the U.S. airline industry.

The company's service is designed with the frequent business traveler in mind. Most new airlines obtained used aircraft, added seat covers, painted the exterior, and away they went.

America West invested between $400,000 and $700,000 per aircraft on the interior. This included new ceilings, side walls, overhead bins, carpets, galleys, and – yes – new seats.

These seats, a new design that provided extra legroom, cost $1000 per seat. It was an investment that we believed well worth while, since the interior of the aircraft is the place where business travelers form their opinion.

Even the color scheme, developed after extensive consultations with interior designers, was intended to provide a businesslike atmosphere in the aircraft.

More subtle areas were attacked. The drinking glasses are larger, *The Wall Street Journal* and *USA Today* are complimentary, and the amenities are all recognizable brand names.

However, you will not find hot food on short flights on America West; high-quality cold snacks, appropriate for the time of day, are served. America West makes all beverages, including cocktails, available on a complimentary basis.

Combined with an effective frequent-flyer program, an excellent reservations systems, and a close affiliation with the travel agent distribution system, these elements produce value above the business traveler's expectations.

The bottom line is our customers. *Conde Nast Traveler* magazine recently named America West one of the top 20 airlines in the world from a service standpoint. And America West Airlines finished as the No. 1 on-time airline during each of the past two years. Keep in mind that this airline is not yet seven years old.

Four critical elements provide fundamental strength for America West, now and in the future:

- A big, modern fleet of aircraft ranging from the 381-passenger Boeing 747 to the 37-passenger Boeing deHaviland Dash 8. Our equipment is among the newest in the world, with an average age of approximately six years.
- A critical mass at both of our key hubs, Phoenix and Las Vegas. In Phoenix, more that 45% of all traffic is on America West; at Las Vegas, more than 35%. We believe this dominance will insulate us from a predatory attack by envious competitors.
- A high-quality product that is available at affordable prices. This has allowed the markets we serve to grow substantially and to obtain repeat business from the frequent traveler.
- America West employees are unique in the industry. We believe they are not only better trained, but have the personal incentives to match their goals with the objectives of America West.

While it is too soon to tell what the future holds in this fast-changing industry, we believe the fundamentals are in place to allow America West to continue to successfully grow and develop. We look forward to the future. □

Financial Centers

Continued from preceding page

gration of product, merchandising, technology and people.

We began the conversion of the first of our 23 centers in 1985 and completed the conversion of our 23d center in September 1988. On Sept. 12, 1988, we formally launched our marketing program to present Dollar Dry Dock as the first bank in the United States to convert its entire banking system to the financial-center concept.

Product

Our main focus was, and continues to be, on how to develop more business with each customer. If we offered a combination of products and services that built additional relationships with existing customers, then not only would we keep these customers, but the same combination of products and services would attract new customers as well.

By taking advantage of the New York State Savings Bank law, our financial centers are able to offer a broad range of financial products and services, from traditional banking to securities and real estate brokerage, mutual funds, insurance, consumer money lending, travel, and foreign currency exchange.

The development of standards is critical in designing a franchise of retail stores not only because of the economies of scale, but also because it is critical to establish a consistent visual identity.

We also understood the importance of being perceived as our customers' primary bank. Customers may have mutual funds with us, book their travel through our travel agency, and hold $50,000 in a passbook account, but when asked to name their bank, their answer will always be the bank that holds their checking account. A critical piece in product development for a financial center is to offer checking accounts that meet the needs of key market segments and comprise benefits that differentiate them from the competition.

We have adopted a life-cycle approach to our assortment of relationship accounts. We have programs for children on through the mature market. Our focus is always on education and helping individuals learn about the many different ways they can do more with their money.

Our school savings program instills in grade school students the importance of saving money. This program is a U.S. Department of Education national model for economic literacy.

We are in the second full year of our program here at Dollar Dry Dock and are having great success with it. Public and private school students from kindergarten through eighth grade bank weekly via their schools' Apple or IBM computers.

This program is more than just a marketing effort. It has become the basis for long-term relationships, shows we are making a community investment in our neighborhoods, and establishes our intent to be part of a team that will promote a savings culture in America. By supporting education in this manner, we have been successful in cross-selling parents, teachers, and educational administrators.

Relationship Program

Dollar Dry Dock offers a mass-market relationship program that links together checking and savings accounts and offers many value-added benefits such as free checking, higher interest, and a combined statement. The product is similar in design to Citi-One and ChemPlus, but we have been able to increase our market share by requiring a lower minimum balance and by enhancing our distribution methods.

We learned about the needs and characteristics of the over-50 market through extensive research. In June 1989, we introduced a product for this lucrative market, 50 Plus – a checking account that is packaged to feel more like a club.

Through a joint venture with FISI Madison, Nashville, we designed this product to offer customers such benefits as:

- Discounts on pharmacy products and eyewear.
- Discounts on entertainment and travel.
- Free credit card protection.
- Emergency cash advances.

With respect to traffic generation, 50 Plus is a retailer's dream. Through affiliations with various senior citizen organizations in the communities, we sponsor a variety of educational programs in the centers. We also leverage the ability to cross-sell the friends of our members by offering programs that include nonmembers.

Merchandising

Once the right assortment of products are in place, the space must be designed to look like an exciting retail store rather than a traditional bank. The physical transformation of a retail space can either strengthen or kill a business.

It is a delicate situation that affects both employees and customers. It was critical that we conduct a thorough analysis of the current situation, and recognize the resistance and obstacles that we would face if we were not careful and

Financial Centers

Continued from preceding page

thoughtful in our approach.

We held one-on-one interviews with customers, and simultaneously began to train managers on traditional retail concepts. From the input we received from our customers, we learned that it was important that the space be friendly, not intimidating, that it be comfortable, and exude an overall feeling of efficiency and good service.

Before the conversion, our branches were dark, gloomy, somewhat intimidating, and uninviting. Instead of conveying streamlined efficiency, we conveyed confusion and sloppy service. Because perception is 90% visual, we had to convince our managers that the most effective way to change our image was through our appearance.

We selected standard colors and finishes for everything from the walls to the telephones. The development of standards is critical in designing a franchise of retail stores not only because of the economies of scale, but also because it is critical to establish a consistent visual identity. If we were to be considered a retail store for financial services, then we were going to follow the lead of some of the industry leaders in visual identity – the Gap, the Limited, Laura Ashley, Channel, and Gucci.

A Feeling of Openness

The design of a sales desk responded to the customer's need for an environment that was personal. As opposed to the traditional desks, which placed the customer on the outside, we designed workstations that could function as miniconference tables, creating a feeling of openness between the customer and salesperson.

Once we understood the parameters we had to work with, we began developing layouts for each location. Our criterion was to move customers through the financial center, allowing them to see all of the products and services we had to offer.

Since most customers head for the teller area, we located the tellers' unit in the back of the financial center. The names of the major products and services, such as brokerage, pension services, foreign currency exchange, and travel, are written boldly over the appropriate workstations in an effort to guide the customer, emphasize the variety of products and services offered, and give a tangible quality to what are otherwise intangible goods.

At Dollar Dry Dock, it is the merchandising that sets us apart from the competition. Using merchandising in concert with other promotional elements creates theater and excitement in our centers.

We have a more difficult merchandising challenge than a Bloomingdale's or Macy's in that we don't sell tangible goods such as shirts, towels, and shoes. Instead, we have to merchandise CDs, mortgages, checking accounts, and mutual funds.

We looked outside of our industry and examined ways in which other manufacturers bring their products to life. What would a pinball machine be without the bells and lights? Would consumers be as attracted to a slot machine if it were silent? Can you even envision the Wurlitzer without the flashing neon lights?

In those financial centers that have large picture windows, we have built permanent stepdown partitions that hold posters. We have designed lifesize banners that call out to the public the different services we offer. We have standardized all of our promotional posters to work together in a grid system to announce one big message, because we recognize that the most you can do with a sign is create awareness.

We standardized our brochures to one consistent format and used beautiful, bright colors to differentiate the various services being offered. In a service industry, the brochure is the product, and it is important that it reflect the image you wish to project.

We designated a color for each product, then we agreed on a layout that would be applicable to any financial service no matter how simple or complex the service. Now our brochure system has become an integral part of our appearance.

When they are merchandised together in a check desk or a permanent queue station, they carry not only visual impact, but are also easily accessible. More important, the content is concise and to the point.

We were lacking another dimension in merchandising. We needed the theater that brings a script to life. Thus came the electronic data wall, Window on the Financial World. Because of its size alone, it commands attention from all who see it.

We added reasons for the customer to stop and look at it. Five electronic pages provide continually updated information on the rates of all major Dollar Dry Dock investment and credit products, plus a broad range of information from world financial markets, including U.S. Treasury rates, exchange rates for seven currencies against the dollar, the price of gold and silver, and the consumer price index. An electronic jet carrying the Dow Jones News Service Corporate Report travels across the top of the data wall, providing up-to-the-second financial information.

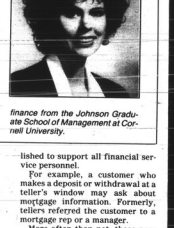
The purpose of the data wall is to attract, excite, and – above all – to emphasize Dollar Dry Dock's commitment to supplying valuable financial information and to provide an immediate sense of the diversity of the center's product line. We have customers and noncustomers who stop by our data wall daily and quickly pick up on the news they did not have a chance to get from *The New York Times* or *The Wall Street Journal*.

Our latest enhancement to providing information in a dynamic way is the use of video technology in the centers. Each center is equipped with at least two monitors that centrally run off of one laser disc player in each center.

Although we have programs on Dollar Dry Dock services, we are careful to mix them with general information such as coverage abroad, we have to merchandise CDs, mortgages, checking accounts, and mutual funds.

We looked outside of our industry and examined ways in which other manufacturers bring their products to life. What would a pinball machine be without the bells and lights? Would consumers be as attracted to a slot machine if it were silent? Can you even envision the Wurlitzer without the flashing

LINDA LOCKHART
First Vice President and Director of Marketing
Dollar Dry Dock Bank



As director of marketing, Linda Lockhart has overall responsibility for marketing, product management, merchandising, advertising, public relations, and corporate communications.

She joined Dollar Dry Dock in August of 1987 as director of merchandising. Ms. Lockhart was instrumental in the interior layout and design of the bank's 23 financial centers.

Prior to joining Dollar Dry Dock, Ms. Lockhart was a senior product manager at Chemical Bank. Earlier in her professional career, she was a buyer and merchandising manager at Bloomingdale's.

Ms. Lockhart holds a bachelor of science degree in design from Drexel University and an MBA in finance from the Johnson Graduate School of Management at Cornell University.

tion every four to six weeks. We have found that most financial products are cyclical, and we capitalize on the cycle through promotional blitzes.

A typical promotion would consist of a print campaign, possibly radio, direct mail, telemarketing, in-center merchandising, a video, and an incentive program. These multimedia campaigns have led to increases in profits and cross-sell ratios. We no longer think of the branches in our network as cost centers; we look at them as profit centers, by department and by square foot.

Dollar Dry Dock's ability to deliver the latest financial data and customer account information is based on advanced IBM technology. Through teller and platform automation, the center is able to deliver fast and accurate answers to customer questions and to significantly reduce the time required to open accounts.

To provide the speed and convenience our customers demand, we installed some of the most advanced automation equipment now available. Our ATMs are IBM System 4730 machines that have some unique features: They can cash checks or provide cash withdrawals for our customers in any exact amount, to the penny. They can accept and read checks for deposit without using deposit slips or envelopes. These ATMs, originally designed only for in-branch use by IBM, were "hardened" for 24-hour use by IBM at Dollar Dry Dock's request.

In the area of platform automation, we installed the IBM System 4700 series, which dramatically simplifies and speeds the account-opening process.

One of the most appealing features of this system is that it enables us to issue ATM cards on the spot. (They are activated the next day, as long as there is a balance).

This unique feature enables our financial consultants to demonstrate to new customers the use of the ATM at account opening. The result has been an 88% increase in ATM validation and almost a 100% increase in usage over the prior year.

We have also upgraded the teller automation system to enable faster and more accurate handling of customer transactions. Now, each of our financial centers is able to communicate with our teleservicing center. A quasi-artificial-intelligence environment is being established to support all financial service personnel.

For example, a customer who makes a deposit or withdrawal at a teller's window may ask about mortgage information. Formerly, tellers referred the customer to a mortgage rep or a manager.

More often than not, these people were busy with other customers. The customer who wants information would have walked away, intending to come back some other time – possibly losing a potential sale.

With the new system, tellers are able to enter the customer's name and address into the system. In turn, the system sends out appropriate information, along with a personalized letter.

The whole process is even simpler if the customer has an ATM bank card. The teller simply passes the customer's ATM card through the machine to enter the individual's name and address.

The bank also supports the financial centers through a state-of-the-art teleservicing center from which 30 professional service representatives respond to incoming customer calls and initiate outgoing marketing calls. The teleservicing staff utilizes the bank's central information systems and menu-driven teleprompter screens to provide account information, answer product questions, renew CDs, send out account opening kits, and cross-sell products and services.

People

In New York City, there are hundreds of delicatessens and dry cleaners to choose from. But the one who gets the business is the one who treats its customers well.

It is nice to walk into a deli and have the counterman look up at you and say: "Ham and cheese on rye with lettuce, tomato, and a pickle to go – right?" The same fundamental concept holds true for banking.

Recognize your customer as a guest. Seize the opportunity to get to know him or her better, thus strengthening the relationship.

A retailer views every customer as an opportunity to form a long-term relationship or strengthen an existing one. We had created an environment that was exciting and full of energy. We had to ensure that the customers were not disappointed once they entered the center.

Developing Best-Practices Programs in Branch Banking

By Robert J. Zizka

Today's regional and superregional banks are the product of several years of mergers and acquisitions among smaller entities with different retail concepts and operating procedures.

Managing these diverse branch networks creates a wide range of challenges for consumer bankers. At the same time, however, the very diversity of the operating environment provides a powerful tool for strengthening profitability and spurring growth: best-practices benchmarking.

Best-practices benchmarking is, in its simplest sense, a sophisticated means of cross-fertilization, whereby the most successful branch strategies and programs are identified and then implemented throughout the entire network.

The first step in benchmarking is to define the key measures of success, covering such areas as profitability, cost efficiency, customer service, throughput, and revenue. The performance of individual branches or regions is then measured on each variable and compared with that of the bank as a whole as well as to local competition in order to pinpoint the practices that lead to outstanding performance.

Since the primary objective of the benchmarking process is to increase profitability, a useful initial diagnostic is branch profitability, i.e., the contribution of the individual branch to corporate return-on-equity targets. This measure identifies both the underperformers in need of further scrutiny or "fixes" and the top performers, which often present the successful strategies for emulation throughout the network.

However, a broad profitability measure does not answer the question of *why* a branch does or does not perform well. To answer this question, the consumer banker must "peel the onion" and use more detailed measures. Such in-depth benchmarks not only reveal specific tactical and strategic practices, but also quantify their impact on the bottom line.

Benchmarking can be applied across all of the cost and revenue components of the branch income statement. This article will focus on a portion of these areas, including deposit pricing, fee-income generation, branch throughput, and staff productivity.

As with many retailing business, the thinner margins of retail banking products, such as CDs, make it

Financial Centers

Continued from preceding page

We knew about their preconceived perceptions on banks and we wanted to change them. Normally, when customers walk into a bank, they expect the bank's representatives to be rude and abrupt. We wanted to make every customer who walked through our doors feel welcome.

The bank utilized a combination of formal training courses and an extensive top-down mentoring program to build a strong sales and service culture. Special emphasis is placed on increasing product knowledge and encouraging employees to work as a team in maximizing sales and providing superior service.

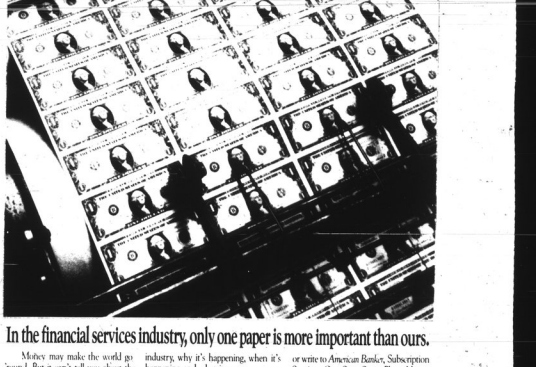
Results

Since our launch in September 1988, the results have more than met our expectations.

- The reaction of both customers and employees to the centers as places to conduct business and to work is overwhelmingly favorable.
- Deposit growth increased by 134% in 1989 over 1988.
- 1989 fees from major nontraditional products, including securities and insurance, increased by 68% over 1988.
- The bank attracted 18,720 new customers in 1989 against 13,160 new customers in 1988.
- Annualized staff turnover declined to 49.6% as of Dec. 31, 1989, from 74.9% as of January 1988.
- The centers are attracting intense industrywide attention. We have had bankers from all over the United States and from at least 25 countries visit us to date. Our own officers have been invited to discuss the centers at numerous conferences. The centers have been the subject of numerous newspaper and magazine articles, as well as local and national television reports.

In response to this interest, Dollar Dry Dock has recently formed a joint venture with Creative Dimensions in Management to provide consulting services to banking organizations wishing to implement the financial center concept in their own markets.

To remain a leader in the delivery of financial services, we are always looking for ways to enhance customer service and sales. Our challenge at Dollar Dry Dock will be to continue to package and market our products and services so that the benefits are clearly defined and, more important, matched to the customers' needs.□



In the financial services industry, only one paper is more important than ours.

Money may make the world go 'round. But it can't tell you about the latest issues, technologies and trends in the banking industry.

American Banker can.

As a subscriber, you'll be one of the first to know what's happening in the industry, why it's happening, when it's happening and what it means.

Continued from preceding page

imperative to understand the competitive price elasticities that exist at a market level. Banks with presence in multiple markets can quantify these elasticities and manage them to reduce overall interest expense.

Quantification of these price/volume tradeoffs requires historical competitive price benchmarking and collection of related deposit volume information. When these data are overlaid with the economics of specific products, the bank can minimize funding costs by optimizing pricing strategies across all markets, products, and maturities.

Funding optimization requires a significant level of analysis and data collection, but the payoff can be as large as 10 to 30 basis points across the time deposit base, depending on the number of markets served and local competitive pricing practices.

The information required to optimize deposit pricing is also useful in identifying immediate opportunities for enhancing product design and positioning. Internal and competitive benchmarks comparing relative levels of transaction and time deposits can identify branches with less desirable product mixes, relative to the demographics of the marketplace being served. The bank can then implement creative programs such as volume-tiered pricing, focused promotion programs, and refined branch-officer incentives to improve product-mix dynamics.

Fee income can also be increased through internal and competitive benchmarking. Fee schedules should, for example, be regularly compared with the competition to identify untapped income sources while guarding against overly aggressive policies that may increase customer attrition.

In addition, the typical bank will find that a significant opportunity for fee income improvement exists through fee-waiver management at the branch level. Simply quantifying waiver rates by product at an individual officer level and incorporating them into incentive structures can increase fee collection by more than 20%.

Another major determinant of branch revenue levels, deposit throughput, can be measured and enhanced through several powerful benchmarking tools. Initially, each branch can be compared with competitors on the basis of total deposit throughput and growth, using publicly available and shared information. This quick diagnostic identifies the weak and strong performers, but additional measures are required to explain the differences in performance.

The differences in throughput can often be traced to a branch's penetration and relative outlet share. In banking, as in many other retail businesses, a phenomenon exists called "network scale."

Network Scale

Simply put, network scale describes the effect that occurs when having dominant outlet share in a given geographical market leads to a more than proportionate market share. When a bank has a dominant share of the banking outlets in a market, it dramatically increases the likelihood of having outlets close to a prospective customer's home and work. The increased visibility and convenience translates directly into increased deposits.

There are several ways to take advantage of this phenomenon. For example, in 1982, Barnett Banks found itself in many high-growth markets in Florida. By building a significant number of new branches over the next five years, Barnett increased its average deposits per branch.

By increasing its share of outlets by 3%, it generated a 6% gain in market share. In "overbanked" markets, a bank may achieve network scale benefits through the acquisition and rationalization of overlapping networks. Wells Fargo used this method of leveraging network scale with its acquisition of Crocker in 1986. A net gain of 3% in outlet share generated an 8% gain in market share.

In markets where a bank's existing network scale position is weak, it has several strategic options. If the market is economically attractive, an expansion or acquisition strategy like those of Barnett and Wells Fargo may be pursued.

If the market is economically unattractive, divestiture may be the best answer, especially if a dominant player is willing to pay a premium to strengthen its own network scale position. Alternatively, a bank may choose to become a niche player by focusing on businesses, other than transaction deposits, which do not require an extensive branch network.

When implementing a branch growth strategy, internal benchmarks can also play a key role in site evaluation. In practice, approximately 10 to 20 key variables drive the success or failure of a new branch, including parking availability, site visibility and access, and the number of trade-area traffic generators. Site selection models which utilize performance data from existing branches can be instrumental in quantifying the impact of alternate locations and designs on new branch performance as well as to prioritize upgrades of existing facilities.

Additional revenue opportunities can be identified by benchmarking individual platform staff sales productivity against market potential. This measure has both an internal component – new accounts generated per FTE – and an external component – account growth rate relative to market levels.

Where poor performance is identified, improvements can be made by redeploying staff from overstaffed to understaffed branches and by instituting appropriate micromarketing programs that use branch officer training and incentives to target attractive customer segments.

Staff productivity measures can also be effective in managing branch expense levels. For example, teller staffing targets can be set using a target transaction-per-FTE measurement.

ROBERT J. ZIZKA
Principal
Strategic Planning Associates

Robert J. Zizka is a principal in the Washington office of Strategic Planning Associates and a leader of the firm's banking practice.

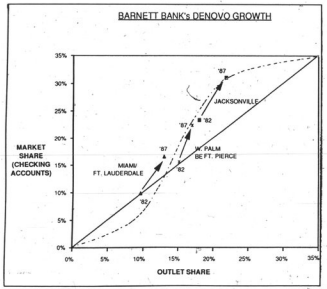
Strategic Planning Associates is one of the leading international strategy and management consulting firms, with over 250 professionals in Washington, New York, London, Paris, Geneva, Singapore, and San Francisco. A Marsh & McLennan company, Strategic Planning Associates is known for its analytical, fact-based approach and its focus on bottom-line profit improvement and value creation.

Following engagements in over a dozen industries as a member of Strategic Planning's general strategy practice, Mr. Zizka has consulted exclusively to banking and financial services clients since 1986. He has worked extensively with regional, superregional, and money-center banks in the United States and has also consulted to European banks, mortgage companies and other financial services firms.

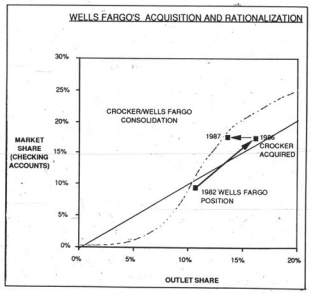
In addition to corporate strategy issues, he has led banking studies in:

- *Bank-wide restructuring.*
- *Retail branch distribution.*
- *Profitability analysis/MIS.*
- *Credit card strategy.*
- *Product pricing/repricing.*
- *Mortgage business strategy development.*
- *Indirect/dealer lending strategy.*
- *Capital planning/prioritization.*
- *Mortgage-servicing portfolio valuation.*
- *Organizational studies.*
- *Cost-reduction and quality-enhancement programs.*

BARNETT BANK'S DENOVO GROWTH



WELLS FARGO'S ACQUISITION AND RATIONALIZATION



Best Practices

Continued from preceding page

In analyzing teller efficiency, however, several adjustments to the raw transaction-per-teller data must be made. Adjustments must be made for the overall transaction scale of the branch (since large branches should achieve higher teller productivity levels), the transaction mix (since all transactions are not the same), the level of automation or the teller line, and the services required or desired by customers in different marketplaces.

Once efficiency measures have been adjusted to compensate for these factors, management can identify and implement those staffing practices that lead to the greatest cost efficiency. Typically, these practices revolve around flexible staffing configurations, including peak and part-time staffing, overlapping shifts, and floating staff.

Interestingly, by matching capacity to demand on the teller line, the bank not only reduces expenses, but improves its customer service levels by reducing the time customers have to wait in line. Such improvements have become more critical as banks increasingly compete based on customer service levels.

Through mystery-shopper programs, customer surveys, and customer-attrition measures, it is possible to quantify the relationship between service levels and revenue performance, as well as to identify specific areas to focus on for service improvement.

The key to successful best-practices programs is the process itself. This process must identify the linkages between superior operating practices and corporate profitability in a manner that leads to the active participation of many different organizations within the bank, including retail management, branch administration, product management, marketing, operations, human resources, finance and treasury, strategic planning, and technology.

It is very important for the manager of the retail system to set overall goals and assume leadership for the effort. On a day-to-day basis, project management responsibility should be assigned to an overall coordinator as well as to line managers within geographic regions.

These individuals must manage the interpersonal issues that arise in such a process and actively communicate corporate objectives while incorporating the concerns of the many process participants. Finally, due to the data-driven nature of the process, a dedicated pool of analytical resources is required.

In many instances, best-practices benchmarking leads not just to continual profit improvements, but to significant and beneficial changes in culture. The process establishes a set of practical targets for management throughout the bank.

At the same time it empowers line managers to contribute to ongoing performance improvement by providing them with the information they need to develop new business approaches and motivate their people. The net result is a more powerful and focused organization. □

Restoring Retail Profitability: Automate, Integrate, or Eliminate?

By Patric J. Jerge

Technology investments and increased profitability have not traditionally gone hand in hand in the retail financial services industry.

While the dollars invested in automation and technology continue to grow at an average rate of 12% a year, most bank executives are not sure these investments are paying off. Unfortunately, most tell us their technology is either a disappointment or that it is only doing an adequate job.

Bankers, like most business executives, have assumed too much about their technology. With each new system and each new level of automation, they thought they were at last getting the state-of-the-art technology they needed to better manage their business.

And while these new technologies improved their operations in incremental steps, time after time they were disappointed. Today bank executives still are searching for the technology that will do its job – in other words, help them significantly improve operations and increase profitability.

The trend toward increased spending on information technology proves our belief that better systems can increase operational efficiency and help banks stay competitive. But our level of satisfaction with these systems is not keeping pace.

Banks now spend two and a half times what they spent on computer systems a decade ago. But are bankers two and a half times happier with their technology?

Not only is the return on technol-

More than just Products that work. People who can tell you how.

Successful financial institutions don't just bank on Hogan products. They bank on Hogan people. No one knows our software better than our Professional Services staff. They can tell you more about our systems because they actually help design and upgrade them. Which means they're the most qualified to teach your people how to use our software. And how to help you make the most of your investment.

Get comprehensive training from Hogan educators. At our Education Centers in Dallas and Woking, England, or at your own location, our professional educators will give your staff hands-on training on Hogan systems. In our fully equipped classrooms, our instructors teach on an integrated version of Hogan software. Students learn job related skills that they transfer directly to their own work environment. That's an education your people can't get anywhere else.

Learn from our consultants, in your own workplace. Our consultants work worldwide – and on-site for our customers. And when Hogan consultants come to your institution, they'll help you develop the least risk strategy,to integrate our software into your operations. Provide the implementation staff. Train your people on our latest product enhancements. Advise you on functional and technical procedures. And do whatever it takes to help you become more productive and profitable – in the shortest period of time.

To gain the most from your Hogan investment, talk to the people behind our products. Call the people with Hogan Professional Services at 1-800-321-0035.

Partners in your success.

Restoring

Continued from preceding page

ogy investments unclear to bank executives, their expectations are becoming greater.

Current market pressures intensify the need for systems that will increase efficiency and maintain costs. In an era of reregulation, increased reporting requirements call for increased productivity and tighter cost controls.

Redefining the Market

What's more, the market itself is constantly being redefined. The growth of bank mergers and acquisitions increases competitive pressures. Maintaining stock prices – to guard against takeovers, ensure a good price if an institution is acquired, or provide the currency with which to make acquisitions – is a critical concern.

In short, the time is over for experiments in new technology, without concern for increased profitability. Banks need solutions, now.

Has technology failed to meet these challenges? It certainly has fallen short of expectations. And cost-effective solutions must be found quickly, as market conditions present new challenges and promote change.

The gap between our hopes for what technology will do and the actual results has a great deal to do with the investment decision itself. The way most banks approach their investment in technology is a recipe for failure.

The following scenario is typical. Senior bank executives, usually unfamiliar with the language of technology, abdicate all technology acquisition-decisions to the information technology (IT) staff.

The IT staff chooses new systems based on capabilities and features, and sells these capabilities to senior management. Then the new systems are implemented, often without input from middle or senior management. This sets the stage for internal conflict and underutilization of the new systems, because the new technology doesn't conform with current operations.

Up to this point, the focus has been on technical benefits, features, and functions, not, on the needs of the institution or the long term impact on operations, internal management, products, and services – the very key areas of concern at the management level.

Measurements Lacking

Once the new systems, recommended and purchased by the technical staff, are implemented, procedures are rarely established to measure the return on technology investments. The systems may remain misunderstood by the majority of the organization. Even worse, no one can give senior management an accurate picture of how well the technology is performing.

What's wrong with this picture? If senior management had been involved in the decision to invest in new technology from the beginning, the focus on using technology to provide specific business solutions would not have been lost.

As banking executives become aware that technology decisions should be part of the business strategy, including the marketing goals, their future IT investments will be driven by management objectives. When the final decision rests at the management level, technology will be designed to fit the business needs. And technology investments will begin to pay big dividends.

Before shopping for new systems, senior managers and the technical staff should determine what the goals are – what they want the technology to do. The proposed investment in new systems can then be evaluated just as any other investment: how it will meet business objectives and increase profitability.

In addition, by generating support and involvement from middle management, the new systems can be implemented to achieve maximum performance, wholly changing current operations if necessary for the technology to function as it should.

> The time is over for experiments in new technology, without concern for increased profitability. Banks need solutions, now.

Finally, responsibility for measuring results should be assigned to middle management.

The major benefits of involving management in technology decisions and system implementation are clear. However, a simple summary of the decision-making process is not sufficient.

How do you evaluate technology's effect on shareholder value, for instance? And how do you measure its performance? The following model provides some of the answers to these complex questions.

Model: A Better Approach To Technology Investment

What are the reasons for investing in new technology?

• Some technologies are essential to helping run your business. Transaction processing or statement rendering are examples.

• Other technologies are not critical to your operations but provide a competitive advantage or additional products and services. ATMs, home banking services, and executive information systems are examples.

• Technologies such as integrated CIF, multibranch banking, and cash-management systems are both critical to operations and can provide a basis for competitive advantage as well.

Once you know what you want the technology to accomplish, an extensive examination of your current operations should be made. What are your strengths and weaknesses in the market, and how will technology impact your strengths?

• Many institutions will call in an outside consultant to do the job – an investment in itself, but worth it in the long run.

• Specific needs addressed by the proposed system should be identified. Examples are asset/liability management system; flexible interest calculations; flexible deposit interest rate setting capabilities; flexible and timely management reports on pricing and rates, by customer type, geographic market, etc.; customer and product profitability systems.

• The study can determine how technology can affect the four key income drivers that determine your near-term profitability: net interest income, noninterest income, operating expenses, and credit quality.

How does the new system meet the specific needs you have identified?

• It will have some affect on the four income drivers:

1. Net interest income. Can't do a lot. Net interest margins are largely market driven.

2. Noninterest income. Can be influenced significantly. Consider the products and services you offer – ATM, plastic cards, payment systems. In what ways will new technology improve your current offerings and lend added value to your customers and higher income institutions?

3. Operating expenses. Also a significant opportunity for improvement by automating manual functions, reducing paper flow and handling transactions in real time, only once.

4. Credit quality. A system can influence credit quality by helping you track creditworthiness, performance, and profitability of the customer segments you do business with.

• How can your vendor help you make the right decision?

1. Your vendor should be able to sell a product to your IT staff.

2. Your vendor should be able to sell to senior management in terms of benefits.

3. Your vendor should help you match technology to the needs of your institution.

Involve your middle managers in your operations evaluation and in your investment decision.

• Any major investment involves a wholesale change in operations if the system is to perform effectively. Middle managers will be responsible for motivating this change.

• Middle managers' support and cooperation will reduce conflict and avert fear of change and resentment of technology, the technical staff and senior management.

How will you measure the performance of your new technology?

• There should be a win/win relationship between you and your vendor. Too often, the technical personnel constrain a vendor on price, giving him no incentive to help the customer after the sale.

• The vendor can help you measure the performance of the system and its ability to meet the business objectives.

• Use the technology to measure the performance of the institution as well.

1. Use it to measure technology's effect on the income drivers.

2. Use it to explore opportunities for improved profitability in other areas, such as an earnings analysis system.

Following this model, a bank can begin to move from the old way of acquiring new technology, in which decisions were based on the recommendations of technical people, to the more successful method of letting market conditions and business objectives drive future technology investments.

This fundamental change in the decision making process may not be easy. It requires not only strong leaders who are committed to technology and innovation, but also a consistent strategy for acquiring new technology.

In addition, an open dialogue with your vendors is critical. Most vendors already know that they will have to sell you more than just newer and better capabilities. You are responsible for making sure they also sell you systems that will help you meet management objectives.

Both you and the vendor have the responsibility for measuring technology's performance. Without a clear picture of what your systems are doing for you, it may be difficult to determine just what your future investments should be. □

Patric J. Jerge is executive vice president of the integrated banking applications group at Hogan Systems Inc. He is responsible for sales, marketing, product development, account management, and customer support.

Mr. Jerge joined Hogan in November 1978. He was appointed senior vice president of the field operations group in June 1987 and executive vice president in May 1988.

Prior to his field operations group appointment, Mr. Jerge served as a vice president of product development. He has also served as a vice president of western regional sales, sales support, and customer support. He was one of the company's first 10 employees.

Identifying the Profitability of Individual Accounts and Products

By Richard M. Hannafin

The health of the financial industry, and your institution in particular, depends upon your ability to implement a relationship-pricing capability designed to grow individual and household account profitability.

Having specialized in quantifiable, bottom-line earnings improvement programs over the past several years, RMH Associates has helped major bank corporations to identify earnings opportunities and increase profits by millions of dollars through implementation of product repricing and a renewed sales culture based on bottom-line results.

As we enter the new decade, financial institutions realize they must meet an increasing array of strategic business challenges, including narrowing interest margins, increased competition and rising operational costs. In today's banking environment, management must address these and other industry forces through adoption of classical marketing protocols and the utilization of new technological tools.

Recognizing the growing need to assist national and regional financial institutions in accessing internal data and gaining a wide spectrum of relationship and profitability measurements, RMH Associates initiated a new support program to aid bank management in achieving greater stability and profitability.

In developing our fully automated PC-based account and product-profitability software package, we focused on designing a program that would both meet the institution's strategic business planning needs and function as an in-house resource.

> As we enter the new decade, financial institutions realize they must meet an increasing array of strategic business challenges, including narrowing interest margins, increased competition and rising operational costs.

Profitability Analysis

In building a customer profitability analysis designed to meet strategic business-planning needs, the first priority fell to conducting quantitative research among bank marketing management to identify the essential attributes of a software system that would support their short-term and long-term financial-planning needs. The design capabilities and flexibility they desired included:

• Calculate individual account profitability through transaction, income, and expense tracking.

• Combine multiple products into one relationship account to determine breakeven balances, product combinations, and perform hypothetical product-pricing scenarios.

• Provide the ability to change interest rates, earning credit, cost of funds, individual expenses, and recalculate account, product, and relationship profitability.

• Implement variable sorts on any combination of factors: product, profit, relationship/household, balance, descending order of profit and branch.

• Project balances or loan volume for existing and new products, recalculate projected profitability by product, and project growth-/loss of accounts by product.

• Develop new products by forecasting internal conversion from selected products by balance ranges. Merge the new product along with the new source of funds to project profitability.

• Recalculate the profitability of an existing product based on projected customer migration to a new product offering.

• Estimate customer transaction swings based on potential pricing decisions by group or product (i.e., over 10 checks per month at 50 cents a check).

• Produce product, branch, and relationship reports for each selection or sort. Reports displayed on screen or in hard copy.

• Measure and compensate the sales staff for profitability of monthly new accounts and overgoal performance.

• Track return on investment relative to marketing campaigns and their impact on profitability due to new accounts generated.

• Export or link selected data, annual profit of account or household to external source for direct marketing or CIF usage.

Looking at Costs

Actually, most of this wish list covering a wide spectrum of planning supports came as no surprise to us, having developed similar programs for client banks. The benefit of this research, however, illustrated a consensus among the

Give your bank some culture.
1-800-456-2340.

Sales culture, that is. It's not the image you once went for. But today, every sale you miss is a chance for your competition.

You can make it happen in your bank, with **Sales Management for Retail Bankers**. A new "how to" guide from Sheshunoff Information Services Inc.

You'll see, step by step, how to create a sales culture, set measurable goals, develop an effective training program, and get your people to sell and cross-sell your services.

You'll learn how to set up your lobby space to increase sales, monitor your programs, and do a five-year sales plan that gives you the time and the tools to reach your goals.

Plus, you get a flow chart that helps you plan your next move, a model financial services manual, and much more.

It's all here in 11 easy-to-read chapters. Proven, hands-on advice from bankers who made it work in banks like yours. And it's published by Sheshunoff Information Services, so you know it's easy to use.

Sales don't just happen, they're made. And you can help your people make more of them for just $195. Call 1-800-456-2340.

High Performance Banking

Private-Banking Workstation Attracts Profitable Customers

By Mark Rodrigues

It is remarkable how few private bankers use the power of desktop computers to attract and retain profitable customers.

Perhaps many bankers believe that technology is a fad to be avoided, like junk bonds and derivative investments. Or perhaps some believe technology is a custodial function, that what really matters is maintaining close personal relationship with clients.

In fact, wealth management is a subset of the information business. Such a perspective can dramatically change work habits.

Private bankers can take control of their information systems using a personal computer (or workstation, a form of souped-up PC) that can connect to the back office. Today, many bankers are using easy-to-understand technology to build critical products and reports without programmer intervention. It is possible to create a single access point to a client's various accounts that are scattered across departments in credit, trust, and investment.

Further, a high-tech approach to private-banking facilitates proactive customer service. A banker whose desktop is linked to Reuters, Lloyds of London, and Sotheby's can provide his clients with timely, important news.

Delivering information services outside of traditional banking domains gives customers reasons to continue doing business with you – a competitive advantage for the creative banker.

In a report on private banking, consultant William Heppner notes: "Private bankers have selected a market that requires a customized and tailored approach, yet they support this business with mass-market retail systems that are both inflexible and time-consuming to change."

Private banks do not have systems designed for their needs. Instead, they use traditional retail and commercial banks that process and file information by product lines – mortgages, checking accounts, trust, and so on.

For example Chase Manhattan Bank has over 50 separate DDA programs in its back office. Robert Bradley of Boston Private Bank and Trust calls this situation "departmentalitis," the condition in which "the control of information resides in each bank department, few of which share information geared to building a total client relationship, but rather constrained by systems".

Millions of dollars have been invested in these back-office systems, so it would be pure folly to attempt to replace them. Data flow between them, and reports are available for each, but pulling reports together is still a chore. Using data from one system in conjunction with another is usually a manual process.

Workstation Benefits

The solution is a personal computer equipped with communication software that permits a banker to sign on to multiple computer systems simultaneously; using windows to see information on a client's various accounts. The procedures to log into one or many systems can be preceded so that a single keystroke does it all.

Using a technique called scripting, the PC can be "taught" to access mortgage, trust, and money markets every time the customer's name is typed into the system. Accounts can be added and deleted to a client's name as needed.

With today's powerful workstations and software, there is no

MARK RODRIGUES
Managing Partner
Harrison Bauer & Co.

Mark Rodrigues is managing partner of Harrison Bauer & Co., Wayne, Pa., a systems-integration company providing solutions to private banks.

Staffed with former private bankers, Harrison Bauer is a general contractor integrating desktop and mainframe systems to make technology part of a strategic advantage to private-banking groups. The Harrison Bauer approach is characterized by rapid development cycles and guarantees of service.

Before beginning his business career, Mr. Rodrigues was a professional hockey goalie in the "New York Rangers" farm system. He joined IBM national accounts division as a sales representative in 1982 and later joined Wang Laboratories as banking branch manager in New York.

As a graduate student he was in investment banker with Merrill Lynch Capital Markets. His experience in technology and banking continued most recently as marketing vice president with a private integrated banking-systems software company. Mr. Rodrigues has been a frequent speaker and writer for trade organizations and publications.

A native of Boston, Mr. Rodrigues has a BA in American History from Yale and an MBA from Harvard Business School. He is married and has two children.

Identifying

Continued from preceding page

majority of respondents that they and their banks must finally look at transactions and costs rather than balance only to build profitability in a new context. After all, banks know commercial-account profitability…now's the time to look at the retail segment in the same light.

The resulting PC-based Individual Account and Product Profitability Analysis software package affords a unique planning tool for management and staff. The system enables the user to perform profitability audits across all product and account categories while allowing the implementation of a variety of planning measurements.

For purposes of simplicity, the system utilizes the individual bank's data base comprising the customer file and transactions. RMH Associates writes the conversion program, formulates, and then records the new operating data within the software package. The user-friendly "point and shoot" system is then ready to go.

Windows of Opportunity

Operationally, the program is divided into three analytical categories. We call them windows of opportunity, each of which affords a diverse list of protocol functions:

- Profitability by relationship and household. This window of opportunity allows you to determine what combination of products actually make up a profitable household relationship based on each account net profit within the household. This baseline report is the starting point in your quest for a more profitable P/I.

(Note: This method of analysis immediately challenges the historic CIF method of identifying high-balance customers as the most lucrative segment of the market. In reality, this program will show that many are not.

The new protocol not only looks at each customer's total bank relationship but identifies how that relationship adds or subtracts from your bottom line.)

- Profitability by product and balance/loan amount. In building data to define what constitutes a profitable relationship, each product offering is analyzed by balance or loan amount in classifications from $100 to $100,000. Each classification is further broken out into profitable accounts, those that lose money, and the net difference between the two.

This window of opportunity enables you to develop strategies in planning monthly service charges based on actual costs. It also provides the breakeven range as a guide in setting profitable minimum deposit balances or loan requirements.

- Hypothetical product pricing. We call it the what-if analysis, an outstanding planning tool. This program element allows products to be priced for profitability. Based on household relationship and product profitability analyses, you now have the opportunity to test and evaluate a mountain of revised pricing scenarios, identify interest rates that can be tiered by balance range, service and transaction charges based on your customers' actual activity and expenses.

The software will automatically recalculate product profitability based on your input. Now you can reprice products, determine the impact on your bottom line, and project potential loss of accounts offset by profits produced by the new pricing strategy.

The PC software is programmed on a three-step format to ensure flexibility in meeting strategic planning needs while providing ease of operation.

Our approach represents only one scenario in generating higher profitability through relationship pricing. Now matter the source in obtaining the necessary software supports, the single most important objective in today's business environment is attaining and implementing this new technological tool. □

RICHARD M. HANNAFIN
President

Richard M. Hannafin is founder and president of RMH Associates, New York.

RMH is a national, full-service financial marketing firm specializing in relationship and individual-account product development, market research, sales training, and tracking.

RMH Associates is responsible for the development of a new PC-based customer-profitability-analysis software system and Sales-Line, the totally automated software sales tracking and goal system that audits new-account profitability and sales achievement.

Mr. Hannafin has over 20 years in the financial services industry. Before starting his own firm, he was senior vice president of the retail banking division of East New York Savings Bank, responsible for branch operations and administration, marketing, life insurance and customer credit; advertising and direct marketing; and corporate communications.

He is a graduate of Boston College and has an MBA from Fordham University. He is married and has two children.

Workstation

Continued from preceding page

technical reason for the service-minded private banker to be held hostage to unfriendly back-office systems. There are numerous software packages called presentation managers that allow even the most casual user to be productive within minutes.

Touch screens, easy-to-understand graphics, and other features have eliminated the blank screen with "C:>" that used to greet early users of personal computers. The same icons and mouse pointers pioneered by Apple can also be used on the IBM PC with products like Microsoft Windows.

McKinsey estimates that over 60% of a private banker's time is spent on administrative issues. Automating these processes allows the banker to spend more time selling services to clients.

Faster Customer Service

A second factor benefiting the nontechnical banker is the computer industry's move toward open standards. Among other things, open standard allow the banker's desktop computer to accept feeds from the elephantine systems in the back office and then massage and customize this data at the desktop.

Private banks do not have systems designed for their needs. Instead, they use traditional retail and commercial banks that process and file information by product lines – mortgages, checking accounts, trust, and so on.

The advantage is control over the information used to service the customer. Currently, the back office has grappled with providing flexible customer information files for years with little support when complex households and multi-tiered relationships are requested by private bankers.

Mainframe systems will always have difficulties accommodating the endless variety of household situations. Why not empower each banker to customize his or her CIF for each client?

Give that banker fingertip access to market demographics and snapshots of customer relationships. If global custody is done by an outside correspondent bank, the private banker workstation could easily monitor clearing information on a real-time basis.

Most private bankers are hostages of a the parent bank's operations group, which does not share the same commitment to customer service. Terminals are connected to Orwellian environments that are inflexible, difficult to use, and administered by technicians whose success is based on "keeping the network up" regardless of whether customers are leaving the bank in droves.

Worse, the backlog for special product and report requests runs an average 18 months in many money-center banks. In contrast, banks that have cultivated technological innovation create a significant competitive advantage.

Consider that a major money-center bank in New York requires 45 days to process a jumbo mortgage for a private banking client (minimum deposit of $500,000), Citibank – long a leader in workstation technology – guarantees 15- minute mortgage approval notification to the mass market using imaging systems from Wang Laboratories.

Cost of Back-Office Computing

Economics is the third reason to pursue a private-banker workstation strategy. The measure of computing power is mips, or millions of instructions per second. The cost of computing power on a mainframe is $200,000/mip versus $500/mip on a workstation.

After purchase, mainframes require massive staff and special facilities. Metropolitan Life, the insurance giant, estimates that mainframe computing costs $1 million a minute. Metropolitan Life is in the process of rolling out workstations to over 2,000 branch offices.

Trying to keep up with technological innovation on the desktop is like driving on the autobahn; just when you think you are moving very fast someone is suddenly blinking their lights from behind. Open systems allow the banker to connect relevant technology as it becomes available.

Equity and Bond traders at Salomon Brothers and Bankers Trust are the latest converts to Unix-based workstations that allow simultaneous sessions to multiple host systems.

When the banker is empowered with information technology, a creative spirit is nurtured. Harris Trust and Savings Bank has used personal computers to improve delivery of products and services.

Arthur E. Greenbank, vice president for private banking, recalls: "When we first put personal computers on the bankers' desks, we did not have the advantage of today's easy-to-use presentation managers.

"We found the best way to train people was to put one of our operations people on-site. My colleague, Cheryl Reich, felt that instant access to technical help – not classroom training – was the best way to get bankers up on the learning curve. Within weeks, productivity

Want to outpace your competitors?

It's easy with the *Journal of Retail Banking.*

Send for a free trial issue and see why!

With the Journal of Retail Banking you can keep more than a finger on the pulse of the consumer financial services industry. This quarterly professional journal is retail banking's premier forum for ideas and research on providing financial services to individuals.

Each issue thoroughly covers topics with practical application in the day-to-day business of retail banking. Subscribers get the full story behind innovative retail banking concepts and practical guidance for implementing sound, creative new strategies.

But, don't just take it from us. See for yourself. Return the coupon below and receive a free trial issue of the Journal of Retail Banking. You'll find articles based on research, case studies and surveys submitted by leading retail banking executives around the world. Who else better understands the critical issues facing the industry today?

Plus all material is screened by at least three professionals in the field to keep the focus squarely on "the real world." With the Journal of Retail Banking you'll get a the comprehensive, useful information you need on:

- Marketing and sales
- Customer service
- Home equity lending
- Automobile financing
- EFT and bank cards
- Compliance and disclosure issues

…and much, much more

To receive your free trial issue simply return the coupon. This coupon entitles you to a one-year subscription for only $72… almost 25% *off* the regular $97 subscription price. Or call us toll-free at **(800) 221–1809** (in New York, call (212) 943–9589). If you prefer you can fax us your order at (212) 943–6256.

☐ **Yes. Please enter my trial subscription to the *Journal of Retail Banking.*** If I agree that it's the premier forum for ideas and research on consumer banking, I will honor the invoice I receive, at the special rate of $72 — almost 25% off the regular $97 annual subscription price.

"If I decide not to subscribe, I'll just return my invoice marked "no thanks," and keep my trial issue as a gift.

Create Distinctive Value to Attract Upscale, Affluent Consumers

By Donald R. Stephens

How do you attract the upscale consumer? By creating a distinctive value.

Banking is a commodity product. All banks deliver money, loans and investments at about the same price. And, with federal deposit insurance, we all have the same level of security. Whenever you have a commodity product, you have two choices:

- Operate with very low margins (e.g., the grain trader).
- Develop something unique that gives you a competitive edge and enjoy margins that are a little higher or margins that are a little less used in paying direct costs.

This choice determines the amount of your margin that you can dedicate to enhancing your image and servicing your customer.

Examples of low-margin commodity businesses in the financial services industry are:

- Discount Brokerage (e.g., Charles Schwab & Co.)
- The retail end of the commercial banking business (e.g., Wells Fargo).

In these businesses the firms earn their income on a large number of small transactions, on each of which they have a small markup and out of which they must pay overhead, advertising, taxes, and make a profit for their shareholders. Because of the high volume of small transactions, most of their margin is used in absorbing direct costs.

Schwab cannot afford to have account representatives hold long, detailed discussions with clients regarding securities services. Wells Fargo cannot afford to have long discussions with its clients about the appropriate amount of reduction of a $3,000 MasterCard bill.

If a customer wants to call a retail bank with a question on a $90,000 home mortgage, he is directed to an 800 number in Long Beach, where he talks to a clerk with a computer. The customer might have to wait on the line a little longer than he would like and there may not be a lot of handholding, but he is not paying for hand holding with the profit margin on a $90,000 loan. This is not to shortchange either of these two excellent mass-market producers and the excellent quality of service they deliver to their target market, at a reasonable price.

A good chain bank is able to deliver the information, competitively priced, to the middle-income market it serves with a degree of quickness and still maintain a profit margin to allow it to be an extremely high-performing institution.

Founded on Personal Service

The Bank of San Francisco is an example of a high-margin commodity business. We still distribute the same basic product as a chain bank – money – but we deliver it in a kinder, gentler fashion as demanded by our market. Our market demands that extra service; and the same percentage margin, when applied to larger-dollar transactions, allows us to provide it.

These concepts of high-margin and low-margin commodity businesses are great to consider in the abstract. But a high level of service just cannot be done if your average transaction is a $15,000 revolving loan or a $90,000 mortgage. There is not enough profit margin in those transactions, if they are priced competitively, to pay a reasonable profit for shareholders and the high cost of delivering the

DONALD R. STEPHENS
Chairman and Chief Executive Officer
Bank of San Francisco

Donald R. Stephens has served as Bank of San Francisco's chairman and chief executive officer since founding the bank in 1979.

A successful lawyer, real estate investor, and banker, Mr. Stephens also serves as managing partner of D.R. Stephens & Co., a wholly owned real estate investment company.

From 1972 to 1976, Mr. Stephens was in investment banking and residential real estate development, having pioneered condominium conversion in San Francisco. Concurrently, he had a law practice until 1976.

Mr. Stephens is a graduate of Hastings Law School and holds a bachelor's degree in finance from the University of Southern California. He serves on the board of directors of the Bank of San Francisco, Lincoln NC Realty Fund, AUFS Inc., Skouras Pictures, and the Charles Schwab Family of Funds.

Workstation

Continued from preceding page

soared."

Mr. Greenbank notes that lending is more art than science. The bank is investigating a PC-based loan-preparation package that prompts the banker with loan-calculation formulas and regulatory notices, ensuring that proper documents are being used. The final product will be output to a laser printer, eliminating multipart forms and carbons.

The bank is also in the midst of a marketing program called Target 25, in which 25% of a banker's existing clients are to be sold a new product. Management tracks the effectiveness of the year-long program on a workstation.

A cross-selling application sends prompts and recommendations to each banker's workstation. Harris plans on continuing to improve customer service by leveraging inexpensive and flexible desktop technology.

Integration During Mergers

Exchange Bank recently merged with LaSalle Bank, which is owned by Dutch giant ABN. Wayne Yeselsky, first vice president for private banking at Exchange, expects his investment in personal computers to facilitate the integration and synergies of the merger.

For example, LaSalle brings a personal-trust business that Exchange did not previously emphasize. "We expect to integrate our PCs with our new affiliate banks in the next nine months," Mr. Yeselsky says.

"The first phase will involve tying in the system. Phase 2 will provide easy-to-understand menus to guide our bankers through the various systems and products we can now offer."

The synergies resulting from the merger are quickly becoming evident.

"We already have done two jumbo mortgages in Los Angeles for ABN London," Mr. Yeselsky says. Such a transaction was never foreseen when application software was purchased years ago, yet the flexibility and rapid-development capabilities of the personal computers allowed Mr. Yeselsky to turn the deal around in 48 hours.

Fee-Based Income Strategy

Successful private banks are characterized by fluid, matrical organizational structures that flow resources to opportunities. In this respect, they more closely resemble investment banks than commercial banks, which tend to be hierarchical with customer interaction controlled by a product specialist like the lending officer.

A private bank has a relationship manager who presents a single contact point for the client. Fee-income-generating specialists in trust, credit, or investments may be brought in to respond to customer needs. This organizational structure must be supported by flexible, highly networked infrastructure if a client is to be properly serviced.

The bank must establish a network of workstations that make it easy for bankers to update call reports and share client information across the firm. With today's focus on fee-based income, the customer is exposed to a variety of specialists such as estate planners and loan officers.

Morgan Guaranty Trust Co. now offers corporate-finance and property skills with its private-banking offerings. Without effective sharing of information, fee income will diminish as the customer comes to identify with the firm instead of the banker.

With today's powerful workstations and software, there is no technical reason for the service-minded private banker to be held hostage to unfriendly back-office systems.

The Learning Organization

As Alvin Shoemaker of First Boston Credit Suisse once put it: "As you have more and more specialist sales forces, you sometimes meet yourself coming around the barn." But he held out hope of someday having one person responsible for the overall relationshi:

"My great fantasy is to have a person who contacts the customer and who can pull up every transaction on a computer screen and measure the tradeoff."

The technology for doing this is easy. The difficulty is in assigning one person the overall responsibility for making the tradeoff decisions and enforcing them.

In an age of specialists, total relationship management will involve more than one person. The private banker workstation, properly networked and configured, acts a road map to coordinate the complex, ever-changing business of relationship management.

It allows access to the specialists so the manager can avoid saying: "I'll get back to you." Shared information results in faster and higher-quality customer service.

Banks wishing to build a private-banking workstation should keep the first project simple. Start by beginning a half-week hunt for critical success factors for the business.

Build an economic case. For about $12,000, a fully equipped workstation can be prototyped using existing desktop application and communication packages.

Involve a cross-discipline team of bankers to design the screens and menus. Hire a consultant or enlist the bank's operations people to construct the workstation screens and interface.

Remember that technology requires a series of incremental improvements. It is part of a continuum that requires daily attention and cultivation.

Closing Thoughts

The private-banker-workstation concept is being used by successful bankers around the world. The future of banking is on the desktop.

The history of innovative banking parallels that of great newsgathering systems, for quality banking – like quality journalism – is based on prompt delivery of information.

During the Australian financial crisis and gold rush of 1892, Baron Reuter set up a money-by-cable remittance system that could transfer funds less expensively than did commercial banks at the time.

The Rothschilds at the time of Napoleon built a legend and a fortune on the ability of their agents to obtain and transmit news by the fastest method available – homing pigeons.

Get involved with the workstation and begin to tap the creative potential of the computer age. □

American Banker's Fourth Annual Technology Survey

Coming soon!

AMERICAN BANKER

Get essential information on the changing dynamics of bank technology

American Banker has conducted an extensive survey of senior-level executives responsible for operations at more than 300 commercial banks and financial institutions. This Special Report features candid opinions, important statistical data and revealing analyses, to keep you on top of the banking industry's technological pulse.

Examine management issues, budget and allocation questions, and emerging technologies, such as expert systems and image processing. You can take a look at where banks buy their hardware and get a preview of the latest bank telecommunications systems.

- **What are the strategic objectives behind investing in new technology?**
- **How involved are chief executives in their banks' technology strategies?**
- **With consolidation in the industry, what major technology areas are being merged?**

Get the answers to these and many other questions in this fascinating chronicle of bank technology.

Free to subscribers

American Banker subscribers receive this valuable reference tool FREE, as part of their subscription. It's just one of the many ways an *American Banker* subscription will keep you informed and up-to-date.

Upscale

Continued from page 36

kind of personal service that we set out to provide at the Bank of San Francisco.

Intentional Style

Our style of operation is not an accident.

When we started the Bank of San Francisco, 11 years ago, we decided that we were going to build an institution on the foundation that its business was to deliver a highly sophisticated, extremely personal, confidential level of service to the wealthy client. That is all we do, period.

We found a different segment of the market and that is the reason I think we have been successful.

The way we did it was fairly easy. We just said that we were not going to handle any of the dollar-amount transactions that I described above:

- Our minimum loan would be $100,000 (our average loan is $250,000).
- Our minimum deposit is $25,000 and our average per relationship is probably $50,000.
- We really would not look at a relationship unless we expected that in the long run, after the relationship matured or the client progressed in his business, deposits would be in the $25,000 area, and loans at the $250,000 level.

We would not attempt to be the low-cost producer. Rather, we would differentiate ourselves by the level of service that we would provide and we would attract the customer who wants convenience, confidentiality, and a high level of service.

Our clients do not want to talk to a computer in Long Beach about their mortgage balances and they do not want to have their account numbers be the first thing they say when they call the bank. They want to talk to somebody who is personally familiar with their account, knows their name, and realizes the degree of credibility they deserve in the financial field. They are willing to pay for it.

The additional service does not really cost our customer any more than it would at a chain bank. If your mortgage at a chain bank is $700,000, you still talk to the computer in Long Beach without getting credit for the fact that the standard bank margin of profit, when applied to the size of your relationship would justify more than a computer response.

Service Strategies

- Delineate the market. To deliver the additional service sought by high-net-worth individuals, we began by setting the minimums described above. They have increased over the years.

We delineated our market as being one that had a sufficient number of dollars involved in each transaction that, using approximately the same margins that the chain banks use in their lending transactions, we would be able to provide, within the dollars generated by that margin, an extremely high level of service as well as pay our shareholders an adequate return.

- The nonchanging banker. In their past banking relationships, clients complained that the people they dealt with at the bank changed continuously. The person who had been a client's "banker" when he started the relationship with the chain bank was soon transferred to the auto-lending division in Milpitas. The client had to deal with a new face and to convince that banker that his net worth was really what he said it was.

I eliminated this early on in the organization of the Bank by setting up two separate paths for advancement. A young management trainee who comes to us with the long-term desire to be the chief financial officer or chief executive officer starts out working in the administrative side of the bank – and stays there.

From the time such individuals start with us to the time their careers are completed, they do not have customers or people who look to them as their banker – although they may be involved in a number of "bankerly" functions such as serving on the credit committee, investment committee, or the asset and liability committee.

If somebody comes to us with the idea that he wants to be a banker, he starts on the private banking side of the business as an assistant on one of the teams and works his way through credit analysis to become a team leader and eventually a senior vice president (the highest level one can obtain as a customer-service person).

The Team Concept

Clients of other banks also complained that when their banker was gone or working on something else, there was nobody to take their calls who was familiar with their accounts. We countered this by organizing the bank into client teams ranging from three to 12 people (depending on the size of the asset base that they manage).

Continued on next page

Our business is to deliver a highly sophisticated, extremely personal, confidential level of service to the wealthy client. That is all we do, period.

Clients feel most comfortable with people who are like themselves – financially successful.

There are two parts to getting the most from your people: a lot of money and a lot of authority.

Productive and successful organizations typically have fewer people, but they pay them better than the competition. It reduces turnover, builds pride and professionalism, and motivates management to keep a lean staff.

For a bank with a high-net-worth target market, there is an added benefit to compensation structures that routinely result in packages that exceed $100,000 per year. Clients feel most comfortable with people who are like themselves – financially successful.

A lot of authority doesn't necessarily accompany a lot of money, but it should. If you are willing to pay for the best people, they shouldn't need a lot of oversight and control to get the job done.

By keeping the hierarchy flat, the distance between client need and corporate response is as short as possible. Flexibility and responsiveness are thus built into the system.

Compensation for officers based on team or subteam profitability on both the asset and liability side, combined with a component that penalizes them for any loans deemed substandard or loss, are key to a good compensation package.

Retaining Relationships

Your bank is dealing with customers one on one, even if it is by mail. You should do whatever you can to maintain familiarity between your customers and their officer. You should have the same people handling the same customers and encourage them to have customers think of them as "their person."

While this is a key to success, it is also a danger in business because the customers will move with "their person." You have to be sure that your salespeople like your company, are well paid, and stay with you. At the Bank of San Francisco we lower our level of exposure to this by making our bank the best working environment with the best employment package in our area.

There are several benefits to consistency of officers:

- It saves customer time by cutting bureaucracy, making the distance between the customer request and the decision very close.
- It creates prompt response time, whether it's returning phone calls or writing notes in response to inquiries.
- It creates a direct complaint line, and the same officer follows up diligently (the complaint is not bounced around the institution).

Line Expansion

Give the customer what he wants, not what you assume he wants. Put yourself in your customer's shoes. What do they want? If you were the client, what would you want personally in a banking relationship? Once you are operating profitably, you can increase revenues and profits by making line expansions of your products that service other similar areas of need of your existing customers.

New products that we have added over the years include leasing, large single-family mortgages, trust, and money-management services, and liquid-asset investment advisory service. All those products directly service the high-net-worth individual who is our prime customer.

Responsiveness

Responsiveness is great, but too often stories of exceptional responsiveness start from an operational error or service lapse. Responsiveness is no substitute for reliability. The trick is to match your services with your clients' needs and offer only those that you

Upscale

Continued from preceding page

with larger teams covering about $50,000,000 in assets.

As a client of the Bank of San Francisco, your relationship would probably be with the senior team member. But several other people on the team will be familiar with your account, your credit limits, and the nature of your relationship with the bank.

Accordingly, if the team leader is gone, any of these other people can facilitate your transactions. Generally, the customers and the bank agree that if their question concerns a misplaced item on a MasterCard account or a canceled check in the wrong statement, they can deal with somebody other than the team leader and get the same degree of service.

As the assistant vice presidents and vice presidents on the team gain confidence, ability, and a clientele of their own, over the years, they are separated to start new teams.

Quality People

If there is one key to our strategy, it is people. If you don't attract the best people you cannot be successful. But your company needs to be organized so that your people are effective.

50% of Munifacts subscribers have converted to Munifacts Plus

100%

Two years ago we introduced Munifacts Plus as an improved version of the Munifacts Printer Service.

Now, more than half have converted to Munifacts Plus and the growth shows no sign of slowing.

And the reasons are simple. Munifacts Plus provides faster access to data that you need to do your job. Data that you need **NOW**.

QUICK ACCESS

Munifacts Plus is a PC-based system. We supply the hardware and the information. The same information you're used to receiving on Munifacts but with accessibility that only a PC can provide.

For example, on Munifacts you have to look through all the printed listings for the day to find the offering you want. With Munifacts Plus you can set the system to show you the offering you are looking for *automatically*. Or, you can go in at any time with a specific request and get the information you need in seconds.

No wonder your colleagues are converting to Munifacts Plus.

50%

A GROWING SERVICE

And we're adding more to the system. You may have already noticed the market commentary and specialty scales from Applied Municipal Network. And announcements and notices from the Public Securities Association (PSA).

As we plan for the 90s our sights are set on how we can make Munifacts Plus better. Let us know if you have any ideas. In fact, you might want to talk to Andrea Prigot, the Munifacts Plus Product Manager. You can reach her at (212) 943-4301.

Find out what Munifacts Plus is all about. If you're a Munifacts subscriber and would like a free trial on Munifacts Plus, call Jack Barthel at (212) 943-8261.

can do well enough to deserve a premium.

Personalized Treatment

Give customers special treatment for their loyal patronage. We host free educational seminars, Christmas parties and private company receptions to show gratitude to our clients, and use our executive dining room for individual luncheons.

We send personal letters regarding new services and products. Our customers receive annual Christmas gifts that are not only practical but reflect our appreciation.

We maintain top service through motivated, long-term employees. We continually send messages to our employees regarding quality service.

We produce an employee newsletter and have quarterly employee meetings during which we present service awards and bring our employees up to date on the latest things that have happened in the bank during the prior quarter.

At these meetings we stress that the most important part of our business is the delivery of service to our customers and the fact that our customers are pleased by any increased level of service they receive.

As the overwhelming majority of new clients are from referral or word-of mouth, we have come to appreciate the power of the client introduction.

Account officers maximize existing relationships by taking advantage of client referrals. A private lunch among an account officer, client, and potential client is a common scenario in the bank's executive dining rooms.

Officers also produce seminars not only as a client service but to mix existing clients with prospective clients of similar backgrounds and interests. Another marketing program is to cosponsor an event with a client in a complementary business (e.g., the bank joins with a client tax law firm to reach a narrow segment of the CPA field.)

Specific affluent markets are targeted by limiting attention to midsize businesses or to individuals above a minimum net worth and professions in a well-defined geographical area. We don't waste valuable marketing dollars on general image advertising in newspapers or publications. Rather, we concentrate on placing articles in our markets' trade and business publications, and having key bank officers speak at professional organization meetings.

In sum, Bank of San Francisco attracts affluent customers by delineating the market, and offering products they need in a fashion they want them delivered. □

THE SECRETARY OF THE TREASURY
WASHINGTON

A MESSAGE TO BANKERS

A half century of helping America save -- that is the result of the decision made by Treasury Secretary Henry Morgenthau, in 1941, to make U.S. Savings Bonds easily available to all Americans by offering them for sale at banks. Equally responsible is the banking community's decision then -- and its commitment in the years since -- that the best interests of America lie in making the Bonds of Uncle Sam universally available.

The results are astounding. Tens -- perhaps hundreds -- of millions of Americans have bought Savings Bonds since then. Bonds helped a whole generation of children learn the importance of saving. Bonds have helped Americans play an active role in one of the greatest economies the world has ever known. Today, the total value of Savings Bonds outstanding has reached $120 billion, the highest in the 49-year history of the program.

In peace and in war, Savings Bonds have performed an invaluable service to the government and to the taxpayers. They have helped spread the Federal debt among Americans, reducing debt costs to the Treasury. Now those same Bonds are playing an important role in helping President Bush pursue his goal of increasing the Nation's savings rate. And, through the Education Bond Program, they are providing for the ever-increasing cost of higher education.

None of this would be possible without your active support and participation. It is an understatement to say that the Treasury is grateful for your efforts. For over half of a century, our partnership has been a dynamic and vital one. We will continue to do our part to help that partnership -- and the Savings Bond Program -- flourish.

Nicholas F. Brady

SEMINAR 1

INNOVATIVE CUSTOMER SERVICE AND SALES TECHNIQUES FOR THE NINETIES

July 16, 1990 • The Vista Hotel • New York City
September 10, 1990 • The Vista Hotel • New York City
September 17, 1990 • Century Plaza Hotel • Los Angeles

As the banking environment becomes more competetive, industry leaders view improved customer service as a solution to retaining market share. But how can your bank achieve such improved service? And as importantly, can quality service be translated into sales? The seminar will address the pressing need for improved customer service and how to implement a service program in your bank. It will also focus on the next step... profiting from quality service through innovative sales techniques, state-of-the-art technology and sales incentives. The industry leaders will address the issue of the nineties...achieving competitive advantage by making your company customer and sales-oriented.

9:00 KEYNOTE SPEECH: EFFECTIVE CUSTOMER SERVICE...THE KEY TO PROFITIBILITY IN THE 90'S

- Profiting from customer service in an age of transition
- A banker's perspective on past successes and failures... and innovations for the future
- A case study in improving service and sales

Thomas Jacob, *Senior Vice President,* Chemical Bank (NY)
Thomas Jacob, *Senior Vice President,* Chemical Bank (NY)
Joan Miszak, *Senior Vice President,* California Federal Bank (LA)

9:45 TURNING SERVICE INTO SALES...ACHIEVING BOTTOM LINE RESULTS FROM QUALITY SERVICE AND SALES TECHNIQUES

- Creating a competitive advantage through customer service
- Improving service...and controlling costs

John A. Goodman, *President,* Techn. Assistance Research Program (NY)
John A. Goodman, *President,* TARP (NY)
Marty Wikoff, *President,* Management Performance Systems (LA)

- The need for effective salesmanship
- Sales techniques for the 90's

Dr. Nancy O'brien, *Marketing Consultant,* Sales Development Assoc. and Dr. Bankers Industry Group, ASTD (NY)
Dr. Nancy O'brien, *Marketing Consultant,* Sales Development Assoc. and Dr. Bankers Industry Group, ASTD (NY)
Shirly Ward, *Vice President,* Bank of America (LA)

10:45 CREATING A SALES CULTURE...A STEP BY STEP APPROACH

- How to implement your new strategy through out the corporation
- How to build a corporate culture based on customer service
- Defining and targeting your customer

Dr. A. Lorri Manasse, *President,* The Cortland Group (NY)
Dr. A. Lorri Manasse, *President,* The Cortland Group (NY)
Dr. A. Lorri Manasse, *President,* The Cortland Group (LA)

11:30 COFFEE BREAK

11:45 ACHIEVING A TECHNOLOGICAL ADVANTAGE...THE ROLE OF TECHNOLOGY IN IMPROVING CUSTOMER SERVICE AND SALES

- Using innovative technology to cross-sell
- How to implement state-of the art systems to improve service and increase sales

Dr. Michael Harden, *Sales Manager,* Citicorp Information Resources (NY)
Frank Martire, *Chairman,* Citicorp Information Resources (NY)
Charles J. Buchta, *Executive Vice President,* First Interstate Bank (LA)

12:30 HOW TO REMOVE MIDDLE-MEN FROM THE BANKING TRANSACTION...FROM THE BOARDROOM TO THE MAILROOM

- Skills to implement to reduce costs while improving quality of service
- Removing obstacles to the sale

Nicholas Papandokas, *Vice President,* Manufacturers Hanover (NY, NY, LA)
John J. Campi, *Managing Director,* Chatham Consulting Group (NY, NY, LA)

1:00 LUNCH WORKSHOP OPPORTUNITIES FOR THE 90'S IN RETAIL AND WHOLESALE BANKING...HOW TO IMPROVE PROFITIBILITY THROUGH SALES AND SERVICE

- Innovative techniques and training methods... a roundtable discussion

Chairperson:
Charlotte Pollard, *Vice President,* Chase Manhattan Bank (NY)
Charlotte Pollard, *Vice President,* Chase Manhattan Bank (NY)
Pamela O'Shea, *Vice President,* City National Bank (LA)

2:45 THE AMERICAN EXPRESS EXAMPLE...A CUSTOMER SERVICE SUCCESS

- A case study in implementing quality service
- Lessons for banks and thrifts

Laura Gross, *Director,* American Express (NY)
Bruce Greve, *Vice President,* American Express (NY)
Dannis Stevens, *Vice President,* American Express (LA)

3:30 A CASE STUDY IN IMPROVING SALES...THE CHASE TRAINING PROGRAM

- Teaching selling skills
- How to implement a training program

Claire Schopler, *Vice President Training,* Chemical Bank (NY)
Claire Schopler, *Vice President Training,* Chemical Bank (NY)
Claire Schopler, *Vice President Training,* Chemical Bank (LA)

4:15 THE KEY TO IMPROVING SALES...MEASURING YOUR CUSTOMER SERVICE

- Judging the quality of service at your bank
- Learning from the leaders...what techniques do the leading bank use to measure service
- How to determine your bank's effectiveness

Jeffrey Kutler, *Assistant Managing Editor,* American Banker (NY)
Jeffrey Kutler, *Assistant Managing Editor,* American Banker (NY)
Douglas Smith, *Managing Director,* BEI Golembe (LA)

5:00 THE ROLE OF SALES INCENTIVES...WHAT WORKS AND WHAT DOESN'T

- How to use worker compensation to increase sales
- Improving service without increasing costs

William Casey, *Principal,* Paris, Casey Inc. (NY)
William Casey, *Principal,* Paris, Casey Inc. (NY)
Matt Walgon, *Senior Consultant,* Sibson and Co. (LA)

6:00 END OF SEMINAR

SEMINAR 2

THE NUTS & BOLTS OF COMMERCIAL LENDING & LOAN PRICING

July 17, 1990 • The Vista Hotel • New York City
September 11, 1990 • The Vista Hotel • New York City
September 18, 1990 • Century Plaza Hotel • Los Angeles

The battle for commercial loan profitability promises trying times for large corporate and middle market lenders. Over the past two decades, the risk in banks lending portfolios has steadily increased. This is not a function of uncontrolled risk-taking, but rather of the past two banks' necessary response to the need to find assets which will provide acceptable levels of risk-adjusted return. The events of the past few years have shown that many banks, however, have been unable to effectively controlthe level of risk that they have taken. Unacceptably high levels of loss have taken place in many banks due to a combination of poor pricing, excessive concentration and the failure to understand the level of risk in a specific loan. Furthermore, new competitors are entering the marketplace scrambling for territory and sparking intense new battles for turf. This seminar reviews how leading-edge banks are beginning to develop new sets of techniques that will gave them a competitive edge in the marketplace for controlling their level of loss, and achieving low-risk diversified portfolios.

8:45 CHAIRMAN'S OPENING REMARKS
William T. Gregor, *Partner,* The MAC Group (NY,LA)

RE-ENGINEERING FROM A CUSTOMER POINT OF VIEW

9:00 KEYNOTE ADDRESS: WHAT RECIPE SHOULD YOU USE TO TURN AROUND YOUR COMMERCIAL LENDING BUSINESS?...A CONSULTANT'S & A BANKER'S VIEWPOINT
William T. Gregor, *Partner,* The MAC Group (NY,LA)
Peter Offermann, *Managing Director,* Bankers Trust (NY)

9:45 CUSTOMER PROFITABILITY & OPPORTUNITIES FOR REFOCUSING ON THE PROFITABLE BUSINESS...NATIONAL WESTMINISTER'S & SECURITY PACIFIC'S MIDDLE MARKET STRATEGY
Vjay C. Poppat, *Principle,* Booz Allen & Hamilton (NY,LA)
Edward A. McNally, *Senior V.P.,* National Westminister, USA (NY,LA)
Frank Abraham, *Chief Credit Officer,* Security Pacific National Bank (LA)

11:00 COFFEE BREAK

11:15 PRESTO CHANGO...CONVERTING UNPROFITABLE CUSTOMERS INTO PROFITBLE ONES...USING THE EMERGING SECONDARY MARKET TO YOUR ADVANTAGE

- Where Will The Secondary Market Work & For What Kind Of Loans?
- How Will The Secondary Market Affect Your Ability To Price?
- Secondary Markets & Loan Sales...What Are The Elements Necessary For Success?

David E. Fisher, *Vice Président,* Loan Pricing Corp. (NY,LA)

12:15 LUNCH BREAK

RE-ENGINEERING THE PRICING PROCESS

1:30 ARE YOU GETTING THE BANG FOR YOUR BUCK?...DEVELOPING A TARGETED PRICING STRATEGY TO ADEQUATELY PRICE FOR RISK

- What Are The Key Components Of Pricing?
- What Prices Are Banks Actually Getting On Commercial Loans?
- How To Set Strategic Pricing Goals For Your Portfolio
- Do Banks Price Adequately For Risk?

Christopher L. Snyder, *President,* Loan Pricing Corp. (NY,LA)

2:15 A CREDIT BASED APPROACH TO ALIGNING RISK & RETURN IN A C&I LOAN PORTFOLIO

- How To Analyze The Relationship Between Credit Risk & Pricing
- Testing The Adequacy Of The Existing Credit Risk Assessment System
- Refining The Existing Credit Risk System To Serve As A Basis For Commercial Loan Pricing Scenarios

Constance Kenneally, *Partner,* Zeta Services Inc. (NY,LA)

3:00 COFFEE BREAK

RE-ENGINEERING THE CREDIT PROCESS

3:15 EMERGING NEW TECHNIQUES FOR CONTROLING LOSSES & MANAGING THE PORTFOLIO

- Buttoned-up Credit Procedures...Ensuring Repayment After The Loan is Made
- Pricing To Recapture Expected Losses
- Diversification As A Tool In Portfolio Management
- Giving Your Problem Loans A Workout...Security Pacific's Workout & Recovery Strategy

Jonathan P. Moynihan, *Managing VP,* First Manhattan Consulting Group (NY,LA)
Gary J. Corbin, *First V.P.,* Security Pacific National Bank (LA)

4:00 ARE BANKS LENDING TO LBO's TO CHEAPLY?...THE FUTURE OF HIGHLY LEVERAGED TRANSACTIONS
Mark G. Sobey, *Managing Director,* Manufacturers Hanover Trust (NY)
Hugh T. Kemper, *Managing Director,* Morgan Guaranty (NY)
Leland S. Prussia, *Vice Chairman,* Capitalcorp., Inc. (LA)

4:45 COMMERCIAL LOAN SECURITIZATION...A STEP BY STEP APPROACH TO SECURITIZING PERFORMING LOANS
Marshall V. Davidson, *Managing Director,* Kidder Peabody (NY,LA)
Robert M. Okabe, *Vice President,* Kidder Peabody (NY,LA)
Clifford Griep, *Managing Director,* Standard & Poors (NY,LA)

5:30 END OF SEMINAR

SEMINAR 3

EFFECTIVE COST MANAGEMENT

July 18, 1990 • The Vista Hotel • New York City
September 12, 1990 • The Vista Hotel • New York City
September 19, 1990 • Century Plaza Hotel • Los Angeles

9:00 CHAIRMAN'S OPENING REMARKS
Patrick J. Leemputte, Partner, Price Waterhouse (NY, LA)

9:15 ACHIEVING COMPETITIVE ADVANTAGE THROUGH COST LEADERSHIP
The 1980's showed that cost leadership is a critical success element in all restructured industries. As the pace of restructuring in banking accelerates, winners will emerge based on competitive cost position and related strategic focus. Global finance will come to be dominated by firms obsessed with the twin pursuits of profitability and productivity.
This session concentrates on managing the key noninterest cost drivers of bank performance: 1) business scope and geographic reach, 2) size of workforce and compensation practices, 3) technology spending and investment, and 4) corporate real estate portfolio management.
Charles H. Nobs, *Senior VP,* Bankers Trust Company (NY)
Charles H. Nobs, *Senior VP,* Bankers Trust Company (NY)
Elwil Istavridis, *Senior VP,* Bankers Trust Company (LA)

10:00 KEYS TO WINNING THE PRODUCTIVITY RACE
If superior expense control is essential to surviving the merger decade, then how is it accomplished?
This session addresses three key issues for banks concerned about expense control: 1) how good is the bank now and where is the potential for greater frustration? Analysis based on business mix can identify bloated budgets and problem areas; 2) experience shows what are the do's and dont's of crafting a program to reduce staff areas, lines of business, branches, operations and systems; 3) What does it take to stay on top? A "coherent organization" and quantitative performance measures can be keys to sustaining a cost effective culture.
James M. McCormick, *President*
First Manhattan Consulting Group (NY)
James M. McCormick, *President*
First Manhattan Consulting Group (NY)
James M. McCormick, *President*
First Manhattan Consulting Group (LA)

11:00 STORIES FROM THE FRONT: HOW MELLON BANK'S COST CONTROLS HAVE LED TO NEW BUSINESS OPPORTUNITIES AND LOWER EXPENSES
Mellon Bank experienced a great deal of cost cutting in the past decade. Mellon's expertise in this area has shown that you can actually turn a cost center into a profit with the appropriate resources and strategy.
In this session, you will learn how Mellon effectively downsized into a better performing bank. This dedication to cost leadership has helped Mellon develop it's technologies and data processing to the point where these strengths have led to new business opportunities.
Janet Hartung, *Senior Vice President,* Mellon Bank (NY)
Janet Hartung, *Senior Vice President,* Mellon Bank (NY)
Janet Hartung, *Senior Vice President,* Mellon Bank (LA)

12:00 LUNCH BREAK

1:15 HOW TECHNOLOGY CAN HELP YOUR BANK CUT COSTS WHILE IMPROVING PERFORMANCE
Commercial banks and financial institutions are wholeheartedly embracing information technology (IT) as a way to achieve competitive advantage. But, while bank IT costs have skyrocketed, banks are cautious to crow about their success. Instead, they suffer from exponential growth in computer spending with almost no impact on their bottom line or market share.
In this session, you will learn how to begin to think about, structure and approach the IT problem in your organization. Learn what technology can do to help control costs and what it cannot do. Analyze how to cut the rising costs of your own IT infrastructure. Most important, begin to understand how you can approach IT complexity without being overwhelmed.
Charles F. Kalmbach, Jr., *Senior Manager*
Price Waterhouse (NY)
Charles F. Kalmbach, Jr., *Senior Manager*
Price Waterhouse (NY)
Charles F. Kalmbach, Jr., *Senior Manager*
Price Waterhouse (LA)

2:15 ELIMINATING EXPENSE THROUGH ACQUISITIONS
If banks merge to achieve economies of scale then why do most mergers fail to meet their expectations? As bank mergers continue to increase, minimizing costs during the integration process has become essential.
While banks of different sizes and market niches will have different merger goals, there is a proper rationale to mergers that will minimize the consolidation process. This session will look at past mergers to critique successful mergers as well as failures. In particular, where can the economies be achieved?... in back office operations/overhead, retail or wholesale operations, data processing and technology or duplication of staff responsibilities. This session provides a framework to minimize the costs of the merger.
Harry H. Tatonis, *Principal,* Booz, Allen & Hamilton Inc. (NY)
Harry H. Tatonis, *Principal,* Booz, Allen & Hamilton Inc. (NY)
James Benowski, *Principal,* McKinsey & Co. (LA)

3:15 MONITORING THE DOWNSIZING EFFORT THROUGH EFFECTIVE HUMAN RESOURCE MANAGEMENT
- How to retain top performers and employee commitment
- What to cut?...What to keep?...How to do it?

Peter J. Doris, *Senior VP,* Right Associates (NY)
Peter J. Doris, *Senior VP,* Right Associates (NY)
Peter J. Doris, *Senior VP,* Right Associates (LA)

4:15 MEASURING THE IMPACT OF COST ON PROFIT PERFORMANCE AND SHAREHOLDER VALUE...THE ANALYST'S PERSPECTIVE
How does a bank's cost performance effect stock price? In this session, learn how analysts objectively view cost cutting practices and how profit performance is related to effective expense practices and how it effects stock price. What banks have made the right moves and what strategies were responsible for improved profit performance.
Gary Gordon, *Vice President,* PaineWebber (NY)
Gary Gordon, *Vice President,* PaineWebber (NY)
Michael Conover, *President,* Ryan Beck & Co. Pacific (LA)

5:00 END OF SEMINAR

SEMINAR 4

BANK AND CROSS-INDUSTRY ACQUISITIONS OF THRIFT INSTITUTIONS & SHOULD THRIFTS BE CONVERTING TO BANKS?

July 19, 1990 • The Vista Hotel • New York City
September 13, 1990 • The Vista Hotel • New York City
September 20, 1990 • The Century Plaza Hotel • Los Angeles
September 25, 1990 • The Ritz Carlton • Atlanta
October 9, 1990 • The Ritz Carlton • Chicago

FIRREA has opened the doors to bank acquisitions of thrift institutions and thrift institution conversions to banks. However, it is not altogether clear what this new regulatory flexibility means and whether banks and thrifts should take advantage of these new options. This one day intensive program for bank, thrift, and other business executives, attorneys and consultants focuses on the mechanics and regulatory procedures involved in bank and non-bank acquisitions of thrifts, as well as how and whether thrifts should convert to banks.

9:15 CHAIRMAN'S OPENING REMARKS
Eric Luse, *Partner,* Brownstein Zeidman and Schomer

9:30 SHOULD A THRIFT CONVERT TO A BANK?
- What Are The Advantages And Disadvantages
- A Review Of The Bank And Thrift Charters

Eric Luse, *Partner,* Brownstein Zeidman and Schomer (NY,AT,LA,CH)
Trent Feldman, *Partner,* Kaplan Smith &Associates (AT,LA)
Edward T. Lutz, *Principal,* Lyons Zomback & Ostrowski (NY,CH)

10:00 REGULATORY HURDLES AND CONSIDERATIONS INVOLVED IN CONVERTING A THRIFT TO A BANK...HOW CAN IT BE DONE & WHAT IS PERMISSIBLE?
V. Gerard Comizio, *Director, Corporate and Securities Division,* Office of the Comptroller of the Currency (NY,AT,LA,CH)
Eric Luse, *Partner,* Brownstein Zeidman and Schomer (NY,AT,LA,CH)
Vernon E. Fasbender, *Director for Analysis,* Comptroller of the Currency (Southwestern District) (AT)
Roy Stovall, *Director for Analysis,* Comptroller of the Currency (Northeastern District) (NY)
Donelle Ward, *Director for Analysis,* Comptroller of the Currency (Central District) (CH)
Daniel Pearson, *Director for Bank Supervision & Analysis,* Comptroller of the Currency (Western District) (LA)

10:45 COFFEE BREAK

11:00 CONVERTING A SAVINGS ASSOCIATION TO A BANK... A CASE STUDY
Samuel J. Malizia, *Partner,* Brownstein Zeidman & Schomer (NY,CH)
James S. Fleischer, *Partner,* Silver Freedman & Taff (LA)
Robert Hall, *Partner,* Silver Freedman & Taff (AT)

11:30 WHY SHOULD A BANK OR NON-BANK ACQUIRE A THRIFT... A STEP BY STEP REVIEW
- What Are The Economic Advantages And Disadvantages?
- Market/Geographic Expansion And Pricing Considerations

Christopher Quakenbush, *Principal,* Sandler O'Neil & Partners (NY,AT)
Fred D. Price, *Principal,* Sandler O'Neil & Partners (LA,CH)
T. Stephen Johnson, *President,* Stephen Johnson & Associates (AT)
John Mingo, *Principal,* BEI Goldmbo Inc. (NY,CH)
Richard Reibman, *Managing Director,* Dean Witter Reynolds, Inc. (NY,LA)

12:00 EVALUATING A THRIFT ACQUISITION...AN ACQUIRER'S PERSPECTIVE
- Regulatory, Operational & Financial Differences With Banks

Christopher Quakenbush, *Principal,* Sandler O'Neil & Partners (NY,AT)
Fred D. Price, *Principal,* Sandler O'Neil Partners (LA,CH)
Addison Levi, *Senior Vice President,* Dean Witter Reynolds, Inc. (LA,CH)
Kenneth Rellander, *Managing Director,* PaineWebber, Inc. (NY,AT)

12:30 LUNCH BREAK

2:00 A REVIEW OF THE REGULATORY PARAMETERS & ROADBLOCKS TO BANK ACQUISITIONS OF THRIFTS ..
- Interstate/Interstate Banking Issues
- Obstacles Of State Branching Laws & How To Circumvent Them
- Healthy Thrift vs. Failing Thrift Acquisitions

V. Gerard Comizio, *Director Corpoate & Securities Division,* OTS (NY,AT,LA,CH)
Eric Luse, *Partner,* Brownstein Zeidman and Schomer (NY,AT,LA,CH)
John Buchman, *Partner,* Milbank Tweed Hadley & McCoy (NY,AT)
John Buchman, *Assistant Deputy Director,* OTS (NY,AT,LA,CH)

3:00 COFFEE BREAK

3:15 WHAT ARE THE STRUCTURAL OPTIONS AND CONSIDERATIONS WHEN ACQUIRING A THRIFT?
- How Should The Resulting Or Target Institution Be Chartered And Insured?
- Holding Company vs. Direct Acquisitions

Eric Luse, *Partner,* Brownstein Zeidman and Schomer (NY,AT,LA,CH)
Peter Schmidt, *Partner,* Arnold & Porter (AT,LA)
William J. Sweet, *Partner,* Skadden Arps Slate Meagher & Flom (NY,CH)

4:15 A BANK ACQUISITION OF A THRIFT...A CASE STUDY
Donald Kaplan, *Managing Director,* Kaplan Smith & Associates (NY,LA)
William Moore, *President,* Trident Financial Corporation (NY,AT)

4:45 TAX AND ACCOUNTING CONSIDERATIONS
- Recapture Of Bad Debt Reserve
- Pooling vs. Purchase
- Use Of Net Operating Loss Carryovers

Roger Teurfs, *Partner,* KPMG Peat Marwick (NY)
James L. Spreng, *Partner,* KPMG Peat Marwick (NY)
Douglas McEachern, *Partner,* Deloitte & Touche (LA)
Vincent Lenuzza, *Partner,* KPMG Peat Marwick (CH)
Gerald F. Hunter, *Partner,* KPMG Peat Marwick (AT)

5:30 END OF SEMINAR

SEMINAR 5

ASSET/LIABILITY MANAGEMENT

July 20, 1990 • The Vista Hotel • New York City
September 14, 1990 • The Vista Hotel • New York City
September 21, 1990 • Century Plaza Hotel • Los Angeles

9:00 CHAIRMAN'S OPENING REMARKS
Sanford Rose, *Editor, Journal of Retail Banking*
Senior Columnist, American Banker

9:15 INTEREST RATE RISK MANAGEMENT
The management of interest rate risk is fundamental to sound banking practice. Banks can experience earnings, liquidity, and capital adequacy problems, if management is poorly run.
This session will deal with a number of fundamental rules in managing interest rate risk as well as develop an integrated risk management project. You will understand how risk is measured, as well as, what tools are used to measure risk. Learn how to incorporate these tools to increase bank profitability.
Ronald D. Reading, *Vice President,* First Manhattan Consulting Group

10:30 COFFEE BREAK FOR SPEAKERS AND GUESTS

10:45 LIQUIDITY
This session learn to understand what liquidity is. Where you can get it. How much it costs, and how much it is worth. Finally, learn to understand how to measure and manage liquidity.
Peter G. Mantilla, *Vice President,* Bank of New York (NY)
Richard Laiderman, *Vice President,* Bank of America (LA)

11:45 THE USES OF DURATION IN ASSET LIABILITY MANAGEMENT
Technological and analytical developments in the 1990's will significantly enhance the ability to deal with risk. The methodology, tools, and implementation approach provide a more rigorous assessment of market risk.
The specific focus will be to contrast the duration approach with a new approach called risk measurement unit approach. The risk measurement unit approach captures both volatility and non-parallel shifts in the yield curve.
Sanford Rose, *Editor, Journal of Retail Banking*
Senior Columnist, American Banker
Robert M. Mark, *Managing Director,* Manufacturers Hanover Trust

12:30 LUNCH BREAK FOR SPEAKERS AND GUESTS

1:30 OFFICE OF THE COMPTROLLER OF THE CURRENCY AND THE NEW EXAMINATION GUIDELINES
The OCC has alerted all bankers that they must prudently manage, measure and limit risk, and that enough capital be available to support exposure to such risk.
This session will discuss the OCC's policy on interest rate risk and how active the Office of Thrift Supervision is. The different topics which will be discussed include: risk matrix, gap reports, simulation, and duration.
Jennifer Johnson, *Developer and Administrator,* OCC

2:30 SECURITIZATION...WHEN AND HOW TO USE IT.
- Being able to securitize your own product
- Opening a secondary market
- The 144 Rule with regards to Private Placement

To Be Announced

3:30 LOWER COST OF MARKET AND THE INVESTMENT PORTFOLIO
1990 will be a year when your accounting department must be able to deal effectively with the new AICPA requirements on accounting for debt securities held as assets. A new standard expected to be issued by the AICPA with the support of the SEC and the FASB will require market value determination. The new standard will require allocating security investments among investment portfolio, held for sale, and trading account.
This session will help you understand the new requirements and the techniques required to successfully implement them.
Raymond Perry, *Partner,* **Deloitte & Touche**

4:30 ASSET LIABILITY MANAGEMENT INTO THE 1990'S.
This session will outline recent advances in the 1) measuring of embedded option risks, 2) measuring volatility risk exposure, 3) measureing index and credit spread risks, 4) integrating value decisions into the management process, 5) integrating risk-based capital guidelines into the risk management process.
Alden Toevs, *Principal,* Morgan Stanley & Co.

5:30 END OF SEMINAR

Fed's Proposal Seen as Volley At Hungry SEC

By ELLEN MEMMELAAR

NEW YORK — By proposing to ease restrictions on the mutual fund activities of bank holding companies, the Federal Reserve Board may be defending its turf against encroachment by the Securities and Exchange Commission, industry observers said.

The Fed issued a proposal in late June that would allow a bank holding company to sell mutual funds that it advises. A bank holding company can now either advise or market funds, but not consolidate those activities under one unit. The Office of the Comptroller of the Currency, however, permits nationally chartered banks to perform both activities.

ANALYSIS: *Follow-up on the news*

Bringing its mutual fund regulation in line with that of the Comptroller is a way for the Fed to reinforce that it has control over all activities of bank holding companies, observers said.

SEC Chairman Richard C. Breeden takes exception to the Fed's view of regulation. He has stated that his agency should supervise the securities activities of bank holding companies.

Turf Battle Seen

"Breeden at the SEC has taken a strong position," said Richard Stierwalt, chief operating officer of the Concord Financial Group, a New York-based mutual fund company. "He wants to regulate banks' involvement in the securities industry. I feel that the Fed and the OCC are protecting their turf by relaying their position in some of these areas in order to maintain control over these banks."

The SEC would not comment directly on the Fed proposal. Jeremy Rubinstein, branch chief of the office of investment company regulation at the SEC, said, "The commission is on record saying that the brokerage activities of banks should be regulated as such and in separate entities. Securities regulators should regulate securities distribution."

Virgil Mattingly, general counsel at the Fed, denied that the proposal was related to SEC policy. "We are merely bringing our regulations up to [national] bank [levels]," he said.

Industry Group Opposed

A group that openly opposes the Fed proposal is the Investment Company Institute, a trade group for mutual funds. It will issue a statement at the beginning of August opposing the

Resignation of Davis Signals Shake-Up in Citicorp Ranks

By JED HOROWITZ

NEW YORK — In the first sign of what is expected to be a broad reorganization of its wholesale banking activities, Citicorp confirmed that its senior executive in charge of corporate finance in North America has resigned.

George L. Davis, who turns 56 next week, announced his resignation on Tuesday, almost three years to the day after he returned to lead Citicorp's corporate banking activities in the United States and Canada. Mr. Davis has spent his entire career at Citicorp with the exception of a sojourn at First Chicago Corp. from 1981 through 1987.

Leaving Citicorp

Reed Cites Changes in Business

"When he returned three years ago as head of the North American corporate finance group, we had all hoped he'd be with us for his entire remaining career," Citicorp chairman John S. Reed wrote in a memorandum to the company's policy committee on Tuesday. "However, the business has changed considerably from that envisioned in 1987, and George feels he can make a greater contribution in a different environment."

Reached at his home on Thursday, Mr. Davis would not comment on his departure or his plans. "I would let my friends at Citi do the speaking for me," he said.

A Citicorp spokesman confirmed that Mr. Davis is leaving but would not elaborate. The memo from Mr. Reed said Mr. Davis would pursue other interests; it indicated that a replacement or a reorganization eliminating Mr. Davis' position would be announced by the end of July.

A Troubled Sector

Mr. Davis presided over one of the most troubled sectors at the nation's largest banking company. He was responsible, among other areas, for real es-

Bill Setting Liability Lid On Cleanups Gains Steam

By ROBERT M. GARSSON

WASHINGTON — Adding momentum to a proposal that many bankers regard as their highest legislative priority for 1990, Rep. John J. LaFalce, D-N.Y., has persuaded a majority of House members to cosponsor a bill limiting lenders' liability for environmental cleanups.

With 250 of the 435 members as cosponsors, Mr. LaFalce has gained leverage in his effort to have the legislation considered by the House Energy and Commerce Committee. Alternatively, if the measure first gains Senate approval, it would be easier to argue for House acceptance.

Bill Faces Obstacles

Despite the broad support Rep. LaFalce lined up before the Independence Day recess, the measure faces onstacles. ine shortened legislative calendar in this congressional election year and opposition from environmental groups could work against it.

In a recent letter to lawmakers, six environmental groups

Columbia S&L's Ex-Chief Is Hit By OTS Charges

By BILL ATKINSON

WASHINGTON — In its boldest enforcement move against an executive of a troubled institution, the Office of Thrift Supervision filed civil charges Thursday against Thomas Spiegel, the flamboyant former chairman of Columbia Savings and Loan Association.

The OTS proceeding, known as an administrative action, seeks almost $19 million in restitution for misuse of Columbia funds and a $5 million civil penalty. Among Mr. Spiegel's alleged wrongs are taking an unauthorized bonus and using thrift funds to pay for personal travel, tickets to a Michael Jackson concert, and other expenses.

Would Bar Involvement

The OTS would also bar Mr. Spiegel, who presided over the rapid growth of Columbia's junk-bond portfolio into the largest in the thrift industry, from future involvement with any federally insured financial

Baltimore Bancorp Shareholders Protest Rejection of Merger Bid

By FRED VOGELSTEIN

Major shareholders of Baltimore Bancorp, alarmed that the board of directors has rejected a merger bid from a crosstown competitor, have written letters to all the directors asking them to reconsider.

The $217 million offer, made by First Maryland Bancorp on April 30, prompted an angry rejection from Baltimore Bancorp management. Now that shareholders are raising objections to the bank's position, analysts are wondering how long management can hold out.

Litigation Seen

"I think [the directors] will be involved in some very serious lawsuits if they don't act," said Lacy Shockley, a bank analyst at Smith Barney, Harris Upham & Co.

Among those objecting is Baltimore Bancorp's largest share-

Guiton Strives for Objectivity As Bush's Consumer Adviser

By LINDA CORMAN

WASHINGTON — Bonnie Guiton is said to have turned on the lights at the Office of the Special Adviser to the President for Consumer Affairs, which was dormant during the 1980s.

"I didn't say that," insists Ms. Guiton, who recently made her mark presenting the administration's position on revisions to the Federal Fair Credit Reporting Act. The law spells out consumers' rights when lenders and credit bureaus exchange personal financial data.

The 48-year-old former assistant secretary of Education and vice president of Kaiser Aluminum is also said to have softened her once ardent support for consumer rights since assuming her post in April 1989. But Ms. Guiton will not concede that point, either.

"We came in looking for a balanced approach," she said in an interview. Both industry and consumer groups agree she has shifted toward the center.

Bonnie Guiton

Official Advocate of Consumer Interests

In her White House post it is Ms. Guiton's responsibility to push for consumer programs and keep federal agencies and lawmakers mindful of consumer interests. She has also been weighing bankers' concerns through her work on revisions to the Fair Credit Reporting Act, about which she has testified twice since assuming leadership of the 22-person office.

"Ms. Guiton made a major impression on me when she first testified before Rep. [Richard] Lehman's [House Banking] subcommittee a year ago last September," said Craig Ulrich, general counsel of the Consumer Bankers Association. "She came on somewhat left of what we expected from the administration's spokesperson. Some of her remarks were less than sensitive to the concerns of the business community."

But now, she has received her "pragmatic and philosophical education on the job," said Mr. Ulrich. She has "established a great rapport with all communities."

Mr. Ulrich has forgotten what it was about Ms. Guiton's testimony that took him aback. But a representative of the Associated Credit Bureaus said she had a "vivid" recollection of Ms. Guiton's changed stance.

"She said reporting agencies should not have to provide a free copy of credit reports once a year," she said of Ms. Guiton's more recent testimony on the Fair Credit Reporting Act. Consumer groups staunchly support free reports. Ms. Guiton also stressed her conviction that credit bureaus try to do a good job and that consumers had to be educated to protect their rights.

"Her testimony reflected a better understanding of the industry," said the staff member for the Associated Credit Bureaus.

Edmund Mierzwinski, an official at the U.S. Public Interest Research Group, concurs that Ms. Guiton has moderated her consumer-oriented positions. But she apparently has not alienated consumer advocates.

"She's not always with us on everything," said Mr. Mierzwinski. But "she's helped to bring [privacy] issues to the forefront. We're going to win a battle [for the FCRA bill]. She'll work to try to get that for us." Consumer groups are seeking amendments to give borrowers easier access to credit reports and improve their ability to correct errors in the files.

Besides privacy, Ms. Guiton has set the concerns of minority consumers and product liability as major priorities. □

Cirrus and Plus Close Deal to Link Networks

NEW YORK – After more than a year of negotiations, Cirrus System Inc., Downers Grove, Ill., and Plus System Inc. Denver, said they would begin exchanging transactions on Aug. 20, 1990.

The interchange agreement could vastly expand the networks' 425 million cardholders' access to cash at automated teller machines. More than 35,000 ATMs worldwide bear the Cirrus logo and 60,000 sport the Plus mark.

An electronic gateway that will help Plus and Cirrus members handle each others' transactions is scheduled to be operating on July 15. □

Albany Bank Settles Suits

ALBANY, N.Y. — National Savings Bank of Albany said it has settled three related lawsuits, receiving a $1.9 million cash payment and is in the process disposing of its largest nonperforming asset. The litigation involved a commercial mortgage loan and title to the Florida property that secured it.

Sun to Acquire Loan Office

ORLANDO, Fla. — Sun Bank, a Sun Trust Banks subsidiary, said it has signed a letter of intent to acquire the Maitland, Fla., loan production office of AmeriFirst Bank, which is refocusing on consumer lending.

Orlando-based Sun said it will hire about 20 AmeriFirst employees with the office, which originates about $100 million a year in residential construction loans. □

Court Upholds RTC Stance on Branching

By ROBERT TRIGAUX

WASHINGTON — In a setback to state regulators seeking to prevent a federal override of state branching restrictions, an appeals court in Denver denied a request to halt the Resolution Trust Corp.'s sale of a New Mexico thrift to a commercial bank.

The state banking interests had sought a temporary order against the sale. The RTC would allow the thrift's offices in several cities to operate as branches of the First National Bank of Albuquerque, even though New Mexico law limits bank branching to a single county.

The U.S. Court of Appeals for the 10th Circuit on Tuesday denied the request for a temporary injunction. If granted, it would have prevented the RTC from selling New Mexico Federal Savings Association to First National until the appeals court could render a final decision.

Arguments in that appeal should occur in September, said Leonard Rubin, an attorney with Bracewell & Patterson, which represents those seeking to halt the sale.

In the case being appealed, U.S. District Judge Santiago Campos in Santa Fe, N.M., refused a request by the Independent Community Bankers of New Mexico to halt the RTC sale and branch override.

The lawsuits pit groups in favor of state regulatory autonomy – the Independent Bankers Association of America and the Conference of State Bank Supervisors – against the RTC. The agency, created by the 1989 thrift-bailout law, has argued that it has authority to override state branching limitations if such action helps it to sell any of the hundreds of insolvent thrifts it has in its inventory.

Illinois Senate Balks at Insurance Sales

By YVETTE D. KANTROW

NEW YORK — Bankers lobbying for expanded insurance powers suffered a setback last week when the Illinois Senate voted against letting state-chartered banks sell all types of insurance through subsidiaries.

The bankers' hopes had been buoyed two weeks ago when the Illinois House approved an insurance bill similar to one already passed by the state Senate. But the House version included a controversial amendment, added to appease the insurance industry, that would permit banks to enter the insurance business only by acquiring or merging with existing agencies.

Last Friday, the Senate voted not to concur with the House amendment.

Heavy Lobbying by Insurers

"It was a disappointment after another debate on the whole issue of banks in insurance," said William Hocter, executive vice president of the Illinois Bankers Association. "People who had sided with us before didn't side with us again." Mr. Hocter said the loss of support was a result of strong lobbying efforts by insurance groups.

The bankers got 25 of the 30 Senate votes needed to send the bill to Gov. James R. Thompson for his signature, according to Mr. Hocter. The bill is now officially under postponed consideration. It will be called for another vote this fall, after Illinois holds its elections.

A New Battleground

The Illinois fight is the latest example of a state legislature becoming the battleground for bankers seeking to expand their insurance powers.

Bankers in Delaware celebrated last month when that state legislature enacted a law allowing state-chartered banks to underwrite and sell insurance nationwide. In 1988, bankers chalked up a victory when California voters approved an insurance-reform referendum that allowed bankers to enter the business.

But bankers have had some setbacks. Legislators in Florida recently voted to preserve a ban on banks' selling most types of insurance.

Fifteen Liberal States

Today, about 15 states permit relatively easy bank participation in the insurance business. Another 15 states, including Florida and Illinois, have laws that are considered very restrictive and prohibit bank employees from getting licenses to sell insurance.

The fight in Illinois is seen as especially important because the state is one of the most populous and is second only to Texas in the number of banks within its borders. Illinois is home to more than 700 of the nation's 9,000 state-chartered banks. □

Midlantic to Buy Trust Accounts of NatWest

EDISON — Midlantic National Bank, the lead subsidiary of Midlantic Corp., said it has bought the corporate trust business of National Westminster Bank NJ, a subsidiary of London-based National Westminster Bank.

The price of the transaction was not disclosed. Midlantic will purchase the trusteeship, paying agent, and registrar accounts – primarily those of New Jersey municipalities, school districts, and corporations – serviced by the NatWest unit.

After the acquisition, Midlantic's corporate trust services portfolio will consist of about 1,300 accounts with holdings of $10 billion, the bank said.

Company Says Cash Management Is Unequaled

By RICHARD LAYNE

NEW YORK — BankAmerica Corp. is close to completing what it says is the most comprehensive system available for global cash management.

The technology initiative, costing more than $300 million to design and fully implement, is largely responsible for the addition of 50 major corporate customers in the past two years, bank executives said. It will be installed at all 42 branches of the company's offices within the end of 1991, said Richard Griffith, executive vice president of the San Francisco-based company.

All Offices Linked

BankAmerica's worldwide offices will then be linked through a single on-line, real-time system and customer information data base. Excluding capital markets, the banking company says it will provide "seamless" service for all aspects of cash management – outstanding balances on loans in U.S. dollars and local currencies, foreign exchange, and trade finance.

As corporations gravitate toward a more global approach, in which a single treasury office may manage the corporation's worldwide cash position, banks are working to provide information and management services across borders. But some corporate treasurers say even the most advanced global cash management systems do not answer all their global needs.

BankAmerica, Chase Manhattan Corp., and Citicorp are the major providers of worldwide wholesale banking services and the top banks in international payment systems, with BankAmerica's big rivals say they provide almost identical reporting and wire transfer services, albeit through a less unified system.

Richard Griffith
BankAmerica

Colin Klipin, senior vice president at Bank of America, said his is the only institution to have a single system for global banking, as opposed to a combination of countrywide systems and international links.

Standardized Reports

The single system allows the bank to offer a standardized report for each customer account in any country. Beginning later this year, the single system will also allow Bank of America to let customers pool their accounts in various countries and currencies into one account.

The global banking system has been operating in continental Europe for six years and is also operating in Asia and the United States. It will take the bank at least a year to toss out the old systems and link the remaining offices in India, Kuala Lumpur, Jakarta, and Manila. The bank processes the transactions in San Francisco, Hong Kong, and London over its own telecommunications network.

Mr. Griffith said the system answers the needs of corporations with increasingly worldwide activities. "A customer in Thailand can get the same cash management report as his colleague in Canada," said Mr. Griffith.

"In the last 12 months, every customer we've been able to get, we've taken from another bank," said Mr. Griffith. "The system is at least a 50% factor, even a 75% factor." In June the global banking system's capabilities helped the bank sign six sizable cash management customers, he said. His competitors cited similar statistics.

Because the global banking system is updated continuously through the day – sometimes referred to as on-line – cash management customers can view all their cash balances in their accounts throughout the world. Customers can do instantaneous money transfers to 42 countries, consolidate their cash position worldwide, and hedge transactions on foreign exchange.

"If a customer wants to get foreign exchange quotes in nine locations around the world and if they can't go on-line real time, they have to make phone calls to various offices around the world," said Mr. Griffith said of other banks' services.

"Other banks tend to operate on a franchise basis, country by country," said Doug Cannon, manager of cash and banking at American President Cos., the Oakland, Calif., shipping giant.

Citibank System Years Off

Citibank is working on a commercial banking system that combines trust and securities processing and wholesale banking, giving the system greater scope than Bank of America's version. But Citibank is years away from complete implementation.

Chase offers a service called InfoCash, which it says is also an on-line system. □

Mellon Installing a System To Track Foreign Securities

By JEANNE IIDA

NEW YORK — In an indication of the growing importance of global custody to its trust business, Mellon Bank is installing a system that will allow it to track foreign securities more efficiently for its customers.

The system, costing Mellon about $3 million, will replace a third-party arrangement. Pictet & Cie., a Geneva bank, now tracks foreign securities transactions for customers of Pittsburgh-based Mellon.

When the project is completed, Mellon will have reduced by about one day the time it takes to receive information about customers' foreign securities portfolios. Customers will also be able to get reports in multiple currencies.

Mellon is the third-largest player in the domestic U.S. corporate trust business and wants to expand its role in international custody.

"Mellon is trying to offer the same level of customer service in the global securities business that they offer in the domestic U.S. master trust business," said Marshall Carter, who heads the $110 billion global custody business at Chase Manhattan Bank.

In-House Systems Favored

Most of the big players in global custody, such as Citicorp's Citibank, Chase, and State Street Boston Corp.'s State Street Bank & Trust Co. are developing their own systems in-house.

Mellon Bank, like Bank of New York, opted instead for a packaged system offered by Vista Concepts Inc. to handle communications with foreign banks and networks such as the messaging network, Swift. The Vista software will control a communications network of some 22 to 25 financial institutions located overseas that act as "subcustodians."

Installing the software from Vista "is a prerequisite to moving to our own network" of global custody partners, said Andrew Berevowsky, senior vice president and manager of trust systems and operations at Mellon.

"It would be far more expensive to develop these systems on our own." He said that Vista's software was the most advanced that the bank evaluated.

Shift by Yearend Expected

Mellon controls about $220 billion in custody. About $150 billion of that is corporate trust, with $2.5 billion in global custody.

The bank expects to complete the shift from third-party to internal control of global custody by yearend. Along with installing the software from Vista, Mellon is developing software in-house that will give reports in multiple currencies.

Mr. Berevowsky said the new system will be cheaper to run than using a third party.

"We're already a leader in master trust," said Mr. Berevowsky. "This will help us improve service."

Expansion Projected

Mr. Berevowsky said studies show that expenses of U.S. banks to foreign investment will grow over the next three years to represent 5% to 20% of their portfolios. Mellon's is now about 1%.

The Vista software for global securities processing consists of a core system that tracks transactions until they are settled.

After a trade is executed, the system allows banks to make sure the money is paid by the appropriate parties. It sends messages to all parties involved – to Swift and to depositories, where necessary – on the value of the foreign security holdings and any activity on the holdings. □

COMMENT/ *By Mark Olson*

Glass-Steagall Act Repeal: An Issue for 'Everybank'

"Repeal Glass-Steagall" – the banking industry's battle cry during the past decade, all but evaporated during consideration of the Financial Institutions Reform, Recovery, and Enforcement Act.

Now that the reform act is part of our law and lore, the repeal of Glass-Steagall is gaining attention again.

For the nation's largest banks, the advantages of repealing Glass-Steagall are very obvious. Many are already involved in investment-banking activities. The largest also have aggressively pursued expansion of these product lines through foreign subsidiaries that operate in nations allowing banks to enter the securities field.

Boon for Money-Center Banks

Further, the Federal Reserve Board, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corp. have recently made favorable rulings of existing law, allowing continual expansion of securities activities by money-center banks.

By contrast, support for Glass-Steagall repeal among the smaller banks has been less than spirited. With rare exception they are not aggressively involved in securities activities. Further, the critical mass required to make a securities affiliate profitable under existing interpretations seems to put securities underwriting out of reach for all but the largest players. Opportunities for smaller banks through expanded securities powers seem limited.

We disagree. While the opportunities are not identical to those at money-center banks, there are important opportunities for all banks. Repeal of Glass-Steagall is an "everybank" issue. It is in the interest of the banking community as a whole to recognize this, and for smaller banks to take action as a result.

In contrast to the large-bank opportunities for underwriting and asset securitizations, we see community-bank opportunities on the right side of the balance sheet. Perhaps most prominent are the alternatives to deposit instruments. Banks must recognize that they either must find alternatives to existing deposit products or face severe restrictions on future growth.

The magnitude of the need is best illustrated by reviewing the impact of several new deposit products on the typical bank balance sheet. Since 1978, banks have been given new-product opportunities that include the six-month certificate of deposit (1978), negotiable order of withdrawal (NOW) accounts allowed by the Monetary Control Act (1980), and money-market deposit accounts allowed by the Garn-St Germain Act (1982).

Senior bankers greeted these new opportunities with a yawn. Few bankers felt compelled by competitive pressures to want these new products, and even fewer lobbied for them. Yet in many banks these three deposit products account for 50% of the bank's core deposits. It is hard to imagine even a small bank serving its market without offering these three products.

Alternatives Exhausted

What would banking do for a encore? The industry is out of alternatives available through further deregulation of deposits. The same Garn-St Germain Act phased out the remaining regulatory restrictions on rate, term, or minimum balance.

Many banks have faced this predicament by offering mutual funds or annuities, which can be brokered through non-bank firms. These alternatives generate fee income to the banks but certainly are not the types of products that build long-term customer relationships.

Further, it is frightening to consider the implications. The 1990s will be considerably more competitive than the 1980s were past. But the banking industry will be facing those heightened competitive pressures without having enjoyed a new deposit product for eight years!

In those 90s, as banks create products to meet customer needs, it is possible that the emphasis gradually will shift from

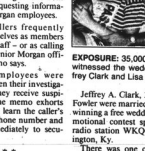
FUNNY MONEY/ *By Tom Leander*

Flash of Inspiration

An alert photographer from the *Worcester Telegraph and Gazette*, who went to watch regulators seize a local thrift, captured an irony on film that told the whole story with a whimsical twist.

On that fair morning in June, no was surprised to see personnel from the Office of Thrift Supervision take over Home Federal Savings in Worcester, Mass. More than half the company's mortgage loans, or 36% of its



Chris Chelios

IRONY: Sign flashed "Better Banking" as regulators seized Home Federal Savings.

$163 million in assets, were delinquent, prompting one well-known New England banking analyst to opine: "This is a very sick puppy we're looking at."

The regulators installed new management, opting to keep Home Federal open for business.

As this drama was being played out within the thrift's walls, the news photographer noticed that Home Federal's familiar outdoor digital sign continued to flash the slogan: "Better Banking." Once the butt of local jokes, the slogan suddenly seemed within the realm of possibility.

A Plague of Snoops

Could it be that headhunters – or company spies – are ruffling feathers at the usually unflappable J.P. Morgan & Co.? An internal memo last week warned employees that the company has been hit by a string of calls from individuals inquiring information about Morgan employees.

"These callers frequently identify themselves as members of Morgan's staff – or as calling on behalf of senior Morgan officers," the memo says.

Morgan employees were urged to sharpen their investigative skills if they receive suspicious calls. The memo exhorts them to try to learn the caller's identity and phone number and report it immediately to security.

Now, Trump Collects

Out of compassion for Donald Trump's cash-flow problems, dinner proprietor Edward Marcinci set up a collection jar three weeks ago on the counter of his Eats restaurant in Elizabeth, N.J.

In the first week, $3.25 in donations trickled into the jar. Last week, patrons donated $51.75 more. This week, Mr. Marcinci says, donations appear to have peaked. He planned to mail the fund receipts today to Trump Organization offices at New York's Trump Plaza.

Mr. Marcini says he received a call from The Donald last week. "It was no big deal," says Mr. Marcini, "He thanked me for his support."

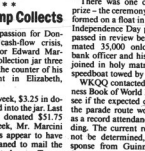
Lender on Parade

A loan officer from Farmers Bank in Frankfort, Ky., found a good use for "something borrowed" this week.



EXPOSURE: 35,000 spectators witnessed the wedding of Jeffrey Clark and Lisa Fowler.

Jeffrey A. Clark, 23, and Lisa Fowler were married July 4 after winning a free wedding in a promotional contest sponsored by radio station WQQ-FM, Lexington, Ky.

There was one catch to the prize – the ceremony had be performed on a float in Lexington's Independence Day parade, as it passed in review before an estimated 35,000 onlookers. The bank officer and the bride were joined in holy matrimony in a speedboat towed by a truck.

WKQQ contacted the "Guinness Book of World Records" to see if the expected crowd along the parade route would qualify as a record attendance at a wedding. The current record could not be determined, and a response from Guinness is still forthcoming.

Mr. Clark and the 23-year-old Ms. Fowler became engaged in May. They had made no concrete plans for a wedding before entering the WKQQ contest.

Espionage in Boston

The Federal Deposit Insurance Corp. has been giving financial-services reporters in Boston a run for their money to find out what, where, why, and who – especially who.

The Who Co., a fictional enterprise, turned up last week in Norma Nathan's gossip column in the *Boston Herald*. Ms. Nathan broke the story that 170 FDIC auditors had booked rooms in several city hotels. All said they were representatives of the Who Co.

The news temporarily made Boston the nation's rumor capital.

Had the FDIC heavies come to town solely to close down tiny Eliot Savings Bank, as they did last Friday? Boston rumormongers suggested the regulators were angling for a much bigger fish – alluding to Lawrence K. Fish, chairman of the troubled Bank of New England Corp. The bank denied it was a target; FDIC spokesman Alan Whitney wouldn't tell, and neither would sources in the area's banks.

Meanwhile, the lobby of the Hotel Meridien has become a favorite venue for covert observation of the comings and goings of the 70 or so Who Co. operatives.

By the end of the week, it had turned into a scene reminiscent of a classic Marx Brothers sketch. The *Herald* reported that short sellers of bank stocks were following regulators down the street, trying to ascertain which bank or thrift they had targeted for closing. They were trailed, of course, by the famished newshounds of the press corps. □

SMALL BUSINESS

Credit Seekers Swamping Hot Line in Massachusetts

By LAURYN FRANZONI
Special to the American Banker

More than 750 small businesses in Massachusetts have sought help from the governor's office since the state established a toll-free hot line in mid-April to match up lenders and businesses. But its success can only be termed limited, with few cases actually resolved.

The hot line received much attention from the press initially, amid reports of a credit crunch. In the first three weeks of operation, 250 calls were reported.

About three weeks ago, the Massachusetts agency operating the line began a broader outreach campaign. It mailed letters to 10,000 manufacturers, informing them of the program. Since then, the hot line has been swamped, averaging 50 calls a day.

Complaints from 'Good Credits'

The recent complaints have come from a group with "a consistently higher quality of credit" than the previous group, said Tom Hubbard, deputy director for the Governor's Office of Economic Development.

"The common problem seems to be that covenants or provisos in credit agreements that had previously not been enforced are now being enforced," Mr. Hubbard said of complaints regarding collateral levels and financing terms. "In other cases, loans are not being renewed without apparent cause."

Of the 120 manufacturers requesting help, 40 had credit problems that were not of their own making.

The Massachusetts Business Development Corp. took on the program at the behest of Gov. Michael Dukakis. After meeting with industry leaders to discuss economic issues in the state, the governor expressed concern about businesses being caught in a credit squeeze. Even though some banks said they were relying from the double punch of deteriorating real estate markets and more stringent federal regulation, other banks set ambitious goals for lending to small businesses.

"Gov. Dukakis asked the MBDC to make the hot line available to take calls from creditworthy private business customers and steer them into private banks for funds," Mr. Hubbard said.

Agency in Business for 30 Years

The state-chartered organization, with a board from the banking industry, had been linking businesses with public agencies for about 30 years. It has acted as an economic development corporation, making business loans and investments. Two years ago, it opened a toll-free hot line to match businesses with other public agencies.

Half of the first 250 calls received by the agency were from retailers or businesses with real estate problems. The remainder came from manufacturers, according to Mr. Hubbard.

True Victims of the Credit Crunch

Of the 120 manufacturers requesting help, 40 turned out to have credit problems that were not of their own making. "After due diligence from the loan officers of the MBDC, we determined that these were victims of a credit crunch," Mr. Hubbard said.

Eight of those 40 cases have been closed out successfully, Mr. Hubbard said. In all of these cases, the agency negotiated with the business and the bank to reconcile differences. Other cases are still being processed.

A review of the recent barrage of calls reveals that the businesses typically had $10 million to $40 million in annual revenue and up to 250 employees. The greatest fear of program organizers, according to Mr. Hubbard, is that participating banks may "run out of loan capacity."

Reaction to External Problems

While some loan problems can be traced to internal company problems or problems within their markets, Mr. Hubbard said the business owners are also responding to external problems that have affected their credit lines. He cited the case of one large Boston venture capital firm that finally wrote to the governor when its executives could not get through on the hot line.

This firm, which has made a number of noteworthy investments, found that it and its client corporations were facing a shortage of funds for financing receivables. Through the Massachusetts Business Development Corp.'s operation, Mr. Hubbard hopes new financing options will open for this firm and others.

"Whatever the multitude of reasons for this uncertainty between borrowers and banks, there is a real problem," Mr. Hubbard said. "Some disruptions in credit can be solved by linking the businesses with new banks. The jury is still out on the ultimate performance of the hot line, but we are in week three of a fairly substantial onslaught."

Fed Seen Protecting Turf on Funds

Continued from *page* 1

measure on the ground that it violates the Glass-Steagall Act, said Craig Tyle, associate general counsel of the trade group. He said considerations of a lawsuit were premature but did not rule out the possibility.

Bank holding companies that advise, or administer, their own mutual funds now have vending operations structured under a separate subsidiary at the bank level.

Bank holding companies that do not yet offer mutual funds would be most likely to take advantage of the Fed proposal and structure new operations under one unit, bankers said. A few other banking companies, such as Security Pacific Corp., expressed interest in consolidating existing operations.

The Fed proposal

"is clearly of some benefit to the bank holding companies."

John Walker
Simpson, Thacher & Bartlett

No Reorganization Seen

But the proposal, whose comment period ends in early August, would probably not spur banking companies to immediately reorganize their mutual fund operations, bankers said.

"Each financial institution will have to perform a refined analysis of the benefits of undertaking any dramatic structural changes in order to provide maximum flexibility regarding permissible activities," said Robert Kuruzca, a partner the Washington office of law firm Morrison & Foerster.

Richard Whiting, general counsel for the Association of Bank Holding Companies, said that the Fed proposal would allow holding companies to "structure the delivery of securities in a way that makes the best business sense to them rather than through an arbitrary governmentally defined method."

Bank Likes the Change

Debra McGinty-Poteet, vice president of Security-Pacific National Bank, said that the parent company's operations in Washington State could benefit from the proposed change in mutual fund operations and might be restructured to reflect it. The banking company declined to provide further information on its existing mutual fund operations.

The Fed proposal "is clearly of some benefit to the bank holding companies," said John Walker, partner at Simpson, Thacher & Bartlett, a law firm whose clients include Manufacturers Hanover Corp. and Barclays Bank.

Manufacturers Hanover serves as an investment adviser for the Hanover Funds Corp., a mutual fund company based in Delaware. In its branches, Manufacturers Hanover Trust Co. sells Hudson Valley Financial Services funds. The company does not plan to change its operations, Mr. Walker said.

No Change at NCNB

Charles King, vice president of NCNB Corp., Charlotte, N.C., said the company also does not plan to alter its operations. NCNB National Bank of North Carolina sells a brand of mutual funds administered by another company.

Even though few companies said they were preparing to alter their mutual fund operations, bankers said the proposal before the measure as a signal of the Fed's intention to chip away further at the wall separating investment banks and commercial banks. □

Western Union Pins Hopes on Financial Side

By ELLEN MEMMELAAR

NEW YORK — Western Union Corp. is touting the sale of its telecommunications businesses as a milestone in its efforts to become a company oriented toward financial services.

The company, based in Upper Saddle River, N.J., announced this week that it has entered into a definitive agreement to sell most of its business services unit to American Telephone & Telegraph Co. for $180 million. But the funds generated from the sale are not enough to solve the company's financial woes, analysts said.

'Too Little Too Late'

"The whole operation is too little too late," said John Bain, an analyst at Raymond James, a firm based in St. Petersburg, Fla. "It's a mystery to me why they haven't seen through some corporate reorganization earlier."

Western Union will shed its EasyLink electronic mail service and packet and telex services. It will retain Priority Services, formerly a part of the business services unit. The Mailgram, Priority Letter, and Customer Letter services will be run as a separate unit of the parent company.

"This transaction," said a company spokesman, "will also complete the transformation of Western Union from a telecommunications company to a provider of value-added services focused in the areas where the company's strengths can be brought to bear most effectively, namely the financial services and paper-based messaging businesses."

Payment Services

Western Union's financial endeavors include a money transfer service and a payment services group.

The company will file plans soon with the Securities and Exchange Commission on the proposed transaction and on plans to retire senior debt with the proceeds. It currently has $640 million in debt on its balance sheet; it said $530 million is being restructured to replace high-yield bonds with lower-yielding bonds.

An executive of American Express Money Transfer Service, a primary competitor, said Western Union has been moving toward financial services. □

ATTENTION! BANKERS & REGULATORS

You are all painfully aware, of the need to identify professionally qualified appraisers since the emergence of the great Thrift debacle. As you know, beginning July 1, 1991, appraisers will have to be either licensed or certified by the state. More than ever, regulators and lenders must rely on designated members of recognized organizations such as The Society of Real Estate Appraisers. The above listings are being published to serve as a handy reference for you when in need of qualified appraisers. This list will appear in American Banker every four weeks, so keep it close at hand until the next one arrives. We are confident that this list will expand so as to be more useful to you. For a complete list of Society of Real Estate Appraisers designated members, call (800) 331-7732.

Meridian Bancorp Vaulting into Ranks of Top Lenders

By STEPHEN KLEEGE

Meridian Bancorp is the latest bank to make a big move in mortgage originations, an area once dominated by thrifts.

Its subsidiary, Meridian Mortgage, announced last week that it would buy 16 branches from Travelers Mortgage Services Inc., to vault from a modest origination volume of $820 million last year to an estimated $3 billion.

Because of declining home prices within the network, "the real potential for growth may be a year or two ahead," when the residential real estate markets rebound, said Stuart Feldstein, president of SMR Research. Budd Lake, N.J. Nevertheless, he said the $3 billion volume this year would easily put Meridian in the top 25 mortgage originators in the nation.

Among bank-affiliated mortgage lenders, $3 billion of originations would have qualified for fifth place in 1989, according to statistics compiled by *Inside Mortgage Finance*, an industry newsletter.

Market Worries Overblown

While acknowledging softness in some of the markets within the branch system, Anthony W. Schweiger, president of Meridian Mortgage, said concern over declining prices is overblown.

"The data we're looking at show that while the number of loans will be constant, there will be an increase in loan amounts," Mr. Schweiger said.

Such banking giants as Chase Manhattan Corp., Citicorp, Security Pacific Corp., Bank-America Corp., and Fleet/Norstar Financial Group are vying through subsidiaries or branch networks — for a share of the mortgage market. Many of the thrifts that once dominated the field are either under government control or have been forced to reduce their lending to meet capital requirements.

Playing Field Leveled

Like other mortgage bankers, Mr. Schweiger has said the departure of thrifts means a more nearly level playing field for mortgage banks. The mortgage bankers note that thrifts traditionally held mortgages in portfolio and thus did not have to charge rates high enough to satisfy investors on the secondary market.

Nowadays, many thrifts also sell loans on the secondary market.

"We don't want to take away from the retail strategy of Meridian banking offices."

Anthony Schweiger
Meridian Mortgage

The Travelers branches stretch from Connecticut to Virginia; the biggest concentration is in New Jersey. In that region, "we've seen either the complete exit or the shrinking of some former formidable players," Mr. Feldstein said. He mentioned Meritor Savings Bank, which is cutting back, and City Federal Savings and Loan Association, which is under government control, as examples. "We think Meridian is stepping in to fill the gap. And a big gap it is."

Another Strategy Purchase

The acquisition, along with the just completed purchase of Keystone Mortgage Corp., Indianapolis, fulfills a major goal for Meridian. Keystone is a small company with about $212 million of servicing and annual originations of about $144 million, according to the Mortgage Bankers Association of America.

"The opportunity is consistent with our strategy, which is to increase our profitability through expanding our production and servicing," Mr. Schweiger said.

At the same time, "we don't want to take away from the retail strategy of Meridian banking offices" in southeastern Pennsylvania, Delaware, and northeastern New Jersey, he said.

Focus on Originations

Though other major deals announced recently focused on servicing rights, Meridian is acquiring branch offices and a staff with experience in originations. Travelers' $12 billion portfolio of servicing rights is being sold to a unit of General Electric Co.

Even though servicing was not part of this deal, servicing is part of Meridian's overall strategy, Mr. Schweiger said. On an interim basis, the company already is processing payments on about $50 million of loans from the portfolio of the Resolution Trust Corp., the agency charged with disposing of the assets of failed thrifts. Mr. Schweiger said Meridian wants to do more business for the RTC and is interested in acquiring portfolios of $50 million to $250 million.

The company's servicing portfolio grew to $3.6 billion in 1989, from $2 billion at the end of 1988. Mr. Schweiger has said the company expects to top $5 billion in servicing by yearend.

The big acquisition comes on the heels of a record year of originations for Meridian. After a downturn in 1988, originations rocketed to $820 million last year – 60% more than expected. As recently as 1983, Meridian originated only $373 million of loans.

Mr. Schweiger said Meridian primarily makes fixed-rate loans, about 85% of which are conventional and the rest insured by government agencies. □

SECURITIES

Prepayment Rate Slumps In California

By STEPHEN KLEEGE

For the latest indication that California's economy is cooling, the state has dropped from first to 10th in mortgage prepayment rates, according to a report by Bear, Stearns.

The rate, which indicates how fast borrowers pay off their home mortgages, is a key factor in the value of mortgage-backed securities.

"Some people have been paying up for securities that have a concentration of California loans," said analyst Richard Ellson, author of the report. "That premium is disintegrating."

In California, home sales have declined and increases in home prices have moderated. With fewer people moving from one home to another, fewer are prepaying their mortgages.

The Bear Sterns report compared the prepayment rate in each state with the rate of 18 months ago. And in California, the prepayment premium has been cut in half in the past 18 months.

The report also found that areas of the Midwest have prospered because of an export boom, resulting in accelerated prepayments. However, Illinois and Indiana still dropped from the top 10 list, along with Hawaii and Vermont.

Alaska has the fastest prepayment rate, according to the report, followed by Montana, Oregon, Idaho, Wyoming, Washington, Nevada, South Dakota, Iowa, and California.

Mr. Ellson noted that factors other than the economy can drive prepayment rates. In New York, mortgage rates are declining turnover pose a "structural impediment", to prepayment activity.

Alaska has the fastest prepayment rate and New York the slowest, the report says.

New York has the slowest prepayment rate, followed by New Jersey, Connecticut, Massachusetts, New Hampshire, Maine, Louisiana, Pennsylvania, Arizona, and Georgia.

The lowest fee report noted few changes in delinquencies, another factor that affects the value of securities. The 10 states with the highest delinquency rates are Mississippi, Texas, Tennessee, Louisiana, Oklahoma, Arkansas,- Utah, Indiana, Alaska, and Georgia.

The lowest delinquency rates are in Hawaii, Rhode Island, South Dakota, Vermont, Oregon, Massachussetts, Connecticut, California, Minnesota, and Washington. □

TALKING *markets*

Citicorp Shifts Chief of Single-Family Originations

By PHIL ROOSEVELT

Leonard Druger, a key player in Citicorp's rise to the top in home mortgage originations, is moving to a new assignment.

The vice chairman and head of home loan originations at Citicorp Mortgage Inc. has agreed to lead an expanded effort by that unit in lending for multifamily housing, a spokeswoman confirmed.

'Entrepreneurial Person'

A spokeswoman for the St. Louis-based Citicorp Mortgage — Citicorp's main mortgage unit — said Mr. Druger was considered a natural to lead the push in multifamily lending, which was announced in February. "He's a creative, entrepreneurial person," she said. "He's particularly good at building new businesses."

The top post in loan originations for single-family homes will be assumed by Martin F. Mayer, who joined Citicorp last year from Xerox Corp. He has been in charge of the processing side of operations.

Architect of MortgagePower

Mr. Druger, who came to Citicorp Mortgage in 1986 from Citibank in New York, is widely considered the principle architect of MortgagePower, Citicorp's controversial marketing link to realty brokers. Under the program, brokers can earn extra fees for helping homebuyers get mortgages from Citicorp.

MortgagePower, rolled out nationally in the mid-1980s, helped establish Citicorp as the nation's largest mortgage originator and servicer. The corporation's bank, thrift, and mortgage-banking units are thought to originate more than $1 billion in home loans a month.

Delinquencies Rose

Some mortgage professionals speculated that Mr. Druger's reassignment reflects concern by Citicorp about the quality of home loans that have been originated. Citicorp Mortgage's delinquencies rose to 4.56% of loans serviced at the end of 1989, from 3.16% a year earlier, according to a filing with the Securities and Exchange Commission. Foreclosures rose to 1.01% from 0.62%.

But the Citicorp Mortgage spokeswoman said the rises had "absolutely nothing" to do with Mr. Druger's shift. Mr. Druger, who will remain vice chairman, could not be reached for comment.

In his new post, he will help coordinate lending for multifamily housing by various Citicorp units and will head Citicorp Mortgage's "forward commitment" program for obtaining new mortgages from other lenders. He will move from St. Louis to California. □

Key Interest Rates

	Week ended 6/29/90	Week ended 6/22/90	Year ago 6/29/89
30-year fixed-rate mortgage	10.20	10.18	10.20
1-year adjustable-rate mortgage	8.38	8.40	8.98

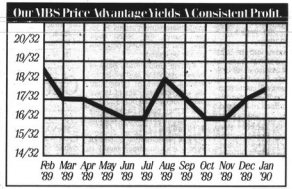
Few Spreads Are As Consistent As Fannie Mae's MBS Price Advantage.

Month after month, discriminating lenders choose the Fannie Mae MBS over the competition's.

Because as you can see from the chart, Fannie Mae Mortgage-Backed Securities consistently command a better price. And a better price spread for us means more profit for you.



During the past year, our price advantage on 30-year current coupon averaged between 16/32nds and 18/32nds. So on each $1 million you securitize, you can get an additional $5000-$5625 in price.

And our price spread for 15-year product has been equally stable and profitable. In fact, it also holds true for Fannie Majors. So you get the advantage on securities of all sizes.

For more information on our MBS, simply call your Fannie Mae Regional Office listed below. Because with a price spread as smooth as ours, we aren't just talking peanuts.

Call your Fannie Mae Regional Office at: Northeastern Region, (215) 574-1419 or (215) 574-1440; Midwestern Region, (312) 368-6279; Southeastern Region, (404) 365-6054; Southwestern Region, (214) 770-7337; Western Region, (818) 568-5140.

Standard & Poor's Lowers Ratings of 3 Finnish Banks

By JOHN EVANS

LONDON — The ratings of Finland's three main commercial banks – Union Bank of Finland, Postipankki Ltd., and Kansallis-Osake-Pankki – were downgraded Thursday by Standard & Poor's Corp., which warned of the "difficult" operating environment they are encountering in their home economy.

The Standard & Poor's action affects about $5 billion of debt.

Postipankki lost its AAA after senior unsecured obligations were downgraded to AA-plus. The senior unsecured debt of Union Bank and Kansallis-Osake-Pankki was lowered to AA-minus from AA.

The movement of domestic Finnish funding toward higher-priced market-rate instruments is creating significant interest rate index gaps in the banks' balance sheets, Standard & Poor's said. The banks will need several years to adjust to this change, it added.

The rating agency affirmed the A1-plus rating of Union Bank's UBF North America Inc., whose commercial-paper program is guaranteed by the parent. Standard & Poor's will continue to rate AAA all long-term debt of Postipankki, which carries a Republic of Finland guarantee.

In February, Moody's Investors Service downgraded long-term debt of Union Bank and Kansallis to Aa1 from Aaa, saying Finland's weakening economy would take a toll on both and erode asset quality. Moody's maintained its Aaa rating for Postipankki.

JAPAN

TOKYO — Sumitomo Bank will set up a currency swap firm in London, a spokesman said Thursday.

The unit will be capitalized at $20 million and will be owned by Sumitomo Bank Capital Markets Inc., the bank's U.S currency swap unit.

The spokesman said the bank has received approval from Japan's Finance Ministry and U.S. Federal Reserve Board. He said the London unit will start operations as soon as it gains permission from the Bank of England.

The move is aimed at increasing demand for currency swap dealing among European currencies. With the establishment of the new company, Sumitomo will be the first Japanese bank that operates currency swap dealing 24 hours a day, the spokesman said. **— Reuters**

The Export-Import Bank of Japan will provide an untied loan of $200 million to Hungary, an agency spokesman said.

The funds will be used for reform in Hungary's financial system and do not require a related purchase of goods or services from Japan, he said. **— Reuters**

Repayment terms and interest have not been agreed upon, but contracts will be signed in August or later, he said.

The loan is a part of the $500 million Prime Minister Toshiki Kaifu pledged to Hungary during his visit to Eastern Europe in January, the spokesman said. The prime minister also pledged $500 million for Poland. **— Reuters**

Bank of Boston plans to discontinue foreign exchange dealing for its own account in its Tokyo branch, as well as foreign exchange option dealing, limiting its foreign exchange business in Japan to dealing for clients.

The decision follows a similar cutback by Continental Bank. Four Bank of Boston traders will be shifted back to the United States, and there are likely to be about 10 more staff cuts in the Tokyo branch. **— TFW**

ISRAEL

Overseas offices have made inadequate contributions to Israeli banks, the central bank said, and unprofitable branches should be closed.

Amnon Goldshmidt, **Bank of Israel** supervisor, said while presenting his annual report that the overseas branches of Israeli banks contributed only $23 million to their parent banks during 1989 on an investment totaling $750 million.

"The contribution of foreign subsidiaries to Israeli banks is not satisfactory," he said. "The banks should close ineffective operations and concentrate on money-making countries." According to a Bank of Israel report, overseas subsidiaries averaged an 8% return on equity during 1989 but competing banks overseas averaged 14%.

Mr. Goldshmidt said the banking system will not be able to finance the $10 billion needed to build thousands of houses for an expected influx of more than 150,000 Soviet Jews this year. **— Reuters**

CANADA

TORONTO — Bank of Montreal said it has sold its 20% stake in **Banque Transatlantique** for $23 million to BT's largest shareholder, **Credit Industriel et Commercial de Paris.**

Bank of Montreal will report a third-quarter pretax capital gain of about $17 million from the sale.

The bank said it will continue to conduct business in Paris for its North American customers but is no longer seeking a deposit base outside North America. **— Reuters**

TFW, the Tokyo Financial Wire, is a Tokyo-based news service of Cumline International Corp., Upstairs, Ltd.

Japan May Resume Loans to China

Announcement Could Come at Houston Summit

Reuters

TOKYO — Japan plans to tell its six partners at the forthcoming Group of Seven summit that it may independently resume official lending to China, according to Japanese media reports.

The National Television Network (NHK) and Kyodo News Agency quoted Prime Minister Toshiki Kaifu as saying on the eve of his departure for Houston that he would like to tell summit partners that Japan may decide to unfreeze loans to China.

NHK said Prime Minister Kaifu's remarks followed a meeting of Liberal Democratic Party executives who concluded that lending should be resumed because of Japan's special relations with China.

Massacre Led to Freeze

At the last Group of Seven summit, a year ago, the seven nations – Japan, the United States, West Germany, Britain, France, Italy, and Canada – agreed to freeze official credits in China to protest against the army's violent suppression of student-led protest in Beijing.

Japan differs from its partners on the lending question, arguing that it is more dangerous for the West to continue to isolate China than to restore official loans that would help to improve the economy and boost the standard of living.

In a related development, Mitsubishi Trust & Banking made the first disbursement on a $126 million loan to the national airline of China on June 21.

The 12-year loan at 1% above the London interbank offered rate is the first new financing by a private-sector Japanese bank since the June 1989 shutdown.

Yen Raises Worries

Meanwhile, the French daily newspaper *Liberation* said a draft of the communique to be issued after next week's meeting of the Group of Seven industrial nations says the current level of the yen could hamper the reduction of world trade imbalances.

Under a Washington dateline the newspaper printed extracts from a 16-page draft that it said was two weeks old and might still be revised.

Meeting Starts Monday

The Group of Seven will meets in Houston from Monday through Wednesday.

The communique says that "although the yen has stabilized recently ... its continued weakness could still have undesirable repercussions on the global adjustment process."

Liberation said the draft summit communique also suggests that the United States and Europe might be moving toward a compromise in their dispute over farm subsidies.

The statement reaffirms that the Uruguay Round of world trade talks should be concluded this year.

Farm Subsidy Compromise

In the area of agriculture, it says the Seven should reach an agreement "defining how far and when export subsidies, internal price supports, and market access barriers should be reduced."

The newspaper said use of the word "reduce" signals a retreat by the United States from its demand for the abolition of export subsidies, a demand rejected by the European Community.

Aid to Soviets

The newspaper said the communique bridges differences within the Group of Seven on how to aid the Soviet Union's move to democracy and market economics.

"We underline our desire to develop and deepen the scope of our cooperation with the Soviet Union," the communique says.

It adds that private Western investment will be vital for the development of Eastern Europe, but that capital will flow only to those countries with "open and hospitable markets." □

Japan argues that it is more dangerous to continue to isolate China.

Cuba Rejects Bush's Economic Proposal

Reuters

HAVANA — Cuba has urged Latin America to reject an economic initiative announced by President Bush last week, saying it is an attempt to extend U.S. domination in the hemisphere.

"President Bush's words reveal the traditional policy of the carrot and the stick," the official Communist Party newspaper *Granma* said in a front-page editorial.

Saying that some Latin American governments welcomed the plan prematurely, *Granma* called for a "common line of defense."

President Bush's June 27 proposal included writing off part of Latin America's debt to the United States, creation of new lending and investment programs and a $100 million U.S. contribution for a new investment fund.

Granma dismissed the proposal as "crumbs" and said the United States continues to treat Latin America and the Caribbean as though the region were its own backyard.

It said the Bush proposal came when "American triumphalism" is at its highest, following the U.S. invasion of Panama last December.

"In this way, the Bush initiative for the Americas, far from opening the road for the economic liberation of Latin America and the Caribbean, becomes a new instrument of domination over our countries," the newspaper added.

Granma noted that while wooing other Latin American nations, Bush attacked Cuba.

"We are, so he says, the only exception in a Latin America that is becoming democratic," it said.

It said Cuba wants Latin America and the Caribbean to defend its capacity to export. **— Reuters**

Bill Setting Liability Lid Gains Steam

Continued from *page 1*

tate lending, leveraged acquisition finance, corporate asset funding, and syndications of loans, leases, and subordinated debt.

In the first quarter, Citicorp lost $34 million from those activities in North America, Europe, and Japan. The loss reflected a $58 million addition to reserves to cover poorly performing loans in Citibank's global finance sector. Mr. Davis' North American units make up the largest part of the sector, which serves corporations, financial institutions, and governments around the world.

The entire global finance sector registered a meager return on equity of 4.5% in the quarter, compared with 24.2% for the bank's consumer sector. That is well below the goal of an 18% ROE that Mr. Reed has targeted as a corporate goal.

Layoffs in the Wind

Banking sources at Citicorp and elsewhere said that Mr. Davis may be taking the blame for a rapidly deteriorating credit portfolio in an environment that is showing no signs of near-term recovery. They also said that sometime soon they expect a major reorganization of a restructuring and substantial layoffs, similar to those announced

Continued from *page 1*

charged that the LaFalce bill is "yet another taxpayer bailout of the savings and loan industry, as well as other lenders, [which] drastically weakens environmental protections."

The environmental advocates, including the Environmental Defense Fund, the Sierra Club, and Friends of the Earth, argue that the 1980 Superfund law places the "commonsense duty on lenders to evaluate borrowers for both economic and environmental risks in order to prevent polluters from obtaining easy financing."

Setback Is Possible

Their letter urges the House members to oppose the measure and withdraw as cosponsors. With rising sensitivity toward environmental issues, the letter could prove a major setback to the LaFalce bill.

Still, Mr. LaFalce has managed to attract an unusual degree of support for his proposal to protect lenders from multi-million-dollar judgments under the 1980 Superfund law. Courts have held banks liable for other lenders liable for such costs when they foreclose on properties that turn out to have been contaminated by hazardous wastes. In addition, bank trust departments have been held responsible for sites they hold as trustees.

Mr. LaFalce, chairman of the House Small Business Comittee and a senior member of the House Banking Committee, has warned that small companies in particular could face insurmountable difficulty in obtaining loans at affordable prices if the court rulings are not overturned.

The Bankers' View

Bankers have argued that they are unfairly being saddled with liability for environmental problems they had no part in creating and that they may not even have known about until foreclosure proceedings.

In the House, the chairman of the subcommittee with jurisdiction over the measure, Rep. Thomas A. Luken, Democrat, already signaled his intention to hold a hearing. In the Senate, the banking committee has scheduled a July 19 hearing on a similar measure sponsored by Sen. Jake Garn, R-Utah.

Congress returns next week for a four-week session and then leaves town Aug. 3 for a month-long break. In September, lawmakers in both chambers will be racing to finish up budget and spending measures as quickly as possible so that members can hit the campaign trail.

Energy and Commerce Committee chairman John D. Dingell, D-Mich., has not said whether he will support the measure. Mr. Dingell's priority has been the clean air bill, which is still pending.

The LaFalce bill "cannot be enacted unless the Energy and Commerce Committee leadership agrees to it," said Edward L. Yingling, executive director of government affairs for the American Bankers Association.

Banking Coverage Where It Counts
WASHINGTON MONDAY

Davis Resignation Signals Restructuring at Citicorp

Mr. Davis may be taking the blame for a rapidly deteriorating credit portfolio in an environment that is showing no signs of near-term recovery.

according to a regulatory filing from the company. Domestic real estate writeoffs were $56 million, compared with $4 million in the first quarter a year earlier. The company, whose first-quarter writeoffs more than tripled from the previous year's, totaled 1.02% of its average commercial loans.

The bank also had put $640 million of its $6.3 billion of leveraged finance loans on a cash-basis status, and was obligated under unused commitments to another $3.5 billion of leveraged loans as of March 31.

In an interview earlier this year, Mr. Davis acknowledged that his main areas of business had dried up, but he denied that many more credit surprises were in store. He said that he had put his employees on an austerity budget but that Citicorp is not retrenching from corporate finance. "We have not been denied what we want," he said. "The only problem is deciding what we want."

That statement appears to be the former chief of corporate banking who is widely thought to have been kicked upstairs to a customer relations role in January. At that time, consumer chief Richard Braddock was named president of Citicorp and the company's investment and corporate banking sectors were combined.

Mr. Davis was also in charge of fee-based transaction banking activities in the United States, a lucrative arena that includes corporate cash management, data processing, and information and trade services.

He also oversaw another thriving area – the sales and trading of swaps, futures, and other exposure-management activities in the United States. The global finance group earned $25 million from these activities in the first quarter.

Mr. Davis, a native of Des Moines, joined Citicorp fresh from Harvard Business School in 1958, two years after receiving a bachelor's degree in economics from Grinnell. His major assignments ranged from senior officer for Australia and head of domestic and international leasing in the late 1960s and early 1970s, to deputy controller of the holding company. He joined First Chicago in 1981 as executive vice president and senior partner of its global corporate bank. □

Ex-Chairman of Columbia S&L Faces Charges by Thrift Agency

Continued from *page 1*

institution.

The thrift regulator also issued a temporary cease-and-desist order freezing Mr. Spiegel's funds in financial institutions and brokerage firms until he establishes an escrow account to guarantee payment of the restitution and penalties.

"This is a landmark action by the OTS" said T. Timothy Ryan, director of the agency. He was flanked at the announcement by Attorney General Harris Weinstein, the agency's chief counsel and Joan Nichols, senior enforcement attorney.

The Ryan Approach

Mr. Ryan, who took office in April and is quickly becoming known as an aggressive enforcer of laws against thrift crimes, said the actions against Mr. Spiegel exemplify "just how seriously we intend to pursue violations of fiduciary responsibility to protect the taxpayer."

The Justice Department and U.S. Secret Service took part in the investigation against Mr. Spiegel, who resigned last December as chairman of Columbia, based in Beverly Hills. Calif. Edward Harshfield, the new chairman of the $4.1 billion-asset thrift, has blamed Mr. Spiegel's junk-bond strategy – the portfolio was as high as $4.5 billion – for the thrift's slide to a $591 million loss last year. It lost another $23 million in the first quarter of 1990.

Mr. Spiegel has denied responsibility for the losses. On Thursday, he expressed "outrage" at the OTS's initiation of the administrative proceeding, and denied all charges. The agency refused to meet with his attorneys to discuss the allegations or to give him a "fair" chance to respond, he claimed in a written statement.

Scapegoating Claimed

Mr. Spiegel accused the agency of proceeding with "trial by press release," and charged that it is seeking "scapegoats to divert public attention from its gross incompetence."

Mr. Spiegel had close ties to Michael Milken, the junk-bond financier at Drexel Burnham Lambert. The OTS accused Mr. Spiegel of illegally letting Mr. Milken's brother, Lowell, use Columbia-owned condominiums.

Use of the condominiums for "unjust personal enrichment" accounts for $1 million of the restitution sought by the OTS. Another $6.4 million would compensate for maintaining aircraft and a hangar with Michael Milken.

Other recoveries sought in the order include a $2.9 million unauthorized bonus from Columbia in 1989, $463,000 for personal travel and expenses such as the purchase of 55 pistols and conflict with those of several other senior executives, including Mr. Reed. He said in a recent interview with *Manhattan* that he is "deeply enmeshed" in corporate banking after having ignored it for too long.

Citicorp sources also noted that Mr. Davis' stiff personal style never meshed well with that of his boss, Michael Callen, who runs the global finance sector. Mr. Callen, who until January was Mr. Davis' equal in charge of investment banking, was on vacation Thursday and unavailable for comment.

One former Citicorp executive said that Mr. Davis also may have made a bad choice of allies. He was a close associate of vice chairman Lawrence Small, automatic weapons, $7,000 for a Michael Jackson concert, $5.7 million for losses on $28 million in loans said to be made without adequate underwriting and at below-market interest rates to a friend of Mr. Spiegel, and $2.4 million for unauthorized payments made to Columbia Savings Charitable Foundation.

Mr. Ryan of the OTS also disclosed that a public administrative proceeding will begin Sept. 25 in Denver against Neil K. Bush, the son of President Bush. As a former director of the failed Silverado Banking Savings and Loan Association, Denver, Mr. Bush is the subject of a cease-and-desist proceeding.

Mr. Ryan noted such administrative hearings on enforcement actions, which typically have been private, will now be open unless there is a compelling reason for confidentiality. □

Court Upholds RTC Override of Branching Rules

Continued from *page 2*

ventory.

The groups opposing the RTC argue that branching within any state's borders should be determined by state law.

Same Debate in Arkansas

The same issues will be be debated anew on Friday in an Arkansas courtroom, where the state's bank commissioner and independent bankers have sued to stop the RTC's sale of the $171-million asset, 20-branch Independence Federal Savings Bank of Northern Bank and Trust Co., Little Rock. The RTC has agreed not to consummate the sale until U.S. District Judge Stephen M. Reasoner rules on the injunction request.

Like New Mexico, Arkansas prohibits a bank from owning branches outside its home county. The RTC could make Northen the state's first truly statewide bank.

Lawyers in the various cases said the RTC will point to the New Mexico decision upholding its override of branching laws as evidence that it may take the same action in Arkansas.

Earlier this year, a Colorado judge granted a temporary restraining order preventing the sale of a multibranch thrift to a bank in Colorado. That action will be used by lawyers against the RTC to show the override power is not absolute.

Like New Mexico and Arkansas, Colorado restricts state bank branching. Since the injunction,

The lawsuits pit groups in favor of state regulatory autonomy against the RTC.

the RTC has formalized in a regulation its right to override state branching laws, and the case is still pending in the Colorado district court.

For the 10th Circuit Court appeal, Mr. Rubin said he plans to make essentially the same argument against the override as he did in district court in New Mexico. But he said his arguments will be bolstered on appeal by the arguments that won a temporary restraining order in the district court in Colorado. □

Executive Help Wanted

Worldwide presence. Risk management.

VISA is committed to becoming the world's preferred consumer payment system. To do so, we must continue to grow and expand into new markets. In the risk management area, we play a critical role by working with our members to provide the tools for effective management of risk.

Help us meet our goals in this challenging position in our San Mateo corporate headquarters.

Director of Issuer Risk

You will focus your efforts on increasing member profitability and ensuring the integrity of the VisaNet payment system. This will involve managing existing issuer risk programs and planning for their future directions. Also, you will be responsible for ongoing interaction with members to identify new concerns and develop new projects to better manage issuer risk. You'll also manage professional staff and provide member education for existing services.

Requirements include 5–7 years' related experience in a banking, financial services, or retail credit environment. Strong management, interpersonal and communication skills are essential. An MBA and a financial analysis background are preferred.

VISA offers an excellent compensation package including comprehensive benefits. For immediate consideration, please send your resume to: VISA U.S.A., Dept. HD-29/24B, P.O. BOX 899, San Francisco, CA 94128. For other VISA opportunities, please call our JOB HOTLINE (415) 378-8299. We are an equal opportunity employer.

MANAGING EDITOR

Every single story in this new financial service industry newspaper is going to help its readers do their jobs better. The readers expect and will get "hands on" and "how to" information. Hands on is how the ME will have to do the job every week. Knowing how financial services executives work and what they need, the ME will plan, assign, rewrite, bounce the copy until its right, then see the paper out the door. The staff will be lean but enough to do the job, including a fast, enticing design. There'll be plenty of correspondents but they will need training in the paper's style. The key is knowing the financial services business from the inside. If you do, you may be able to meet this unusual journalistic challenge. The readers are there. Hard work and dedication will yield generous rewards. Write with resume:

COMMENT

Continued from page 1

deposit guarantee fees to cash flow. That is, products with securities characteristics – such as mutual funds, annuities, equity-appreciation capability – will complement the existing deposit-gathering emphasis.

Outlook for New Products

Predictions are always risky, but if even small banks experienced a 50% increase in traditional deposit products to newly created instruments in the last decade, is it unreasonable to expect a similar pattern in the '90?

For banks to realize a significant change in cash flow from deposit products to investment instruments, Congress will have to act. And before Congress acts it will want a solid answer to a very important question. How will the banks distinguish deposit products insured by the FDIC from investment instruments involving potential equity appreciation and devaluation?

An obvious question raised by the above scenario is: How can my bank grow if I deemphasize deposit products? Or, how can I continue to fund my loan demand without deposit growth?

If consumer demand shifts away from deposit products to investment instruments, the banks with an already lost the ability to utilize those deposits to fund loans. Even worse, from the bankers' standpoint, the money will largely be under the management of the securities industry.

Back to the Left

A second answer is to examine securitization, a trend already evident through much of banking. When we examine the banks' role, we also find dramatic changes.

Most significant is the growing trend toward securitization, defined as transferring bank assets from the bank balance sheet to an intermediary, converting them to a security instrument and selling to investors.

Banks have a long history of selling loans or participations of loans. The underwriting and selling advantages offered by securitization (which, of course, Glass-Steagall precludes) include greater efficiency, by not having to sell or monitor the portfolio loan by loan, and the increased number of potential purchasers available by selling instruments in dollar denominations desired by investors.

Expansion of Securitization

In the past few years, securitization has expanded out of its historic utilization in mortgage instruments to include credit card debt, consumer credit, auto loans, and virtually any other loan instrument on a banks' books. The trend toward securitization, driven by decreasing margins, shows no sign of abating as the new decade begins.

Securitization clearly works for the biggest banks. Will it also work for the small bank? Is it logical to expect community banks to package, securitize, and sell auto loans or consumer loans? The answer will not be easy, but several reasons exist to suggest that it is not impossible.

First, banks of all sizes have figured out how to package and sell the most cumbersome loan instrument on their books – the residential mortgage loan. It was not a desire to enter the securities business, or to feed a creative urge that prompted small banks to develop this capability.

Small banks wanting to make mortgage loans found that they needed to develop this capability or curtail their mortgage lending.

Necessity for Smaller Banks

Should changes in deposit gathering occur in the manner we have described, securitization of loans will become a necessity for smaller banks. That necessity could generate multiple bank participation in loan securitization.

The correspondent-banking network, which has long provided the means to bring big-bank solutions to small-bank problems, would be a logical vehicle for implementing this process.

One more benefit to small banks for Glass-Steagall repeal is that it would benefit the largest banks. This has not been an historic priority of the smaller banks, of course. But the major money-center banks, unable to meet the competitive pricing available through issuing commercial paper, have aggressively pursued all forms of consumer loans that they previously had left for the community banks. By allowing the largest banks to compete with full effect against the securities houses, some of the competitive consumer loan pressure felt by community banks may abate.

Here We Go Again

Few congressional observers believe that a major banking bill will emerge in the second half of the 101st Congress. The effort required to produce the reform act has diminished congressional interest in any banking bill.

Hearings already have been promised for further deregulation. The debate on community bank benefits from Glass-Steagall repeal will again be heard. Hopefully, Congress will respond before the marketplace makes such action irrelevant. □

Credit Lyonnais Seeks to Snare a Wall Street 'King' for Its LBO Unit

By STEVEN LIPIN

Seeking to capitalize on opportunities in busted leveraged buyouts, the investment banking arm of Credit Lyonnais, is looking to start a leveraged buyout fund that is expected to emphasize restructurings and workouts, a source close to the bank said.

CL Global Partners Securities Corp. is in discussions with Leon Black, formerly cohead of investment banking at Drexel Burnham Lambert and one of the top mergers specialists on Wall Street, to run the fund, the source said.

A senior official from CL Global Partners said, however, that it was "premature to speak of it" and said nothing has been signed yet. "We have not yet reached an agreement," this official said. Mr. Black could not be reached for comment.

It is unclear whether the fund would be strictly a workout fund or a leveraged buyout fund that would also take equity stakes in overleveraged companies.

Mr. Black, one of the last Drexel stars who had yet to resurface after the junk-bond firm filed for bankruptcy, would be managing an $800 million buyout fund, half of which reportedly will be supplied by Credit Lyonnais, the source said. The remaining $400 million will be raised from institutional investors, the source added.

Credit Lyonnais, France's third-largest bank, has been an active player in the U.S. market in recent years, particularly leveraged lending. The bank was ranked 10th in foreign lenders to U.S. corporations for the year ending June 30, 1989, with 88 deals under its belt, according to Loan Pricing Corp.

The investment banking subsidiary is involved in cross-border advisory work as well as securities trading and sales.

A number of investment and commercial banks have targeted workouts and restructurings as business opportunities for the 1990s that would clean up companies overleveraged from the LBO boom of the 1980s.

J.P. Morgan & Co. and Chemical Banking Corp. are known to be concentrating resources in restructurings. And at least one buyout firm – Forstmann Little & Co., a sharp critic of junk bonds – is putting together a fund to invest in overleveraged companies.

"It's all the rage," one banker said.

Very few foreign banks have set up buyout funds, bankers said. Among U.S. commercial banks, most of the money-centers have capital to invest in equity stakes, including Bankers Trust New York Corp., Continental Bank Corp., First Chicago Corp., Manufacturers Hanover Corp., and Chase Manhattan Corp.

Raising capital and committing resources throws the French bank into merchant banking in a difficult time.

The value of announced leveraged buyouts in the U.S. plummeted to $7.6 billion this year from $40.9 billion through the first half of 1989, according to Securities Data Co.

And the market is being dominated by Forstmann Little because of its ability to fund both the equity and subordinated debt layers, observers said. The firm recently announced plans to acquire General Instrument Corp. in a $1.6 billion buyout, which would be one of the largest deals this year.

Many buyout funds have not been able to commit capital because of the tough environment for financing leveraged deals. Rough estimates suggest that there is upward of $20 billion to $30 billion available on the sidelines for leveraged buyouts.

Those deals that are being done have equity levels of 40% or more, such as Wasserstein Perella & Co.'s $300 million acquisition of Maybelline, which had over 50% equity in the deal.

Mr. Black is a veteran of the takeover wars of the 1980s and was involved in virtually all of Drexel's big deals, including RJR Nabisco, Beatrice Cos., and Jim Walter Corp.

"He was their king," one investment banker noted.

Mr. Black received attention when Drexel's bankruptcy filing disclosed that he received a $15 million bonus for 1989 amidst a liquidity crisis at the firm.

Few Drexel stars have had problems landing jobs on Wall Street or at commercial banks. Arthur Kirsch, formerly a top equities executive at Drexel, is now chief executive officer of Natwest Securities. G. Christian Anderson, a top Drexel banker, was hired by PaineWebber Inc. as a vice chairman.

National Westminster Bank USA; Smith Barney, Harris Upham & Co.; Donaldson, Lufkin & Jenrette; and Jefferies & Co. all hired a number of Drexel professionals.

Dresdner Bank Maintains Tough Stance on Trump

Dresdner Bank balked at joining more than 80 banks in the Trump bailout, saying that because, unlike other banks, it asked for the future buyout of its loan under certain circumstances, banking sources close to the negotiations said.

Dresdner's demand for the buyout went a step further than the Chase Manhattan Bank banks in the syndicate led by Chase Manhattan Bank which holds a $75 million first mortgage on the Trump Tower. Each of the five banks holds a $15 million portion of the loan.

As a condition to agreeing to the credit pact for Mr. Trump, Dresdner and the other banks had demanded assurances from Chase that holders of the first mortgage on the Trump Tower would have undisputed control over subordinated lien holders on the future sale or refinancing of the property.

Buyout Scenario Unclear

Only Dresdner asked for the provision requiring a possible buyout, the sources said. Dresdner officials declined to comment and it was not clear what circumstances would trigger the buyout it requested.

The other three foreign banks are Mitsubishi Bank, Dai-Ichi Kangyo Bank, and Sumitomo Bank.

The banks were concerned that, as part of the Trump credit pact, additional liens of $62.7 million were placed on the Trump Tower. The $62.7 million represents Trump loans – either unsecured or poorly collateralized – that are held or were agented by Chase, sources said.

One of the foreign bankers involved in the Trump Tower syndicate was concerned that the subordinated liens would be in a position to hold up a decision to sell the property fast.

Chase provided the assurances necessary to win over the three Japanese banks, but Dresdner still balked because Chase did not agree to its buyout option, according to sources.

The German bank demanded from Chase that it be "pro rata whole" under certain circumstances if its rights in the future as a first-mortgage holder became impaired, according to a source.

Dresdner is said to be concerned that in a bankruptcy court, other Trump creditors could hurt the ability of first-mortgage holders to realize the full value of their loans.

Demand Called Unreasonable

However, a bankruptcy expert at a bank without any exposure to the Trump loans suggested that the German bank was being unreasonable.

"If we shocked if Chase agreed" to Dresdner's demand, the bankruptcy expert said.

"It's tantamount to buying them out."

The Japanese banks accepted Chase's assurances in separate but similar agreements, and it is possible they could wind up opposing the final wording of the documents relating to the additional liens.

That could cause the entire Trump credit pact to unravel, but it is considered unlikely.

Chase and the four foreign banks each hold 20% of the $75 million first mortgage. The original covenants provide that only 51% of the holders are needed to approve additional liens on the property.

Thus, even without Dresdner, Chase had 82% approval of the additional liens. Another foreign bank could deflect without inserting its credit pact.

Under the credit pact, Mr. Trump's principal banks provided a $250 million bridge loan and agreed to a $65 million, five-year loan. The banks also agreed to defer interest payment on some $850 million of Mr. Trump's existing $2 billion of bank debt.

— William Goodwin

Scottish Bank Still Plans a U.S. Takeover

By JULES STEWART

EDINBURGH — The Royal Bank of Scotland plans to go ahead with its $149 million acquisition of a thrift holding company in New England despite market conditions that it might back out of the deal.

"We are definitely going ahead on the deal, and there should be some news by August or September," said Sir Michael Herries, Royal Bank Group's chairman, of the agreement to acquire BankWorcester Corp. in Worcester, Mass.

The purchase agreement contained a clause that would permit Royal Bank to cancel its acquisition if BankWorcester's nonperforming loans exceeded certain levels. BankWorcester reported troubled assets exceeded those levels in the first quarter but said they did not endanger the deal.

Thrift to Make Purchase

The purchase will be made by Citizens Financial Group Inc., a Providence, R.I., thrift company that Royal Bank formed two years ago for $440 million. The decline in the New England economy, particularly in real estate, has not deterred the Scottish institution from planning expansion.

Citizens made a $38.2 million contribution to group profits last year, and Sir Michael said he expects this to rise slowly.

He said U.S. ventures are the first stage in Royal Bank of Scotland's overseas growth strategy, which is taking shape as the European Community prepares for a unified financial market in 1992.

"The second stage was Europe," he said. "We realize that if you want to remain in the big league, you have to be an international financial services group."

Buying into Development

Sir Michael said a 1988 agreement with Banco Santander in Spain, in which each bank purchased shares in the other, was essentially an investment in long-term development. Since forming the alliance, the banks have set up a banking operation in Gibraltar and bought an interest in Portugal's Banco de Comercio e Industria.

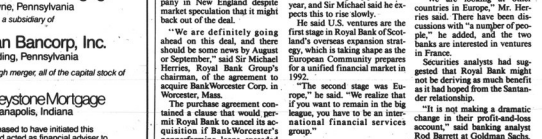
Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 75 largest publicly traded thrifts as measured by the market value of all common shares outstanding. As of March 30, 1990, the market value itself for banks was $68.6 mil. and for thrifts $121.45 mil.; $2 Wk Hi Lo: the moving 52-week high and low prices for the stock; PE: the price-earnings ratio. It is the current stock price divided by the trailing four-quarter earnings per share adjusted for items extraordinary to S&L, to book; the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Book value is adjusted for announced earnings and dividends. Dis: The price at which the stock was last traded. If no trades for the day, the bid price is listed; Net Chng: Change in weighted average of the top 250 banks in market value from the previous day. 50-50: a market value weighted index of banks and thrifts; Commercial banks and thrifts are listed in one alphabetical order. Bank holding companies are listed under their holding company name. Footnotes: pf: preferred; wt: warrants; wi: when issued; xd: ex-dividend; xr: ex-rights; xw: without warrants; z: sales in full; NM: not meaningful; NA: not available; ---: no trades.

Data sources: SNL Securities, Charlottesville, Va., 804/977-1600, publishes the tables. Financial News Network, Vienna, Va., provides SNL with the daily prices.

Libor Swap Yield Curve — Wednesday, July 5, 1990



Data source: Manufacturers Hanover Trust Co., New York

Description of table: For lenders and borrowers in the interest rate swap market, the LIBOR swap yield curve is the benchmark interest rate used to derive particular swap rates. Engaging the exchange of fixed- and floating-rate cash flow streams of different maturities. For example, a fixed-rate lender holding a one-year fixed-rate loan and wishing to swap into floating would pay the one-year rate at the end of a year in exchange for a floating-rate payment stream, usually 3-month LIBOR, paid and reset quarterly.

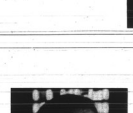
Shareholders Fight Rejection Of Merger Bid

Continued from *page 1*

holder, T. Rowe Price Associates. "We're just confounded by the behavior of the directors of the bank, and we've tried to communicate our concerns to them," said Brian Rogers, a portfolio manager at the large Baltimore money-management firm.

As owner of one million shares, equal to 7.8% of the shares outstanding, Mr. Rogers' company has written two letters to each director of Baltimore Bancorp, as well as its chairman, Harry L. Robinson, urging them to reconsider their rejection of the offer from First Maryland.

While Rogers and other shareholders stop short of accusing directors of shirking their fiduciary duty, one Philadelphia law firm has not. Greenfield & Chimicles, specialists in class action suits against banks, filed suit against Baltimore Bancorp in May, charging directors with breaching their fiduciary duties in rejecting the First Maryland bid.



Harry L. Robinson
Baltimore Bancorp

Stock Has Settled Back

The $17-a-share bid was made when the stock had been trading at $10.25. It jumped to $15 on the news and has settled back to $12.50 since then. A merger with First Maryland, the U.S. subsidiary of Allied Irish Banks PLC, would create a bank with assets of $10.8 billion, roughly half the size of the largest bank in the area, MNC Financial Corp.

Gerald B. Kracke Jr., senior vice president for marketing, said the bank's position had not changed since it rejected the offer on the ground that it was not in the long-term interests of shareholders.

First Maryland declined to comment.

Besides T. Rowe Price, shareholders that have written letters are Glenmede Trust Co. in Philadelphia, which owns 330,000 shares, or 2.6%, and Legg Mason Wood Walker Inc., Baltimore, which owns 585,000 shares, or 4.6%.

No Replies Received

William H. Miller 3d, president of the investment arm of Legg Mason, wrote a letter before the bid was rejected urging the bank to negotiate with First Maryland. He said he did not receive a reply. Officials from T. Rowe Price Associates and Glenmede Trust said they had not received replies either.

A source familiar with the situation said two other shareholders representing about 180,000 shares had also written.

Mr. Rogers of T. Rowe Price said his organization had sent two letters to the board and management, one immediately following the First Maryland bid in April urging the bank to seriously consider accepting the offer and a second on June 15 questioning the board's judgment in rejecting the offer.

John Church, chief investment officer at Glenmede Trust, said, "The stock has underperformed other bank stocks in its peer group fairly consistently and management has not lived up to its expectations.

"When they rejected the First Maryland offer, they said, 'We think we can do better. Our view is, 'Why do they think they can do it now when they haven't been able to do it in the past.'"

Glenmede Under Water

Glenmede's average cost is $19 a share. It has owned the stake since 1986.

Mr. Kracke of Baltimore Bancorp said, "Our objective has been to create value for shareholders over a longer period of time and we don't think that selling the bank at this time or especially at this price to be [in keeping with that objective].

The bank also said it was concerned about First Maryland's desire to look at its loan portfolio without guaranteeing it would go through with the deal. First Maryland is a competitor and could use the information to put it out of business, bank officials said.

Rodgin Cohen, a partner at Sullivan & Cromwell and one of the lawyers representing Baltimore Bancorp in the deal, said, "The bank has to consider all the investors. Just because a couple write in to say 'Do this' doesn't mean the bank has to change its position."

Defending the company's languishing stock price, he said, "Take any investor in bank stocks and look at their performance over the past five years and you'd find they have lost money. This isn't a good time to be an investor in bank stocks."

Bank Public Since 1985

Formerly a small savings bank called the Bank of Baltimore, the bank went public in 1985, changing its name to Baltimore Bancorp. Under Mr. Robinson, it embarked on a dramatic expansion plan that doubled the holding company's size to $3.5 billion. Mr. Robinson owns roughly 30,000 shares and has options for another 48,600.

However, shareholders and analysts say the effort so far has been unsuccessful. The stock has traded below its book value of $18,87 since late 1987. Despite reported 1989 earnings that were seven times 1988 levels, operating earnings for the year were flat. The bank's return on assets is 0.64%, well below the benchmark of 1%.

"It never had the ability to attract the demand deposits of a commercial bank," said one large shareholder who would not be quoted by name.

Shareholder Power Limited

Not everyone agrees that shareholders can force management to make a deal.

Referring to the Time-Warner merger that was upheld in court despite shareholder support for a Time-Paramount merger, Edward Herlihy, a partner at the law firm Wachtell, Lipton, Rosen & Katz, said, "The board gets to make the decision and shareholders are not necessarily entitled to participate."

He said not all bank mergers in the past have proved to be good for stockholders and some banks that have fought merger bids have turned out healthier in the long run. Specifically, he referred to BankAmerica Corp., which fought off a merger bid by First Interstate Bancorp in 1986, and has flourished.

Meanwhile, Moody's Investors Service Inc. said on Tuesday it had reviewed Baltimore Bancorp from a possible upgrade to "direction uncertain," citing the company's resistance to First Maryland as well as its "significant exposure" to the softening real estate markets in Maryland. The agency also reiterated that it might downgrade First Maryland if it acquires the relatively weaker Baltimore.

Baltimore Bancorp currently has a Ba1 senior debt rating, while First Maryland is rated A3 for senior debt and A3 for subordinated debt.

John Evans in London contributed to this story.

THURSDAY'S MARKET

Bank stocks tracked the overall market Thursday and fell sharply, with a number of issues losing between 3% and 6%. However, volume was thin, with the biggest losers not trading more than 80,000 shares by 3 p.m.

"There's just no volume so whether this is real, I don't know," said Michael Sadwick, an analyst at C.J. Lawrence, Morgan Grenfell Inc.

Mellon Bank Corp. led the losers, losing nearly 6%. It fell $1.25, to $24.25. NBD Bancorp, one of analysts' favorites, fell $1.125, to $30.875; First Interstate Bancorp fell $1.125, to $30.25, and Wells Fargo & Co. down $2, to $74.875.

Virginia banks, which were rekindled earlier this week on fears of deteriorating real estate in the area, had stabilized by 3 p.m. Crestar Financial Corp. was the exception, falling 75 cents, to $20.875. Sovran, which fell $2.125 Monday and Tuesday, was unchanged at $26.75. Dominion Bancshares rose 12.5 cents, to $13.125, and Signet Banking Corp. was unchanged.

Near the close, the Dow was off 30.44, to 2809.08.

Banks Retain Funding Mix Despite Expected Rate Drop

By KELLEY HOLLAND

Wary of adding interest rate risk to the list of problems they are grappling with, banks are sitting tight with their funding mixes despite widespread anticipation of a drop in interest rates.

President-Bush's call for "tax revenue increases" and broad concerns about slowing growth suggest that interest rates will soon ease. But the prospect of gaining a few basis points in net interest margin by shortening their funding is not enough to offset banks' desire for liquidity in today's skittish markets, according to bank treasurers and funding officers.

Banks worry that if they shorten their funding, they may not be able to renew it at attractive rates when it matures.

"In general, banks are staying liquid because of general market concerns over banks, the economy, and so on," said Brian W. Nocco, a vice president at Continental Bank Corp.

A Fall in Some Rates

Short-term rates have already started to come down on some bank funding instruments. The average rate for 30-day jumbo certificates of deposit dropped to 7.71% in June from 7.78% in April, for example. And economists think rates could drop further.

Furthermore, banks' median gain in net interest margin during quarters when interest rates are falling is 42 basis points, according to data provided by IDC Financial Publishing.

But, for several reasons, banks hesitate to position themselves to take advantage of the anticipated rate decline.

Concern Over Liquidity

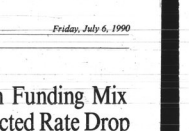
The most important reason is that many banks are nervous about frequent trips to the market in the current environment for bank securities. "We're going with the plan we set out with at the beginning of the year, and that is to continue to increase our liquidity," said a senior official at a money-center bank.

"I think most people are afraid to reduce liquidity right now," the official said. "To make a few basis points and to take this kind of risk, I don't think it's worth it."

Danger of Negative Carry

Secondly, any banks that do buck the trend could find themselves with negative carry. The overnight fed funds rate, around 8.25%, is higher than the 8.2% current rate on two-year Treasuries. Banks trying to shorten fund assets with yields between 8.2% and 8.25% would find themselves literally paying for that strategy.

The last time many banks tried to anticipate a rate decline was in spring 1989. As more and more economists became convinced rates would fall, a number of banks shortened their liabilities relative to their assets.



"In general, banks are staying liquid."

Brian W. Nocco
Continental Bank

Much to their chagrin, though, the yield curve inverted, so banks with long-term assets and short-term funding found themselves with negative carry.

Fed's Course Uncertain

Third, the Federal Reserve Bank is continuing to demonstrate concern about inflation, even though a number of economic indicators are pointing to a slowdown in growth. Some bank funding officers worry that a decline in rates may not in fact be imminent despite widespread expectations of Fed easing.

Chairman Alan Greenspan could decide that short-term rates do not yet need to be lowered, according to a funding manager at one regional bank.

"Inflation is still a big deal for the Fed, and inflation isn't coming down," he pointed out.

Court Rulings On Seizures Rock the FDIC

By STEVE KLINKERMAN

DALLAS — The Federal Deposit Insurance Corp. is reeling from a series of recent court decisions that found it had abused its authority in provoking the failures of dozens of Texas banks.

The FDIC does not deny that in its zeal to lower the cost of several big Texas rescues it deliberately caused the failure of about 60 relatively small subsidiaries of First RepublicBank Corp., MCorp, and Texas American Bancshares.

The FDIC then sold the banks — they had been healthy, unlike those in typical FDIC actions — and pocketed the proceeds to offset the costs of the failures of those companies' larger banks.

In so doing so, the FDIC relied on highly liberal interpretations of law.

Now it can be penalized.

Time after time, federal judges in district and bankruptcy courts have condemned the FDIC for exceeding its authority and violating federal laws. If it loses on appeal, the agency could be forced to pay more than $500 million of restitution.

The Rulings' Meaning

The message is clear: The law, says say, is that the FDIC must obey federal laws – even the frustrating ones – until Congress sees fit to change them.

"If the law prevents the regulators from doing what they want, then they have to go back to Congress" for authorization, said Thomas Brooks, a former FDIC general counsel. "Otherwise, you have the potential for egregious actions on the part of regulators who overstep their bounds."

Moral Justification Seen

Though the FDIC has fared poorly in the courts, observers generally agree that the agency has moral justification for the way it dealt with the Texas crises.

The big Texas banking companies got in trouble by funneling deposits from suburban affiliates to their bigger downtown banks, such as MBank Dallas, which used the funds to make high-risk loans. When the city banks failed, the holding companies sought to hold on to the solvent suburban banks.

The FDIC went ahead and confiscated the suburban units, and that is where it ran into

The Rising Cost of Regulation
How a proposed change in the Comptroller's assessment method would affect national banks of various sizes

Source: Office of the Comptroller of the Currency

Comptroller Planning to Boost Assessments by 8% Next Year

By BILL ATKINSON

WASHINGTON — With its cost rising faster than projected revenues, the Office of the Comptroller of the Currency is planning to increase its assessments on national banks next year by 8%.

The assessments – which are calculated according to a bank's total assets – are the national bank regulator's primary source of revenue. The 8% across-the-board increase, along with increases in examination fees and other levies, would take effect next January after a period of public comment.

Deficit Looms in 1991

The Comptroller said the increase is necessary to avert an operating deficit in 1991

Krause Tapped for Policy Role

By ROBERT M. GARSSON

WASHINGTON — Susan F. Krause has been named senior deputy comptroller for bank supervision policy, a position that puts her squarely in the middle of the debate over whether national bank examination standards have become too harsh.

The 39-year-old economist succeeds Robert J. Herrmann, who will move to Chicago on July 23 to become deputy comptroller of the Central District.

Defends Agency's Policy

In an interview on Friday, shortly after her appointment was announced by Comptroller of the Currency Robert L. Clarke, Ms. Krause defended the agency that has been accused of touching off a credit crunch in some regions, particularly the Northeast.

UAL Buyout Moves Ahead With 5 Banks As Coagents

By STEVEN LIPIN
and WILLIAM GOODWIN

In the strongest indication yet that UAL Corp.'s leveraged buyout is on track, five U.S. money-center banks have agreed to serve as coagents for the $4.4 billion proposed bid, bankers in the deal confirmed.

A source close to the union-led buyout said each bank has "pledged" about $500 million, but that could not be confirmed by the agent banks by press time.

The five coagents are the banking units of Chase Manhattan Corp., Chemical Banking Corp., Citicorp, Manufacturers Hanover Corp., and Bankers Trust New York Corp., a source at one of the banks confirmed.

Litmus Test for LBOs

The UAL buyout is considered an important bellwether of interest by banks in leveraged-buyout lending. Last October, the failure of UAL's management to arrange bank financing for a buyout sent a signal that the easy-money days of leveraged buyouts had come to an end.

A banker at one of the five banks described the developments as "a way to observe but early-stage indication of serious interest" by the quintet of lenders.

Completion of the financing by the Aug. 9 deadline, however, would still hinge on the participation of a bevy of other banks in the financing. It is estimated that the buyout group, United Employee Acquisition Corp., was initially looking for about

Kemper Will Get to Test Skills at Great American

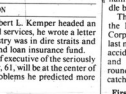
By TERESA CARSON

LOS ANGELES — In 1987, when Robert L. Kemper headed an influential think tank dealing in financial services, he wrote a letter to Congress warning that the thrift industry was in dire straits and urging a recapitalization of the savings and loan insurance fund.

As the newly named chairman and chief executive of the seriously ailing Great American Bank, Mr. Kemper, 61, will be at the center of the storm, struggling to deal with the problems he predicted more than three years ago.

Mr. Kemper replaces Gordon C. Luce, 65, who announced at the annual stockholders' meeting in May that he planned to retire as soon as a successor was found.

Trained as an accountant, Mr. Kemper will need to marshal all his financial skills at San Diego-based Great American. The thrift's capital plan, which was approved by regulators, calls for the $15.4 billion-asset institution to raise $350 million in new capital by yearend or face seizure by the government. Great American is trying to sell parts of its 213 branch network or find a merger partner.



Robert L. Kemper

Mr. Kemper spent 27 years at Wells Fargo & Co., eventually becoming vice chairman and a member of the board.

After being passed over as chairman, he resigned from Wells Fargo in 1983 to become president of Bankwire, a now defunct moneytransfer network. He was later named director of the National Center on Financial Services at the University of California at Berkeley.

'He Is a Solid Guy'

Mr. Kemper is also a former president of the California Bankers Association, former chairman of the Western States Bankcard Association, and former president of the Bank Administration Institute.

"He is a solid guy. I'm sure he understands the challenges he has taken on," says Frank N. Newman, vice chairman and chief financial officer at BankAmerica Corp. in San Francisco.

Mr. Kemper admits he has never had to turn a company around but says he has the skills needed to do the job. "I have lots of experience in mergers and acquisitions," with the necessity of trimming costs and restructuring, Mr. Kemper says. He also notes that he has been involved in raising capital.

Mr. Luce was chief executive of Great American for 21 years. Under his leadership it expanded from a four-office thrift with less than $300 million in assets to a multistate institution with branches in Arizona, Colorado, Montana, and Washington.

Mr. Luce's decision to enter Arizona by buying the $2.4 billion-asset Hohne Federal Savings and Loan, Tucson, in 1986 brought on most of Great American's problems.

Some analysts predicted that Great American would have difficulty filling this job because of the likelihood that the thrift would be seized. Mr. Kemper and Great American executives declined to discuss the terms of his employment, but other executives in similar circumstances have extracted rich contracts.

Mr. Kemper says he is in for the long haul at Great American. "I'm not here for a week or two. I hope to help Great American out of its difficulties and run it until I'm ready to retire." □

Seidman Returns to FDIC Corral

Chairman Upbeat as Ever after Serious Riding Accident

By BILL ATKINSON

WASHINGTON — L. William Seidman is back in the saddle but not out on the range.

The 69-year-old chairman of the Federal Deposit Insurance Corp., who separated his pelvis last month in a horseback-riding accident, was in Washington and behind his desk Friday, rounding up loose papers and catching up on work.

First Post-Hospital Interview

In his first interview since he was released from the hospital, Mr. Seidman was upbeat and feisty, as usual.

"I feel good, I just get tired a little more quickly," he said. "I'm on crutches, and my main problem now is, I have lost a lot of blood. I'm a doctor, my wife decided she likes my new personality."

Indeed, Mr. Seidman has plenty of work to do. In addition to heading the FDIC, he is chairman of the Resolution Trust Corp., overseeing the sale and liquidation of seized thrifts.

Mr. Seidman's accident at Wagon Mound, his New Mexico ranch, sparked rumors that he may retire sooner than expected. Last spring, he said he wanted to cut his term short and resign, but he never set a date. It was anticipated that he would bow out this summer or fall.

2d-Quarter Goal Reached

One goal he said he would accomplish before retiring was to sell or close 141 troubled thrift institutions in the second quarter. The agency surpassed that total, but in the interview, Mr. Seidman said he has had little time to think about retiring.

"I was mainly thinking about trying not to expire," he said. "I had 16 tubes in me, and I lost about 40% of my blood."

Mr. Seidman was in Wyoming and New Mexico last month speaking before bankers and a management conference sponsored by the FDIC's division of liquidation. On June 20, he went to his ranch for a cattle roundup with his daughter, Tracy, who runs the ranch. Mr. Seidman was riding his favorite horse, a gelding named Primero, when the rough ride started.

"Maybe he was getting even. He has never bucked before," Mr. Seidman said of the horse. He said his daughter later checked Primero and found a bug on it, which could have stung or bitten the horse.

Putting on a Display

"All of a sudden, he started bucking," the FDIC chairman recalled. "He put on a pretty great display. By the third time he went up, he was flabtailing. At that point, you either stay on it and lose your head, or you can bail out.

"I got set to jump off him, and in doing so, I caught my left leg in the stirrup, and that tore apart. I think what's called the pubic bone," Mr. Seidman said. "I was sort of in shock. I got up and walked to the car. I was a couple of hours from the hospital."

Mr. Seidman said a volunteer ambulance took him to St. Vincent Hospital in Santa Fe, where he was monitored and underwent surgery that night.

He expects to be at full strength in a matter of weeks, Mr. Seidman said. Next week, he will attend an FDIC board meeting, and he also expects to testify on Capitol Hill. □

Pressure on Fed By White House Draws Criticism

By ROBERT TRIGAUX

WASHINGTON — Economists are saying an interest-rate easing by the Federal Reserve, while not imminent, is only a matter of time. But they warned late last week that recent White House snubs over lower rates could prompt the Fed to delay such a move.

Fed watchers, trying to assess the secret July 2-3 meeting of the Fed's Open Market Committee, said no sign had emerged of an easing. But many agreed in principle that the committee may soon shift from a "neutral" stand on rates – in which it is inclined neither to ease nor to tighten monetary policy – to a "bias" toward easing rates.

See **PRESSURE** *page 9*

Corrections

The headline on a June 27 article ("Banc One's System Turns Frail Thrifts into Winners," page 26) was misleading. Only three of the 18 acquisitions shown in the accompanying table were of thrifts; the rest were of banking companies.

■

The July 5 Analysis ("Economist Says 'Insolvent' FDIC Is Covering Up," page 1) incorrectly stated that all three researchers hired by a House Banking subcommittee to study the health of the Federal Deposit Insurance Corp. had concluded the FDIC is probably insolvent.

Two of the three economists, Dan Brumbaugh and Robert Litan, have reached that conclusion based on previous review of public data.

But the third, James Barth, finance professor at Auburn University, indicates he has not yet drawn any conclusions from the study, slated for completion in the fall.

Loan-Loss Provision Helps Put Security in the Red

VINELAND, N.J. – Security Investments Group Inc., the holding company for Security Savings Bank announced Friday that additions to its provisions for loan losses and valuation allowances for certain real estate assets are expected to result in an operating loss in the quarter ended June 30, 1990.

The company said it expected to provide about $3.6 million for reserves and writedowns of other real estate in its second quarter 1990.

Pittsburgh Gas Co. Offers An Automatic Debit Plan

PITTSBURGH — Equitable Gas said it is offering an automatic bill-payment service called Soap, for Simple No-fuss Automatic Payment. Customers can avoid writing checks or paying gas bills in person by authorizing direct debits of their bank accounts. The funds are then transmitted electronically to Equitable via the automated clearing house.

Mellon Bank will process the transactions for Equitable Gas. Mellon was the fifth-largest originator of ACH debit transactions last year.

First American Completes Holding-Company Plan

CANTON, Ohio — First American Savings Bank said it completed the previously announced formation of its holding company, First American Bancorp, effective June 30.

First American Savings became a wholly owned subsidiary of First American Bancorp, and First American Savings shareholders automatically became shareholders of First American Bancorp on a one-for-one basis. — **Reuters**

New Data Format Could Help Cut Check Handling

By JEANNE IIDA

NEW YORK — The National Automated Clearing House Association and other organizations are taking steps to lower the cost and improve the reliability of check truncation, in which a paper check is stopped at a collecting bank.

A small but vocal minority of bankers advocate the practice, also known as check safekeeping. Now the clearing house and other groups are trying to encourage more banks to truncate checks as a way to cut checkhandling costs.

When a check is stopped at a collecting bank or its agent, the payment is turned into an electronic message and cleared through the automated clearing house system.

New Standard to Be Developed

The National Automated Clearing House Association (Nacha) and the National Association for Check Safekeeping (NACS) have just started work to develop a standard for check truncation that would allow twice as many checks to be sent in a single ACH record as now permitted.

The new format will be tested early next year, and Nacha is working with the Federal Reserve to find participants.

The Federal Reserve Bank charges 1 cent to 1.5 cents for each ACH record sent by a bank, but it does not charge for check processing.

"This is not really a technical problem," said Elliott McEntee, president of Nacha. "It's a matter of deciding on the format and then getting the Fed to make the software changes."

L.L. Head Promotions and Fulfillment, a market research company based in Grand Rapids, Minn., and Itasca State Bank, also based in Grand Rapids, have agreed to participate.

Nacha said the modified format should be available commercially in 1991 for personal and corporate checks, money orders, and travelers checks.

Arizona Program

Separately, the Arizona Automated Clearing House plans to start a program in the next few months truncating checks deposited in the state's banks through the Arizona ACH system.

Mr. McEntee said no figures

New standard for check truncation would allow twice as many checks to be sent in a single ACH record.

are available for the number of checks that are now truncated or kept at the collecting bank. Other experts said the number could be as low as one million.

50 Billion Checks a Year

Of the 50 billion checks written annually in the United States, about five billion are kept at the bank rather than being returned to customers. Many of those kept at the bank are not truncated; rather, the bank on which they are written retains them as a customer service.

Of the five billion checks not returned, between one billion and two billion are corporate checks, Mr. McEntee said.

Present rules established by NACS permit truncation of corporate checks only. By yearend the rules will be changed to let consumer checks be truncated. □

New Uses for Laptops Proliferate

Tiny Machines Speed Mortgages, Pep Up Meetings

By KAREN GULLO

NEW YORK — When bankers leave the office to call on customers, more and more are taking portable personal computers with them to stay productive on the road and put some dazzle into their sales presentations.

Most banks are equipping salespeople, consultants, and auditors in their corporate banking groups with small, lightweight computers, which are usually battery powered.

But some banks are also finding uses for portables outside the corporate banking area. A handful of institutions are using portables in real estate lending units to speed mortgage qualification and application processing.

The banks are storing mortgage product and pricing information on the portables and incorporating them with communications capabilities so they can dial up credit bureau data bases and access credit reports for near-instant approvals.

Banks Slow to Catch On

Many nonbank mortgage companies began using portables a few years ago, but banks are just starting to. "It's an emerging area for banks," said Doug Gallagher, president of Gallagher Financial Systems Inc., Coral Gables, Fla.

Earlier this year, BancBoston Mortgage Corp., Jacksonville, Fla., a subsidiary of First National Bank of Boston, began requiring its 125 loan officers to use Toshiba laptop computers. Improved productivity and better customer service are the biggest advantages, say company executives.

"We find that it reduces the traditional ratio of processor to originators, allowing the originator to do more up-front processing in the field," said Stephen B. Matheson, vice chairman and chief financial officer at BancBoston.

"They allow us to respond quickly to customers and also provide very attractive and professional presentations."

Banking Goes On Location

BancBoston officers typically take the computers with them to client meetings at real estate brokers' and builders' offices, where they type customer information into the computer. A small printer attached to the machine can produce application forms and letters. The system is also equipped with a modem, which transmits information from the portable to computers in the home office.

"When you have a single product environment, it becomes hard to justify brick-and-mortar expenses," said Mr. Matheson. "Having the laptop allows the officers to be in realtors' office and download information on products and prices through the telephone line."

Gallagher Financial Systems markets a software system for mortgage originations that runs on portables. The system can tap into credit bureau data bases, communicate with a computer in the home office, and produce forms.

Mr. Gallagher says about 150 mortgage companies use the system but only a handful of banks have acquired it. That may be because of the expense. Hardware and software can cost $6,000 to $7,500 a unit, at least as much as for a desktop computer.

"They aren't cheap, but the morale boost it gives our staff is worth it," said Don A. Resler, vice president and head of the treasury management consulting group at Continental Bank, Chicago.

Continental, which has been using portables in some capacity for three years, purchased more from Compaq Computer Corp. in January for its treasury automation and cash management consultants and salespeople.

The computers have "changed the way we do consulting," Mr. Resler said.

Not only do the portables allow consultants to work on proposals in their hotel rooms at night and exchange electronic mail messages with colleagues in the office, but they add finesse to sales presentations. The portables can run spreadsheet and word processing programs, allowing consultants to revise and recalculate figures in a sales proposal on the spot.

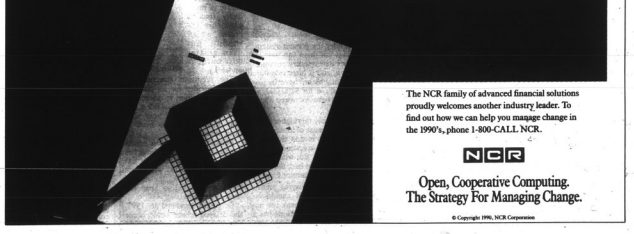
"It makes for a much more professional discussion and relieves anxiety on the loan[illegible] level," said Mr. Resler.

The portables also come in handy for demonstrations for bank products that run on personal computers. Salespeople in the trust and commercial banking units at the Northern Trust Co., Chicago, take portables along on sales calls to demonstrate how to dial into the bank's Mastertrust Client Services and use the bank's PC-based cash management products.

Advantages Outweigh Problems

While portables are relatively easy to use, getting the system's communications to work can sometimes be a problem. Usually a phone can be plugged right into most machines, but "sometimes it's not that simple," said Robert F. Schnitzer, vice president, corporate finance department, at Bankers Trust, New York.

"Sometimes phones are not touch tone, or a hotel doesn't have phones you can readily plug into," he said. □



COMMENT/ *By Paul Nadler*

The Party's Over: Analysis Is In, Hobnobbing Out

The bank credit crisis of 1990 is ample proof of the old saw "Schmidlap hasn't had 40 years' experience in banking, he has had one year's experience 40 times."

The corporate culture that is needed to survive and possibly thrive in today's lending environment appears to be quite different from that of years past, and those who have not adopted the new culture will cause trouble for their banks and themselves.

What about the nonperforming loans that are overwhelming banks today? Can they all be blamed on real estate problems and economic conditions that bankers feel they cannot control?

Obviously not. After all, the four Cs of credit include conditions, collateral, and capacity. Aren't these areas the banks should have thought of before they financed the overbuilding of commercial and residential facilities in the Northeast, Texas, and other areas?

Generation of Socializers

One can conclude that making loans was so easy for so long that banks developed a generation of lenders who were picked for their ability to socialize, make the right contacts, and generate relationships without tackling the hard job of analyzing the numbers.

Just as someone who wins on his first trip to the track thinks that the game is easy, and just as security analysts who started their careers at a time of rising stock prices think they have special savvy, many lending officers never have had to face tough times in their careers. When they finally did have to in 1990, they were unprepared.

In this regard, I was impressed by a comment made by Steve Panegko, head of commercial lending at L.J.B. Financial Corp. in New Jersey. Speaking of the credit crisis of the Northeast, he said, "About 70% of our staff of senior officers has been with us for at least 15 years since the last time we had credit problems. So they are prepared for what is happening."

Some Froze Up

One can compare this with the younger lenders at some banks who have been well trained academically and have been given decent credit training by their banks but who froze up when the loans they made started to go sour.

Having survived the baptism of fire in the mid-1970s is about as good a credential as a bank lender can have today. One can question once more the banks that have given early retirement to 55-year-old lenders so that younger people could move up, only to wish they had the perspective and experience of these older people on board in today's environment.

But there is more changing in the corporate culture than the new challenges and attitudes that lending officers are being forced to face. There is also the issue of what type of lending a bank should be doing.

Realtors, builders, and small businessmen are screaming at banks that have become so conservative they are not making the loans the nation needs to keep its economy strong.

Sharp bankers may answer that this is just not the case. The real issue, they often hold, is that these potential borrowers were given loans in the recent past that should not have been granted because of the poor prospects for sale of the structures and products being financed.

Thus what potential borrowers call super-conservatism the bankers call a return to reason. In other words, banks can no longer provide 100% of the needed funds, plus enough extra for the borrower to meet interest payments, until the property rises sufficiently in value to allow the loan to be repaid out of the capital appreciation.

Don't Count on Growth

The changes in corporate culture today also involve less stress on growth and more on basics. Growth was great when it gave employees new challenges and opportunities for promotion, and expanded the egos of top officers. Inflation slowly absorbed any overpayments for deposits and assets that growth entailed.

It is not difficult to see a correlation between growth in the 1980s and defaults in the 1990s in our financial sector.

So corporate culture is changing, and banks are likely to turn to healthier policies and goals as a result of the problems of today.

How long will this healthy change last? One would like to hope forever. More likely, the change will last just until today's lenders leave the scene and a new group comes in certain that they know and can handle situations that their predecessors were not smart enough or well trained enough to deal with. □

Mr. Nadler is professor of finance at Rutgers University's Graduate School of Management.

"SOUND OFF"

A senior official at the Federal Deposit Insurance Corp. said recently that the agency's Bank Insurance Fund could decline as much as $2 billion by the end of the year if real estate problems persist and any large banks fail. Industry observers fear that such a decline in the fund, which is already at the lowest point relative to total deposits in its 56-year history, would force banks to foot the bill for another increase in the FDIC premium. Louis Gerhardstein, who writes for Medill News Service, asked:

Q *How would additional insurance premiums affect the banking industry? Would the burden be bearable?*

■ **Peter S. Damon**
President/CEO
Bank of Newport
Newport, R.I.

This year, the premiums we pay to the FDIC will increase about 45% to $360,000, while our earnings will be about $1.6 million.

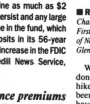
We could continue to absorb deposit insurance increases, but that would detract from our earnings.

I can't imagine the FDIC would increase premiums any more than necessary, as long as there is a segregation between traditionally insured FDIC banks and the so-called "safe" banks that came out of the Federal Savings and Loan Insurance Corp. mess.

Deposit insurance is extremely important to the stability of the banking structure and the public's confidence in us, and I don't see any alternatives if the increases are required.

■ **Charles E. Waterman**
Chairman/CEO
South Holland
Trust & Savings Bank
South Holland, Ill.

South Holland can cover any additional cost of premiums through our earnings, although I wouldn't be looking forward to it, and I don't think it would be warranted.



I don't like to see coverage so low, but the situation was well-anticipated because of real estate problems in the Southwest. The fund is tracking exactly as forecast by the ABA, so I don't think additional premiums are necessary.

■ **Richard G. Kelley**
Chairman/CEO
First National Bank
of New Jersey
Glen Rock

We have the capital, but we don't want to pay for another hike in the premium. We've been in business since 1899, and have never filed a claim.

This year, the cost of insurance we pay to the FDIC went up 50% to $3 million. I think we pay more than our share right now.

I'm in favor of risk-based premiums, because we've had abuses in the fund in the past. Under the present system, a savings and loan can pay 2% more in interest than a commercial bank, and drives investors in by telling them, "your deposits are insured for $100,000, so you don't have to worry about it."

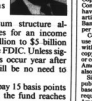
They can pay this higher interest partly because of looser regulation, which means that they can put their investments into riskier vehicles. But when those investments went bad, the S&Ls leaned on the insurance fund.

Banks that are paying premiums into the fund should be risk-rated. A good bank run according to the regulations has a lower risk and ought to pay lower rates. A bank that wants to take a risk and put a burden on the insurance fund should pay higher premiums.

In fact, I might take things one step further and allow only one deposit per person lifetime insurance of $100,000.

■ **Robert H. Dugger**
Chief Economist
American Bankers Association
Washington, D.C.

Most banks are well-positioned, and they certainly can afford the higher premiums. Some banks however, are not so well-positioned, and the effect on overall bank viability is important when considering an increase.



A delayed rebate is more likely than a premium increase, which would put even greater cost burdens on banks.

The premium structure already provides for an income flow of $4 billion to $5 billion per year to the FDIC. Unless significant losses occur year after year, there will be no need to raise the rate.

Banks will pay 15 basis points per year until the fund reaches 1.25% of insured accounts. At that point, the FDIC will rebate to individual banks the money that's not needed to keep the fund at that level.

Originally expected in 1997, the delayed rebate would occur sometime in 1998 or 1999. □

Court Rulings on Texas Seizures Leave the FDIC Reeling

Continued from *page 1*

trouble with the courts.

"It wasn't fair," James Sexton said in defense of the agency's actions.

Mr. Sexton, the former director of bank supervision for the FDIC, said, "For all intents and purposes, those suburban banks were branches. They helped fund the high-risk loans that made the big banks fail. And because of their complicity, they should have become the property of the FDIC."

At Texas American Bancshares, for example, the FDIC was found to have unfairly seized 12 solvent banks. The 12, along with many other banks not owned by Texas American, had lent cash to the company's 12 failing banks.

FDIC Prevented Repayment

After the failing units were seized, the FDIC prevented them from repaying loans that the 12 solvent units had made to them. Denied repayment, the 12 solvent units then failed.

The decision on these loans contrasts with FDIC approval for full repayment of loans made by banks outside the Texas American system.

> **"The facts of this case indicate an . . . egregious use of the FDIC's extensive powers."**
>
> **Judge Robert Sanders**

The FDIC used the same tactic on affiliate loans at First Republicbank Corp., Dallas. All told, roughly 60 solvent banks failed because the FDIC withheld funds owed to them by seized affiliates.

Termed a Conscious Violation

Not only did the FDIC break the law by discriminating among creditors of failed Texas banks, but the agency apparently knew all along that it was acting illegally, lawyers say. In 1978, First Empire Bank won a decision against the FDIC over this very issue.

The First Empire decision, as cited by U.S. District Judge Robert Porter when he upheld an MCorp claim against the FDIC, held that Congress never intended "to have the fiscal integrity of the bank insurance fund outweigh the policy of equitable and ratable payment of creditors."

1978 Case Cited

U.S. District Judge Robert Sanders, in upholding Texas American's claim against the FDIC, also referred to First Empire. "The facts of this case indicate an equally egregious use of the FDIC's extensive powers," he said. "The seizure and sale of solvent banks through arbitrary devaluation of their assets in another bank cannot be fair."

Congress is sympathetic to the FDIC's plight. In crafting the 1989 thrift-reform bill, lawmakers inserted a cross-guarantee provision that empowers the FDIC to seize healthy banks to offset the cost of rescuing failed affiliates. Thus, the FDIC will not again act as it did in the Texas situations, which predated that legislative change.

Present Actions Challenged

But the FDIC still has not shaken its proclivity to act beyond the scope of its authority, lawyers say.

They point to recent efforts by the FDIC-managed Resolution Trust Corp. to make the former owners of failed thrifts comply with capital-maintenance agreements obtained by the defunct Federal Home Loan Bank Board. The FDIC also recently tried to establish itself as the priority claimant and litigant in any bankruptcy proceeding of a failed bank.

Federal judges blocked both attempts.

> **"The FDIC wraps itself in a flag as a protector of the public welfare, thinking that stance is enough to justify anything it wants to do."**
>
> **Howard Cayne**
> *Arnold & Porter*

"The FDIC wraps itself in a flag as a protector of the public welfare, thinking that stance is enough to justify anything it wants to do," said Howard Cayne, a lawyer with Arnold & Porter. "But the agency can't be so obsessed with its mandate as to ignore the rights of affected parties."

Indeed, that is the position being adopted fairly regularly by federal judges. And the judges are making it clear that they won't help the FDIC by making shaky liberal rulings that have the effect of circumventing the intent and authority of Congress.

"The FDIC should take all feasible measures authorized in the Federal Deposit Insurance Act to maximize recovery to the fund," said Walter Hoffman, senior district judge in the U.S. Court of Appeals for the 11th Circuit in Florida. "We cannot, however, approve of judicial expansion of the express powers and rights granted to the FDIC by Congress." □

Institutions Step Up to Aid Victims of California Fire

Continued from *page 1*

home-loan payments. Bank of America and Security Pacific National Bank are providing loans with lower than normal interest rates. Home Savings of America, meanwhile, is pressing its recovery team into action.

The late June fires devastated some areas of parched Southern California. They destroyed 400-plus homes in Santa Barbara, 45 in Glendale, and additional homes elsewhere, with damage estimated in excess of $500 million.

Bankers said homeowners find themselves in a financial bind because insurance payments or disaster relief funds can take months to arrange – and the families need cash now.

A few fire victims face much bleaker prospects because they did not carry enough insurance. Some homeowners had neglected to step up their coverage to keep pace with dramatic jumps in California housing prices.

Bankers said it is too early to tell whether they will sustain loan losses because of the fires. Although the personal costs of the tragedy are high, the number of homes destroyed is small compared with the size of their portfolios, the bankers said.

Bankers also said it is too early to estimate how many customers will take advantage of special loan rates and other aid programs. "We found that after the recent San Francisco earthquake we got the most calls about a month afterward," said Patricia Kenny, vice president for retail lending at Security Pacific National Bank, Los Angeles. "That is when people had dealt with their insurance companies and the [government] agencies and decided how they wanted to repair or rebuild."

> **"These people are in shock – and often the policy was destroyed in the disaster."**
>
> **Maureen Maginn**
> *Home Savings of America*

Home Savings of America, Los Angeles, has perhaps the most elaborate aid program. It is fielding a disaster team created in 1987 for the Whittier, Calif., earthquake. The team also worked on relief efforts in the aftermath of Hurricane Hugo and the San Francisco earthquake.

Disaster Team Mobilized

The team's first action is to define the affected area, using information from the media and its local branches. In 24 to 48 hours, the team has a listing of all the thrift's customers in the affected area.

"We then contact the branches and ask them to ask the customers to call our 800 number," said Maureen Maginn, vice president. "We fax our lists to the branches and ask them for drive-by inspections."

Customers who call the 800 number get a disaster specialist at the thrift's Pasadena service center. Home Savings representatives have been specially trained to be sensitive to customers whose lives have been uprooted, said John Davidson, senior vice president. Kits are mailed to customers with brochures from relief agencies and the bank.

Help for People in Shock

Home Savings executives said the biggest problem is that homeowners often do not know who their insurance company is or how to contact it. "We have that information and help them out," said Ms. Maginn. "These people are in shock – and often the policy was destroyed in the disaster."

Security Pacific is offering emergency 90-day loans to qualified residents of the fire-ravaged areas. It is also offering personal unsecured loans of up to $20,000 or secured real estate loans of up to $100,000 at 9.5% interest, with no fees or closing costs. This compares with the bank's usual rate of 18.75% on an unsecured loan and 11.75% to 13.75% on secured loans. No payments on the emergency loans will be due until maturity.

Security Pacific promises to expedite credit card applications and requests for credit line increases. Furthermore, it is permitting early withdrawal from time accounts without penalty.

First Interstate Bank of California, Los Angeles, is offering to defer payments on all types of loans for 90 days for any customer affected by the fire.

People who lost their homes can get an immediate $5,000 unsecured line of credit. The First Interstate Bancorp unit is waiving fees and offering loans at two points below the prevailing interest rate. For now, that means a rate of 17% instead of 19%. First Interstate is also allowing early withdrawal of time deposits without penalty.

Special Fixed-Rate Loans

Bank of America, San Francisco, is allowing homeowners to borrow up to $25,000 for 90 days at a special fixed rate of 9.25% with no fees for points. The normal rate is 12.125%.

The BankAmerica Corp. unit will make personal loans for $1,000 to $5,000 at 12% with no points or fees, compared with the 21% generally charged. The bank is also working with customers who need extensions or revisions of their loans or higher credit limits. Customers burned out of their homes are being allowed to skip a payment on their credit cards. □

Card Groups Sue Telemarketers

MasterCard, Visa Say Scams Cost Them $4 Million

By ELLEN MEMMELAAR

NEW YORK — MasterCard and Visa have filed a multimillion-dollar lawsuit in what they say is the largest telemarketing fraud operation they have ever uncovered.

The lawsuit, unsealed on Thursday, names 10 individuals and 11 companies and alleges racketeering, fraud, trademark infringement, and interference with contractual relationships. The card associations are seeking $10 million in punitive damages and recovery of actual damages, estimated at $4 million.

MasterCard International and Visa International also want to ban the telemarketers from associating with them or using their accounts.

Consumers Lured with Freebies

According to the suit, consumers have been enticed by mailings that promise free cars, watches, and cash prizes. The consumers then call "boiler rooms" where salespeople use pressure tactics to persuade them to buy water purifiers, travel packages, and vitamins, the suit charges.

Such telemarketing operations often suggest that the program is affiliated with MasterCard or Visa, and the connection is used to obtain the callers' credit card numbers.

In some cases the caller is charged multiple times for the product and billed for products that were not purchased, according to the suit. Callers often don't receive the merchandise or it is not what was described over the phone, it also states.

Banks often refuse to set up accounts with telemarketing operations, fearing that customers will refuse to pay. So telemarketers turn to small businesses, which agree to process the sales drafts for a 6% commission.

These businesses file for bankruptcy protection when the banks try to collect on the fraudulent charges, and the banks lose significant amounts of money, said Richard Collier, director of security and fraud control at MasterCard International. "Banks are taking heavy hits."

Losses Sure to Grow

The lawsuit documents $4 million in losses for the card associations, said Daniel Bookin, a San Francisco lawyer representing them. But the losses are sure to be much larger, he said.

Telemarketing scams are responsible for $150 million to $200 million in annual losses at Visa and MasterCard. The Federal Trade Commission estimates that such frauds cost consumers $1 billion a year.

"It is a tremendous problem for the industry," Mr. Collier said. "We are attacking the issue forcefully."

The card associations' efforts to halt telemarketing fraud go well beyond the lawsuit, said Mr. Collier. Both associations are preparing statement stuffers on the subject and have developed seminars and videos for bank employees, he said.

Also, two bills are being debated in a subcommittee of the Senate's Commerce, Science, and Transportation Committee. The associations favor a bill introduced by subcommittee chairman, Sen. Richard Bryan, D-Nev., that would empower the FTC to pursue fraudulent telemarketers and would allow suits against them to brought in federal court. □

American Express Hastens to E. Germany

By YVETTE D. KANTROW

NEW YORK – Continuing to take advantage of the newly liberalized markets of Eastern Europe, American Express Travel Related Services Co. said it was making its charge cards and travelers checks available to consumers in the German Democratic Republic.

The New York-based financial services giant also said it will open travel service offices in East Berlin, Leipzig, and Dresden beginning this fall. American Express is striving to have a tangible presence in the region by yearend.

Its announcement represents the latest move by an American card company to seek new opportunities in the East bloc.

MasterCard International and Visa International recently signed agreements with banks in Eastern Europe to issue cards and enable merchants to accept them.

Toehold in the East

All three companies apparently have a toehold in Eastern Europe, as demonstrated by a recently released survey of consumer brand attitudes.

Landor Associates, a San Francisco-based image consulting firm, interviewed a cross section of 1,500 Eastern European consumers in April and May, asking them to rate their familiarity with 400 leading brand names. The sample was evenly distributed among consumers in the Soviet Union, Poland, and Hungary.

The average Eastern European in the study was familiar with only about 175 of the world's 400 top brand names. But the credit card brands were among the names recognized.

In Hungary, which is believed to be one of the most westernized of the Eastern European countries, the American Express brand name ranked 132, ahead of such U.S. corporate names as Time, Chrysler, and Du Pont. Visa ranked 161, while Eurocard – a charge card system affiliated with MasterCard – ranked 177.

American Express also fared well in the Soviet Union. Visa – which will begin to offer cards in the Soviet Union next year – did not make the Soviet list. Nor did MasterCard. □

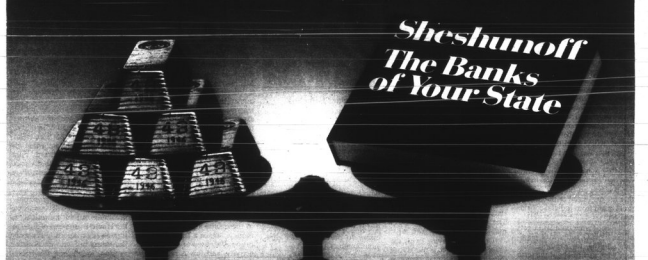
Trends Change. Standards Don't.

1-800-456-2340



Nowhere is this more true than in banking. At Sheshunoff, we've been tracking bank performance for the past 19 years. And as we watched the trends change, we set the standards you needed to evaluate them.

In 1974 we published the first Sheshunoff Bank State books. Carefully designed to be accurate and easy to use, these landmark books sparked a revolution in how the industry viewed itself.

Today, we still craft our State Books to be as accurate and useful as possible. Which is why they're still the industry standard.

We start with the very latest year-end data from the federal agencies. Run over 150 edit checks using our unique historical database of bank information. And when we find something that doesn't quite add up, we check it some more. Even if it means calling 75 to 100 banks every quarter.

Once we're satisfied that the data lives up to our standards for accuracy and timeliness, we start building our books. And trained experts check every page of every book at least three times.

Yet, remarkably, you can still get your detailed bank data and analysis days after the raw data is released by the federal agencies. Our people volunteer to work around the clock, weekdays, weekends, and holidays, to make sure you do.

The Banks of Your State 1990 will be available with 1989 year-end data soon. 16 sections of careful ratio analysis, historical data, and merger & combination information for every bank in your state. Complete with User Guides and the easy-to-use, comparable format that makes it simple to spot trends and set some standards of your own.

Please call 1-800-456-2340 to request yours.

Bankers Expect Some Relief from Sharp Sting of RICO

By LOUIS GERHARDSTEIN
Special to the American Banker

WASHINGTON — The banking industry, after years of being threatened in civil suits with triple damages under the Racketeer Influenced and Corrupt Organizations Act, now feels confident that current proposals in Congress will successfully narrow use of the RICO law.

One proposal, introduced by House Judiciary Subcommittee Chairman William J. Hughes, D-N.J., and members William McCollum, R-Fla., and Rick Boucher, D-Va., is now before the full Judiciary Committee. The Senate already has passed its own RICO revision bill.

The original 1970 RICO law awarded triple damages for fraud in racketeering cases involving organized crime. But the law was so broadly applied that organized crime link almost faded from judicial consideration.

Banks became popular targets of civil RICO suits, with plaintiffs alleging, for example, that they were misled about the term "prime rate."

'Gatekeeper' Concept

The Hughes proposal hinges on a "gatekeeper" provision, which relies on federal judges to dismiss civil RICO suits that do not meet a standard of "egregious criminal conduct." The provision would reduce sharply the number of plaintiffs qualified to receive tripledamages.

"It will discourage and weed out frivolous lawsuits against banks," said John K. Villa, partner with the law firm of Williams & Connolly.

"There is an overwhelming consensus in Congress that RICO needs to be reformed," said Barry Direnfeld, a partner with the Washington law firm of Swidler & Berlin and counsel to the Business Coalition for RICO Reform, which worked with the subcommittee to draft the legislation.

Rate Squabbles

Confusion about the prime rate did exist, for example, but bankers argued that such cases did not belong in federal court and should not qualify for triple damages.

The Supreme Court ruled in 1985 that the language was too vague, but attempts to revise the statutes in 1986 and 1988 failed. The attitude among lawmakers may be different this year.

"Congress is saying [with the suggested revisions], 'We didn't intend these draconian penalties to be used in every civil dispute,' " Ms. Adams said. "They're saying, 'We really intended them to apply to truly criminal activity.'"

In the House proposal, lawsuits could be brought only against defendants already convicted of a RICO offense or other "predicate acts" that establish a pattern of criminal conduct. If a defendant has no prior convictions, the plaintiff must establish that the "magnitude or significance" of the injury makes a RICO action appropriate, that the defendant was a major participant in the criminal action that caused the plaintiff harm, and that triple damages are necessary to prevent further egregious conduct.

Spurious Cases Take Toll

One of banks' principal concerns about provisions of current RICO law is that the mere filing of such a suit can mean substantial legal costs for the bank and can erode community confidence, even if the suit has no merit.

Rep. William J. Hughes
New Jersey Democrat

"The threat of a RICO action pressures a financial-institution to settle cases without merit," said James L. Harrison, president and chief executive officer of First Community Bancshares of Princeton, W.Va., in testimony before the Senate Judiciary Committee in June.

A $7 million RICO suit brought in 1983 against a First Community subsidiary dragged on for five years and cost as much as $400,000 to defend, Mr. Harrison said. Even though a federal court of appeals dismissed the charges in 1988, Mr. Harrison said, the subsidiary's assets shrank to $50 million from $60 million, while the assets of its major competitor in the region grew to $170 million from $70 million.

First Community is still trying to resolve a $321 million RICO suit filed in 1987 that has cost the bank between $250,000 and $400,000 to defend, Mr. Harrison said.

The banker said the damages of these suits are not limited to money. "Once a financial institution is accused of racketeering activity, and this is reported to the public, the negative impact is felt for many years."

The current House bill is sponsored by eight of 10 members of the subcommittee. One dissenting member, John Conyers, D-Mich., is expected to introduce an amendment to the full committee that would maintain current RICO statutes for investigations into savings and loan fraud.

Opposition also remains strong among consumers, who contest the bill's retroactive clause and contend that vague language in the gatekeeper provision may enable individuals connected to failed S&Ls to escape conviction.

"The language of the gatekeeper is so vague that there is a very good chance the aiders and abetters will get away," said Pamela Gilbert, legislative director of Public Citizen's Congress Watch. "These defendants will use every tool at their disposal to wriggle out of liability."

But assertions that S&L criminals might get off scot-free are without merit, said Mr. Villa. The actions of people involved in S&L failures would qualify as egregious criminal conduct, he said.

Mr. Direnfeld said he is confident that the bill will be reported favorably out of committee to the House by the end of July, although negotiations to reconcile the House bill with the Senate's version "don't lend themselves to splitting the difference."

Although the simplicity of the House bill makes it more likely to be approved than the Senate bill, Mr. Direnfeld added, both bills "remove RICO to the appropriate cases."

Mr. Gerhardstein writes for the Medill News Service.

THE WEEK *ahead*

MONDAY, JULY 9

Consumer Credit figures for May are released by the Federal Reserve Board.

TUESDAY, JULY 10

Congress returns from its recess for the Independence Day holiday.

The Resolution Funding Corp. sells $5 billion of 30-year bonds.

The House Banking subcommittee on housing and community development holds a hearing on the Federal Housing Administration. The hearing will focus on Price Waterhouse's actuarial review of the FHA's Mutual Mortgage Insurance Fund. 202-225-7054.

The Federal Deposit Insurance Corp. holds an open board meeting to discuss extending the deadline for informing depositors of changes in deposit insurance coverage. Also up for consideration: a memorandum and resolution pertaining to unsafe and unsound banking practices. 202-898-3813.

WEDNESDAY, JULY 11

The Senate Banking Committee holds a hearing on the jurisdiction of regulation of securities markets by the Securities and Exchange Commission and the Commodity Futures Trading Commission. Numerous witnesses testify, including Charles Schwab, who heads the Schwab discount brokerage, and Leo Melman, head of the Chicago Mercantile Exchange. 202-224-7391.

THURSDAY, JULY 12

Federal Reserve Chairman Alan Greenspan testifies before the Senate Banking Committee on legislation to modernize the financial services industry. 202-224-7391.

The SEC/CFTC hearings continue at the Senate Banking Committee, with Treasury Secretary Nicholas F. Brady testifying. 202-224-7391.

Initial jobless claims for the week ending June 30 are reported by the Labor Department.

FRIDAY, JULY 13

Producer Price figures for June are released by the Labor Department.

Retail Sales figures for June are released by the Commerce Department. □

INSIDE *congress*

St Germain Named in Insurer's Collapse

Former House Banking Committee Chairman Fernand J. St Germain, D-R.I., has emerged as the man in the middle in the recent collapse of Executive Mutual Property & Liability Insurance Co., Providence.

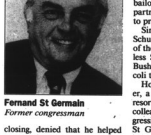
Thomas Leslie Newman, a self-described entrepreneur from Reston, Va., told the *Providence Sunday Bulletin* that he decided to buy the company after Mr. St Germain told him it was for sale. Six months after he closed the deal with a $100,000 check from the Central Falls Credit Union, the insurance company was taken over by the state.

A longtime friend of Mr. St Germain's, Roland O. Ferland, brokered the deal and received a $150,000 finder's fee, the Providence paper reported. Of that, he set aside $10,000 for Mr. St Germain, who, Mr. Ferland told the Bulletin, asked him to hold the money.

"Fred said, 'When I want it, I'll call you,' " Mr. Ferland said, according to the *Bulletin*. "He apparently didn't want it in 1989, because then he'd have to declare it on last year's income tax return."

Mr. St Germain, who acknowledged introducing Mr. Newman and Mr. Ferland and who said he was present at the closing, denied that he helped arrange the sale.

The June 23 article in the *Bulletin* was followed five days later by a report in *The Boston Globe* that Mr. St Germain had signed out investments in troubled thrifts for a businessman who was a target in a federal probe into possible fraud.



Fernand St Germain
Former congressman

Word War. Ever since White House spokesman Marlin Fitzwater denounced congressional Democrats for their role in bringing on the S&L crisis, the daily *Congressional Record* has been overrun with transcripts of floor speeches on the subject. Most try to fix blame.

On June 20, for example, Rep. Marcy Kaptur, D-Ohio, claimed that taxpayers in her state are being asked to pay too great a share of "the Bush savings and loan bailout" while the Justice Department is moving too slowly to prosecute S&L fraud.

Similarly, Rep. Charles E. Schumer, D-N.Y., complaining of the administration's "rudderless S&L ship," said President Bush has said more "about brocolli than the S&L crisis."

However, Rep. Robert Walker, a Pennsylvania Republican, resorted to verse to remind his colleagues of Democratic transgressions. One couplet, citing St Germain, gives the general idea.

There once was a Democrat named Freddy
His chairmanship made him quite heady
He said, What the hell,
Let's live on S&L,
I've got their credit card always ready.

The last line presumably referred to old reports that Mr. St Germain sometimes borrowed a charge card from James O. "Snake" Freeman, who at the time was a lobbyist for the U.S. League of Savings Institutions.

— Robert M. Garsson

Pressure on Fed by White House Is Criticized

Continued from *page 2*

Minutes of the July meeting will not be made public until Aug. 24, but *The New York Times* cited unidentified government officials Friday as reporting that the committee had adopted a resolution July 3 expressing a new willingness to reduce interest rates. The resolution conditioned such a move on fresh data showing the economy headed toward recession.

The Fed declined to comment on the article.

Minutes of the committee's May 15 meeting, released Friday, showed that the Fed had remained neutral on policy, with only Lee Hoskins, president of the Federal Reserve Bank of Cleveland, voting to tighten reserve conditions.

If a policy shift did occur last week, it would be the first this year and would indicate the central bank's worry that the economy is growing weaker. The Fed last eased short-term interest rates in December.

Dependent on Data?

"My own view is that the Fed did agree on a bias toward easing but made any action dependent on future economic and price data," said David M. Jones, senior vice president and economist at Aubrey G. Lanston & Co. in New York.

Mr. Jones and other economists said the public comments by Treasury Secretary Nicholas Brady urging the Fed to cut interest rates in advance of a government agreement to reduce the federal budget deficit would not influence the Fed.

"I think the Fed wants to avoid the perception it is making a deal with the devil or politicians, whichever word you want to use," said Mr. Jones. "The Fed would view any deficit-cutting action for its impact on the economy rather than participate in an outright deal with politicians."

Surprise in Job Numbers

Friday, employment numbers released by the government contained a surprisingly strong upward revision in May's U.S. nonfarm jobs total. That overshadowed the weak data for June and convinced economists that the Federal Reserve will not ease interest rates soon. In the Treasury securities market Friday, the yield on the benchmark 30-year bond rose from 8.42% to 8.51% on news of the May revision.

Most economists said the Fed will ease interest rates some time in the third quarter unless the economy, now growing at a 1.5% to 2% annual rate, starts to slip toward zero or negative growth.

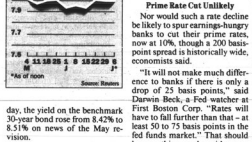
A fall in short-term rates would immediately benefit banks by increasing the spreads between their cost of funds and their lending rates. However, economists said a drop of just 25 basis points in the federal funds rate – to 8% from the 8.25% at which fed funds have traded since December – would prove inadequate to spur credit demand.

Prime Rate Cut Unlikely

Nor would such a rate decline be likely to spur earnings-hungry banks to cut their prime rates, now at 10%, though a 200 basis-point spread is historically wide, economists said.

"It will not make much difference to banks if there is only a drop of 25 basis points," said Dawson Beck, a Fed watcher at First Boston Corp. "Rates will have to fall further than that – at least 50 to 75 basis points in the fed funds market." That should happen this year, he said.

Mr. Jones of Aubrey G. Lanston characterized the economy as so sluggish that the Fed may need to ease short-term rates as much as 300 basis points over time in order to stimulate business activity sufficient to avert a recession. □



Krause Named to Key Supervisory Position at Comptroller's Office

Continued from *page 1*

"When you get the kind of criticism that has been this intense and this heartfelt, you should take a second look – and we are taking a second look," said Ms. Krause.

"But I haven't found anything yet to suggest the [current examination] policy is wrong," she added. Ms. Krause will move into her new post July 23. She and Dean Marriott, acting deputy comptroller for bank supervision operations, are the national bank regulator's highest-ranking supervisory officials.

Ms. Krause will oversee development of supervisory policy for the domestic and foreign operations of 4,200 banks with $1.97 trillion in assets. Succeeding to her will be the agency's chief national bank examiner, the deputy comptroller for compliance management, and the deputy comptroller for international banking and finance.

Nontraditional Background

Ms. Krause (pronounced Kraw-zy) is the agency's first head of bank supervision policy in memory who did not come from the ranks of examiners.

Susan F. Krause
Comptroller's Office

Her three immediate predecessors – Mr. Herrmann, H. Joe Selby, and Paul Homan – all came from the examination side of the agency.

However, Ms. Krause gets high marks from those who know her, both inside and outside the agency. "She's very bright, hard-working, and well connected within the agency," said Brian Smith, a banking lawyer with Stroock & Stroock & Lavan in Washington.

"She's fantastic," said Frank Maguire, senior vice president-counsel for legislative and public affairs. "She's been involved in most of the major policy decisions here."

Ms. Krause is probably best known to bankers for her work on the development of risk-based capital standards, a project that has consumed huge amounts of her time in recent years.

In addition to the continuing criticism over examination policies, Ms. Krause will face a number of other tough issues in her new post. The first is likely to be the agency's new procedures for monitoring compliance with the Community Reinvestment Act. □

Great American Converts

SAN DIEGO — Great American Bank said it completed its conversion to a stock savings bank June 29 by combining its federal- and state-chartered units and adopting a single identity.

The $15.4 billion-asset thrift said the change enables it to stop paying assessments to the California Department of Savings and Loans; these totaled $500,000 last year. Great American said the change does not limit its service and investment powers. □

Overcharging On Adjustables To Be Probed

By RICHARD CHANG
Reuters

NEW YORK — Sen. Richard Lugar, R-Ind., is asking the Senate Banking Committee and the General Accounting Office to probe overcharges on adjustable-rate home loans.

The requests, made in letters dated July 5, followed the Federal Deposit Insurance Corp.'s acknowledgment of the problem and its promise to compensate borrowers whose rates were overcharged on loans that regulators seized from troubled thrifts.

"The [adjustable-rate mortgage] problems acknowledged by the FDIC may only be the tip of the iceberg," Sen. Lugar said.

Scope May Be Wide

Sen. Lugar said he was particularly concerned about the scope of the problem, since adjustables are sold by banks, thrifts, credit unions, and mortgage banking companies. Some observers, have estimated that the overcharges will run into billions.

"Furthermore, in taking over the assets of failed savings and loans, the Resolution Trust Corp. may be holding incorrectly adjusted ARMs," Sen. Lugar said.

"Clearly, it would be most appropriate to correct these mortgages prior to selling them. Consequently, this issue could drive the cost of the savings and loan bailout," he said.

Precedence to Be Given

An aide to Sen. Donald Riegle, D-Mich., chairman of the Senate Banking Committee, said that because millions of consumers were involved, the issue of errors in adjustable-rate mortgages "will obviously take precedence" over other topics scheduled for committee hearings.

A spokesman for the General Accounting Office, an investigative arm of Congress, declined to comment on Sen. Lugar's request for a study.

Sen. Lugar said he first raised the issue in November with the Federal Reserve Board, Office of Thrift Supervision, FDIC, and RTC. It was then referred to the Federal Financial Institutions Examination Council, a coordinating body, which reportedly has passed the case off to a subgroup that monitors consumer compliance issues.

High Error Rate

An industry consultant who studied 7,000 adjustables held by thrifts seized by the government found that consumers were wrongly charged in half the cases. At one thrift, the error rate was 100%, said the consultant, John Geddes of Zugos Corp., Mays, Ind.

His study pointed to potential refunds of $8 billion on some $463.5 billion of loans.

In a related matter, an Indiana law firm using Mr. Geddes' data is preparing a class action on behalf of homeowners and consumers seeking compensation for overcharges on adjustables. □

Comptroller to Boost Assessments On National Banks 8% Next Year

Continued from *page 1*

as supervision costs rise and banks' asset growth slows. A steering committee within the agency recommended the increases. Costs are projected to grow 7.4% this year, to $263.8 million; current assessment levels have been in effect for two years.

The steering committee also studied alternative methods of calculating the assessment. One under consideration would increase many banks' assessments by more than 10% above current levels. (See chart on page 1.)

An 8% increase next year would cause a $173 rise in the base semiannual assessment – that paid by the smallest national banks – to $2,339. A bank with $10 billion in assets would increase its twice-yearly payment to $493,346, from $456,802.

Banking trade groups have not yet determined the full impact of the planned increase, but some expressed concern.

Banking Group Alarmed

"We, of course, are alarmed about such a significant increase," said Linda A. Garvelink, director of bank regulations at the Independent Bankers Association of America. "Increasing the fee rates is going to increase the expenses to small banks significantly [the proposal]. We do recognize that they are going to have to get more income." The Comptroller, which regulates 4,200 national banks, said an 8% increase would bring $19 million in additional annual revenue, enough to cover its short-term needs.

The agency faces several problems, beginning with bank asset growth. After increases in growth in recent years – 2% in 1987, 3.4% in 1988, 7% in 1989, and a decline in the first quarter of 1990 – has made assessment-revenue projections difficult.

Employee Costs Rise

Employee salaries and benefits have also risen, to about 72% of OCC expenditures this year, up from 66% in 1985. The Financial Institutions Reform, Recovery,

"We do recognize that they are going to have to get more income."

James D. McLaughlin
American Bankers Association

and Enforcement Act of 1989 forced compensation higher, requiring the agency's pay to be consistent with that at other regulatory agencies.

Meanwhile, problem banks, troubled areas of bank lending and highly leveraged transactions have required more supervisory resources.

In addition to the 8% assessment rise, the OCC has proposed new fees for processing certain securities-related filings by national banks. An annual fee is also proposed for banks with municipal- and government-securities dealer departments, where the OCC is the primary regulator.

The agency is also proposing to bill banks for services that have not been priced in the past. □

GLOBAL *dispatches...*

Brady Hints at Flexibility On Japan's Loans to China

Reuters

WASHINGTON — U.S. Treasury Secretary Nicholas F. Brady expressed an understanding of Japan's desire to resume lending to China but stopped short of saying whether Washington would approve of such a move.

He told a small group of reporters that the geographic proximity of the two countries had to be taken into account when discussing Japan's loan policy toward China.

"You have to respect [that]," Mr. Brady said. "That leads to business relationships."

In a show of solidarity with the West and particularly the United States, Japan cut off loans to China after Beijing's brutal crackdown on pro-democracy demonstrators in June last year.

Tokyo has been under increasing domestic pressure recently from businessmen and others to resume its suspended loan program to China, but it has feared risking U.S. criticism.

Mr. Brady said that a distinction had to be drawn between bilateral loans to China and lending by international institutions such as the World Bank. Largely at the behest of the United States, the World Bank has limited its loans to China to credits that meet so-called basic human needs. A senior U.S. official made it clear last week that that position had not changed.

Mr. Brady said he expected next week's Group of Seven meeting in Houston to discuss multilateral lending policy toward China.

BRITAIN

Mired in losses on its New York real estate holdings, Britain's **Berisford International** PLC, a conglomerate, set plans in London for a major corporate restructuring.

The company is primarily involved in leasing and related financial services, metals trading, property investment, and food production. It disclosed group net debts of $2.1 billion. It plans to sell its main operating division, British Sugar, to raise up to about $2.2 billion to restructure its debts.

The company is also confident that leasing, the major part of its financial activities, can be sold before yearend, a company spokesman said.

Berisford has written down a total of $340 million, covering 90% of its exposures to the New York real estate market. This follows its foray into Manhattan property in 1987, an investment badly hit by declining values. After the writedowns, the company is left with a published net worth of just over $400 million.

Meantime, Berisford has reached preliminary agreement with its leading British banks to put borrowings, mostly short-term, on a longer-term basis, the spokesman said. The company has borrowings outstanding from a total of 68 different banks, but declined to disclose its main lenders.

The rescheduling of its indebtedness is required to avoid a run on the company if creditors lose confidence, the spokesman said.
— **John Evans**

NEW ZEALAND

A New Zealand bank, **Countrywide Banking Corp.**, has conditionally agreed to buy **Diners Club (NZ) Ltd.** from **NZI Bank Ltd.** and the New Zealand branch of **Citicorp's Citibank.**

NZI Bank holds 94% of the credit card company and Citibank the rest. No price was disclosed.

NZI Bank is a unit of Britain's **General Accident** Fire and Life Assurance Corp. PLC, which also holds 20% of Countrywide.

Jim Macauley, executive chairman of NZI Bank, said Diners did not fit in with his bank's new direction, while a Countrywide spokesman said the acquisition would be a major part of the bank's consumer banking operations.
— **Reuters**

AUSTRALIA

National Australia Bank Ltd. said its brokerage unit A.C. Goode & Co. would shut down its trading operation after the close last Friday.

"All transactions will be completed in the normal manner," the bank said.

The shutdown follows the bank's announcement two weeks ago that it would pull out of the brokerage industry. A.C. Goode employees 150 people.
— **Reuters**

JAPAN

Sumitomo Bank Ltd. said it opened a representative office in East Berlin Friday.

"With the unification of Germany anticipated, the needs of our customers for information on the economy, trade, and finance in East Germany are increasing," an official said.
— **Reuters**

* * *

Bank of Tokyo's establishment of a representative office in Taipei has already received government approval, but finding an office and securing staff could delay the actual opening until this fall or later.

The bank says the delay has nothing to do with the displeasure over the move expressed by China.

U.K. Lenders Take Heat for Deficit

Voluntary Restrictions Sought on Consumer Credit

By JOHN EVANS

LONDON — Banks and finance companies are rapidly becoming public enemy No. 1 of British economic policymakers, who blame much of the nation's hefty inflation and persistent trade deficit on aggressive marketing of consumer credit.

Rumblings are beginning to emerge from the administration of Prime Minister Margaret Thatcher and consumer-protection agencies that official curbs may be placed on lenders to stem what economists describe as a credit explosion in recent months.

Credit growth is accelerating despite a sharp upward push in interest rates last year, the chief policy response of the government to Britain's destabilizing $35 billion trade deficit.

Snowballing Expansion

Consumer credit jumped $6.5 billion in May, faster than at any time in the past two years. Interest on consumer loans and credit card borrowing is approaching 30% while mortgage rates are at a record 15%.

Undeterred by costly money, consumers continue to spend freely. They are largely financed by loans from banks, thrifts, and finance companies.

Most of this credit is being advanced by British banks, although many of the 500 foreign banks that operate in London have also turned to consumer and mortgage lending.

Unfettered credit expansion stimulates the demand for imported goods, deepening Britain's trade with other countries, economists say. At the same time, British industry is hampered by sharply higher financing costs that make it less able to compete with foreign imports.

> **"Thrift has gone out of fashion."**
>
> **Robin Leigh-Pemberson**
> *Bank of England*

Neil MacKinnon, chief economist at Yamaichi Securities Ltd. in Britain, says the government's deepening concern reflects the fact that lending is still growing at a 19% annual rate, nine months after the commercial banks hoisted their prime rate to 15%.

That raises doubts around the world that Britain can put the brakes on consumer lending. The Thatcher government has so far resisted imposing any formal controls on credit, Mr. MacKinnon says.

Government Action Avoided

Britain's chancellor of the exchequer, John Major, has warned that banks and thrifts could be subject to official action if they fail to curb "irresponsible" consumer lending practices. Bank of England Governor Robin Leigh-Pemberson has sounded a similar note, contending that "thrift has gone out of fashion" in Britain.

The government urgently wants the banking industry to adopt a tough voluntary code on credit. A primary objective would be to prevent the type of misleading marketing that leads consumers into heavy debt. A recent survey showed that up to 500,000 households in Britain are suffering some form of credit problem or debt arrears.

Signal International, a consumer research group, claims that Britain will "borrow itself into a recession," without some form of credit control.

Younger Borrowers Targeted

In its survey, the firm found that a general increase in borrowing in Britain is directly connected with the availability of credit. Signal accuses some banks and financial companies of irresponsible lending, including "indiscriminate marketing" to younger borrowers.

"This is a real problem for the government, which is caught between a rock and hard place," says Signal's chief executive, Alan Charlesworth.

A spokeswoman for the British Bankers Association says that its members practice responsible lending and will support the proposed consumer lending code. "But we are not in the business of policing our customers," she says. □

World Bank to Limit Role in East Europe

By JOHN EVANS

LONDON — Though the World Bank plans to increase its lending to Eastern Europe in the next two to three years, it aims to curtail the lending thereafter to make way for the new European Bank for Reconstruction and Development.

Moeen Qureshi, senior vice-president, said that until the East European bank becomes fully operational, his own agency will expand its lending to the region to between $2.5 billion and $3 billion a year for the next two to three years. It lent Eastern Europe $1.8 billion in its latest financial year.

After that, "we would be glad to leave everything the EBRD can do for Eastern Europe to them and pick up what only the World Bank can do," he said in an interview in London.

The East European bank, which is expected to become operational from its London base next summer, plans to lend about 60% of its $12 billion of resources to private-sector projects.

The World Bank is expected to concentrate on public-sector projects in Eastern Europe, including environmental and energy programs.

This strategy will leave Western European nations, the main stockholders in the bank, shouldering the chief burden of the economic recovery of the one-time communist nations.

At the same time, leading Western commercial banks have indicated that Eastern Europe represents a high-risk area for bankers and the main sources of help must first come from official agencies.

Mr. Qureshi stressed that while his bank was making a "major effort" to help the economic transition in Eastern Europe, "it will not be taken at the expense of any other country in any other region in the world."

MANAGING EDITOR

Every single story in this new financial service industry newspaper is going to help its readers do their jobs better. The readers expect and will get "hands on" and "how to" information. Hands on is how the ME will have to do the job every week. Showing how financial services executives work and what they need, the ME will plan, assign, rewrite, bounce the copy until it's right, then see the paper out the door. The staff will be lean but enough to do the job, including a fast, enticing design. There'll be plenty of correspondents but they will need training in the paper's style. The key is knowing the financial services business from the inside. If you do, you may be able to meet this unusual journalistic challenge. The readers are there. Hard work and dedication will yield generous rewards. Write with resume:

DEALS: UAL Unons in Buyout Attempt Get 'Pledges' from 5 Banks

Continued from page 1

$4 billion in bank loans to finance the deal.

Commitments Uncertain

While the pledges that the cosegents are said to have made are far less, the union source said the balance of the funds could come from other banks or outside investors. And it is unclear whether the pledges are firm commitments.

Sources in the group said banks were dealing with representative of the buyout group last Friday at Citibank.

While some observers took the news of the bank pledges to mean the buyout group has found an outside equity investor, no agreement has been reached yet with an investor, the union source said.

Equity Would Tilt the Balance

Bankers have fretted about the lack of equity in the buyout group's bids and believe the deal could be financed easily if an outside investor was found.

"The deal would look a whole lot better with $500 million in cash," said one money-center banker.

Indeed, new equity seems to be key to generating enthusiasm among bank lenders. Sources say agent banks for RJR Nabisco Holdings Corp. are whopping $7 billion of potential bank loans for a $2.25 billion portion of the buyout group's financing in this way, primarily because of infusion of new equity into the company by Kohlberg Kravis Roberts & Co.

While last fall's managementled buyout attempt at UAL had an equity investor, the effort by the unions this time around has several additional factors going for it. The price of the buyout, for instance, is slated to be $201 per share in cash and securities, instead of $300 in all cash.

The naming of the bank group for UAL comes at a precarious has raised $375 million for Unitime for the financing of leveraged transactions. Money-center banks are facing an extremely skittish syndicate market for highly leveraged transactions, and risk being stuck with loans they've underwritten if the banking community keeps the HLT spigot shut.

UAL rose $2.75 points Friday to $153 on volume of 207,400 shares. While the overall market was up strongly, UAL was likely to get a boost from the airline had halted talks with aircraft makers about the purchase of $15 billion in jets.

DEALS: Citibank Unit Marks Debut as Junk-Bond Investment Banker

Continued from page 13

reaping commitment fees of 50 basis points and a high 300-basis-point fee for a standby letter of credit. Citibank's agent fee could not be determined.

Attractive Pricing

Citibank began to market the private placement three months ago on a best-efforts basis. It was achieved at relatively attractive pricing for Uniroyal Chemical, according to market sources.

The debt was issued in two tranches – $162 million of six-year, fixed-rate notes paying 12.22% and $113 million of floating-rate notes at the London interbank offered rate plus 250 basis points. Citibank sold much of the floating-rate tranche to Japanese investors, while U.S. institutions bought the fixed-rate tranche, a bank official said.

The sale "took longer than anticipated," he conceded, noting that private investors have become cautious and picky about nonivestment-grade deals. "People want to really understand what they are buying, and are doing more extensive analysis and due diligence," he said. They also are being offered an expanding menu of workout and exchange offers at high rates.

Citicorp Securities – along with the securities underwriting affiliates of J.P. Morgan & Co., Bankers Trust New York Corp., and Chase Manhattan Corp. – received permission last summer to underwrite corporate debt, including junk bonds. None has yet managed an issue, though officials at several banks said they are working on private placements with registration rights that could allow the securities to become publicly traded at a future date. □

Mack Requests Loan Extension

By STEVEN LIPIN

Hurt by the decline in the trucking industry, Mack Trucks Inc. said its finance subsidiary is seeking to extend a $350 million revolving credit facility that matured July 8. A spokesman confirmed that the company was unable to pay off the loan.

Chemical Bank, agent on the revolver to Mack Financial Corp., has agreed to extend the loan two weeks while negotiations continue for a longer-term extension, the company said. Of the $350 million, $339 million has been drawn down, the Mack spokesman said.

Mack will be meeting with Chemical and its other bankers this week to discuss the terms of any restructuring, the spokesman said. He confirmed, though, that Mack did not have the money to make the payment. "We're counting on the extension," he said.

A spokeswoman for the Chemical Banking Corp. unit said any long-term extension would need the approval of the 15-member bank group.

The troubled maker of heavy trucks announced Friday that Renault Vehicules Industriels, which owns 44.5% of Mack's outstanding common stock, will commence a tender offer at 3 share for the shares it does not already own.

Mack also said it would likely be in violation of loans made by the banking units of Citicorp and Credit Lyonnais, once second-quarter figures are finalized. Because Mack has not maintained minimum gross profit margins, the company said banks could declare it to be in default.

The Mack spokesman said "banks need time to digest the information" but that the company has not yet been put in default.

Mack expects to incur a net loss of roughly $90 million for the six months ending June 30, and a $130 million loss for the year ending December 31.

Since the last half of 1989 the trucking industry has skidded, and Mack has felt the brunt of the downturn. It reported a $34 million loss in the fourth quarter, one notched by Standard & Poor's Corp. in June when it downgraded Mack's debt to single-B from double-B minus.

This is not the first time the company has had to ask banks for breathing room. Mack had obtained waivers from banks from its banks after first-quarter figures showed a $60 million loss in the company's financial condition, noted May Ann Sudal, an analyst at Fitch Investors Service Inc. "Banks have appeared amenable," Ms. Sudal said. □

ADD PLUS® TO YOUR CIRRUS® ATMs AND GET AN EXTRA 150 MILLION

Soon Cirrus® members will be able to cash in on Plus System® customers. Adding the revenue potential of over 150 million Plus® cardholders.

Fleet Securities Business Backed

WASHINGTON — The nation's 16th-largest banking organization, Fleet/Norstar Financial Group, Providence, R.I., has won approval for a variety of securities businesses to be conducted through a subsidiary.

The Federal Reserve Board voted to allow Atlanta-McEntee Fleet Norstar Securities of New York to offer interest advisory and brokerage services, act as agent in the private placement of its debt securities, and trade all types of securities on behalf of investors as a "risk-less" principal.

The Bank of Montreal, whose parent is Bankmont Financial Corp., also received approval to act as agent in the private placement of all types of securities through its subsidiary, Nesbitt Thomson Securities of New York. Nesbitt Thomson may provide related advisory services, trade all types of securities on behalf of investors as a "risk-less" principal, and do a limited amount of underwriting and dealing in debt and equity securities.

MNC Financial Is Losing Favor As Loans Sour

By FRED VOGELSTEIN

It was only a year ago that analysts were calling MNC Financial Corp. one of the most innovative banks in the Southeast, perhaps in the country.

It was considered a pioneer in marketing credit cards and securitizing their receivables. One analyst called its chairman, Alan P. Hobbitzell Jr., "one of the brightest people in the banking industry."

Today, with the real estate

market in the Washington-Baltimore area souring, analysts say MNC is much more the subject of their concern than praise.

Problems Expected

"MNC is going to have a lot of problems," said Lacy Shockley, an analyst at Smith Barney, Harris Upham & Co.

Investors have clearly grown disenchanted in a hurry. MNC's stock has lost 28% of its value since June 5, falling from $17 to $11.50 on Friday.

The stock had already been beaten down with other bank stocks before June, having fallen from $29.875 since October 1989. It is now selling at 70% of its book value of $17.34. The industry average is 105%.

Contributing to the recent drop in the stock was the bank's June 13 announcement that continued softeness in the Washington-Baltimore real estate market "is likely to have an adverse effect on second quarter results."

Funding Available

However, it said Friday that it was not having trouble borrowing money to meet its needs.

A spokesman said it would reserve further comment on its financial situation until after release of its second-quarter earnings.

Standard & Poor's Corp. substantiated investor and analyst fears late Thursday, announcing it had downgraded MNC's debt rating from A- to BBB+.

What makes MNC's situation particularly severe is the extent of its exposure in what analysts say is a very weak market. Roughly 30% of its $14 billion loan portfolio is in real estate related lending, analysts say.

"They just took on too much real estate too fast," said Michael Plodwick, an analyst at C.J. Lawrence, Morgan Grenfell Inc.

Anthony Davis, an analyst at Wheat First Securities, said he was projecting MNC's nonperforming assets to increase 46% in the second quarter, from $360 million to $525 million.

* * *

FRIDAY'S MARKET

Shares in St. Paul Bancorp had plunged 13% by 3 p.m. Friday on news that the Chicago-based thrift had been ordered to increase its provisions for loan losses $26 million, a move that would cause a $20.8 million loss for the second quarter. The shares were off $1.50, to $9.625, on the news.

Bank stocks were mixed within a narrow range, with roughly the same number of losers as gainers.

Provisions Defended

St. Paul Bancorp, responding to the directive by the Office of Thrift Supervision to increase its loan loss provisions, said it continued to believe that loan loss reserves had been adequate.

It said nonperforming assets as of June 30 were $39.5 million, or 1.19% of total assets, compared with 1.44% a year earlier and 0.93% at the end of 1989.

Chicago Corp. analyst John Snow said the loan-loss order was not due to actual problem loans, so St. Paul should return to its normal earnings rate of about 45 cents a share for the third quarter but would likely post a loss for the year. □

Debt Downgradings Elicit Anger, Relief

By KELLEY HOLLAND

The avalanche of bank debt downgradings by the nation's credit agencies is generating heated objections from some bank executives and, surprisingly, relief from others, who feared worse.

Late last week, for instance, Standard & Poor's Corp. placed three Virginia banks on CreditWatch for possible downgrades and lowered its ratings on MNC Financial Inc.

Executives from the Virginia banks – Signet Banking Corp., Crestar Financial Corp., and Central Fidelity Bank – reacted with various degrees of disappointment to being placed on notice.

But at MNC Financial, which has already felt the sting of rating agencies' disapproval, the chief financial officer is quietly relieved that its downgrading was not more severe.

Downgrading Called Unjust

At Central Fidelity Bank, which has never been downgraded, one executive was hopping mad about being grouped with the other Virginia institutions.

"We were very, very taken aback; to say the least," said John T. Percy, an executive vice president and head of asset-liability management at Central Fidelity. "We think Standard & Poor's is making a mistake to lump us in there with Crestar and Signet."

Lower Earnings

Crestar and Signet both announced last week that their second-quarter earnings would prove lower than previously expected. Crestar said it would be adding $25 million to its loan-loss reserves, and Signet said its nonperforming assets would increase to about $150 million. But Central Fidelity has made no similar announcement.

Central Fidelity can boast higher reserve levels than its neighbors. The bank finished the first quarter with loan-loss reserves equal to two times nonperforming assets and loans 90 days past due, in contrast to an 86% ratio for Crestar and 59% for Signet, according to Sheila Davis, a ratings specialist at Standard & Poor's.

Mr. Percy said he thought Standard & Poor's, with its frequently voiced concerns about banks' exposure to commercial real estate, was unfairly tarring his bank with the same brush as Signet and Crestar on the basis of geographic proximity. "The market's getting weaker, but it's not a disaster," he said. "We've just got to go to New York and defend our case."

Officials at Signet and Crestar seem more resigned to the rating agency's action, but they are still unhappy.

"It was disappointing," said Robert M. Freeman, chairman and chief executive officer at Signet. But, he added, "I think they're following up on what they've done everywhere."

Robert M. Freeman
Signet Banking Corp.

Bank executives reacted with various degrees of disappointment.

As for the real estate market in Virginia, Mr. Freeman said it had long been robust because of the stability provided by nearby Washington. "Washington has buoyed this market for a very long time," he said. But even factoring in Washington, he declined to predict whether the weakness in the Virginia market is near an end.

Patrick Giblin, chief financial officer of Crestar, said his institution was downgraded in May and "we don't feel a further downgrade is justified." But he conceded that the commercial real estate market in Virginia is overbuilt, and he said the problem would persist. "We think the real estate problems in our market will go well into 1991."

MNC Financial was actually downgraded, but Peter L. Gartman, MNC's chief financial officer, took a more positive view of the action than did his counterparts put on CreditWatch. "I view this as a positive because of the affirmation of the commercial paper rating and the fact that they said our outlook was stable," he said.

In the corporate bond market, securities of Crestar, Signet and MNC were virtually unchanged on news of the rating agency action. Trading was so light during the holiday-shortened week that trading levels were almost impossible to establish. The banks' bonds could reflect the rating agency action this week when activity picks up, however.

Officials at all the institutions said their funding strategies would not be affected by the possibility of a rating downgrade. For one thing, Standard & Poor's affirmed the commercial paper rating of Signet and Central Fidelity, and it does not rate Crestar's commercial paper. Also, none of the banks are currently planning long-term debt issues, the officials said. □

AMERICAN BANKER

VOL. CLV NO. 133 Tuesday, July 10, 1990 155th year

Banks to Do Less Lending, More Brokering

By SANFORD ROSE

The financial needs of the American consumer are changing inexorably, creating both problems and opportunities for the country's banking institutions.

It is a well-established fact that the consumer has been the mainstay of bank profitability for much of the last decade. Large banks with scale advantages have been able to garner returns on equity of as much as 45% to 50% in the credit-card business and comparable returns in home-equity lending, thereby offsetting much lower risk-adjusted profits in the troubled commercial-lending area.

Comment

Retail banking as a whole – both lending and deposit taking – is now responsible for an outsize proportion of the equity values of major banks, argues the First Manhattan Consulting Group. An estimated 60% of the market value of a sample of nearly 200 large bank-holding companies is attributable to their retail operations.

Bank credit-card operations alone account for approximately 19% of this retail value, or 11% of the total market capitalization of the nation's largest banks. In absolute numbers, the credit card boosts big-bank share values by around $16 billion.

An Aging Population

Many bankers are therefore mightily concerned about what will happen to their profits and stock prices if consumer borrowing slows, as it now shows signs of doing. A progressive slowing of consumer borrowing is in fact being forecast not merely for cyclical reasons, but for secular considerations as well.

The long-term factors commonly cited are the aging of the population and the fact that the distribution of income has become more skewed – that is, there is a higher proportion of both very rich and very poor households and a concomitantly smaller proportion of those middle-income consumers who are most prone to borrow.

Scrambling for Share

As the total of consumer borrowings begins to taper off, there inevitably will be a scramble to redivide the market share of available loan footings. Those banks that are able to originate and service consumer loans at the lowest cost will obviously take market share away from

Merger Offers for Healthy Banks And Thrifts Continue to Be Slack

By GORDON MATTHEWS

NEW YORK — Massive consolidation of the banking industry may be inevitable, say the experts, but few bankers seem to be doing much to make it happen.

Mergers among healthy banks and thrifts institutions remained stuck in low gear in the second quarter, with most companies focusing their expansion efforts on government-assisted deals for sick thrifts.

Total Could Shrink

For the third straight quarter, the value of proposals announced fell below $1 billion in value, a level routinely exceeded – sometimes in a single month – until bank stock prices began their steep decline last October.

Even the $950 million of deals tallied for the quarter may be subject to revision. The figure includes a $212.7 million bid by First Maryland Bancorp., Baltimore, that has been rejected by its crosstown rival, Baltimore Bancorp.

But while merger activity in banking is moribund, some idea can be gained of what may spark the large-scale consolidation widely expected by industry observers.

First off, bank stock prices would have to rebound. With their stock prices – the currency for dealmaking – currently so

Mass. Bankers Cite Lobbying In Tax Victory

By ELLEN MEMMELAAR

Massachusetts bankers on Monday said a grass-roots campaign was instrumental in turning back a proposed 5% sales tax on their services.

The state legislature approved a broad sales tax early Saturday morning as part of a package to raise $1.1 billion in fiscal 1991 and $1.6 billion the following year. But conspicuously absent from the list of businesses subject to the 5% sales tax is the financial services industry.

An earlier version passed by the Senate would have levied the tax on banking and brokerage services. That measure, passed in mid-June, left mortgage bankers infuriated, with some threatening to move their operations to another state if it was adopted.

The bankers rallied to block the measure by organizing a large-scale letter-writing effort. The effort was orchestrated primarily by the Massachusetts

Rich Fees in RJR and UAL Deals Signal Lenders' Tougher Posture

By STEVEN LIPIN

If the proposed leveraged buyout of UAL Corp. goes through and the RJR Nabsico Inc. refinancing closes, major banks will see a payday of at least $300 million in up-front fees, bankers and observers believe.

The deals signal more than just a revival for big-ticket highly leveraged transactions. This revival brings a new set of rules that include much higher fees and much more equity. In fact, the fees expected on the UAL and RJR deals approximate the high underwriting spreads that investment banks charge for high-yield bond offerings.

"It's a consequence of what the market is requiring," said Raphael Soifer, a banking analyst at Brown Brothers Harriman & Co. "Even with a good credit, it takes high fees to get a deal done. Banks probably feel they need this sort of fee income to sell the deal."

For its $2.25 billion deal, RJR is paying 350 basis points over the London interbank offered rate, with fees of 3.5% to 4%.

Fees 'North of RJR'

Coming on the heels of RJR's successful financing, the $4.4 billion UAL deal could require up to $4 billion in bank loans. If completed, it is expected to offer fees "north of RJR," said a source at one of the five banks

OTS, Utah In a Wrangle Over Thrift's Conversion

By ROBERT M. GARSSON

WASHINGTON — In the latest flare-up of tensions between federal and state regulators, the Office of Thrift Supervision has sued the Utah commissioner of financial institutions for permitting a thrift to become a commercial bank without OTS approval.

The federal agency accused George Sutton, the Utah regulator, of defying an OTS order to seize Home Savings Bank, Salt Lake City, and instead encouraging it to convert to a commercial bank. As a bank, it would no longer be regulated by the federal thrift agency.

Injunction Sought

Seeking an injunction to prevent the conversion, OTS director T. Timothy Ryan Jr. filed documents with U.S. District Court in Salt Lake City, asserting that his agency must approve all charter changes.

The OTS-Utah battle is the latest jurisdictional dispute between federal and state financial regulators, whose overlapping authorities have periodically led

California Suits Tech Chief Who Moved From Wall St.

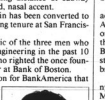
By RICHARD LAYNE

By most accounts, Martin A. Stein is a dyed-in-the-wool New Yorker. The new technology chief at BankAmerica Corp. went to college and graduate school within walking distance of subway stops, and he still speaks with a hard-edged, nasal accent.

But two weeks into his new job, Mr. Stein has been converted to the California good life and is planning a long tenure at San Francisco-based BankAmerica.

Staying power has not been characteristic of the three men who have headed Bank of America Systems Engineering in the past 10 years. The latest was Michael Simmons, who righted the once foundering unit before accepting a job this year at Bank of Boston.

Mr. Stein, however, has a long-term vision for BankAmerica that includes some major changes for the 4,300-employee technology organization.



Martin A. Stein

"Because of the size of the institution, we have to be on the leading edge of technology," said Mr. Stein, who was formerly executive vice president of PaineWebber Inc. "The bank must step up its implementation of new data base designs, to imaging, to artificial intelligence – the bank must move faster to apply emerging technologies."

The banking company also will examine the types of computers it uses.

"There is a whole series of cost curve changes, with personal computers, minicomputers, and workstations becoming a substantial presence and networking becoming a major issue," said Mr. Stein. As the banking business becomes more international, computer systems must update data bases instantly, not overnight, he said.

'A Seven-Minute Commute'

Mr. Stein applauded BankAmerica's recent decision to reorganize BASE into seven operating units to support the business better. "It frees me up to think about the future, to look at costs, and to keep spending consistent with revenue growth," said Mr. Stein, who regularly puts in 12-hour days.

The workday may not have changed when he moved across the continent, but the surrounding scene has.

"I am adjusting to the rigors of a seven-minute commute," said Mr. Stein, who previously battled traffic and commuters' elbows for an hour and a half each way to and from his home in New Jersey.

An inveterate jogger, Mr. Stein clocks four to eight miles each morning. To make sure he knew the route from his temporary apartment to his BASE office in Concord, Calif., he woke up at 4 a.m. his first day of work and ran the route he would drive two hours later.

He has arranged a cultural exchange program, shipping sourdough bread to New York and receiving bagels in return.

A recent evening found him watching the sun set over Mount Diablo. "To quote my wife, 'What's not to like?' " said Mr. Stein, who worked for Fleet/Norstar Financial Group Inc., Chase Manhattan Corp., and Citicorp before jumping to PaineWebber.

'Grace Under Pressure'

Colleagues said Mr. Stein is cool, calm, and collected, necessary traits on Wall Street, where frustrated traders are not above breaking the screen of a malfunctioning personal computer with a hammer. "He has grace under pressure," said Christopher A. Green, vice president of First Manhattan Consulting Group.

Mr. Stein and his wife have an 11-year-old daughter, who is settling into the California lifestyle, and a son with a technical bent, who is spending his summer vacation from college teaching computer skills to the government of Mali. Mr. Stein holds degrees from St. John's University and New York University.

Perhaps the only real difficulty in the Steins' move across country was transporting their menagerie of 14 animals, including a horse, goats, sheep, dogs, and cats. BankAmerica hired the guy who moved the Moscow circus on its U.S. tour. □

NEWS *briefs*

A Tide of Name Changes

NEW YORK — Banks, thrifts and other financial institutions made 202 name changes in the first half of 1990, or 29% of all changes in corporate identity, the consulting firm Anspach Grossman Portugal reports. Financial industry name changes rose by 4% from the first half of 1988, while the total for all companies fell 9% to 697.

Among the banking industry changes registered this year were Citicorp's renaming of four thrift subsidiaries to Citibank.

Loan Extensions Expected

HOUSTON — Leaders of the Group of Seven industrial countries agreed that longer debt-repayment periods are necessary for lower-middle-income countries such as Poland, the West German government spokesman Dieter Vogel said. He added that increased aid may have to be considered for such countries.

Bluebonnet Savings Under Senate Scrutiny

Thrift's Success Story in Question

By STEVE KLINKERMAN

DALLAS — A Senate Judiciary subcommittee turned its investigative spotlight Monday on Bluebonnet Savings Bank, one of the top-performing thrifts organized under the controversial Southwest plan.

The Dallas-based thrift was acquired in December 1988 by Arizona financier James Fail, only three weeks after he learned that the Federal Home Loan Bank Board would form the institution from the remains of 15 broke Texas thrifts.

According to earlier testimony by the defunct Bank Board, Mr. Fail's investment group, CFSB Corp., got $234 million of tax breaks when it bought Bluebonnet, along with a federal assistance package worth $1.8 billion.

A Subsidized Gold Mine

The tax breaks and federal assistance have turned the $3 billion-asset Bluebonnet into a gold mine. The thrift earned $35.4 million in 1989, for a return on common equity of about 40%.

Most of the institution's earnings have come from the management of distressed loans and properties for the federal government, which has guaranteed the profitability of at least a third of Bluebonnet's assets.

So comprehensive are the

Dallas S&L Case Evokes Senate Ire

By DEBRA COPE

WASHINGTON — Former federal thrift regulators and a Phoenix insurance executive who acquired 15 failed Texas thrifts with only $1,000 of his own money will be subpoenaed to testify before a Senate probe if they do not appear voluntarily, Sen. Howard Metzenbaum said Monday.

Speaking at a Senate Judiciary antitrust subcommittee hearing that he chairs, Sen. Metzenbaum expressed outrage that the insurance executive, James M. Fail, was awarded $1.8 billion in federal aid to buy Bluebonnet Savings Bank despite a 1976 indictment and guilty plea for securities fraud and tardiness in bringing $10 million of capital to the deal.

Sen. Metzenbaum also charged that a $10 million loan obtained by Mr. Fail to capitalize the thrift was eventually sold to Mississippi Savings Bank, Jackson, Miss., a troubled thrift that has since been seized by the Resolution Trust Corp.

"At what price are we saving savings and loans? Is it worth draining other parts of insurance companies to make one thrift viable?" he asked. Sen. Metzenbaum did not disclose whether the loan was repaid.

But an attorney for Dallas-based Bluebonnet Savings countered that Sen. Metzenbaum's motives are political, and defended Mr. Fail's refusal to testify before the committee. Stanley M. Brand said in a statement that the subcommittee had overstepped its jurisdiction and accused Sen. Metzenbaum of "behaving like a political vigilante."

The Federal Savings and Loan Insurance Corp. agreed to allow Mr. Fail to capitalize the thrift

Bank Seeks to Cancel Thrift Deal

Reuters

PONTIAC, Mich. — First Federal Bancorp Inc. said it obtained a restraining order last weekagainst regulators' plans in an attempt by the company to stop the acquisition of a thrift institution in Florida.

The temporary order, in effect pending a hearing Wednesday on a permanent injunction, came after the $1.4 billion-asset First Federal filed a lawsuit against the Office of Thrift Supervision and the Federal Deposit Insurance Corp.

Disagreement on Deal

Pontiac-based First Federal claimed the agencies approved of its acquisition of Citizens Federal Savings Bank, an $80 million-asset thrift in Jacksonville, but then imposed conditions that delayed and frustrated the purpose of the acquisition.

First Federal, the fifth-largest thrift in Michigan, said the regulators' actions made the merger agreement between the two thrifts unenforceable. The deal would have added four Jacksonville branches to First Federal's 28 in Michigan.

The Michigan thrift is also seeking a court order to prevent the OTS and FDIC from taking any action toward appointing a conservator of First Federal or calling such action "unwarranted, unjustified, and unconstitutional."

Hearing Set for Wednesday

The hearing on a permanent injunction against the acquisition is set for Wednesday in U.S. District Court for the Eastern District of Michigan, First Federal said.

In another OTS-related development, the $900 million-asset John Hanson Savings Bank and the thrift agency has approved its capital restoration plan.

The approved plan requires a $10 million capital infusion by Dec. 31. Hanson has hired Legg Mason Wood Walker Inc., Baltimore, to advise and assist in its capital-raising program. □

MasterCard Eases Small Purchases

Viata Alliance Permits 3-Second Authorizations

By KAREN GULLO

NEW YORK — MasterCard International has begun offering an authorization service that will encourage member banks to sign up small-ticket businesses such as fast-food outlets, supermarkets, and movie theaters for credit card services.

MasterCard is making the service available through an alliance with Viata Corp., an electronic payment and marketing company. Credit card authorization and settlement of small-dollar charges are being handled through Viata's Quick Payment Service as of July 1.

Visa Is Experimenting

Visa U.S.A. is also experimenting with quick authorization for small-dollar transactions through a number of pilots across the country.

Banks have generally shied away from pursuing small-ticket merchants, reasoning that profit margins are too low. But MasterCard officials foresee a lot of fee-income potential for banks.

Traditional Market 'Saturated'

"The traditional merchant market is fairly well saturated," said Sharon G. Cline, vice president of marketing for MasterCard's automated point-of-sale program, "and this is a way for them to increase their merchant customer base easily and more significantly."

The service, which will be added to MasterCard's point-of-sale program, gives authorizations for charges of up to $25 within three seconds.

For High-Speed Merchants

"Usage is geared primarily for high-speed merchants and is expected to make credit card acceptance more attractive to establishments where the speed of the payment is critical to the sale," said David Mills, president of Viata, which is based in Fort Worth.

Some large banks have been experimenting with the quick-authorization concept. Bank of America, San Francisco, teamed up last month with Visa U.S.A. and Safeway Inc. for a test to determine whether customers will use Visa cards to pay for groceries.

Widespread Interest Seen

Visa says its studies show that nearly half of Americans are interested in using credit cards at supermarkets and that 3,000 su-

> **"The challenge is breaking down the barriers and getting the banks to sell their services to those merchants."**
>
> **Sharon G. Cline**
> *MasterCard International*

permarkets around the country accept credit cards.

"The average ticket sale goes up dramatically when a customer uses a credit card, according to the studies I've seen," said Ms. Cline. "The potential is there, but the challenge is breaking down the barriers and getting the banks to sell their services to those merchants."

With the Quick Payment Service, MasterCard sends negative card information over telephone lines from its processing center in St. Louis to Viata in Fort Worth.

Negative Data Downloaded

Viata then downloads the information to merchants, stores, where it is stored on a computer terminal or personal computer.

When a customer uses a MasterCard, Visa, or Discover card for a purchase of $25 or less, the card is swiped through a reader and the account information is checked against the negative card information stored on the site. Those data are updated daily.

The on-site authorization takes three seconds. Authorizations for purchases of more than $25 are sent over dial-up telephone lines and take about 12 seconds.

Brand 'Practically Nonexistent'

"Fraud and chargebacks have been practically nonexistent," Ms. Cline said. "We recently gave presentations on the new service to three of our largest customers, and they're very interested."

The Viata system also captures and stores data about customer buying habits. This allows the merchant to develop targeted marketing programs, such as sending discount coupons to customers most likely to buy particular products.

Eventually, Checks Too

The system will eventually be enhanced to authorize personal checks for payment through the Quick Payment Checkcard.

Visa's pilot with Bank of America and Safeway works essentially the same as the Viata system. Negative card information is stored on-site at the merchant.

Banks that sign up for the service are charged a lower interchange rate for MasterCard authorizations only. The interchange charge is the fee that the merchant's bank pays to the card-issuing bank when the transaction is transmitted to MasterCard for processing. □

Indianapolis Bank Will Use Artificial Intelligence System

By JEANNE IIDA

NEW YORK — INB Financial Corp. of Indianapolis has signed a pact that will make it the third U.S. banking company to use artificial intelligence to reduce risks in commercial lending.

INB, which has $6 billion in assets, joins Security Pacific Bank Washington, Seattle, and Integra Financial Corp., Pittsburgh, in licensing Lending Advisor, a system that helps bankers make credit decisions and frees them to devote more time to developing customers' business.

Mainframe Software

INB expects to be testing the system by yearend and have it fully operational early next year. The software, which the bank is installing on its mainframe, will eventually be used to help credit officers make decisions for the bank's entire $1.7 billion commercial loan portfolio.

The other two U.S. banks expect to have Lending Advisor in production by yearend.

The only other bank to have installed the software is the $80 billion-asset Canadian Imperial Bank of Commerce, Toronto. Lending officers at the Canadian bank have been using the system since January.

The software, developed by Syntelligence Inc., Sunnyvale, Calif., uses a branch of artificial intelligence called expert systems, which uses the expertise of professionals in a given field to aid decision-making.

Lending Advisor combines standard underwriting methodology with the educated judgments of lending experts to help lenders focus on the right issues in analyzing customers' credit.

INB said it expects the software to mitigate the problem of high staff turnover in its commercial lending area. One in five lending officers leaves a bank every year.

"We saw a problem with credits becoming more complex, and the average age and experience of lending staff declining," said Thomas F. Kelly, senior vice president and manager of INB's credit services division. "Something had to jump in the middle of this."

The software tool "forces you to go through the methodology of good underwriting on a consistent basis," Mr. Kelly said.

INB is the parent company of INB National Bank, the largest bank in Indiana, and two affiliated banks.

Mr. Kelly said that banks in the state of Indiana experience particularly high turnover as out-of-state banks come in and hire away good people. While the bank has an experienced "back bench" of senior lenders, the "first-line" lenders tend to have only one or two years of experience, Mr. Kelly said.

The system, while expensive – costing INB "in the low seven figures" – will be worth the price, Mr. Kelly said. "We only need to duck one medium-sized bullet, and [the system] pays for itself."

'An Intuitive Feeling'

By yearend 1991, about 70 lenders, 25 analysts, and 7 or 8 loan reviewers will be actively using the system for all commercial loans in INB's Indianapolis headquarters.

"After we're satisfied we have it under our belt, we'll roll it out to our affiliates," Mr. Kelly said.

Mr. Kelly declined to estimate how much the software would reduce the banking company's loan losses.

"It's an intuitive feeling that if you do all the steps and use the expert knowledge, you're going to do better underwriting," he said. □

$7500

Includes On-Site Installation & Travel Expenses

Designed to meet the needs of all financial institutions regardless of size or financial sophistication, IPS' Asset/Liability Budget Management (ALBUM) is a complete decision support system that easily interfaces with any general ledger, loan, deposit and investment system.

Complete $7,500 System Includes:

•GAP ANALYSIS
•WHAT-IF PROJECTIONS FOR 10 YEARS
•BUDGET VARIANCE ANALYSIS
•CUSTOM REPORT WRITER
•RATIO ANALYSIS •MATCH/MISS INTERFACE
•TB-13 CALCULATIONS •3 YEARS HISTORY
•INTEREST RATE RISK MANAGEMENT
•PREPAYMENT/DECAY FACTORS

COMMENT/*By Anat Bird*

Why Not All Regionals Are Turning Out Exactly Super

Regional banks are in vogue. Bigger is better, particularly when it is local. However, facts seem to indicate that large regional banks are much more at risk than the true superregionals – banks that diversified their presence across economic regions.

The true superregionals, such as First Interstate, Bancorp are doing much better than the large regional banks, ranging from Bank of New England Corp. to Marine Midland Banks Inc..

Trend of the 1980s

The late 1980s witnessed an emerging trend among banks in various regions of the country. Size was deemed to be essential to success: without economies of scale, it was felt, banks could not achieve significant profitability.

As a result, several banks emerged as large regionals through a spree of mergers and acquisitions within their market areas. Examples include:

• Bank of New England, which grew within the New England proper and then acquired Connecticut Bank and Trust.

• Republic Bank of Dallas, which acquired troubled Interfirst only to encounter multiple problems.

• First Bank Systems in Minneapolis, which is the result of a combination of several local banks.

• First Jersey, itself a combination of two banks, which acquired Fidelity Bank of Pennsylvania.

These banks and others like them became large, assumably strong regional banks. They have reached the critical mass that is necessary for success.

The Logic of Regionals

The logic behind the strategy appeared infallible: The regional bank would still be perceived as a local bank and maintain its community orientation while consolidating back offices and reaching greater efficiencies possible only in large institutions (with assets exceeding $20 billion, in most cases). Back offices were gutted, people were let go, and new institutions were born.

These new institutions focused on their marketplace. They wanted to avoid the "Penn Square syndrome" of making loans in far-flung territories where they have no local expertise and market knowledge.

Rather, they focused on building a local presence, a clear identity, in their defined geographic market.

The Superregionals

In the same period, several banks exemplified alternative regionalization trend by creating "superregional" institutions. These focused on a strong home base augmented by major acquisitions in different geographic areas.

Ms. Bird is director of financial institutions consulting at BDO Seidman, New York.

Peggy Turbett

"The true superregionals are doing much better than the large regional banks."

Although the banks were regional, the regions were large enough for the banks to achieve diversity in the economic environments serviced and in the management styles of the individual banks making up the superregional entity.

Examples include Citizens & Southern Corp. from Georgia, which bought several large banks in Florida and other states in the south, and First Interstate. (The First Interstate banks were somewhat unusual, since they involved a franchise concept. The "home base," located in California, franchised its name and consolidation efficiencies throughout the West Coast, as far north as Oregon and as far south as Arizona.)

The superregional concept was similar to the regional but involved one important exception: more geographical diversity.

It is important to emphasize that asset size did not make the difference; most regionals and superregionals reached a similar size, regardless of expansion strategy. The differentiating factor was local focus versus regional focus – for instance, New England as opposed to the Georgia-Florida corridor.

Both strategies were quite fashionable in the 1980s. They were applauded as the wave of the future and the secret to survival.

The Middle Vanishes

The superregionals and regional banks created an intermediate tier between the huge money-center banks and the tiny community bank. They have brought about the virtual disappearance of the medium-size bank, in the $500 million to $1 billion range.

Banks below $500 million were not deemed acquisition-worthy by the larger regionals; banks bigger than $1 billion often could survive on their own. Those in the middle range seemed to be ideal acquisition targets for builders of large regional banks.

Problem Seen with Regionals

The regional concept is still very popular. It is considered the last word in the restructuring of the banking industry; studies emphasizing economies of scale continue to bring the point home.

We beg to differ.

All regionals indeed created efficient larger entities that resulted in improved efficiencies and reduced costs per dollar pro-

CRIME BLOTTER/*By Tom Leander*

Foot Couriers Get the Boot

Reacting to a recent knifepoint robbery, the Bank of England will phase out the time-honored use of foot messengers to transfer securities in the City of London.

For at least two centuries, banks and other institutions within the City – as London's financial district is called – have settled their money market transactions by physical delivery of the valuable documents, usually by foot messenger.

Britain's central bank is inaugurating a computer clearing system for the money markets on Oct. 1. Officials of the bank, known affectionately as the Old Lady of Threadneedle Street, say they are establishing the system to prevent theft and fraud.

When three men robbed the money broker's courier two months ago, he was carrying 80 bank certificates of deposit valued at $130 million – part of a securities delivery worth a total of nearly $500 million. The securities were recovered last month during a routine baggage search at London's Heathrow Airport.

2 Held in West Virginia Heist

Two West Virginia men were arrested last week on charges of holding up West Union Bank in Salem, W.Va. The robbers escaped with $19,000 after using sawed-off shotguns to threaten two tellers.

The men are also being held in connection with the Father's Day stickup of a Baptist meeting in Phillipi, W.Va. The churchgoers were relieved of about $1,000 in cash, jewelry, and other valuables.

Roger L. Smith, 29, of Philippi and Arthur R. Weidlich, 20, of Grafton were arrested July 4. An anonymous phone call advised police to investigate Mr. Smith's van, which was parked at a local campground.

Police discovered some of the bank cash inside the van. And some items taken from the Baptist congregation were found at home of Mr. Smith's mother.

Also on July 4, Mr. Weidlich was arrested in a car near Flemmingdon, W.Va. Police say he also had some of the loot from the bank and the church in his possession.

In the robbery at Faith Way Baptist Church, a lone gunman interrupted the Sunday service, ordered parishioners to the floor, seized their belongings, then darted off into the woods.

* * *

The Cash Was in the Mail

Oregon police are scratching their heads over the "C.O.D." return of a large bundle of cash stolen May 29 from a Federal Reserve Bank shipment.

The parcel was deposited late at night on July 2 in a mailbox on a Portland city street corner. It was addressed to the U.S. Treasury Service but carried no stamps to cover the cost of delivery.

Postal inspectors in Portland who opened the postage-due package found the cash, which they identified as part of a shipment the Fed had sent by mail from Portland to a bank in LeGrande, Ore.

Police inspector James Pitkin, who is heading the investigation into the theft, said the Federal Reserve uses the mail to ship cash only in those very rare cases when there is no other expeditious way to get cash to a bank. Cash is normally transported via armored car.

The exact sum of money stolen May 29 has never been disclosed. Portland police described the amount as "large." They have posted a $10,000 reward for information leading to the thief who stole the money – and perhaps mailed it back.

Police would not say whether all the money has been recovered. According to inspector Pitkin, the cash had been rewrapped. Rather than handle the money to count it, investigators sent the package to a crime lab to see if it would yield clues about the sender.

Swiss Tackle Laundering

A bill aimed at fighting money laundering was passed in Switzerland last week. A compromise was struck in the upper house of the Swiss legislature to drop a penalty provision for financial institutions that negligently accept criminal funds.

The law becomes effective Aug. 1. It makes money laundering a crime even if committed outside Switzerland through an account in a Swiss bank, if money laundering is illegal in the country where the action originates. Swiss financial institutions are now be required to check the identity of their depositors.

The new law bans the laundering of criminal proceeds under penalty of fines and jail sentences. Opponents of the bill were unable to meet a July 2 deadline for mustering up sufficient votes to call for a referendum.

The penalty clause, which did not survive, would have imposed heavy fines on banks that were connected with money laundering violations. The banks strongly objected to such proposals, saying they were impractical and would require them to perform police-type duties. □

COMMENT

Continued from *page 4*

cessed or originated.

The local regionals maintained their local presence, building upon their identity and market knowledge.

Spreading the Risk

The superregionals created economic diversification, through which they reduced the risk of exposure of total bank assets to an economic downturn in any one region.

For instance, Financial General Bancshares, which owns the First American network, has banks in New York, the District of Columbia, Maryland, Virginia, Tennessee, and Georgia. Through such expansion, it reduced risk in its loan portfolio.

Hedging Against Downturns

This is quite different from buying banks from Penn Square, an unknown originator in an unknown marketplace. Rather, your own loan officers build a loan portfolio consistent with your own credit criteria.

By doing so in different regions of the country, they reduce exposure to local economic downturn. The diversification is achieved without overstretching the institution and within major regions of the country.

(This concept worked exceptionally well for First Interstate – until it chose to expand further East into Texas. Texas did not invalidate the First Interstate concept. It was a mistake, and a serious one, since it nearly dragged the institution down. Nonetheless, the rest of the network was strong enough to pull its ailing brothers through, as the bank's first-quarter results testify.)

Regionals Falter

On the other hand, the regional banks that opted to create large entities in a single region fared less well.

Republic and Bank of New England demonstrate the problems of very large entities that did not diversify geographically. When the economy turned in Texas or in New England, both banks suffered major blows from which they may not recover.

Thus by yearend 1989, the profitable regional banks in the table were truly superregionals, but the local giants were in suffering.

Further Diversification

The superregionals diversified – either through acquisitions or through nationwide activities (CoreStates Financial Corp. in lending, National Westminster Bank U.S.A. in trust services, Banc One Corp. in data processing).

The regionals in the table are all in economically troubled areas. And other regionals, now healthy, might face the same fate if they take heavy losses when the cycle turns and their economy sours.

Regionals Versus Superregionals

Yearend 1989					
SUPERREGIONALS			REGIONALS		
	ROA	ROE		ROA	ROE
Citizens & Southern	1.09%	6.91%	Bank of Boston	0.19%	3.35%
NetWest	1.08	19.21	First Bank System	(0.09)	(1.69)
NCNB	0.83	19.89	First Fidelity	0.55	10.13
Banc One	1.51	16.93	Midlantic	0.67	9.95
CoreStates	1.19	18.67	PNC	0.60	12.69
Average	**1.14**	**18.32**		**0.38**	**6.85**

A Significant Difference

The regionalization idea works when superregionals are created. It combines efficiency with strong local loan production and risk reduction through geographic diversification of the portfolio. The larger bank takes advantage of combined funding capabilities, larger loan minimums, and economies of scale.

However, the concept does not work when all eggs are put in one basket.

Size has its benefits, particularly in curbing operating costs and in centralizing functions.

But it is a major disadvantage when it represents a single-risk economy. When that economy turns sour, the large bank collapses under its own weight. □

"Size has its benefits, but it's a major disadvantage when it represents a single-risk economy."

Florida Thrift Fined in Fraud

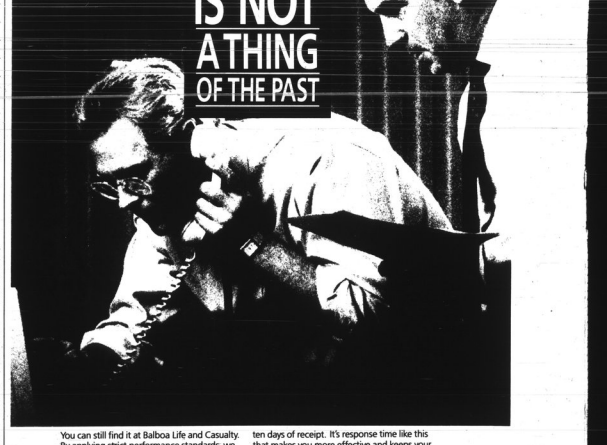
ST. PETERSBURG, Fla. — Florida Federal Savings Bank said a U.S. District Judge in Tampa has ordered the thrift to pay $17 million of restitution and $2.2 million in federal fines following its conviction for student loan fraud.

Florida Federal said the ruling clears the way for recapitalization. Last month, the institution was found guilty of falsifying collection records contained in some insurance claims for defaulted student loans.

Several investment groups have in progress due-diligence evaluations of the $4 billion-asset Florida Federal, the thrift said.

Florida Federal is negotiating with the Civil Division of the U.S. Justice Department and the U.S. Department of Education to quantify and resolve other aspects of the student loan issue.

The thrift said the Office of Thrift Supervision asked it to enter into a consent agreement because its regulatory capital is below the specified level of $15 million. A consent agreement is often a signal that an institution will be placed under regulatory management, Florida Federal said. — **Reuters**



Merger Bids for Healthy Thrifts and Banks Remain Slack

Continued from page 1

low, banks that are potential acquirers now find most acquisitions too expensive in terms of dilution of earnings per share for potential acquirers. In addition, the cloud over asset quality will have to lift. As it is, healthy banks are wary of loan portfolio bombshells at institutions they might buy.

Independent of those trends, a powerful new force toward consolidation is emerging at the bank board level. Often after forceful reminders from regulators about their duties and liabilities, directors are stirring to action in a way that some industry observers believe could begin to force some mergers.

Board Are Vulnerable

"Many managements have lost the control they once had of their boards, because directors have been put in position of very direct responsibility and accountability for actions of their institutions," said John J. Lyons, a New York consultant to banks and thrifts.

Activism by directors could help prompt future consolidation, noted James M. McCormick, president of FMCG Inc., a New York consulting firm.

"I don't see bank directors becoming three times as active as they are now, but the top managements in weaker organizations could lose credibility with their boards and then be susceptible to being put in play on a friendly or not friendly basis," he said.

While such forced mergers have yet to surface, evidence of the increased independence of boards can be seen in the increasing number of announcements on earnings projections and nonperforming assets that managements would prefer to keep quiet.

These losses of credibility, he said, could happen "both in terms of why you committed so into the predicament they're in as well as for not having a well-articulated strategy for profitability and growth going forward."

"Directors have got to get active and push harder because Firrea [the Financial Institutions Reform, Recovery, and Enforcement Act of 1989] puts the burden on them. Egos and social issues may count for less," said Katherine R. Hensel, a banking analyst for Shearson Lehman Hutton Inc.

Shareholder Activism

Large shareholders are also expected to flex their muscles in telling management what to do. Ms. Hensel and others believe that large shareholders will become restless if bank stocks continue out of market favor indefinitely. "Subpar returns could make big investors more proactive," she said.

Certainly there are more major stakeholders at big banks than ever before. The Kohlberg Kravis Roberts Group, for instance, earlier this year took a big stake in First Interstate Bancorp.; the Tisch family owns a major block of Boston Corp.; and the Chilmark Capital Parriners Inc. has recently become a major shareholder in UJB Financial Corp., Princeton, N.J.

Directors and large investors are likely to turn more aggressive if the softness in the real estate markets and corporate loan demand persist, say consultants and analysts.

"Consolidation over time is inevitable, but distress, like war, is accelerating events massively," noted Mr. Lyons, who is managing principal, of Lyon, Zomback & Ostrowski Inc. in New York. He thinks a few deals could occur soon among some relatively healthy institutions "whose stocks have been beaten down."

Opportunity Available

If they can swap stock and combine capital resources, they will be in a spot to take advantage of opportunities created by difficulties at rivals, Mr. Lyons said.

Carole A: Berger, a banking analyst for C.J. Lawrence, Morgan Grenfell Inc., however, believes there will be minimal consolidation among healthy banks and thrifts until the smoke over the troubled real estate clears. And that could require another two or three years, she said.

Others are slightly more optimistic, although expecting little activity in the immediate future.

"How could a banker possibly have the nerve to buy anything right now, not knowing what's in the loan portfolios?" asked Lacy M. Shockley, banking analyst at Smith Barney, Harris Upham & Co.

Correction Takes Time

She thinks several years are required for overbuilding in real estate to be corrected, but notes that a construction hiatus in areas where the economy has allowed excess capacity to be absorbed reasonably quickly. Ms. Shockley cited middle Tennessee as such an area. Construction activity slowed there well over a year ago.

But while some areas can heal themselves in a couple of years, regions such as New England – with slow economic activity and static population growth – could require much longer.

Meanwhile, the hot merger activity these days is in banks taking over the deposits and branches of troubled thrifts. A number of large institutions now under government control are available to propel the consolidation trend from either Dallas Sooner Federal Savings and Loan Association, Tulsa, Okla.; Empire of America Federal Savings Bank, Buffalo, N.Y.; and City Federal Savings Bank, Bridgeport.

Efficiencies Vital

When combinations resume among healthier institutions, they will be driven by the need for greater capital and for increased efficiency and cost savings to offset the lack of loan growth anticipated in this decade by most analysts.

Mr. McCormick of FMCG cites several major forces that are expected to drive merger activity in the 1990s, besides management credibility with directors.

*Deal Terminated, July 3, 1990

Source: Securities Data Co.

First, in-market mergers will be popular because of the efficiencies that can be gained. Second, aggressive chief executive officers will continue to seize opportunities to expand their franchises.

Returns on Equity Strong

These moves will be possible, he said, because "some regional banks are amassing the ability to operate in the low 20% return on equity range, which should give them stock price and market capitalization with which to make acquisitions in the 1991-92 time frame."

Another force for consolidation, he said, will be scale-building in some areas of the banking business such as securities processing. Moves to build scale by some banks in these areas could trigger a series of responses by others in the same

Massachusetts Bankers Cite Lobbying in Tax Victory

Continued from page 1

Bankers Association and the Massachusetts Federal Savings Council, a thrift trade group.

The state bankers' group sent a three-page letter to legislators and aides outlining the impact of a service tax on financial institutions and a list of 35 banking products and services that would have been effected, said Robert Sheridan, president of the Massachusetts Bankers Association.

"We would have been impacted very seriously," Mr. Sheridan said. "Clearly, it would have made us less competitive."

He said the letter-writing campaign persuaded the legislators to exempt financial services from the tax.

The final Massachusetts tax package covers 594 services, including those of lawyers, accountants, engineers and architects, with many other industries receiving exemptions and special provisions under the complex legislation. It is awaiting Gov. Michael Dukakis' signature to become law.

Banks in the state, especially smaller ones that use more outside services, will still be affected by the new sales tax, said Robert Stoico, president of First Federal Savings Bank of America, Fall River. His $400 million-asset institution will have to pass the additional cost of accountants, lawyers, and other professionals directly on to the consumer, he said.

The Massachusetts Bankers Association argued in its letter that the state's bankers already pay a disproportionate amount of taxes, Mr. Sheridan said. Banks are subject to a 12.54% income tax, and other corporations pay only a 9.54% tax, he said.

Real estate problems have rocked the state banking industry, Mr. Sheridan said, and bankers are worried about out-of-state competition. These fears are heightened by Gov. Dukakis' signing of an interstate banking bill that will open the borders to banks from other states in July 1992, he said.

Along with sending its own letter, the state bankers' group urged member banks to voice their concerns to legislators.

The Massachusetts Federal Savings Council also rolled out its troops, said ring-leader Robb Osinski, vice president of First Federal Savings Bank of Boston. The group decided not to send lobbyists to the state house, but rather to gather support through a public relations campaign, he said.

Large numbers of letters were sent from the organization and its members, and press releases were sent to the media to generate public support, Mr. Osinski said.

EXECUTIVE *changes*

Fuji Bank Names Kamio NY Director

Tomohiro Kamio, general manager of the **Fuji Bank Ltd.,** Tokyo (American division), has been named director and general manager of the bank's New York branch.

He succeeds **Toru Nonoyama,** who will become managing director and will oversee all American operations from the division's regional headquarters in New York. The New York branch is Fuji's largest operation outside Japan.

Mr. Kamio assumes leadership of a New York branch with 200 employees and $43 billion in assets, the largest of 10 offices in Fuji's U.S. banking network.

Fuji New York has diversified its client base to include a large number of U.S. corporations and Japanese corporate customers.

Tomohiro Kamio

The New York branch offers broad merchant banking services in the corporate, municipal, real estate, project and international finance market as well as in capital markets, money markets, and foreign exchange.

Previously, Mr. Kamio was joint general manager of the international planning division of Fuji Bank, Tokyo. From 1982 to 1986, he served as president of the European subsidiary, Fuji Bank (Luxembourg) S.A.

— Franklin Smith

NEW ENGLAND

The Boston Co., Boston, has appointed **Patricia P. Baillieul** senior vice president and manager of human resources.

The Federal Reserve Bank of Boston has appointed **Jonathan S. Fine** assistant vice president, banking structure department, and **David K. Park** assistant vice president and assistant general counsel.

Plymouth Five Cents Savings Bank, Plymouth, Mass., has named **Dennis P. Jones** vice president and chief financial officer.

MIDWEST

Credit Union Executive Society, Madison, Wis., said **Jeanne Klemm** is retiring as senior vice president and chief administrative officer on July 1 after 21 years of service.

First of America Bank Corp., Kalamazoo, Mich., said **Jae M. Maxfield** has been named president and chief executive officer of its First of America Bank-Monroe unit. As president, Mr. Maxfield succeeds **Malcolm Powell,** who has assumed the presidency of the company's Indianapolis bank.

MIDDLE ATLANTIC

John Hanson Savings Bank, Beltsville, Md., has elected **John V. Pollock** president.

He assumes the presidency from **J. William Middendorf 2d,** who continues as chairman and chief executive officer of the thrift.

Mr. Pollock has been serving as senior executive vice president and chief operating officer since joining John Hanson Savings in March 1989.

Bankers Trust Co., New York said **John T. McNabb 3d** has joined the bank as managing director and head of BT Southwest Inc., a wholly owned subsidiary of **Bankers Trust New York Corp.** BT Southwest includes the Houston office of the corporation's Energy Merchants Bank.

Mr. McNabb was formerly an executive with **Prudential Capital Corp.,** Dallas, where he was responsible for merchant banking in the Southwest as well as energy investment in North America.

In addition, **Paul J. Gronski** has joined Bankers Trust Co. as head of analysis and planning for the private banking/marketing group. He will be responsible for market research and analysis, project management, product and market strategy development, and strategic planning.

He comes to Bankers Trust after eight years with **Citicorp,** most recently working in the strategic marketing unit of Citicorp's private bank.

Riggs National Corp., Washington, D.C., announced the following promotions at its Washington and Maryland units:

Riggs National Bank of Washington, Richard E. Brewer has been named senior vice president and trust officer in the personal trust division, and **Bruce J. Wildman** has been named senior vice president and trust investment officer in the trust division's asset management group.

Barbara Boykin-Brown has been named senior vice president of the private banking group at **Riggs Bank of Maryland** and **Michael P. Fitzgerald** has been named senior vice president in charge of Riggs' business banking unit in Maryland.

Travelers Mortgage Services, Cherry Hill, N.J., has named **Lori Gagliardi** assistant vice president, business and financial strategies, for the company's wholesale division, which purchases mortgages nationwide from 343 clients in 34 states.

Meridian Bancorp Inc., Reading, Pa., said **Steven P. Kurtz** has been named chairman, president, and chief executive officer of its American Title Insurance subsidiary.

He replaces **John W. Tagge,** who has resigned for personal reasons but will, during the transition period, remain on as a consultant.

Mr. Kurtz will relocate to the Miami, Fla., area, where American Title has its headquarters.

James Madison Ltd., Washington, said **Donna W. Eacho** has been elected a director of Madison National Bank of Virginia, a subsidiary of the bank holding company.

Ms. Eacho' brings a background in commercial banking to Madison National Bank of Virginia, working as a vice president with **Crestar Bank,** Richmond, Va., since 1987.

— Franklin Smith

CREDIT UNIONS

Bank CEOs Earning More Than Peers at Nonprofits

By ELLEN MEMMELAAR

Though credit union chief executives had made some progress since the previous year, their 1989 compensation still fell as much as 40% shy of what a bank executive made for comparable work, according to a study by the Credit Union Executive Society.

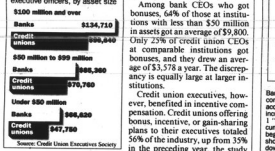
The compensation gap between chief executive officers of banks and credit unions of comparable size is substantial, ranging from 21% to 40% in 1989, the study found. Industry watchers attributed the difference to the institutions' structures and their varying philosophies.

The study for the society, which was completed by Koch-McNabb Resources, includes responses from 854 of the trade group's members. The respondents gave information on more than 700 chief executive posts and nearly 2,100 other executive jobs. The results are published in the *1990 Credit Union Management Compensation Manual*.

The biggest salary growth was at credit unions with $50 million to $99 million in assets, where executives' base salary grew 7.6%, and at institutions with more than $200 million in assets, where growth was 7.5%. Growth in base salary among other credit union executives remained close to the inflation rate, about 4% or 5%, according to the study.

For executives one rung beneath the top, credit union pay was even skimpier. Second-ranking officers at banks with less than $50 million in assets made $46,640, or 40% more than their credit union counterparts, who earned $33,270, the study found. The average operations officer at a $100 million-plus credit union made $48,990, while his banking opposite number pulled in $82,990, a 69% difference.

The Salary Gap
1989 Compensation of chief executive officers, by asset size



Source: Credit Union Executives Society

Bankers also soundly beat credit union executives in incentive or performance bonuses, according to the study.

Among bank CEOs who got bonuses, 64% of those at institutions with less than $50 million in assets got an average of $59,800. Only 25% of credit union CEOs at comparable institutions got bonuses, and they drew an average of $3,578 a year. The discrepancy is equally large at larger institutions.

Credit union executives, however, benefited in incentive compensation. Credit unions offering bonus, incentive, or gain-sharing plans to their executives totaled 56% of the industry, up from 35% in the preceding year, the study showed.

"It is pretty clear that the reason bankers make more than credit union people is the philosophy of how both organizations are run," said Thomas Powers, president of First Commonwealth Credit Union, Lehigh Valley, Pa. He cited credit unions' nonprofit status, their reliance on volunteerism, and a tendency for credit union executives to place less emphasis on salary.

"There will always be a difference," Mr. Powers said of credit union pay vs. bankers' pay. But credit union executives should gain ground, he added, because credit unions are stretching beyond the small, single-purpose institutions that they were two decades ago.

Talented people with master's degrees in business administration are needed to run these increasingly complex organizations, he pointed out.

Salaries will increase for other reasons, too, Mr. Powers said. He and others pointed to a shrinking pool of executives who have risen in credit union ranks. These institutions have grown so rapidly in recent years that they have not had time to cultivate their own candidates, he said.

The average age of the credit union executive is fairly high, said Marvin Umholtz, senior vice president of government and public affairs at the Michigan Credit Union League, Southfield.

"Many of these executives have retired in recent years, and others are getting closer," Mr. Umholtz said, creating numerous potential vacancies.

Therefore, more credit union executives are being drawn from the banking industry, Mr. Powers said. These executives have the necessary experience but come at a higher cost, he said.

While he expects the gap to close somewhat in the 1990s, Mr. Powers said, it will never close completely.

Tun Wai, director of research at the National Association of Federal Credit Unions, said he doubts the gap will close in the next decade. Bank operations "are much more complicated," he said. Bankers must handle more complex types of commercial activity that credit unions are legally prohibited from handling. This alone will cause a continued salary differential, he said. □

Banks Rated No. 1 in Survey on Service

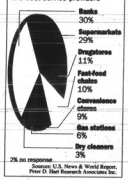
By ED LYNCH

NEW YORK — Bankers struggling to improve service quality can take heart. *U.S. News & World Report* says they give the best service in America.

For its "Best of America" edition, dated July 9, the magazine compiled lists of excellent performers, including predictable winners like Sam Walton for his business acumen and less likely ones like Jimmy Carter as best social advocate.

To determine top-rated services, the magazine contacted 1,005 consumers and asked which of seven everyday businesses gave the best service. Banks came out on top with 30% of those surveyed; supermarkets were favored by 29%, said Amy Bernstein, an associate editor of the weekly newsmagazine.

How Businesses Rank
1,005 consumers pick the best service providers



Source: U.S. News & World Report, Peter D. Hart Research Associates Inc.

"The banking industry is really working like heck on this thing, and it is a moving target because the consumer's expectation is always being ratcheted up by wherever they're getting the good service."

"I'm delighted that consumers are thinking that way," said John A. Russell, vice president and director of corporate communications for Banc One Corp., Columbus, Ohio. "I don't know if we're getting better or the others are getting worse."

Both men seemed to relish the victory over supermarkets.

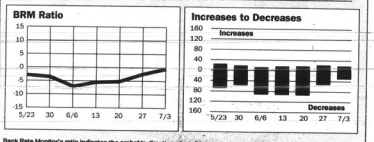
"That's who has been beating us consistently," said Mr. Nelson: "These really nice new grocery stores that are very large."

A Cautionary Note

J. Douglas Adamson, executive vice president of the Bank Marketing Association, said, however, "it is extremely well documented" that the American public is unsatisfied with service in all consumer industries. "So to be ranked the best among bad should not be that consoling to an industry so reliant on service quality," he said.

Ms. Bernstein said the survey was done in April by Peter D. Hart Research Associates Inc., a Washington firm that telephoned people 18 or older at 263 randomly selected locations in the continental United States. □

AMERICAN BANKER /Bank Rate Monitor's™
Consumer Money Index — **Latest rate trend: ratio goes on hiatus**



Bank Rate Monitor's ratio indicates the probable direction of retail interest rates over the next several weeks. The ratio is computed by dividing the total number of rate decreases into the number of increases or vice-versa on six types of accounts offered by the 10 largest banks and thrifts in each of the nation's 10 largest markets. Example: 100 rate increases and 25 decreases would make a 4-to-1 "Plus" ratio. Or, 100 decreases and 25 increases would make a 4-to-1 "Minus" ratio. Over time, the longer and farther the ratio moves on the Plus or Minus side, the more sustained the current rate cycle is likely to be. When the ratio suddenly moves strongly in an opposite direction, it usually signals the beginning of the end of a cycle. The graph shows how the ratio has moved over the past 8 weeks, and the bar chart shows the actual number of rate increases to decreases used to calculate the ratio. The greater the number of ups and downs, the longer the cycle probably will last.

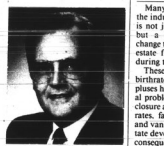
Deutsche Bank's U.S. Unit Digs In For Long Dry Spell of Acquisitions

By ANDREW REINBACH

In 12 years in the U.S. real estate business, Deutsche Bank has made only one mortgage, a $550 million loan on New York's Worldwide Plaza.

Even during the boom years, Deutsche Bank Capital Corp. set its sights on acquiring office buildings in the U.S. market rather than lending. In keeping with this focus, the Worldwide Plaza mortgage converts to 50% ownership after 10 years.

Now, the acquisition deals may be drying up, too. Karl H. Casagrande, executive vice president of Deutsche Bank Capital, sees the end to the current slump as three to five years away. Until then, his bank won't even consider real estate loans here.



Karl H. Casagrande
Deutsche Bank Capital Corp.

His unit has been most active in buying leased office buildings for a real estate investment trust traded on the Liechtenstein stock exchange. He expects few new deals in the near future, citing the prevailing opinion of European investors; "U.S. [real estate] is a dead market."

Timing explains why Deutsche Bank sat on the sidelines during one of the biggest real estate lending booms in U.S. history. The bank's real estate unit opened here in 1978.

"By the time we understood the markets, we didn't feel we would be adequately compensated for the risk," Mr. Casagrande said.

Businessmen and politicians from Europe and Asia will determine the future of the U.S. real estate business, Mr. Casagrande said. The economies of Europe and Asia are outperforming the United States, which will eventually reduce demand for American office and warehouse space.

On the brighter side, he pointed out, "Banks pulling out of the real estate market will allow it to avoid overbuilding and absorb what's there now. But it will be quite a while before there is money for new buildings." □

Structural Decline Seen in Realty

Revived Lending Boom Unlikely in '90s, Experts Say

By ANDREW REINBACH

Many real estate experts say the industry's current downturn is not just a cyclical correction but a fundamental structural change that could cut banks' real estate financing nearly in half during the 1990s.

These experts said falling birthrates and vast property surpluses have created the structural problem. Today's rising foreclosure and nonperforming asset rates, falling real estate prices, and vanishing interest in real estate development are among the consequences.

"It's not difficult to conjure up a development industry working at 50% of the activity of the 1980s, and you're not going to see very many real estate loans done until this market straightens out," said Ralph Carestio, corporate executive vice president of NCNB Corp., the Charlotte, N.C.-based bank holding company.

Demographics, Tax Law

"The volume of activity will never get back to where we were in 1985," he said. "Twenty-five percent of the incentive disappeared [with enactment of the 1986 tax reform], and you can easily add another 20% for demographics."

Academics agree that the high rolling 1980s were an exception to the normal business cycle.

"The volume of loans you saw then won't be seen again unless there's a tremendous structural change affecting the entire economy," said William B. Brueggman, Corrigan professor of real estate at Southern Methodist University, Dallas.

It's the inconvenient arithmetic of demographics that spells out the worst news for real estate and construction loans lending.

"Because of the baby boom followed by the baby bust, we have entered into a period extending a few years into the next century in which we have a decline in the number of young people entering the job market," said Peter A. Morrison of the Rand Corp., Santa Monica, Calif.

Office Space Burgeons

From 1985 through 1989, 972.1 million square feet of office space were built in the nation's 55 top markets alone, a 71% increase in inventory, according to TCW Realty Advisors, Los Angeles. Another 132.7 million square feet are under construction.

But the economically active U.S. population in those years grew by only 9%, to 117.8 million, from 106.3 million, according to the U.S. Bureau of Labor Statistics.

A total of 629.3 million square feet – 24% of inventory – was vacant or under construction Jan. 1, 1990. This space will take 5.6 years to absorb at last year's leasing rate, according to TCW. But this is an optimistic estimate; Salomon Brothers Inc. thinks it will take 7.6 years to reach a 5% vacancy rate nationwide.

Local Variations

This oversupply won't be universal, though.

Areas with relatively high population growth will see demand for property – and real estate loans – recover more rapidly, than in slow-growing areas. And a severe local property crash today means price declines that attract tenants, hastening a comparative recovery in the local real estate market.

Commercial banks – not just insolvent savings and loans – deserve a lot of the blame for this predicament, both banking and real estate experts said.

"The banks were involved in creating speculative excesses, and now we're reaching triggers that may suggest we've gone too far," said Alex Sheshunoff, an Austin, Tex.-based banking analyst. "The major engine behind loan growth has been real estate lending. It was a major source of profitability, and now it's a major source of vulnerability."

Little Sympathy for Banks

Banks get scant sympathy from real estate professionals.

"Why did banks keep lending for the past five years? Because they were making money. They deserve everything they get," said Leanne Lachman, a managing partner at Schroeder Real Estate Advisors Inc., based in New York.

Some real estate professionals pointed out that most major insurance companies – generally considered the most sophisticated real estate lenders – had largely pulled out of the market by 1984. By that year, insurers had stopped writing mortgages with the money they were raising on Guaranteed Investment Contracts, or GICs, and had begun investing in leveraged buyouts.

Banks Replaced Insurers

Banks stepped into the breach, and office development soared.

"The building boom supercycle was started by the insurance companies with GICs money but further accelerated by S&Ls and commercial banks after deregulation in 1986," said Sol Rabin, senior partner of TCW.

And the future? It holds less building and less real estate lending.

"The moment of truth is now at hand," said Gabriel Sternlieb, university professor of urban planning at Rutgers University, New Brunswick, N.J. "But what we're going back to isn't a revolution – it's a counterrevolution.

"We're going back to normalcy. Bankers will have to think small; they'll have to think about the tenant and customers that will use the building, not a goal post to goal post pass." □

Dallas S&L Case Evokes Outrage Among Senators

Continued from page 2

with $70 million borrowed from insurance companies, Sen. Metzenbaum said.

Charging that this strategy "put thousands of policyholders at risk in the investment," the Ohio Democrat called for a closer look at insurance company investments in failed or weak thrifts. Half the funding came from seven insurance companies controlled by Mr. Fail, the balance from Bankers Life and Casualty, Chicago.

"At what price are we saving savings and loans?"
Sen. Howard Metzenbaum
Ohio Democrat

Sen. Metzenbaum said he plans to subpoena Mr. Fail; M. Danny Wall, former Federal Home Loan Bank Board chairman; Stuart Root, former executive director of the FSLIC; Thomas Lykos, former director of FSLIC's Southwest Plan, under which the Bluebonnet deal was negotiated; Robert Thompson, a lobbyist and former congressional liaison to then-Vice President George Bush, and Robert T. Shaw, chairman of Bankers Life and Casualty.

Mr. Brand, the attorney for Bluebonnet, said federal authorities were fully informed of Mr. Fail's 1976 indictment for securities fraud, which was dismissed, and the guilty plea he entered on behalf of United Security Holding Co., which he controlled. "Neither matter disqualified Mr. Fail from purchasing the Texas thrift," Mr. Brand said. □

Recapitalization Plan Is Scrapped

PONTIAC, Mich. — First Federal Bancorp Inc. said a potential investor has decided not to pursue a proposed recapitalization of the company's two thrift subsidiaries and has withdrawn its letter of intent.

President Leo Ottoni said the investor indicated its decision was based on conversations with its recently retained investment adviser regarding the ability to attain the group's investment objectives in a transaction that would not be assisted by regulators.

"While we are disappointed with their decision, we will continue to explore alternatives designed to enable First Federal's subsidiary savings banks, First Federal Savings Bank and Trust and Citizens Federal Savings Bank, to attain compliance with the recently enacted tougher regulatory capital requirements," Mr. Ottoni said.

The units are operating under Office of Thrift Supervision restrictions because of insufficient capital.

with $70 million borrowed from insurance companies, Sen. Metzenbaum said.

Charging that this strategy "put thousands of policyholders at risk in the investment," the Ohio Democrat called for a closer look at insurance company investments in failed or weak thrifts. Half the funding came from seven insurance companies controlled by Mr. Fail, the balance from Bankers Life and Casualty, Chicago.

"At what price are we saving savings and loans?"
Sen. Howard Metzenbaum
Ohio Democrat

Sen. Metzenbaum said he plans to subpoena Mr. Fail; M. Danny Wall, former Federal Home Loan Bank Board chairman; Stuart Root, former executive director of the FSLIC; Thomas Lykos, former director of FSLIC's Southwest Plan, under which the Bluebonnet deal was negotiated; Robert Thompson, a lobbyist and former congressional liaison to then-Vice President George Bush, and Robert T. Shaw, chairman of Bankers Life and Casualty.

Mr. Brand, the attorney for Bluebonnet, said federal authorities were fully informed of Mr. Fail's 1976 indictment for securities fraud, which was dismissed, and the guilty plea he entered on behalf of United Security Holding Co., which he controlled. "Neither matter disqualified Mr. Fail from purchasing the Texas thrift," Mr. Brand said. □

Tax breaks and federal assistance have turned the $3 billion-asset Bluebonnet Savings Bank into a gold mine.

ties, and despite a 34% drop in net mortgage loans during the year.

Tracing Source of Investment

Mr. Fail's group initially invested $70 million into Bluebonnet. Ultimately it is obligated to invest an additional $50 million into the unit.

Arizona and federal examiners are investigating whether Mr. Fail misled regulators about the source of some the funds he used to buy Bluebonnet, including the possibility that he concealed a $10 million loan from a Mississippi thrift that later failed.

Examiners also suspect that Mr. Fail improperly pledged some of his Bluebonnet stock as surety on investments in the failed Farm and Home Life Insurance Co., Arizona, which he owned. □

Athletes Do Well in British Event

NEW YORK — A 12-member squad of outdoor sports enthusiasts from the London branch of Bankers Trust Co. performed well as contestants in the annual Challengers Trophy, held in the United Kingdom.

The unit of Bankers Trust New York Corp., the only American institution to participate, fielded two women's teams, one of which took first place in the women's competition. The men's team, brought together from Scotland, Germany, Spain, the United States, and England, finished 15th in its division.

The Challengers Trophy competition, which some call the ultimate corporate sports event, took place in the rugged Trossachs area not far from Glasgow.

Men's and women's teams spent four days in activities such as mountain biking, mountain climbing, canoeing, and road running. Each team spent one night navigating a lake in a rubber dinghy, then hiking five miles through woods.

"Our hard work and training has paid off," said Kate Crean, a member of the bank's winning team. "We covered some tough terrain. Training proved extremely valuable.

"The win can be credited totally to teamwork," she said. "It was a big plus to have built up such a bond over the past couple of months."

Ninety-two teams from around the United Kingdom participated in the competition, held May 30 through June 2.

INDEX *of top stories*

The following is a selected index of the top stories that appeared in the *American Banker* in the past two weeks, arranged by subject. The date on which the article appeared precedes each item.

COMMENTARY

6/26 Research from Booz-Allen & Hamilton Inc. indicates that the typical branch need earn only about 1.2 basis points on its abilities, Sanford Rose reports. *Page 4*

6/27 The FDIC must demand a fair price for the shares of Continental Illinois that it acquired in the 1984 bailout, writes Irvine Sprague. *Page 4*

6/28 The mortgage market is ripe for exploration by bankers, says Alden L. Toevs. *Page 4*

6/29 The key challenge in deposit insurance reform is to eliminate incentives for banks to take more risks as their net worth declines, writes Robert Eisenbeis. *Page 4*

7/2 "No doc" loans perpetuate the mistakes that got thrifts into hot water, writes Paul Nadler. *Page 4*

7/3 Branch survival depends on close attention to scale of operations, staffing patterns, and product-pricing and product-mix management, writes Sanford Rose. *Page 4*

7/5 Deposit insurance reform still faces many hurdles, writes William M. Isaac. *Page 4*

7/6 Large and small banks must present a solid front to demand Glass-Steagall repeal, writes Mark Olson, a partner with Ernst & Young. *Page 4*

COMMERCIAL REAL ESTATE

6/26 Marriott Corp. is shopping for foreclosed hotels, on the theory that it can buy at a deep discount from banks and convert the properties profitably to its own brand names – without adding to the glut of rooms. *Page 8*

6/28 In the first indication that Donald Trump's financial problems could affect bank earnings, Manufacturers Hanover Corp. disclosed in a regulatory filing that it will place up to $157 million of its loans to the real estate developer on a nonperforming basis. *Page 1*

7/3 The California market, which has been the hottest in the nation, is showing signs of weakness. Tighter credit demands are putting a crimp in construction. *Page 8*

COMMUNITY RELATIONS

6/29 For the first time, banks will have to disclose how well they are complying with the Community Reinvestment Act, the 13-year-old law that requires regulators to monitor an institution's record of providing credit to low-income and middle-income communities. *Page 1*

COMPETITION / BANK

6/26 Promising "significant and rapid change," the newly named chairman and president of Chase Manhattan Corp. announced in an internal memo a sweeping restructuring that is aimed at saving $300 million a year, or 8% of current operating expenses. *Page 1*

7/2 A horse race is developing after a period of banking consolidation in Philadelphia, with CoreStates Financial Corp. and Mellon Bank Corp. neck and neck for the lead in retail market share. *Page 1*

CONSUMER SERVICES

6/25 Shorebank Corp. of Chicago doesn't just finance community development. A subsidiary, City Lands Corp., has built 1,300 units of low- and moderate-income housing units since it was formed in 1978. *Page 6*

6/25 An unusual degree of financial uneasiness makes older members of the baby-boom generation a potentially lucrative marketing target for astute bankers, researchers and bank marketers say. *Page 1*

6/26 The New York Cash Exchange says an award-winning ad campaign helped it make significant inroads in the competitive New England market. *Page 6*

6/28 In pursuit of consumers concerned with environmental problems, Wells Fargo Bank is diving into water conservation, and First Interstate Bank of California has a new program to cut through the smog and get older cars off the freeways. *Page 6*

6/28 MasterCard International plans a discount calling-card program in conjunction with MCI Communications. *Page 15*

6/29 Senior citizens are a potentially lucrative market, yet banks are failing to offer them truly comprehensive packaged accounts. *Page 8*

7/2 Bank of New England Corp. said it plans to sell or close more than 95 branch offices by the end of the year. *Page 2*

7/3 Elizabeth Burkhart, a strong supporter of the credit union movement, is retiring to Hawaii after eight years with the NCUA. *Page 6*

7/3 A booming economy and the ailing thrift industry are fueling a surge in consumer lending in California that is unmatched in any other region of the country. *Page 1*

7/5 Morgan Guaranty is forming within its private bank a global asset management group that will offer clients many products developed for institutional and corporate customers of parent J.P. Morgan. *Page 6*

7/5 Chase Manhattan Corp. plans to launch a nationwide identity campaign this fall to integrate all its consumer products. *Page 6*

7/6 Small businesses in Massachusetts have been swamping a hot line set up to match lenders with borrowers. *Page 5*

CREDIT CARDS POINT OF SALE

6/27 Spiegel Inc., the catalogue retailer, said it plans to purchase First Consumers National Bank, a credit card institution in Portland, Ore. *Page 20*

6/28 The Federal Reserve Board introduced a new wrinkle into the increasingly competitive credit card market last week by easing a long-standing ban on offering card discounts to attract other business. *Page 1*

See **INDEX** *next page*

The time has come for the top management of the bank, the CEO, to get involved in automation. Top management must face this fact and cannot wish that responsibility onto others.
Automation is no longer the intrigue and complexity that it has been for 30 years, and top management must realize that fact. The automation directions, strategies, and decisions must come from bankers, not data processing people. For those CEOs who realize this, the bank can move ahead now. If they won't take the responsibility, then the bank will have to wait until the CEO is willing to become involved.
Automation is no longer decisions in hardware and software, but decisions in the art and science of banking.

union movement, is retiring to Hawaii after eight years with the NCUA. *Page 6*

DEPOSIT INSURANCE

7/2 The Federal Deposit Insurance Corp.'s Bank Insurance Fund could decline as much as $2 billion by yearend if real estate problems persist and any large banks fail, a senior official at the agency said. *Page 1*

7/5 Economist R. Dan Brumbaugh, who was among the first to predict the collapse of the thrift industry, now says the Federal Deposit Insurance Corp. is effectively insolvent and commercial banks are in big trouble. *Page 1*

EARNINGS

6/28 Adding consumer loans to its growing list of woes, Equimark Corp. said it expected to report a net loss of $12 million to $17 million for the second quarter. *Page 1*

6/28 In the first indication that Donald Trump's financial problems could affect bank earnings, Manufacturers Hanover Corp. disclosed in a regulatory filing that it will place up to $157 million of its loans to the real estate developer on a nonperforming basis. *Page 1*

7/3 Following disclosures that its second-quarter earnings would be soft, First City Bancorporation of Texas said that it would cut its work force by more than 10% over 12 months. *Page 2*

FINANCE

6/25 RJR Nabisco Holdings Corp. appears well on the way to raising $2 billion to $3 billion in bank loans to help retire some of its junk bonds. *Page 14*

6/26 Dai-Ichi Kangyo Bank, one of Donald Trump's Japanese lenders, denied press reports over the weekend that it had agreed to a new credit pact to bail out the troubled developer. *Page 18*

6/27 Japanese Banks may siphon off a source of capital for U.S. banks if they get permission to issue subordinated loans and include them in regulatory capital. *Page 32*

6/27 Banc One's winning strategy has been to expand rapidly through acquisitions and yet maintain a high level of performance. *Page 26*

6/27 Even as Kohlberg Kravis Roberts & Co. invests an additional $1.7 billion in RJR Nabisco Inc., the leveraged-buyout firm is looking to withdraw $500 million as well as accrued interest in short-term debt it had previously invested in RJR, according to banking sources. *Page 1*

6/28 Brokered deposits, which abetted the growth of troubled thrifts in the 1980s, are now also being used by large banks as an important part of their borrowed-funds mix. *Page 24*

6/29 Faced with the inability to refinance short-term bank loans in the junk-bond market, Zale Corp. and its bank lenders restructured $300 million in acquisition-related debt, bankers and analysts said. *Page 1*

6/29 Short sellers continue to take positions in Fleet/Norstar Financial Group, betting that earnings at the New England regional will suffer as nonperforming real estate loans rise. *Page 20*

7/2 In what could prove to be the first in a series of debt offerings by Japanese banks in the United States, a subsidiary of Sumitomo Bank Ltd. is preparing to issue $500 million of 10-year fixed-rate guaranteed notes. *Page 1*

7/3 Despite a drastic drop in the prices of Charter Medical Corp.'s high-yield bonds, the company's bank creditors have not begun to clamp down on the company. *Page 14*

7/3 A weak market for financial stocks has created an opportunity for Jamaica Savings Bank, which last week completed its conversion from a mutual- ly chartered to a public thrift. *Page 16*

7/5 Manufacturers Hanover expressed confidence in its ability to syndicate $1.17 billion in bank loans to back Forstmann Little's bid for General Instruments. *Page 16*

7/5 The best way for a bank to tap the capital markets may be for it to avoid operating like a bank, G Republic New York Corp.'s recent experience is any indication. *Page 16*

7/6 Credit Lyonnais is planning a leveraged buyout fund and is said to be wooing Leon Black, formerly cohead of investment banking at Drexel Burnham Lambert, to run it. *Page 14*

HOME MORTGAGES

6/29 NCNB Mortgage, which last year made waves with aggressive pricing in home-loan originations, now has set its sights on becoming one of the biggest mortgage servicers. *Page 6*

INTERNATIONAL

6/25 Some Japanese bankers, fearing that further penetration of the U.S. market could prove a political liability, acknowledged that they may have to accept voluntary growth restraints. *Page 10*

6/26 Florida's Department of Banking and Finance has ordered foreign banks to tighten internal controls as part of a crackdown on money laundering in the state. *Page 12*

6/27 Citibank concluded a long-awaited agreement in Tokyo for access to the 20,000-strong automated teller machine network operated by Japan's big banks. *Page 24*

6/28 Regionals like First NH Banks, confronted with the growing internationalization of U.S. trade, have decided to expand international operations. *Page 10*

6/29 West German banks have shipped the equivalent of $15 billion into East Germany in the past six weeks to lay the foundation for a new banking system. *Page 12*

7/2 Perestroika in the Soviet Union is failing an important test of a modern economy – the creation and management of an effective banking system. *Page 10*

7/3 The Bank of England has unveiled a five-pound banknote that it says can foil a new genera-

Mitsubishi in Options Venture

TOKYO – Mitsubishi Trust and Banking Corp. and Chicago Research and Trading Group Ltd. will set up a joint venture to pursue arbitrage opportunities, primarily in derivative currency and interest rate products, a Mitsubishi statement said.

The new company, yet to be named, will be capitalized at $150 million, and will be owned equally by Mitsubishi and Chicago Research. CRT is a leading options trading company with membership on 20 exchanges.

The joint venture will take over all of Chicago's existing operations. It and its affiliates will operate in New York, Philadelphia, London, and Tokyo.

The joint venture will enable Mitsubishi to obtain membership at major U.S. and European exchanges and participate as a primary dealer in U.S. securities through Chicago Research. — **Reuters**

Canadian Banks Hunting Bargains

See U.S. Thrift Crisis as an Expansion Opportunity

By ANN BROCKLEHURST
Reuters

TORONTO — Canadian financial institutions are shopping for U.S. thrifts, hoping they can spot bargains to allow them to expand south of the border, industry officials said.

Companies such as Royal Trustco Ltd. of Toronto scour the quarterly list of U.S. thrifts up for sale published by the Resolution Trust Corp., the Washington agency responsible for selling savings and loan assets.

Sometimes they find what they are searching for: salvageable savings and loans.

Western Acquisitions

Last October, Royal Trust bought Pacific Savings Bank, an insolvent 11-branch thrift in Costa Mesa, Calif., from the RTC. In June, it picked up 62 branches and some assets of Oregon's American Savings for about $30 million.

Both thrifts are being folded into the operations of Seattle-based Pacific First Financial Corp., a bank with $6.6 billion in assets that Royal Trust bought in February 1989 for $212 million.

Canadian trust companies – with their wide experience in mortgage lending – are attracted to U.S. savings and loans, which have a majority of of their assets in real estate.

The U.S. market is "probably the best opportunity and the scariest," says Peter Maurice, who will soon take over as the chief executive officer of Canada Trustco Mortgage Co.

In May, U.S. Treasury Secretary Nicholas F. Brady said it might cost the government $130 billion to clean up the thrift industry, not including interest on bonds to pay for the bailout. More than 1,000 savings and loans, or about 40% of the industry, may eventually be seized by the government and then put up for sale.

Royal Trust, which had been researching the U.S. market since 1987, looked at some 100 institutions, according to Barry Henstock, senior vice president and chief financial officer. But eventually, it decided to concentrate on the Pacific Northwest and California because of the dynamic economy of the region.

Shopping for More

Royal Trust is still shopping with about $400 million to spend, building up its U.S. banking network over the next three-and-a-half years.

"We just have one gap in our coverage," said Mr. Henstock. "We need a bigger retail franchise in California."

> **"There's certainly risk in going in. No one really knows if it's bottomed out down there."**
>
> **Peter Maurice**
> *Canada Trustco Mortgage Corp.*

While Mr. Henstock said there was no risk in buying the thrifts, because of provisions allowing buyers to return bad assets to the RTC for cash within 18 months, other industry sources say the situation is not quite so clear-cut.

Would-be buyers must scrutinize the asset quality of possible purchases to make sure they are as insulated as possible from future real estate downturns. It is also important that the thrifts have a good interest rate mix.

Despite believing that U.S. real estate markets will continue to deteriorate, Canada Trustco's Mr. Maurice is keen to buy a U.S. thrift chain, most likely in the Northeast.

Canada's big five banks do not have the same appetite for thrifts as the trust companies because they would have to make a huge purchase for it to affect profits, banking analyst Keyin Choquette of First Boston Canada Ltd. said.

"Trust companies are under a little more pressure [than banks] to try and expand and create growth potential," he said. "It's just the logistics in terms of relative size of assets and the relative product mix they're after."

However, Harris Bankcorp of Chicago, the Bank of Montreal's U.S. subsidiary, has done some bargain shopping for thrifts.

In April, Harris bought Libertyville Federal Savings and Loan, an insolvent three-branch institution in suburban Chicago, which it has now converted into a bank.

Senior vice president Ed Lyman said Harris was still shopping. "There are two to three [thrifts] for sale in the Chicago area. We're interested in looking at thrifts as a way to expand." Mr. Lyman said it was easier to get a charter to turn a once-insolvent savings and loans into a bank than to apply for a charter, because the RTC is grateful to have thrifts taken off its hands. There are fewer restrictions on a bank's lending.

Royal Trust's Mr. Henstock said: "Our prediction is, there will not be in the marketplace, in two or three years, a thrift industry. There will be, in the marketplace, a single industry: banks." □

The Sheshunoff High Performance Planning Report is no ordinary piece of information. It's a unique interactive tool that helps you plan for growth and control expenses in every part of your bank.

After all, isn't that what they pay you for?

The Report was originally designed by our bank performance specialists as the ultimate strategic planning tool for the banks they were helping. It worked so well that we decided to offer it to you.

Our carefully prepared, comparable data for your peer group is presented in a series of special flow charts. Every key area is covered. Your most current numbers are shown for each key area so you can immediately spot your opportunities for improvement. And a special section lets you see how a better allocation of funds and interest rate changes will impact your bottom line.

1989 year-end data will be available very soon, and requests will be met on a first-come basis. To make sure you have yours as soon as possible just call 1-800-456-2340.

Sheshunoff data set the standards for the industry. Use it to set some standards of your own with the High Performance Planning Report.

shares does not even rank in the top 300, yet Philip R. Boyce is among the industry's money-making elite with salary and bonus for 1989 totaling $918,106. *Page 1*

MARKETING

6/25 An unusual degree of financial uneasiness makes older members of the baby-boom generation a potentially lucrative marketing target for asset bankers, researchers and bank marketers say. *Page 1*

7/5 Back in the days when private banking was entirely synonymous with "old money," institutions landed new clients through referrals. Now that brash entrepreneurs and self-made corporate executives have captured the bankers' attention, advertising is the name of the game. *Page 6*

MERGERS/ ACQUISITIONS

6/25 With so many troubled thrifts for sale at bargain prices, the bank-takeover market is relatively dormant these days. But that's not stopping speculators from keeping alive talk of a bid for First Interstate Bancorp. *Page 1*

7/2 Fiserv Inc., a supplier of data-processing services for financial institutions, said that talks about a potential merger had been terminated. *Page 3*

7/2 Bank of Boston Corp.'s directors adopted a poison pill stockholder rights plan, but insisted that the move was not in response to any known plan to acquire the company. *Page 11*

7/5 Talman Home Federal Savings and Loan Association announced Tuesday that an investor group headed by Chicago banker Harrison I. Steans had terminated its agreement to acquire the thrift because of lower-than-expected profit projections. *Page 1*

7/5 In an unexpected move, software company Jack Henry & Associates called off merger talks with Peerless Systems Inc. *Page 3*

MORTGAGES

7/6 Meridian Bancorp is the latest bank to make a big move in mortgage originations. It plans to buy 16 branches from Travelers Mortgage Services. *Page 7*

PEOPLE

6/25 Arthur F. Ryan, newly appointed president of Chase Manhattan Corp., is a hands-on, Brooklyn-bred executive who fits right in at a patrician institution closely identified with the Rockefellers. *Page 2*

7/2 William D. Davis, California's new savings and loan commissioner, faces much the same job as many of the institutions he regulates. He must shrink and restructure his department to meet the new demands of the thrift business. *Page 2*

7/3 Charles J. Buchta, a former Marine, is executive vice president for the western-states consumer unit at the $25 billion California Federal Bank, Los Angeles. He says he aims to encourage an environment where his managers can function creatively. *Page 2*

7/5 After making his mark as the entrepreneurial chief executive officer at Telecredit Inc., Lee A. Ault 3d is getting a new boss. *Page 2*

TECHNOLOGY

6/25 Verifone and Financial News Network reached an agreement that will allow merchants to receive credit card authorizations via television transmissions. *Page 2*

6/26 Electronic Data Systems Corp. is said to be considering a bid for Fiserv Inc., which may face revenue shortfalls as the thrift industry consolidates. *Page 3*

6/26 Moving to consolidate its telecommunications services, Bauc One Corp. said Monday it had signed a four-year contract worth at least $42 million with MCI Communications Corp. *Page 1*

6/27 Royal Bank of Canada is installing 13,000 personal computers in a multimillion-dollar project to make its retail branch network operate more efficiently. *Page 3*

6/27 Hoping to cut technology costs while staying on the leading edge of automation, many banks are considering hiring an outside company to run their technology operations. But bankers and analysts say the decision is less clear-cut for larger banks than for smaller ones. *Page 1*

6/28 Northern Trust will jointly market electronic data interchange services with IBM, which owns a worldwide communications system called Information Network. *Page 3*

6/29 Foreign banks are expanding their cash management business in the United States, but they may be forced to shrink their payments service offerings. *Page 3*

7/2 Banco Latino International of Miami will begin using an image-processing system to handle inquiries about letters of credit and electronic funds transfers. *Page 3*

7/2 Fiserv Inc., a supplier of data-processing services for financial institutions, said that talks about a potential merger had been terminated. *Page 3*

7/3 Security Pacific Corp. has made a big commitment to a technology called neural networking, a branch of artificial intelligence that attempts to recreate how the mind learns. *Page 3*

7/3 As West German banks moved into East Germany, they grappled with an antiquated telecommunications system. *Page 3*

7/5 Sovran Financial and Citizens and Southern are each consolidating data center operations to cut technology costs in advance of their merger. *Page 3*

7/5 This summer, the flagship subsidiary of Bank South Corp. will become one of the first in the United States to test smart cards. *Page 3*

7/6 Bank of America is close to completing what it claims is the most complete system available for global cash management. *Page 3*

THRIFTS

7/3 A weak market for financial stocks has created an opportunity for Jamaica Savings Bank, which completed its conversion from a mutually chartered to a public thrift. *Page 16* □

Banks to Deemphasize Lending, Stress Savings Brokering

Continued from *page 1*

their less efficient competitors. Thus, trends in consumer borrowing will reinforce other environmental factors that presage a further consolidation of banking-industry assets during the current decade.

Of course, if the consumer is slated to borrow and spend less, he will be saving more. Is it possible that what bankers lose as lenders they will recoup as deposit takers, enjoying the lower cost of funds that could result from an upsurge in consumer savings?

Unfortunately, it is unlikely that very much of the increased consumer saving will take the form of deposit balances. From 1985 through 1989, the compound rate of growth of bank deposits amounted to only 5.9%, down from 9.9% in the previous five years. Adjusted for inflation and the increased number of households, the growth rate of deposit balances was practically zero during the 1985-1989 period.

Deposits: Less Desirable

Consumers have been increasingly earmarking their savings to nonbank vehicles, principally mutual funds, tax-exempt bonds, pension fund reserves, government bonds, and equities. As a result, the share of consumer financial assets held in the form of bank deposits fell from 33% in 1984 to 26% in 1989.

"The share of consumer financial assets held as deposits fell seven percentage points, from 33% in 1984 to 26% in 1989."

Banks that wish to profit from the projected upsurge in consumer saving must therefore find a way to offer those savings products to which the consumer is most attracted. Hence in the future, banks should become less interested in utilizing their branches as deposit-gathering vehicles, especially since there will be fewer opportunities to invest such deposits profitably, and more interested in developing both branch and bankwide capabilities to broker nonbank investment products.

J. William Bowen, a managing vice president of FMCG, has assessed the relative strengths of banks in satisfying the five basic financial needs of the consumer, as originally categorized by Citibank. These needs are: transactions, credit, investment, protection, and advice. As noted by Bowen, banks do an excellent job of satisfying the consumer's need for transactions, or money-transfer, services and for credit. They do very much less well in providing him with suitable investment vehicles, investment advice, and insurance-protection products.

They Hanker for a Banker

Yet, as Bowen points out, the banking industry is uniquely favored in its contacts with the consumer. Nearly seven out of eight households have relationships of one sort or another with a commercial bank.

What's more, bankers also seem to have the confidence and trust of their key customers. For example, according to a Yankelovich, Skelly, and White survey, affluent consumers attach a high value to the financial advice given by their bankers.

Despite the adverse publicity received by many financial intermediaries in the last few years, the plain fact is that, as one economist puts it, "consumers still hanker for a banker to manage their financial affairs." Thus, the demand for bank financial services is strong, far stronger, it turns out, than is the supply of such services.

The task, says Bowen, is to exploit and strengthen the basic bank franchise through product diversification, tailored distribution of these products, and careful attention to erecting barriers to competitor market entry.

Preempting the Broker

Banks must offer more all-in-one accounts, thereby consolidating most of the traditional banking needs of their customers. More important, they must offer to put the customer into a variety of mutual funds – both large-capitalization and small-capitalization stock funds, bond funds, and money-market funds. And they must also offer what are called "asset-allocation life-cycle investment programs" – plans that take into account the fact that most households have distinctive financial needs at various stages of their financial life cycles.

"Bankers must strengthen their franchise through product diversification."

The aim in all of the above is to induce the rank-and-file saver to forsake the retail broker in favor of the bank, by providing him with a diversified menu of investment options geared to his income and age. Banks already provide this service for the most affluent savers through their personal trust activities. They must now find a way of using personal-computer-driven investment models to do the same job for the more moderate-net-worth individual at an affordable fee.

Projecting an Image

Once the products are in place, banks need to protect themselves from competitors by projecting a distinctive image. Image can constitute a barrier to

MANAGING EDITOR

Every single story in this new financial service industry newspaper is going to help its readers do their jobs better. The readers expect and will get "hands on" and "how to" information. Hands on is how the ME will have to do the job every week. Knowing how financial services executives work and what they need, the ME will plan, assign, rewrite, bounce the copy until it's right, then see the paper out the door. The writ will be lean but enough to do the job, including a fast, enticing design. There'll be plenty of correspondents but they will need training in the paper's style. The key is knowing the financial services business from the inside. If you do, you may be able to meet this unusual journalistic challenge. The readers are there. Hard work and dedication will yield generous rewards. Write with resume.

OTS and Utah in Wrangle Over Thrift

Continued from *page 1*

to conflict. A group representing state officials, the Conference of State Bank Supervisors, has lobbied for preservation of their power in a "dual banking system," sharing power with the federal agencies.

The state regulators are currently pressing efforts by the Resolution Trust Corp. to override some states' limits on bank branching. The RTC claims that banks will be more willing to take over failed thrifts if they can hold onto the thrifts' offices as branches.

Rulings in Conflict

On Monday, an Arkansas judge ruled that the RTC cannot override state laws when it sells insolvent, multibranch thrifts to commercial banks. The ruling went against an earlier one in New Mexico, where a federal judge sided with the thrift-bailout agency.

In Little Rock, U.S. District Judge Stephen M. Reasoner called the RTC's override "unlawful, null and void." The decision effectively kills the RTC's planned sale of the $171-million asset, 20-branch Independence Federal Savings Bank of Batesville to Worthen Bank and Trust Co, Little Rock. Sources said the RTC will appeal.

Losses Called Excessive

In the Utah case, OTS officials are contending that Home Savings Bank was losing too much money to be allowed to change its charter while leaving its management team in place.

> **"Obviously some things are of higher priority to OTS than saving the taxpayers' money."**
>
> **Ron Draughon**
> *Utah Thrift Supervisor*

But Utah regulators say they had a commitment from private investors to turn the institution around – as a bank – with $1 million in capital.

"Obviously some things are of higher priority to OTS than saving the taxpayers' money," said Ron Draughon, the Utah supervisor of savings and loans, who reports to Mr. Sutton. Describing the OTS lawsuit as part of a turf fight, he added, "They just want to assert their authority."

The $1 million in capital would have been pumped into the ailing, $16 million-asset thrift was twice the amount needed to repair its capital deficiency, but the OTS insisted on placing it in receivership, Utah officials charged.

Move Called Useless

Home Savings "lost $60,000 in June alone," said one OTS official familiar with the case. "It doesn't help the taxpayers to recapitalize the institution if they continue to lose that much money."

The OTS had also found the institution in violation of truth-in-savings regulations and had ordered it to pay $100,000 in restitution, said the agency official. The OTS would be unable to enforce the order if the thrift converted.

In its complaint, OTS argues that Utah's action "impermissibly conflicts with, hampers and impedes the federal regulatory process," and asks for an order barring future thrift conversions without prior OTS approval.

Conversions Allowed

Under the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, an acquired thrift can be converted to a commercial bank, thereby depying the OTS of income from its assessment on regulated institutions' assets. The thrift must continue to pay insurance premiums to support the bailout and the Savings Association Insurance Fund for at least five years. After that, a thrift can leave SAIF provided it pays required exit fees.

OTS is required to seek written approval from the appropriate state official before moving on a state-chartered institution.

The Utah commissioner gave permission for the charter change on June 15. OTS was notified on June 19, issued a receivership order July 5, and filed the federal court complaint July 6. □

Consumer to Save More in '90s

Continued from *page 19*

market entry as formidable as is the lack of the required capital. Unfortunately, most banks are not terribly good at projecting a clear and distinct corporate personality.

Says Bowen: 'Banks can achieve better market positioning by extolling their virtues. The best positioning comes from identification with consumers' needs. One example of this is Citibank's positioning as the bank for people "who want to succeed, not just survive." Another example is that of Household Bank, a thrift which is positioning itself as "America's Family Bank" in markets across the country.

Those institutions that manage to build images which fit their new roles as financial problem solvers rather than as mere lenders and deposit takers will adjust quite well to an environment in which the consumer is borrowing less and saving more. Retail interest-differential earnings will unquestionably drop, at least relative to total earnings. But fee-based retail profits may rise sufficiently to offset or more than offset the shortfall in asset income. □

DEALS
Lenders Are Demanding Rich Fees

Continued from page 1

working with the union-led buyout group. The five banks have yet to commmit funds.

The rough figure talked about is at least 4% and as much as 5% of the deal, although no final price has yet been ironed out, banking sources said. Back-of-the-envelope estimates suggest that UAL would generate from $160 million to $200 million in up-front fees for banks.

"It is dangerous to offer low fees," said one banker at a Japanese institution. "You can't do a big deal without high fees now."

"If the trend continues," Mr. Soifer said, "it will certainly help to make up the severe shortfall in corporate-finance income all the major banks are experiencing. Corporate-finance income continues to be slow."

Based on his discussions with banks, Mr. Soifer said earnings from corporate finance will likely be flat, compared with the sluggish first quarter, and down versus the year-ago second quarter.

Some Exceptions to Trend

There are some conspicuous exceptions to the upward trend in fees, mostly Hannan Industries' $2.6 billion deal that had very thin pricing and fees. In that case, banks looked past the U.S. arm's parent and saw $5 billion in cash on its books. "And deals that do not have rich pricing are of higher quality, with strong equity components," said Gina Sprintzeis, director of research at Loan Pricing Corp.

But fees in general have jumped. Last year, the Japanese banker said, many HLTS were done with fees of 1% to 1.5%. The Revlon Inc. credit had fees of 2% to 2.5%, but that was clearly not enough.

Revlon's $1.8 billion refinancing was underwritten by four banks that have had great difficulty reducing their exposure. The new deal carried a lower interest rate than the facilities it was replacing.

Large banks found that they could not easily unload their commitments into the secondary market. In fact, the Japanese banker called Revlon "a test case" that could have prompted the recent increase in fees.

"That didn't go well, and I think it caused an impact on RJR and UAL," he said.

Proper Compensation for Risk

Loan Pricing Corp. believes banks had not been getting properly compensated for many leveraged deals of recent years. "Because of the reluctance of banks to fund leveraged buyouts, the deals are expected to be better structured and have pricing more in line with the risk," said Ms. Srinivasan of Loan Pricing.

"Banks have to get paid for the risk," Mr. Soifer said. "This is a judgment of what it will take to sell a deal."

HLT capital is a scarce resource since the failure of Federated Department Stores and the collapse of UAL's management-led buyout last year. Not only are many regional and foreign banks cutting back on commitments to new deals, but many are looking to sell down their portfolios through the secondary market for buyers of existing loans.

Pressure on Leveraged Credits

One Japanese banker said selling down loans in both the U.S. and Tokyo markets has become very difficult. "We're all under pressure not to increase our exposure to HLTs," he said. The Japanese banks. "Thinly priced deals have no excuse going through."

Newly released data for 1989 show that roughly $259 billion in loans were sold in the quarter ending Dec. 31, 1989, putting the annual total at just over $1 trillion, a 6% increase over 1988, according to Sheshunoff Information Services Inc. But the trend turned sharply downward in the year's final quarter, when the pace of sales fell by about 10% compared with fourth-quarter '88. □

2 Coagents Join Forstmann-Little Credit

By WILLIAM GOODWIN

Chemical Bank and Nippon Credit Bank signed on as coagents in a $1.165 billion loan to Forstmann Little & Co., whose agent bank is Manufacturers Hanover Trust.

The loan will help finance Forstmann Little's recently announced $1.6 billion bid for General Instrument Corp.

The Chemical Banking Corp. unit and Nippon each committed $250 million, according to Dominick Baione, a managing director at Manufacturers Hanover.

The two new coagents join Continental Bank of Chicago, which previously committed $300 million.

Continental's commitment will be scaled back to $250, and Manufacturers Hanover's initial $700 commitment will be reduced to $415 million.

Hanover also received a commitment from a fourth potential coagent, but a squabble over a request for incremental fees made it appear unlikely that an additional bank would sign on to the deal, a banking source said.

The coagents were offered fees of 175 basis points. That is a little richer than the fees Hanover offered to coagents on the loans used to finance the acquisitions of Gulfstream Aerospace and Saks Fifth Avenue.

Hanover's Mr. Baione said the coagents on the General Instrument loan were given an extra 25 basis points because of the extra "homework" required to understand General Instrument's product line. The New York-based company makes cable television equipment.

The General Instrument loan is priced at prime plus 150 basis points, and will be marketed later this month.

"I think we'll ultimately have a very high hit ratio," Mr. Baione said of the syndication.

As previously reported, the loan package for General Instrument comprises a $565 million eight-year term loan, a $250 million eight-year revolver, a $200 million two-year term loan, and a $150 million two-year revolver.

Forstmann Little is drawing $800 million from its buyout fund to complete the financing for the deal.

The bank loans include funds for working capital.

There has been speculation that a higher bidder might emerge for General Instrument. But a spokeswoman for Forstmann Little previously said the buyout group would not raise its offer of $44.50 a share. □

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the total value of their outstanding common stock. As of March 30, 1990, the market value cutoff for banks was $60.6 mil. and for thrifts $121.45 mil. PE is the ratio of the stock's 52-week high and low prices for the stock. PE, the price-earnings ratio, is the current stock price divided by the bank's per-share earnings per share adjusted for latest announced earnings. Mkt. to book, the ratio of the current day's closing price to the stock's book value, expressed as a percentage. **Book value** is adjusted for announced earnings and dividends. Cls. The price at which the stock last traded. If no trades for the day, the latest bid. **AB Bank Index**, a weighted index of average prices of the 250 largest banks by market value and the top 50 thrifts in market value, respectively. Highlights three largest percent gainers/losers in price, and the same indicators most shares traded and today's volume as a percentage of average shares traded daily over the year.

Data sources: SNL SECURITIES, Charlottesville, VA, 804-977-1600, produced the tables; Financial News Network, Vienna, VA, provides SNL with the daily prices.

Shawmut Denies Big Writedown; Slide Is Halted

By FRED VOGELSTEIN

Rumors of huge increases in nonperforming assets drove shares of Shawmut National Corp. to a 10-year low midday Monday. However, a bank representative put an end to the speculation at midafternoon, saying nonperforming assets would not be as big as rumored.

Teresa Jones denied that the bank, based in Hartford and Boston, would report increases near $500 million.

"It's wild," Dow Jones newswire quoted her as saying. "It's simply not true."

She told Dow Jones the figure would be closer to $100 million. Later, a bank spokesman said it would be about $200 million.

Earnings Seen Off Slightly

Ms. Jones said second-quarter earnings would range from 35 cents to 40 cents share, lower than the 40 cents to 43 cents a share analysts had predicted. A full earnings report is expected at the end of next week, another bank spokesperson said.

billion in assets, was profitable in the first quarter, earning about $40 million, but it cut its quarterly dividend 31%-to 25 cents a share.

Joel B. Alvord, Shawmut chairman, had said at the company's annual meeting in May that nonperforming assets would increase for the second quarter but that the bank would be profitable for the quarter and the year.

Assets Reduced

The bank shed $3 billion in assets during the first quarter to better enable it to weather the storm surrounding its loan portfolio.

A specialist with Shawmut's New York Stock Exchange specialist firm, Nick, Lyden & Co., said much of the selling on Friday and Monday was the result of three block trades by Montgomery Securities totaling 350,000 shares.

The representative, who asked his name not be used, said it was not unusual for a stock to hit a new low when someone sells large blocks.

One trader said the sales were by investors unloading long positions rather than by short sellers.

Shawmut Tests A New Low

Price per common share

Price of $11.25 at 3 p.m. on Monday

Source: DM Technology Inc.

Before the 2 p.m. announcement, volume was running about four to five times normal, at 440,600 shares. The stock had been off 12.5 cents to $10.625, after falling 37.5 cents Friday on volume of 550,600 shares.

Since early June, when it was trading at $15.125 a share, Shawmut's stock had declined nearly 30% before rising Monday afternoon.

The stock rebounded 50 cents after the announcement to close at $11.125, regaining its losses of early Monday and Friday. Volume was nearly 849,100 shares by the close.

Results Restated

Shawmut, one of the New England banks hit particularly hard by problem real estate loans, was forced to restate its fourth-quarter 1989 results in March to reflect a $326.7 million loss rather than a $3.9 million profit. The disclosure came on the heels of its exam by the Office of the Comptroller of the Currency, completed in March.

The bank, which has $24.9

MONDAY'S STOCKS

Most bank stocks fell Monday but not by much as few banks fell more than 25 cents. The exception was NCNB Corp. in Charlotte, N.C., which was off $1, to $36, on negative news about its Texas banking subsidiary in Monday's *Wall Street Journal*.

The overall market was higher, with the Dow up 9.16, to 2809.08.

The *Journal* quoted a report from Charles Peabody, a Kidder Peabody & Co. analyst, stating he expected additional problems in NCNB-Texas' loan portfolio in the second quarter.

MNC Financial Corp., which has fallen steadily through June and early July, was up 75 cents, to $12.25, on volume of roughly 300,000 shares.

St. Paul Bancorp, which fell $1.50, to $9.625, on Friday on news of substantial increases in nonperforming assets, gained 62.5 cents to $10.25.

Chase Manhattan Corp., Chemical Banking Corp., Citicorp, Manufacturers Hanover Corp., and Bankers Trust New York Corp., the five banks identified as cosigners for UAL Corp.'s leveraged buyout, had uneventful days, with none changing by more than 12.5 cents. □

Fed Lags on Issuing Interim Capital Rules

By KELLEY HOLLAND

Although new international capital guidelines have been approved by regulators around the world, the Federal Reserve has yet to approve the capital requirements that its member banks must meet this year.

That could change this week, though, if the Fed approves transitional rules that its member banks must meet on their way to complying with the international standards by 1992. The Fed issued the rules for comment late last year.

Most member banks already meet the transitional capital standards. But the proposed requirements also include a leverage constraint, and that has flustered some institutions.

Raising the Leverage Ratios

"The transition rules are really just to help banks in their capital planning process," said one regulator. "The idea behind [the leverage limit] is to place a constraint on the leverage ratios of institutions."

The proposed capital guidelines for the period through Dec. 31, 1990, call for banks to maintain either primary capital of 5.5% of assets and total capital of 6%, or a 7.25% risk-based capital ratio.

In addition to the total capital requirements, banks would have to maintain at least a 3% Tier 1 capital-to-total-assets ratio. This last requirement, a leverage-capital ratio, could rise 100 to 200 basis points for institutions deemed to have overly risky capital structures.

Under the international risk-based capital guidelines, most banks face a Tier 1 capital requirement that includes common equity, perpetual preferred stock, and minority interests in subsidiaries, less most goodwill. Total capital includes Tier 1 capital and qualifying loan-loss reserves, auction preferred stock and term preferred stock, mandatory convertible notes, perpetual debt, and subordinated debt.

Most Large Banks Comply

The proposed leverage restriction would be on top of the international capital requirements.

Almost all the largest U.S. banks already have capital exceeding the risk-based capital requirements proposed for 1992, let alone 1990. At the end of 1989, 89 of the 100 largest banks had total capital exceeding 8% and Tier 1 capital exceeding 4%, according to data from an American Banker survey.

Most smaller state-chartered banks regulated by the Fed are also adequately capitalized, according to a spokesman for the American Bankers Association. "The community banks and some of the smaller banks have excellent capital adequacy," he said. "Certainly this isn't a problem for them."

Most banks probably also have enough equity to meet the leverage capital requirement. But since the exact requirement for each bank can only be set by the Fed, it is impossible to determine just how many institutions have adequate Tier 1 capital. And that has upset some interested parties.

Competitiveness Said at Risk

For example, three multinational banks responding during the comment period on the proposed rules this year said the 3% leverage-capital provision could undermine the competitiveness of U.S.-banking organizations. And David E. Danovitch, chief regulatory counsel for the National Council of Savings Institutions, said, "We are concerned that there is no objective measure of capital in this rule."

During the comment period, 45 respondents, including 33 banks and thrifts and nine trade groups, gave their opinions.

* * *

MARKET MONITOR

Having been late with a debt payment once already, American Capital Corp., Miami, is now seeking to restructure its outstanding subordinated notes.

American Capital, parent of TransOhio Savings Bank, Cleveland, missed a June 15 payment of $3.3 million in interest due on $78.5 million in notes, saying it was exercising its right to be 30 days late if a "restriction event" occurs.

The company said last August's passage of the Financial Institutions Reform, Recovery, and Enforcement Act, with its risk-based capital standards, sharply reduced the company's capital ratios and constituted a restriction event.

The company is now negotiating with bondholders to find a way to satisfy them while reducing the cash burden created by the debt.

American Capital, which issued its bonds in 1985 in an offering managed by Drexel Burnham Lambert, had adequate capital under the old guidelines. But it is far short of the levels required under the new risk-based rules. At March 31, it had $69 million in equity and $5.2 billion in assets. □

Giving Banks The Green

Under the Federal Reserve's proposed capital standards for yearend 1990, banks can choose either ...

Either...

6.5% primary capital
6% total capital to total assets

Or...

7.25% risk-based capital

As well as...

3% Tier 1 capital to total assets

The community banks and some of the smaller banks have excellent capital adequacy, the American Bankers Association said.

OTS' Easing Of Loan Limit Seen as Feeble

By ROBERT M. GARSON

WASHINGTON — For savings and loan executives looking for temporary relief from tough new limits on loans to one borrower, the regulation issued last week by the Office of Thrift Supervision came as a disappointment.

"It's like attacking homelessness by expanding the IRA program," said Palmer Hamilton, a Mobile, Ala., lawyer. "It just doesn't have much effect."

The Financial Institutions Reform, Recovery, and Enforcement Act of 1989 imposed national bank standards on the thrift industry, limiting most loans to no more than 15% of an institution's capital. An exception was made for loans for residential housing development, which could run as high as 30% of capital.

ANALYSIS: *Follow-up on the news*

Previously, thrifts had been able to lend the equivalent of 100% of capital to any one borrower.

In a speech to the League of Savings Institutions on June 25, T. Timothy Ryan Jr., director of the Office of Thrift Supervision, announced that the Treasury Department had agreed to a transition rule that would give well-capitalized institutions until 1992 to meet the new standards.

Qualifiers Are Few

That was little enough: With much of the industry struggling to meet the new capital requirements, only 1,100 institutions qualify under the rule, according to OTS.

But the regulation made public last week gave a good deal less than that.

The transition rule comes down to this:

- For loans backing the development of domestic residential housing, thrifts that already meet capital requirements taking effect in 1992 get a break: between now and the end of the year, they can lend up to 60% of capital to a single borrower. Next year, such loans will be limited to 30% of an institution's capital, the amount specified in the bailout law.
- For commercial loans, there is no transition period: Credit is limited to 15% of capital.

Little Benefit Seen

"I don't know what good this will do anyone," said David Danovitch, regulatory counsel to the National Council of Savings Institutions. Mr. Danovitch expressed surprise that the transition rule did not cover assets other than loans for residential

The Surge in Asset Securitization

By commercial banks, dollars in billions

Banks Rushing to Securitize Assets, But Analysts Fear Long-Term Harm

By KELLEY HOLLAND

If a bank asset isn't nailed down these days, it may well be on the way to being securitized.

A market created five years ago when auto loans were first securitized has exploded as banks rush to issue securities backed by assets ranging from credit card receivables to recreational vehicle loans.

In the first half of this year, banks securitized $12.8 billion of their assets, compared with $5.9 billion during the first six months of last year.

Banks Are Big Players

Banks have issued 48.1% of the $82 billion in nonmortgage assets securitized in recent years and are increasingly finding willing buyers among pension funds and mutual funds holding corporate bonds.

Behind the rush by banks to this growing market is their need to pump up capital ratios. Securitizing takes the assets off their books, immediately increasing banks' financial ratios and reducing their need for capital.

But longer-term, analysts and capital markets specialists say, securitization may make it harder for banks to raise capital to fund the less-desirable assets they will have left on their books.

"Banks are securitizing their best assets," said one analyst.

OTS to Seek Bids Before Seizing Sick Institutions

By DEBRA COPE

WASHINGTON — Moving ahead with a plan to sell troubled thrifts before they become unattractive to potential acquirers, the Resolution Trust Corp. board on Tuesday authorized the Office of Thrift Supervision to line up buyers before seizing the institutions.

OTS officials said they will select eight to 12 institutions for a 90-day test of the accelerated resolution program. If the procedure succeeds, up to 70% of 299 thrifts with $193 billion in assets that the OTS has identified as most likely to fail could be sold without being placed in RTC conservatorship, according to William Roelle, director of RTC's resolutions and operations division.

3-4 Months for Results

"At the end of three or four months, we should know definitively if this program will work," OTS Director T. Timothy Ryan Jr. said in an interview. "We're all enthusiastic about the prospects for success."

Mr. Ryan, who sits on the RTC board, said he envisions

Norwest, United Of Colorado Talking Merger

Norwest Corp. and United Banks of Colorado Inc. announced late Thursday afternoon that they were discussing a possible merger.

"There is no definitive agreement, and there is no assurance that any such agreement will be reached," according to the two-sentence statement.

Company Would Be in Top 20

A merger between the two holding companies would be one of the biggest ever in banking, creating the nation's 20th-largest.

Norwest, an eight-state superregional based in Minneapolis, now ranks 30th, with $24.33 billion in assets. Denver-based United Banks is Colorado's largest holding company and the 81st-largest in the United States. It owns 40 banks in Colorado and has $6.08 billion in assets.

The announcement came after the stock market closed. Nor-

Though Bank Shares Are Down, Insiders Are Buying Vigorously

By GORDON MATTHEWS

NEW YORK — With most investors running away from bank stocks these days, it sometimes seems that the only buyers willing to step forward are the banks' own officers and directors. And they have been active buyers, indeed.

In June, for instance, 10 insiders at First Bank System, including the new chief executive officer, John F. Grundhofer, spent nearly $665,000 to acquire 43,590 shares of its stock.

In May, five insiders of SouthTrust Corp., Birmingham, Ala., acquired 26,230 shares for $445,910. The largest buyer, director Raymond J. Harbert, purchased 15,000 shares.

Stocks Have Plunged

Also in May, 10 officers and directors of Comerica Inc., bought 4,180 shares for $161,250. Insider buying at the

Top Cop on S&L Task Force Set to Tackle Major Frauds

By NANINE ALEXANDER

James G. Richmond, U.S. attorney for the Northern District of Indiana, has been thrust into the spotlight of national attention by the ground swell of public outrage over fraud that contributed to the savings and loan crisis.

Last month, President Bush picked Mr. Richmond as his top cop to lead a special task force in the Justice Department that will coordinate investigation and prosecution of bank and thrift fraud.

Mr. Richmond says his job – special counsel for financial institutions – is a temporary assignment to get the fraud unit operational. He will review and redeploy available resources, direct a team of 10 representatives from the various agencies, and create a spousal squad of investigators and attorneys who can help out in cases where resources are thin or other enforcement personnel are unfamiliar with the special nature of financial fraud.

"After you identify suspect transactions, you have to determine whether you have a case of fraud or poor business practices," Mr. Richmond said in a telephone interview from his Washington office. "In fraud cases, the documents are never in one easy-to-find place."

James G. Richmond

Mr. Richmond said the reassignment of experienced assistant U.S. attorneys and FBI agents to the effort is under way, with 118 attorneys and 202 agents added since December. With an additional $75 million budgeted for fiscal year 1991 beginning in October, Mr. Richmond expects to add more personnel, but he said it is too soon to know how many or in which areas.

Top Priority Is Data Base

The toughest and most important task facing Mr. Richmond will be the creation of a data base by the 10-member interagency Financial Fraud Coordinating Unit. The members will represent Justice, the FBI, the Treasury Department, the Office of Thrift Supervision, the Resolution Trust Corp., the Federal Deposit Insurance Corp., the Office of the Comptroller of the Currency, the Federal Reserve Board, the National Credit Union Administration, and the attorney general's advisory committee of U.S. attorneys.

The team is using the FBI's definition of major frauds: those involving more than $100,000, bank officers and other insiders, or multiple borrowers. Of 2,100 referrals, Mr. Richmond said investigations at 100 institutions identified by the RTC, the OTS, and the FDIC have priority status.

In addition to keeping current the status of each investigation, the data base will help the team target cases for civil action, such as freezing assets, while criminal investigations go forward.

Witness Cooperation Deemed Essential

Because the beneficiaries of financial fraud generally do not sign any documents, Mr. Richmond said cooperation is needed from the traceable participants to nail the major players.

"This is not like the average bank holdup, where you can line up the suspects and have a teller say, 'That's the guy who put the gun in my face.'" Mr. Richmond said.

Mr. Richmond, 46, brings over 20 years of experience to his assignment, including stints as an FBI special agent and an IRS agent, six years as a defense attorney, and service as an assistant U.S. attorney.

Mr. Richmond is a graduate of Indiana University with degrees in business and law. He enjoys fishing and pheasant hunting. □

GAO Chief Revises Upward Estimate of Thrift Bailout

WASHINGTON — Charles Bowsher, head of the General Accounting Office, said he was revising upward his earlier estimate that the cost of bailing out the savings and loan industry would be a minimum of $325 billion.

"The minimum will be more than $325 billion," Mr. Bowsher told reporters after speaking at a meeting of economists. He added that the higher figure – $500 billion – is still correct because it takes into account lower real estate values. — Reuters

Mortgage Group Buys Washington Bancorp Unit

WASHINGTON — Washington Mortgage Acquisition Group said it had completed the purchase of the mortgage banking subsidiary of the troubled Washington Bancorp. Terms of the deal were not disclosed.

The company also said it received Federal National Mortgage Association approval to participate in the delegated underwriting and servicing program, allowing it to sell multifamily home loans at preferred prices to the agency known as Fannie Mae. □

FDIC Bends on Notification Of Minor Coverage Changes

By BILL ATKINSON

WASHINGTON — The Federal Deposit Insurance Corp. said Tuesday that it would give banks and savings and loans an extra month to inform depositors of a list of minor changes in deposit insurance coverage – as long as the institutions are making a good-faith effort to comply with a disclosure rule adopted in April.

Bankers and trade groups have been at odds with the agency over the rule. The bankers charge that the rule is unclear, the time frame is too short, and they will bear the costs of mailing to depositors. Financial institutions were expected to inform depositors about the changes by July 29.

Under the rule, about 10 types of accounts will be affected, including single-ownership accounts, joint-ownership accounts, and retirement accounts.

Mandated by Reform Act

The rule was mandated by the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, which required the FDIC to eliminate differences in deposit insurance coverage at

Bankers charge that the rule is unclear.

banks and savings and loan associations.

The one-month extension is insufficient, said Kenneth A. Guenther, executive vice president of the Independent Bankers Association of America. "It should have been delayed to later in the year."

Mr. Guenther is concerned that the rule, because it concerns changes in deposit insurance at a time of public concern about the S&L crisis, could be misinterpreted as something more serious than it is.

"I think the FDIC underesti-

Corrections

In a July 3 article ("Security to Try Neural Networking," page 3), the consulting company was misidentified.

The company's correct name is New Science Associates, Southport, Conn.

■

Because of a typographical error in Paul Nadler's Comment column Monday ("The Party's Over: Analysis Is In, Hobnobbing Out," page 4), the bank where Steve Panevko is head of commercial lending was misidentified. It is UJB Financial Corp.

■

In Monday's Analysis ("Court Rulings on Seizures Rock the FDIC," page 1), the misplacement of a paragraph made it appear that a former Federal Deposit Insurance Corp. official, James Sexton, was criticizing recent court decisions on the FDIC. Instead, Mr. Sexton was criticizing certain banking practices that caused losses for the FDIC.

Another misplacement of a paragraph made it appear that court findings, in litigation involving Texas American Bancshares, supported Mr. Sexton's remarks. In fact, the court findings supported Texas American's contention that the FDIC had illegally caused 12 of its banks to fail.

Fed Chairman Sees a Decline In Inflation Rate

WASHINGTON — Federal Reserve Chairman Alan Greenspan said he sees a gradual reduction in U.S. inflation and does not expect to see a sharp drop in real estate values as overall inflation is brought under control.

In written answers to questions from the Senate Banking Committee, Mr. Greenspan said it is possible that reducing the inflation rate could push real estate prices lower.

"A sharp adjustment of prices is not likely, however, as we envision only a gradual, measured reduction in inflation," Mr. Greenspan said.

Lower inflation would have the added benefit of reducing the savings and loan bailout costs because interest costs for the Resolution Trust Corp. would be less, Mr. Greenspan said.

Lower interest rates would also help healthy savings and loan institutions, while lower inflation will promote a more stable economic environment, he added. — Reuters

An Unfulfilled Promise of the ATM

Survey Finds Sluggish Growth in Network Volume

By JEANNE IDA

NEW YORK — Despite big increases in consumer use of automated teller machines to get cash, banks are not chalking up the volume increases on their proprietary networks that would save them money, according to a study by Speer & Associates Inc.

"We think there are too many ATMs out there for the card base and the activity," said Thomas E. Reynolds, senior vice president of the Atlanta-based research firm. "Most financial institutions are still over-ATMed."

The average monthly volume of transactions per ATM is up only 8% over the past five years, despite a 105% increase in the number of transactions per card, according to the study. The number of ATM cards in circulation has also risen steadily.

Poll Covered 110 Networks

Speer based its findings on a poll of 110 proprietary networks with a total of 4,833 ATMs, consumer transaction accounts and a proprietary debit card base of 22.6 million at the end of 1989. The percentage of consumer accounts with a debit card was 51% overall.

The survey respondents reported an average of 4,833 transactions per ATM each month, and the average cardholder used his card 37 times in 1989.

Thirteen percent of the banks surveyed said they would introduce or increase ATM fees in 1990, and 12% said they would introduce or expand point-of-sale services this year. Nine percent said they expected to consolidate networks this year, and 7% said they would market to increase cardholder and ATM use.

Overlapping Service

Mergers and acquisitions are not necessarily resulting in ATM consolidations, the research firm also concluded. In mergers with overlapping networks, a reduction in machines can increase average ATM volume. But if two merging banks do not have overlapping markets, the average transaction volume per ATM may remain the same or decrease.

"We're seeing some banks slow to reduce number of ATMs in a merger," said Mr. Reynolds. "It's definitely better when they can reduce the number of ATMs."

Mr. Reynolds said his firm has found that two merging institutions with overlapping bases can reduce the number of ATMs by 15% to 20% and retain 90% of their customers.

Mr. Reynolds cited CoreStates Financial Corp., Philadelphia, as an example of efficiencies in ATM deployment achieved by a merger. CoreStates said in May that it plans to close a total of 25 branches, including 20 ATMs, belonging to First Pennsylvania Bank and Philadelphia National Bank, now owned by CoreStates. About 116 branches will remain.

Considerations of Scale

Furthermore, Speer & Associates recommends that a branch have at least 3,000 accounts before it puts in an ATM. "We don't believe that you need an ATM at every branch," Mr. Reynolds said.

"We keep hoping to see some quantum jump in the number of transactions per ATM, but we haven't seen it," said Mr. Reynolds.

Intangible factors, however, make it difficult to measure the cost-effectiveness of regional networks, according to Paul Martaus, director of research at Payment Systems Inc., Tampa.

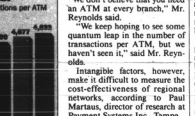
One intangible is whether customers would change institutions if their bank reduced ATM service. Another is whether the bank's ATM network is set up as a profit center or as a service.

Other banks may use ATM networks as part of a strategy for geographic expansion, Mr. Martaus said. These banks put ATM networks in a region before putting in branches.

Both Payment Systems and Speer & Associates reported that regional networks are feeling a pinch. For regionals, Speer forecasts, shared network costs will remain in the range of 10 cents to 15 cents over the next three to five years. Speer estimates that a bank needs 5 cents to 11 cents to remain competitive.

Payment Systems said it has noticed a growing trend for banks to charge for transactions at their own machines. In a recent survey of 150 of the top bank holding companies, 17% said they charge for transactions that their customers perform at their own ATMs.

To increase network volume, Speer & Associates advises banks to market debit cards more aggressively for retail point-of-sale purchases. "Significant" volume growth will not occur for about three to five years," Mr. Reynolds predicted. □



First Chicago Uses New Software To Automate Its Direct Lending

By KAREN GULLO

NEW YORK — Coin Banking Systems Inc., Norcross, Ga., has introduced software that automates the processing of direct-lending operations at the main offices of a bank and its branches.

The system, which is based on personal computers and operates on a local-area network, is being installed at branches of First National Bank of Chicago. Called Application Manager DLS, the system replaces manual processing of loan portfolios at the First Chicago Corp. unit.

DLS can communicate with mainframes and other computers and tap into credit bureau data bases. The enhancement will allow First Chicago loan officers to generate loan documents and process loans on PCs at the branches, rather than fax documents to the home office and wait for approvals to be faxed back.

Control of Approvals

"The system can control the approval process on the front end," said Joseph M. Wilda, executive vice president of Coin, "and all the file-folder documents can be transmitted electronically from the central office to the branch or automatically faxed between offices."

First Chicago is installing personal computers at many of its branches, which will be linked to one of two central processing centers. Customer files, credit scoring, and other information can be downloaded from the central processing system to the PCs, where it can be incorporated in loan documents.

The system is designed to work with Coin's Indirect Lending System, which is installed at 350 midsize and large banks.

MasterCard and Visa Reporting Surge of Growth in the Far East

By RICHARD LAYNE

NEW YORK — Both MasterCard International and Visa U.S.A reported significant first-quarter increases in transactions and authorizations in the fast-growing Asia/Pacific region.

MasterCard, with members joining its Banknet processing network and card-usage climbing, said it processed 2.71 million authorizations in the first quarter, 38% more than a year earlier. Settlement transactions rose 47%, to 4.73 million.

Settlements Rise 107%

Visa's preliminary figures show even larger increases for the first quarter. The volume of settlement transactions for cash and sales was eight million, a 107% increase over the period last year. In authorizations, Visa cited a 53.4% increase, to 7.6 million. Only Latin America is a faster-growth area for Visa.

MasterCard said the number of members in the region using its Banknet network doubled over the past three years.

MasterCard said it had four million cards in the Asia/Pacific region, compared with 29 million cards for Visa.

Fastest-Growing Regions

MasterCard has had three regional switching centers – Tokyo, Sydney, and Hong Kong – on its Banknet network to provide Asian users. MasterCard added that it had more than doubled its members in the region without increasing the number of switching centers. □

COMMENT/*By Charles H. Nobs and Eleni Istavridis*

Cost Leadership Gives Competitive Edge

While New York City may not always be an accurate barometer for the state of the national economy, today's city conditions pose an interesting metaphor for the banking industry.

Manhattan employment is down in both manufacturing and service sectors. Real estate markets are in a slump. Opportunities to raise tax revenues are evaporating, and embedded costs are uncompetitively high.

This is particularly relevant to financial firms based in new York, where the health of the city and the financial-services sector are so closely related. Cities and industries alike can be ripe candidates for restructuring.

Forecast for the '90s

Certainly, the 1980s showed that cost leadership is key to success in any restructured setting. Whether the restructured corporate environment is steel, electronics, automobiles, airlines, computers, or telecommunications, market leadership is invariably associated today with those firms that managed their cost profiles with the greatest finesse and foresight.

Just as these industries underwent a sea change in the past decade, so too will a combined banking and securities industry be restructured in the 1990s.

Stratification trends in returns to shareholders, market valuations, and market share are predestining the fortunes of most banks. Analysis by IDC Financial Publishing shows that banks with better credit quality and better cost control over the 1984-89 time frame achieved stronger investment returns than those institutions with less favorable credit and cost performance.

Market Capitalization

Research by First Manhattan Consulting Group shows that banks with "strong" expense performance have stock prices that are 60% or more higher than if they had "average" performance. Studies by McKinsey & Co. show that superregional banks increased their average market capitalization almost seven times during 1982-88.

This far outdistanced multinationals, who increased their capitalization less than two times. Regionals also increased their market share of total bank deposits, according to McKinsey, while money-center and community banks lost ground.

> **"Market leadership is invariably associated today with those firms that managed their cost profiles with the greatest finesse and foresight."**

Thus the gap between the "strong" and "less so" is well established and growing. A fundamental reshaping of the banking industry has already begun and will accelerate. To exert cost leadership, knowledge about the relevant competitive universe must be gained and details about relevant competitors' costs must be learned.

Factors such as the growing strength of superregionals and availability of foreign capital will eventually affect most aspects of retail and wholesale banking. These considerations will alter scale economies, pricing latitude, and technology strategies for many financial products, rendering them fundamentally unattractive for all but those bank providers whose size and business mix have been rationalized along the new competitive lines.

Expense or Investment?

Part of this rationalization process involves a strong differentiation between expense and investment. Since expense is most often defined by the existing, rather than future, culture, it must be rigorously questioned. Moreover, expense must be made variable to the greatest practical degree, thereby allowing changes in business and transaction volume to be met with expense growth or decline.

Examples include incentive-based compensation across various job classifications, use of contract and temporary workers where feasible, flexible benefits programs, profit sharing rather than guaranteed savings plans, and outsourcing a broad range of bank service activities.

The contracting-out of non-strategic bank services, often

GRAPEVINE/*By Jed Horowitz*

Ties that Bind. Money-center bank executives these days are quick to speak about the theoretical benefits of mergers, but few have spoken of actual combinations or hard numbers.

One who has not shied away from getting specific, however, is Manufacturers Hanover Corp.'s president, Thomas Johnson.

At a meeting with institutional investors, he said that a combination of any two of the following New York branch-system banks could lead to incremental annual earnings of between $400 million and $700 million for the merged institution: Chemical Banking Corp., Chase Manhattan Corp., Bank of New York Co., and Hanover.

Mr. Johnson's company, meanwhile, may try to "unlock hidden values" on its own, a Merrill Lynch & Co. analyst, Judah Kraushaar, wrote in a recent report. Manny Hanny may eventually unload its Park Avenue headquarters building, which the company values at between $500 million and $750 million, and it is likely to sell entire business lines overseas.

* * *

Chasing the Reorganization. Chase Manhattan Corp. has reassigned a number of executives after dissolving its tripartite global individual-institutional structure. The most dramatic shift is of Hughlyn F. Fierce, believed to be Chase's highest ranking black executive. Mr. Fierce, who was head of the Asia-Pacific corporate finance unit, is now to run a unit that markets retail bank products to municipal and state governments in New York City, Westchester County north of the city, and Long Island.

Mr. Fierce's former domain has been combined with the Japanese corporate finance unit under Timothy McGinnis, head of the Japan unit.

Chase also bestowed new responsibility on Michael F. Dacey, head of North American corporate finance. With the transfer of vice chairmen Richard Boyle and Robert Douglas to nonline duties, Mr. Dacey has full responsibility for Chase Securities, Chase Municipal Securities, Chase Leasing, and domestic institutional banking services.

Robert D. Hunter added Chase Home Mortgage Corp. to his national financial services empire. Donald Boudreau, head of the metropolitan community bank, also now oversees Chase's regional bank franchise.

* * *

The Fizz is Gone. It's not just money-center banks that are curtailing their corporate finance and investment banking ambitions. The sharp downturn in corporate finance activity also is affecting regional banks.

With each passing month, the membership rolls of the Bankers Association for Corporate Finance – a group of regional bankers who aspired to be on the cutting edge in mergers and acquisitions, private placements, and other investment banking areas – are dwindling. The group was founded a few years ago by about 30 bankers who meet twice a year to share ideas and plans.

Recent Refugees

Among the most recent refugees from the group are bankers at First Fidelity Bancorp's Fidelity Bank and NCNB Corp.'s North Carolina bank.

The three principals of Fidelity's investment banking group – Mark DeNino, Leslie Brun, and Jai Bowers – left recently to join CMS Cos., a Philadelphia-based personal investment banking firm. Mr. DeNino, who would not comment on the departure, said the trio continues to offer M&A and private-placement services to middle-market customers.

Investment Banking Mandates

A First Fidelity spokesman said that Stephen H. Clark, who heads the bank's asset sales units, has picked up the group's investment banking mandates.

At NCNB, veteran banker J.G. Richards Roddey – who has run the bank's corporate finance activities for over 10 years – moved last month to London.

"Either congratulations or condolences are in order," joked Mr. Roddey, 53, an NCNB managing director and founding member of the Bankers Association group. In London, he is overseeing NCNB Corp.'s two British-based branches and coordinating activities with NCNB's British merchant bank and its broker-dealer, Panmure Gordon & Co.

His U.S. domain is being split between managing directors Richard Gross, who will run corporate finance activities, and Richard Robb, who will be in charge of domestic mergers and acquisitions.

Guten Morgan. When J.P. Morgan & Co. set up a group to develop government and business contacts in eastern Europe in May, it targeted privatization and debt restructuring for the nascent democratic governments in the region as an initial goal for the group. Debt restructuring was a natural since the group reports to Rodney Wagner, Morgan's veteran negotiator on Third World debt.

It turns out that Morgan also has an ace in the hole when it comes to privatization. Detlev Rohwedder, a member of the advisory board of its German bank subsidiary – J.P. Morgan GmbH – has just been named chairman of Treuhandanstalt, a trust that Morgan says owns most of East Germany's industrial companies and is charged with privatizing them. Herr Rohwedder also is chairman of Hoesch, the West German steel and engineering conglomerate.

* * *

Hong Kong Bound. State Street Bank and Trust Co. won permission from the Federal Reserve Board late last month to convert a Hong Kong-based depository trust subsidiary to a full branch.

An official at the Boston-based bank company said the conversion will allow the State Street Boston Corp. unit to expand its foreign-exchange trading activities, since the branch can tap the capital of its parent company. The conversion still awaits approval from Hong Kong authorities.

Although many foreign companies are fretting about the return of the British territory to China in 1997, State Street sees Hong Kong – where it employs about 100 people – as a vital part of its expansion into the Far East. Earlier this year, it announced plans to buy Wells Fargo & Co.'s Tokyo branch. The $10 billion-asset State Street specializes in securities custody and asset management. □

LAST YEAR, JAPAN GRADUATED 71,000 ENGINEERS.

PRIVATE BANKING

Foreign Currrency Accounts Getting Off to a Slow Start

By MAUREEN KEVIN DUFFY
Special to the American Banker

NEW YORK — Six months have passed since U.S. banks got the green light to maintain deposit accounts in foreign currencies, but Federal Reserve sources say only 125 to 150 banks are offering such products. Monthly filings with the Fed indicate that foreign currency deposits amount to just under $2 billion, these sources say.

Before the United States lifted its ban on multicurrency deposit accounts, foreign banks pointed to the ban to suggest a lack of sophistication in the U.S. private banking market. Observers expected U.S. banks to seize their new opportunity with the lifting of the ban.

But most of the large private banks have yet to show a strong interest in foreign currency accounts.

U.S. Trust Co., New York, is not taking multicurrency deposits and doesn't plan to. Wells Fargo Bank, San Francisco, doesn't take foreign deposits in the United States, but a spokesman said it may consider doing so. Bankers Trust Co., New York, offers a multicurrency deposit account through offshore units but not in the United States — an arrangement most other worldwide private banks favor.

At Morgan Guaranty Trust Co., where money market or mutual fund accounts average $900,000, there is little incentive to open a U.S. account in which funds are insured up to $100,000. Morgan doesn't accept foreign currency deposits but is reviewing the possibility, said Arthur B. Sculley, managing director of the private bank.

> **"If we get into a period of dollar devaluation, foreign currency accounts could be viewed as a safe haven."**
>
> **Ronald Mandle**
> *Sandford C. Bernstein & Co.*

Citibank is an exception. "Over the first few months of the year, we've really seen interest building among selected individuals in U.S. multicurrency accounts," said David Hessney, head of private bank product development.

Citibank began accepting foreign currency deposits in January but did not actively promote them until June. "Now that we've seen exactly what customers look for in a multicurrency product, we're expanding our product offering," Mr. Hessney stated in early June.

The New York bank is offering time deposit and money market accounts in British pounds, Canadian dollars, deutsche marks, Japanese yen, and Swiss francs. Each account requires a minimum balance of $50,000 per currency. Citibank is promoting the products through statement stuffers and its relationship managers in the private bank. The accounts are open to consumer bank clients as well as worldwide personal bank customers.

Accounts Serve Varied Purposes

Wealthy clients use multicurrency accounts for various purposes, including savings diversification and hedging on currency fluctuations. Clients with accounts overseas can move the money to the United States without converting to dollars. They also may save money if the original currency appreciates.

Other clients may own property overseas and want to make payments in that currency through the multicurrency account. And Americans whose forebears came from Europe may want to hold the old country's currency to show confidence in its future.

Though banks seem slow to exploit this market, Ronald Mandle, an analyst with Sandford C. Bernstein & Co., sees potential growth. "They'll be popular among some foreigners and people who travel for business or pleasure, for their convenience.

"In addition, if we get into a period of dollar devaluation like the '70s, foreign currency accounts could be viewed as a safe haven."

Mr. Mandle said the accounts could prove useful in smoothing commercial trading in currency futures. "You settle the trade by transferring the funds to your account, and this way you don't have to convert first."

Neither First Chicago nor Northern Trust, both based in the hometown of the Chicago Board of Trade and the Chicago Board Options Exchange, plans to market such accounts.

Foreign Competition Is Heavy

One drawback to consumer support is heavy competition from abroad. Joanne Snyder, vice president and product manager for foreign currency accounts at Citibank, said, "We've seen interest pick up in the concept of a foreign currency deposit, but many end up going offshore for the extra interest." Accounts in the United States yield lower interest because of FDIC insurance fees.

"It depends on the client's risk tolerance," she said. "The multicurrency account is still a new idea for the American client. But we're having excellent results."

Ms. Snyder said interest rates on multicurrency accounts vary greatly, with some banks paying no interest at all. Citibank is offering a fixed rate that which varies according to the currency.

Ms. Duffy is a freelance banking reporter based in New York.

Credit Prescreening Is Criticized

Pending Bills Would Ban the Practice or Tighten Rules

Reuters

WASHINGTON — Prescreening mailing lists of credit prospects has proved to be controversial, with opponents citing loss of privacy and advocates saying credit opportunities are enhanced.

In the practice, a credit bureau sells a list of names and addresses within parameters set by the credit-offering company.

Financial marketers, sensing the opportunities, have learned to refine their requests to make sophisticated sales pitches.

Upscale Buyers Targeted

Credit companies now screen for potential "gold card" holders by buying the names of people with the highest incomes and best reports from credit bureaus. They also screen for riskier customers who have more questionable credit histories and have to pay higher rates to get credit. "If you can get 18% or 19% on those customers, maybe you can afford to take more risks of a few people not paying," says Fritz Elmendorf, spokesman for the Consumer Bankers Association.

> **Credit companies now screen for potential "gold card" holders.**

Prescreening has incurred the wrath of some consumer groups and sparked concerns among some legislators.

"Consumers are unaware that credit information they think of as confidential is used to place them on lists sold to persons with whom they have never dealt," said Rep. Richard Lehman, D-Calif.

Legislation Pending

As chairman of the House banking subcommittee on consumer affairs, Rep. Lehman has introduced legislation that would tighten rules on reporting accuracy and on credit repair groups. It also would require credit bureaus to give consumers a copy of their credit reports, free, at least once a year. Consumers generally pay for that privilege now.

A second bill, by Rep. Charles Schumer, D-N.Y., would abolish prescreening.

Both measures would amend the Fair Credit Reporting Act, which took affect in 1971. The House subcommittee held heated hearings on both proposals in mid-June but has not scheduled a markup session on the bills.

Lobbyists and congressional aides say that any legislation is at least a year away from passage.

Easy Access to Credit Reports

Consumers Union reports that prospective employers and landlords have legal access to credit reports as long as they can prove they have a "legitimate business purpose."

Some evidence indicates that employers are increasingly making use of this right but not fulfilling the requirement that they notify the potential employee if a poor credit report kills the chance for the job.

"Employers are not following the current amendments," said Kathleen Brueger, legal counsel for the congressional subcommittee handling the legislation. "They are required to tell you when they used a credit report to deny the job."

Prohibition Seen Unlikely

Congress could pass a law prohibiting disclosure of credit information unless the subject of the report authorized it, much as medical records are authorized for distribution to insurance companies. But that's not likely.

"It would be a very costly requirement," said Ms. Brueger. "Frankly, it would be difficult to even get it out of the subcommittee."

Rep. Lehman's legislation is aimed instead at making sure employers and landlords meet existing disclosure rules. But in practice, it's hard to force a potential employer to explain exactly why an applicant was denied a job.

Advantages of Prescreening

However, prescreening is not expected to be eliminated altogether. The practice is well established, and many argue that the credit and credit reporting industries need to prescreen. They also say that the practice helps ease the effects of a credit crunch by making credit available to large numbers of people.

> **"Americans are willing to reveal information when they can see a clear benefit."**
>
> **Rep. Richard Lehman**
> *Democrat of California*

"Americans are willing to reveal information when they can see a clear benefit to be gained," Rep. Lehman said in introducing his bill.

"An example of one such benefit is access to credit opportunities," he said. "Some diminishment of control over private information may be the price we pay for living in a society with numerous credit opportunities available to us."

He is said to lean toward a compromise proposal, pushed by the banking industry, that would allow consumers to prohibit their names from being used for prescreening. Even that action would probably be costly to the big three credit reporting companies: TRW Credit Data in Orange, Calif., TransUnion Credit Information Co. in Chicago, and Equifax-CBI in Atlanta. □

Cost Leadership Provides an Edge

Continued from *page 4*

called "vending," is an important discipline for noninterest expense control. Vending is a state of mind, limited only by management's will and creativity.

At the other end of the spectrum lies investment, a resource (i.e., capital) which must be tightly rationed and only apportioned to those projects and/or acquisitions directly linked with strategic goals.

The operative word is "directly." The 1980s will be remembered as the decade when all too many U.S. financial services firms built lavish headquarters buildings and acquired new lines of business, only to turn around and soon dispose of people and assets to bring costs and capital into line. Discipline in capital spending will come to be viewed as an increasingly important discriminator in judging bank management performance.

Organizational Psychology

While all banks ascribe value to the pursuit of expense optimization and capital rationing, the execution processes needed to achieve these goals are tenuous. What is needed in many banks is a revised organizational psychology and a dedicated focus on doing those things that matter most. Changing the way an organization thinks about cost management is a critical evolutionary step.

> **"The tendency to accept the status quo is a disturbing trend in U.S. banking."**

Effective leadership today involves defining spending for internal "consumption" of services (e.g., technology, real estate, travel and entertainment, office supplies), monitoring usage through timely MIS designed to heighten awareness, and ensuring compliance with policies via strong and consistent enforcement mechanisms. While standardizing what is expected in all areas affecting corporate lifestyle, senior management must also focus on those elements which have greatest impact on a bank's cost profile:

- Lines of business and number of locations/geographic reach.
- Absolute size of work force and compensation practices.
- Technology spending and investment.
- Corporate real estate portfolio management.

Decisions regarding lines of business to be pursued and geographic reach are potentially the most beneficial and costly to make and undo. But once an organization has invested time, capital, and ethos in a particular course of action, it is rare to see large-scale shifts in strategy even when market dynamics are changing.

This tendency to accept the status quo is a disturbing trend in the U.S. banking industry, where operating costs equal about 66 cents of each dollar of total revenue; analysis conducted by Price Waterhouse shows that this proportional relationship has not shifted materially over the past five years.

Human Resources

Overall size of work force and compensation practices bear close attention, because redefining appropriate staffing versus the relevant competition is essential to any notion of profitability leadership.

The most successful bank competitors have already differentiated themselves in the human resources marketplace. Goals of high-quality, talent attraction and strategic cost management are being addressed simultaneously.

Progressive firms are abandoning historical views of internal compensation "fairness" (i.e., consistency driven by title and grade) in favor of market-driven compensation differentiated by specific line of business.

Base salary is being deemphasized while incentive compensation is being substituted for growing numbers of both managerial and nonmanagerial staff. The end result is a reward system aligned with individual and organizational performance.

Technology

Technology has had a consequential shaping and enabling influence on banking. But as declining costs – in real terms – of mainframe computers, minicomputers, and personal computers have fostered automation, many banks have lost control over their spending.

> **"Many banks have lost control over their technology spending."**

Next year's budget is invariably higher than the last. Decreases in computing efficiency are far outstripped by new application demands, and maintenance grows annually. Well-managed users of technology devote considerable effort to assembling a total picture of spending – for data centers, telecommunications, systems development, and personal computing.

Forward thinkers are devoting increasing attention to budgeting and planning for an environment in which every professional will have a personal computer with electronic mail linkage – an enormous one-time and recurring investment for most banks.

These users all develop standards for areas such as hardware, systems architecture, and communications networking.

Leading-edge firms separate strategic from maintenance-related technological spending. Strategic investments must build business value. Maintenance spending must be scrutinized for lower-cost sourcing.

Corporate Real Estate

Finally, we turn our focus to corporate real estate. Very few banks manage their corporate real estate with the care befitting

Which branch automation company offers a single point of service and product management?

Major Banks Vie for Global Custody Business in Far East

By RICHARD LAYNE

As Far Eastern investors place more funds in foreign markets and dollars pour into the region from abroad, U.S. banks are coming to view the Pacific Basin as a hotbed for securities processing services.

The major providers of global custody services are adding offices in the Far East and, to serve both local and foreign investors, changing the way they process trades. They are giving regional offices autonomy and creating a seamless, electronic system to monitor trades and settlements.

Business Grows in Asia

U.S. banks have historically looked to Europe as the major source of global assets. But with the pace of industrialization quickening, the Pacific Basin countries are accumulating vast wealth that will be invested. Whenever that money is placed in another country's securities, the investor relies on a global custodian to make sure the trade is settled and the accounting is performed.

"What we are seeing is a growth in pools of funds put together in Asia for investment outside of the home country," said Marshall N. Carter, senior vice president of Chase Manhattan Corp., the largest global custodian, with $112.2 billion in assets and $20 billion in the Far East.

"The interest in the Pacific Basin may have been drained slightly because of what is happening in Europe, but it is still the exciting shop," said Mark C. Aprahamian, vice president of Citicorp, another big provider of global custody in the 40-country region.

Scratching the Surface

Chase, Citicorp, and Security Pacific Corp. – the three major global custody providers in the Far East – have a total of about $60 billion in assets under custody in the region.

"We are just scratching the surface in providing global custody services to investors in Asia," said Edward Cooper, vice president of Chase. He said that Chase's share of the market may triple in three years, with Japan, Hong Kong, Singapore, and Australia the most attractive markets.

Overall, Asia represents about a $200 billion market for global custodians, Chase estimated.

"The Far East is growing at 30% to 50% per annum as a home for investment funds," said James Hockley, the head of Chase's Far Eastern custody business.

Offices Are Added

Echoing a change among investment managers, Chase has opened customer service offices in recent months in Tokyo, Hong Kong, Singapore, and Sidney, Australia.

"We are starting to market to customers resident in Asia, who are investing in Asia and outside Asia," Mr. Cooper said. Chase plans to set up similar offices in Taiwan and Korea – when those countries lift restrictions on direct foreign investment.

"What we are seeing is a growth in funds put together in Asia for investment outside the home country."
Marshall N. Carter
Chase Manhattan Corp.

The new offices are connected via a private telecommunications network to Chase's data processing facility in Bournemouth, England. The offices provide local trade settlement services and instant access to Chase's worldwide data base on securities trading. Through this new setup, investment managers can tap into the same securities data base as their bosses at the head office in New York or London.

Change from the Past

Previously, local investment managers could find out trade information only through their head offices.

"When a [Hong Kong] fund manager did a trade in Thailand and wanted to know did we receive foreign-registered shares or local shares, he had to call London or New York," said Mr. Hockley. "Now he can get the answer to his question that day." Mr. Hockley said that the new processing capability has brought in several million dollars in business from local fund managers.

U.S. and U.K. investment fund managers have taken on a larger role in the Far East, with funds granting them more autonomy to invest in the local markets. Hong Kong, for instance, has more than 100 fund managers operating locally.

Security Pacific, which has had a strong presence in the Far East, offers a single-system service similar to Chase's. The Los Angeles-based banking company, however, is in far fewer countries than Chase.

Concentration by Security

Unlike other major domestic custodians, Security Pacific has concentrated more on the Far East than on Europe and has about $4.5 billion in funds originating in Asian countries.

Until two years ago, the banking company did processing exclusively in Tokyo, its flagship office in the Far East. The securities movement and control system in Tokyo, which primarily handles settlements for broker-dealers, is now being rolled out to other Far Eastern countries.

The system, called DISC (for distributed international securities clearance system), has recently been installed in Singapore, Kuala Lumpur, and Malaysia because of heavy trading volume. The next cities on the list are Bangkok and Hong Kong. All trade and settlement information is entered directly into the system and routed to a central data base in the United States.

Fast Service Demanded

"Broker-dealers want nearly real-time information in terms of failed-trade management and control," said Richard A. Pregiato, managing director of the Sequor Group, part of the merchant banking operation of Security Pacific National Bank.

Citicorp trails its major U.S. competitors in building a single system for securities processing and wholesale banking. While Citibank offers global custody services throughout the Far East, the settlement activity in each country is not connected to a central data base.

Citibank, which has been in Tokyo longer than any other non-Japanese bank, plans to spend $100 million over the next three years improving its securities processing in the Pacific Rim. □

STRATEGIES: *joint venture*
Mellon Looks North for Fee Market Growth

By RICHARD LAYNE

To open new markets for its fee-based services, Mellon Bank Corp. plans to become the first U.S. banking company to form a joint venture with a Canadian financial institution for securities processing.

Mellon, the largest U.S. provider of securities transfer services, and Toronto-based National Trustco Inc. recently signed a letter of intent to form a processing company. Mellon is to invest an undisclosed amount in the already established operation and will manage an expanded joint operation. The deal is subject to approval by the Federal Reserve Board and by Canadian regulators.

Pittsburgh-based Mellon has an estimated 20% of the stock-transfer market in the United States, counting its own business as well as processing services done for 100 other banks, an arrangement called private labeling.

Lure of Moves Abroad

"Moving into Canada is desirable for any American company heavily involved in stock transfer," said Allan P. Woods, president of Mellon's fiduciary services group. "Most large players want to expand internationally."

Mr. Woods said that the joint venture will let National Trustco expand its securities transfer business, although he declined to cite financial goals. National is one of four major providers of securities transfer services in Canada; it serves more than 1,000 corporate clients, representing 1.2 million shareholders. In Canada, trust companies are separate from commercial banks.

The joint venture sprang from informal conversations between bankers at Mellon and National Trust, the major operating company of the Canadian Trust Corp., when National Trust was building a back-office processing system for securities transfer and sought advice. The talks turned formal when National asked Mellon this year whether it was interested in a joint venture.

High Volume the Key

A securities transfer agent keeps computerized records of all individual shareholders for a corporation, issues new certificates, dispenses dividends, and does proxy tabulations. As in other processing businesses, the higher the transaction volume, the better the chance to make a profit. Many banks no longer maintain stock-transfer operations, preferring to hire service providers.

Mr. Woods said National Trust has a sophisticated processing system that can calculate dividend payments in multiple currencies and calculate exchange rates for the purchase of shares.

A Mellon executive will head the joint venture and run the day-to-day operation, supplying processing experience. The banking company does not plan to move a significant number of employees to Toronto.

"We aren't planning an invasion," said Mr. Woods. Mellon is sensitive to the fact that the joint venture will be operating in a foreign country with different business customs, he said. National Trust, with 171 offices throughout Canada, will provide the local contracts.

Mr. Woods said the joint venture may open the door for Mellon to expand its fee-based services northward. □

COMMENT
Cost-Control Leadership Gives an Edge

Continued from *page 9*

a sizable investment portfolio, often valued in the hundreds of millions of dollars. Banks forget that net occupancy cost is typically the second-largest noninterest expense, after employee compensation.

For the majority of moneycenter institutions, occupancy costs rose at double-digit rates during much of the 1980s. For those banks that built new headquarters both domestically and overseas, global premises costs doubled in well under five years.

An effective corporate realty program creates and unlocks value in premises assets while restraining occupancy cost growth. Real estate value is usually optimized by accurately forecasting square-footage needs, bundling these needs together to maximize negotiating clout, and obtaining equity positions or options consistent with the level of space commitment being made.

Occupancy-cost growth is minimized by acquiring needed space on a just-in-time basis, subletting the balance of vacant area to generate tenant income, standardizing square-footage allotments for employees, and avoiding notions of full colocation (i.e., "Let's put everyone together in a new headquarters facility. . .").

Compounded expense growth has turned corporate real estate into a sizable business at many banks and it needs to be managed as such.

A Design for Restructuring

Leadership in cost management has proven to be a key element of success in all restructured industries. Financial services is no different.

While the forecasted pace and degree of restructuring in banking can be widely debated, there is little doubt that the growing influence of superregionals and foreign financial players poses serious challenges to existing profitability and market share.

Achieving excellence in cost containment must begin with a knowledge of competitors' practices, standards, and costs. Distinctions between expense and investment must be carefully drawn for all categories of expenditure.

Rationing of Capital

No effort should be spared to variabilize expenses and outsource nonstrategic activities. Capital must be rationed to build business value, rather than simply add discretionary fixed assets.

It also cannot be stressed enough that the organization's lifestyle must be attuned to cost-awareness and action – beginning first at the ranks of senior management and extending to the most junior employee.

Finally, management must focus on those items that matter most: lines of business and geographic reach, size of work force and compensation practices, technology spending and investment, and corporate real estate portfolio management. □

Reported Rise in Spending Is Puzzling to Economists

Reuters

WASHINGTON — Economists this week were confused by a report that consumers took on 10 times as much debt in May as they did in April, contradicting other signs that Americans were turning cautious on spending.

"It's a puzzling increase," said Jerry Jordan, chief economist with First Interstate Bancorp, Los Angeles. He noted that retail sales fell in May for a third straight month. An increase in borrowing is usually reflected in higher consumer spending.

"It doesn't square up with anything else," Mr. Jordan said of the Federal Reserve Board disclosure that outstanding consumer credit swelled by $3.91 billion in May after growing a revised $390 million in April.

That meant total consumer debt was growing at a 6.5% annual rate in May, the fastest pace since last October when it hit 7.5%. The annual rate in April was a meager 0.6%.

Contradicts Prevailing View

If borne out by other statistics, the credit data would dispute the prevailing view that the economy is moribund.

Most recent surveys of consumer spending plans have indicated a growing wariness about the direction of the economy over the next several months.

The largest part of May's consumer debt was a $3.14 billion increase in revolving loans, primarily credit-card outstandings. The May growth followed a $1.7 billion increase in April.

In contrast, auto loans shrunk in May by $87 million, after declining $1.99 billion in April. These figures were misleading because auto sales have been weak for much of this year.

All of credit figures are seasonally adjusted.

Is the Consumer Back for Real?

Retail sales figures for June are to be released Friday, and analysts are sure to watch them closely for a possible upward revision in the May figures in light of the big credit expansion.

"If the consumer really was back in there to that extent, then a lot of perceptions about the economy could change," said Jean Sundrla, an economist with Evans Economics Inc. in Washington.

Consumer spending fuels about two-thirds of the economy's growth. A principal reason for a slowdown in the past year is the rate of expansion of the gross national product has been slower growth in personal consumption spending.

So-called "other" credit, which includes bank loans, grew by $533 million in May after a $689 million increase in April. Before seasonal adjustment, outstanding consumer credit in May totaled $720.3 billion, compared with total debts of $691.2 billion in May 1989, the Fed said. □

Who has the largest installed base of branch automation systems?

REQUIRED READING/By W. Lee Hoskins

Coordinating Global Economic Policy

This is an edited version of a speech that Mr. Hoskins, president of the Federal Reserve Bank of Cleveland, gave May 25 at the Fraser Institute in Vancouver, British Columbia.

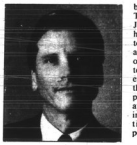
When I spoke to the Fraser Institute last year, in Toronto, my talk dealt with the instability that inflation causes and the merits of a monetary policy that strives for zero inflation. Policymakers in Canada and the United States have become more aware that a commitment to price stability is the most important contribution monetary policy can make to achieving full employment and maximum sustainable growth.

Bank of Canada governor John W. Crow and other Bank of Canada officials have publicly supported the goal of price stability. In the United States, Federal Reserve chairman Alan Greenspan and other Fed officials have publicly supported House Joint Resolution 409, which would make zero inflation the primary overriding goal of the Federal Reserve.

I will build on this basic idea and discuss international markets, exchange-rate volatility, and international policy coordination.

Two decades ago, many nations embraced flexible exchange rates as a means to promote worldwide trade, economic growth, and higher standards of living. Canada's experience from 1950 to 1962, when its exchange rate was allowed to float, encouraged those hopes.

Currently, though, some critics are claiming that the system of flexible rates has failed to provide exchange-rate stability and adjustments in trade imbalances. These critics seek, instead, a system of negotiated exchange rates maintained through international policy coordination.



I hope to convince you that some forms of coordination, particularly foreign-exchange market intervention, do not promote certainty and do not reduce fluctuations in exchange rates.

Holdings of foreign currencies by the Federal Reserve and the Treasury were at $45.2 billion in January 1990. More than one half of this large accumulation took place during the past year as concern over the rising value of the dollar prompted officials to intervene extensively in foreign exchange markets. But throwing money at the alleged problems only worsens the situation, because we are not focusing on the real problems: defective fiscal and monetary policies.

A Case for Intervention?

Those who argue for intervention in foreign-exchange markets note the increased volatility of exchange rates since the demise of the fixed exchange-rate system of Bretton Woods, which was abandoned in 1973. Unpredictable fluctuations in exchange rates pose a risk to people who buy and sell goods and services internationally — a risk that cannot be completely eliminated through hedging.

It is true that exchange rates, both nominal and real, have been more volatile since the advent of the floating-rate regime in 1973. But there is no reliable evidence that this volatility has reduced trade or international commerce, or that systematic intervention can reduce volatility in exchange rates.

Account Imbalances Persist

Another complaint is that the floating-rate system has failed to promote adjustment in nations' trade accounts. Critics cite the existence of prolonged current account imbalances around the world as evidence that some intervention is necessary to move markets toward long-term equilibrium and economic stability and growth.

"There is no reliable evidence that exchange-rate volatility has reduced trade or international commerce."

A system of floating exchange rates, by itself, cannot be expected to promote a balance in each country's trade accounts. First, there are many other factors that contribute to trade imbalances. Most important among those factors are monetary and fiscal policies, which are beyond the control of markets.

Second, economists have not found a clear correlation between nominal exchange rates and international current accounts. And third, despite its size, it is not clear that the United States current account deficit represents disequilibrium, or even that it is unsustainable given present circumstances.

Information Processors

Convincing evidence does not exist that foreign-exchange markets suffer from avoidable imperfections. Exchange markets are highly efficient information processors. There are many participants, and none dominates the market. Moreover, there are few barriers to entry. As flexible rates adjust rapidly to supply and demand shifts, they act as a

Setting Global Economic Policy

Continued from *page* **12**

cushion to the international transmission of shocks that otherwise would more severely affect other economic variables — prices, interest rates, and employment.

Policy Intentions

In a flexible exchange-rate system, the equilibrium rate is determined by factors affecting the supply of and demand for currencies. Some of the factors — like domestic monetary and fiscal policies — lie within the realm of control of policymakers, while others — like changes in productivity, demographics or supply shocks — cannot be controlled by policymakers.

The fundamentals that are controllable by policymakers should not be allowed to contribute to confusion and volatility in markets and prices.

Policymakers can minimize uncertainty by adopting sound policies; namely, policies that have clear objectives, are verifiable, and embody rules that are consistently adhered to. If policymakers follow sound policies, then decision makers can factor the effects of such policies into foreign exchange prices, contributing to stability in foreign exchange markets.

"Convincing evidence does not exist that foreign-exchange markets suffer from avoidable imperfections."

Unfortunately, the absence of sound and credible economic policy objectives around the world has forced decision makers to focus on short-term governmental actions, adding to uncertainty and volatility in foreign exchange prices.

Central Bank Actions

Foreign exchange dealers base their price quotations partly on current economic conditions and partly on the actions of policymakers. Recognizing the links between monetary growth, inflation, and foreign exchange rates, dealers pay particular attention to central bank actions.

Dealers scrutinize a variety of central bank data — changes in reserves, changes in the discount rate, and conditions in the money market — for clues about changes in the Federal Reserve's objectives and its reaction to current economic conditions.

For example, if Federal Reserve actions are interpreted by the market as a policy of unexpected easing, that will cause a rise in the U.S. inflation rate and the U.S. dollar exchange rate may decline. In this way, unexpected changes in the money stock contribute to exchange-rate volatility.

Future Expectations

Changes in the expected future value of market fundamentals are also integrated into foreign exchange prices. Foreign-exchange rates always embody expectations of central banks' longer-run policies.

Where intentions are unclear, the market is forced to place heavy emphasis on central banks' behavior as an indication of their future expected policies. Put another way, the lack of sound and credible policy causes unnecessary uncertainty and consequently, unnecessary volatility in change markets.

Conflicting Objectives

The Federal Reserve, like most central banks, has a lengthy list of policy objectives — high employment, maximum output growth, balance of payments equilibrium, exchange-rate stability, and price stability.

The lack of an overriding objective, or an explicit prioritization of the current list, makes it difficult for markets to know how the Federal Reserve will respond to the latest economic data.

Although the Governors of the Federal Reserve and the 12 Federal Reserve Bank presidents are on record in support of price stability, there is neither an explicit timetable for achieving it nor as strong a public mandate to do so as I would like.

A central bank that attempts to maintain price stability and a nominal exchange-rate target has more policy objectives than policy instruments. At times, these two objectives might be

"Furnishing a sound and stable currency is frequently overlooked."

compatible. For example, in the late 1970s, limiting rapid dollar depreciation through intervention was compatible with a contractional monetary policy to eliminate inflation. As often as not, however, these two policy objectives will be incompatible, and generally, foreign exchange intervention activities are sterilized, or offset, to avoid interfering with domestic policy objectives.

Opposing Actions, Goals

U.S. intervention sales of dollars in early 1989, for example, seemed inconsistent with a goal of price stability and with Federal Reserve actions at that time to slow monetary growth.

That intervention carried a risk of sending confusing signals to foreign exchange and bond markets, since the markets may have thought that U.S. monetary policy had become less focused on lowering the inflation rate.

Under such conditions, markets may not view either price stability or exchange-rate stability as credible policy goals. The knowledge that central banks will deviate from a policy of price stability to pursue an exchange-rate objective will raise uncertainty about real returns and will distort the allocation of resources across sectors and

See **REQUIRED** *next page*

REQUIRED READING

Setting Global Economic Policy

Continued from *page 13*

over time.

Moreover, without sound monetary and fiscal policies, attempts to maintain nominal exchange rates will not eliminate exchange-rate uncertainty, since countries inevitably will resort to periodic exchange rate realignments. Hedging exchange-rate risk will remain an important aspect of international commerce.

Interventionists argue that a sterilized approach, in which the central bank offsets any monetary effects of intervention, can influence the exchange rate without compromising domestic policy. If this view has any merit, the effects are very short-lived.

Furthermore, distinguishing between the two types of intervention — sterilized and unsterilized — is difficult in practice and bound to create additional uncertainty on the part of private decision makers.

Reduce Government's Role

Policymakers can best minimize uncertainty by reducing government interference with market mechanisms. To be sure, providing an institutional framework that protects individual property rights is a necessary role for governments to play. But government policies to control market prices can be destructive.

Unlike the market, the machinery of government includes no automatic mechanism to promote efficiency. Rather than fostering efficiency, intervention slows and impedes the market's natural adjustments. Furthermore, such intervention will, sooner or later, be at odds with publicly stated domestic goals, causing substantial confusion and speculation.

Intervention's Attractiveness

Conventional wisdom suggests that elected officials and markets usually do not share the same incentives and goals. While market forces promote long-run efficiency and equilibrium, governments often react to shorter-run factors and the pressures of their constituencies.

"Price stability offers nations the opportunity for the highest possible economic growth."

These diverse and often conflicting goals tend to reduce the credibility of domestic policies, increasing uncertainty and volatility in foreign exchange markets.

Elected officials might find exchange-rate intervention attractive because it defers criticism while buying time for more fundamental actions. In 1985, U.S. domestic manufacturers were experiencing stiff competition from abroad. Competition was intensified by extremely high dollar exchange rates, and lobbyists besieged Congress with proposals to restrict imports.

Fixing Structural Imbalances

The administration realized that the U.S. current account deficit reflected imbalances between savings and investment in the United States, West Germany, and Japan.

These structural imbalances could have been corrected through adjustments in fiscal policies. However, governments cannot easily change fiscal policies because of strong vested interests in maintaining various taxes and expenditures.

The continued struggle to balance the U.S. federal deficit typifies the problem. Similarly, in the early 1980s, West Germany and Japan were extremely reluctant to adjust fiscal policies for balance-of-payments purposes.

Responding to Constituencies

Lacking the ability to address these structural problems directly and quickly, policymakers find it easy to resort to exchange market intervention. When coordinated and publicized through the Group of Seven — Britain, Canada, France, Italy, Japan, the United States, and West Germany — such intervention offers a highly visible signal that governments are responding to the desires of their constituencies.

"Flexible exchange rates themselves can contribute to price stability by providing another channel through which markets can work."

In this way, government intervention can serve to diffuse criticism of its policies, to stall protectionist demands, and to buy time for more fundamental policy adjustments.

Temporary Benefits

In addition, it has been a long-standing belief that a nation can offer temporary benefits to specific constituencies by adjusting monetary policy to depreciate the value of its currency.

However, unless markets are imperfect or unduly constrained, such a policy cannot succeed in the marketplace for any substantial period of time. Furthermore, depreciation of a nation's currency via monetary policy will eventually cause domestic inflation.

Economists have long questioned the wisdom of attempting to achieve current account objectives through a monetary manipulation of nominal exchange rates, and most have come to reject this practice as little more than a near-term palliative. Nevertheless, aiming monetary policies at nominal exchange-rate targets increasingly seems to be the approach of choice among national leaders.

Defective Public Policy

The ability of governments and central banks to intervene freely in foreign exchange markets has not really promoted effective policy coordination and has not materially affected exchange rates. Nations that commit to sound economic policies can live with flexible or rigid exchange-rate regimes, but a rigid structure of exchange rates cannot be maintained when nations pursue fundamentally different domestic economic policies.

For example, it is hard to imagine a fixed exchange-rate system that would encompass the high-inflation policies of Latin American nations as well as the low-inflation policies of West Germany and Switzerland.

Setting Global Economic Policy

Continued from *page 14*

Any successful system of international coordination must be founded on the proper economic incentives for each individual country. Price stability offers nations the opportunity for the highest possible economic growth and would reduce fluctuations in exchange rates. Over the long haul, it is in society's best interests for governments to commit to a policy of price stability, or zero inflation.

Conditions for Recession

Every recession in Canada's and the United States' recent history has been preceded by an outbreak of cost and price pressures. And these results aren't confined to North America.

Evidence from a number of countries with various institutions and economic conditions indicates that persistent inflation erodes long-term growth by favoring projects with quick paybacks and discouraging the formation of capital.

Policy coordination should not be abandoned. However, important economic fundamentals should not be ignored and market forces should not be encumbered by public policies.

Attaining Price Stability

Attention to the fundamentals will encourage the adoption of goals — specifically, price stability — that are essential to reach the highest levels of social and economic welfare for each nation and the world as a whole.

To attain price stability, we need to adopt a sound policy — one that is verifiable, with clear objectives and rules that are consistently adhered to.

If we cannot get firm commitments for zero inflation, should we abandon floating rates and resort to a fixed-rate system? The answer is no! As long as there are separate, sovereign nations, we must accept the possibility of varied domestic agendas.

A system of floating rates can accommodate these interests with the least governmental interference. The key is adherence to sound policies; as long as governmental policies are predictable, uncertainty can be minimized.

International coordination should be viewed as a journey, not a destination. Policy coordination should not take the form of intervening to slow the natural adjustment of exchange rates, or to fix them. While markets may not be perfect and may not always coincide with the interests of politically driven systems, they generally outperform the actions of governments. □

Bank Executive Guilty of Fraud

Washington Bureau

WASHINGTON — The U.S. Justice Department said that Alfred Lon Robertson, former executive vice president of First State Bank, Blanchard, Okla., pleaded guilty to bank fraud.

According to the U.S. attorney for the Western District of Oklahoma, Robertson made personal and corporate loans to Pinnacle Land Management Corp., an entity in which he had a concealed ownership interest.

Robertson and others had formed Pinnacle and a subsidiary to operate Brothers Fried Chicken restaurants in Oklahoma. He allegedly concealed his ownership from the bank and the Federal Deposit Insurance Corp. in 1985 and 1986, when two loans totaling $895,000 were made to Pinnacle.

Law enforcement officials said Robertson borrowed money in his own name from First State, but failed to disclose that the proceeds would be used in connection with the business of Pinnacle.

Also, Robertson allegedly documented the transactions to make it appear that Pinnacle was borrowing money from First State in arm's-length transactions.

Robertson, 36, could receive a fine of up to $250,000 and up to five years in prison, the law officials stated. □

Va. Bank Investigates Diversion of Funds

BRISTOL, Va. — Charter Federal Savings Bank said it is investigating an embezzlement of at least $1.2 million by one or more former employees at a branch in Roanoke. The $1 billion-asset thrift referred the case to the Federal Bureau of Investigation.

Charter Federal said funds deposited by a small number of customers, principally in certificates of deposit, were diverted in the scheme. E.L. Byington Jr., chairman and chief executive officer, said employees will investigate and make good on any account discrepancies, and the bank intends to file civil claims to reclaim lost funds. □

COMMENT / *By Stephen T. Crosson*

Law, Market Transforming Battered Appraisal Industry

Few industries are changing faster than real estate valuation.

Once an obscure field, valuation became a major topic during the 1980s as appraisers came under new scrutiny from the federal government and private industry. And the importance of accurate, unbiased appraisals has become increasingly apparent in the midst of the banking crisis.

Now, moves toward increased professionalism – including state licensing and certification and the adoption of national uniform appraisal standards – are elevating what had mostly been a cottage industry.

For the most part, the changes are welcome; in some cases, they are long overdue.

Born in Volatility

The foundations of modern valuation practices were established during the 1920s and 1930s, when volatility in the financial markets created a need for reliable asset valuation. The American Institute of Real Estate Appraisers was established in 1932 to provide a forum for appraisal education and a vehicle for certification.

"The importance of accurate, unbiased appraisals has become increasingly apparent."

The appraisal report became an inherent part of underwriting, though too often the document was regarded as support for a preconceived value rather as an objective estimate of worth.

Not until the early 1970s, when the teachings of Leon W. Ellwood and other emerging theorists began to gain recognition, did the field really start to become a skilled profession.

Rapid advances in software and microcomputers have contributed to the development of more sophisticated valuation techniques. These required more intelligent and better-educated appraisers, and required them to work harder.

Nonetheless, much more was needed to bring the practice as a whole to a true professional level.

Taint of Fraud

The industry passed under a cloud during the 1980s, when the banking crisis revealed unethical conduct by certain individuals engaged in appraisal practice. It was clear that the availability of advanced appraisal techniques did not assure quality work.

The events of the 1980s brought to light the lack of centralized control in the appraisal industry.

Though the American Institute of Real Estate Appraisers and the other leading organization, the Society of Real Estate Appraisers, have long provided the main body of knowledge and standards governing the industry, appraisal designations can be obtained from a host of other organizations created over the years. Many of these have few or no approval requirements.

Outsiders were surprised to learn during the so-called Barnard congressional hearings, which exposed cases of appraisal abuse involving securities and government-insured mortgage programs, that the appraisal industry was virtually devoid of state and federal controls.

In most states, people with no formal training or education – or only a license to sell real estate – could evaluate residential and commercial properties.

The fraud identified in the Barnard hearings was limited to only a few individuals, but their actions stained the entire industry.

Most appraisers are dedicated to accurate and objective analysis. What worries them is the possibility of errors of omission, rather than commission, by unqualified individuals.

Though it is estimated that 250,000 people work as part-time or full-time appraisers in the United States, only about 5 percent have achieved designations from the American Institute of Real Estate Appraisers or the Society of Real Estate Appraisers. This is alarming, given the complexity of many valuation assignments and the specialized techniques required.

Positive Changes

The events that have spurred government intervention in the appraisal industry were negative, but the resultant changes have been quite positive.

As an outgrowth of the Barnard hearings, measures regarding program and procurement of appraisals were written into the Financial Institutions Reform, Recovery, and Enforcement Act, the huge thrift-bailout package passed by Congress in 1989.

Firrea required that by Feb. 9 of this year federal agencies dependent on real estate appraisals draft regulations on appraisal standards and the use of state-

The Changing Appraisal Industry

Continued from *page* **16**

certified and licensed appraisers. The agencies must issue the regulations in final form by Aug. 9.

States must establish procedures and begin certifying and licensing appraisers by July 1, 1991. From that date on, appraisals involving federally related transactions must be performed by state-certified or licensed-appraisers.

Shared Responsibility

The new law establishes a regulatory system similar to the one governing certified public accountants. In both, responsibility is shared by the federal government, the states, and the profession.

Firrea has contributed to the creation of a single organization, the Appraisal Foundation, that is responsible for establishing the standards and qualifications that states and federal agencies must use. The Appraisal Foundation is a consortium of the nation's leading appraisal organizations, including the American Institute of Real Estate Appraisers and the Society of Real Estate Appraisers.

A nationwide reform effort among states is already under way to certify and license appraisers. By late 1989, 24 states had adopted laws or rules providing for certification, licensing, or the creation of appraisal standards. Most other states are drafting or approving similar measures.

Under the Firrea mandate, only state-licensed appraisers will be able to perform valuation on transactions of more than $1 million. All other transactions, and those involving one- to four-unit residential structures, may be performed by state-certified appraisers.

Few Hardships Foreseen

For practicing professionals, the new regulations should pose no significant hardships. The Uniform Standards of Professional Appraisal Practice (USPAP), promulgated by the Appraisal Foundation, parallel those already established by the American Institute of Real Estate Appraisers and the Society of Real Estate Appraisers. Licensing and certification should come easily to people already involved with a reputable appraisal organization.

"The law establishes a system like the one governing certified public accountants."

Although the purchasers of appraisal services may not see an overnight change, the new regulations should benefit the real estate industry over the long term. The new standards should assure that higher-caliber individuals are attracted to the valuation field, while people more interested in the success of a transaction than the objective estimation of value gravitate to other aspects of real estate.

Ultimately, the value estimates underlying mortgages, mortgage-backed securities, real estate purchases, and all other areas requiring asset valuation should become more uniform and dependable as the USPAP standards become the foundation of most appraisal assignments.

The Market Pressed for Change

Though the nationwide adoption of uniform appraisal standards has been largely the result of government intervention, the private sector had already begun to demand better performance by real estate appraisers.

Because the Tax Reform Act of 1986 eliminated most of the tax-shelter advantages of investment real estate, investors were concentrating much more closely on the financial feasibility of their holdings.

Sophisticated Buyers

The increasing sophistication of investors demands better methods of analysis by appraisers. More and more, buyers of appraisals are questioning the reasoning behind the final value estimate and are scrutinizing the appraisal report. Appraisers are being challenged to support their conclusions with hard statistical data.

The distinction between the appraiser and the analyst/advisor will continue to erode. As valuation assignments become more complex, appraisers are being required to be experts in economic and statistical analysis.

Advances in technology – most notably in data bases – will increase the availability of information on a grand scale and force valuation experts to keep pace with technology.

These developments extend not only to the individual appraiser, but to the firms providing valuation services.

Industry Is Consolidating

Historically, the appraisal industry has been characterized by small shops headed by one or a few practitioners.

Such firms will continue to occupy a niche in the financial-services industry – a niche in which large-scale information management is not vital.

However, economies of scale are contributing to consolidation in the appraisal industry much like the consolidations that swept accounting, law, and advertising in years past.

The synergy/efficiency of the emerging "super" firms is a primary reason for this trend, as is the consolidation of the financial-services industry as a whole.

The creation of large national or global funds targeting real estate investments has greatly increased the need for portfolio valuations that often involve multiple metropolitan locations and regions.

The coming years could prove difficult for appraisers or appraisal firms unable to adapt to the rapid changes under way in this industry.

But the future will be rewarding for those who can anticipate the changes and find their niche in the market. □

GLOBAL *dispatches...*

BankAmerica Back in Italy With Milan Branch Opening

By JOHN EVANS

LONDON — BankAmerica Corp. has returned to Italy with full-service banking after a four-year absence, opening a branch Tuesday in the business center of Milan.

This Italian venture also marks the San Francisco bank's first new commercial branch to be opened in Europe since 1984.

BankAmerica pulled out of Italy in 1986 when it sold its controlling interest in the Banca d'America e d'Italia network to Germany's Deutsche Bank AG. Since then it has maintained a representative office in Italy.

Variety of Services

The Milan branch will provide treasury and capital markets, corporate finance and electronic banking services to international companies active in Italy and major Italian companies with worldwide business, the bank announced.

Chief executive officer Richard M. Rosenberg, who dedicated the Milan branch, said it "underscores our commitment to be a major player in European wholesale banking."

The branch gives the bank a full presence in each of its key European markets, providing it with a presence in the European Community ahead of unification scheduled for 1992, he added.

BankAmerica has maintained ties with Italy almost from its inception. Originally called Bank of Italy when it opened in San Francisco in 1904, its founder, A.P. Giannini, was the son of Italian immigrants.

Vice president Pier Giorgio Rota Baldini has been named to manage the branch.

Japan's Banks Consider Bank-Card Loans

Japan's city, or money-center, banks are considering a publicity drive that stresses the convenience of revolving credit through bank cards.

Not for two years will the banks be able to offer revolving-credit payments systems. But they are interested in expanding the market for loans tied to their own credit cards.

This month **Bank of Yokohama** will launch month an overdraft capability tied to its credit card.

The industry is being careful not to anger consumer credit companies or local merchant groups, for fear that excessive restrictions could be attached to the permission for revolving credit. — **TFW**

U.K. Realty Slump Threatens Banks

American, Other Foreign Lenders Seen as Big Losers

By JOHN EVANS

LONDON — U.S. and other bank lenders are becoming mired in a deepening real estate recession that is starting to plague Britain.

Though real estate values in London and other cities haven't plunged as deeply as in the United States, banks in Britain still face potential losses running into billions of dollars from their high-rolling property financing of recent years, analysts warn.

High Financing Costs

The shakeout was triggered by high financing costs, stemming from a 15% prime rate, and a surplus of projects, the result of a development boom.

The Bank of England, which has repeatedly warned about excessive real estate lending, has released data showing how Britain's 500-institution banking industry and other lenders have rushed pell-mell into realty.

Outstanding loans to developers and construction companies, $27 billion in May 1988, are now estimated at $67 billion.

Leading to real estate companies alone rose $17 billion in the 12 months that ended in February. Of this total, $850 million came from U.S. banks and $3.4 billion from Japanese. Other overseas banks, mostly European, lent $4.5 billion.

Foreign Banks Seen Hurting

IBCA Banking Analysis Ltd., a London-based rating agency, estimates that Britain's large commercial banks will lose $1.25 billion in provisions for bad real estate debts.

Foreign banks could lose even more, the agency says.

Alison Deuchars, an analyst at the brokerage firm Smith New Court, agreed. Non-British banks often did "riskier lending," much of it last year when real estate values were at their peak, she said. "It's natural to assume that foreign banks will have to take more than their fair share of the problems."

> **Non-British banks often did "riskier lending."**
> **Alison Deuchars**
> *Smith New Court*

The Biggest Failure

In the biggest corporate failure so far, developer Rush and Tompkins PLC, with a construction portfolio worth $1.25 billion, owes its bankers about $600 million.

Its lead lender is Lloyds Bank. Thirty-five other banks, including Security Pacific, Citibank, and First Interstate , have loans outstanding to the company or its joint ventures.

Security Pacific and a major colender, the Halifax Building Society, a thrift, also sent liquidators to the Kentish Property Group, a specialist developer in London's residential sector.

However, Security Pacific's outstanding loans in construction, real estate, and related investment in Britain amounts to less than $600 million, and non-performers have been minimal, said Johnyn Moss, a senior vice president who heads the bank's British property division.

"I'd be akin to an ostrich" to deny that Security Pacific, "like other lenders," is concerned about the British real estate industry," he said in an interview. But the bank's exposure to Rush and Tompkins and other problem developers is "very small," amounting to less than 3% of its portfolio for debts where it's no longer accruing interest. The Kentish Property exposure is under $9 million.

U.S.-Style Collapse Is Doubted

He said he doubts real estate will plunge as deeply in Britain as it did in the United States.

"The downturn here can't be compared with Texas or other states. Cycles in the U.S., where shorter leases are the norm, tend to be much deeper than in the U.K., where 25-year institutional leases for commercial property are more prevalent."

But a recovery isn't likely soon, says the British brokerage firm Barclays de Zoete Wedd. Values of commercial real estate are falling at an annual rate of 10% to 20%, it estimates, and "the property bear market will last at least another 18 months." □

Japanese Welcome Decision on Lending to China

TOKYO — Japan's decision to resume official loans to China after this week's Group of Seven economic summit was greeted with satisfaction by the business community.

A government spokesman said in a news conference in Houston that Prime Minister Toshiki Kaifu had told the other leaders in the organization of seven top industrial nations that Japan plans to resume loans to China gradually after the summit.

The spokesman quoted the prime minister as saying that Japan had made a commitment to extend $5.6 billion in official loans to Beijing and could not break the promise.

Taizo Hashida, chief of the Bankers' Federation of Japan, told reporters that his association welcomes the resumption of loans.

"We think positively about it, but the association has to watch the movement of the United States and the World Bank," said Mr. Hashida, who is also president of Fuji Bank.

Limits Are in Place

A Japanese banker pointed out though the resumption is positive for banks, new lending to China would be capped by country credit limits. The limits are decided by indexes, including domestic inflation, external debt, foreign-currency reserves, and access to public loans.

An official of a major trading company said traders and businesses welcome the news because Japanese companies usually win about half of the contracts offered under the yen loans.

The loans to be resumed through 1995 will go to 42 projects, including power stations, fertilizer plants, roads, and railways. — **Reuters**

The most important thing about banking is the bottom line.
Here's the bottom line.
AT&T gives banks a highly cost-effective way to do business.

When it comes to delivering the telecommunications services that banks really need in today's market, AT&T is unmatched. And we're going further.

More flexibility and better cost control.

For headquarters to branch, or branch-to-branch communications, the AT&T Software Defined Network (SDN) gives you all the benefits of a private voice network. But with greater flexibility and better cost control, plus the ability to track and monitor call volume.

The hottest technology in banking today.

And what SDN does for voice, our new Software Defined Data Network (SDDN) now does for data. SDDN is a switched data service with dynamic bandwidth allocation that provides the transmission flexibility necessary for image-processing applications, such as signature verification, document processing and check processing.

AT&T is committed to meeting the banking industry's needs.

In 1989, AT&T introduced the Retail Banking Solution, which gives branch banks the tools needed to manage and grow customer relationships effectively. And the AT&T DEFINITY® Communications System helps speed calls to and from customer service centers. So go with AT&T. Because with our innovative services we give your bank the competitive edge. And that's what counts on the bottom line.

Innovation. Another AT&T advantage.

For more information, call your AT&T Account Executive or 1 800 247-1212, Ext. 580.

AT&T
The right choice.

Norwest and United of Colorado Say They Are Discussing Merger

Continued from *page 1*

west's stock closed at $21.125, down $1. United Banks closed at $20, up $1.125.

Bruce Hoyt, a vice president of the investment banking company Boettcher & Co., estimated that Norwest would have to pay between $400 million and $500 million to buy United Banks, or, a premium of up to 25% of book value.

A spokesman for Norwest declined to elaborate beyond the release. Norwest has been expanding aggressively in its immediate 11-state market, acquiring small bank holding companies and related businesses. It has loan offices and a corporate banking operation in Colorado.

United Banks, with 39 offices, controls 18% of the bank deposits in Colorado, according to Mr. Hoyt.

Mr. Hoyt said the negotiations come at a time when the Colorado economy is showing signs of a rebound after several down years. Real estate and energy woes have buffeted the state's financial institutions. Colorado is now showing employment growth and some increased demand for housing. □

CEO Resigns at Unit of Maine's One Bancorp

PORTLAND, Maine — The One Bancorp said Arthur M. Burton has resigned, effective immediately, as chairman, president, and chief executive officer of the company's Southstate Bank for Savings.

The company said that Mr. Burton and the Southstate board of directors differed about the institution's future. Mr. Burton said that because One Bancorp offered to sell Southstate as part of a capital recovery plan, it seemed appropriate for him to seek other opportunities.

The board appointed Thomas J. Whalen, a director since 1976, as acting chairman, and it formed a search committee to find a successor to Burton.

The One Bancorp also owns the $1.5 billion-asset Maine Savings Bank, Portland.

SunTrust Profits Rise 3% in 2d Quarter

By KENNETH CLINE

ATLANTA — SunTrust Banks Inc. reported Tuesday that its profits rose 3% to $88.5 million in the second quarter.

The modest increase was due to a 21% boost in the bank's loan loss reserves to $102.6 million, which was taken following an examination by the Office of the Comptroller of the Currency last month.

Reserves Boosted

Several other Southeastern banks, which increased their reserves following exams by the Comptroller's office in the first and second quarters, are also are expected to report strained second-quarter earnings. Atlanta-based SunTrust is the first bank in the region to report its earnings.

Analysts say the situation may improve later in the year, now that most banks have completed their exams by the Comptroller's office.

"Barring any major deterioration in real estate values in the Southeast, we should see loan-loss provisions come down significantly in the second half," said Gerard J. O'Meara, Jr., with the Robinson-Humphrey Co. in Atlanta.

"The OCC exams are just being completed, so there will be further pain or interruptions at certain institutions. But for the most part, the earnings power of the banks has not been impaired dramatically."

Results No Surprise

SunTrust increased its provision for loan losses by $26.6 million between the first and second quarters. The company had predicted an approximately $27 million increase on June 28, following the Comptroller's office exam.

"SunTrust had conditioned the market earlier, so the mystery was removed and the results came in basically as expected," Mr. O'Meara said.

SunTrust was trading Tuesday afternoon at $20.875, up $0.25. SunTrust lessened the effect of its loan-loss provision on second quarter earnings with two unrelated purchase accounting adjustments on earlier acquisitions aggregating $19 million.

Tenn. Leads Nonperformers

As usual, Tennessee provided the bulk of SunTrust's $90 million in new nonperforming assets between the first and second quarters - up 20%. The state has been in a real estate recession for several years. The 15.5% boost in nonperformers in Florida, where SunTrust's largest subsidiary is located, was more modest.

Outlook Stable to Flat

The outlook for other southeastern superregionals, who will be reporting second quarter results over the next two weeks, is stable to flat, except for Norfolk-based Sovran Financial Corp. The company is expected to build its reserve following its exam.

Most analysts are predicting that Sovran's earnings in the second quarter could fall to about $30 million, down from $65.5 million in the second quarter of 1989. □

Thrift Industry Sees Few Benefits In OTS' Easing of Loan Ceilings

Continued from *page 1*

development.

How much latitude OTS and its parent agency, the Department of Treasury, had in designing a transition rule is controversial. "There isn't much room to do anything," said Treasury Under Secretary Robert Glauber a week ago.

Likewise, Congressional aides who worked on the legislation said the legislative history made it clear that Congress intended for the regulation to take effect immediately without a phase-in period. The new limits, according to the House-Senate report on the law, "are self-executing."

Balance Sheets Differ

"The provisions could not be self-executing," said Martha Ellet, a thrift lawyer with Gibson, Dunn & Crutcher. "You cannot take the national bank standards and abruptly apply them to S&Ls, with their different balance sheets."

To many in the thrift industry, the new regulations are evidence of a second-class regulator, one under the thumb of the Department of Treasury and the Office of the Comptroller of the Currency.

Much of what the OTS does is determined by the Comptroller. Capital requirements, for example, are to be "no less stringent" than those that apply to national banks, under the bailout law.

On loans to one borrower, thrifts are made "subject to the same limit . . . as [applies] to national banks," according to the House-Senate conference report that accompanied the 1989 law.

Reaction to Press Report

But in the case of loans to one borrower, Treasury department policy makers appeared to have played a key role as well. In early June, *The Washington Post* published an editorial describing efforts to provide a transition period as a "grotesque" reminder of the industry's once-cozy relationship with its regulator. The Treasury Department reacted by temporarily shelving the regulation.

"Right now, you would have to say this is a very timid regulator."
Palmer Hamilton
Lawyer

It was not known whether the department insisted that the regulation be watered down before it was issued, but a number of industry sources said the limited nature of the transition rule suggests that OTS is unlikely to emerge as an independent agency in the mode of the Comptroller.

"It's still too early to tell," said Mr. Hamilton. "But right now, you would have to say this is a very timid regulator." □

RTC Backs Plan for OTS to Try Selling Shaky Thrifts Before Seizure

Continued from *page 1*

resolving each case in roughly 90 days.

The agencies hope to sell each thrift intact; that would put assets in private hands rather than letting them languish in the government's growing stockpile. Some deals will fall short of this goal, and some could be structured as insured deposit transfers, the least desirable option.

Procedure Outlined

The OTS will notify thrifts of their eligibility, market and prepare institutions for sale, prepare bid packages, work with the RTC to make sure bids conform to its guidelines, and supervise due-diligence examinations. Then bids will be evaluated by RTC staff members, who will recommend action to the RTC board.

The accelerated resolution program, outlined by RTC Chairman L. William Seidman in a National Press Club speech last March, was hammered out by OTS and RTC officials. As its inventory of thrifts swelled, the RTC has been at odds with the OTS over the pace at which thrifts should be moved into conservatorship.

Under the plan, bidding for ailing thrifts would be decentralized.

Employees in the RTC regions and OTS districts are to work hand-in-hand under direction from Washington to identify institutions for the fast-track sales. Thrifts in danger of failing and destined for RTC conservatorship within one year could be placed in the program or could enter it voluntarily.

Mutual Thrifts May Act

The voluntary option is most likely to be chosen by mutual thrifts, perhaps after they line up their own buyers.

"This is a program designed to sell thrifts in the most efficient and quickest manner possible, with the least possible deterioration in value," Mr. Seidman said after the vote approving the program.

The plan won high marks from a prominent investment banker, who said it could become the RTC's new blueprint for case resolutions.

"This could be an important thrust for dealing with resolutions rather than simply piling them into the RTC and letting them atrophy in receivership," said John Oros, a partner in the investment banking firm of Goldman, Sachs & Co., New York.

Ely Urges Faster Action

But the Alexandria, Va., consultant Bert Ely, a critic of the bailout program, questioned whether thrift franchises' value would be preserved just by putting them out of conservatorship.

"I don't believe franchise value deteriorates overnight," he said. "It begins to break down long before a thrift is placed in conservatorship."

Mr. Ely added, "This is essentially what the FDIC has been doing at the rate of 200 a year. This shouldn't be a pilot program. They should be going full-bore on this thing."

In related news, RTC Executive Director David Cooke told the RTC board that 155 thrift cases were resolved in the second quarter of 1990, bringing to 207 the number of RTC resolutions by June 30. These institutions had assets of $85 billion. The RTC retains $39.4 billion in assets and expects to take back about $3 billion more if acquirers exercise options to return assets, he said. □

Banking Coverage Where It Counts

mates the nervousness and skittishness among the depositors of this nation. Deposit insurance is becoming an increasingly sensitive issue. I think it is going to confuse people, it is going to make depositors uncertain," Mr. Guenther said.

"We are disappointed by the FDIC's action," said Mark Burnenko, a spokesman for the American Bankers Association. "We don't feel it goes far enough, considering the costs the banks are going to have to absorb in complying."

The ABA estimates that it will cost banks, depending on their size, from $2,500 to $200,000 to cover the mailing cost.

"I think it is going to confuse people."
Kenneth A. Guenther
Independent Bankers Association

"I think [the rule] is a bunch of garbage," said Gerald F. Chapman, president and chief executive officer of Reston, Va.-based Vista Federal Savings Bank. The $173-million-asset institution has already enclosed the FDIC form with its monthly statements. "It is another statement stuffer that will go out and 99% of the people will throw it away without ever reading it."

The IBAA's Mr. Guenther was particularly angered by a section of the FDIC rule that said customers who find out that their deposits are not fully insured may wish to consider transferring excess funds to another institution.

"They are actively encouraging deposit-switching," he said. □

Pact for American Bancorp

EXECUTIVE *changes*

First NH Bank Picks Marshall For CEO Post

F. William Marshall Jr. was appointed chairman of the board and chief executive officer, effective next Monday, of First NH Banks Inc., the Manchester, N.H., subsidiary of the **Bank of Ireland.**

He was formerly executive vice president-corporate banking group – which includes large corporate customers, special industries, international trade, and cash management activities for the corporation – at Shawmut National Corp., Boston.

Mr. Marshall succeeds **Frank O. Buhl,** who will remain on the board through 1990.

Mr. Buhl announced his intention to retire last spring, noting, "It was important for me to make my announcement now, providing the board sufficient time to select a suitable successor." He also asked that First NH Banks' new CEO be given the chance to provide "leadership into the 21st century."

F.W. Marshall Jr.

Mr. Marshall was raised in Bellport, N.Y., on the south shore of Long Island. In 1964, he got a bachelor of science degree in finance from Washington University, St. Louis, then joined Shawmut Bank, Boston, as a management trainee. In 1982, he became executive vice president of Shawmut Worcester County Bank. He was elected president and chief operating officer in 1983 and chief executive officer in 1986.

— **Franklin Smith**

NEW ENGLAND

Centerbank, Waterbury, Conn., elected **Robert J. Narkis** chief executive officer; he had been named chairman and acting CEO in January.

Stedman G. Sweet, chairman of the board of directors' search committee, stated: "Bob Narkis is a respected businessman, attorney, and community leader. He has served on Centerbank's board of directors for over 22 years, most recently as chairman of the executive committee and as a member of the board's nominating committee."

Robert J. Narkis

Until January, Mr. Narkis was a senior partner, specializing in real estate and commercial transactions, at Gager, Henry & Narkis, a Waterbury-based firm of 42 lawyers.

Robert T. Kenney was elected president of Centerbank. He previously was chief operating officer.

Rockingham County Trust Co., **Salem, N.H.,** an affiliate of **New Hampshire Savings Bank Corp.,** named **Robert F. Dickinson** vice president-commercial lending with responsibility for asset quality within the commercial and consumer loan divisions.

He previously was with US Trust Corp. and Bank of Boston, where he was vice president and assistant vice president, respectively, in the banks' commercial loan divisions.

Edward A. Gray was named assistant vice president-commercial loan officer at Rockingham Trust. He is to manage business development in the bank's Plaistow region, as well as personally serving the needs of Salem and Plaistow customers.

Chittenden Bank, Burlington, Vt., promoted **F. Sheldon Prentice** to senior vice president; he joined the bank in 1985 as vice president and general counsel and was named secretary in 1987.

MIDWEST

Lincoln Financial Corp., Fort Wayne, Ind., named **Jeffrey E. Smith** senior vice president and general counsel, **David A. Thackery** assistant vice president and assistant controller, **Carl A. Miller Jr.** assistant vice president, and **Michael J. Dennis** accounting officer.

MIDDLE ATLANTIC

New York State Bankers Association, New York, said **David L. Glass,** formerly a partner in the New York law firm of Hawkins, Delafield & Wood, has been named general counsel.

As the association's chief legal officer, Mr. Glass will analyze

David L. Glass

and help shape responses to regulatory, court, and legislative proposals; be secretary to the association's board of directors; and serve as counsel on insurance activities. He joined the staff in early June.

Essex Corp., New York, named **Frederick S. Nicholas** vice president in its New York City office and **Edward E. Potter** vice president in the Los Angeles office.

Essex markets annuity and investment products through leading commercial banks and thrift institutions.

New regional vice presidents are **Craig W. Cooper,** Sandy, Utah; **Seth E. Friedman** and **Jay G. Joyce,** New York; **Peter J. Kalman,** Tigard, Ore.; and **Margaret E. Raupp,** Buffalo.

Bank Leumi Trust Co., New York, a subsidiary of **Bank Leumi Le-Israel,** appointed **Robert Fine** president of its BLT Leasing subsidiary. He has more than 15 years experience in lease financing.

Student Loan Marketing Association, Washington, announced four promotions.

Paul Carey was named vice president, public finance. He manages Sallie Mae's higher education facilities finance department, which handles financing to colleges and universities for construction, renovation, or purchase of academic plant and

Sellitto,** direct response; **Shelley M. Simon,** corporate controller; **David Skinner,** metropolitan community bank; **Patricia Sparacio,** corporate human resources; **Mark Squillante,** Chase Securities Inc.; **Chin Poh Tan,** international individual banking; **Gay S. Truscott,** real estate finance; **Peter R. Valone,** administration services; **Samuel M. Weissman,** real estate finance; **Robert F. Wilkinson,** corporate operations and systems; and **Deborah A. Willis,** Chase InfoServ International.

The following were named managing directors:

Lawrence Cohn, domestic institutional banking; **Enrique Ido, Renato Silva,** and **Jorge Sosa,** Western Hemisphere corporate finance; and **Kinue S. Ino,** Chase Investment Management Corp.

United Jersey Bank, Hackensack, N.J., elected **Robert S. Gates,** chairman of Gates Construction Corp. and president of Gates Equipment Corp., both in Little Ferry, N.J., to its board of directors. The bank is a unit of **UJB Financial Corp.**

Marine Midland Bank, New York, a subsidiary of the **Hongkong and Shanghai Banking Corp.,** appointed **Frederick C. Braun 3d** regional corporate executive for Long Island, responsible for corporate business development.

Kenneth Reeve was named to succeed Mr. Braun as regional commercial executive. He is responsible for Marine's commercial districts in Nassau and Suffolk counties, serving the credit and noncredit needs of small to middle-market business and professional clients.

Bankers Trust New York Corp. said **Willem Dudok de Wit** and **Geoffrey Blanning** have joined the London office of Bankers Trust Investment Management Ltd.

Mr. Dudok de Wit will be vice president-European sales and marketing, responsible for developing the bank's institutional management presence in Europe, with particular focus on the Netherlands, Belgium, and Scandinavia. He was formerly with Mitsubishi Bank (Europe) in Brussels.

Mr. Blanning will be multicurrency fixed-income portfolio manager, with specific responsibility for the United States, Canada, and Australia. He was formerly with Kidder, Peabody Asset Management Ltd.

Norstar Bank, Melville, N.Y., a subsidiary of **Fleet/Norstar Financial Group** Inc., Providence, R.I., hired **R. David Pontius** for its New York corporate banking division as senior vice president.

He has more than 20 years of corporate lending experience with Manufacturers Hanover Trust Co. and Chemical Bank.

Barclays de Zoete Wedd Investment Management, New York, a member of the **Barclays Group,** London, hired **Michael R. Horsburgh** as managing director to establish and head its U.S. investment fund management business.

Mr. Horsburgh joins the investment unit from Bear, Stearns & Co., New York, where he was a senior managing director in the international equities division.

SOUTHEAST

Signet Bank, Richmond, a unit of **Signet Banking Corp.,** named **Patrick T. O'Hara** vice president and **Sharon Higginbotham** assistant vice president.

Mr. O'Hara is national accounts sales representative for marketing cash management products in the commercial services division. Mrs. Higginbotham manages the bank's card sales support department.

First National in Palm Beach, Fla., a division of **Southeast Bank,** appointed **Janice S. Lacy** assistant vice president and banking center manager.

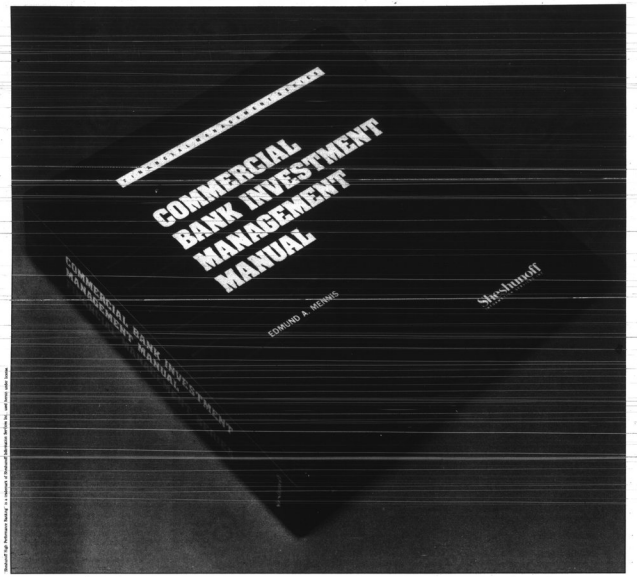
Mrs. Lacy directs the personal banking and lending activities of the Sunrise Banking Center, Palm Beach.

The **Virginia League of Savings Institutions,** said **Clarence W. Keel,** president of Seaboard Savings and Loan Association, Virginia Beach, was elected league chairman.

As chairman of the board of governors, Mr. Keel will also be chairman of the league's executive committee. In the past year, he was first vice chairman of the league and chairman of its finance committee.

Clarence W. Keel

Other officers elected were **Barry D. Crawford,** president of Fidelity Federal Savings Bank, Richmond, first vice chairman, and **Gerald F. Chapman,** president of Vista Federal Savings Bank, Reston, second vice chairman. □



Better than a crystal ball. 1-800-456-2340.

Your bank's counting on you for every penny of investment income you can give it. So you need a way to stay on top of every new development affecting your portfolio. From the latest investment opportunities to legal and regulatory requirements.

That takes systems. It takes skilled use of economic and interest rate forecasts. And it takes proven methods and techniques for managing the investment function all the way down the line.

The Commercial Bank Investment Management Manual has it all. In 15 easy-to-read chapters written by experts in every area of investment management. So you get a lot of information and guidance in one comprehensive source.

And since it's from Sheshunoff Information Services Inc., you know it's written just for bankers. Plus, we make sure it's realistic and easy to use.

Best of all, it's a lot easier to get a hold of than a crystal ball. All you have to do is call our Client Services Representatives direct at 1-800-456-2340.

MERGERS

Case Study from the 1980s: Harold Pote and First Fidelity-Fidelcor

By DANIEL PIRO

In the summer of 1987, with the stock market at its peak, First Fidelity – then a company with $15.4 billion in assets – agreed to merge with the $11.7 billion Fidelcor Inc.

First Fidelity, the largest banking organization in New Jersey, was a confederation of operating units brought together by prior mergers. It had done little to integrate operations, and, as a result, had been criticized for failing to capitalize fully on its franchise.

The pending deal with Philadelphia-based Fidelcor brought rave reviews from most analysts and dealmakers. Harold Pote, who was Fidelcor's CEO at the time, was considered the key to the deal. He would become the CEO of the combined organization.

In December 1988, 16 months later, Mr. Pote was asked to resign. What happened, and what lessons can bankers learn from this experience?

Words of Love

In the summer of 1987, almost everyone in the investment community trumpeted the abilities of Hal Pote. "Hal Pote really knows how to run an efficient bank," said analyst Lacy Shockley.

The pending deal with Fidelcor brought rave reviews from most analysts and dealmakers.

Talking about Mr. Pote and his management team, another analyst, Felice Gelman, said, "They are a dynamic group, young and deep in talent. They are very, very good at strategic planning."

Ryan Beck's Fenwick Garvey praised the combination as one of the best-conceived mergers ever.

The only dissenting opinion appeared in the pages of the August 1987 issue of *Bank Mergers & Acquisitions*. At the time, it was questionable whether Mr. Pote would be able to do the job of integrating the operations of the two companies. We believed he would encounter steadfast resistance from the New Jersey side to any plan that would cut operating budgets or eliminate areas of responsibility.

Modern CEO

Armed with a Princeton education and a Harvard MBA, Hal Pote dazzled the banking industry with his rapid rise. When he became CEO of Fidelcor in 1984, he proclaimed that success in the new banking era required knowledge of how to create new delivery systems, develop new products, improve productivity, and properly manage assets and liabilities.

He presented himself not as a traditional banker but rather as a corporate executive who happened to be managing a bank. He was focused on growth.

By the age of 40, in only three years at the helm, he had, through a series of acquisitions, built a regional banking company with almost $12 billion in assets. He seemed to be the very model of a modern major bank CEO.

A Feather in Mr. Pote's Cap

When Fidelcor and First Fidelity announced merger plans in the summer of 1987, Mr. Pote's prestige ascended to new heights. He had negotiated a merger in which Fidelcor shareholders would receive a modest premium in the division of equity interests, while Mr. Pote and his team retained management control.

Hal Pote dazzled the banking industry with his rapid rise.

As it turned out, some of the risks Mr. Pote had taken earlier in growing the Fidelcor earnings returned to hurt him. In December 1988, reports from external auditors concerning loans made by the London office took Mr. Pote and the board of directors by surprise.

At the same time, the board learned of the need to take loss provisions on loans to a Philadelphia real estate developer. It appeared that Mr. Pote had known in early 1987 (prior to the merger announcement) that the developer was facing economic difficulties. Possibly the pressure to maintain solid earnings growth while merger negotiations were in process dissuaded him from taking additional loss provisions in 1987.

After a lengthy board meeting in that same month of December; Mr. Pote agreed to resign. First Fidelity then announced that, as a result of the portfolio difficulties, it would be declaring a loss in the fourth quarter that would offset most of its gains for the first nine months.

The next day, the company's

Case Study from the 1980s: First Fidelity

Continued from *page* 25

stock fell in price by 23%. As a result of a $235 million provision for loan losses, the company declared a loss of $180 million for the 1988 fourth quarter. Profits for the year were only $16 million.

With a different combination of organizational policies and circumstances, Hal Pote might have survived his mistake. But Mr. Pote was doing things his way, attempting to impose his vision and his corporate culture.

People from the New Jersey side who saw things differently were waiting for him to err in a big way. They had ultimate control, since 14 of the 26 members of the First Fidelity board, including chairman Robert Ferguson, came from the New Jersey organization.

With a different combination of organizational policies and circumstances, Hal Pote might have survived his mistake.

The problems that have since occurred on the New Jersey side of First Fidelity's portfolio add weight to the view that Mr. Pote was defeated primarily by organizational resistance. In the fourth quarter of 1989, the company again declared a loss. Although smaller than the corresponding 1988 loss, the $26 million loss in fourth-quarter '89 was the catalyst for implementing the long-overdue operational efficiencies.

Interim CEO Ferguson retired, and Anthony Terracciano, a long-time Chase executive who had recently served as president during the successful turnaround of Mellon Bank Corp., was hired to enact the program that Mr. Pote never had a chance to implement.

The lesson from this story for the bank executive is to enter a merger agreement with a well-defined plan of action that addresses vital issues, and with firm commitments from the managements and boards of both companies to enact the plan. The added size that results from a merger does not necessarily correspond with increased shareholder value.

A second lesson is to be a banker first and a corporate executive second. A bank remains a highly leveraged entity. A banker knows his first priority is to avoid damaging portfolio hits. This means that in good times, he must manage risk under the premise that economic circumstances may soon become less favorable.

For analysts, the lesson is to take a hard look at the facts. When there is a conflict between current promises and past performance, be prepared to discount the promise.

Shareholders have paid for the company's delay in consolidating.

Analysts were correct in believing the merger between First Fidelity and Fidelcor had great potential. The two companies shared a 100-mile border along the Delaware River. Their territories in Pennsylvania and New Jersey were adjacent. The potential for efficiencies in marketing and delivering services was undeniable. Unfortunately, there was ample evidence that such efficiencies would be difficult to actuate.

The pre-Fidelcor version of First Fidelity had itself failed to produce efficiencies in the operations that delivered services. Management had encountered so much resistance to its cost-cutting program that, in his letter to shareholders in 1986, then-CEO Ferguson reported: "We have refrained from grasping too urgently at the available economies of scale arising from the merger into our organization in late 1984 of the banks of the former Fidelity Union Bancor-

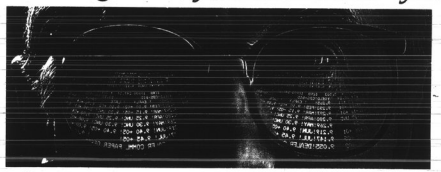
Through the eye of the fiduciary.



When it comes to trust investments, it's Federated's only line of sight.

Your ability to execute your fiduciary responsibility in an ever-changing financial marketplace and complex regulatory climate requires a special vision—and an investment approach aligned with that vision.

That's how *we* see it.

Many mutual fund companies offer trust departments the same generic funds that they distribute to the general public. Not Federated. Our *MultiTrust®* Systems of investment products and services are designed to meet the focused investment needs of the fiduciary...so you can allocate assets efficiently, and concentrate on new business development.

Spanning market sectors and maturity ranges, MultiTrust portfolios are managed by teams of experts who apply structured, highly disciplined methodologies to every decision.

We back these investments with value-added services that can make the critical difference in your success.

We'll keep you up to date on regulatory issues.

Provide practical marketing support.

Connect you to user-friendly technology for up-to-the-minute trading, information, and recordkeeping.

And, for the highest level of personal attention, we'll service your account with a regional team of dedicated specialists.

To learn more about how Federated investment products line up with your department's vision, call a Federated representative toll-free 1-800-245-5040.

Through the eye of the fiduciary. It's our only perspective.

MERGERS
Case Study from the 1980s: First Fidelity and Fidelcor

Continued from page 27

portation..."

Only a year earlier, in the afterglow of the 1984 merger, the same Mr. Fenimore had advised shareholders: "We believe that in 1986 and in subsequent years the economies to be realized from our present mergers will become substantial."

When it came time to deliver on its promise, management waffled: It would not push for cost gains with pain. A key measure, the ratio of operating expenses to average assets, was still at 3.43% in 1986. This equaled the premerger 1984 ratio that could be calculated for the two organizations on a pro forma basis.

When the deal with Fidelcor was announced, it was obvious that a strong commitment to achieve cost efficiencies was not in place. Absent from the official announcements was any discussion of strategies to achieve synergies from unified operations.

Reductions in staff expense would be accomplished by attrition only. No strategies existed with respect to technology issues. Officials could not even say if and when the ATM systems of the two companies would be integrated.

Despite the known advantages of employing a common name in a contiguous territory, and despite the fact that the banking units in the Philadelphia metro market operated under the name Fidelity in Pennsylvania, but were called First Fidelity on the Jersey side, the slight name change to First Fidelity for the Pennsylvania banks was not contemplated.

Mandate Was Lacking

The evidence was clear in 1987 that a mandate to achieve the potential operating synergies did not exist. Much to the detriment of First Fidelity shareholders, it appears that the real objective of the merger was to create an organization large enough to avoid being acquired.

At the time, the euphoria that accompanies every speculative wave blinded the markets served by the two companies. The boards and managements probably found it easy to accept the premise that the prevailing favorable economic circumstances would continue for at least a few more years, thereby supplying the revenue that would finance high levels of operating expenses.

That convenient assumption enabled the parties to the merger to sidestep the issue of unifying the organization at the price of consolidating functions, trimming the ranks of management, and making deep cuts into expense budgets.

It was the economic downturn in the markets served by First Fidelity-Bancorp. that finally produced a commitment to creating a unified and efficient operation. The selection of Mr. Terracciano, an executive with the skills to turn around a troubled company, has now mandated that which should have been done in 1987.

In only five months on the job, Mr. Terracciano has trimmed core operating outlays by $95 million, and has programs in place that are targeted to save another $50 to $60 million during the next two years. The swiftness of these actions serves to highlight the failure of prior management.

Shareholders have paid a large penalty for the company's delay in consolidating. First Fidelity's market capitalization has declined 47%, to $1.05702 billion on June 27, this year from $1.997 billion (on a pro forma basis) on the date of the announcement. □

Job Bank — Situations Wanted

OPERATIONS MANAGER
A proven leader in the field of bank operations management seeks a challenging position with thrift or commercial bank. Broad experience of 30 years in money center bank with focus on strategic planning, product profitability, customer service. Recognized as successful, innovative administrator in rectifying chronic problem situations. Adaptable to variety of assignments in both senior player and leader. Reply to: BOX #365, c/o American Banker, 1 State Street Plaza, New York, New York 10004.

Retail Lending Manager
Retail Lending Manager at supermarket which seeks senior position in retail banking. Proven ability to grow consumer at 20%/yr to excess of 1.5%, $650 mil. outstandings. Extensive experience in commercial lending, marketing, budgeting, loan workouts, real estate, systems development, securitizations, pricing, quality. Outstanding analytical and managerial skills. Reply to BOX #362, c/o American Banker, 1 State Street Plaza, New York, New York 10004.

COMMUNITY BANK CEO
High Energy Banker, Mid 40's, Ready For A Challenge. Serves At Size Bank. Able To Create Order Out Of Chaos. Extensive Experience -Private Lending, CEO 15 Yrs At $50 Million And 200 Million Banks. Good At Organization And Able To Make Tough Decisions. No Geographic Restrictions For Challenging Opportunity. Let Full Resume Be Available October 1990. BOX #288, c/o American Banker, 1 State Street Plaza, New York, New York 10004.

CASH/FLOAT/OPERATIONS MANAGEMENT
HIGHLY REGARDED PROFESSIONAL - 41 years hands on management experience in all areas of operations. Extensive CASH/FLOAT management expertise with top performing bank and premier check processing institution. Strictly results and bottom line oriented. Seeks temporary/contract engagements with Financial Institutions and Corporations to assist you in recognizing opportunities and converting them to continuing benefits. References on request. Reply BOX #345, c/o American Banker, 1 State Street Plaza, New York, New York 10004.

Purch. Director/Administ. Services
High exped. banking professional with over 25 years of service in both financial and savings industry. Demonstrated expertise in managing all aspects of the Purch. function. Implemented automated inventory control procedures for two major banks with a deposit base over $2 billion. Established, instituted and retained an annual budget of $2.1 million. Coord. all activities relating to Administ. Services, Security, Maint., Mail, Duplicating and Record Retention. Excel. record in developing and improving employee performance and morale. Competent in innovating administrative efficiencies. Call Francis (201) 679-4665.

Recent MBA Graduate, specializing in finance and real estate, seeks a case management, property management, or financial analyst position within the REO department of a financial institution or government agency. Has practical work experience in the stock brokerage and the real estate development/ management industries. Honest and hard-working. Willing to travel/ relocate. Please contact: Elizabeth Ashgreen, 2512 S. University Blvd. #16, Denver, CO 80210, (303) 722-8813.

FLOOR BROKER
Seeking joint venture partner(s) with interest in establishing futures trading unit at the Chicago Board of Trade. J.V. Partner to hold controlling interest. Management team/ individuals experienced floor broker and trading analyst. Future growth financially rewarding, as many firms internationalize their operations and look to cut costs. B. Buckbinder, 4718 Meridan Ave. #346, San Jose, CA 95118.

FINANCIAL CAREER SOUGHT
Young, dedicated, degreed team player, seeks challenging growth opportunity with prominent New York City Commercial/ Industrial Lending entity. Position would have allow for training, growth and experience with credible, New York based financial firm. (Previous Experience) Two years with Private Lender specializing in Classic blue settlement deals; 6 months with Municipal Dealer as Remarketing desk. Please call John Burrell at: (212) 255-8004 for Particulars.

Have you identified those business you want to grow in size and profits without sacrificing credit quality? Have you identified the executive with a solid track record who can achieve such results? I have successfully started, managed and grown credit oriented businesses plus know how to adapt culturally to a different company environment. Metropolitan NYC only. BOX #259, c/o American Banker, 1 State Street Plaza, New York, New York 10004.

Experienced mortgage banker seeks career challenge in residential mortgage and consumer loan production management. Have successfully owned manager and sold two mortgage companies. Have broad experience. Additional expertise in facilities management, property management, marketing and sales. Prefer Middle Tennessee (NW/E-TN/PA). References and resume... P.O. Box 59043, Cleveland, OH 44139.

Job Opportunity
CFO or CEO that loves a challenge. Described as "Mr. Fix It." Like "turn-around" situations, or organizing new opportunities or ventures. Thrive on establishing, monitoring, and follow through on well-conceived strategic plans. Call David Hamburger 818-789-0772.

DEALS

Some of UAL's Bankers See Japanese Participation as Vital to Buyout

By WILLIAM GOODWIN

In a sign of the continued importance of Japanese banks to the deal market, several New York money-center bankers said the underwriting group for the proposed union buyout of UAL Corp. must be expanded to include at least one Japanese institution.

"Conceptually, I think we need the Japanese in the deal," said an official at one of the five money-center banks that have agreed to serve as coagents for the $4.4 billion buyout effort.

The five coagents are the banking units of Chase Manhattan Corp., Chemical Banking Corp., Citicorp, Manufacturers Hanover Corp., and Bankers Trust New York Corp.

"It is clearly recognized that having some major Japanese lenders [in the underwriting group] is a critical element in successfully syndicating" the bank loans, said an official at another of the five New York banks.

A Role in Most Major Buyouts

This banker noted that 25% to 40% of the financing for most major buyouts in the United States comes from Japanese members of bank syndicates.

That's why U.S. bankers are so anxious to have Japanese representation in the underwriting group for the UAL deal.

The reluctance of Japanese banks to support the failed $6.8 billion buyout of UAL last year also weighs heavily on bankers' minds.

"We are ready to consider this [new] transaction in a serious way," said an official in the Chicago branch of one major Japanese bank.

The Information Gap

At the same time, though, the Japanese banker said he has not held any talks yet with Gerald Greenwald, the former Chrysler Corp. chairman who is leading the buyout effort by the three principal unions of United Airlines.

"We need more information on this financing," the Japanese bank official added.

Because the addition of at least one Japanese bank, the underwriting group ultimately could consist of as many as eight to 10 banks, an official at one of the five New York banks said.

The eventual size of the bank underwriting group will depend, at least in part, on how much money the union-led buyout group can raise from outside investors.

Talks have been held with airframe and engine manufacturers in the United States and Europe, including Boeing Co., General Electric Co., Airbus Industrie, and Rolls-Royce.

A source close to the unions said last Friday that each of the five New York banks "pledged" about $500 million, or a total of $2.5 billion.

While no commitments have yet been made, "I think that's a good number to focus on," an official at one of the five banks said.

$4 Billion Nut to Crack

The buyout group needs to raise a total of roughly $4 billion to cover the cash portion of the deal. That amount also includes funds for working capital and a letter-of-credit facility.

Apart from the roughly $2.5 billion from the five New York banks, the buyout group must still raise about $1.5 billion from investors and others.

The unions have until Aug. 9 to raise the necessary financing, though that ability to meet the deadline appears questionable.

Several bankers said it is "conceivable" that the deadline can be met, but by no means certain.

PRODUCT ANNOUNCEMENT

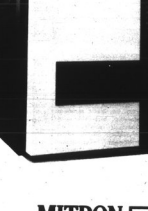
MITRON STD 6250

MITRON Systems Corporation of Columbia, Maryland has added a new magnetic tape data communications terminal to its product line which will process 6250 bpi high-density formats. In service since January 1989, the STD 6250 provides an efficient, cost-effective method for sending and receiving data off-line without the need for a computer.

With the STD 6250, any requirement to ship tapes between offices via courier service or mail can be eliminated. Tape data generated in either 1600 bpi or 6250 bpi format can be transferred anywhere via dial-up, private line or digital networks.

The STD 6250 requires no software for its operation and accurately transfers data at speeds up to 256KB. This versatile off-line data communications terminal provides reliable and timely data exchanges while communicating with remotely located MITRON terminals or other manufacturers' bisynchronous terminals and computers.

MITRON offers several lease and purchase programs.



Since 1969, Mitron's magnetic tape systems have been used in a wide variety of data communication applications. For more information on how the Mitron STD 6250 can be used to send or receive magnetic tape data files, call 800 638-9665 (in Maryland, 301 992-7700).

Future announcements will describe an STD 3480 cartridge-compatible data communications terminal and a higher speed STD 6250. Both terminals will operate faster than T1's 1.544 mega-bit per second data rate.

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices of banks and thrifts traded over the national banking firms and the 25 largest publicly traded thrifts as measured by the most recent quarterly asset figures available (As of March 30, 1990, the market value cutoff for banks was $89.2 million and for thrifts it was $127.2 million). Mkt to bk is 52-week high and low prices for the stock. PE: the price-earnings ratio. Is the current share price divided by the bank's annual earnings per share adjusted for latest announced earnings. Mkt. to book: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Book value is adjusted for announced earnings and dividends. Cls.: the price at which the stock last traded. If no trades for the day, the latest bid. AB Bank and Thrift Indexes: A weighted average of the top 250 banks in market value and the top 50 thrifts in market value, respectively. Highlights: How largest gainers and losers performed and two volume indicators most shares traded and today's volume as a percentage of average shares traded daily over the past year.

Data source: SNL SECURITIES, Charlottesville, VA. 804-977-1600, produced the tables. Financial News Network, Vienna, VA, provides DJIA, with the daily prices.

Chemical to Issue Paper for Allied

By WILLIAM GOODWIN

Chemical Banking Corp. has formed a special-purpose financing corporation to issue up to $700 million of commercial paper backed by Allied Stores Corp.'s credit card receivables.

Proceeds from issuance of the commercial paper will be used to fund Allied's credit card operation which, in turn, will use the loans to finance the purchase of receivables from Allied's operating companies.

Allied, a unit of Campeau Corp., filed in January under Chapter 11 of the bankruptcy code. Allied said the new financing vehicle will provide it with a cheaper source of funds than the company's existing $700 million receivables facility with Citicorp's Citibank, which is scheduled to expire in '91.

Allied expects to save about $10 million annually under the new three-year facility, which can be extended.

The new financing vehicle is authorized to issue $630 million of commercial paper, but that amount could rise to $700 million. Initially, about $400 million to $450 million of paper is expected to be issued.

Chemical also agreed to extend for two years an existing $300 million debtor-in-possession loan, which was originally negotiated at the time of Allied's Chapter 11 filing. The DIP loan is now set to expire May 5, 1993.

A bankruptcy court hearing on the new receivables facility is scheduled for July 26 in Cincinnati. □

STOCKS

Though Bank Shares Are Down, Insiders Are Buying Vigorously

Continued from page 1

Detroit banking company has been high for several months.

Banks and thrift institutions, whose stocks have plunged since last fall on fears of loan problems and lower profits, lead all groups of publicly traded companies in insider stock acquisitions during the past year, according to Robert Gabele, president of Invest/Net, a Miami firm that tracks such activity.

"The buying has continued all the way down," Mr. Gabele said on Tuesday. "The fact that they're still buying at the lower levels has to be seen as a vote of confidence for the industry."

Buying Despite Uncertainties

"There are a lot of uncertainties out there for the bank, but you have to say that there are people at the banks stepping up to plate," he noted.

The trend goes beyond bank stocks that have been heavily sold by regular investors, and includes some that are well-liked on Wall Street and have fallen far less than others in the industry.

At Corestates Financial Corp., Philadelphia, a favorite of many banking analysts, three directors recently purchased 6,500 shares for $178,750.

Thrift Stocks Favorites

Thrift stocks, shunned by many, are also insider favorites. Mr. Gabele said that Dime Savings Bank of New York; Greater New York Savings Bank; Coast Savings Financial Corp., Los Angeles; and Conservative Savings Bank, Omaha, Neb., have been among the leaders in insider buying in the past six months.

At First Bank System, the heavy buying activity — 43,000 shares at an average cost of $15.25 per share — is viewed as a sign that top managers at the Minneapolis company feel restructuring at the long-troubled company is complete and that they believe the stock will appreciate significantly in the future.

Analysts Neutral

But most Wall Street analysts are decidedly neutral of the stock, noting that it already trades at a premium to other regional banks. The stock was off 12 cents to $14.875 in midday trading on Tuesday.

Analysts take a wait-and-see attitude on First Bank System's revised business strategy and anticipate up to 10% dilution of earnings per share through next year, after the company's recent recapitalization with a $175 million private placement of common stock.

"In general, turnarounds in 1990 may be more difficult to engineer than those of the early 1980s," Kristina E. Anderson, a bank analyst at Kidder, Peabody & Co., noted in a recent report on the company.

Some analysts said the large amount of insider buying may have been a show of faith in the company following the private placement, which was taken by Corporate Partners, an investment group, and the State Board Administration of Florida.

A spokeswoman at First Bank System declined to comment on that possibility.

A leading inside buyer at the company last month was Mr. Grundhofer, the new chairman and chief executive officer. He purchased 10,000 shares.

Mr. Grundhofer, who joined the company on Jan. 30 after a career in California at Wells Fargo & Co. and Union Bank, made his purchase on a single day, June 21. He paid $14.50 per share for a total investment of $145,000.

The June acquisitions were substantial enough to increase by 11.5% the amount of stock owned by officers and directors of the banking company, as reported last Feb. 1.

Selling Drives Stocks Down

Late afternoon selling drove bank stocks sharply lower Tuesday. One analyst said there were late rumors that another analyst would issue a report that he was more bearish about banks than he had been previously. However, most said they were at a loss to explain the late drop beyond that banks followed the overall market, which turned sharply lower late in the day.

Bankers Trust New York Corp. lead money center banks, falling $1.125 to $39.75. Manufacturers Hanover Corp. was off 87.5 cents to $32.625. Chemical Banking Corp. was off 75 cents to $24.75. Bank of New York, Chase Manhattan Corp. and Citicorp were also lower, although not as severely.

The Dow Jones Industrial average, after being off about 13, fell 10 points in the last 30 minutes of trading to end the day at 2890.84, down 23.27. □

CAPITAL

Banks Rushing to Securitize Their Assets

Continued from page 1

"Isn't that eventually going to make it harder for banks to sell stock and debt?"

In a single week in June, banks issued $2.8 billion in securities backed by credit card receivables. And Norwest Corp. securitized $95 million in manufactured home loans.

"The asset-backed market is really developing into the fourth leg of a chair: governments, corporates, mortgages and now asset-backed," said Stephen A. Candland, senior vice president at Dean Witter Reynolds Inc.

Deals Marketed Globally

Recently, the market has spread beyond the United States. Citicorp has taken the lead, issuing billions of dollars in securities backed by credit cards from subsidiaries called global credit card trusts.

European banks are also starting to securitize assets. Swiss Bank Corp. recently issued $500 million in securities backed by automobile loans, for example.

By taking the assets off their books, banks raise their equity-to-assets ratios and their return on assets. Equally important, they continue to earn the difference between the yield on the asset and the cost of funding it; and they are able to take the tax deduction for the interest expense associated with the securitization.

Raising return on assets makes a bank appear more profitable, and more appealing to current and potential investors, according to Jack J. Ross, a director at Merrill Lynch Capital Markets.

"They have improved their risk profile by securitizing those assets," he said. Banks "still retain the servicing [of those assets, even though they're off balance sheet."

As for investors, portfolio managers of trust accounts and corporate bond funds are eager for high-grade securities, such as asset-backeds, with yields above Treasuries, according to Alan F. Bembenek, an analyst at Fidelity Management and Research Co.

"I think you're going to see a continuation of large issues coming to market," he said.

But some capital markets specialists and analysts question the long-term implications. If a bank transfers all its best assets off its balance sheet, investors in that bank's debt and equity may balk at the notion of financing only that bank's lower-quality assets, they say.

"For a bank with problems in other areas of its loan portfolio, securitization would affect the receptiveness of investors to its securities," William King, a bank bond analyst at Merrill Lynch Capital Markets. "For less than top-quality banks, securitizing leaves their real estate loan portfolios looming larger and larger."

Mr. Bembenek agreed. "Once those assets are removed from the balance sheet, what's left is relatively unattractive," he said.

Several banks have been particularly aggressive in securitizing assets. Citicorp has been the biggest issuer, but MNC Financial Inc., First Chicago Corp., Chemical Banking Corp., Security Pacific Corp., BankAmerica Corp., and Hongkong & Shanghai Banking Corp.'s subsidiary Marine Midland Bank have all been major players in the asset backed securities market.

And banks are having to pay less in fees to underwriters as competition heats up for the business and underwriting presence in asset-backeds shifts. First Boston dominated the market in its early years.

But Merrill Lynch Capital Markets is making inroads. In 1990, Merrill has underwritten 20% of the asset-backed issuance, compared with First Boston's 26%.

Automobile loans and equipment leases were the collateral used most often in the market's early years. But credit card receivables began to be used in 1987, and they now back 42% of the asset-backed securities in the market. Home equity loans, boat loans, time-share loans, and recreational vehicle loans have all been used for collateral, and securities backed by other assets, such as commercial loans, are reportedly in the offing. □

FINANCIAL TECHNOLOGY UPDATE

NCR in the '90s: helping you manage change

The fiercely competitive decade which lies ahead will bring unprecedented changes in the banking industry, and therefore unprecedented technology, designed to meet those challenges.

In an era when banks must reduce the cost of delivery while increasing its quality, managing information technology has become the single most powerful factor for success in banking. In retail banking for example, service, sales and office automation must be integrated into a single retail delivery system that can accommodate the inevitable changes of technology.

NCR has evolved a long-term strategy to enable its customers to take full advantage of these changes. It's called "Open, Cooperative Computing. The Strategy For Managing Change." It means providing customers with a vendor-neutral computing environment based on open industry standards, allowing information resources to interoperate enterprise-wide as one integrated system, and in a way that is easy to use.

Simply put, NCR's delivery systems will seamlessly integrate customers' systems, networks and software from multiple vendors into a single, flexible solution.

This long-term strategy, which began in 1981 with a commitment to open systems, has positioned NCR as the only company with the products, global presence and financial clout to deliver its advantages to the end-users.

For example, Integrated Retail Delivery Systems (IRDS) will allow customers to deliver new products in new ways. Self-Service Automation will continue to help the branch to focus on cost reduction while freeing up branch personnel for cross-selling efforts. New NCR 3 Image solutions will help create new productivity in document management, item processing and office information systems.

NCR will bring its leading-edge technology together with that of other niche technology providers in an architecture designed to facilitate change and deliver superior solutions to critical business problems. This commitment will help financial institutions manage change now and throughout the evolution of their retail delivery strategies.

INNOVATIVE CUSTOMER SERVICE AND SALES TECHNIQUES FOR THE NINETIES

July 16, 1990 • The Vista Hotel • New York City
September 10, 1990 • The Vista Hotel • New York City
September 17, 1990 • Century Plaza Hotel • Los Angeles

As the banking environment becomes more competetive, industry leaders view improved customer service as a sollution to retaining market share. But how can your bank achieve such improved service? And as importantly, can quality service be translated into sales? The seminar will address the pressing need for improved customer service and how to implement a service program in your bank. It will also focus on the next step... profiting from quality service through innovative sales techniques, state-of-the-art technology and sales incentives. The industry leaders will address the issue of the nineties...achieving competitive advantage by making your company customer and sales-oriented.

9:00 KEYNOTE SPEECH: EFFECTIVE CUSTOMER SERVICE...THE KEY TO PROFITIBILITY IN THE 90'S
- Profiting from customer service in an age of transition
- A banker's perspective on past successes and failures... and innovations for the future
- A case study in improving service and sales

Thomas Jacob, *Senior Vice President,* Chemical Bank (NY)
Thomas Jacob, *Senior Vice President,* Chemical Bank (NY)
Joan Mizask, *Senior Vice President,* California Federal Bank (LA)

9:45 TURNING SERVICE INTO SALES...ACHIEVING BOTTOM LINE RESULTS FROM QUALITY SERVICE AND SALES TECHNIQUES
- Creating a competitive advantage through customer service
- Improving service...and controlling costs

John A. Goodman, *President,* Techn. Assistance Research Program (NY)
John A. Goodman, *President,* TARP (NY)
Marty Wikoff, *President,* Management Performance Systems (LA)
- The need for effective salesmanship
- Sales techniques for the 90's

Dr. Nancy O'brien, *Marketing Consultant,* Sales Development Assoc. and Dir. Bankers Industry Group, ASTD (NY)
Dr. Nancy O'brien, *Marketing Consultant,* Sales Development Assoc. and Dir. Bankers Industry Group, ASTD (NY)
Shirly Ward, *Vice President,* Bank of America (LA)

10:45 CREATING A SALES CULTURE...A STEP BY STEP APPROACH
- How to implement your new strategy through out the corporation
- How to build a corporate culture based on customer service
- Defining and targeting your customers

Dr. A. Lorri Manasse, *President,* The Cortland Group (NY)
Dr. A. Lorri Manasse, *President,* The Cortland Group (NY)
Dr. A. Lorri Manasse, *President,* The Cortland Group (LA)

11:30 COFFEE BREAK

11:45 ACHIEVING A TECHNOLOGICAL ADVANTAGE...THE ROLE OF TECHNOLOGY IN IMPROVING CUSTOMER SERVICE AND SALES
- Using innovative technology to cross-sell
- How to implement state-of-the art systems to improve service and increase sales

Dr. Michael Harden, *Sales Manager,* Citicorp Information Resources (NY)
Frank Martire, *Chairman,* Citicorp Information Resources (NY)
Charles J. Buchta, *Executive Vice President,* First Interstate Bank (LA)

12:30 HOW TO REMOVE MIDDLE-MEN FROM THE BANKING TRANSACTION...FROM THE BOARDROOM TO THE MAILROOM
- Skills to implement to reduce costs while improving quality of service
- Removing obstacles to the sale

Nicholas Pepanikolow, *Vice President,* Manufacturers Hanover (NY, NY, LA)
John J. Campi, *Managing Director,* Chatham Consulting Group (NY, NY, LA)

1:00 LUNCH WORKSHOP OPPORTUNITIES FOR THE 90'S IN RETAIL AND WHOLESALE BANKING...HOW TO IMPROVE PROFITIBILITY THROUGH SALES AND SERVICE
- Innovative techniques and training methods... a roundtable discussion

Chairperson:
Charlotte Pollard, *Vice President,* Chase Manhattan Bank (NY)
Charlotte Pollard, *Vice President,* Chase Manhattan Bank (NY)
Pamela O'Shea, *Vice President,* City National Bank (LA)

- Teaching selling skills
- How to implement a training program

Claire Schopler, *Vice President Training,* Chemical Bank (NY)
Claire Schopler, *Vice President Training,* Chemical Bank (NY)
Claire Schopler, *Vice President Training,* Chemical Bank (LA)

4:15 THE KEY TO IMPROVING SALES...MEASURING YOUR CUSTOMER SERVICE
- Judging the quality of service at your bank
- Learning from the leaders...what techniques do the leading bank use to measure service
- How to determine your bank's effectiveness

Jeffrey Kutler, *Assistant Managing Editor,* American Banker (NY)
Jeffrey Kutler, *Assistant Managing Editor,* American Banker (NY)
Douglas Smith, *Managing Director,* BEI Golembe (LA)

5:00 THE ROLE OF SALES INCENTIVES...WHAT WORKS AND WHAT DOESN'T
- How to use worker compensation to increase sales
- Improving service without increasing costs

William Casey, *Principal,* Paris, Casey Ifc. (NY)
William Casey, *Principal,* Paris, Casey Inc. (NY)
Matt Walgon, *Senior Consultant,* Sibson and Co. (LA)

6:00 END OF SEMINAR

SEMINAR 2

THE NUTS & BOLTS OF COMMERCIAL LENDING & LOAN PRICING

July 17, 1990 • The Vista Hotel • New York City
September 11, 1990 • The Vista Hotel • New York City
September 18, 1990 • Century Plaza Hotel • Los Angeles

The battle for commercial loan profitability promises trying times for large corporate and middle market lenders. Over the past two decades, the risk in banks lending portfolios has steadily increased. This is not a function of uncontrolled risk-taking, but rather of the banks' necessary response to the need to find assets which will provide acceptable levels of risk-adjusted return. The events of the past few years have shown that many banks, however, have been unable to effectively control the level of risk that they have taken. Unacceptably high levels of loss have taken place in many banks due to a combination of poor pricing, excessive concentration and the failure to understand the level of risk in a specific loan. Furthermore, new competitors are entering the marketplace scrambling for territory and sparking intense new battles for turf. The seminar reviews how leading-edge banks are beginning to develop new sets of techniques that will give them a competitive edge in the marketplace for controlling their level of loss, and achieving low-risk diversified portfolios.

8:45 CHAIRMAN'S OPENING REMARKS
William T. Gregor, *Partner,* The MAC Group (NY,LA)

RE-ENGINEERING FROM A CUSTOMER POINT OF VIEW

9:00 KEYNOTE ADDRESS: WHAT RECIPE SHOULD YOU USE TO TURN AROUND YOUR COMMERCIAL LENDING BUSINESS?...A CONSULTANT'S & A BANKER'S VIEWPOINT

Marshall V. Davidson, *Managing Director,* Kidder Peabody (NY,LA)
Robert M. Okabe, *Vice President,* Kidder Peabody (NY,LA)
Clifford Griep, *Managing Director,* Standard & Poors (NY,LA)

5:30 END OF SEMINAR

SEMINAR 3

EFFECTIVE COST MANAGEMENT

July 18, 1990 • The Vista Hotel • New York City
September 12, 1990 • The Vista Hotel • New York City
September 19, 1990 • Century Plaza Hotel • Los Angeles

9:00 CHAIRMAN'S OPENING REMARKS
Patrick J. Leempputte, *Partner,* Price Waterhouse (NY, LA)

9:15 ACHIEVING COMPETITIVE ADVANTAGE THROUGH COST LEADERSHIP

The 1980's showed that cost leadership is a critical success element in all restructured industries. As the pace of restructuring in banking accelerates, winners will emerge based on competitive cost position and related strategic focus. Global finance will come to be dominated by firms obsessed with the twin pursuits of profitability and productivity.

This session concentrates on managing the key noninterest cost drivers of bank performance: 1) business scope and geographic reach, 2) size of workforce and compensation practices, 3) technology spending and investment, and 4) corporate real estate portfolio management.

Charles H. Noba, *Senior VP,* Bankers Trust Company (NY)
Charles H. Noba, *Senior VP,* Bankers Trust Company (NY)
Eleni Istavridis, *Senior VP,* Bankers Trust Company (LA)

10:00 KEYS TO WINNING THE PRODUCTIVITY RACE

If superior expense control is essential to surviving the merger decade, then how is it accomplished?

This session addresses three key issues for banks concerned about expense control: 1) How good is the bank now and where is the potential for greater frustration?.Analysis based on business mix can identify bloated budgets and problem areas: 2) What kind of programs work to bring expense under control? Experience shows what are the do's and don'ts of crafting a program to reduce staff areas, lines of business, branches, operations and systems; 3) What does it take to stay on top? A "coherent organization" and quantitative performance measures can be keys to sustaining a cost effective culture.

James M. McCormick, *President*
First Manhattan Consulting Group (NY)
James M. McCormick, *President*
First Manhattan Consulting Group (NY)
James M. McCormick, *President*
First Manhattan Consulting Group (LA)

11:00 STORIES FROM THE FRONT: HOW MELLON BANK'S COST CONTROLS HAVE LED TO NEW BUSINESS OPPORTUNITIES AND LOWER EXPENSES

Mellon Bank has experienced a great deal of cost cutting in the past decade. Mellon's expertise in this area has shown that you can actually turn a cost center into a profit with the appropriate resources and strategy.

In this session, you will learn how Mellon effectively downsized into a better performing bank. This dedication to cost leadership has helped Mellon develop it's technologies and data processing to the point where these strengths have led to new business opportunities.

Janet Hartung, *Senior Vice President,* Mellon Bank (NY)
Janet Hartung, *Senior Vice President,* Mellon Bank (NY)
Janet Hartung, *Senior Vice President,* Mellon Bank (LA)

12:00 LUNCH BREAK

1:15 HOW TECHNOLOGY CAN HELP YOUR BANK CUT COSTS WHILE IMPROVING PERFORMANCE

Commercial banks and financial institutions are wholeheartedly embracing information technology (IT) as a way to achieve competitive advantage. But, while bank IT costs have skyrocketed, banks are cautious to crow about their success. Instead, they suffer from exponential growth in computer spending with almost no impact on their bottom line or market shares.

In this session, you will learn how to begin to think about, structure and approach the IT problem in your organization. Learn what technology can do to help control costs and what it cannot do. Analyze how to cut the rising costs of your own IT infrastructure. Most important, begin to understand how you can approach IT complexity without being overwhelmed.

Charles F. Kalmbach, Jr., *Senior Manager*
Price Waterhouse (NY)
Charles F. Kalmbach, Jr., *Senior Manager*
Price Waterhouse (NY)
Charles F. Kalmbach, Jr., *Senior Manager*
Price Waterhouse (LA)

2:15 ELIMINATING EXPENSE THROUGH ACQUISITIONS

If banks merge to achieve economies of scale then why do most mergers fail to meet their expectations? As bank mergers continue to increase, minimizing costs during the integration process has become essential.

While banks of different sizes and market niches will have different merger goals, there is a proper rationale to mergers that will minimize the consolidation process. This session will look at past mergers to critique successful mergers as well as failures. In particular, where can the economies be achieved?... in back office operations/overhead, retail or wholesale operations, data processing and technology or duplication of staff responsibilities. This session provides a framework to minimize the costs of the merger.

Harry H. Tatonis, *Principal,* Booz, Allen & Hamilton Inc. (NY)
Harry H. Tatonis, *Principal,* Booz, Allen & Hamilton Inc. (NY)
James Bemowski, *Principal,* McKinsey & Co. (LA)

3:15 MONITORING THE DOWNSIZING EFFORT THROUGH EFFECTIVE HUMAN RESOURCES MANAGEMENT

- How to retain top performers and employee commitment
- What to cut?...What to keep?...How to cut?

Peter J. Doria, *Senior VP,* Right Associates (NY)
Peter J. Doria, *Senior VP,* Right Associates (NY)
Peter J. Doria, *Senior VP,* Right Associates (LA)

4:15 MEASURING THE IMPACT OF COST ON PROFIT PERFORMANCE AND SHAREHOLDER VALUE...THE ANALYST'S PERSPECTIVE

How does a bank's cost performance effect stock price? In this session, learn how analysts objectively view cost cutting practices and how profit performance is related to effective expense practices and how it effects stock price. What banks have made the right moves and what strategies were responsible for improved profit performance.

5:00 END OF SEMINAR

SEMINAR 4

BANK AND CROSS-INDUSTRY ACQUISITIONS OF THRIFT INSTITUTIONS & SHOULD THRIFTS BE CONVERTING TO BANKS?

July 19, 1990 • The Vista Hotel • New York City
September 13, 1990 • The Vista Hotel • New York City
September 20, 1990 • The Century Plaza Hotel • Los Angeles
September 25, 1990 • The Ritz Carlton • Atlanta
October 9, 1990 • The Ritz Carlton • Chicago

FIRREA has opened the doors to bank acquisitions of thrift institutions and thrift institution conversions to banks. However, it is not altogether clear what this new regulatory flexibility means and whether banks and thrifts should take advantage of these new options. This one day intensive program for bank, thrift, and other business executives, attorneys and consultants focuses on the mechanics and regulatory procedures involved in bank and non-bank acquisitions of thrifts, as well as how and whether thrifts should convert to banks.

9:15 CHAIRMAN'S OPENING REMARKS
Eric Luse, *Partner,* Brownstein Zeldman and Schomer

9:30 SHOULD A THRIFT CONVERT TO A BANK?
- What Are The Advantages And Disadvantages
- A Review Of The Bank And Thrift Charters

Eric Luse, *Partner,* Brownstein Zeldman and Schomer (NY,AT,LA,CH)
Trent Feldman, *Partner,* Kaplan Smith & Associates (AT,LA)
Edward T. Lutz, *Principal,* Lyons Zomback & Ostrowski (NY,CH)

10:00 REGULATORY HURDLES AND CONSIDERATIONS INVOLVED IN CONVERTING A THRIFT TO A BANK...HOW CAN IT BE DONE & WHAT IS PERMISSIBLE?

V. Gerard Comizio, *Director, Corporate and Securities Division,* Office of Thrift Supervision (NY,AT,LA,CH)
Eric Luse, *Partner,* Brownstein Zeldman and Schomer (NY,AT,LA,CH)
Vernon E. Fassbender, *Director for Analysis;* Comptroller of the Currency (Southeastern District) (AT)
Roy Stovall, *Director for Analysis,* Comptroller of the Currency (Northeastern District) (NY)
Donelle Wenk, *Director for Analysis,* Comptroller of the Currency (Central District) (CH)
Daniel Pearson, *Director for Bank Supervision & Analysis,* Comptroller of the Currency (Western District) (LA)

11:00 CONVERTING A SAVINGS ASSOCIATION TO A BANK... A CASE STUDY
Samuel J. Malizia, *Partner,* Brownstein Zeldman & Schomer (NY,CH)
James S. Fleischer, *Partner,* Silver Friedman & Taff (LA)
Robert Friedman, *Partner,* Silver Friedman & Taff (AT)

11:30 WHY SHOULD A BANK OR NON-BANK ACQUIRE A THRIFT... A STEP BY STEP REVIEW
- What Are The Economic Advantages And Disadvantages?
- Market/Geographic Expansion And Pricing Considerations

Christopher Quakenbush, *Principal,* Sandler O'Neil & Partners (NY,AT)
Fred D. Price, *Principal,* Sandler O'Neil & Partners (LA,CH)
T. Stephen Johnson, *President,* T. Stephen Johnson & Associates (AT)
John Mingo, *Principal,* BEI Golembe Inc. (NY,CH)
Richard Reibman, *Managing Director,* Dean Witter Reynolds, Inc. (NY,LA)

12:00 EVALUATING A THRIFT ACQUISITION...AN ACQUIRER'S PERSPECTIVE
- Regulatory, Operational & Financial Differences With Banks

12:30 LUNCH BREAK

2:00 A REVIEW OF THE REGULATORY PARAMETERS & ROADBLOCKS TO BANK ACQUISITIONS OF THRIFTS
- Interstate/Intrastate Banking Issues
- Obstacles Of State Branching Laws & How To Circumvent Them
- Healthy Thrift vs. Failing Thrift Acquisitions

V. Gerard Comizio, *Director Corporate & Securities Division,* OTS (NY,AT,LA,CH)
Eric Luse, *Partner,* Brownstein Zeldman and Schomer (NY,AT,LA,CH)
John Shockey, *Partner,* Milbank Tweed Hadley & McCoy (NY,AT)
John Buchman, *Assistant Deputy Director,* OTS (NY,AT,LA,CH)

3:00 COFFEE BREAK

3:15 WHAT ARE THE STRUCTURAL OPTIONS AND CONSIDERATIONS WHEN ACQUIRING A THRIFT?
- How Should The Resulting Or Target Institution Be Chartered And Insured?
- Holding Company vs. Direct Acquisitions

Eric Luse, *Partner,* Brownstein Zeldman and Schomer (NY,AT,LA,CH)
Peter Hamett, *Partner,* Arnold & Porter (AT,LA)
William J. Sweet, *Partner,* Skadden Arps Slate Meagher & Flom (NY,CH)

4:15 A BANK ACQUISITION OF A THRIFT...A CASE STUDY
Donald Kaplan, *Managing Director,* Kaplan Smith & Associates (NY,LA,CH)
William Moore, *President,* Trident Financial Corporation (NY,AT)

4:45 TAX AND ACCOUNTING CONSIDERATIONS
- Recapture Of Bad Debt Reserve
- Pooling vs. Purchase
- Use Of Net Operating Loss Carryovers

Roger Teurfs, *Partner, KPMG* Peat Marwick (NY)
James L. Spreng, *Partner,* KPMG Peat Marwick (NY)

5:30 END OF SEMINAR

SEMINAR 5

ASSET/LIABILITY MANAGEMENT

July 20, 1990 • The Vista Hotel • New York City
September 14, 1990 • The Vista Hotel • New York City
September 21, 1990 • Century Plaza Hotel • Los Angeles

9:00 CHAIRMAN'S OPENING REMARKS
Sanford Rose, *Editor, Journal of Retail Banking*
Senior Columnist, American Banker

9:15 INTEREST RATE RISK MANAGEMENT

The management of interest rate risk is fundamental to sound banking practice. Banks can experience earnings, liquidity, and capital adequacy problems, if management is poorly run.

This session will deal with a number of fundamental rules in managing interest rate risk as well as develop an integrated risk management project. You will understand how risk is measured, as well as, what tools are used to measure risk. Learn how to incorporate these tools to increase bank profitability.

Ronald D. Reading, *Vice President,* First Manhattan Consulting Group

10:30 COFFEE BREAK FOR SPEAKERS AND GUESTS

10:45 LIQUIDITY

This session learn to understand what liquidity is. Where you can get it. How much it costs, and how much it is worth. Finally, learn to understand how to measure and manage liquidity.

Peter G. Manilla, *Vice President,* Bank of New York (NY)
Richard Leiderman, *Vice President,* Bank of America (LA)

11:45 THE USES OF DURATION IN ASSET LIABILITY MANAGEMENT

Technological and analytical developments in the 1990's will significantly enhance the ability to deal with risk. The methodology, tools, and implementation approach provide a more rigorous assessment of market risk.

The specific focus will be to contrast the duration approach with a new approach called risk measurement unit approach. The risk measurement unit approach captures both volatility and non-parallel shifts in the yield curve.

Sanford Rose, *Editor,* Journal of Retail Banking
Senior Columnist, American Banker
Robert M. Mark, *Managing Director,* Manufacturers Hanover Trust

12:30 LUNCH BREAK FOR SPEAKERS AND GUESTS

1:30 OFFICE OF THE COMPTROLLER OF THE CURRENCY AND THE NEW EXAMINATION GUIDELINES

"The OCC has alerted all bankers that they must prudently manage, measure and limit risk, and that enough capital be available to support exposure to such risk."

This session will discuss the OCC's policy on interest rate risk and how active the Office of Thrift Supervision is. The different topics which will be discussed include: risk matrix, gap reports, simulation, and duration.

Jennifer Johnson, *Developer and Administrator,* OCC

2:30 SECURITIZATION...WHEN AND HOW TO USE IT.

- Being able to securitize your own product
- Opening a secondary market
- The 144 Rule with regards to Private Placement

To Be Announced

3:30 LOWER COST OF MARKET AND THE INVESTMENT PORTFOLIO

1990 will be a year when your accounting department must be able to deal effectively with the new AICPA requirements on accounting for debt securities held as assets. A new standard expected to be issued by the AICPA with the support of the SEC and the FASB will require market value determination. The new standard will require allocating security investments among investment portfolio, held for sale, and trading account.

This session will help you understand the new requirements and the techniques required to successfully implement them.

Raymond Perry, *Partner,* Deloitte & Touche

4:30 ASSET LIABILITY MANAGEMENT INTO THE 1990'S.

This session will outline recent advances in the 1) measuring of embedded option risks, 2) measuring volatility risk exposure, 3) measureing index and credit spread risks, 4) integrating value decisions into the management process, 5) integrating risk-based capital guidelines into the risk management process.

Alden Toevs, *Principal,* Morgan Stanley & Co.

VOL. CLV NO. 135 | Thursday, July 12, 1990 | 155th year

Utah Has Opened Door to Interstate Branch Banking

By SAM ZUCKERMAN

SAN FRANCISCO — In a little-noticed decision that further erodes prohibitions against interstate branch banking, Utah authorities have allowed Bank-America Corp. to operate a Salt Lake City office as a unit of its Arizona-chartered bank.

BankAmerica has obtained full banking privileges in Utah and may open more branches if it wishes. Previous interstate branching decisions have limited the number or location of offices.

"This is the first effective creation of a multistate bank since the Civil War," said Michael Roster, a lawyer with Morrison & Foerster, Los Angeles, who worked for BankAmerica to obtain regulatory approval.

ANALYSIS: *Follow-up on the news*

Lawyers and banking regulators familiar with the case said the ruling sets a precedent that could ease the way for further interstate branching by state-chartered banks. "It's a harbinger of things to come," said James B. Watt, president and chief executive of the Conference of State Bank Supervisors.

Utah Office Purchased

BankAmerica acquired the Utah office as part of its $81 million purchase of some Western Savings and Loan Association assets and liabilities from the Resolution Trust Corp. at the end of May. Western had 61 offices in Arizona and a lone branch in neighboring Utah.

On acquiring Western, BankAmerica immediately converted it from a thrift to a state-chartered commercial bank.

As part of the package of regulatory approvals needed for the deal to go ahead, Utah's top 2 banking official formally allowed BankAmerica to operate the Salt Lake City branch as a full-service office using the Arizona charter.

Bowing to the Inevitable

George R. Sutton, the Utah commissioner of financial institutions, said he permitted Bank-America to operate with an out-of-state charter not because of special circumstances but because he believes that states must accommodate interstate branching.

Congress is considering legislation that would permit nationally chartered banks to branch across state lines. That is a signal, Mr. Sutton said, that states must get on the bandwagon.

"If states do not go along with

Cost Cutting Gains Momentum As Sources of Revenue Dry Up

By PHIL ROOSEVELT

NEW YORK — Commercial banks' cost-control drive, increasingly visible in recent weeks, has only just begun.

Faced with weak earnings and sluggish loan growth, banks across the country have been moving aggressively to cut their noninterest expenses, such as personnel, branches, and back office systems.

Bankers and analysts said the increased austerity will shape banks' 1991 budgets, which are now in preliminary planning stages.

"We are looking at 1991 as another year in which we will be giving a lot of attention to cost control," said J. Robert Lee, chief financial officer of First Union Corp., Charlotte, N.C. He hopes to cap cost increases to 3%, despite an expected inflation rate of 4% to 5% and hefty increases in postal rates and deposit insurance premiums.

Out-and-Out Reductions

Many banks have striven in recent years to better control the annual growth of their noninterest expenses. But now, a significant portion of the industry appears to be going a step further and actually reducing the expenses.

A recent survey of 32 banks by Trans Data Corp., an affiliate of the *American Banker*, found that 25% were cutting costs this year, by magnitudes ranging from 3.5% to 15% from 1988 levels. The greatest reductions were reported by larger banks.

Moreover, 21% of those surveyed already have plans to cut costs in 1991.

Such reductions were far more rare just two years ago, consultants and analysts said. They

U.S. Files 500 Suits Against Former Bank, S&L Officials

By DEBRA COPE and BILL ATKINSON

WASHINGTON — In a dragnet that could eventually snare the son of President George Bush, federal investigators have filed more than 500 lawsuits against former directors and officers of failed banks and thrifts.

The Federal Deposit Insurance Corp. chairman, L. William Seidman, disclosed the number of legal actions in a House subcommittee hearing on Wednesday. He did not discuss the case of Neil Bush, the President's 35-year-old son, a former director of a failed thrift in Colorado.

Substantial Penalties Sought

Probes of 550 banks and 350 thrifts under the FDIC's control and 400 thrifts in the Resolution Trust Corp.'s caseload have led to the professional liability suits seeking civil penalties ranging from $1 million to $1 billion, Mr. Seidman, who is also chairman of the RTC, told the House Judiciary subcommittee on criminal justice.

Neil Bush fits in the category of those targeted by investigators sifting through the ruins of failed institutions. The younger Mr. Bush was a director of the defunct Silverado Banking, Sav-

U.S. Orders 20% Writedown on Latin Lending

By JAMES R. KRAUS

NEW YORK — Regulators ordered U.S. banks on Wednesday to write down their medium- and long-term loans to Argentina and Brazil by 20% in the third quarter.

The writedowns will have no immediate impact on earnings, since banks will use existing reserves against loan losses to cover them, bankers and analysts said. However, the move may force some banks with low reserves – including Citicorp and Chase Manhattan Corp. – to replenish them later.

Total of Lending

U.S. banks had outstanding loans of $16.3 billion to Brazil at yearend, of which nearly $10 billion are medium and long term. Loans to Argentina totaled $4.5 billion, of which $3.4 billion are

U.S. Banks Increase Dominance In Global Syndication of Loans

By JOHN EVANS

LONDON — U.S. banks are tightening their grip on the international loan-syndication market this year, a British magazine survey shows.

Nine of the top 10 global loan syndicators in the first half of 1990 were U.S. banks, according to *International Financing Review*, an *American Banker* affiliate. U.S. banks took six of the top 10 positions in the first six months of 1989.

The U.S. dominance of the global syndication business came despite a 30% drop in corporate borrowing at home, to $68 billion from $97 billion in the same period a year earlier. European funding expanded 13.5% to $46.3 billion from $40.8 billion.

Total syndicated lending in the first half dropped 18% to a total of $136.8 billion from $167.4 billion a year ago, the

Patrick Weber Takes Helm Of Norwest Mergers Unit

By NANINE ALEXANDER

At a time when many banks are scaling back investment-banking activity, Norwest Corp. is expanding. Last week the Minneapolis-based bank holding company named Patrick J. Weber to head mergers and acquisitions in its financial services group.

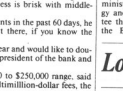
Mr. Weber, 32, becomes a vice president of the company's lead institution, Norwest Bank Minnesota. In the new mergers and acquisitions unit, he will work with buyers or sellers, assist in finding financing, and provide fairness opinions.

Mr. Weber agreed that many observers say the pace of mergers is declining. But he pointed out that business is brisk with middle-market companies in the upper Midwest.

Norwest has signed six new fee agreements in the past 60 days, he said. "There are pockets and money out there, if you know the market."

The company handled eight deals last year and would like to double the number, said James R. Campbell, president of the bank and head of corporate banking.

Norwest Bank's fees are in the $50,000 to $250,000 range, said Mr. Campbell. "We're not getting the multimillion-dollar fees, the big home runs, but we're getting solid base hits."



Patrick J. Weber

Norwest represents both buyers and sellers. But Mr. Weber said it is more common for his unit to represent the sell side.

He cited the printing industry as one that is consolidating. He said other regional middle-market industries that make up Norwest's market include food, agribusiness, basic manufacturing, and high technology.

The Norwest unit is concentrating for the moment on expanding its sources of referrals. Internally, Mr. Weber hopes to tap the bank's relationship managers. For outside sources, he looks to lawyers, accountants, and other banks.

Mr. Weber, a Michigan native, has lived in Minneapolis in the past. He moves to Norwest from Salvio & Co., the investment-banking arm of John Hancock Insurance Co., based in Los Angeles. While there he handled several transactions that used Pacific Rim financing, including Japanese investors.

An Avid Runner, Tennis Player, and . . .

Prior to Sutro, Mr. Weber managed the West Coast mergers and acquisitions office for KPMG Peat Marwick from 1983 to 1988. He joined Peat Marwick as an auditor after graduation from Michigan State University in 1980.

An avid marathoner, Mr. Weber said he lost 20 pounds of fluid running the Long Beach, Calif., marathon in the 90-degree heat last May. He was pleased because it qualified him for next year's Boston marathon. In the meantime he plans to run the Twin Cities marathon this October.

He also plays tennis and competes in volleyball tournaments. Mr. Weber said his wife is a personal trainer and sales representative for a fitness-equipment company, perhaps explaining why he also lifts weights. □

Bankers Trust New York Announces an Elite Group

NEW YORK — The banking unit of Bankers Trust New York Corp. on Wednesday announced that it has established a corporate finance group of elite managers to initiate, develop, and maintain relationships with corporate and individual clients.

The group will be headed in New York by Scott C. Marden, a managing director who coordinates the bank's cross-border and media merchant banking efforts. Bankers Trust, which two weeks ago slashed its corporate finance staff by 10%, said it has recruited the bank's "most senior managers" for the group.

Bank's ESOP Raises Stake To 10% of Company Stock

BELLEVUE, Wash. — First Mutual Savings Bank said its employee stock ownership plan had increased its stake in the bank to 10.7%.

The ESOP disclosed in a filing with the Federal Deposit Insurance Corp. that, from June 22 to July 9, it bought 60,500 shares, increasing its ownership to 148,880 shares, the bank said.

Kansas Thrift to Reserve Against Big Loan Losses

OVERLAND PARK, Kan. — Western Financial Corp. said its principal subsidiary, Columbia Savings Association, will take unspecified material charges against earnings to cover loan and real estate losses and to add to loan-loss reserves.

The company said it will charge off loans that will significantly exceed Columbia's current $1.8 million loan-loss reserve. The charges will be set after an examination by the Office of Thrift Supervision.

Breeden Asks Radical Bank Reform

Urges Repeal of Wall Between Finance, Commerce

By ROBERT M. GARSSON

WASHINGTON — Securities and Exchange Commission Chairman Richard Breeden called Wednesday for radical reform of banking laws, including a dismantling of the barrier between banking and commerce.

Mr. Breeden, who has been President Bush's closest adviser on financial services industry issues since Mr. Bush's days as Vice President in the Reagan administration, told a House Energy and Commerce subcommittee that the Glass-Steagall Act, the Bank Holding Company Act, and laws restricting interstate banking should be rewritten, if not repealed.

The 1933 Glass-Steagall Act prohibits commercial banks from involvement in investment banking, and the 1956 Bank Holding Company Act erects a barrier that prevents banks from owning or affiliating with nonfinancial companies.

Mr. Breeden outlined a system under which the barrier to affiliations with a variety of financial and nonfinancial companies would be largely repealed.

With his characteristic caution, Mr. Breeden declined to say after his testimony how his reform approach compares with others under discussion, such as the proposed Depository Institutions Affiliation Act, which would effectively repeal both Glass-Steagall and the Bank Holding Company Act.

But he repeatedly criticized both laws, which he said impose "avoidable regulatory costs, or reduce liquidity and efficiency of U.S. financial firms and markets."

On a related issue, Mr. Breeden also told the House panel

Loans a Worry in Norwest-United Talks

By NANINE ALEXANDER

A Norwest Corp. acquisition of United Banks of Colorado Inc. has the potential to be a minefield, but if properly structured, the benefits could be great, analysts said.

The two companies announced late Tuesday that they were discussing a merger but emphasized that agreement was not assured.

Analysts said the biggest problem is United Banks' poor asset quality. The $6 billion company's loan-loss reserve of $72 million is only 40% of the $180 million in nonperforming loans. Its ratio of nonperforming loans to total loans at the end of March was 5.7%.

Price Must Be Right

Pointing to Norwest's track record, industry watchers were convinced that a deal would go forward only if the price were right.

"Norwest is not going to do a dumb deal," said James Rosenberg, analyst at Sheraton Lehman Hutton Inc. Any combination would almost assuredly be for stock. Mr. Rosenberg said Minneapolis-based Norwest could be expected to make 100% reserves against nonperforming loans a condition of the agreement.

Describing United Banks as underlisted and deposit rich, Richard J. Tejera, who follows the bank for Dain Bosworth Inc. in Seattle, said the Denver company offers good earnings potential in the right hands. He said that, assuming adequate reserves are factored into the purchase price, deposits could be turned into earning assets fairly quickly.

Deal Makes Sense

Steven Schroth, managing director of research at Piper Jaffray & Hopwood Inc., said the discussed acquisition by Norwest made sense, since Norwest wants to enter Colorado.

But other companies may be interested in acquiring the Denver company, analysts said. Colorado's bigger date for national interstate banking is Jan. 1, and banks from other states, specifically California, might show interest, they said.

As a unit-banking state, the options for establishing a franchise in Colorado are limited.

Ben Crabtree, at Dain Bosworth's Minneapolis office, said Norwest would need to wring 20% in cost savings out of United Banks and make sure no large increase in nonperforming loans was looming. If those conditions are met, he said, he could see a stock price of as high as $30 a share.

Under such a scenario, Mr. Crabtree said, he would expect 5% earnings dilution in the first year and nothing in 1992.

Confidence in Johnson

Analysts expressed confidence in the ability of Norwest chief executive Lloyd P. Johnson, who they described as an aggressive cost-cutter.

Mr. Johnson left Security Pacific Corp. in 1985 to take over at Norwest, when the company was struggling with sour agricultural loans and high costs. In about a year, staff was cut from 19,000 to 15,000. Since then, assets have grown from $20 billion to $26 billion. □

Fleet/Norstar to Automate Branches with NCR System

By KAREN GULLO

NEW YORK — Fleet/Norstar Financial Group Inc. has signed a $10 million contract with NCR Corp. to automate its branches in New York and plans to spend a similar amount to update its New England systems over the next three years.

In New York, Fleet plans to install 1,400 personal computers and accompanying software from NCR to facilitate loan processing, the opening of new accounts, and cross-selling of products. The move is Fleet's first attempt to bring state-of-the-art branch technology to its banks in Albany, Buffalo, and Syracuse and on Long Island.

The $37 billion-asset banking company, which is based in Providence, R.I., operates 300 branches in New York, mostly upstate. But Fleet has captured only a small share – about 3% at the end of 1988 – of the state's giant consumer banking market.

Productivity Is Goal

The new system is designed to improve the productivity of platform and branch personnel, sales culture, and improve customer service – and it could go a long way toward helping Fleet gain market share.

Many large banks are following a similar route by installing PC-based branch automation systems that offer greater functionality and flexibility than controller-based systems. Bank of America, San Francisco, and Manufacturers Hanover Trust Co. are among the institutions installing thousands of PCs in their branches.

Though Fleet has lagged in moving to branch automation, it believes the timing of its shift will be an advantage.

Older Technology

"A lot of banks have a financial commitment to older technology," said David Shepherd, executive vice president of Fleet/Norstar Services Corp., the company's automation and operations unit. "We have a chance to start fresh."

Fleet plans to install NCR's FTS II branch automation system at 155 New York branches by yearend and equip the rest of then New York branches by mid-1991.

The new system will be installed in 260 New England branches next year, replacing some older controller-based branch automation equipment from ISC-Bunker Ramo and International Business Machines Corp.

> **Fleet believes the timing of its shift will be an advantage.**

Initial Cost $10 Million

The initial $10 million contract covers the installation of systems in New York. The systems for banks in Rhode Island, Maine, and Connecticut represent an additional $10 million investment.

Fleet chose NCR after evaluating systems from American Telephone & Telegraph Co., IBM, ISC-Bunker Ramo, and NCR. Mr. Sheppard said NCR offered the best price, adding that the system had a strong set of core software programs.

"The question we fought with was whether to buy a total automation package or a tool that we could use to build our own platform automation," said Mr. Sheppard. "The NCR system has the automation, some of which we will modify to suit our needs." □

Mellon Unifying Retail Network

Objective Is to Cut Operating Cost, Tighten Control

By RICHARD LAYNE

NEW YORK — To cut operating expenses and adopt a uniform marketing approach a la McDonald's, Mellon Bank Corp. is establishing common products and systems for retail operations.

Joining the vanguard of banking consolidators, Mellon will bring all its Pennsylvania banking affiliates, the 54 recently acquired PSFS branches, and its Maryland bank onto a common back-office and branch-automation system by 1992.

The system is already in use at its major banks in Pittsburgh, Philadelphia, and Delaware.

The McDonald's Approach

Bankers sometimes call the move to such common systems and products the McDonald's approach, referring to the fast-food chain's reputation for uniformity at outlets around the world. Mellon executives said common systems will save the Pittsburgh-based banking company hundreds of thousands of dollars in annual operating costs and would increase management's control.

"Without a common set of applications with a common product agenda to chose from," said Richard A. Gaugh, Mellon vice chairman. "To get the efficiencies from the affiliate banks, we've got to do this."

Until recently, state banking regulations prevented Mellon from consolidating its Pennsylvania affiliates into a single charter.

Conversions Planned

Mellon now plans to convert the affiliates to branches, easing centers into two. Even before the recent Pennsylvania announcement, Mellon had begun to convert the Maryland bank to its systems.

> **"The system will give you the ability to monitor the effectiveness of your operations."**
> **Richard A. Gaugh**
> *Mellon Bank Corp.*

Other major banking companies, including Banc One Corp., Columbus, Ohio, and First Union Corp., Charlotte, N.C., believe common systems are critical to a superregional bank's survival.

"To succeed as a big regional bank, you have to have common systems, common products, and reduce the number of data centers," said Charles G. Klapheke, director of automation at First Union, which will finish bringing all affiliates onto a common system for both retail and wholesale by 1992.

A Uniform Voice

"The real objective is that when you are talking to customers, you speak with the same voice in all your markets," said John Russell, a vice president of Banc One, which offers a common slate of products for its affiliate banks in Ohio, Indiana, Michigan, and Kentucky.

Mr. Gaugh said by next week Mellon will have settled on the retail products it will offer at all its Pennsylvania banks. "We are trying to make these like a McDonald's standard set," said Paul Nussbaum, first vice president. Local managers will be able to price their services for their markets.

By the third quarter of 1991, the three Pennsylvania banking affiliates, along with the newly acquired PSFS branches, will run on a consolidated back-office system that already handles Mellon's banks in Pittsburgh and Philadelphia.

Ready for Acquisitions

"After we are through with this conversion, we can go into [potential acquisitions] with a knowledge of how we run a branch, what products to offer, and what functions we have in our branch automation," said Mr. Gaugh.

The consolidation may pave the way for better management control of affiliates.

"The system will give you the ability from a central site to monitor the effectiveness of certain facets of your operations," said Mr. Gaugh. It is difficult to interpret a bank's lending exposure, for instance, by comparing reports gleaned from two separate units.

Under Mr. Nussbaum, Mellon is working on the technical details of converting the 54 PSFS branches onto the system running at Mellon East.

The PSFS branches are also extremely costly to run. Under an existing contract, EDS Corp. provides processing services for their 800,000 accounts. Mr. Nussbaum said that converting the PSFS systems to the Mellon system would save the banking company $1 million a month. □

COMMENT / *By Sanford Rose*

Determining Loan Values And Marketing Outlays

How much money should a bank spend to market a given type of loan? At most banks marketing expenditures depend more on educated guesses than on scientific evaluations. Yet it is possible to rationalize marketing costs based on an analysis of the economic value of various loan products. Such an analysis will reveal the amount of money that can be allocated to product sourcing or marketing while still preserving an acceptable level of loan profitability.

To determine the appropriate level of marketing expenditures, banks must do a capital-budgeting analysis of loan types, taking into consideration their size, term to maturity, interest rate, the expenses involved in booking and servicing, expected losses, and the cost of both the internal and external funds used to finance them.

As pointed out by Michael Lenora, vice president for marketing at The Walter Latham Co., a direct-marketing agency specializing in financial services and domiciled in Broadview, Ill., determining the economic value of a loan is conceptually similar to determining the value of the lender. Both values depend on discounting a complete set of future cash flows by the appropriate cost of capital.

Determining Discount Rates

The value of a loan is determined by comparing the discounted present worth of the cash flows it will generate in the future with the current cost of making the loan. The trick, of course, is to choose appropriate discount rates.

Since a lender assembles funds from both outside creditors and shareholders, he must discount future cash flows at rates that provide acceptable returns to each class of funds provider. The rate of return demanded by outside creditors is the rate of interest at which they lend. The return demanded by equity holders is determined by the opportunity cost of equity – the return that could have been earned had the shareholders put their money in other equity investments of comparable risk.

Thus the appropriate discount rate is a composite number, reflecting both the cost of debt and the usually much higher cost of the equity component of investable funds. If the discount rate is properly computed, it already incorporates the return required by debtholders and that which is minimally acceptable to shareholders.

Generating Excess Returns

Hence the lender is justified in making the loan if the discounted present worth of its net cash flows (future revenues minus initial and future expenses) is just equal to the loan size. If the present value of the net cash flows exceeds the loan size, the lender is generating excess returns, which can be retained, serving to boost stock values, or else earmarked to appropriate marketing expenditures. Ideally, the level of permissible marketing outflows emerges as a by-product of a careful discounted cash-flow analysis.

Mr. Lenora of The Walter Latham Co. has analyzed the excess returns, or permissible marketing costs, available from installment loans of various types and terms. He finds, for example, that for installment loans of $10,000 made at an 18% rate of interest for 48 months, the excess value, assuming 4% losses, $50 initial booking expense, and $12 monthly maintenance, amounts to about $445.

In other words, $445 is the

THE LOBBYISTS

Common Cause Lists The D.C. Recipients Of Columbia Largees

California's **Columbia Savings** and Loan, the once high-flying Beverly Hills thrift now under scrutiny by authorities, was uncommonly generous in its political contributions, according to a study by **Common Cause**, the self-proclaimed "citizens lobby."

In the nine-year period ended in April, Columbia executives and their spouses gave a total of $284,900 to congressional candidates and political party committees, the study found.

Louise Kraft

Rep. Donald W. Riegle
Michigan Democrat

The top recipient was Senate Banking Committee Chairman Donald W. Riegle, D-Mich., who also received large contributions from individuals associated with the failed Lincoln Savings and Loan, Irvine, Calif.

Mr. Riegle received $29,000 from Columbia executives and spouses, beating out Sen. Jake Garn, R-Utah, who received $25,200 during the period under study. Mr. Garn is the committee's ranking Republican and was its chairman.

The Common Cause disclosure comes after the Office of Thrift Supervision filed civil action against Columbia and former chairman Thomas Spiegel. The OTS wants to collect $24 million that it alleges Mr. Spiegel squandered on corporate jets, lavish bonuses, vacation condominiums, and other extravagances.

While Mr. Spiegel and his associates paid closest attention to the Senate Banking Committee chairman and ranking Republican, other members were treated well.

Next in line were Sen. Timothy E. Wirth, D-Colo., with $17,500; Sen. Bob Packwood, R-Ore., $17,000; Sen. Pete Wilson, R-Calif., $15,500; Sen. Alan Cranston, D-Calif., $13,500; Sen. Howard M. Metzenbaum, D-Ohio, $11,000; and Sen. Alfonse M. D'Amato, R-N.Y., $7,000. Mr. Wirth, Mr. Cranston, and Mr. D'Amato are members of the banking committee.

House members made the list too. Rep. Howard L. Berman, D-Calif., received $5,000, while Rep. Lee H. Hamilton, D-Ind., and Rep. Carroll Hubbard Jr., D-Ky., both got $4,000.

Former Rep. Fernand J. St Germain, D-R.I., the chairman of the House Banking Committee until his defeat in 1988, received $15,700.

The Democratic party fared even better. The Democratic National Committee and the two Democratic campaign committees received a total of $66,850, Common Cause said. The Republican National Committee received $1,000. But for anyone feel sorry for the Republicans, Common Cause said Mr. Spiegel made a soft-money contribution of $100,000 to President Bush's 1988 campaign.

Bank Directors Take Aim at Crime Bill

A fledgling trade group representing bank directors has charged that a crime bill sponsored by Chalmers P. Wylie, R-Ohio, could drive away directors from serving on boards of banks and savings and loans.

The **American Association of Bank Directors** is taking issue with several provisions in the Financial Crimes Punishment and Prevention Act of 1990, backed by such heavyweights as House Banking Committee

Louise Kraft

Rep. Chalmers P. Wylie
Ohio Republican

Chairman Henry B. Gonzalez, D-Tex.; Frank Annunzio, D-Ill., and Doug Barnard Jr., D-Ga.

In short, the legislation cracks down on bank and S&L executives who commit financial crimes.

Although it agrees with the spirit of the law, the association charges that the legislation is drafted so broadly that unwitting directors who sit on the board of a failed institution could have their assets frozen as well as tax returns released to banking agencies.

"It [the legislation] is overly broad," said David H. Baris, executive director of the Washington-based trade association. "Those directors who read it carefully will be scared."

Mr. Baris said the association believes that freezing assets may be unconstitutional. Mr. Baris said the group has about 200 members, but he would release only the names of the association's advisory committee, which includes Alfred M. Pollard, director of federal government relations, Security Pacific Corp.; Dana H. Cook, partner and national director of financial institution capital markets, **KPMG Peat Marwick**; and William Resnik, senior counsel of Seattle-based **Seafirst Bank**.

The association also takes issue with with an amendment made to the legislation on June 28 that increased the financial risk to directors. The House Banking financial institutions subcommittee took the action without holding a hearing.

According to the association, the amendment permits a banking agency to have a court issue a restraining order prohibiting any party subject to a civil cease and desist order or other actions from withdrawing, transferring, or disposing of assets.

The association has requested a hearing.

Laundering Bill Gets Thumbs-Up from ABA

The banking community is originally pleased with the Senate version of money-laundering legislation that will be considered by the Senate Banking Committee on July 17. In particular, the **American Bankers Association** is pleased with a new provision that shields a company from liability if it acquires an institution that violated money-laundering laws.

However, the trade group listed a number of concerns in a June 26 letter to Sen. Donald W. Riegle, D-Mich., the banking committee chairman. For example, the bill's removal provisions may be too harsh, the ABA said.

"While removal authority is justified for individuals who violate money-laundering laws, removal for record-keeping violations of the Bank Secrecy Act may be in the majority of cases inappropriate and in our opinion should be addressed through civil penalties," the letter said.

LETTERS *to the editor*

Idea of Seizing, Selling Mutuals Is Condemned

To the Editor:

The proposal set forth by Reid Nagle and Kevin Stiroh in the July 5 issue ("Auction of Mutual Thrifts Could Raise Billion Fast," page 14) ignores the legal system's protection of mutual savings institutions. It also ignores simple economics and the role played by mutuals in their communities.

Proposal Seen as Illegal

First, let us deal with the legalities.

Mr. Nagle and Mr. Stiroh are proposing the confiscation of property simply because institutions are mutually held rather than held by stockholders or other private owners. The authors blithely ignore the court cases and other legislative and regulatory barriers to such confiscation, including Constitutional provisions such as due process, equal protection under the law, and prohibitions against the government's taking private property.

COMMENT

Continued from *page 4*

amount the lender can theoretically spend to source such loans while still covering all expenses and maintaining an acceptable rate of return.

A Highly Sensitive Number

This figure is based on a finance-company leverage ratio of 7-to-1 and therefore a weighted average cost of capital of 11.03% – a combination of an 8% cost of external funds and an expected pretax return on equity funds of 30%. If bank leverage ratios, which are often much higher than finance-company ratios, had been used, the weighted-average cost of funds would have been lower and thus the net present value of the loan would have been higher, justifying larger marketing outlays.

In practice, of course, the net present value of loans is highly sensitive to changes in loan characteristics. The larger the loan size, the larger the excess return because while interest earnings rise, maintenance and booking expenses remain fixed. Similarly, of course, the higher the loan rate and the lower the expected losses, the higher is the excess return.

Lower loan rates eviscerate the feasible marketing effort. For example, if we drop the rate from 18% to 16% and hold everything else constant, the amount of feasible marketing dollars tumbles from $445 to only $44.

Mr. Lenora's point is simply that the level of appropriate marketing expenses need not be based on seat-of-the-pants judgments. A more informed estimate can be made through the use of discounted cash-flow analysis. A detailed review of the methodology for determining loan values will be published in the fall issue of the *Journal of Retail Banking.*

Secondly — though perhaps it is a means to distract us form the first problem — Mr. Nagle and Mr. Stiroh have developed a peculiar scenario under which this confiscation is to take place. They equate confiscation with either the conversion of a mutual to stock or its immediate merger with another institution, then propose the government as the beneficiary.

But even if their proposal were legal, the economics simply won't work. The conversion of a mutual institution to stock is a way to raise capital.

What a Bid Means

Let us say, for example, that the total bid for stock in a healthy mutual is $10 million. This $10 million stays with the institution and becomes new working capital to expand loan or investment activity or to raise the existing capital level.

In fact, the new stockholders are bidding on the basis of the knowledge that they will have their $10 million plus the existing institutional value through which a return on that investment will be generated.

Value Would Be Reduced

Clearly, if the government states beforehand that it will confiscate the vast majority of the new institution's value, bidders would pay little if anything for the package. In fact, the package value would be reduced by at least the amount of the proceeds given to the government.

Another way of looking at this problem would be to ask the market what it would pay for an institution if the government took its cut out of the retained earnings before the conversion took place. Clearly, the amount bid would be reduced precisely by the amount of the government cut.

The Role of Mutuals

Legalities and economics aside, there is a third and perhaps most important reason for preserving mutuals: They play an important role in the communities they serve.

State-chartered mutual savings banks have served local communities for over 175 years. The overwhelmingly majority are solvent, successful, and crucial to the economic needs of individuals and smaller businesses in cities and towns across the country.

Mutuals have worked hard to ensure their strong financial position; on average, their tangible capital it approximately 8.5%. They are conservative. They are very well managed.

In a period of crisis in the financial industry, we believe that many could benefit from studying the managerial and operational accomplishments achieved by mutual institutions. Further, we believe that mutuals can serve as a model during the current evolution of our industry. They should not be a target for misleading speculations such as the Nagel-Stiroh proposal.

How to profit from 1,347 of your competitors

Proven methods for selling mutual funds

Working with 1,347 banks and S&Ls has taught MFS a lot about selling mutual funds. So have our 66 years of experience since we started the mutual fund industry. Now we've put it all together in a free training package called *Partners in Profit*. The kit is filled with simple, inexpensive training methods guaranteed to get results. Step-by-step, we'll take you through four major selling opportunities.

1. HOW TO BUILD A SUCCESSFUL INVESTMENT BUSINESS AT THE BRANCH.
2. WORKING THE BOOK: SIX APPROACHES TO GUARANTEE FUTURE BUSINESS.
3. SEMINARS: HOW TO MAKE THEM WORK FOR YOU.
4. SALES IDEAS: HOW TO HELP YOUR CUSTOMERS AVOID INVESTORS' SEVEN MOST COMMON MISTAKES.

MFS, with $26 billion under management for 1.7 million investors, is a name you and your customers can count on for investment performance, service and commitment to the banking industry. We have a dedicated team of professionals available for on-site referral training (last year alone, they conducted 1,107 sessions using our acclaimed 12-minute video entitled "Banking and Investing: Today's Team").

Isn't it time you started a partnership with our Banking Industry Marketing Department?

MFS
Helping investors manage money since 1924.

MARKETING/ADVERTISING

Banks Push Brand Identity To Stand Out from the Pack

By ELLEN MEMMELAAR

Recognizing that many consumers still view financial institutions as commodity operations, some large banking companies are trying to differentiate themselves through brand-identity campaigns.

BankAmerica Corp., Chase Manhattan Corp., and Citicorp all appear knee-deep in brand-identity development. Such efforts closely link a symbol or logo with all the institution's products. In more traditional campaigns, institutions merely try to project a positive image.

"Institutions are not building brand identity clearly into their advertising," said Tyrus Ragland, president of Message Factors, a marketing and research firm based in Memphis, Tenn. The name of the bank is often not clearly tied to the campaign or the product being promoted, he said.

Mr. Ragland's research indicates that the typical advertising campaign for a major financial institution generates some sort of awareness among about one-third of consumers.

Of consumers who say they have seen, read, or heard such campaigns, only 14% can identify the financial institution, and 34% believe another institution did the advertising, Mr. Ragland said.

Clearly, financial companies need to explore alternative advertising styles if they are going to succeed, he said.

> "Symbols are very powerful. We've seen it work for our competitor."
>
> Lucille Deluilis, *BankAmerica Corp.*

The surge in interest in brand identity has other explanations, as well. Financial institutions tightening their belts are attracted by the effectiveness and efficiency of a brand-identity campaign, which combines elements of image and product advertising, said Michael Sullivan, a Charlotte, N.C.-based consultant.

The maturing of the credit card market is also forcing institutions to focus more on their bread-and-butter products, he said.

"With branding, there is a real understanding that many products are mature," said Mr. Sullivan, and brand and product differentiation is more important in mature markets.

BankAmerica Will Bring Back Its Eagle

BankAmerica, which gave its eagle symbol a vacation five years ago, is calling it back into action for an all-encompassing campaign, said Lucille Deluiis, vice president and director of regional advertising. A series of television advertisements in coming months will feature the eagle. After its reintroduction, the eagle will become a unifying device in all the bank's advertising, including print, she said.

"Symbols are very powerful," said Ms. Deluiis. "We've seen it work for our competitor."

The competitor is Wells Fargo & Co., whose stagecoach debuted in 1964 and has rolled through the banking company's advertising ever since. Banks are just beginning to recognize the value of brand identities, said William McEuen, senior vice president and director of strategic planning at McCann-Erickson, San Francisco, a subsidiary of the Interpublic Group of Companies Inc., which handles Wells' advertising.

Campaigns Termed Expensive

"Developing [a brand-identity campaign] is an expensive thing," said Mr. McEuen. "Not all have the willingness to go through with it now." Brand campaigns must last through management changes, budget cuts, and changes in taste, he said.

Robert Visini, McCann-Erickson vice president and management supervisor, said establishing an image means an institution needn't be first in the marketplace with everything. Rate wars and market downturns become less costly for the institution that has established a firm presence in consumers' minds, he said.

Chase Manhattan, Citibank Consider Brand Campaigns

Both advertising executives warned that building an image isn't as simple as going out and getting one. "A me-too image is no better than a me-too product," said Mr. Visini.

On the East Coast, news of Chase Manhattan's search for an advertising agency to create a brand campaign surfaced last week right after similar reports from Citibank.

Chase will consolidate mortgage, credit card, and other products under a single advertising theme, said Aubrey Hawes, a vice president who is corporate director of advertising and promotion. Details of Citibank's plans are sketchier, but the campaign is said to be under development at N.W. Ayer & Son Inc., the bank's advertising agency of record.

Unlike the more common television-based image campaigns, brand-identity campaigns of the 1990s will be direct-response oriented, said Mr. Sullivan, the North Carolina consultant.

While television has a high impact, TV commercials are too general and lack a feedback mechanism, he said. More marketers will incorporate brand identities into direct-response print advertisements, mailings, and toll-free numbers, he predicted. □

Citicorp Moves into Travel Industry

Bank Joins Others in Bid for Piece of Market

By ELLEN MEMMELAAR

NEW YORK — Citicorp is promoting travel packages for the first time, sparking speculation about the banking company's long-term goals in the travel business.

Last month, Citicorp mailed fliers to select gold MasterCard and Visa cardholders promoting luxury weekend trips to London, the Rockies, and the Cayman islands.

The company's new service, called the Personal Travel Portfolio, is being organized through Citicorp Information Management Systems, a small travel information subsidiary based in Connecticut.

The banking company hopes to continue providing travel packages to credit card customers, said a Citicorp spokesman, and will add more trips to its roster. The spokesman denied that the institution was making a big push into the travel business, though industry observers say it appears to be doing just that.

"Citibank appears to be testing the waters with a Citibank-branded travel approach," said Les Dinkin, a Westport, Conn.-based consultant. "They're bringing their technology, operations, consumer data base management, and consumer services marketing expertise to bear."

Citicorp will offer a variety of services in a bid to attract consumers and generate more fee income, said Ronald Mandle an analyst with Sanford C. Bernstein & Co. "The bank is trying to capture more of the consumer financial services spending," he said.

Citibank, however, is prohibited from opening a full-fledged travel agency.

In 1978 the Office of the Comptroller of the Currency ordered nationally chartered banks to divest their travel agency operations within three years and prohibited them from setting up new travel agencies.

Despite the restrictions, some observers see a growing opportunity for national banks that are willing to elbow their way into the industry and fight to have the 1978 restriction repealed.

"The regulation was not based on a reasoned analysis," said Robert Kurucza, a partner at Morrison & Foerster. "It's unfortunate that it is out there."

> **About 100 thrifts and state-chartered banks have travel subsidiaries.**

Mr. Kurucza believes that the Comptroller should and will take a second look at the issue. He also has high hopes for legislation in 1991 that would loosen the reigns on bank activities.

Many Banks in Travel Field

More than 7,000 financial institutions, including national banks, offer some type of travel service to their customers. Many of these institutions, however, are simply promoting packages created by outside agencies.

About 100 thrifts and state-chartered banks have travel subsidiaries with a full menu of offerings. Dollar Dry Dock Bank, New York, and Washington Mutual Savings Bank, Seattle, are among the institutions to have entered the business in the past five years in hopes of becoming a one-stop shopping center for their customers.

New York-based Dollar Dry Dock is especially eager to expand its travel customer base and plans to acquire two travel agencies in 1990.

Future Remains Uncertain

Even though some financial institutions are dodging restrictions and forging ahead, the future of bank-owned travel agencies remains uncertain.

The business has undergone a dramatic change in the last decade from a "cottage industry" into one with big players and deep pockets. American Express Travel Related Services Co. has blossomed into a dominant financial/travel services company, with travel agencies, travelers checks, money exchange centers, and other programs.

"Because of generally restrictive laws for bank-owned travel agencies and the limited returns on investment for travel agencies in general, we do not anticipate additional banks expanding into the travel industry," said Diane Steeman, president of Banc One Travel, a subsidiary of Bank One.

Competition Not Welcome

The travel industry is much opposed to banks and thrifts expanding in the travel business and has lobbied Congress to prevent such actions.

"Much of the savings and loan crisis was due to financial institutions getting into businesses that are low profit and highly risky," said Lonnie Johns, president of Travel Consultants Jacksonville, Ill., based company. "The last thing we need is for banks in Illinois to get involved in a low-profit and risky business." □

Do your CDs come back to haunt you?

When you issue those big CDs of $1 million or more, you have a right to sleep peacefully.

Sound sleep depends on your issuing and paying agent. Which is why so many issuers and dealers depend on Bankers Trust.

We offer on line issuance. Timely and DK-free delivery. Quick turnaround. Advance notification of any and all principal and interest amounts due. All at competitive prices.

So if you want to be undisturbed by the spectres of late principal or interest payments...slow, error-riddled documentation...the moans of investors and the groans of dealers call Michael O'Leary at (212) 250-6212.

When it comes to your CDs (or deposit notes), we can turn nightmares into pleasant dreams.

Bankers Trust Company
Corporate Trust and Agency Group

Bank Travel Agencies Seek More Corporate Accounts

By ELLEN MEMMELAAR

NEW YORK — Financial institutions with travel agencies are looking to boost profitability by creating a mix of corporate and retail accounts that guarantees a stable cash flow.

"I think that many banks have missed the boat on this," said Joy Cristell, president of the Bank Travel Marketing Group, a subsidiary of JMS Enterprises, Edison, N.J. "Good, solid corporate accounts for travel will bring in the money."

Changes May Be Coming

Most banks and thrifts with travel agencies have concentrated on leisure accounts and their existing customer bases, Ms. Cristell said. But that may be changing.

Dollar Dry Dock Bank, which established its travel service unit in early 1989, has begun soliciting corporate customers, said Steven Safaway, first vice president of planning and future technology for the New York institution.

One-Stop Shopping

Its entry into travel services was spawned by a desire to provide "one-stop shopping" for services, including brokerage

> "Good, solid corporate accounts for travel will bring in the money."
>
> Joy Cristell, *Bank Travel Marketing Group*

transactions. Six of Dollar Dry Dock's 23 branches now have a two-person travel center.

The travel service's client mix is about 90% retail and 10% corporate, Mr. Safaway said.

60-40 Seen Ideal Mix

Ms. Cristell, whose trade group has more than 300 members, said travel agencies should have 60% corporate accounts and 40% leisure travelers. Corporate travel generally occurs when leisure travel is slowest – between holidays and during the winter.

Dollar Dry Dock hopes to duplicate the successful mix of American Express Travel Related Services Co. by selling travelers checks, money exchanges, and other banking products to travel customers.

"We want the consumer to buy things other than investments," Mr. Safaway said.

First Alabama's Plans

First Alabama Travel, a subsidiary of First Alabama Bancshares Inc., is also targeting the corporate market, said Betty Howe, manager of the operation. The Birmingham-based company has travel service centers in four bank locations.

"We are looking for a balance" of corporate and leisure travelers, Ms. Howe said. "It would be nice to get some larger accounts. But that takes time."

The travel agency is also evaluating the relative profitability of various sizes of accounts, she said.

Fixed Focus

Mutual Travel Corp., a subsidiary of Seattle-based Washington Mutual Savings Bank, focused on garnering corporate accounts from the day it was launched in 1985, said Robert Dunlop, president of the travel subsidiary.

Corporate accounts represent 50% of its business, leisure travel accounts for 35%, and group travel the rest. □

As Revenues Shrink, Cost-Cutting Drives Gain Momentum

Continued from *page 1*

added that the survey's findings of significant cutting of total costs were in line with their observations.

Cost Control Now Imperative

While cost control became an increasingly high priority for the industry in the mid- to late-1980s, this year's market conditions have made the activity a virtual imperative.

With the rise in nonperforming real estate loans, the industry's profits fell 15% in the first quarter, to $6.2 billion. Stocks have slumped, and opportunities to boost revenues seem limited.

"You're not seeing much in the way of loan growth at either regional or money-center banks, which is leading to slow revenue growth," said Raimundo C. Archibould Jr., an analyst at Fox-Pitt Kelton Inc. "In order to maintain earnings, you have to restrain growth in expenses."

In the first five months of this year, total loan growth was just 0.7% at banks participating in Federal Reserve surveys, according to Salomon Brothers Inc. "Growth in consumer and commercial and industrial loans is exceptionally weak, except in the Dallas and Philadelphia districts," a recent Salomon report said.

Large banks, which raked in handsome fees financing corporate restructurings in the 1980s, have been suffering as deal mania has died and regulators have stepped up their scrutiny of highly leveraged portfolios.

Several big banks already have unveiled plans for major cuts in their corporate finance departments and other areas. On June 25, Chase Manhattan Corp. announced a sweeping restructuring aimed at saving $300 million a year, 8% of current operating expenses. The next day, Continental Illinois Corp. said it would drop 900 employees, or 13% of its total, after completing a broad reassessment of its product lines.

According to the Trans Data Corp. survey, 40% of banks with assets of more than $1 billion are cutting costs this year, and 26% are already planning to cut costs in 1991.

Less Cutting at Smaller Banks

Smaller banks also have joined the cost-cutting trend, though to a lesser extent. The survey found that 11% of banks with assets under $750 million are cutting costs this year, while 17% plan to cut next year.

Howard Bank, Burlington, Vt., plans to reduce both staff and expenses by 7% next year. The $500 million-asset bank plans to farm out all its data processing work, for an expected saving of $1 million a year.

It also plans to restructure its branch system, using more automation and fewer employees. Chief executive Joseph L. Boutin said these steps are necessary for the bank to meet its goal of boosting return on equity to 17% in 1991 from 14% in 1989.

"There seems to be a broadening awareness on the part of most bank managers that they've got to get their cost structures down," said James J. McDermott Jr., director of research for Keefe, Bruyette & Woods Inc.

James M. McCormick, president of First Manhattan Consulting Group, said more banks may be inspired to launch aggressive cost-cutting campaigns as they watch two of the industry's most prominent turnaround efforts unfold.

Heavy cost cutting by Anthony Terracciano, chief executive at First Fidelity Bank Corp., and Lawrence K. Fish, chief executive at Bank of New England Corp., "will provide evidence that banks can operate, albeit not at full speed, at a much lower level of operating expense," Mr. McCormick said.

Swift Action at First Fidelity

In the first five weeks after taking the job in February, Mr. Terracciano cut 1,400 employees from the company's total of 13,500. In April, a month after Mr. Fish assumed his post Bank of New England, that institution announced that it would eliminate 5,600 jobs, or about one-third of its work force, this year.

Of course, many other banks have been quietly paring costs in recent years, with particular attention to reducing head count. After peaking in 1986 at 1.56 million people – up from 640,000 in 1960 – the industry's employment has fallen to about 1.53 million people, said Diogo Teixeira, a consultant with McKinsey & Co.

"This is the only time we've observed in the past 30 years that the number has started to come down, and that is very significant," he said.

Mr. Teixeira said the decline largely reflected advances in banking technology. "Most of the industry is still paper based, but the share of information flows handled electronically has gotten to be enough that employees are decreasing," he said.

Yet, by some measures, the industry as a whole has yet to become substantially more efficient.

An efficiency measure used by Keefe, Bruyette & Woods – recurring noninterest expense divided by the sum of noninterest income and taxable-equivalent net interest income – has changed little for banks of all sizes over the past five years. For banks with assets of more than $25 billion, the ratio has actually risen somewhat, to 63.91% last year from 62.28% in 1985, according to Keefe Bruyette.

Thus, the search for savings continues, and some banks are leaving no stones unturned. In the Trans Data survey, one bank advocated replacing real plants in offices with artificial ones. Others said they were cutting back on such expenses as conventions and subscriptions.

Hugh McColl, the hard-driving chief executive of NCNB Corp., told Trans Data that he is making cuts this year in "anything that doesn't make money."

Many banks that already have implemented major cost-cutting programs in recent years are now trying to fine-tune their strategies.

"The thing that is most dramatic for us right now is the cost of employee benefits, particularly in the medical area," said L. Scott Nelson, chairman and chief executive of First Security Bank, Salt Lake City. Through a new compensation system the bank is also trying to encourage branch managers and other unit leaders – not just senior executives – to implement cost-cutting measures. □

COST CONTROL

Discounts Can Keep Employees Airborne Without Breaking the Bank

By DON MUNRO
Special to the American Banker

Even managers facing the most stringent cost-cutting mandates need not eliminate travel entirely from their budgets.

The Bank of Boston Corp.'s 3,500 employees spend $6.5 million a year on air travel alone. For years, the $39.2 billion-asset commercial bank has been wielding its travel-buying clout to negotiate large rate discounts with major travel suppliers.

Many airlines, hotels, and car-rental firms are itching to offer price breaks to banks that can guarantee a minimum flow of travel dollars into their pockets, says Elizabeth Meyer, manager of corporate travel and relocation at Bank of Boston.

In the bad times – and even in good times, for a few observers – business travel is perceived as little more than a euphemism for frivolous, martini-filled junkets.

A Priority for New England

In New England, where many banks and thrifts are reeling from bad real estate loans, cost-control is a particularly urgent priority.

But completely eliminating travel can harm customer relationships, and ultimately do more harm than good.

"You can't totally avoid travel," says Susan Grace, president of SDG Consulting, Southboro, Mass. SDG advises companies on ways to manage business travel.

"But banks here are in a mess, cutting and slashing travel. Many are making longer trips, hitting more places on one trip versus going out every week."

The troubled Bank of Boston has negotiated approximately a 25% discount on air fares. Negotiations with individual carriers on specific routes have netted price breaks of up to 37%.

"We've taken our most commonly used city pairs and bargained for discounts with the specific carriers who fly those routes."

Ms. Meyer says the bank gets discounts of 30% to 35% at individual hotels in Los Angeles, Boston, and New York. Without these discounts, the bank's $3 million annual hotel bill would be substantially more.

She notes that the price breaks she has won are reducing the bank's 1990 travel costs by 15% over the previous year. Without the discounts, there would be greater pressure from senior management to reduce bank travel, according to Ms. Meyer.

"Managers would look at trip requests and ask: 'Can you do in three days what you usually do in four?'

Despite the obvious advantages to the Bank of Boston, Ms. Meyer wages a daily war to get employees to use her hard-won price concessions.

Some employees simply ignore directives to fly with a carrier that offers the discounts, chiefly because they want to continue earning the maximum mileage on their favorite airline.

"For some people, those mileage programs outweigh any desire to cut costs. But we have a weapon: We send out exception reports of people who aren't using the preferred airlines."

The current economics of the banking industry make it much less likely that Bank of Boston travelers will ignore cost-cutting directives, Ms. Meyer adds.

"There's a general concern in the banking industry to reduce costs. People are more willing today to follow through on that than they were five years ago." □

Proven Ways to Cut Costs Sought for New Column

Bankers are looking everywhere for ways to control their cost of doing business. To provide readers with constructive cost-cutting tips, *American Banker* has begun a column that will appear Thursdays on the management page.

We invite readers to let us know about methods they have found successful in trimming expenses. Please contact Patricia Stundza, features editor, *American Banker*, One State Street Plaza, New York, N.Y. 10004; 212-943-5733.

BALANCING ACT.

BANK COMPENSATION AND BENEFITS MANUAL

Starting a new business is a challenge. You have to make it pay, and you have to balance compensation and benefits that attract and keep good people on the one hand and your bank's profitability on the other.

That means knowing what each person's job is and what it's worth to the bank. And that's just the beginning.

You can count on the new Sheshunoff™ *Bank Compensation & Benefits* manual to give you everything you need to design, implement, support, and maintain a compensation and benefits program that helps your bank keep up-to-date with market and legal changes and meet its goals. Because whether your personnel policies are formal or informal, they need to be planned and consistent to motivate your people and operating methods. So you've got your bank's unique aspects in mind as you develop job descriptions and policies for salary administration and performance measurement, measure job worth, design and organize your benefits and management incentive programs, communicate with your employees, create useful forms to document your programs, and *control salary costs through budget planning.*

For more information, or to get your own copy of *Bank Compensation & Benefits* call 1-800-456-2340.

Gonzalez Questions Plans For Increase in FHA Fees

Reuters

WASHINGTON — House Banking Committee chairman Henry Gonzalez, D-Tex., has expressed concern that administration proposals to strengthen the Federal Housing Administration will make it harder for low- and moderate-income people to buy homes.

The banking committee's housing subcommittee is concerned that the administration's proposals, by requiring higher down payments and increasing premiums for FHA mortgage insurance, would limit the number of families who could afford a home, Mr. Gonzalez said at a subcommittee hearing on the proposals.

Report's Accuracy Questioned

The proposals were made by Housing Secretary Jack Kemp after a Price Waterhouse & Co. report said the FHA mutual mortgage insurance fund was losing money and might become insolvent within several years.

Mr. Gonzalez said the report might be inaccurate. He gained support from the National Association of Realtors and Mortgage Bankers Association, which agreed the proposals were too stringent.

The Department of Housing and Urban Development seeks to bring up the FHA mortgage insurance fund by imposing higher closing costs and raising the premium for buyers making down payments of less than 10%.

The National Association of Realtors said the change would increase the fee, now 3.8%, to as high as 7.5% of the loan amount, with the highest premiums charged to those making the smallest downpayment.

Consequences Predicted

"Changes in FHA are needed, but not at the expense of the future homebuyers who need FHA to buy their homes," association president Norman Flynn said at the subcommittee hearing.

The Realtors' group estimated that the proposed change could shut out as many as 100,000 borrowers a year who can now use the program. The group supports legislation sponsored by Rep. Bruce Vento, D-Minn., and Rep. Thomas Ridge, R-Pa., that would set a non-refundable fee of 1.35% of the loan, payable at closing from the proceeds of the loan, as well as an annual renewal fee of 0.5%. □

Barnett Profits Off 9% in 2d Quarter

Analysts Expected Better Rebound from Exam Effects

By KENNETH CLINE

ATLANTA — Barnett Banks Inc. announced on Tuesday that its profits declined 9% in the second quarter to $58.5 million, from $64.3 million in the same period a year earlier.

The Jacksonville-based superregional's performance improved sharply from the first quarter, when it earned only $15.5 million. But many analysts expected better numbers because Barnett had significantly boosted its reserve in the first three months following an examination by the Office of the Comptroller of the Currency.

"The quality of earnings was high, but I think other analysts are going to be somewhat disappointed that the rebound was not as much as they had hoped," said Kathryn H. Bissette, an analyst with Interstate/Johnson Lane.

Barnett's stock was trading Wednesday afternoon at $30.25, off 25 cents.

Downward Revision

Interstate/Johnson Lane, which previously estimated Barnett's 1990 earnings at $216 million, or $3.45 a share, believes they could go as low as $204 million, or $3.25 a share. "The assumption that each quarter is going to build on the previous is much more difficult to see now," said John Mason, an analyst with the Atlanta-based brokerage company.

Barnett's loan-loss reserve rose to $332.3 million from $316.6 million in the first quarter. After being examined by the Comptroller, Barnett was forced to adopt stricter methods for classifying its real estate loans.

Effect of Exam

"What was important for Barnett's numbers was this was the first bank we've gotten to look at after the exam," Ms. Bissette said. Most other large southeastern banks were examined in the second quarter.

The level of nonperforming assets ended the quarter at $467 million, up from $456 million at the end of the first quarter and $324 million a year ago. Of Barnett's nonperforming loans, 24% are less than 90 days past due, according to the company. □

After the Comptroller's exam, Barnett was forced to adopt stricter methods for classifying real estate loans.

500 Suits Filed by FDIC Against Former Bank, S&L Officials

Continued from page 1

ings and Loan Association of Denver.

Reports circulated on Wednesday that the FDIC would file a $200 million suit against Mr. Bush and other former directors and officers of Silverado, according to *The New York Times*, the suit would charge the former officials of negligence and of employing unsafe and unsound practices in operating the institution, which thrift regulators seized in December 1988.

Alan Whitney, a spokesman for the FDIC, acknowledged that an investigation is under way into Silverado's failure, but he would not confirm whether the agency is about to file a lawsuit.

"The matter is under review and no decision has been made," he said. "Silverado has not been singled out." Mr. Whitney said the FDIC has been conducting the Silverado investigation since last August to determine whether a suit could be filed for damages.

Timing of Seizure Questioned

Some Congress members have raised questions about the timing of Silverado's closing. OTS Director T. Timothy Ryan Jr. said Wednesday that he has asked the Treasury Department's inspector general to look into why the thrift was seized six weeks after supervisors recommended the action.

The House panel, chaired by Rep. Charles Schumer, D.-N.Y., heard testimony from legislators, regulators, and the Justice Department on further steps to increase prosecutions of thrift crimes.

At the urging of the House leadership, Rep. Schumer is crafting an S&L enforcement package to pad out the omnibus crime bill currently pending before the House.

In a related development, on Wednesday the Senate passed by 94 to 6 an omnibus crime bill that provides $152.5 million in annual budget authority for the Justice Department to pursue cases of financial institutions fraud and abuse.

With rumors flying about an FDIC suit, Neil Bush is wrestling with charges by the OTS that he violated conflict-of-interest rules from 1985 to August 1988. He is scheduled to appear before an administrative law judge on Sept. 25 in Denver, who will hear the accusation that he approved millions of dollars in loans to Bill L. Walters and Kenneth M. Good, who were partners in Mr. Bush's JNB Exploration Co., a Colorado partnership.

Mr. Bush has refused to knuckle under to the government by publicly answering charges. He spent all of Monday answering reporters' questions, and repeated the task on Wednesday, said James Nesland, "Mr. Bush's attorney. He said Mr. Bush intended to stay out of the media, but the regulators forced the issue into the open.

In January, the OTS informed Mr. Bush that it was going to take steps to ban him from the thrift industry. Mr. Bush took issue with the move and now the agency is taking a milder stance that would require him not to violate conflict of interest rules in the future.

Last Thursday, the OTS changed its policy on administrative law hearings by opening them to the public.

"They mounted their public crusade. They opened [the hearing] to the public. I think he almost has to" go public Mr. Nesland said.

Most of a battery of legislative initiatives advanced by House members were dismissed by James G. Richmond, the Justice Department's new special counsel for financial institutions.

The Justice official said he opposes measures to set up a national commission to investigate S&L fraud and abuse; establish local strike forces to crack down on thrifts; set a deadline of Jan. 1, 1992, for the Justice Department to work through its backlog of S&L cases; put Secret Service investigators to work on S&L cases; and set up a financial services crime division at the Department of Justice.

The RTC has made criminal misconduct referrals to the Justice Department for more than half of the thrifts it controls, said Mr. Seidman. He said insider abuse and misconduct significantly impaired 40% of RTC-controlled thrifts, and indicated that the agency sees growing evidence of collusion among lenders. About 15% of thrifts controlled by the RTC were involved in "irregular and possibly fraudulent transactions with other financial institutions," he said.

In Texas, Edwin T. McBirney 3d, former president of Sunbelt Savings Association, was indicted on charges of defrauding the government in connection with a $700 million real estate scam, according to Justice.

Mr. McBirney acquired the institution in 1982 with five associates. Sunbelt and seven other insolvent S&Ls were consolidated and managed by the Federal Savings and Loan Insurance Corp. in 1988 as part of the government's Southwest plan. □

Some Proposals to Tackle Thrift Crimes

Sponsor	Measure
HOUSE	
Gerald Kleczka* D-Wis.	Create financial services crime division at the Justice Department.
Stephen Neal D-N.C.	Justice must prosecute 50% of cases by yearend, up from 1991.
Peter Smith R-Va.	Appoint special prosecutor for thrift crimes.
Chalmers Wylie R-Ohio	Form commission to investigate crisis.
SENATE	
John Heinz R-Pa.**	Increase penalties up to life sentence for most severe S&L frauds; authorize $487 million over three years for federal agents and prosecutors.
Terry Sanford D-N.C.	Require attorney general to accelerate dealing with regulators' referrals of S&L crimes.

*Sen. Robert Graham, D-Fla., has sponsored a similar measure in the Senate. Numerous senators have companion versions to House bills.
**Rep. Tim Wirth, D-Colo., is House cosponsor. Measure passed Senate Wednesday as part of omnibus crime bill.

How they spend it is their business.

Last year, American businesses spent over $100 billion for hotels, meals and airline travel.

Plus billions more for entertainment, supplies and unexpected emergencies. From fixing a fax in Detroit to fixing a flat in Quebec.

The best way to tap into this enormous market is with the Visa® Business Card program.

Cardholders already rate Visa as their number one bankcard, both overall and for business T & E. And the Visa family of cards consistently gets the highest response on solicitations.

With this proven selling power, the business card program will be both easy to sell and lucrative to offer.

The best program for you is also the best one for your customers. They get the advantage of over 284,000 Visa member branches and 44,000 ATMs in 38 countries. Which gives them unequaled access to money all over the world.

Whether it's for a cafe in Paris, a cafeteria in Paducah or just the neighborhood deli.

Your customers also have the advantage of a superior MIS reporting system. Designed to help control and manage both their travel and business expenses.

They get detailed, timely reports broken down in expense report form—monthly, quarterly or annually. And the ability to customize reports according to their specific business needs.

Our program also integrates with your billing system and that of travel agents. Which will keep both your corporate and travel agent clients happy.

They'll be even happier when they hear about the new benefits we've added to the business card package. We'll soon be launching a national consumer campaign that will explain these benefits in detail.

To get the details on how you can sign up, just give us a call at the phone number nearest you. In San Mateo, California, call us at (415) 570-2120 or in McLean, Virginia, call us at (703) 827-8404.

And do it soon.

Because the business of business is booming.

VISA It's everywhere you want to be.

How they pay for it should be yours.

Amro Cuts a Merger Link To Clear Way for Another

By JOHN EVANS

LONDON — Amsterdam-Rotterdam Bank cut its last links with Belgium's Generale Bank on Wednesday, paving the way for merger with Amsterdam-Rotterdam's fellow Dutch bank, Algemene Bank Nederland.

Amro said that its chairman, Koelof Nelissen, had resigned from Generale Bank's supervisory board. Also, Generale's chairman, Paul Janssen, has left the Dutch bank's board.

The Last Remaining Links

The seats on the respective boards were the only links that remained after merger plans were abandoned in August 1989. The two banks had planned to merge to compete better when the European Community becomes a single market in 1992. But their plans were scuttled because of legal, tax, and supervisory problems.

Amro's deal with Alegemene Bank Nederland is intended to strengthen its position at home and abroad.

"We're back to where we started – good friends, that's all," said an Amro spokesman.

The proposed Dutch merger, first announced in March, will create Europe's seventh-biggest bank, with $170 billion in assets, and one of the world's top 30 banking companies.

Amsterdam-Rotterdam and Algemene Bank Nederland have made it clear that their merger is aimed not only at speeding their banks' ability to expand abroad but also at strengthening their combined position in their own domestic market.

Strong capitalization is required "if you want to be a global player from a small market like the Dutch," said ABN chairman Robert Hazelhoff. "A merger would put us among the top banks and allow us to expand rapidly." □

U.S. Orders Writedown on Latin Loans

Continued from *page 1*

medium and long term.

Regulators ordered banks to write down their loans to Argentina by 40% last year after the country suspended interest payments. The latest writedowns mean regulators do not expect banks to collect more than 40 cents on the dollar of their loans to the Latin American country.

Argentina resumed nominal interest payments of $40 million a month in June. Brazil has not paid any interest on its foreign commercial bank debt since March 1989.

Wednesday's action by the Interagency Country Exposure Review Committee was the first time banks have been ordered to write down Brazilian loans. The regulatory agency comprises nine representatives from the Federal Reserve Board, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corp.

"Argentina is an anticipated continuous writedown, but Brazil is a new name in the equation," said James J. McDermott, executive vice president with Keefe, Bruyette & Woods Inc. in New York.

The level of reserves against losses on Third World loans varies widely. J.P. Morgan & Co., for example, is reserved for 100% of its loans.

Citicorp, however, is reserved for only 38% of its medium- and

James J. McDermott
Keefe, Bruyette & Woods Inc.

long-term loans, Manufacturers Hanover Corp. for 35%, Bank-America Corp. for 41%, and Chase Manhattan Corp. for 45%, according to Keefe Bruyette.

Citicorp will not be affected by the latest Argentine writedown since it wrote off 60% of its loans to the country last March, on its own initiative.

The reserves of Citicorp and other major banks will be seriously depleted by the Brazilian writedown.

At yearend, Brazil owed Citicorp $3.9 billion, BankAmerica Corp.$2.65 billion, Chase Manhattan Corp. $2.3 billion, Manufacturers Hanover Trust Co. $2 billion, and Chemical Banking Corp. $1.5 billion.

Argentina owed Citicorp $900 million, Manufacturers Hanover $888 million, Chase $580 million, J.P. Morgan $400 million, and BankAmerica $380 million.

Although banks stand to gain tax deductions from the writedowns, they will be of little benefit due to lackluster earnings.

"Profits are at depressed levels and tax deductions are about the last thing banks need now," said J. Richard Harvey Jr., a partner with Price Waterhouse.

The writedown order apparently took bankers by surprise. Few of them expected the U.S. government agency to order additional writedowns because both Argentina and Brazil were moving to open talks with their banks. □

U.S. Banks Build Dominance in Global Syndication

Continued from *page 1*

magazine reported.

U.S. banks are "learning earlier than most banks" to adjust to the tougher lending climate, said Rudiger Eisenhart-Rhote, a managing director at Chase Manhattan Corp. "Necessity is a very forceful innovator."

Guidelines issued by the Bank For International Settlements require banks to back their loans with more capital. International loan syndications have become increasingly attractive because they pool risk among a group of banks, requiring participating banks to put up smaller amounts of capital.

And the big banks that arrange syndications also welcome the much-needed fees that they collect for their efforts.

While money-center banks such as Citicorp have historically been major forces in loan syndications, they have rarely dominated to the extent seen this year, bankers said.

For example, Chemical Banking Corp., ranked 19th in first-half 1989 lending, jumped to second place this year. Continental Bank Corp., ranked 17th a year ago, is now in 10th position. The only non-American to figure in the top 10 is Britain's National Westminster Bank PLC, standing in third place.

Successes in Europe

Europe's banks were not unduly favored by the surge in corporate borrowing in their home market. Citicorp has won the key coordinator role in a $1 billion loan currently being sought by Enimont, an Italian industrial concern.

J.P. Morgan & Co. won prestigious deals like the $1.4 billion loan facility for Bayerische Motorenwerke (BMW), the German automaker. Morgan has also received the mandate to raise $1 billion for West German industrial group Thyssen AG, acting together with Deutsche Bank AG as colead manager.

"U.S. banks, including ourselves are having some notable successes in capturing European loan business which formerly would have undoubtedly gone to European relationship banks, a move definitely helping our rankings this year," said Morgan's Hugh Payton, vice president and loan-syndications head.

Citicorp: Most Active

Citicorp was by far the most active arranger in volume terms, syndicating just over $31 billion or almost double that of its nearest rival, Chemical Bank, with $15.4 billion.

Only two Japanese banks figure among the 20 leading lenders, a big reversal over previous years when Tokyo banks were among the main sources of global loan financing. But U.S. bankers said much of this past clout hinged more on the ability of Japanese lenders to book assets easily than their skills as loan arrangers.

"The Japanese have really pulled back and this has caused big changes in the [loans] market. They now closely scrutinize every loan for profitability, Mr. Payton said. □

Utah Decision Opens Door to Interstate Branch Banking

Continued from page 1

this trend, it will put pressure on banks to flip to a federal charter," he said in a telephone interview.

On another front, Mr. Sutton has made waves at the Office of Thrift Supervision. The federal thrift regulator has sued him for allegedly encouraging a thrift he regulates to convert to a commercial bank without OTS approval. It is another flashpoint in the debate over where state regulators should defer to federal authorities.

Currently, state laws widely restrict or prohibit such branching. An unpublished survey by the Conference of State Bank Supervisors found that only Utah, Nevada, Rhode Island, and Virginia allow interstate branching.

"In most states, it would require state statutory action" before interstate branching could become common, said Washington State Banking Supervisor Thomas H. Oldfield.

BankAmerica referred questions about its Arizona charter to its outside attorneys.

The branching authority of federally chartered banks is defined by the McFadden Act of 1927.

Exception, Not the Rule

This federal law does not specifically bar interstate branching by state-chartered banks outside the Federal Reserve System. But traditionally, the law has been interpreted to allow interstate branching only in exceptional cases. These have included offices already open when the law was enacted and banks that relocated their headquarters across state boundaries.

Generally, banking companies have been able to operate in more than one state only under a holding company structure in which each state unit is separately chartered and has its own board of directors and administration.

Many banks are convinced that interstate branching would save money by eliminating parallel administrations.

An Opening for States

The Utah case demonstrates that, when state law permits, state regulators can allow state-chartered institutions to operate branches outside their home states.

"Under today's law, if you are a state-chartered, nonmember bank and you have found two states willing to sign off, then you've got yourself a bank that can go across state lines," said William S. Eckland, a Washington, D.C.-based lawyer with Morrison & Foerster.

> **"Interstate banking is something whose time has come. I do not yet believe that interstate branching's time has come."**
>
> **William H. Rivoir**
> *Arizona banking superintendent*

By extension, the Utah precedent can be used to argue for interstate branching rights for nationally chartered banks and Federal Reserve members, Mr. Eckland said. The McFadden Act ties branching authority of federal institutions to that of state-chartered, nonmember banks.

States' Readiness Unclear

If Mr. Eckland's interpretation is correct, states would have broad authority to permit interstate branching.

It is not clear how many state banking commissioners are prepared to allow out-of-state banks to open branches within their borders or, if necessary, recommend that their legislatures change the law to permit interstate branching. But the Utah precedent could fuel moves by some states to liberalize interstate branching laws, banking experts said.

"A lot of states are going to look at [Utah] and see what happens," said Mr. Oldfield, the Washington State regulator.

Mr. Watt of the state bank supervisors' group said, "My feeling is, a majority of state supervisors would support interstate branching as long as there is no negative impact on safety and soundness and that the institution meets local standards."

Arizona Banking Superintendent William H. Rivoir remains opposed to interstate branching. He has blocked a BankAmerica proposal to operate Western's branches as units of its Nevada-chartered bank.

"By having an institution with corporate status here, [a bank has] a greater commitment to Arizona," he said.

"Interstate banking is something whose time has come. I do not yet believe that interstate branching's time has come."

Despite his position, Mr. Rivoir has agreed to work out a joint supervisory agreement with Utah, under which Mr. Sutton's office will be responsible for examining BankAmerica's Salt Lake City office. □

The 1991 Banker's Diary and Guide

A personalized planning tool that not only keeps track of your business activities—it becomes part of them.

Don't start 1991 without your most important business associate. The *1991 Banker's Diary and Guide.*

Impressive. The *Diary and Guide* has been specially prepared by *Banker's Magazine* and Warren, Gorham & Lamont with attention to the smallest detail...a genuine fine-grain leather cover...gilt-edged pages...personalized with the recipient's name, company name, or company logo embossed on the cover in 23-karat gold.

Practical. The *Diary and Guide* will help you organize your business, set appointments, and save time throughout 1991. At a single glance, you can plan for the week at hand, or from month to month.

Intelligent. A uniquely-functional desk reference for bankers, the *Diary and Guide* was designed with your information needs in mind. You'll find important bank reference material—facts, figures, charts, sources, checklists—including:

- Annual compound interest annuity table
- Treasury bill yield computations
- Tax-exempt yields and taxable equivalent yields
- Bond and security glossary
- Income tax rate table
- And much more!

Ideal. As a gift for your clients. Your staff. Or even as a treat for yourself. It's a convenient reference and planning tool to use—and depend on—daily.

The *1991 Banker's Diary and Guide*—plan on it. For more information, call:

Thomas P. Short
Vice President, Corporate Employment Services
AMCORE Financial, Inc.
501 Seventh Street - Suite 400
Rockford, IL 61104
An Equal Opportunity Employer M/F/H/V

MANAGING EDITOR

Every single story in this new financial service industry newspaper is going to help its readers do their jobs better. The readers expect and will get "hands on" over how to do information. Hands on is how the ME will have to do the job every week. Knowing how financial services executives work and what they need, the ME will plan, assign, rewrite, bounce the copy until its right, then see the paper out the door. The staff will be lean but enough to do the job, including a fast, demanding design. There'll be plenty of correspondents but they will need training in the paper's style. The key is knowing the financial services business from the inside. If you do, you may be able to meet this unusual journalistic challenge. The readers are there. Hard work and dedication will yield generous rewards. Write with resume:

Breeden Asks Congress for Radical Banking Reforms

Continued from page 2

that, if the Office of the Comptroller of the Currency relaxes rules governing the marketing of bank collective investment funds, the SEC would require that the investment vehicles be registered as mutual funds. Collective investment funds were traditionally offered only through bank trust departments.

Subcommittee Chairman Edward J. Markey, D-Mass., expressed concern that the Comptroller's proposal would not afford adequate supervision of bank investment products, which would compete against SEC-regulated mutual funds. He said he plans hearings on the issue when Congress returns from its August break.

Action Foreseen in 1991

As Congress prepares for what is likely to be major movement toward restructuring legislation in 1991, Mr. Breeden's testimony gives the clearest indication yet that the Bush administration will press for big changes.

Mr. Breeden, who is the administration's point man on last year's savings and loan bailout legislation, and he is still widely believed to have the President's ear on financial services issues.

However, while Mr. Breeden was outlining his vision of reform, Wednesday's hearing gave ample evidence that many obstacles blocking past reform efforts remain in place.

Mr. Markey told Mr. Breeden that, while some provisions of both Glass-Steagall and the Bank Holding Company Act may require modification, "I have yet to be convinced that, in a world where certain truths hold constant, the basic thrust of that legislation is misguided."

Mr. Markey – whose subcommittee will have a big hand in any restructuring bill considered by Congress – also held out the prospect of comprehensive legislation, including deposit insurance reform, in the next Congress.

'Deaf Ears'

One restructuring proponent, Rep. Jim Cooper, D-Tenn., told Mr. Breeden that, while he "had made important recommendations," his words "had fallen on deaf ears.

"I don't know of any way to overcome the interest-group gridlock on this," Rep. Cooper said, referring to the turf wars among the banking, securities, and insurance industries that have blocked action in the past.

Mr. Breeden said each regulated subsidiary of a bank holding company would be supervised by function; that is, an insured bank would be overseen by a bank regulator, while a broker-dealer subsidiary would be supervised by the SEC.

Mr. Markey, the subcommittee chairman, said that in Mr. Breeden's scheme no single regulator served "as a tiebreaker."

Siebe's $900 Million Acquisition Loan Not Deemed 'Highly Leveraged'

By STEVEN LIPIN

Siebe PLC has arranged roughly $900 million in bank financing for the acquisition of Foxboro Co. Bankers said it is one of the largest acquisition-type loans that does not fall under banking regulators' definition of a highly leveraged transaction.

The banking units of Bankers Trust New York Corp. and Chemical Banking Corp. have agreed to underwrite the entire facility for Siebe, the U.S. arm, a source at one of the banks said. Bankers Trust has been Siebe's traditional banker in the United States.

While the loan is not strictly speaking an H.L.T., fees and pricing are expected to be generous and approach those commanded by highly-leveraged transactions. The source said final pricing and fees had not been determined by late Wednesday, but tentative pricing was set at prime plus 125 basis points, or the London interbank offered rate plus 225 basis points. Fees were said to be over 200 basis points.

A Question of Equity

One banker involved said there is enough equity in Siebe's capital structure to qualify the new loans as unleveraged, even though the $900 million will go toward the acquisition of Foxboro. The interest coverage ratio is two and a half times, indicating significant excess cash flow.

The two banks are expected to launch the primary syndication today, the banker said. One banker not involved in the deal said initial responses were positive.

Siebe PLC, based in the United Kingdom, manufactures industrial and environmental controls. Foxboro, based in Massachusetts, produces process controls for manufacturing.

Siebe is tendering for all outstanding shares of Foxboro Co. at $52 a share. The tender expires July 27, and Siebe needs two-thirds of the shares for the acquisition to go through. Siebe officials could not be reached for comment by press time.

Expensive Price Tag

On June 25, Siebe won an auction for Foxboro and agreed to buy the company at a price that represented 75% over Foxboro's share price before the company put itself up for sale.

At the time, a number of analysts said the $656.4 million price tag for Foxboro was expensive, considering the company posted a net loss in 1989 of $4.6 million. But Siebe has had a string of successes in U.S. acquisitions, including Robertshaw Controls Co. and Ranco Inc.

It was not clear late Wednesday why the company was raising $900 million in debt for a $656 million transaction, but one reason could be for refinancing existing Foxboro debt.

The other large acquisition loan that was not considered an HLT was the $1 billion facility for MCI Communication Corp. for Cellnet Data Systems USA. □

United Tote's Banks Refinance Bridge Loan

By WILLIAM GOODWIN

United Tote Inc. said its banks committed to provide $46.9 million in new loans to refinance a bridge loan obtained last December for the acquisition of Autotote Systems Inc. for $87.8 million in cash and securities.

MNC Financial Inc.'s Maryland National Bank, Baltimore, committed to provide $31.9 million in new funds, with the balance to be provided by U.S. Bancorp's U.S. Bank of Washington, Seattle.

The two banks and Wembley Inc., a United Tote stockholder, provided last year's bridge loan. The loan, which was originally set to expire June 30, has been extended through Sept. 30 to allow time for completion of the new financing.

The new financing consists of a $7 million revolving credit due March 31, 1992, and a $39.9 million term loan, also due in March 1992.

Similar Pricing

The revolver is priced at prime plus 100 basis points and the term loan is priced at prime plus 150 basis points, according to David Jorgenson, United Tote's vice president for finance.

United Tote will pay fees amounting to 1.5% of the loan, Mr. Jorgenson said.

Pricing on the original bridge loan was prime plus 150 basis points.

United Tote, Shepherd, Mont., supplies computerized betting machines. It financed the balance of the Autotote Systems acquisition last year with a combination of subordinated debentures and stock. □

OTS Rejects Fulton Federal's Plan

NEW YORK — Fulton Federal Savings Bank, Atlanta, said Wednesday the Office of Thrift Supervision had rejected its plan for complying with the capital requirements stipulated in the 1989 thrift-bailout law.

The $2.4 billion-asset thrift said the action left it subject to a variety of supervisory and enforcement actions. But chief executive Henry B. Garmon said, "We remain committed to working with the regulators to develop a solution to Fulton Federal's capital problems."

The thrift also announced an agreement to sell most of its $1.5 billion mortgage-servicing portfolio to Bibliotech Savings Bank, a Dallas thrift now under Senate scrutiny. Bluebonnet is one of several problem thrifts organized under the controversial Southwest plan, an attempt by the defunct Federal Home Loan Bank Board to resolve thrift problems in Texas.

Fulton Federal is at least $100 million short of its required tangible capital, a spokesman said. The thrift's capital plan had called for selling 22 branch offices in the Atlanta area. □

Chase in Pact To Service Loans

NEW YORK — A unit of Chase Manhattan Corp. has purchased rights to service about $2 billion of home loans from a subsidiary of capital-strapped Commonwealth Savings.

Officials at Chase and Crossland confirmed rumors of the deal, but information on terms was not immediately available.

Market sources pointed to the transaction as a prime example of how banks are gaining ground in all aspects of mortgage finance as the thrift industry struggles to meet the requirements of the 1989 bailout law.

Chase Home Mortgage Corp., based in Tampa, Fla., is one of the nation's 10 largest servicing companies. At the end of 1989, it was servicing about $14 billion of loans for investors.

A spokesman for New York-based Crossland said the thrift's mortgage unit routinely sells some servicing rights. He said the sale to Chase was not designed to help the thrift meet new capital rules "but it certainly helps." □

This announcement is neither an offer to sell nor a solicitation of an offer to buy these securities. No offering is made except by the Prospectus, a copy of which has been filed with the Department of Law of the State of New York. The Attorney General of the State of New York has not passed on or endorsed the merits of this offering.

Description of table: For lenders and borrowers who want rate swap market, the LIBOR swap yield curve is the benchmark interest rate used to active participants when arranging the exchange of fixed- and floating-rate cash flow streams of different maturities. For example, a fixed-rate lender holding a one-year fixed-rate loan and wishing to swap into floating would pay the one year rate at the end of a year in exchange for a floating-rate payment stream, usually 3-month LIBOR, paid and reset quarterly.

CityTrust Rises Despite Woes In Real Estate

By FRED VOGELSTEIN

Even though most bank stocks have been falling recently, in anticipation of another dismal set of earnings reports, shares in CityTrust Bancorp, one of the most troubled, have been rising, confounding analysts.

At the close of trading Monday, the stock was at $6.375, up 50% from its July 2 low of $4.25. Since then, the stock has given up only a little of the ground it gained. It closed Wednesday at $6, down 12.5 cents.

Still, analysts say to stay away from the stock. The Bridgeport-based bank has been staggering

A Slight Recovery: Will It Last?

CityTrust Bancorp's price per common share

Price of $6.125 at 3 p.m. on Wednesday
Source: DB Technology Inc.

for more than a year under the weight of bad real estate loans in a market that shows no sign of improving. Its capital is running low, analysts say.

Little Value Seen

"It'll probably round up at zero," said Donald Kauth, an analyst at First Albany Corp. He said he was skeptical of the bank's ability to survive. "It's critically short of capital and long on nonperforming assets."

The company's $85 million in loan loss reserves cover only 30% of its first-quarter nonperforming assets of $285 million, the lowest coverage of any major bank in the area. Those $200 million of unreserved nonperforming assets are more than three times the bank's equity of $60 million.

The bank, which had 1989 assets of $2.63 billion, is due to to report second-quarter results July 18. Analysts expect the losses to continue, although some have stopped predicting how bad they will be. James Plunkett, a company spokesman, would not comment on the prospect of earnings or losses.

No Explanation

As for the recent rally in the stock, "I was surprised the shares stayed as high as they did for so long [when they traded at $9]. I don't know what's causing this," said Lacy Shockley, an analyst at Smith Barney, Harris Upham & Co.

The stock, which traded as high as $34.375 last summer, has been sliding steadily since then. It started May at around $9.50. By the beginning of July it had fallen to its all-time low of $4.25.

Gerard Cassidy, an analyst at Tucker Anthony Inc., in Portland, Me., theorized that the stock's thin trading float was partly responsible for the rise. "One buyer or seller can drive it up or down," he said.

Insiders hold nearly 40% of the company's 4.2 million shares, he said.

"They still have a good franchise in a good market. Maybe someone decided it was so cheap it was worth buying," said Charles Cranmer, an analyst at Shearson Lehman Hutton. "When stocks reach those levels, they don't move on fundamentals."

* * *

WEDNESDAY'S MARKET

Bank stocks tracked the market for the second day in a row, closing mostly higher as the Dow rose 42.08, to 2932.92.

US Bancorp, in Portland, Ore., led the way, gaining $1.50, to $30.25, on news of record second-quarter earnings, a rarity for banks these days.

"Strong loan growth and our philosophy on controlling expenses were two factors leading to these fine results," said Roger L. Breezley, chairman and chief executive officer.

Net income for the second quarter was $47.3 million, or 95 cents a share, up 23% from the $38.4 million, or 78 cents a share, earned in the same last year. Return on assets was 1.10% and on equity 17.20%.

Earnings Estimates Raised

J. Richard Fredericks, an analyst at Montgomery Securities, said the results were so good he was raising his earnings estimates for the year from $3.60 to $3.70 and predicting a 10% to 20% increase in the dividend in the third quarter.

"That growth rate will be at the top of the banking industry for the year," he said.

Wells Fargo & Co. rose $1.375, to $76.25, possibly on news that the outlook for California banks remained strong.

Sovran Financial Corp., which hit a 52-week low of $26 on Monday, climbed $1.125, to $27.25, on Wednesday. It is due to report second-quarter earnings next week, following the completion of its exam from the Office of the Comptroller of the Currency. Although all agree earnings will be down, there is no agreement among analysts about how much.

NCNB Corp. was among those that fell Wednesday, losing 25 cents to reach $34.625.

"I would assume it's primarily concerns about asset quality," said Marc Alpert, an analyst at Bear Stearns & Co. "I think those concerns are exaggerated. We expect nonperforming assets to rise less than 20% in the second quarter, which is better than most Southeastern banks." □

CAPITAL

Spanish Bank to Offer Shares in the U.S.

By KELLEY HOLLAND

In the first of what could be a wave of offerings by foreign banks, the Spanish bank Banco Central is readying an issue of five million American depositary shares, representing 2.5 million shares of common stock.

A number of European banks could soon be actively tapping the American market in order to gain wider placement of their shares before the economic unification due in 1992, market sources said.

"Issuing in the U.S. could give them a wider distribution base and more investors," said Frederick L. Psorro, a senior vice president at Thomson BankWatch.

Broadening Investor Base

As for Banco Central, it is clearly broadening its investor base through the upcoming offering. The offering being readied for American and Canadian investors is taking place at the same time one million American depositary shares will be offered overseas.

Capital raising is not a pressing need for the highly profitable Banco Central. Its net interest margin was a hefty 4.79% on an annualized basis in the first quarter of 1990, and its annualized return on average shareholders' equity was about 48% for the quarter.

Banco Central's Vital Statistics

Capital and profitability ratios as of March 31

Net interest margin	4.79%
Return on average shareholders' equity	48.43%
Tier 1 capital ratio	7.32%
Total capital ratio	11.71

Source: Banco Central

At the end of March, the bank had Tier I capital equal to 7.32% of its risk-weighted assets and a total capital ratio of 11.71%, well in excess of the 4% and 8% required minimum levels, according to a preliminary prospectus.

"When you look at the Spanish banks' capital ratios on a stated basis, they have very good reserves," Mr. Psorro said.

Europeans Get First Crack

Officials from Banco Central are currently marketing a concurrent overseas offering of one million shares to European investors. They will be marketing the domestic issue in the United States next week, according to a senior official at Banco Central.

The offering is for shares now held by an unconsolidated insurance broker subsidiary of Banco Central. Proceeds will be used for general corporate purposes.

Prudential-Bache Capital Markets is lead manager of the offering. Officials there declined to comment on the offering because it is in registration.

MARKET MONITOR

Sumitomo Bank priced its $500 million 10-year subordinated debt offering at 102 basis points over comparable Treasuries, with a coupon of 9.55%.

The spread over Treasuries is tighter than it has been for any of the American banks in the market for subordinated debt recently. Even Republic New York Corp. offered a yield 105 basis points over Treasuries when it issued $100 million in 10-year subordinated debt late last month.

* * *

Standard & Poor's Corp. lowered its ratings on Shawmut National Corp. on Tuesday, citing the bank's recent announcement that its nonperforming assets could increase nearly 20% in the second quarter.

Shawmut's subordinated debt is now rated below investment grade at BB-plus, down from the previous rating of BBB. □

VOL. CLV NO. 136 — Friday, July 13, 1990 — 155th year

This Is Friday, So Expect Tales Of Big Seizure

By TOM LEANDER

NEW YORK — Boston has become the banking industry's rumor hub.

Every Friday — the day the Federal Deposit Insurance Corp. usually seizes troubled financial institutions — whispers abound in Boston that Bank of New England may be targeted for takeover.

The FDIC has declined to comment. And Bank of New England officials said they have reassurances from the agency that such a move is not imminent.

Nevertheless, the rumors fly. They first circulated when the bank announced a $1.1 billion fourth-quarter loss because of massive real estate loan problems. And several recent developments have fed the rumor mill.

ANALYSIS: *Follow-up on the news*

• Two weeks ago, a senior FDIC official predicted that the bank insurance fund could decline by as much as $2 billion this year if real estate problems persist and any large bank fails. Since the FDIC typically takes in $4 billion a year, that would imply losses of about $6 billion. Such a loss could only be produced by the failure of a bank the size of Bank of New England.

• In late June, a horde of FDIC examiners suddenly checked into Boston hotels, registering as employees of a mysterious concern, the Who Co. No one – including the FDIC – has produced an exact number of examiners. Reports have said 100. Some analysts said the total may have reached 300, then declined. At any rate, most agree that too many examiners are on hand for just the takeover of a string of smaller banks.

• Last month, two investment bankers advising major bondholders claimed that a Bank of New England Corp. vice chairman told them "one or more" subsidiary banks were in danger of failing within months. R.T. McNamar has denied he made that statement or that the conversation even took place. Some observers believe the report, however.

Bank of New England Corp. has four subsidiary banks. The obvious target for a seizure would be the flagship Bank of New England unit in Boston, analysts said. It has $15 billion in assets.

Other Subsidiaries Vulnerable

And some have suggested that, simultaneous with a Bank of New England seizure, regulators might take over the $9 bil-

ATM Derby: Diebold, IBM Join Forces

By RICHARD LAYNE

NEW YORK — In a bid to lead the global market for automated teller machines, Diebold Inc. and International Business Machines Corp. have agreed to form a joint company to manufacture and market self-service banking devices worldwide.

The joint venture gives Diebold a substantial marketing presence in the hot European market and access to IBM's research and development, placing the company on at least equal footing with its computer company rivals.

NCR Is the Leader

IBM and Diebold plan to develop a new generation of self-service machines, using advanced technologies that will allow the machines to grant loans and accept bank documents.

Together, the two companies still trail NCR Corp., the worldwide market leader. According to *The Nilston Report*, an industry newsletter, NCR shipped 15,800 units last year, more than double Diebold's 7,301. IBM shipped 2,955 machines. If the joint venture can overtake NCR in the European market, it could

Fed Set to Go Beyond Capital Rules of 1992

By ROBERT M. GARSSON

WASHINGTON — The Federal Reserve Board is working on a proposal to require increases in bank capital levels well above the risk-based standards that regulators are phasing in over the next two years, Fed Chairman Alan Greenspan said on Thursday.

In a wide-ranging policy statement before the Senate Banking Committee, Mr. Greenspan did not give specifics on the increase in capital requirements but said they would be "not insignificant" over an extended period.

The minimum would go higher than the 8% ratio of total capital to risk-based assets that the United States and other major countries have agreed to impose by the end of 1992. About 90 of the 100 largest U.S. banks had already hit the 8% level by year-end 1989.

Limits on Expansion

Banks falling short of capital requirements should not be permitted to expand into new lines of business, Mr. Greenspan added, because insufficient capital could threaten the "federal safety net." He said arguments that higher capital standards would place U.S. banks at a disadvantage against international competitors are "short-sighted."

Alan Greenspan
Federal Reserve chairman

"Too many banking organizations, in our judgment, have traveled too far down the road of operating with modest capital levels," he said.

Bank Stocks Driven Down

Mr. Greenspan's threat, made in remarks Thursday morning, to increase the capital burden helped drive down money-center bank stock prices. Chase Manhattan Corp. and Manufacturers Hanover Corp. were off $1 much of the day. Chemical Banking Corp. fell 75 cents to $24.125 in late trading, and Bank of New York fell 62.5 cents to $30.625. Visa, Paying a Fee of $20 Million, Sees Gold in Olympic Sponsorship

By YVETTE D. KANTROW

NEW YORK – Visa is renewing its corporate sponsorship of the Olympic Games – a strategy that in 1988 proved to be one of the most successful in its history.

The San Mateo, Calif.-based card association plans to sign a pact today making Visa the official card and travelers check for the Games. Visa is paying an estimated $20 million for that privilege and will gain the right to use the Olympics' logo of five interlocking rings in promotions worldwide.

In addition to the sponsorship fee, Visa International is expected to spend $50 million to $60 million on related advertising and marketing campaigns by the time the 1992 events are completed in Albertville, France, and Barcelona, Spain. Advertising will include television, radio, and print efforts with an Olympics theme, and a number of special promotions.

A Cause-Related Drive

As it did for the last Olympics, Visa will sponsor a major cause-related marketing campaign under which it will make a small contribution to the U.S. team each time one of its payment products is used.

"No one gets the value out of the sponsorship fee that we do," said John H. Bennett, a Visa senior vice president who has been instrumental in aligning the card company with various sports

MNC Foresees Quarterly Loss Of $75 Million

By FRED VOGELSTEIN

Adding to investor fears about the Middle Atlantic commercial real estate market, MNC Financial Inc. announced Thursday that its problem loans would more than double and that it would report a $75 million loss for the second quarter.

The bank said in a press statement revealing preliminary results for the quarter that nonperforming assets rose to $750 million from $359 million and its loss would equal 90 cents a share. It said the loss was primarily due to problem loans for commercial real estate.

Largest in Capital Area

The increase raises the bank's ratio of nonperforming loans to loans outstanding to 5.35%, substantially more than the 2% to 3% that analysts have been considering normal recently. With $25 billion in assets, MNC is the largest banking company in the Baltimore-Washington area.

Analysts and an investor said

PEOPLE *in the news*

Innovator or Outlaw? Focus Is on Utah's Chief Regulator

By TERESA CARSON

LOS ANGELES — Normally, the commissioner of financial institutions for Utah does not spend a lot of time in the national spotlight. But George R. Sutton is grabbing attention because the Office of Thrift Supervision is suing him and because he is breaking ground on interstate banking.

Despite this, the 43-year-old Mr. Sutton is not considered a radical. "He is a fair and innovative regulator. He is not reckless or on the fringe," said David Adams, president and chief executive of the Utah League of Credit Unions, Salt Lake City.

The OTS is suing Mr. Sutton for allowing a thrift to switch to a bank charter without the agency's approval. It accused Mr. Sutton of defying an OTS order to seize Home Savings Bank, Salt Lake City, and instead encouraging the thrift to convert to a commercial bank.

In another case with national implications, Mr. Sutton allowed BankAmerica Corp., San Francisco, to branch into Utah using an Arizona bank charter. This eliminated the need for a separate Utah bank charter and is considered a major step toward interstate branch banking.

George R. Sutton

"I'm not trying to stir the waters," said Mr. Sutton, a native of Salt Lake City who studied philosophy at the University of Utah. But he admitted, "I'm willing to look at the regulatory framework a little differently."

Sutton Has Been a Utah Regulator for 7 Years

Mr. Sutton was appointed to his current post three years ago, after being deputy commissioner for four years. Before becoming a regulator, he worked for two small Salt Lake City law firms, where he specialized in real estate and small business.

As commissioner, Mr. Sutton oversees about 185 financial institutions – banks, thrifts, and credit unions – with about $7.5 billion in assets.

Lawry Alder, executive vice president of the Utah Bankers Association described Mr. Sutton as an accessible regulator. "You might have problems with one regulator trying to regulate several industries," he said. "But George tries to be fair."

Resolving Collapse of Thrift and Loan Industry

Mr. Sutton got a trial by fire as a regulator. When he came to the department in 1983, he said, "the thrift and loan industry and its insurance fund was in a general state of collapse." He and the former commissioner eventually closed six of the state's seven thrift and loans.

Mr. Sutton said he tries to balance his concern for safety and soundness with how financial institutions must respond to changing markets. "The health of a financial institution depends on its ability to operate successfully," he said. "They must compete with less regulated businesses, or we doom them to fail." □

Treasury Fears Home Loan Exits

Sees Threat To Funding Of Bailout

By DEBRA COPE

WASHINGTON — A senior Treasury Department official warned this week that an exodus of thrifts from the Federal Home Loan Bank System could impair the system's ability to contribute to the costs of the thrift bailout.

The warning led the Federal Deposit Insurance Corp. board to postpone a discussion at its meeting Tuesday on whether to permit a Wisconsin thrift to retain FDIC insurance after its planned departure from the Federal Home Loan Bank of Chicago.

State-chartered thrifts have traditionally been members of the Home Loan Bank System, but it is not clear whether membership is required for deposit insurance coverage.

Temptation to Cash In

Membership in the system gives thrifts access to liquidity and other operating services.

The Thrifts that Went Out
Applicants to leave the Federal Home Loan Bank System, as of June 25

	Home district	Assets ($millions)	Value of FHLB stock ($millions)
Security Savings & Loan Association	Chicago	$2,100	$14,000
Republic Capital Bank	Chicago	636	3,600
Kenosha S&L Association	Chicago	380	2,800
Wauwatosa Savings & Loan Association	Chicago	352	3,000
Home Savings Bank	Chicago	152	1,100
First S&L Association	Des Moines	147	800
La Jolla Savings Bank	San Francisco	144	880
American Home S&L	Des Moines	81	500

But with the system's earnings lagging, several thrifts have served notice to regional home loan banks that they wish to cash in their shareholdings and reinvest the money elsewhere.

In a Tuesday letter to FDIC Chairman L. William Seidman, Deputy Treasury Secretary John Robson urged the insurance agency to delay a decision on whether to let Wauwatosa Savings and Loan Association keep FDIC coverage after leaving the Home Loan Bank System.

The $352 million-asset thrift was the first to decide to leave the bank system and is the only one to have formally applied for a dispensation from the FDIC.

Taking Extra Time

Mr. Seidman's top aide, John Bovenzi, said Thursday that the

First Union and Wachovia Increase Profits

By KENNETH CLINE

ATLANTA — First Union Corp. reported a record loan loss 5.7% in the second quarter, and First Wachovia Corp. announced an 8% increase.

Meanwhile, NBD Bancorp Inc. reported that second quarter earnings rose 2.9% to $68 million.

First Union, Charlotte, N.C., and Wachovia, Winston-Salem, did not take any special loan loss provisions related to exams by the Office of the Comptroller of the Currency, which have caused serious problems at some other Southeastern banks.

First Union's nonperforming assets rose 23%, to $616 million. The company's results incorporated for the first time the full effects of its January acquisition of Jacksonville-based Florida National Banks of Florida Inc.

Gerard J. O'Meara, an analyst with the Atlanta-based brokerage firm Robinson-Humphrey Co., estimated that 45% of First Union's nonperforming assets derived from Florida National's portfolio.

James M. Rosenberg, an analyst with Shearson Lehman Hutton Inc. in New York, said First Union's nonperformers were "a little higher than expected," but expressed overall approval of the second-quarter numbers.

"First Union has been stalled for several years," Mr. Rosenberg said. "These numbers are beginning to show they're generating a little bit of steam after a long period in the station."

In the first half of the year, First Union earned $149 million, compared with a $146 million in the period a year earlier. The year-ago period included after-tax gains of $6 million, primarily from the sale of mortgage servicing rights.

First Wachovia, long considered one of the Southeast's best-run banks, continued its stellar earnings record despite its OCC exam.

"As expected, the impact [of

NEWS *briefs*

Torell Is Named Chairman Of Fortune Financial Group

CLEARWATER, Fla. — John R. Torell 3d, a former president of Manufacturers Hanover Corp. and chairman of CalFed Inc., was named chairman of Fortune Financial Group, parent of the $3 billion-asset Fortune Savings Bank.

Mr. Torell, 50, succeeds John A. Moran, who is chairman of Dyson-Kissner Moran Corp., New York. The latter company owns 9.97% of Fortune Financial's stock and has applied to the Office of Thrift Supervision for permission to buy up to 20%. The OTS required Mr. Moran to relinquish his Fortune post as a condition of the stock purchase.

Hove Appointment to FDIC Clears Senate Panel, 19-0

WASHINGTON — The Senate Banking Committee voted 19-0 to recommend that the Senate confirm the nomination of Andrew Hove to the Federal Deposit Insurance Corp. board.

Mr. Hove would fill a seat on the five-member board.

Northeast's Shareholders Approve of Restructuring

HARTFORD, Conn. — Shareholders of Northeast Savings have approved the formation of a holding company, Northeast Federal Corp. The Office of Thrift Supervision reported the move in April as part of a reorganization and capital-raising plan.

MCorp Signs Deal to Sell Waco Bank to Investors

DALLAS — MCorp said it has executed a definitive agreement to sell its interest in MBank Waco to a private investor group led by Gerald J. Ford, an owner of several Texas financial institutions.

MCorp, which is in bankruptcy, owns 100% of MBank Waco, which had $333 million in assets and $329 million in deposits March 31. □

Bankruptcy Trustee Fees in Doubt

Rulings Might Drive Them from Business, Banks Say

By JEANNE IIDA

NEW YORK — Bankers say recent court rulings indicate that they may be unable to collect operating fees when acting as trustee for a corporation that enters bankruptcy proceedings.

The judicial trend could cause some banks to stop offering these services or to raise fees in order to compensate for possible losses, said bankers with sizable corporate trust operations.

Banks' Alternatives

"These decisions clearly adversely affect our ability to do what we're supposed to do," said Robert I. Landau, Bankers Trust Co. senior vice president. "Banks may start to say, 'As soon as this issue starts to come down the tube, we're getting out, because we're not going to get paid.'" Or they may raise fees, "so the rest of corporate America will have to pay the cost."

Obligations of Trustees

The controversy centers on a bank's role as an indentured trustee.

When a corporation issues bonds, it must appoint a bank to act as trustee for its bondholders. The bank is obliged to process transfers and payments, maintain records, and handle bondholder inquiries.

When a company encounters problems meeting interest payments or has other financial difficulties, the bank is legally obligated to do what it can to make sure bondholders are paid.

Broader Interests

In several recent court cases, judges have decided that unless the bank acts to protect the interests of all creditors – not just the bondholders – it may be entitled to its operating fees and expenses from the bankrupt estate.

Bankers said they are especially concerned about the judges' rulings because of the number and size of bankruptcies. Dun & Bradstreet counted 49,719 bankruptcies in the United States in 1989; total liability was $35.6 billion. Dun & Bradstreet said the trend is slightly up in 1990.

Corporate trust services are offered by 1,854 banks, according to the Federal Deposit Insurance Corp. The FDIC has estimated that about 200 do 50% of the business.

> **"Banks may start to say, 'We're getting out.' "**
>
> **Robert I. Landau**
> *Bankers Trust Co.*

1939 Act Cited

Bankers say that trustees have an obligation under the 1939 Trust Indenture Act to look out for the class of creditors they represent. But doing so may sometimes be to the detriment of other creditors.

For example, if the issuer is having trouble making interest payments, the trustee might speed up payment on the principal of the loan. That could leave less for other creditors.

Amendment Suggested

Some bankers say they would like the federal Bankruptcy Code to be amended to more clearly describe the right of trustees to recover their fees.

They would also like the to be issue reviewed by the Securities and Exchange Commission, which early last year invited comments on the Bankruptcy Code. The SEC has not scheduled hearings to review the comments. The American Bankers Association wrote to the SEC late last year, saying it would testify in any hearings.

The case arousing the most controversy involved Manufacturers Hanover Trust Co. and a flight charter company that issued bonds and then went out of business. A circuit court ruled that Manufacturers Hanover was not entitled to full compensation. The bank had sought about $175,000 from the bankrupt estate in fees and expenses; the court allowed only $18,000.

An appeals court upheld the judgment. The bank settled out of court but maintained throughout that it had upheld its obligations to bondholders.

What Concessions Were Made?

The court essentially asked, "What sort of concessions did you make to help the case draw to a conclusion?" said Timothy Crane, who heads fiduciary operations for Hanover.

But bankers say their top concern must be bondholders.

Someone who has worked hard for the bondholders "should get paid for it," Mr. Crane said.

Additional Costs

Banks also are cautious when an account gets into trouble – a fact the courts are overlooking, Mr. Landau said. Costs triple because the bank spends more time on accounts and sends senior executives to administer them and attend meetings, he said.

Also, banks administering trust accounts engaged in bankruptcy proceedings lose chances to pursue other business, Mr. Landau said. "It's a double-edged sword, with both edges working against the trustees. Even if you get paid the normal fee, you lose money."

The uncertainty surrounding banks' right to recover fees "doesn't make for a viable corporate trust industry," Mr. Landau said. □

Diebold, IBM Join Forces In Global ATM Marketing

Continued from *page* **1**

emerge as the worldwide leader.

Diebold will be the majority owner of the new company, Robert P. Barone, Diebold's president, will become the chief executive officer.

IBM will have a minority stake in the venture, which will be based in Canton, Ohio. It is scheduled to open for business later this year.

Division of Territories

Diebold, which had $451 million in revenue last year, will market the new lines of self-service machines in the United States. IBM, which has worldwide marketing and distribution operations, will sell the machines internationally.

"We were looking to expand our distribution channel outside the U.S.," said Robert W. Mahoney, chairman of Diebold.

Separately, Diebold agreed to purchase IBM's ATM servicing business, increasing its own $241 million servicing operation by about $25 million in annual revenue. The price was undisclosed, but observers said it is less than the annual revenue.

Diebold Sales Trending Upward

Diebold has watched U.S. ATM sales stagnate in recent years, but the Canton-based company has experienced an upturn recently.

Analysts said a new generation of computerlike ATMs has sparked sales in the past six months. Also, a restructuring announced last year to attain manufacturing and operating efficiencies is slightly ahead of schedule, they said.

Mark L. Carr, vice president with McDonald & Co. Securities, Cleveland, said the announcement further brightens the ATM picture for Diebold.

Industry observers said Europe is the fastest growing ATM market, with sales increasing 18% to 22% a year.

Robert P. Barone
Diebold Inc.

"There is a fairly big market for new ATMs in the next five years or so," said Ron Mackintosh, chief executive for Computer Sciences Corp., a U.S.-based consulting and systems integration company, in Britain.

Cutting-Edge Technologies

In a telephone interview, Mr. Mahoney and Marvin Mann, vice president of IBM, said the self-service machines will use advanced technologies not now available in ATMs. They envision machines that can create and transmit images of documents between ATMs and a bank's main processing system. They also said that self-service machines may be equipped with artificial intelligence to emulate a customer's credit and grant car and boat loans.

Mr. Mann said IBM also plans to use the self-service machines in building branch automation systems.

Diebold and IBM will share research and development activities and will have laboratories in Canton and in two major IBM centers – North Carolina and Germany. Observers said the new products could be ready in 18 months. □

COMMENT/ *By Philip S. Corwin*

Insurance Powers Arrived In Bits, Pieces over a Decade

The struggle in the past decade to expand insurance opportunities for commercial banks has been arduous. In Congress, particularly, it's been a cliff-hanger.

In 1982, Title VI of the Garn-St Germain Act permanently restricted the Federal Reserve's power to permit new insurance activities by bank holding companies. In 1984, the Senate passed the Dodd amendment, which would have barred insurance activities by the two-thirds of state banks in bank holding companies. The measure died, but a one-year moratorium in 1987 froze federal regulatory action on the issue. In 1988, insurance provisions in the Proxmire bill would have both reaffirmed and restricted states' rights. It died, too.

Openings in Present Laws

The role of the American Bankers Association in the turbulent 1980s was to resist anti-

Mr. Corwin is director and counsel for operations and retail banking at the American Bankers Association in Washington.

competitive legislation while pushing for financial restructuring.

And while no federal law on the subject has been enacted since 1982, the ABA has explored opportunities available under existing law. It has helped individual banks seeking regulatory approval, state banking associations advancing state initiatives, and participants in critical litigation.

After simmering for years, the insurance powers pot has suddenly boiled over. New avenues have opened to banks seeking enhanced revenues and customer relationships through insurance products and services.

The remainder of this article reviews these new options.

Fixed Annuities Power

Feb. 12, the Office of the Comptroller of the Currency advised Goodhue County National Bank of Red Wing, Minn., that it could sell fixed annuities under the general authority of national banks to broker financial investment instruments.

Though generally marketed as a species of insurance, annuities

The ABA has explored opportunities available under existing law.

are not insurance under the National Bank Act because they lack the basic characteristic of indemnification against risk.

An April 1985 ruling by the OCC had allowed national banks to sell variable annuity contracts as securities that may be traded for the account of customers under authority of the Glass-Steagall Act. If the interpretation on fixed annuities withstands legal challenge, national banks will be able to market the full spectrum of annuity products – quite an opening, given that annuities generate about half of all life insurance company premiums.

Publicizing a Distinction

While judging as minimal the risk that customers may confuse annuities with Federal Deposit Insurance Corp.-insured accounts, the OCC nonetheless required full disclosure of this distinction.

Further, before an annuity sale, the bank must obtain a signed customer statement of understanding that the annuity is an obligation of the issuing insurance company and is not FDIC-insured. Also, banks are instructed to determine and fully comply with state laws governing annuity sales.

However, in March 1989, the OCC held that the National Bank Act preempts not only Tennessee's law prohibiting national banks from selling variable-rate annuities but also its statute requiring national bank employees to obtain a state license for such sales.

Hence, it is not clear that the OCC's advice to "fully comply" with applicable state law would include licensing requirements – although variable annuities are securities under federal law and therefore distinguishable from fixed annuities issued by an insurance underwriter.

FUNNY MONEY/ *By Tom Leander*

Unfunny Papers

A $174,000 lawsuit ain't "Peanuts," even when the defendant is famed cartoonist Charles M. Schulz.

It turns out that the creator of the "Peanuts" comic strip borrowed $174,000 from the ill-starred Penn Square Bank a decade ago – and the bank that took over the loan claims he never made a payment.

AP/Wide World

GOOD GRIEF! A bank is suing cartoonist Charles M. Schulz.

Details of the suit against Mr. Schulz and a dozen other investors were reported late last week by Robin Robinson, writing in the Oklahoma City *Journal Record Press*. According to Ms. Robinson, the investors' group borrowed nearly $1.7 million to participate in a drilling fund, the Copeland Energy 1980 Deep Program Ltd.

The notes were originally due March 1, 1985, but the borrowers apparently renewed them until March 1 of this year. Except for one borrower, who sent $98, they have yet to make any payments of principal or interest on the notes, the Oklahoma newspaper reported.

Penn Square, located in a shopping center in Oklahoma City, collapsed noisily on July 5, 1982. In August 1983 the Federal Deposit Insurance Corp. assigned the notes signed by Mr. Schulz and his coinvestors to Seattle First National Bank, a unit of BankAmerica Corp., which filed suit against Mr. Schulz and the others.

* * *

Chopping Overhead

Yasuda Trust & Banking Co. has found an imaginative way to cut costs, reduce trash, and save trees – all in one stroke.

Yasuda management announced this week that the company cafeteria will switch Aug. 1 to reusable plastic chopsticks.

The firm said it has been going through disposable wooden chopsticks at the rate of 650,000 pairs a year, generating three tons of garbage in the process.

A Yasuda spokesman said a cleaning system will be installed at the cafeteria to wash the new chopsticks at a cost of $6,600 per year. The current size of the bank's chopstick budget was not disclosed.

* * *

Guten Appetit!

East Germans have shown a lusty appetite for capitalist investment vehicles in the few short days since they merged their economy with West Germany through adoption of the western mark as the single currency for both sides.

Citizens of the new, free-market East Germany have invested the equivalent of several million dollars in bonds since July 1. So far, observers say, they have completely shunned the stock market.

Hundreds of financial advisers from East and West Germany are competing to attract business with their investment tips. Along with their appetite for bonds, East Germans are flocking to take advantage of banks that are paying 7.5% on deposits, double the rate paid under the communist regime.

Total East German deposits are estimated at the equivalent of $60 billion. The heavy rate of savings largely reflects the shortage of consumer goods under communism, leaving consumers with little choice but to put their cash in the bank.

Mistaken Identity

NBC-TV had some egg on its face the other night when it broadcast a news item about the Office of Thrift Supervision's civil charges against Thomas Spiegel, flamboyant former chairman of Columbia Savings and Loan Association in California.

The network's "Nightly News" program predictably showed a photograph while anchorman Tom Brokaw ran through the OTS charges against Mr. Spiegel: The thrift regulator claimed Mr. Spiegel took an unauthorized bonus and objected to his alleged use of funds from the junk-bond-laden thrift in Beverly Hills, Calif., to pay for personal travel and tickets to a Michael Jackson concert.

But someone at NBC blundered. Instead of showing Mr. Spiegel's photograph, the network flashed a picture of Lawrence K. Fish, former Spiegel associate and ex-president of Columbia Savings.

Mr. Fish, of course, is now lashed to the tiller at Bank of New England Corp., one of the nation's most troubled institutions.

Mr. Fish's institution spotted the error and was able to get it corrected for that night's NBC newscasts to the Rocky Mountain and Pacific time zones. Mr. Brokaw acknowledged the error nationally and set matters straight on July 6.

* * *

A Tiresome Subject

Cost-cutting may be one of the hottest trends in banking, but some executives clearly are not turned on by the subject.

Asked in a recent survey by Trans Data Corp. – a research subsidiary of the *American Banker* – for the most interesting cost-cutting measure that his institution has implemented, one banker responded: "They were all dull."

— Phil Roosevelt

GOOF: NBC showed Lawrence Fish, not Thomas Spiegel

Freddie Mac's Gold PCs offer a golden opportunity – the fastest investor payment schedule of any conventional mortgage-related security – just 14 days.

Freddie Mac has spent twenty years creating securities in response to investor needs. Securities like the original PC, the CMO, the WAC ARM PC. And now Freddie is introducing the latest enhancement to its PCs – the Gold PC,* available this fall, with a 14-day actual payment delay.

Add to that a guaranteed timely payment of interest and scheduled principal, as well as prepayments based on actual factors, and you're looking at one of the most attractive investment opportunities in the secondary mortgage market.

For more information about the Gold PC, or to find out how to convert standard PCs, call Freddie's investor hotline at (800) 336-FMPC.

STEADY FREDDIE

SMALL BUSINESS

Data Bases May Provide Edge in Choosing Clients

By LAURYN FRANZONI
Special to the American Banker

For many small-business bankers, trying to gauge their market share performance is like putting pants on an octopus: It is hard to know where to start.

But banks need to look closely at small businesses to decide which they want as clients, consultants say.

In small-business banking as in retail banking, "aggregate market share might be a very misleading statistic," said consultant Barry Deutsch of Coral Gables, Fla. "There are vast segmenting possibilities, and you'd be making a mistake if you failed to segment the small-business market."

Mr. Deutsch recommends that bankers consider three areas of segmentation: size, use of credit, and form of ownership (that is, family owned versus professionally managed).

Even if you knew market share, "you wouldn't know how profitable it was, or even if it was the right share," said Kathleen C. Holmes, executive vice president of Furash & Co., Washington. She advises banks on forming and improving their small-business units.

"You must ask who they are and how site-sensitive those business customers are," she said. Even if a bank has the sites to serve a particular business, she said, "credit quality is so uneven that you need a good screen to identify with whom you would like to do business. One bank may only want to bank 30% of a given market, based on profit potential."

Developing an internal tracking system for the small-business market need not be costly. Executives who have done it say critical elements are time and staff to develop high-quality data.

Some data-gathering services track small-business data, according to consultants. But few of these concerns break the data down into categories that are useful for banks' marketing needs. Loan Pricing Corp., a New York-based research and publishing firm, offers evaluation product designed to compare loan portfolios in a peer group.

> **Even if you knew market share, "you wouldn't know how profitable it was."**
>
> **Kathleen C. Holmes**
> *Furash & Co.*

Loan Pricing's ProtVal project considers criteria of loan portfolios including individual loan size, revenues of the small business, industry line, credit score, purpose, and fees. The results, however, are revenue projections and cost analysis, not market share data.

Ruth Stanat, president of Strategic Intelligence Systems Inc., New York, said the lack of pure data is one reason her firm no longer collects and reports for the financial industry.

"The key challenge banks face is to collect the correct information," she said. "You really have to build it on a local level using some public information and a lot of primary research."

TRW Target Marketing Services, Orange, Calif., offers customer lists based on demographics.

Help with Defining the Criteria

"Many banks have thought out who the customer is, and when we are given that profile we can help them further define the criteria," said communications manager Cheryl Bukacek.

For fees averaging $65 per 1,000 names, TRW scans its vast client lists for business marketing data. At additional cost, the company can prescreen a bank's target customer list according to payment histories, credit scoring, and other features.

"The bank marketer really has to take control," Ms. Bukacek said. "You need to know what you're trying to do and then track the returns carefully to learn how to make the lists respond even better next time."

Consultant Kathy Holmes says that identifying market share is a management issue rather than a technical one. "It's not a massive effort," she said. "Banks need a centralized business development data base."

Such a data base, much like a customer information file, should contain as much information as possible, including product and service usage, on individual business customers.

An Investment of Time, More Than Money

"It really represents more of an investment in time than money," Ms. Holmes said. "You need to dedicate at least one person full time to setting up and maintaining the data. And it's important that information get in and out . . . quickly."

Most advisers recommend beginning a small-business data base with Dun & Bradstreet Inc. or other basic information lists, including credit histories and basic financial data.

Then, they say, banks should use mass-marketing techniques such as mail and telephone surveys to update information on current and prospective customers.

"The data are so poor in small business that banks must continue to find ways to qualify the data base," Ms. Holmes said. "Most of the banks that are doing this well are banks in markets where it is impossible to know every business customer personally."

Ms. Franzoni is a freelance banking reporter based in Springfield, Mo.

The money that Visa will spend on its Olympic blitz will be annualized over its advertising budgets for the the next three years and will ultimately be shared by the 200,000 banks that belong to Visa worldwide.

Ad Space Available

Visa's competitors – American Express Travel Related Services Co.; Sears, Roebuck and Co.'s Discover Card; and MasterCard International – will be allowed to buy advertising space during Olympic broadcasts, but only Visa will be accepted within the arenas. And only Visa will have the right to issue cards sporting the Olympic logo.

"We're 'everywhere you want to be,' " said Mr. Bennett, invoking Visa's familiar advertising slogan. "It's a leveraging of that idea."

In aligning itself with high-profile events, Visa is engaging in the type of mass-marketing activities traditionally associated with household brands such as Budweiser, Coca-Cola, Kodak, and Pepsi Cola. In addition to the Olympic Games, Visa has been affiliated with the 1989 Super Bowl and the L.A. Lakers' appearances of the 1990 Paul McCartney World Tour.

... A Form of Leverage

"What we see with the Olympics, with McCartney, and with the Super Bowl, is a way to leverage" the relatively small advertising budget, Mr. Bennett said. While Visa controls 40% of the U.S. card market, it accounts for only 14% of the ad dollars spent in that market.

MasterCard has garnered its share of exclusive sponsorships in recent years, particularly in the sports realm. MasterCard is designated the official card of professional baseball, basketball, and hockey, as well as of the 1990 World Cup tournament of soccer.

Visa's sponsorship of the 1988 Olympic games proved fruitful for the card association. In the United States, Visa's sales volume increased 16% in 1988. The company had projected only 12% growth.

Others Grew More Slowly

By comparison, MasterCard saw U.S. sales volume increase 11% that year. American Express, which did not break down its sales volume by region that year, reported worldwide sales growth of 13%.

Aligning itself with the Olympics also helped Visa gain ground against American Express in the push for prestige, Mr. Bennett said. While American Express is often viewed as having more cachet than bank cards among frequent travelers and other upscale groups, Visa said sponsorships were slowly helping to change that image.

According to studies by Barna Research Group commissioned by Visa, the card was rated best for international travel by only 11.5% of consumers in early 1985. At the same time, 71% of consumers rated American Express the best.

Gaining on Amex

By January 1988, Visa was rated best by 21% of consumers and American Express by 58%. In October of that same year, 27% of consumers said Visa was the best card for international travel; 47% cited American Express.

"We didn't come out ahead, and it will be a long time before we do," Mr. Bennett said. "But that gain was significant for us."

Visa will begin to exercise its sponsorship rights long before the first torch is lit for the 1992 Olympics.

The association is planning an Olympic Card Club under which members marketing Olympic cards to consumers can offer additional benefits, including Olympic newsletters, pins, magazines, and packaged trips to the events.

Visa is planning to buy a substantial amount of advertising time during the Olympics broadcasts. Airtime goes for about $200,000 for a 30-second spot, about one-third more than prime-time advertising usually costs.

"You swallow that hard," Mr. Bennett acknowledged. But the largely professional audience, which has an average annual income of $40,000, is a desirable one for Visa. □

For $10,000 Deposit, First Union Donates a Tree

By ELLEN MEMMELAAR

Money may not grow on trees, but deposits are helping plant trees in South Carolina.

Earlier this week, the First Union National Bank of South Carolina launched a nine-month evergreen certificate of deposit. For every $10,000 invested, the Greenville-based bank will donate a tree to the South Carolina Parks.

Customers will receive a certificate verifying that the tree was planted in honor of the person they choose. Each depositor will also receive a book, "50 Simple Things You Can Do to Save the Earth."

"We thought it was important to come up with something that positioned us as a company concerned about the environment," said Jeep Bryant, a spokesman for the subsidiary of First Union National Bank, Charlotte, N.C. A radio and print advertising campaign, created by William Cook Inc. of Jacksonville, Fla., supports the product.

The bank is offering the CD at an initial interest rate of 8%, 8.10%, and 8.15% for amounts of $10,000, $50,000, and $100,000, respectively. The bank has 56 branches in 32 communities across the state.

"We congratulate First Union and its customers for their vision and for this act of conscience and caring," said Charles Harrison, assistant state park director of the South Carolina Department of Parks, Recreation, and Tourism.

"Everyone has an increasing awareness of our stewardship responsibility to our environment," said Sid Tate, chairman and chief executive of the bank. "We feel this is a chance to care for our state's environment while encouraging economic investment in our state." □

Lending problems stop here.

Sheshunoff™
High Performance Banking

Your lending area is the part of your bank most likely to get you in trouble. Maybe it already has, whether or not you know it.

We have your solutions.

You can choose from our professional publications, like the Sheshunoff™ *Self-Paced Loan Documentation Training*, *The Loan Management System*, *The Guide to Commercial Lending Law*, or *Financial Statement Analysis Software*. Each one has the strength of our years of hands-on experience behind it. And like all Sheshunoff tools and services, they recognize that every bank is different and requires its own unique solutions.

If you need more first-hand help, our staff of senior professionals can come to your bank, find the source of your problems, and give you concrete, realistic methods to deal with them safely and efficiently. We can even find problems that are just waiting to happen. So you can fix them before they do any damage.

Whether you use our information tools or our people, we never try to hand you a boilerplate answer.

We just bring all our years of experience helping banks around the country, and insights from our ongoing communication with banks of all types and sizes, to everything we do for you. So you get proven approaches that really work, tailored to your specific strengths and weaknesses.

Best of all, we've been around since 1971, and we'll still be here next week, next month, and next year. So you'll always be able to call us if you have a problem or a question.

For more information on our professional publications for lenders, call 1-800-456-2340. To find out how our senior consulting staff can help you; in complete confidence and without obligation, call Bill Meredith at (512) 472-2244.

1-800-456-2340.

Banks Gain Momentum in Servicing

Survey Finds Shrinking Share for Thrifts' Secondary Markets

By PHIL ROOSEVELT

NEW YORK — Commercial banks, as part of their broad push in home-mortgage finance, have been posting big gains in the business of servicing mortgages for investors.

An *American Banker* survey has found that bank-affiliated companies accounted for 43% of the servicing handled by the top 100 servicing companies last year, up from 35% just two years earlier. And some of the leading banking concerns in the field continue to post big gains this year.

Thrift-related servicing companies, meanwhile, saw their share drop to 20% from 29% in 1987, reflecting efforts to comply with the capital requirements of the thrift bailout law. Other mortgage companies, including independents and units of industrial concerns, saw their share rise slightly, to 37%.

Top 100 Servicing Companies

A ranking of the top 100 servicing companies, along with a description of their ownership, appears on the following two pages. This annual ranking focuses on mortgage companies and thus excludes a number of thrifts that perform servicing directly rather than through mortgage company subsidiaries.

Mortgage servicing, long the most profitable part of mortgage banking, entails funneling monthly payments from borrowers to investors, handling property tax and insurance payments, and initiating foreclosure proceedings.

The rise of commercial banks in the field, which follows a slide in the mid-1980s, underscores banks' increased role in virtually all areas of mortgage finance.

Rise in Bank Originations

As part of overall strategies to boost consumer banking, many banks have sharply increased their originations of mortgages in the past two years. In June 1990, banks surpassed savings and loans in originations for the first time, as insolvent and capital-short thrifts pulled back.

The industry has also posted big increases in its holdings of mortgage-backed securities, encouraged by risk-based capital rules.

Some industry observers say banks' growth in servicing could be slowed by a pending rule to restrict the amount of purchased servicing rights that banks and thrifts can count toward capital.

The ranking excludes thrifts that service directly.

To proposal, if enacted, could well cause the mortgage units of nondepository institutions to gain ground. But some leading bank-related companies say they are loading up on servicing, both by purchases and through their own originations.

Chase Home Mortgage Corp., for example, expects to be servicing more than $23 billion of mortgages by yearend, up from $14 billion at the end of 1989 and $10.7 billion at the end of 1988. The unit of Chase Manhattan Corp. is a big buyer and recently purchased a $2 billion portfolio from a unit of capitalstrapped Crossland Savings.

First Union Mortgage Corp. increased its servicing portfolio to $15.3 billion last year from $10.6 billion. The portfolio should hit around $19 billion by the end of this year, said James Abbott, chief executive officer of the First Union Corp. subsidiary.

Megaservicer in the Making

It has been recognized by our holding-company management that we have the capabilities . . . to be a megaservicer," Mr. Abbott said.

The two mortgage units of Fleet Norstar Financial Group boosted their combined portfolio by 53% last year, to $41.3 billion. By the end of this year, that could hit $50 billion, Fleet officials have indicated. □

MBA Membership Makes Sense

To more than 2,600 mortgage bankers, servicers, investors and others in the real estate finance industry, membership in the Mortgage Bankers Association of America makes sense. As commercial banks come to the fore in mortgage lending, membership in MBA makes sense for them.

MBA provides its members with a voice in Congress and with federal regulators, as well as educational communications and other business services matched to members' mortgage finance business, more efficiently and more profitably.

MBA is the only organization that offers the real estate finance industry all these benefits and more.

For more information call: Membership Department, Mortgage Bankers Association of America, 202 861 6568

Realty Brokers Face Cap on Loan Fees

By PHIL ROOSEVELT

Pennsylvania is poised to become the first state to impose a limit on the fees real estate brokers may charge for helping homebuyers obtain mortgages.

The Pennsylvania Real Estate Commission last month proposed to limit such fees to $100, unless the realty broker holds a license to act as either a mortgage broker or mortgage banker.

The proposal, though still subject to a lengthy review process, has drawn observers from mortgage banking trade groups in Pennsylvania and elsewhere. These groups have argued that real estate brokers have a conflict of interest when they take mortgage fees from borrowers while earning commissions from sellers.

Cap Called Too Low

But the National Association of Realtors and some lenders said the $100 cap was arbitrary and low.

The proposal "is of tremendous significance," said E. Robert Levy, executive director of the Mortgage Bankers Association of New Jersey and a consultant to the Pennsylvania Mortgage Bankers Association. He said it could give new momentum to efforts to limit the fees on a nationwide basis.

While some states, such as Connecticut, have passed laws requiring that realty brokers' mortgage fees be commensurate with services rendered, several experts said they knew of no other state that has set a cap.

The $100 cap is lower than many observers had expected and well below the fees realty brokers earn under the programs of many lenders. The programs often allow brokers to charge homebuyers a feed of about 1%.

A spokeswoman for Citicorp Mortgage Inc., Citicorp's main mortgage unit, said her company had no objections to the idea of limiting mortgage fees for re-

Key Interest Rates

	Prior week ended 7/6/90	Week ago ended 6/29/90	Year ago ended 7/7/89

Fed Expected to Go Beyond International Capital Rules

Continued from *page 1* on page 20).

The Fed chairman made several other comments on far-reaching policy matters.

Aside from describing the central bank's evolving proposal for higher capital levels, he said regulators should move quickly to require suffering banks to rebuild depleted capital by cutting dividends, allowing asset growth, or divesting affiliates, if needed. On other matters, he said:

• Bank examinations should be intensified to ensure that institutions are not "maintaining return on equity by acquiring riskier assets." Examiners should insist that banks with shaky loans create new reserves from earnings or capital.

• The Fed is looking closely at whether examination policies are affecting interest rates and is prepared to ease monetary policy if necessary to offset any rate increases that are not intended by Fed monetary policy.

• Firewalls have not proved effective in sheltering banks from the risks undertaken by nonbank subsidiaries and should probably be dispensed with.

Mr. Greenspan conceded that raising capital levels "will be neither easy nor cheap."

• Congress should grant banks new powers to engage in a wide variety of financial activities, including a full range of underwriting services. In contrast to Securities and Exchange Commission Chairman Richard Breeden, who testified before a House panel on Wednesday, Mr. Greenspan called for a link-age between higher capital and new businesses and did not suggest that banks be permitted to affiliate with nonfinancial companies.

• The McFadden Act should be amended to permit banks to branch across state borders. Although a number of states have made provision for some form of interstate banking, branching across state lines is still generally forbidden.

• Congress should not limit the ability of regulators to bail out large institutions on a case-by-case basis. However, Mr. Greenspan said, regulators should take a "presumption that no institution is too large to be liquidated."

Deposit Insurance Limits

In comments on reform of the deposit insurance system, Mr. Greenspan expressed considerable sympathy for efforts to limit the number of insured accounts that a single depositor should be able to hold.

Under questioning from committee chairman Donald W. Riegle, D-Mich., who has been advocating limits, Mr. Greenspan said that they "would be a useful reform" but that there would be problems in implementing them.

Mr. Greenspan said the Fed has nearly completed a study showing that only 1.4% of the nation's families have more than $100,000 on deposit in multiple accounts. But those relatively few households own 28.6% of the nation's deposits, he added.

Interpretations Differ

The two numbers are likely to work at cross purposes in the debate over deposit insurance reform. Mr. Riegle noted that the first statistic showed that "98% of the nation's families have less than $100,000" on deposit, a fact that would make limits on multiple accounts politically palatable.

But the second number, he noted, indicates that limits have the potential to disrupt the banking system. "If you go to a $100,000 limit, some substantial part of the 28% might move out of banks," he noted.

Any efforts to tinker with the scope of deposit insurance coverage – up to $100,000 per account and no limit on the number of accounts at different institutions – would be opposed vehemently by many banks, especially community institutions.

Community bankers believe such limits would divert deposits from their institutions to large banks that are deemed too big too fail. At the big banks uninsured depositors are generally made whole in a bailout.

Mr. Greenspan's "willingness to tinker with insurance coverage of multiple accounts in small banks is troublesome, particularly since he concedes too-big-to-fail banks are here to stay," said Kenneth Guenther, executive vice president of the Independent Bankers Association of America.

Mr. Greenspan conceded that raising capital levels for banks "will be neither easy nor cheap." Return on equity would fall and U.S. banks would be at a competitive disadvantage compared with institutions in countries that stick with the minimums adopted in the international Basel accords.

But he said "well-capitalized banks are the ones best positioned to be successful in the establishment of long-term relationships...to be the most attractive counterparties for a large number of financial transactions and guarantees, and to expand their business activities to meet new opportunities and changing circumstances."

Mr. Greenspan acknowledged that higher capital requirements would increase the cost and reduce the availability of bank loans, but that a bank would stop making risky loans at rates that do not reflect the credit's true risk.

"Obviously, we have to wait and see how the standards they come up with, but most banks I've talked to have been managing according to higher de facto standards anyway," said Raphael Soifer, a bank analyst at Bron Brothers Harriman & Co. "They know from their conversations with the Fed that regulators are targeting higher standards, particularly for banks that are expansion minded."□

HONEST
Advice About Fraud

Few areas of the law are as ambiguous and open to manipulation–and misinterpretation–as today's law of fraudulent transactions.

But the new legal reference, **The Law of Fraudulent Transactions** from Warren, Gorham & Lamont, brings the law into sharp focus and helps attorneys when they need clarification of the law and its impact.

The Law of Fraudulent Transactions leads you step-by-step through the maze of current legislation and regulation, to help you minimize the risk of exposure to fraud and successfully litigate should a client be victimized by fraud.

In this one easy-to-use reference, you'll find in-depth analysis and practice-oriented guidance, with an emphasis on the areas of fraud-related law that are most commonly litigated and in which problems most often arise. The discussion includes implications and applications of the entire body of contemporary fraud law as contained in the:

- Uniform Commercial Code
- Uniform Fraudulent Transfer Act
- Uniform Fraudulent Conveyance Act
- Federal Bankruptcy Code
- RICO statute
- Common law principles.

You'll discover the subtle ways in which these critical bodies of law interrelate...how they impact the planning, negotiation and execution of dozens of today's most common transactions...how recent legislative developments have altered their power and scope...and much more.

Most important, you'll learn how today's fraud law can protect your clients' interests–and your own.

INTERNATIONAL NEWS

GLOBAL *dispatches...*

E. Germans Block Accounts In Fighting Mark Profiteers

Reuters

East Germany said Wednesday it had frozen 56 new hard-currency bank accounts containing tens of millions of marks on suspicion the sums were amassed through illegal speculation.

The newly democratic nation adopted the West German mark when the two Germanys merged their economies July 1. Accounts in almost-worthless East marks were converted into West marks at par or a two-to-one rate, depending on the saver's age.

Thousands of Cases Checked

Government spokesman Matthias Gehler told reporters huge sums had been deposited in some special exchange accounts set up by citizens in the weeks before economic union, prompting investigations of 60,000 cases.

Thousands of suspected cases of black market dealings were investigated.

About 1,600 personal accounts are still being examined and 26 of those, containing a total of $2.4 million, were frozen on the suspicion the money was obtained through black-market speculation, Mr. Gehler said.

He said 660 accounts in the names of companies and organizations were also being scrutinized and 30 containing tens of millions of marks had been blocked.

... by country

HUNGARY

The Hungarian Credit Bank and Daewoo Securities of South Korea have started the first financial joint venture between the two countries.

The venture, called Invest-Trade, will provide financing for trade between the two countries, investing in Hungarian ventures and advising on mergers and acquisitions. The $100 million company is a member of the new Budapest Stock Exchange. — EMMA

HONG KONG

Chemical Banking Corp. is closing its foreign-exchange and money-market trading operations in Hong Kong, a bank spokeswoman said Thursday.

The trading units employed 21 persons, who will be offered positions at the bank's Singapore branch.

Douglas H. Short, regional manager of Hong Kong operations, will transfer to head activities in Singapore.

Chemical also announced this week that it planned to close its 18-person branch in Taipei, Taiwan, within four months.

The Chemical spokeswoman said the Hong Kong and Taiwan trading units were profitable, but added that the moves were being made to improve efficiency. Several other banks this year also have closed their Hong Kong operations.

The Chemical spokeswoman will continue to operate its regional merchant bank, Chemical Asia Ltd., out of its Hong Kong branch. A small financial services group that offers cash-management services also will remain in Hong Kong, she said. — **James R. Kraus**

SWITZERLAND

Swiss federal authorities have decided to accept 10 applications for banking permits from Japanese companies, including **Daiwa Bank**, **Nikko Securities**, and **Tokai Bank**. Permits are expected to be issued between this fall and next summer.

The new entrants will add to the 11 Japanese institutions, including **Fuji Bank** and **Nomura Securities**, that already have banking permits.

The Swiss move is thought to represent a favorable reaction liberalization of the banking system in Japan because the Swiss authorities believe in reciprocity. — TFW

TOKYO

Big Japanese banks, especially the city banks, are facing additional difficulties in their programs for keeping capital ratios at good strong levels.

The Ministry of Finance has in effect said the banks are not to participate in the reopening of the new-issue markets this month because of the fear that the banks would oversupply the market with equity.

The ministry sees last year's big bank issues as contributing to the equity market's problems this year. — TFW

* * *

Real estate-related loans by all Japanese banks as of the end of April showed a drop of 1.3% from the figure at the end of March, the first such monthly drop in more than two years.

The drop compares with a net gain of about $11 billion in the three months through March, and represents a rather sudden shift in lending policy in response to the central bank's and finance ministry's "guidance." The figure is the first statistical confirmation of a drop in real estate lending. — TFW

U.S. Banks Not Adding Reserves

Won't Replace Funds Written Off Under Mandate

By JAMES R. KRAUS

NEW YORK — U.S. banks are unlikely to replenish soon their reserves depleted by mandated writedowns on loans to Brazil and Argentina, bankers and analysts said Thursday.

Since most money-center banks with large loans to both countries already face problems with low levels of capital and earnings, the banks are extremely reluctant to see these levels reduced further, the bankers said. Any increase in reserves would come out of either equity or earnings.

"It's going to be a tough [third] quarter. There are no real factors which would be boosting earnings and that would permit them [banks] to add to their reserves," said a senior banker in New York who declined to be identified.

Writedowns Ordered

Federal regulators ordered U.S. banks this week to write down 20% of some $10 billion in medium-term and long-term loans to Brazil and an additional 20% of around $3.3 billion in medium-term and long-term loans to Argentina. The writedowns have raised questions over whether current levels of reserves at major banks are adequate.

"My guess is that [banks] won't do anything just because of the regulators' action. But in the longer term, they will have to rebuild their reserves," said Mark Gross, a banking analyst with IBCA Inc., the credit rating agency.

Analysts said any decision to increase reserves would also depend on how highly a bank is exposed and what level of reserves it considers adequate.

The analysts identified Citicorp, Manufacturers Hanover Corp., BankAmerica Corp., Chase Manhattan Corp., and Chemical Banking Corp. as the banks most underreserved and undercapitalized. They said the five banks would probably seek to increase their capital and reserves by selling nonessential businesses or using tax deductions gained through the writeoffs.

A Citicorp spokesman told Reuters on Thursday that the bank considers its reserves against Third World loan losses to be adequate. Citicorp has $3.1 billion in reserves, or 37% of some $8.4 billion in medium- and long-term Third World loans.

"All the banks, including Citicorp, have reserves specifically for these Third World portfolios," the Citicorp spokesman told Reuters. "Unlike normal reserves, it is not the practice to replenish them" after a writeoff."

Writeoffs Rebuild Capital

Among banks, BankAmerica has been the most active to use tax deductions obtained through Third World loan writeoffs to gradually rebuild capital and reserves.

"BankAmerica's reserves are low, but its capital position is increasingly strong, so it is unlikely to have serious problems," said Raphael Soifer, an analyst with Brown Brothers Harriman & Co. in New York.

Spokesmen for BankAmerica, Chase, and Chemical could not be reached for comment. □

Soviet Seeking Big U.S. Loan Guarantees

By RICHI MILLER
Reuters

HOUSTON — The Soviet Union is pressing the United States to grant big loan guarantees later this year to help buy American food, Agriculture Secretary Clayton Yeutter said.

But Moscow should not assume the guarantees will be granted, he added. "It's not a sure thing that the Soviets will obtain credits at all, let alone credits of the magnitude they would prefer."

The government's Commodity Credit Corp. guarantees about $5.5 to $6 billion in private loans each year for exports of American farm goods.

Amounts Called Substantial

Mr. Yeutter declined to say how much Moscow is looking for but said the amounts are very substantial. "They've been talking to us about how important it is for us to give them these programs," he said.

But before the United States can even consider the Soviet Union's request, Moscow would have to pass legislation allowing free emigration. Moscow has said will happen in fall, but Mr. Yeutter noted that the Soviets have missed deadlines before.

The Soviet Union, long a major importer of food, has been faced with increasing shortages in recent months, even in big cities.

Support for Reforms

At the start of the three-day economic summit of major nations that ended Wednesday, National Security Adviser Brent Scowcroft said Soviet leader Mikhail Gorbachev wants food and consumer aid over a period of about two years until his economic reforms can take effect.

Commerce Secretary Robert Mosbacher said he had been told by Soviet officials that the problem lies mainly with the Soviet food distribution system, something that experts from the U.S. Commerce Department are already working on with Moscow.

Once Moscow passes the emigration legislation, the United States could grant most-favored-nation status, giving the Soviets the best possible access.

"My impression is that they simply assume that once the [most-favored-nation] hurdle is overcome here that everybody is going to rush in to give them all types of credits," Mr. Yeutter said.

"That may turn out to be wishful thinking," he added. "We have a lot of other countries in the world who also want CCC credit guarantees.

He said the United States would apply the same criteria for deciding whether to grant the Soviet Union credit guarantees as it does with other countries. That includes which markets are the most potential and the credit standing of the borrower. □

Home Loan Exits Feared as Threat to Bailout Funding

Continued from page 2

FDIC board intends to address the Wauwatosa application in two to three weeks.

"Because there's such interest and concern about this issue, the board is just taking the opportunity to hear more views," he said.

He added that the review focuses on legal issues and whether existing law is a threat to the safety and soundness of the banking system.

Mr. Robson said departures could impair the Home Loan banks' ability to pay interest expenses on bonds issued by the Resolution Funding Corp. to finance the bailout. Under the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, the 12 Home Loan banks may be tapped for up to $300 million per year to cover those interest costs.

Arthur Siddon, a Treasury spokesman, said Mr. Robson suggested that exits should be limited during a transition period. Mr. Siddon, who confirmed the contents of the letter to Mr. Seidman, did not elaborate. Mr. Robson was unavailable for comment.

Eight Petitions to Quit

Wauwatosa's exit application, filed last September and made public in March, was followed by several others in the Chicago, Des Moines, and San Francisco Home Loan bank districts. By June 25, eight state-chartered thrifts insured by the FDIC's Savings Association Insurance Fund had petitioned to leave, asserting that they have no legal obligation to remain in the system.

The controversy has forced the FDIC to become the reluctant arbiter in a public policy debate that may reshape the Federal Home Loan Bank System.

"It's an emotionally charged policy issue," said the FDIC deputy general counsel, Douglas Jones.

While the FDIC studies the implications, the Home Loan banks face mounting pressure on earnings because of shrinking membership and slack demand for advances.

1,085 Departures Feared

If the FDIC permits departing state-chartered thrifts to continue their insurance, the banks could open for as many as 1,085 thrifts to leave, taking with them 19% of the bank system's capital, the Federal Housing Finance Board has told the FDIC. The board is the overseer of the home loan banks.

Federally chartered thrifts are clearly required to belong to the bank system, but the Housing Finance Board has raised the prospect that these institutions could convert to state charters to escape.

Worries Called Exaggerated

Wauwatosa's president and chief executive said concerns about wholesale exits from the bank system are exaggerated. "If more people were inclined to go, they would be in line by now," said Raymond J. Perry.

> **"If a little Midwestern savings and loan can destroy the system, then the system ought to be destroyed."**
>
> **Raymond J. Perry**
> *Wauwatosa Savings and Loan Association*

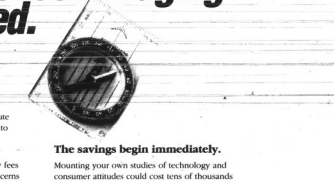
He said Wauwatosa wants to quit the system because it does not borrow from the advance window and could reinvest its $3 million stock subscription more profitably in loans to the community.

"I think there's a place for the system," Mr. Perry added. "But if [the withdrawal of] a little Midwestern savings and loan can destroy the system, then the system ought to be destroyed as a useless appendage of government."

But a Housing Finance Board official, speaking on background, said it is possible that more thrifts will petition to leave. "The question is how quickly the line will form if the FDIC lets them out," this official said.

The House Banking Committee chairman, Rep. Henry B. Gonzalez, opposes the exit bids. "The overriding thing in last year's bailout bill was that the S&L industry would have to pay as much of the cost as possible," said Jake Lewis, an aide to the Texas Democrat. "No one was going to escape this obligation to help bail themselves out." □

Get clear direction on how to make returned check imaging succeed.



The savings begin immediately.

Mounting your own studies of technology and consumer attitudes could cost tens of thousands of dollars and valuable months of time.

But Trans Data, backed by a decade of rigorous experience in banking research, has anticipated your needs. Our already prepared studies are available immediately. So call now.

We'll point you in the direction of the best returns from returned check imaging.

For a prospectus, mail the coupon below or FAX to (301) 546-3836. Or call toll-free **1-800-456-3282**

Make a cool analysis of a hot topic.

When digital images replace returned checks, you ask customers to accept a radically new way of doing business with your bank.

Trans Data's recently completed studies outline what the impact will be on consumers and your relationship with them. There's no clearer or faster way to understand all the marketing implications.

We've learned how willing customers are to pay for the service...and how much. They've told us how this technology may affect your image. And whether they'll switch their business to a bank that implements the technology before you do.

Chase in Deal To Service Loans

NEW YORK — A unit of Chase Manhattan Corp. has purchased the rights to service about $2 billion of home loans from a subsidiary of capital-strapped Crossland Savings.

Officials at Chase and Crossland confirmed rumors of the deal, but information on terms was not immediately available.

Market sources pointed to the transaction as prime example of how banks are gaining ground in all aspects of mortgage finance as the mortgage industry struggles to meet the requirements of the 1989 bailout law.

Chase Home Mortgage Corp., based in Tampa, Fla., is one of the nation's 10 largest servicing companies. At the end of 1989, it was servicing about $14 billion of loans for investors.

A spokesman for New York-based Crossland said the thrift's mortgage unit routinely sells some servicing rights. He said the sale to Chase was not designed to help the thrift meet new capital rules "but it certainly helps." □

Every single story in this new financial service industry newspaper is going to help its readers do their jobs better. The readers expect and will get "hands on" and "how to" information. Hands on is how I at ME will have to do the job every week. Knowing how financial services executives work and what they need to do their jobs, crisp, cogent, concise the copy until it's right, then see the paper out the door. The staff will be lean but enough to do the job, including a fast, enticing design. There'll be plenty of correspondents but they will need training in the paper's style. The key is knowing the financial services business from the inside. If you do, you may be able to meet this unusual journalistic challenge. The readers are there. Hard work and dedication will yield generous rewards. Write with resume:

Analysts Call Seizure Likely but Await 2d-Quarter Results

Continued from page 1

lion-asset Connecticut Bank and Trust Co., Hartford, or the $2 billion-asset Bank of New England-West. The corporation is seeking a buyer for its Maine National Bank and Bank of New England-Old Colony, a Rhode Island subsidiary.

James Dorney, a Bank of New England spokesman, called the rumors "frustrating." He maintained that they have spurred off in recent months, since the arrival of chairman Lawrence K. Fish.

The magnitude of the company's problems was acknowledged by Mr. Fish at a recent shareholders meeting.

"After all," he told the disgruntled crowd, "the problems we face are enormous. The future is uncertain. The recent past was a disaster, and the present is frankly very difficult."

Mr. Fish has said that the company's future depends on a turnaround in the regional economy. Most analysts don't see a rebound in New England real estate until next year at the very earliest.

Analysts Feel Dubious

Many banking analysts feel the company's survival is in question. Most feel its chance of survival through the end of the year is less than 50%. Only one – and he declined to be quoted – said he thought the chances were good that the banks could "muddle through."

"It's 50-50," said Nancy Bush, an analyst at Dean Witter Reynolds Inc. in New York. "I think that [the regulators] have given [Mr. Fish] some time, some breathing room, but they realize that there's only so much management can do."

"The likelihood is overwhelming. We feel pretty certain that the bank will be shut down this year," said Kristine Andersen, an analyst for Kidder, Peabody & Co. Ms. Andersen has predicted the seizure could come as soon as Labor Day.

Market Pressures FDIC

A consultant with close ties to the bank said, "Talk about brinksmanship! Of course, it's a possibility." He added that, while the FDIC is in no rush to seize the institution, deepening real estate troubles in New England might force its hand.

A bailout of the $24.8-billion asset holding company would be the nation's third-largest banking failure – after Continental Illinois, which had $40 billion in assets when it failed in 1984, and $33 billion-asset First Republicbank Corp. in Texas.

Officials familiar with FDIC procedure said it is unlikely the agency would move unless it had an immediate fire to put out.

Alluding to the takeover of Continental Illinois, Irvine Sprague, a former FDIC chairman, said, "Something always triggers the action. For example, they put on Continental forced us to move."

Some recent developments suggest that Mr. Fish's hand-picked management team was averted such a crisis.

Bank of New England has no immediate liquidity problem. Borrowings of funds from the Fed discount window in Boston have stopped, the bank said, a sign that the fire sale of its assets had forestalled any liquidity crisis. The bank had borrowed $2 billion from the discount window this year.

Its new management team has halted the outflow of deposits and attracted new ones by aggressively advertising certificates of deposit nationwide at rates ranging from 8.5% to 9%. But the higher rates may eventually squeeze the bank's net interest margin, analysts pointed out.

Analysts have speculated that the outflow of $6 billion in deposits since December may have been stemmed by "hot" money – large commercial deposits.

"A number of important relationships have left the bank," a source said.

> **"If Bank of New England has the wherewithal to survive, the first signs of it would be [visible] now."**
>
> **Nancy Bush**
> *Dean Witter Reynolds Inc.*

In turn, smaller retail deposits in amounts covered by the FDIC fund have flowed into the bank since the recent CD marketing campaign.

And other signs indicate that confidence in the company is building. Larger banks have resumed lending overnight funds to the ailing institution – at the FDIC's urging, a source close to the bank suggested.

Finally, reports from within the bank indicate that morale has remained high, despite the rumors. "The staff cuts have been made," said a source on the bank's staff. Most employees "feel they've hit bottom and are on the way back up."

Lackluster Stock Performance

The company's share price has been moribund in recent weeks. The stock did, however, hit $2.75 Thursday morning – its lowest since Mr. Fish took charge – before rising to $2.875 near the close, according to Bloomberg. Bank of New England shares made a 52-week low of $2.50 shortly after its problems were revealed in January.

The bank has taken drastic measures to turn the situation around.

Mr. Fish unveiled a strategic plan in April to recapitalize the company and focus its business on retail and consumer banking in Massachusetts and Connecticut. The plan included shrinking the company by about one-third, cutting 5,600 jobs, selling the Maine and Rhode Island banking subsidiaries, extensive expense reductions and a possible exchange offer for all or a portion of its outstanding long-term debt.

Still, analysts said, strong factors are pressing regulators to move soon.

With second-quarter results due out at the end of this month, analysts said that regulators may be watching to see whether non-performing loans grow.

"Why now? The timing around the end of the second quarter is key," said Ms. Bush of Dean Witter. "If Bank of New England has the wherewithal to survive, the first signs of it would be peering through now."

Analysts also said that a significant increase in nonperforming loans might convince regulators that the bank cannot be saved.

At March 31, Bank of New England had $2.7 billion in nonperforming assets, with about 60%, or $1.5 billion of those nonperforming loans.

The company's ratio of equity-to-assets was 1.6%, or about $398 million, down from 5.1% the year before. That means uninreserved bad loans now represent about 300% of equity.

"A bank can't have bad nonperformers at 100% of equity is a bank with serious problems," said Donald Kauth, an analyst at First Albany Cos., an investment bank. He added, however, that a reserve of 60% is usually considered good insurance against loan losses. □

Insurance Powers Arrived in Bits and Pieces

Continued from page 4

a 1986 ruling by the OCC that a national bank or its branch in a town of 5,000 or fewer people may sell insurance to existing or potential customers without geographic restriction.

Assuming this decision is upheld on appeal, a national bank could establish an insurance office in any small place where it has a branch and then market insurance statewide, regionally, or even nationwide.

While the issue was not raised in this case, it is even possible that, because insurance is not a core banking activity subject to the McFadden Act, a national bank might establish an insurance office in any small place, whether or not coincident with a branch location, within or outside its headquarters state.

Not Subject to McFadden?

The Financial Institutions Act requires only that the activity be

> **insurance authority affirmed May 8 by a federal trial court would certainly preempt any state antiaffiliation law.**

conducted in a small place where the bank is "transacted and doing business"; the business might be the insurance agency or another office, such as a loan production office, not subject to McFadden.

On the other hand, the court's emphasis on the statute's purpose of enhancing revenue for small-town national bank offices may require the insurance agency to be associated with a bank branch.

In any event, insurance sales can certainly be made by direct mail. And agents based in the office could market widely on a person-to-person basis.

This insurance authority would certainly preempt any state antiaffiliation law prohibiting a bank from underwriting once. However, legitimate state licensing and other general requirements would apply because the McCarran-Ferguson Act delegates the regulation of insurance to the states and can only be preempted by a federal law specifically addressing insurance.

State Banks' Powers

Nov. 29, the 2d U.S. Circuit Court of Appeals upheld the Federal Reserve Board's determination that nonbanking restrictions of the Bank Holding Company Act do not reach the direct activities of bank subsidiaries.

The practical effect of this decision was to permit holding companies' state bank subsidiaries to engage in any authorized insurance activity. Thus, for example, all California banks can continue to use the insurance sales opportunity offered by Proposition 103, even as courts continue to review it.

The case did not decide whether Citicorp could be permitted out by an operating subsidiary of the state bank (as opposed to directly by the holder) restricted by the federal law. The Fed has asserted such authority but never has issued a supporting revision of Regulation Y.

The ABA and other bank trade associations would litigate against any such Fed rule change. The regulator's willingness to pursue this claim of authority may have been further dampened May 15 by a decision of the 5th U.S. Circuit Court of Appeals.

"In striking down the Fed's 'source of strength' doctrine, the court declared that the Bank Holding Company Act "does not grant the [Federal Reserve] Board authority to consider the financial and managerial soundness of the subsidiaries, or to alter it approves the application" of acquisition, nor does it give the [Fed] any power to regulate those subsidiaries' day-to-day affairs.

Delaware's Insurance Law

May 30, Delaware enacted broad new legislation permitting its state-chartered banks both to sell and underwrite insurance (except title insurance). Consideration of this authority had prebecause the Delaware Supreme Court in a 1986 decision, which reaffirmed the ability of Delaware and other states to act.

The new Delaware law not only authorizes bank insurance sales but also establishes a complex regulatory and supervisory scheme. It permits new insurance activities to be conducted directly within a separate bank division or through an operating subsidiary.

> **The practical effect of a Nov. 29 federal Appeals Court decision was to permit holding companies' state bank subsidiaries to engage in any authorized insurance activity.**

Safety and soundness and consumer protection requirements include maintenance of separate financial records and capital; limited, arms-length loan transactions; disclosure rules on bank use of information obtained by the insurance operations; 23% limit on total capital (of the Delaware bank, not the parent bank holding company) that can be devoted to insurance operations; anti-tying prohibitions; a 30-day customer cooling-off period, with complete right of cancellation; and full supervision of these activities by the Delaware insurance commissioner.

Modest Operations Allowed

These requirements, taken as a whole, mean that Delaware insurance powers will be of a modest scale. If the 2d Circuit decision gave a clear "green light" to states, the Delaware law provides a striking example of how to proceed responsibly.

Insurance products and services offered outside Delaware would be subject to the same licensing and regulation as are applied to any other out-of-state insurance agent or underwriter.

Generally, Delaware banks could not sell insurance in states with antiaffiliation laws. However, at some point, such laws might be challenged on equal-protection grounds – if Prudential, Sears-Allstate, Travelers, American Express, and others with affiliated banks are permitted to market their insurance products.

Predictably, a coalition of insurance groups has already petitioned the Federal Reserve Board to prohibit banks from using the new Delaware law. It is unclear whether the Fed will respond; as discussed above, its grounds for asserting jurisdiction have been substantially diminished.

An FDIC Intervention

Finally, June 12, FDIC Chairman L. William Seidman indicated that he was instructing agency employees to assess safety and soundness implications of the Delaware law. The mid-1980s FDIC proposal to require specific structural safeguards – many of its provisions reflected in the Delaware law – will be revisited.

The agency's staff may recommend prohibiting certain activities or, more likely, require them to be conducted in a separate subsidiary. FDIC concerns appear centered on certain forms of property and casualty underwriting. Mr. Seidman's announcement appeared to assert FDIC primacy on this issue vis-a-vis the Fed.

Delaware's law is only the most striking example of a new state activism on insurance.

Other States Open Up

Oregon's legislature – somewhat by 1987 permitted state-chartered banks to sell insurance, and California's voters did the same through Proposition 103 the following year. Florida banks have just gotten legislative authority for the same antiunity activities as national banks perform.

In a regulatory decision last month, the Washington State Banking Department authorized all its commercial banks to act as general insurance agents if either the head office or a full-service branch is a city of fewer than 5,000 people. And Illinois is on the brink of authorizing agency activities.

Legislative and regulatory opportunities undoubtedly exist in other states and will be actively explored. Most bankers will probably move cautiously, however, due both to remaining legal uncertainties and to questions about the most effective means of marketing insurance.

Insurers' Counteroffensive

While continuing its efforts in state legislatures, with regulators, and in the courts, the ABA is on guard against attempts by the insurance industry to roll back these gains in Congress.

Congress, however, is not eager to expose itself to the cross fire, and insurers are apparently being advised to continue pursuing administrative and judicial remedies.

Legislatively, the insurers' problem can no longer be solved by a simple, 1987-style moratorium freezing federal authority actions. The cat is now out of the bag, and insurers could reverse those developments only by writing permanent restrictions into federal banking law.

When Congress revisits insurance powers in the context of deposit insurance reform and financial restructuring, one hopes that bankers will have established a prudent, procounsumer record that settles the matter once and for all. □

Shawmut Unit Buys Trust Accounts

Reuters

HARTFORD, Conn. — Connecticut National Bank said Thursday that it has contracted to acquire the corporate trust department of National Westminster Bank USA, New-York.

Connecticut National, a subsidiary of Shawmut National Corp., which is based in Hartford and Boston, said it would become successor trustee for almost all of the National Westminster unit's corporate, state, and municipal debt issues. The companies did not disclose financial terms of the transaction.

The Shawmut trust group now serves more than 5,000 debt trusteeships with $40 billion in outstanding bond issues.

The trust department sale is the second announced this month by U.S. subsidiaries of National Westminster Bank PLC, London. National Westminster Bank NJ, Jersey City, earlier said it had sold its corporate trust accounts – mostly administered for New Jersey corporations, municipalities, and school districts – to Midlantic Corp.'s Midlantic National Bank, Edison, NJ. □

OTS Taps NJ Lawyer For Eastern District

WASHINGTON — Faith S. Hochberg has been named the Office of Thrift Supervision's top regional attorney, litigation lawyer for the eastern United States.

As a senior deputy chief counsel based in the Jersey City district, Ms. Hochberg will oversee the agency's crackdown on fraud and abuse there and in the Atlanta, Boston, Cincinnati, and Pittsburgh districts.

Ms. Hochberg was a partner with Cole, Schotz, Bernstein, Meisel & Forman in New Jersey. As an assistant U.S. attorney from 1983 to 1987, she headed the securities-fraud unit for the Eastern District's New Jersey district. □

Tonka Corp.'s Bankers Agree to Amend Covenants on Acquisition Loan

By WILLIAM GOODWIN

Tonka Corp., which faced high acquisition-related debt costs and a continued slump in sales of its Ghostbusters toys, said it has reached an agreement with its banks that will allow the company to avoid violating loan covenants.

A group of 18 banks, led by First Chicago Corp.'s First National Bank of Chicago, agreed to lower interest coverage ratio requirements for the second and third quarters of 1990. Concurrently, the banks postponed a scheduled reduction in interest rates on the loans.

Tonka was also forced to waive its right to repurchase series-A subordinated bonds until the first quarter of 1991 and its option to make cash payments in lieu of payment-in-kind interest on its series-B debentures.

Net Loss Possible for Year

Tonka's current cash flow appears sufficient at the moment to cover debt payments, analysts said, despite a projected net loss for the first half of 1990 and possibly for the full year.

"Going into Christmas 1991, it's uncertain" if the Minnetonka, Minn., toymaker will be able to meet its debt payments, though, said Garry Jacobson, an analyst at Kidder, Peabody & Co.

"History has shown that in the toy industry – especially in leveraged situations – caution should prevail," Mr. Jacobson said.

"I wouldn't want to be [Tonka's] bankers," another analyst said privately.

Kenner Parker Buyout Debt

The company's bank debt stems from its 1987 acquisition of Kenner Parker Toys.

Tonka obtained a $275 million term loan to finance roughly half the purchase price. The bank group also provided a $350 million working capital line, which was reduced last fall to $275 million.

The bank group lowered Tonka's interest coverage ratio for the second quarter to 1.64 from 1.8. The third-quarter ratio was cut to 1.59 from 1.9.

Tonka will continue paying Libor plus 250 basis points on its term loan through yearend, and Libor plus 200 basis points on the working-capital line.

Those rates had been scheduled to decline in the second quarter by 100 basis points and 50 basis points respectively.

Immediately after the Kenner Parker acquisition, Tonka's debt soared to 87% of total capital. The company has since lowered its debt ratio to 68%, still well above Tonka's own target level of 50%. In a telephone interview, William Frame, Tonka's treasurer, would not comment on when the company expects to reach the target.

"If you forget about the debt, the business is nicely profit-

> **"In the toy industry . . . caution should prevail."**
>
> **Gary Jacobson**
> *Kidder, Peabody & Co.*

able," said Kidder's Mr. Jacobson. On an operating basis, he said, Tonka makes over $100 million a year.

However, the company has substantial noncash charges, including amortization of goodwill arising from the Kenner Parker acquisition.

"Net income sharply understates cash flow," said Paul Valentine, an analyst at Standard & Poor's Corp.

Mr. Valentine said Tonka made a strategic decision several years ago to focus on the highly profitable but fickle segment of the toy industry that features such video games, Cabbage Patch dolls, and Teenage Mutant Ninja Turtles.

"Obviously, in the face of the Nintendo phenomenon, that decision has not been vindicated," Mr. Valentine said, referring to the current video-game craze. However, the analyst thinks video games have peaked.

"I believe the collapse in video-game sales over the next 12 to 18 months will bail Tonka out," Mr. Valentine said.

Ghostbusters sales, which accounted for 20% of Tonka's total revenue in 1989, are off substantially this year.

"Obviously, looking out to 1991 and 1992, it's a substantial part of revenue that's going to have to be replaced," S&P's Mr. Valentine said.

Tonka, however, has a good record of managing inventory, and its costs as a percent of sales are below those of rival toy makers Hasbro Inc. and Mattel Inc., Mr. Valentine said. □

New RJR Loans Raise Doubts About Old Loans' Value

By STEVEN LIPIN

The high fees and lofty interest rates in RJR Nabisco Inc.'s new bank loans have bank syndicate officials scratching their heads about the value of the company's existing bank facilities in the secondary loan market.

"The question is: what's the dollar price differential?" asked one banking official with knowledge of both deals.

What is likely to emerge, bankers and loan sales officials say, is an unusual arbitrage between virtually identical RJR Nabisco bank loans.

"There's an unbelievable arbitrage here," said the head of secondary loan sales at a major bank. "At least in theory."

Potential Impact on Funds

One impact, some say, is that mutual funds, which have to mark loans to market on a daily basis, might have to carry the old loans at a loss, eating into the total return of the funds.

A number of experts believe ry the same senior status and mature at about the same time, the extra 100 basis points in interest that the new deal pays essentially means the old deal is worth roughly 1.5 points less in the secondary market, using net-present-value analysis.

"It's fairly strange," said one Japanese lender involved in both deals. "How the market will value this is very interesting."

Similar Terms

The terms of the loans are very similar, and both are senior loans at the same level of the corporate structure. The new $2.25 billion term loan pays 350 basis points over the London interbank offered rate, maturing in October 1996, with a 5.5-year average life.

The existing $3.5 billion term that because both bank lines carloan pays 250 basis points over Libor, maturing in February 1995 with a three-year average life.

> **Both are senior loans at the same level of the corporate structure.**

The rate on the new loans is 100 basis points greater than the existing loans because of the bullet structure of the new facility. The bulk of the loan repays at maturity, while the existing facility amortizes within three years.

A Bet on Tobacco

"The new money is a longer bet on tobacco," said one banker involved in the deals.

But bankers interviewed said they could not recall one company with two similar bank facilities that were priced that far apart.

Syndicate sources said they expect the new RJR deal to hit the market at up-front fees of 2%, or a dollar price of 98. That assumes the underwriters take two points of the bank-acquisition fee and reoffer two points to the secondary market.

The existing loans now trade at an up-front fee of about 3%, or a dollar price of 97.

Because most loans are nowhere near as volatile as stocks and bonds, loan-sales executives say the daily mark-to-market requirement is more for the Securities and Exchange Commission than for mutual-fund investors.

But some do not agree with the analysis, and point out that the terms are not identical. Also, the larger supply of the existing loans could contribute to the drop in price of the existing loans. □

First Union and Wachovia Increase Profits

Continued from *page 2*

the OCC exam] was minimal," said Mr. O'Meara, of Robinson-Humphrey, "overall, it was a very solid quarter for First Wachovia."

As of June 30, First Wachovia's nonperforming assets totalled $118 million, or 0.74% of total loans, and foreclosed real estate, one of the best ratios in the region.

Profits for the six months increased to $146.5 million from $135.2 million in 1989.

Income Figures Climb

First Wachovia's loans grew by $1.1 billion, or 8.3%. Noninterest income rose 16% to $98.4 million, from $85.1 million during the second quarter of 1989.

Detroit-based NBD attributed its earnings improvement to a 4.4% rise in net interest income from the comparable period a year earlier to $220.6 million, from $211.3 million.

Net income for the six months rose 4% to $135 million. □

STOCKS

MNC Expects $75 Million Loss for Quarter

Continued from page 1

the figures were worse than expected but said it was hard to tell just how bad things are at the Baltimore-based bank until the Office of the Comptroller of the Currency conducts its exam later this month. Still, they said unless the situation radically improves soon, the bank's dividend could be in jeopardy.

"This is the second quarter where they haven't paid the dividend out of earnings," said Theodore Price, head of research and vice chairman of Wheat Investment Advisors in Richmond. "What worries me is that if they don't make enough to pay it out of earnings in the third quarter, [regulators] might say, 'Don't pay it.' At which point the stock" could drop significantly.

Wheat Investment owned roughly 100,000 shares of MNC stock six months ago but sold all of it when the the price continued to decline and the bank's problems mounted, Mr. Price said.

Immediately after the news was released, the stock plunged more than 6%, or 75 cents, to a low of $10.875 early Thursday afternoon. It closed at $11.375, down 25 cents. Volume was 631,000 shares. Over the past month MNC's stock has lost about 28% of its value.

Bank officials declined to comment further until July 24 when at complete earnings report will be made. But analysts said MNC officials told them that the loss and the large writedowns were partly a strategic move to prevent huge writedowns following the new controller's exam.

"They want to be able to show regulators they will have decent earnings by the end of the year, so they won't force them to cut the dividend," said Kyle Legg, an analyst at Alex. Brown & Sons, Baltimore.

That won't be an easy task. With MNC's announcement, analysts said it is clear that the

Baltimore-Washington-Northern Virginia commercial real estate market is in dire straits and that the bank's recovery may take longer than expected.

"There are serious problems with commercial real estate in the area, and MNC is very heavily exposed," said Michael Plodwick, an analyst at C.J. Lawrence, Morgan Grenfell Inc. "I don't think this is a one-quarter event for MNC."

He said that 22% of MNC's $14 billion loan portfolio is in commercial real estate.

Although many banks, especially those on the East Coast, have been hit with problems stemming from sour real estate loans, the decline of MNC's fortunes is particularly disturbing. Only a year ago is was considered one of the most innovative and profitable banks in the country and its chairman, John P. Hoblitzell Jr., was considered one of the industry's top executives.

Mr. Plodwick said, "They just took on too much real estate too fast."

Other Richmond-based banks fell on the MNC news. Sovran Financial Corp. was down $1 to $26.25. Signet Banking Corp. fell 37.5 cents to $18.75. Crestar Financial Corp. fell 12.5 cents $20.875. Dominion Bancshares, which is based in Roanoke, Va., dropped 25 cents to $12.875.

* * *

THURSDAY'S MARKET

The overall market hit a record, but bank stocks continued their slide, with money-centers, in particular, falling sharply.

The Dow Jones industrial average rose 37.13 to 2969.80, surpassing its previous high of 2956.93.

Nervousness about the state of the banking industry expressed by Federal Reserve Chairman Alan Greenspan, continued concern about the degree of deterioration in second-quarter earnings, and negative comments by a bank analyst drove bank stocks down. Analysts said the increased writedown in Latin American loans was not responsible for the bank stocks' slide.

Chase Manhattan Corp. lead the way, falling 87.5 cents to $22.50 on volume of nearly 1.5 million shares. Manufacturers Hanover Corp., which was down more than $1 for most of the day, fell 87.5 cents to $44.75. Chemical Banking Corp. fell 50 cents to $24.75, and Bank of New York fell 75 cents to $30.50.

Mr. Greenspan said Thursday that stiffer bank capital requirements may be necessary to ensure the stability of the banking system.

Also on Thursday, Carole Berger, an analyst at C.J. Lawrence, Morgan Grenfell Inc., predicted money-center banks would begin cutting their dividends by yearend. She was particularly bearish about Chase, which she said would be the first to eliminate a payout to shareholders. She said investors and speculators should consider shorting the stock.

"Whenever an analyst takes that aggressive a position, it makes people think," said Ralph Rieker, an analyst at Brown Brothers, Harriman & Co. He said Ms. Berger's remarks, Mr. Greenspan's comments, and concern about deteriorating second-quarter earnings "makes for a very pleasant scene."

Shares of Northern Trust Co. also were down sharply Thursday, falling $1.125 to $27.375.

Robert Sharpe, a Federal First Bank System Inc. were among the few that bucked the downward trend. They rose $7.5 cents to $77.125. First Bank was up 25 cents to $14.75.

First Wachovia Corp., one of analysts' favorite stocks, reported higher earnings for the quarter. It earned $1.07 a share, up from 98 cents in the second quarter of 1989. The stock closed up 12.5 cents to $41.50.

Even though First Union Corp. reported higher earnings – 72 cents a share versus 69 cents a year ago – its stock was down 12.5 cents to $18.375. □

CAPITAL

Meritor Will Pull Out the Stops To Strengthen Capital Position

By KELLEY HOLLAND

Continuing a drive to shrink assets and improve capital ratios, Meritor Savings Bank announced a series of moves on Thursday that will result in a second-quarter loss of $138 million and a substantial increase in primary capital.

Meritor's actions include: settling and redeeming $172 million in debt of its Florida subsidiary and replacing them with a cash payment and note worth $60 million, terminating swap contracts with a notional value of about $1 billion, adding $35 million to loan-loss reserves, and establishing a $54 million reserve against gains that had been anticipated but are no longer likely.

Next: Improve Profits

As a result of the recapitalizing moves, Meritor will finish the second quarter with a positive tangible net worth and insure its immediate viability. But more remains to be done, particularly in terms of profitability, according to Roger S. Hillas, chairman.

"We've done the downsizing, and we've gotten into capital compliance," he said in an interview on Thursday. "The third thing is to make money."

Meritor will finish the second quarter with a positive tangible net worth.

Certainly the downsizing and capital increases have been dramatic since Mr. Hillas took over the helm at Meritor two years ago. At that time, the bloated institution was losing money at a rapid clip and its tangible capital base was negligible.

Meritor had more than $18 billion in assets, and it reported a loss for 1988 of $5.98 a share. But after sales of assets such as its mortgage banking operations, its consumer finance company, and $1.5 billion in liquid investments, Meritor shrank down to finish 1989 with assets of $12.6 billion. And the reducing continued this year. Meritor sold 54 branches to Mellon Bank Corp., enabling the thrift to finish the second quarter with assets of only about $7 billion.

Meritor was also insufficiently capitalized when Mr. Hillas took over. The thrift had almost no tangible net worth in 1988 and $313 million worth of goodwill. Meritor's capital has been increased since then, but the Philadelphia thrift still finished the first quarter with primary capital of 5.45%, well below the 6.5% requirement the regulators established.

Some Pressure Taken Off

The restructuring moves announced on Thursday substantially reduce Meritor's need for new capital going forward, according to David M. West, a financial institutions analyst at Wheat First Securities.

"Meritor won't have to take a big loss on the subsidiary, so that decreases the level of required capital you have going forward."

And recapitalizing the Florida subsidiary makes it a more salable asset, Mr. West said. A sale would further reduce Meritor's need for new capital, he pointed out.

"The capital ratios appear to me to have healed," said Roger G. Powell, an analyst at Alex. Brown & Sons in Baltimore.

When its second-quarter results are reported, Meritor will show a loss of about $138 million despite receiving a premium of $337 million when it sold its branches to Mellon. But with $172 million in goodwill off its books after the branch sale, the thrift will also show an increase in tangible net worth to nearly $140 million, Mr. Hillas said. Its primary capital ratio will be a hefty 7.3%.

"The game isn't over, but we're still surviving," he said.

In the stock market on Thursday, Meritor's shares were changing hands at $1.94, down 62.5 cents.

Maine Thrift's Bad Assets Rising

PORTLAND, Maine — Peoples Heritage Financial Group said it expected nonperforming assets to rise $20 million in the second quarter, to $100 million, which could lead to additional loan-loss provisions and a net loss.

For the first quarter, Peoples Heritage reported a loss of $9.8 million, or $1.22 a share.

The holding company said it expected problem assets to amount to 3.5% of total assets in the second quarter, compared with 2.75% in the first quarter.

The company's principal subsidiary, the $1.8 billion-deposit Peoples Heritage Savings Bank, is the largest thrift in Maine.

As a result of this increase and a related increase in loan chargeoffs, Peoples Heritage said it was considering establishing additional provisions "which would reduce net income" or otherwise profitable quarter."

"The company continues to be affected by the generally adverse real estate market in New England," said Weston Bonney, president and chief executive officer. "As a result, the company will continue its historical approach to establishing provisions for loan losses and will be carefully evaluating whether a change in the company's dividend policy is appropriate."

Greenspan's Tip On Rate Policy Raises Eyebrows

By JED HOROWITZ

NEW YORK — When Federal Reserve Board Chairman Alan Greenspan tipped his hand on interest rate policy in his congressional testimony on Thursday, he gave Fed watchers and other tea-leaf readers a whole new set of questions to ponder.

First, what really prompted him to give the markets such an unusually blunt signal that Fed policy would ease? The question arises because the hint comes at a time when the Bush administration is calling more strongly than ever for exactly what Mr. Greenspan now says the Fed will do.

ANALYSIS: *Follow-up on the news*

Yet there are few signs that the economy is slowing. And his ostensible reason for moving off the dime — to relieve a regulatory-induced credit crunch — conflicts with his assessment only three weeks earlier that this was not a problem.

The other question that arises is how Mr. Greenspan expects lower interest rates to leap the economy rolling in the face of his alert to banks that they face tighter capital standards. Raising capital standards, after all, would give banks even less to lend, thus possibly exacerbating a credit crunch that would weaken the economy.

Greenspan's Reasoning

Mr. Greenspan dealt with this seeming contradiction in his testimony. While he said that higher capital would "reduce the availability of credit from insured institutions to riskier borrowers," he noted that "it is just such financing . . . that has caused so many of the current difficulties."

Without further written comment on the matter, it appears that Mr. Greenspan does not expect his plans for tougher capital standards to have any further untoward impact on bank lending.

The motivating factor for the push toward higher capital standards is not as unclear as his nod toward lower interest rates, however. Clearly, Mr. Greenspan is under pressure to ensure that the banking industry will not meet the same politically charged fate as the thrift industry. In other words, taxpayers' money must not be used to bail out banks and their depositors.

Mr. Greenspan acknowledged as much in his testimony before the Senate banking committee. The stronger risk-based capital ratios the Fed plans to propose will "create a large buffer be-

Acting Fast on Chief's Talk, Fed Cuts Funds Rate to 8%

By KELLEY HOLLAND

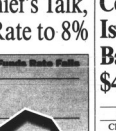
For the first time in seven months, the Federal Reserve on Friday moved to reduce interest rates, pushing the federal funds rate down a quarter point, to 8%.

The move came a day after Federal Reserve Chairman Alan Greenspan said some easing of rates might be advisable to alleviate a credit crunch that could hamper economic growth.

Will Banks Respond?

However, several economists said more easing may be necessary before banks will step up lending.

"If this is only a response to what the Fed perceives as a tightness in credit, I don't think the response is likely to be all that enthusiastic in terms of new lending," said Henry R. Engler,



a vice president and economist at Chemical Banking Corp. "A quarter of a point move is very,

Continental Is Doubling Bad Loans, to $455 Million

By NANINE ALEXANDER

CHICAGO — Barely two weeks after announcing a $50 million restructuring chargeoff for the second quarter, Continental Bank Corp. said it would nearly double its domestic nonperforming loans to $455 million.

Analysts said the move could force the bank company to increase its reserves, which would result in a loss greater than the $40 million to $50 million that was expected because of the restructuring charge. Continental, which is expected to report its earnings Wednesday, declined to comment.

Market Not Disturbed

The increase in nonperforming loans was announced after the stock market closed Thursday and investors took the disclosure in stride. Continental's stock closed Friday at $13, unchanged.

Continental declined to disclose details of its problem credits, but analysts speculated they largely involved highly leveraged transactions. The company said its domestic nonperforming loans represent about 3% of its domestic loan portfolio.

Continental said about 40% of the newly classified nonperforming loans were current and meeting interest payments. The action was seen as being in an-

OTS Rescinds Controversial Rule

By ROBERT M. GARSSON

WASHINGTON — The Office of Thrift Supervision has backed down from a policy requiring significantly higher capital at thrifts that service pools of mortgages guaranteed by the Department of Veterans Affairs.

The rule, which became effective in June, generated a storm of protest from thrifts struggling to comply with the net-worth requirements of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989.

If the OTS left the rule in place, hundreds of thrifts might have been forced to sell mortgage-servicing rights at a loss in an effort to meet capital standards.

The policy affected Government National Mortgage Association (Ginnie Mae) pools containing VA mortgages that institutions service but do not own. A company that services loans processes payments on behalf of investors.

Stiff Increase Averted

On Ginnie Mae pools consisting of at least 20% of VA loans, the OTS wanted thrifts to maintain capital behind the entire VA loan amounts, less the 25% that the veterans' agency typically

LaWare Rules Game of Bank Reform

Silvio Redinger

BIG PLAYER: John LaWare of the Fed Reserve Board holds a strong hand.

By ROBERT TRIGAUX

WASHINGTON — With two years under his belt at the Federal Reserve Board, John LaWare is emerging as the central bank's key player in bank regulatory issues.

The Fed governor, who spent 35 years in banking, has established himself as an advocate for reform. Mr. LaWare thinks commercial and investment banking should not be separated, as they are by the Glass-Steagall Act. He also advocates the elimination of the McFadden Act, which prohibits banks from branching nationwide.

The Top Controversy

He is also encouraging debate on what is perhaps the most controversial issue in the banking industry: whether it should be legal for banks and nonfinancial corporations to be jointly owned. That question has split the ranks of U.S. banks and is fueling a tug of war within the Federal Reserve System.

Mr. LaWare, 62, will probably have a big say in how these issues are resolved. The former chairman of Boston-based Shawmut National

Lawyer Leads Fight to Put A Lid on Lender Liability

By ROBERT M. GARSION

WASHINGTON — Lender liability is one of the hottest legislative issues for the banking industry today, and it was Alfred Pollard, Security Pacific Corp.'s inquisitive and tireless lobbyist, who first fanned the flames.

Mr. Pollard, 38, began organizing lenders, borrowers, and lawyers back in April 1989, and the network he developed has provided much of the momentum for two bills on the issue.

His group, now known as the Environmental Lender Liability Group, scored an impressive victory last month when Rep. John J. LaFalce, D-N.Y., announced that a majority of his House colleagues had signed as cosponsors of his bill to limit lender liability.

The measure faces an uphill fight: With elections ahead, lawmakers are paring all but essential items from the legislative agenda. But the list of cosponsors gives Mr. Pollard hope that a law can still be enacted to limit banks' exposure to the costs of cleaning hazardous waste sites they inherit from defaulted borrowers.

"I think there is a chance to get these bills enacted this year," Mr. Pollard said. "The borrower groups can't wait another year, because they can't get loans."

Mr. Pollard first came upon the issue while doing research in 1988 to update a book he edited on issues of banking law. His interest was further piqued the next April, when Mr. LaFalce introduced his first lender liability bill. (A second version was introduced a year later.)

Alfred Pollard

"It was the kind of thing where I pulled a few people together for a meeting and at they end they would say, 'When do we meet next?' "

Casting a Net for Support

He began casting a wider net, bringing in trade groups representing home builders, farmers — anybody worried that credit might tighten if lenders grew too leery of environmental liability.

He also served as an informal clearinghouse, faxing or mailing updates and position papers each week — sometimes daily.

"It's really been his show," said Martin Farmer, lobbyist for Barnett Banks Inc., Jacksonville, Fla. "To his everlasting credit, he was the one who got the borrowers together. He set up a lawyers committee, a lenders committee. And he set up what I would say were the original meetings with LaFalce."

'A Professional Student'

In Washington, Mr. Pollard is looked upon as a lobbyist of a different sort: a bit of a gadfly and a man of diverse interests.

"He is a professional student," said Mr. Farmer. "He has more degrees than anyone else in town."

After putting in a stint on Capitol Hill in the office of Sen. Sam Ervin, D-N.C. — best known for his work as chairman of the Senate's Watergate committee — Mr. Pollard returned to school. The lawyer earned a doctorate in foreign affairs from the University of Virginia and then worked briefly for the Tobacco Institute. He joined Security Pacific nine years ago.

In addition to writing — he is updating his book, "Banking Law in the United States," and he recently assembled a long paper critiquing bank "firewalls" — he teaches a course on undergraduate business law at Georgetown University. He is a father of three children and is an amateur photographer. □

NEWS *briefs*

Fixed Mortgage Rates Up

WASHINGTON — The average interest rate on a 30-year fixed-rate mortgages rose last week to 10.11%, from 10.07% a week earlier, the Federal Home Loan Mortgage Corp. said. The average adjustable-rate mortgage was off slightly to 8.45%, from 8.46%.

OTS Clears Hawaii Merger

HONOLULU — Bancorp Hawaii said it had received Office of Thrift Supervision approval to proceed with its previously announced acquisition of FirstFed America Inc., parent of the $800 million-asset First Federal Savings and Loan Association. Bancorp Hawaii, the largest bank holding company in the state, is still awaiting Federal Reserve Board approval for the merger.

Synovus Plans Acquisition

COLUMBUS, Ga. — Synovus Financial Corp. has signed a letter of intent to acquire Citizens Federal Savings and Loan Association, Rome, Ga.

Synovus plans to convert the $130 million-asset thrift from mutual to stock form and purchase all the outstanding stock. Account holders of Citizens Federal will have an opportunity to purchase Synovus stock.

The $2.7 billion-asset Synovus owns Columbus (Ga.) Bank and Trust Co. and 19 other banks in Georgia, Florida, and Alabama. □

Sovran, Raising Loss Fund, Expects 60% Drop in Profit

By KENNETH CLINE

ATLANTA — Sovran Financial Corp. increased third-quarter profit to fall about 60% after quadrupling its loan loss provision to $74 million.

Meanwhile, Signet Banking Corp., Richmond, Va., announced Friday that its second-quarter profits fell 91% to $2.5 million, after it increased its loan provision by 197% to $50.5 million, from $17 million in the first quarter.

Sovran and Signet recently underwent exams by the Office of the Comptroller of the Currency.

Bad Assets Surge

Norfolk-based Sovran said it expected nonperforming assets to rise 91% to $250 million from the $131 million reported at March 31. Included in this category are $39 million in loans where principal and interest payments are still being met, the bank said.

Sovran also announced Friday it had sold about $60 million in rescheduled or problem loans to lesser-developed countries, which it said accounted for $28 million of its $74 million increase in loan loss provision. It said $33 million of loans classified as nonperforming are in the Washington, D.C., area.

The company expects to report its earnings Tuesday.

Sovran said it expected to report second-quarter earnings in the range of $21 million and $22.2 million, down from $66.6 million in the period a year earlier. It said its reserves for problem loans would rise to $265 million from $198 million, accounting for 1.5% of total loans outstanding.

Problem Assets Small

Analysts said Sovran fared better through its OCC exam than most of its competitors because its problem assets comprise only 1% of its entire loan portfolio.

"The underwriting function at Sovran is functioning effectively despite a deteriorating market," said Gerard J. O'Meara, with Robinson-Humphrey Co. in Atlanta.

Despite Sovran's lower second-quarter earnings, the company indicated it still expects to complete its merger with Atlanta-based Citizens and Southern Corp. in the third quarter, forming a new holding company called Avantor Financial Corp.

Fed May Raise Limit on Deals Made Overseas

By LINDA CORMAN

WASHINGTON — Responding to demands from U.S. banks active internationally, the Federal Reserve Board is likely to propose today an easing of its limitations on securities dealings overseas.

International banking lawyers and other observers say the central bank's intent is to improve American banks' competitiveness in underwriting and dealing in foreign debt and equity securities.

U.S. banks' exposure in any one deal cannot exceed $2 million. Sources said they did not know by how much the Fed would increase that ceiling, but they expect a significant change in the $2 million limit that has been in force for 11 years.

Change May Have Cost

But what the Fed gives with one hand, it may take away with the other. The higher investment

Corrections

In the July 13 issue, the Analysis ("This Is Friday, So Expect Tales of a Big Seizure," page 1) wrongly stated the company affiliation of Nancy Bush, a bank stock analyst. She is an assistant manager at Brown Brothers Harriman & Co. in New York. ■

The Stocks column of July 13 incorrectly stated the timing of expected dividend cuts at money-center banks. The column should have said that an analyst at C.J. Lawrence, Morgan Grenfell predicted there would be dividend cuts within the next 12 months.

Bleakley Resigns as Paper's Editor

NEW YORK — Fred R. Bleakley has resigned as editor of the *American Banker*.

Mr. Bleakley joined the paper in April 1989 and oversaw a redesign of the publication's format and an expansion of its coverage.

In resigning, Mr. Bleakley cited a disagreement with management over his proposal to report directly to the company's president and a desire to pursue other opportunities. He has not announced his plans.

Allan Priauls, the paper's publisher, expressed regret at Mr. Bleakley's decision. "He's done an excellent job with the *American Banker*, particularly in creating and implementing the redesign," Mr. Priauls said.

A successor has not been announced. Thomas J. Ferris, managing editor, will be acting editor of the newspaper while a decision is made, Mr. Priauls said.

A note to readers from Mr. Bleakley appears on page 4.

Bank-by-Phone Competition Rising

Hanover Group Seeks Device a Cut Above Citicorp's

By KAREN GULLO

NEW YORK — Move over, Citicorp: Manufacturers Hanover Trust Co. and several other banks are planning to introduce telephone-banking devices over the next year to give a jolt to their home-banking programs.

The move marks a definite shift away from personal computers for home banking, a service that many banks have dropped because of low profit margins. It also indicates that banks believe they must keep up with Citicorp, which announced in March that it had developed a modified telephone for consumers to bank from home.

Sources say Manufacturers has asked several equipment suppliers to submit proposals for a telephone device that would allow customers to pay bills, transfer funds, and conduct other routine banking business from home.

Unlike Citicorp's initial offering, the proposed Manufacturers device could also deliver advanced telephone services such as voice messaging and caller identification and information services like stock quotations.

BankAmerica Leads the Pack

The Excel home banking program by Manufacturers Hanover is the fourth-largest in the country, with an estimated 7,200 customers in 1989. BankAmerica Corp., Citicorp, and Chase Manhattan Bank hold the top three spots.

In contacting suppliers, Manufacturers said, it is acting as the lead bank for an informal consortium of some dozen banks that want to offer a telephone device but cannot afford to develop their own. Most of the banks working with Manufacturers already offer home banking through the personal-computer-based videotex service known as Prodigy and use Manufacturers' software and back-office processing for home-banking transactions.

Prodigy Services Inc., a joint venture of International Business Machines Corp. and Sears, Roebuck and Co., delivers information services such as home banking, reservations, and shopping via personal computers. The service is available in 42 cities and has 425,000 subscribers, though only a small portion of those use it for banking from home.

Manufacturers does processing for CoreStates Financial Corp.'s Philadelphia National Bank, Comerica Bank-Detroit, First Interstate Bancorp's First Interstate Bank of Denver, Wells Fargo Bank, and several banks in the MAC automated teller network.

Secret Plans

Executives at these banks are reluctant to reveal their plans for a telephone home-banking device. "We don't want to tip off the competition," said a Wells Fargo executive.

Sources expect Manufacturers to offer the telephone device to banks as part of its home-banking processing service. The banks would then rent the phones to customers for a monthly fee.

"The banks that we've had discussions with feel that an enhanced telephone is the way to go," said James Bauer, vice president of electronic banking at Manufacturers. "The interest is being driven by two factors. Banks want to position themselves because they feel threatened by Citibank. They also feel that the market is not right for PCs."

Availability Undetermined

Mr. Bauer acknowledged that Manufacturers is talking to equipment suppliers and other banks, but he declined to say which companies might make the device. He also said it was too early to say when such a device would be available or how it would be distributed.

Citicorp announced its Enhanced Telephone, or ET, in March. The bank leases the telephone for a one-time fee of $49.95 plus $9.95 a month. The product is made by Philips International, a Dutch company.

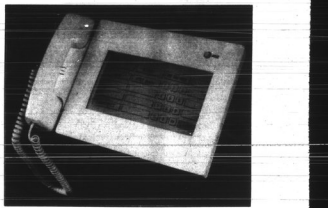
A few hundred ETs are being tested with customers of two Manhattan branches of Citicorp. The ET can be used for home banking, making calls, storing phone numbers, and automatic dialling.

"A dedicated stand-alone banking device won't fly," Mr. Bauer said. The device, he said, must marry features of a computer terminal to a telephone and be able to take advantage of advanced services, called class services, by the phone company. Class services include voice messaging, automatic electronic directories, and caller identification, a feature that delivers the telephone number of the calling party when the phone rings.

Several companies have or are developing such devices. American Telephone & Telegraph Co. recently announced a new telephone that incorporates a small touch screen. Called Smart-Phone, the device can be programmed to make and receive phone calls with the push of a button. AT&T hopes to distribute the phone through regional telephone companies.

"Banking services is one of the primary applications of the phone," said Michael Grisham, manager of strategic planning at AT&T Network Systems.

Mr. Bauer declined to comment on whether Manufacturers is considering the SmartPhone. He did say that bankers may be reluctant to make deals with AT&T because of tension between the two groups ever since AT&T introduced its Universal credit card, which competes with cards issued by banks. □



ADVANCED FEATURES: AT&T's SmartPhone, combining some features of a computer terminal and a home telephone, may be the type of device that Manufacturers Hanover Trust will consider for its latest home-banking initiative.

Norwest Corp. Sells Data-Processing Unit to Fiserv

By JEANNE IIDA

NEW YORK — Fiserv Inc. said Friday it bought a data processing company that had only recently been acquired by Norwest Corp., Minneapolis.

In the cash transaction, Fiserv paid an undisclosed amount for a subsidiary of First Interstate Management Services of Wisconsin Inc., which Norwest acquired in April.

Norwest will continue to perform data-processing services for banks, thrifts, and credit unions through another subsidiary, Norwest Technical Services, which uses an International Business Machines Corp. environment.

"We considered converting the FIMS customers to the Norwest systems, but since FIMS and Fiserv are both Unisys processing environments, this was the most cost-effective and least disruptive for the FIMS customers," said Kim Meier, senior vice president, information services at Norwest Technical.

Data-processing services increasingly are being consolidated in the hands of companies like Fiserv, West Allis, Wis., a few big banks.

Fiserv, which has been aggressively snapping up data-processing companies, said recently that merger talks had broken off with an unnamed suitor.

The newest addition, First Interstate Management Services of Sheboygan, Wis., processes 400,000 customer accounts for institutions in Wisconsin and Minnesota. □

COMMENT/ *By Paul S. Nadler*

A Normal Day Isn't News At Ol' Schmidlap National

The most important events at Schmidlap National Bank last week were these:

- People requested 1,500 loans, all of which were acted on within a week of the request; some were approved, some rejected.
- The bank handled 168,000 transactions with only 267 errors, all of which were corrected with one phone call each.
- The tellers called 78% of the customers by name.

Did any of this make the newspapers? Of course not. That's not news.

The Squeaky Wheel Syndrome

If any news story appeared about Schmidlap last week, it probably involved an individual who was turned down for a loan and complained that he should have been given it or someone who told the press that the bank's service charges were higher than other banks' charges or that the bank refused to cash checks of dubious origin for people the bank did not know.

Now, that's news!

And if the bank happens to have had some nonperforming loans and has had to build up reserves and write down profits, that's headline news.

The reason for this is obvious. The routine is not news. The exception is. And reporters are always looking for the exception. It is a never-ending struggle.

Creating Misimpressions

The problem, however, is that in their efforts to make stories more exciting than they really are, the news media can create misimpressions.

As recently as late spring, a run developed on a Colorado savings and loan that forced it to be closed earlier than officials wanted because a television station built up a routine report by regulatory officials.

And we have had throughout this year such bad publicity on banks that few investors will touch bank stocks.

Without question, the heavy pressure put on banks and thrifts by the media is a basic reason why the public is gravitating to larger institutions, hoping that regulators will treat them as "too big to fail." This movement is at the expense of smaller institutions that may actually be far sounder.

But this is to be expected.

And you may bet that – when conditions turn and many banks earn healthy profits from recapture of reserves set aside now to satisfy overzealous regulators – instead of crowing that the banks are now healthier and recovering their forgone profits, the news media will say: "Bank profits are too high – they are milking the public."

What can banks do about this? Precious little. But bankers can turn inward and recognize what these reports really mean and what motivates them.

For just as bankers can believe their own press clippings and develop swelled heads when journalists write laudatory articles – because this makes the bankers more interesting than articles with less hype in them – bankers can also get in trouble when they read adverse press comments. They'll get in trouble, that is, if they begin to believe they cannot do the job that must be done.

In sum, bankers must remember that today's news is tomorrow's fish wrapper – and not even that much if it went out on the airwaves.

Most important, bankers must remember that what is not news to the media is still the most important news of banking to people who want loans, want to correct their statements, and want to be treated civilly when they visit the bank. □

Mr. Nadler is a contributing editor of the *American Banker* and professor of finance at Rutgers University's Graduate School of Management.

A Note to Readers

Dear Reader:

Over the past 15 months I have occasionally used this space to keep you apprised of changes in the *American Banker's* editorial content. Many of those changes came about because of the willingness of many of you to let us know what is most important to help bankers understand and react to such a challenging environment.

This is the last issue of the paper that I will edit, and I wanted to take this opportunity to thank you for your support in the redesign of the paper that took place earlier this year. I am also grateful to the management of the *American Banker;* its owner, The Thomson Corp.; and such a hard-working, talented staff of reporters and editors for helping me make the most of this unique opportunity.

Sincerely,
Fred R. Bleakley,
Editor

"SOUND OFF"

California bank branch offices are closing at an unprecedented rate, spurred on by acquisitions, merger mania, and the anticipation of interstate banking, scheduled for 1991. The *American Banker's* Los Angeles bureau chief, Teresa Carson, asked the following people:

***Q** How many financial institution branches do you think will be closed in California in the next three to five years?*

■ John J. Keating
President and CEO
Lincoln Bancorp.

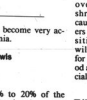
About one-third to one-half the branches in California are likely to close.

There are several forces going on here. The big California banks are buying smaller banks and consolidating them into their operations in anticipation of [interstate banking in] 1991. You don't hear a lot of action on interstate banking from the big Eastern banks yet; so far, most of the activity is by California banks.

Also, many savings and loans will be acquired, either from the government or as independent entities. That will mean more consolidation. And there are mergers among smaller banks, which will also produce branch closures.

The only thing that will throw off this estimate is if the big Eastern banks become very active in California.

■ Donald J. Lewis
Audit Partner
Arthur Andersen



I think 10% to 20% of the branches will be closed over the next few years.

Although there will be acquisitions and mergers, my estimate is low because many of these offices continue to operate after they are acquired. If there is overlap, an acquiring institution might sell off the branches. Many of the failed thrifts that will be up for sale – like Santa Barbara Savings, and others – have very attractive branch networks.

Basically, though, a branch network is still the most cost-effective way to gather deposits. Although more and more customers are dependent on ATMs, a branch office is the only way to attract new customers. In the future, branches may be smaller without full services, but we will still have the branches.

■ Richard M. Rosenberg
Chairman and CEO
BankAmerica Corp.

The financial services industry is characterized by considerable overcapacity. Although each

day we see the overcapacity shrinking because of mergers and acquisitions, this will continue for a long period and will produce its own special set of competitive stresses.

■ W. Dean Cannon
President
California League of Savings Institutions

I can only speak to the savings and loans. The California savings and loans peaked at 212 companies with 3,400 offices during the middle 1980s. I expect by year-end we will have only 150 independently operating savings and loans because

we will see branch closures and the numbers of companies will shrink. That will continue over the next two or three years and that will take another 50 companies off the roster of 150. More savings and loan offices will be closed and we will be left with about 2,500 total.

■ Michael B. Abrahams
Vice president
Bateman Eichler, Hill Richards Inc.

As interstate banking grows, greater consolidation in banking is to be expected. Thus, it is only natural that the number of branches decline. In California, my guess is that the nearly 3,100 savings and loan offices and the 3,025 commercial bank offices will probably decline by 25% to 35% over the next decade.

Probably the most obvious reason to expect declining branch levels is the sale or liquidation of the troubled S&Ls; while some branches will remain open under a new owner, I expect that many will be consolidated into the acquirers' nearby branches. It would be very surprising, for example, if Security Pacific kept all of Gibraltar's branches open.

Secondly, the arrival of interstate banking in California next January is likely to accelerate the consolidation now occurring. I would be very surprised if the number of banks and savings and loans did not drop sharply from the current level of 700 by the end of the decade.

Finally, the large and growing ATM network makes branch offices less necessary for retail customers while improved information systems may make branch consolidation more efficient. □

Now, the BANCPEN Branch Data is as close as the keyboard of your Personal Computer

The BANCPEN Branch Data is now available in a ready-to-use format for use with the IBM Personal Computer or any other IBM compatible machine with a minimum of two disk drives and 256K RAM.

The latest data on all bank and savings institution branches and credit unions is built into our special program to make your PC your fastest, most complete market information source available. Data for the last five reporting years is given for each branch location, including dollar volumes for total deposits and all other deposit categories reported.

Bancpen provides the data by state in a ready-to-use format. The Bancpen program will give you the market share data you want by city, county, zip code, or let you create your own market down to census tract or trade area. It also calculates growth rates for each individual branch over the last five years. Plus, a special projection feature weights this past performance information so you can forecast deposit and market share data for the next five years.

Put the Bancpen Reports on your PC. Use it whenever—and as often—and as long as you need to. It costs less than on-line systems, is more convenient, and no programming time is involved.

COMMUNITY RELATIONS

Tighter Enforcement Stuns Some Foreign-Owned Banks

By LINDA CORMAN

Regulators have taken some foreign-owned banks by surprise in cracking down on Community Reinvestment Act compliance.

Some of the institutions, after operating for years under the mistaken belief that they were exempt from CRA requirements, have recently been handed poor evaluations, banking sources said.

Rules that took effect July 1, bankers said, have prompted regulators to step up enforcement of the 13-year-old law that calls for banks to invest in low- and moderate-income communities. The rules require banks to disclose to the public the results of their CRA evaluations.

"Some [foreign-owned banks] may not understand the regulatory or political environment they're dealing with."
Daniel M. Leibsohn
Low Income Housing Fund

Bankers have said that regulators, worried about being criticized for lax supervision, have toughened their exams.

The rule changes have not altered which banks are subject to the law. Foreign-owned banks with deposits covered by the Federal Deposit Insurance Corp. have always been subject to CRA requirements, according to a Federal Reserve lawyer.

But recent events indicate that at least some foreign banks have been lax on compliance and that they are now feeling the hot breath of regulators pressing them to put their houses in order.

Patrick C. Gatins, vice president, deputy counsel, and CRA compliance officer for the Bank of Tokyo in New York, said he knew of only one other foreign-owned bank with a CRA compliance officer. And that officer was named only recently by a bank that had thought it was exempt from the law, he said.

A Lonely Figure at CRA Conferences

Mr. Gatins, who said his bank has had a compliance officer nearly as long as there's been a CRA, also said he was virtually the only officer from a foreign-owned bank at the recent spate of conferences and meetings on CRA issues. In recent months, however, a number of bankers, suddenly aware of their CRA responsibilities, have called him for pointers, he said.

And Daniel M. Leibsohn, a community organizer in California, said many foreign banks, after traditionally having done little CRA lending, recently are among the most active.

Executives of foreign-owned banks may have been more prone to think they were exempt than did those at U.S.-owned banks, Mr. Leibsohn said, because CRA is so American. "Some may not understand the regulatory or political environment they're dealing with," he said. "There isn't anything like this where they're from."

Low Income Housing Fund Borrows Money for Projects

Mr. Leibsohn is president of the Low Income Housing Fund, which obtains low-interest loans from financial institutions and re-loans the funds to organizations for low-cost housing projects.

Most foreign-owned institutions primarily offer wholesale services. Recently, wholesale banks – both domestic and foreign-owned – have been put on notice they are subject to the CRA, several sources said. Many wholesale banks had not considered themselves subject to the law because their products do not lend themselves to community investments, bankers said.

At least one organization representing foreign banks in the United States said it was unaware of its members' encountering more zealous enforcement of the CRA. These banks "have been subject to the same amount of [CRA] supervision and regulations as domestic banks," said Paul Pilecki, a partner in the Washington law firm of Shaw, Pittman, Potts & Trowbridge, which represents the Institute of International Bankers, a New York based group.

Making the Retail-Wholesale Distinction

For retail banks that take deposits and make loans, it seemed natural that some of those loans would be required to be made in the communities from which the deposits came, as CRA specifies. But wholesale banks, whose primary product is loans to corporations with facilities nationwide or worldwide, have no local community to serve, bankers said.

If wholesale banks did not actually consider themselves exempt, they often felt they had fulfilled their responsibilities by giving to nonprofit corporations like YMCAs, symphony orchestras, and museums. But now, wholesale banks have been told explicitly that their lending must meet CRA guidelines, said one banker.

And if foreign-owned banks have been more truant than domestically owned banks on CRA compliance, Mr. Leibsohn said, consumer activist groups should accept part of the blame.

"We weren't even going to them," he said. "We were scratching our heads," trying to figure out how to get them involved. "We didn't try. We wrote a few letters and never got responses" and did not follow up. □

Economists See Tight Reins on Borrowing

By YVETTE D. KANTROW

NEW YORK — Despite reports last week of an unanticipated increase in consumer credit, economists expect consumers to be cautious borrowers in the months ahead.

Some economists said the Federal Reserve's latest report, which showed that consumers took on 10 times more debt in May than they did in April, was a statistical aberration. Even though those observers expect consumer borrowing to decrease in the months ahead, they said the May results are a significant bright spot in an otherwise bleak economic picture.

"It's challenged the consensus view that the economy is weak," said John E. Silvia, a vice president and economist at Kemper Financial Services Inc., Chicago. "It stopped people in their tracks when forecasting a downturn."

Consumer spending habits have taken on heightened importance at banks. As the profitability of lending to big corporations declined, many institutions restructured their balance sheets, emphasizing personal loans.

But some in the industry have expressed concern that banks are stepping up their retail lending activities at a time when consumers, feeling overburdened by debt, are in a saving rather than a borrowing mode.

Consumers seem in a saving rather than a borrowing mode.

"They're walking into a phase of the economy where the creditworthy seem to not be the ones who want to borrow," said Gary Ciminero, chief economist at Fleet/Norstar Financial Group Inc. "So it's a tougher sell."

Mr. Ciminero predicted that consumer credit figures for June will show negative growth. "Slow months are often followed by fast months and fast months by slow months," he said.

Grounds for Positive Outlook

Still, bankers are confident that their consumer lending businesses will remain strong, even as Americans become more cautious borrowers. Banks today are applying stricter underwriting standards to their retail portfolios. As long as they approach expansion cautiously, bankers say, their outlook will remain positive.

"We are seeing a slackening in demand, and things are slow for us," said Patrick M. McQueen, a senior vice president at Manufacturers National Bank in Detroit. "But we're still optimistic about the next year or so."

The bank, which Mr. McQueen said has a small retail loan portfolio compared with other regionals its size, is now expanding its reach and entering the Chicago market. The move,

The 1991 Banker's Diary and Guide.

A personalized planning tool that not only keeps track of your business activities–it becomes part of them.

Don't start 1991 without your most important business associate. The *1991 Banker's Diary and Guide.*

Impressive. The *Diary and Guide* has been specially prepared by *Banker's Magazine* and Warren, Gorham & Lamont with attention to the smallest detail...a genuine fine-grain leather cover...gilt-edged pages...personalized with the recipient's name, company name, or company logo embossed on the cover in 23-karat gold.

Practical. The *Diary and Guide* will help you organize your business, set appointments, and save time throughout 1991. At a single glance, you can plan for the week at hand, or from month to month.

Intelligent. A uniquely-functional desk reference for bankers, the *Diary and Guide* was designed with your information needs in mind. You'll find important bank reference material–facts, figures, charts, sources, checklists–including:

- Annual compound interest annuity table
- Treasury bill yield computations
- Tax-exempt yields and taxable equivalent yields
- Bond and security glossary
- Income tax rate table
- And much more!

Ideal. As a gift for your clients. Your staff. Or even as a treat for yourself. It's a convenient reference and planning tool to use–and depend on–daily.

The *1991 Banker's Diary and Guide*–plan on it. For more information, call:

Dearth of Numbers from OTS Makes Thrift Picture Hazy

By DEBRA COPE

WASHINGTON — Where have all the numbers gone?

The past four months have been a dry season for analysts of the monthly and quarterly data that the Office of Thrift Supervision collects on the condition of the thrift industry.

Congressional budget analysts say an information drought is making it difficult to measure the progress of thrift industry rescue efforts and assess the Resolution Trust Corp.'s financial needs.

No statistics culled from monthly thrift financial reports have been published by the OTS since March 7, when it released a thrift activity report for December 1989.

"It's an absolute shame not to be providing information on a timely basis when we're confronted with such a serious problem," said James R. Barth, an Auburn University finance professor who was chief economist at the OTS until last November.

The OTS appeared to be in the midst of revising its policy on disclosing monthly thrift activity reports when the *American Banker* placed calls last Thursday.

Some Data Due This Week

The agency has decided to release data for January and February sometime this week, spokesman William Fulwider said on Friday. Thereafter, it will publish the monthly data on a quarterly basis, but will provide the monthly numbers as they are calculated upon request, he said.

A senior OTS official insisted the agency is not withholding the data it collects month by month. The agency is still working the bugs out of a new computer system, and thrifts are struggling with a congressionally mandated switch to new consolidated reports of their financial condition, this source said.

"If there is a real or perceived need for folks to continue to get monthly data, I don't think anyone has a problem. It's not a hard-and-fast decision," this official added.

Monthly reports provide information on the composition of the thrift industry's portfolio, its

James R. Barth
Former OTS economist

capital position, and rates offered on deposits. Income data, though collected monthly, have been released only quarterly.

Congressional budget analysts said the monthly data provide intermediate indicators of where thrift industry problems lie. "During last year's deposit outflows, the monthly numbers really helped us understand that they were caused by downsizing, not by depositor runs," said one analyst.

"We don't know how many thrifts are likely to survive the current strains, and we don't know where the groups that were marginal are headed," said a Senate Banking Committee staff member. Getting adequate data has been such a problem for the committee staff that Chairman Donald W. Riegle, D-Mich., summoned OTS Director T. Timothy Ryan Jr. to his office to explain delays.

Congressional sources said the OTS's office of the chief economist is in disarray and has had trouble gathering data from the agency's 12 district offices, which are being reorganized.

"The districts don't feel like reporting the latest numbers because they know there is going to be a consolidation of field offices," one source said.

Deputy chief economist James Freund has been managing the office since last November. Mr. Ryan said recently that he has narrowed the search for a new chief economist.

"Given the public policy concerns, it is highly inappropriate to reduce the flow of data at a time when it ought to be increasing," said Bert Ely, a consultant in Alexandria, Va.

"Why should the public be denied that information?" Mr. Barth asked. "They ought to release it all or explain to Congress why they should not."

Prospective investors also want aggregate information on the thrift industry. "If you want to ascertain the health of specific institutions, you have to have a frame of reference," said Milton R. Joseph, a financial analyst for UBS Securities Inc., a New York subsidiary of Union Bank of Switzerland. "To acquire a thrift, you have to understand its balance sheet. How would a foreign investor have any idea what a thrift was supposed to look like if he didn't know what the industry looks like?"

"I can make some judgments about investments without relying heavily on aggregate industry data," said David Hochstein, a thrift analyst for Bear, Stearns & Co. who said he has "learned to function without as much industry data."

However, Mr. Hochstein added, "I don't know how you can look at the industry as a whole without data." □

THE WEEK *ahead*

MONDAY, JULY 16

The Federal Reserve Board meets in open session at 9:30 a.m. to discuss suggested revisions to Regulation K, which governs international banking operations. 202-452-3204

The House Banking subcommittee on oversight and investigations holds a hearing in Hartford, Conn. to examine reports that a credit crunch in New England is leading to an economic slowdown. 202-225-2828

TUESDAY, JULY 17

A House Banking Committee task force exploring the competitiveness of U.S. financial institutions will hold a hearing on progress in the development of a financial services agreement in the ongoing Uruguay Round of trade talks. The task force, headed by Rep. John J. LaFalce, D-N.Y., will also explore the issue of whether "financial dumping" – foreign financial firms selling services in the United States below cost – is taking place. 202-255-5821

The Senate Banking Committee has tentatively scheduled a vote on a number of items, including money laundering legislation, the Truth in Savings and Investment bill, and the Fair Lending Enforcement bill. 202-224-7391

The National Credit Union Administration will present an update on the Central Liquidity Fund and the Insurance Fund at an open board meeting in Nashville, Tenn. 202-682-9600

WEDNESDAY, JULY 18

The Oversight Board of the Resolution Trust Corp. will hold its fourth open meeting at 2:30 p.m. to discuss the investigation and prosecution of financial institution fraud and the enforcement efforts the RTC has made. There will also be a general status report on the activities of the board. 202-786-9672

The National Association of Federal Credit Unions begins a four-day conference in Nashville to discuss key issues affecting the nation's credit union industry. About 1,600 credit union officials are expected to attend. Speakers include Sen. Jim Sasser, D-Tenn.; Robert Krukovich, a business news correspondent for "CBS This Morning," and Roger Jepsen, chairman of the National Credit Union Administration Board. 703-522-4770

Federal Reserve Board Chairman Alan Greenspan will testify at 10 a.m. before the Senate Banking Committee, in the Fed's semiannual Humphrey-Hawkins report, on monetary policy. 202-224-7391

Mary Bush, executive director of the Federal Housing Finance Board, speaks to reporters at the National Press Club. 202-662-7500

THURSDAY, JULY 19

Securities and Exchange Commission Chairman Richard Breeden appears before the Senate Banking Committee to discuss restructuring the financial services industry.

FRIDAY, JULY 20

No significant events are scheduled.

Long Wait Seen to Fill Johnson Vacancy

By LINDA COREAN

WASHINGTON — It looks like it may be another extended wait, rivaling the year-long stretch between the resignation of Robert Heller and the ascension of his successor, David Mullins, before outgoing Vice Chairman Manuel Johnson's seat is filled at the Fed.

Council of Economic Advisers Chairman Michael Boskin, Treasury Secretary Nicholas F. Brady, and White House Chief of Staff John Sununu are working on the nomination, but they are pondering a list of eight to 10 names, said an administration source. The list has not yet been winnowed to one or two names.

"They're putting a lot of time and effort into it," but the administration has been caught up in the economic and budget summits, the source said. Not to mention the thrift crisis.

The Likely Nominee

The nominee will probably be a banker, a chief executive officer, or business person because that is what Secretary Brady is after, rather than an academic or government insider, the source said.

That scratches one rumored candidate from the list, David Mulford, Treasury undersecretary for international affairs.

But not necessarily Council of Economic Advisers member John B. Taylor, one of the names most frequently mentioned, said the source.

"Taylor would certainly be a top contender if a CEO type is not chosen," said the source.

Manuel Johnson
Departing vice chairman

As to timing, even if a nomination were to be made this week (highly implausible), it is unlikely Congress could confirm before it adjourns. Since there are six sitting governors, an emergency could hardly be declared to keep Congress on the job to finish the work. Only four governors are needed for a quorum. So, it is quite possible there will be no one to replace the vice chairman until next year.

And, despite the source's insistence that the Administration is on the case, as several observers noted, there seems to be no sense of urgency.

In the past, nominations have been made quickly if the missing governor was the chairman or if a new administration wanted to replace the opposite party's nominees with his own, said Steven Roberts, partner at KPMG Peat Marwick and a former assistant to Paul Volcker.

But, none of this applies this time around.

Meanwhile, Vice Chairman Johnson's days at C and 20th Street are dwindling to a precious few. His last day at work will be Aug. 3.

"He's in a cooling-off period," said Joseph R. Coyne, assistant to the board.

The vice chairman has not only absented himself from the Federal Open Market Committee meetings the first week of this month, which he is required to attend; he is also not participating in discussions on applications or regulatory issues, Mr. Coyne said.

"He said he felt uncomfortable," discussing regulatory issues, Mr. Coyne said.

Last weekend and early last week the vice chairman attended his final meeting of the Bank for International Settlements in Basel, Switzerland. After a few extra days on the continent he was to arrive Friday to Washington, when he was expected to get down to cleaning out his office.

He plans to take the month of August off to vacation with his family. His new life as the G-7 Council, a nonprofit organization he helped start this spring, and George Mason University, begins after Labor Day, said the Fed staff member.

While most of the governors have emerged from their reticence induced by the open-market committee meeting, newly installed Governor David W. Mullins is still refusing press interviews. Mr. Coyne predicts the silence will end in the next few weeks. □

The "How To" system for your whole bank. 1-800-456-2340

How to run your lending area better. How to stay in compliance. How to price your services. How to handle personnel issues. And much, much more.

That's the **Sheshunoff High Performance Management System**. 12 easy-to-use volumes that show you how to manage your bank safely and profitably.

You get model policies and procedures. Sample forms and documentation. And clear, step-by-step recommendations for every part of your bank.

You even get System Updates with the latest ideas for improving performance. And Regulatory Updates designed to make it easier for you to stay in compliance.

Best of all, you get two complete sets with your order. So you can give individual volumes to each department head, and still have a set of your own for handy reference. All for $1,650.

And you know it's information you can trust because it's from Sheshunoff Information Services Inc. The leader in high performance banking since 1971.

To get your whole bank working on the same successful system, just call 1-800-456-2340.

OTS Rescinds Capital Requirement on VA Loan Servicing

Continued from *page 1*

would cover in a default. On a $100,000 serviced loan, the thrifts' risk-based capital requirement would equal 4% of $75,000, or $3,000.

In the past, thrifts with servicing rights to Ginnie Mae pools had to have capital backing only for the value of the servicing rights, typically 1.5% of the loan amount. A loan for $100,000 would have a servicing value of $1,500; 8% total capital on that smaller amount would equal only $120.

In opposing the greater capital requirement, thrift executives had an ally at the Department of Veterans Affairs, which warned that the OTS rule would have limited the availability of mortgages for military veterans.

The issue will now be evaluated by the Federal Financial Institutions Examination Council, a coordinating body of bank and thrift regulators. The council is currently seeking public comment on capital requirements for recourse arrangements, which would include treatment of servicing rights for VA loans.

Final Rule by Yearend

The examinations council has targeted the end of the year as the effective date for any changes in the rules on recourse.

The OTS rules were implemented last month without fanfare as a reinterpretation of the agency's risk-based capital guidelines. OTS has been criticized not only for the substance of the policy but the way in which the agency promulgated it – without putting it out for public comment.

Notice of the change came in a letter from Jonathan L. Fiechter, principal senior deputy OTS director, to the director of the agency's Cincinnati district office. The first disclosure came after a copy was obtained by the *American Banker*.

A number of observers, including officials at the VA department, argued that OTS should have published the rule and sought public comment.

"There was absolutely no opportunity for comment or discussion," said Peter Knight, vice president for mortgage finance at the National Council of Savings Institutions. "For something that would have affected as large a market as this, it's wise to have public comment."

Concern Over 'No-Bid' Option

OTS said it acted out of concern that VA's "no-bid option" puts servicers at risk when loans go bad. Under the option, when a loan goes into default, the veterans agency can pay off its guarantee and turn the loan over to the institution with the servicing rights. In areas with depressed real estate markets, the agency's typical 25% share may not be enough to cover losses, the OTS argued.

Industry groups argued that the OTS overstated the risk of VA mortgages. "We just don't think the risks are anything close to what their rule suggests they are," said Curt Uhre, president of the Coalition for Affordable Home Finance, a thrift industry group.

Mr. Uhre welcomed the agency's decision. He had predicted that the OTS rule might have required the thrift industry to add $3 billion or more in new capital.

Although bank and thrift regulators could still adopt similar rules once the examinations council concludes its review, Mr. Uhre and others said the opportunity for public comment on the regulation should lead to a more modest capital requirement.

"To my knowledge, neither OTS nor the bank regulatory agencies even have precise data" on the composition of outstanding Ginnie Mae pools, Mr. Uhre said.

The OTS's Mr. Fiechter had said that VA loans account for more than 20% of only a very few pools, but he acknowledged that he did not have precise data.

Thrift executives were trying to find out how the rules would affect them. □

Restraint Seen In Borrowing By Consumers

Continued from *page 6*

he said, is part of a strategy designed to keep consumer credit growth strong at the bank.

At the end of 1989, Manufacturers National Bank had approximately $1.3 billion in consumer receivables outstanding, representing 24% of its total assets. It was the 92d-largest bank lender to consumers, according to an *American Banker* ranking.

"Banks that have made strategic decisions to jump into new markets have suffered," Mr. McQueen said. "We will be moving carefully and deliberately."

Weighted by Credit Card Debt

According to the most recent consumer credit figures from the Fed, Americans took out $3.9 billion more debt in May than they paid off, resulting in a seasonally adjusted annual growth rate of 6.5%. The increase – which represented the highest annual rate of growth since October – gained notice, as net new debt in April had totaled only $390 million.

The surge in May was heavily weighted by credit card debt, which grew $3.1 billion, representing an annual rate of 18.5%. But economists expect June's figures to show slower growth, as consumers show more restraint.

Retail sales results for June, as reported by major retailers Thursday, also indicate that consumers are pulling in their horns. Sears, Roebuck and Co., the nation's largest retailer, posted an unimpressive increase in sales of 3.5% for June. □

The time has come for the top management of the bank, the CEO, to get involved in automation. Top management must face this fact and cannot wish that responsibility onto others.

Automation is no longer the intrigue and complexity that it has been for 30 years, and top management must realize that fact. The automation directions, strategies, and decisions must come from bankers, not data processing people. For those CEOs who realize this, the bank can move ahead now. If they won't take the responsibility, then the bank will have to wait until the CEO is willing to become involved.

Automation is no longer decisions in hardware and software, but decisions in the art and science of banking.

EXECUTIVE *changes*

Bank of Vermont Taps John Ewing To Be President

John T. Ewing has been elected president of Bank of Vermont, Burlington, a subsidiary of **Bank of Boston Corp.**

Mr. Ewing succeeds Paul R. McConnell, who, after a short transition period, will move on to head private banking in Massachusetts for the parent corporation.

Mr. Ewing has been serving as executive vice president and director of Bank of Vermont. He was also in charge of the bank's retail financial services group and will continue in this capacity as president.

A leader in initiating dialogue between bankers and community reinvestment interests, Mr. Ewing played a key role in the formation of the Burlington Community Banking Council, which includes representatives from community groups. The council is particularly interested in formulating plans to make affordable housing and banking services available for people of low or moderate income. As president Mr. Ewing will be actively involved in community affairs.

A graduate of Amherst College and Yale Law School, Mr. Ewing was admitted to the Vermont Bar Association in 1957. He was in private practice until he joined Bank of Vermont as general counsel in 1973.

— **Franklin Smith**

NEW ENGLAND

Vermont Bankers Association, Montpelier, has elected **Richard C. White** president of the association for the 1990-91 term. He is president of **Community National Bank** in Derby.

Richard L. Noel, president of **First Vermont Bank and Trust Co.**, Brattleboro, is first vice chairman, and **G. William Ellis**, president of **Northfield Savings Bank** in Northfield is second vice chairman.

Newly elected to the association's nine-member board were **John D. Hashagen Jr.**, president of **Vermont National Bank** in Brattleboro; **Kathryn Boardman**, executive vice president of the **Merchants Bank** in Burlington; and **J. Hayes Stagner**, president of **Bellows Falls Trust Co.**, Bellows Falls.

MIDDLE ATLANTIC

New York State Bankers Association, New York, elected **Robert F. Wallace** to head the group for the 1990-91 term. Mr. Wallace is president of **National Westminster Bancorp**, New York.

Robert F. Wallace

Elected first vice president of the association was **Richard S. Simmons**, vice chairman of **Chemical Banking Corp.**, and its principal subsidiary, Chemical Bank, New York.

John A. Kanas has been elected second vice president of the association. He is chairman, president, and chief executive officer of the **North Fork Bancorp**, Mattituck, and of its principal subsidiary, North Fork Bank & Trust Co.

Kenneth D. Philbrick, president and chief executive officer of **Steuben Trust Co.**, Hornell, has been elected treasurer of the association.

U.S. Trust Corp., New York, said **Maureen Scannell Bateman** has joined the corporation as senior vice president and general counsel.

Mrs. Bateman previously was vice president and counsel at Bankers Trust Co., New York.

Kansallis-Osake-Pankki, said **John Birch**, senior vice president of its New York branch, has been appointed managing director of Kansallis International Bank in Luxembourg. In addition, Mr. Birch will assume the duties of general manager of the Kansallis-Osake-Pankki branch in Luxembourg. He will succeed **Matti Mankki**.

His appointment is effective Sept. 1.

Hudson Valley National Bank, Yonkers, N.Y., appointed **John P. Gilligan** vice president in charge of business development in Yonkers.

He was formerly with National Westminster Bank USA.

MIDWEST

First Colonial Bankshares Corp., Chicago, said **William G. Hoskins** was named chairman of First Colonial Bank of Lake County in Vernon Hills. He will also continue as president of the unit.

Boatmen's National Bank of St. Louis, Mo., elected **Jay D. Justice, Joseph H. Hempen, William F. Sommer,** and **Daniel Callahan** senior vice presidents.

Mr. Justice directs the human resources division for the bank; Mr. Hempen is group manager of trading/institutional sales; Mr. Sommer is manager of treasury/investment operations in the investment banking division; and Mr. Callahan is senior credit officer for the South Region.

SOUTHEAST

The **Virginia Bankers Association**, Richmond, elected **William F. Shumadine Jr.** president. Mr. Shumadine is president of the **Central Fidelity Bank**.

He succeeds **John H. Clements**, chairman, president, and chief executive officer of the **Bank of Southside Virginia**, Carson.

William Shumadine

President-elect of the association is **Douglas D. Monroe Jr.**, chairman and chief executive officer of **Chesapeake National Bank**, Kilmarnock.

SOUTHWEST

Western Capital Investment Corp., Denver, named **Scott Crosby** chief financial officer, replacing **Richard Green** who resigned.

Mr. Crosby will also continue as chief financial officer at Bank Western, the company's principal subsidiary. □

Venezuela Predicts 100% Participation in Debt Plan

By JOE ORTIZ
Reuters

Venezuela expects all its creditor banks to participate in its debt reduction plan, said Pedro Tinoco, president of the central bank.

"The deal is not dependent on 100% participation, although we firmly believe 100% of the banks will make a choice of an option or combination of options," Mr. Tinoco said in a London interview.

The plan would restructure about $20 billion of the country's foreign obligations, which total around $32 billion.

Mr. Tinoco and other Venezuelan officials were in London for meetings with commercial bankers, the Bank of England, and the British Treasury. They have already visited Washington, New York, Frankfurt, Paris, and Rome.

"We've received an encouraging reception," Mr. Tinoco said. "The financing plan has the full endorsement of the banks, and through our meetings we have been able to clarify and explain further."

Full participation is expected because the menu of options in the deal was developed with the full cooperation of the bank advisory committee and is highly market-oriented, Mr. Tinoco said. "It's a balanced menu," he said. "We expect a balanced answer."

The deal would give the banks five options, including lending new money equivalent to 20% of their current exposure, rate reduction for five years, and a buyback at 45% of face value.

Thirty-year interest reduction bonds and 30-year principal reduction bonds backed by 30-year U.S. Treasury zero coupon bonds and a 14-month interest guarantee would also be available.

Carlos Hernandez Delfino, Venezuela's chief debt negotiator, said preliminary discussions have taken place with the U.S. Treasury on its participation. Only when it becomes clear which options the banks will take can agreement be reached, he said.

Mr. Hernandez said the deal would require a pool of about $4.3 billion, some $1.5 billion of which would come from the central bank's reserves.

The rest would come from the International Monetary Fund, the World Bank, and Japan's Eximbank, which is expected to provide about $600 million to help reduce the principal.

... by country

UNITED KINGDOM

Bank of England Governor Robin Leigh-Pemberton said Trade Secretary Nicholas Ridley's criticism of West Germany will not harden European Community attitudes toward British proposals on European economic union.

"I don't think it will be very damaging," Mr. Leigh-Pemberton told British Broadcasting Corporation Television in London. "I think it will be seen to have been a simple outburst."

He called Mr. Ridley's comments that West Germany is trying to take over Europe "exaggerated and extreme."

Mr. Leigh-Pemberton said he does not think Britain's proposal for a "hard" Ecu as a common European currency existing alongside existing national currencies is doomed.

Any attempt by France, West Germany, or others to move directly and independently toward economic and monetary union would be "a premature and impatient move, and it will have the disadvantage of creating a two-speed Europe," he said.

JAPAN

Japan's Finance Ministry is likely to ask an unofficial advisory panel to resume debate soon on the timing and procedures for decontrolling interest rates on demand deposits, a ministry official said.

The panel plans to hold its first session July 26 and issue a report in the first half of 1991, the official said in Tokyo. Meetings will probably be held once or twice a month, he added.

In May The panel finished discussions on liberalization of time deposits with a proposal to fully deregulate interest rates on them in three years.

The United States wants Japan to free demand deposit rates in a year.
— Reuters

Japanese banks are ready to resume full operations in China now that Tokyo has formally pledged to reopen official lending to Beijing, a top Japanese banker said.

"Japanese commercial banks can now resume their activities in mainland China," said Tetsuo Horie, president of Long-Term Credit Bank of Japan Ltd., at a press luncheon in Tokyo.

Prime Minister Toshiki Kaifu told reporters in Houston last Wednesday that Japan may start lending to China again before the Asian Games start in Beijing in September.

In June 1989, to protest China's violent crackdown on dissent, Japan froze an official loan package of $5.4 billion. Japanese commercial banks followed suit, suspending their loans.

Mr. Horie also said he sees little need for the Bank of Japan to raise the official discount rate, even if the U.S. Federal Reserve lowers interest rates. "If, for instance, U.S. interest rates were to go down, there would be no necessity [for] the Bank of Japan to increase its rate," he said.

Brazil Expecting Tough Debt Talks

Sees a Negotiating Edge from Writedowns by Banks

Reuters

BRASILIA — Economy Minister Zelia Cardoso de Mello predicted that Brazil's forthcoming talks with creditors over its $114 billion foreign debt would be tough.

Talks about the debt, she said, would have to be conducted within the framework of Brazil's radical economic reforms, which have halted galloping inflation and should produce a budget surplus this year – the first in many years.

"The success of this internal adjustment depends on the numbers being maintained," Mrs. Cardoso said. "Any modification would involve too great a risk, and we are not prepared to take it."

"There are two loaded pistols pointing at each other."

Zelia Cardoso de Mello
Brazil's economy minister

A Tougher Stance

Bankers and analysts said they expected Brazil to take a tougher stand in debt negotiations after U.S. regulators last week ordered banks to write down 20% of some $10 billion in medium- and long-term loans to the country.

They added that the regulators' decision effectively acknowledged that Brazil was unlikely to resume payments soon on its foreign debt. They said this would prompt Brazil to demand that banks forgive a large portion of their loans.

"It's made the banks' negotiating position with Brazil difficult," said Mark Gross, a banking analyst with IBCA Inc. in New York.

Mrs. Cardoso was scheduled to travel to Europe over the weekend to meet government and business leaders in Britain, France, West Germany, and Italy. She has said, however, that debt negotiation was not the main aim of the trip.

Mrs. Cardoso reiterated the government position that internal adjustment had to take priority over the foreign debt.

"All negotiations about the debt will have to be subordinated to [internal adjustment], and we will stick to that line rigorously," she told reporters.

"It is going to be a very hard negotiation. There are two loaded pistols pointing at each other. We are going to see who has the greater capacity of persuasion," she added.

Brazil suspended all interest payments on its $72 billion commercial bank debt in July 1989 and has accumulated arrears of $8 billion since, according to the Economy Ministry.

Brazil's full debt service obligations amount to about $10 billion a year, but on taking office in March President Fernando Collor de Mello pledged to pay no more than half that.

Ability Called Limited

Mrs. Cardoso did not give specific numbers for debt payments this year, saying only that "our ability to pay will be very small."

While agreeing that the forthcoming IMF negotiations were crucial for talks afterward with other creditors, she added:

"I don't think we're going to ask [the IMF] for a guarantee for our program. The situation has changed. Before, the debt question influenced everything. Now, for us, the main axis is internal adjustment. Debt should be discussed in that context." □

Crisis and Rates Burden Canadian Stocks

By JAMES R. KRAUS

NEW YORK — A constitutional crisis, high interest rates, and low share prices are giving Canadian banks little to cheer about these days.

Their share prices have fallen almost 10% since the beginning of the year amid concerns over the country's political and economic future. The uncertainty is cited as a cause of the overall weakness of the Toronto Stock Exchange's composite index of 300 stocks, which was down 9.41% last Friday morning.

Bankers and analysts said several factors contributed to the downward pressures. Canada has been in political turmoil since last month, when the provinces of Manitoba and Newfoundland balked at ratifying a controversial constitutional amendment.

The amendment, known as the Meech Lake accord, would have given the French-speaking province of Quebec extensive powers to promote its owns interests. Concerns were expressed that the province would leave the Canadian confederation if the amendment were not ratified.

Tough anti-inflation policies by the Bank of Canada have driven Canada's prime lending rate, on which many other lending rates are based, to 14.75%, from 13.5% at the end of last year. That compares with a prime rate of 10% in the United States.

Analysts held out little hope that interest rates would soon go down, sparking fears that a recession is imminent.

"I think it's clear that the concerns that Meech Lake raised have somewhat limited the options of the central bank," to bring down interest rates, said J. Arthur English, general manager for Toronto-Dominion Bank in New York.

"We'll have a made-in-Canada recession if we're not able to bring rates down."

Still, some believe that the constitutional crisis may bring some longer-term benefits.

Stephen Blank, director of the Institute for U.S.-Canadian Business Studies at Pace University in New York, predicted that the crisis would increase regionalization, decentralize the Canadian economy, and ultimately give banks bigger business opportunities.

"I don't forget that Canadian financial deregulation came about as a result of competition among provinces to build better markets and has been good for banks in many ways." □

Coming in the July 26th issue of American Banker. . .

Are banks missing out on global marketing opportunities?

There is no denying that the world is changing. But are U.S. banks changing along with it?

On July 26th, *American Banker* will take a look at whether U.S. banks are taking advantage of the latest opportunities to compete globally. Or, are they isolating themselves and missing out?

You'll get answers to questions like these:

Are U.S. banks handicapped in the global market because of the layers of regulation, high costs of raising capital and domestic real estate problems?

Where do banks get demographic information and how do they measure demographic changes around the world?

What is the latest technology used to help with international marketing strategies and demographics?

What are the ethnic markets banks are missing? And what type of services are most useful for these groups?

How do world environmental concerns affect corporate marketing strategies?

With this special report from *American Banker,* you'll be able to identify changing international markets and figure out if there really is a global opportunity for you and, if so, how you can best capitalize on it.

For fastest service
To get your copy of *Globalization of Bank Marketing,* simply:

Sr. Product Support Specialist Bankcard Operations

San Mateo, California

Technology and innovation have made VISA the largest, most widely recognized financial payments system in the world. We do more than enhance existing products. We focus on new product development as well. For you, that means exciting new projects in bankcard operations as well as a chance to gain greater visibility as you present recommendations to senior management.

Your primary focus will be on developing and writing operating regulations for our new and existing bankcard programs. This will involve analyzing the impact of operating regulations and presenting your findings to Member groups. You will also respond to inquiries from members, merchants, and cardholders regarding complex VISA policies and procedures.

You'll need a BA/BS, or equivalent, in-depth knowledge of bankcard operations, and a general understanding of Visa products, services, and systems. You must also have proven presentation skills, as well as management and analytical abilities. Some background in writing and editing is needed.

VISA offers an excellent compensation package, including comprehensive benefits. For immediate consideration, please send your resume to: VISA U.S.A., Dept. SH/7/16/AB, P.O. Box 8999, San Francisco, CA 94128. **For other VISA opportunities, please call our JOB INFORMATION LINE (415) 378-8299.** We are an equal opportunity employer.

VISA

We're everywhere you want to be.

Overseas Banking Consulting

As one of the world's oldest and most prestigious U.S. based consulting firms, we are continuing to expand our business in the Asia Pacific region. With offices in Singapore, Tokyo, Sydney and Jakarta, we have a strong established presence in the region and, in particular, a dominant position serving clients in the financial services industry.

We are currently seeking banking professionals with a strong record of achievement to join our Singapore office. We specifically require individuals with demonstrated functional expertise in the areas of:

- **CREDIT**– preferably middle market/wholesale
- **OPERATIONS**– both head office and branch levels
- **HUMAN RESOURCES**– emphasis on manpower planning, performance/potential appraisal, organization, training

Candidates should have 5-8 years of significant banking experience and possess an MBA or other relevant graduate degree. International work experience, especially in developing countries, would be a plus. In addition, the successful applicant must demonstrate the personal qualities of drive, initiative, creativity and professionalism, and possess strong communication, interpersonal and problem-solving skills.

For immediate consideration, send your resume and salary requirements in confidence to:

Box #435

Continental Doubles Nonperforming Loans

Continued from page 1

tication of pressure from regulators, who have been reclassifying current loans that could become problems in the future.

No Effect from Mandate

At the same time Continental said it will not be affected by last week's regulatory order requiring banks to writedown their loans to Argentina and Brazil by 10%. The banking company said it already has written down its loans to those two countries well below the required amounts.

Analysts said they were not certain whether Continental would raise its loan loss reserves beyond the $25 million that was already expected.

Felice M. Gelman, analyst for Dillon Read & Co., said she had expected an increase in bad loans in her estimate of a $40 million loss. Mrs. Gelman said she expected total reserves of about $229 million, or about 50% coverage for nonperforming loans. Other large regional banks experiencing credit-quality problems are about 60% to 65% reserved against bad loans, she said. But Continental appares favorably to money-center banks, which are less well reserved, she said.

While an increase in domestic loan loss reserves could change the earnings picture, she thought the company might be reluctant to raise it.

Reasoning that Continental has said it would like to buy back the 25% stake held by the Federal Deposit Insurance Corp. since the bank's 1984 bailout, Mrs. Gelman said she thought the company would want to keep some cash available to buy the shares and retire them.

Christoph M. Kotowski, an analyst at Oppenheimer & Co., said he had been looking for a loss of this size. He added a $120 million to $150 million increase in nonperforming loans. "But given the state of flux in the industry, negative surprises are no surprise."

His projections included a $50 million pretax charge for a restructuring that will cut 900 from the payroll and eliminate some lines of business, including back-the-trades traded futures and options. □

Herrick Named to Banking Board

NEW YORK — Peter Herrick, vice chairman of the Bank of New York Co., has been named to represent money-center banks on the New York State Banking Board.

Mr. Herrick, 63, takes the seat vacated almost two years ago by John Torell 3d after his resignation as president of Manufacturers Hanover Trust Co. and a $120 million to $150 million increase in nonperforming loans. "But given the state of flux in the industry, negative surprises are no surprise."

His projections included a $50 million pretax charge for a restructuring that will cut 900 from the payroll and eliminate some lines of business, including back-the-trades traded futures and options. □

Mr. Herrick is a former director and president of the New York State Bankers Association, a director of MasterCard International, and a member of the Association of Reserve City Bankers.

He was one of four new members of the banking board announced by its chairman, New York State Banking Superintendent Jill M. Considine. The board oversees banking department policies and consists of Ms. Considine, eight bank and thrift executives, and eight public representatives.

The other new members are Salvatore Marranca, 43, president and chief executive officer of Cattaraugus County Bank, Little Valley; Jose T. Moscoso, an attorney in the New York law firm of Baker & McKenzie; and John B. Robinson Jr., executive vice president of Fleet/Norstar Financial Group. □

LaWare Plumps for Bank Reform at Fed

Continued from page 1

Corp. now heads the central bank's powerful committee on supervision and regulation. That panel decides which proposed bank holding company regulations eventually get sent to the full board of governors for consideration as final rules.

The positions adopted by the Fed on these issues, particularly the question of bank ownership, will carry a lot of weight with Congress when it considers major reforms of the banking industry next year.

"LaWare is emerging as the point man of the Federal Reserve System on all matters relating to regulatory reform and deposit insurance," said Kenneth Guenther, a former Fed staff member who is now executive vice president of the Independent Bankers Association of America, a trade group representing many small commercial banks.

Small Banks Nervous

Mr. LaWare's stirring of the controversy with Mr. Greenspan has pleased some in the industry but has made others anxious.

"I don't think small banks are encouraged by what LaWare has said on McFadden, Glass-Steagall, or the separation of banking and commerce," said Mr. Guenther. Those changes would tend to favor large banks over smaller banks but leave smaller institutions more susceptible to being acquired.

One major issue Mr. LaWare has not weighed in on is deposit insurance reform, which Congress is expected to consider next year. Small banks fear that

> **"I don't think small banks are encouraged by what LaWare has said."**
>
> **Kenneth Guenther**
> *Independent Bankers Association of America*

any cutback on deposit insurance would put them at a competitive disadvantage in making it harder to attract deposits.

"Our hope is we will have a godfather in John LaWare in the deposit insurance reforms," said Mr. Guenther. "If not, [small banks] will weep and rebel."

In his role as point man on banking issues, Mr. LaWare has testified before Congress numerous times recently on various controversies. He has argued before a small-business commission that there is no evidence of an examiner-inspired credit crunch, and he defended the Fed against hostile banking committee accusations that regulators failed to police banks on mortgage discrimination.

Mr. LaWare accepts the anecdotal indications of a credit crunch, but maintains that the empirical evidence of a crunch has yet to appear.

"You hear a story about someone who has gotten good attention from this bank in New England," he say, and all of a sudden he finds he has his credit lines reviewed," said Mr. LaWare. "Most of the comments already broken the barrier with banks."

> **Mr. LaWare sees no empirical evidence of a credit crunch. "You have a declining economy, and some people who might have been good customers in the past now show things in their balance sheet . . . that would make the banks justifiably cautious."**

tary does not stop to ask, Has his picture changed? The assumption is the bank has changed. But you have a declining economy, and some people who might have been good customers in the past now show things in their balance sheet and the P and L [profit and loss] statement that would make the banks justifiably cautious in their approach."

The image is growing at a slower pace than in past years, Mr. LaWare said, but so is the economy, and those figures do not indicate that businesses are having difficulty getting credit.

"We have to look at the numbers," Mr. LaWare said. "It takes some time for the effect of changed policies and changed attitudes to wash through into the numbers that are available to us to make those judgments."

Changes in International Arena

Much of Mr. LaWare's upcoming power in the regulatory arena emanates from from his role on the Fed panel. The committee, for example, is busy supervising an overhaul of Regulation K, which governs the international activities of U.S. banking companies. Without elaboration, Mr. LaWare promises that some "interesting" changes will be forwarded to the board by the end of the year.

Behind the scenes, Mr. LaWare is also part of the Fed's secretive "F9" group, a recently assembled six-member panel of Fed governors and Federal Reserve district bank presidents that is embroiled in an internal struggle to determine the Fed's role in the rapidly changing financial services industry.

Mr. LaWare acknowledged that the group exists, but declined further comment. "That is all I care to say about this at the moment," he said in a recent interview in his corner office in the Eccles building. "It is for our internal purposes to let the Fed board consider options intelligently."

Restructuring the System

For the future of U.S. banks, no more pressing question for the F6 and the Fed to resolve is whether banking and commerce – separated by law for more than 50 years – should be reunited

DEALS

UAL Unions, Noncontract Workers to Try Again for Crucial Pact

By WILLIAM GOODWIN

Representatives of UAL Corp.'s noncontract workers will meet this week for what could prove to be a decisive round of negotiations with the union-led group seeking to buy the airline holding company.

The two sides have so far been unable to resolve differences over wage concessions and related issues that stand in the way of the noncontract employees' support of the $4.4 billion union buyout effort.

Opposition by the noncontract employees to the deal could scare off Japanese banks, whose participation in the financing is considered critical by U.S. bankers.

Major Issues Unresolved

Negotiators met last week, but all of the major issues remain unresolved, sources familiar with the talks said.

"We've made progress, but we're not there," one of the negotiators said Friday.

UAL's 26,000 noncontract employees represent about one-third of the company's total work force.

Even more so than their U.S. counterparts, the Japanese banks are especially sensitive to worker harmony, bankers have noted.

Aversion to Union Discord

Union discord was one reason why the Japanese banks didn't support UAL's failed $6.8 billion UAL buyout effort last year by the company's pilots union and senior management.

As part of the new deal, the union-led buyout group is seeking first-year wage concessions from the noncontract employees totaling about $50 million.

In return, the noncontract workers would get a 14.2% stake in UAL, with the airline's three unions collectively holding the remaining interest in what would be a 100% employee-owned company.

However, there is still no agreement on the exact level of wage concessions from the noncontract employees, the timing of future wage increases, or on changes to their pension plan.

Written Assurances Sought

The noncontract employees also want written assurances that the financial terms of their agreement with the unions will not be changed down the road.

Last week's talks were described by a source as "constructive," while one participant said he was "neither upbeat nor downbeat" about the ultimate outcome of the negotiations.

The unions now have a little more than three weeks to line up financing for the deal before the Aug. 9 deadline.

While five New York money-center banks have agreed to serve as cosagents, a number of elements must fall into place before the banks will actually commit to provide funds.

Quest for Outside Equity

The banks do not want to be the sole source of financing for the buyout but, as of last Friday afternoon, there was no sign that the union buyout group had yet lined up outside investors.

"It's fair to say the deal will not get done" without an outside investor, an official at one of the five coagent banks said.

The coagents are the banking units of Chase Manhattan Corp., Chemical Banking Corp., Manufacturers Hanover Corp., Citicorp, and Bankers Trust New York Corp.

Officials at some of the five banks have also said they want to expand the group to include at least one Japanese bank.

Bankers say they need Japanese participation in the bank underwriting group to attract other Japanese banks when the loan goes to general syndication.

The buyout group needs to raise a total of about $4 billion in financing. □

OTS Restricts Savings Bank

UPPER DARBY, Pa. — Bell Savings Holdings Inc. said the Office of Thrift Supervision has imposed a cease-and-desist order on its Bell Savings Bank unit, limiting its lending and deposit growth and requiring tighter administrative and regulatory compliance procedures.

The $900 million-asset Bell Savings will add $12 million to loan-loss reserves, which, along with an increase in nonaccruing loans, will result in a net second-quarter loss of $12 million, the holding company said. □

Fed May Raise Foreign Limits

Continued from page 2

ment limit may come at the cost of erecting "firewalls" to insulate banking operations from the volatility of securities activities.

Despite pushing for the higher investment limit, banks may find them unworkable if firewalls are imposed, said Gary M. Welsh, partner in the Washington law firm of Prather, Seeger, Doolittle & Farmer, which represents the Bankers Association for Foreign Trade.

The Fed action will follow a staff review over the past several months of Regulation K, the rules that govern international activities of U.S. banks.

Review Is Required

The International Banking Act of 1978 mandates a review every five years of Regulation K. The current review is expected to produce major changes because of the diminished standing of U.S. banks overseas. Bankers have argued that they need new powers to regain lost ground.

Federal Reserve officials last week declined to discuss the details of its recommendations. But William Ryback, deputy associate director of bank supervision, said investment limits and equities-related powers were the major issues addressed in the proposed revisions.

Since 1979, the last time Regulation K was significantly overhauled, U.S. banks overseas have been held to the $2.5 million underwriting ceiling. The limit has prevented U.S. banks from being lead underwriters or taking major positions in overseas syndicates, U.S. bankers have argued.

Restricted at home to a limited range of securities activities through affiliates, commercial U.S. banks have more latitude overseas, where they can directly underwrite issues.

Firewalls between the securities and banking operations overseas would offset the advantages of the broader powers, Mr. Welsh said.

While Mr. Welsh expected a firewall treadoff, Karen Shaw, president of the Institute for Strategy Development, said it would be inconsistent of the Fed to go that route.

She cited Fed Chairman Alan Greenspan's statement at a Senate Banking Committee hearing last week that firewalls were not necessary or effective in protecting the safety and soundness of banking operations. □

It's easier than you think to cut your bank's consumer bankruptcy losses.

Join us for

ABA's 1990 CONSUMER BANKRUPTCY MANAGEMENT SEMINAR

Prevention, Prediction, and Process

September 27-28
Arlington, Virginia

November 1-2
Los Angeles, California

You'll learn how to challenge bankruptcy, maximize recoveries, and minimize losses, and how to identify potential customer overextension. You'll hear from bankers, attorneys, and judges with extensive experience in consumer bankruptcies, as well as credit counselors and others.

Take advantage of this vital opportunity to meet with your peers to learn what they're doing to combat the increase in consumer bankruptcy filings.

Refcorp Calms Bond Market Fear With Strong Sale of 30-Year Bonds

By TABASSUM ZAKARIA
Reuters

NEW YORK — The results of an auction last week of $5 billion in Resolution Funding Corp. 30-year bonds eased market jitters about whether the agency created to finance the thrift bailout would overcome negative reaction to its earlier 40-year issues.

"The market's just more familiar with the behavior of a 30-year than a 40-year" bond, said Joseph Liro, vice president at S.G. Warburg & Co.

Gratifying Numbers

The auction of 30-year Refcorp bonds produced an 8.93% average and high yield, with bids clustered in a very narrow range around the average; 38% of the bids at the high rate were accepted. The ratio of bids submitted to those accepted was a strong 3.08 to 1.

The results were much better than had been expected before the Tuesday bidding deadline, when some dealers were predicting a large spread between the average and high yields. Strong interest in the nearly 9% yield developed among domestic pension funds and Japanese investors, traders said.

The relatively high yield also attracted nondomestic investors, as shown by the $208 million in noncompetitive bids.

Demand for Stripping

Refcorp's 40-year bonds attracted poor initial demand but were fairly successful after stripping – the practice of selling the coupon and principal separately.

Last Monday, dealers said demand for stripping would not emerge unless the Refcorp bond sold at 40 basis points or more above the yield of the 30-year Treasury bond. After bids were submitted last Thursday, a 38-basis-point spread would prompt enough demand from dealers wanting to strip the Refcorp bonds.

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and for the 50 largest publicly traded thrifts as measured by the market value of all common shares outstanding. As of March 30, 1990, the market value of banks in the banks was $69.6 bil. and for thrifts $121.45 bil.) 52 Wk Hi (as the moving average of the last two years for banks, 52 for thrifts) Lo: Price ratio. It is the current stock price divided by the trailing four-quarter earnings per share adjusted for latest announced earnings. NM, for bank: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Mkt Cap: Market value in millions of announced earnings and dividends. Chg.: The price at which the stock traded, or the change from the previous day's closing price. Last Chg.: The net change in weighted average of the top 250 banks in the Keefe Bank Index from the previous day's closing quotation. Highlights show each week's largest gainers and losers, and the two year indicators most shares traded and today's volume as a percentage of the previous 30-day average of shares traded.

DATA SOURCE: SNL SECURITIES, Charlottesville, VA, 804/977-1600, produced the tables, Financial News Network, Vienna, VA, provides SNL with the daily prices.

Bank Issues Get Lift from Move To Lower Rates

By FRED VOGELSTEIN

Bank stocks turned in one of their strongest days in months on Friday as news of credit easing by the Federal Reserve Bank overshadowed its statements about the prospects for increased capital ratios.

The overall stock market and the bond market also were buoyed by the news. The Dow Jones industrial average broke 3,000 for the first time, before settling down to 2,980.20, up 10.40. The yield on the 30-year bond dropped from 8.58% to 8.48% and the yield on two-year Treasury bills fell to 8.18%.

"I think Greenspan's remarks are one of several positive signs for banks in the past week," said Mark Alpert, an analyst for Bear Stearns & Co. He also pointed to the fact that banks had pledged to finance the UAL Corp. leveraged buyout and the fact that RJR Nabisco Inc.'s $2.25 billion refinancing deal received $7 billion in commitments.

Positive Signs

"There is some sign that easier values have stopped their decline and that banks are more willing to step up to the plate and get involved," he said.

A number of analysts had said earlier on Friday that the market would overlook Mr. Greenspan's remarks about easing and focus on the more negative news about increased capital ratios, but it seemed that word of credit easing ruled the day.

Northern Trust Co. led the way, rising $2.125 to $29.50, on news of record trust fees, growth in net interest income, higher cash management fees, and a lower provision for credit losses.

Most money-center banks, which were off sharply on Thursday, rose strongly on the credit easing news. J.P. Morgan & Co. was up $7.5 cents to $35.75, and Bankers Trust New York Corp. was up 62.5 cents to $40.125

Chase Manhattan Corp., however, was down $1.25 to $21.25. It traded more than one million shares for the second day in a row. Analysts and the company said they could not explain the activity. Analysts at C.J. Lawrence, Morgan Grenfell on Thursday said they predicted that money-center banks would cut their dividends within 12 months and that Chase probably would be the first.

Among regionals, NBD Bancorp rose 75 cents to $32.375, and Wells Fargo & Co. rose 75 cents to $77.875.

First Wachovia Corp., which reported increased earnings last Thursday, was up 87.5 cents to $42.375.

U.B Financial Corp. led losers, falling $1.125 to $14.875. Lacy Shockley, an analyst at Smith Barney, Harris Upham & Co., said that, after talking to the company, she suspected one seller was dumping the stock but that there was no fundamental reason for the decline.

Bad News for Near Term

Regardless of market activity on Friday, most analysts said Mr. Greenspan's comments about the prospects for increasing bank capital requirements would overshadow the prospects for credit easing and, in the near term, would not be good news for bank stocks.

"It's like they just finished running a race [to get to the current capital levels] and now people are talking about having them run another one," said Robert Alberston, an analyst at Goldman, Sachs & Co.

He said that if Mr. Greenspan continues along his current course of tightening capital requirements, he will drastically hinder banks' willingness to lend money and hurt their profitability.

Other analysts said long-term benefits will outweigh short-run problems.

"Long term, it will inject market discipline into the commercial banking industry, which is long overdue. I basically applaud the move," said Thomas Hanley, an analyst at Salomon Brothers Inc.

Ronald Mandle, an analyst at Sanford C. Bernstein & Co., said higher capital requirements also could force more bank mergers, which would be good for shareholders.

Most analysts said they expect few surprises in the coming week of earnings, and as a result expect little additional deterioration in most stocks because of them.

Still, most see more bad news on the horizon. Although next week's earnings releases may not have a big impact on bank stocks, continued deterioration in asset quality will. Most feel those problems will persist through the end of the year and say they seem to be broadening into previously unaffected regions. □

Greenspan's Tip on Interest Rate Policy Raises Eyebrows

Continued from page 1

tween the mistakes of bank owners and managers and the need to draw on the deposit insurance fund," Mr. Greenspan said.

No Compelling Reason Seen

Bankers could find no compelling reason for Mr. Greenspan's indication to lower interest rates in response to banks' tightened lending policies.

They note that the June producer price index released last Friday showed a much stronger than expected rise of 0.6%, confirming past Fed assertions that the economy is not showing noticeable signs of slowing. Retail sales figures released the same day showed a sluggish but steady rise of 0.5%.

To be sure, the link between Mr. Greenspan's interest rate statements and his plan for more capital are not necessarily intertwined.

"The easing of interest rates is a short-term economic fact, and the increase of capital is a long-term plan," said Karen Shaw, president of the Institute for Strategy Development, a Washington-based bank consulting firm. "The capital proposal is of major significance and has created considerably unsettled reaction at banks."

Ms. Shaw and others also rejected the notion that Mr. Greenspan's crusade for more capital was motivated by political expected rise of 0.6%, confirming past Fed assertions that the economy is not showing noticeable signs of slowing. Retail sales figures released the same day showed a sluggish but steady rise of 0.5%.

To be sure, the link between Mr. Greenspan's interest rate statements and his plan for more capital are not necessarily intertwined.

Mr. Greenspan offered few specifics about the planned capital standards. But it is understood they will go beyond the 8% capital-to-assets risk-based ratio that is now being phased in for banks around the world. Many U.S. banks currently meet those standards, which go into effect at the end of 1992, and a few would be close to the stronger standards now being considered, according to Washington sources.

The new standards probably would carry the same risk adjustment weightings as the 1992 standards, Washington sources said. But the Fed is considering major rewards for banks with "exceptionally high capital" above the new minimums, they added.

Mr. Greenspan spoke of "more flexibility in supervisory treatment," but others said that new powers – such as the ability to underwrite equity without restrictions – could be tied directly to the amount of excess capital a bank company keeps in its coffers.

Nevertheless, some observers said the call for more capital could not have come at a worst time. Later that day, Ms. Shaw said, the Federal Deposit Insurance Corp. will undoubtedly raise its assessment rate back to a level of perhaps 20% and may apply the assessment to currently unassessed liabilities, such as overseas deposits.

"You're changing the rules at the worst possible time," said Robert Albertson, an analyst at Goldman, Sachs & Co. "[Greenspan] has just put a bombshell underneath the credit creation mechanism of banks. I can assure you bankers are in a state of stunned disbelief."

Banks' Response to Small Cut Problematic

Continued from page 1

very small. I'm not sure it will have that big an impact on bank behavior."

Darwin L. Beck, a vice president and money market economist at First Boston Corp., agreed. "Marginally, this easing will work in the direction of what [Mr. Greenspan] wants to accomplish," he said, but "this doesn't preclude another step in this direction."

More easing may not be in the offing, however, because the evidence is not uniform that the economy is slowing.

Sign of Economic Strength

For example, a bond market rally ended Friday morning after the Producer Price Index for June increased an unexpectedly high 0.6%. And one banker pointed out that banks had committed to sizable loans to both UAL Corp. and RJR Nabisco Inc. in recent weeks.

"For the Fed to follow through with a series of easings, they would have to have data showing a slowing down in economic interest," said Lawrence J. Lane, a vice president and head of Fed funds trading at Bankers Trust New York Corp. "I don't think more than a quarter of a point is in the cards right now."

Economists said the Fed was unlikely to cut the discount rate along with its apparent easing on Fed funds, the relationship between discount window borrowing and the fed funds rate has become less regular in recent years because banks, worried about liquidity questions, are keeping more excess reserves and going to the discount window less often.

Fed's Intervention

The Fed added temporary reserves to the Treasury market Friday morning by executing system repurchase agreements. System repos, as they are commonly used by the Fed to boost the supply of funds, thereby forcing down rates.

And the stop-out rate, the minimum the Fed will pay dealers who enter system repurchase agreements, was a scant 8.03%, one market observer said. Fed funds traders said a system repurchase agreement with a stop-out rate below 8.15% would signal the Fed's intent to ease.

"Yesterday, Greenspan said he'd ease. Today, he followed his words with action," said F. Ward McCarthy, a managing director at Stone & McCarthy Research Associates. "This year, the fireworks happened after the Fourth of July."

The Treasury yield curve steepened dramatically Thursday afternoon and Friday morning as word spread of Mr. Greenspan's remarks to the Senate Banking Committee. The difference in yield between one-year Treasury notes and 30-year Treasury bonds – just 19 basis points late Thursday morning – widened to 27 basis points less than an hour after the Fed chairman spoke and was at 34 basis points by noon Friday.

But yields fell for all maturities.

The yield on the 30-year bond dropped from 8.58% Thursday morning to 8.48% after the Fed executed its system repos, and the yield on two-year Treasury notes fell from 8.39% to 8.14% after the intervention.

The overnight fed funds rate finished the day Thursday virtually unchanged from the close a day earlier, at just over the Fed's then-apparent target rate of 8.25%. Traders in the very short-term markets were uncertain about the precise timing of any easing. But after the Fed intervened Friday, the rate dropped almost immediately to 8%.

Eurodollar deposit rates dropped sharply on the prospect of lower interest rates. Overnight deposits were at 8.31% Wednesday evening, but after the Fed intervened Friday morning, they hit 7.93%.

The steeper yield curve will help banks that have been funding assets with shorter-term liabilities, according to one money-center banker. And the decline in short-term rates will also help those banks who built up their holdings of bonds and money market instruments. A Fed funds trader at one bank said he had been busily lending fed funds for several days, in anticipation of lower rates.
