Standard & Poor's Corp. has been aggressively reducing ratings on bank holding companies since late 1989. But the trend has picked up slightly in the second quarter.

The rating agency cut ratings on 23 holding companies in the quarter and upgraded only one, Manufacturers Hanover Corp. That compares with downgradings of 16 holding companies in the first quarter and an upgrading of one, Trustcorp Inc.

The agency said it expects the emphasis on downgrading to continue for a few quarters, as concerns remain about asset quality, reduced profitability, and banks' risk-adjusted capital levels. □

Appraisers Balk At Fed Board's Real Estate Rule

By LINDA CORMAN

WASHINGTON — Bankers and real estate appraisers are nearing a showdown over rules established by the Federal Reserve Board to govern the use of certified appraisers in mortgage transactions.

The two constituencies, which work together to complete many mortgages and real estate transactions, are on opposite sides of a year-long controversy over appraisal requirements in the Financial Institutions Reform, Recovery, and Enforcement Act of 1989.

To implement that law, the Federal Reserve Board issued a regulation on June 28 to toughen appraisal standards. The rule is to take effect Aug. 9, the anniversary of the Fire Bailout law.

But the final version of the Fed regulation will require the use of certified appraisers only on transactions valued at $100,000 or above. It was a turnabout from earlier proposals that would have mandated appraisers on transactions valued at $15,000 or more.

Caught by Surprise

The banking and real estate industries favored the higher threshold as a way to guard against losses from abuses – such as inflated assessments – in the large transactions where there most often occur.

The appraisal industry was caught by surprise when the Fed put forward the $100,000 proposal and is working feverishly to roll it back.

The Fed's final regulation is a radical departure from what had been expected, said Donald E. Kelly, vice president and director of Washington operations for the Society of Real Estate Appraisers, which represents about 20,000 appraisers nationwide.

"We hope our concerns will be heard by the appropriate and that the Fed will reconsider," Mr. Kelly said. His group is reviewing options for administrative relief, he said, and may request a formal review of the Fed's action.

Most Agencies Agree

The staff papers accompanying the Fed's final rules said all regulators except for the Office of Thrift Supervision were in basic agreement on the final regulations. The OTS planned to

Riegle Questions Insurance Sales

By ROBERT M. GARSSON

WASHINGTON — Taking aim at a Delaware law that allows banks to underwrite and sell insurance, Senate Banking Committee Chairman Donald W. Riegle, D-Mich., has urged federal bank regulators to study whether restrictions should be placed on those activities.

In letters to the chairmen of the Federal Reserve Board and Federal Deposit Insurance Corp., Mr. Riegle asked for prompt rulings on whether the insurance powers are permissible under the Bank Holding Company Act or might pose a threat to the bank insurance fund unless certain safeguards

Chase's Profits Fall 62%; Pressure on Dividend Seen

1st Chicago Off 35%; Midlantic Posts Loss

By JED HOROWITZ

Chase Manhattan Corp. reported Monday that its second-quarter profits plummeted 62%, to $52 million, because of problem real estate loans, intensifying speculation the banking company will be forced to cut or eliminate its quarterly dividend.

Credit woes also continue to plague First Chicago Corp., which announced its profits declined 35%, to $87.4 million, and Midlantic Corp., which reported a $24.8 million loss.

Meanwhile, NCNB Corp. announced that its profits soared 50%, to $137.4 million, because of the inclusion of its Texas unit; Security Pacific Corp. reported its profits rose 6%, to $195.2 million; and J.P. Morgan & Co. said its profit was flat, at $207 million.

The mixed earnings picture sent some bank stocks up nearly 5%, but most money-center bank saw their share prices drop. (See story, page-24.)

Chase Manhattan's stock fell 50 cents, to $20.75, and First Chicago fell $1, to $27.625. J.P. Morgan closed at $37.875, up $2.125; NCNB at $36.50, up $1.75; and Midlantic at $14.75, up 62.5 cents. Security Pacific fell 12.5 cents, to $36.25.

Chase's earnings of 24 cents per share were well below the 62 cents needed each quarter to cover its common stock dividend. However, Chase said management would recommend to its board Wednesday that the dividend be maintained at its current level.

Earnings at a Glance
Dollars in millions

Chase	$52	62
First Chicago	$87.4	35
J.P. Morgan	$207	Flat
Midlantic	-$24.8	NA*
NCNB	$137.4	50%
Security Pacific	$195.2	6%

*Not applicable

The slide resulted in part from a $225 million addition to the bank's provision for possible credit losses but did not include expenses related to a restructuring the bank has promised to undertake. The yearnings to eliminate $300 million of expenses.

"It's a pretty dismal quarter," said Judah Kraushaar, an analyst at Merrill Lynch & Co.

Highly Leveraged Lending Rebounds

By STEVEN LIPIN

Highly leveraged lending is back.

While the spigot is not wide open, the trickle of deals seen six months ago has recently turned into a more steady flow.

As acquirers find banks willing to commit funds, bankers and syndicate officials are busier than they have been in months, doing deals with high fees and plenty of equity.

When financing fell through for last year's management-led buyout of UAL Corp., both commercial and investment bankers were shaken, and deal flow dropped precipitously. After a lull, bankers reassessed the market and began to establish new standards for the structure of leveraged deals.

"Everyone assumed the business was finished," said Dominick Baione, managing director at Manufacturers Hanover Trust Co.; which has been lead bank for some of this year's largest deals.

But, Mr. Baione said,

Big Banks Aim To Streamline Disaster Plans

By JEANNE IDA

NEW YORK — A handful of money-center banks are making big investments in disaster recovery with the aim of dramatically reducing the amount of time it would take them to restore operations in case of a system failure.

The change, to same-day recovery from overnight recovery, is taking place initially in banks with big funds transfer businesses, including Manufacturers Hanover Trust Co. and Chemical Bank. Encouraged by regulators and clearing houses, the change will allow banks to better assess their financial position.

Picks Up Where Bank Left Off

With the new system, the bank would not have to return to start-of-day balances when operations are restored after a major systems failure, earthquake, or fire. Instead the bank would be able to resume business

PEOPLE *in the news*

McEntee Brings Fed Lore To Clearing House Post

By JEANNE IIDA

Elliott C. McEntee is not your typical computer guru. In college, he studied labor relations. Afterward, he took a job at the Federal Reserve Bank and wound up managing an overburdened wire transfer department.

The unit had severe labor problems and 75% turnover, but Mr. McEntee proceeded to smooth out the difficulties.

As president and chief executive of the National Automated Clearing House Association, Mr. McEntee is now drawing on lessons learned in his 20 years at the Fed to guide the group into the era of all-electronic payments. For the next few years, he will focus on aggressively marketing such services as electronic data interchange and direct deposit payments.

His knowledge of the Fed's inner workings will come in handy. As the clearing house is transformed from a vehicle for small-dollar transfers to the primary means for corporations to make payments to each other, the Fed is more concerned about risk in the system.

About 1.1 billion transactions took place last year on the ACH system, a mere drop in the bucket compared with the 50 billion checks that were processed by the Fed. But ACH volume is growing faster than check volume. ACH transaction volume rose 25% to 30% last year, while check volume grew about 4%.

The average dollar size of ACH transactions is also rising.

"As we begin to understand risk in the ACH, it's important to have a president like Elliott who can appreciate the goals and direction of the Federal Reserve System," said David Kvederis, chairman of the board of the national clearing house and senior vice president of Wells Fargo Bank, San Francisco.

Elliott C. McEntee

Mr. McEntee, 46, joined Nacha in November 1988, three years after the organization separated from the American Bankers Association in an effort to become more focused and more professional. William Maroney, Mr. McEntee's predecessor, is credited with initiating the cultural shift, but Mr. McEntee's appointment was viewed as working for "the long haul," Mr. Kvederis said.

Well Known from His Days at the Fed

Mr. McEntee was already well known by the ACH organizations from his work at the Fed, where he headed operations.

"He'd been respected in the industry for a number of years," said Michel Paulette, executive officer of cash management at Sovran Bank, Richmond. "He brought to the scene a lot of expertise in payment systems and a good management style with humor."

Colleagues say one of Mr. McEntee's biggest contributions so far is his proposal to simplify ACH processing schedules so that many more corporations will be able to offer direct deposit services to their employees. The current system forces companies to run off their processing a couple of days in advance of the payment date.

Mr. McEntee relished the move from the Fed to the private sector.

"The biggest change is that in the private sector you can get things done much faster," said Mr. McEntee. "I go to a lot fewer meetings now."

After Air Force, Sojourn in California

Born in Brooklyn, Mr. McEntee joined the Air Force in 1965 and was stationed in California. He stayed on to go to the University of California at San Jose.

His first job out of college was working for the New York Federal Reserve Bank, which rotates staff members. When Mr. McEntee moved from employee relations to the wire transfer area, he was expected to help work out a solution for the problem-plagued department.

"In 1969 [at the Fed], employees were working under impossible conditions," he said. Wire transfers were done in an overcrowded, hot part of the bank, without air conditioning, on a system built to handle half the number of transactions that it was processing.

System Relied on Human Switches

Individuals acted as the switches on the system, picking up a paper tape produced by the computer, reading the tape to find out which bank the transfer was destined for, and walking it over to a computer terminal.

The problems were resolved partly by management gaining an understanding of the employees' hardships and partly by greater automation. Mr. McEntee ended up heading wire transfers at the New York Fed for five years.

Mr. McEntee and his wife, Katren J. Bopp, a deputy general counsel at the Federal National Mortgage Association, devote much of their free time to a two-year-old daughter. The baby "has changed my priorities," he said.

Mr. McEntee keeps a Japanese garden with a waterfall and fish pond stocked with brightly colored carp. "I was fascinated by the look and feel of Japanese gardens," said Mr. McEntee, who spent five years achieving the effect. □

Fed Review of Regulation K Results in a Mixed Proposal

By LINDA CORMAN

WASHINGTON — The Federal Reserve Board proposed Monday to raise the limits on the underwriting of securities overseas by U.S. banks but impose new restraints on portfolio investments.

The two actions prompted one Fed member, Wayne D. Angell, to criticize the board majority for taking a muddled approach to overseas bank powers.

In a lone dissent on the moves, Mr. Angell said the proposed revisions in Fed Regulation K failed to chart a clear direction for U.S. banking operations overseas.

Rules Issued for Comment

The regulation governs the international activities of U.S. banks, and the U.S. operations of foreign banks. As part of a review of Regulation K that takes place every five years, the Federal Reserve Board voted Monday to issue the securities-related changes for a 60-day comment period.

The Fed offered to raise the limit on underwriting – the cumulative total of a bank's total subsidiaries in any one deal – from $15 million to $60 million.

The Fed is also proposing that a bank may hold up to 40% of the equity of a company, so long as its value does not exceed $25 million. If the total does exceed $25 million, a bank may hold no more than 24.9% of the total equity of a company.

Clarification Included

Currently, banks as investors are limited to owning 20% of nonvoting shares, with the total value subject to approval by the Fed on a case-by-case basis. In effect, the new rule liberalizes the small investments banks may make and clarifies the large investments they may make, according to Fed staff members.

Mr. Angell said the board was waffling to avoid being either blamed for inhibiting the competitiveness of U.S. banks overseas, or granting them powers far beyond what domestic banks have.

But the other governors said the central bank's conflicting mandates to enhance the competitiveness of U.S. banks overseas and to protect their safety and soundness dictated their approach.

Governor David W. Mullins said a more clear-cut approach would have to wait until the domestic banking system was overhauled.

"This is buying time until we rethink U.S. banking regulations," he said.

Despite Mr. Angell's reservations, advocates of banks operating overseas welcomed the changes.

The increases in underwriting limits represented a "substantial liberalization," according to Gary M. Welsh, a partner of Prather Seeger Doolittle & Farmer, which represents the Bankers' Association for Foreign Trade.

Problem Seen in Restraints

But the new restraints on portfolio investment, "may be a problem," he said.

Mr. Welsh also welcomed the board's decision not to ask for firewalls between the securities and banking activities of overseas banks. Unlike banks operating domestically, securities and banking activities may be conducted by the same overseas subsidiary of a U.S. bank.

Proposals to construct firewalls had been expected because Fed Vice Chairman Manuel H. Johnson, the board's authority on international affairs, had been a strong advocate of them.

But Mr. Johnson, who has resigned from the board effective Aug. 6, was absent from Monday's meeting, generating speculation that he was angered by the direction the board was taking on Regulation K. He could not be reached for comment. □

RTC Cleared To Finance Bulk Sales

By DEBRA COPE

WASHINGTON — The Resolution Trust Corp. Oversight Board granted the RTC authority on Monday to finance up to $2 billion in bulk sales of commercial loans and real estate.

By easing strict limits on the RTC's ability to finance sales from its $142 billion portfolio, the Oversight Board sought to accelerate its program by removing a major obstacle for investors interested in buying assets in $500 million chunks.

In the trial program, the RTC will be able to tailor financing to the needs of the institutional investors who are the likeliest bidders.

"They're dealing with market realities to what makes the [RTC sales] program more workable," said John Dyss, partner, Goldman, Sachs & Co., New York. "Clearly, it's a step in the right direction."

Terms Up to Five Years

The RTC has been limited to offer loans of up to five years to investors making a 15% down payment. Previously, the RTC could extend financing only if no other loan were available.

Bulk financings will be exempt from the requirement for the RTC to structure loans for sale to the general market within one year, and from a $1 billion ceiling on the total amount of seller financing outstanding.

"This pilot program will provide us with a good opportunity to test the market for bulk sales of commercial properties and loans, which are among the RTC's most difficult assets to move and sell," said Peter H. Monroe, president of the Oversight Board. The Oversight Board will review the program once the RTC has reached its $2 billion commitment ceiling. □

New Systems Ease Recovery Of Bank Data After Disaster

Continued from *page 1*

ness from the time the disaster occurred, whether it was 9 a.m. or 3 p.m.

The Federal Reserve Bank of New York has begun urging its members to adopt such recovery standards. And the New York Clearing House Association will require similar speed by June 1991. Clearing house members that average $20 billion in funds transfers daily will need equipment that allows them to send and receive wire transfers within six hours of a disaster.

"The ability to manage your books and to close your books at the end of the business cycle is completely dependent on computers," said Dennis Forand, senior vice president and general manager of cash management services at Chemical Bank.

"We're a major player in funds transfer, and we're dependent on large financial institutions to close and open accurately," said Michael J. Pasiecki, senior vice president in wholesale computing services at Manufacturers Hanover. "If a bank's key services suffer a major disruption, that ability is impaired."

Usual Method Loses Data

In the traditional form of disaster recovery, a bank makes a copy of its business at the end of the day and sends that copy to a remote site. If affected bank computer systems go down, the bank uses the copy of the previous business day to resume business from the start of the day when the trouble occurred.

But some banks that process huge volumes of transactions say they cannot afford to lose the data accumulated since the start of the business day.

Those banks are investing hundreds of thousands of dollars in telecommunications technology that will allow them to keep a copy of transactions as they occur – at a remote site where they can be called on if needed.

For many banks, disaster recovery is no longer seen as a data processing problem, but as an enterprise-wide problem. Even the name, disaster recovery, is giving way to a new term: business recovery.

Most Banks Lack a System

While banks such as Manufacturers Hanover and Chemical Bank are forging ahead, many banks have no disaster recovery capabilities at all. Only 35% to 40% of the top 3,000 commercial banks have some kind of disaster recovery plan in place, according to Cato Carpenter, a software analyst with Alex. Brown & Sons, Baltimore.

Manufacturers Hanover, which sends and receives 35,000 funds transfers a day, has invested $1 million annually over and above its normal recovery budget to implement same-day recovery.

"This gives us a competitive edge," said Anthony Catania, a vice president in funds transfer operations.

The bank will dedicate 5% to 6% of its $60 million computer operating expenses to business recovery in 1990-91. That 5% figure includes the $1 million for same-day recovery.

Manufacturers Hanover is buying the disaster recovery service from Comdisco Computing Services Corp., Carlstadt, N.J. Eventually, the bank plans to handle most backup operations in-house.

Moving in that direction, the bank expects to open a data center in Wilmington, Del., by the first quarter of next year. That site eventually will perform many of the disaster recovery functions currently contracted from Comdisco.

"The trend is toward same-day recovery" in all lines of business, said Michael J. Pasiecki, senior vice president of wholesale computing services at Cos-Serve, the processing arm of Manufacturers Hanover.

Last year, only the funds transfer business had same-day recovery; this year the bank is evaluating moving check processing and securities processing to same-day recovery. Other business units are also asking to upgrade to same-day recovery.

Since May, Chemical Bank has had same-day recovery through a contract with Comdisco. Upgrading the system has caused the bank to increase its disaster recovery budget by only 1%, Chemical said.

Chemical, which has a smaller funds transfer business than Manufacturers Hanover, says it has been able to keep costs down by not purchasing dedicated access to a mainframe.

The funds transfer operation receives and sends a continuous stream of messages, from customers, the Fedwire System, the Swift system, and the proprietary cash management services offered by other banks. In many banks, this information is automatically linked with payments systems, allowing banks to initiate transactions.

On-line transaction processing systems, such as those offered by Tandem Computers Inc., keep a copy of all the transactions sent and received. If a system goes down, the computers continue to send and receive information.

But these recovery systems do not apply to back-office functions, when transactions are applied to customer files. Banks have found it too expensive to store in duplicate the vast quantities of data generated.

The Comdisco service, the first of its kind on the market, gives an on-line backup system that allows a bank to copy a "snapshot" of a transaction to a remote site.

Sungard Data Systems Inc., Wayne, Pa., plans to add the service, called remote journaling, later this year. □

Co-Op Bank In U.K. Buys Card System

By RICHARD LAYNE

NEW YORK — In an attempt to reduce bad debts and increase productivity, a British bank is installing a credit-card management system from First Bankcard Systems.

The Co-operative Bank of Great Britain has purchased two software products from First Bankcard, which counts Chase Manhattan Corp. and First Wachovia Corp. among its domestic clients.

The Co-Operative Bank is the second British institution to purchase software from Atlanta-based First Bankcard, which has clients on Europe's mainland and in Canada as well as the United States. Barclays Bank of Britain bought a First Bankcard system in 1988, partly to offer both MasterCard and Visa cards to customers.

Expansion Expected

The Co-Operative Bank bought a delinquency management system, which runs on a mainframe computer. The system will initially process collections for all credit card and loan products. The bank plans to expand the system to handle personal banking products.

The second product is a system to manage credit transactions. The system processes transactions, applications, authorizations, and customer accounting for bank card and other credit products.

The bank is installing the collection system and plans to have the credit-processing system operations in 1991.

The Co-Operative Bank, which is based in Manchester, operates 110 branches and 4,000 facilities within retail stores. □

COMMENT/ *By Sanford Rose*

Know Thy Costs

In order to understand how to price retail products, banks must self-evidently know their costs. Many banks have an excellent handle on the variable costs involved in administering deposit and loan products. Where they fall down is in calculating the full extent of branch and corporate overhead, which in many cases may account for as much as two-thirds of the total expenses of product administration.

Lacking a full understanding of both direct and indirect costs, banks often misprice their products.

The classic example is that of the garden-variety CD. Many banks think that the CD is a cheap product because the variable cost of generating it is nugatory – say $10 to $15. But if we add in the back office and, more importantly, the expenses of advertising and those of training the people who sell the product, the all-in cost of a CD at a regional bank with between $5 billion and $10 billion in retail deposits balloons to some $90 a year per account, calculates Booz-Allen & Hamilton.

Lowering Bank Value

Hence, the CD is not an especially cheap product. In fact, its total cost approximates that of a passbook savings account, which has higher variable costs (an estimated $25 versus that $10 to $15) but requires proportionately less overhead.

If a bank bases its prices on variable costs, it will end up underpricing CDs. And, indeed, many banks have launched CD promotion campaigns based on an incomplete expense analysis. In consequence, they are often unable to earn enough on the fully costed new money to provide an adequate rate of return to their shareholders. Thus, the failure to cost properly contributes to a marketing decision that ends up lowering rather than enhancing the value of the bank.

Banks that know their all-in costs understand that low-dollar-balance CDs may not pay their way. Since the cost of administering large CDs is no higher than that of handling the low-balance accounts, such banks will often pay more interest on the former and correspondingly much less interest on the latter.

A Table of Costs

Booz-Allen has constructed a cost table for various checking, savings, investment, and retail loan products. Because branch, back-office, and even corporate-overhead expenses vary with the scale of operations, the following cost figures are approximately valid only for the aforementioned regional bank – that is, one with between $5 billion and $10 billion in retail deposits. Smaller banks should have higher expenses, while bigger banks should enjoy lower costs.

The cost per year of administering a basic demand deposit account amounts to around $200, some $80 in variable expenses and the remainder in branch and corporate overhead. That for administering an interest checking account totals around $180.

'Pricing retail deposits based on variable costs alone can be disastrous.'

Money-market savings products cost $125. Statement savings accounts run around $85, while the expenses of administering passbook accounts amount to a total of $90 a year.

As noted, CDs also cost about $90. The expenses of handling IRAs, another advertising-intensive product, amount to about $75, with only about $10 in variable costs but some $45 in corporate overhead.

Cheap, But Unprofitable

Among loan products, the costliest is the direct installment loan, with an annual charge of $175, followed by the home-equity loan, which costs about $165. Indirect installment loans carry a $125 price tag, while student loans are the cheapest, with expenses of only about $70 per year. Unfortunately, student loans have increasingly thin spreads, which make them unattractive to many banks, despite their modest noninterest expense.

Of course, larger banks can materially trim these costs of administration. Some idea of the feasible savings can be gleaned from a glance at what are called scale factors.

A scale factor measures the possible reduction in unit costs for a doubling in volume. Thus the scale factor in branch operations is about 75%, which means that a doubling of branch deposits would reduce the branch cost per deposit by about a quarter.

The Twin Imperative

Similar economies are available in back-office operations. A doubling in volume will reduce the unit costs of check processing by around 20% and those of deposit support by some 30%.

So banks face a twin imperative: They must obviously calculate the fully loaded expenses of product administration. But, having done so, most will find that these expenses are too high in relation to what can be charged in markets that are becoming increasingly competitive.

Long-term survival, therefore, depends on having larger branches, bigger back offices, and a much higher volume of loan originations than is possible for, say, our midsize regional. In short, as price umbrellas disappear, survival will depend to an increasing extent on aggressive in-market mergers. □

CRIME BLOTTER/ *By Tom Leander*

Working for a Living Is Easier

Even bank robbers have lousy days.

Consider 27-year-old Alexander Hatfield, who allegedly walked into a branch of Homefed Bank in San Diego, and handed a note to a teller demanding all the cash in the drawer.

The teller forked over $331, according to the *Los Angeles Times*. The robber went to the bank's parking lot, where a traffic tie-up at the exit stalled his escape. Employees of the bank had ample time to notify police of the car's license number.

When Mr. Hatfield was finally able to drive away from the bank, a patrol car was almost immediately in pursuit.

A short chase ended abruptly when Mr. Hatfield rammed into a tractor trailer. Although the car was a total loss, Mr. Hatfield emerged unscathed from the accident and was promptly arrested.

Money-Laundering Admitted

First Bank of Georgia, East Point, faces fines of up to $770,000 after pleading guilty to federal money-laundering charges for its role in hiding funds for one of Atlanta's biggest cocaine traffickers.

The bank admitted that three of its former officers – president S. Carlton Hays, vice president Gordon Burdette, and assistant vice president Barbara Herskowitz – arranged a series of loans to launder the money.

The loans concealed the origin of $385,000 used to post bail for convicted cocaine trafficker Walter Lee Freeman last June.

The plea, signed by current bank president Charles M. Barnes, also admitted that the three former officers lied to federal agents during the investigation.

Mr. Barnes replaced Mr. Hays after he was fired in February. Sentencing is set for Aug. 28.

* * *

Indictment in Loan Fraud

A grand jury in Providence, R.I., has indicted a man who posed as an eye doctor on charges that he swindled a total of $1.2 million from Fleet National Bank and Hospital Trust Bank, both based in Providence.

The robber fled to the bank's parking lot, where a traffic tie-up stalled his escape.

Federal authorities are still seeking Cyrus Panah, who is known to use several aliases, said assistant U.S. attorney Charles A. Tamuleviz.

In October 1986, Mr. Panah asked Hospital Trust Bank for a loan and a line of credit, the indictment said.

He allegedly told a bank official he was an eye surgeon planning to move his practice from Worcester, Mass., to Providence. He allegedly submitted false income tax returns for six years.

The bank gave Mr. Panah loans and credit for $995,000. He defaulted on the loan, and returned to hospital Trust in June 1989 asking the bank to double his $50,000 line of credit.

In the same month, Mr. Panah allegedly asked the Fleet/Norstar Financial Group unit for a loan and allegedly submitted false individual and corporate income tax returns. He also defaulted on his $510,000 loan from Fleet National.

Wells Swindlers Sentenced

Four members of a team that hatched a scheme to defraud San Francisco-based Wells Fargo Bank of $1.5 million were sentenced last week.

The lead participants in the scam, Jeffrey Borer and Terrance Quinn, drew six-month prison terms and were ordered to pay a total of $200,000 in restitution.

The defendants were convicted of participating in an elaborate fraud scheme in 1984 and 1985. They borrowed $3 million from Wells Fargo Bank in Los Angeles to buy aircraft that had been appraised by Mr. Borer at twice its actual value.

The loans were made to so-called "straw buyers," individuals recruited and paid by the defendants to submit phony tax returns and financial statements to the bank.

The loans all went into default in 1985. Because the aircraft were worth much less than the amount that had been loaned to them, the bank lost nearly $1.5 million.

Edward Stein was ordered to serve 30 days in jail. Jay Klein received a two-year probation sentence.

Another defendant, Casey Duggan, was sentenced last spring to three years probation.

The final defendant, Patricia Stanley, will be sentenced this week. □

Appraisers Seek Rollback of Fed's New Rule on Mortgages

Continued from *page 1*

keep the $15,000 minimum. While all the financial agencies are working toward a coordinated rule, heavy lobbying by the affected industries has made that goal difficult to attain.

The Fed's rule will apply to real estate transactions of the institutions it regulates: bank holding companies, their nonbank subsidiaries, and state-chartered member banks. Others writing rules for their jurisdictions are the OTS, the Office of the Comptroller of the Currency, Federal Deposit Insurance Corp., National Credit Union Administration, and the Resolution Trust Corp.

Peter S. Barash, political consultant to the American Society of Appraisers, said the Fed regulation changed dramatically under pressure from real estate and banking interests, while the appraisers were content with the original proposal.

"We assumed at most there would be fine-tuning of the regulations," said Mr. Barash. "Instead, they tore down the house."

The appraisal groups are arguing that the higher limit raises concerns about safety and soundness of the banking system.

"If you look at the median price of homes, it is in the low $90,000s," said Mr. Kelly. "That means that more than half needn't have appraisals – or, at most, need not have a licensed appraiser."

But banking groups say the higher ceiling would put a brake on escalating costs, particularly for small borrowers. They also say licensed – rather than certified – appraisers are capable of doing the job.

The American Bankers Association said it had not determined the difference in cost between a certified and uncertified appraiser, but Mr. Kelly estimated it would be $25 to $50 on a typical $250 to $375 appraisal bill.

In allying itself with bankers, the real estate industry warns that mandatory use of certified appraisers will create long delays in completing transactions because of a scarcity of these professionals.

According to Stephen Driesler, senior vice president for government affairs at the National Association of Realtors, there are currently no states that have appraiser-certification programs. Once they do, it will take a long time for them to issue proper credentials, he said.

"Most states are many months away from issuing licenses," Mr. Driesler said. "There are over four million residential property transactions a year. That does not include commercial, home equity loans," and other transactions that already require certified appraisers. "Many we've talked with in state regulatory bodies tell us they can't meet the deadlines."

To persuade other agencies not to follow the Fed's lead, the appraisers are providing new information to document their position that there will be no appraiser shortage. By Mr. Barash's estimate, 30,000 full-time appraisers are needed to do $1 billion in annual residential appraisals; the eight appraisal industry associations have total membership of about 60,000.

> **"We assumed at most there would be fine-tuning of the regulations. Instead, they tore down the house."**
>
> **Peter S. Barash**
> *Consultant to the American Society of Appraisers*

Question of Complexity

The appraisers also object to the Fed's shift away from requiring certified appraisers on what are known as "complex transactions" for residential properties above $100,000.

The final rules presume that a transaction up to $1 million is not complex unless lenders decide otherwise. The preliminary rules presumed that any transaction above $100,000 was complex.

A complex transaction is one which is "atypical," according to the Fed, because of "the age or extent of improvements, architectural styles, size of a lot, environmental-hazard liability, leasehold interests, or other reasons."

"We were hoping they would retain the 'complex' distinction," said Mr. Kelly. "They've now turned that on its head."

A third concern of the appraisers is the Fed's shift from requiring certified appraisers for all nonresidential transactions to those valued at $250,000 or more.

Appraisers "want an act of Congress mandating they be used," commented James D. McLaughlin, director of agency relations for the American Bankers Association. □

Northeast Savings Posts Quarterly Profit

NEW YORK — Northeast Federal Corp. said its Northeast Savings unit earned $1.2 million in the quarter ended June 30, compared with a loss of $780,000 a year earlier.

The Hartford, Conn.-based thrift, with $4.9 billion in assets, was helped by increased net interest income, lower general and administrative expenses, and lower goodwill amortization expenses.

The earnings announcement came one week after the company reported that it had achieved compliance with the capital requirements of the thrift-bailout law. — **Phil Roosevelt**

Our Mission Is To Create Value For You.

Here's What That Means And Why It Matters.

We measure value by our ability to help you achieve success with your customers. To accomplish this end, we need to provide you with complete, innovative solutions that increase customer service while improving your operational productivity.

These solutions have been developed under an NCR strategy called Open, Cooperative Computing. The cornerstone of this strategy is an open architecture, based on industry standards, that allows you to integrate the NCR products you need for success today . . . while assuring an open, multi-vendor environment that protects your investment for the future.

For example, our open Financial Tower System has revolutionized teller and platform productivity. Our Integrated Retail Delivery Systems will bring a new perspective to customer service . . . and branch performance. NCR Self-Service Systems will give your customers more depth in the services they can perform themselves. In addition, NCR Imaging Systems for Item and Document Management will provide you with powerful productivity weapons to use in the competitive decade of the '90s.

Open, Cooperative Computing is a strategy that will reshape the future of financial technology. The full benefits of this strategy can give you and your people transparent access to the enterprise-wide resources needed to effectively manage your growth into the next century. If you would like to learn more about the company that can create value for you and your customers, phone 1-800-CALL NCR and ask for the "Open, Cooperative Computing" brochure.

Appraisal Standard Said to Hobble RTC

By ANDREW REINBACH

NEW YORK — A congressional requirement that the Resolution Trust Corp. not sell failed thrifts' properties for less than 80% of their appraised value has handicapped the sales effort and left the agency open to criticism that it is lagging, an RTC regional director said last week.

William Dudley, head of the RTC's Region 1 said, "We're being pushed and tugged on this issue. On the one hand, we're told that we sell too low and, on the other, that we hold on to properties too long."

Region 1 consists of 16 eastern and and northeastern states and the District of Columbia.

Mr. Dudley said he would prefer a bidding system to set prices, rather than the appraisal-based system mandated by the 1989 thrift-reform legislation.

The 80% requirement, he said, sometimes means he must hold onto a property long enough to create uncertainty in a local market. But a short holding period may mean getting a price that is below the appraisal.

In the absence of instructions to the contrary, he said, he must use appraisals as the basis of determining value.

The requirement is bogging the RTC in liquidating its property portfolio, said Robert B. O'Brien Jr., chairman of Carteret Savings Bank, Morristown, N.J., a subsidiary of Carteret Bancorp. "The RTC should do business as business and not with an eye to future congressional hearings," he said.

Mr. O'Brien said the current RTC structure is creating "too much oversight and not enough business decisions." He suggested tax breaks for properties sold by the RTC. That would help the New Jersey real estate market, he said, which is "almost as soft as Texas and New England, especially in the residential area." □

Riegle's Request for Fast Decision On Insurance Sales Seen as Signal

Continued from *page 1*

are imposed.

FDIC Chairman L. William Seidman already has launched such an inquiry, but Sen. Riegle wants answers by July 31.

Although Sen. Riegle's letters ask only for information, insurance groups interpreted them as warning shots in preparation for a legislative battle. Some observers saw them as an indication that Sen. Riegle will go to bat for insurance interests who oppose banks' entry into their industry.

Sen. Riegle has placed much of the blame for the savings and loan crisis on some states' overly ambitious expansion of banks' powers, and he has indicated that he is eager to avoid having such problems spread to the Federal Deposit Insurance Corp.'s bank insurance fund.

"These letters show he is serious," said Robert Rusbuldt, the chief Capitol Hill lobbyist for the Independent Insurance Agents of America.

Concern Is Reported

"We have talked to a number of senators and congressmen, and because of the S&L bailout, they are concerned about this," Mr. Rusbuldt added.

"Sen. Riegle has a long-standing concern about states' taking actions and the FDIC picking up the tab," said Karen Shaw, executive vice president for the Institute for Strategy Development, Washington. "If they get around to legislation, he would probably want to rein in these kinds of powers."

Last year, Sen. Riegle wrote language into the thrift bailout law that generally restricted state-chartered savings associations from exercising powers not granted to federal S&Ls.

Fast Ruling Urged

In a July 9 letter to Alan Greenspan, chairman of the Federal Reserve Board, Mr. Riegle said the central bank should rule as quickly as possible on a petition filed by the Independent Insurance Agents that asks the Fed to determine whether insurance activities conducted by Delaware bank subsidiaries are permissible under the Bank Holding Company Act.

That decision could be pivotal, since the Fed previously stopped Citicorp from taking advantage of a South Dakota law that allowed banks chartered in that state to market insurance nationwide.

"The Delaware law is basically the same as South Dakota," said Mr. Rusbuldt. "And substantively, nothing has changed."

Differences Noted

Edward L. Yingling, executive vice president of the American Bankers Association, disagreed. He said the Fed's was opposed to banks in South Dakota chartered primarily as marketing vehicles for insurance products. In Delaware, he said, the institutions would be doingbroader banking activities, with no more than 25% of their capital allocated to insurance.

The Delaware law, enacted this year, gives many of the nation's largest bank holding companies entry into the insurance business through existing credit card and wholesale banking subsidiaries.

Sen. Riegle's other letter of July 9, to Mr. Seidman, asked what that agency was doing to "ensure that the activities permitted by the new Delaware legislation do not endanger the deposit insurance fund." □

Salomon Forms Latin Fund To Invest in Government Debt

Salomon Brothers Inc. is the latest investment banking firm to throw its hat into the ring of new funds that will invest in Latin American debt instruments.

Salomon recently announced the opening of a five-million-share, $75 million fund – called the Latin America Fund Investment Fund Inc. – that will invest in sovereign debt instruments primarily of Mexico, Brazil, and Chile.

The fund is unique in that it will invest in both debt and equity, and Salomon is touting it as the first to capitalize on opportunities in LDC debt trading, debt-equity conversions and privatizations, as well as traditional equities.

Up to 30% of the fund's investments may be made in Latin American external debt instruments, and 25% of the fund may be invested in unlisted equities, including investments in new companies.

Donaldson, Lufkin & Jenrette Inc. and Smith Barney, Harris Upham & Co. are co-lead managers with Salomon.

The fund will be co-managed by BEA Associates Inc. and Salomon Brothers Asset Management Inc., with BEA advising on equity and domestic investments, and Salomon advising on sovereign debt investment.

The fund will also be able to invest in other Latin American countries.

Two other debt funds have already been launched. Citicorp Investment Bank and Lazard Freres & Co. offered the First Mexico Income Fund last month, and Merrill Lynch Capital Markets launched a similar debt fund last December.

Five million shares will be offered at $15 per share; 3.75 million will be issued in the United States and Canada; 1.25 million are being sold in Europe and Japan.

Shares will be traded on the New York Stock Exchange and will be offered internationally through a syndicate led by Salomon Brothers. □

Capital Standards May Get Stricter

Japanese Say the Definition of Assets Could Change

By BRIAN ROBINS
International Banking Regulator

TOKYO — Japanese bankers have expressed considerable consternation over rumored proposals for tighter capital-adequacy standards as of 1993. The proposals were reportedly circulating at the recent meeting of governors of the Bank for International Settlements, but details are sketchy.

According to preliminary details reaching Tokyo, the BIS is planning to introduce standards forcing banks to add their holdings of foreign exchange, stocks and bonds to their total asset figure.

The aim is to tighten capital adequacy ratios by ensuring that foreign exchange risk as well as exposure to investments in securities will be kept in check.

Given the substantial stock and also bond holdings of most Japanese banks, such an expansion of the definition of bank assets would force them to strengthen their capital even further.

The inclusion of foreign exchange holdings as part of overall bank assets is already a part of the tighter BIS capital adequacy standards to be introduced as of 1991. Holdings of stocks and bonds are not.

Already there are fears among some banks in Japan that, in the wake of the slowdown in capital markets, they will find it difficult to meet the minimum capital adequacy standard of 8% by 1991.

A proposed new rule would require that securities holdings be counted in assets.

Help from Ministry

Recently, the Ministry of Finance has given banks access to the subordinated debt market, and the first debt securitization deals have also been concluded.

In both instances, however, deals have been little more than preliminary, partly because of the reluctance of Japan's institutional shareholders to put their funds into such paper, even though interest rates have been pegged at the long-term prime rate.

The latest proposals are likely to meet with the opposition of Japanese officials, but most are waiting until more information is available before passing judgment. While Japanese banks would be hit hard by any such expansion of the definition of bank assets, so too would German banks, which also have extensive securities and bond holdings.

U.S. and Canadian banks would be relatively unaffected by such a move, however, given legislative restraints on extensive securities holdings.

With difficulties of raising fresh, and cheap, capital through domestic capital markets, this is forcing many of Japan's bigger banks to rethink their strategies, and is likely to lead to a drastic slowing in the international growth strategies of some of the bigger banks, at least until they can get their asset ratios well clear of the existing BIS capital standards.

Hongkong Tightens Control Over Marine

By JAMES R. KRAUS

NEW YORK — Further tightening its control over Marine Midland Bank Inc., the Hongkong and Shanghai Banking Corp. has acquired an 80% stake in Marinvest, Marine's asset management unit.

The acquisition, carried out earlier this month through an internal share restructuring, turns Marinvest into a subsidiary of Wardley Investment Services Ltd., Hongkong and Shanghai's international asset management unit.

Marinvest gives Wardley a vital new link in its international network, which is still mainly based in Asia and Europe.

Completing the Picture

"The U.S. was the missing piece in the puzzle for us," said Nigel S. Tulloch, Wardley's chief executive.

He added that the acquisition will enable Wardley to expand its international fund management faster than it could have otherwise.

Wardley has around $6.5 billion in assets under management and Marinvest $3.2 billion. Both units manage investments mainly on behalf of institutional customers.

A Marketing Plan

Wardley plans to use Marinvest to market European and Asian investments to U.S. customers and to manage U.S. investments for foreign institutions.

According to Kenneth W. Ostrowski, director of marketing at Marinvest, the U.S. unit will shortly introduce a European equities fund and a European/Asian equities fund to its U.S. customers and will distribute a fixed income U.S. fund through Wardley to investors overseas. Foreign banks have been actively chasing after U.S. fund management business as U.S. institutions have increased their international investments.

Since 1980, international investments by U.S. pension funds alone has climbed from $5 billion, or around 1.5% of total investments, to $70 billion, or around 4% of the total.

The growth has been slower than in other countries and bankers believe that the big opportunities for providing international asset management to U.S. customers still lie ahead.

Mr. Tulloch added that opportunities for asset management are also growing quickly in Asia.

The acquisition of Marinvest is the latest in a series of moves by Hong Kong-based Hongkong and Shanghai to take over Marine's operations as profits at the U.S. bank have sagged because of its Third World and real estate loans. □

EXECUTIVE *changes*

NCNB Names Lewis to Lead General Bank

NCNB Corp., Charlotte, N.C., named **Kenneth Lewis** president of its General Bank, a new post to oversee an organization combining the company's 936 branches with consumer and commercial banking activities.

Mr. Lewis will report to NCNB chairman Hugh McColl. His responsibilities cover Texas, Florida, North Carolina, South Carolina, Georgia, Maryland, and Virginia. **William Middlemas**, president of Southeast banking, and **Robert Lane**, General Bank executive in Texas, will report to Mr. Lewis.

"This is another move to best serve NCNB's customers regardless of where they are," said Mr. McColl. "Combining oversight responsibilities for NCNB's branch network, its consumer banking, and its commercial banking means our organization is shaped around the customer and not shaped by geographical boundaries across the areas where we do business."

James Sommers retains responsibility for NCNB's national trust, private banking, and securities businesses and will report to Mr. Lewis. **Brad Iversen** will report to Mr. Lewis and moves to General Bank marketing executive.

Catherine Bessant assumes Community Reinvestment Act responsibilities for the General Bank. **Ralph Carestio**, specialized lending executive, and **Joseph Musolino**, Dallas vice chairman, will continue to report to Mr. Lewis. He is to move to Charlotte by Jan. 1. All other officers and employees will remain in their current locations.

Since August 1988, Mr. Lewis has been president of NCNB Texas. He has been responsible for all its consumer, commercial, real estate, and energy banking activities.

Savings Group Elects Officers

James F. McConnell, president and chief executive officer of **Flushing Savings Bank**, was elected chairman of the **Savings Banks Association of New York State.**

James F. McConnell

Paul E. Proske, chairman and chief executive officer of **Northfield Savings Bank**, Staten Island, was elected vice chairman.

The association represents 83 savings banks with about $140 billion in assets; the state's industry employs 35,000 people in 1,000 branches, offices, and subsidiaries.

Mr. McConnell was elected CEO of Flushing Savings last December and has been president since 1981. He has been on the association's board of directors since 1987.

Caldwell Joins PNC Trust Unit

PNC Financial Corp., Pittsburgh, hired **Richard C. Caldwell** as executive vice president, effective Monday.

Mr. Caldwell was also elected executive vice president of the holding company's Provident National Bank unit, Philadelphia. He will direct trust and money management operations of both the holding company and Provident.

He is relocating to the Pittsburgh area from Chicago, where he was executive vice president and manager of the trust division at Harris Trust & Savings Bank.

Mr. Caldwell joined Harris in 1975 and managed corporate trust, corporate trust employee benefits, and institutional investments and trust sales, as well as marketing for the institutional department. He also managed personal trust.

— **Franklin Smith**

NEW ENGLAND

New England Bank & Trust Co., Windsor, Conn., named **Michael B. Paparella**, vice president, to head its private banking group. His responsibilities include developing and maintaining relationships with personal and business customers in north-central Connecticut.

The **Massachusetts Bankers Association**, Boston, elected **Elliott G. Carr** 1990-91 chairman of the board. He is president of **Cape Cod Five Cents Savings Bank**, Orleans.

Alan R. Morse Jr., chairman of **U.S. Trust Co.**, Boston, was elected the association's first vice chairman. **John H. Pramberg Jr.**, president of **Institution for Savings**, Newburyport, was elected second vice chairman, and **Jane C. Walsh**, president of **Northmark Bank**, North Andover, was elected treasurer.

Peterborough Savings Bank, Peterborough, N.H., elected **Marcia Tripp** to its board of trustees. She is president and chief executive officer of Pawprints Inc., Jaffrey, N.H.

Newly elected corporators are **John Falby** of the Brighton, Fernald, Taft and Falby law firm, and **David Jordan**, president of Crotched Mountain Foundation and Center.

MIDDLE ATLANTIC

Dun & Bradstreet Corp., New York, named **Richard H. deMoll** executive vice president of its Dun & Bradstreet Business Credit Services division. He will be responsible for the division's Receivable Recovery Systems and American Credit Indemnity units.

Princeton Bank & Trust Co., Morristown, N.J., hired **Barbara W. Schlicher** as vice president with investment portfolio and equity research analysis responsibilities.

Before joining this private banking affiliate of the banking unit of **Chemical Banking Corp.**, New York, Mrs.

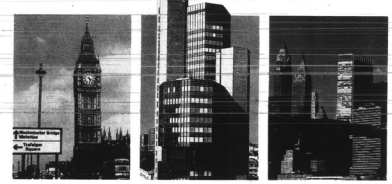
Well equipped for the future



For Hessische Landesbank, 1989 was yet another successful year, marked by moderate growth in business and income and an expansion of its equity base.

The balance sheet total rose 1.6% to DM 76 billion. The business volume also increased 1.6% to DM 78.1 billion. As in previous years, the emphasis in lending was on long-term fixed-rate credits which advanced to DM 35.3 billion from DM 34.8 billion.

The Bank's own mortgage and municipal bonds outstanding reached a volume of DM 31.2 billion.

After extensive risk provisions and taxes on income and assets, the Bank posted a profit of DM 26 million which will be used to distribute an unchanged dividend of 5% to shareholders.

Following the issue of participation certificates worth DM 265 million, Hessische Landesbank's liable funds, including an unchanged capital of DM 530 million, now amount to DM 1.7 billion.

Financial Highlights	1987	1988 DM million Dec. 31	1989
Business volume	73,606	76,835	**78,085**
Balance sheet total	71,532	74,761	**75,964**
Total credit volume	54,778	56,109	**56,799**
Short-term assets	18,589	20,627	**21,398**
Due from banks	13,490	15,742	**16,386**
Due from customers	5,099	4,885	**5,012**
Long-term loans	33,717	34,818	**35,323**
Loans to banks	6,928	7,700	**8,653**
Loans to customers	26,789	27,118	**26,670**
(Municipal loans)	(17,405)	(17,503)	**(16,851)**
Short-term liabilities	17,765	20,104	**22,206**

JULY 17 1990

EXECUTIVE *changes*

Continued from *page 9*

Schlicher was vice president at Midlantic National Bank, where she had similar investment responsibilities.

Prospect Park Savings Bank, West Paterson, N.J., promoted **Denise Cohen Vontobel** to senior vice president-director of marketing, and **Chester A. Weyant** was named senior vice president-chief financial officer and treasurer for **Prospect Park Financial Corp.**, the bank's holding company.

Fidelity Bank, Philadelphia, a subsidiary of **First Fidelity Bancorp.**, Newark, N.J., promoted the following to vice president:

Robin M. Kahn, head of the audit secured lending unit in wholesale banking; **Ruth E. Leone**, commercial lender in the communications division of wholesale banking; **William J. McMenamin**, unit manager in database administration, information systems, and technology; **Anne E. Merklin**, business development officer in personal trust; **Suzanne K. Schad**, lender in commercial asset sales, wholesale banking; and **Carole A. Zatz**, division manager in information services, information systems, and technology.

The **Tokai Bank Ltd.**, Nagoya, Japan, elected **Eiichi Kimata** – general manager of the New York branch office – a director.

United National Bank of Washington, a subsidiary of the Washington-based bank holding company **James Madison Ltd.**, elected president and chief executive officer Joseph L. Aston Sr. to the additional post of chairman of the board.

Joseph L. Aston Sr.

He joined the bank in February 1988 after having become president and chief executive officer of New World National Bank, Pittsburgh, in 1987.

The flagship bank subsidiary of **Chase Manhattan Corp.**, New York, appointed the following vice presidents:

Jorge Alonso and **Federico L. Amadeo**, Western Hemisphere corporate finance; **Jack Davis**, metropolitan community bank; **Mary Downey**, domestic institutional banking; **Gregory Fitzgerald**, metropolitan community bank; **Lai Ching Fong**, Asia-Pacific corporate finance; **Al Gherlarducci**, metropolitan community bank; **John E. Gott**, real estate finance; **James Koo**, corporate controller; **Robin Lander**, institutional banking; **John Lizzi**, administration services; **Sonia Marbarak**, Western Hemisphere corporate finance; **Debra McKnight**, corporate controller; **Paul M. Morris**, Chase Investors Management Corp.; **Alexander Svarnos**, direct response; **Douglas Turnbull**, Western Hemisphere corporate finance; **Peter R. Valone**, administration services; **Pablo de Vescovi**, Western Hemisphere corporate finance; and **Mark Zussman**, real estate finance.

MIDWEST

NBD Bancorp, Detroit, appointed executive vice president **Louis Betanzos** chief financial officer, succeeding **D. Dean Kaylor**, who took early retirement.

Mr. Betanzos will continue as corporate treasurer. He formerly was executive vice president and head of the investment division at the company's flagship NBD Bank.

To replace Mr. Betanzos, **Joseph M. Grace Jr.** was elected first vice president and head of the investment division.

Marquette Bank Minneapolis, a subsidiary of **Bank Shares Inc.**, appointed **Larry Anderson** president of Marquette Bank New Hope to replace **Dennis Williams**, who became president of Marquette Bank Rochester.

The Minneapolis bank also named **Jeri Slinger** president of Marquette Bank Apple Valley, replacing **Joe Nordlund**, who was named president of the Lake Street office.

Huntington Bancshares Inc., Columbus, Ohio, promoted **Leslie P. Rideout Jr.**, from vice president of compensation and benefits at Huntington National Bank to senior vice president, director of human resources, of the parent company.

SOUTHEAST

Miami-based Barnett Bank of South Florida, largest affiliate of **Barnett Banks Inc.**, Jacksonville, Fla., promoted **Orlando** M. Gelpi from senior vice president and manager of its Museum Tower office to senior vice president and area executive.

Mr. Gelpi will oversee lending and operations at eight branches in downtown Miami, as well as those in Coral Gables and Miami Beach.

WEST

The lead banking subsidiary of **BankAmerica Corp.**, San Francisco, named senior vice president **Barbara L. Rambo** to manage its New York-based Northeast-Southeast institutional group.

Ms. Rambo has been acting head of the group for three months, with responsibility for corporate relationships in the regions. She succeeds senior vice president **Bruce W. Mitchell**, who now manages European transactional services.

San Diego Trust & Savings Bank, a subsidiary of **San Diego Financial Corp.**, elected **Gene Trepte**, a director for more than 20 years, chairman of the board.

He is president of Trepte Investment Co., an asset management and development company.

Silicon Valley Bank, Santa Clara, Calif., a subsidiary of **Silicon Valley Bancshares**, hired **Sherry Stevens** as vice president, corporate banking, in the commercial division.

Ms. Stevens is developing a portfolio of middle-market companies in the bank's downtown San Jose, Calif., office. She formerly held a similar post at Plaza Bank of Commerce, San Jose. □

"THERE IS NO SUCH AS A COM

THING
MODITY."

INDEX *of top stories*

The following is a selected index of the top stories that appeared in the *American Banker* last week, arranged by subject. The date on which the article appeared precedes each item. This column was compiled by Matt Barthel.

COMMENTARY

7/9 In the brave new world of banking, number crunchers are in and partygoers are out, writes Paul Nadler. *Page 4*

7/10 Facts seem to indicate that large regional banks are much more at risk than the true superregionals, writes consultant Anat Bird. *Page 4*

7/11 Market leadership is invariably associated today with those firms that managed their cost profiles with the greatest finesse and foresight, write Charles H. Nobs and Eleni Istavridis. *Page 4*

7/12 Marketing costs can be rationalized on the basis of analysis of the economic value of various loan products, writes Sanford Rose. *Page 4*

7/13 New avenues have opened to banks seeking enhanced revenues and customer relationships through insurance products and services, writes Philip S. Corwin. *Page 4*

COMMERCIAL REAL ESTATE

7/10 Falling birthrates and vast property surpluses have created a structural problem in the real estate industry, not just a cyclical downturn, many experts say. *Page 10*

COMMUNITY RELATIONS

7/9 Even before the fires that destroyed more than 600 homes in Southern California were under control, the state's financial institutions had begun creating programs to aid victims of the disaster. *Page 1*

CONSUMER SERVICES

7/9 MasterCard and Visa have filed a multimillion-dollar lawsuit in what they say is the largest telemarketing fraud operation they have ever uncovered. *Page 6*

7/10 The financial needs of the American consumer are changing inexorably, creating both problems and opportunities for the country's banking institutions. *Page 1*

7/10 The best service in America is provided by banks, according to a recent consumer survey in *U.S. News and World Report*. Banks were rated tops among seven business categories. *Page 8*

7/11 Prescreening mailing lists of credit prospects has proven controversial. Opponents cite loss of privacy, but advocates say credit opportunities are enhanced. *Page 8*

7/12 Citicorp is promoting travel packages for the first time, sparking speculation about its long-term goals in the travel business. *Page 6*

7/13 Close scrutiny of small businesses, with judicious use of data bases, can help lenders choose the best prospective customers. *Page 6*

CREDIT CARDS

POINT OF SALE

7/13 Visa is renewing its corporate sponsorship of the Olympic Games – a strategy that in 1988 proved to be one of the most successful in its history. *Page 1*

DEPOSIT INSURANCE

7/9 The Federal Deposit Insurance Corp. is reeling from a series of recent court decisions that found it had abused its authority in provoking the failures of dozens of Texas banks: *Page 1*

EARNINGS

7/13 Adding to investor fears about the Middle Atlantic commercial real estate market, MNC Financial Inc. announced that its problem loans would more than double and that it would report a $75 million loss for the second quarter. *Page 1*

FINANCE

7/9 In the strongest indication yet that UAL Corp.'s leveraged buyout is on track, five U.S. money-center banks have agreed to serve as cosagents for the $4.4 billion proposed bid, bankers in the deal confirmed. *Page 1*

7/9 MNC Financial was a darling of stock analysts a year ago. Today, with the real estate market in the Washington-Baltimore area souring, the company is more a subject of concern than of praise. *Page 16*

7/10 Shawmut National Corp., whose stock recently tumbled to a 10-year low, scotched rumors of a huge increase in nonperforming assets. Shawmut said it would report an increase closer to $200 million than the rumored $500 million. *Page 24*

7/10 If the proposed leveraged buyout of UAL Corp. goes through and the RJR Nabisco refinancing closes, major banks will see a payday of at least $300 million in up-front fees, bankers and observers believe. *Page 1*

7/11 What soured the 1987 merger of First Fidelity with Fidelcor Inc.? Though analysts gave the combination rave reviews, chief executive officer Harold Pote was forced to resign just 16 months later. *Page 25*

7/11 With most investors running away from bank stocks these days, it sometimes seems that the only buyers willing to step forward are the banks' own officers and directors. And they have been active buyers, indeed. *Page 1*

7/12 Citytrust Bancorp shares have been rising in a down market for bank stocks, and analysts are hard pressed to explain the strength. *Page 20*

7/13 Adding to investor fears about the Middle Atlantic commercial real estate market, MNC Financial Inc. announced that its problem loans would more than double and that it would report a $75 million loss for the second quarter. *Page 1*

7/13 Meritor Savings Bank, continuing a drive to shrink assets and improve capital ratios, announced a series of moves

that will result in a second-quarter loss of $138 million and a substantial increase in primary capital. *Page 20*

HOME MORTGAGES

7/13 Commercial banks, as part of their broad push in home mortgage finance, have been posting big gains in the business of servicing mortgages for investors, an *American Banker* survey shows. *Page 8*

INSURANCE

7/13 New avenues have opened to banks seeking enhanced revenues and customer relationships through insurance products and services, writes Philip S. Corwin. *Page 4*

INTERNATIONAL

7/9 British economic policymakers are blaming the nation's hefty inflation and persistent trade deficit on the aggressive marketing of consumer credit by financial institutions. *Page 10*

7/10 Bargain thrifts in the United States are the targets of Canadian financial institutions shopping for acquisitions to help them expand south of the border. *Page 14*

7/11 A real estate recession that is starting to plague Britain also threatens to mire U.S. and other bank lenders. *Page 18*

7/12 Amsterdam-Rotterdam Bank cut its last links with Belgium's Generale Bank, paving the way for Amro's merger with another Dutch bank, Algemene Bank Nederland. *Page 12*

7/12 Regulators ordered U.S. banks to write down their medium- and long-term loans to Argentina and Brazil by 20% in the third quarter. *Page 1*

7/12 U.S. banks are tightening their grip on the international loan-syndication market this year, a British magazine survey shows. *Page 1*

7/13 U.S. banks are unlikely to replenish soon reserves depleted by mandated writedowns on their Brazilian and Argentine loans. *Page 12*

INTERSTATE BANKING

7/12 In a little-noticed decision that further erodes prohibitions against interstate branch banking, Utah authorities have allowed BankAmerica Corp. to operate a Salt Lake City office as a unit of its Arizona-chartered bank. *Page 1*

LEGAL CRIME

7/12 In a dragnet that could eventually snare the son of President George Bush, federal investigators have filed more than 500 lawsuits against former directors and officers of failed banks and thrifts. *Page 1*

LEGISLATION REGULATION

7/9 The Federal Deposit Insurance Corp. is reeling from a series of recent court decisions that found it had abused its authority in provoking the failures of dozens of Texas banks. *Page 1*

7/9 With its costs rising faster than projected revenues, the Office of the Comptroller of the Currency is planning to increase its assessments on national banks next year by 8%. *Page 1*

7/9 Susan F. Krause has been named senior deputy comptroller for bank supervision policy, a position that puts her squarely in the middle of the debate over whether national bank examination standards have become too harsh. *Page 1*

7/9 Bankers are hopeful that they will get some relief from the toughest penalties of the RICO law. *Page 8*

7/10 In the latest flare-up of tensions between federal and state regulators, the Office of Thrift Supervision has sued the Utah commissioner of financial institutions for permitting a thrift to become a commercial bank without OTS approval. *Page 1*

7/11 For savings and loan executives looking for temporary relief from tough new limits on loans to one borrower, the regulation issued by the Office of Thrift Supervision came as a disappointment. *Page 1*

7/11 Moving ahead with a plan to sell troubled thrifts before they become unattractive to potential acquirers, the Resolution Trust Corp. Oversight Board authorized the Office of Thrift Supervision to line up buyers before seizing the institutions. *Page 1*

7/12 Richard Breeden, chairman of the Securities and Exchange Commission, called for radical reforms in banking laws, including a dismantling of the barrier separating banking from commerce. *Page 2*

7/12 In a little-noticed decision that further erodes prohibitions against interstate branch banking, Utah authorities have allowed BankAmerica Corp. to operate a Salt Lake City office as a unit of its Arizona-chartered bank. *Page 1*

7/12 Regulators ordered U.S. banks to write down their medium- and long-term loans to Argentina and Brazil by 20% in the third quarter. *Page 1*

7/13 Every Friday – the day the Federal Deposit Insurance Corp. usually seizes troubled financial institutions – whispers abound in Boston that Bank of New England may be targeted for takeover. *Page 1*

MANAGEMENT / HUMAN RESOURCES

7/12 Many airlines, hotels, and car rental firms are offering price breaks to banks that can guarantee some flow of travel dollars. *Page 8*

7/12 Commercial banks' cost-control drive, increasingly visible in recent weeks, has only just begun. *Page 1*

7/13 The Federal Reserve Board is working on a proposal to require increases in bank capital levels well above the risk-based standards that regulators are phasing in over the next two years, Chairman Alan Greenspan said. *Page 1*

MARKET FORCES

7/10 Massive consolidation of the banking industry may be inevitable, say the experts, but few bankers seem to be doing much to make it happen. *Page 1*

7/10 Recapitalized leveraged buyout of UAL Corp. goes through and the RJR Nabisco refinancing closes, major banks will see a payday of at least $300 million in up-front fees, bankers and observers believe. *Page 1*

7/11 Norwest Corp. and United Banks of Colorado Inc. announced that they were discussing a possible merger. *Page 1*

7/13 In a bid to lead the global market for automated teller machines, Diebold Inc. and International Business Machines Corp. have agreed to form a joint company to manufacture and market self-service banking devices worldwide. *Page 1*

MERGERS / ACQUISITIONS

7/9 In the strongest indication yet that UAL Corp.'s leveraged buyout is on track, five U.S. money-center banks have

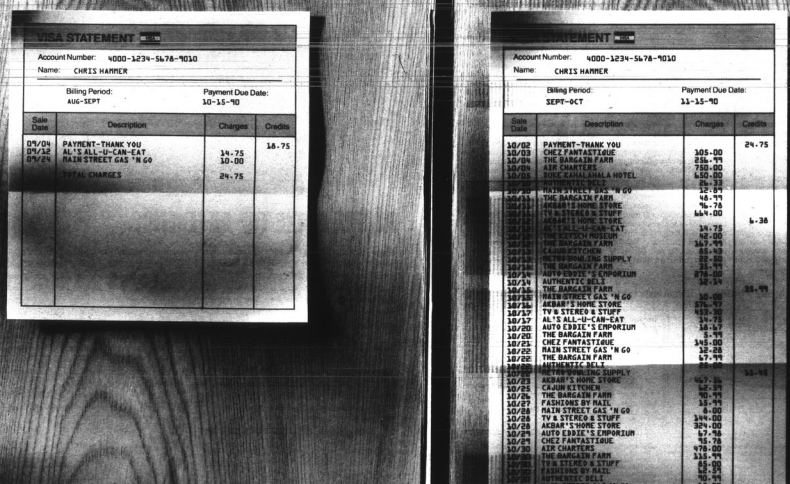
A lot of interesting things happen when people think someone else might pick up the tab.



Not surprisingly, they spend just a little more freely.

Which is precisely what occurs each year in response to the Visa Our Treat™ promotion.

We give people the chance of having one of their Visa purchases paid for. And then, during the heaviest shopping period of the year, they go to town.

It's a strategy that could pay off big, considering we'll be giving away $1 million worth of randomly selected transactions between October 1 and December 31, 1990. Meaning some 15,000 cardholders will get a Visa purchase on us.

Whether it's a new bowling ball. Or a trip to Bali.

Either way, you'll win even bigger.

After all, Our Treat has led to record fourth-quarter volumes for two years in a row. And, with private consumer awareness (plus a major ad campaign in the works), this year promises greater rewards.

For your own program guide and sample statement inserts, simply give us a call at 1-800-876-5637.

And put human nature to work for you.

VISA

It's everywhere you want to be.

NO PURCHASE NECESSARY. To enter without purchase, hand-print your name, address, city, state, zip code, day and evening telephone numbers and the words "Visa. It's everywhere you want to be." on a 3"x5" card and mail to: Visa Our Treat Sweepstakes, P.O. Box 88608, Elmhurst, IL 60126-8608. Limit one entry per envelope; no mechanical reproductions permitted. Entries must be received by December 31, 1990, or before total weekly prize pool is awarded. Prize pool weekly drawing is a check to the winner in an amount equal to the winning purchase entry. Offer void where prohibited or restricted. Cash advances, certain articles and non-U.S. dollar purchases are excluded from entry. Maximum prize in weekly drawings: $75,000. For a complete set of rules, send a stamped, self-addressed envelope to Visa Our Treat Sweepstakes Rules P.O. Box 8805, Elmhurst, IL 60126-8605 (VT and WA residents may omit return postage). Sweepstakes open to all residents of the 50 United States and the District of Columbia 18 years or older except employees and their families of Visa, its advertising and promotional agencies and Visa card issuers. Promotion ends December 31, 1990, or when total prize pool is awarded, whichever occurs first. ©Visa U.S.A. Inc. 1990

Regulator Says Credit Adequate

WASHINGTON — The U.S. deputy comptroller of the currency for the Northeast District said that although credit has contracted in some localities, the effect is not as severe as it is often portrayed.

Karen Wilson, in testimony before a congressional subcommittee, said the reduction consists in part of a decline of credit extended for activities in geographic areas where demand for those activities is declining.

In addition, there has been an increase in collateral and guarantee requirements for loans that are particularly sensitive to changes in economic conditions.

She told the subcommittee, "We haven't told bankers not to make loans, and we haven't told them to cut off credit to good customers." But she said the regulator has told them to take care in making loans, and where necessary, has required banks to recognize weaknesses in their portfolios and management systems.

CREDIT UNIONS

Defense-Related Groups Plan Survival in Age of Cutbacks

By BILL ATKINSON

WASHINGTON — Military base closings, cuts in defense spending, and new warmth in the United States' relationship with the Soviet Union could squeeze credit unions associated with the armed forces.

The nation's 345 defense credit unions, with nine million members and $30 billion in assets, have prospered over the years as military budgets bulged.

But 36 domestic military installations are targeted to close beginning this year, and the congressional armed services committees are pushing to cut more than $20 billion from the administration's military budget for 1991.

"I think there are some credit unions that are going to get hurt," said Angel Lopez, president and chief executive of Credit Union 1, Rantoul, Ill., whose sponsor, Chanute Air Force Base, is slated to close in 1994. "There are some credit unions that have never gone outside the fence. I don't think anybody ever anticipated *perestroika*," he said.

Credit Union 1 scaled the fence in the late 1970s when it found out Chanute was doomed. The institution immediately diversified its membership field to include people who work for the State of Illinois, a veritable gold mine with 250,000 employees; Eastern Illinois University; the University of Illinois at Chicago, and other groups.

"Everybody apparently has at least one plan."

James Rowe
Defense Credit Union Council

"The state is a growth industry and so are the universities," Mr. Lopez said.

Some of the largest defense credit unions are not sure how the cuts will affect their business. Unlike Credit Union 1, most have no immediate plans to expand their fields of membership. In the short term, some plan to close branches, some plan to shrink, and most are beginning to plot long-term strategies.

"It remains to be seen how it is going to affect us," said a spokesman for Navy Federal Credit Union in Merrifield, Va., which is the largest credit union in the nation. "We are looking at the long-term implications," he said.

Navy Federal, which has $4 billion in assets, plans to close a branch in Greece and is reviewing as many as 11 other branches for possible closing or consolidation.

The spokesman said the credit union will address defense cutbacks and base closings at a strategic planning conference this fall. He expects the impact to be minimal because naval forces are modest and important to the country's defense.

The Pentagon Federal Credit Union in Alexandria, Va., the fourth largest in the nation, also believes it will weather cutbacks in U.S. military spending.

"I think the rate of growth will slow down a little bit, but we will continue to support the military and that is our mission," said Gordon J. Levine, executive assistant for planning and corporate relations. Acknowledging that cuts in the armed forces reduces potential membership, he said the credit union does not plan to have to cut back staff.

"I think we are well positioned," Mr. Levine said. "We are well capitalized, we have been building reserves, so economically we are okay."

Pentagon Federal, which has $1.3 billion in assets and 391,000 members, plans to close one of its 20 branches. The targeted branch is in San Francisco, where the Presidio will close.

Groups Said to Be Unfazed by Events

The military credit unions are not panic stricken, said James W. Rowe, president and chief executive of Defense Credit Union Council, a trade group representing military credit unions. "They are going to handle it," he said. "Everybody apparently has at least one plan."

The Norton Credit Union of San Bernadino, Calif., plans to stick with its Air Force membership, known as "blue suiters." But because Norton Air Force Base will be closed, the credit union is planning to open a branch to tap Air Force retirees.

"We have not gone into a survival mode," said David Raley, chief executive of the $75 million-asset institution. "We continue to serve the people who work on Norton Air Force Base."

Mr. Raley expects a decline in membership, now at 16,000, once the base is shut. But he is optimistic that the credit union will survive. In the 1960s, cutbacks left Norton Air Force with just 400 people on base, and the credit union pulled through.

Mr. Raley also expects companies like Lockheed to move operations to the base. "I think the base will eventually become a major industrial complex," he said. □

MasterCard Saw Fraud Drop in '89

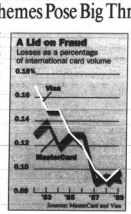
But Criminal Schemes Pose Big Threat in the Far East

By ELLEN MEMMELAAR

NEW YORK — In spite of a decrease last year in fraud as a percentage of transaction volume, MasterCard officials say they still face fierce battles, especially in the Far East.

Credit card fraud fell to 0.093% of MasterCard's gross dollar volume in 1989 from 0.095% in 1988, said Joel Lisker, vice president of security and fraud control at MasterCard International.

Visa International reported a slight increase to 0.10% from 0.09%. The association lost $259 million to fraud last year, up from $189 million in 1988.



Lost, Stolen Cards Take Big Toll

In sheer dollars, fraud at MasterCard rose 19% to $151.1 million, while sales volume advanced 20% to $162.7 billion. According to MasterCard, lost and stolen cards remain the biggest problems, accounting for 67% of the association's fraud.

The cost of fraud to banks is not easy to determine because the losses take many forms, such as personal bankruptcies and merchants' refusals to make payment, said Mr. Lisker. But the losses are indeed large, he said.

The overall trend for the past eight years at both card associations has been a decline in fraud as a portion of transaction dollars. The associations attributed the drop to efforts to contain counterfeiting.

But the decline in domestic counterfeiting has coincided with a burst of such activity abroad. The fraud category with the most rapid growth at MasterCard was counterfeiting, largely because of a 71% increase in such activity in the Asia-Pacific region.

The burgeoning markets of Malaysia, Thailand, and Singapore are hotbeds of fraud, Mr. Lisker said. Some Hong Kong residents who want to leave the colony before China takes control are using credit card schemes to obtain the money, he said.

Although countries around Hong Kong are experiencing rapid development as people and companies shift their assets out of the colony, their crucial infrastructures are still inadequate, Mr. Lisker said. "From the standpoint of their economy, there is tremendous expansion," he said. Because the infrastructure cannot handle some technological methods of card verification, fraud is easier in some of these countries.

Visa International has also experienced a growth spurt in counterfeiting in the Asia-Pacific region, said William Neumann, senior vice president in charge of the risk management services division. To prevent cards from being duplicated, the association has introduced a counterfeit-protection strip on the magnetic stripe. Called a CVV, the strip is encoded with an algorithm that indicates the card is authentic.

Telemarketing Not Counted

Both associations exclude telemarketing losses from their fraud figures. In addition to the $130 million that Visa lost to fraud last year, the card associations together lost $150 million to $200 million because of telemarketing schemes internationally, Mr. Neumann said.

Visa is working with MasterCard and the law firm of Morrison & Foerster, Washington, to publicize a bill in Senate and House committees that would make it a federal crime to launder credit card slips. "We are very optimistic about the bill," said Mr. Neumann. □

NCNB Encourages Volunteerism on Company Time

NCNB Corp. is increasing its commitment to education with perhaps the best gift of all – employees' time.

Under a program called Education Initiative, the Charlotte, N.C., banking company is allowing employees to spend two hours of paid time each week supporting school activities, as long as they receive supervisors' approval.

The company is encouraging employees to volunteer as tutors, coaches, mentors, administrative assistants, and leaders in groups such as the Parent-Teacher Association.

And, emphasizing family values, NCNB is permitting parent-teacher conferences during paid working hours, if that's necessary.

Schools Termed Essential

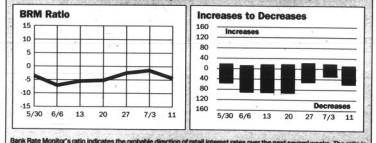
"Our pledge to support excellence in education will improve the quality of life in our communities," said Robert Lane, president of NCNB Texas. "Enhancing our schools and our workfamily environment are essential elements for supporting that goal."

The bank is also expanding its Matching Gifts for Education program to include secondary schools, a spokeswoman said. Through the program, employees and the bank contributed $65,000 to colleges and universities last year.

Among the company's other provisions that reinforce family life are extended leaves of absence, flexible working hours, and modified schedules for parents. — Ellen Memmelaar

AMERICAN BANKER /Bank Rate Monitor's™

Consumer Money Index Latest rate trend: Down Pattern resumes



Bank Rate Monitor's ratio indicates the probable direction of retail interest rates over the next several weeks. The ratio is computed by dividing the total number of rate decreases into the number of increases or vice-versa on six types of accounts offered by the 10 largest banks and thrifts in each of the nation's 10 largest markets. Example: 100 rate increases and 25 decreases would make a 4-to-1 "Plus" ratio. Or, 100 decreases and 25 increases would make a 4-to-1 "Minus" ratio. Over time, the longer and farther the ratio moves on the Plus or Minus side, the more sustained the current rate cycle is likely to be. When the ratio suddenly moves strongly in an opposite direction, it usually signals the beginning of the end of a cycle. The graph shows how the ratio has moved over the past 8 weeks, and the bar chart shows the actual number of rate increases to decreases used to calculate the ratio. The greater the number of ups and downs, the longer the cycle probably will last.

With Bankers in Retreat, Insurers Advancing Cautiously

By ANDREW REINBACH

Just when most banks are regretting the big plunge they took into commercial real estate lending in the late 1980s, insurance companies are beginning to stick a toe back in the water.

"The insurance companies dropped out of the market, and the pipeline broke down," said Robert Arvinides, a senior vice president at Conning & Co., an insurance industry consulting firm in Hartford, Conn.

Now, with the banks out of the real estate lending market, big insurance companies are beginning to take their place in the construction loan and takeout business. The chief financial officer of a major national developer said these include the Travelers Corp., Hartford, Conn., Prudential Insurance Company of America, Newark, N.J.; and Metropolitan Life Insurance Co. and Equitable Life Assurance Society of the United States, both in New York.

Prudential Insurance approved a $61 million deal like this in California last week, according to Frank B MacDougal, president of Prudential Mortgage Capital Corp. And John Somers, senior vice president of Teachers Insurance and Annuity Association of America/College Retirement Equities Fund, New York, said his organization just lent $75 million to a California developer to expand a shopping center.

But this is a very new business for the insurers, who have traditionally concentrated on long-term lending. They're being cautious. Mr. MacDougal's deal is a fully leased, custom-built project and is 80% leased. Mr. Somers said he expects to write only three or four similar deals this year.

The problem for the banks is not just the amount of their real estate lending but also the character of the loans they made and the prospects of asset recovery in a workout.

Essentially, banks vastly increased their loan volumes and market share by making uncovered construction loans, or construction loans with takeout commitments, as the credit quality of the commercial real estate markets deteriorated in the late 1980s. Then they locked themselves into the loans by fixing the coupon with an interest rate swap.

Since banks cannot get out of swapped loans — and workout prospects will be dimmed by an expected combination of low population growth and high vacancy rates in the 1990s – banks will be losing money on these loans for years.

Insurance companies, meanwhile, cut back on their activities, and by 1989 they had cleaned out of the market almost entirely.

Real Estate Exposure in Two Industries

Commercial real estate loans outstanding, in billions of dollars

Signals from the Oil Patch

Why? "It became apparent to us that with the Oil Patch out of the picture, what had appeared to be healthy markets were dead, and the credit quality of the asset pool was dead, so the traditional lenders tightened up their criteria" said Mr. Somers.

The following data illustrate this dramatically: From 1986 to 1988, national banks increased their market share of commercial real estate loans to 63.2% from 59.7% – and then proceeded to take 92.8% of the market in 1989.

Insurance companies, meanwhile, could produce market share from 32.4% in 1986 to 29.5% in 1988 – and then took a free fall to 11.3% in 1989. What makes these data even more dramatic is that aggregate loan volume dropped from $61 billion in 1988 to $43.8 billion in 1989.

Starting from a similar asset base in 1980, bank real estate assets grew 347.6% by 1989 – from $76.8 billion to $343.8 billion. Insurance company real estate loans, meanwhile, rose a mere 160.1% – from $73.6 billion to $191.4 billion.

But while nonperforming real estate assets grew 40.9% for insurance companies, from $4.4 billion in the first quarter of 1988 to 6.2 billion in the first period of 1990, and nonperforming real estate assets among national banks grew 36.8%, from $19 billion to $26 billion, those percentages are not really comparable. The total exposure by banks is obviously greater.

Banks Did It to Themselves

The worst of the mess for banks is that they did it to themselves. "The banks had made these loans, and they wanted to keep them on the books, so they did what they could to keep their competitors from getting them by rolling their construction loans into 'miniperms' [three- to five-year fixed-rate mortgages]," said Arthur I. Sonnenblick, vice chairman of Sonnenblick-Goldman Corp., a New York-based mortgage broker.

Also, the happy workout experience of the 1970s probably won't be repeated in the 1990s. "My sense is that the '90s are unlikely to resemble the late '70s, said John A. Koskinen, president of Pulmieri Co., Washington. "The problem is that with a standard recession and a standard expansion, you won't see great values in workouts."

Even inflation may not bail out real estate workouts in the 1990s, many experts believe. They say the shortage of new workers will keep a lid on inflation on the one hand, but it will also keep demand for office space – and rents – low.

The problems that real estate lending created for banks may, however, be just beginning, according to Robert Litan, a senior fellow at the Brookings Institution in Washington. He said nonperforming assets will double after the examination teams sent to safety-and-sound banks by the Comptroller of the Currency return home with their findings, and that most of those will be real estate assets. □

DEALMAKERS

Opening Seen for Realty Investment Bank

By ANDREW REINBACH

Although he believes the salad days of real estate investment banking are over, Bradford Klatt is starting a real estate investment bank for Wertheim Schroder & Co., New York, which he joined seven weeks ago as a managing director.

Gone are the days when an investment bank could create such exotic financing deals as a construction loan rolling into a 10-year, fixed-rate permanent mortgage through a staged series of commercial paper offerings, replete with a series of rate options that fixed the interest rate coupon.

Complicated Deals Are Out

Mr. Klatt's former employer, Goldman, Sachs & Co., did just such a deal for the Beacon Companies, a Boston developer, in 1986.

"There just wasn't much of a market for that sort of deal; it was a product people were trying to sell," he said. "Today's deals are very straightforward; you've got to be much simpler with both the credit and the equity."

That being the case, it might not seem the best of times to start a new real estate investment bank. But Mr. Klatt, 38, thinks otherwise. He said he sees significant opportunity in what he calls the "chaos in order" business – working with properties from the Resolution Trust

Bradford Klatt
Wertheim Schroder & Co.

Corp., for instance, or from big, publicly traded real estate companies.

A 'Reality' Play

A typical deal, he said, is one he's now working on for a publicly traded land development company. With asset value of about $400 million, it has decided to cash in on its portfolio.

The market timing might seem questionable, especially since the portfolio is all raw land in the Southeast. But Mr. Klatt is exploiting the difference between marketplace reality, which values factors like how surrounding development and regulatory approvals affect price appreciation, and accounting reality, which forces companies to carry real estate on their books at depreciated cost.

"The public market has traded down the value of all real estate," Mr. Klatt said, "so it's especially discounted the real values of open-space land as to way below the true asset values."

Market Value 'Hidden'

His client's company has a number of sites – all "landlocked," or surrounded by development – in urban or suburban locations, said Mr. Klatt. All have full regulatory approvals. The result is a market value, reflected by either stock price or accounting treatment."

As a result, he has been able to arrange and finance a series of short-term joint ventures.

Some deals have been with owners of abutting properties that want to expand; others, with nontraditional buyers, including foreign construction firms and, in one case, a foreign elevator company. The latter, he explained, want to penetrate the U.S. market and see investing in these projects as a way in.

Mr. Klatt left Goldman Sachs in 1987 to start his own firm, Metropolis Equities Inc., which will be folded into Wertheim Schroder. Among Metropolis' deals was an operating partnership with two private investors, Claude Ballard and Robert Marcy, who acquired what became a large warehouse portfolio in Dallas. □

Weak Chase Profit Won't Cover Payout, but No Trim Planned

Continued from *page 1*

"Even without the restructuring charge, they managed to have clearly disappointing earnings. The general sense is that there is no way the company can say there is an end in sight."

Analysts also said that the earnings almost certainly point to a dividend cut.

"This is the second quarter in which they failed to cover the dividend on an operating basis," said Raphael Soifer, an analyst at Brown Brothers Harriman & Co. The dividend yield on Chase's stock is hovering near an unsupportable 12%, he said.

"Every time they pay a dividend, they kill the company a little more," said an investment banker who asked not to be named.

"Our dividend requirement is $95 million [of earnings per quarter], and we are at $44 million," Mehdi Esposito, Chase's chief financial officer, said after first-quarter earnings were released. "We can't play that game forever."

Nevertheless, Mr. Esposito said in an interview last month that he is confident the bank will earn its dividend this year.

The nation's second-largest banking company repeated that its loan-loss reserves are adequate to continue at high levels "if economic conditions in domestic commercial real estate markets continue to be adverse."

On the plus side, Chase's net interest revenue increased for the second quarter from the year-earlier period, principally reflecting higher spreads and volumes on consumer banking assets. Revenue was up, but the margin fell from 3.48% to 3.44%.

Also, fee and commission revenue from consumer and investment banking rose 15% from the second quarter of 1989.

However, those increases were offset by declines in a number of operating lines. Trading revenue fell from the year-earlier quarter, led by a 36% drop in foreign exchange revenue, to $49 million, from the year-earlier quarter.

Analysts expressed skepticism over Chase's ability to realize benefits quickly from its planned restructuring and change in top management that the bank announced last month. "The fact that there is no restructuring charge reemphasizes our questions about whether this company has thought through a detailed restructuring plan under the new management," Mr. Kraushaar said.

Reactions Vary to 1st Chicago

Analysts' reactions to First Chicago results were mixed. Some were cheered that no appreciable jump had occurred in nonperforming real estate loans, but others saw an underlying weakness in earnings.

"Total domestic nonperforming loans aren't up by too much, and real estate didn't show much change, so given the current environment, that's pretty good," said Richard A. Mueller, analyst for Chicago-based Duff & Phelps Inc.

Expressing concern about how quickly the company could generate revenue to offset its higher expenses, James J. McDermott, executive vice president for research at Keefe, Bruyette & Woods Inc. in New York, said he would reduce his previous 1990 earnings estimate of $5 a share to about $4.50.

Total noninterest expense rose to $397.7 million, from $354.3 million; salaries and benefits accounted for more than one-third of the increase.

A First Chicago spokeswoman said the higher operating costs reflected the company's decision to expand its capital markets and merchant banking businesses. "It's an area where we think we can make money," she said.

Real Estate's Impact

Midlantic Corp., the real-estate battered New Jersey bank, reported a loss of $24.8 million for the quarter after adding $186 million to its provision for loan-loss reserves.

The number could have been even worse if Midlantic had not booked $68 million of gains from selling its credit card portfolio and securitizing many of its consumer loans, investment bankers said. In the year-earlier period, Midlantic earned $61.6 million, or $1.57 per share.

The Edison, N.J.-based bank company's loss came as examiners from the Office of the Comptroller of the Currency began scrutinizing its real estate portfolio. Analysts said the $24.2 billion-asset bank's decision to add $186 million to its provision for possible loan losses was thus a prudent move.

"Everybody's expecting the worst anyway, so they might as well take as much of it as they can afford now," said Michael Plodwick, an analyst at C.J. Lawrence, Morgan Grenfell. He said that Midlantic's earnings report, which translated to a loss of 67 cents per common share, was generally in line with expectations.

The bank company, which has long specialized in real estate lending, is considered the most vulnerable of all New Jersey banks to the decline in property values. For the first six months of 1990, the bank reported a loss of $23.4 million, compared with a gain of $121.1 million in the first half of 1989.

Midlantic's reserve for possible loan losses stood at $550 million, or 76% of its $725 million of nonperforming loans, at the end of the second quarter. The bank also charged off $77 million of loans in the quarter, up from $48 million in the first quarter and $27 million in the year-earlier period.

Midlantic last month declared a special dividend, which at the close of trading Friday yielded 13.3%, the highest among all bank holding companies tracked by Wasserstein, Perella & Co.

The bank company, which last quarter said it would restructure its balance sheet through the sale of assets, booked $68 million of gains in the quarter from selling its credit card accounts and receivables and securitizing some autoscale bills and home-equity loans.

Executive Help Wanted

Sr. Product Support Specialist
Bankcard Operations

San Mateo, California

Technology and innovation have made VISA the largest, most widely recognized financial payments system in the world. We do more than enhance existing products. We focus on new product development as well. For you, that means exciting new projects in bankcard operations as well as a chance to gain greater visibility as you present recommendations to senior management.

Your primary focus will be on developing and writing operating regulations for our new and existing bankcard programs. This will involve analyzing the impact of operating regulations and presenting your findings to Member groups. You will also respond to inquiries from members, merchants, and cardholders regarding complex VISA policies and procedures.

You'll need a BA/BS, or equivalent, in-depth knowledge of bankcard operations, and a general understanding of Visa products, services, and systems. You must also have proven presentation skills, as well as management and analytical abilities. Some background in writing and editing is needed.

VISA offers an excellent compensation package, including comprehensive benefits. For immediate consideration, please send your resume to: VISA U.S.A., Dept. SH/77/16/AB, P.O. Box 8999, San Francisco, CA 94128. **For other VISA opportunities, please call our JOB INFORMATION LINE (415) 378-8299.** We are an equal opportunity employer.

VISA

We're everywhere you want to be.

Overseas Banking Consulting

As one of the world's oldest and most prestigious U.S. based consulting firms, we are continuing to expand our business in the Asia Pacific region. With offices in Singapore, Tokyo, Sydney and Jakarta, we have a strong established presence in the region and, in particular, a dominant position serving clients in the financial services industry.

We are currently seeking banking professionals with a strong record of achievement to join our Singapore office. We specifically require individuals with demonstrated functional expertise in the areas of:

- **CREDIT**– preferably middle market/wholesale
- **OPERATIONS**– both head office and branch levels
- **HUMAN RESOURCES**– emphasis on manpower planning, performance/potential appraisal, organization, training

Candidates should have 5-8 years of significant banking experience and possess an MBA or other relevant graduate degree. International work experience, especially in developing countries, would be a plus. In addition, the successful applicant must demonstrate the personal qualities of drive, initiative, creativity and professionalism, and possess strong communication, interpersonal and problem-solving skills.

For immediate consideration, send your resume and salary requirements in confidence to:

Box #435
c/o American Banker
One State Street Plaza
New York, NY 10004

MANAGING EDITOR

Every single story in this new financial service industry newspaper is going to help its readers do their jobs better. The readers expect and will get "hands on" and "how to" information. Hands on is how the ME will have to do the job every week. Knowing how financial services executives work and what they need, the ME will plan, assign, rewrite, bounce the copy until its right, then see the paper out the door. The staff will be lean but enough to do the job, including a fast, enticing design. There'll be plenty of correspondents but they will need training in the paper's style. The key is knowing the financial services business from the inside. If you do, you may be able to meet this unusual journalistic challenge. The readers are there. Hard work and dedication will yield generous rewards. Write with resume:

Net Interest Margin at Morgan Increases for 2d Quarter in a Row

Continued from page 17

$160.7 million, or 15%, from the $139.7 million set aside in the first quarter.

Nonperforming loans totaled $1.87 billion, up 14% from $1.63 billion a year ago and up 7% from $1.74 billion in the first quarter. The increase was mostly overseas, Security Pacific's announcement said; domestic nonperforming loans were essentially flat. Problems centered in the United Kingdom and in Australia's slumping economy.

Since most of the increase in problem loans was in foreign credits, analysts were not ringing alarm bells over other loan categories. "This certainly didn't raise any new concerns about real estate," said Donald Crowley, San Francisco-based bank analyst with Keefe, Bruyette & Woods.

Expenses Tightly Controlled

The news on bad loans was offset by gains realized from tight expense control.

"I am very impressed with their control of staff costs," said Mr. Crowley. Noninterest expense in the second quarter totaled $781.3 million, up only 2% from the year earlier. Staff expense declined 3%, to $390.5 million.

Security Pacific took $159.6 million in net credit losses in the quarter ended June 30. That is up from $108.8 million in the year-ago quarter.

Noninterest income was stronger than some analysts anticipated, at $502.6 million, up 12%. For the six months, net income was $383.6 million, up 5% from the $363.8 million earned in the first six months of 1989.

Trading Gains at Morgan

Morgan's results were boosted by trading gains of $234 million, up 55% from the year-earlier period and 9% from the first quarter.

Though foreign-exchange trading profits were down 9% from the first quarter, to $64 million, Morgan said its revenues from trading swaps, Third World debt, and bonds were up significantly.

"The trading results were very impressive, and the fact that Morgan delivered them for the second quarter in a row diminishes somewhat investor fears that this is a flash-in-the pan performance," said Mr. Kraushaar of Merrill Lynch.

Morgan also showed a small gain over the first quarter in its net interest margin, the amount by which interest it collects on loans and other assets exceeds what it pays to fund them.

Investors tend to watch the interest revenue and returns at Morgan more closely than at most banks because of its heavy reliance on playing yield-curve spreads to fund longer-term loans on a short-term basis. Analysts speculated that most of the quarter-to-quarter interest yield gain – from 1.43% to 1.49% – was captured in June and predicted that third-quarter earnings could continue on the upswing if the yield curve continues to steepen.

Net interest revenue declined 30% from the year-earlier quarter, to $286 million.

Kenneth Cline in Atlanta, Teresa Carson in Los Angeles, and Nanthiz Alexander in Chicago contributed to this article.

Recession Effect on Insurance Fund Cited

By BILL ATKINSON

WASHINGTON — Having slumped to its lowest level relative to total deposits, the Federal Deposit Insurance Corp.'s bank insurance fund could face more losses next year if the nation is thrown into a long and deep recession, said L. William Seidman, agency chairman.

Mr. Seidman's comments last weekend reveal an ever-increasing concern over the soundness of the banking industry and its insurance fund as the nation reels from the crisis in the savings and loan system.

Appearing Sunday on the CBS News program "Face The Nation," Mr. Seidman said the bank fund is "under considerable stress."

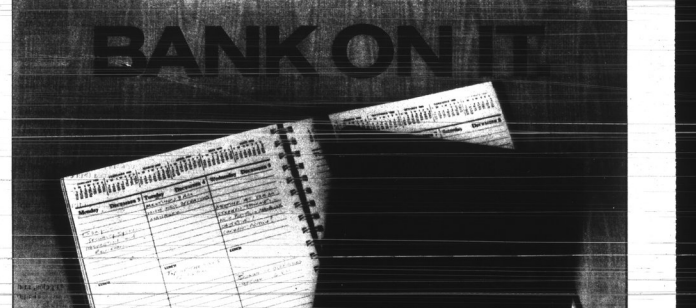
"It's at a low point in history, as a percentage of what it's insuring," Mr. Seidman said. "And we can handle anything we can foresee right now. But if there are things [that] come along, major failures that we're not able to foresee at this time, that would be another story."

The $13.2 billion bank fund insured 13,239 banks at Dec. 31 and held 70 cents for every $100 dollars in deposits. The fund held 80 cents in reserves for every $100 in assets in 1988 and $1.10 in 1987.

In a worst-case scenario, the fund could lose as much as $2 billion this year, according to John F. Bovenzi, deputy to Mr. Seidman. Such a loss would drag the fund balance down to $11.2 billion.

Industry critics said Mr. Seidman is showing candor in trying to address the banking industry's problems rather than sweeping them out of sight.

"He is recognizing reality," said Robert Litan, a senior fellow at the Brookings Institution, a Washington-based think tank. "The only quarrel I would have with what he said is that even a mild recession could put the fund under. I think [the fund] is skating on a thin edge."



The 1991 Banker's Diary and Guide.

A personalized planning tool that not only keeps track of your business activities–it becomes part of the business.

Don't start 1991 without your most important business associate. The *1991 Banker's Diary and Guide. Impressive.* The *Diary and Guide* has been specially prepared by *Banker's Magazine* and Warren, Gorham & Lamont with attention to the smallest detail...a genuine fine-grain leather cover...gilt-edged pages...personalized with the recipient's name, company name, or company logo embossed on the cover in 23-karat gold.

Practical. The *Diary and Guide* will help you organize your business, set appointments, and save time throughout 1991. At a single glance, you can plan for the week at hand, or from month to month.

Intelligent. A uniquely-functional desk reference for bankers, the *Diary and Guide* was designed with your information needs in mind. You'll find important bank reference material–facts, figures, charts, sources, checklists–including:

- Annual compound interest annuity tables
- Treasury bill yield computations
- Tax-exempt yields and taxable equivalent yields
- Bond and security glossary
- Income tax rate table
- And much more!

Ideal. As a gift for your clients. Your staff. Or even as a treat for yourself. It's a convenient reference and planning tool to use–and depend on–daily.

The *1991 Banker's Diary and Guide*–plan on it. For more information, call:

DEALS

Highly Leveraged Lending Rebounds from the Doldrums of Late 1989

Continued from *page 1*

"There's business to be done and profits to be made. We're going to have a barn-burner of a year."

Data Indicate Upward Trend

While others say that prognosis might be a bit optimistic, the lending data appear to bear out anecdotal evidence that acquisition-type lending is rebounding.

Total deal flow tracked by Loan Pricing Corp. – including both HLTs and non-HLTS - has picked up from its lows. Volume dropped from $18.3 billion in February to $13.8 billion in March to $11.9 billion in April.

But in May, deal flow began turning around; rising to $12.2 billion. June's figure is expected to increase as well, an official at Loan Pricing said.

Not only has the total value of deals picked up, but the percentage of all commercial loans that qualify as HLTs has increased considerably since the winter.

When the management-led buyout of UAL Corp. failed in October, 60.7% of loans tracked by Loan Pricing Corp. were HLTs, falling to 47.8% by January and 44.6% by February.

However, that figure jumped to 50% in March, over 50.5% in April, and 51.8% in March. While it dipped back down to 49.2% in May, a Loan Pricing official said the figures for May and June were understated because of the lag time in collecting data.

Number of Deals Rebounding

While the dollar value of mergers and acquisitions has not yet returned to the level of last October, the number of deals has begun to rebound. From a low of 1,061 deals announced in the first quarter, the second-quarter figure shows volume increasing to 1,245 deals announced, according to Securities Data Co.

And cross-border merger and acquisition volume was actually up 3% over last year's first half, according to Securities Data. This has been a factor for banks because foreign buyers often use U.S. banks for funding the transactions, such as the $900 million bank facility for Siebe Inc.'s acquisition of Foxboro Co.

In recent months, merger and acquisition activity "has definitely picked up," said Eduardo Mestre, cohead of mergers and acquisitions at Salomon Brothers Inc. Both investment and commercial bankers agreed that deal flow was put on hold as acquirers and commercial banks reassessed the ability to finance and syndicate deals.

Acquirers Step Up Activity

But after sitting on the sidelines, banks are willing to fund deals – albeit with different criteria – acquirers began pursuing deals, industry, investment bankers say.

"The strategic types are active, and there's a big appetite on the cross-border." In addition, he noted that certain industries such as telecommunications have been seeing increased activity.

The recast market, though, clearly looks much different than highly leveraged transactions done before the collapse of the first UAL deal and the bankruptcy filing of Campeau Corp.

"We're starting to see more activity, but in deals with new capital structures" than last year, said James Lee, managing director and head of structured finance at Chemical Bank. "We're playing ball in a new park."

With the near-fatal injury to the junk bond market, banks are the only game in town for any leveraged lending greater than a few hundred million.

Equity Cushion Is Also Thicker

Rather than replacing the subordinated junk debt with bank debt, as some expected, corporate acquirers and investors have been forced to find deals with a much higher cushion of equity, often at lower multiples.

The Chemical Banking Corp. unit has jumped in the rankings of loan originations. Mr. Lee noted that banks want plenty of capital below the senior bank level, even if acquirers must fund the deals with 40% in equity or more.

"Banks are not any less selective. What's changing is the underlying structure of buyouts," Mr. Lee said.

"There's plenty of money available for good deals – the trick is figuring out what's a good deal," said the head of syndication at a top money-center bank.

Strategic Investors Adjust

Strategic investors have clearly been more active than financial buyers that are active must lower potential returns from the lofty 50% returns seen in earlier transactions.

In the acquisition of Mayfield by Wasserstein, Perella & Co., over 50% of the capitalization was equity. Or the buyout's purchase of Foxboro Co., the acquisition loan was not considered an HLT because of the high equity levels.

Both financial and strategic buyers "started to adjust to the new set of circumstances," said Mr. Lee of Chemical. "The trend is a different capital structure, a lower price, and higher fees" for banks.

RJR Nabisco Inc.'s $2.25 billion new loan, in which over $7 billion in commitments was received, is the most obvious example of the willingness of banks to fund leveraged transactions. Fees on the deal were a high 3.5% to 4%.

Other large transactions include Hanson Industries' $2.6 billion deal, Saks Fifth Avenue's $750 million loan, and the $1.15 billion deal for the proposed leveraged buyout of General Instrument Corp.

"I'm feeling a whole lot better than I was three months ago," said the money-center syndication head. "I'm not euphoric, but there is more deal flow. . . It's not robust, but it's better than the first and second quarters."

Of course, the proposed $4.4 billion buyout of UAL Corp. by an employee-led group will likely be the toughest test yet of the new climate, because the capital structure does not appear to pass the new rules of the game without additional equity.

While some pointed to RJR's $7 billion as an indication that banks are more aggressive, many bankers disagred. Once the $2.25 billion was syndicated, it became apparent that banks "lobbed in high numbers knowing the[y'd get cut back," said one lender involved in the deal.

Jumping In with Large Numbers

Because the fee structure was based on commitments as well as allocations, many banks jumped in with large numbers knowing they would not have to put up that much money, but would nevertheless receive fees based on the higher fee structure.

"It wouldn't read too much into the $7 billion," said one of RJR's Japanese lenders.

Knowing that they'd likely be cut back, banks flexed their muscles for Kohlberg Kravis Roberts & Co., one the largest borrowers in the history of leveraged lending.

Late last week, as allocations were set, most banks were cut back to roughly one-third of their commitment levels, bankers in the deal said. □

Moran Resigns Posts at Fortune

CLEARWATER, Fla. — Fortune Financial Group Inc. said Friday that John Moran, its chairman, president, and chief executive officer, had resigned to pave the way for obtaining regulatory approval to double his company's ownership stake in Fortune.

A day earlier, Fortune announced the appointment of John Torell Jr., a former top executive of Manufacturers Hanover Corp. and CalFed Inc., as chairman. Rausey Mason, a Fortune executive vice president, was promoted to president and CEO.

The Office of Thrift Supervision required Mr. Moran to give up his executive duties at Fortune as a condition for his other company, Dyson-Kissner-Moran Corp. of New York, to buy up to 20% of Fortune's stock. That would double its current holding of 9.97%.

Fortune Financial is the holding company for the $3 billion-asset Fortune Savings Bank, Clearwater. Mr. Moran remains a director of both. — **Reuters**

STOCKS
Mixed Signals And Earnings Roil the Market

By FRED VOGELSTEIN

A wave of mixed earnings reports from some of the larger banks and conflicting signals from the Federal Reserve Board created a volatile day for bank stocks.

NCNB Corp. and J.P. Morgan & Co. surged nearly 5%, while Chase Manhattan Corp. and other money-center banks fell near or below their yearly lows.

"Where the earnings have come in higher-than-anticipated for banks, the market has re-

Banks Gear Up For Debt Issues

Source: Securities Data Co., American Banker

warded them. Away from these exceptions, however, the pressures caused by poor asset quality continue," said James McDermott, executive vice president and director of research at Keefe, Bruyette and Woods.

Two Indexes Rise

The Dow rose 19.55 points, to 2999.75, while the *American Banker* index of 225 banks was up a mere 0.5%.

J.P.Morgan & Co. climbed substantially, rising $2.125, to $37.875, while NCNB jumped $1.75 to $36.50. Both reported better-than-expected second-quarter earnings.

Security Pacific Corp.also reported higher earnings but closed down 12.5 cents to $36.25.

Bankers Trust New York Corp. rose $1.25 to $41.375 in sympathy with Morgan's move. Mark Alpert, an analyst at Bear Stearns & Co., said many investors "think the fundamentals that drive Morgan are similar to those that drive Bankers and since Morgan had a great second quarter, perhaps some are thinking the same will happen to Bankers."

Northern Trust Climbs

Among other leaders, Northern Trust Co. also gained for the second day, rising 75 cents $30.25. It was up $2.125 Friday on news of record trust fees and lower provisions for loan losses.

Most of the money-center banks declined, however. In addition to disappointing earnings figures from Chase, analysts and investors said it was clear that Fed Chairman Alan Greenspan's remarks last Thursday about the prospects for increasing bank capital requirements were having their expected negative effect. That overshadowing his comments about easing interest rates.

"People are coming to their senses" that interest-rate easing is not as important as the need for additional capital, said Charles Cranmer, an analyst at Shearson Lehman Brothers Holdings Inc.

Chase Stays Active

Chase, which traded more than 2.42 million shares – and topped 1.4 million for the third day in a row – was off 50 cents to $20.75, reaching a 52-week low on news of lower second-quarter earnings.

Analysts, who have become particularly bearish about Chase lately, noted that this is the second quarter in a row that Chase has not covered its dividend payments with earnings.

"Two bad quarters, a weak capital base and Greenspan's remarks [about increasing bank capital requirements] are certainly enough reasons to be suspicious [about the dividend]," Mr. Cranmer said.

Analysts and investors also said money-centers were still reeling from a very negative report by C.J. Lawrence, Morgan Grenfell Inc. It stated that dividends at a number of money-center banks could be in jeopardy within the next 12 months.

"The C.J. Lawrence piece put a lot of fear in people," said Thomas J. Tisch, president of F.L.F. Associates, an investment partnership including holdings of CBS chief executive Lawrence A. Tisch and family.

Mr. Tisch is a large investor in bank stocks. His holdings include a 6.6% stake in Bank of Boston and positions in Chemical Banking Corp. and Chase Manhattan Corp. □

CAPITAL
Rate Cuts May Eventually Spur Debt Issues

By KELLEY HOLLAND

As funding costs drop with the Federal Reserve Board's recent move to lower short-term interest rates, bank debt issuers could pick up in the second half of 1990, according to analysts and capital markets specialists.

Any additional capital requirements demanded by the Fed could also spur debt issuance, experts say.

But in the near term, bank debt deals are not expected to flood the market at least until second-quarter earnings have been released.

"U.S. banks are going to try and pick their spots," said William J. Downes, a vice president at Keefe, Bruyette & Woods.

Quick Results

The Fed's effort to lower interest rates last Friday immediately pushed short-term yields down, prompting some bank treasurers to hope long-term rates would soon fall as well. In fact, long rates have dipped around five basis points since the Fed action.

Mr. Downes predicted that if they can keep all-in financing costs below 10%, banks could easily issue $3 billion in new debt during the second half.

A likely increase in Yankee bond issuance could induce American banks to issue debt quickly. Sumitomo Bank International Finance NV issued $500 million in subordinated debt in the Yankee market last week, and rumors abound as to which Japanese bank will be next.

American banks concerned about the limited demand for U.S. investors could try to issue securities before other Japanese banks come to market, according to capital markets specialists.

Aside from market-timing reasons, Federal Reserve Chairman Alan Greenspan's comments that capital requirements for banks could be raised may also propel banks into the market, analysts said.

Almost all the nation's largest banks have more than enough capital already to meet the 1992 risk-based requirements of an 8% total capital ratio.

But a 50% increase in capital requirements is now plausible, according to Ann L. Robinson, a vice president at Donaldson, Lufkin & Jenrette. And if that happens, she said, a number of institutions could find themselves planning new issues.

"Already a growing number of banks are preparing for new debt issues. Shelf registrations for bank debt exceeded $1.3 billion in the second quarter, according to Securities Data Co.

And in the early weeks of the third quarter, Fleet/Norstar Financial Group has already filed a registration for $700 million in debt.

Fleet's treasurer, Richard R. Pannone, said his bank has no plans to issue subordinated debt this year. But lower rates could change his view.

"If we have a significant decrease in rates, issuing become much more attractive," he said.

Several factors, however, are working against new debt issuance in the immediate future. For one thing, banks are leery of issuing debt while second quarter earnings are still being released.

Concern over Secondary Market

Banks are concerned about their securities being pummeled in the secondary market as banks announce disappointing quarterly results, according to Andrew J. Cooley, a managing director at Merrill Lynch Capital Markets. "There may be some bank bashing in the market," he said. "That may push some of this [issuance] off until things settle down."

Also, banks are waiting to see if the 25-basis-point downturn in short-term rates will be paralleled by lower long-term rates. Since the Fed move, 10-year Treasury securities have dipped from 8.50% to 8.45%.

The banks most likely to come to market will probably be those with the least immediate need for capital, Ms. Robinson said. That's because investors remain deeply concerned about credit quality. Banks with the greatest need for new capital are the ones who might find the market unaccommodating, according to Ms. Robinson.

"The Darwinian theory is playing out," she said.

MARKET MONITOR

The decline of banks reporting disappointing earnings were pounded in the market Monday. Chase Manhattan Corp.'s 10% bonds due in 1999, which had been trading at 200 basis points over 10-year Treasuries at the end of June, traded at 255 basis points over Monday afternoon. There were no bids at all for Midlantic Corp.'s 9¾% bonds due in 1999. □

Superregional Dilemma: How Long a Leash?

By KENNETH CLINE

ATLANTA — In announcing this month that it was reorganizing its consumer and commercial operations along functional rather than geographic lines, NCNB Corp. indicated that it was grappling with a dilemma faced by other superregional banks: How much autonomy should they grant managers at the state and local levels?

As their empires expand, many are modifying the drive to decentralize that swept the industry in the 1970s and 1980s, and exerting more control from headquarters.

Under NCNB's new structure, all consumer and commercial banking through the company's 936 branches in seven states will be combined in a General Bank headed by president Kenneth Lewis.

The practical effect of the move was to integrate NCNB Texas National Bank, previously a more autonomous entity, into the rest of the company's southeastern operations, covering Florida, Georgia, Virginia, Maryland, and the Carolinas.

Using Its Size

"What NCNB is realizing is, if it really wants to take advantage of its growing size, it's necessary to centralize more activities and move away from a geographical structure," said Stephen J. Kohn, national director of international banking activities for Ernst & Young in New York.

With assets of $64 billion, Charlotte, N.C.-based NCNB has grown quickly into the largest banking company in the Southeast and ninth largest in the nation. Industry experts view centralization as an inevitable byproduct of such growth.

"The banks that have grown from regionals and superregionals into really national banks may shift from trying to have a decentralized area and state appearance of autonomy to more centralized controls," Mr. Kohn said.

Autonomy on Pricing

NCNB, though, is hedging its bets by leaving some autonomy at the state level, particularly in matters of pricing. The new General Bank will include a central marketing organization, which will develop standardized products and a common advertising theme, but line managers in each state will set prices.

"What we're trying to do is get standardized products, drive down costs, and have people fo-

Panel Rejects Extra Day for Local Checks

By ROBERT M. GARSON

WASHINGTON — The Senate Banking Committee on Tuesday narrowly rejected a proposal to give banks and thrifts a partial reprieve from tighter check-clearing schedules that take effect on Sept. 1.

The committee voted 11 to 10 to turn back an attempt by Sen. Jake Garn, R-Utah, to add a day to the funds-availability timetable on deposited checks. He wanted to attach the measure at the last minute to a comprehensive package of banking-related legislation that included anti-money-laundering and truth-in-savings provisions.

Concern over Fraud

The Sept. 1 changes in funds-availability schedules were mandated by Congress in 1987 and became known as Regulation CC. But Mr. Garn said he has received a letter from Fed Chairman Alan Greenspan expressing concern that fraud will increase if banks do not have enough time to verify checks are backed by sufficient funds.

With Mr. Greenspan and other Fed officials lobbying for his proposal, Mr. Garn sought to give banks two business days to cash checks drawn on other

Wells Buys Branches From Great American

By TERESA CARSON

LOS ANGELES — In a bold move to expand its reach in Southern California, Wells Fargo & Co. announced Tuesday that it will buy 130 branches from the ailing Great American Bank in San Diego.

San Francisco-based Wells will pay $492 million for the branches, $6.4 billion in deposits, and $5.9 billion in assets.

"It looks like a hell of a deal" for Wells Fargo, says Arthur P. Soter, bank analyst at Morgan Stanley & Co., New York.

No. 1 in San Diego Market

The purchase will increase Wells' branch network in California to 616. And it will boost Wells from sixth to first in the rich San Diego market, with about a 16% share of deposits. Wells currently has 24 branches in San Diego and will add 64 there from Great American.

"This is a very valuable franchise," said Clyde W. Ostler, a Wells vice chairman, in a press conference.

The price tag works out to a premium of 5.8% to 6.15% on deposits. Although analysts characterized the premium as possibly a little high, they pointed out that this was a unique opportunity. "This is a significant share of a significant market," says J. Richard Fredericks, partner, Montgomery Securities, San Francisco. "This is an opportunity that passes only once."

Servicing Rights Included

The assets Wells will assume include $3.3 billion of single-family mortgage loans, $1.8 billion of income property, construction and business loans, and $625 million of consumer loans. Wells will also acquire servicing rights on $8.7 billion of single-family mortgages, including $3.4 billion of loans serviced for others.

Great American, plagued by problems mostly from its Arizona operations, was required by regulators to raise $350 million in capital by yearend or face

Mellon, Banc One, And Wells Post Gains

By GORDON MATTHEWS

NEW YORK — Faster economic growth and slower growth in problem assets helped superregional bank companies outshine their money-center counterparts in the second quarter.

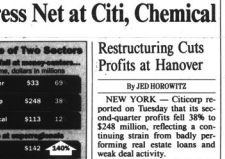
Leading the pack was Pittsburgh-based Mellon Bank Corp., which increased its profits soared 140% to $142 million because of a $74 million special gain from the sale of its consumer finance unit. Even without the gain, Mellon's profits rose 15% to $68 million.

Sale of Unit Helps Wells

Wells Fargo & Co. reported that its profits rose 58% to $232.4 million, largely because of a one-time gain from the sale of a securities unit. Excluding the gain, Wells' profits were up 11% to $163.8 million.

Also reporting a gain in profits were Columbus-based Banc One Corp., up 14% to $104 million and Minneapolis-based Norwest

A Tale of Two Sectors
Profits fell at money-centers...
Net income, dollars in millions



Corp., up 12% to $70 million. Citizens and Southern Corp. reported its profits were virtually unchanged at $57.7 million.

In most cases, investors responded by handing out gains in share prices. Mellon's stock rose 37.5 cents, to $25.875, while Wells Fargo gained $1.50, to $80.125, and Citizens gained $1, reaching $23.625.

Meanwhile, Banc One edged ahead 12.5 cents, to $29.125, but

Restructuring Cuts Profits at Hanover

By JED HOROWITZ

NEW YORK — Citicorp reported on Tuesday that its second-quarter profits fell 38% to $248 million, reflecting a continuing strain from badly performing real estate loans and weak deal activity.

Two other big New York banks also announced lower second-quarter profits. Chemical Banking Corp. said its earnings declined 12% to $113.1 million, plagued by an increase in nonperforming real estate and highly leveraged transaction loans.

Manufacturers Hanover Corp.'s income plummeted 69% to $33 million, largely because of a one-time pretax restructuring charge of $100 million.

Excluding the charge, earnings would have been $93 million, compared with $106 million in the second quarter of 1989.

Rutland Models Northeast On Big California Thrifts

By PHIL ROOSEVELT

NEW YORK — George P. Rutland is trying to work some California magic on a big New England thrift.

For two years, he has been recasting the once-faltering Northeast Savings, Hartford, Conn., in the image of the strong and profitable California thrifts. Specifically, he said, his model is World Savings, Oakland, Calif. – a widely admired thrift.

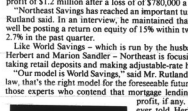
Mr. Rutland, himself a veteran of the California thrift scene, has a long way to go with Northeast. But he is clearly making headway.

Last week, the $4.9 billion-asset Northeast announced it had met capital requirements of the thrift-bailout law. And this week, Northeast reported improved earnings in the second quarter, a modest profit of $1.2 million after a loss of of $780,000 a year earlier.

"Northeast Savings has reached an important turning point," Mr. Rutland said. In an interview, he maintained that the thrift could well be posting a return on equity of 15% within two years, up from 2.7% in the past quarter.

Like World Savings – which is run by the husband-wife team of Herbert and Marion Sandler – Northeast is focusing on the basics, taking retail deposits and making adjustable-rate home mortgages.

"Our model is World Savings," said Mr. Rutland. "Given the new law, that's the right model for the foreseeable future." He scoffed at those experts who contend that mortgage lending produces little profit, if any. "I guess nobody ever told Herb Sandler that," he said. The key, he added, is aggressive cost control.



George P. Rutland

Mr. Rutland, 57, knows plenty about the ways of West Coast thrifts. He formerly was president and chief executive officer of CalFed Inc., Los Angeles, the nation's fourth-largest thrift company. He resigned in May 1988 when he was passed over for the chairmanship.

Mr. Rutland joined Northeast in July 1988 as chairman and chief executive. The thrift – formed in 1982 when Schoenecktady Savings Bank, Schenectady, N.Y., acquired troubled thrifts in Hartford, Boston, and Worcester, Mass. – had suffered from weak profits.

Seeking to boost performance and comply with the bailout law's capital requirements, Northeast has reduced assets from $8.2 billion at the end of 1988 to the current $5 billion, mainly by selling mortgage-backed securities. And Mr. Rutland has cut about 450 jobs, or 30% of the total, eliminating entire levels of management.

"If there is any big thrift that has done what it could to meet both the spirit and the letter of [the bailout law], it is Northeast," said Don Kauth, an analyst at First Albany Co.

Despite those efforts, Northeast's capital remained negative until this month, when it formed a holding company. About $100 million of cumulative preferred stock, which cannot be counted as capital, was shifted to the holding company and replaced by the holding company's investment in the thrift. That investment is recorded as common equity.

Meanwhile, Northeast is suing the government, claiming unfairness in the bailout law's provision that disqualifies the type of capital Northeast took on through government-assisted acquisitions of troubled thrifts.

"That is arbitrary taking of property without due process," Mr. Rutland declared. He said victory in the suit would boost Northeast's capital by $200 million. □

NEWS *briefs*

Ranieri's Thrift Completes Purchase of Loan Offices

HOUSTON — United Savings Association of the Southwest, a thrift headed by mortgage-securities pioneer Lewis S. Ranieri, completed its purchase of the loan production operations of Commonwealth Mortgage of America.

The transaction brings United 45 offices in 15 states.

World Bank Plans Big Cut In Loan Margin to 3d World

NEW YORK — The World Bank plans to cut its loan margin, now at 50 basis points or one-half of 1%, to help Third World borrowers improve their cash flow, according to the World Bank's senior vice president, Ernest Stern.

The lending margin could be cut to as little as 20 basis points, Mr. Stern said. But bank officials rejected debt forgiveness.

Attleboro Sells Deposits From 3 Branches to Fleet

PROVIDENCE, R.I. — Fleet-/Norstar Financial Group said it agreed to buy the deposits of three branches of Attleboro Pawtucket Savings Bank and to assume the lease on one of the offices.

Attleboro will be left with 17 offices in Rhode Island and Massachusetts.

$47 Million for Low-Cost Housing

Kemp Kicks Off Program Mandated by Thrift Law

By STEPHEN KLEEGE

NEW YORK — Thrift institutions, working with local housing agencies, will distribute $47.2 million of industry money in the first phase of a new affordable housing program mandated by the 1989 thrift-bailout legislation, the Federal Housing Finance Board announced Monday.

The money, to be distributed on the basis of proposals submitted by lenders and housing groups, will go toward the development of 13,706 residential units at a total cost of $669 million.

"I am particularly pleased with the diversity of the housing developments – from new rental units for very-low-income people and the homeless, to rehabilitated multifamily properties for the elderly and handicapped, to interest buy-downs to help low-income families," said Jack Kemp, secretary of housing and urban development, who also serves as chairman of the finance board.

Home Loan Banks Made Choices

The projects were selected by the 12 Federal Federal Home Loan Banks. The Financial Institutions Reform, Recovery, and Enforcement Act required the district banks to contribute a percentage of annual income to the programs, beginning at 5% this year and rising to 10% on $100 million, whichever is greater, in 1993.

In the first phase of this year's program, 193 projects were selected from 433 applications, mostly from institutions.

The $4.4 million of "subsidy funds provided by this bank are a charge against earnings," said Brian Dittenhafer, president of the New York Home Loan Bank. "Those funds would otherwise be paid out as dividends to our stockholders, the home-financing institutions of the district."

U.S. League Lauds Participants

The U.S. League of Savings Institutions, whose members fought the affordable housing provisions in the bailout legislation, issued a statement by its president, Frederick Webber, saying the league is "proud of the savings institutions business's enthusiastic response to the AHP."

An aide to Rep. Henry B. Gonzalez, D-Tex., chairman of the House Banking Committee who pushed to include the affordable housing language in the legislation, said that the program had "a difficult birth," but that once it was enacted, the savings industry responded well.

The district banks got more applications than even the most optimistic would have expected," the aide said.

First Nationwide Bank, San Francisco, a unit of Ahmor Co. subsidiary, had 18 applications; 16 won grants.

The First Nationwide projects will cost a total of $106.2 million, with the thrift contributing $26.8 million in loans, the district bank subsidy amounting to only $4.2 million, and most of the rest coming from other government sources, a thrift spokewoman said.

Those projects range from bridge loans for tax-advantaged, low-income housing in Cleveland to an acquisition and rehabilitation project with World California Housing Corp.

Squall Homes in South Bronx

A typical project using funds from the Federal Home Loan Bank of New York, entails the construction of 196 small homes for low-income families in the South Bronx. The Home Loan bank funds will be used for a low-interest construction loan, with additional subsidies coming from New York City and State and long-term financing by the New York City Housing Development Corp.

Also among the recipients of grants were four multilender groups, including Samco, a Santa Clara, Calif., group of 23 institutions that received $1.2 million to subsidize $33 million of developments.

In all, Samco is expected to develop 1,200 housing units, including 240 for very low income residents. The group announced on Monday that it has approved two loans – for 20 apartments in Morgan Hill, Calif., and 84 housing units in San Jose.

The rest of the total of $78.7 million for 1990 will be awarded by the end of the year. □

Hartford Bank Hires Florida Exec

BOSTON — Bank of New England Corp. said it has recruited Florida banker William E. Moeller to become president and chief operating officer of its Hartford-based subsidiary, Connecticut Bank & Trust Co.

Mr. Moeller, 48, had been executive vice president in charge of institutional and south Florida banking at Southeast Bank, principal subsidiary of Southeast Banking Corp., Miami. He began at Southeast in 1988 after stints at First Chicago Corp. and Citicorp in a career dating from 1966.

Lawrence B. Fish, chairman and chief executive officer of the $25 billion-asset Bank of New England, said Mr. Moeller has "an outstanding record of success in highly competitive banking environments." Mr. Moeller succeeds James F. McNally, who announced his retirement in May. □

CoreStates Continues Drive To Expand Card Processing

By RICHARD LAYNE

NEW YORK — Acting to increase fee income, CoreStates Financial Corp. has acquired its second processing business in four weeks.

CoreStates, which aims to join the ranks of the biggest merchant bank card processors, has purchased the merchant processing portfolio of Equibank, a subsidiary of Equimark Corp., Pittsburgh, for an undisclosed price.

The acquisition gives CoreStates entree into the Pittsburgh market for transaction processing and electronic funds transfer services. Equibank had 1,318 merchants and annual volume of about $60 million.

The Equibank merchants can now accept the Mac debit card for point-of-sale payments, an important step in the growth of debit cards for CoreStates, which runs the Mac network.

A Key Acquisition

In June, CoreStates bought the Amherst Group, the biggest point-of-sale processor in New England. The acquisition made CoreStates into a leading bank provider of POS services. Stock analysts have predicted that CoreStates will continue to increase its electronic payments services through acquisitions.

"We are in the the transaction processing business," said T. Gage Lightner Jr., a vice president of Philadelphia-based Bank, the CoreStates unit that operates the merchant processing service. "We subscribe to the theory that this is where the future of banking is."

Earnings Not Disclosed

CoreStates does not make public its earnings from transaction processing, which includes the Mac electronic funds transfer business.

Even with the acquisition, CoreStates remains a long way from the top 10 merchant processors. CoreStates processes $1.25 billion a year from 26,000 merchants through its Card Linx service.

According to *The Nilson Report*, an industry newsletter, National Processing Co. does $18 billion in merchant volume, followed by Citicorp, with $17.7 billion. Before the Equibank acquisition, CoreStates ranked 36th among processors in *The Nilson Report*.

> **"We subscribe to the theory that this is where the future of banking is."**
>
> **T. Gage Lightner Jr.**
> *Philadelphia National Bank*

As in many processing businesses, nonbank companies predominate. Citibank, the top processor among banks, is said to be eager to acquire enough portfolios to take the overall lead.

Commitment Noted

"Many banks are getting out, but we are committed," said Mr. Lightner. CoreStates plans to purchase additional merchant processing portfolios, which provide fast growth, instead of developing the business merchant by merchant, he said.

Until the recent acquisition, CoreStates merchant processing business was centered on Philadelphia, with few customers in western Pennsylvania, where it has a substantial number of Mac cardholders. "It was important to be in that market," said Mr. Lightner. "It is a strong debit area for us." □

$10 Million Capital Markets System

Security Pacific Buys Help to Manage Risk, Products

By JEANNE IIDA

NEW YORK — Security Pacific Corp. is installing a $10 million system to help its capital markets group manage risk and package new products.

The Los Angeles-based bank is one of the first to use relational data base technology, which lets a bank organize data more efficiently than through sequential data organization.

Its system will allow a trader to see on a single screen consolidated information about a customer's transactions, including swaps, foreign exchange, treasury bonds, and options.

Sections Join System

Domestic funding operations at Security Pacific have been using the system since February. The foreign exchange area will switch in the next two months. And the company is evaluating addition of money dealers, the third part of the capital markets group, to the system.

The system is "providing the lowest cost on a product and managing risk," said Richard J. Harmel, first vice president of facilities and technology at Security Pacific.

Citicorp, Chase Manhattan Corp., and BankAmerica Corp. are also working to apply relational data base technology to capital markets. BankAmerica's system will be installed in North and South America in mid-1991, said Richard Griffith, executive vice president.

Minimizing Costs

"You can't run a profitable business without a precise link between funding." Mr. Griffith said. "These projects are aimed at minimizing the cost of funds" business.

Security Pacific said its system will bring together information from disparate networks around the world, allowing the company to craft new capital markets products more quickly and more cheaply. The savings will be passed on to customers, the company said.

The international environment will let the bank categorize transactions as fed funds, for-

> **"You can't run a profitable business without a precise link between funding. These projects are aimed at minimizing the cost of funds" business.**
>
> **Richard Griffith**
> *BankAmerica Corp.*

eign exchange, or swaps; process them; and then present them as part of a consolidated trading position.

Funds Areas Cross-Fertilize

It will also be easier to package new products quickly, Mr. Harmel said. "We're beginning to see a cross-fertilization" of capital markets businesses, he said. "I believe one day we'll see a generic trader of sorts."

The system streamlines flow of transaction data to the back office and helps manage risk.

In the past, traders wrote up their own tickets after a transaction. The tickets would then be entered into the back-office system, creating margin for error.

Dealers Enter Trades

With the new system, a dealer enters the trade at his desk. The customer's master file is automatically updated on the global trading system. "It gets shot off to back-office systems for confirmation," said Mr. Harmel, and the payment is initiated.

Systems used by most banks make it cumbersome to create new capital markets products. Data typically must be extracted from one data base and entered into another system. It takes considerable time to build the product and even longer to change it.

Mr. Harmel said the bank will assess the system's success by looking at the capital markets group's profitability. The system should give Security Pacific "a better flow of information, the ability to transact in higher volumes, and the ability to respond more quickly to market dynamics," he said.

Old Networks Linked

The company is tying together data from an old network in Asia, composed of midrange computers from International Business Machines Corp., and other networks in Europe and the United States, which use Digital Equipment Corp. computers.

In its capital markets project, BankAmerica will keep foreign exchange operations separate from the new data system. Instead, foreign exchange will be included in the San Francisco company's $300 million global banking system.

A capital markets system should be more flexible than a system for foreign exchange transactions, said Mr. Griffith of BankAmerica.

BankAmerica views foreign exchange as a more stable type of transaction than other capital markets transactions. "In capital markets, the derivative products are much more technology-driven," Mr. Griffith said. □

UNDER ONE ROOF

At SSI, you'll find your complete mortgage loan software solution under one roof. You'll find a selection of PC, midrange and mainframe solutions—designed to help manage everything from loan production to secondary marketing to loan servicing. And you'll find the most experienced development/support team in the industry—ready to help you get started. Used by over 200 of the nation's leading lenders, SSI's software provides a proven, cost-effective way to meet the demands of your mortgage business. For more information, call or write us today.

Cleanup Law Hazardous To Banks with Deep Pockets

Cowed by CEBA and battered by FIRREA, many financial institutions should be wary of CERCLA, an increasingly important entry in the lender's lexicon of legislative acronyms.

In the wake of the 20th anniversary of Earth Day and the "greening" of the national consciousness, lenders that are perceived to have deep pockets may find that, although they did not create the mess, it may cost them dearly to clean it up.

Environmental contamination presents several kinds of problems for financial institutions and is attracting the attention of federal banking regulators.

Appraisals Don't Tell Story

In lending situations, contamination reduces property values, but is rarely reflected in appraisals. Contamination imposes substantial encumbrances on the proposed collateral and gives rise to the real possibility that the lender may be subject to cleanup claims.

Collateral for existing loans may not be as creditworthy or as secure as bank records indicate.

Contamination may have substantially eroded the value of real property or corporate assets. Property managed for personal trusts and in collective funds or investment pools can have similar problems.

The decline in the value of the trust assets due to contamination can be made even more onerous by the bank's fiduciary relationship to such property.

Problems associated with the management of troubled assets in workout and foreclosure are substantially compounded by the existence of contamination.

Purpose of the Law

The Comprehensive Environmental Response, Compensation, and Liability Act, also known as the Superfund law, was enacted in 1980 to establish a mechanism for the expeditious cleanup of inactive or abandoned waste sites.

CERCLA was substantially changed in 1986 by the Superfund Amendments and Reauthorization Act.

CERCLA has three principal elements: First, the law permits the federal government to enter onto property where hazardous substances are found and respond to an emergency by removing the hazardous material or taking other actions to abate the dangerous condition.

Mr. Smith is chairman of the Financial Institutions Group of the law firm Stroock & Stroock & Lavan. He is based in Washington.

"Collateral for existing loans may not be as . . . secure as bank records indicate."

Second, the law establishes the Hazardous Substance Response Trust Fund (the Superfund) to pay for such cleanup actions. Initially, the Superfund was set at $1.6 billion to cover the first five years of operation. The fund was increased to $8.5 billion under the 1986 amendments.

How Mostly Is Raised

Money for the Superfund is raised by special taxes on industry, including taxes on petroleum and chemicals, and a broad excise tax. The law also requires that private parties responsible for contaminating the site reimburse the fund for expenses incurred by the Superfund.

Third, the law imposes liability on private parties identified as having contributed to the contamination of a particular site. These parties are called potentially responsible parties (PRPs) and they include: present owners and operators of any facility where a hazardous substance is located; owners and operators of any facility at the time of disposal of a hazardous substance; any offsite entity that generated or arranged for disposal or treatment of hazardous substances ultimately disposed of at the site; and transporters who brought hazardous substances to the site.

Under the law, in addition to being empowered to perform the remedial action itself, the government can issue orders to potentially responsible parties requiring that they perform the remedial work.

Frequently, however, the Environmental Protection Agency will negotiate judicial consent orders with the parties in which they agree to reimburse the Superfund for any money already spent and to conduct and finance future remedial work at the sites.

Under the statute, the potentially responsible parties may be liable not only for the costs of removal or remedial action incurred by the federal government or private parties, but also for damages or injury to, destruction of, or loss of natural resources, and the costs of health assessments performed by state

Money-Center Cuts. Some analysts are disappointed that Chase Manhattan Corp. did not bite the bullet and take a big restructuring charge in the second quarter, but the bank is signaling that the restructuring is ready to roll.

In addition to previously mentioned sales of real estate and other assets, bank executives are saying that some product lines will be dropped. Analysts speculate that most of the businesses to be dropped will come from what was formerly known as the institutional banking sector, which was run by vice chairman Robert R. Douglas. Prime candidates for severance are the money management business and some leasing businesses, one analyst speculated.

Chase last month dissolved its tripartite institutional/individual/global bank structure and removed Mr. Douglas and Richard J. Boyle, vice chairman in charge of corporate banking, from line responsibilities.

At Manufacturers Hanover Corp., meanwhile, president Thomas S. Johnson reportedly has cast a cold eye on the first round of proposed budget cuts offered by his senior managers. Mr. Johnson sent the proposals back to the managers, saying they had not gone far enough, according to one bank source. Hanover yesterday announced a second-quarter restructuring charge that it said would save operating expenses of $125 million annually.

Morgan Sees Equity. It is unclear how much equity business is out there, but J.P. Morgan & Co. should be the first bank company to get a crack at it.

Regulators from the Federal Reserve Board have been inside J.P. Morgan Securities since the end of June — reviewing policies, procedures, and capital requirements — in preparation for granting Morgan final approval to underwrite equities, bank sources said. They are expected to be out by the end of July, and have told Morgan officials to expect a final ruling in September.

Morgan and securities subsidiaries of Bankers Trust New York Co., Citicorp and Chase Manhattan Corp. last year won the right to underwrite corporate debt to a limited extent. The Fed granted equity underwriting powers at the same time. However, it said it would wait about a year before reviewing supervisory and other policies to ensure that the riskiness of the equity activities do not spill over to the insured bank affiliate of the securities units.

Regulators from the Federal Reserve have been inside J.P. Morgan Securities since the end of June in preparation for granting Morgan final approval to underwrite equities.

Separately, Morgan is transferring the head of its futures brokerage subsidiary, Gary D. Lawrence, to become its senior corporate officer in Hong Kong in September. Mr. Lawrence, who also oversaw the equities department of J.P. Morgan Securities, replaces David W. Hudson, who is returning from Hong Kong to head corporate finance in New York. Mr. Lawrence's futures post will be assumed by Jared A. Chase, who will move to New York from his London post as a managing director of the securities subsidiary.

Swap Stabs. Rumors have been circulating among swaps traders for several weeks that one or two money-center banks suffered big losses in their overseas swaps or swap options portfolios.

Most prevalent is talk that Citibank lost more than $100 million yesterday because of swap mismatches in Asia. The talk intensified after *International Financing Review* last week published a ranking of earnings by foreign banks operating in Japan. Citibank galloped into prominence as the biggest money loser for the fiscal year that ended in March, reporting an ordinary loss of 29.7 billion yen (about $200 million at current exchange rates). Runners-up, with loses 4.3 billion yen and 3.6 billion yen respectively, were Bank of America and Continental Bank.

A Citibank spokesman said the loss stemmed from differences between Japanese and U.S. accounting practices for swaps as well as from expansion of retail services. If U.S. mark-to-market accounting were used, Citibank's fiscal year loss in Japan would have been 4.1 billion yen, the spokesman said. Citibank, a spokeswoman added, "is quite satisfied with its performance in the Asian swaps markets."

The Japanese results were reflected in Citicorp's first-quarter earnings, the spokesman said.

Chemical Banking Corp., which last year suffered a large hit in options trading and has reduced its presence in the market, also is believed to be booking losses as it closes out mismatched positions, traders said. A Chemical spokeswoman said she is unaware of any major losses related to swaps.

There's No Business. . . A division of publishing company Pennsylvania for the past four years has sponsored a well-attended seminar for bankers and bank lawyers titled "Current Issues in Commercial Bank Financing." The agenda for this year's session seemed hot. It would focus on "loan default remedies and protection" and "protection against market risk for new financing arrangements," according to a brochure.

In a telling sign of current issues in banking, the seminar was canceled last month because of insufficient interest. "If we could find some new financing deals," one lender said, "we might be interested in protection against market risk." □

LETTERS *to the editor*

Official Says OCC Seeks Out Qualified People

To the Editor:

I would like to respond to Peter Edwards' letter to the editor published on June 12 ("Hire Bankers for Regulatory Jobs, Consultant Urges," page 5). Let me assure Mr. Edwards and other readers that the Office of the Comptroller of the Currency does have a policy to hire experienced people.

The OCC implemented an experienced-hire program several years ago to supplement its entry-level recruitment efforts. The program specifically targets people with experience in the financial services industry. Our recruitment efforts include advertisements in professional magazines and major newspapers, recruitment literature for experienced candidates, and training programs.

Our experienced-hire program is successful primarily because OCC managers strongly support the idea of hiring candidates who have relevant work experience. Last year, 40% of the OCC's newly hired examiners had such experience. Candidates for the program can contact me at 202-447-1543 for more information or a brochure.

Rebecca J. Minton
National recruitment coordinator
Office of the Comptroller of the Currency

A Cheer for U.S. Banking System

To the Editor:

Included in your June 25 analysis article ("Pressure Mounts to Allow Banks Free Branching," page 1) was the usual line about the inability of U.S. banks to compete internationally because of lack of size.

A few questions, please:

Has not the American banking system always been considered to be among the world's finest?

Has not that banking system contributed substantially to one of the world's highest standards of living?

Was not our financial system given some credit for our ability to quickly mobilize for World War II?

Why, oh why, are we so determined to change our banking system so as to pattern it after other banking systems?

Thomas F. Bolger
President
McHenry State Bank
McHenry, Ill.

The Details of Postal Discount

To the Editor:

I would like to make a clarification in a June 18 story ("Banks Using Less First-Class Mail," page 3).

The discount which would result in payments as low as 24.3 cents is included in the rate proposal requesting a 30-cent first-class stamp. These rates, if approved, are scheduled to go into effect in early 1991.

Currently, the lowest discount available to mailers for presorting and pre bar coding mail is a 5-cent reduction from the current 25-cent rate for first-class mail.

Chief of Bank Of New England Notes Progress

To the Editor:

I and my colleagues at Bank of New England Corp. are disappointed and surprised over last Friday's *American Banker* "Analysis" of rumors about us.

As we move forward with factual steps toward recovery, we are disappointed in the decision by our industry's leading trade journal to breathe life into rumors. And we are upset because of the serious, significant effects of such rumors has on employee morale.

As we pointed out recently to our shareholders and to *American Banker*, we are making slow, steady, measurable progress toward recovery, a fact shared with the various federal regulators with whom we have a close and cooperative relationship.

We have made major additions to our outstanding management team. Our national and regional deposit campaign is working, significantly ahead of earlier liquidity pressures. We are getting control of our credit area. And we have been successful in our strategic asset disposition campaign.

All of these facts have enabled us to restore confidence to some two million customers whose faith in us was sorely tested by a daily dose of bad news last winter.

Our progress is measured in steps, our full recovery is not some way off, and our rebuilding will take some time. But on Monday, July 16, as all could see, we were open for business. And that's a fact.

Lawrence K. Fish
Chairman and chief executive officer
Bank of New England Corp.
Boston

Editor's Note: When rumors are so widespread that they affect how a company is being perceived in a marketplace, that is worthy of news analysis. In our judgment, the rumors about Bank of New England had reached that level. □

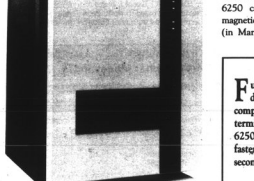
PRODUCT ANNOUNCEMENT
MITRON STD 6250

MITRON Systems Corporation of Columbia, Maryland has added a new magnetic tape data communications terminal to its product line which will process 6250 bpi high-density formats. In service since January 1989, the STD 6250 provides an efficient, cost-effective method for sending and receiving data off-line without the need for a computer.

With the STD 6250, any requirement to ship tapes between offices via courier service or mail can be eliminated. Tape data generated in either 1600 bpi or 6250 bpi format can be transferred in either mode via dial up, private line or digital networks.

The STD 6250 requires no software for its operation and accurately transfers data at speeds up to 256KB. This versatile off-line data communications terminal provides reliable and timely data exchanges while communicating with remotely located MITRON terminals or other manufacturers' bisynchronous terminals and computers.

MITRON offers several lease and purchase programs.



Since 1969, Mitron's magnetic tape systems have been used in a wide variety of data communication applications. For more information on how the Mitron STD 6250 can be used to send or receive magnetic tape data files, call 800 638-9665 (in Maryland, 301 992-7700).

Future announcements will describe an STD 3480 cartridge-compatible data communications terminal and a higher speed STD 6250. Both terminals will operate faster than T1's 1.544 mega-bit per second data rate.

PRIVATE BANKING

Southeast Banking Boosts Its Efforts to Lure Clients

By MAUREEN NEVIN DUFFY
Special to the American Banker

Private bank units, because of their entry requirements, frequently serve the most stable, lucrative clients of the institution. The strength and profitability of these operations has never been more apparent than in the Florida market, where real estate losses have depressed other banking businesses.

Southeast Banking Corp., which has suffered from dramatic increases in nonperforming real estate loans, is aggressively marketing its private banking services. The Miami holding company reported a first-quarter loss following a Comptroller's exam, and anticipates further losses for both the second quarter and the year. In his March 27 report, J.S. Kraushaar, an analyst for Merrill Lynch, said Southeast's expenses are "likely to rise to over 76% of revenues before leveling off in 1991."

"We have not at this point experienced any negative trends in the private bank or trust area due to the negative earnings of the bank," said Samuel W. Gentry Jr., senior vice president of both the domestic and international private bank operations. "Private banking and trust services are the real bright spot. My challenge is to keep people motivated about what we are doing for the client base."

To gain an edge in Florida, where a combination of retirees from the North and new wealth makes for a competitive market, Southeast began a marketing program for its private bank in January.

> **"Private banking and trust services are the real bright spot."**
>
> **Samuel W. Gentry Jr.**, *Southeast Banking Corp.*

The program, designed by Neil S. Fox, president of Fox/MMJM Direct, a New York-based promotion firm, is the first marketing effort since the private bank and trust services areas were integrated in 1987-88. During that period, Southeast acquired the high-net-worth clients of First National Bank of Palm Beach. Until then, most clients with high net worth dealt directly with the bank president, Mr. Gentry said. Now there are so many of these clients, "they would get lost within the system," he said.

Ad Campaign Stresses Elitism

Advertisements appearing in *The Wall Street Journal's* Florida edition, *South Florida Business Journal*, and playbills refer to the "Inner Circle," an elite group of private bankers, each with a minimum of 20 years of experience. Services advertised include trust, estate planning, custom credit lines, custody services, and high-yield investment options. The goal of the campaign is to attract clients who have at least $500,000 in liquid assets.

In addition to advertising, Mr. Gentry is hosting a weekly classical radio show in Miami, featuring the Philharmonic Orchestra of Florida. Southeast is also sponsoring sports events, ballet and art productions, and charity benefits.

"At this point, we are helping the rest of the bank out because of the earning stream we are providing," Mr. Gentry said. He declined to give figures on assets under management or quantify their growth, except to say that he expects to exceed his profit plan for the year.

No Defaults on Loans

Despite the depressed Florida real estate market, Mr. Gentry said, the private bank has had no defaults on loans. Real estate loans are not handled in the private bank, except for jumbo loans or other unusual requests.

Its private clients are diversified so that sour real estate investments would not adversely affect clients' total wealth, he said.

Southeast considers its major competitors for private bank services to be the Florida unit of Chicago-based Northern Trust Corp. (with $6 billion in trust assets under management in the state), Barnett Banks Inc., and the Florida units of SunTrust Banks Inc., Atlanta.

Among the major New York private banks that Southeast competes with in Florida are Bankers Trust, Morgan Guaranty, Bessemer Trust, and U.S. Trust.

Fla. Client Has Lower Net Worth

While the Florida market is profitable, the average private-banking client in the state has a lower net worth than private banking customers nationwide, according to one research company.

PSI, a Tampa-based financial services, research, and consulting firm, estimates that $4,300 people use private bank services in the state, with an average income of $128,000 and average net worth of $471,000.

Nationwide, private-banking customers have an average income of $153,000 and an average net worth of $835,000. The private banking household generates $8,936 a year in financial services revenues, according to PSI senior vice president John J. DeMarco.

Florida also has a disproportionately small share of U.S. private banking households, according to the PSI data. The state has 5.4% of the nation's households, but only about 2% of private banking households, the company found.

Visa Travelers Checks Surge 17%

Group's Sales Rocket 40% in the Asia-Pacific Region

By ELLEN MEMMELAAR

NEW YORK — Visa International says first-quarter sales of its travelers checks were well ahead of projections, which had been termed optimistic by many in the industry.

Worldwide, Visa sold $2.8 billion in travelers checks in the period that ended March 31, for a 17% increase over the comparable period in 1989, the association said.

Foreign Sales Total $2.1 Billion

Sales outside the United States totaled $2.1 billion.

The Asia-Pacific region led in increases, with 40%. The second-largest gain was in Canada, where sales climbed 29%, the spokesman said.

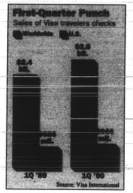
Competitors Post Fewer Gains

Visa's sales gains far surpassed those of its competitors. American Express Travel Related Services Co. reported international sales of $5.2 billion, up 3% from the year-earlier period. MasterCard sales jumped 7.5% to $1.75 billion in the quarter.

For the full year, Visa has projected a sales increase of 11.6% to $13 billion, from $11.5 billion in 1989.

The card association appears well on its way to meeting that goal. The first-quarter gains were solid, and the period is traditionally a slow one for travelers checks sales globally.

The increase in domestic sales was less startling, at 13.6% to $644 million, from $556 million in the first quarter of 1989. The association does not make predictions for domestic travelers check activity, but Jean-Jacques Desbons , executive vice president for consumer products, said Visa is expecting solid growth in the United States.



> **"The Asia-Pacific region is where the growth is."**
>
> **Jean-Jacques Desbons**, *Visa International*

Dennis Stevens, vice president of marketing at American Express Travelers Cheque group, believes Visa's emphasis on foreign markets is designed to cover the lack of growth in domestic sales.

"Since the early 1980s, when Visa first introduced a travelers check product in the U.S., Visa sales here have hardly grown at all, while American Express travelers checks in the U.S. have grown by almost $7 billion," Mr. Stevens said.

Large Gains Abroad

Mr. Desbons points to the gains abroad and the future gains from the addition of Rome-based Banca Nazionale del Lavoro and Singapore-based Overseas Chinese Banking Corp. both of which will come on board in the fourth quarter.

Visa travelers checks will be the leading brand abroad by 1991, he predicted.

MasterCard claims to lead in sales abroad, primarily because of its affiliation with Thomas Cook Inc.

'Where the Growth Is'

"The Asia-Pacific region is where the growth is," Mr. Desbons said.

The association's biggest focus is the Japanese market, but markets in Thailand, Taiwan, Korea, and India are poised for significant growth over the next year, he said. Singapore, Australia, and Hong Kong are boasting solid sales, he added. □

Arizonans Have Worst Consumer Credit Records

NEW YORK — Residents of Arizona, Alaska, and Louisiana have the worst consumer credit records in the nation, according to a study by SMR Research Corp.

Hawaii, Delaware, and Wisconsin have the most conscientious consumers, the survey found.

29,600 Institutions Surveyed

The Budd Lake, N.J.-based research firm based its findings on a survey of 14,000 credit unions, 13,000 banks, and 2,600 thrifts in 1989. The firm asked institutions for information on delinquencies and chargeoffs in three areas – real estate, home mortgages, and consumer loans – as well as personal bankruptcies.

Areas with booming real estate markets, like Hawaii, tended to fare better than states with sagging markets, like Arizona. "The local real estate market is a function of the local economy," said Mark Kamm, spokesman for SMR.

Hawaii had a bankruptcy rate of 0.7 for every 1,000 residents in 1989, the best in the nation. The national average was 2.5 bankruptcies per 1,000 people, and Arizona had the most, 3.96 for every 1,000 residents.

The research firm also listed metropolitan statistical areas by creditworthiness. Wausau and Milwaukee, Wis., ranked as the best; Shreveport, La., was at the bottom of the heap.

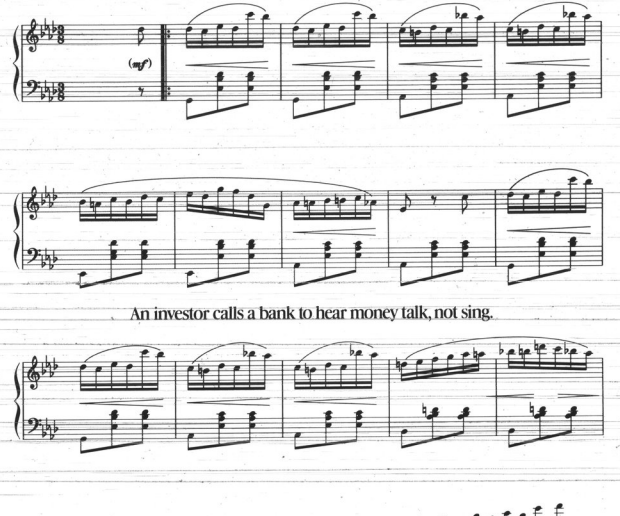
Data Source: Bank Rate Monitor, N. Palm Beach, 33408



An investor calls a bank to hear money talk, not sing.

Being put on hold for three minutes of Chopin's Waltz in A♭ is enough to make anyone see red. And a bank can't afford to make its customers angry.

That's why Norstar Bank, N.A. invested in the new AT&T DEFINITY® Communications System. Now, by handling calls efficiently, they save time and frustration for their customers. And because the system helps them maximize their ETN network, the bank has also saved $300,000 this year alone. Not only is the system's modular architecture technically advanced to speed traffic handling, but it can grow with every advance. Plus, as a member of the System 75/85 Users Group, Norstar can share knowledge with other users that will not only enhance their voice network and simplify features, but also give them input into AT&T product development for the future. That makes the AT&T DEFINITY System worth banking on. And does wonders for their customers' listening pleasure. For details, call your AT&T Account Executive or 1 800 247-1212, Ext. 361. In Canada, call 1 800 387-6100.

Senate Panel Rejects an Extra Day to Clear Local Checks

Continued from *page 1*

banks in their local areas. He wants the three-day deadline to be permanent and not cut to two days, as scheduled, on Sept. 1.

Mr. Garn would not change the funds-availability schedule on most nonlocal checks, currently seven business days and falling to five days on Sept. 1.

May Go to Senate Floor

Losing by only one vote in committee, Mr. Garn may be able to push his funds-availability amendment on the Senate floor. Several Democrats on the banking committee said they might be willing to support the amendment if they receive more information.

Sen. Alan Dixon, D-Ill., who led the opposition to the Garn amendment, said he did not "have any real strong feelings" about it but objected to revamping a package that involved weeks of delicate negotiations. Following are some of the areas covered in the wide-ranging package that cleared the banking committee.

• Money laundering. The bill permits regulators to revoke an institution's charter or terminate its deposit insurance if senior management, directors, or the institution itself is convicted on money-laundering charges. It also requires the Treasury Department to promulgate regulations governing international wire transfers.

• Truth in savings. The legislation sets uniform standards for disclosure of rates on savings accounts. Depository institutions would be permitted to advertise only one type of return – an annual percentage yield based on a formula determined by the Federal Reserve that takes into account the interest rate, frequency of compounding, and a 365-day period.

• ATM deposits. On another funds-availability issue, the bill would delay for four years, until September 1994, a provision in existing law that would require depository institutions to handle checks deposited in shared automated teller machines in the same way as checks deposited in local branches.

The panel also approved, as a separate measure, the Fair Lending Enforcement Act of 1990, which would require bank, thrift, and credit union regulators to establish separate consumer compliance divisions with specially trained examiners to monitor consumer protection laws.

That bill would require regulatory agencies to refer to the Attorney General any violations of the "pattern or practice" section of the Equal Credit Opportunity Act. Individual cases of suspected discrimination would be referred to the Department of Housing and Urban Development.

Both bills now go to the Senate floor, where they face an uncertain future. The larger package, which includes the money-laundering, funds-availability, and truth-in-savings provisions, could be broken into smaller parts.

In this congressional election year, the money-laundering bill is regarded as close to a sure thing, and anything attached to it is likely to be enacted as well. As a consequence, even though the ATM deposit amendment is part of two other bills, including truth in savings, Sen. John Heinz, R-Pa., asked that it be attached to the money-laundering measure as a safeguard.

The panel also approved a separate measure that would require bank, thrift, and credit union regulators to establish separate consumer compliance divisions.

More uncertain is whether Sen. Howard Metzenbaum, D-Ohio, will try to attach a bill he has sponsored, requiring banks and thrifts to cash government checks presented by noncustomers, to the truth in savings or any other part of the package.

Sen. Alan Dixon, D-Ill., and Sen. Christopher Bond, R-Mo., did not offer a scaled-back version of the Metzenbaum amendment, as they were reportedly considering a few weeks ago.

The Garn amendment on funds availability may have failed because of its last-minute nature.

Sen. Terry Sanford, D-N.C., voted against the check-holding amendment but said that if he receives more information he may change his vote by the time the measure gets to the floor. A number of lobbyists said the issue came up only in the past few days. One said he was not even asked to contact his senator until the afternoon before the committee vote. □

Synovus Completes Branch Acquisitions

COLUMBUS, Ga. — Synovus Financial Corp. said it completed the previously announced acquisition of branches of Phenix Federal Savings and Loan Association in Phenix City and Opp, Ala.

The Opp branch will operate as a branch of Fort Rucker National Bank, a Synovus affiliate in Fort Rucker, Ala. The Phenix City branch will operate as a branch of CB&T Bank of Russell County, Ala., another Synovus unit.

The $2.6 billion-asset Synovus owns 14 banks in Georgia, four in Florida, and two in Alabama. It also controls Total System Services Inc., a leading processor of bank credit card transactions. □

It's everywhere you want to be.

Highest consumer preference.

Highest number of cardholders.

Highest sales volume.

Highest level of outstandings.

Highest growth rate.

Highest standard of service.

Donation by Partner of Neil Bush Is Termed 'Hush Money'

By LOUIS GERHARDSTEIN

WASHINGTON — The chairman of a House Banking subcommittee said last week that a political contribution from a business partner of President Bush's son Neil, made less than a week before the 1988 presidential election, could be considered "hush money."

Rep. Frank Annunzio, D-Ill., cited reports filed with the Federal Election Commission that Kenneth M. Good, a business partner of Neil Bush's, donated $10,000 to the Republican National Committee on Nov. 2, 1988.

The younger Mr. Bush is a former director of Denver-based Silverado Banking, Savings and Loan Association, which thrift regulators seized in December 1988. Mr. Annunzio and other critics have accused regulators of being too slow to close Silverado and crack down on alleged unsafe practices.

Annunzio cited reports to the Federal Election Commission that Kenneth M. Good, a business partner of Neil Bush's, donated $10,000 to the Republican National Committee.

Timing Called Suspect

Asked at a press conference about the timing of Mr. Good's donation, Mr. Annunzio replied: "Hush money. He apparently felt he could do himself some good."

Mr. Annunzio said that, at recent House hearings, the Office of Thrift Supervision revealed that it had referred five matters regarding Silverado to the Justice Department for possible criminal prosecution. Mr. Annunzio said the OTS initially agreed to provide the names and dates of the referrals but later declined at the insistence of the Justice Department.

At a press conference, Mr. Annunzio suggested that one Silverado referral might have dealt with Mr. Good.

The congressman released a letter he had sent to Attorney General Richard L. Thornburgh, requesting that the Justice Department disclose the five Silverado referrals to the House Banking subcommittee on financial institutions, of which Mr. Annunzio is chairman.

Mr. Annunzio's questions about possible Justice Department improprieties come when Mr. Annunzio himself is being scrutinized for accepting campaign contributions from savings and loan interests during the 1980s.

Common Cause, the self-styled citizens lobby, said Mr. Annunzio had accepted $51,620 from individuals and political action committees associated with savings and loans from January 1981 to April 1990. That placed him eighth among current House recipients of such contributions.

Mr. Gerhardstein writes for Medill News Service.

Superregional Dilemma: How Long a Leash?

Continued from *page 1*

cus on customer needs," said Mr. Lewis, who was formerly president of NCNB Texas. "But at this point, we do not want to lose sight of the fact that there are regional differences we need to respond to."

As Mr. Lewis suggested, centralization is driven by the need to reduce costs and take advantage of economies of scale, particularly in the use of technology. The trick is to centralize while retaining the ability to respond to local market forces.

"While we operate in several markets, usually our competition is just operating in that one market," Mr. Lewis said.

Analysts said other large banks are facing similar questions as the economy cools and the pace of interstate acquisitions subsides.

Turning Inward for Profits

"Organization is a hot topic right now because banks are increasingly emphasizing profitability as opposed to growth," said John Karr, a managing associate at Coopers & Lybrand in New York. "And whenever you get banks emphasizing profitability instead of growth, they tend to look inwardly rather than externally."

In the wake of accumulating real estate problems, for example, the large New England banking companies have tightened controls over their regional subsidiaries, Mr. Karr said.

Banks also tend to centralize gradually after acquisitions, leaving acquired units alone temporarily to soothe ruffled egos.

'A Delaying Tactic'

"In some sense, autonomy is a delaying tactic until you figure out what you want to do," said Anthony Santomero, finance professor at the Wharton School of the University of Pennsylvania.

Given NCNB's history of centralization, analysts said, it was inevitable that the Texas operations would eventually be integrated into that structure. The announcement came two years after NCNB ventured into Texas by taking over the bankrupt First RepublicBank Corp. □

AN INTERVIEW WITH GENE BEDELL

Jump Cautiously on the Case Bandwagon, Expert Advises

Three months ago, International Business Machines Corp. and First Boston Corp. formed SEER Technologies Inc. to sell financial software and computer-aided software engineering (Case).

The chief executive's job went to Gene Bedell, 47, who had been managing director and chief information officer at the First Boston Corp. He now projects more than $5 million in 1990 revenue for the new company.

Case technology, which is almost five years old, promises to make computer programmers more productive by automating the tedious writing of code.

In a study by two professors, SEER's Case tool, called High Productivity Systems, improved productivity by 100 times. The SEER tool is unusual in that it creates code that supports cooperative processing. Some major banks are moving to this type of data processing, in which mainframe computers and personal computers run a program simultaneously.

American Banker *reporter Richard Layne recently spoke with Mr. Bedell in his office in New York:*

"You want to use 1990s productivity to develop 1990s systems."

Gene Bedell
SEER Technologies Inc.

Q.: Why all the ballyhoo about Case?

BEDELL: There is a tendency for some data-processing people to latch onto one technology and assume it will solve productivity problems. We've gone through data-base management systems, personal computers, fourth-generation languages, and now Case.

Case is one technology in a series of technologies that is useful for improving productivity.

Q.: What is Case?

BEDELL: The technology consists of two parts. Upper Case uses high-resolution graphics for data modeling and strategic planning. In lower Case, programmers use a computer to do many of the code-production tasks formerly done by hand.

Our belief is that it is as dangerous to get on the Case bandwagon as any other technology. Our product is a combination of technologies, including a Case tool and object-oriented programming.

Q.: What's wrong with the Case software available now?

BEDELL: All those technologies are 1990 technology. But companies use them to build the same kind of systems that were built in the 1960s and 1970s. They produce standard batch or even on-line systems that don't make full use of the processing capabilities of workstations and of high-resolution graphics.

You want to use 1990s productivity to develop 1990s systems: cooperative processing, high-resolution graphics, workstations, relational data-base management systems.

Q.: How many banks have cooperative processing?

BEDELL: It's more an issue of how many have discovered it and are moving toward it. The reasonably large, forward-looking banks are moving this way. That's much different from three years ago.

By and large, banks do not want new systems to be driven by nonprogrammable workstations. They want a mix of PCs and nonprogrammable terminals.

The problem is, using conventional tools, you can't develop systems that utilize PCs.

It's one thing to use a PC as a stand-alone computer, to run a Lotus spreadsheet or do word processing. But it is another to use a PC as a integral part of the processing, as in cooperative processing. To handle, for example, the front-end processing for a major system that is running a relational data base on a mainframe.

Q.: How does Case software write those kinds of systems?

BEDELL: You write a program to help you buy a stock – you don't have to say on what computer the program will run. The program you are writing that process for is turned into what is called a rule.

With our Case tool, you give that rule an attribute. An attribute is what platform – mainframe, minicomputer, PC – you want to run that part of the program on. Part of the Case software generates the code to run on the platform, whether it is in C for a PC or Cobol for a mainframe. It's not magic by any means.

No one else generates code for cooperative processing architecture. A lot of people say they are doing it. No one else has delivered code that is running cooperative processing systems. We run systems with millions of lines of code of cooperative processing.

Q.: Case manufacturers are now claiming extremely big productivity gains for their software. But you claim that High Productivity Systems increased productivity 100 times, much more than anyone else. Why?

BEDELL: You can get productivity using conventional Case techniques. But we don't just use Case. We combine the available technologies – object-oriented programming with heavy reuse of the code, information engineering, relational data-base management systems.

It's not just that you could build systems faster. You couldn't do a large cooperative system without this kind of tool set. At First Boston, we would never finish our own project without this.

It's one thing to hire an elite tool-development team. It's another to have to hire 100 or so developers who know all the technologies.

Q.: How did First Boston get into the Case business?

BEDELL: Changes in the financial market after 1979 brought on global trading and multicurrency accounting and made obsolete the old system.

We started to build a new system then, a $100 million project. We discovered after five years that you can't get there from here.

My team came up with the idea for a Case tool to help us build the system. We knew we wanted cooperative processing, but it is impractical to build.

You need people with skills on mainframe, minis, personal computers. It's like having three data-processing departments.

We thought we needed a Case technology that would insulate the developers from the different and disparate technologies. We had no intention of building a Case tool. We bought a lot of stuff. We ended up building it.

Q.: Do you see more competitors entering the field?

BEDELL: It is getting difficult now to become a competitor. The cost of developing the tool is enormous. It can't be done by five guys in a garage with a six-pack and a PC.

The firms that have been in this have been at it for five years. They've put in a lot of money. □

ISSUES: *mergers*
Savings from Big Combinations Only So-So, Survey Finds

By KAREN GULLO

NEW YORK — Consultants are urging bankers to get realistic when projecting the savings from big mergers and acquisitions.

According to a study conducted earlier this year by Ernst & Young and Keefe, Bruyette & Woods Inc., banks in big mergers rarely reduce technology costs as much as expected. They err by extrapolating from the effects of small acquisitions, the consultants said.

The survey, of 34 large institutions across the country, found that most banks expect to reduce data-center and operating expenses by 50% or more when they announce a merger. Actual savings averaged only 35%, the study showed.

Only six of the 34 banks surveyed achieved savings of 50% or more. Three banks realized no savings through consolidation.

Undelivered Promises

The results are significant, given the fact that many mergers and acquisitions are justified to regulators and shareholders by the economies promised from such consolidations.

Citing other consultants and studies by the Federal Reserve Board and universities, Ernst & Young and Keefe Bruyette concluded in their report that financial returns and operational advantages from mergers are mediocre at best.

Ernst & Young and Keefe Bruyette report that financial returns and operational advantages from mergers are mediocre at best.

Banks are also slow to establish a standard set of software systems to support operations. Running multiple software programs is costly and often botches the best-laid plans for saving money.

"Banker's estimates are uninformed because they base them on historical success of achieving economies of smaller institution acquisitions," said Brendan O'Sullivan, a banking specialist and partner at Ernst & Young, the accounting and consulting firm.

Unrealistic Expectations

"Banks can reduce data-processing costs by 75% in small acquisitions because they can move processing from closed branches into their existing computer operations," said Mr. O'Sullivan. "But when you apply that experience to a merger of equals, that's where expectations fall short."

Bankers that have gone through mergers say that technology cost estimates are inaccurate because they are often made not by technology executives but by people managing mergers and acquisitions. They also point out that as banks grow, it is more difficult to achieve economies of scale in technology.

Instead of projecting a 50% decrease in technology expenditures, banks can realistically anticipate savings of 15%, said Brian Whitehead, banking specialist and senior manager at Ernst & Young.

If two large banks merge and form a $50 billion organization, technology expenses of the merged entity might run $400 million. Mr. Whitehead said that annual savings of $50 million to $75 million would be a realistic estimate.

"When estimating savings, bankers should set significantly lower savings targets and longer time frames for mergers than acquisitions," Mr. Whitehead said.

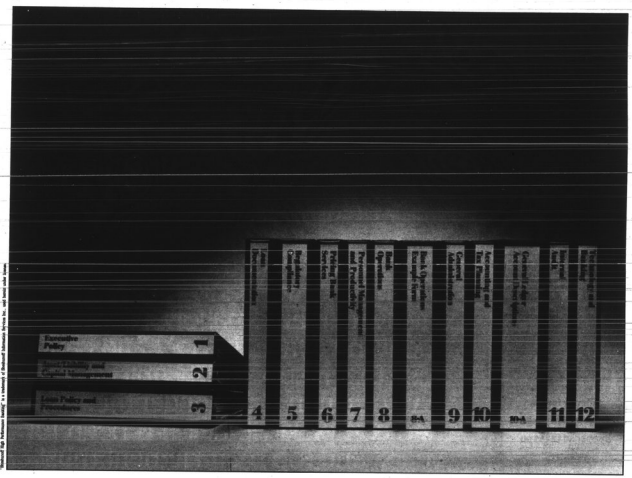
Standard Software a Priority

Management should develop a standard set of software programs for bank operations within nine to 12 months after a merger, and they should consolidate data centers within two years, the consultants said. A tight timetable will improve the banks' chances of realizing cost-cutting goals, they said.

The chief technology officer of a bank should deliver realistic savings goals to management and not buckle under pressure to inflate cost-reduction figures to appease superiors, they added.

Many banks reduce costs quickly by laying off workers, but the consultants said technology managers should take care to retain programmers who are key to developing standard software.

"If they leave in the first year, then you haven't got the knowledge base to be able to efficiently and quickly maintain and reduce the number of applications," Mr. Whitehead said. □



The "How To" system for your whole bank. 1-800-456-2340

How to run your lending area better. How to stay in compliance. How to price your services. How to handle personnel issues. And much, much more.

That's the **Sheshunoff High Performance Management System**. 12 easy-to-use volumes that show you how to manage your bank safely and profitably.

You get model policies and procedures. Sample forms and documentation. And clear, step-by-step recommendations for every part of your bank.

You even get System Updates with the latest ideas for improving performance. And Regulatory Updates designed to make it easier for you to stay in compliance.

Best of all, you get two complete sets with your order. So you can give individual volumes to each department head, and still have a set of your own for handy reference. All for $1,650.

And you know it's information you can trust because it's from Sheshunoff Information Services Inc. The leader in high performance banking since 1971.

To get your whole bank working on the same successful system, just call 1-800-456-2340.

or federal agencies to determine the potential risk to human health posed by the contaminated site.

Standards of Liability

The law imposes strict liability, or liability without fault. The statute prescribes three limited defenses to the otherwise absolute liability. To avoid liability, the potentially responsible party must establish that the release of hazardous substances to the environment and the resulting damages were caused solely by an act of God, and act of war, or an act or omission of a third party, other than an employee or agent of the potentially responsible party, provided that the potentially responsible party exercised due care with respect to the hazardous substance and took precautions against foreseeable acts or omissions of such third party.

Because the law imposes strict liability on the present owner or operator of a contaminated facility – even if that owner did not contribute to the contamination – potentially responsible parties who had not owned or operated the property at the time it was originally contaminated sought to avoid liability by asserting the "acts of a third party" defense, i.e., that the contamination was caused by a prior owner or operator.

"Money for the Superfund is raised by special taxes on industry."

An unrelated third party could not be a party whose act or omission occurred with a contractual relationship existing directly or indirectly, with the owner. For example, under this disclaimer, a purchaser or lessee of a property would be liable and unable to claim exception since the sale contract or lease were sufficient to establish a "contractual relationship."

'Innocent Purchaser Defense'

To clarify the applicability of this defense, Congress included in the amendments a provision commonly known as the "innocent purchaser defense." The amendments narrowed the definition of contractual relationship by excluding "land contracts," deeds, and other instruments transferring title or possession.

This provision states that the defense may only be asserted by a current owner who acquired the property after the disposal or placement of the hazardous substance at the site if:

- At the time the property was acquired, the potentially responsible party "did not know and had no reason to know" that any hazardous substance which is the subject of the release was disposed of at the site; and
- That the PRP undertook at the time of the acquisition "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice in an effort to minimize liability."

The standards enunciated in the amendments and subsequent amplification of these standards in EPA guidance documents, have created a standard of care for all parties who are involved in the acquisition of real property.

Lender Liability Issues

The legal issues in the hazardous waste/contaminated property arena are different from those that financial institutions normally encounter. Under federal law there is a "security interest" exclusion generally available to banks.

The definition of "owner and operator" excludes "a person, who, without participating in the management of a . . . facility holds indicia of the ownership primarily to protect his security interest . . ."

According to this definition, a lender who merely holds the mortgage is not an owner or operator. A lender who forecloses on the mortgage, however, may thereby become an owner or operator of the hazardous waste site and consequently may be liable for cleanup costs.

"The law imposes liability on private parties identified as having contributed to the contamination of a particular site."

The leading cases on this issue – United States v. Mirabile, 15 Envt'l L. Rep. 20994 (E.D. Pa., 1985), United States v. Fleet Factors Corp., (11th Circuit, May 23, 1990), and United States v. Maryland Bank & Trust Co., 632 F. Supp. 573 (D. Md., 1986) – have not definitively settled when a lender becomes an owner or operator for purposes of hazardous waste liability.

In the Mirabile case, three financial institutions became defendants in an action for the costs of cleaning up a paint manufacturing site. The first creditor, American Bank and Trust Co. was the high bidder at the foreclosure sale.

After the sale and after the facility's operations had ceased, the bank told the sheriff it intended to take title but continued to show the property to potential purchasers.

Shortly thereafter, the bank assigned its bid to Mellon Bank. The court granted ABT's summary judgment motion, finding that "before a secured creditor such as ABT may be held liable, it must, at a minimum, participate in the day-to-day operational aspects of the site."

Type of Involvement Crucial

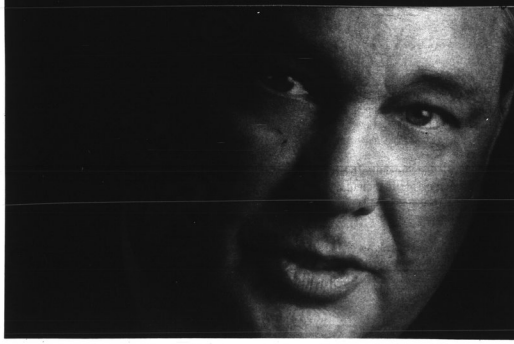
The court found it crucial that the bank's involvement in management was limited to participation in financial decisions. Although there was some disagreement whether ABT acquired legal or equitable title, the court found it unnecessary to decide the nature of the title received by ABT at the foreclosure sale.

The court also granted sum-

See COMMENT *next page*

The time has come for the top management of the bank, the CEO, to get involved in automation. Top management must face this fact and cannot wish that responsibility onto others.

Automation is no longer the intrigue and complexity that it has been for 30 years, and top management must realize that fact. The automation directions, strategies, and decisions



must come from bankers, not data processing people. For those CEOs who realize this, the bank can move ahead now. If they won't take the responsibility, then the bank will have to wait until the CEO is willing to become involved.

Automation is no longer decisions in hardware and software, but decisions in the art and science of banking.

mary judgment to a second creditor, the Small Business Administration. The court ruled that the SBA's involvement in the operations was limited to financial aspects (it had a loan agreement with the company) and was an insufficient basis for liability.

The court refused to dismiss the complaint against a third defendant, Mellon, finding that it was debatable whether Mellon's participation in operations, inter alia, placing a bank officer on the company's advisory board, would bring Mellon within the scope of liability.

In the Maryland Bank case, the court held that a bank which had held a mortgage on the property, and then acquired the site through foreclosure and held legal title at the time of the EPA cleanup, was an owner within the meaning of the law. In so holding, the court refused to distinguish a bank that purchases at foreclosure from any other purchasers at a foreclosure sale.

Security Interest Exclusion

The Fleet Factors decision has narrowed the "security interest exclusion." It holds that a lender may be directly liable for costs of cleanup when it participates "in the financial management of a facility to a degree indicating a capability to influence the corporation's treatment of hazardous waste."

This decision broadens the "active involvement in manage-

"A lender who forecloses on the mortgage . . . may thereby become an owner or operator of the hazardous waste site and consequently may be liable for cleanup costs."

ment decisions" standard, which has been considered the prerequisite for establishing direct liability.

Increased due diligence respecting hazardous waste at lending and during loan administration is expected by the Fleet Factors court. The court indicates that its decision "should encourage potential creditors to investigate thoroughly the waste treatment systems and policies of potential debtors."

Banks are encouraged to "insist upon compliance with acceptable treatment standards as a prerequisite to continued and future financial support."

Clearly, the courts are setting a standard for lenders that will require extensive reexamination of many practices.

In order to minimize liability for cleanup costs, an institution must recognize that "compliance with laws" is not the determinant by which environmental liability arises. The physical condition of the property or of the assets is of direct concern, not merely whether it exists in "compliance with law."

There are methods for addressing potential contamination and ensuing liability. These can be divided into four phases. First, a financial institutional must establish an internal environmental policy, consisting of uniform guidelines that address the potential risk of environmental liability.

The framework has a twofold purpose. Lenders will be able to assess potential environmental liability that may affect the borrower s creditworthiness. On the other hand, the lender will be able to factor environmental risk as an element of credit risk into the valuation of the collateral.

Second, environmental liability can be minimized in loan documentation through the use of contractual clauses that allocate environmental risk.

Third, before closing a transaction, an environmental assessment of the property should be performed that encompasses not only present ownership and use and its compliance with federal and state law, but past ownership and use as well.

This due diligence is valuable primarily to develop data on which prudent decisions can be made. It is also valuable in demonstrating the prudence of the institution's management, should it become necessary to do so in the event of a Superfund action.

"Financial institutions cannot afford not to protect themselves."

Fourth, after the transaction has closed, the financial institutions should develop a mechanism that will provide periodic assurances regarding continuing compliance with environmental laws and, in the event that financial difficulties determine whether to participate in a workout or to foreclose on the property, thus incurring liability under Maryland Bank and Mirabile as discussed above.

Under Superfund, the government can and does require cleanup from the party that is most identifiable or that has the deepest pocket available. In order to avoid environmental liability that may run to millions of dollars, financial institutions cannot afford not to protect themselves by policing individual transactions and organizing and managing their affairs to account for these concerns. □

Citicorp Completes 1st California Deal

SUNNYVALE, Calif. — De Anza Holding Corp. said it has completed a definitive agreement to become the first commercial bank acquired by Citicorp in California.

The final agreement came June 29, two months after the companies announced a letter of intent. New York-based Citicorp, which owns the $7.4 billion-asset Citibank, San Francisco, will take over the $35 million-asset De Anza and its principal subsidiary, De Anza Bank of Sunnyvale. □

Portuguese Bank Plans Sale Of Equity Issue in the U.S.

By JAMES R. KRAUS

NEW YORK — Aiming to raise its profile among U.S. investors, Banco Commercial Portugues plans to bring a secondary issue of shares to the market here in the form of American Depositary Receipts, banking sources have reported.

This will be the first U.S. issue by a Portuguese company and is intended to help acquaint American investors with the bank and the Portuguese stock market.

The shares will be traded over the counter. J.P. Morgan & Co. will act as depositary.

Popularity Grows

American depositary receipts, or ADRs, are negotiable certificates representing ownership of shares in a non-U.S. company and are traded in dollars. They are have been growing in popularity among U.S. investors over the past few years as an easy way to buy and sell shares in foreign companies.

Banco Commercial is Portugal's eighth-largest bank, with $4.3 billion in assets. It has $733 million in shareholder equity, well in excess of international capital requirements.

Sources estimated that foreign investors had already purchased about 10% of the bank's shares on the Lisbon stock exchange. Banco Commercial's shares currently trade at about $18 a share.

Competition Stiffening

Competition from domestic and foreign banks has been increasing in Portugal in advance of financial market integration in the European Community after 1992.

Sources said Banco Commercial was strengthening its operations in Portugal by increasing the number of its branches to 100 from 67 and by developing into a full-service bank with operations in insurance, factoring, leasing, asset management and brokerage.

The bank, set up as a retail banking institution in 1985, also plans to set-up joint ventures and strike selective alliances with foreign banks to develop its international network.

In a related move, Banco Commercial became last year the first Portuguese bank to set up a unit in the newly created offshore banking center in Madeira.

JAPAN

Barber Conable, president of the World Bank, told Japan's finance minister, Ryutaro Hashimoto, that he welcomed Tokyo's decision to resume lending to China.

"I appreciate Japan's efforts," Mr. Conable was quoted by a Japanese finance ministry official as telling Mr. Hashimoto.

During their 20-minute talk, Mr. Conable said the move would allow the World Bank to start lending to Beijing in such fields as environmental protection and economic reforms.

Prime Minister Toshiki Kaifu of Japan said at the Group of Seven economic summit in Houston, Texas, last week that Tokyo would resume part of a $5.5 billion, five-year loan package to China.

Japan, in concert with most Western nations and institutions, suspended all official credits to China after a military crackdown on pro-democracy protesters in Beijing last year.

Mr. Conable was in Tokyo to attend a meeting of international financial organizations including the Asian Development Bank, Inter-American Development Bank and the World Bank.

Meanwhile, China's foreign minister thanked Japan for promising to resume the $5.5 billion loan but warned Western powers against continuing sanctions against Beijing.

Japanese sources said China's Qian Qichen made the remarks to Japanese deputy foreign minister Hisashi Owada, in China for a three-day visit to brief Chinese leaders on the recent G-7 summit in Houston. — **Reuters**

BRAZIL

The **Bank of New England** is closing its representative office in Brazil at the end of July, Richard Hayes, vice president and representative, said in Sao Paolo.

The office is being closed for because of problems in the United States, not Brazil, he said.

The Bank of New England in recent months has reported restructuring in the wake of problem loans in real estate in the Northeastern United States.

"They don't want to hear of Brazil," said Mr. Hayes, who is continuing as an independent financial consultant. — **Reuters**

AUSTRALIA

The **State Bank of Victoria** has cut back its foreign exchange operations in New York and London, according to its international treasurer, Peter McLean.

"We have come out of direct market operations but we will still have an on-going presence," he said by telephone from Melbourne.

He said the New York staff of five and the London staff of six had each been cut by two.

"It is a small rationalization more suited to our ongoing business structure," he said.

The bank will maintain its Melbourne, Hong Kong and Sydney operations, he said. — **Reuters**

Midland Shuts NY Securities Unit

3d British Bank to Quit U.S. Treasury Bond Market

By JOHN EVANS

LONDON — Midland Bank on Tuesday closed its Midland Montagu Securities Inc. unit in New York, becoming the third British bank to pull out of the U.S. Treasury bond market. The closedown will result in the loss of about 140 jobs.

It is part of a reorganization that will enable Midland Montagu, the bank's investment banking arm, to focus its U.S. resources on more strategic businesses, Midland said.

Other Dealerships Closed

Two other banks, National Westminster Bank Plc and Lloyds Bank Plc, closed their U.S. primary dealerships last year. Both cited overcapacity in U.S. government securities trading and the failure to achieve a sufficient return on capital.

Midland, in a statement, said while Midland Montagu Securities is profitable, it is "one of the smaller players in the highly competitive" U.S. government securities market.

The bank's U.S. activities will now be centered on cross border corporate and investment banking as well as treasury and foreign exchange, it added.

In reactions, Allen Broutbon, analyst at Morgan Stanley International in London, said Midland's strategic decision looked "correct."

Barclays Stays Put

Barclays Bank, through its Barclay's de Zoete Wedd investing banking arm, is the only big British bank to maintain a primary dealership in New York, after receiving Federal Reserve authorization last December.

BZW chief executive David Band said: "We remain committed to our dealership as a key part of our worldwide securities and related operations. U.S. government securities are still the benchmark for world interest rates."

Mr. Band noted that a dealership is also an important element in a bank-owned securities firm's overall investment banking and fixed-income activities in the United States, under Treasury regulations.

BZW employs around 70 at its dealership in New York.

Tie to Hongkong Bank

Meantime, industry speculation suggests that the Midland closure may be connected with the overall cooperative pact it has concluded with Hongkong & Shanghai Banking Corp., which operates the Carroll McEntee and McGinley Inc. primary dealership.

Hongkong Bank owns 14.9% of Midland and analysts expect some form of merger when their current agreement, which currently places a limit on that stockholding, expires at the end of 1990.

Morgan Stanley's Mr. Brouthon, however, doubted that such strategic considerations played a part in the closure, arguing that the British bank is looking for ways to allocate its capital more effectively.

Electronic Systems Linked

Separately, Midland announced a further cooperation step with Hongkong Bank through the linkage of their electronic banking and cash management systems. This will allow their customers to receive balance information and to make payments and transfers over their accounts held at either bank.

The system used is Telepath, Midland's electronic banking network, and Hexagon, the Hongkong Bank's counterpart system. The link will provide instant access to accounts in the 28 countries where the facility is available, Midland said.

Last month the two banks linked their worldwide automated teller machine networks. □

Citing Problems, Gorbachev Seeks Rescheduled Debt

Reuters

MINERALNYE VODY — Soviet President Mikhail Gorbachev said Moscow wanted to reschedule some debt on better terms because of the difficulties it was having reforming its economy.

Gorbachev told journalists earlier in the week after two days of talks with Chancellor Helmut Kohl he did not want a Western aid package the West German leader supported to be a "handout or a favor."

'Prolonging Repayment'

"We want to make very deep changes," Gorbachev said, in reference to the economic reform plan Bonn officials expected him to draw up by October. "The issue is only prolonging the repayment of our debts a bit at more suitable conditions."

Gorbachev, who with Kohl announced a deal including Soviet support for a united Germany in NATO, did not mention any figures for the amount of debt he wanted rescheduled.

$2.26 Billion Late

According to Deutsche Bank, Moscow is $900 million behind in payment of its debts to West German firms and $2.28 billion late in payments on total Western debt.

Bonn guaranteed a $3 billion credit to Moscow last month to help it meet payments deadlines to West German firms.

According to Bonn officials, Gorbachev said the Soviet economy was suffering heavily from the drop in world prices for oil, one of its main export commodities.

Expense of Chernobyl, War

Gorbachev told the visiting West Germans the 1986 Chernobyl nuclear accident had cost the Soviet economy $24 billion while the 1979-1988 war in Afghanistan had eaten six to seven billion rubles, they said.

Even Gorbachev's unpopular anti-alcohol campaign, which he introduced soon after taking power in 1985 but later relaxed, carried a price tag he declined to reveal, they added.

The officials, who asked not to be named, said Kohl offered no new funds to win Soviet acceptance of German membership in NATO. □

The most important thing about banking is the bottom line.

Here's the bottom line.

AT&T gives banks a highly cost-effective way to do business.

When it comes to delivering the telecommunications services that banks really need in today's market, AT&T is unmatched. And we're going further.

More flexibility and better cost control.

For headquarters to branch, or branch-to-branch communications, the AT&T Software Defined Network (SDN) gives you all the benefits of a private voice network. But with greater flexibility and better cost control, plus the ability to track and monitor call volume.

The hottest technology in banking today.

And what SDN does for voice, our new Software Defined Data Network (SDDN) now does for data. SDDN is a switched data service with dynamic bandwidth allocation that provides the transmission flexibility necessary for image-processing applications, such as signature verification, document processing and check processing.

AT&T is committed to meeting the banking industry's needs.

In 1989, AT&T introduced the Retail Banking Solution, which gives branch banks the tools needed to manage and grow customer relationships effectively. And the AT&T DEFINITY® Communications System helps speed calls to and from customer service centers. So go with AT&T. Because with our innovative services we give your bank the competitive edge. And that's what counts on the bottom line.

Innovation. Another AT&T advantage.

For more information, call your AT&T Account Executive or 1 800 247-1212, Ext. 580.

© 1990 AT&T
SDDN pending FCC approval.

AT&T The right choice.

You're looking at the difference between our end-of-day pricing service and theirs.

It's called a responsive customer service team.

At Muller Data, our customers tell us we have the "most professional" service in the industry. They say we're friendly and helpful. That we try harder, and do things right the first time.

Answers, fast.
Our records say we answer more than 80 percent of your questions while you're still on the phone. So instead of promises to "get back" to you, we give you answers and solutions – on the spot. When we do have to call you back, we give you a time, and treat it like an important commitment. Because to us, it is.

Accurate data.
Of course, we start with accurate, comprehensive data for more than 750,000 issues, including listed and OTC equities, commodity and financial futures, CMOs, MBSs and UITs – plus the full universe of more than one million municipal bonds, corporate fixed-income securities, government instruments, and 80,000 Canadian and overseas equities and bonds.

Can we show you?
We'd like to show you just how accurate, timely and responsive a securities pricing service can be. For more information, write Muller Data Corporation, 161 William St., New York, New York 10038, or call toll-free: 1-800-US-MULLER.

MULLER DATA CORPORATION

An American Banker • Bond Buyer Company

Net Income Declines at Citicorp, Chemical, and Hanover

Continued from page 1

earlier – were boosted by nonrecurring events such as a large $80 million gain from cashing in part of its venture capital portfolio. Citicorp recorded just $6 million of revenue gains from the portfolio one year ago, and $54 million in its first quarter.

"I see little that worked right for them this quarter except for the consumer sector," said Richard Bove, an analyst at Dean Witter Reynolds Inc.

The bank's earnings from its credit card, branch system, and private banking businesses increased 28% to $266 million while its local-currency lending and trading activities in lesser-developed countries rose $44 million to $138 million.

Its corporate and investment banking activities in Japan, Europe, and North America, however, fell 69% to a flabby $42 million. The head of Citicorp's North American global finance unit, George Davis, left the bank earlier this month, and the bank is expected to announce a restructuring in the area soon. The company would not comment on rumors circulating this week that staff cuts of 6,000 people may be announced soon.

Citicorp's other business line – information services, which includes its Quotron stock information unit – continued to show losses. It lost $54 million in the second quarter, compared with $37 million a year earlier.

Citicorp also reported losses of $82 million in its cross-border portfolio, largely because Argentina and Brazil are not paying interest. It also wrote off $631 million of Brazilian medium- and long-term debt. The company said, however, that it will participate in two Argentine debt-for-equity conversions involving about $500 million, which will be booked in future quarters.

Excluding its third-world debt portfolio, Citicorp wrote off $92 million of commercial loans – including $42 million of real estate loans and $52 million of leveraged buyout loans – and recovered $2 million that were previously written off. The writeoffs compare with $29 million taken in last year's second quarter and $136 million in this year's first quarter.

CHEMICAL

Earnings of $113.1 million, or $1.02 per share, at the nation's sixth-largest bank company exceeded most analysts' expectations, though they were down from the year-earlier income of $128.6 million, or $1.65 per share, on fewer shares outstanding.

"Expenses were very tightly controlled, and interest revenue was up," said Ronald Mandle, an analyst at Sanford C. Bernstein & Co., who noted that Chemical did not disguise its operating results with nonrecurring earnings.

Analysts were impressed with continuing progress at Chemical's Texas Commerce Bancshares subsidiary, which earned $24.1 million, versus $3.2 million one year ago, and reduced its level of nonperforming assets to $984 million, the eighth straight quarter of decline. Analysts also applauded a 4% rise in Chemical's net interest income over the first quarter and noninterest expenses of $635.9 million that were unchanged from the first quarter and 3% lower than in the 1989 quarter.

Counterbalancing Chemical's improved interest spreads was a rise in nonperforming real estate loans and highly leveraged transaction loans. Nonperforming real estate loans at Chemical's New Jersey subsidiary now stand at $171 million, Mr. DeSantis, said close to the $200 million ceiling that the bank predicted.

Chemical charged off $73.7

Regional Banks Report Strong Earnings for Second Quarter

Continued from page 1

Norwest Corp. eased 12.5 cents to $20.875.

Reflecting on what he termed "Super Tuesday for bank earnings," James J. McDermott Jr., research director at Keefe, Bruyette & Woods Inc., said most superregional banks posted results within expectations, while money-center banks by comparison came in "on the light side."

Meeting expectations, these days, he explained, means to stay in a predictable earnings range and not suffering "from material or unmanaged deterioration in asset quality."

For the money-center banks, on the other hand, he noted, "the elements affecting their balance sheets are slow growth and deteriorating asset quality, and it's tough when both those demons are working you over."

MELLON BANK

Frank V. Cahouet, Mellon's chairman, president, and chief executive officer, said the company's core businesses – retail banking, wholesale banking, and service products – performed well in the second quarter.

The quarter's results reflected increases in loan-loss-fee income and other revenue that offset a decrease in net interest revenue and a reduction in trading revenue as well as increases in the provision for credit losses and operating expenses.

Service-fee revenue in the second quarter, a major item for Mellon, moved up to $165 million, against $162 million a year earlier.

Other noninterest revenue was $124 million, compared with $16 million, reflecting the gain on the sale of the consumer finance company, as well as $26 million in cash dividends from the corporation's investment in the senior preferred stock of Grant Street National Bank.

Grant Street is an independent bank formed in 1988 as part of Mellon's asset restructuring program. The other income category also reflects $18 million in fees paid by the smaller bank to Mellon for collection services.

Net interest revenue was $207 million in the second quarter of 1990, compared with $209 million a year earlier.

Excluding the effect of a $7 million decrease in receipts on Brazilian nonperforming loans, net interest revenue increased $5 million, reflecting the acquisition of 54 branches from Meridor Savings Bank, Philadelphia.

Compared with the second quarter of 1989, operating expenses increased by $7 million, to $288 million, resulting from the acquisition of banking offices in the Philadelphia area from Meritor.

WELLS FARGO

Wells said it increased its provision for problem loans by $75 million, unchanged from the first quarter. Problem loans, including foreclosed real estate, increased 9% in the first quarter to $1.268 billion or 2.8% of total loans.

Analysts were heartened by the results because they were reported following examinations by regulators. They pointed out that regulators did not force Wells to increase its provision for problem loans over the first quarter period.

"They had their exam and California did not fall off the face of the earth," says J. Richard Fredericks, partner at Montgomery Securities, San Francisco. Earnings were about what analysts had expected.

The second quarter results include $116.5 million pretax gain that resulted from the sale of 50% of Wells Fargo's index fund business to Nikko Securities Co., Tokyo. The new joint venture is called Wells Fargo-Nikko Investment Advisers.

Wells, known for its tight expense control, reported that expenses were up 8% to $416.4 million in the second quarter, from $385 million a year ago.

For the six months ended June 30 Wells earned $392.2 million, up 36% from the $288.9 million Wells earned in the 1989 period.

BANC ONE

Columbus-based Banc One said it increased its provisions for problem loans by 17% or $61 million. However, the provision was offset by the inclusion of its Texas unit for the first time during the period, which added $12.5 million to its earnings for the period.

A 23% increase in nonperforming loans since the first quarter came chiefly from Midwestern real estate. The lone loan category was up 34% from the year earlier.

Results were in line with the expectations of analysts, who had been looking for Banc One Texas to offset slower loan growth and weakening credits in the Midwest. The increase in nonperforming loans had been announced earlier.

"This quarter really underlines the Texas contribution," said Felice M. Gelman, an analyst at Dillon Read & Co., "proving their [Banc One's] point that Texas is where the opportunity is."

CITIZENS AND SOUTHERN

Although its net income fell 1% from $58.6 million reported the previous year, Citizens recovered sharply from the first quarter, when it earned $41.6 million following a regulatory examination.

The Citizens board Tuesday voted to increase the company's third quarter dividend 11% to 39 cents per share, from 35 cents per share, payable Sept. 15.

In the second quarter, Citizens, which is held by Citizens and Southern Corp., announced a $30.9 million loan-loss provision, down 44% from $54.8 million reported in the first quarter, when the bank underwent a targeted real estate examination by the Office of the Comptroller of the Currency.

On June 30, Citizens' nonperforming assets totaled $251.3 million, or 1.59% of total loans and other real estate owned. □

Sr. Product Support Specialist Bankcard Operations

San Mateo, California

Technology and innovation have made VISA the largest, most widely recognized financial payments system in the world. We do more than enhance existing products. We focus on new product development as well. For you, that means exciting new projects in bankcard operations as well as a chance to gain greater visibility as you present recommendations to senior management.

Your primary focus will be on developing and writing operating regulations for our new and existing bankcard programs. This will involve analyzing the impact of operating regulations and presenting your findings to Member groups. You will also respond to inquiries from members, merchants, and cardholders regarding complex VISA policies and procedures.

You'll need a BA/BS, or equivalent, in-depth knowledge of bankcard operations, and a general understanding of Visa products, services, and systems. You must also have proven presentation skills as well as management and analytical abilities. Some background in writing and editing is needed.

VISA offers an excellent compensation package, including comprehensive benefits. For immediate consideration, please send your resume to: VISA U.S.A. Inc., SF/716/AB, P.O. Box 8999, San Francisco, CA 94128. For other VISA opportunities, please call our JOB INFORMATION LINE (415) 578-8299. We are an equal opportunity employer.

VISA

We're everywhere you want to be.

Overseas Banking Consulting

As one of the world's oldest and most prestigious U.S. based consulting firms, we are continuing to expand our business in the Asia Pacific region. With offices in Singapore, Tokyo, Sydney and Jakarta, we have a strong established presence in the region and, in particular, a dominant position serving clients in the financial services industry.

We are currently seeking banking professionals with a strong record of achievement to join our Singapore office. We specifically require individuals with demonstrated functional expertise in the areas of:

- CREDIT– preferably middle market/wholesale
- OPERATIONS– both head office and branch levels
- HUMAN RESOURCES– emphasis on manpower planning, performance/potential appraisal, organization, training

Candidates should have 5-8 years of significant banking experience and possess an MBA or other relevant graduate degree. International work experience, especially in developing countries, would be a plus. In addition, the successful applicant must demonstrate the personal qualities of drive, initiative, creativity and professionalism, and possess strong communication, interpersonal and problem-solving skills.

For immediate consideration, send your resume and salary requirements in confidence to:

Box #435
c/o American Banker
One State Street Plaza
New York, NY 10004

Net Income Declines at Citicorp, Chemical, and Hanover

Continued from page 17

million of non-LDC debt and $281.4 million of Third World loans, mostly to Brazil and Argentina. It added $82 million to its loan-loss reserve, down from $90.9 million in the year-earlier quarter. Its allowance for loan losses at the end of the quarter was $2.1 billion, or 4.8% of all loans, compared with $2 billion, or 4.4%, a year earlier.

MANUFACTURERS HANOVER

As expected, the nation's eighth-largest bank took a substantial restructuring charge of $100 million, or $60 million after tax. About $40 million of the pretax charge will cover layoffs of some 1,400 people, the bank said in its earnings release, with the remainder of the charge covering lease obligations and the discontinuation of various business activities.

The bank predicted that the restructuring would save $125 million a year pretax from operating expenses.

Net income for the second quarter was $33 million, or 31 cents a share, against $106 million, or $1.87 a share, in the 1989 quarter. Excluding the restructuring charge, earnings would have been $91 million, or $1.15 a share.

They also said that the bank's addition of $84 million of nonperforming loans during the quarter was below expectations, given Hanover's earlier disclosure that it would put its loans to developer Donald Trump on a nonperforming basis.

A bank spokesman explained that if it were not for the bank's $153 million of nonperforming Trump loans, the level of nonperforming loans would have declined during the quarter to $762 million, indicating a relatively healthy real-estate and leveraged debt portfolio.

Total nonperforming loans at June 30 stood at $2.5 billion, down from $3.0 billion a year ago and $2.9 billion at the end of the first quarter.

BANK OF NEW YORK

Meanwhile, Bank of New York Co. announced late Monday that its second-quarter profit declined 39% from a year ago to $70 million because of an increased loan-loss provision. Nonperforming assets rose to 3.7% of total loans on June 30, from 3.4% at the end of the first quarter on March 31. The bank said the rise came from the addition of $160 million of real estate and $115 million of loans on highly leveraged transaction.

The loan-loss provision was increased by $94 million in the second quarter, of which $71 million was consumed in the writeoff of bad loans and $23 million was added to the reserve against loan losses. The reserve totaled $940 million on June 30, or 2.62% of all loans. □

Coming in the July 26th issue of American Banker. . .

Are banks missing out on global marketing opportunities?

There is no denying that the world is changing. But are U.S. banks changing along with it?

On July 26th, *American Banker* will take a look at whether U.S. banks are taking advantage of new latest opportunities to compete globally. Or, are they isolating themselves and missing out?

You'll get answers to questions like these:

Are U.S. banks handicapped in the global market because of the layers of regulation, high costs of raising capital and domestic real estate problems?

Where do banks get demographic information and how do they measure demographic changes around the world?

What is the latest tecnology used to help with international marketing strategies and demographics?

What are the ethnic markets banks are missing? And what type of services are most useful for these groups?

How do world environmental concerns affect corporate marketing strategies?

With this special report from *American Banker,* you'll be able to identify changing international markets and figure out if there really is a global opportunity for you and, if so, how you can best capitalize on it.

For fastest service
To get your copy of *Globalization of Bank Marketing,* simply:

COMMENT/MERGERS

Most Active Acquirers Have Taken Advantage of Federal Assistance

By REID NAGLE
President
SNL Securities

Successful banks in the 1980s stuck to the businesses they knew best, avoided nonresidential real estate lending and highly leveraged transactions, watched costs, successfully employed technology, and accumulated capital.

The same strategies will prove successful in the 1990s, with one additional opportunity: For banks having adequate capital or the ability to tap the capital markets effectively, consolidation will present unprecedented opportunities for profitable, nondilutive expansion.

Recent consolidation experiences point the way.

Common Threads

An examination of the 10 most active acquirers in the 18 months ended June 30, 1990, reveals a common history of successful operation and a willingness to take advantage of government-sponsored consolidation in banking markets. Only one of the 10 most active acquirers, Union Planters, failed to make an acquisition through the RTC or FDIC in the past year and a half.

The lure of government-assisted transactions has reduced the flow of private-sector bank acquisitions to a trickle.

With the possible exception of the ninth and 10th most active acquirers, Union Planters Corp. and Citicorp, respectively, the active bank acquirers in this group have consistently outperformed their geographical asset-size peers. In general, their superior financial performance has enabled them either to accumulate sufficient capital or to have access to the capital markets sufficient to support their active acquisition programs.

Two other characteristics dominate this group of active acquirers. Seven of the 10 have acquired failed banks and thrifts in the Texas market. Further, many of those that have made government-assisted acquisitions in the past 18 months are concerned that a growing supply of bidders for the RTC and FDIC caseload is driving up the cost of acquisitions to an unattractive level.

As Ron Steinhart, chief executive officer of the recently created Team Bank, noted, "the market has heated up for savings and loans" in Texas, making many acquisitions unattractive.

Indeed, the number of RTC resolutions has risen dramatically with 25 thrifts being sold in Texas during the second quarter of 1990, compared with just 12 Texas resolutions for the previous two and one half quarters.

The second quarter also saw the number of high-cost acquisitions rise, as 25% of the resolutions involved premiums of over 1% of core deposits. Only 16% of the previous deals received premiums of over 1% of core deposits.

The following summaries describe briefly the acquisition strategies of three of the six institutions whose expansion has focused primarily in Texas. Next week's merger column will examine the strategies of four others whose acquisition activity has been partially or exclusively concentrated outside of Texas.

NCNB

NCNB Corp. became the trendsetter in today's era of government-assisted bank consolidation with its 1987 acquisition of First RepublicBank Corp. While others waited on the sideline, NCNB enjoyed the advantages of being the first to negotiate a large transaction with the FDIC in the current pricing climate and shareholders have enjoyed the bounty.

Largely as the result of the FDIC's largesse and NCNB's willingness to seize the opportunity, earnings per share have more than doubled in two years – to $4.44 in 1989 from $2.03 a share in 1987. While that trend will slow down, or partially reverse, the cause is primarily NCNB's real estate exposure in the Southeast and not its expansion into Texas.

In the past six weeks, NCNB's expansion in Texas appears to have slowed down in response to rising prices commanded by the most attractive franchises in RTC and FDIC auctions. The company has strictly adhered to pricing standards that unambiguously reward shareholders.

In pricing terms, NCNB has generally paid up to 1% of core deposits for failed thrifts, and 2% to 3% more for core deposits of failed banks. As the number of Texas transactions involving premiums above NCNB's 1% ceiling have increased, NCNB has slowed down its acquisition program.

Hibernia

Hibernia Corp., a $7.2 billion bank holding company with operations in Louisiana and Texas, defied the odds by remaining continuously profitable throughout the '80s. Only during the first quarter of 1990, when it added $57 million to reserves, did it record a loss.

Since August 1989, Hibernia has moved aggressively into Texas, completing 17 government-assisted bank and thrift acquisitions in the Dallas, Houston, San Antonio, and Austin markets. As of June 30, Hibernia National Bank of Texas had $785 million in assets.

While Hibernia's Texas chairman and president, Larry McIntosh, readily admits that the bank "won't be one of the major players [in Texas] for an extended period of time," Hibernia expanded into Texas at the right time and at a price lower than could be achieved in today's market.

Unlike some other Texas interlopers, Mr. McIntosh claims that Hibernia "puts every dollar back into Texas" that it generates from deposits. Without specifically confirming a price that Hibernia is willing to pay for detractive franchises were still low.

Buoyed by success, Team Bank negotiated to acquire the failed Texas American Banks from the FDIC, and in the process went to market with a third private placement of $175 million. That issue, comanaged by Goldman Sachs and Allen & Co., sold out almost exclusively to investors in the earlier offering, and was actually oversubscribed by $25 million. Today's investor profile includes a 4.9% ownership interest by Goldman.

Texas American combined with Deposit Guaranty in January 1990 to form Team Bank, an institution with 49 offices and close to $5 billion of assets. Team Bank's business strategy revolves around serving upscale individuals and the middle market, defined by Mr. Steinhart as businesses with credit needs ranging from $1 million to $25 million.

Unlike First City Bancorporation of Texas, a large competitor, Team Bank does not invest in HLTs or go much beyond Texas. These parameters mean that for Team Bank, "the biggest challenge is loan growth." As for the future, Team Bank will continue to explore opportunities in Texas, including both banks and thrifts.

Mr. Steinhart notes that Team Bank, with excess capital provided by the latest private placement, plans to "stay within Texas" looking at opportunities that include both "failed and healthy institutions." So far, all of Team Bank's acquisitions have been banks, although the bank did submit a losing bid on Plano Savings, won by Ron Perelman's First Gibraltar Savings at a 1.22% premium to core deposits. ☐

SNL Securities is a publishing and data-base company specializing in banks and thrifts. This article is excerpted from an article in the August issue of *Bank Mergers and Acquisitions,* which explores the acquisition strategies of the 25 most active bank acquirers in the past 18 months.

Dime Posts 102% Rise in Profits, Cites Hefty Net Interest Income

By GORDON MATTHEWS

NEW YORK — The Dime Savings Bank of New York on Tuesday reported a 102% rise in second-quarter profits compared with the same period last year and 8% higher than a year ago.

The company reported net income of $10.1 million, compared with $5 million earned in the same period of 1989. The earnings translated to 44 cents a share, versus 22 cents a year earlier.

Dime Savings is the nation's 13th-largest thrift institution in assets and the 11th largest in deposits, according to industry rankings published by the *American Banker.*

The thrift said its second-quarter net interest income increased by $17.9 million, or 38.5%, to $46.4 million. Partially offsetting this increase was a $4.8 million increase in the loan-loss provision and a $6.4 million rise in other operating expenses.

The thrift reported that nonperforming assets were $754.8 million, or 6.45% of assets, on June 30. That compares with the nonperforming ratio of 3.26% at the same point a year ago and 4.72% at yearend 1989.

Co-Op Loans Improve

Richard D. Parsons, president and chief executive officer, said that "the increase in one- to four-family and cooperative apartment nonperforming assets of $62.2 million during the second quarter."

But nonperforming commercial real estate and multifamily assets rose $31.6 million in the quarter. ☐

Government-Assisted Acquisitions July 9-16

DEALS

Citibank Backs United Telecommunications Bid to Own All of US Sprint

By STEVEN LIPIN

United Telecommunications Inc. has raised $550 million through Citibank that is earmarked for the acquisition of GTE Corp.'s stake in US Sprint Communications Co., according to a source at the bank.

But United Telecommunications, based in Westwood, Kan., said Tuesday that it was not on the verge of buying the 19.9% stake, which would give it full ownership of US Sprint.

A spokesman for United Telecommunications said the acquisition was contingent upon US Sprint's operating income. He did acknowledge, however, that United Telecom president William Esrey has said that it could occur in 1990.

"Nothing is happening," the spokesman said.

Earmarked for Acquisition

Citicorp's Citibank unit, nevertheless, has agreed to provide a $550 million revolving credit bridge loan explicitly for the acquisition, a bank source said.

United Telecommunications confirmed that the company has raised the cash, but said this move was "to be ready." Analysts said it was doubtful the company would raise the bridge loan without plans to use it.

"It's an indication that there's interest in doing it," said Timothy Cain, a vice president at Fitch Investors Service.

United Telecommunications and GTE each owned 50% of US Sprint until last year, when United purchased an additional 30.1% for $600 million. US Sprint was formed in 1986 when the two companies merged their long-distance and data-communications subsidiaries.

Options to Buy and Sell

Under the terms of last year's agreement, United has the option to purchase the remaining 19.9% until Dec. 31, 1995, at book value at the time of exercise. At the same time, GTE has the option to require United Telecom to purchase its remaining interest – essentially a put – at any time between Dec. 31, 1991, and Dec. 31, 1995.

But there is an incentive for United to purchase the stake because book value is expected to increase, analysts said. That suggests "an interest in purchasing it sooner rather than later," Mr. Cain said.

A spokesperson for GTE, which itself is in the midst of a merger with Contel Corp., said the put has not been exercised and that United Telecom has not contacted GTE regarding the sale. "There's been no formal notice," she said.

She added that the Contel merger does not require GTE to sell its stake in US Sprint. "The two are totally separate," she said.

US Sprint has performed solidly, given the increased competition from MCI Communications Corp. and American Telephone & Telegraph Corp., Mr. Cain said. But the growth in US Sprint's revenues and profits are expected to slow.

"AT&T and MCI have been more aggressive in retaining market share. US Sprint's revenues will grow because the market's growing, but growth will be restrained," Fitch's Mr. Cain noted.

In the first quarter, Sprint had operating income of $85 million on net operating revenues of $1.2 billion. □

Wells Fargo Buys Branches From Great American Bank

Continued from page 3

seizure.

After this sale, Great American will still have 81 branches in Arizona, Washington, and Colorado. It plans to continue to originate mortgages on single-family homes in California through about 20 offices. But it will not gather deposits in the state, according to chairman and chief executive officer Robert L. Kemper, who was appointed just three weeks ago.

Fuel for a Buying Binge

Analysts say Wells' bold move will fuel the buying binge of the big California financial institutions. "It is going to accelerate the scramble to stake out positions in California," says Mr. Neier. There has been particularly keen interest in the San Diego market.

Just two weeks ago Security Pacific Corp. won the bidding for the 82 branches of the failed Gibraltar Savings of Simi Valley, Calif. That brings Security Pacific's California branches to 645.

Analysts say it is certain that Wells will close branches, lay off employees, and slash costs as it did with its purchase of Crocker National Corp. Mr. Oster declined to be specific about cost-cutting but said Wells would probably keep 80% of the branches open. Head-office operations are "problematic," he said.

Further Erosion of Capital

Great American also announced that it will take an additional $176 million of loan-loss provisions in the second quarter, further eroding its weakened capital position.

The sale of Great American's California operations will be completed in two phases. The first involves Great American's 52 branches and $4.6 billion in deposits in San Diego, Orange, and Riverside counties plus Great American's operations center in National City and the mortgage-servicing unit there. The $2.4 billion of loans will be included in phase 1, scheduled to be completed in late 1990.

Phase 2, to be completed in mid-1991, will include the remaining 38 California branches. Great American's statement said phase 2 might not be completed, depending on the availability of cash and other assets to Great American.

The transaction is subject to necessary regulatory approvals and the shareholders of Great American. □

Security Sets Gibraltar Target

LOS ANGELES — Security Pacific Corp. hopes to complete in the third quarter its review of Gibraltar Savings assets and liabilities acquired June 29 from the Resolution Trust Corp., said John Kessler senior vice president and chief financial officer.

Under an agreement with the RTC, Security Pacific already has returned a significant portion of the $5.1 billion in assets acquired with the failed thrift.

"We've already put back some of the assets, and some others we plan to sell quickly," Mr. Kooken said. "We haven't made all our determinations at this time, but we hope to in the third quarter."

Security Pacific assumed the $5.1 billion in assets and acquired $4.98 billion in deposits, paying a premium of $141 million for the deposit base.

In addition to the deposit premium, Security Pacific paid $3 million for the option to acquire up to $1 billion of loan assets. The latter figure does not include $17 million in loans on one- to four-family homes that it intends to retain. — Reuters

Mum's the Word for UAL Buyout Banks

By WILLIAM GOODWIN

Even as they canvass the banking community for interest, the five money-center banks leading the financing effort for the proposed union buyout of UAL Corp. are being unusually taciturn with potential members of the general bank syndicate, banking sources said.

"They must be under instructions not to say anything," said one midwestern banker, who met last week with senior syndication officials at several of the five banks.

"Everyone was very tightlipped," he added.

The banks' reagents are the banking units of Manufacturers Hanover Corp., Citicorp, Chase Manhattan Corp., Chemical Banking Corp., and Bankers Trust New York Corp.

The midwestern banker, who asked not to be named, said his institution is interested in committing $25 million to the proposed $4.4 billion UAL buyout.

Who's in Charge?

After three days of meetings in New York last week, the banker said he came away frustrated by a lack of information about the deal from the lead banks, and a sense that no one is in charge.

"We don't know who's running the deal," the midwesterner complained.

Some officials from the syndicate group, however, noted that there are few details because even calling it a "deal" is premature, and specifics are still being ironed out.

"I can understand the frustration," a syndication official at one of the money-center banks said. "But if there were things to talk about, there's nothing to talk about."

The syndication official stressed that there is still no deal on the table.

"We're pretty far away from that point, " he added.

"Testing the market always goes on," without terms being set, another source within the bank group added.

Still Seeking Equity

Apart from the specific loan amount, interest rates, and fees, the lead banks are also said to reach a consensus on a number of other issues, including amortization schedules, and whether the bank loans will be paid back from cash flow or asset sales, the syndication official said.

The banks are also waiting for the buyout group to come up with an outside investor to contribute a portion of the necessary financing.

At the same time, the five banks want to expand the core underwriting group, bankers say.

A Bank of America official declined comment on rumors that the BankAmerica Corp. unit might join the lead bank group.

Aug. 9 Deadline

The union buyout group faces a deadline of Aug. 9 to raise approximately $4 billion in financing for the proposed UAL acquisition.

With the deal being viewed as a bellwether of the LBO market, the five lead banks are understandably cautious, said the portfolio manager of a major bank-loan fund.

"If I were running the syndicate, this would be done perfectly by the book – I'd say this until the deal is out," he said. Still, he expressed surprise that he has not even been contacted by the lead banks.

"We are kind of important to the market. I would have thought we'd be polled," the portfolio manager said.

The banks, however, would not have liked his response: "I'm not going to do the deal," the portfolio manager said.

He said his fund already has enough exposure to the airline industry through its participation in the financing of last year's $3.65 billion buyout of NWA Inc.

Also, the structure of the UAL deal is going to be a "thorny" issue because it lacks the sizable equity component that the market has come to expect, the portfolio manager said. □

Hanover Beats Drum for Forstmann Little Syndicate

By WILLIAM GOODWIN

Manufacturers Hanover Trust Co. will hold a bank meeting Thursday for prospective syndicate members interested in participating in a $1.165 billion loan to Forstmann Little & Co.

The loan will help finance a buyout firm's recently announced offer to buy General Instrument Corp. for $1.6 billion in cash.

As agent bank on the deal, Manufacturers Hanover is offering up-front fees of 0.625% for commitments of $25 million, and 0.875% for $50 million or more.

In addition, the agent is offering a "dollar amount incentive fee for a certain number of commitments in excess of $75 million," a Hanover official said. He would not specify the dollar amounts.

The deadline for commitments is three weeks away.

Bank of Nova Scotia has signed on as a fourth cosagent, joining Continental Bank, Chemical Banking Corp.'s Chemical Bank, and Nippon Credit Bank.

Manufacturers Hanover's commitment now stands at about $350 million, with each of four cosagents committing about $200 million.

Before the additional cosagents were brought in on the deal, Manufacturers Hanover and Cont'nental had committed $700 million and $300 million, respectively.

About 75 institutions were invited to attend Thursday's bank meeting. So far, "the interest looks very, very strong," the Manufacturers Hanover official said.

The loan package, which includes funds for working capital, is priced at prime plus 150 basis points. □

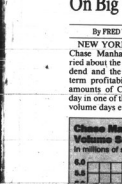
Investors Bid Up Chase's Shares On Big Volume

By FRED VOGELSTEIN

NEW YORK — Investors in Chase Manhattan Corp., worried about the safety of the dividend and the company's long-term profitability, traded huge amounts of Chase stock Tuesday in one of the stock's greatest volume days ever.



But so-called bottom fishing and a buy recommendation from a banking analyst sent the stock up 37.5 cents, to $21.125, at the close.

Other bank stocks, meanwhile, had another volatile day as second-quarter earnings continued to rule the market.

The big movers were NCNB Corp. and Wells Fargo & Co., both up considerably, and the Bank of New York Co., which slipped more than $1 a share. Citicorp was up more than $1 before sliding back to a 12.5-cent gain.

The overall market was flat in active trading as many companies released earnings. The Dow Jones Industrial Average was unchanged, at 2,999.75, after soaring nearly 60 points in the preceding two trading days.

Volume in Chase stock was more than 5.3 million shares, the greatest one-day volume since February 1987 when about 8 million shares were traded, a company spokesman said.

Chase's volume has exceeded 1.3 million shares for the past four trading days; Monday's total was 2.42 million shares. The stock had fallen 12% in six trading days through Monday, from $23.625 July 9 to $20.75, a 52-week low.

The Chase board is expected to decide today whether to pay its regular quarterly dividend. Although management has said it would recommend the dividend be paid, experts said many investors were worried, nonetheless.

"There is controversy on whether the dividend is sustainable and what the board will do," said Ronald I. Mandle, an analyst at Sanford C. Bernstein & Co. He said he thinks the dividend is sustainable.

In fact, despite lower than expected second-quarter earnings at Chase, Mr. Mandle said, he is raising his rating on the stock from mildly positive to a buy. "They have enough retained earnings to meet the regulatory requirements [for the dividend] and enough capital," Mr. Mandle said.

Also, he said, a clear implication emerged in the company's recently announced restructuring that earnings will improve significantly by 1991. Bernstein is Chase's largest stockholder, with roughly 6% of the shares outstanding.

Speculation that the dividend cut could come as early as today developed Monday after Chase, for the second quarter in a row, did not cover its dividend payout with earnings.

TUESDAY'S MARKET

Wells Fargo & Co., closed up $1.50 a share, at $80.50; NCNB Corp. closed up $1.375, at $37.875; and Citicorp closed up 12.5 cents, at $21.875. Bank of New York closed down $1.125 a share, at $27.50.

Wells and Citicorp reported earnings in line with or better than expectations. Wells also announced it was acquiring Great American First Savings Bank for $500 million. NCNB reported better than expected earnings Monday.

Bank of New York reported lower than expected earnings after the close of trading Monday. □

CAPITAL

Worries Over Japanese Debt Issues Wane

By KELLEY HOLLAND

Contrary to initial concern that Japanese bank debt issuance would overwhelm the U.S. market, the banks are not expected to crowd out their U.S. counterparts in the domestic debt markets, capital markets officials say.

When Sumitomo Bank International Finance announced last month it would issue $500 million in subordinated bonds in the United States, domestic bank treasurers worried that a series of offerings from overseas would siphon demand for their own bonds.

Buyers Outside U.S.

But now that the Sumitomo offering has come to market, it is apparent that about 60% of the offering has been sold to investors outside the United States, said an official at Goldman, Sachs & Co., sole underwriter of the deal. Thus, concerns over crowding out appear excessive, or at least premature.

"I don't really see a crowding-out effect," said Raymond D. Warner, a vice president at Salomon Brothers Inc. "A lot of the Yankee product has always traded overseas, and that will probably continue to be the case."

About $300 million of the deal was sold to foreign investors, half in London and half in Japan, according to Jon Winkelried, a vice president in charge of new issues at Goldman. American investors bought only about $200 million, no more than they would have bought of a typical domestic offering.

Other Issues Likely

To be sure, other Japanese banks are likely to try to follow Sumitomo's lead. Two city banks are reported to be "very hot to do something," one capital markets specialist said, and other banks there are considering similar moves.

"I think you could expect to see a substantial amount" of Japanese deals, said Nicholas B. Paumgarten, a managing director at First Boston Corp. "Once these things are done, lots of others may follow."

Mr. Paumgarten estimated that Japanese banks could issue more than $2 billion in subordinated debt this year if the Ministry of Finance continues to allow them to issue bonds to raise new capital.

Ministry Gives Approval

The ministry gave Japanese banks the authority last month to issue subordinated loans, but said the decision to allow subordinated bonds would be made on a case-by-case basis. The Sumitomo bond offering was the first to be approved after the pronouncement.

Like the Japanese, European banks may also try to issue debt in the United States. "The success of the Sumitomo deal may draw some of them in," said another capital markets pro.

Moreover, investment banks are likely to work hard to increase debt issuance by foreign banks. U.S. banks have been slow to come to market this year, and takeover activity has also been light, so investment bankers have had little activity from which to reap fees.

Sumitomo's issue, priced last Wednesday at 102 basis points over comparable Treasuries, was all sold Wednesday afternoon following the pricing. The bonds have not traded actively since then, but market sources said they were holding firm at their initial spread over 10-year Treasuries.

MARKET MONITOR

Moody's Investors Service reduced its ratings on debt of Midlantic Corp. Monday, citing weakening asset quality.

Midlantic's senior debt rating was cut to Ba3 from Ba1 and its subordinated debt rating to B1 from Ba2. Bank subsidiaries' ratings on long term deposits were downgraded to Baa2 from Baa2, on LOC-backed long term issues to Ba2 from Baa3, and on LOC-backed short term issues to Not Prime from Prime-3.

* * *

Standard & Poor's Corp. reduced ratings on several New Jersey banks, citing weak asset quality and a deteriorating commercial real estate market.

Summit Bancorp's senior debt rating was cut to BBB+ from A; UJB Financial's preferred stock rating was lowered to BBB- from BBB, and Central Jersey Bancorp's subordinated debt rating was cut to BB+ from BBB. □

FINANCIAL TECHNOLOGY UPDATE

The NCR Financial Tower Thrift System with Starcom interface automates a range of teller and platform services to improve handling of deposits, window posting, new account processing and loan processing.

The Financial Plus® teller platform from Systems Concepts, Inc. and the Cross Sell Manager™ platform application are combined with the NCR 5067/5267 Financial Workstations and interfaced via a Local Branch Network (LBN) through an NCR TMX Tower branch processor to the NCR data center. This combination delivers the versatility and flexibility to speed transaction processing and reduce long service lines…which allows for more concentration on customer satisfaction.

You can save valuable branch space by integrating NCR's 5085 and 5084 through the wall ATMs and the 5285 Business Night Depository. The result is one footprint rather than two. Commercial cardholders can deposit bags and receive a receipt that verifies the location, date, time, and amount deposited…a valuable service to help you increase your commercial account base.

The NCR 5682 is the next step in self-service. Account service transactions are integrated to the platform via the NCR 5682. Your customers can perform a wide range of financial transactions without the assistance of a customer service representative. Plus, unequaled custom graphics and VGA videodisc capabilities attract customers and promote services.

On the platform side, valuable information is gathered increasing your ability to track account needs. Cost and time is saved for both customers and branch personnel. As competition increases, financial institutions are turning to integration technology for solutions to improving and expanding their levels of customer services.

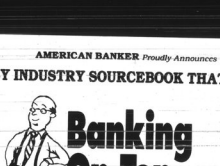
AMERICAN BANKER *Proudly Announces*

THE ONLY INDUSTRY SOURCEBOOK THAT MATTERS...



Banking On Top Bankers-1990

THE INDEX FOR THE 90'S

WHAT EXACTLY IS BANKING ON TOP BANKERS?

IT IS A 6" BY 9" BOUND SOURCEBOOK THAT GIVES YOU THE TOP 1000 BANKING PROFESSIONALS AT YOUR FINGERTIPS. THE BOOK IS COMPRISED OF THESE INDUSTRY LEADERS' CAREER HIGHLIGHTS, BIOGRAPHICAL INFORMATION, PHOTOGRAPH, ADDRESS, PHONE NUMBER AND OTHER ESSENTIAL INFORMATION.

THE THREE "EASY TO USE" SECTIONS INCLUDE:

I. TOP BANKERS BY PROFESSION

• BANKING ELITE • TOP BANK ANALYSTS • TOP STATE REGULATORS • • BANKERS TO WATCH • TOP BANK LEGISLATORS • TOP BANK LAWYERS • • TOP INVESTMENT BANKERS • TOP FEDERAL REGULATORS • • TOP BANK CONSULTANTS •

II. TOP BANKERS BY AREA OF EXPERTISE

• ASSET SECURITIZATION • COMPLIANCE • FIRRE ACT • RETAIL BANKING • • BALANCE SHEET MANAGEMENT • CORPORATE RESTRUCTURING • • INTERNATIONAL BANKING • THRIFT SURVIVAL • CAPITAL GUIDELINES • • COST CUTTING • MORTGAGE-BACKED SECURITIES • TECHNOLOGY • • COMMERCIAL LENDING • ESOP'S • BANK RESTRUCTURING •

III. LISTINGS

• TOP COMMERCIAL BANKS • TOP INTERNATIONAL BANKS • • TOP THRIFTS • TOP COMMUNITY BANKS • STATE BANKING ASSOCIATIONS •

WHY SHOULD YOU ORDER A COPY?

BECAUSE WE HAVE DONE ALL OF YOUR RESEARCH FOR YOU. SO NOW YOU DON'T HAVE TO SPEND COUNTLESS DOLLARS FINDING LEADING BANKING PROFESSIONALS TO ANSWER YOUR QUESTIONS. ALSO, NO OTHER SOURCEBOOK GIVES TO YOU THE TOP BANKING PROFESSIONALS BY AREA OF EXPERTISE AND SUBJECT CATEGORY.

SO ORDER **BANKING ON TOP BANKERS** TODAY. THE SOURCEBOOK THAT IS "CHOCK FULL OF INFORMATION, NOT CHOCK FULL OF AD'S".

TO ORDER OR TO FIND OUT MORE INFORMATION: CALL US AT (212) 943-2221 OR MAIL IN THE BELOW ORDER FORM. PURCHASE MORE THAN 1 BOOK AND RECEIVE A 20% DISCOUNT.

IT'S MORE THAN A DIRECTORY

. . . IT'S A WELL-ORGANIZED SOURCEBOOK . . . A LOCATOR OF FINANCIAL SERVICES DECISION-MAKERS . . . AND THE REFERENCE TOOL THAT YOU WILL NOT BE ABLE TO DO WITHOUT.

Illinois Opening Leaves Acquirers Unenthusiastic

By NANINE ALEXANDER

CHICAGO — Illinois will open its doors to full interstate banking on Dec. 1, but so far no acquirers are waiting in line.

As the trigger date nears, banks from outside the Midwest have yet to stake any claims in the Land of Lincoln. Stocks of Illinois-based banks are rallying less than expected in anticipation of potential acquisitions.

Analysts attributed the lack of activity mainly to the high price expectations of Illinois bankers and the preoccupations of potential buyers with their own asset quality and battered share prices.

ANALYSIS: *Follow-up on the news*

Illinois banks "all have this notion of selling for three times book," said Stuart I. Greenbaum, banking professor at Northwestern University's Kellogg Graduate School of Management. "They all need a reality transplant," Mr. Greenbaum said.

"Either premiums are going to come down or there's going to be a lot less activity than anticipated," said Henry C. Dickson of McDonald & Company Securities, Cleveland.

Regulatory Inhibitions

Price are not the only factors keeping merger activity dormant, said Joseph F. LaManna, bank analyst for William Blair & Co., Chicago. The current regulatory climate has made acquirers reluctant to buy anything that has not been throughly scrutinized by bank examiners.

The thrift alternative may also be discouraging some potential bank mergers, said David D. Olson, senior vice president and an investment banker for Donaldson, Lufkin & Jenrette Inc., based in Chicago. Banks that already have a presence in Illinois and wish to expand may find it more attractive to acquire a thrift with federal assistance, gaining clean assets, market share, and deposits for a modest premium.

Sooner or later, though, banking companies with nationwide aspirations are expected to enter the Illinois market – particularly Chicago.

"If you're going to have a national franchise, you can't ignore Chicago," said Michael Milunovich, analyst with Robert W. Baird & Co., Milwaukee.

Easy Market to Enter

Illinois is a relatively easy market to enter. No banking

House Chiefs Ask Stiff S&L Crime Terms

By ROBERT M. GARSSON

WASHINGTON — The House Democratic leadership rallied Wednesday behind legislation that would stiffen penalties for bank-related crimes and establish a national commission to investigate what caused the savings and loan crisis.

The legislation, sponsored by Rep. Charles E. Schumer, D-N.Y., was to be offered late Wednesday or early today as an amendment to the crime bill now before the House Judiciary Committee. The bill could be on the House floor as early as next week.

Foley, Gephardt Backing

Mr. Schumer's package gained the backing of House Speaker Thomas S. Foley, D-Wash., and Majority Leader Richard Gephardt, D-Mo., who appeared at a press conference to demonstrate Democratic solidarity. The initiative is the party's effort to recapture the moral high ground as Congress and the Republican administration jockey over who is doing the most to resolve the S&L crisis.

Recently, President Bush held what amounted to a pep talk for U.S. attorneys he pledged new resources to prosecute crimes against S&Ls. The Senate followed last week with legislation that would permit life sentences for the worst offenders, the so-called S&L kingpins.

Mr. Schumer said the 30-year prison terms mandated in his bill are "plenty tough."

In a thinly veiled criticism of the Senate provision, Mr.

Greenspan Hints Fed May Cut Rates Again

By LINDA CORMAN

WASHINGTON — The tightening of bank credit that prompted the Federal Reserve to reduce short-term interest rates last week is likely to continue, and may lead to further easing by the central bank, Fed Chairman Alan Greenspan said Wednesday.

In his most detailed assessment of the purported credit crunch and the recent effort to counteract it in monetary policy, Mr. Greenspan said the drop in the overnight fed funds rate may not have been sufficient to overcome the perception of tight credit.

More 'Scrutiny' Ahead

"The process of credit restraint may not have reached completion, and some of its effects may not yet have been

See **GREENSPAN** page 26

Greenspan's Main Points

- Banks in recent weeks may have "slipped over the line to overly restrictive lending standards."
- Bank lending may get tighter before easing.
- There is "no real basis" to expect a repeat of the S&L crisis in commercial banking.
- Economic slowdown remains unlikely, but there has been "a shade tilt toward a recession."

Yields Rise on Bank Debt

By KELLEY HOLLAND

NEW YORK — A spate of disappointing second-quarter earnings figures sent the yields on bank debt rising in recent days, continuing their upward trend of the past two weeks.

The increase in yields could mean a rise in cost of funds for many large banks, a looming problem at a time when regulatory pressure could warrant additional capital requirements beyond the 1992 risk-based capital guidelines.

"As things stand now, the risk for all banks is that getting capital is going to be increasingly expensive going forward," said Andrew J. Cooley, a managing director at Merrill Lynch Capital Markets. "As loan quality suffers, so do bond prices in the marketplace."

Market May Be Unfriendly

Admittedly, the change has no immediate effect on banks' funding costs. But in light of Federal Reserve Chairman Alan Greenspan's comments last week and again on Wednesday in which he advocated higher capital requirements, banks may be forced to step back into a po-

Trust Areas Gained Some Glitter in '89

By RICHARD LAYNE

NEW YORK — Growth in large U.S. banks' trust income and assets bounced back last year after sputtering in 1988, indicating that the leading institutions are succeeding in their search for profits from the once sleepy function.

The 1989 increases – 12.4% in income and 19.3% in discretionary assets at the 100 largest trust banks – marked a return to the growth rates of the mid-1980s, according to the *American Banker*'s annual trust survey. The industry recovered from 1988 growth rates of about 4% for both assets and income that occurred in the aftermath of the 1987 stock market crash.

Growth in the market value of trust assets was 30% or more at

PEOPLE *in the news*

Consultant Alden Toevs Sees a Dangerous Stampede

By KELLEY HOLLAND

NEW YORK — Seeing a herd mentality at work can bother a Westerner, and Alden L. Toevs, a native Oregonian and First Manhattan Consulting Group's newest partner, is no exception.

Banks are rushing into fee-based activities, he said, and right now too many of them are chasing too few lines of business. That means there could soon be excessive competition in those businesses, and banks will be entering markets that could be unprofitable by the time they get there.

Alden L. Toevs

"Too many people chase the same fees," he said. "It's a herd instinct into a boxed canyon."

Mr. Toevs should know. He spent the past seven years advising banks on strategic issues, such as risk management, while a principal at Morgan Stanley & Co. Since Monday, he has been working on the same issues from his new post as a managing vice president in the capital strategy and risk management practices at First Manhattan, a New York-based financial services consultancy.

Mr. Toevs also helps banks on questions of asset/liability management. Just as he wishes banks would take a broader look at fee-based businesses, he would like to see them exchange asset/liability management for a more integrated focus on capital management.

"Often, the way banks approach asset/liability management is to look at the interest rate sensitivity of assets, then of liabilities, and then net them," he said. "They should just start looking at the interest rate risk of capital."

Regulatory scrutiny is one reason banks should give more and more attention to their capital strength relative to the interest rate risk in their balance sheets, Mr. Toevs said.

"Capital management has been given a big push by the whole regulatory focus on capital and on having capital adequate to the interest rate risk inherent in the business," he said.

Taking a Closer Look at Mortgage-Backeds

One way banks can more accurately measure and manage their interest rate risk is to better analyze their mortgage-backed securities portfolios, Mr. Toevs said. He is one of the original developers of option-adjusted spread analysis, a widely used system of valuing the embedded options in mortgages and corporate securities.

Banks have been investing billions of dollars in mortgage-backed securities, particularly since thrifts began selling their holdings last year, so valuing those instruments is more important than ever.

Mr. Toevs taught at the University of Oregon before joining Morgan Stanley. While there, he was granted a visiting scholar to the Federal Reserve Bank of San Francisco in 1982 and, the following year, the Federal Home Loan Bank of San Francisco. He has a Ph.D. in economics from Tulane University and has done post-doctoral work at the Massachusetts Institute of Technology.

He serves on the editorial boards of several publications, including *The Financial Analysts Journal* and *The Journal of Securities Markets*.

Mr. Toevs lives in Manhattan with his wife and describes himself as an aggressive cyclist who is avidly rooting for Greg LeMond, the American competing in the Tour de France. □

1st Interstate Profit Off 8%; Realty Hurts Fleet and PNC

First Interstate Bancorp. announced Wednesday that its second quarter profits fell 8% from the year-earlier level, to $95 million, but the company reported continued improvement in reducing its heavy load of nonperforming assets.

Meanwhile, problem real estate loans continue to plague Fleet/Norstar Financial Group Inc. and PNC Financial Corp. Fleet, based in Providence, R.I., said its profits fell 33% to $60 million, and PNC said its earnings declined 13% to $108.9 million.

Also reporting Wednesday was Continental Bank Corp., which announced a $57 million loss and First Bank System Inc., which announced a 43% drop in earnings to $29.9 million.

Wednesday's earnings announcements were in line with analysts' expectations and most of the bank stocks settled around pre-announcement levels. First Interstate was unchanged at $39.875; Fleet was unchanged at $18.875; PNC was unchanged at $43.25; Continental was unchanged at $13.375. First Bank was down 12.5 cents to $14.875.

Despite the dip in earnings, First Interstate's new chairman and chief executive, Edward M. Carson, touted the company's "steady progress" in cleaning up its operations. The Los Angeles bank is suffering from continued problems in Arizona and Texas.

"We are paying particular attention to improving the quality of our loan portfolio, and this effort is reflected in the fact that the level of nonperforming assets decreased significantly during the first half of the year," Mr. Carson said in a statement.

FIRST INTERSTATE

Bulk sales of nonperforming loans as well as more traditional workout methods have helped pare down First Interstate's problem loans. Nonperforming assets totaled $1.88 billion, down from $2.047 billion at the end of the first quarter.

First Interstate Bank of Arizona lost $3.5 million in the second quarter, and First Interstate Bank of Texas reported a $14 million profit.

First Interstate set aside $117.7 million for possible loan losses, compared with $166.5 million in the second quarter a year earlier and $91.8 million in the first quarter ended March 31, 1990.

Despite strict cost cutting, First Interstate's expenses were up 5.8% to $626.9 million in the second quarter. This was mostly due to expenses related to the maintenance and disposition of problem real estate.

For the first six months of 1990, First Interstate earned $222.3 million , off 6% from the $235.3 million earned in the first six months of 1990.

FLEET/NORSTAR

Fleet's lower earnings were largely due to a $90 million loanloss provision, only partially offset by a special $35 million gain from the sale of a portion of its credit card portfolio and a change in its investment plan. In contrast, the company took a $425 million loan-loss provision in first quarter, which led it to report a $98 million loss.

"These problem real estate loans are not going to be gotten rid of any time soon," said analyst Christoph Kotowski of Oppenheimer & Co., New York. "We're going to be lugging those

7 States Agree To Share Data On Foreign Banks

By ROBERT TRIGAUX

WASHINGTON — Responding to the expansion of foreign banks in the United States, regulators in seven large states said Wednesday they have agreed to coordinate the supervision of international banks in their jurisdictions.

The pact means that any problems uncovered at a foreign bank branch or agency by one state supervisor will be shared with the six other regulators.

State agencies also will share basic data on foreign banks' financial conditions, examination ratings, business practices, compliance records, and relationships with parent companies and foreign supervisors.

State coordination of foreign bank activities is part of a larger push by state banking agencies to develop an efficient system for supervising any multistate banking operation.

National Networks Eyed

Observers on Wednesday applauded the initial plan to share data on foreign bank operations, but they said states eventually will have to come to terms with the supervision of banks – domestic or foreign – that have nationwide branch networks. State banking departments, through the Conference of State Bank Supervisors, have begun work on this plan.

The arrangement to share information on foreign banks will expand upon the sharing of information between state supervisors and the Federal Reserve Board, which helps regulate foreign bank activities in the United States.

"What we do with the Federal

Visa Beefing Up Software That Tracks Business Usage

By RICHARD LAYNE

NEW YORK — In an effort to gain share in the corporate card market, Visa International said Wednesday it would begin offering new systems for its business cards.

The new software, which will be available in August, provides corporate managers with more detailed reports on the travel and entertainment expenses of employees, including airline travel and international spending. Managers rely on the reports to set budgets and negotiate discounts with frequently used hotels and airlines.

Banks that belong to the card association pay a annual fee to run the software on their own systems.

American Expressis Leads

Visa launched its business card product a year and a half ago to assist member financial institutions in penetrating the $135 billion business travel and expense market. American Express Co. dominates the market, although it does not release figures on corporate cards in circulation. MasterCard U.S.A. and Diners Club also have a strong presence.

MasterCard does not offer airline reports and international spending reports, said Stephen Schapp, senior vice president at Visa. American Express, he said, does not offer an international spending report.

Corporate cards tend to be less profitable for banks than mature personal credit cards, Mr. Schapp said. But corporate cards are typically issued en masse, making it cheaper to acquire new business customers than personal credit customers. For some banks, offering a business card to customers strengthens the relationship with them.

Room for Growth

Mr. Schapp estimated that seven million corporate cards are in circulation, but there is significant room for growth. The market could could top off at 15 million cards, he said. For Visa, the potential for growth in business cards rivals that of gold cards.

"The majority of purchasers in this market are with personally held cards," said Mr. Schapp. "We see opportunities to tap those personally owned cards and to convert them to business cards." □

ABA Sees Some Postage Victories

Group Takes Heart in Deluge of Written Testimony

By JEANNE IDDA

NEW YORK — Based on the flood of written testimony presented to the Postal Rate Commission on Monday, the American Bankers Association believes it can look forward to some modest victories in its fight against proposed rate increases.

"I do not feel certain we will win all the points raised, although I think they are all justified," said Perry D. Quick, a principal with law firm Quick, Finan & Associates in Washington, who is representing the ABA in the rate case. "I think we should win some specific victories."

Mr. Quick said the bankers could win higher discounts for presorting and bar coding their mail and the elimination of an accounting fee the Postal Service has proposed that would effectively raise the cost of business reply mail.

Accounting Criticized

The cost-changing written critique of the Postal Service's plan to raise $48 billion a year in revenue, the ABA attacked the service's cost-accounting methods. The point of greatest contention is a proposed 5-cent hike in rates for first-class mail that bankers say would put a disproportionate burden on first-class mailers.

As the largest users of first-class mail, bankers sided the increase could cost the industry $250 million a year.

In its testimony, the ABA said an increase to 30 cents was unjustified and that at most a 4-cent increase should be granted. Each penny saved in first-class rates represents $50 million a year for the industry, according to the ABA.

> **"I agree in general that the Postal Service is asking for more money than is absolutely necessary."**
> **Stephen Gold** *U.S. Postal Service*

Accusation by ABA

The ABA also argued that the Postal Service was taking advantage of its monopoly over first-class service to cut increases in other areas where it faces competition, such as in third-class bulk mailing.

"The U.S. Postal Service spent many months putting together this rate case, and we stand by the numbers," said Robert Hoobing, a spokesman for the Postal Service.

The Postal Rate Commission's Office of the Consumer Advocate has until June to review the testimony submitted by more than 100 witnesses, representing interests ranging from third-class bulk mailers to Federal Express Corp.

Agreement by Unit

"I agree in general that the Postal Service is asking for more money than is absolutely necessary," said Stephen Gold, director of the consumer office.

"They have a number of items in their request that give them more money" than their expenses, Mr. Gold said. The Postal Service is not allowed to make a profit.

The prepared texts will be reviewed and evaluated by the Postal Rate Commission over the next few months. In September, witnesses will present oral testimony, with rebuttals scheduled for October and the commission's decision due Jan. 4.

An Earlier Victory

In 1987, during the last rate case, the Rate Commission granted several of the ABA's requests, including a reduction in business reply mail and discounts.

The Post Office breaks down its revenue-raising proposal by each class of mail.

Among other complaints, the ABA has criticized the Postal Service's proposed 2-cent discounting mail that banks have presorted or bar coded. The proposed discounts are not enough to reflect the Post Office's savings, the group argues.

"The Post Office is appropriating the cost savings," said Mr. Quick. "Based on detailed assessments of the Postal Service's cost structure, we have enough information to compare the costs of a presorted letter with a non-presorted letter."

Mr. Quick said that the Post Office saves 5 cents to 10 cents for each presorted letter, but is suggesting only a 2-cent discount for most presorted mail. "We say at a minimum [the discount] should be 5 cents," he said. □

Harris Trust Offering Electronic Account Statements

By RICHARD LAYNE

NEW YORK — Harris Trust and Savings Bank has joined a handful of cash management providers that offer electronic statements to customers.

The Chicago bank, a subsidiary of Bankmont Financial Corp., transmits electronic statements to customers' personal computers or mainframes via a communications technology called electronic data interchange. Harris began a pilot program in January with three customers of its electronic account analysis service.

Corporations that use cash management services have long complained that bank bills are difficult to read and compare with their own information.

Format Being Developed

The National Corporate Cash Management Association developed a standard format for bills last year. American National Standards Industry, an independent standard-setting organization that has representatives from many industries, is turning that paper format into an electronic format but is months away from being done.

Harris is part of a small group of banks, including the flagship subsidiary of Chase Manhattan Corp., making the service available before electronic formats are standardized.

"Our customers are asking for this service now, so we are offering it now," said Donald Zyck, a Harris vice president. "At a large company, it saves days and weeks of their time," he said, because managers no longer have to check paper records against each other. □

ULTIMATE WEAPON AGAINST CONSUMER CREDIT FRAUD

HAWK™ was developed by Trans Union to detect potentially fraudulent credit applications. Relying on the industry's largest file of fraud information, it is the most effective and cost-efficient fraud-alert system credit grantors can use to help keep costly frauds off their books. Write or call Trans Union, 111 W. Jackson Blvd., Chicago, IL 60604, (312) 431-5100.

TRANS UNION Leading the way.

"After we had looked hard at our data processing costs, we switched to Citicorp's Resource Manager. We're glad we did."

"The U.S. Air Force Comptroller had challenged Computer Sciences to achieve a factor of six improvement in software productivity. We found that our data processing had to be a whole lot more effective, and Citicorp Information Resources helped us do it more effectively," says William A. Fitzsimmons, President and CEO, Computer Sciences.

"When Citicorp Information Resources told us Resource Manager would let us lower our costs and increase productivity in the same operation, we believed it.

"Now Citicorp provides the data center, including hardware and software, for our entire operation.

"We've had no fun without without giving up control.

"The biggest thing we've got from Citicorp is time. Time to do the things we've always wanted to do, but never had the time for. Time to plan for the future. Time to be proactive instead of reactive.

"Now Citicorp provides the data center, including hardware and software, for our entire operation.

COMMENT/ *By Stephen H. Axilrod*

Fed, Despite Recent Easing, Keeps Brakes on Inflation

The Federal Reserve Board has eased monetary policy a notch in an effort to offset credit tightening at banks and other depository institutions. That was the clear implication of Fed Chairman Alan Greenspan's testimony last week at the Senate Banking Committee hearing on bank capital, confirmed at Wednesday's monetary policy hearing.

As indicated in last month's column, the weakness of money supply over the past few months suggested that the Fed might in practice – given the change in institutional lending attitudes – have restrained the bank reserve base, and hence the money supply, more than it intended. In that case, it would be quite natural to provide more reserves and let the money market ease a bit further.

The expected result would be more accommodative market conditions and more liquidity in the hands of the public, helping to offset the reduced accommodation and greater desire for liquidity at banks.

Mr. Axilrod is vice chairman of Nikko Securities Co., New York.

The recent easing does not represent any lessening in the Fed's continuing effort to constrain inflation. So long as the money supply (particularly the M2 version) is not running high in the Fed's longer-run target ranges, the Fed remains on a rather restrictive course.

Elusive Money Trends

Such a statement about the money supply sounds more unequivocal than it should. Money trends in the aggregate are fiendishly difficult to interpret, as everyone knows by now. They cannot be judged without also looking at the velocity of money, which itself depends on interest rates (representing the cost of investment alternatives to money) and also on public attitudes independent of interest rates.

If velocity showed an independent tendency to rise sharply, that could indicate an increase in inflationary expectations and a flight away from money. If turnover showed an independent tendency to decline sharply, that could indicate the public wants a lot more liquidity for cautionary reasons (as occurred temporarily after

the October 1987 market crash).

In current conditions – with velocity not showing unusual independent tendencies – it seems reasonable to interpret sluggish growth in money as indicating that monetary policy had become a little tighter than intended. That is by no means a reversion to the monetary targeting of the early '80s, but it does suggest that money cannot be, and is not being, entirely ignored in monetary policy operations.

This recent episode also brings up the vexing question of the relationship between regulatory and monetary policies. Ideally, they should be quite separate. That is, the economic objectives of monetary policy should not be influenced by regulatory policies to assure the soundness of individual institutions and the banking system.

But the implementation of monetary policy has to take into account how banks are responding within an existing economic and regulatory environment.

Regulatory decisions affecting the conduct of banking should be based on the nation's goals for a competitive, safe banking system – not on the needs of monetary policy. The U.S. banking system is clearly in need of more, not less, scope for operations in light of the evident globalization of finance.

I do not necessarily mean that the banks should be charging into the securities business, where competition is already fierce and profit opportunities limited. Nor do I mean that bank capital standards here are too high. Given the loan experience of the past several years, they surely are not.

U.S. banks are at a disadvantage in size. They cannot accumulate capital and deposits to compete effectively against the truly nationwide banks of other major countries.

Limitations on interstate banking here are eroding, but it would be a great help if they were eased, with a little congressional push. The European Community's banking directive will let banks chartered in one country operate in other countries of the community.

It should not be beyond the wit of the more culturally integrated United States, which already has national banking authority, to move more rapidly toward nationwide banking – before all the good international markets are gobbled up by the growing banks of Europe and Asia. □

THE LOBBYISTS

Kennedy Bill Would Tax the Wealthy To Fund S&L Bailout

The **Financial Democracy Campaign,** a loose coalition of labor, consumer, church, and organizations, begins lobbying today for a bill that would tax the wealthy to pay for the savings and loan cleanup.

The coalition formed last year in response to the mounting cost of the S&L bailout to U.S. taxpayers. Among its victories was an amendment sponsored by **Rep. Joseph P. Kennedy 2d,** D-Mass., that beefed up anti-redlining laws. Another, sponsored by **Rep. Henry B. Gonzalez,** D-Tex., created industry-financed low-income housing.

A defeat came on a separate Kennedy proposal to finance the bailout with a special tax. This year, however, the coalition believes a new effort, also led by Rep. Kennedy, has a shot at making it to the President's desk.

"The environment has really changed," said **Steve Kest,** executive director of the **Association of Community Organizations for Reform Now,** or Acorn, which took a lead in forming the Financial Democracy Campaign. "People are extremely angry over the cost of the bailout."

Rep. Kennedy was scheduled to announce his new initiative this morning, at a press conference attended by representatives of the Financial Democracy Campaign and consumer advocate **Ralph Nader.**

Acorn is known for its confrontational tactics. Earlier this week, the group demonstrated outside the Chicago headquarters of the U.S. **League of Savings Institutions.** After U.S. League president **Frederick Webber** finally invited representatives up to talk, Mr. Kest presented him with a bill for $1.4 trillion – his estimate of the cost of the bailout.

Housing Groups Fight FHA Overhaul

An omnibus housing bill advancing to the House floor as early as today has mortgage insurers and housing industry groups squaring off over a Bush administration plan to revamp the government's flagship home-ownership program.

Girding themselves for battle with the **Mortgage Insurance Companies of America,** home builders, mortgage bankers, and Realtors have lined up support for an alternative Federal Housing Administration reform proposal to be offered by **Rep. Bruce Vento,** D.-Minn., **and Rep. Thomas Ridge,** R.-Pa.

Growing losses are consuming the capital of FHA's mutual mortgage insurance fund, prompting Housing and Urban Development Secretary **Jack Kemp** to warn that the fund backing nearly $300 billion of single-family mortgages could be broke by the end of the decade. Now all the players are picking through a report by **Price-Waterhouse,** the accounting firm that examined ways to restore the FHA program to financial health, for clues on how to stop the fund's slide.

A plan was assembled by the Bush administration to levy risk-based mortgage insurance premiums and end financing of most closing costs. Approved by the Senate in late June, it would increase the FHA's current 3.8% mortgage insurance premium on principal to as much as 7.6% for borrowers who put down less than 5% on a home. The borrowers would pay supplemental annual premiums for up to 15 years.

Mortgage insurers – still smarting over a measure enacted last year that raised the FHA single-family loan limit to $124,875 – favor the plan, saying it would ward off foreclosures. "This isn't a matter of just putting people into homes; you have to keep them there," said **Suzanne Hutchinson,** executive vice president of the mortgage insurers' group.

S. Hutchinson

The **Mortgage Bankers Association,** the **National Association of Home Builders,** and the **National Association of Realtors** disagree. They say the plan would put home ownership out of reach for up to 100,000 families a year. They endorse the Vento-Ridge alternative, which drops the initial premium to 1.35% but requires all borrowers to pay an extra 0.5% annual premium.

And now **Consumers Union** has taken up their cause. "The Vento-Ridge proposal shows that we can save the program without killing the dreams of first-time homebuyers in the process," said **Michelle Meier,** government affairs counsel.

The housing industry groups asked Price Waterhouse to reassess the fund's health using cheerier assumptions. Price Waterhouse acknowledged that interest rate, unemployment, house appreciation, and inflation scenarios and policy initiatives suggested by the groups add up to a more robust FHA.

IRS Proposal Would Tax S&Ls' Bad-Debt Reserves

Healthy thrifts that back away from real estate lending or switch to commercial bank charters, beware: A tax-hungry Internal Revenue Service is eyeing your bad-debt reserves.

The **National Council of Savings Institutions** warns that some thrifts may be taxed into insolvency by an IRS ruling that could drain them of more than 30% of capital. **Mark Riedy,** the trade group's president, and **James O'Connor,** its vice president for tax, will take on the IRS position at a briefing Tuesday.

Mark Riedy

For decades, the government has stimulated mortgage lending by permitting thrifts to cushion themselves against future loan losses by deducting bad-debt reserves from income. Now the IRS is tightening the rules that trigger a recapture of the subsidy, pulling into its revenue stream the bad-debt reserves of thrifts that obtain commercial bank charters or whose residential mortgage lending drops below 60%, the National Council of Savings Institutions says.

MARKETING/ADVERTISING

LOBBY OR SALESROOM? Ford is displaying two redesigned auto models in lobbies of its subsidiary First Nationwide Bank as part of a cross-selling campaign for the thrift's checking accounts.

Ford and Affiliate Thrift Pitch Each Other's Wares

By SAM ZUCKERMAN

SAN FRANCISCO — Call it the ultimate cross-selling campaign.

First Nationwide Bank, San Francisco, is pitching the cars of corporate parent Ford Motor Co., and Ford is promoting First Nationwide checking accounts. The campaign is running seven weeks, highlighted by "The Drive to Win" sweepstakes at 28 First Nationwide branches in Northern California. Grand prizes in the contest are new Ford and Mercury autos.

The campaign was made possible by a provision of last year's thrift-bailout law that repealed a ban on joint marketing ventures between a thrift institution and its nondepository affiliates. Experts said they know of no other such joint promotion.

Thrifts "many times have participated in joint promotions with [unaffiliated] auto dealers," said Douglas Adamson, executive vice president of the Bank Marketing Association. "But I'm not aware of nonfinancial affiliates promoting in branches."

Several thrifts are owned by insurance companies; only a handful are affiliated with nonfinancial companies.

But restrictions will be relaxed on thrift ownership, and many companies will want to carry out joint marketing campaigns with their deposit-taking subsidiaries, said Samuel J. Baptista, director of the Financial Services Council, a Washington trade group lobbying to remove limits on ownership of financial services companies.

Goal Is to Gain 3,000 Checking Accounts

First Nationwide aims to add 3,000 checking accounts in Northern California. The nation's third-largest thrift, with $29.1 billion in assets, it also wants to accentuate its ties to rock-solid Ford, which presumably would help distinguish it from some of its shakier industry colleagues. And Ford foresees access to potential car buyers.

The two grand prizes in the sweepstakes are a 1991 Ford Escort GT and a 1991 Mercury Tracer LTS. "These two particular models are very important to Ford," said Robert E. Lackovic, the thrift's chairman and chief executive. "We were asked to help."

Deals Trying to Increase Sales of Two Models

Ford has called first-half sales disappointing and this week announced dealer incentives for the Escort and Tracer. Ford also plans to increase ad spending in July and August in an effort to increase sales and reduce inventories.

The redesigned Escorts and Tracers will be displayed inside 12 First Nationwide branches during the campaign. First Nationwide wanted to put cars in all participating branches but settled on those with doors wide enough to let a vehicle through.

Five other winners in the thrift sweepstakes will each get $1,000 certificates of deposit, savings accounts, or travelers checks. The "second prize" is six months of free checking at First Nationwide, and "everybody is going to get a second prize," Mr. Lackovic said.

The campaign has been designed to exploit cross-selling opportunities. The sweepstakes will use a scratch-off game card, which consumers can get through First Nationwide branches, direct mail, or Ford and Lincoln-Mercury dealers.

More than 100,000 cards will be sent to two groups: households, that are current customers but do not have checking accounts with First Nationwide and noncustomers who live near its branches.

Competitors Are Skeptical

Direct-mail packages will include brochures on Escorts and Tracers and coupons good for an extra 0.25% on the interest rate of a First Nationwide certificate of deposit of at least $1,000.

To learn whether they have won a prize, sweepstakes players must take their cards into First Nationwide branches.

Competitors are skeptical about the campaign's possibilities. "I can't envision that marketing or sales opportunities would extend beyond cross-solicitations," said Ralph W. Burke, marketing administrator for SFFed Corp., parent of San Francisco Federal Savings and Loan Association. □

Easing the Way for Insurance Sales

Firm Offers Back-Office Services to Delaware Banks

By YVETTE D. KANTROW

NEW YORK — Coverdell & Co. is offering to help banks take advantage of a controversial Delaware law that allows state-chartered banks to sell insurance nationwide.

The Atlanta-based firm has developed a program that will allow Delaware banks to market insurance products under their own private label without heavy back-office investment. Coverdell will handle the issuance of policies, customer service, premium billing, claims review, and other essential functions.

"It gives banks the appearance of operating a full-blown business without making the investment," said Michael Levison, Coverdell's president. "Down the road, banks can take over the business when they are ready."

Significant Powers

The Delaware law, enacted in May, is seen as one of the most significant expansions of bank insurance powers to date. It allows banks chartered in the state – which include the credit card and wholesale units of many of the country's largest institutions – to underwrite and sell insurance nationwide.

But the law has sparked debate among bankers, the insurance industry, legislators, and regulators. The Federal Deposit Insurance Corp. launched an inquiry several weeks ago to determine how the law affects bank safety and soundness.

Senate Banking Committee Chairman Donald W. Riegle, D-Mich., has asked both the FDIC and the Federal Reserve Board to decide whether the insurance powers granted by Delaware are permissible under the Bank Holding Company Act.

"A lot of banks are waiting and seeing what shakes down before they proceed," said Michael P. Bucci, a consultant at Wyatt Co., Washington.

Citicorp, Chase to Act

Other than Citicorp and Chase Manhattan Corp., which have publicly stated their intent to enter the insurance business, few banks with operations in the state have acted.

"There's no question that a lot of banks are waiting to see how much [of the law] will stand up," agreed Mr. Levison of Coverdell. "No prudent banker will run full speed ahead."

But that is what makes Coverdell's package attractive, he said. Banks can test the insurance market with little risk.

For banks that want to take advantage of the underwriting powers granted by the Delaware law, Coverdell will set up special reinsurance participation arrangements.

Building a Customer Base

Mr. Levison said Coverdell has relationships with a variety of insurance carriers, enabling banks to sell many products. All banks that sign up for the service will be allowed to take over the insurance business when they are ready. "We'll enable them to build a large policyholder base that will be important in the long term," he said.

Coverdell hopes to sign up its first banking client by yearend.

"We don't need 50 banks to be successful," Mr. Levison said. "Two or three hits, and it's a success."

Despite the inquiry into the Delaware insurance law, observers expect many of its basic provisions to survive. "If they overhaul one section of the law, parts of it will stand," said Mr. Bucci of the Wyatt Co. His firm offers advice to banks that want to enter the insurance business. □

Growth Expected in Tally of Banks that Sell Annuities

By ELLEN MEMMELAAR

NEW YORK — Companies that provide annuities and other insurance products to banks are anticipating a flurry of activity in the next two years.

"Over the next 24 months, there is going to be an explosion of this," said Alan Blank, chairman of Pamco Securities, which distributes insurance and securities products to banks and other institutions.

In the latest example, National City Corp., a large bank holding company based in Cleveland, recently signed a contract with Pamco to acquire the ability to offer annuities.

Kevin Crowe, chairman and chief executive officer of the Essex Corp., another insurance product distributor, said a cluster of small state-chartered banks in the Midwest and a large New York City bank will soon announce their entry into the insurance market.

More than 100 commercial banks, each with deposits of at least $750 million, now offer annuities, according to a survey by Kenneth Kehrer Associates, Princeton, N.J. The total is rising, Kehrer said, as states ease restrictions and defer to the Comptroller of the Currency's February statement encouraging national banks to sell annuities.

Intramarket competition will force banks to offer insurance and securities, Mr. Blank said, and they will use these products to increase fee income and halt disintermediation.

Ohio Citizens Bank, a National City subsidiary in Toledo, this month began offering Pamco's fixed-rate annuities. The holding company plans to make annuities available at other bank units as well, said Susan Burns, senior vice president and branch administration.

Widening the Product Range

National City also is considering selling other types of annuities and possibly other insurance products, Ms. Burns said.

Banks' expansion into the insurance market has been relatively slow, she said. "As bankers, we tend to be very cautious. If we offer a product, we want to make sure that it is safe." □

Illinois' Dec. 1 Interstate Opening Leaves Acquirers Cold

Continued from page 1

companies have a major statewide presence, an legacy of the state's prior insistence on unit banking. Illinois has allowed multibank holding companies only since 1982. And competition in most parts of the state is not as intense as in other regions of the country.

First Chicago Corp., with $50 billion in assets, and Continental Bank Corp., with $29 billion in assets, are considered too large to be acquired at this stage of the banking consolidation movement.

The only midsize bank holding company is the $11 billion-asset Northern Trust Corp. With its strong trust business accounting for more than 50% of earnings, Northern could be an attractive candidate, analysts said.

Bevy of Smaller Companies

Myriad smaller Illinois bank holding companies all have less than $3 billion in assets. Very few banks in the state have assets of $2 billion or more. Industry experts disagree over the ideal asset size for a takeover candidate.

Many potential targets are virtually unknown outside the state, according to Mr. LaManna of William Blair. The analyst has identified 36 Illinois bank holding companies with assets of $350 million to $3 billion, only 15 of which are listed on the three major exchanges.

Mr. Milunovich is recommending stocks of 10 banking companies – including Northern Trust – to Baird's clients; eight are in Chicago and nearby suburbs, and two are the state capital, Springfield. Baird expects most acquisition interest to center in Chicago and Springfield.

All but two of Mr. Milunovich's recommendations have assets in excess of $1 billion.

Piecemeal Franchises

Out-of-state banks that are keen to enter the market may have to stitch together a franchise by acquiring more than one bank holding company.

Several superregionals and at least one money-center bank are interested in Illinois. Norwest Corp., Minneapolis, would have been likely to make the first move until it recently began merger discussions with United Banks of Colorado Inc.

Norwest very recently became an indirect presence in the state by purchasing First Interstate Corporation of Wisconsin, which had just acquired First Illini Bancorp of Galesburg, on the western side of Illinois.

A semaphore of interest was waved by Norwest executive president Leslie S. Biller, when he told the Illinois Bankers Association that Norwest wants to be a big player in the state.

First Chicago Corp., with $50 billion in assets, and Continental Bank Corp., with $29 billion in assets, are considered too large to be acquired at this stage of banking consolidation.

NBD Bancorp., Detroit, entered Illinois in 1987 by purchasing USAmerihares the after the state opened to regional interstate banking in 1986. NBD is expected to expand its franchise. And Citicorp., which acquired First Federal Savings and Loan Association of Chicago in 1983, is also likely to make bank acquisitions.

Once Illinois opens to full nationwide interstate banking, other logical entrants are Banc One Corp., Columbus, Ohio; PNC Financial Corp., Pittsburgh. But both companies will be preoccupied for a while with asset-quality concerns, and Banc One needs time to absorb the big acquisition it made in Texas last year.

Only First Chicago and Northern Trust are considered large enough to expand outside the state. Continental will not be in the running, since it has refocused itself as a business bank.

Richard Thomas, a vice president at First Chicago, said the bank is interested in neighboring states, but has no immediate acquisition plans. The option of moving into neighboring states has been open since 1986, First Chicago has not made the move.

The forces keeping the brakes on merger activity will let up eventually. "Sooner or later bank prices will rebound," said Mr. LaManna. "And the preoccupied banks will clean up their balance sheets." □

12 Consumer Bankers Plan to Advise Soviets

WASHINGTON — Several U.S. consumer bankers will visit the Soviet Union next month to offer tips and explore other means of helping their Soviet counterparts reform the banking system.

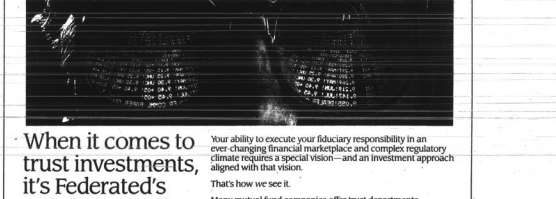
Joe Belew, president of the Consumer Bankers Association, will lead the 12-member delegation to Moscow, Leningrad, and Kiev from Aug. 18 through 31.

The group will meet with Soviet economists and officials from the Ministry of Finance and from Soviet banks. Their discussions will cover personal financial services, electronic funds transfer, mortgage lending, affordable housing, agricultural lending, checking account systems, credit and debit cards, and convertibility of the ruble.

The Citizen Ambassador Program, a private exchange organization based in Spokane, Wash., arranged the trip.

— Linda Corman

Through the eye of the fiduciary.



When it comes to trust investments, it's Federated's only line of sight.

Your ability to execute your fiduciary responsibility in an ever-changing financial marketplace and complex regulatory climate requires a special vision—and an investment approach aligned with that vision.

That's how we see it.

Many mutual fund companies offer trust departments the same generic funds that they distribute to the general public. Not Federated. Our *MultiTrust*® Systems of investment products and services are designed to meet the focused investment needs of the fiduciary, so you can allocate assets efficiently, and concentrate on new business development.

Spanning market sectors and maturity ranges, MultiTrust portfolios are managed by teams of experts who apply structured, highly disciplined methodologies to every decision.

We back these investments with value-added services that can make the critical difference in your success.

We'll keep you up to date on regulatory issues.

Provide practical marketing support.

Connect you to user-friendly technology for up-to-the-minute trading, information, and recordkeeping.

And, for the highest level of personal attention, we'll service your account with a regional team of dedicated specialists.

To learn more about how Federated investment products line up with your department's vision, call a Federated representative toll-free 1-800-245-5040.

Through the eye of the fiduciary. It's our only perspective.

FEDERATED SECURITIES CORP.

Trust Business Emerged From Doldrums Last Year

Continued from *page 1*

some of the top banks, reflecting a shakeout similar to that in other businesses such as credit cards and mortgage servicing.

According to the *American Banker* trust ranking, Bankers Trust New York Corp., the perennial leader in discretionary trust assets, remained on top, with a 29% increase to $104 billion on Dec. 31. (See tables beginning on page 8.)

Citicorp displaced J.P. Morgan & Co. as the leader in total trust income, jumping 6% to $477 million while Morgan declined 2% to $446 million.

The Bank of New York Co. and NCNB Corp. made big gains in the top 100 rankings in terms of both assets and income as they consolidated the activities of acquired banks.

At many of the largest banks, trust income is increasing as a percentage of total operating income. Meanwhile, they find themselves in an increasingly competitive market, particularly in personal trust, in which their investment management must outperform brokerage companies and insurance companies.

Some Becoming Selective

Price slashing and consolidation are causing the big to get bigger, and some banks are becoming selective by exiting some aspects of corporate trust and personal trust.

Citicorp rose to the top spot in trust income – it was seventh in assets with $45.7 billion – even though it dropped two trust businesses two years ago.

One of the beneficiaries of consolidation is Bankers Trust, which has acquired significant trust businesses in the past three years from Bank of California, European American Bank, and Wells Fargo & Co. Last year, Bankers Trust became the first bank to surpass $1 billion in the market value of discretionary assets.

"We are getting requests for proposals to acquire other businesses," said B.J. Kingdon, senior vice president at Bankers Trust. "Some of the players in this field are looking to drop out. Either you are in it in a big way or you are just another player."

"We expect that consolidation will continue, as it will in all areas of U.S. banking," said John S. Sutfin, executive vice president of Northern Trust, which ranked ninth in assets and eighth in income.

Top Tier Rate Internationally

Bankers and industry observers say there is room for competition on a regional level, but not on the national and international level where the top tier of banks dominate and have the required investment in technology is enormous.

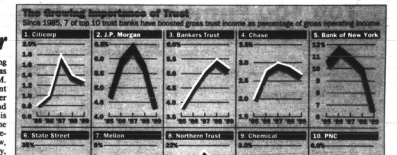
Seven of this year's top 10 trust providers earned a higher percentage of their income from trust fees in 1989 than in 1985, according the *American Banker* statistics. That growth is evidence that trust departments are meeting bankers' expectations in generating fees to offset the dwindling returns from commercial lending.

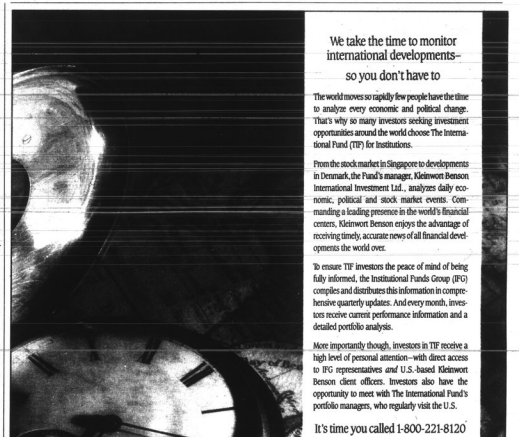
"We are seeing the resurgence of a business that in the darling days of commercial lending was yesterday's act," said Robert M. Boykes, executive vice president at Mellon Bank Corp., another of the top 10 trust banks. Behind that resurgence, bankers say, is the fundamental strength of the trust business: No capital reserves are needed, risk is low, and earnings growth is steady, although computer and communications expenditures can be substantial.

No Room at the Top

Those fundamentals may seem attractive to many banks,

See **TRUST** *page 11*





We take the time to monitor international developments–

so you don't have to

The world moves so rapidly few people have the time to analyze every economic and political change. That's why so many investors seeking investment opportunities around the world choose The International Fund (TIF) for Institutions.

From the stock market in Singapore to developments in Denmark, the Fund's manager, Kleinwort Benson International Investment Ltd., analyzes daily economic, political and stock market events. Commanding a leading presence in the world's financial centers, Kleinwort Benson enjoys the advantage of receiving timely, accurate news of all financial developments the world over.

To ensure TIF investors the peace of mind of being fully informed, the Institutional Funds Group (IFG) compiles and distributes this information in comprehensive quarterly updates. And every month, investors receive current performance information and a detailed portfolio analysis.

More importantly though, investors in TIF receive a high level of personal attention–with direct access to IFG representatives *and* U.S.-based Kleinwort Benson client officers. Investors also have the opportunity to meet with The International Fund's portfolio managers, who regularly visit the U.S.

It's time you called 1-800-221-8120

We'll send you a current Fund prospectus containing more complete information, including charges and expenses. The prospectus should be read carefully before investing.

Data Source: American Banker survey questionnaires mailed to the largest trust firms in the nation. **Number of subsidiaries engaged in trust activity:** American Banker asked respondents to indicate the number of commercial bank subsidiaries, nondeposit trust companies affiliated investment adviser subsidiaries, and all other subsidiaries engaged in trust activities in 1989.

The number shown is the sum of all these subsidiaries. **Affiliated Investment Adviser Subsidiaries:** Number of subsidiaries that are not the bank or trust company's investment adviser subsidiary or subsidiaries. "N.A." indicates the firm has such a subsidiary and "No" indicates it does not. If a firm did not respond to the *American Banker* questionnaire, it was sent a mailgram version of the survey questionnaire. The mailgram did not ask for the number of subsidiaries engaged in trust activities. Thus, for these firms the data are not available. **(1)**— Sold First Chicago Investment Advisors in 1989. **(2)**— In addition, the Boston Co. has four affiliated investment advisers managing $16.2 billion in trust assets.

Compiled by American Banker, Copyright 1990

The 10 Largest Gains in Trust Assets Among Top 100 Firms in Assets

		Trust Assets 1989	Trust Assets 1988	Percent Increase	Asset Rank
1	Boston Safe Deposit & Trust Co.	14,504,407,000	4,288,691,000	238.20	25

Consolidation Helps Big Banks Reap Profits from Trust Area

Continued from page 9

but the chance of reaching the top rung of global corporate and institutional trust providers is slim. The best chances for growth are at banks that are concentrating in personal trust and on regional markets, say industry observers.

"Are we going to compete with Bankers Trust?" asked Steven D. Pooh, senior vice president at NCNB. "No, instead of calling on the Fortune 500, we will drop down to the corporate 2,000."

"We see more interest [in trust] on the part of banks, but the top-tier competitors remain the same," said Mr. Sutfin of Northern Trust. The Chicago institution gets 55% of total revenues from fees, and 90% of the fees stem from its trust business. Discretionary assets rose 32% at Northern Trust in 1989.

Other major trust banks such as State Street Boston Corp., which increased assets 44% last year, and Wells Fargo, which was No. 3 on the asset list, derive most if not all of their trust income from corporate and institutional customers.

Technology Commitment

Entering and staying in the elite requires a major commitment to technology and personnel. Some trust banks are committing upward of $40 million to build new computer systems. Mellon, for example, is investing $30 million to upgrade its systems. NCNB executives have committed $22 million to build a new trust system.

A study by the consulting company Greenwich Associates found that new business is tough to come by: More than 80% of corporate pension funds use a master trust, and seven of eight winners of master trust accounts were replacing previous master trustees. In a mature trust market, banks are cutting prices to attract business from competitors.

Some banks see growth opportunity in defined contribution plans such as the 401(k), in which employers and employees contribute to open-ended accounts. According to the Employee Benefit Research Institute in Washington, defined contribution funds totaled $460 billion last year. In 1982, these were 32% of all pension funds. In 1989, they grew to 38%.

Some bankers see the personal trust business as another likely source of growth.

"The opportunities for growth through fee increases are nonexistent on the institutional side," said Mr. Boyles of Mellon. "But there are still opportunities for banks on the personal side."

In trust departments, where past efforts to garner new business largely consisted of reading obituaries, recruiting personal trust clients is now a top priority.

Bankers say that more people are wealthier at a younger age now, creating demand for investment management and a more sophisticated array of investment products. In trust departments, where past efforts to garner new business largely consisted of reading obituaries, recruiting personal trust clients is now a top priority.

Banks have hired more professional investment managers to compete with investment advisers, Wall Street companies, and insurance companies.

Focus on Personal Trust

Even the major corporate trust banks are looking to attract more personal trust customers.

"Personal trust is now more of a focus for us," said Mr. Sutfin. Northern Trust opened offices in California and Florida to pursue personal accounts.

How do banks perform as investment managers? A recent study by CDA Investment Technologies Inc. for the American Bankers Association showed that investment managers at banks outperformed their nonbanking competition in some measures of return on equity and fixed-income investments.

Over a three-year period, banks had a 16.1% annualized rate of return on equities, slightly ahead of investment advisers at 16.0%, insurance companies at 15.9%, and mutual funds at 13.8%. Over a five-year period, insurance companies and investment advisers did better than banks.

In the fixed-income arena over three years, insurance companies led the field, with an 8.2% annual return. Banks had a 7.7% return, and mutual funds 5.9%. □

Thrift in Houston Taps George Bender

NEW YORK — George R. Bender, formerly chief executive officer of Comtrust Bank's mortgage unit, has been tapped to head the mortgage operations of United Savings Association of the Southwest, Houston.

That thrift, led by mortgage-securities pioneer Lewis S. Ranieri, has been expanding rapidly in the home-loan field.

Last week, it completed purchasing the 15-state origination network of Commonwealth Mortgage of America L.P.

Mr. Bender's previous company was Centrust Mortgage Corp., Deerfield Beach, Fla. The parent thrift, which is based in Miami, was seized by the federal government in February. □

NCS

ARE YOU GETTING THE MOST OUT OF YOUR TRUST SYSTEMS?

Is your department responding to customer needs and accessing information as quickly and cost-effectively as it could? Are your present systems allowing the department to realize its profit potential?

FIND OUT FOR SURE.

Get *The Systems Review Checklist*. The comprehensive guide for selecting and evaluating trust systems for your company. It includes the questions you should definitely consider in any systems review. As well as how to differentiate various systems' benefits and shortcomings. It's free. Just return the attached coupon, or call us for more information at 1-800-877-1655.

I want to get the most out of my trust systems. Send me your *Systems Review Checklist*. I've checked the version(s) I'm interested in below.

Data Sources: American Banker survey, annual reports. Federal Reserve Board Y-9 data for bank holding companies, and the federal regulatory report of income for banks. **Gross operating income** of the trust department includes income from all types of fiduciary services but excludes all non-operating credits. **Market value of all trust assets** includes discretionary assets, nondiscretionary assets, and accounts of a strictly custodial nature. Corporate trust accounts are excluded. **(a)**—The 1989 data include Irving Trust Co., which was acquired from Mellon Bank Corp. — The 1989 data include NCNB Texas National Bank, and the 1988 data do not. NCNB Texas — which became a subsidiary of the NCNB Corp. in Aug. 1988 — had trust assets of $92 million in trust income. **(c)**—The 1989 data do not include Ameritrust Corp., which was acquired from MCorp. MNvestment Corp — now called Ameritrust Texas— had $60.4 million in trust income in 1989, ranking MCorp 36th in this year's listing. Had the consolidation taken place at year-end 1988, Ameritrust would have had $128.4 million in trust income. **(d)**—On Jan. 29, First Union Corp. acquired Florida National Banks. Had merger taken place on Dec. 31, First Union would rank 27th with $84.8 million in trust income. **(e)**—Data are for MNvestment Corp. **(f)**—Became a holding company in 1989. In 1988, data for two group members were reported: Bessemer Trust Co. NA, New York ranked 58th with $33 million in income and Bessemer Trust Co., Woodbridge, N.J. ranked 80th with $18.5 million. **(g)**—All trust activities were consolidated in PNC Trust Co. NA, Washington, D.C. **(h)**—MNC acquired Equitable Bancorp., Baltimore, on Jan. 19. Had the merger taken place at yearend, MNC would have ranked 46th with $51.6 million in income. **(i)**—On March 5, CoreStates acquired First Pennsylvania Corp. Had the merger taken place at yearend, CoreStates would have ranked 28th with $61.3 million in income. **(j)**—Society Corp. acquired Trustcorp on Jan. 5. Had the merger taken place at yearend, Society would have ranked 26th with $61.2 million in income. **(†)**—Revised since publication on 6/27/89. **(‡)**—Rank claims would have held, if revised data had been received earlier. **(•)**—Data for 1988 and 1989 are not fully comparable. **(↑)**—Change. **(T)**—The 1989 total is for the top 100 firms that year. **(B)**—Bank not controlled by a U.S. bank holding company. **(C)**—A multibank holding company. **(M)**—A U.S. bank holding company. **(T)**—Trust company not controlled by a U.S. bank holding company.

Profit Up 51% At No. 1 U.S. Thrift Company

By TERESA CARSON

LOS ANGELES — H.F. Ahmanson & Co. on Wednesday announced a 51% increase in second-quarter earnings, despite a big jump in the amount set aside for possible problems in its real estate loan portfolio.

Ahmanson, parent of Home Savings of America, the nation's largest thrift, reported net income of $60.1 million, or 61 cents per share, in the quarter ended June 30, compared with $39.6 million, or 40 cents per share, in the year-earlier quarter. For the first six months of 1990, Ahmanson earned $121.8 million, up 54% from the $78.8 million profit in 1989's first half.

The gains came despite a $61.6 million increase in Ahmanson's loan-loss reserve, which was more than twice the $25.2 million set aside in the first quarter.

Nonperforming assets totaled $596.9 million at June 30, up 9% from the prior quarter and up 59% from the $375 million of a year ago. Nonperforming assets are 1.25% of total assets.

Other thrifts have also announced hefty earnings. Great Western Financial Corp., Beverly Hills, Calif., reported second-quarter net earnings of $78.2 million, or 60 cents per share, up 51% from the year-earlier quarter. And San Francisco-based Golden West Financial Corp. earned $49 million, or 75 cents per share, up 22%. □

1st Interstate Finishes Nova Financial's Sale

LOS ANGELES — First Interstate Bancorp. says it has completed the previously announced sale of its consumer finance subsidiary, First Interstate Financial Services, to Transamerica Finance Group Inc. for about $111.9 million in cash.

The Transamerica Corp. subsidiary is adding Nova's 71 offices in California, Colorado, and Hawaii to its network of 428 lending offices in 30 states.

The price was about $4 million higher than the estimate given June 8, when First Interstate announced the sale and said it would yield a pretax gain of $90 million in the third quarter. The Los Angeles-based holding company put Nova on the block in March, saying it would concentrate on relationship-oriented consumer banking and middle-market lending. □

Fargo Report On California

SAN FRANCISCO — Wells Fargo & Co. said the California economy is exercising mixed signals. High technology, defense, and construction are current weak spots, while the service and agribusiness sectors are strong.

"With U.S. inflation moderating and economic growth stagnating, the Federal Reserve is likely to ease credit conditions within the next several months," stated Wells Fargo's California Economic Monitor report for July.

The report predicts that "Once interest rates move lower, the economy should pick up from its current levels."

Business activity in California continues to increase at a moderate pace, according to the report. There is growing evidence, however, that the pace of retail sales have flattened out in recent months.

Information in the report shows bank loan volume, excluding real estate, up 2.5% in June, from a year ago. At the same time, corporate profits remain disappointing, a result of slow sales and competitive pressures. In housing, production remains spotty in the face of tight credit and high interest rates. □

Bank South Delays Report on Earnings

ATLANTA — Bank South Corp. announced Wednesday that it will delay a report on second quarter earnings until an examination of the company's commercial real estate loans has been completed by the Office of the Comptroller of the Currency.

The $5.4 billion-asset bank said it expects to release its report on second quarter earnings before the end of the month.

Analysts took the news in stride because other banks have delayed release of earnings reports ever since the Comptroller's examiners began scrutinizing Southeastern real estate portfolios in January.

"The delay itself doesn't automatically mean something negative," said Kathryn H. Bissette, who is with Interstate/Johnson Lane in Atlanta.

Ms. Bissette declined to speculate on how the OCC exam will affect Bank South's second quarter earnings. Bank South earned $10.8 million, or 32 cents per share, in the second quarter of 1989.

In the first quarter, Bank South classified 2.79% of its loans as nonperforming, including those 90 days past due and accruing. That figure is in the upper end of the range for regional Southeastern banks.

— Kenneth Cline

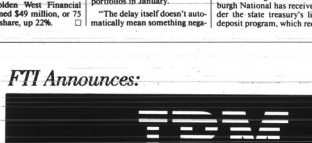
Pittsburgh National In Development Deal

PITTSBURGH — Pittsburgh National Bank, a subsidiary of PNC Financial Corp., said it had received a $1 million state deposit as part of a business-development program.

It is the largest sum that Pittsburgh National has received under the state treasury's linked-deposit program, which requires that the funds go toward creating and retaining jobs. The money will be lent to Jovijo Inc. to purchase, renovate, and expand a retail store in Jeannette, Pa.

State Treasurer Catherine Baker Knoll said the $1 million loan would preserve 50 jobs at the Jeannette Shop 'n Save in Westmoreland County. □

FTI Announces:



What this means to Large U.S. Banks:

- IBM offices across the U.S. will market AMS
- IBM now offers AMS installation services contracts
- AMS is IBM's preferred trust solution
- AMS will keep you ahead

The Result: Throughout the 1990's, AMS will continue to be *the* trust system for large, progressive banks

For more information contact your local IBM representative, or contact:

AN INTERVIEW WITH ED FURASH

As Banking Changes, Managers Are Advised to Stick to Basics

The risks bank managers face leading their organizations have rarely been so great as in today's troubled industry. Yet the opportunities are just as mind-boggling, says Ed Furash, a 30-year veteran of the banking business and now president of Washington-based Furash & Co., a consulting company. In a recent question-and-answer session with American Banker *editors, Mr. Furash discussed many topics, including the personality traits characteristic of top industry managers.*

Q: Is it difficult being a bank manager today?

FURASH: I've never seen a more trying – if not impossible – time to be a chief executive officer of a bank. I've also never seen a time in which there was such great opportunity for a CEO who knows what he's doing, who focuses well, and who can find his way through these problems.

But there are no tried-and-true formulas on how to make it work. The ground is shifting underneath bankers all the time. Last month's hero is this month's goat.

Q: Are there any ground rules that a CEO can follow?

FURASH: Run a bank according to the "Cannon" rules – capital, assets, management, earnings, liquidity, and, of course, all those other things.

Q: What are the most important personality traits found in successful banking managers?

FURASH: First of all, stamina. I cannot emphasize the degree to which physical and intellectual stamina are necessary for being a leader today.

We're in the middle of the changing of the guard in the management industry. A lot of people are getting out of the business because they're just tired. And I can't blame them.

Another necessary trait is an intellectual curiosity that is tied to a bottom-line orientation. In other words, good managers have to be very curious about where the industry is going. They have to have a vision. And they must then be able to translate a big-picture vision into a strategy and get people to carry it through. They have to have the capacity to break the big picture down into digestible chunks so that lower level employees can apply it to their jobs.

Third, a successful manager has to be persistent and consistent. To lead an organization that's in great turmoil, managers have to say the same things to people every day, day after day, the same way. If a manager gets bored with the message, so will the employees.

Fairness is terribly important. And courage. By courage, I mean the courage to delegate, to believe in the employees' ability to get the job done. And with that courage comes the courage to bring people up short – to act quickly when you see something going wrong. To be decisive.

Q: What specific skills does a manager need today?

FURASH: One of the most important characteristics of a good manager is knowing how to ask the right questions. If you don't ask the right question, you may never get to the issue at hand.

Then you have to know how to diagnose the situation, to use your staff effectively to give you the proper briefings and the materials you need.

The third characteristic for managers of the '90s is, they have to be incredibly focused. They can not be distracted. The CEO today is marching through unknown territory. He needs to focus on those businesses that will maximize revenues and profitability.

Q: But how good are most banks at measuring that profitability?

FURASH: In general, most banks do not have the analytical techniques in place to measure profitability. However, they have the data. Now they need to collect it and put it together. And banks are getting a little better at it.

Q: How can bankers learn to be better marketers?

FURASH: The era in which managers can wing it in banking is over. They need to accept the fact that they must make decisions based on facts, not opinions or hunches.

They need specific knowledge of their customers, of what's going on in the market, and how they are going to behave.

Most banks have minimal management information systems to do what they need to do. Yet they are highly reluctant to spend the money they need to spend to understand their own customers.

The greatest threat to a U.S. bank is a competitor who goes out and listens to what customers want.

Q: Why are bankers so reluctant to do this?

FURASH: Cost. Bankers are simply under so much pressure to earn money that any expense that doesn't look like it's producing a sale is under question.

Q: With marketing taking on a greater role in the banking industry, should the industry search other businesses for marketing-oriented managers?

FURASH: There are numerous managerial skills that are not present in banking that must be brought in. Banking has companies get larger and larger, the . . . traditional CEO – who has usually risen through the commercial lending route with a lot of hands-on experience – fails when he tries to control and manage people.

Q: Are there ways a manager can gain better access to what is going on in a large organization?

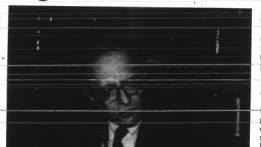
FURASH: The system needs to be managed so that employees volunteer the information managers need to know.

Q: How can a manager enhance that communication?

FURASH: The most obvious strategy is the simplest: Adopt a system in which employees know what is expected of them.

Q: Can bankers learn any lessons from managers abroad?

FURASH: While the U.S. banking industry may be missing the boat in terms of some of its management talents, the skills they are learning are nothing compared to banks overseas. There is a lot that U.S. banks can bring to these managers. □



Peggy Turbett

ED FURASH: "The CEO today is marching through unknown territory. He needs to focus on businesses that will maximize" profits.

COST CONTROL

Workers' Suggestions Bring Double Payout – to Them and Florida Thrift

By JUDY FERRING
Special to the American Banker

An aggressive program to find new ways to save money at Florida Federal Savings Bank in St. Petersburg has put more than $500,000 in employees' pockets, cut operating costs roughly five times that amount, and boosted both customer satisfaction and employee morale.

The head of the program lies in an innovative employee suggestion plan adopted in 1987.

Up to $20,000 Reward

Employees are paid 20% of the first year's savings, up to $20,000, for productivity-boosting ideas that are incorporated into bank policy. If cost savings cannot be quantified – for instance, if an idea calls for a change in a form – an arbitrary sum (usually $25) is awarded.

Suggestions that duplicate changes already under way do not qualify for the bonus, said Joe Davis, senior vice president in charge of planning and productivity analysis at the bank.

Mr. Davis' department researches the feasibility of each suggestion and recommends approval or disapproval. Research on each suggestion includes a review by the department that would be responsible for carrying it out.

Most Departments Affected

Few departments of the bank have been left untouched.

Among the suggestions that have eased branch employees' workloads were elimination of redundant activity logs for the automated teller machines run by the bank in area supermarkets, getting rid of self-duplicating tapes for the branches' adding machines (employees had to strip away the extra layer of paper), renting smaller bulk trash bins for branches that generate less trash than average, using both sides of a sheet of paper when documents are duplicated, and using lower-wattage light bulbs in exit signs.

Customer service has often been the target of suggestions, said Sharon Quigley, the bank's employee relations specialist.

A Redundant Form

Among changes that benefited holders of the bank's certificates of deposit was elimination of a rollover form sent to CD holders. They had been sent both a rollover and a transfer form for signature when the accounts matured. Branch employees said signing just the transfer form accomplished both tasks.

The monetary rewards for these kinds of suggestions are minimal. The employee who suggested eliminating the self-duplicating adding machine tape was awarded part of the savings from buying single-layer tape instead – not a large amount. Likewise, 20% of the savings on a year's supply of low-power light bulbs for all the bank's exit signs is not a lot.

By contrast, ideas like changing how the interest on variable-rate mortgages is computed or programming software to generate in-house reports can win bigger awards.

But not all the big rewards are for technological suggestions, Mr. Davis said.

For example, he said, one employee suggested that the bank sell its 800 number. The original number, it turned out, spelled out a name that another company wanted to use in advertising. Florida Federal gave up its right to the number for $200,000 and got a new number in its place. □

Proven Ways to Cut Costs Sought for New Column

Bankers are looking everywhere for ways to control their cost of doing business. To provide readers with cost-cutting tips, the *American Banker* has begun a column that will appear Thursdays on the management page.

We invite readers to let us know about methods they have found successful in trimming expenses. Please get in touch with Patricia Stundza, features editor, *American Banker*, One State Street Plaza, New York, N.Y. 10004; phone 212-943-5733 or fax 212-943-2984.

COMMENT/ *By Polly DiGiovacchino*

Fresh Approach to Managing Needed in Competitive Age

In recent years, as the dollar plunged and the deficit grew, U.S. companies asked themselves some hard questions: Are we not as productive as other countries? Are our products not as good? Are our prices not as competitive?

The answers to these questions caused a flurry of mergers, layoffs, restructuring, and streamlining in a desperate attempt to cut costs and survive. Companies invested heavily in the latest technology. Last year alone, they added $17 billion worth of computers and new equipment.

On the surface, it looks as though these tactics are working. Labor productivity in goods-producing industries has surged, pushing the annual growth rate to an average 3.5% for the past decade. That is up from the 1.4% of 1973-79.

Productivity Higher Overseas

So, why the concern? Because, although the United States is boosting productivity, competitive nations are boosting theirs higher than we are. The more

"The United States has used up its bag of tricks and is still in fourth place."

corporate America has tried to boost productivity, the more elusive that goal has become. In 1983, productivity topped 5%. Since then, it has slowed to 3%. Experts worry that it is unsustainable and in danger of falling further.

That is the paradox: Despite all of these investments and cuts in labor costs, the United States still lags behind such nations as Japan, Britain, and France in productivity growth. The United States has used up its bag of tricks and is still in fourth place.

The financial services industry is not exempt from the productivity paradox. Many of us have experienced the slash and burn techniques used to increase productivity – the layoffs, the restructurings, the mergers – and then experienced the paradox of failures in spite of the changes.

As managers in the financial services industry, it is time that we study the national environment, credit the predictions for the future, and take action to bring about positive changes that will enable our companies to overcome the productivity paradox.

At the basic level, productivity is defined as the ratio of inputs to outputs. Inputs include all the resources a firm uses to manufacture its products or services – materials, capital, energy, and labor. Labor and capital are the two key factors of production. When they are most productive, the economy is getting the most for its money – the most output, whether it be goods or services, for a given level of input.

Success in productivity can be reduced to a simple formula: maintaining control of expenses while producing steady income and finding new ways to generate additional income.

Traditionally, efforts to increase productivity have focused on the first half of the equation – cutting costs and investing in technology. But the most recent productivity numbers verify that the benefits of cost cutting and restructuring are running out. There is overwhelming evidence that people, not machines, are the driving force behind economic growth.

From 1948 to 1982, the nation's gross national product increased at an annual rate of 3.2%. Edward Dennison, an expert in growth economics, found that one-third of that gain was caused by the increase in the education level of the U.S. work force. About half the growth was the result of technological innovation and increased knowhow, which also depend on education. But just 15% of the total increase was the result of more capital equipment.

Technology's Value Questioned

In practice, the promise that technology will increase productivity has been proved false. It is a paradox that stands to a very obvious question: What can be done to circumvent the paradox? How can we revive productivity in America?

The often overlooked factor in this formula is people. In the book "Megatrends," John Naisbitt describes the new workplace. He outlines three major forces driving the changes in American business: increased competition, the impact of technology on business, and a scarcity of qualified workers.

The dearth of such workers is probably the "megatrend" that will affect our industry the most. Let's look at some important demographics:

- Overall, the labor force will grow only 1.2% a year between 1988 and 2000. This is down from 2.2% for the period 1972 to 1985.
- The youth work force will decline by 0.2% a year, while the older work force will grow by 0.2% a year.
- Women will account for two-thirds of all new workers and represent 47% of all workers by 2000, up from 39% in 1972.
- Hispanics will account for 29% of all new workers.
- Blacks will account for 19%

COMMENT
Meeting Needs Of Employees

Continued from *page 15*

of all new workers during the rest of the century.

With the Bureau of Labor Statistics predicting that nearly all new jobs created in the United States between now and the year 2000 will be in the service industries, as managers we must be prepared to deal with this new work force.

A Call for Change

To begin with, human resource management must become an important element of corporate strategy. It is estimated that one out of five people switch jobs each year and one in 10 switch careers. These facts prove that we must meet our employees' needs in order to retain them.

Although we don't have a crystal ball, we can tell you that a new concept of work is emerging in the minds of employees. To be truly productive and satisfied with their work life, employees must work for themselves.

As managers we must be prepared to alter the nature of the traditional contract between employee and employer. We must develop a new form of partnership with the individual employee in which both parties share in the risks, costs, and rewards of pursuing new ventures.

"People, not machines, are the driving force behind economic growth."

Management styles focusing on participative management, emphasizing the needs of employees, must become widely accepted. Employee-centered management has already been applied in America with spectacular success by such organizations as IBM and Hewlett Packard.

Innovative management practices such as quality circles, decision-making consensus, removal of communication barriers, emphasis on personal contact, and concern for individual employee needs and goals have been the common threads in increasing worker productivity and job satisfaction in a handful of companies.

Care for Dependents

Research links employees' concerns for the care of children or elderly relatives with productivity losses. Factors include increased absences, tardiness, stress on the job, and time wasters such as excessive use of the phone. This holds true for men in dual-career marriages as well as for single fathers.

More than half of all mothers work. Those with children under six make up the fastest-growing segment of the work force. A recent Financial Women International survey showed that women in the financial services industry who have children under the age of 10 spend up to 12.5% of the work week dealing with child care.

According to Mercer-Meidinger-Hansen, an employee benefits firm, about 40% of workers over the age of 40 already provide care for parents. And about 12% of women who care for aging parents must quit their jobs to do so. As the work force continues to age, workers' responsibilities will continue to grow and become more apparent.

Whether companies offer on-site care or a flexible benefits plan that includes care incentives, it is a fact of life that must be accommodated if the work force is going to be productive.

Make Leave Policy Flexible

With more women in the work force, companies are realizing that they are losing productivity and money by training new employees instead of developing a leave policy that encourages valuable employees to return to work.

Some financial institutions have already made changes to accommodate the new work force, such as flexible work schedules, whether a four-day work week or daily work hours that are not nine to five.

The scarcity of workers and the aging of the work force are also forcing companies to be flexible in meeting staffing requirements. They must look at new ways to fill positions.

One bank in Minneapolis has helped college students and mothers with children solve their scheduling problems with job sharing. One staff position in the government relations department is filled by two people who split the responsibilities and the time right down the middle.

The Oklahoma Bank in Oklahoma City uses the vast knowledge and skills of individuals

"The promise that technology will increase productivity has been proved false."

that might otherwise go untapped. For example, a 75-year-old man works as a paying and receiving teller on the weekends. Although he works limited hours, those are shifts that are difficult to fill and he is both dependable and accurate.

Barnett Bank of South Florida in Miami has introduced "swing tellers," full-time employees who have been trained as tellers and are called upon as needed. Bank personnel are used more effectively and the customer is better served.

Companies must also change benefits to attract the new type of staffer. By 2003 the National Center for Health Statistics predict life expectancies at birth will be 84 years for women and 74 for men. Today the 58-year-old who takes early retirement is essentially middle aged. Companies must explore new benefits, such as portable pensions, that will erase disincentives for middle-aged workers to move on.

Focus on Education

The most important productivity factor in relation to the changing work force is that educational levels will not keep pace with the requirements of the available jobs.

A brief look at history teaches an important lesson about edu-

cation and its impact on productivity. In 1851 Britain was the dominant world power. The United States was No. 2 in industry and catching up fast. British businessmen came here and marveled at American-made products.

The British-industrialists' research to find the secrets of our success uncovered that it was due in large part to a highly educated work force. Americans had a literacy rate of 90% among the free population. In contrast, just two-thirds of the people in Britain were literate.

Today, the United States is the dominant world power, and Japan is No. 2 and catching up fast. Americans are awed at the quality of Japanese products. Now it's our turn to do the research. And our research has given us the same answers the British found in 1851: The success is due in large part to a better-educated work force. Today, Japan's functional literacy rate is better than 95%. In America it is down to about 80%.

America's failure to make education a top priority is already causing problems for businesses today. Chemical Bank in New York reports that it must interview 40 applicants to find one who can be successfully trained as a teller.

Corporations must work with the government to make a new national commitment to America's future by investing in its

"We [managers] must develop a new form of partnership with the individual employee in which both parties share in the risks, costs, and rewards of pursuing new ventures."

people. Together we must develop programs to combat illiteracy, lower the dropout rate, and raise the level of education in our schools. As corporate leaders, parents, and citizens we need to support and participate in educational reform.

But it is not just children who need better education.

Retraining the Work Force

Several forces are combining to produce a leap in the skills the economy will require. First, technology is upgrading the work required in most jobs that demand high reading and math capabilities. Millions of jobs go unfilled while the army of unskilled remains unemployed.

Second, job growth will be fastest in high-skill occupations and most of these jobs will be in the service sector. This kind of work now requires knowledge that was not necessary 20 years ago.

Third, the way in which work is now being organized requires a completely new set of skills. As companies shift from the old models of assembly-line production to Japanese-style work teams, employees will have to sharpen their abilities to communicate.

A report from the Hudson Institute compared the new jobs that the economy will create in the next 10 years with the level of skills needed to perform the jobs and the number of people in the work force who will have those skills. They found that most new jobs will require workers who have solid reading and writing skills, but fewer than one in five new employees will be able to function at the needed level.

Search for Good Managers

The task of finding quality managers in the financial services industry will be even harder. Many of the jobs we will need to fill will require employees to read journals and manuals, write reports, and understand complex terminology. Just 5% of the new employees will be able to do that.

As many as 51 million workers may have to be trained or retrained in the next 11 years. Of those, 21 million will be new entrants and 30 million will be current employees.

George Gallup's book "Forecast 2000" examines the impact

"Women will account for two-thirds of new workers" between now and the year 2000.

that the shift to service industries will have. Mr. Gallup emphasizes that companies must remain market sensitive, at all times stressing customer service. Customer service is, in fact, the theme of some of the most successful companies in America today.

By structuring a personnel management program that rewards exceptional employee performance, financial institutions will be able to retain quality employees who emphasize customer service and contribute to the increased productivity, profitability, and growth of the industry.

More and more, financial services institutions are becoming aware of the importance of bonus incentives in motivating employees. Employee referral fees, sales incentive trips, installment loan production incentives, and the like are becoming common practice.

Recently, Barnett Bank of South Florida in Miami began a MasterCard campaign. For every approved credit card application referred by an employee, he or she would be rewarded with $10. After the first 30 days of the campaign, one person had earned $1,000. Incentives do work.

All of these forces are leading us to look for a new type of manager. The leaders of tomorrow will be creative, innovative risk takers. The successful managers will anticipate change, will develop, motivate, and inspire their people, and will have new answers to old questions. Problems must become opportuni-

OUR TREAT

Not surprisingly, they spend just a little more freely.

Which is precisely what occurs each year in response to the Visa Our Treat promotion.

We give people the chance of having one of their Visa purchases paid for. And then, during the heaviest shopping period of the year, they go to town.

It's a strategy that could pay off big, considering we'll be giving away $1 million worth of randomly selected transactions between October 1 and December 31, 1990. Meaning some 15,000 cardholders will get a Visa purchase on us.

Whether it's a new bowling ball. Or a trip to Bali.

Either way, you'll win even bigger.

After all, Our Treat has led to record fourth-quarter volumes for two years in a row. And, with proven consumer awareness (plus a major ad campaign in the works), this year promises greater rewards.

For your own program guide and sample statement inserts, simply give us a call at 1-800-876-5657. And put human nature to work for you.

CalFed to Buy $75 Million of Empire Deposits

LOS ANGELES — California Federal Bank said it will purchase about $75 million in deposits from three branches of Empire Federal Savings Bank of America, Buffalo, effective July 20.

The principal subsidiary of Los Angeles-based CalFed Inc. said it will also convert Empire's Castro Street office in San Francisco into a California Federal branch.

The Castro Street location will be the 200th in California Federal's branch network. It is the nation's fourth-largest thrift, with $23 billion in assets. Empire Federal of America, the fourth-largest thrift based in New York State, was taken over by the Resolution Trust Corp. in January and placed into receivership on Feb. 28. □

Do your CDs come back to haunt you?

When you issue those big CDs of $1 million or more, you have a right to sleep peacefully.

Sound sleep depends on your issuing and paying agent. Which is why so many issuers and dealers depend on Bankers Trust.

We offer on line issuance. Timely and DK-free delivery. Quick turnaround. Advance notification of any and all principal and interest amounts due. All at competitive prices.

So if you want to be undisturbed by the specters of late principal or interest payments...slow, error-riddled documentation...the moans of investors and the groans of dealers call Michael O'Leary at (212) 250-6212.

When it comes to your CDs (or deposit notes), we can turn nightmares into pleasant dreams.

Stiff S&L Crime Penalties Get House Chiefs' Backing

Continued from page 1

Schumer said the House "tried to be tough on penalties without going off the deep end just for show, if you know what I mean."

Lobbyists See Witch Hunt

In recent days, financial institution lobbyists have begun referring to legislation dealing with S&L crime as part of a witch hunt. They have asked whether the tougher penalties hanging over officers and directors might make it more difficult to recruit board members.

"The mood in this town is ugly," said Kenneth Guenther, executive vice president of the Independent Bankers Association of America. "In terms of preventing a future S&L crisis, these bills don't solve that problem. But they provide what is always necessary in situations like this – a public flogging or a public hanging."

The National Commission

The national commission proposed in the Schumer bill would be a step toward writing an official history of the S&L crisis, and would likely touch upon a number of sensitive and controversial areas, such as the role played by lawmakers and regulators.

2 States of Commissioners

The 12-member commission would include six White House appointees and six congressional appointees, Mr. Schumer said.

Other provisions in Mr. Schumer's amendment would:

- Make it a crime to conceal assets of an insured institution from a conservator or receiver or to impede an examination of a financial institution. Violations could be punished by prison terms of up to five years and fines of up to $250,000 for individuals and $500,000 for institutions.
- Bar persons convicted of crimes against a financial institution from working for a bank, thrift, or credit union for at least 10 years. After that, the consent of the appropriate federal agency would be required.

"These bills don't solve th[e] problem. But they provide what is always necessary in situations like this – a public flogging or a public hanging."

Kenneth Guenther
Independent Bankers Association

- Bring a number of bank-related crimes under the Racketeer Influenced and Corrupt Organizations Act, or Rico, which would facilitate prosecutions.
- Permit the Federal Deposit Insurance Corp. to limit the use by banks or thrifts of the extravagant severance packages known as "golden parachutes."
- Give regulators the ability to prevent the dissipation or disposition of property acquired as a result of banking law violations.
- Make it easier for regulators to seek restitution from individuals who contributed to the downfall of a bank or thrift.

"We tried to be tough...but fair," said Mr. Schumer, who added that under current law some who contributed to the downfall of the thrift industry may never be punished. Among them, he said, is William L. Walters, a Denver businessman who borrowed but failed to repay more than $100 million to the failed Silverado Banking, Savings and Loan Association.

No Law Against It

"There is no law in the land that prevents that son of a gun from living a fat life while the taxpayers pay" to clean up Silverado, Mr. Schumer said.

In unveiling the package, the Democrats pledged to work with Republicans but criticized as inadequate the administration's efforts to prosecute S&L crimes. They also took note of public anger over the S&L fraud and corruption that has required an increasingly costly bailout.

"The public wants answers," said Mr. Foley.

"We are sending a clear signal to the perpetrators and the public," added Mr. Gephardt. "The crimes and the cause must cease. Taxpayers and depositors must be protected. The savings and loan crisis must be attacked head-on." □

Cross-Guarantee Is Seen as Risk to Holding Companies

Last Aug. 9, President Bush signed into law the Financial Institutions Reform, Recovery, and Enforcement Act, a complex of regulatory reforms aimed at resolving the thrift crisis and strengthening the hand of the regulators to prevent future crises.

A major provision of Firrea imposes liability on "sister" insured banks and thrifts for losses incurred by the Federal Deposit Insurance Corp. in liquidating or assisting affiliated banks and thrifts under "common control" – typically, those that belong to the same holding company system.

This "cross-guarantee" provision was sought by the FDIC in response to its costly multibank holding company transactions in Texas – with MCorp, First RepublicBank Corp., and First City Bancorp.

Particularly at MCorp, the bad banks were liquidated at public expense while healthier subsidiaries remained untouched.

Branch Equivalence

Cross-guarantee was initially envisioned by the FDIC as converting the subsidiary banks of a holding company system into the equivalent of branches, contingently liable for one another.

Intensive lobbying by bank holding companies, including behind-the-scenes negotiations with regulators, ultimately led to a considerable softening of the original cross-guarantee design.

Nonetheless, it poses new concerns to creditors and shareholders of holding company banks, as well as to holding companies themselves.

In essence, cross-guarantee makes any "sister" insured bank or thrift liable for losses incurred by the FDIC to a commonly controlled bank or thrift "in danger of default." The FDIC may in good faith estimate the amount of the loss; allocate the loss among sister banks and thrifts, where more than one is involved, and either establish a schedule for reimbursement or require immediate payment upon written notice.

Though FDIC is required to consult with the appropriate federal or state banking agency for each institution so assessed, it has the final say regarding liability and payment schedule.

Exemptions and Waivers

Among the provisions added to soften the final language was exemption for banks insured by the Bank Insurance Fund (BIF) from cross-guaranteeing an affiliate insured by the Savings Association Insurance Fund, and vice versa, if the affiliate had been acquired before last Aug. 9. (The SAIF is successor to the Federal Savings and Loan Insurance Corp.)

The purpose of this provision was to avoid penalizing, in the typical case, a bank holding company that had acquired a troubled FSLIC-insured thrift. But this exemption will phase out in five years.

In addition, the FDIC may, in its discretion, exempt any insured bank or thrift from cross-guarantee liability if the agency determines that exemption is in the best interests of BIF or SAIF.

Quid Pro Quo

The quid pro quo of the exemption is that the exempt institution and all its affiliates are subject to Section 23A of the

COMMENT
Meeting Needs Of Employees

Continued from page 17

ties and decisions, choices.

Middle managers are the keys to the future for our organizations. They implement the strategy decided at the top. What they think and how they feel is critical to the corporation's heart and soul. Companies must learn to manage with more delegation and less control. In essence, as the evolution of organizations takes place, middle managers must have a new role as partners with top management in making the United States more competitive.

"The leaders of tomorrow will be creative, innovative risk takers."

These are all wonderful ideas, but what will make a company adopt some of these changes? The bottom line. These ideaswill reduce employee turnover, reduce absenteeism, lift morale, increase loyalty, and improve productivity.

The emphasis on raising productivity and increasing international competitiveness is transforming the debate over social equity into a discussion about economic growth. The realization that this is not just a social issue, but a bottom-line issue, has hit us right in our pocketbooks.

Simply put, the productivity paradox is going to push companies to tailor the work force for the new employee if they expect to recruit, and more important, retain the best and the brightest. □

GE Capital Buys Packager Of Stores' Cards in Britain

By JOHN EVANS

LONDON — GE Capital announced Wednesday it had acquired Burton Group Financial Services, Europe's largest private-label packager of credit cards for retail stores, for $329 million in cash.

Industry sources in Britain said that GE was also eying Club 24, the financial services unit of the Next PLC retailing group. The prospective purchase price for the unit, which has more than 1.5 million store card accounts, is reportedly about $65 million.

GE Capital is a unit General Electric Co. A spokeswoman at the conglomerate's Stamford, Conn., headquarters declined to comment. A Next spokesman was unavailable.

Support for Expansion

Ray Nide, GE Capital's director of European business development, said that the company "will be looking at a lot of retailers' financial services business over the next few years" to support its expansion.

The Burton purchase involves the store credit cards it handles across Europe, totaling three million accounts for more than 20 retailers besides itself.

GE, as the largest provider of private label retail credit cards in the United States, considers the British buy a "perfect build" for the same type of capability in Europe, the spokeswoman said.

The combination with GE Capital "creates a powerful new force in the credit card market," GE said in its announcement. Apart from cards, Burton Financial offers a range of financial consumer lending and insurance products. It also operates the First Personal Bank, a consumer lending operation.

Activities Are Broadened

GE Capital's Mr. Nide said consumer lending added to other activities the company is building in Europe, including commercial real estate financing, leasing, and leveraged acquisition finance. However, GE does not plan a conventional commercial banking presence in Europe.

"We are doing many of the things a bank carries out, but we don't have the same types of regulatory constraints. There are also no plans to open bank-type branches in Europe," Mr. Nide said.

Meantime, Burton Financial's existing senior management team, headed by chairman and chief executive David Legg, will stay on. The company has some 1,500 employees in three main locations in Britain.

... by country

THE NETHERLANDS

Nippon Life Insurance Co. has completed market purchases of stock in **Amsterdam-Rotterdam Bank** amounting to about 1% of the bank's outstanding stock. The insurer says its aim is to have a relationship with a major bank in each of the European Community member countries. — **TFW**

VENEZUELA

A Venezuelan delegation explained to the 20 Japanese banks holding some $4 billion of Venezuelan debt the details of its five-point menu for a Brady plan restructuring. The Japanese banks will be taking the interest rate and capital reduction options, but their reaction to the idea of new lending to the country is described as "extremely cautious." — **TFW**

BRAZIL

Brazil's special secretary for economic policy, Antonio Kandir, is traveling to Washington to seek a date for an International Monetary Fund mission to come to Brazil, an Economy Ministry spokesman said.

The mission will negotiate an economic adjustment program between the IMF and Brazil. A pact with the fund would pave the way for negotiations with Paris Club creditors and international commercial banks.

Mr. Kandir will meet with IMF managing director Michel Camdessus today to set the date for the mission's visit, he said.

Mr. Kandir was also expected to meet with David Mulford, under secretary for international affairs for the U.S. Treasury, the spokesman in Brasilia said.

Brazil's negotiations with foreign creditors have been slow getting off the mark. In May, Economy Minister Zelia Cardoso de Mello said the IMF mission would come to Brazil in early June with a view to signing a pact by September. Now a deal is not expected before October.

Private bank creditors, meanwhile, have been expressing exasperation about the lack of interest payments on most medium-term and long-term debt for one year. — **Reuters**

JAPAN

The previously announced easing of regulations on Japanese individual and corporate foreign savings will go into effect on July 30. The revision also includes the lifting of the ban on buying and selling foreign securities. — **TFW**

Poland Gives Nod to 4 Foreign Banks

Preliminary Approval for Full-Fledged Operations

By JAMES R. KRAUS

NEW YORK — Poland has granted Citicorp, Austria's Creditanstalt Bankverein, and Britain's Barclays Bank PLC and Midland Bank PLC preliminary approval to open full-fledged banking operations.

Within weeks the four banks will submit formal applications to open branches or subsidiaries, said Gerhard Randa, deputy chairman of Creditanstalt.

Mr. Randa said he expects Polish banking authorities to approve the applications within months and that Creditanstalt will have an operating unit in Warsaw by yearend.

Comment Is Sparse

Spokesmen for Midland in London and Citicorp in New York declined to comment. A spokesman said Barclays plans to open representative offices in Czechoslovakia, Hungary, and Poland, but he would not comment on other plans.

Two weeks ago, Citicorp opened representative offices in Prague and Warsaw.

Citicorp said it planned to use the offices to help corporate customers find local business partners, help establish joint ventures, and arrange investment-related financings, provide trade finance, and help privatize government-owned companies.

A decision to let foreign banks remit all profits cleared the last obstacles, said Gerhard Randa of Creditanstalt.

Citicorp said at the end of June that it expected to have a "broader participation in Czechoslovakia's and Poland's banking and finance systems as regulatory arrangements evolve in the two countries."

Citicorp's other main operation in Eastern Europe is in Budapest, where it owns 80% of a local bank, Citicorp Rt.

Creditanstalt has been rapidly expanding in Eastern Europe.

In May, Creditanstalt opened a commercial bank in Hungary in partnership with Budapest. It plans to open a bank in Czechoslovakia as soon as that country revises its bank regulations to allow foreign ownership.

The Austrian bank plans to take local deposits and provide commercial loans, trade finance, and investment banking services in Poland, Mr. Randa said.

He agreed with estimates that $4 billion to $5 billion in foreign currency was being hoarded privately in Poland. Foreign banks stand to collect much of that in deposits because of their better "reputation," he said.

Creditanstalt is also working on arranging debt for equity swaps in Poland.

Around 30 such swaps are now being reviewed by the Polish government, according to Mr. Randa.

Mr. Randa said that the bank decided to apply for a banking license in Poland after obtaining preliminary approval from the Polish government.

A recent decision by the Polish government to allow foreign banks to freely remit all profits had cleared the last remaining obstacles to doing banking business in Poland, he added. □

World Bank Balks at Forgiving Some Debt

By JAMES R. KRAUS

NEW YORK — "What's good for the goose is not necessarily good for the gander" might serve as a motto for the World Bank these days.

This week, officials of the multilateral lending agency rejected bankers' demands that it join commercial banks in forgiving a portion of its loans to Third World countries.

'No Plans to Participate'

"The World Bank has no plans to participate in debt reduction," said Robert Wood, its vice president for financial policy and risk management, at a press briefing Tuesday.

Last year, Treasury Secretary Nicholas F. Brady called on commercial banks to forgive a portion of their loans to Third World countries. Five agreements to do so have been reached – with Mexico, Venezuela, Costa Rica, Morocco, and the Philippines.

In a related move, President Bush announced last month that the United States would write off a portion of some $7 billion in loans to Latin American countries and will sell, at a discount, a portion of $5 billion or so in markets-rate loans. The aim is to facilate debt-for-equity and "debt-for-nature" swaps.

The President's announcement triggered speculation that the World Bank and other international lending agencies, such as the International Monetary Fund, might follow suit.

Position Is Defended

However, Mr. Wood said that there is no justification for calling on the World Bank to forgive any of its loans since, unlike commercial banks, it has continued to supply new loans to support economic reform in developing countries.

He added that loan forgiveness would lower the World Bank's triple-A rating and raise its own borrowing costs as well as those of the Third World countries.

In a concession to debt relief, however, the World Bank has reduced its 0.75% commitment fee and has said that this year it plans to cut its loan margin, now 0.5%, to help Third World borrowers improve their cash flow.

The Washington-based bank, officially the International Bank for Reconstruction and Development, lends to countries around the world, mainly for long-term economic investment. It has 162 member countries.

7 Countries in Arrears

The bank has about $90 billion in loans outstanding, $35 billion to $40 billion to developing countries. Peru, Zambia, Syria, Guatemala, Liberia, Sierra Leone, and Panama are in arrears on around $3 billion in loans. □

What the regulators don't tell you. 1-800-456-2340.

Complying with CRA/HMDA is simple. You post your public notice, keep a public file, and file the required HMDA forms. And you act in the *spirit* of the law and actively support your community.

Now what exactly does that last part mean?

Turns out it's not as simple as it seems. The regulators will grade you on your efforts. And your grade will beCome available to the public in a few months. So anyone can find out how you're doing in this gray area. And use it to challenge your decisions to branch or enter new businesses.

The only way to prevent this threat is to be sure you have a CRA/HMDA program that complies in spirit, act, and deed with the regs. And while the regulators don't tell you how to do that, we can.

The **Community Reinvestment Act/Home Mortgage Disclosure Act Regulatory Compliance Manual** covers it all in one easy-to-read book.

We show you exactly how to structure a good CRA program, develop community outreach programs that meet community needs, document everything, train your people to comply, and audit your program to be sure it works.

There's also a summary of the regs in plain english, a reprint of the regs for your reference, and a review of an actual program in use now at successful banks.

You can be sure it meets the regulators' standards because it's written by a former OCC field officer. And it's published by Sheshunoff Information Services Inc., the leader in high performance banking information since 1971.

Get your copy and make sure you've got a CRA/HMDA program that no one can challenge. Call 1-800-456-2340 today.

News Reports, if True, Show Guilt of 5 Senators, Activist Says

Reuters

WASHINGTON — If five senators tried to intervene with regulators on behalf of savings and loan executive Charles H. Keating Jr., as news media have reported, then they violated ethics rules, the watchdog group Common Cause says.

Common Cause filed a legal brief with the Senate Ethics Committee, which is investigating the senators' contacts with the former chairman of the failed Lincoln Savings and Loan Association, Irvine, Calif., a subsidiary of American Continental Corp., Phoenix.

The committee is investigating whether the legislators tried to pressure regulators not to scrutinize or seize Lincoln. The legislators, known as the Keating Five, are Alan Cranston of California, Dennis DeConcini of Arizona, John Glenn of Ohio, and Donald Riegle of Michigan, all Democrats, and John McCain, an Arizona Republican.

Mr. Riegle is chairman of the Senate Banking Committee.

The senators' campaign funds or political organizations they controlled received a total of more than $1 million from Mr. Keating as well as free transportation for themselves or family members. The five have denied wrongdoing and said they were providing a normal constituent service.

> **"A senator's assurance . . . is irrelevant."**
>
> **Archibald Cox**
> *Common Cause*

Their motivation is not an issue for the ethics panel, contends the brief that Common Cause filed with the committee.

Archibald Cox, chairman of Common Cause and a special prosecutor in the 1970s Watergate scandal, wrote in the brief, "A senator's assurance that he was not influenced by the extraordinary benefits is irrelevant."

"No one truly knows the effect of such large favors upon his thinking," Mr. Cox added. "The appearance of influence damages public confidence in the impartiality and integrity of both individual senators and the Senate."

Mr. Cox said the ethics committee's job is to decide whether the published reports are substantially true. If so, he said, the situation is far different from one in which a senator makes a straightforward inquiry on behalf of a campaign contributor or constituent.

Gifts 'Substantially Larger'

Here, the benefits conferred by Keating were substantially larger in all five instances," Mr. Cox wrote. "Given all these circumstances, no one can seriously deny that reasonable persons might draw the conclusion that the senators' intercession was influenced by Keating's favors."

Violations of ethics rules could bring mild or more serious censures from the Senate committee and could damage a senator's chances for reelection or his standing in the Senate. □

7 States Agree To Share Data On Foreign Banks

Continued from *page 2*

Reserve now, we will do with other states," said Harold Doyle, deputy superintendent of banks in California, who served on a task force that developed the plan to share information.

"We want the quality of foreign bank assets to be safe and sound," he added. "We do not want foreign banks to ship assets from one state to another state."

$700 Billion in Assets

The states involved thus far – California, Florida, Georgia, Illinois, Michigan, New York, and Washington – account for the bulk of the $700 billion of foreign bank assets in the United States. The Conference of State Bank Supervisors, the trade group for state banking departments that helped to develop the foreign bank plan, said 94% of foreign bank-controlled assets are under state regulation.

Speaking on behalf of foreign banks in the United States, Lawrence R. Uhlick, executive director and counsel at the Institute of International Bankers, said his group supports the effort to create a more efficient system of supervising foreign banks here. State regulators said such coordination would benefit foreign banks by providing greater consistency of supervision and coordinated timing of examinations by state banking departments.

U.S. Charters Unaffected

Most branches and agencies of foreign banks are state-licensed. The state data-sharing affects only the branches and agencies of foreign banks and does not extend to the full-service banks chartered in the United States but owned by foreign companies.

State regulators said they expected the confidential sharing of data on foreign banks to be expanded to other states as foreign banks spread geographically. One regulator said he expected Texas, because of its large market, to be an area of particular interest for foreign banks. □

To crack the tough small business market, you need hard facts.

How are your competitors segmenting and marketing to one of the most profitable markets in banking?

Trans Data knows. And you should, too.

Small businesses think, react and bank unlike any other customers. They have strong ideas about what they deserve. And they have needs other banks are already addressing aggressively.

Trans Data gets you inside cost-effectively.

Three prepared Trans Data studies take a hard look at timely topics. Your competitors' strategies and products. The needs and attitudes of key market segments. In-depth reactions to popular DDA accounts. You'll find insights and projectable results to impact product development, customer service and marketing strategies.

Or focus on your local prospects with a proprietary Trans Data survey. Tailored from a thoroughly-tested model, it's a rapid and economical way to probe your potential small business base.

Gather a year's worth of results in days.

Syndicated studies are obtainable immediately. Proprietary results could be in your hands as soon as two weeks after interviews begin. And all are backed by a decade of rigorous experience in banking research.

For the past year, we've been answering the tough questions about small business you're asking today. If small business banking looks like a big business to you, call now.

COMMENT
Risks Are Seen In Cross-Guarantee

Continued from *page 19*

Federal Reserve Act.

This section limits an insured bank's transactions with an affiliate to 10% of capital and requires that all loans or extensions of credit to an affiliate (including, for example, a stand-by letter of credit) be fully collateralized. (Since 1982, affiliated banks have been exempt from these provisions.)

The purpose of the waiver privilege is, of course, to assist the FDIC to find buyers for failing banks and thrifts.

Priorities of Payment

As originally proposed, the cross-guarantee liability would have had priority over most categories of claims against the bank, other than deposits.

As adopted, however, the priority of cross-guarantee claims has been considerably reduced.

Superior Claims

Thus the FDIC's claim now outranks only two other categories:

- Any obligation to shareholders – that is, the parent holding company and its shareholders and creditors (as well as direct minority shareholders).

"The FDIC may exempt any insured bank or thrift from cross-guarantee liability."

- All obligations to affiliates, including secured obligations (unless the security arrangement was in place on May 1, 1989).

The good news, relatively speaking, is that cross-guarantee liability is expressly subordinate to:

- Any deposit (except a deposit of an affiliate).
- Any secured obligation of an unaffiliated party.
- Any other general liability, senior or subordinate, other than those to affiliates and shareholders.

The latter category apparently would include, for example, lessors and trade creditors. Counterparties on swaps, repos, and other "qualified financial contracts" are generally protected under Firrea and apparently would not be precluded from exercising their rights, notwithstanding a cross-guarantee assessment.

A Worry for Bank Creditors?

The modified law has much less effect on creditors of banks and thrifts than the original proposal would have had.

In particular, the upgrading of unaffiliated subordinated creditors from a position of subordination to one of priority over the FDIC prevents what could have been a major chilling effect on the ability of healthy sister banks and thrifts to maintain and build funding.

Nonetheless, there are areas of concern.

'Source of Strength' Doctrine

Firstly, though the law is directed at insured bank and thrift subsidiaries, it has the potential for stripping the parent holding company of cash flow.

But the Federal Reserve Board's "source of strength" doctrine requires holding companies to act as a source of strength – including funding – for their insured bank subsidiaries.

Stripping the parent of cash flow calls this doctrine into question, particularly in crises for which it was designed.

The FDIC is not the only challenge to "source-of-strength." Last summer, the bankruptcy court dealing with MCorp ruled that bankruptcy laws and procedures override the doctrine, at least where the holding company is already in bankruptcy proceedings.

A second area of concern is the priority of the cross-guarantee liability over all claims of the parent holding company on its subsidiaries.

"As originally proposed, the cross-guarantee liability would have had priority over most claims against the bank. As adopted, the priority has been considerably reduced."

This priority weakens the position of creditors and shareholders of holding companies and will make it harder for such companies to raise capital.

From a lender's perspective, it becomes preferable to make a subordinated capital loan to the insured bank than to its parent. In effect, the new law treats the parent holding company as the weakest link in the chain of entities constituting a bank holding company system.

A third area of concern for creditors is the law's ban on payment of dividends by a healthy holding company bank if default or FDIC assistance is occurring elsewhere in the company's system.

The same prohibition applies to the payment of interest on capital notes of debentures if by their terms they are payable only out of profits. These prohibitions remain in force as long as any assessment due the FDIC is in default.

Therefore, the payment of dividends to the parent holding company – for purposes of debt servicing and paying dividends to its shareholders – is totally cut off once FDIC has given notice of a cross-guarantee. The dividends stay at zero until the claim has been paid in full.

Possible Response

A possible response by holding companies might be for them to accumulate financial assets from dividends paid by the subsidiaries.

This money would enhance the parent's creditworthiness by increasing a cash cushion to be used in the event of a cross-guarantee claim.

Incentive Seen as Illusive

A fourth area of concern relates to the incentive that cross-guarantee might at first glance

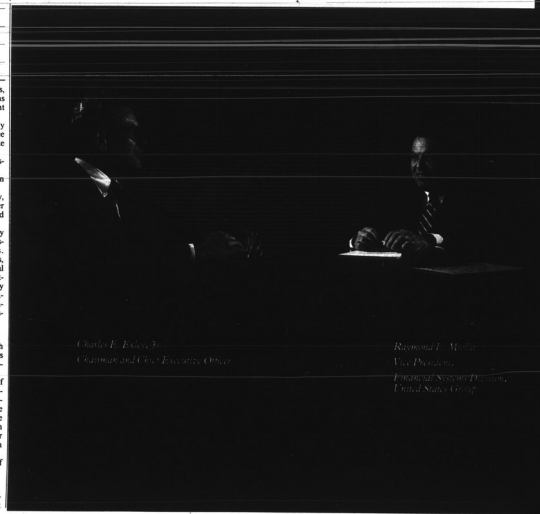
Our Mission Is To Create Value For You.



Here's What That Means And Why It Matters.

We measure value by our ability to help you achieve success with your customers. To accomplish this end, we need to provide you with complete, innovative solutions that increase customer service while improving your operational productivity.

These solutions have been developed under an NCR strategy called Open, Cooperative Computing. The cornerstone of this strategy is an open architecture, based on industry standards, that allows you to integrate the NCR products you need for success today…while assuring an open, multi-vendor environment that protects your investment for the future.

For example, our open Financial Tower System has revolutionized teller and platform productivity. Our Integrated Retail Delivery Systems will bring a new perspective to customer service… and branch performance. NCR Self-Service Systems will give your customers more depth in the services they can perform themselves. In addition, NCR Imaging Systems for Item and Document Management will provide you with powerful productivity weapons to use in the competitive decade of the '90s.

Open, Cooperative Computing is a strategy that will reshape the future of financial technology. The full benefits of this strategy can give you and your people transparent access to the enterprise-wide resources needed to effectively manage your growth into the next century. If you would like to learn more about the company that can create value for you and your customers, phone 1-800-CALL NCR and ask for the "Open, Cooperative Computing" brochure.

COMMENT
Risks Are Seen In Cross-Guarantee

Continued from *page 24*

seem to create for redistributing weak assets among the banks of a holding company system.

The concern incentive arises because cross-guarantee effectively eliminates the ability of a bank holding company to preserve the stronger banks while allowing the weaker to default.

But Section 23A effective prohibits insured banks from purchasing low-quality assets from affiliates. Though sales of assets among affiliated banks are generally exempt from 23A, transfers of low-quality assets – principally loans criticized by the bank examiners and other restructured or nonperforming loans – are expressly forbidden.

On balance, then, creditors of healthy banks need not fear that their better assets will be stripped and replaced with weaker ones.

Constitutional Issue

A number of matters regarding cross-guarantee remain unresolved.

Perhaps the most fundamental is the legality of the doctrine itself. Some observers have questioned whether the concept of compelling one corporate entity to cover the losses of an independent though "sister" corporation might not be an unconstitutional taking of property. This remains to be tested in an appropriate case.

Another open area is the treatment of minority shareholders of an insured holding company bank.

"Cross-guarantee does not pose a major additional risk to extant creditors of an insured bank, since cross-guarantee claims by the FDIC are subordinated to essentially all claims of unaffiliated parties."

If one insured bank is assessed to cover the losses of its sister bank, arguably the majority shareholder – the holding company – is no worse off, over all.

But what about a minority shareholder of the bank so assessed? Does cross-guarantee amount to a taking of the shareholder's property without due process and just compensation?

Or would a court determine that the risk of such regulatory action comes with the territory?

It also should be emphasized that cross-guarantee does not take effect unless there either has been a default or the FDIC has provided assistance to an institution deemed to be in danger of default.

One condition of a default is that there must have been a receiver or conservator appointed. But the law also allows appointment of a conservator on grounds other than insolvency; a recent prominent example is that of Franklin Savings Association of Kansas. Cross-guarantee apparently would not take effect in such as case.

All or Nothing?

Finally, it is not clear whether cross-guarantee is an all-or-nothing proposition.

True, the FDIC has discretion to impose liability based upon the actual or estimated loss to the insurance fund. But it also has discretion to waive that liability if to do so would be in the best interests of the insurance funds.

One reason to waive would be to tempt a buyer for a healthy property. Another reason might be to prevent the undermining of an otherwise healthy institution.

Does this mean that the FDIC has discretion partially to waive liability? May it require only a partial payment in order to avoid fatally weakening a healthy sister bank or thrift? Or will it hold to the view that preserving the health of sister holding company banks at public expense only invites a repetition of the MCorp scenario?

The agency is understood to be preparing a policy statement for eventual publication. Perhaps this clarify some of these uncertainties.

"The new law is a significant potential risk to holding company creditors."

A Selective Risk

Cross-guarantee does not pose a major additional risk to extant creditors of an insured bank, since cross-guarantee claims by the FDIC are subordinated to essentially all claims of unaffiliated parties.

But the funding power of the same banks after the exercise of "cross-guarantee" is apt to be impaired.

In addition, the new law is a significant potential risk to holding company creditors, since all their claims on the insured bank subsidiaries are expressly subordinate to cross-guarantee liability.

It also appears to be a threat to minority shareholders of insured banks and thrifts that are part of a holding company system. □

Bankers Trust Aiding Math Centers in NY

NEW YORK — Bankers Trust New York Corp. is underwriting a program to help improve students' mathematics performance in the city's public schools.

The bank is providing a $115,000 leadership grant to expand one of the school system's three existing Mathematics Resource Centers.

The centers offer training workshops, demonstration lessons, and resource materials for teachers, supervisors, students, and parents. □

Greenspan Says Credit Crunch May Spur Further Easing

Continued from *page 1*

felt," Mr. Greenspan told the Senate Banking Committee. "Hence, it will require continued scrutiny."

On bank credit policies, he said, "It is hard to discern the dividing line between lending standards that are still healthy and those that are so restrictive as to be inconsistent with the borrower's status and the best interest of the lender in the long run.

"In recent weeks, we may have slipped over that line."

Correction Called One-Time

That perception by the central bank led it to ease interest rates for the first time this year, dropping the fed funds rate last week to 8% from 8.25% in what Mr. Greenspan originally characterized as a one-time correction.

"If we had done nothing, we would have increased the likelihood of the credit system beginning to crush economic growth," Mr. Greenspan said in his semiannual report to Congress. He left the door open to further easing.

"The Federal Reserve must remain alert to the possibility that an adjustment to its posture in reserve markets might be needed to maintain stable overall financial conditions," he said.

No New Crisis Seen

The Fed chairman also said he did not see the banking industry falling victim to a crisis of the magnitude faced by savings and loan institutions. And he saw a "shade" more risk of the economy's tipping towards recession in the near future.

He noted that while there had been a sharp inflationary surge in the first quarter of this year, inflation had moderated and he expected it to begin to fall. But he added, "the likelihood of a near-term recession seems low."

The Fed chairman said he did not see the banking industry falling victim to a crisis of the magnitude faced by thrift institutions.

While not committing to quid pro quos, Mr. Greenspan indicated the Federal Reserve would further ease interest rates if an accord were reached in Washington to reduce the budget deficit by $50 billion to $60 billion or more.

Role of Economy Stressed

Mr. Greenspan attributed the credit tightening not to monetary policy but to an independent increase in interest rates and a decrease in monetary aggregates. Higher interest rates were propelled by a stronger-than-expected economy and higher Treasury bill rates, reflecting the large issues needed to fund the Resolution Trust Corp.'s role in the thrift bailout.

Declines in monetary aggregates, in turn, stemmed from a run-up in market interest rates and to the savings and loan crisis. Because of the large deposits taken over and in some cases sold by the federal government, surviving institutions had less need to raise rates to attract new funding, said Mr. Greenspan.

Meanwhile, savers shifted their deposits from banking institutions to stock and bond mutual funds.

The S&L crisis contributed to a diminution of the money supply in part because the RTC, in taking over S&L's, placed many of those institutions' assets on the government's balance sheet. As a result, the funds needed by the depository system decreased.

No Recession Seen

Although more growth would be desirable on balance, "things are not too bad" in the economy, Mr. Greenspan said.

The Fed chairman said the economy was unlikely to slip into recession any time soon and that the gross national product should grow 1.5% to 2% this year and 1.75% to 2.5% in 1991. He said the Fed may have to respond with credit adjustments if there are big cuts in the budget deficit or if the credit crunch at commercial banks persists.

Committee members repeatedly asked Mr. Greenspan why the Fed had shifted from its insistence earlier this year that there was no "credit crunch."

Mr. Greenspan explained that signs early this year that commercial banks were concerned about their capital levels and were contemplating increasing margins were inconclusive.

Only recently have there been sufficient signs of widespread concern and accompanying action by the banks to lead the Fed to conclude credit was tightening significantly. Signs of banks increasing margins combined with a sharp drop in monetary aggregates in May precipitated last week's action, Mr. Greenspan said. □

Canadian Bank to Buy Trust

Reuters

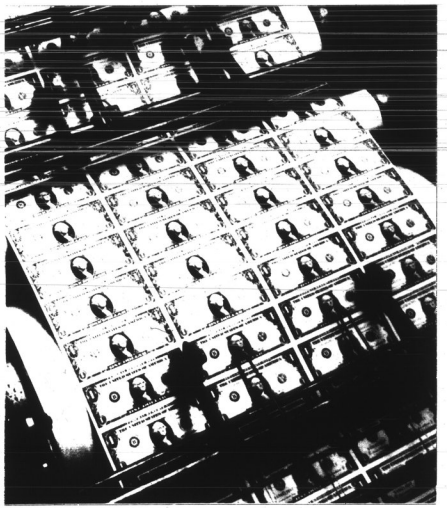
TORONTO — The Royal Bank of Canada said it has signed a binding agreement to buy International Trustco Inc., a Toronto-based trust company with $3 billion in assets and 80 employees at yearend 1989.

Royal Bank, which is also based in Toronto, did not disclose the price. It made the deal in anticipation of proposed changes in the national Bank Act that would blur distinctions among commercial banks, brokerage firms, and other financial service providers.

Trust companies are deposit-taking institutions similar to thrifts in the United States. International Trust specializes in corporate and institutional fiduciary business.

"International Trust is an ideal choice," said W.A.R. MacDonald, senior executive vice president for strategic development at Royal Bank, which is Canada's largest commercial bank. "It will provide us with much faster access to the trust/-business market, when permitted, than would be possible on a de novo basis."

Kathryn Humber, a banking analyst at Richardson Greenshields of Canada Ltd., said Royal Bank's move is "an indication of their confidence that regulatory reform will allow them expanded powers." □



In the financial services industry, only one paper is more important than ours.

Money may make the world go 'round. But it can't tell you about the latest issues, technologies and trends in the banking industry.

American Banker can.

As a subscriber, you'll be one of the first to know what's happening in the industry, why it's happening, when it's happening and what it means.

Join the successful financial executives who depend on *American Banker* for its intelligence, its editorial and its insight. Executive Help Wanted

Sr. Product Support Specialist Bankcard Operations

San Mateo, California

Technology and innovation have made VISA the largest, most widely recognized financial payments system in the world. We do more than enhance existing products. We focus on new product development as well. For you, that means exciting new projects in bankcard operations as well as a chance to gain greater visibility as you present recommendations to senior management.

Your primary focus will be on developing and writing operating regulations for our new and existing bankcard programs. This will involve analyzing the impact of operating regulations and presenting your findings to Member groups. You will also respond to inquiries from members, merchants, and cardholders regarding complex VISA policies and procedures.

You'll need a BA/BS, or equivalent, in-depth knowledge of bankcard operations, and a general understanding of Visa products, services, and systems. You must also have proven presentation skills, as well as management and analytical abilities. Some background in writing and editing is needed.

VISA offers an excellent compensation package, including comprehensive benefits. For immediate consideration, please send your resume to: VISA U.S.A., Dept. SH/7/16/AB, P.O. Box 8999, San Francisco, CA 94128. For other VISA opportunities, please call our JOB INFORMATION LINE (415) 378-8299. We are an equal opportunity employer.

VISA

We're everywhere you want to be.

Overseas Banking Consulting

As one of the world's oldest and most prestigious U.S. based consulting firms, we are continuing to expand our business in the Asia Pacific region. With offices in Singapore, Tokyo, Sydney and Jakarta, we have a strong established presence in the region and, in particular, a dominant position serving clients in the financial services industry.

We are currently seeking banking professionals with a strong record of achievement to join our Singapore office. We specifically require individuals with demonstrated functional expertise in the areas of:

- CREDIT– preferably middle market/wholesale
- OPERATIONS– both head office and branch levels
- HUMAN RESOURCES– emphasis on manpower planning, performance/potential appraisal, organization, training

Candidates should have 5-8 years of significant banking experience and possess an MBA or other relevant graduate degree. International work experience, especially in developing countries, would be a plus. In addition, the successful applicant must demonstrate the personal qualities of drive, initiative, creativity and professionalism, and possess strong communication, interpersonal and problem-solving skills.

For immediate consideration, send your resume and salary requirements in confidence to:

Box #435
c/o American Banker
One State Street Plaza
New York, NY 10004

An equal opportunity employer

The Office of the Comptroller of the Currency (OCC) is seeking to employ 1 or more Financial Analyst who will be responsible for analyzing banking and financial industry trends, economic and regulatory issues and initiating new or revising existing supervisory policies and procedures. Candidates should possess:

• At least 6 years of professional experience, including 3 years performing financial analysis and evaluation work requiring a comprehensive knowledge of: (1) corporation finance, banking and the money and securities markets and (2) the financial and management structure, operations and practices of corporate and other organizations.

• Expertise in interest rate, liquidity and foreign exchange risks OR expert knowledge regarding specific products and practices relating to the money, capital and derivative markets.

Salary range $39,400-77,800 (plus geographical pay differential) commensurate with qualifications. Resumes will not be accepted. Applicants must submit a current "Personal Qualifications Statement" (SF-171) to:

Office of the Comptroller of the Currency
Washington Personnel Office
490 L'Enfant Plaza
Washington, D.C. 20219

Interested candidates may obtain a copy of the Job Announcement (#90-38) by calling (202) 447-1867. Completed applications must be received in our office by August 3, 1990.

An Equal Opportunity Employer - U.S. Citizenship Required

SR. FINANCIAL ANALYST

The Federal Home Loan Bank of Boston, central bank for over 200 of New England's mortgage lenders, has a unique and challenging career opportunity for a seasoned financial analyst. The Consultant will lead a new resource group providing state-of-the-art financial modeling and analysis to support the Bank's financial policy setting/decision making and new financial product research and development.

Qualified applicants will have advanced degrees, preferably in finance or economics, and at least five years of combined graduate education and relevant work experience. In-depth knowledge of financial theory, markets, and instruments is required, as is the ability to convey complex financial concepts verbally and in writing to audiences with varying levels of technical expertise. Demonstrated computer literacy, strong interpersonal and problem-solving skills building option financial models also are required.

This opportunity features a highly competitive salary and benefits package related to experience. Applicants should send resumes, salary histories, and cover letters to:

Janet L. Welch
AVP/Director of Human Resources
Federal Home Loan Bank of Boston
P.O. Box 9106 Gbtf
Boston, MA 02205-9106

An Equal Opportunity Employer

Asset/Liability Director

Innovative, medium-sized Mid-Atlantic regional bank holding company seeks Director of Asset/Liability Management Analysis, reporting to the SVP-Treasurer. Responsibilities include managing several analysts and working closely with senior management in the holding company and affiliate bank levels to develop and implement strategies to improve interest rate risk management and product pricing.

The ideal candidate will have 7-10 years of banking/financial analysis experience, including at least 3 years at a major regional bank working with interest rate risk simulation models and asset/liability management processes involving transfer pricing systems, complex investments and off-balance-sheet instruments. A good working knowledge of bank balance sheet/income statement dynamics is also necessary.

We offer a competitive salary commensurate with experience, plus an excellent benefits package. Qualified applicants should send a resume to: BOX #434, c/o American Banker, 1 State Street Plaza, New York, New York 10004.

Equal Opportunity Employer M/F

Product Manager

We are looking for a self-motivated Student Loan Product Manager who has an understanding of profit dynamics, operations and regulatory issues. If you're team-oriented and can take charge of a National Student Loan Portfolio, we'd like to talk to you. Interested candidates should have strong communications skills and a solid marketing background. Major bank experience a must. Send salary history and resume to:

Earnings of Large Banks Show Declines in Second Quarter

Continued from page 2

nonperformers for some time."

Fleet's nonperforming loans increased to $756 million from $653 million. This amount includes $355 million in so-called performing/nonperforming loans that are either current or less than 90 days past due.

Foreclosed real estate assets increased to $291 million from $275 million.

The company's loan-loss reserves increased to $618 million from $595 million at March 31.

Fleet's financial services group buffered the company in second quarter, with $31.2 million in profits, up 31% from a year ago.

Where Fleet stands out from the pack is where they have these other businesses, but that's not going to prevent them from suffering the same loan-loss troubles experienced by others in their New England peer group," said Gerard Cassidy, an analyst for Tucker, Anthony & R.L. Day Inc. in Portland, Maine.

Jack Flynn, Fleet's chief financial officer predicted that the company would remain profitable in the third quarter.

CONTINENTAL BANK

Chicago-based Continental's loss resulted from a $48 million restructuring charge and a doubling of domestic nonperforming loans to $455 million. It also reported a $21 million loss on the sale of government securities, partially offset by a $15 million gain on sale of real estate.

Continental's provision for loan losses was 25% greater than in the first quarter. Net interest income declined 15% and fee revenues dropped 23% compared with first-quarter 1989.

Last month, Continental dropped a bombshell, saying it would cut 900 jobs, or 13%, after reassessing its product lines.

Continental said its operating expenses rose 9% in that the company expects the cutbacks to save $25 million in the second half and about $75 million a year beginning next year.

PNC FINANCIAL

PNC's decline in earnings was mostly due to a $70.7 million chargeoff related to loans to developing countries and a $40.1 million chargeoff related to real estate, the bank said.

The company earned $74.5 million in net income in the first quarter and $125.5 million in second-quarter 1989.

"We have substantial LDC debt and are aggressively writing down real estate values to dispose of these properties as quickly as possible," said chairman Thomas H. O'Brien in a prepared statement. Analysts said that the real estate portion of the chargeoff was higher than expected.

DEALS: Syndication of Lin Broadcasting Loan Proceeds Smoothly

By WILLIAM GOODWIN

The lead banks on a $1.75 billion loan for Lin Broadcasting Corp.'s cellular telephone operations have syndicated almost the entire amount before the final deadline for commitments, offering rich up-front fees as high as 325 basis points.

A total of 14 banks, including the three lead banks, ponied up $1.7 billion by Tuesday's deadline for early commitments.

Additional commitments of up to $700 million are expected by the July 24 final deadline, said William Hoglund, a managing director at Morgan Guaranty Trust Co., one of the three lead banks.

In addition to the J.P. Morgan & Co. unit, the other lead banks on the credit are the banking unit of Citicorp and Toronto Dominion Bank.

Participating banks are being rewarded with unusually high fees in recognition of the fact that there is virtually no secondary market for cellular loans, even high-quality cellular paper like the Lin credit, bankers said.

Secondary sales of a $3 billion loan to McCaw Cellular Communications have been essentially nonexistent, bankers say.

The Lin facility "is quite possibly the best cellular financing in terms of pricing and structure that the bank community is likely to see for some time to come," said an official at one of the banks participating in the credit.

Proceeds from the loans will be used in part to cover the cash portion of Lin's purchase of certain cellular properties of Metromedia Co.

Each of the three lead banks committed $200 million to the cellular facility. Before the loan was marketed, the lead banks committed to arrangement commitments totaling $675 million.

Barclays Bank PLC and Bank of Nova Scotia each committed $200 million, Kansallis-Osake-Pankki of Finland committed $125 million, Bank of New York committed $100 million, and Bank of Montreal provided $50 million, Mr. Hoglund of Morgan said.

That left only $475 million of the $1.75 billion credit to be raised from the general bank syndicate.

A companion credit of $350 million for Lin's broadcast operations was fully underwritten by the three lead banks and Bank of New York Corp.

Fees on the broadcast facility, which is also expected to be oversubscribed, are substantially lower than the cellular facility, even though the underlying transactions for both credits are considered highly leveraged.

In contrast to the cellular credit, the maximum fee on the broadcast facility is 137.5 basis points.

Fees on the cellular facility range from 325 basis points for commitments of $200 million to a record 175 basis points for commitments of $25 million.

As an incentive to sign up early, banks that committed by July 17 will receive a portion of their fees based on their actual commitments, rather than their allocated amount if the credit is oversubscribed.

The interest rate on the loans is set initially at 250 basis points over the London interbank offered rate, but the rate will decline as the company's ratio of debt to cash flow improves, Morgan's Mr. Hoglund said. □

Nonunion Group Agrees To Back UAL Buyout Bid

By WILLIAM GOODWIN

Representatives of UAL Corp.'s nonunion workers said Wednesday they will support the proposed $4.4 billion buyout of the airline company after reaching agreement with the unions on wage concessions and related issues.

Failure of the noncontract workers to support the buyout effort would have dealt a serious blow to the deal.

The noncontract workers agreed to wage and cost concessions of about $50.5 million and modifications of pension and other benefits.

In return, UAL's 26,000 noncontract employees, who represent about a third of the company's total work force, will hold 14.26% of UAL if the buyout succeeds. The three unions would own the rest of the company.

Terms of the noncontract workers' pact with the unions must be inserted as amendment to the merger agreement between the buyout group and the UAL board. The amendment would amount to a contract within the merger agreement, an adviser to the noncontract workers said.

The noncontract employees were represented by First Chicago Corp.'s First National Bank of Chicago and Fried, Frank, Harris, Shriver & Jacobson.

Negotiations between the noncontract workers and the union buyout group ended last week without agreement on any of the major issues. Those talks were followed by phone conversations between the two on Tuesday.

The agreement was announced Wednesday morning by the noncontract workers' advisers.

A spokesman for the union buyout group had no immediate comment on the agreement. □

Thrift to Repay U.S. $18 Million It Bilked

WASHINGTON — Florida Federal Savings Bank of St. Petersburg has agreed to repay $18 million to the federal government to settle charges that it falsely billed the Department of Education for student loans.

The Justice Department said the savings bank will repay the money by agreeing not to accept legitimate reimbursements from the government for student loans.

— Reuters

ADD PLUS® TO YOUR CIRRUS® ATMs AND GET AN EXTRA 150 MILLION

Soon Cirrus® members will be able to cash in on Plus System® customers. Adding the revenue potential of over 150 million Plus® cardholders.

So, by adding the Plus logo to your ATMs, you will start attracting customers who used to pass you by!

For information, please contact Ron Reed, vice president and general manager, at 303-620-7318. And make the most of your ATMs.

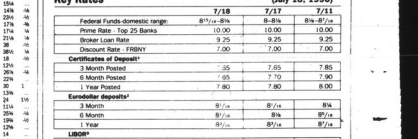
Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the dollar value of their common stock outstanding on December 30, 1989. Also listed are value ratios — the market to book: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Book value is adjusted for announced earnings and dividends. Cls. The price at which the last stock last traded. If no trades for the day, the latest bid. All Bank and Thrift Indices: A weighted average of the top 250 banks or market value and the top 50 thrifts in market value, respectively. Highlights show largest percent gainers/losers in price, and two volume indicators most shares traded and today's volume as a percentage of average shares traded over the past 65 days.

Data sources: SNL SECURITIES, Charlottesville, VA, 804-977-1600, produced the tables. Financial News Network, Vienna, VA, provides 246, with the daily prices.

Libor Swap Yield Curve

Wednesday, July 18, 1990



Data source: Manufacturers Hanover Trust Co., New York

Description of table: For lenders and borrowers in the interest rate swap market, the LIBOR swap yield curve is the benchmark interest rate used by active participants when arranging the exchange of fixed and floating-rate cash flow streams of different maturities. For example, a fixed-rate lender holding a one-year fixed-rate loan and wishing to swap into floating would pay the one year rate at the end of a year in exchange for a floating-rate payment stream, usually 3-month LIBOR, paid and reset quarterly.

STOCKS

Barnett Stages Partial Rebound From Its Slump

By GORDON MATTHEWS

NEW YORK — Shares of Barnett Banks Inc. have recovered some ground after a disappointing second-quarter earnings report jolted nervous investors and led some analysts to slice forecasts for the well-regarded Florida superregional banking company.

While the stock is not back to its pre-announcement levels and some observers remain skeptical, analysts point to a decline in nonperforming loans, convincing some that it's attractive at current levels.

Barnett last week announced a 9% decline in quarterly earnings to 93 cents a share, significantly below many analysts' estimates, and bolstered its loan loss reserve.

Drop in Nonperforming Assets

The stock simultaneously fell to $30.50, a level more than 10% below its price of just two weeks earlier. By Wednesday, it had recovered to $32.50, but was off 12.5 cents on the day and remained well under its $34 price of mid-June.

The weakness in the stock has occurred despite a drop in nonperforming assets at Barnett in the second quarter, to 1.89% of loans from 1.91%.

Moreover, the chargeoff ratio improved to 0.58% of average loans from 0.84% in the first quarter. While the declines were modest, they reversed the trend of higher problem assets at many banks and thrifts.

A Nervous Market

"It shows just how much on pins and needles the market is for these stocks that a bank can show this and still get hurt," commented one New York analyst who follows superregional banks in the southeastern states.

Even while cutting estimates, many analysts have continued to laud Barnett as a well-run company with a commanding 23% market share in a state with an expanding population and economy. But they see little reason for short-term optimism on a market-valuation basis.

At its recent low of $30.50, the stock still sold at 7.4 times the 1991 earnings of $4.10 per share recently estimated by Salomon Brothers analyst Thomas H. Hanley. "Until real estate market conditions improve, we see little upside potential in the stock," he said.

But while Mr. Hanley retained his investment opinion on Barnett's stock, others are gloomier. Norman Jaffe, a bank analyst for Fox-Pitt Kelton Inc., issued a sell recommendation on the stock after the earnings announcement.

Mr. Jaffe said "several sizable positive transactions in nonperformers camouflaged a disconcerting potential trend."

* * *

WEDNESDAY'S MARKET

Most major bank and thrift stocks headed down on Wednesday as the stock market in general retreated. The Dow was off 20.54 at midafternoon in a sharp pullback from the 3000 barrier it has recently neared.

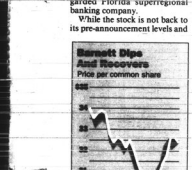
Nervous anticipation by investors characterized the action in several bank and thrift equities.

Shares of Chase Manhattan Corp. slipped 12.5 cents, to $21, as the market awaited a late afternoon board meeting there. Directors were to consider the dividend at the money-center institution, whose earnings have not covered its payout during the past two quarters.

Meanwhile, shares of in HomeFed Bank, San Diego, had declined $1.375, to $19.375, at midafternoon in anticipation of a weak second-quarter earnings report later in the day by the nation's seventh-largest thrift.

"Everyone seems to be fantasizing about this after what happened last month," said Gary Gordon, the thrift analyst at PaineWebber Inc.

On June 13, HomeFed disclosed a rise in nonperforming real estate loans and its stock plunged $8.25. Before that announcement, its stock was at $33.25. □



CAPITAL

Poor Earnings Push Up Bank Debt Yields

Continued from *page 1*

tentially unfriendly subordinated debt market.

Mr. Gorman reiterated on Wednesday that the capital cushion for banks was "too low." Some analysts believe as much as a 50% increase in capital requirements is plausible.

If the spreads remain wide on outstanding bank bonds, institutions in need of capital will be forced to swallow potentially expensive funding costs – or face the risk of new downgradings by rating agencies concerned about capital adequacy.

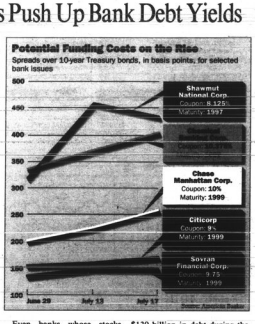
"Banks are just going to have to adjust their expectations," said an analyst at a large mutual fund company. "I think we won't see any meaningful tightening until maybe the end of this year."

Spreads Begin to Widen

Spreads on bank debt relative to Treasuries began widening last week in anticipation of mediocre second-quarter earnings. Since the end of June, spreads have widened as much as 70 basis points. The yield on Chase Manhattan Corp.'s 10% of 1999 have widened from 200 basis points over 10-year Treasuries at June's end to 260 over Treasuries. In that period, longer-term Treasury yields barely moved.

The yield on Citicorp's 9% bonds due in 1999 have widened from 155 basis points over Treasuries to 170 over. And the yield on Chemical Banking Corp.'s 10 3/8% of 1999 has widened from 335 basis points over Treasuries to 405 over.

Shawmut National Corp. has actually enjoyed a tightening in the spreads on its bonds in the past several days. But that move follows a widening of nearly 150 basis points in the first two weeks of July as the bank announced that nonperforming assets would increase nearly 20% in the second quarter.



Even banks whose stocks have risen because of actual or anticipated earnings announcements have not seen improvement in their bonds' performance.

For example, Bankers Trust New York Corp., which has yet to report earnings but whose stock has traded in sympathy with that of J.P. Morgan & Co., since that bank reported earnings, has seen its stock rise $0.75 since July 13. But its 9.2% bonds due in 1999 have been trading at 128 basis points over 10-year Treasuries since the end of June.

"Right now, there seem to be more sellers than buyers," said one bank bond trader.

* * *

MARKET MONITOR

Moody's Investors Service announced it downgraded a total of 80 financial institutions with $130 billion in debt during the first half of 1990.

Only 10 financial institutions, with $13 billion in debt, had their ratings raised during the period.

Commercial real estate was the primary reason for most of the downgrades. But John Lonski, a senior economist at Moody's, said "the inability of some banks to readily meet stricter capital requirements also helped spur downgrades."

Overall, corporate downgrades outpaced upgrades by a factor of 4.2 to 1, compared with a pace of 2.5 to 1 in 1989.

Separately, Moody's confirmed its ratings on securities of Wells Fargo & Co. and subsidiaries. A review was undertaken after Wells Fargo announced it would purchase the retail branch network of Great American Bank. □

Citicorp Admits Need to Revamp Finance Business

By JED HORWITZ

Citicorp appeared to swallow some humble pie this week when it acknowledged the need to reorganize its corporate finance businesses in Japan, Europe, and the United States.

For months, the nation's biggest bank company had denied that it would follow the path of Chase Manhattan Corp., Manufacturers Hanover Corp., and other big banks that promised to slim down their wholesale banking sectors in the face of weak deal flow, deteriorating credit portfolios, and flaccid earnings.

At an analysts' meeting on Wednesday, Citicorp officials not only joined their competitors in signaling that cost-cutting action must be taken, but also conceded that the company's program to sell assets on a specific schedule and

ANALYSIS: *Follow-up on the news*

that its deteriorating $13 billion portfolio of domestic commercial real estate loans will not improve soon.

Units Employ 15,000

Although Citicorp officials continue to shun the word reorganization, they made it clear that something must be done to reduce expenses and increase revenues from their corporate finance units in the recession-ridden world, which employ about 15,000 people.

"We don't have many excuses," said Thomas Jones, executive vice president for financial control. "Expenses are going up too much for the level of activities today, and we will get that into balance. We recognize the problem and we are going to do something about it."

Mr. Jones said that Citicorp will not be making specific projections about layoffs or potential annual cost savings as Chase, Hanover, and Bankers Trust New York Co. have done. "We hope we can make an intelligent statement about the way we measure and manage the business," Mr. Jones said, leading some analysts to predict that Citicorp will engage in a series of "mini-restructurings" within its global finance business sector and relate each to its program to build capital.

In the past year, Citicorp has bowed out of the British brokerage and securities markets and slashed its participation in the municipal bond market. Rumors circulated on Wednesday that Citicorp, along with other big banks, may soon give up their primary dealer status in

HomeFed's Stock Falls 25% As Bad Realty Loans Soar

Worries Spread to Other California Institutions

By FRED VOGELSTEIN

NEW YORK — HomeFed Corp.'s stock plunged 25% Thursday after the San Diego thrift company announced an unexpectedly large increase in bad real estate loans. The fallout spread to other California banks with real estate exposure.

HomeFed closed Thursday at $14.25, down $4.75. The drop, which came after HomeFed posted a $108.2 million second-quarter loss, was the second major jolt to the company's stock in a few weeks.

The stock had been trading at $33.25 just six weeks ago, before HomeFed began indicating its problem loans were on the rise.

The turnaround in fortunes of what was considered one of the nation's best-run thrifts has surprised analysts and investors.

The $5.04-a-share loss, announced late Wednesday afternoon, stemmed from a $234 million provision for loan losses. HomeFed increased its nonperforming assets by 56%, to $708 million.

Magnitude Surprised Analysts

Analysts had been expecting large increases because the thrift had already disclosed that nonperforming assets would increase at least $125 million.

But most said that they had not expected twice what had already been disclosed. Nonperforming assets, the bulk of which is real estate loans, now represent 3.73% of total assets, more than the 1% to 2% of most California banks and thrifts.

"Everyone thought they'd trash the quarter, but [a] $5 [a share loss] is a lot," said David Treadway, an analyst at Smith Barney, Harris Upham & Co.

HomeFed's stock began trading almost three hours late Thursday morning because of

SEC Chief: Depositors Should Pay For Insurance

By ROBERT M. GARSSON

WASHINGTON — Richard C. Breeden, chairman of the Securities and Exchange Commission, told Congress Thursday that the government should consider selling deposit insurance to consumers at a market rate.

Mr. Breeden, who is expected to play a key role in formulating the administration's position on financial modernization, said such a system would help reduce the federal deficit and allow consumers to decide how much insurance they want to pay for.

Reaction Likely to Be Divided

Mr. Breeden's comments are likely to cheer larger institutions, which are looking for a way to add market discipline to deposit insurance. But they may come as bad news for community banks, which fear that they will be at a competitive disadvantage if deposit insurance coverage is scaled back.

It is widely assumed that Congress will take up deposit insurance reform next year as part of a broader look at the financial services industry.

"We do have a budget deficit of considerable proportions, and

DC Bank Says Further Losses Push It to Brink

By BILL ATKINSON

WASHINGTON — With its losses mounting from bad real estate loans, Washington Bancorp.'s ability to continue operating is in doubt," John J. Mason, the company's recently appointed chairman, said.

The holding company of the National Bank of Washington reported a $60 million loss for the second quarter, bringing its six-month deficit to $86 million.

Program Is Aborted

The earnings announcement on Wednesday came with a statement from Mr. Mason that the company could not complete a previously announced $45 million recapitalization program and was contemplating significant asset sales and restructuring.

Washington Bancorp. has already reduced its assets to $1.8 billion on June 30, from $2.1 billion at yearend. It is weighing bids for acquire its banking sub-

RTC Plan to Resolve 77 Cases Includes Empire and Merabank

By DEBRA COPE

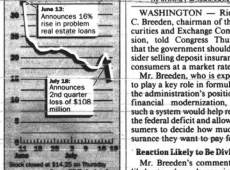
WASHINGTON — The Resolution Trust Corp. will devote its energies in the next few months to selling or liquidating 77 institutions with total assets of $48 billion.

Under an operating plan approved Thursday by the RTC Oversight Board, the agency will put several large thrifts on the auction block before Sept. 30. They include Empire Federal Savings Bank, Buffalo; Merabank, Phoenix; and Benjamin Franklin Federal Savings and Loan Association, Portland, Ore.

In concentrating on institution sales, the RTC will give a lower priority to lowering the cost of funds at the thrifts under its control. Many troubled thrifts have paid high interest rates to attract deposits.

Although the number of cases the RTC intends to resolve in the current quarter is well below the 155 handled in the three months ended June 30, the amount of assets involved is about the same.

The plan gives the RTC $41



billion for its operations this quarter. The bulk of the total – $34 billion – will be in the form of working capital borrowed through the Federal Financing Bank.

An additional $2 billion will come from dividends collected on assets in receivership, and $5 billion more will come from Resolution Funding Corp.,

PEOPLE *in the news*

Norwest's Leslie Biller Puts His Reputation on the Line

By NANINE ALEXANDER

Safety is the byword for Leslie S. Biller, Norwest Corp.'s point man on acquisitions: He has earned his reputation for doing conservative, in-market deals.

His image may change if discussions with the $6.1 billion-asset United Banks of Colorado Inc. — disclosed last week – result in an acquisition agreement. He will be deemed brilliant if this strategy works, bungling if it flops.

Mr. Biller declined to comment on any specifics of the United Banks talks. But he agreed with observers any combination of Norwest with the $26.8 billion-asset United Banks would be an ambitious undertaking. "We would want to focus on those challenges until we felt we had adequately addressed them," he said in a telephone interview.

A marriage with United Banks would leapfrog Norwest into the top 20 banking companies. Such a move would set a new standard of sophistication for the bank's acquisition strategy.

A United Banks deal, said Ben B. Crabtree, analyst at Dain Bosworth Inc., makes several big assumptions, not the least of which is that the Colorado economy has ended its decade-long slide.

A stock deal with United Banks would dilute earnings as much as 5%, a consequence of acquisitions that Norwest has consistently avoided. But a successful combination could also yield a 20% cost savings.

Analysts predict that any dilution Norwest accepted in the first year of pairing with United Banks would be earned back by the second.

"Biller understands the D-word [dilution] very well," said Steven R. Schroll, analyst at Piper Jaffray & Hopwood Inc., Minneapolis.

"We take the position that we represent both shareholder groups," said Mr. Biller, "buyers and sellers – and dilution penalizes both groups."

Leslie S. Biller

A Colorado agreement is a long way from being in the bag. And fresh in Mr. Biller's memory are some near misses on other big deals, including last year's bid to the Federal Deposit Insurance Corp. for Texas American Bancshares and National Bancshares Corp. of Texas.

"Les steered us around some rocky shoals in that deal," said Norwest spokesman John R. Kerr. The FDIC passed over Norwest in favor of Deposit Guaranty Bank of Dallas for Texas American.

The bid of Equimark, Pittsburgh, for National Bancshares foundered last April.

Referring to Norwest's bid on the Texas package, Mr. Biller said Norwest took full account of the risks: "We were looking at the competition" from Banc One Corp. and others.

A Background in Consumer Banking

The 42-year-old banker who has steered Norwest's acquisition strategy for the past three years has a background in consumer banking at Bank of America for two years, and 12 years at Citicorp.

Most of his tenure with Citicorp was spent in Milan (he is fluent in Italian) and in London, where he rubbed shoulders with Richard Kovacevich, then chief of international operations. Mr. Kovacevich, now president of Norwest, is a likely successor to chief executive officer Lloyd P. Johnson.

Mr. Kovacevich brought his former Citicorp colleague to Norwest as acquisition strategist, observing that Mr. Biller "understands how difficult it is to make money, so [he] won't spend it unwisely." □

2d Quarter Income Is Flat At American Express Co.

NEW YORK — American Express Co. reported net income of $320 million for the second quarter, up 1% from $316 million a year ago. The share figure was unchanged at 73 cents.

The travel-related services subsidiary contributed $249 million of profit, with the number of cards outstanding rising by 8% to 36 million and travelers check sales rising 4% to $6.6 billion.

The troubled Shearson Lehman Hutton subsidiary returned to profitability, netting $51 million, and American Express Bank's earnings fell $3 million to $32 million.

Ruding of IMF Is Named To the Board of Citicorp

NEW YORK — H. Onno Ruding, a former finance minister of the Netherlands and chairman of the interim committee of the International Monetary Fund, has been named a director of Citicorp.

An economist by training, Mr. Ruding, 50, also served as a managing director of Amsterdam-Rotterdam Bank in 1981 and 1982, an executive director of the IMF from 1977 to 1980, and joint general manager of Amsterdam-Rotterdam Bank from 1971 to 1976. □

Profits Dip 12% at BankAmerica

Total Is $267 Million After Writeoff for Nonperformers

By TERESA CARSON

LOS ANGELES — BankAmerica Corp. announced Thursday that its profits fell 12% to $267 million in the second quarter as it charged off $580 million in nonperforming loans.

Last year the company benefited from a one-time $44 million after-tax gain from payments on Brazilian debt that had been on nonaccrual status. Excluding the special gain a year earlier, this year's second quarter profit was up 2.6%.

'An Excellent Quarter'

"It was an excellent quarter," says San Francisco-based bank analyst Donald Crowley of the New York firm of Keefe Bruyette & Woods Inc.

Richard M. Rosenberg, chairman and chief executive, said BankAmerica has enjoyed a half-dozen experienced good growth in deposits, loans and core deposits and a big drop in sour loans. The results were about what most analysts had predicted.

For the six months, BankAmerica earned $545 million, down 6% from $579 million in the corresponding period a year earlier. Excluding from the comparison $82 million in Brazilian payments last year, first half earnings actually increased 16%.

Bad Loans Pared Down

Like many other banks, BankAmerica has been working hard to pare down a hefty burden of bad loans. Nonaccrual assets were $3.1 billion at the end of the second quarter, down from $4 billion in the first quarter and $4.1 billion a year earlier.

The company set aside $210 million in the second quarter for possible problems in the loan portfolio, 13% more than the first quarter's $185 million. As it reduced the problem loans, BankAmerica also let its reserves-against-credit problems slip by June 30 to 3.56% of total loans, from 4.39% in the first quarter. □

First Fidelity Bancorp. Posts a $150 Million Loss

By TOM LEANDER

NEW YORK — First Fidelity Bancorp. announced Thursday that it had lost $150.4 million in the second quarter after taking an expected $300 million provision for possible credit losses.

The Lawrenceville, N.J.-based company said nonperforming loans increased 24%, to $731.9 million, including "a major real estate/casino credit."

No Comment on Trump

A First Fidelity spokesman declined to comment on analysts' speculation that the problem credits include a $75 million loan to developer Donald Trump.

Manufacturers Hanover Corp. last month acknowledged that it had put more than $50 million in loans to Mr. Trump on nonperforming status.

First Fidelity disclosed in May that its nonperforming loans could rise as much as 40% in the second quarter, and its loss was in line with Wall Street's expectations. First Fidelity shares were off 25 cents to $16.75 in late afternoon trading Thursday.

Analysts said the results reflect regional economic woes experienced by most major banks in the Northeast; they said a lack of surprises was good news in itself.

"The question, of course, remains: Does this take care of the problem? Right now nobody has the answer," said Nancy Bush,

Nynex Builds Software Role With Agreement to Buy SSI

By RICHARD LAYNE

NEW YORK — Nynex Corp. said Thursday it had reached a definitive agreement to acquire Stockholder Systems Inc., which will give the regional phone company another inroad into the attractive market for banking software.

The stock transaction, which follows a letter of agreement signed in April, could be completed as early as September, Nynex said.

With an emphasis on financial-service clients in the United States and Britain, Nynex's software companies generated about $500 million in revenue in 1989, putting the phone company among the ranks of major software providers. The company's long-term plan calls for those revenues to triple in the next five years.

Valuation Explained

In what the companies describe as a tax-free purchase, Norcross, Ga.-based SSI will become part of AGS Computers Inc., a unit of Nynex Information Solutions Group. In the stock transaction, Stockholder Systems' shares will be valued $15 for each. The total amount is based on the average price of Nynex's common stock before the transaction is completed.

For Nynex, the acquisition fits into its plans to concentrate on providing technology to financial services companies. Nynex and other regional phone operating companies have targeted financial services as a key market for their expansion into information services.

Regulated telephone services accounted for some 85% of Nynex's $13.2 billion revenue in 1989, but Nynex executives believe that the growth potential of unrelated businesses is greater.

Nynex owns two software companies: AGS Computers, which specializes in trading-room software; and the BIS Group, a British company purchased in 1978. These two companies were responsible for most of the $500 million in revenue last year for the Information Solutions Group.

Stockholder Systems will provide only a small increase in revenue but a broad range of software offerings. The company, which sells IBM and compatible computers, reported $22.1 million in 1989 revenue. Its products perform check processing, electronic funds transfer and loan recovery. The company said it has 1,200 banking customers.

As with past acquisitions, Nynex is expected to leave Stockholder Systems' product line unchanged.

Stockholder Systems acquired four software companies in the past three years as part of its strategic growth plan. The company was unsuccessful in its bid to acquire Systeme Corp., a Maitland, Fla., company that sells branch networking technology.

Larry A. Dean, chairman of Stockholder Systems, said Nynex could provide resources to grow. The acquisition, he said in April, would allow the company's shareholders to "realize a value for their investment that has not been recognized by the current market." □

For Nynex, the acquisition fits into its plans to concentrate on financial-service technology.

Saving on Telecommunications

Small and Midsize Banks Join the T-1 Bandwagon

By JEANNE IIDA and KIM ANN ZIMMERMAN

NEW YORK — Small and midsize banks are reporting big savings in telecommunications costs from a technology that until recently only money-center banks and superregionals could afford.

The high-speed digital telecommunications technology, called T-1, allows a bank to send the equivalent of 24 voice and data lines over a single line. By funneling voice and data traffic onto a single line, banks can replace their multiple and costly telecommunications lines.

Banks can also automatically switch communications traffic to a different route if a problem develops on one part of the T-1 network.

Internal Control

First Security Corp., a $6 billion-asset bank based in Salt Lake City, is expanding an existing T-1 line so it can control the network internally instead of relying on a carrier. The bank says it has reduced its telecommunications costs 40% in some parts of the bank and expects still greater savings. With the decline in T-1 costs, the bank is saving as much as $10,000 over its costs several years ago on some parts of the network. Albert Pino, vice president and corporate telecommunications manager of First Security, said, "The percentage of savings is becoming a lot more dramatic" as the network cost drops.

As banking by telephone becomes more popular, some institutions see T-1 as a way to cut the cost of handling large volumes of customer service calls. Crossland Savings Bank, New York, installed a T-1 network in the spring for this purpose.

Prices on T-1 services have fallen 40% to 200% over the past three years, said Daniel Briere, president of Telecheck Inc., a consulting firm in Stamford, Conn. Prices are greatly because carriers usually cut individual deals with customers. Many carriers offer discounts of up to 60% if a customer makes a commitment of several years.

Besides saving money, the T-1 network will help First Security's 182 branches offer better customer service, gives faster loan approvals, and process new account information more quickly, Mr. Pino said. First Security is using equipment from Newbridge Networks Inc., Herndon, Va.

While the benefits filter down to smaller banks, derivative services are springing up. Some big banks are turning to a technology that provides three times the capacity of a T-1, called T-3.

Carriers in some parts of the country are also offering slices of a T-1 line, which costs less than an entire line.

Avoiding Frozen Lines

Citicorp Information Resources, a service bureau for small and midsize banks, is installing a T-1 network that will give its customers the ability to switch traffic automatically to other lines if a problem develops on the network.

The network is already being used by some customers, and Citicorp expects to complete the project by yearend, said Jack Frey, CIR's data processing director. The service would not result in higher costs, he said.

"The biggest advantage to this is improved customer service," said Robert Cochrane, vice president of Commercial Federal Corp., a $6 billion-asset thrift in Omaha.

"It really wasn't economically feasible to have two lines set up in case one line failed," he said.

If the volume of transmissions gets too high, Citicorp's network will be able to spill them over to a second line. □

Crestar Unit Migrates to PCs for Loan Production

NEW YORK — Crestar Mortgage Corp. plans to install software that will enable personal computers to run loan-production software, a step toward establishing a national network of mortgage bankers.

Crestar Mortgage, a unit of Crestar Bank and a midsize originator, is testing new software from Lomas Information Systems, a subsidiary of Lomas Financial Corp. The software, called distributed processing option, allows Lomas's mainframe-based software for mortgage processing to run on personal computers in branches.

Rinne Abbitt, assistant vice president of Crestar, said the system may provide the necessary support for the recently announced MortgageWright program. Under that program, Crestar plans to form a national franchise of up to 200 independent mortgage bankers.

Crestar originated $425 million in loans last year in Virginia, Maryland, and Washington. It services $3.1 billion of mortgages. Crestar plans to finish testing the Lomas software in September.

Regulators Have Put Banks In Double Bind on Capital

"There are opportunities for banks to build capital in special situations."

Not a day passes without front-page stories about the savings debacle, the growing cost of the S&L bailout, and the catastrophic erosion of commercial bank capital due to losses from lesser-developed country, leveraged buyout, and real estate loans.

Surprisingly, the financial press and bank stock analysts have been given extra fuel for their fire by bank regulators who are apparently eager to antiseptate future exposure or, more likely, to avoid criticism for not predicting "the next Texas."

It is not surprising, however, that the sometimes sanctimonious pronouncements made by regulators about real estate exposure in New England and LBO loans, coupled with examinations of a new rigor and dismal earnings reports, have led to a daily trashing of bank stocks. A recent rally was short-lived.

Public Confidence Jeopardized

The regulatory may have forgotten their duty to maintain public confidence in the nation's banking system, and inadvertently contributed to a loss of confidence in banks and consequent reduction in liquidity and capital values.

The solution proposed for this national disaster is more stringent capital requirements, presumably coupled with a beadier regulatory eye. This is not just an ad hoc response to the crisis in the U.S. banking system, but rather a concordat hammered out in Basel, Switzerland, by representatives of the central banks and supervisory authorities of Western nations and Japan.

Banking organizations will be required by the end of 1992 to meet a minimum 8% ratio of capital to risk-weighted assets. At least 50% of such capital must be core capital consisting principally of common and noncumulative perpetual preferred stock. Goodwill and certain intangible assets will be deducted. In addition, U.S. requirements may include a separate minimum leverage ratio of 3% of core capital to total assets.

Most banking institutions will have to raise substantial additional capital to meet these requirements as well as to continue to pay dividends at current high rates, replenish former intangible asset capital eliminated by the regulators, cover losses on LDC, LBO, and real estate loans, and expand by acquiring failed banks from the Resolution Trust Corp.

Raising Capital in Adversity

How can banks raise capital in these parlous times when bank stocks are selling at deep discounts from book value, reflecting a suspicion regarding real book values, capital, and earnings power? A simple mathematical exercise illustrates the problem.

Well-run (and lucky) banks do very well to earn an average net after-tax return on assets of 1% per year, and most earn significantly less. If, given the risk weighting of its assets, a bank must effectively maintain minimum capital of 6% of total assets, and it has an ROA of 0.6%, it would realize a 10% return on equity — a marginal equity return at best.

Hence, its stock might sell at a substantial discount from book value, making it dilutive to raise equity by selling additional common shares. And preferred stock or subordinated debt might be unattractive or unavailing, given current market conditions.

There are opportunities, however, for banks to build capital in special situations. Two recent examples demonstrate how strongly capitalized institutions may combine in a manner to strengthen the capital of the acquiring institution.

In a bidding transaction, the Bowery Savings Bank subsidiary of H.F. Ahmanson & Co. would acquire Home Savings Bank, one of New York's best-capitalized thrifts, with capital of about 15% of assets. It has been reported that the transaction would involve a swap of Ahmanson common stock for Home common stock at an exchange ratio that would have the effect of significantly increasing Ahmanson's pro forma capital.

Republic New York Deal

Recently, Republic New York Corp. built substantial additional capital by acquiring the Manhattan Savings Bank in a so-called merger-conversion. Manhattan Savings, a mutual institution with substantial capital, converted to stock form and merged into Republic's Williamsburgh Savings Bank subsidiary, which changed its name to Manhattan Savings.

Republic simultaneously contributed to Manhattan about $170 million of fresh equity capital raised in a rights offering of Republic common stock to Manhattan's depositors and a public offering of unsubscribed shares.

This transaction increased Republic's capital not only by the amount of net proceeds realized from the public offering of its common stock, but also by the amount of Manhattan's capital, which, with certain adjustments required under the purchase method of accounting, will be amortized into Republic's earnings over time.

A third capital-building possibility may exist for the stronger money-center or superregional banks, particularly with the expansion of interstate banking. But it is not for the faint of heart.

A New England Scenario

Consider, for example, a New England bank selling at 50% to 60% of book value based on generally accepted accounted principles and perhaps 75% to 80% of "honest to God" (HTG in in-

FUNNY MONEY/ *By Tom Leander*

Licorice-Stick Stickup?

Clarinetist Lisa F. McCallum may have been blowing a few bars of Benny Goodman's classic "Sing, Sing, Sing" up the river if prosecutors get to call the tune.

Last week, Ms. McCallum was arrested as the woman who had walked up to a teller at a Community Banks of Peoria branch in Creve Coeur, Ill., and handed over a note that read, "I have a gun, fill all the money you have in the bag."

The teller handed over an undisclosed sum, and robber bolted from the bank.

When police arrived, about five minutes later, bank employees described the robber, the nondescript case she had said concealed her weapon, and the getaway car.

Creve Coeur Police Chief Jerry Daughters pulled over Ms. McCallum, 32, of East Peoria. But when he gingerly opened the case he discovered a clarinet, not a gun.

Chief Daughters arrested Ms. McCallum and charged her with one count of armed robbery – and, he later quipped, two counts of "possession of a deadly instrument."

Slim Pickings at the Bar

As the parent agency of the Resolution Trust Corp., the Federal Deposit Insurance Corp. is going after abusers of thrifts with a vengeance, filing hundreds of civil lawsuits against former thrift officers.

But if recent history is a guide, the agency will be lucky if recoveries top the cost of litigation.

In an appeal late last year, the FDIC told Walter Hoffman, senior judge of the U.S. District Court for the Eastern District of Virginia, that agency lawsuits against bank

The judge noted that the FDIC recovered $59 million through lawsuits in 1987 — but spent $54 million.

abusers should take priority over shareholder suits. The FDIC said that would help it replenish the deposit insurance fund.

But the agency's legal prowess was called into question by Judge Hoffman, who noted that the FDIC recovered about $59 million through lawsuits in 1987 — but spent $54 million to litigate the cases.

Judge Hoffman rejected the FDIC's priority argument. — **Steve Klinkerman**

Cold Feet in Jacksonville

On a steamy Jacksonville, Fla., morning this month, two masked gunmen had the moxie to hold up a narcotics detective and make off with his 1987 Porsche roadster.

They had the nerve to race off and screech to a halt in front of a Florida National Bank branch several blocks away.

And they had the gall to enter the bank and shout "Lie down!" to employees and customers.

But when it came time to steal the cash, they apparently felt some misgivings. They bolted from the bank in terror.

Jacksonville police Sgt. Steve Weintraub can't explain what possessed the two wanna-be bank robbers, who were wearing ski masks and carrying 9-millimeter semi-automatic weapons.

Police found the Porsche abandoned on a roadway outside Jacksonville. The car's stereo, its radar detector, and part of its mobile phone were gone.

The almost robbers are still at-large, police said.

She's Banking on the Media

Mortgage bankers, who could lose business under a proposal to restrict Federal Housing Administration mortgage insurance, should fight the plan with "skillful use of the local media," says a Mortgage Banks of America officer.

Jacqueline Grumbacher, staff vice president of the trade group, urges lenders to "offer up" to local reporters real, live home-buyers who couldn't qualify for mortgages under the proposal.

"The FHA issue is ready-made for building good rapport with reporters," Ms. Grumbacher wrote in a recent issue of the trade group's weekly newspaper. "It is a solid human-interest story that can be presented to the press with most of the legwork already done."

However, Ms. Grumbacher balefully conceded, "the truth is that very few people in the reading and viewing public care about lenders." □

SMALL BUSINESS

Qualitative Data Called Helpful in Boosting Share

By LAURYN FRANZONI
Special to the American Banker

An increasing number of financial institutions are using qualitative research to turn secondary accounts of small-business clients into primary accounts.

Maryland National Bank, Baltimore, says it has boosted market share in core small-business markets "a couple of share points a year" through acquisitions and by focusing on development of businesses with sales of $3 million to $10 million.

Beginning with syndicated research to establish baseline numbers, the bank uses qualitative data to get a handle on what market share numbers mean, said Ed Nazarko, who heads the bank's wholesale marketing support group.

Quantitative syndicated research comes from such groups as Trans Data Corp., the Oxford Group, and Greenwich Associates. Maryland National also uses proprietary quantitative surveys of companies in its marketplace to determine whether the bank is considered first or second tier at that corporation. Companies that use the bank in a secondary manner are targeted.

"We use qualitative research to understand what's behind the numbers," Mr. Nazarko said.

"So many banks are concerned about measuring market share," he said. But share is less important than shifting small businesses into the first tier of bank services from the second tier, he said.

Focus and Quality Cloud Public Sources

"There is a continual compulsion among banks to look at their peers," said market researcher John Barlow in Minneapolis. "It's a very narrow focus. The competition for small business today includes the bank across the street, but it also includes nonbank leasing companies, other lessors, and even brokerage firms on the deposit side."

American National Bank's system is jealously guarded by management because of its strong track record.

In addition to a wide spectrum of competitors, Maryland National is concerned that corporate financial officers may opt out of syndicated research studies, Mr. Nazarko said. "There are so many people out there calling that the CFOs I talk to are tired of answering telephone surveys," he said. This means banks must gather their own data from a large number of contacts or develop attitude surveys to confirm third-party reports.

Mr. Nazarko says a relationship-based quantitative survey conducted by Mr. Barlow for Maryland National did confirm syndicated research. Mr. Barlow's firm measures small-business markets by looking at companies' attitudes toward financial institutions.

Attitudes Measured with In-House System

The Bank of California also draws on attitude research to aid its small-business marketing. The San Francisco bank uses an outside firm to measure business customer behavior relevant to deposits and the way cash is managed. That inform...ion is fed into a relatively sophisticated in-house tracking system, according to Sarah Ellsworth, vice president and marketing manager for small business.

The Bank of California serves small businesses through a 50-branch network across the state. Planners have identified industry segments they would like to do business with and have spent the past year developing a data base to support that marketing effort. "Being a relationship and a niche player, it is essential to know what part of the market we are reaching," Ms. Ellsworth says.

Commitment to developing an accurate data base for use in sales and in strategic planning varies among banks.

A bank with a strong commitment is American National Bank and Trust Co., Chicago. For the past eight years, the bank has risen to the top in serving middle-market businesses in its area while building an internal data base.

Bank spokesmen admit the process is arduous, but the system is jealously guarded by management because of its strong track record. American National's data base began with multiple public sources, but has been augmented by detailed reports from 150 bank calling officers. Every day, the officers update customer and noncustomer files.

In return, the marketing managers use the system to flag certain files and give the sales force reports on prospects and industry developments.

After eight years of development, American National's system is regarded as the best of its kind by outsiders. Insiders, who have learned much about its potential, give it a B-plus and want to continue making incremental improvements.

In all of these cases, the personnel requirements are relatively small. Most banks operating a successful, supportive data base employ two to four individuals dedicated to marketing research and management. The cost of outside surveys varies by marketplace.

Ms. Franzoni is a freelance banking reporter based in Springfield, Mo.

A Lure for First-Time Homebuyers

Comfed Trumpets Low-Down-Payment Mortgage

By YVETTE D. KANTROW

NEW YORK — Comfed Bancorp, a troubled New England housing lender, is offering a government-insured mortgage with a low down payment.

Designed to stimulate activity in sluggish housing markets, the "Low Down" mortgage is aimed at first-time homebuyers who believe they are locked out of the housing market. The mortgage carries an adjustable rate, with increases in interest rates capped at one percentage point a year, up to a maximum of five percentage points over the life of the loan.

Down payment and closing costs amount to less than 5% of the total loan.

FHA Is Cooperating

Comfed is offering the mortgage in conjunction with the Federal Housing Administration. Thrift executives expect other lenders to offer the federally insured product soon.

"A lot of lenders are trying to attract first-time homebuyers," said Gerald Devlin, senior vice president at Comfed Mortgage Co. "We see a joint effort with one of the agencies as a way to do that."

Comfed has long participated in Federal Housing Administration and Veterans Administration lending programs. But the Low Down mortgage program is especially appealing in New England, Comfed said, where the housing market is soft.

> **"It's a real opportunity to get people into the market."**
> **Gerald Devlin**
> *Comfed Mortgage Co.*

"It's a real opportunity to get people into the market," Mr. Devlin said.

Comfed's Troubles Mount

Troubles at Lowell, Mass.-based Comfed increased this week when the Office of Thrift Supervision disapproved a capital plan filed by Comfed Savings Bank. The company has been hurt by credit-quality problems in its home mortgage portfolio.

Comfed is now negotiating a consent agreement with the regulator. That agreement would limit some of the thrift company's activities but not affect its basic retail-banking and mortgage-lending businesses.

According to Mr. Devlin, Comfed Mortgage, which operates 16 offices in five Northeastern states, has been offering the Low Down mortgage for two weeks and has originated $2.5 million of the loans. While the mortgage carries no income restrictions, most of the borrowers have annual incomes ranging from $30,000 to $60,000.

"Four or five years ago, people were running to get adjustable-rate mortgages," Mr. Devlin said. "A couple of years later, they went into payment shock," as interest rates climbed. With the annual limit, the Low Down mortgage is designed to prevent such payment problems.

In 1989, Comfed originated $23 million worth of FHA loans and $35 million worth of VA loans. □

PNC Unit Tries a New Breed of Branch

By ELLEN MEMMELAAR

NEW YORK — Pittsburgh National Bank is constructing a series of financial centers to serve commercial and retail customers in rapidly expanding communities.

The unit of PNC Financial Corp. plans to build seven of the full-service branches across the state, said Susan Bohn, vice president in charge of organizational development. The first branch, in Robinson Town Banking Center, will open on July 31. All the branches will contain a business bank, a consumer bank, and a private bank.

Commercial and retail customers will have access to a range of services, including commercial loans; lease and cash management; private banking, with trust, investment management, and brokerage; mortgage lending; and traditional branch operations.

Others Have Done It

Other banking companies, including Banc One Corp. and Dollar Dry Dock Bank, have built similar full-service branches across the state. The branches of Banc One, Columbus, Ohio, cater to consumers and include everything from travel to financial planning services. Dollar Dry Dock's financial centers in New York offer commercial and consumer banking services and have a similar approach to marketing and design as Pittsburgh National.

Pittsburgh National designed the branch with marketing in mind, Ms. Bohn said. Brochures are available throughout the branch, and posters of the bank's advertisements are displayed: "After all, our brochures are really our product line," said Ms. Bohn.

The interior of the branch is being designed with the communities' demographics in mind, Ms. Bohn said. Because of the number of high-income residents in the area, portions of the branch are being set aside for consumers to receive financial planning and private banking services. The bank is aiming to provide a high degree of privacy, with angled teller windows and glassed-in offices.

Jobs Expected to Surge

Employment in the area now is about 28,780 but is projected to top 60,000 by the year 2000, for a 176% increase. □

Sears Mortgage Beefs Up Its Portfolio of Servicing Rights

By STEPHEN KLEGE

Reversing a three-year trend, Sears Mortgage Corp. last month began to amass mortgage servicing rights. But Walter C. Klein, chairman and president of the company, dismissed talk that the Sears, Roebuck and Co. subsidiary has set its sights on dominating the servicing market.

"We have emerged from the cocoon, hopefully as a more beautiful, productive, and profitable creature," Mr. Klein said, explaining that the purchase of $6.4 billion of servicing rights from Southeast Banking Corp., Miami, stems from a strategic plan adopted nearly a year ago.

Acquisition Strategy

The five-year business plan calls for carefully chosen acquisitions that will keep the portfolio about five times the size of its annual origination volume, Mr. Klein said. His 5-1 rule of thumb is based on the need to offset the cost of investing in new originations with the "annuity" of the servicing income.

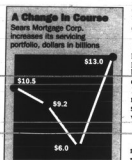
Sears originated $3.1 billion of servicing last year and projects originations of about $4 billion for 1990, suggesting more acquisitions may be in store.

Mr. Klein would say only, "We have not set our sights on [overtaking] Citicorp's $60 billion," referring to the portfolio of Citicorp Mortgage, which is the largest in the nation.

Still, the purchase marks the end of a three-year period in which the unit let its portfolio shrink to just over $6 billion from more than $10 billion. And it comes as some experts suggest that nondepository mortgage companies such as Sears may be positioned to dominate the servicing market.

They note that new capital regulations make it more expensive for thrifts and banks to hold purchased servicing and may spur them to sell servicing at low prices to raise their capital ratios.

Mr. Klein said, however, that when the strategy was adopted at Sears, the mortgage unit was a subsidiary of Sears' thrift unit in Glendale, Calif., and therefore subject to the capital requirements. (The mortgage company has since become an affiliate of the thrift, he said.)



He acknowledged that the decision to pursue servicing is based partly on anticipated lower prices because of portfolios coming on the market through the Resolution Trust Corp. and from depository institutions seeking to boost capital.

"Servicing is offering the best real return it's offered in 10 years," he said.

Mr. Klein's predecessor, Robert D. Horner, now chairman of Citicorp Mortgage, aggressively built up Sears' portfolio in the early 1980s by originating loans.

But rising interest rates in 1987 and a shift in the marketplace to adjustable-rate loans prompted Sears Mortgage to cut back new originations, market observers have said. And in 1988, they said, the retailer's need for cash spurred the sale of some of the mortgage unit's servicing portfolio.

Proceeds from Skyscraper

Sears recently took out a mortgage for more than $800 million on its skyscraper in Chicago, with proceeds reportedly going for stock buybacks and freeing up capital for expenditures within the organization.

Mr. Klein, who stresses that the mortgage company follows "as mundane a strategy as Sears is renowned for," said the reason for the switch from the selling to the buying mode is straightforward. "Sears has sold high and bought low," he said.

In keeping with its conservative approach, Sears looked at several portfolios, including the $12 billion portfolio recently bought by GE Mortgage Capital Corp. from Travelers Corp.

Mr. Klein said the Southeast portfolio fit best with Sears' existing portfolio. It helped balance a high percentage of quickly prepaying California loans with a high percentage of more stable loans in Florida. It also helped increase the proportion of fixed-rate and government loans.

Real Estate Woes at Southeast

Southeast has been plagued by problem real estate loans and is projecting a loss for the year. The company "decided in terms of capital deployment that it wanted to cash in [its servicing]," Mr. Klein said. He was quick to add that it was not a bargain-basement deal for Sears.

Mr. Klein has been notably absent from the bidding for servicing portfolios being marketed by the RTC, referring to them as "fixer-uppers."

But now that the RTC has changed its policy and begun to offer some basic guarantees of the quality of the loans in the portfolio, Mr. Klein said he would not rule out considering such acquisitions in the future. □

Freddie Mac to Issue Pass-Throughs Backed by Libor Adjustable Loans

By PHIL ROOSEVELT

NEW YORK — The Federal Home Loan Mortgage Corp., or Freddie Mac, said it will issue $250 million of securities backed by adjustable-rate mortgages pegged to the London interbank offered rate.

The action marks the first time a secondary-market agency has issued securities backed by such loans. Freddie Mac will issue the pass-through securities as part of a transaction with Western Federal Savings and Loan Association, Marina del Rey, Calif.

Western Federal will receive the securities in exchange for a like amount of Libor-based adjustables. Ultimately, Western Federal will sell the securities, an official at the thrift said.

The $4.8 billion-asset Western Federal – a unit of an investment group led by former Treasury Secretary William E. Simon – is believed to be the nation's largest originator of Libor adjustables. It says it has originated $1 billion of the loans since October and has sold $600 million of them through Wall Street.

Most adjustable-rate mortgages are pegged to Treasury yields or thrifts' average cost of funds. Proponents of Libor adjustables say the loans could expand the secondary market for adjustables, boosting demand among a range of international investors. That, in turn, could allow lenders to offer relatively low rates to consumers.

But the loans have been slow to catch on, with many lenders fearing that U.S. consumers will be perplexed by the index.

Freddie Mac announced its Libor deal this week in San Francisco at the California League of Savings Institutions' secondary mortgage market conference.

Also at the conference, the Federal National Mortgage Association, or Fannie Mae, unveiled measures aimed at making it easier for lenders to sell their loans for cash rather than for securities. Dennis Godfrey, cohead of cash transactions, said the modifications were the largest since 1986.

While the cash program has been eclipsed in recent years by swaps of loans for securities, a number of smaller lenders still sell their loans for cash. In the first half of this year, such transactions totaled $11 billion, or 19% of Fannie Mae's total volume.

The centerpiece of the modifications is Cash Flex, a pricing program that allows lenders to amass mortgages of differing interest rates and sell them at one time.

Meanwhile, GMAC Residential Funding Corp. – a securitization unit of GMAC Mortgage Co. – said it has filed a shelf registration with the Securities and Exchange Commission to eventually issue $4 billion of mortgage securities. GMAC Residential Funding called the filing the largest of its kind. □

Margaretten to Build Wholesale Presence

By PHIL ROOSEVELT

Margaretten & Co., a leading mortgage company in retail originations, is about to make a major push in the wholesale market.

The Perth Amboy, N.J.-based unit of Primerica Corp. plans to open a wholesale unit in San Ramon, Calif., during the first week of August, becoming one of the last major mortgage companies to enter the wholesale arena.

Margaretten executives expect the unit to purchase about $1 billion of mortgages from other lenders in 1991, generally closing the loans in Margaretten's name. That would make the company one of the nation's top 20 wholesalers, based on a 1989 ranking by Asset-Backed Capital Research Inc., Cleveland.

Felix M. Beck
Margaretten & Co.

Executive Recruited

Margaretten, which hinted of its wholesale plans in January, has recruited F. Ann Papanek to run the new unit. She was chief executive of Home Owners Fed, a well-regarded wholesale unit of Home Owners Savings Bank, Burlington, Mass. The parent thrift was seized by the government earlier this year.

Margaretten also is hiring more than 30 of Ms. Papanek's former colleagues, company officials said.

The purpose of the wholesale effort, said Margaretten's chief executive, Felix M. Beck, is to increase the size and geographic diversity of the company's servicing portfolio; it stood at $2.4 billion at the end of last year.

Mr. Beck said the new unit would not detract from Margaretten's retail originations system, which produces about $3 billion of loans a year. Rather, the wholesale unit is intended to complement, taking in loans from regions not served by the retail network, especially California.

"We will always be a very important part of the retail establishment," Mr. Beck said in an interview.

A number of mortgage companies have plunged into wholesaling in the past few years. But Margaretten has held back until now.

The availability of Ms. Papanek and her team eased many of the fears, Mr. Beck said. "We have found the people who can carry this forward with care," he said. □

The $250 Billion Fannie Mae MBS Market. How Can Something So Big Be So Easy To Get Along With?

Actually, by design. Because we tailored our MBS specifically for fixed-income managers who are looking for ways to fine tune their portfolio strategies.

So they're finding liquidity, a market with new issues being offered almost daily. They're also finding variety, with REMICs, Strips and ARM Securities. They are finding size and diversity, in Fannie Majors, the pools that average $100 million, submitted by lenders across the country.

The Friendly Fannie Mae MBS.
- *Actual factors on every pool.*
- *20-day faster pass throughs.*
- *Guaranteed timely payment of principal.*
- *PoolTalk,® online system for access to new issues, pool factors, etc.*

No wonder they find ours to be the most agreeable MBS.

For more information, just call Bob Sahadi, VP for MBS Investor Marketing at (202) 752-6640. See how friendly an MBS can get.

Nigeria Talks Fail to Reach Debt Restructuring Accord

Reuters

Nigeria and its leading foreign creditor banks have concluded two days of negotiations without agreeing a general framework for a new debt restructuring package, Finance Minister Olu Falae said in a London interview.

But Mr. Falae, speaking after more than 10 hours of talks with his country's commercial bank steering committee, said the negotiations yielded an important breakthrough by forging a role for below-market interest rates for the first time.

The two sides are expected to resume negotiations late next month.

Meanwhile, Mr. Falae said, Nigeria's policy of limiting interest payments on outstanding debt to 3% remains in force.

Nigeria and its bank committee agreed in principle that options in any future restructuring package would include a debt buyback and an exchange of loans for bonds paying below-market interest.

But talks on Wednesday brought little progress on what terms would be feasible in an overall scheme.

The two sides also remained apart on collateral for securing interest and principal payments on the below-market bonds. Bankers involved in this week's negotiations said the committee hoped to persuade Nigeria to use foreign currency reserves and credits from the World Bank as collateral for any future debt reduction scheme.

The debt buyback and bonds with below-market interest rates were part of a debt restructuring package the banks proposed to he Lagos government last month.

Nigeria, which has about $32 billion in foreign debt, is seeking to limit debt service payments this year to $2 billion, or 25% of the anticipated $8 billion in hard currency earnings.

Foreign creditor banks hold some $6 billion in medium-term and long-term debt, as well as letters of credit.

Lagos also expects to reopen talks with the Paris Club of government creditors in September.

ARGENTINA

The Central Bank's president, Javier Gonzalez Fraga, will travel next month to Japan and the United States to meet bankers and government officials, a senior member of the Argentine economic team said in Buenos Aires.

Mr. Gonzalez Fraga will visit Washington on Aug. 1 to talk with World Bank officials. The next day in New York he is to meet with commercial bankers.

In Japan he will spend a week meeting government officials and private bankers, said the Argentine official, who asked not to be identified.

In Washington, Mr. Gonzalez Fraga will discuss details of loans for Argentina, which expects about $1.3 billion from the World Bank this year to finance reforms.

In New York he will review the Peronist government's privatizations with private banks, to which Argentina owes $40 billion plus around $6 billion in interest arrears.

The official said Argentina will stand by its strategy of making monthly $40 million payments to commercial creditors as interest on its debt.

— Reuters

MEXICO

Mexico will award $1 billion debt-equity swaps to the developers of 27 projects to improve the country's infrastructure, the finance ministry said.

Finance officials chose the projects from 359 proposals submitted by investors hoping to trade debt for investment in areas including agriculture, tourism, and communications, the ministry said in a statement.

Sealed bids for the swaps were submitted through July 9; officials began to review them Monday.

The ministry did not list the companies or detail the projects that would be carried out, but it said the discount rate for eligible debt had been set at 52.05%.

— Reuters

BRITAIN

Midland Bank PLC, Britain's third-largest bank which has just cut 390 jobs in a new cost-cutting measure, was downgraded Thursday by Standard & Poor's Corp.

The rating agency cited a downturn in Midland's performance in 1989 and the adverse effect on its earnings from heightened competition and high levels of overhead expense compared with that of other big British banks.

Midland's provisioning of around 50% for lesser-developed country debt is below the over-70% level achieved by its major domestic competitors, S&P noted.

As a result, the bank's capital position has deteriorated to well below that of of its peers, the rating agency said.

The latest job cuts, centered in Midland's group operations, chiefly involve the information technology and electronic services areas.

Midland's senior long-term debt was lowered to A-plus from AA-minus.

Its subordinated debt was cut to A from A-plus. About $3.1 billion of Midland debt is affected.

— John Evans

Dai-Ichi Exec in Unexpected Move

Oana, Negotiator of CIT Purchase, Returning to U.S.

JAMES R. KRAUS

NEW YORK — Yuko Oana, senior managing director for international planning at Dai-Ichi Kangyo Bank Ltd. and a driving force behind the bank's recent expansion in the United States, is returning to the United States to take over as chairman of CIT Group, a unit of Dai-Ichi Kangyo Bank of California.

Dai-Ichi Kangyo officials in New York declined to comment on the move, which was announced by the bank earlier this month in Tokyo.

However, Japanese banking sources said that Mr. Oana, who engineered the acquisition of CIT Group from Manufacturers Hanover Trust Co. last December, is being sent back to supervise development of the bank's two U.S. units over the next few years.

Mr. Oana, 58, is scheduled to assume his new functions in September. He served as general manager of Dai-Ichi Kangyo's New York branch for four years until September 1988, when he returned to Tokyo to take over as head of international planning.

He was named chairman of CIT Group last November but was not expected to take an active part in running the unit.

Role in Strategic Planning

Japanese bankers said that Albert R. Gamper Jr., president and chief executive of CIT, will continue to run day-to-day operations at the middle-market lending unit while Mr. Oana will focus on strategic planning.

Mr. Oana will also serve as a liaison with U.S. regulators.

Dai-Ichi Kangyo is the world's largest bank, with $403 billion in assets. Last year it paid $1.4 billion to acquire a 60% stake in CIT from Manufacturers Hanover and a 4.9% stake in the U.S. bank. It was the biggest U.S. acquisition ever by a Japanese bank.

Mr. Oana could not be reached for comment.

Growth in California

However, in an interview last September, Mr. Oana said one of Dai-Ichi Kangyo's top priorities is building up its middle-market lending in California.

He did not exclude the possibility that Dai-Ichi Kangyo might make an additional acquisition to further that goal.

Dai-Ichi Kangyo Bank of California has been rapidly increasing its assets. As of the end of last year, the bank had $53 billion in assets, up 31% from 1988.

However, Dai-Ichi Kangyo's presence in California remains small compared with that of other big Japanese banks, several of which have built up large retail and middle-market banking operations there.

Seen as Liaison to Regulators

Mr. Oana, who will be based in New York, will also serve as a liaison between Dai-Ichi Kangyo and U.S. regulators in Washington, Mr. Gamper said.

Mr. Gamper said that the nomination will not affect management of CIT and will help CIT expand its business with Japanese corporations.

"It really doesn't change the CIT structure, and his great contacts with Japanese corporations will be helpful. He'll be opening doors for us to high-level executives at Japanese companies," Mr. Gamper said. □

Italy Moves to Modernize Banking System

By JOHN EVANS

LONDON — Italy, long considered overbanked but underbranched, is moving to modernize its notoriously inefficient banking industry.

A wave of mergers among Italy's 1,200 banks, many of which are government-owned, should result from measures approved by the parliament in Rome.

Under the legislation, known as the "Amato law" after former Treasury Minister Guiliano Amato, who first sponsored the proposals, state-controlled banks can turn themselves into publicly quoted companies that are free to raise capital from investors through the issue of stock. However, the state will retain 51% of the voting stock.

A total of $1.5 billion has also been set aside for the recapitalization of banks, while tax breaks will be offered as incentives for mergers.

Government officials say the law is designed to increase the efficiency of Italy's banking system and prepare it for the increased competition expected in Europe's single market.

Italy's big banks are not prominent on the world stage. The largest, Banca Nazionale del Lavoro, with $91 billion of assets, ranks as Europe's 15th-biggest.

William Vincent, a securities analyst at the brokerage firm UBS Phillips & Drew , says the reforms "recognize the need to modernize the banking system" as well as the threat that other European banks will "move into Italian market and clean up" after the European unification.

Four Captive Banks

Four of Italy's big banks, Banca Commerciale Italiana, Credito Italiano, Banca di Roma and Banco di Sicvro, are all controlled by the Italian state industrial holding company IRI.

Along with other big state institutions such as Istituto Bancario San Paolo di Torino and Mediobanca, Italian banks have consequently been hampered in finding the resources to build modern branch networks across Italy.

Such growth has also been stunted by Italian regulators, who up to now have protected smaller banks and rural savings institutions by restricting the number of branches that their big counterparts could open.

"The bigger Italian banks have networks which typically number under 600, while someone like National Westminster Bank in Britain has more than 3,000," Mr. Vincent says. □

$150 Million Loss Reported By 1st Fidelity

Continued from *page 2*

an analyst for Brown Brothers Harriman in New York.

Nonperforming assets exclude the OREO reserve were $854 million on June 30, up 40% from the end of the first quarter.

Excluding the OREO reserve addition, second quarter noninterest expenses of $207 million compare to a fourth quarter core expense rate of $236 million. The company wants to reduce its core operating expenses $95 million by yearend.

$178 Million in Chargeoffs

First Fidelity charged off $178 million in the 1990 second quarter, up from $37 million a year before. The company said $68 million of the chargeoffs were related to troubled real estate, $19 million to sales of lesser-developed country debt, and $10 to restructuring Mexican credits under the Brady plan.

First Fidelity earned $63.2 million in the 1989 second quarter, after taking a $19 million loan loss provision.

Shawmut Profits Plunge

Meanwhile, Shawmut National Corp., with headquarters in Boston and Hartford, reported late Wednesday that profits fell 65%, to $30.2 million, in line with predictions.

The $30 million gain posted by Shawmut included an one-time credit of $5 million arising from the utilization of a net operating loss carryforward, the company said.

The company's nonperforming loans and foreclosed properties totaled $1.3 billion, or 7.72% of all loans, at the end of the quarter. Nonperforming loans and foreclosed properties totaled $1.1 billion.

Analysts said that the $200 million rise in nonperforming loans was in line with predictions. Two weeks ago, speculation had swirled that nonperforming loans would increase by as much as $500 million, but Shawmut basically quashed the rumor by releasing earnings projections. □

COMMENT
Banks Are Put In Double Bind

Continued from *page 4*

vestment (marketable) book value. A strong bank holding company parent could swap its shares for the New England bank's at an attractive premium to market – but a discount to HTG book – and, like Ahmanson, pick up the difference as capital. Add to this the operating cost efficiencies realized through merger, and the capital building and earnings growth possibilities get very interesting.

A bank whose shares have been beaten down to low levels in the market might decide to pass the hat to its stockholders through a rights offering or perhaps to a private investor. Thus, First Bank System Inc., Minneapolis, recently raised $175 million of capital through a sale of common stock to the private equity Corporate Partners (an affiliate of Lazard Freres) and the Florida state pension fund.

This transaction was reportedly sweetened by a special guarantee arrangement providing for the issuance of additional common stock to the investors if the dividend rate over the next five years should fall below agreed levels over a certain period.

FDIC Can't Give Them Away

The examples above illustrate why the RTC and FDIC are not doing a land-office business selling banks. It is not simply the difficulty in valuing the bad assets, which the FDIC can ameliorate by offering credit protection. Capital is the deterrent. Even if the FDIC delivers a "clean" bank "for free," with the acquirer's only obligation being to contribute fresh cash capital of, say, 6% of total assets, the economics are marginal.

It would be difficult to generate a sufficient equity-level return. And the opportunity to "make it on the back end" through a future sale at a premium over book value is dubious in light of current market conditions and the fact that any premium may be goodwill, which would be excluded from capital.

So the regulatory solution of higher capital levels may be impeding deals that make regulatory and economic sense. If the regulators are serious about getting the benefits of fresh capital, good management, and earnings from acquisitions, it is time to consider priming the capital pump.

Bridging the Gap

For example, if a transaction cannot be closed at required capital levels, the FDIC might bridge the gap – at least as to capital requirements in excess of core – by committing its note in exchange for a matching subordinated note to be paid off after receipt of capital up to required levels.

Some may say this would compromise bedrock capital principles and be a return to phony accounting practices. But sound economic reasons require that this and other alternatives be considered to promote the capital-building process where economic returns on required minimum levels cannot be demonstrated and fresh capital will not otherwise be available. □

If you have a secured interest in

this... this... or even this...

here's how to protect it.

It used to be that when you made a secured loan to a producer of farm products, your interest was automatically protected by the farm products exception of the UCC.

Then came Section 1631.

Now you have to *perfect* your *actual notice* that a farm product is serving as collateral against a loan. And because each state has its own notification system, there are literally *fifty* sets of rules and regulations that you must comply with. Or you risk losing your protection.

Cause for concern, but not for alarm.

Because now, **Farm Products Financing and Filing Service** gives you all the information you need to ensure that your secured interests in farm products are protected under Section 1631.

This is the only in-depth examination of Section 1631 available. It analyzes all the legal issues surrounding the allocation of risks among lenders, buyers, selling agents and commission merchants. Examines the two notification systems Section 1631 creates–PNS and CNS. And offers practical guidance on how to file valid PNS and CNS notices–including sample forms and scheduled rules for state CNSs.

And since Section 1631 is in its infancy, and litigation and changes to its requirements will no doubt occur, **Farm Products Financing and Filing Service** is updated three times a year with special supplements that keep you apprised of *any* new developments and changes.

Call now for more information. Or to receive a copy to examine for 30 days without obligation.

Call 1-800-950-1210 now.

Breeden Suggests U.S. Should Sell Insurance to Depositors

Continued from *page 1*

if we have this valuable product produced by the federal government, maybe we should charge for it," Mr. Breeden said to reporters following his testimony before the Senate Banking Committee.

A Vulnerable Position

Because deposit insurance premiums count toward deficit reduction under the Gramm-Rudman law, bankers have long been nervous that the administration and Congress would mandate increases to help out the budget talks.

But Mr. Breeden cast the issue in a different light, suggesting that the federal government's guarantee – like a triple-A rating – is a commodity that can be priced and sold to the public.

"If the federal government owned a lot of valuable buildings and was giving them away, somebody might suggest that we should sell them for their real value," he said. "We're not giving away insurance, but we're selling it for less than it's worth."

Higher Value Noted

"I don't think anyone is arguing that twelve-and-a-half basis points reflects the true value of the federal guarantee," Mr. Breeden added. Banks now pay 12.5 cents per $100 of deposits for insurance.

Mr. Breeden told the panel that with some $3 trillion in assets "ultimately banked by the U.S. taxpayer," the government was providing "too much deposit insurance."

The system, he added, essentially asks taxpayers "to back losses from every loan decision by every loan officer in the country."

Mr. Breeden said the government's exposure could be limited by reducing the amount of insurance coverage from the current $100,000 level or by limiting the number of insured accounts each person could have.

Depositor's Choice

But he placed most emphasis on a system in which each individual depositor would be permitted to choose what level of insurance they desired and would be charged a rate that reflects the value of the federal government's guaranteed. Mr. Breeden said that rate would be "significantly higher" than the existing premium schedule.

Mr. Breeden also said in comments to reporters that the government might want to limit rates that could be offered on insured accounts by pegging them to a market index.

"Somehow, we have to control this phenomenon of an institution that says, let's bring in an extra $1 billion this morning – and if the market is paying 8%, we'll pay 12%," he said.

Support Is Expected

Noting the growing public anger over the cost of the savings and loan bailout, Mr. Breeden said he expected his ideas would find broad public support.

However, one bank industry representative said Mr. Breeden's suggestion that depositors pay for extra insurance "will be about as popular as the 25 cent fee on deposit accounts" suggested last year in the Bush administration's early discussions of how to pay for the thrift bailout.

"I reject his premise," added Steve Verdier, a lobbyist for the Independent Bankers Association of America. "The federal government is not giving away deposit insurance. In fact, the price has been going up."

In his testimony before the Senate panel, Mr. Breeden also stepped up his attack on the Glass-Steagall Act and the Bank Holding Company Act, contending that the two laws remove "an enormous potential source of badly-needed capital from the banking industry."

A Call for Separation

In a wide-ranging discussion of the financial services industry, Mr. Breeden said there was little evidence to suggest that the long-standing separation of banking and commerce in the United States was necessary.

Large investment banking firms are owned by commercial and industrial concerns, he said, and the parent companies have provided capital for restructuring or liquidity when needed. □

Riegle Suggests Finance Ministry

WASHINGTON — If the United States overhauls the financial services industry, a ministry of finance might be needed at least temporarily to coordinate regulators' efforts, Senate Banking Committee Chairman Donald W. Riegle Jr. said Thursday.

A "brave new world of financial modernization" probably would require the interaction of a plethora of state and federal agencies that oversee banks, thrifts, insurance companies, and securities firms, said the Democrat from Michigan.

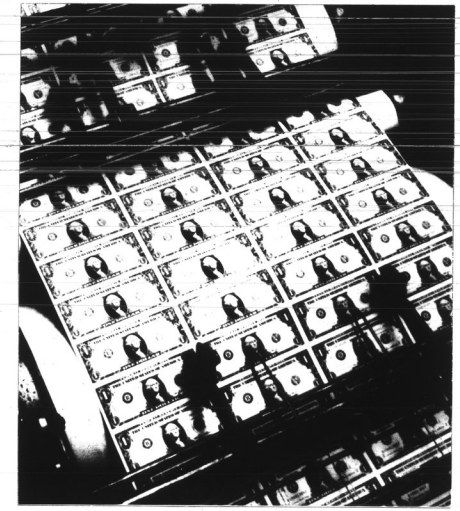
When Securities and Exchange Commission Chairman Richard Breeden alluded to foreign ministries of finance, Mr. Riegle responded by saying, "Why not do that?"

Mr. Riegle also put the Bush administration on notice that a financial modernization or restructuring bill will succeed only if the White House makes it one of its top four or five legislative priorities next year.

The windup to the next presidential election begins next year, Mr. Riegle said, "and normally in the third year of a presidency, careful decisions have to be made about what goes on that short list" of priorities.

"The issues are important, and time is running against us," he added. "With the kind of dynamics we are likely to see in 1991-92, I can see how the issue could be left unresolved."

— **Robert M. Garsson**



In the financial services industry, only one paper is more important than ours.

Money may make the world go 'round. But it can't tell you about the latest issues, technologies and trends in the banking industry.

American Banker can.

As a subscriber, you'll be one of the first to know what's happening in the industry, why it's happening, when it's happening and what it means.

The Professional's Publisher®

Coming in the July 26th issue of American Banker. . .

Are banks missing out on global marketing opportunities?

There is no denying that the world is changing. But are U.S. banks changing along with it?

On July 26th, *American Banker* will take a look at whether U.S. banks are taking advantage of the latest opportunities to compete globally. Or, are they isolating themselves and missing out?

You'll get answers to questions like these:

Are U.S. banks handicapped in the global market because of the layers of regulation, high costs of raising capital and domestic real estate problems?

Where do banks get demographic information and how do they measure demographic changes around the world?

What is the latest technology used to help with international marketing strategies and demographics?

What are the ethnic markets banks are missing? And what type of services are most useful for these groups?

How do world environmental concerns affect corporate marketing strategies?

With this special report from *American Banker*, you'll be able to identify changing international markets and figure out if there really is a global opportunity for you and, if so, how you can best capitalize on it.

Citicorp Reluctantly Admits Need to Cut Back Finance Area

Continued from *page 1*

government securities.

Mr. Jones refused to be "glib" about specifics, noting that the global finance sector in Japan, Europe, and North America is a complex amalgam of about 50 different businesses. Considering that the sector returned just 4.6% on equity in the second quarter, however, some major surgery is believed to be in store. Mr. Jones repeated that Citicorp aims to achieve an 18% to 20% return on equity from each of its sectors.

Citicorp insiders said they expected an internal announcement on Thursday or Friday about the latest moves.

Mr. Jones also backed off somewhat from Citicorp's oft-repeated assertion that the company's weak capital ratio will be rebuilt through asset sales, supplemented by retained earnings and asset securitization.

Sale Program Behind Schedule

The asset sale program is a bit behind schedule, the victim of the same weak deal climate that is hurting the corporate finance business. "The problem is that this is not the greatest environment in the world in which to do deals," Mr. Jones said. "It's not as good as we had hoped six months ago. We don't want to get into the trap of doing deals at fires-sale prices."

He nevertheless hinted that Citibank may announce one or two deals soon, and reiterated the bank's intention to restore its common equity-to-assets ratio from its current 3.7% level to between 4% and 4.5%, at a rate of 10 basis points per quarter.

While asset sales were the preferred method of building equity, Citicorp can manage its balance sheet using other methods, Mr. Jones said. That means a continuation of the bank's aggressive program to securitize credit card receivables, and a decision to let thin-margin loans and other assets run off the books, analysts said.

Citicorp officials have said repeatedly that the bank will not dilute shareholders' equity interests by issuing new common stock, though some analysts said a preferred equity offering may be in store within the next year.

Citicorp's risk-based capital ratio is believed to be about 3.4%, well below the 4% standard that regulators will require by the end of 1992. Mr. Jones said Citicorp is not currently negotiating with rating agencies for upgrades to allow issuance of debt to meet the standards. Banks, he added, do not get into trouble because of too little capital; they get into trouble because of bad loans. "Excess capital never saves you," he said.

Mr. Jones, who delivers an analysis after every quarter, noted good-humoredly that there are some quarters that come around too quickly. Asset quality, capital, and revenue streams all were problematic in the second quarter, he said.But he remained optimistic. "Other than those items, everything is in good shape," he quipped.

On other issues, Mr. Jones made the following points:

• The quality of Citicorp's real estate portfolio continues to get worse. "It would be dangerous to say it's plateaued," Mr. Jones said. "We are not in a position to say it's bottomed out. In times of strain, you pay the price." The company declared $324 million of its real estate loans nonperforming in the second quarter and foreclosed on another $366 million worth of property.

• Citicorp wrote off $103 million of leveraged buyout loans this year but is "probably at the end of real problems" with its $14.9 billion leveraged buyout portfolio, Mr. Jones said. The number includes unused commitments.

• He disputed charges that Citicorp's reserves are insufficient to cover nonperforming loans. Citicorp very conservatively puts a large number of loans on nonperforming basis in order to give them closer attention, but has a high rate of recovery on them, he said.

Even without regulatory encouragement, it has put almost $1 billion of loans that are current in principal and interest payments on a cash basis. These so-called nonperforming performers include about $250 million of commercial real estate loans. Citibank recovers about one-third of all its non-LDC writeoffs, and a towering 50% of its real estate writeoffs.

LDC debt reserves have fallen to about 30%, Mr. Jones said, but Citicorp "remains comfortable" with that level.

• Citicorp continues to invest in its money-losing information business sector, which has siphoned off $96 million so far this year. It is excited about a new foreign exchange product being tested in its Quotron subsidiary and is spending about $50 million after-tax per year to develop a consumer point-of-sale information business.

• Citicorp spent about $1 for every $1.50 of revenue thus far this year, but is aiming for a revenue-to-expense ratio of 2:1.

• Citicorp is investing heavily in new consumer businesses to combat charges that it is too dependent on credit card revenues. Consumer credit quality declined two out of three months in the second quarter, but the consumer sector returned 23.6% on equity.

Sr. Product Support Specialist Bankcard Operations

San Mateo, California

Technology and innovation have made VISA the largest, most widely recognized financial payments system in the world. We do more than enhance existing products. We focus on new product development as well. For you, that means exciting new projects in bankcard operations as well as a chance to gain greater visibility as you present recommendations to senior management.

Your primary focus will be on developing and writing operating regulations for our new and existing bankcard programs. This will involve analyzing the impact of operating regulations and presenting your findings to Member groups. You will also respond to inquiries from members, merchants, and cardholders regarding complex VISA policies and procedures.

You'll need a BA/BS, or equivalent, in-depth knowledge of bankcard operations, and a general understanding of Visa products, services, and systems. You must also have proven presentation skills, as well as management and analytical abilities. Some background in writing and editing is needed.

VISA offers an excellent compensation package, including comprehensive benefits. For immediate consideration, please send your resume to: VISA U.S.A. Inc. SR7/BA/AB, P.O. Box 8999, San Francisco, CA 94128. For other VISA opportunities, please call our JOE INFORMATION LINE (415) 378-8299. We are an equal opportunity employer.

VISA

We're everywhere you want to be.

Overseas Banking Consulting

As one of the world's oldest and most prestigious U.S. based consulting firms, we are continuing to expand our business in the Asia Pacific region. With offices in Singapore, Tokyo, Sydney and Jakarta, we have a strong established presence in the region and, in particular, a dominant position serving clients in the financial services industry.

We are currently seeking banking professionals with a strong record of achievement to join our Singapore office. We specifically require individuals with demonstrated functional expertise in the areas of:

- CREDIT– preferably middle market/wholesale
- OPERATIONS– both head office and branch levels
- HUMAN RESOURCES– emphasis on manpower planning, performance/potential appraisal, organization, training

Candidates should have 5-8 years of significant banking experience and possess an MBA or other relevant graduate degree. International work experience, especially in developing countries, would be a plus. In addition, the successful applicant must demonstrate the personal qualities of drive, initiative, creativity and professionalism, and possess strong communication, interpersonal and problem-solving skills.

For immediate consideration, send your resume and salary requirements in confidence to:

Box #435

DC Bank Says Losses Push It to the Brink

Continued from page 1

sidiaries in Maryland and Virginia, and has agreed to sell and securitize $75 million of commercial real estate loans.

The holding company's stock was trading Thursday afternoon at $1, a 52-week low and down from $2.75 at Wednesday's close.

Infighting a Problem

The disclosure by Mr. Mason, a Washington lawyer and director who took over as chairman on May 31, is the latest sign of turmoil for a company that has experienced months of upheaval marked by infighting and lawsuits among directors. In May, Washington Bancorp.'s financial problems surfaced when five banks withdrew their lines of credit, preventing the company from covering $25.8 million in maturing commercial paper.

National Bank of Washington then began borrowing from the Federal Reserve discount window, a last-ditch source of liquidity that most banks avoid.

On May 17, the Federal Reserve Bank of Richmond reported that institutions in its district had borrowed $136 million on that day.

Former Washington Bancorp. chairman John M. Toups said the Washington bank was responsible for most of the window borrowing, and it has apparently continued. On July 11, the district reported borrowings of $204 million.

Washington Bancorp.'s second-quarter half-year losses, which compared with profits of $3.5 million and $7.1 million in the comparable 1989 periods, reflected large increases in loan-loss provisions and nonperforming loans.

The company said it is the subject of an inquiry by the Securities and Exchange Commission in connection with sales of the company's commercial paper and other matters, it said.

Mr. Mason could not be reached for comment.

In a written statement, the company said management was forming a plan to raise capital. But given the company's current financial condition, no assurance can be given that holders of commercial paper or other creditors would be repaid in full.

The gloomy picture painted by Mr. Mason could be a move to force creditors to the negotiating table and take big losses on their investment, a former bank official speculated.

Once that is accomplished, Mr. Mason and Wafic Said, a wealthy Saudi Arabian who is the bank's largest stockholder, could recapitalize the institution.

"I just don't see them throwing in the towel," the source said. Mr. Mason "is going to negotiate the creditors as far down as he can. He'll pay [the debt] off, and the Saudis are going to recapitalize." □

Bank of America Leads Refinancing of Lancer Industries' Bridge Loan

By WILLIAM GOODWIN

Lancer Industries Inc. refinanced a $130 million bridge loan maturing next month with a combination of new loans from a group led by Bank of America and the issuance of private subordinated debt, the company announced Thursday.

The bridge loan was provided last August by Merrill Lynch Capital Markets to finance the bulk of New York-based Lancer's purchase of Fairfield Manufacturing Co. for $146 million. Lancer contributed $30 million of equity in the transaction.

Many mergers and acquisitions done in the past two years included bridge loans that are coming due this year and next. With the new-issue, high-yield bond market still in tatters, many companies are relying on banks or the private-placement market to refinance the bridge loans.

Senior Debt Plan Scotched

Lancer had originally planned on refinancing much of the bridge loan with senior debt.

The new bank financing comprises an $85 million seven-year term loan and a $20 million revolver.

A Bank of America official said the loan was priced at 150 basis points over the prime rate, and carried fees customary for highly leveraged transactions. He declined to be more specific about the fees, except to say they were "well south" of 300 basis points.

The BankAmerica Corp. unit was the sole underwriter of the bank financing. The syndicate members are General Electric Capital Corp., Gironzentrale of Austria, National Bank of Canada, Mitsui Merritt, and Van Kampen Merritt Inc.

A number of banks bid to arrange the bank financing, but Bank of America offered the best terms, said Yvonne Cliff, vice president of corporate development at Lancer. The other bids were not identified.

A New Relationship

She said Lancer had no previous banking relationship with Bank of America.

The Lancer transaction is one of the few middle-market deals Bank of America has done outside of its home state of California, the Bank of America official in New York said.

Bank of America was attracted to the deal in part because Lancer's Fairfield unit, which is the borrower of record, is the leader in its market by a "factor of two or three," the bank official said.

The Fairfield unit makes custom gears for such applications as mining and road-building equipment.

In addition to the refinancing of the bridge loan, which was set to expire next month, Lancer also said it completed a $25 million financing with Westinghouse Credit Corp. through the issuance of Lancer subordinated notes.

The funds will be used to finance acquisitions, Lancer said.

Hanover, Clayton-Dubilier Talking About IBM Units

Manufacturers Hanover Corp. and Clayton & Dubilier have discussed bank financing for a possible acquisition of low-technology businesses from International Business Machines Corp. by the New York buyout firm, sources said.

At the same time, though, talks between the buyout group and IBM were described as being in the early stages.

"It's a way off," a source said of the possible deal.

Talks between Clayton & Dubilier and IBM on the possible buyout were first disclosed by *The Wall Street Journal*.

Substantial Equity Expected

One source described the reported price tag of $2.5 billion to $3 billion as accurate.

At the same time, he said it was premature to discuss the structure of the proposed deal, including the amount of bank financing that would be needed.

It is expected that any transaction involving Clayton & Dubilier would involve a substantial equity component.

"If it does happen, it will be clearly a very nice transaction for the banking community," a source said.

IBM Mulling Strategy

IBM declined to comment beyond a statement issued Wednesday that it is "considering many options" to sharpen its strategic focus.

Clayton & Dubilier's spokesman could not be reached for immediate comment.

Manufacturers Hanover has been the sole lead bank on many of the buyout firm's deals, making it likely that the bank would play a similar role in the possible purchase of the IBM business.

Word of the possible deal caught the immediate attention of banks anxious to participate in what would be a "very high-quality deal," a banking industry source said.

"This is probably the only deal that has generated this kind of enthusiasm that is not a deal," the source added.

Yasuda Unit Wins Bidding To Finance Union's Tower

By STEPHEN KLEGE

Yasuda Trust & Banking Co. emerged as the winner in competitive bidding among about 10 banks to provide $100 million for a new headquarters for the nation's largest local union.

Yasuda stepped up after another bidder pulled out, citing the cost of correcting an environmental problem at the New York City construction site.

Developer Edward J. Minskoff denied that the discovery of coal ler during excavation was a factor in the bidding. A report that the lowest bidder dropped out when the environmental problem was discovered "borders on being ludicrous," Mr. Minskoff said.

But James Fitzgerald, head of Yasuda's real estate division, confirmed that another Japanese bank dropped out of the bidding when the problem was discovered at the construction site for the 412,000-square-foot headquarters of the Service Employees International Union, AFL-CIO. The Japanese bank, he said, had not anticipated any problems when its priced its loan. At that point, negotiations with Yasuda — which had made an "above market" bid — were reopened.

Mr. Fitzgerald said Yasuda allowed for contingencies – such as the possible need for environmental cleanup – in calculating its bid. He added that the problem has been cleared up and the building is under construction.

Mr. Fitzgerald declined to detail the loan terms, except to say that the bank had exercised an option to convert to a fixed rate from a variable rate based on a spread over the London interbank offered rate.

Swap for Fixed Rate

He said Yasuda was able to arrange the fixed rate by entering into a series of swap agreements designed to mitigate interest rate risk for the bank.

The construction loan is designed to roll over into a five-year mortgage loan after 18 months, he added. The financing was arranged by Donald Zucker Co., New York.

Mr. Minskoff said coal tar is not uncommon in New York, where many projects are built on landfill. "The foundation is in," he said, arguing that if coal tar had been a problem, the project would have stalled.

Bankers familiar with the project characterized it as a "build to suit," meaning that the union will occupy virtually all of the space, eliminating the risk associated with leasing space in Manhattan's soft office market.

Based on Mr. Minskoff's track record and the financial strength of the union, the other risks are also seen as minimal, one banker said.

Integrated's Creditors Win a Round

Banks seeking the best possible return on their loans to Integrated Resources Inc. won a partial victory in U.S. Bankruptcy Court on Thursday.

U.S. Bankruptcy Judge Howard C. Buschman granted Integrated Resources just under two weeks to finalize an agreement that would sell control of four Integrated mortgage funds to the Krupp Cos., Boston, for $45 million.

Judge Buschman enjoined CRI Insured Mortgage Association from proceeding with litigation against Integrated through Aug. 1.

CRI is trying to make an exchange offer for the funds outside the bankruptcy court. It has sued, claiming that Integrated officials illegally ammended partnership agreements to give themselves control of the funds at the expense of the limited partners.

The court order gave a glimmer of hope of progress in the sale of the assets to Krupp for $38.6 million, plus payments of about $6 million. But attorneys for some of the creditors said the brief time frame could make the victory an hollow one. Allan Pepper, attorney for Integrated, said the next step may be to seek a permanent injuction.

The creditors said the proposed CRI exchange would wrongfully cut in half the value of Integrated's stake in the funds.

When Integrated declared bankruptcy in January, Manufacturers Hanover Corp. was owed the largest sum by Integrated, $55.8 million, followed by Chemical Banking Corp., owed $51.57 million.

Creditors also include the Hongkong and Shanghai Banking Corp. and Columbia Savings and Loan Association.

Bank Stock Table Explained: The table lists in alphabetical order daily closing prices for the top 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the total assets reported in their most recent quarterly filing. As of March 30, 1990, the market value cutoff for banks was $42 million, and for thrifts was $30 million. The table is ranked by 52-week high and low prices for the stock. PE: the price-earnings ratio is the current price of the stock divided by the most recent four quarters' earnings per share adjusted for latest announced earnings. Mkt. to bk: the ratio of the current stock price to the latest quarter's book value, expressed as a percentage. Book value is adjusted for recent acquisitions and divestitures. Chg.: the change in which the stock last traded. If no trades for the day, the latest bid. All Bank Stock Table prices are supplied by Interactive Data Corp. Bid-and-market value and the top 50 thrifts in market value, respectively, highlight average spreads between bid and ask prices and set-and-one indications most shares traded and today's volume as a percentage of average shares traded daily over the past year.

Data sources: SNL SECURITIES, Charlottesville, VA, 804-977-1600, produces the Bank Stock Table; Financial News Network, Vienna, VA, provides SNL with the daily prices.

Loss Sends HomeFed Plunging

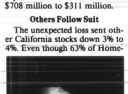
Continued from page 1

an overabundance of sell orders.

The company's stock had fallen 24.8% June 13 when the company announced that it was increasing nonperforming assets $81 million to $125 million for the second quarter. The stock is off roughly 50% since the beginning of June, sending the market capitalization down from about $708 million to $311 million.

Others Follow Suit

The unexpected loss sent other California stocks down 3% to 4%. Even though 63% of Home-



Peggy Turbett

Robert Adelizzi
HomeFed Corp.

Fed's problem real estate loans are out of state, analysts said the fact that 37% are in California, combined with the fact that investors in general are growing more skittish about the real estate market there, hurt other California bank and thrift stocks.

Wells Fargo & Co. fell $1.875 to $76.875, Security Pacific Corp. was off $1.125 to $34.75, BankAmerica Corp. was off $1 to $26.625, First Interstate Bancorp was down $2.875 to $37, H.F. Ahmanson & Co. dropped $1 to $20.875, and Golden West Financial Corp. was off $1 to $31.

Robert Adelizzi, HomeFed's president and chief executive officer, and Thomas Marrie, chief financial officer at First Interstate Bancorp, were quoted by Reuters as saying they were starting to become concerned about the once unflappable California market.

Norman Jaffe, an analyst at Fox Pitt Kelton, said a pending report from Moody's Investors Service about the California real estate market was also contributing to investors' nervousness about banks there.

Analysts said HomeFed's earnings announcement was particularly disturbing because, despite problems with the industry, HomeFed has been fairly healthy. The company has $19 billion in assets.

It earned $28.1 million, or $1.30 a share, in the second quarter of 1989. Until recently, it was one of the top thrifts in market capitalization. Further, analysts said, it has held a dominant position in its market with a 13% share.

However, with such dismal earnings results, with Wells Fargo's acquisition of HomeFed rival Great American Savings Bank knocking it out of the top slot, and with people raising the prospect of souring real estate in California, analysts are becoming less sure of its prospects.

Mr. Adelizzi "may have cleared up his existing problems, but I'm worried about what's going to happen down the road," Mr. Treadway said.

The company said that much of its second-quarter earnings problems were the result of nonperforming loans made out of state. Analysts say that could mean more trouble for HomeFed if the California market does sour.

One analyst said that despite the dismal earnings report, he was encouraged because the bank had increased reserves far beyond what will be necessary to cover current nonperforming assets and therefore probably won't have to write off more loans soon.

"They're very insulated now," said Joseph A. Jolson, an analyst at Montgomery Securities.

R. Michael James, a general partner at Wedge Capital Management that owns about 950,000 HomeFed shares, said the stock is cheap and is a good buy at its current levels.

* * *

THURSDAY'S MARKET

Most bank stocks outside California also were lower in midafternoon trading.

First Fidelity Bancorp and First City Bancorp Texas reported earnings, but they were in line with expectations. First Fidelity was down 37.5 cents to $16.625. First City was up 12.5 cents to $21.75.

The Dow Jones industrial average was up 12.31 to 2993.81 at 4 p.m.

CAPITAL
Bank-Level Debt Looks More Attractive

By KELLEY HOLLAND

Banks seeking to limit their cost of funds for subordinated debt could find it desirable to issue debt at the bank level instead of the more common holding company level, market sources said.

Credit analysts, noting that the credit rating is often higher for bank-level debt, say banks could save 25 basis points or more by issuing debt at bank level.

"In an environment of everhigher capital rules, if you're looking for new capital, why not just do it out of the bank?" said Jay M. Weintraub, a director at Salomon Brothers Inc. "It's cheaper."

Bank-level debt is considered to be higher quality – and therefore lower yielding – because bank-level assets provide the collateral, and bank-level debt is closer to the bank's assets. And subordinated debt issued at the bank level counts as capital on a fully consolidated basis.

Reduction in Flexibility

But bank-level debt can be used only by the bank subsidiary issuing the securities, whereas debt issued at the holding company level can be used by any subsidiary. And that limit on flexibility may prove too costly for some institutions, particularly those looking for ways to fund nonbank subsidiaries.

"It's cheaper, but you have a lot more flexibility issuing out of the holding company," said a funding specialist at a money center bank.

This year, strong West Coast thrifts such as Great Western Bank, a subsidiary of Great Western Financial, have totaled $380 million in the second quarter, up from $25 million in the first three months of the year.

But today, as banks watch their holding company bonds fall further and further out of favor with investors, the capital-raising potential of a note issue is increasingly important, so banks could well start joining their thrift counterparts.

Higher Ratings

Certainly the rating agencies believe bank-level obligations are more creditworthy than holding company debt from the same institution.

For example, at Standard & Poor's Corp., ratings on most investment grade banks are one notch higher for senior bank-level debt than for senior debt at the holding company level, according to Donna M. Dickert, a vice president at S&P.

For banks with ratings below investment grade, she said, "we'll go as much as three notches, depending on the situation."

At Moody's Investors Service, a bank with a senior debt rating of A2 at the holding company level would probably have a subordinated debt rating at the holding company level of A3 and a subordinated debt rating at the bank level of A1, according to J. Michael McMullen, a Moody's vice president.

Higher ratings translate into lower financing costs. Banks could expect to pay as much as 25 basis points less for subordinated bank-level financing than they for subordinated debt at the holding company level, according to an investment banker specializing in bank financing.

What is More Important?

The lower cost could easily induce banks to issue debt at the bank level. But they will also factor in the intangible cost in flexibility, according to one capital markets specialist. That is important because bank subsidiaries can generally fund themselves with deposits.

One analyst at a major mutual fund company says banks put more value on the flexibility they have with holding company funding than on the lower price they have to pay at bank level.

"The rate is important, but not nearly as important as flexibility," he said.

But with lending activity light, Anne McDermott, a vice president at Kidder, Peabody & Co., pointed out that banks could simply stay out of the market. Bank-level issues as well as holding companies will probably remain rarities in the next few quarters, she said. □

MARKET MONITOR

Bonds of Midlantic Corp. have slid sharply in price since the Edison, New Jersey based bank announced its second quarter results. Midlantic's 9¾% subordinated capital notes due in 1999 were bid Wednesday at 64 cents on the dollar, but Thursday afternoon there was only a small bid for the securities, at 62 cents on the dollar.

"People are beginning to think the problems are deeper than management is willing to admit," one trader said. □

RTC Plan to Resolve 77 Cases Includes Empire, Merabank

Continued from page 1

which raised the money in an bond auction completed July 17.

The RTC will have $31.8 billion for case resolutions in the quarter and $6 billion to cover asset puts – or the options that buyers of RTC assets have to return unwanted holdings to the government.

Another $2 billion was allocated for selling assets in bulk – Secretary known as the accelerated resolution program.

"We have not been able to give the RTC all the money it wants for all the uses it brought forth to us," said Peter H. Monroe, Oversight Board president, at a press briefing Thursday. But the panel, chaired by Treasury Secretary Nicholas F. Brady, did not put constraints on the RTC plan to resolve a large number of institutions in this final quarter of the fiscal year, Mr. Monroe said.

"We have not been able to give the RTC all the money it wants for all the uses it brought forth to us."

Peter H. Monroe
RTC Oversight Board

The Oversight Board slashed the RTC's request for funds to finance conservatorship advances from $13.5 billion to $1 billion. It also granted $6 billion to cover previously granted asset puts, well below the $10.5 billion that the RTC sought.

By continuing an ambitious pace of resolutions through the end of September, the RTC will increase its net obligations to $48.9 billion, just $1.1 billion shy of the $50 billion ceiling imposed by Congress.

At the end of the quarter, the Federal Financing Bank's debt for S&L resolutions will total $60.6 billion, and the government's cumulative net loss will rise to $37.3 billion.

Because the agency is rapidly exhausting the financial resources allocated to it in the 1989 savings and loan rescue law, the Oversight Board is seeking authority from Congress for up to $59 billion in additional funding.

"We have absolutely enough to operate in this quarter, and some funds left for the next quarter," Mr. Monroe said. "But we will, sometime in the next quarter, run out of money."

Looking for more cash flow from a faster liquidation of assets, the Oversight Board asked the RTC to provide a report within 15 days on the outlook for its asset sales.

Also on Thursday, the Treasury Department said it increased its borrowing requirements for the current quarter to between $62 billion and $66 billion to pay for the S&L bailout. Treasury initially had announced plans to borrow $30 billion to $35 billion during July, August, and September. □

SERVICE QUALITY IN FINANCIAL INSTITUTIONS: AN UNDERDEVELOPED STRATEGIC WEAPON

While service quality has long been a key factor in most successful financial institutions, the term "service quality" has all too often been treated as a fad in recent years. More has probably been written and discussed about service quality than any other consumer banking issue in recent memory. In reality, however, service quality has been inherent to the banking business since its beginning. This issue focuses on the role of service quality in the context of overall strategic planning and more specifically on its implementation in the current banking environment. The basis for this analysis is a one year, $1 million study S&A completed this Spring on service quality in financial institutions.

As regulations have eased and financial service markets have become more competitive, banks have sought new ways to differentiate themselves. Many have introduced new products, but in doing so have found that new products are easily copied and often do not provide the sustainable long-term competitive advantage necessary to increase profitability or market share. On the other hand, some banks have used pricing to attract market share. Clearly, unless sufficient economies of scale are achieved to support this approach, this is a risky alternative that will not necessarily improve profitability. Likewise, convenient branch locations are a key mechanism by which to compete, but brick and mortar is costly. As a result of the limitations of these strategies and following the lead set by other industries, some financial institutions are turning to service quality as a strategy with which to carve out a competitive niche. The success of these efforts, however, has been limited. **Most financial institution service quality "programs" are still limited to special campaigns and promotions that are not systematic and all-inclusive in their approach.**

It is time to treat service quality in the same manner as strategic planning. Service quality must begin with an analysis of the market environment, progress to a comprehensive internal assessment, and culminate in the preparation of a fully-integrated bankwide strategic service quality plan. Service quality must now be considered as a vital factor in planning for performance improvement in the rapidly changing financial services industry. Treating service quality in this manner dictates that it not be confined to a narrow role in a financial institution's business plan. Service quality is not limited to marketing, to branch banking, nor even to retail banking. It transcends these activities, and must be evaluated and planned with an eye to its universal impact on how business will be done throughout the organization.

As a new decade begins, service quality must take its place alongside more traditional concerns such as credit quality, asset/liability management, retail/wholesale market segmentation, product/delivery system development, and technology management in the integrated planning effort that is so important to achieving long-term success. This will

Service Quality: A Business Overview

An extensive examination over the past year of service quality in successful companies outside the financial services industry convinces S&A that banks can achieve tangible improvements in market share, productivity and profitability as well as a sustainable competitive advantage through the application of sound principles and experience. In assessing such firms as Motorola, Walt Disney and Marriott, as well as the writings of noted observers, S&A concludes that the following elements are key to employing service quality in the business environment:

- Establish a service culture -- Successful service quality initiatives come from companies which learned that the development of an effective service environment requires the total orientation of the firm. Foremost is the personal commitment of senior management to the service culture; having this commitment ensures that the cultural re-orientation will progress through the ranks.
- Not a program but a way of life -- Service quality cannot be implemented as a program. It is not a short-term campaign or focus. The cultural change will not occur overnight and the commitment must be ongoing.
- Investment in people -- Successful service quality cultures are based on the adage that a "company's employees are its greatest asset." Recognition, incentives, rewards and morale building must coincide with the sincere commitment to quality of service. Peer pressure will then become an important mechanism.
- Effective two-way communication -- As always, the communication in a service quality culture must move up as well as down. A participative atmosphere must convince employees that they can have an impact on the organization.

With these key business principles in mind, S&A evaluated the current financial services industry regarding service quality.

Current Financial Institution Service Quality Programs

S&A surveyed the top 100 commercial banks in the U.S. to determine their current commitment to service quality and then combined the results of this survey with an extensive review of secondary research and S&A's own experience to develop an overall assessment of the state of the banking industry today. Based on this study, S&A made several observations:

- **Seventy-five percent of banks responding had a formal service quality program in place, although many are currently "token" programs,** and do not reflect a cultural change in their organizations.
- **Many existing service quality programs are only modified customer service programs that are limited in scope.** The efforts of most service quality programs are still focused on specific campaigns and promotions and are not systematic and all-inclusive in their approach.
- **Most financial institutions cannot quantify the results of their service quality program except in broad, general terms** such as reduced customer complaints. A direct link between the program and financial results cannot be made by most institutions. Even though this direct measurement is not being made at this time, most financial institutions believe, as does S&A, that their service quality efforts will pay off in the long run.

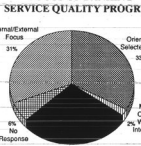
FOCUS OF BANKING SERVICE QUALITY PROGRAM



While identified as a key factor to long-term success and given "lip service", financial institution service quality efforts are still new and underdeveloped compared to other industries. Most efforts are not consistent throughout the organization and few senior managers are truly committed to the concept. Additionally, the tools and techniques available for implementing and managing service quality are not being fully utilized.

Service Quality Assessment

Using the survey results as a basis, S&A evaluated the impact of service quality on the three major areas within financial institutions: retail banking, wholesale banking and operations/data processing/administration. As a result, four fundamental issues were identified:

- Organizational Placement -- **Retail banking, and specifically the marketing department, most often manages service quality in financial institutions.** Even where service quality is managed in a separate function, its scope seldom extends to other corporate areas. Usually staffed with one or two full-time employees, personnel are typically drawn from retail functions often with customer service backgrounds.
- Management Commitment -- **S&A has found, in practice, little senior management involvement in service quality above the vice president level.** This lack of senior management commitment is the best indication of an organization's real support for a service quality culture. In most of the broad-based, successful service quality programs, senior management commitment is primarily responsible for the development and implementation of the overall effort.

PROGRAM MANAGEMENT

- Measurement of Results -- **Measurement of the results of a service quality program continues to be a difficult process.** Actual measurement of tangible criteria is rare, forcing managers to less quantifiable measures of how well things are working. The most common tools for measurement include market share data, customer surveys (open, closed, complaints, etc.), employee surveys, shopping studies and internal quality control measurements.
- Overall Perceptions -- Most major banks believe that their service quality programs are producing positive results, yet management is quick to admit that measurement of concrete results is difficult, if not impossible. S&A, however, believes that the lack of perfect measurement systems should not inhibit financial institutions from implementing service quality programs. **It is evident that any sincere efforts at improving service quality, particularly those efforts with management-wide and organization-wide support, will have a beneficial impact on business retention and will therefore enhance profits in the long-term.**

In general, there appear to be several typical problems with existing quality processes at commercial banks. **These problems include passive leadership, reactive customer service and product development systems, and limited monitoring and measurement.** Moreover, little integration of quality concepts have occurred within most banking organizations evidenced by an absence of performance goal setting, planning and appraisal as related to service efforts. **This partial implementation has unfortunately caused many banks to conclude that service quality is merely a marketing ploy.**

S&A believes that service quality should be an integral part of any high-performing financial institution's overall

strategic business plan and should be dealt with in the same methodology as more traditional banking activities.

As with any strategic planning process, the interaction among participants is often as important as the end product, so the process itself is a key to successful implementation and ongoing management. While there are numerous alternative approaches to developing a service quality strategic plan, S&A believes that the tasks outlined in the following sections must be addressed to achieve measurable results on a timely basis.

Current Service Quality Audit

The first step in developing a service strategy is a service "audit". A service audit is a comprehensive, systematic, independent, and periodic examination of each business unit's service environment, objectives, strategies and activities. The goal is to determine problem areas, identify opportunities and recommend a plan to improve the company's service performance. Three steps are required:

- Establishing the objectives and scope
- Gathering data and performing marketing research
- Preparing and presenting the findings

To effectively judge the extent of commitment and investment to be made in developing a service quality culture, the current assessment or review of each financial institution's service environment is instrumental. This analysis should focus on at least the three major areas - retail banking, wholesale banking and operations/data processing/ administrative support.

S&A strongly believes that a service quality initiative must be market driven. As such, consumers, customers and clients should determine strategy, not internal capabilities or perceptions. Effective consumer segmentation is, therefore, a vital analytical tool for service quality, as are external consumer behavior studies, image evaluations and delivery system assessments. Each institution must determine where it stands in the marketplace in the attitudes and perceptions of the consumer, and how it can change and improve those perceptions, as well as behavior, to the advantage of the institution.

Service quality programs must include features that are of real benefit and importance to the customer, those that can be measured, and those that are within the ability of the bank to deliver on a consistent basis. These features can only be determined through market research, and will likely include many of the following items.

- Prompt answering of telephone lines serving both external and internal customers.
- Determining the correct department to handle a customer inquiry and to refer the customer only once.
- Quick, accurate and friendly resolution of customer complaints and problems.
- Reducing errors in bank statements, operations, etc.
- Setting standards for teller wait times.
- Rendering statements quickly after cut-off dates.
- Prompt loan approval turnaround.
- Special customer service functions for specific market segment needs.
- Mechanisms for routine customer feedback.

The current assessment must provide a means for identifying the underlying factors which are critical for long-term success of the service initiative. The framework must also offer a way of establishing the implications of these factors for the allocation of limited resources within the organization.

Service Quality Strategy Development

Once the current assessment has been completed, the Bank must decide the level of investment in service which is effective and efficient in meeting the institution's short and long-term objectives. Many organizations differ in their definition of service quality. Some define it as customer satisfaction, others take it to the point of providing customer satisfaction to a degree that is measurably better than the competition.

Clearly, the level of investment will be dependent upon each bank's unique situation. Managers must, however, understand the mission and know how much is too much, and what is less than required. The most secure approach to profitability is to dominate the competition on a segment basis. Most broad business areas do break down into a number of segments which have fairly distinct economics. The overall aim of segmentation is the identification of product/market segments which are sufficiently distinct, economically and competitively, to be meaningful in developing service strategy for each segment individually. The segmentation process must also identify clearly the service basis on which a superior cost/revenue position can be developed in the segment to enable competitive strategy to be developed properly.

Retail Banking

From a retail banking perspective, for a service quality strategy to be effective it should meet two criteria:

- **It must provide a benefit that the customer wants and have an implicit or explicit value to the customer.**
- **It must differentiate the bank in some meaningful way in the eyes of the customer.**

As a result, a service strategy should be based upon a **market driven approach.** Historically, many banks defined their business in terms of what they sold, - "our business is loans." Many of these financial institutions have found that when products and technologies become obsolete, their mission is no longer relevant. Therefore, a more enduring way of defining the service mission is an external rather than an internal focus.

The success of any service initiative hinges on how well the organization can identify consumer service desires and organize its resources to satisfy them profitably. Thus, a critical element of the service initiative is understanding what service is required to satisfy customers.

The external service assessment examines the bank's knowledge of the customer, overall customer service systems, responsiveness, and its ability to meet customer requirements and expectations. Also examined are current levels and trends in customer satisfaction.

S&A bases its approach on three steps:

- Development of a customer segmentation framework and strategy.
- Understanding the service needs of priority segments.
- Designing and implementing service initiatives to address the needs of the priority segments.

Understanding consumer behavior is one key ingredient to a service quality initiative. This is primarily accomplished through marketing research with the following objectives:

- To ascertain the motivating factors that accompany the selection of a particular financial institution.
- To determine the market's perceptions of financial institutions on those attributes which are most important to consumers (i.e., convenience, product knowledge, responsiveness, etc.).
- To identify the impact of recent market changes on consumer perceptions of the bank.
- To determine if customer segments are satisfied with the products and level of service that they receive.

Market Research Methods
Service Quality Measurement

Research Used	Percent of Banks
Branch Shopping	83%
Customer Satisfaction Surveys	81%
Image Research	67%
Closed Account Surveys	64%
Others	19%

Source: S&A survey of top U.S. commercial banks.

These techniques can be combined or adapted to suit the information needs of a particular bank.

Wholesale Banking

While retail service quality may often emphasize overcoming consumer perceptions, often focusing on balancing price, convenience and cost/benefit, wholesale service quality focuses more on "surprising customers with excellence."

Wholesale service quality may be defined as meeting customer needs through better, more modern products that are delivered accurately and reliably with a commitment to error-free performance. Customer needs are identified and met by a responsive staff that is devoted to maintaining enduring business relationships through constant customer contact and the resulting deep understanding of each customer's business. Extraordinary competence is exhibited in handling the most complex customer requirements and extraordinary flexibility is shown in customizing services and procedures to meet individual customer needs.

Compared to the retail service quality planning process, wholesale banking presents a number of different issues. As with retail banking, the CEO's commitment to the concept and process of service quality is key to establishing a culture re-orientation in the wholesale business. Much of what can be accomplished in the area of wholesale banking service quality can be obtained through organizational changes and the implementation of processes and reporting systems within current staffing and expense levels. As with retail, target market and customer segments must be identified and fully evaluated to tailor wholesale banking activities to specific relationships and their needs and perceptions.

Management Information Systems
Service Quality Measurement

Measurement	Percent of Banks Retail	Commercial
Market Research	90%	33%
Customer Feedback	87%	31%
Employee Feedback	79%	26%
Quality Control Measurements	59%	13%
Others	49%	0%

Source: S&A survey of top U.S. commercial banks.

Much of what will be accomplished in setting up a service quality orientation in the wholesale area depends on the systems created and followed to measure service quality results against goals and expectations. Recognized quality corporations surveyed by S&A consistently report that service quality measurement systems are the focus of their service quality programs. The leading service quality companies devote considerable resources and effort to checking customers' perceptions of their service and believe

that "quality will be judged by the user, not announced by its maker." Key internal indicators of wholesale service quality should include:

- Officer call totals
- New business developed
- Business gained or lost from/to competitors
- Loan approval turnaround time
- Individual service/product volumes
- Problem rates versus performance standards

While specific attributes of wholesale banking dictate unique approaches to service quality planning, financial institutions can establish a clear differentiation in this area as well as in retail banking. Their methodology of external and internal evaluation, determination of alternatives and selection of a direction for the bank parallels that of retail and should be pursued equally aggressively.

Operations/Data Processing and Administration

Since reliability is a significant element of service quality, a financial institution's operational/data processing and administrative areas are integral to overall service quality planning. Performing to expectations is a key measure of these support areas, which in practice have two customer groups, external and internal. While most financial institutions have some form of quality control process to measure productivity and internal efficiency, few have related this performance to the bank's external situation.

Operations and Data Processing Service Quality Measurement

Measurement	Percent of Banks
Quality Control Measurements	64%
Employee Feedback	49%
Customer Feedback	46%
Marketing Research	18%
Others	3%

Source: S&A survey of top U.S. 100 commercial banks.

Overall service quality goals and objectives must be related to the bank's support functions in terms of performance and in terms of customer perceptions and behavior. An effective means of integrating the quality control/productivity approach with the service quality culture is through service level agreements between support areas and end users. Identifying and tracking key measures in these agreements are often instrumental in establishing an open dialogue between "production" and "service" functions.

Goals and Commitment

The Service Quality Current Assessment provided the bank with information regarding the market's perceptions of the bank's service quality. As part of the strategic plan three fundamental directions must be established:

- **The degree to which the bank wants to differentiate itself on service quality (i.e., pre-emptive, defensive, status quo, etc.).**
- **The commitment in resources required to reach this degree of differentiation.**
- **The breadth and scope of the institution's service quality initiative.**

The resolution of these issues will require balancing of the opportunities associated with an improved service posture against the costs/expenses of implementing an effective service program. Once senior management has established this direction, however, goal development/reinforcement is the most crucial role for senior management. Management must ensure that service goals have the following characteristics:

- **Be common throughout the organization.**
- **"Stretch" the bank to find new ways to accomplish things rather than to just increase costs (i.e., new processes and technologies).**
- **Be made part of all organizational-level and personal performance plans and job descriptions.**
- **Be reported on regularly to senior management. Many CEOs, in other industries, make this the first topic on the agenda of staff meetings.**
- **Be communicated throughout the organization.**

To maintain a service drive within an organization and to address these issues, most successful CEO's have a service "champion" - someone other than the CEO who serves as a manger and "driver" of service quality initiatives. For financial institutions, this is best served by establishing a service quality catalyst. This often is a person or small department which is responsible for administering and overseeing quality initiatives. This person or group keeps the fire burning and manages the process. It is most effective when this group reports to a senior executive, if not, the CEO. **While the CEO must infuse his or her organization with a service quality culture from the top down, day-to-day service quality management responsibility is critical.** The program manager generally should be chosen from within marketing or retail banking, but with direct access to senior management in a dedicated function. The criteria sought for the service quality department manager and "service driver" should include skills such as entrepreneurial, leadership and communications abilities and administrative talents. The position would have the following responsibilities:

- Oversee all quality activities
- Serve as a catalyst within the organization for quality
- Ensure that quality objectives are met
- Ensure that standards are followed
- Provide training to management
- Manage special quality programs

Measurement and Follow-up

Measurement is the last critical issue to be addressed in developing an effective service quality program. The statistical applications and methodologies first applied to the manufacturing industry have application to the financial services industry as well. Successful service quality programs depend upon consistent measurement over time. Measurement of processes, customer perceptions, and individual performance is critical. Motorola's success in winning the Baldrige award for service excellence in part is due to the emphasis placed on measurement. To monitor the bank's progress on these issues, senior management should require annual quality improvement plans from each operating division including cost of quality estimates. These plans form a basis for evaluating performance.

Another key issue for senior management is marketing. Senior management must address whether or not the service initiative should be promoted. **S&A believes that service quality programs should not be promoted until the "cultural change" has occurred throughout the organization and the bank can deliver on its commitments to the customer. Promoting too early creates expectations without the ability to follow through, and the result is the cosmetic, campaign-oriented "program" too often pursued by financial institutions.** Senior management must guard the use of service marketing. When promotion is appropriate, media advertising, public relations, employee incentives and similar activities should be aggressively implemented.

The bank that is truly committed to a service quality culture will make it a part of every employee's job description and will hire people based on this new criteria, including the following:

- Within reason, all customer contact employees should reflect the bank's commitment to service quality.
- Customer contact staff must be selected on their interpersonal skills as well as their technical skills.
- Hiring decisions must be influenced ultimately by the customer. If the customer is Hispanic, then employees should be bilingual.
- The time to re-orient employees to the service culture is during the hiring process. S&A agrees that it is better to make the time commitment at this time rather than during lengthy review or termination processing.

Senior Management Issues

To implement a service quality culture in your organization, S&A suggests that the following issues be addressed:

- What is my organization's real level of service quality? How does it compare to my key competitors?
- Given our overall business plan and performance goals, what level of commitment is appropriate to establish a service quality environment?
- Recognizing the need to cut across traditional organizational lines, how do we organize our service quality effort? Am I willing to designate a "service driver" and delegate appropriate authorities to establish a service environment?
- Given other priorities am I willing to make the long-term (three years plus) commitment to establish a service quality environment?
- Have we or can we establish the level of personal commitment throughout the organization to ensure a successful service quality environment?
- Does my organization have, or what do we need to do to establish the appropriate ongoing service quality measurement and management information systems?
- How do I integrate service quality into our overall planning environment?

In conclusion, service quality presents a demanding challenge for financial institutions. Unlike other businesses, banking deals primarily in intangibles, making it difficult to

differentiate one institution from another with enough significance to motivate the customer. **Banks are best served when delivering a consistently high level of service, value and performance to the marketplace, and not in attempting to hit the occasional "home run." Developing an effective service quality culture is consistent with this view; its bottom-line benefit will only be realized over an extended period of delivering higher than expected levels of service to the public.**

Next Issue

In the next issue of Strategic Commentary, S&A will discuss the future directions of Shared ATM/EFT networks. This analysis will focus on the state of shared network development today; product/service trends; financial performance; network consolidation; and future directions.

S&A

PRESENTS AN EXTENSIVE STUDY OF HOW TO ESTABLISH A SERVICE QUALITY PROGRAM AT YOUR INSTITUTION.

As competition has increased, financial institutions are seeking new ways to differentiate themselves in the market place. Following the lead of other industries, many are turning to service quality as a strategy with which to carve out some competitive advantage over their competitors.

The study includes the results of a survey of top U.S. commercial banks conducted by S&A which identifies the service quality techniques being used in:

- Retail Banking
- Wholesale Banking
- Operations
- Data Processing
- Administration

The S&A special report on service quality is a comprehensive "how to" guide for implementing and measuring a service quality program at financial institutions.

The study also provides an overview of how management in other businesses address service quality, including industries involved in:

- Electronics
- Retailing
- Insurance
- Investment
- Entertainment
- Hotel
- Telecommunications

More than a research report, S&A's Service Quality in Financial Institutions outlines the step by step process for establishing a program in your institution. Sample checklists and questionnaires are included for:

- Conducting a service quality audit
- Training and Development
- Organization and Staffing
- Administration and Support
- Establishing Objectives
- Market Research/Customer Surveys
- Statement Rendering

Tougher Exams Spark Worries Over CRA Loans

By STEPHEN KLEPER
Staff Reporter, American Banker

NEW YORK — Is the requirement that banks provide credit to poor communities headed for a collision with tougher regulatory exams?

That question is on the minds of bankers who are faced with the dilemma of being pressured to increase local lending at the same time regulators are cracking down on credit quality. The bankers worry that their regular examiners may view the local loans as overly risky and force them to be written down.

The pressure to make more CRA loans stems from the new requirement that banks publicly disclose how well they comply with the Community Reinvestment Act. Because a low CRA rating would result in bad publicity, banks reportedly have been stepping up their lending to poor and middle-income communities.

ANALYSIS: *Follow-up on the news*

In late June, before the CRA disclosure rule took effect, bankers in Boston told government officials they feared the tight credit policies being enforced by regulators could derail some of their community redevelopment programs.

They got only lukewarm reassurance from the comptroller of the currency, Robert L. Clarke, that his agency's credit policies are consistent with CRA lending, according to one account of the private session.

But a spokesman said the agency sees no conflict between CRA compliance and prudent lending. "Some banks claim that CRA loans are bad loans," said spokesman Dean Debuck. "We don't agree. There are good loans to be made to fulfill your CRA responsibility, and banks should go ahead and make them."

"Nobody tries to make bad loans; that's not the issue," said James P. Murphy, executive vice president of Fleet/Norstar Financial Group, Providence, R.I. "We're trying to sensitize the examiners that when you make a [CRA] loan, you have to be more flexible."

There is plenty of anecdotal evidence that CRA loans perform just as well as any other category of loan. But because the loans are not reported separately from other loans, statistical evidence of this is hard to come by. Mr. Murphy said he has proposed a separate reporting category for the loans.

He said it remains to be seen whether examiners will force lenders to reserve against com-

Japanese Planning Big Expansion In U.S., Dashing Hopes of Easing

By JAMES R. KRAUS

NEW YORK — Defying predictions that the Japanese would curb their expansion in the United States, 15 banks are planning to open or upgrade 27 offices in 13 cities across the country, according to an internal memo of the Ministry of Finance.

Banking sources in Japan and New York said the banks intend to emphasize higher-yielding assets and fee income rather than simply an increase in the size of their existing assets.

Bankers Confirm Details

Officials with Japan's Ministry of Finance declined to comment on the memo, a copy of which was obtained by the *American Banker*. However, senior Japanese bankers confirmed the expansion, which they said was part of a plan by Japanese banks to open 65 additional offices around the world.

Japanese banks have been rapidly increasing their share of the U.S. market over the past decade and diversifying out of straight lending into other banking businesses.

Japanese banks held $372.5 billion in U.S. assets as of mid-year 1989, or more than 12% of total U.S. banking assets. They have 120 offices around the country.

The decision to expand in the

CalFed Loss Heightens California Realty Fears

By TERESA CARSON

CalFed Inc. on Friday became the second California thrift in three days to report a large loss stemming from problem commercial realty loans, heightening concerns that the state's real estate market is headed for trouble.

California bank and thrift stocks were volatile Friday, with many still reeling from the earlier disclosure of problem real estate loans at San Diego-based HomeFed Corp. and an announcement by First Interstate Bancorp that it expected nonperforming loans to increase.

No Downturn Expected

But while analysts conceded some California markets were softening, most agreed that a major downturn was not imminent.

"The markets have definitely overreacted," said James F. Wilson, housing and thrift analyst at Montgomery Securities Inc.

First Interstate Bancorp fell $2.25, to $34.75 and Wells Fargo & Co. fell $1.375 to $75.50. HomeFed, whose shares lost 25 percent of their value Thursday, closed up 12.5 cents to $14.375.

Citicorp Outlines A Wide-Ranging 'Reconfiguration'

By JED HOROWITZ

NEW YORK — In an announcement long on promises and short on specifics, Citicorp on Friday unveiled a "reconfiguration" of its troubled commercial and investment banking activities.

The plan calls for a simplified management structure in Citicorp's global finance sector for Europe, Japan, and North America. It puts power in the hands of nine key executives and sets up a compensation system that rewards customer service and market share more than meeting traditional quantitative goals, such as profit-center earnings.

Analysts Disappointed

The long-awaited news disappointed analysts, who were hoping that the nation's largest banking company would project cost savings from the restructuring and announce a specific number of layoffs among the

Thrift Industry Kept Shrinking In Early Part of Year, OTS Finds

By DEBRA COPE

WASHINGTON — The Office of Thrift Supervision released data Friday showing that the long, steady contraction of thrift industry deposits and assets continued into the first two months of 1990.

In its first, long-delayed report on the industry this year, the agency said deposits of all thrifts – both healthy and in conservatorship – shrank by $19.2 billion in January and February. The net outflow was little changed from the comparable period a year earlier.

Another $700 million left the industry in January and February as 18 thrifts were closed or merged out of existence.

Body Count

At the end of February, 2,860 thrifts remained in operation, including 333 in conservatorship. Their deposits totaled $926.5 billion, 3% below their February 1989 level of $957.4 billion. Meanwhile, assets fell to $1.225 trillion, 8% below the $1.336 trillion they logged in February 1989 and 2% below the

$1.250 trillion mark in December 1989.

"What we see is a slowly shrinking industry, both within the surviving institutions as well as those moving out of the industry," said Bert Ely, an Alex-

Moeller Expects Long Run At Connecticut Bank & Trust

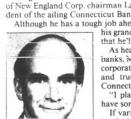
By TOM LEANDER

NEW YORK — The Moellers love a banking challenge.

When Franklin Delano Roosevelt declared a banking holiday on March 6, 1933, Frank Carl Moeller stepped in as president of First National Bank of Fort Dodge, Iowa. And he stayed – for 50 years.

His grandson, William E. Moeller, was tapped this week by Bank of New England Corp. chairman Lawrence A. Fish to become president of the ailing Connecticut Bank and Trust Co. subsidiary.

Although he has a tough job ahead, Mr. Moeller, 48, who carries



William E. Moeller

his grandfather's gold watch, is confident that he'll be at CBT for a long time.

As head of one of Connecticut's largest banks, Mr. Moeller will be responsible for corporate, commercial, real estate, retail, and trust and private banking within Connecticut.

"I plan to make this thing work, and have some fun," he said.

If variety adds up to fun, Mr. Moeller has had loads of it in his 24-year career.

He was executive vice president with Southeast Banking Corp. in Florida for the past two years. He was in charge of institutional and South Florida banking,

and responsibilities included international corporate banking, capital markets, and all commercial real estate activities.

Southeast suffered a significant rise in nonperforming real estate loans in the first quarter, but the Florida bank's woes pale when compared with the whopping $2.67 billion in problem assets carried on the books by Bank of New England Corp.

Mr. Moeller said his real estate experience – a new area before he arrived at Southeast – will pay off at CBT.

"It will serve me well in New England," he said.

Before going to Southeast, he worked for seven years at First National Bank of Chicago, where he rose to head the North American banking group. He cut his eyeteeth in banking, working in a number of positions at Citicorp, including commercial lending and back office operations. At Citibank, he was put in charge of franchising the company's Citicard to correspondent banks.

Mutual Friend Brought Them Together

The appointment of Mr. Moeller to Bank of New England had a personal touch. A mutual friend of both Lawrence K. Fish, Bank of New England Corp.'s chairman who assumed the post in March, suggested that they talk.

"Larry was very persistent, very persuasive, and the environment itself was extremely inviting," said Mr. Moeller.

Mr. Moeller, who spent his first full day on his new job touring CBT last Thursday, is brimming with enthusiasm. "We're on the right glide path at CBT," he said.

Mr. Moeller points out that he lived in Connecticut when his father worked a stint at General Electric Corp. He also attended Yale, where he graduated with a degree in economics, and earned a master's degree in business administration from the Amos Tuck School of Business at Dartmouth College.

He devotes his spare time to gardening, with a knack for plants that grow "in a temperate climate." In his other spare time, he says, was that he chucked a potential career as an oboist for symphony orchestras to take up banking. □

Glenfed Says Bad Loans Declined in Latest Quarter

GLENDALE, Calif. — Glenfed Inc. said nonperforming loans declined by $20 million in its fourth fiscal quarter to $449.4 million, or 1.76% of total assets. The percentage was 1.84% at March 31, the end of Glenfed's third quarter. □

House Committee to Probe Trump Real Estate Empire

By ROBERT M. GARSSON

WASHINGTON — Donald Trump's crumbling real estate empire will be examined Aug. 9 at a hearing called by House Banking Committee Chairman Henry B. Gonzalez, who said aggressive oversight is needed now to ensure that banks do not go the way of the thrift industry.

The Texas Democrat, who had staff investigators in New York last week, has asked bank regulators and Trump lenders to testify. Citicorp has been asked to testify, according to one source, and Chase Manhattan Corp. may be summoned as well.

In addition, Mr. Trump and representatives of the Trump Organization will be asked to appear, a committee spokesman said.

A Question of Confidentiality

However, there were signs that the hearing could be derailed because of a dispute between Rep. Gonzalez and the regulators over how much information the committee can provide about individual bank customers.

Rep. Gonzalez criticized the Office of the Comptroller of the Currency for indicating at staff-level meetings that the agency would not provide information about the Trump loans or the supervisory data taken with respect to the Trump Organization's lenders.

"I am aware of OCC's longstanding policy of confidentiality and it is something that often slows congressional oversight efforts in the past," Rep. Gonzalez wrote in a letter to Comptroller Robert L. Clarke.

"We are in a new era where the public expects a more open system and a more vigorous oversight of the agencies which regulate taxpayer-insured institutions," he added. "I am convinced that billions of dollars of insurance and tax dollars could have been saved" had Congress carefully monitored thrift regulators.

Senior deputy Comptroller Frank Maguire said the agency has no intention of discussing the Trump loans.

"We cannot speak to individual loans, and Trump is an individual," Mr. Maguire said. The Federal Reserve, which has also been invited to testify, reportedly shares the Comptroller's views.

Mr. Maguire said he doubted individual banks would violate Trump's right to financial privacy and testify about their loan agreements with the Trump Organization or their efforts to restructure that debt.

The hearing could be derailed because of a dispute between Rep. Gonzalez and the regulators.

The Softening Market

In his letter to Mr. Clarke, Rep. Gonzalez placed the Trump negotiations within the context of the continuing credit crunch.

Some committee members, he said, "have suggested that much bank credit is being channeled to larger borrowers while smaller, creditworthy borrowers suffer from a lack of credit."

A committee aide said the hearings could provide a case study of the nation's softening real estate markets, and would give the committee information about how those problems will affect the banking industry. □

Fed to Consider Merger Proposal Of Sovran, C&S

By LINDA CORMAN

WASHINGTON — The Federal Reserve Board will hold a closed session today to consider the proposed combination of Sovran Financial Corp. of Norfolk, Va., and Citizens and Southern Corp. of Atlanta.

If approved by the Fed, the merger will employ a stock swap to create a new organization, Avantor Financial Corp., with dual headquarters in Norfolk and Atlanta. Avantor would become the nation's 12th or 13th largest holding company, with $49.5 billion in assets and operations in 11 states.

The planned merger, announced last September, has gotten most other necessary approvals. It was delayed while the Office of the Comptroller of the Currency reviewed the real estate portfolios of the two institutions' lead banks. The Fed, which received the merger application in December, said it would not consider it until the Comptroller's office completed its examinations.

Loss Provisions Boosted

Sovran announced last week that it would boost its loss provisions, according to their recent statements.

Last week, Sovran announced reduced net income for both the second quarter and first half of 1990. The lower quarterly results were attributed to a $69.8 million increase in provisions, including those for problem real estate and commercial loans and Third World debt.

In April, C&S announced it was setting aside $54.8 million to cover real estate losses.

A spokesman for C&S said he did not expect the writedowns to have an effect on the Fed's decision. Both the Fed and the Comptroller's office declined to comment on the results of the review.

The merger has also been

Imaging Systems for Checks: Banks Expect Slow Payback

By JEANNE IIDA

NEW YORK — Although bankers look forward to increased productivity with check image processing, they expect the payback to be slow in coming, according to a survey by the Bank Administration Institute.

Of 113 bank respondents, 38% expect a payback two to three years after imaging systems are installed. But the largest group, 46%, said the payback would take more than three years.

"The payback is still one of the biggest issues surrounding imaging," said Bruce Davis, director of technology and operations for the institute based in Rolling Meadows, Ill. "Talking about cost benefit is like getting your arms around a cloud."

Most organizations seem to think the high cost of such systems can be justified within three years, he added. "Others have told us flatly they don't think it can be done in four years."

A Tough Sell to Management

Because the return on investment is uncertain and both systems are so expensive – at least $1 million to $2 million to install – some executives have a hard time selling top management on the technology.

A full 96% of the bankers in the survey said they plan to install imaging systems. But, Mr. Davis said, "very few of these banks have concrete plans."

Roger Elsom, vice president and manager of operations support at Huntington Banchares Corp., anticipates a payback in three to five years. Huntington, based in Columbus, Ohio, plans to test an imaging system in its check-processing area by next spring.

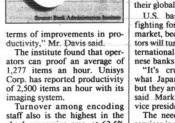
"There's going to be a lot of determining factors about volumes and work mix – how much preceded work a bank has versus over-the-counter work," Mr. Elsom said.

Decentralized organizations employing many proof operators may achieve returns the fastest, Mr. Davis said. Banks that have already centralized their operations and are enjoying economies of scale with larger reader/sorter machines will experience smaller returns.

Productivity Improvements

One of the biggest drags on productivity is proof encoding, in which an operator types in an amount for every check. Proof encoding "has hit the wall in terms of improvements in productivity," Mr. Davis said.

When Will Image Processing Pay Off?
Officials of 113 commercial banks give their projections



The institute found that operators can proof an average of 1,277 items an hour. Unisys Corp. has reported productivity of 2,500 items an hour with its imaging system.

Turnover among encoding staff also is the highest in the check-processing area, at 62.5% in 1989, up from 57.2% in 1987.

The survey of 138 institutions included 76 commercial banks, 29 thrifts, 28 banking holding companies, and five cooperative banks. □

U.S. Banks in Global Custody Race

Foothold Sought in Japan Through Advanced Systems

By RICHARD LAYNE

NEW YORK — With Japanese banks playing catch up in technology, U.S. banks are rushing to sign global custody contracts with Japanese investors.

At stake may be tens of millions in assets to be divided among U.S. bankers, who hope that their advanced back-office systems will give them an advantage as Japanese investors increasingly look to foreign markets.

A handful of U.S. banks operating in Japan have invested millions of dollars in systems that can settle trades and monitor portfolios in a variety of currencies. But industry observers say the U.S. banks' technological edge is diminishing as Japanese banks develop similar systems.

"You are seeing a race on the part of the U.S. banking institutions to gain a foothold in Japan as a global custodian," said Richard A. Pregiato, managing director of the Sequor Group, part of the merchant bank of Security Pacific National Bank. U.S. banks feel a sense of urgency, he said, because of well-funded Japanese efforts to match their global custody capabilities.

U.S. bankers say they are fighting for a small piece of the market, because Japanese investors will turn the bulk of their international assets over to Japanese banks for custody.

"It's crumbs compared to what Japanese banks will get, but they are worth fighting for," said Mark C. Aprahamian, a vice president at Citicorp.

The need for global custody services is expanding as the Japanese increasingly look abroad for investments. According to the Japanese Ministry of Finance, investors there have more than quadrupled their holdings in foreign-issued stocks and bonds since 1984. They accounted for $112 billion in net purchases last year, up from $27 billion in 1984.

The vast majority of Japanese investments continue to be in U.S. securities and Eurodollars. But U.S. bankers say Japanese pension funds and other investment pools are substantially increasing their investments in European and Asian securities.

While a U.S. branch of a Japanese bank can monitor U.S. purchases, a global custodian is needed to settle trades and provide timely information on trades in Europe, Asia, and Latin America.

U.S. banks declined to supply data on their global custody services in Japan, merely saying they see opportunities opening.

Chase Manhattan Bank, the largest global custody bank with $112 billion in assets, shifted its strategy in Japan late last year. The New York-based institution got out of fund management and other businesses to concentrate on global custody.

Chase Manhattan Trust Bank, Tokyo, has also been connected directly to a processing center in Bournemouth, England, giving Japanese customers instant access to their asset portfolio worldwide.

Chase and other U.S. banks operating in Japan can report on transactions in a variety of currencies and can settle trades in many markets. Mitsubishi's U.S. operations have multicurrency accounting software, but no Japanese bank operating on home turf does.

"One thing we can leverage going in is that we handle more cross-border investments for investors," said Mr. Aprahamian of Citicorp.

That technology advantage is eroding. "Japanese banks don't now have the technology to do global custody themselves," said Mr. Pregiato of the Sequor Group. "But we would be fools to think they won't have it soon."

U.S. bankers say the Bank of Tokyo is on the verge of announcing such a capability. The bank reports holding $112 billion in custody worldwide including stocks, securities holdings, with slightly more than half held through its trust bank affiliate in New York.

"Japanese banks have the clout and the resources to build global custody systems," Mr. Aprahamian said. "One or two of the Japanese banks will be heard from soon." □

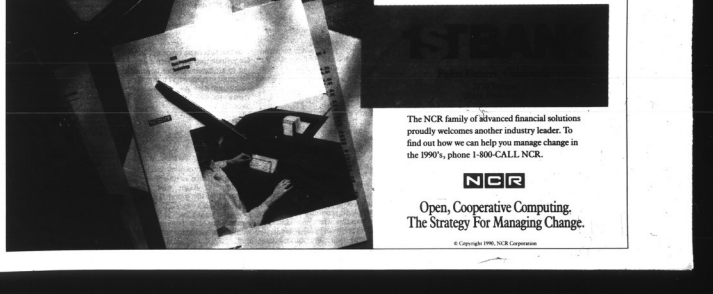
Fleet Names Unit President

PROVIDENCE, R.I. — The Fleet/Norstar Financial Group said Thomas Skala, senior executive vice president for the past four years, has been appointed president of its lead subsidiary, Fleet National Bank.

Mr. Skala, 46, succeeds Robert Higgins, 64, who was named chairman of the bank and remains as chief executive officer. — Reuters



COMMENT/*By Paul Nadler*

Powerful Minority Paved The Way for S&L Disaster

Meeting a top executive who has been brought in to help solve the savings and loan debacle and put the industry back into high public esteem, I asked, "What's the most interesting thing you have learned about the thrift crisis since you took this tough job?"

We were seated together at a dinner, and he asked me to wait a half hour before he answered. This was his response:

"The most interesting thing I have learned is how many savings industry executives resented the power structure that ran the industry since the early 1960s. The leadership consisted of a handful of people who made all the decisions and did not allow other executives to provide input or gain any power over decision-making."

In hindsight, one has to conclude that this helps explain a lot of what went wrong.

A Sense of High Purpose

It is ironic. For it was the multitude of thrift operators throughout the nation who cultivated the local congressmen, senators, and state legislators and made them feel that supporting the thrift industry was important for the future of America and for the housing stock of its citizens.

Mr. Nadler is a contributing editor of the *American Banker* and professor of finance at the Rutgers University Graduate School of Management.

These thrift executives knew and supported their lawmakers on both sides of the aisle, and they made the typical legislator feel that thrifts were "good guys" who were there for the people. This attitude was immortalized in the movie "It's a Wonderful Life," which did so much for the image of the savings and loans.

But when it came to using this goodwill, the decisions about what to demand of Congress were all made by this small group that my friend described. What they asked for was idiocy (as any free-market economist would tell you now, and many tried to say then).

As conditions changed, the thrift industry could no longer survive on 3, 6, and 3 (taking in funds at 3%, lending them out at 6%, and hitting the golf course by 3 p.m.). Instead of fighting for new powers, such as variable-rate loans and shorter-term assets, these leaders asked for interest rate ceilings to protect them from market forces. And with their political clout, they got them.

But all that really resulted was that the commercial banks had to bypass these Regulation Q restraints through the use of the Eurodollars and by borrowing through the bank holding company structure, so the actual flow of funds would not be to a regulated bank but rather to a corporation that was not subject to Reg Q. The public got around the ceilings by putting money directly into money funds.

Day of Reckoning Postponed

All that Reg Q protection did for the thrifts was to postpone the day of reckoning until the early 1980s. The experience proved the old saw "Your first loss is your easiest loss." By the time the industry had undergone the radical surgery it needed, most S&Ls were in such difficulty that they had to work to carve out laws that allowed them to be the ranch.

This process involved taking risky assets financed with deposits solicited from everywhere under federal deposit insurance. As the S&L executive put it, 75% of the funds were invested not for safety, but rather for rate alone.

Deeper examination of the thrift industry today proves "the sins of the fathers shall be passed on to the third generation."

Pendulum Has Swung

For as thrift leaders try to rescue what is left of a once-proud industry, they find that Congress and the regulators have swung the pendulum so far the other way that it is difficult to make any thrift survive and thrive.

● In the 1980s the industry lobbied for and won deregulation without an accompanying increase in examination. Now regulators are directing exam policies that make negotiating with a terrorist reasonable by comparison.

● Industry leaders got "creative means" of generating capital, notably the development of goodwill capital. The industry relied on this as a solution to capital problems, only to see the thrift-bailout legislation remove it. That made the capital problem far more severe than it would have been.

● The leaders fought for full diversification and direct investment in anything, and in some states they got it. The result is that now the industry has to return to strict reliance on home finance and the very inflexibility in asset posture that helped cause the problems.

But most important, by trying to make housing and thrifts so important in the minds of Congress that money would be directed to home finance in all phases of the business cycle, we put so much money into one needed homes and commercial structures that we have an overhang of unsold and repossessed property that will depress the real estate market for years. Also, capital was denied to other areas that could have used it.

The lessons of the thrift bailout must include a repeat of the warning that a militant minority can rule over a passive majority.

As for that minority itself, it is obvious that even with all their power as spokesmen for the industry, they forgot the adage "Be careful in what you wish for, because you may be cursed to receive it." □

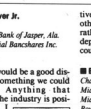
"SOUND OFF"

Federal Reserve Board Chairman Alan Greenspan recently suggested that a rise in bank capital requirements is in the offing. While he gave few specifics, he raised the possibility that it may be higher than the 8% ratio of capital to risk-based assets that the United States and other major countries have agreed to impose by the end of 1992. *American Banker* reporter Gordon Matthews posed the following question:

***Q** What impact will potentially higher capital requirements have on growth in the banking industry?*

■ John T. Oliver Jr.
Chairman
First National Bank of Jasper, Ala.
First Commercial Bancshares Inc.
Birmingham.

I think it would be a good discipline and something we could live with. Anything that strengthens the industry is positive, and I would applaud it. We would not want anything like the savings and loan situation to happen within the banking industry.



I look at this through a community banker's eyes, of course. Since the smaller banks have always been more heavily capitalized, it's easier for me to be positive than it might be for some other bankers. I would certainly rather see this than a change in deposit insurance limits, which could be very disruptive.

■ Edward J. Reiter
Chairman
Mid-American National Bank & Trust
Mid-Am Inc.
Bowling Green, Ohio

Without knowing what all the figures would be, I doubt it would affect a bank like ours, at least right now. However, if we were to experience further growth, it gets hard to predict the effect of this announcement.

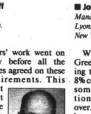
It seems like another case of reaction to problems in a certain segment of the industry by further regulating the majority of the industry – those who have been prudent and have not caused any problems. I don't think that's the right way to do it.

Politically, it would be popular, of course. Whenever anyone asks if banks should have more capital, the popular answer is yes.

But it might not work out to be so popular, economically speaking. If banks are restricted in lending money because of capital restrictions, we might not be able to grow as fast. That may cause small recessions in the communities in which we operate.

■ Ken Stancliff
Treasurer
First Union Corp.
Charlotte, N.C.

Several years' work went on internationally before all the major countries agreed on these capital requirements. This would be a bit like throwing it out before you've even tried it.



There isn't any doubt in my mind that we would be going back to a situation in which the banks in the United States would be at a disadvantage. We're not in a United States economy anymore, we're in a world economy.

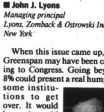
Does this affect First Union in the short term? No. Does it affect the other big southeastern banks? Probably not.

It would be felt by the major money-center and internationally oriented banks. I think it would be a mistake to put them at a disadvantage.

Longer term, it would mean the same problem for all domestic banks. In the Southeast, we have most of the major footing banks represented, at least in Atlanta and Miami. They would have a competitive advantage, since their required return on capital would be lower than ours.

■ John J. Lyons
Managing principal
Lyons, Zumbach & Ostrowski Inc.
New York

When this issue came up, Mr. Greenspan may have been catering to Congress. Going beyond 8% could present a real hump for some institutions to get over. It would be easier said than done.



Realistically, how would the banks that need it move toward higher capital levels if the marketplace is unwilling to provide it? Right now that seems to be the mood. The answer probably wouldn't be to grow through some variety of borrowed capital. The regulators would be unlikely to accept that. □

Citicorp to 'Reconfigure' Commercial, Investment Banking

Continued from page 1

sector's 15,000 employees.

For weeks, rumors have circulated that Citicorp would cut as many as 10,000 jobs, sell assets, and close down businesses.

Instead, the company said in an internal announcement that the changes "ultimately will result in fewer people and lower costs associated with these businesses. Our primary focus, however, is a change in management process."

Stock Unchanged

Citicorp's stock closed unchanged Friday at $21.65 on the New York Stock Exchange.

In the first six months of the year, earnings at the global finance sector, which is headed by Michael A. Callen, plunged 72% from the year-earlier period.

The sector, skewered by a battered portfolio of domestic real and by a sluggish Wall Street, returned a paltry 4.7% return on equity, well below the 20% that Citicorp's chairman, John S. Reed, has targeted for Citicorp business lines.

'Activity Centers' Retained

In a turn of phrase characterized by one insider as intentionally "fuzzy," Citicorp said it will retain "activity centers" focused on customers and products.

Each center, it said, will report directly to Mr. Callen, a former trader who was elevated to head of the global finance sector for the developed world in January.

Mr. Callen, in turn, will work with eight "line executives" who will coordinate the sector's worldwide activities with "the sole purpose of building the [customer] relationships and revenues that derive therefrom," according to the internal memorandum.

'Flattening the Structure'

"It's a change in the way we manage," said Thomas Jones, executive vice president for financial control. "These businesses used to be stand-alone kinds of activities with appropriate staff and divisional levels. We are flattening the structure out to get the people who are running the business more close to senior management."

The changes, which will primarily affect administrative staff people, will be phased in over the next 18 months to two years, Mr. Jones said.

Vagueness Defended

He defended the lack of specifics. "We honestly believe it would be wrong to put out a number on savings or head count, because it would take away from what we are aiming toward. Cost will be a natural byproduct of simplifying the structure and balancing the resources against the revenues."

Mr. Jones added that Citicorp is not disbanding the sector's approximately 50 business lines. What's more, he said, "we will not be reorganizing anyone who deals with the customers."

Rivals Moved First

In a philosophical sense, Citicorp is taking a page from three of its rivals — Bankers Trust New York Corp., Chase Manhattan Corp., and Manufacturers Hanover Corp. — which in recent weeks announced similar restructurings in their profit-starved wholesale banking units.

They also said that the changes will respond in a flattened management structure that is more responsive to the needs of issuers and investors. And they also implied that their new structures will hold management more accountable.

However, the three bank companies also listed specific layoff numbers and projected overhead savings — ranging from 75 people and annual savings of $10 million at Bankers Trust to more than 3,000 jobs and savings of $300 million at Chase.

The management changes at Citicorp were signaled earlier this month when George L. Davis, the unit's head of corporate lending in the United States, resigned.

Group of Eight

The so-called Group of Eight, whose members emerge with so-lidified power, is heavily weighted with executives schooled in Citibank's North American corporate banking division, which at one time was segregated from its investment banking area.

The group includes the three senior regional executives in global finance who were left after Mr. Davis' departure: Michael B. Kelland in Japan, Australia, and New Zealand; Ernst W. Brutsche in Europe, and Phillip B. Lassiter, head of North American investment banking.

> **"We are flattening the structure out to get the people who are running the business more close to senior management."**
>
> **Thomas Jones**
> *Citicorp*

The five others are:

● Jeffrey Grandy, who once ran commercial real estate lending and leasing and currently heads Citibank's commercial banking activities in London.

● Michael T. Welch, Mr. Grandy's predecessor in the London post and current chairman of Citibank's credit policy committee.

● Peter Burnim, current head of investment banking activities in London and a former corporate banker in New York.

● Todd Slotkin, head of the group that originates and distributes leveraged buyout loans.

● Rodney F. Bailek, who runs distribution and securitization in the sector's capital markets division. □

If your institution issued a million checks last year, you'd be doing O.K.

If you had issued them using our Official Checks you'd be doing about $650,000 better.

Here's why. With American Express' Official Checks, you earn commissions on 100% of your outstandings. And we reduce your back office labor costs. So altogether, you can earn an average of 65¢ more profit on every check you issue.*

Just think, your funds disbursement items including teller loan, dividend and expense checks could actually improve your earnings.

Call us today at 1-800-458-8677. And make your bottom line look even better.

COMMUNITY RELATIONS

Bankers Fear Regulators May Target Local Loans

Continued from *page 1*

munity development loans that are being paid on time but do not meet all underwriting standards, as has happened with real estate loans.

The **American Bankers Association** is urging members who are uncertain about a loan to seek written judgment from the examiners and to record responses in their CRA files. "If you have it in writing, you're covered," said association spokeswoman Tara Ranels Little.

Among those attending the Boston meeting with the comptroller and Massachusetts Gov. Michael Dukakis were Bank of Boston chairman Ira Stepanian, Shawmut Bank president John Hammill, Bank of New England vice chairman Tim McNamar, BayBanks Inc. chairman William Crozier and vice chairman Richard Pollard, and Robert Sheridan, president of the Massachusetts Bankers Association.

Stephen Coyle, director of the Boston Redevelopment Authority, was also present. He said he pressed Mr. Clarke for a clear statement that there is no assumed conflict between prudent lending and CRA lending.

"His comment was that there was nothing in the supervisory review" that precluded CRA lending, but that did not mean loans would be rubber-stamped just because they were earmarked for community development, Mr. Coyle said. "It was walking the middle line," he said of Mr. Clarke's response.

> **"What doesn't work is throwing your standards out the window."**
>
> **Kristin Faust**
> *First National Bank of Chicago*

The regulators' answers may not have completely convinced bankers, but community development specialists assert that CRA loans can – indeed, must – be safe and profitable.

"We're willing to go the extra step for borrowers, but what doesn't work is throwing your standards out the window. That's foundation work," Kristin Faust, assistant vice president of the neighborhood banking division of **First National Bank of Chicago**, said during a recent American Bankers Association conference.

Ms. Faust said her division, which has provided $105 million in loans for community development, including residential and retail projects, never lends for more than 80% of the value of collateral and requires a $1.20 cash flow for every dollar in debt.

In lending to low-income buyers, however, it is sometimes necessary to accept the ability to pay rent and utilities as evidence of creditworthiness and to allow "sweat equity" to buyers willing to work toward their down payment, she said.

Extra Consideration Given to the Poor

"The needs of low-income communities are so clear to everybody, including the regulators, that extra consideration is going to be given for the bit of extra creativity needed to conduct CRA lending effectively," added Robert Dugger, chief economist of the ABA.

"The area that could be the most heavily impacted by regulatory scrutiny would be the commercial real estate area," said a banker who asked not to be identified. But he added that CRA provides that loans be made "in the context of safety and soundness," making it unlikely that banks will be pressured to finance new apartment buildings in soft markets such as New England.

Martin D. Levine, vice president for low- and moderate-income housing for the **Federal National Mortgage Association**, said lenders that wish to meet their CRA requirements by financing apartments could refinance existing multifamily properties or devote foreclosed property to use by low-income residents.

"My job is to encourage members of the U.S. League [of Savings Institutions] to be active – to work with community leaders and nonprofits," said Frank Willis, executive director of the league's Housing Opportunities Foundation. "There really are a lot of seasoned nonprofit groups that know their way around."

By forming such partnerships and tapping into government subsidies, Mr. Willis said, lenders can provide below-market financing to worthy projects while maintaining a profitable spread.

Competition for Public Money Is Keen

Mr. Willis noted, however, that competition for public money and other grants is already intense. The Federal Housing Finance Board recently awarded the first increment of this year's $78 million of Federal Home Loan bank money for affordable housing, a program that Mr. Willis described as "oversubscribed."

Mr. Willis said that although underwriting the loans can be "challenging," there are ways to remove from the balance sheet loans that might attract examiners' attention. For example, **GE Capital** Mortgage Insurance Cos. has a Community Home Buyers Program in which underwriting criteria are relaxed for borrowers who undergo home ownership counseling, he said. The private insurance enables the lender to sell the loan, passing the risk on to the secondary market agencies.

In Minneapolis, **First Bank System Inc.** meets part of its community reinvestment obligation by managing tax-advantaged equity investments by big corporations in low-income housing. □

Banks Stalking Executive Clients

Direct Mail Marketing Is Used to Flush Them Out

By ED LYNCH

NEW YORK — In the continuing hunt for lucrative niche markets, more banks are aggressively pursuing the personal accounts of top executives and professionals, industry sources say.

"The attractiveness of the executive/professional market is that it is an easier market to identify, easier to communicate with, and it's easier to find out where they are," said J. Douglas Adamson, executive vice president of the Bank Marketing Association.

Though no statistics are available, Mr. Adamson said, banks are using more direct mail to reach executives and professionals.

Recruiting a New Clientele

Chase Manhattan Bank decided to go after corporate executives, professionals, and entrepreneurs after bank studies showed they would be receptive to direct mail, said Suzanne Schutte, division executive of marketing at Chase's U.S. private bank.

"We had to get away from the traditional ways – for example, client referrals and our internal banking network – that we have relied on to get leads," she said. "Over the course of years . . . those sources dry up."

Last July the private bank began using direct mail in an effort to reach the wealthiest 2% of the population. Chase culls individuals who fit at least two of the following criteria: income of $250,000 or more, $1 million in net worth, and $500,000 or more in investable assets.

> **"It is an easier market to identify, easier to communicate with, and it's easier to find out where they are."**
>
> **J. Douglas Adamson**
> *Bank Marketing Association*

Targeting the Executive Suite

Chase and a Security Pacific Corp. unit are using proven mailing lists, such as those from upscale magazines, to reach executives. Security Pacific Executive/Professional Services said it also gets lists from trade and alumni associations.

In its mailings, Security Pacific offers an unsecured line of credit of up to $35,000. The division has targeted a less wealthy segment of the population than Chase – executives with incomes of $50,000 to $200,000 – said Dennis O'Brien, executive vice president.

Mr. O'Brien said Security Pacific has been in the direct mail business since the mid-1960s, when it bought a company that marketed loans to doctors and dentists. It expanded that effort in the mid-1980s to include executives and other professionals.

The Personal Touch

Manufacturers Hanover Trust Co. also offers a special credit line to executives. The Personal Executive Revolving Credit is available through the branch banking division only to the principals of its commercial accounts, said Robert Schaefer, a retail marketing vice president.

Potential clients for the credit line are also offered private banking products and priority banking, which includes reduced rates on credit cards and home financing products.

Manufacturers Hanover opts for a more personal sales pitch than Chase or Security Pacific. Its executives call or visit the potential customer instead of relying on mail. "It's just something that says their personal business is very important to us," Mr. Schaefer said.

Return on Investment

Security Pacific likes to see an overall response rate of 2% or more to its mailings, Mr. O'Brien said, and the division has about 100,000 accounts.

Ms. Schutte said Chase's response rates "have consistently outperformed 3%, which is your standard benchmark for direct mail." Respondents are put in touch with a portfolio manager, who often takes six to nine months to close a sale.

Manufacturers Hanover declined to give figures for its three-year-old program. □

Citibank Claims Success for Purchase Protection

NEW YORK — After one year of offering purchase protection to cardholders, Citibank is proclaiming its program a success, despite high costs.

Average Claim is $175

Under the insurance plan, goods purchased with any of Citibank's 27 million Visa cards and MasterCards will be replaced if the items are damaged or lost.

Over the past year, 90% of the claims filed have been paid, said Sheryl Behar, vice president of card member communications. The average claim runs about $175.

She declined to say how many claims have been made or give a dollar figure for refunds, acknowledging only that it was more than $1 million.

The Cost of Premiums

Industry observers say the average cost for premiums is 70 cents to $1 on each account, but Citibank pays slightly less than that, Ms. Behar said. At 70 cents an account, the cost would be $18.9 million for 27 million accounts.

The bank introduced purchase protection partly in response to a similar program heavily promoted by American Express® Co. In May, Citibank expanded the benefit to its checking account customers.

— Ellen Mennemeier

7 Home Loan Banks Given Go-Ahead to Raise Dividends

By DEBRA COPE

WASHINGTON — Softening a policy it adopted six months ago, the Federal Housing Finance Board last week lifted stock dividend caps for seven of the 12 Federal Home Loan banks it oversees.

The relaxed grip on dividends is a victory for the Federal Home Loan bank presidents, who have argued for flexibility to pay market rates of return. Dividends are a sensitive matter because the return on stock that members must hold has to remain attractive in order for the Home Loan Bank System to retain members and draw new ones.

Indeed, with up to 40% of thrifts slated to be closed or merged out of existence, the Home Loan Bank System's survival may hinge on its ability to attract capital by generating strong earnings and offering robust dividends.

Recruiting May Be Easier

The easing could bolster the district banks' efforts to recruit new members from a base that has been broadened to include commercial banks and credit unions, and to market advances and other services.

The shift away from dividend austerity will boost efforts to coax commercial bank members to the Home Loan banks' dwindling rosters by sending a signal that they "don't have to be concerned about the stability of the system," said Thurman C. Connell, president of the Federal Home Loan Bank of Des Moines. It could also quell exit bids and redemptions of excess stock by savings institutions.

The policy shift is an indication of improved relations and growing trust between the Finance Board and the Home Loan banks, sources said.

"It's a matter of us getting to know one another better," said James Faulstich, president of the Federal Home Loan Bank of Seattle. In its nearly one year of existence, "the Housing Finance Board has gotten a deeper understanding of bank operations," he added.

Strong Earnings Expected

The Finance Board bent its rule because it expects that strong current earnings by the Boston, Pittsburgh, Atlanta, Indianapolis, Des Moines, Topeka, and Seattle banks will continue into next year, said Mary Bush, managing director of the fledgling regulatory agency. The banks got the nod to pay second-quarter dividends ranging from 9% to 11.15%.

Dividends of 8.25% to 9% were authorized for the Home Loan banks of New York, Cincinnati, Chicago, Dallas, and San Francisco.

The six-month-old rate policy, initially intended to firmly anchor dividends to the federal funds rate, now appears to serve more as a guideline. Unless Home Loan banks can persuade the Finance Board otherwise, they must limit dividends to 100 basis points above the benchmark rate, or 9.23% in the second quarter.

Tighter limits apply to Home Loan banks that make incomplete payments to the Resolution Funding Corp., which raises funds for S&L resolutions. These banks may pay only 50 basis points above the federal funds rate – 8.73% in the second quarter.

'Positive Indications'

Despite competing claims on Home Loan bank earnings, there are "positive indications that the banks are well managed, well capitalized, and capable of weathering the adverse circumstances swirling about the industry," said Mr. Connell. He noted that the Home Loan banks were already looking at thinner payouts when the Finance Board unveiled its dividend control policy last January.

Five months earlier, Congress laid claim to the banks' retained earnings plus $300 million annually to cover some of the costs of cleaning up insolvent S&Ls, and earmarked up to $100 million more from annual earnings for affordable-housing subsidies. Simultaneously, profits slackened as the system's thrift membership began to shrink and lose its previously robust appetite for advances.

Home Loan Bank System earnings slumped 25% to $610 million in the first five months of 1990, but the drop was from a record $816 million for the comparable period in 1989. This year's performance marks a gain from the $568 million earnings achieved in the first five months of 1988. Given massive thrift industry restructuring, profits are strong, Ms. Bush said.

Banks Show Interest

Fourteen commercial banks have joined the Home Loan Bank System since barriers were lifted last August by the Financial Institutions Reform, Recovery, and Enforcement Act, and 23 more applications are pending, Ms. Bush told reporters. Some observers say a tandem effort to lock up thrift members has dampened the enthusiasm of potential voluntary members, although Ms. Bush disputes this.

Many thrifts have been angered by a plunge in the better-than-market-rate returns that have been an enduring attraction of Home Loan bank membership, and to date 10 have petitioned to withdraw.

The Finance Board is trying to persuade the Federal Deposit Insurance Corp. to withhold coverage from state-chartered thrifts that quit the Home Loan Bank System. □

2 Democrats Join the House Banking Panel

With only a few legislative weeks left before Congress is scheduled to adjourn, it might seem a waste of time to fill two recently created vacancies on the House Banking Committee. But Democrats, apparently concerned about their dwindling majority on the panel, named two House veterans last week to fill the vacancies.

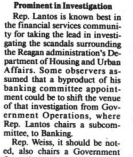
Seven-term Rep. Tom Lantos of California and six-term Rep. Ted Weiss of New York will take the seats vacated when Rep. C. Thomas McMillen, D-Md., moved to the Energy and Commerce Committee and Rep. Marcy Kaptur, D-Ohio, transferred to the appropriations Committee. The assignments to the Banking Committee are temporary.

No Votes Scheduled

In past years, such end-of-term transfers were viewed as fund-raising moves, since the Banking Committee provides members with easy access to industry political action committees. But Congress is scheduled to adjourn in October – and to spend much of its time until then on recess. Most observers doubted that either Rep. Lantos or Rep. Weiss took the assignment to bolster his fund-raising effort.

"They will probably tend to make the committee somewhat more liberal," said one financial industry lobbyist. However, added a banking industry lobbyist, "it's not at all clear there will be any more votes this year in the committee."

Rep. Ted Weiss
Democrat of New York



Rep. Tom Lantos
Democrat of California

Tried to Impeach Reagan

Rep. Lantos, who spent his youth fighting in Hungary's anti-Nazi resistance, is the more conservative of the two. But that is only because Rep. Weiss – who was also born in Hungary – hails from one of the country's most liberal congressional districts.

It was Rep. Weiss who led a small band of House members in a futile effort to impeach President Reagan over the Grenada invasion, and it was Rep. Weiss who spent the Reagan years battling cutbacks in social programs.

Prominent in Investigation

Rep. Lantos is known best in the financial services community for taking the lead in investigating the scandals surrounding the Reagan administration's Department of Housing and Urban Affairs. Some observers assumed that a byproduct of his banking committee appointment could be to shift the venue of that investigation from Government Operations, where Rep. Lantos chairs a subcommittee, to Banking.

Rep. Weiss, it should be noted, also chairs a Government Operations subcommittee.

RTC *observer*

Branching Laws Prove to Be a Major Hurdle in the Courts

By STEVE KLINKERMAN

Unless Congress acts to clarify interstate banking laws, the Resolution Trust Corp. will be unable to override state branching restrictions when selling thrifts under its control for at least the rest of the year.

In separate cases, federal judges in Arkansas and Colorado have enjoined the RTC from providing a sweetener in its sales deals with banks in states that limit branching to counties or other small geographic areas.

Using an agency regulation permitting overrides of state law, the RTC has offered to let banks that buy failed thrifts use the thrifts' office networks as branches, even if the locations would not ordinarily be permitted by laws applying to commercial banks.

The RTC plans to appeal the rulings but does not expect appellate court decisions for roughly six months.

The RTC plans to appeal the rulings but does not expect appellate court decisions for roughly six months. A third branch-override case, in New Mexico, favored the RTC, and the state bank supervisors have an appeal pending in U.S. Circuit Court in Denver.

A String of Court Rulings

The Arkansas and Colorado injunctions are the latest in a string of court decisions holding that the RTC and its parent agency, the Federal Deposit Insurance Corp., overstepped the authority granted them by Congress.

The court rulings are a clear setback for the RTC, which needs every available tool in selling the hundreds of bankrupt thrifts coming under its control.

But the decisions are also victories for state bank regulators. These officials contend that the RTC would wreck their state regulatory structures by according the wider branching privileges to banks acquiring thrifts.

An apparent absence of authorization in the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 persuaded the federal judges to block the RTC's promised conversions.

According to Judge Stephen Reasoner, who presides in the U.S. District Court for the Eastern District of Arkansas, the reform law "says nothing about a bank converting [thrift] branches to bank branches and so operating them."

In establishing the regulation permitting overrides, Judge Reasoner said the RTC "clearly overstepped its authority pursuant to the language of the statute under which it was acting."

States' Rights

The judge's stinging rebuke will put a chill on further override attempts, experts say, because bankers and the RTC alike know that the overrides probably will not prevail.

"From a practical standpoint, bankers will be reluctant to accept overrides that have been found unlawful in two federal district courts," said Leonard Rubin, a lawyer with Bracewell & Patterson, who represented the Conference of State Bank Supervisors in court arguments against the RTC policy.

That is just fine by the state regulators, who maintain that a competitive disparity is created when acquiring banks get branching privileges while banks not acquiring RTC thrifts must abide by restrictions set by state lawmakers.

"It's a tradeoff," said Jonathon Lindley, managing director of the Washington office of Ferguson & Co. "States' rights have been preserved [in the Arkansas and Colorado cases], but the RTC has lost a tool that could elicit higher bids for certain failed thrifts and thereby lower taxpayer outlays in their rescues."

In the wake of the Arkansas court decision, Worthen Bank and Trust9 Co., Little Rock, has withdrawn a bid for Independence Federal Bank, Batesville, which has branches in 16 Arkansas counties.

Measure Pending in Congress

The RTC's best chance for a rebound on the issue lies with a provision that would amend the Federal Deposit Insurance Act. Proposed by Sen. Jake Garn, R-Utah, the provision would amend the thrift-reform law in a way that would allow the RTC to proceed with overrides as it sees fit.

Barring passage of the bill, the RTC has to hope that appeals courts overturn the lower court rulings. But the game is over if the appeals are kicked up to the Supreme Court. "The RTC's job will be over by the time the Supreme Court gets around to the issue," said agency spokesman Stephen Katsanos. □

Take a quick insider's look at your competitors' prices.

There's a secret to successful pricing. And your competitors are holding onto it.

Their current, component price lists for corporate cash management services are essential to the pricing decisions you make. And now you can see them, thanks to Trans Data's relationship with hundreds of the nation's top banks.

Order a customized look at over 25 services.

Our Corporate Pricing Series constantly updates detailed component and bottom-line prices for over 25 cash management services.

These prices are fresh, accurate and itemized. And we deliver them in two unique and useful styles. First, review quarterly price analyses of banks categorized nationally, regionally and by deposit size. For even more perspective, consult the studies' historical records to analyze ongoing trends.

Then, ask Trans Data for a customized comparison of your prices with those of your peer bank groups. We'll even stack your numbers up against those of specific banks you designate. Their identities are concealed, but their numbers will offer a clear, actionable picture of your specific market.

Price more confidently... and profitably.

With the Corporate Pricing Series in your files, you have a head start in setting price and product features for a new offering. You'll simplify the task of spotting and leveraging price advantages. And fine-tune profit margins more confidently.

Developed in a decade of banking research, our connections are priceless. So call us now, before you make another pricing decision. Let Trans Data give you a look at what's going on inside the minds — and price lists — of your competitors.

GLOBAL *dispatches...*

As '89 Ended, New Lending To Eastern Europe Slowed

Reuters

BASEL — Struggling Eastern Europe continued to soak up Western bank loans in the second half of 1989, but more slowly than in the first half, the Bank for International Settlements reported.

Total bank lending to Eastern Europe grew $3.3 billion in the second half, to $96 billion. The first half's rise was $5.3 billion.

The Soviet Union remained the region's biggest borrower. Its foreign bank debt, adjusted for exchange-rate swings, rose $1.9 billion in the second half to reach $43.22 billion at the end of last year.

Moreover, the cash-strapped Soviet Union withdrew $1.3 billion in deposits at Western banks during the period.

The Soviet Union still had $14.61 billion in deposits at the end of 1989, according to the semiannual BIS figures.

Renewed Soviet borrowing continued a recent pattern; Western bank lending to the Soviets had swelled $4.8 billion in the first half.

This year the Soviets, shaken by a economic disarray, have had trouble meeting scheduled payments to Western suppliers.

East Germany and Czechoslovakia were the other major borrowers, with $800 million and $700 million, respectively.

In general, international bank lending to countries other than major Western nations expanded $1.5 billion in the second half, the BIS estimated. The first-half increase was $1.2 billion.

Outstanding loans stood at $455 billion. International deposits leaped $30 billion, to $577 billion.

New lending to developed countries outside the reporting area – the Group of 10 plus Austria, Denmark, Finland, Ireland, Luxembourg and Spain – accelerated to $3.6 billion, from $1.2 billion in the first half. Almost all the new loans went to private borrowers.

Loans to members of the Organization of Petroleum Exporting Countries grew by a net $1.9 billion, lifted primarily by a $2 billion increase in lending to Iraq.

Outstanding loans to Latin America kept shrinking, falling $7.7 billion, to $176.1 billion, after a $6.9 billion drop in the first half.

Meanwhile, the Federal Reserve Board has reported that U.S. bank lending to foreign borrowers fell $1.3 billion in the first quarter this year, to $241 billion.

Loans to Latin American borrowers fell $3.7 billion from yearend 1989, to $40.5 billion. Loans to borrowers in industrialized countries climbed $10.9 billion, to $162.7 billion.

BRAZIL

Brazil should have a program of debt swaps to reduce its stock of debt, former Finance Minister Mailson da Nobrea said in a Sao Paulo interview.

By converting foreign debt into equity "we reduced our debt stock by between $15 billion and $18 billion" during the last two years of the Jose Sarney administration, Mr. Nobrega said. The current government, which took office in March, should do the same, he said.

"Some U.S. banks have accused Brazil while I was minister of buying back debt, using foreign exchange reserves. This is not true," Mr. Nobrega said. Some state-controlled companies using their own resources carried out international transactions to reduce their foreign debt, he said.

CHILE

The Central Bank has set up guidelines for debt-to-equity swaps to make the most of the rest of the country's shrinking commercial debt.

The guidelines favor new investment and put most of the financial sector off limits.

A debt-swap pioneer, Chile has slashed its commercial bank debt from $14.5 billion in 1985 to under $5 billion, of which only about half is available on the secondary market.

"The debt-to-equity swap has fulfilled most of its potential in Chile," Francisco Garces, the Central Bank's international operations director, said Thursday. "We want to make more effective use of what's left of the debt."

The Central Bank board agreed this month that in considering approval for future swap, top priority would go to new investment, expansion of export projects, and import substitution industries.

Investments in equity in the communications, energy, tourism and banking sectors will also be encouraged. But swaps will no longer be allowed in insurance companies, investment funds, pension funds, or investment societies.

PHILIPPINES

President Corazon Aquino has cautioned against a Congressional proposal to suspend foreign debt repayments to enable the Philippines to recover from the destruction wrought by last Monday's killer earthquake.

In a statement, she said she hoped "we do not rush into any resolution" that undermines "the good will and credibility we now enjoy as well as the already ongoing efforts to mobilize external financial resources for our needs."

A House committee has sought a two-year freeze on foreign debt payments.

Japanese Dash Talks of Curbed Growth

Continued from *page 1*

United States is at odds with earlier predictions that Japanese banks would be forced to curtail their U.S. growth because of their battered capital ratios. The ratios weakened earlier this year after a sharp drop in the Tokyo stock market and in the value of the yen against the dollar.

The decline in stock prices weakened the value of shares that Japanese banks count as part of their capital, while the fall in the value of the yen increased the amount of yen-denominated capital the banks need against their dollar-denominated assets.

"We're not very anxious to increase assets. Earnings from nonasset-related businesses are growing faster," said one Japanese banker, citing real estate investments, corporate acquisitions, project finance and trade finance as among the businesses his bank is targeting.

Japanese banks have been rapidly increasing their share of the U.S. market over the past decade and diversifying out of straight lending and into other banking businesses.

Applications Due Soon

Bankers said they would soon begin applying to local banking authorities for authorization to open or upgrade their offices.

Despite economic downturns in the Northeast and various U.S. regions around the country, Japanese bankers said they continue to view the United States as an attractive market in which to do business.

"There are more business opportunities here than anywhere else," said one senior Japanese banker in New York.

Japanese bank sources said the expansion was intended to broaden their business relationships with medium-size U.S. businesses and Japanese subsidiaries around the country.

Looking Ahead

Japanese banks also want a network they can use to do business unhampered by barriers to interstate banking fall.

Analysts said that the recovery in bank-stock prices over the last few months had bolstered Japanese banks' capital ratios.

According to Salomon Brothers Inc. banking analyst Thomas Hanley, 11 out of Japan's 15 biggest banks have already met or surpassed the minimum 8% capital-to-asset ratio agreed on by international regulators.

The banks are likely to strengthen their capital still further, Mr. Hanley noted in a report that the Ministry of Finance had recently authorized Japanese banks to issue subordinated bonds in the United States and that one bank, Sumitomo Bank Ltd., had already announced plans to issue $1 billion in subordinated bonds.

The dollar-denominated subordinated bonds are accepted as capital and will strengthen the banks' capital ratios, permit continuing growth in assets, and give the banks a hedge against future fluctuations in the value of the yen against the dollar.

Mitsubishi Most Ambitious

Among the 15 banks planning to expand their offices here, Mitsubishi Bank Ltd. has the most ambitious plans.

Mitsubishi, the world's fourth- largest bank with $360 billion in assets, is planning to open loan production offices in Atlanta, Philadelphia, Boston, Minneapolis, Detroit, Dallas, and St. Louis. Such offices may take loan applications but not deposits.

Mitsubishi already has branches in Los Angeles, Chicago, and New York; a U.S. commercial banking subsidiary – Bancal Tri-State Corp. – in San Francisco; an agency in Houston; a trust company in New York; and financial futures and securities affiliates in Chicago and New York. Agencies can extend loans but may only accept deposits from nonresidents.

Other Moves Listed

The other banks are:

• Tokai Bank Ltd., the world's ninth-largest bank, with $228 billion in assets, plans to open loan production offices in San Francisco, Columbus, Minneapolis, and Dallas. It already has branches in New York and Chicago, an agency and commercial banking subsidiary – Tokai Bank of California – in Los Angeles, and a trust company and securities affiliate in New York.

• Mitsui Taiyo Kobe Bank Ltd., the world's second-largest bank, with $375 billion in assets, plans to upgrade representative offices in Houston, Atlanta, and San Francisco to agencies. The bank already has branches in Seattle, Chicago, and New York; an agency in Los Angeles; a commercial banking unit, Mitsui Manufacturers Bank, in Los Angeles; and a securities affiliate and trust company in New York.

• Daiwa Bank Ltd. plans to open a representative office in Houston. The bank has branches in Chicago and New York, a Los Angeles agency, and a trust company and securities affiliate in New York.

• Saitama Bank Ltd. plans to open a representative office in San Francisco and upgrade its Guam loan production office to a branch. The bank already has branches in New York, Chicago, and Los Angeles.

Virginia Governor to Ask Counterparts to Back S&L Study

By ROBERT M. GARSON

WASHINGTON — Gov. L. Douglas Wilder of Virginia, who urged the White House last month to appoint a commission to study the thrift crisis, plans to take his proposal to the conference of the nation's governors.

Laura Dillard, the governor's press secretary, said the exact course of action has not been decided for the conference, which convenes here July 29, but she added it was "a good possibility" Mr. Wilder would seek support for his proposal.

Letter Sent to Bush

The Democrat from Virginia first described his proposal for a commission in a little-noticed June 12 letter to President Bush. The measure is essentially the same as one endorsed Wednesday by the House Democratic leadership.

House Democrats plan to incorporate the measure into a omnibus crime bill moving through Congress. The amendment is scheduled for action by the committee on Monday and could be on the floor later in the week.

Mr. Wilder said a national commission should be drawn from the investment, business, education, and labor communities. It should investigate the origins of the problem and the cost of the clean-up, and should make recommendations for remedying the problem and averting future crises.

Gov. Wilder wants a commission of investment, business, education, and labor leaders to investigate the origins of the problem.

Last Pushs for States

Mr. Wilder's initiative highlights the wide impact of the burgeoning S&L bailout. To the nation's 50 governors – as well as thousands of mayors, county executives, and other municipal officials – the thrift bailout is siphoning off money that might otherwise be spent on schools, roads, and services.

"Our citizens must know the truth," Mr. Wilder stated in his letter to the President. "They must be told the real facts of the effect this 'bailout' will have upon them, their children and their children's children.

"The working men and women of this great nation must be apprised of the steps that are to be taken, and that must be taken, to heal this wound in the most fiscally responsible manner available," he continued.

On the Taxpayers' Minds

Ms. Dillard said the S&L bailout appears to on the minds of people who attend Mr. Wilder's speeches.

"It's something he talks about a lot," she said. "The audiences always applaud."

Mr. Wilder, she added, regards the breakdown in the S&L industry as a case of "gross mismanagement" that the taxpayer should not have had to pay for.

"As early as 1984, there were recognizable signs of the irresponsible and unconscionable management practices that had enveloped many of our nation's savings and loan institutions," Mr. Wilder said in his letter.

Had Congress and the Reagan administration tackled the issue then, the cost of cleaning up the mess would have been greatly reduced, he added.

Mr. Wilder said a national commission should be drawn from the investment, business, education, and labor communities. It should investigate the origins of the problem and the cost of the clean-up, and should make recommendations both for remedying the problem and averting future crises. □

Fed to Hear Avantor Application

Continued from *page 2*

challenged for alleged inadequacies in the banks' Community Reinvestment Act performances. Most of those CRA challenges were directed at C&S.

Since January when the challenges were filed, C&S has announced its participation in a number of community-aid projects. Those initiatives prompted the provision of a letter of credit – reportedly at a discounted rate – to secure $10 million to $20 million in tax-exempt revenue bonds for an initiative to rehabilitate and rebuild housing in low-income neighborhoods.

A C&S spokesman said he does not know whether the Fed was satisfied with the company's CRA compliance. But he said the central bank has made submissions by the bank, had not requested any further information about CRA activities.

The Fed spokesman also declined to discuss whether the central bank was satisfied with the banks' CRA compliance. He said only that the board will weigh the institutions' CRA performances when it considers the application at its closed meeting.

Last Major Hurdle

The banks said the Fed's approval is the last major regulatory hurdle to the merger. If it grants approval, the Justice Department then has 30 days to challenge on antitrust grounds.

The merger has been approved by the banking commissioners of the District of Columbia and seven of the eight states in which the two companies have banks, said Sovran's general counsel, Page Crawford. The approval of the eighth state, South Carolina, is contingent only on the Fed's approval, Mr. Cranford said. □

Citibank Seen Close to Deal to Sell Ambac

By NICHOLAS BOYLE

NEW YORK — Citibank is negotiating to sell a 75.1% stake in its municipal bond insurance subsidiary, Ambac Indemnity Corp., to US West and American International Group, according to sources close to the talks. The announcement of an agreement in principle is imminent, the sources said.

The price is estimated at about $275 million, based on an overall value of $900 million.

Meetings Spur Speculation

Late last week, separate meetings were held by Ambac's executive committee, Citibank directors, and executives of US West Financial Services, Financial Security Assurance. Citibank executives also addressed the entire Ambac staff. Speculation, as a result, boomed.

James McLane, division executive of Citibank's global insurance division, categorically denied that a sale was near.

"No deal has been done," Mr. McLane said. "Citibank is committed to Ambac, and I'm very optimistic for Ambac's outlook."

He also said a possible alliance with US West and American International Group was not the entire picture. "It's not necessarily just them" involved in discussions, he said.

The unfortunate aspect of the proposed deal, sources said, is that Ambac would be dissolved and its more than $360 million unearned premium reserve would be "run off."

Lenders' Group Bolsters Its Marketing Effort

PHILADELPHIA — Robert Morris Associates, a trade group for commercial lenders, said it has formed a marketing and communications council to provide guidance and support for marketing and public relations activities.

William J. Rossman, chairman of the council, said its duties will include reviewing publications and recommending design and printing improvements.

Mr. Rossman, who is president and chief executive officer of Mid-State Bank and Trust Co., Altoona, Pa., said the council reflects an effort by Robert Morris Associates "to become more market driven."

The council has hired Steven C. Taylor for the newly created position of sales manager and has promoted Paul E. Kushner to senior manager – marketing services. □

Thrift Industry Shrank in Early '90, OTS Reports

Continued from *page 1*

andria, Va., consultant.

The OTS data showed progress by the Resolution Trust Corp. in bringing down the high interest rates paid by failed thrifts that it has managed since inherited, Mr. Ely said. Conservatorship thrifts slashed their time deposits toward shorter maturities and shaved rates on three-month to one-year certificates of deposit, bringing these yields close to those offered by institutions operating independently.

Rate Variances Persist

While the RTC is making headway, it still has not eliminated interest rate variances, said James Barth, a former OTS chief economist. Jumbo CDs at conservatorships continue to command high rates. Moreover, Mr. Barth said, it is hard to draw conclusions about the RTC's success based on the February data, because many deeply troubled thrifts had not yet been placed in the agency's hands. Some clues about the thrift industry's effort to restructure its balance sheet also emerge from the January-February data.

While borrowings declined $2.9 billion in those months, thrifts appeared to be easing up on efforts to cut deposits and to repaying Federal Home Loan bank advances and other debts. In contrast, over the period through December 1989, thrifts repaid $63.7 billion in borrowings.

Mortgage Securities Retained

The data also show that thrifts appear to stop their binge of selling mortgage securities in the first two months of this year. Thrifts sold only $2.6 billion of mortgage-backed securities in January and February, compared with $45.1 billion from June to December last year.

Mr. Ely speculated that thrifts may be holding onto the securities to meet the qualified-thrift-lender test, which requires S&Ls to keep 70% of their assets in investments related to residential mortgages. Alternatively, he said, thrifts may be capitalizing on a short-term widening of spreads.

Publicity about thrift problems may be motivating some depositors to move funds out of thrifts, said Mr. Barth, now professor of finance at Auburn University.

"I don't think that was ever much of a factor in the past," he said. "I don't think it's because of fear of losing money, just concern their funds will be tied up or delayed, even if that's not the case."

Enforcement Update

Timothy Ryan, director of the OTS, said at a press conference in Dallas Friday that the agency would step up civil actions against thrift executives who abused their institutions. In addition to demanding restitution, he said, the OTS will move to bar abusers from the thrift industry.

Mr. Ryan announced a strategy shift, saying that the OTS would temporarily cease hiring outside law firms to help with the enforcement proceedings. Instead, the agency would beef up its own team of lawyers.

"The work done by us will be just as good if not better than that done in the private sector," said Mr. Ryan, a lawyer himself. He said the U.S. Justice Department will also counsel the OTS on enforcement actions.

Steve Kliakerman in Dallas contributed to this article.

Executive Help Wanted

RETAIL BANK EXECUTIVE

Billion dollar New England bank must revitalize relationships with retail customers. Service is the foundation of profitable market share. We'll do a lot better, now and into the future, with a leader whose vision and integrity build focus, intensity, sustained team effort and results.

We'll find a line management winner who:

- Lives customer relationships in small cities and little towns . . . not just in the urban/upscale profit centers.
- Knows all forms of deposit and retail credit lines of service, cold . . . commercial credit, a plus.
- Makes marketing principles work, even when population and media availability put per exposure costs out of sight.
- Appreciates values of key staff areas like marketing, financial planning, HR.
- Has a college degree . . . maybe MBA or Stonier too.
- Has a stable personal life . . . our work is tough enough without any extra baggage.
- Probably runs one of the retail or community banking regions in a bank many times our size.
- Manages the game and the score by inspiring the players.
- Is looking ahead for the right show to run.

Salary, incentives, benefits, challenge and career opportunity. Please send a detailed resume, to be held in confidence, now.

MANAGING EDITOR

Every single story in this new financial service industry newspaper is going to help its readers do their jobs better. The readers expect and will get "hands on" and "how to" information. Hands on is how the ME will have to do the job every week. Knowing how those readers execute, know and what they need, the ME will plan, assign, train and edit the copy until it's right, then see the paper out the door. The staff will be lean but enough to do the job, including a fast, exciting design. There will be plenty of correspondents but they will need training in the paper's style. The key is knowing the financial service industry from the inside. If you do, you'll be able to meet this unusual journalistic challenge. The readers are there. Hard work and dedication will yield generous rewards. Write with resume:

Bailout Seen Penalizing 2 Regions

By ANNE HAZARD
States News Service

WASHINGTON — Taxpayers in the Northeast and Midwest will have to pay far more than their share of the cost of bailing out insolvent savings and loans, a report issued by a congressional coalition said.

In one such bill, introduced last week, Rep. Howard Wolpe, D-Mich., calls for states with the most savings and loan failures to pay an extra insurance premium for their state-chartered thrifts. Most of the failures have been in Texas, California, and Florida. Mr. Wolpe said it was unfair to make taxpayers in states with few failures pay for bailouts elsewhere.

Using figures for state-chartered savings and loans, Mr. Laughlin said 18 states in the Midwest and Northeast are responsible for only 4.6% of bailout costs but must pay 47.5% of the costs associated with insolvent state-chartered thrifts.

The regions "are being asked to pay a very high portion of the bailout, and this bailout is going to reduce the government's ability to make other kinds of investments we need," including road and bridge repairs, worker training, and environmental cleanups, Mr. Laughlin said.

Data Offered

December 1989 data compiled by a Cleveland State University professor showed that Indiana, for example, had 10 savings and loans insolvent or on the verge of collapse holding tangible capital equaling 3% or less of total assets. Texas had 142 such thrifts, Illinois 84, California 68, and Louisiana 47. □

RJR Nabisco's Bank Group Eager to Unload Much of the New Loan

By STEVEN LIPIN

RJR Nabisco Inc.'s bank group reoffered at least $1.4 billion of the new $2.25 billion credit to the secondary market last week, indicating that the big banks would like to lay off much of the new loan.

While it does not indicate skittishness about RJR as a credit risk, the $1.4 billion reflects banks' eagerness to receive the bulk of the high fees in the deal--without holding much of the loans, banker say.

"That's the wish list," said one banker in the deal.

Cautious About Exposure

For some observers, the desire of the 28 originating banks to syndicate the bulk of the loan signals continued resistance on the part of banks to increase their overall exposure to highly leveraged transactions. Agents on the new financing are the banking units of Bankers Trust New York Corp., Manufacturers Hanover Corp., Chase Manhattan Corp., Citicorp, Security Pacific Corp.; and Fuji Bank and Long-Term Credit Bank of Japan.

Because of regulatory pressure in the United States, and Japanese reluctance to increase their overall exposure to highly leveraged transactions, many banks are trying to avoid increasing their HLT portfolios.

"We all have their existing debt," explained one of RJR's Japanese lenders. "I don't think many banks want to keep the additional amount."

While RJR is one of the preeminent HLTs, the secondary market is awash with over $5 billion in existing loans -- the most liquid, most widely held bank loan in the market. Underwriters feel the need to spread the risk across the industry, but as many as 150 banks already hold stakes in the company's bank debt.

Officials in the group said the figure was higher than expected, and pressure..on the secondary market pulled the quotes of RJR's existing loans down a point -- in other words, the upfront fees jumped as much as 100 basis points, loan-sales officials say. Initially, bankers were expecting a much lower figure of about $500 million for the pool.

"The tone of the market got bearish" when the $1.4 billion figure was circulated, one loan sale head said. "It's a lot of money to be thrown back in the pot."

With $7 billion in commitments, the originating banks expect the two-month selldown to be well received and are not overly concerned.

Hefty Fees

But because of the credit's initial underwriting risk, cosgents are taking as much as 250 basis points to 300 basis points before selling the loans to RJR's existing 150 lenders. That, some say, could temper banks' enthusiasm for the loan.

Explained one banker in the pool, "There's not an army out there waiting. There's already an army holding the paper."

Remaining fees for secondary banks will be 100 basis points to 150 basis points, which some bankers said was generous for the secondary market.

RJR raised $2.25 billion from banks as part of its effort to refinance its high-yield reset bonds. Proceeds from the loan are going toward redemption of its $1 billion in increasing-rate notes and the retirement of its refinancing bridge loan.

A pooled selldown allows a number of banks to divide loans to the secondary market. After the two-month selldown, banks retain their pro rata share of the credit, and individual banks can then sell additional loans to individual banks. □

Macy's Bank Group Agrees to Amend Terms of Loans

By WILLIAM GOODWIN

R.H. Macy & Co. and its bank group amended terms of the company's bank loans, giving the retailer added financial flexibility as it approaches its peak borrowing period for the fall and Christmas inventory buildup.

The 40-member bank group is led by Manufacturers Hanover Corp. and Bankers Trust New York Corp. The amendment was first reported by *Women's Wear Daily*.

Hopes for a Better Christmas

Macy's is still feeling the effects of last year's disastrous Christmas season, which was marked by huge discounting.

"I don't anticipate another Christmas season like they had" last year, said Thomas Razukas, a high-yield bond analyst at Fitch Investors Service.

Last year's Christmas season was hurt by an overall weakness in retailing, which was made worse by the financial woes of Campeau Corp.'s Allied and Federated units.

While Mr. Razukas said he thinks Macy's is in relatively good shape, he still expects the retail environment to remain difficult.

Under the amendments to Macy's bank-loan agreement, the banks lowered interest coverage ratios for Macy's fourth fiscal quarter ending July 31, and the first quarter ending October 31.

For-both quarters, the ratios were reduced to 1.2 from 1.5.

In addition, the banks agreed to lower the minimum level of earnings before taxes, interest, depreciation, and amortization for the fiscal year ending July 31.

$438 Million in Long-Term Debt

To give the company added financial flexibility, the banks agreed to let Macy's use up to $50 million from asset sales until the end of the year. The original agreement required all proceeds from asset sales to be used for debt reduction.

As of the end of its current fiscal year on July 31, Macy's long-term bank debt will stand at $438 million, a company spokesman said. Macy's also has a revolving credit line from its bank group that ranges from $350 million to $475 million, depending on the season.

Macy Credit Corp., a subsidiary, has a revolving credit line of $625 million. □

Freddie Mac Moves to Let Servicers Use Mortgage Rights as Collateral

By PHIL ROOSEVELT

NEW YORK — In a move that could help the depressed secondary market for mortgage-servicing rights, the Federal Home Loan Mortgage Corp., or Freddie Mac, has taken steps to let servicers use the rights as collateral for borrowings.

Market professionals say that a number of servicers want to borrow against their portfolios to buy more rights. But Freddie Mac and the rival Federal National Mortgage Association, or Fannie Mae, have not allowed servicers to grant security interests in servicing rights related to loans purchased by the agencies.

In a memo to lenders this week, Freddie Mac said it has revised its rules to allow for servicers to grant security interests, as long as the servicer and lender sign a standard agreement crafted by Freddie Mac.

A spokeswoman for Fannie Mae said that agency plans to allow servicing rights to be used as collateral.

Duties of Servicers

Servicing rights allow the holders to earn fees for funneling monthly payments from mortgage borrowers to investors, tending to property tax and insurance payments for borrowers, and initiating foreclosure proceedings.

The rights, which historically have sold for 2% of the related loan, often trade for 1.5% nowadays, reflecting pending regulations and expectations of heavy selling by thrift liquidators and capital-short thrifts.

Services seeking to take advantage of the low prices might be better able to finance purchases under the revised Freddie Mac rule. The increased buying, in turn, could help support prices.

"We really applaud Freddie Mac," said Warren Lasko, executive vice president of the Mortgage Bankers Association of America. The trade group had been pushing hard in recent months for the agencies to accommodate the use of servicing rights as collateral.

"It's a step in the right direction," said Lawrence Pendleton of American Security Bank, a Washington bank that lends to mortgage bankers.

Debra Rose-Johnson, director in risk management at Freddie Mac, said the security interests granted to lenders will be subordinate to Freddie Mac's interest. Mortgage bankers pushing for the change did not expect anything more than a subordinate interest to be permitted. □

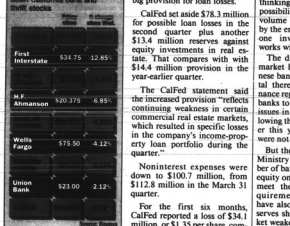
STOCKS

Loss by CalFed Heightens Fears On Real Estate

Continued from *page 1*

Los Angeles-based CalFed said it added $78 million to its loan loss reserve to cover problem commercial real estate loans, leading to a $53 million loss for the second quarter. Despite the loss, CalFed closed up 37.75 cents, at $14.875.

On the puzzling rise of CalFed's stock, analysts said the market was being kinder to the stock because of the belief that management is taking a proactive approach to a number of problems they did not create. CalFed has had three chief executives in three years.



Golden West Financial Corp. fell $1.125 to $29.875 Friday.

On Thursday, the stock of HomeFed Corp., San Diego, plunged $4.75, to $14.25, on news that it set aside $234 million for problem loans, producing a loss of $108 million.

Concern Over Property Loans

First Interstate also disclosed it was concerned about its California property loans, but added that it did not foresee a big jump in problem real estate loans in the immediate future.

"We should not be concerned about California financial institutions based on California real estate," Jerry L. Jordan, chief economist at First Interstate, said Friday.

"California does not compare to Texas or Arizona. We do not have the same overbuilding."

Slowing Is Reported

Mr. Jordan said California's economy was still good, although it is "slowing sharply from an unsustainable pace." Mr. Jordan said housing was not a problem, but offices were overbuilt.

Analysts said most of the problems the California financial institutions are experiencing are out of state. At CalFed, for example, only about 35% of the $606 million in problem assets are in California.

Analysts also stressed that nonperforming assets were down at most of the big California commercial banks in the second quarter. And even at CalFed, non-performers went up only slightly, from $602 million at March 31 and were down from $616 million at year-end.

Weak Spots Noted

"Overall, some spots are weak in the California real estate markets, said Jerry St. Dennis, chairman and chief executive of CalFed. But, he said, the problem areas are pretty predictable.

CalFed reported a second-quarter loss of $53 million or $2.10 per shre, compared to a profit the year earlier of $19.1 million or 73 cents a share. Although analysts earlier had expected profits from the company, they had warned investors that the company might take a big provision for loan losses.

CalFed set aside $78.3 million for possible loan losses in the second quarter plus another $13.4 million reserves against equity investments in real estate. That compares with with $14.4 million provision in the year-earlier quarter.

The CalFed statement said the increased provision "reflects continuing weakness in certain commercial real estate markets, which resulted in specific losses in the company's income-property loan portfolio during the quarter."

Noninterest expenses were down to $100.7 million, from $112.8 million in the March 31 quarter.

For the first six months, CalFed reported a loss of $34.1 million, or $1.35 per share, compared with earnings of $36.6 million or $1.40 a share for the first half of 1989. □

CAPITAL

Japanese Banks May Sell Preferred in U.S.

By KELLEY HOLLAND

As Japanese banks search for ways to raise their capital ratios, they may soon be tapping the preferred stock market in the United States for the first time, according to experts.

The Japanese are eager to raise new Tier I capital to meet the 1992 risk-based capital requirements. But weakness in the Tokyo stock market earlier this year makes the U.S. market for preferred stock more attractive.

"This is something they never thought about until three or four months ago because they thought they could continue to issue common stock," said Masaru Kakutani, an associate director at Moody's Investors Service.

$1 Billion Volume Seen

"Almost all the banks are thinking about this as a distinct possibility," he said. New-issue volume could reach $1 billion by the end of 1991, according to one investment banker who works with foreign banks.

The drop in the Tokyo stock market has kept a lid on Japanese banks' ability to raise capital there. The Ministry of Finance reportedly asked Japanese banks to hold off on new equity issues in the Nikkei market following the correction there earlier this year. Ministry officials were not available for comment.

But the reported move by the Ministry of Finance left a number of banks with barely enough equity on their balance sheets to meet the 1992 risk-based requirements. Japanese banks have also seen their hidden reserves shrink as the stock market weakened.

Loan Issues Authorized

Recently, the ministry authorized subordinated loan issues by Japanese banks, a rule change that enables banks to raise Tier 2 capital. And a unit of Sumitomo Bank Ltd. recently issued $500 million in fixed rate subordinated bonds in the United States after approval from regulators.

But Tier 1 capital must comprise at least half a bank's risk-based capital, so Japanese banks are still eying ways to boost their Tier 1 capital ratios. With their domestic market for common closed to them, the American preferred market is looking more and more like the best alternative. There is no preferred market in Japan.

"They certainly have a need for it in terms of raising capital," said John McVeigh, preferred-stock product manager at First Boston Corp.

Specialty of Banks

Foreign banks have been the source of more than half the new-issue volume in the American preferred stock market since the beginning of 1989 because of a favorable tax treaty.

New-issue volume is now below the levels prevailing in 1989, before investors grew so worried about the creditworthiness of the banking industry. But the high credit ratings on Japanese banks should ease their entry.

To be sure, preferred stock will not come cheap for Japanese banks. Under current corporate structures, Japanese bank issues would not be eligible for the dividends-received deduction, unlike their U.S. counterparts. The deduction allows investors a 70% deduction on dividends they receive on preferred stock.

Deduction Is Limited

The dividends-received deduction is only available to United States companies buying preferred stock of U.S. issuers, according to Ronald Gallatin, a managing director at Lehman Brothers Inc.

The preferred-stock market is becoming more and more skittish about bank issues. For example, Manufacturers Hanover Corp.'s recent issue of preferred stock, priced at $25 a share with a dividend of 10.96%, was offered recently at a yield of 11.4% and a price of about $23.75.

Foreign banks have taken the lead in issuing fixed-rate preferred stocks in the U.S.
dollars in millions

MARKET MONITOR

Banc One Corp. has filed a shelf registration for up to $300 million of senior or subordinated debt. Separately, the Columbus, Ohio-based bank announced it has completed its offering of 11.5 million shares of common stock at $29 a share.

Moody's reduced its ratings on the banking unit of HomeFed Corp., citing weaker asset quality and high levels of nonperforming loans. HomeFed Bank's subordinated debt rating was reduced to B1 from Ba2, its rating for long-term deposits to Ba2 from Baa3, and its rating for short-term deposits and commercial paper to Not Prime from Prime-3. □

Changing an Organization's Culture Requires More than Vision

By Anthony P. Terracciano

Alfred North Whitehead described a concept called the "climate of opinion." If you listen to two people having an argument, he said, and you want to really know what those people think, listen not to their points of disagreement but to those ideas and concepts that neither of them discusses – their unspoken, shared assumptions.

Those nondebated assumptions make up what those people really think. That's the "climate of opinion" that underlies debate, and you can't have a debate until you share a tremendous amount. It's impossible for people who disagree about everything to have an argument.

When people talk about culture, they generally mean this shared "climate of opinion."

You can't describe culture except by reference to an operating environment. And you can't evaluate whether it's unhelpful or unhelpful, good or bad, unless you tie it to a task, to a strategy.

Transmitting Shared Values

In a stable operating environment, a culture tends to transmit shared values. It plays a socialization role, takes new people coming in and teaches them the unspoken value system of the organization.

Many of the things that people learn are in the air; they're behavioral, not conceptual values. They watch and listen, but they watch more than they listen. By watching, they usually get to learn the value system.

In stable environments, these values are easy to describe and easy to manage, because they are process-dominated.

Process is very helpful and effective in a stable operating environment where the culture is not changing, where the environment doesn't force change. The process is part of the vocabulary that communicates the culture.

It's particularly helpful if there's some consistency between what the process is telling people and what the chairman is telling people. Often, the two are inconsistent: Senior officers give speeches and say things, and the process tells them something very different.

Executives say: "Take risks. Don't be afraid to speak up." The process tells them exactly the opposite: "Your freedom to act is constrained – you do it this way. That's the way it's done here."

Still, it is relatively easy to describe, work within, and manage a culture that has tested, shared values that have been successful in an environment that isn't changing. Unfortunately, none of us have that option of working in a stable environment, and it's unlikely that we will.

In a period of dramatic change, what is the role of culture? The only possible task to be assigned to culture in a period of change is to help facilitate the change. It's almost like asking someone to bend his elbow in the wrong direction.

Culture is the glue. Culture is, almost by definition, reactionary. It helps resist change, and suddenly you're asking it to facilitate change.

The Role of Confusion

Unlike the stable operating environment, culture in a period of change – if it's the right culture – is disruptive. It creates and sustains confusion.

It makes people uncomfortable, because culture is fluid. That's terrible for a people to deal with. The value system is saying: "What's important is change – not structure, not stability, not process."

Culture helps determine which companies do well and which do not.In a period of change, a company that is process-dominated, in an industry that is going through tremendous change, is dead.

A culture for a stable environment doesn't facilitate the accomplishment of the strategic objective; it frustrates it. We really love those processes. We develop a vested interest in them, and they don't help very much.

In a period of change, I can't separate culture, strategy, and leadership. A leader or manager in a period of significant change has to twist the culture to accomplish the strategy.

Leadership: Dominant Variable

Leadership and culture, for some period of time, are almost the same. To define the culture of an organization that is undergoing change, the dominant variable is leadership. That's dangerous because it is dependent on a small group of people.

Managers in a period of rapid change must understand and manage change. Have you noticed how often people talk about *managing* change? And how little people talk about *understanding* change? If you look at Western thought from the time of the Greeks until today, it wasn't until the 18th century that people stopped talking about understanding things and started talking about managing things – only a couple of hundred years.

The emphasis was on understanding change for all those years. Now people hardly ever talk about it. Ironically, the Greeks didn't accomplish a hell of a lot by understanding it.

It didn't bother them. They thought the intellectual exercise of understanding was satisfying in itself.

The job of the manager is both to manage and understand change. If you try to manage it without understanding it, you'll get killed. If you try to manage it even when you do understand it, the odds are 8-to-2 against you. But if you understand it and you don't do anything with that understanding, nothing is going to happen.

Belief in the Possible

What does it take to have change? Do you think any group, any country, any corporation, is as likely to have change as the next? To have change, people have to believe it's possible. You didn't have the Russian Revolution until you first had a czar who eased up a bit. When conditions eased up, people saw that change was possible.

Two groups that have an underdeveloped sense of change and of the future are the very rich and the very poor. The probability of a change is minimal for both groups.

With a strong, big middle class, you tend to have a lot of change because there's a lot of both upside and downside potential. The middle class lives with that every day.

In some of the Indian languages of this country, there is no word for the future. In their culture, if you asked someone to forecast the future, it would be taken as a personal insult. You would be implying that they were crazy.

Don't assume that all cultures have the same developed sense of the possibility of change. Without that sense of the possible, there can be no change.

A startup operation will tend to have a highly developed sense of change, or is likely to be able to go through change quickly. It has no history, no memory.

The Temporary Thaw

And a company in trouble is capable of digesting a large amount of change very quickly. It is horrible to have problems, but one good thing about problems is that them temporarily thaw out the culture; you can get a lot of things done very quickly. If you don't do them quickly, that culture will freeze up again, maybe at a lower performance level.

If you don't move quickly through that window of opportunity, you lose the chance to make a lot of change very quickly. That's why you're better off doing things fast – which means that you have to know what you have to do.

Revolution is not easy on the individual. You'll find the greatest rigidity in that part of the organi-

TO THE READER

In an age of consolidation, effective management of human resources is vital for companies hoping to survive the banking industry shakeout. The surviving entities will surely be those that demonstrate the best grasp of the key issues of compensation and reward systems, improving productivity, and reducing costs.

The articles in this special supplement on human resource management for the 1990s represent the best information on this continuously evolving field that was available to the authors at the time the articles were written. Readers are urged to contact the authors or their own advisers to seek timely updates.

To order additional copies of this supplement, or reprints of individual articles, call Martha Hernandez at 800-367-9989 outside New York or 212-943-4845 in New York State. Fax orders will be accepted at 212-480-0165.

More than Vision

Continued from preceding page

zation which has historically been most successful.

Inventorying Strengths

Each of Shakespeare's tragedies had a hero with a tragic flaw. The flaw differed in each tragedy, but in each play the flaw was a strength that started working against the tragic hero.

For Hamlet, it was his intellect; Othello, his passion. It was always a strength that got out of control and eventually started to work against the individual.

To compete with you, I'm not going to spend a lot of time identifying your weaknesses, because that makes the arrogant assumption that I'm much smarter than you are. I need to concentrate on your strengths.

To understand change and how to deal with it, study the history of revolutions. Find out what caused them, their similarities and differences, the type of leadership that surfaced in each case, and whether it worked or didn't work.

'No Problem,' the Russians Said

I had a visit in Pittsburgh about a year and a half ago from 15 Russians, all senior bureaucrats. At lunch, I asked: "How are you going to do all this? You must have great courage to take on this agenda. This is going to be very hard."

"No problem," they replied.

"What do you mean, no problem?" I asked. "I've done the same kind of thing in a tiny way, and I've found it hard as hell."

The Russians replied: "You can't take your experiences and assume that ours will be similar. We have something going for us that you don't have – we have a whole population that has been trained to do exactly what they're told," they said.

"My God," I responded, "are you going to have problems. As soon as people in the Soviet Union get the idea that change is possible, you'll become like a playwright – in total control until the curtain goes up, then no control at all."

They didn't even understand their own revolution. Otherwise, they never would have had that perspective on what they were about to take on. They were ready to manage the hell out of it, but they hadn't studied it.

Articulate the Vision

You must be able to articulate the vision, presupposing that you have one. If you don't have a vision, why are you causing all this trouble?

You must have a vision, not a process. You have to break away from the stable-culture environment. You can't hide behind process. Having a vision is not sufficient. You must be able to convince people that it's real.

They don't have to be 100% convinced. It's helpful if the people in the organization think you're just a little bit crazy. Not a lot.

If they think you're totally crazy, they'll ignore you. But if they think you're a little crazy, that's good. In the early stages, creating change requires an act of faith from the people in the organization. It's not bad if they say: "He's just crazy enough, maybe he can do it."

Now's the Time

To define the pace you will use in managing change, there are two dominant variables. First, how much time do you have? You can't control that.

I hear people talking about change in terms of three-year or four-year projects. You don't have three to four years. The consolidation predicted in the banking industry by the year 2000 is coming much sooner.

The second dominant variable, which you also do not control, is the capacity of the organization to digest a certain rate of change. There are no techniques available to tell you precisely how much. It's always more than people think, and you don't know the real limits until you hear the creaking, the

To understand change and how to deal with it, study the history of revolutions. Find out what caused them, their similarities and differences, the type of leadership that surfaced in each case, and whether it worked or didn't work.

straining, the cursing, the yelling.

Listen for those things. Watch how your people's work hours and questions change. If you go too slow, it's going to be too late. You'll do a great job but it won't mean a damn thing.

If you go too fast, you lose control and have chaos. If you understand the amount of time you have, you'll be right on the edge of losing control.

If you understand the pace and you have the vision, you must phase it in, so that each phase lays the foundation for the next phase. People won't understand your vision in one second.

Conceptual Thinking

The reason it's so difficult to read books written by very smart people is that they're thinking in terms of concepts. What takes me four steps to understand, they understand in one.

The same is true about visions. People don't understand visions. They hear the words, but they don't understand the content.

You must create a vocabulary to make all this happen. That's the first element of change that begins to take hold.

Romancing the Change

The adoption of a new vocabulary is one of the risks, what I call "romancing the change."

The subordinate puts himself on the back and says: "I made the change. I was afraid for a while, but it only took three and a half hours. I've done it!" They think they've changed because they've learned the new words.

Years ago, commercial bankers didn't want to do anything except make loans. All of a sudden they were talking about swaps. They thought they were terrific, talking about risk-adjusted return on equity.

Their behavior hadn't changed a bit, but they had a new vocabulary. That's not bad. Let them feel good. But don't confuse words with behavioral change.

Translation Skills

Translation is an important concept. Organizations do a great deal of damage when they order their managers to communicate more. That's not what they get paid to do – which is good, because damn few of them communicate anyway.

It doesn't require tremendous skill to pass a comment along to someone down the line. It also doesn't do a damn bit of good.

Someone must translate that message from the upper echelons to the environment of the people listening. Translation is a soft skill. Few people are good at it. When people try to communicate, they get exactly the opposite result.

When Moses went to the mountaintop, he said to the Lord: "Who are you?" And the Lord said: "I am who am."

Moses must have said to himself: "Thanks for clearing that up." Considering the source, though, it was a perfect answer.

Answering the Wrong Questions

I introduced new strategies at both Chase and at Mellon. The young people in these organizations were terrific – really intelligent, well motivated. They wanted to do their best. They kept raising their hands, saying: "I don't understand your new strategy."

I said: "Gee, I'm not that bad. Let me give you my strategy. The new wholesale strategy is to create revenues without creating assets. Now, what word don't you understand?"

I was stupid. I wasn't translating their questions. They weren't asking me to explain the wholesale strategy. They really wanted to know what was wrong with the old strategy. Why did it have to be changed?

- "If the old one has to be changed, how do we know the one you're putting in is the best alternative?
- "Even if it is, what's your basis for assuming that this organization can pull it off?
- "Even if the organization can pull it off, don't you recognize that I'm threatened because I don't know whether I'll be successful in that new environment?"

If you don't understand which question the person is asking, how do you answer it? Are you communicating? You're throwing words back and forth. If the same question keeps coming back again and again, obviously you haven't answered the right question.

Translation is a hard skill to develop. Sometimes, people with vision do the worst job of articulating it; they understand it so clearly that it's almost impossible for them to explain it.

A Lesson from Plato

In Plato's "Republic," there's a section called the allegory of the king: Prisoners are chained, facing a wall, so that they can't turn around. Behind them is a ditch, and in back of the ditch there's a fire.

People down in the ditch are carrying cardboard cutouts of animals, people, trees in front of the fire. These cutouts cast shadows on the wall that the prisoners are looking at. To them, the shadows – two steps removed – are reality. Problems arise only if you the prisoners find out that there are two other steps.

One of them breaks his chain, crawls out of the cave, goes outside. He can't see anything. He needs time to adjust. After a while, he's able to see the real trees and animals.

He gets so excited that he runs back down in the cave to tell the other people. But back in the dim cave, he can't see – he stumbles.

"You're not going to believe this," he tells the other prisoners. "I have just seen reality. What you're looking at is not reality."

As he's raving about reality, he's stumbling around because he can't see. In their world, he looks like an idiot.

Articulating the Message

That's how a leader has to appear from time to time. The person with the vision of change isn't always capable of articulating it.

ANTHONY P. TERRACCIANO
Chairman, President, and Chief Executive Officer
First Fidelity Bancorp.

Mr. Terracciano is chairman, president, and chief executive officer of First Fidelity Bancorp.

Before joining First Fidelity on Feb. 1, 1990, he was president and chief operating officer of Mellon Bank Corp., Pittsburgh.

Mr. Terracciano was associated with the Chase Manhattan Bank for 23 years before joining Mellon in 1987. At Chase, he served in a number of senior management positions including vice chairman for wholesale banking, executive vice president and chief financial officer, and treasurer with responsibility for services and activities in worldwide money markets.

Born Oct. 27, 1938, in Bayonne, N.J., Mr. Terracciano received a bachelor's degree in economics from St. Peter's College and a master's degree in philosophy from Fordham University.

He serves on the board of directors of Legent Corp., is on the board of directors of Philharmonic-Symphony Society of New York, is a member of the Council on Foreign Relations, and a member of the National Committee on Education and Literacy for the United Way of America.

More than Vision

Continued from preceding page

Translation skills have to be applied hierarchically. The message must be taken from the top, articulated, restructured, and sent down to the ranks in a form they will understand.

In the banking business, subcultures hate each other. The guys in the production base hate relationship managers, the bulls hate traders, and they all hate staff people.

Why? Because of the relevancy test: They all live in different time frames, use different vocabularies, have different priorities.

Do you really think a trader and a relationship manager would talk to each other? The trader doesn't go to meetings – he stares at a tube. When are you going to arrange for him to talk to a relationship manager?

Who will translate between them, especially during a period of change when the priorities of their culture are shifting? Who has the ability to present to each of those groups the perspective of the other?

We compound the difficulty of the translation job when we say to people: "You're not only responsible for the day-to-day tactical management of your business – you're also responsible for the strategy of your business.

People don't understand visions. They hear the words, but they don't understand the content.

"So, while you're doing all this complex translation, I also want you to live in two different time frames. And, by the way, I want you to talk to people who are living in all different time frames."

Living in Different Times

In a stable environment with a strong, tested culture, everybody is in the same time. That makes it easy for people to get along.

Everybody is living in today because there's not much change going on. Today looks a lot like yesterday, and tomorrow promises to be just as nice.

Now, put that same organization in a traumatic change environment. You need communicators. A small group of people will already be rushing to that vision like there's no tomorrow. They're already living in tomorrow.

But the bulk of the organization is still firmly rooted in today, with a number of people who wish we could go back and do things like we did it in 1965.

Changing, for an organization, is not like walking through a door. The whole organization doesn't go through at the same time. Somebody has to translate. Otherwise, you risk losing control. Then, the change will take even longer.

The management and the execution require and a different set of skills, to solve the problems. When you go through change, people meet problems they've never met before, and they get into a loop.

I'll take a manager who has no other skills except the ability to listen to people talk about a problem. He can restructure that problem to make it solvable.

That makes people angry, because they don't necessarily want to see their problems solved. People complain about the management information system. It's the greatest crutch ever invented. Two variables affect the quality of management information: the quality of the questions you're asking and your commitment to get the answers.

A manager has to help people see the roadblocks in a different way so that they lend themselves to solutions, especially in a period of rapid change.

Lots of people can measure progress, but how many managers can define it? You go to a meeting, you talk to people, they ask you questions, and they give you some complaints.

You go to a meeting with the same group one month later, you say something, they ask you questions, and they give you some complaints. You do that for six months in a row, and some managers finally give up. "All these people want to do is complain," they say.

What do you have to listen for to tell if you're making progress? For a change in the sophistication of the complaints. Don't expect an absence of complaints, because that only happens when you're dead – no data, no feedback at all.

Define you progress in terms of the increased sophistication of the complaints. I want people complaining constantly; I just don't want to hear the same complaints after six months of hard work. I want to hear better, more sophisticated complaints.

Every time you make a change, you change your mix of vulnerabilities and invulnerabilities. Before you made the change, you had some real risks to worry about. And you had another group of risks that you really didn't have to spend much time worrying about because your structure protected you against them.

Now you change, and things that weren't risks before you made the change are real issues. If you see change in too linear a way, you don't think about the associated risks.

The Example of Oedipus

In "Oedipus Rex," two people act logically, taking steps to change a situation, and both of them accomplish exactly the re-

Excelling in the '90s: A CEO's Perspective on Corporate Culture

By Richard P. Cooley

Everybody talks about culture, culture, culture. When I moved to Seafirst in Seattle from Wells Fargo in San Francisco, people said the culture at Seafirst would be different.

And, of course, the culture is different. But, at the time, I didn't quite understand what "culture" is.

Finally, I realized that a corporate culture is "how we work." Some people work in one way; other people work in other ways. And the way we work changes over the years.

What the Customer Sees

Much has changed in the way banks work today compared with 25 years ago, or even five years ago. Some people think that what's most significant is not what changes the banker sees but the changes the customer sees.

The customer's perception should be positive. Banks should be perceived as changing to make things better for the customer.

At our bank, and perhaps yours as well, Personal bankers in the branches are helping consumers from 9 a.m. to 6 p.m. on weekdays, and on Saturdays from 9 a.m. to 1 p.m. We even offer "Saturday special" sales.

We have a new telephone service that gets 18,000 calls a day, operating 24 hours a day, including weekends. We find that our commercial loan officers are beginning to spend more time out calling on the customers than working in the office. A lot of changes.

Change Energizes

As I look back over the years, this is quite remarkable. These are big changes. The feedback we hear from customers is that they like the changes. And they expect us to do at least this well, if not better, in changing in the years ahead.

This has meant a lot of changes for our employees. In the employee surveys we have done, these changes are received positively by employees, for the most part. People working for the bank feel energized; they feel excited. They like the positive response of customers. In an employee survey we conducted 18 months ago, 95% of the people in the bank said their job had a direct effect on customer service. That's fantastic.

At Seafirst, we've tried to establish a "sales culture," complete with sales goals and targets. This is accepted in our bank today, but we've learned that we need to watch carefully how the idea is applied. Selling is one thing, but managing sales is another. We must make sure people don't feel threatened if they don't make their sales goals. If employees do feel threatened, the whole value of a sales culture is destroyed. There's a fine line there; sales management is an art.

As a CEO, part of my job is not only to keep an eye on the way such ideas about culture are applied, but also to help shape the future. Let's consider three perspectives on the elements of our culture we at Seafirst feel are essential for excelling in the 1990s.

Trend Toward Service

The first perspective is to look at business trends from this country's past. As we look at business and industry in the second half of this century, a series of 10-year trends is evident. In the post-war period, in the 1950s, the big emphasis was on manufacturing. Autos and housing boomed as never before. People wanted new cars and new homes. This was a time when people were building a new life and a new economy.

In the '60s, as businesses grew, the spotlight turned more to professional management, as everyone talked about management by objectives. More and more business people went to Harvard Business School or to the special executive programs at Stanford, Berkeley, Columbia, and Wharton.

In the '70s the emphasis was on finance, particularly after the post-Vietnam War recession from 1973 to 1975. During the double-digit inflation of the late 1970s, more and more businesses recognized the necessity for the disciplines of finance. For example, the CEOs of many companies came out of the finance or controller's department.

When Paul Volcker finally got the reigns on inflation, companies realized that to make the numbers go up, they had to get out and sell. That made the '80s a decade of marketing.

For the '90s, it appears the focus more and more will be on service. A cover story in the June 4 issue of *Fortune* magazine said what the customer really wants is three things: service, service, service.

RICHARD P. COOLEY
Chairman and Chief Executive Officer
Seafirst Corp.

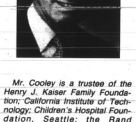
Mr. Cooley is chairman, chief executive officer, and president of Seafirst Corp., the parent company of Seattle-First National Bank.

He joined Seafirst in 1983; after a long career at Wells Fargo Bank, beginning in 1949. He was named a vice president at Wells Fargo in 1957, senior vice president in 1964, and executive vice president in 1965. He became president, chief executive officer, and a director of the bank in 1968.

In 1978, Mr. Cooley became chairman and chief executive officer of Wells Fargo & Co. The following year, he also became a director of the holding company.

Mr. Cooley is on the board of directors of BankAmerica Corp. and Bank of America, UAL Corp., and Burlington Northern Inc.

He is a member of the Washington Roundtable, the University of Washington School of Business Administration advisory board, the International Financial Conference, and the Seattle Symphony board.



Mr. Cooley is a trustee of the Henry J. Kaiser Family Foundation; California Institute of Technology; Children's Hospital Foundation, Seattle; the Rand Corporation, and the Seattle Art Museum.

Born in Dallas in 1923, Mr. Cooley is a 1944 graduate of Yale University with a BS degree.

Over the past three or four years at our bank, we've gone back and forth, debating over conflicts between our new sales culture and the traditional service culture. Then we realized that, from the customer's point of view, service includes selling in the customer's best interest. We began to see that excellence in customer service today does far beyond anything we did five, 10, 15, or more years ago.

We see that our competitors, your competitors can provide almost as good a value on many products that we all offer. We can differentiate perhaps on price, but especially on service. Service and attitude. We see service as the way to establish a competitive edge in the 1990s. Because of that, a focus on customer service will drive our culture in the years ahead.

The International Scene

The second perspective is from the international point of view. It's fine to look at our own country, we are hearing more and more about the global environment and global competitiveness. Seafirst is taking a strategic look at the Europeans, the Japanese, and other key players on the international scene. The picture and the possible impact on a corporate culture are impressive.

I won't go into a lot of detail, but there were some things I heard at the International Financial Conference in Frankfurt, and from customers in Europe and Japan, that were significant.

In four days of meetings in Frankfurt we heard from the head of the Deutsche Bank, the head of the Bundesbank, and the German finance minister. In all of those speeches and meetings there were only two mentions of the Pacific Basin.

In the meantime, in Seattle we say that the Pacific Basin is the future (we have the closest port to Asia), and that the Pacific Basin is where all the growth is going to be.

But Europe is so excited about what's going to happen in 1992, plus the communist breakdown and the loosening up in Eastern Europe, that they say the future will be in Europe, maybe even more than in the Pacific Basin.

This appears to be a special moment in history. The economy of the Soviet Union is in state of crisis. We all know that. The Germans made a big loan to the Soviets; whether that's going to solve the problem, I don't know.

At the same time, knowledgeable people told us, the German economy this year will be a negative 2% to 4%. The other side of that view was that the people in West Germany said that after an initial problem with unemployment in East Germany, maybe for as long as 24 months, the East German economy is going to grow 8% to 10% a year.

What the economic problems and pressures for a market economy will be in the Soviet Union – if the Soviets can save the government, if they can keep control – are very hard to imagine.

American banks have looked at the coming of 1992, the consolidation of the European Community, for several years, sometimes with some apprehension. Many people in Europe advocate giving a lot of help to the Soviet Union, as the Germans did, to get its new economic and political structures going. To leave out the Soviet Union, they say, would be foolish. As everybody tries to balance all these factors, how things will develop in Europe is unclear.

Some say the expansion of German banks into East Germany and the financial power of Frankfurt will be even more significant than 1992. The first two or three paragraphs of the conference talks by the German finance minister, the head of the Bundesbank, and the head of the Deutsche Bank demonstrated a big push to make Frankfurt the financial center of Europe, not London. So you can see how

More than Vision

Continued from preceding page

verse of what they set out to accomplish. The same type of thing happens when you take an organization through a process of change. There are some variables you can control and some variables you can't, and you've got to know how that mix of variables will change.

When you add it all up, you could convince yourself quite easily that the task is impossible, that you're better off not initiating change. But if you don't, you don't survive. If it's an issue of survival, you'll do it.

You'll generate anger. All that hostility in the culture will come after you. Tell them: "Stay angry for three years, because we're not letting expenses go up for three years; we'll never again put this organization in a position where it has to do that."

To pull this off, you need a culture that is identified exactly with the task with which the bank or starts it and has the responsibility for completing it. The culture, the manager, and the environment become one. That's the only kind of culture that can get you through. And if you don't get through, you won't survive.

You need to get out that cultural message. You send it out by acting. I wouldn't give very high odds of succeeding. It is very difficult to rend that infrastructure, that culture.

Excelling

Continued from preceding page

they're thinking.

At the conference there was a consensus that gradualism in Central and Eastern Europe won't work, that speedy change is a necessity.

Just so I wouldn't get too sold on Europe, I went to Japan to get the Japanese point of view. Customers there still have money to invest in our country. Even so, they have a variety of concerns about the yen, the stock market there, and the real estate market in this country.

Many large companies in Japan have been burned by their real estate investments here. We need to make sure that investment vehicles are adequate for them; it's not smart to turn off the Japanese interest in investing in our country. We need to treat Japanese investors as good customers.

Already, the large Japanese banks – the Citibanks of Tokyo, which I haven't called on in a couple of years – have different names. They're merging with smaller retail banks. As in the United States, bankers world over want access to the retail market.

Several ideas arise from an international view that relate to our other perspectives on corporate culture, such as the periodic necessity for speedy changes. For example, West Germans are merging quickly with the East German banks, seizing the opportunity at hand.

My point is that several themes from the international perspective strike a chord with what we see from other perspectives as essential to our corporate culture for the 1990s: taking care of the customer, focusing on retail banking, and making changes quickly when the time is right.

Leaders in Retailing

With national and international trends in mind, let's turn to a third perspective on corporate culture in the next five years. We know we are in the service business. At Seafirst we know we are a regional bank. In the past two or three years we have taken a careful look at what other service businesses – in many cases regional businesses – are doing to deliver excellent service. We wanted to examine their strengths and weaknesses, problems and opportunities.

One of the big things we have learned is that we in fact are in the retail business, not just banking. In trying to become more retail-oriented in the past couple of years, we realized we have a lot to learn from leaders in retailing.

From looking at businesses in food service, transportation, consumer goods, and many other industries, we see several factors that help define and lead to excellent service. These factors have strong implications for a bank's corporate culture. There is not a "magic" list, but let's go through these ideas that apply to our retail business.

First, a commitment to service. Customer service must come first, high-quality service as perceived by customers. This takes commitment by top management and by everybody in the business.

Certainly, bankers all believe this idea. But when you look at this from the customer's point of view, it's easy to be humble. In a recent survey we did, one of our customers said: "I think bankers tend to look at what other bankers are doing as their definition of what giving good service is. And why you would want to look at the poorest examples of what customer service is all about and try and one-best them is beyond me."

Hamburger University

So we looked elsewhere. We send our people to McDonald's. We went to Hamburger University.

Almost one out of 10 Americans eat at a McDonald's each day – that's more than 20 million people a day.

In the whole world, more people eat at McDonald's every day than the total population of Australia and New Zealand combined.

McDonald's is the biggest food-service corporation in the world. Today you can find more than 11,000 pairs of golden arches in 51 countries.

In the United States, McDonald's sells more than one-third of all hamburgers sold in commercial restaurants and more than 25% of all french fries.

This is a fascinating statistic: McDonald's also is one of the largest employers in the United States. The number of American workers who had their first job at McDonald's is 1 out of 15. McDonald's has replaced the U.S. Army as the nation's largest job-training organization.

Another way of looking at all this is that McDonald's has posted its 100th consecutive quarter of record earnings – that's 25 years in a row.

How do they do it? How do they outsmart, outbuild, outlast their competitors every single day, every single year?

Their big "secret" is their overall commitment to service. Perhaps you've read how MacDonald's is experimenting with adding carrot sticks, celery, pasta, and pizzas to their menu. And their U.S. restaurants are switching from ice cream products to lowfat milkshakes and lowfat frozen yogurt, even to nonfat muffins.

The big point, according to their chief executive officer – and perhaps the message to all of us – is that you simply have to be better today than you had to be yesterday.

Just as that has worked well for McDonald's for the last 25 years, it will work well for banking for at least the next 10 years.

Along with this goes the second cultural value we see: "thinking big but small." Even if you are with a big bank with ties to worldwide financial resources, it's clear you have to relate to the needs of local consumers, person to person, face to face. Otherwise all the resources, all the systems, all the technology mean very little.

Our approach is perhaps not surprising. Our idea is what we call the "franchise concept." In a sense, each Seafirst branch is run like a franchise, much like a McDonald's. The branch is the manager's franchise; he or she is in charge.

Need for Flexibility

Now sometimes it's hard to get the manager to accept this idea. And sometimes it's difficult to provide enough flexibility in how we manage so that sales quotas and goals fit the local market. At one branch, the manager recently said to me that one of their monthly sales goals involved selling 150 accounts of a certain type. The manager asked how they could have a quota of 150 when the branch hasn't sold three of those products in the last 10 years.

The branch was meeting four out of its five goals. At Seafirst all branches have quotas, and if they meet their quotas, they participate in the profits to a considerable extent. An average-size branch with 10 to 15 people can make $4,000 to $5,000 a quarter. Approximately 15% goes to the manager, and the manager splits up the rest among the personal bankers, the tellers, and the rest of the staff, rewarding those who have been particularly good at sales that month.

Fortunately, we adjusted this branch's quotas, fixing the problem. Yet I'm sure their are other adjustments to make. We have to be able to adapt to local needs in a specific marketplace.

In our look at other industries, we have found that getting to know local business and consumers first hand is essential to providing the kind of service customers want, and to developing a personal touch.

Calling on Customers

All of our top management make calls on customers every week; we're out of our offices a lot. There's no substitute for direct contact with customers.

I count calling on the branches as calling on customers. In a sense, we are customers of each other within the organization. At Seafirst we believe that. That's why people in the computer center can say in an employee survey that their job provide enough flexibility in how we manage so that sales quotas and goals fit the local market. At one branch, the manager recently said to me that one of their monthly sales goals involved selling 150 accounts of a certain type. The manager asked how they could have a quota of 150 when the branch hasn't sold three of those products in the last 10 years.

Navigating Change

Change is an undeniable fact in the financial services community. And as the industry changes, so must job responsibilities, qualifications, and compensation. How then do you attract, retain, and motivate employees to meet your leadership position?

KPMG Peat Marwick's performance and compensation management consulting practice can help you find the answer. We have a successful history of working with financial institutions on their human resources needs. We've performed executive compensation studies, developed performance-based incentive plans, and, most recently, offered our clients *COMPEAT*, a computer-aided system that allows for more accurate job evaluations.

Let Peat Marwick help you manage the demands that change brings. To learn more, please contact:

Rose Marie Orens
Performance and Compensation Management Consulting Practice

KPMG Peat Marwick

Citibank's Approach to Attracting and Retaining Qualified Staff

By Joel Ospa

A tidal wave of change is sweeping across the United States – in economics, in demographics, and in the values of working people.

In the competitive environment, the banking and savings and loan industries will be regulated much more aggressively. There are also an enormous number of new entrants into the financial services market.

Given our financial performance, one wonders why all these other companies want to go into financial services. But Sears is very heavy in mortgages, the Discover card is becoming profitable, and they have a brokerage organization.

Ford, through its Nationwide subsidiary, is a very big presence in banking. And AT&T recently entered credit cards, with Universal, which we view as a formidable competitor.

Greater Expectations

Customer expectations are changing. We are moving through a demographic cycle States that affects our customer base; the types of products and services they demand, and the way they demand them.

As the work force gets older, people acquire assets. They reach a stage in life at which they think about maintaining and building their resources. Investment and service become more important to them than loans and mortgages.

The work force is aging. The baby bust is here; there will be many fewer young people entering the work force. In fact, the growth rate is negative beginning this year. Minorities and immigrants are representing an increasingly greater percentage of the work force.

Single families now account for 45% of the families in the United States and dual-career households for 40%. It's hard to find a woman in the work force today who doesn't have children: 65% have children under the age of six.

Declining Commitment

Values and commitments in the work force are changing. As people become increasingly mobile, their commitment to organizations declines. About 40% of those age 20 to 29 relocate physically for job-related reasons.

There's a growing disparity between job requirements – basic skills such as reading and writing – and the capabilities of people entering the work force.

Most workers feel generally low levels of commitment to the organizations that employ them.

They believe that their organizations don't have any particular commitment to them – which is realistic, particularly in the financial-services industry.

Most workers do not expect to be staying with their current organization very long, either because they don't expect their organization to survive or because they expect to move on.

The next decade will bring longer retention of our older workers. They are a stable, experienced work force, but they also tend to be more resistant to change.

Managing Diversity

Greater generational and ethnic diversity will create organizational tension. Some of my colleagues in high-tech firms talk about "managing diversity." Some organizations are even starting to have a function called "director of diversity," which evolved from the old equal-opportunity departments.

Considering generational gaps, immigration, and minority representation, we are growing a work force of tremendous diversity in the United States – with the concomitant conflict and tension as people worry about careers and lifestyle. The demand is increasing for family-related support – child and elder care and more flexible work environments. We face increasing competition in recruiting and, consequently, a major increase in compensation costs.

The Riddle of Incentives

How do you build incentive plans that really work to retain people? Citibank loses 15% to 25% of its exempt work force per year.

Location is the predominant variable. The lowest turnover rates today in the country, for us and the rest of the financial-services sector, are in the Northeast. The highest rates are in the Midwest and California. With about 25% of our exempt work force turning over every year, how can your management gain a business?

We need to invest in training, some of it in very basic skills such as reading and writing, and put more emphasis on people management. Around Citibank, I often hear complaints about super-

Continued on next page

Excelling

Continued from preceding page

been involved in their communities. I predict such involvement will grow in importance in the 1990s as banking becomes more and more retail oriented.

Seafirst is involved financially through our Seafirst Foundation and through direct bank support, together more than $1.5 million a year. This has become a significant part of our culture.

We also have something called the Seafirst Volunteers. This program encourages employees to get involved in community organizations, matching employees' skills with the needs of nonprofit organizations. More than half of our employees are out in the community as Seafirst Volunteers.

Such programs attract new employees who want to help people, a value that is fundamental to a service culture. You help people. That's what banking's all about.

Emphasis on Sales

Another factor that we believe is essential for the 1990s is to continue to foster an emphasis on sales as part of our corporate culture, not something that is here today but gone tomorrow, but a focus on the long term. Customers like being sold in the context of a longer-term relationship with a company that stands behind its products and services.

Customers don't like a lot of turnover. They want to see the same person there. That isn't just true of the corporate treasurer who gets upset the third time a new vice president calls in nine or 10 months, it's also true of the individual who walks into a branch, who's used to seeing familiar faces, used to being greeted by name. Customers aren't happy if the whole teller line turns over every six months.

And customer retention is significant. We may have different kinds of customers, but once we get a customer, we want to keep that customer.

Any banker should. On the average it costs five times as much to get a new customer as it does to serve an existing one. The average cost of acquiring a customer – including marketing, advertising, opening a credit account – ranges from $500 to $1,000.

You want to protect that investment, but you also want to feel you are helping people and responding to their needs. Nobody likes to lose a customer.

How do you lose one? They either move away or die – right? Wrong. Our numbers say this:

- 1% die.
- 3% move away.
- 5% develop other relationships.
- 9% leave for competitive reasons.
- 14% leave because they're dissatisfied with the products.
- But 68% leave because they've encountered an attitude of indifference as they're being served.

Every big branch opens thousands of accounts each year. Other closes thousands of accounts each year. Three years ago we were closing more accounts than we were opening.

When you're dealing with a half a million accounts, a somewhat negative ratio may not seem significant; the total dollars of deposits may not change that much. But, in the last two years, we've turned the situation around. Now we're opening more accounts than we're closing.

Last year we opened 30,000 more demand deposit accounts than we closed – a net gain of 30,000 accounts. That's like opening 10 branches – mature, good branches – without putting one brick on the ground. It's really so easy when you think about it. You want to keep those customers.

People want service. When they want to be sold, they want to be influenced by someone who knows the product, but who is especially interested in helping them in the long run. Just as it takes creativity to sell, we're trying to be both innovative and flexible in adding value through service.

That's why about a year ago we introduced something called "Excel Service," which includes longer hours on weekdays and being open on Saturdays, the 24-hour phone service, and the $5 we pay if people have to wait in a teller line more than five minutes. All of these factors help in customer retention.

Once we saw the need and the opportunity for such changes, we worked fast to be the first bank in the market, and the first in the country, to offer these services. To be a leader and to be successful, we feel we have to be able to respond to the customer, and to be able to do so quickly.

This goes hand in hand with being the low-cost producer, something which is easily misunderstood. This doesn't mean be cheap, it doesn't mean lay off your people. It starts with offering top quality. If you do it right the first time, your costs go down. Continuous quality improvement can lead to continuous cost reductions.

It's also a matter of what adds value for the customer. If you can get rid of things that don't add value, you not only can cut expenses but you also can offer quicker and better service.

There's an art to this. We look at the pros, like the regional chain, Costco. In seven years it has gone from a two-person company to an operation with 62 units in nine western and southeastern states and two western Canadian provinces.

Costco follows a club concept targeted to wholesale and business customers. By limiting sizes and quantities to those best suited for offices, restaurants, and small retailers, Costco has driven its expense-to-sales ratio – if you can believe this – to less than 9%. I questioned this number when I first saw it; I couldn't believe it. I'm assured that it's true.

In a sense, each Seafirst branch is run like a franchise, much like a McDonald's. The branch is the manager's franchise; he or she is in charge.

Training is Fundamental

Fundamental to giving good service is hiring, training, and keeping good employees, a factor on our list at Seafirst.

As part of the service focus of the 1980s, this is becoming the decade of the employee, particularly for employees with the right skills. As demographics change, as baby boomers reach middle age, the entry-level job market is tightening. Seafirst has seen this already for the last year or so.

Because good, attentive employees are looking more and more for good training, and because we are focusing more carefully on the career-development interests and needs of current employees, our "Seafirst College" training budget is 10 times more today than three years ago. We're happy to make this investment because we know that our customers want good people with top skills, because our people want good training, and because training is a key to building the corporate culture we want in the 1990s.

To help employees find what

Citibank

Continued from preceding page

vision.

I ask: "How many supervisors do we have in the country?" Few people can answer that question. Given an estimated span-of-control of 5-to-1, we have roughly 5,000 supervisors for our 22,000 employees in the United States.

How much basic training in people management have these supervisors received? We send about 500 people a year to some form of training, which roughly covers our turnover. That's capture about 20% of supervisors with any form of basic supervisory training. We're embarking on an effort to improve those numbers.

With a work force that is becoming more difficult to attract and less committed to the organization, most organizations (including Citibank) are looking to alternatives such as ATMs and other forms of electronic support. Some of these are more productive and less expensive than people.

Short-Term Perspectives

Key professionals are going to be leaving in greater numbers. Those who stay will demand immediate financial rewards.

Many of the professionals who come to our organization today have very short-term perspectives. They want the cash bonus coming into the organization, they want the cash on a formula basis every month, and they want lots of cash at the end of the year. It's not the sort of thing that builds commitment to an organization: You can't really blame them. We've created some of this ourselves.

Regardless of financial rewards, we are seeing much less tolerance for unenriched jobs. Key professionals are quite ready to move if the job is not satisfying, interesting, enriching, challenging, and autonomous.

Career Impatience

Career impatience is a growing factor. People tell me that if they haven't moved in the last six months, and if they don't see something of great significance very shortly, they're not having a very successful career.

There's also an increase in what I call independence behavior; it's a lot more difficult to manage people. They don't listen to you the way they used to. It's very hard to maintain an authoritarian organization in which people do what you tell them to do. In my organization, they hardly ever listen.

The Competitive Environment

In the competitive environment, we see a stronger focus on sales and marketing and an increased emphasis on service as a competitive differentiator, particularly as our customer base begins to age. On the retail side, it is not only good business to provide good service, but there's an increasing demand for it from our customers – our populations are less tolerant.

The market where we do really well financially is New York. In the national context, service scores in New York are relatively nil, so I guess New Yorkers are used to poor service. The demand for service in Florida is incredibly high.

In U.S. consumer banking, Citibank is active in seven major geographic areas: California, Utah-/Nevada, Arizona, Florida, Washington/Maryland, New York, and Illinois. Our major areas are Florida, New York, Illinois, California, and Arizona. New York is the only market where we really

Excelling

Continued from preceding page

they need to develop to succeed in their work, we also have established a career-development program. We have been rewarding employees through incentive compensation can work, and is essential, particularly in a sales environment.

In surveys, employees typically ask for more and better employee recognition, so we are working on that. We see that recognizing employees is a key to keeping employees. Just as a focus on retention makes for better customer service; retention of employees is the key to building a long term service culture.

Employees need to be good at what they do. If the incentives are right, then the constant climbing of the ladder is not necessary to get ahead. Changing jobs every six to 18 months frustrates the customer, and is not easy on the manager of the departments that these fast track people are going through.

If you get good salespeople in the right place and give them the right incentives, they don't have to move 10 miles away to a larger office in order to make another $10,000. We like to be able to provide incentives to keep employees happy with what they're doing.

So, after going to school on other service and retail businesses, these are some of the factors on our list at Seafirst.

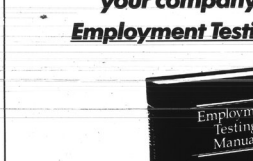
- Commitment to service.
- Thinking big but small.
- Getting to know retail businesses and consumers first hand.
- Fostering community involvement.
- Emphasizing sales and customer retention.
- Being innovative to add value.
- Being a low-cost producer.
- Developing good employees.

So the three perspectives we've considered – business trends in this country from the '50s through the '90s, the international scene, and what leaders in retail are doing – bring us to a sharp, clear, consistent focus: service.

To a large extent, delivering service is a matter of mastering fundamentals that can be a strong foundation for a bank's corporate culture. How well and how consistently we apply those fundamentals in the 1990s will make all the difference. □

Now you can use tests to improve your workforce–without putting your company at risk!

Employment Testing Manual



The all-new **Employment Testing Manual** shows you how to create a more efficient and more productive workforce, reduce theft, and boost profits by using properly administered tests.

Employment Testing Manual discusses the law, the tests, the results and the record keeping. It's the only volume that covers the entire range of employment tests–and gives you a step-by-step guide to using tests properly.

You get all the information you need to develop and implement the best testing policy for your company–in one easy-to-use volume.

Written specifically for the human resources professional, **Employment Testing Manual** covers every step of the testing process and gives you practical intelligence on all important testing issues, including:

- The complete array of testing options...from basic skills and aptitude tests to complex AIDS and drug tests
- An easy-to-understand explanation of all governing laws and regulations...including the Employee Polygraph Protection Act of 1988, EEOC's Uniform Guidelines on Employee Selection Procedures, and other federal and state statutes
- The technical and cost/benefit aspects of each type of test
- How to choose and evaluate which testing programs will best accomplish your organization's goals
- How to interpret test results...maintaining a test's validity ...acting on test results...keeping testing records without violating confidentiality...and more!

Plus, the Employment Testing Manual is loaded with charts, ready-to use forms and detailed checklists to ensure your testing program is in complete compliance with laws and regulations.

Examine it FREE for 30 days!

The Employment Testing Manual is an indispensable resource you'll use again and again in your work. And the periodic supplements and updates (sent to you on approval) will keep you completely up-to-date at all times.

To order the **Manual** for a FREE 30-day trial examination, simply return the coupon below. Or, for immediate service, call **toll-free 1-800-950-1216.**

Risk-Free Offer–Act Now!

Continuously Evolving Role of the Human Resources Manager

By Mary Jean Wolf

After 17 years in the airline industry, I came to the Dime Savings Bank of New York three years ago — when Mr. Icahn chased a few of us out of TWA.

So I've seen deregulation, takeovers, significant corporate change, and a great deal of downsizing in my career as a human resources person. But I have never seen anything like the accelerated change that we are going through right now in the thrift business.

When I came to the Dime, I found two or three people making decisions at the top and a whole lot of other people waiting to be told what to do. When I asked why things were done a certain way, people told me: "That's the way we've always done them."

The Dime's recruiter told me going in that they wanted someone who would be more proactive. When I got there, I found a human resources function that threw the pratics and, willy-nilly, ran some o the benefit programs. It didn't do much else.

Some people from Citibank had infiltrated a few years earlier, so we were getting a lot of the very independent behavior in senior management that Citibank has successfully fostered. This independent orientation hit the savings bank like a ton of bricks – the cultural differences were enormous.

There is no such thing as a culture in our organization. We're trying to develop it, but we are going through a convulsion of accelerated change.

Window of Opportunity

We could almost we overwhelmed by environmental issues, the weak economy, work-force demographics, the negative image of the thrift business these days – you can't pick up a newspaper without seeing another horror story – and all the things that we're trying to do clean up bad loans, improve service quality, and differentiate ourselves in the marketplace.

But we have a tremendous window of opportunity right now. You could say we have a long way to go, but we have nowhere to go but up.

We have an opportunity to redefine ourselves, and that's what we're doing.

The lines separating the various types of financial-services institutions are becoming blurred. Soon we won't be talking about commercial banks and thrifts, just about financial services.

We have access now to some very competent people as a result of recent misfortunes on Wall Street. People are available who might not have been interested in working for a thrift before 1987, and – they're good. They have strong technical skills and are tremendously entrepreneurial.

The challenge for the human resources function is not only to help recruit these people, but to welcome them with open arms and try to create a climate where they can do their best work. That takes a lot of skill.

Relearning the Business

My approach to the human resources function today is to forget everything we ever knew and start over. In the next 10 years we're going to see an evolution that will make what we knew in the '60s, '70s, and '80s just about unrecognizable.

It's a little frustrating to think that all the stuff we worked so hard to master is becoming almost irrelevant. It's not. The transactional issues, personnel administration, compensation, and benefits all have to keep being done. But, on top of that, we have an obligation to do other things that have not been part of our vocabulary in the past.

Start from the strategic plan. Until a few years ago, our organization didn't have a strategic plan – we were just a thrift. Now we have a strategic plan, so we have a focus.

The first order of the day, for me, was to position myself as a partner with the heads of our lines of business. Remember, I mentioned that we have a lot of Citibank people: They are accustomed to having profit-and-loss responsi-

Citibank

Continued from preceding page

have a commanding market share.

We have moved to what we call semiflexible choices in our benefits coverage. We have all seen enormous increases in the cost of medical coverage in recent years. People get older, they get sick, there are more of them. On top of that you have diversity in the work force: working families, single mothers, immigrants – all with differing values and needs.

We have instituted a variety of family-support programs, including counseling and day-care centers. In some locations our work force is highly dispersed: 220 branches in the New York area, for example, representing 7,000 people spread out over about 10,000 square miles. It is very hard to provide day care given this dispersion.

We have a day-care center in Sioux Falls, S.D., that handles about 200 children. We charge an employee about $100 a month per child. We subsidize it to the tune of about a $1 million a year – for 200 kids.

Stock-Based Incentives

In the area of retention incentives, we are moving toward stock-based plans. We have essentially decided that the current program, using stock options, doesn't really get us the value. We give out 5.5 million stock options a year to exempt employees, and our assessment is that it gets us about zero in terms of commitment.

We're looking at the use of restricted stock plans and stock in lieu of bonuses. We believe that the way to build strong commitment to the organization is getting people to feel a close tie with the shareholder. Dividends count as real cash, and the stock becomes valuable to the vast majority of the work force.

We are seeking to tie incentive compensation into our sales and service area. For several years we have had very aggressive sales incentives on the mortgage side. As a result, we're now the nation's No. 1 one mortgage lender with about $15 billion a year in mortgage originations. I only wish I could tell you that it is as profitable as the assets suggest, although in various years the mortgage side will generate $30 million to $100 million dollars in after-tax earnings.

On the retail side, which has proven more difficult, we've also begun to look at an integrated sales-incentive plan. A branch has about 300 to 400 products running through it, requiring a typical branch manager and staff to perform an enormously varied set of tasks.

We may give them an incentive to sell assets or checking accounts this month and savings and CDs the next. With promotions changing almost daily, the enormous diversity in the branch makes it difficult to create sales incentives. And, always, the incentives must be counterbalanced against a strong service orientation.

Our response has been what we call SBL: satisfying, building, and leveraging. This translates into sales, service, and productivity.

SBL is an integrated program of goal-setting that allows the branch to trade off sales and service for points that lead to incentives. We have tried to empower the branch to make the tradeoffs, but the incentives require them to take a very balanced approach to their marketplace.

Recruiting and Training

In recruiting, we're competing for qualified, available people. Today, in New York, we have to screen 40 people to hire one teller. It's not just New York. We have similar problems in most of our major metropolitan areas in the U.S. Some would argue that we're not screening as well as we should, but we want the people, and they are hard to find.

In our supervisory training, a lot of focus is on conflict resolution and problem-review procedure.

We also do annual employee surveys, which are important to Citicorp. We believe that employee attitudes relate to service. We see a direct relationship: If the employees believe the organization is treating them well, the customers in those branches also believe they're being treated well.

We have expanded participant hours for training and development to 600,000 a year from about 400,000. Much of this training effort is focused on the branches.

We put Macintosh computers in all of our branches, and we use them as training vehicles. We need to make more intelligent use of electronics. We're now using intelligence-support systems in our branches for sales, and are experimenting with other systems.

JOEL D. OSPA
Senior Human Resources Officer
Citicorp U.S. Consumer Banking Group

Joel D. Ospa is the senior human resources officer for Citicorp's U.S. consumer banking group, which is responsible for Citicorp's retail financial activities in the domestic market, including savings organizations in New York, Maine, California, Illinois, Arizona, Florida, Utah, Nevada, the District of Columbia, and Maryland.

The group also includes Citicorp's national mortgage business (the largest in the U.S.), the national student loan business, Citicorp Brokerage, and a variety of smaller businesses.

There are over 22,000 employees in this Group, working in over 700 locations across the country. Mr. Ospa supervises about 600 human resources professionals.

Mr. Ospa is a 1966 graduate of Brooklyn College. Following service in the U.S. Army, he earned a master's degree in business administration from Baruch College of the City University of New York. He worked briefly for the Port Authority of New York and New Jersey.

Mr. Ospa joined Citicorp in 1973 as a specialist in its education and training organization. For the first seven years of his career, he held a variety of positions in personnel research and training.

From 1976 to 1979, he was the vice president supervising Citicorp's human resources research and organization development organization. During this period, Mr. Ospa continued his professional training by earning the New York University's doctoral program in industrial psychology.

He left the research and organizational development area in 1979 to become senior human resources executive for Citicorp Industrial Credit, the organization's secured-asset-lending business. Mr. Ospa was then promoted to head the human resources function for the New York retail bank. Over the years, he has assumed increasing responsibility as Citicorp's consumer businesses have grown.

Evolving Role

Continued from preceding page

bility and their own resources. So we're moving toward a more decentralized way of doing business.

We have only 2,500 people, so a lot of skill is needed to determine which things make no sense to decentralize, because of economies of scale, and which things to give the line organization.

When I say give, I'm kidding myself. If I don't give responsibilities all have to keep being done. But, on top of that, we have an obligation to do other things that have not been part of our vocabulary in the past.

The more entrepreneurial types from Wall Street will run their own human resources activities, evaluating people and paying people the way they perceive it needs to be done. The days of job descriptions, salary levels, and the compensation practices of the past are pretty much over.

We have to start being creative as we move toward an environment in which there's much more blurring of lines among jobs. We will be evaluating people on the basis of what they produce for the organization as opposed to a job standard.

We have access now to some very competent people as a result of recent misfortunes on Wall Street. People are available who might not have been interested in working for a thrift before 1987, and they're good.

Good human resources people will immediately start cringing to think of equal-opportunity issues and other things we've learned to do for good reasons. We have to unlearn them and find other approaches.

The senior people who head up our business lines pretty well know what somebody's worth when they hang them out to organization, and they know what a job is worth based on their business plans.

I have to participate in the development of the business plans with them so that I can understand what's going on. I don't need to be able to do their jobs, but I need to know enough about what they're trying to accomplish and what kind of people they're bringing in.

We recently remodeled our entire compensation program for officers. Now, we have them fill out a questionnaire; we don't ask for job descriptions anymore, because they are too rigid. The questionnaire helps us determine the value of a job in the organization, and has been enormous successful and popular.

The questionnaire is easier to fill out – except for people who, when they answer the questions, find out they're not really doing very much.

Where people have honestly believed that they were below market, this kind of an exercise tends to reinforce that belief and gives us much clearer evidence.

Salesmanship

Salesmanship is another area in which we all need to do better. We need to develop nontraditional ways of finding workers – they're just not there any more. And a lot of the business heads don't understand this. They think it's still like it was in the '70s, when you just put an ad in the paper and people showed up; if you had to interview 40 people to get one, that was O.K.

We've been doing a lot of work with older workers. As a group, they are very interesting. They've seen it all. They are little cynical; they've been through all the puppy-dog eagerness, and they're past that stage. They're not going to buy a story unless it makes sense. So if you've got a task that really is worth doing, and you empower them to do it, you'll find plenty of energy in the older workers, better judgment and experience than you would get from younger workers.

We've also done a lot of work among people with physical limitations. We had an interviewer who could speak, but could not hear at all. She interviewed by reading lips. She did a wonderful job, was extremely successful, and half the people she interviewed never understood that she couldn't hear anything they said. Getting people to buy into the concept of hiring an interviewer who can't hear would be very difficult, but once you get people into the organization, show what can be done, it becomes a lot easier.

We have many such barriers to break down. The workers are out there; they just look different from the workers we've had in the past. And to the degree that we understand how a sale is made, we will be more successful in getting our business managers to do that. Some of these ideas of nontraditional workers. Every human resources person should be reading a good book on how to sell.

Coping with Entrepreneurs

Tools for Advancement

We have opportunities to give people tools to advance, to develop, to get in touch with their own skills as they move ahead in their careers – if they can identify the direction they should be taking, what's right for them, where they fits are going to be for them at the next level. If we work as partners with people in their career advancement, they will find the organization a more rewarding place to work; we don't do that nearly enough.

At the Dime we do a lot of technical, in-house, job-related training. We do some management training, and we make available to all the departments a service that provides information about seminars in various areas.

We aren't trying to tell our people which courses they have to take. Our interest is in knowing what training people are getting.

Our job is going to be, increasingly, to turn over our tools to the line managers. That is hard to accept, because it feels like we're giving up job security. But we have no job security unless we give them as much knowledge and support as we can, and let them play a much stronger role in self-determination on human resources issues.

In compensation, especially, you can really turn people off if you're not enabling them to have the programs that they feel they need to get their jobs done.

Necessity for Planning

You have a right to ask them to plan, and the business plan should talk about compensation. It also doesn't mean that they have their own payroll system; it does mean that they should be overlooked. With procedural barriers.

It means allowing them some flexibility in what kind of instrument they use to evaluate employees. As long as what they're doing works for them – and works for the organization – and isn't being applied indiscriminately, it's probably appropriate to be a little more relaxed about what you let them do.

A blank piece of paper can be used as an evaluation form, as long as it is used the same way for all employees. If they give everybody the company evaluation form – except for one person who gets "Susie ain't makin' it" on a blank piece of paper, that won't work.

But if they want to write just one thing about the employee's progress and maybe the things that they think the employee needs, why force a form on them? We've gotten a little carried away with some of these elaborate programs that probably worked well enough in the heyday of the legislation we were dealing with.

We have an enormous need to be communicators. Human resources should take responsibility to support the organization's mission statement. We recently drew up a vision and values statement which we gave to all of our employees.

We recruited 50 managers to meet with employees around the organization. We've talked to just about everybody, and gave them a chance to write in questions about any points that bothered them. So we had a successful launch.

The role that I expect to be playing in the future will be very different from the role I've played in the past. But it is full of opportunities, and I'm very excited about it.

MARY JEAN WOLF
First Senior Vice President
The Dime Savings Bank of New York

Mary Jean Wolf is first senior vice president and director of corporate human resources for the Dime Savings Bank of New York.

Ms. Wolf came to the Dime after a 17-year career with Trans World Airlines Inc. For six years, she was vice president of personnel at TWA, responsible for human resources functions for 28,000 employees worldwide.

At the Dime, Ms. Wolf is responsible for developing corporate human resources functions for the Dime and its subsidiaries. She is experienced in organizational planning, litigation prevention, recruiting and employment, career development and outplacement activities, compensation and benefit functions, employee-assistance programs, and administrative services.

She speaks frequently on a broad range of human resources topics including litigation, labor-management relations, arbitration, and employee privacy legislation and practice. Ms. Wolf chairs the Management Resources and Organization Committee of the National Foreign Trade Board and is an active member of the Human Resources Planning Committee.

A Manhattan resident, Ms. Wolf earned her undergraduate degree at Philadelphia's Drexel University and her MBA from New York University Graduate School of Business.

The Dime, with assets of $10.1 billion, is the fourth-largest thrift institution in New York State and one of the largest thrifts in the nation. It operates 62 retail banking offices in New York and 34 residential-property loan-production offices in New York and nine other states on the Eastern seaboard.

I wish I understood why some people have judgment and some don't, but it's like pornography – I don't know how to describe it, but I know it when I see it.

Emphasis on the 3 Ps: Profitability, Productivity, and People

By Richard A. Collister

It's a tough environment out there. In the past two years we have lost an estimated 45,000 jobs in the securities industry alone.

We'll be seeing a lot more – some say another 5,000. I think we could see another 15,000 to 20,000 jobs disappear over the next year. Some of the large financial institutions such as Citibank or Chase Manhattan – that have not had to deal with this situation to the same extent as the brokerage security firms or the thrift industry – will also be facing it.

We've seen a fundamental shift in the paradigm. Perrier and Drexel both went down the tubes in the same week.

Soon we'll be wishing we were back in the '80s, because the '90s are going to be a very tough environment. In the year that I've been at Merrill Lynch, we've brought down the work force by some 2,000 people in my area alone. We're continuing to work on bringing it down further.

As our industry undergoes this change, the human resource function has become extremely important. It is increasingly becoming a partner with the business. The focus in human resources increasingly is on the three P's: profitability, productivity, and people.

Many other houses on the Street are also losing money. Some of those are masked by the fact that they have parents with deep pockets. Over time, the question will be: How deep are those pockets? How long is one's arm? Other houses that are protected today by parents such as Kidder, Sears, or GE, eventually may disappear or have to go through significant change.

Focus on Profitability

We have to move away from just revenue generation. In an industry such as ours, focused on generating revenue, the purpose for generating revenue was to spend it. Our goal was to increase product share, market share, product positioning – but profitability was not necessarily a word used throughout the organization. Increasingly, we have to think in terms of bringing dollars to the bottom line.

Some managers had been accustomed to giving whatever salary increase they wanted to give. And the difference of 1% in salary increase could be a change of $3 million to $4 million in our bottom line. In today's environment, that is not something to sneeze at. The difference between a one-year guarantee for a new hire, a big producer, or a two-year guarantee on bonuses, can sometimes be millions.

When I first came to Merrill, a multiyear package for a new hire was presented for my approval: base salary, $150,000 – not unreasonable. That's what we pay most of our investment bankers and producers.

But later on, after all the stock options, restricted shares, and guaranteed bonuses, there was a number: $4.5 million. So I sent it back to be retyped, because $4.5 million seemed to be an obvious typo – they had to mean $450,000, based on my historical frame of reference.

I was wrong. It was a $4.5 million package. In talking with the manager, I started to see that there was some anticipation of how much the individual would make for the firm, but most of what that revenue would go to that individual, not to the bottom line.

I quickly changed my attitude quickly because that individual, within six weeks of coming aboard, brought in a $20 million deal; he paid for himself, literally, within six weeks. Other similar deals, unfortunately, have not worked out as well.

Profitability is an absolutely critical factor. We in human resources must focus some of our attention on profitability, as well as productivity and return on equity.

A few years ago, if you had a problem you threw money at it. Today, we're cutting expenses, getting our hands around our real costs. The capital markets group used to say that it had 8,000 employees. In reality, we had 13,000 employees – because we didn't manage operations, support functions, or a whole host of other areas. When we measured the business on the basis of 8,000 employees, it was making money. When we considered our total cost today, it wasn't. The most common response to dealing with the issue of people today is downsizing, firing, trimming, cutting expenses, getting rid of people.

Break the Paradigm of the Past

How do we create a culture that is business-based, future-focused, and breaks the paradigm of the past? Can your organization build a new culture with the management team that brought you the old? The real question is: Can you change people, or do you need to change people?

We must deal with the ambiguity of getting smaller in an era of consolidation while trying to build for the future. However, the first priority has to be stop the bleeding. We must focus initially on short-term solutions.

In a recent survey, 73% of senior human resource executives at large companies around the globe said that building and keeping a qualified work force is the critical challenge they face. We have to downsize, but we also need to reconfigure our organizations.

We need to ensure that we are keeping the right people, maintaining morale, and positioning the organization for the future. And we're not doing this only at the top, or with producers. It must be done at the managerial level, professional level, clerical level – from the top producer to the little people.

In our industry, little people have not counted in the past. They've been cogs in the machine, they've been expendable. Increasingly, we're having to recognize the need to deal with people from all levels, from the multimillion-dollar producer to the $24,000-a-year margin clerk. They're all important to us.

At Merrill, over the past year, we've had to focus on a realistic assessment system. And I don't mean performance appraisal. We needed to look at what products and activities we wanted to stay in business with. What people did we want to keep? In some cases those were individual decisions as to what people we wanted to keep; in other cases they were group decisions.

We also had to focus on the skills we would need for the future. As an institution, we have become highly specialist in recent years. There is a debate in our industry about whether to continue to have specialists or move more toward generalists.

Today we have a specialist – a person who has a skill to perform a transaction on Tuesday from 11 a.m. to 11:15 a.m. If the market shifts – now it's Wednesday, from 2 p.m. to 2:30 p.m. – we'll fire the person with the Tuesday skill and hire somebody with the Wednesday skill. We have to rethink that approach as we move toward the future.

We've also had to provide for those people who are going, once we've made the decision. I am a very strong advocate for outplacement service – whether provided in-house, as we did in one of the years I was at Chase, or externally as we are doing at Merrill.

Fairness

It must never be forgotten that we are dealing with human beings. These are people whose identity is associated with your company. They must be dealt with fairly and positively.

You can negotiate fees, programs, and terms with outplacement firms, much as you can with executive recruiters. Most companies like to use outplacement firms because that's a way of washing their hands: I turn over the problem to somebody else.

In today's world it is critically important for the company and the outplacement agency to work in partnership, so that you're dealing fairly with your people, tracking performance. It allows you to send back a message to those who are staying in the organization that you treat people fairly, that you care, that you have made good decisions.

A key issue with survivors is to communicate, communicate, communicate. Most communications from management assumes that they need to say it only once, and they need to focus only on what they want to say. We need to focus on what the listened hears, his train of thought, at all levels in the organization.

We need to clarify new directions and objectives, but also to tell people what is no longer acceptable. Most surveys say that our employees want clarity of direction, a better understanding of performance standards, and a clear statement of how they fit in.

Communication Is Behavior

We need to answer these questions for individuals at all levels. Communication is more than just verbiage. It is also behavior.

One of the biggest disappointments I've had is to encounter managers who do not understand that. They feel that a speech is all that is necessary; they don't understand the impact of their behavior.

We reward new behaviors. We have cut bonuses, and we will continue to cut. Bonuses last year in our businesses went down 20% to 60%, and they will continue to go down another 25% or more this year.

It is thus becoming increasingly important to make sure that we use the dollars we have to reward the kind of performance that we want in the future.

Return on equity was a term that was unheard of in our institution a year ago. This past year, as we pre-

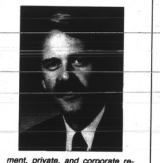
RICHARD A. COLLISTER
Director
Merrill Lynch Capital Markets

Richard A. Collister is director of human resources for Merrill Lynch Capital Markets.

He is responsible for implementing human resources policies and procedures for compensation programs, management development, equal employment opportunity, employment, employee relations, and human resources information within capital markets worldwide.

Mr. Collister joined Merrill Lynch in 1989 from the Chase Manhattan Bank, where he was held a succession of progressively responsible positions in human resources over an 11-year period, most recently as director of executive and managerial resources.

Earlier, Mr. Collister worked with the chief operating officer and a group of other senior Chase officers on the implementation of major strategic change worldwide. Prior to that, he served as the human resources executive for the bank's Western Hemisphere area and as senior human resources generalist for the trust, investment, private, and corporate recruiting and staffing.



Before working at Chase, Mr. Collister spent four years as an assistant vice president for organization planning and development at the First National Bank of Chicago. Prior to that, he was a special assistant to the executive director of the Illinois Board of Higher Education, and staff assistant to the chancellor of the University of Illinois at Chicago Circle.

Using Group Incentives to Motivate Tomorrow's Bank Worker

By Elizabeth A. Gall
and James E. Nickel

The worker of the year 2000 will be different from today's employees. So will the bank she works for.

Consequently, banks need to rethink how they motivate and reward their employees. At the core of banks' new human resources programs will be broad-based group incentives in the operations and retailing sectors of the business.

These new group incentives will be used to underline business strategies, encourage greater employee involvement, improve customer service, and control costs. They will complement the executive, functional area, and sales bonuses already in place.

Some widely accepted predictions of changes in the work force and organizations apply easily to banking. There will be a suppliers' market for many types of labor. Employees, not jobs, will be in short supply. Banks will compete more aggressively for fewer workers.

As a result, banks will take workers' needs and desires more into account in designing their human resources programs. They will learn from industries such as health care, which is already responding to nursing shortages by increasing nurses' participation in patient management.

The shortages will be particularly acute in the first several levels of organizations, as fewer workers enter the work force over the next decade. Further, those who do enter will have much lower skill levels. It is clear that banking industry cannot avoid these problems because entry-level employees are the backbone of operations and retail functions.

A low birth rate plus an increased life span will result in the graying of the American population. Older workers will fill the gaps caused by shortages of youthful workers.

We see this trend even today. Fast food chains are actively seeking seniors to work in their retail operations. Some banks are doing the same in seeking tellers. Many older workers could, instead, choose to remain on the job – if the workplace offers satisfactions not available in retirement.

Many baby boomers will find themselves squeezed in the managerial pyramid. In 1987, 1 in 20 of them would have been promoted to management.

By 2001, only 1 in 50 will ascend the flattened managerial pyramid. Companies will face the problem of motivating employees who perform well but can expect no more promotions.

Cost control and emphasis on quality and customer satisfaction must be instilled throughout the organization. Faced with persistent erosion of product line mar-

sented our bonuses, we presented what we called the ROE program.

As we took bonuses down 25% or more, we also offered our producers the opportunity to earn the equivalent of 15% of their 1989 bonus in 1990 and another 15% of the 1989 bonus in '91 by achieving certain ROE objectives. People suddenly became very interested in return on equity.

When we issued our first-quarter earnings, the most commonly asked question was: What was the ROE?

We also have expanded the use of restricted shares and stock options to increase ownership and tie personal needs, desires, and goals into the issues of the shareholder.

Some Bleak Christmases

Historically, Wall Street has given out Christmas bonuses. It hasn't been a very good Christmas the past few years – more like a stocking full of coal. This year, we're thinking of doing away with the Christmas bonus. If we achieve certain ROE targets, all employees will get a bonus, not just the big producers. Our people might get a week's pay or two, not as a Christmas bonus but because we've achieved certain corporate objectives.

We're also starting to use spot awards as a vehicle for rewarding specific behavior. Each quarter, managers can nominate individuals who are not bonus-eligible, who have come up with ideas that resulted in cost savings or increased productivity.

Human resource people need to contribute to productivity and profitability; 80% of our efforts and expenditures today are for administration. In the future, the good human resource function will spend devote only 20% of its activities and expenditures on administration.

The key focuses have to be on building future capability, improving profitability and productivity, creating an organizational climate that makes you the employer of choice, and employee service. If we can break out of our historical paradigm, we can help the organizations that we're working with break through theirs.

BUSINESS & HEALTH
STRATEGIC OPTION SERIES

Now There's a Single Source for Evaluating All of the Latest Health Benefits Strategies

Eight 32-page issues, written exclusively for top executives, focusing on strategies for:

- Evaluating Cost Containment Approaches
- Handling Substance Abuse Issues
- Assessing HMOs
- Managing Retiree Health Benefits
- Coping With Dependent Care Issues
- Coping With Workers' Compensation
- Assessing Supplemental Benefits
- Dealing With Working Women's Issues

Group Incentives

Continued from preceding page

gins, banks must ensure that expenses, especially for labor, do not get out of line with revenues. Quality will also be important, since poor quality is so costly in terms of both revenues and expenses.

The fallout of cost-control programs already undertaken by banks is diminished worker loyalty. Every worker on the banking industry's payroll has seen friends and acquaintances lose jobs in downsizings.

As a result, blind loyalty to company will become a thing of the past. The banking community will have to earn the loyalty of its producers in the 1990s.

Group Incentives

TPF&C has observed a growing trend toward the use of group incentives, which is not surprising. This trend is born of the competitive pressures and changing workforce just discussed:

• Suppliers' market for labor. Workers in short-supply can expect the bank to allow them to participate in the successes they create in a way that does not add uncompetitive fixed costs.

• Graying work force. The team effort to achieve the goals of a group-incentive plan will appeal to older workers, as will the opportunity for greater involvement and more meaningful input in their workplace.

• Managerial traps. The energy spent in striving for promotion will have to be redirected. The sense of being a part of a team that wins by achieving strategy can be a substitute.

> The fallout of cost-control programs already undertaken by banks is diminished worker loyalty. Every worker on the banking industry's payroll has seen friends and acquaintances lose jobs in downsizings.

• Cost control. High-labor-cost businesses such as operations and retailing will choose performance measures to focus employee behavior on reducing costs and improving productivity. Changing employee behavior is the most traditional goal of incentives.

• Loss of worker loyalty. Loyalty will not ensure that workers strive to achieve company goals. But group incentives will tie worker rewards to the achievement of those goals. Greater emphasis on information-sharing will also help create a sense of being a stakeholder in the organization.

Today's Group Incentives

Having observed the trend toward group-incentive programs, TPF&C sought to learn from those already using them successfully. Therefore, we recently surveyed 177 programs in 144 large and small companies in a variety of industries. Over 30% of the respondents are in the service sector. We eliminated executive, sales, and special-recognition bonuses as well as deferred cash plans from the study.

Companies using group incentives typically adopt them to meet business competition. Or the programs help to strengthen employee involvement in order to gain competitive advantage in recruitment and retention.

The participants told us that group incentive plans work. They report achieving excellent results through:

• Improved quality, productivity, and cost control.

• Promotion of teamwork among employees.

• Encouraging employee participation.

These plans measure performance in a variety of ways. Some focus on operational or financial measures alone, some on a combination of operational and financial measures.

The type of performance measure chosen, or the focus of the plan, had great impact on plan success. Results differed significantly with the type of program.

Operational measures, which often focus on efficiency or effectiveness, proved most effective. Fully 86% of the respondents viewed their operational measures as accurate or very accurate in measuring performance.

Financial measures (primarily unit profitability) are less successful if used as the sole measure.

Only 56% of the respondents rated their financial measures as accurate or very accurate, with 13% citing not accurate at all.

> Organizations are coming to realize that group incentives can be an effective means of reinvigorating the organization and managing change.

The most effective plans use "blended" measures and look at performance from a broad, strategic perspective. Their performance measures are chosen to have a direct line of sight between the workers' activities and their impact on plan targets or measures effective in reflecting employee achievement. Their blends of performance measures typically include financial and operational measures as well as an emphasis on quality and customer service.

Over 90% of companies with operational measures use multiple criteria and over half use three to five measures.

Unlike the traditional gain-sharing plans of the past, programs today set target levels or standards of expectations based on current business needs and objectives rather than some historical baseline. Most companies also change measures and targets as required to reflect current business conditions and to incorporate the concept of "continuous improvement."

ELIZABETH A. GALL
Vice President
TPF&C

Ms. Gall is a TPF&C vice president specializing in executive compensation and salary administration.

Her areas of expertise are the design of incentive programs for executive, midlevel, and sales employees and executive annual-incentive, long-term incentive, and capital-accumulation programs.

An area of special interest is the design of functional-area incentives for financial institutions, including investment banking, corporate and retail banking, capital markets, and investment management. She has also conducted projects involving pay-level testing, job evaluation, the creation of salary structures, and the development of administrative policies and procedures.

Ms. Gall has worked with a number of domestic and foreign-owned commercial banks, including money-center and regional banks.

Ms. Gall joined TPF&C's Philadelphia research department in 1970.

She received a BA in economics from Northwestern University and an MILR. from the New York State School of Industrial and Labor Relations at Cornell University.

A frequent author and speaker on financial services topics, Ms. Gall is located in the New York consulting office.

JAMES E. NICKEL
Principal
TPF&C

James E. Nickel is a principal of TPF&C and Towers Perrin's alternative rewards practice.

He is responsible for managing this practice and for conducting client assignments in the design and implementation of all forms of alternative-rewards programs worldwide.

His experience prior to joining TPF&C includes seven years of consulting experience as Midwest regional practice director for compensation with Sibson & Co., and as a principal and practice director in human resources consulting with Arthur Young & Co.

He earned BS and MS degrees in industrial relations at Iowa State University.

Mr. Nickel's consulting experience includes developing numerous forms of incentive programs such as gain-sharing and short-term-bonus plans (both individual and small-group-oriented); and human resource management projects including organizational analysis, work measurement, performance appraisal, manpower planning, and productivity-improvement programs.

He has designed and installed gain-sharing and group-productivity programs in a variety of manufacturing and service organizations for some of the nation's largest companies.

The participants reported that commitment of both management and employees is critical to plan success. This means that the most fruitful plans involve worker participation and the carefully managed communications process.

The surveyed companies reported this success even with relatively small awards: the average award was about 7% of salary, or $1,200. Most did not change their plans to replace any other form of compensation. That is, they did not reduce salary when they introduced the plan.

While more variable pay may be an objective, most companies do not view these programs as a different (or perhaps less costly) way of paying people or shifting risk to employees. Organizations are coming to realize that group incentives can be an effective means of reinvigorating the organization and managing change. The survey results certainly say so.

Group Incentives in Banking

Through their use of executive, functional-area, and sales incentives, banks already know that incentives can be very useful in underlining business strategies.

Group incentives offer the opportunity to extend this methodology to other parts of the organization where such issues as cost savings, quality, and customer service are especially important. At the same time, group incentives meet the needs of the changing work force. For all these reasons, TPF&C expects to see more use of group incentives, particularly in banking operations and retail sectors.

A copy of the complete report is available from local TPF&C offices.

Achieving Competitive Advantage Through Human Resources

By Robert H. Marcin

First Nationwide is one of four members of Ford Motor Co.'s financial services group. Ford bought us in 1985 as part of its strategy to diversify using financial services to balance the cyclical results of the auto business.

Our fellow group members are Ford Motor Credit, U.S. Leasing, and the Associates. Together, we employ about 27,000 people worldwide.

The financial services group has combined assets of more than $115 billion. We provide a broad array of products for consumers and commercial customers.

In 1989, our combined income was $660 million, or 17% of Ford's total earnings. Ford wants the group to contribute 30% of its worldwide earnings.

Among the benefits of the association with Ford Motor Co. are its reputation for sound fiscal management, continuously improving quality products and services, a customer-driven philosophy of service, a keen sense of cost competitiveness, and, without doubt, employee involvement and teamwork.

Strategy Founded on People

For me personally, it blended the concepts of mission, values, and guiding principles with First Nationwide's proud culture. The transfer of those principles from manufacturing to financial services illustrates how a strategy founded on people can yield significant competitive advantages in the marketplace.

We at First Nationwide believe that the only possible competitive advantage left is our 6,700 employee work force. While that sounds rather obvious, the planning for managing your human resources to become a competitive advantage immediately raises a number of questions:

• What advantages, if any, do you possess?

• What target advantages do you want? Cost structure? Quality service and delivery? Reward systems? Talent retention?

To address this strategic issue of competitive advantage, we at First Nationwide took stock of our organization's strengths and weaknesses. The bank had endured largescale changes in acquired several small thrifts, selling off disadvantaged businesses, and replenishing a number of key executive positions.

First Nationwide has now acquired what I refer to affectionately as a "mongrel" culture. The organization had influences from the "old bank," the acquired institutions, a new cadre of management, and an industry under attack by regulators and consumers.

The challenge was to make a make a success out of a geographically dispersed nationwide bank with diverse customer groups.

Strategic Planning Model

The process of setting the strategic direction began with an off-site planning meeting using the Peter Drucker strategic planning model: opportunities, challenges, mission statement, requirements, goals, objectives.

Among the opportunities we focused on were creating a common vision, transforming into a premier consumer bank, and accelerating the rate of change. The challenges are our ability to make decisions rapidly on markets, products, organizations and people; regulatory uncertainties; focus on the customer; and creation of competitive advantages.

Now we have all been through those long, arduous sessions of hunting for precisely the right words for a mission statement that ends up essentially meaningless. None of us was looking forward to this experience again. However, one member of our group sat quietly after our discussions on opportunities and challenges, and sketched out the essence of a mission statement that we believe says it all:

"Our mission is to create a premier nationwide consumer bank that is:

• A great place to bank.

• A great place to work.

• A great place for stockholders' investment.

• A place where we all reach for the best in everything we do."

Among the plethora of requirements we defined included these people-related items: investments in training; rewards for performance; disciplined management; and clear, consistent communication with our people. The five-year goals we established were in terms of our customers, people, and shareholders.

The final step in this model was the linkage of this message to the rest of the bank's management. This process brought together 300-plus bank officers in an interactive planning session.

We used this same strategic planning model, laying open our goals and objectives for the groups' input. In this way, commitment was built into the strategic direction and managers buy in to its implementation.

The process was then cascaded by all managers down to their staffs, utilizing the same meeting format, but this time based on vid-

We Provide Over 40,000 Human Resource Professionals With the Best Information in the Field.

You can get it too, in these outstanding publications from WG&L.

Personnel Director's Legal Guide

The only practical guide available today that covers every area of employment law—giving you all applicable legal considerations in one place for easy, instant access. The GUIDE spans the full range of your professional responsibilities, reviewing all the significant laws and regulations, pointing out what's changing rules. It's more than the usual reporting service on recent legislation — it shows you how to solve the employment law problems that crop up every day, and provides compliance strategies to keep you out of trouble with the new rules and avoid recurring problems with the old ones. An up-to-the-minute source for covering every aspect of the personnel function, from recruiting to hiring, from performance appraisals to discipline.

Journal of Compensation and Benefits

An authoritative journal to guide you through the maze of government regulations. It combines timely reporting and analysis of new developments with in-depth examination of the most profitable compensation and benefits strategies available today. Through ten regularly featured departments, the JOURNAL keeps you abreast of new tax and legal angles, current developments, their implications, and how they affect your plan, in-depth analysis of benefits options, and how to combine them into a strong, well-coordinated program. The Journal places at your fingertips the tools you need to do your job better — without risking costly legal or compliance headaches.

Employee Benefits Handbook

This completely revised and updated edition provides fully integrated coverage of the 1986 Tax Reform Act and other legislative changes. In a clear, concise style the HANDBOOK answers virtually every question about employee benefits and helps you get the most for your benefit dollar. Expert contributors detail practical ideas for plan design, administration, and legal compliance. In addition, the HANDBOOK reviews and analyzes the complete spectrum of traditional and innovative packages — examining each plan's advantages and disadvantages, and integrating discussions of tax and legal considerations, actuarial problems, and overall cost to the employer.

Learn from Wall Street's Mistakes to Get a Handle on Bonuses

By Vincent C. Perro

With regulatory barriers crumbling over the past several years, banks and other financial-services firms have expanded aggressively into investment banking and other traditional Wall Street businesses, developing a host of new skills in transaction structuring and risk management.

As a result, the distinctions have blurred considerably between the skills of transactors (i.e., dealers) in securities firms and other financial-services firms such as banks.

The most important lesson Wall Street teaches is the cost of not integrating bonus planning with business planning.

As transactor skills have converged, so have compensation practices. Banks and other financial-services players have adopted many compensation practices of the Street – particularly much larger bonuses – to attract and retain talented transactors.

However, there is a dark side to these changes: the potential to lose control of bonus costs and erode profits, a significant factor in Wall Street's recent misfortunes.

Banks and other financial firms have an opportunity to learn from Wall Street's mistakes and institute bonus and overall pay practices that support talent-intensive transaction businesses without wreaking havoc on the bottom line. The following five lessons can help firms get a handle on bonuses to the benefit of both the firm and transactors.

Lesson No. 1: Pay Mix

Traditional practice in investment banking and trading emphasizes highly variable pay with significant potential balanced by significant risk. Many securities firms extend this philosophy throughout their firms, giving junior people opportunities to double their fixed pay via bonuses and allowing senior people's awards to climb to four or five times their salaries.

"In such entrepreneurial environments, having so much pay at risk is highly motivating. However, large bonus opportunities can distort perceptions about reasonable levels of pay.

As a result, the big bonuses paid at the top begin to trickle down to lower-level jobs. Many transactors begin to view part of their bonus as deferred salary. This thinking, plus bonus-guaranty practices and a fear of losing their stars, has held many securities firms virtually hostage to what amounts to bonus-funding floors.

Large bonus opportunities can distort perceptions about reasonable levels of pay. As a result, the big bonuses paid at the top begin to trickle down to lower-level jobs.

The result? A good idea – highly variable pay – is more illusion than reality.

The investment banking group of a large money-center bank devised an interesting solution to address part of this problem. The bank knew it had to increase pay dramatically to compete for talent.

It also knew competitive bonuses would be very different across its varied units, such as real estate and leasing. It had two other concerns: the difficulty of measuring junior transactors' bottom-line contributions, and the barrier different bonus practices could present to cross-training.

The solution: Pay highly competitive salaries to MBAs in their first few years and keep them on a division-wide bonus averaging 10% to 20% of base.

Then, put them on a business-unit bonus plan after two or three years of rotations, when they are established in a business unit. Finally, slow base salary growth and eventually cap it – allowing bonuses to determine future pay growth.

The benefits realized from this approach included dramatically lower turnover and enhanced cross-training efforts.

Lesson No. 2: Competitive Positioning

A second lesson concerns determining the proper competitive framework and pay position versus that framework – that is, who should we compare ourselves with? Should we pay more, less, or the same?

Some of Wall Street's pay problems result from vague definitions of "competitive." A typical refrain among investment bankers is: "We need to pay like the bulge-bracket firms."

Instead, they should be asking questions such as: With whom do we compete for deals? What caliber of people are we hiring? To what firms have we lost people in the last few years? How does our performance compare with others?'

Answering these questions helps establish the appropriate framework and positioning policy. For example, a leasing company considered its business and people competitors to encompass a wide

ROBERT H. MARCIN
Group Senior Vice President
First Nationwide Bank

Robert H. Marcin joined First Nationwide Bank in September 1989 as group senior vice president and human-resources director.

Prior to joining First Nationwide Bank, Mr. Marcin spent 16 years at Ford Aerospace, where he held various management positions in personnel relations, compensation, and industrial relations.

His last position at Ford Aerospace was executive director, employee relations and external affairs office.

Mr. Marcin holds a BS degree form State University of New York and an MBA from California State University at Hayward.

Competitive

Continued from preceding page

ees of their own functional planning work. All employees contributed their ideas to implementation of the strategic direction in work team meetings.

This process resulted in the establishment of our final people objectives:

1. Build the bank through internal career planning, management development, and selective external recruiting.

The focus of this objective has much to do with changing the culture from a historically small thrift to a nationwide savings bank. This is a compound objective that began with an inventory of our skills and talents on board through our succession-planning process. Where no replacements are identified, the officer-hiring process was enlisted to fill the void.

2. Define, communicate, and launch a major component of First Nationwide University.

To gain capability and implement change in our strategic direction, we established First Nationwide University. We rolled out major training initiatives supporting the strategic direction and reinforcing people as our competitive advantage.

Examples include:

• A quality customer service program cascaded by human resources trainer/manager teams, developed in conjunction with line organizations and setting of quality standards and recognition and reward programs.

• A teller training program designed by human resources with line-manager advisers and signoff.

• New-product training through computer-based programs designed by functional experts.

• Process-improvement-team training and consulting support for dealing with cross-functional problems impeding accomplishment of strategic objectives.

3. Establish a compensation program based on rewards for performance.

We believe it was necessary to establish a compensation philosophy with the active participation of the top management group. We "mongrels" wanted to become "thoroughbreds," at least in our thinking on what we believe compensation can and should do for the motivation, retention, and reward of the work force.

We used two-off site sessions to review compensation issues in terms of pay and benefits, linkage of pay to performance, productivity sharing, etc. The purpose is to have senior management have some ownership in compensation and benefit programs designed by our human resources team.

It also is having an ancillary effect of educating management about the complexity, costs, and effects of a "compensation philosophy." The major shift is orienting the total bank toward a sales culture.

4. Develop an effective bank-wide communication program – delivery, content, less volume.

During any organization change, a comprehensive communication vehicle must inform, educate, encourage, and create a common knowledge base essential for a competitive advantage. As with recruitment, employee communication was centralized and integrated with the business. It is now rolling out with extremely favorable response and contains news-letters, bulletins, vidbos, telephone "news talk," issue letters, and informal management "skip level" lunches.

A Simple Formula

It appears to be a rather simple formula and it is meant to be. The keys to successful implementation without question are the human resources professionals to understand the bank's mission and the strategic direction of business; design the processes to support the strategic direction; and the planning to see it through.

My own role in these processes is to sponsor these activities through the actions and words of our top management team. I see my responsibility to be the catalyst for change; the internal critic, the instigator of culture examination, and often the inquirer of the obvious questions. I am fortunate to have helped build that team; the challenge is to continue to develop the team.

In summary, at First Nationwide, our strategic thrusts are in the areas of customers, our people, our shareholders. The competitive edge in banking is in people serving people, whether externally or internally.

Human resources brings expertise to the workplace in building the cultural framework that links people - management to line, peer to peer, employee to customer.

As key players in supporting First Nationwide's strategic direction we are using strategic planning, training and organizational development, hiring and compensation strategies, to create a clear understanding for the fit of each employee in the success of First Nationwide Bank. □

Wall Street

Continued from preceding page

range of firms in securities, commercial banking, and equipment leasing. But a detailed analysis narrowed the range.

The company had successfully hired from one bulge bracket firm but rarely recruited from the others (thus, only the former made the list). In addition, looking at performance demands and risks as well as the quality of transactor staff suggested different positioning versus the different competitors.

As a result of this analysis, the company decided it should pay less than securities firms, more than other lessors, and roughly the same as banks.

Lesson No. 3: Measuring Performance

Financial firms can be viewed as a collection of highly intertwined businesses. This makes performance measurement difficult and contributes to a traditional focus on top-line – not bottom-line – measures of results. Often the result is overpayment of bonuses relative to overall profits.

A number of approaches have been tried to measure accurately the contributions of business units that jointly produce revenue, but few firms have been wholly successful in solving this dilemma.

For example, one approach is to create a non-P&L tracking system that credits each contributor to a deal with transaction revenue. This double (or sometimes triple) counting minimizes crediting disagreements and supports a team-oriented environment. But it does not help to distinguish the relative contributions of deal-doers.

And "restating" revenues can create the illusion of larger profit margins than actually exist, leading to payout expectations that exceed an organization"s ability to pay.

A second method of measuring performance is transfer pricing – allocating revenues and costs to the units responsible for them. Transfer pricing can more accurately measure relative contributions and it can help keep bonus expenditures within overall means.

On the downside, disputes may erupt over the real market rate for services and, in the worst-case scenario, an organization can become so consumed with measurement that it loses track of performance.

There is a third alternative used by a large investment banking firm. Given the limitations of measurement, this approach may be the most practical.

This firm uses a formula based on overall firm profits to set the maximum size of the bonus pool. It then awards business units and individual bonuses according to discretionary quantitative and qualitative criteria.

The reason? Measurement is so complex that only a judgmental assessment can capture all the nuances of business-unit and individual results.

This approach supports teamwork and largely avoids the problem of aggregate overpayment. Such extensive use of discretion, however, requires frequent and clear communication to prevent participant mistrust from developing.

Lesson No. 4 Managing Expectations

With such difficulty establishing a realistic- yet equitable pay mix, defining an appropriate comparative framework, predicting competitive bonus levels, and measuring performance, it is no wonder the loudest complaints in investment banking and trading revolve around the trauma managers and recipients face in managing expectations.

Discretionary bonuses contribute to the problem. Top management struggles with the appropriate level of aggregate funding as successive management layers try to guess how big the pie will be and how to slice it up to a multitude of deserving transactors.

Since most firms do not have specific performance criteria and expectations linked to business unit funding or individual bonus targets, the bonus process is more akin to negotiation than decision making.

As tough as it may seem, expectations can be managed effectively. It starts with communicating the rules of the game and addressing such questions as: How will bonuses be decided? Who will be involved in the decision? How long will it take? What input do participants have?

The communication goal is for participants to understand what is driving bonus funding – unit profits, company profits, individual performance — and in roughly what proportions.

A successful approach to managing expectations is illustrated by the bonus plan of a large money-center bank. The bank uses a pre-established profit formula to make an overall adjustment to an aggregate target bonus pool. Then business-unit and individual performance adjustments are based on quantitative and qualitative measures such as revenues, milestone achievement, cost control, and productivity.

Participants know the range of the corporate and business unit adjustments, and can reasonably estimate the impact performance at each level will have on their awards.

The process is further strengthened by linking individual objectives to business-unit and corporate goals drawn from the business strategy and a series of key success factors (what needs to happen to execute strategy). Ongoing feedback and the yearend performance assessment are based on achievement against these objectives, forming the basis for bonus payouts.

Lesson No. 5 Integrating Bonus Planning With Business Planning

Perhaps the final and most important lesson Wall Street teaches is the cost of not integrating bonus planning with business planning. Traditionally, bonus accruals have been managed at firmwide levels rather than at the business unit, to avoid raising expectations. Unfortunately, firms playing bonuses close to the corporate vest forgo the opportunity to link bonuses to the drivers of value in the business, give clear signals to talented performers, and maximize returns on their bonus investment.

One way to integrate bonus and business planning is to view compensation as "capital" to be used for building and maintaining the firm's talent base. When compensation (and particularly bonuses) is viewed as a capital expenditure, firms are able to make bonus funding decisions on the basis of where they are most likely to get an adequate return on the investment of bonus capital.

For example, a business that needed to increase staff but expected higher profits would need more bonus capital, and should get it. Another business unit's bonus fund could be subsidized if the unit is not yet profitable but is central to the business strategy. The decision to subsidize will help attract and retain the level of talent necessary to grow the business.

The subsidy for the business could be taken from another unit that is a poor performer and provides an asymmetry with other businesses. Poor performers would be "starved" of bonus capital until they became more competitive (i.e., by cutting back staff or pay levels, or increasing contribution).

The key is to manage bonus investment, or disinvestment, around the returns each business generates and their bonus "capital" requirements – a process not unlike the capital budgeting techniques widely used today.

Summing Up

The dilemma of bonuses suggests no easy answers for financial services firms competing in traditional Wall Street businesses. Powerful competitive forces argue for large bonuses to attract and retain talent.

Yet the potential exists to lose control of bonuses with obvious consequences for the bottom line. But the solution is within reach: carefully assessing competitive requirements, tightly managing performance, and focusing on the return on bonus capital.

The payoff for financial services firms that implement this solution is success in attracting, motivating, and retaining talented transactors without sacrificing long-term viability.

VINCENT C. PERRO
Principal
Sibson & Co.

Mr. Perro's consulting experience encompasses executive compensation, sales management, incentive-plan design, organizational analysis and development performance management, and pay-strategy development.

Mr. Perro has consulted for a variety of manufacturing, service, and financial corporations. He has been particularly active in assisting banks, securities firms, and service firms in addressing their unique human-resources needs.

Prior to joining Sibson & Co., Mr. Perro spent six years with E.F. Hutton & Co., where he served as vice president and chief administrative officer of the firm's public-finance division. He was responsible for all administrative matters, including strategy and business plan development, accounting, and professional staffing.

Earlier, he was a vice president of personnel for Hutton and was responsible for exempt and non-exempt staffing, university relations, human-resource information systems, manpower planning and development, employee relations, benefits planning, and employee communications.

Before Hutton, Mr. Perro served as a personnel generalist with the Federal Reserve Bank of New York and held management positions at Saks Fifth Avenue and R.H. Macy & Co.

Mr. Perro has an MBA degree from New York University and a bachelor's degree from City University of New York, summa cum laude. He is a frequent speaker on human-resource management issues for industry groups.

Linking Human Resources to Success in Middle-Market Lending

By Richard P. Semler

The success of companies in all industries is directly connected to the effectiveness of the link between business strategy and human resources capabilities.

To be successful in the 1990s, financial services companies are recognizing that diverse business units need to align human resources strategy (recruiting, selection, training, career paths, and pay) with the unique needs of each business. This is particularly true for banks doing middle-market lending, where the capabilities and activities of the people, and their aggregate cost, are a critical factor in both the production and profitability of business.

Local banks must concentrate on growing local talent. Close customer contact and strong community standing are essential to business development and credit control at this level.

As straight lending to major corporations declined through the 1980s, the area of middle-market lending has become a key priority for many banks, regardless of size or locality. Spreads are still good in middle-market lending, and expenses are relatively controllable and relatable to profit.

It's a hot market – although not a sure thing. Several major banks have made a series of false starts in the middle market. Penetrating this market requires a specific strategy attuned to the specific market segment in which the bank operates, and reflecting the bank's existing capabilities.

Business strategy in middle-market lending hinges on the environment and on the capabilities of the organization. Six factors are primary determinants of strategic positioning:

- Geography, particularly the existence (or lack) of a branch system.
- The existence (or lack) of various merchant-banking functions.
- The extent and type of competition.
- The specific customer base and needs.
- The bank's culture, and its compatibility with the targeted segment of the market.
- The existence and strength of skills in credit, developing and managing relationships, cash management, financial analysis, advisory and structuring services, and risk assessment.

Conceptually, these factors translate to three primary market segments, which represent the primary positioning possibilities for middle market lending: 1) the national market segment, 2) the regional market, and 3) the local market. These segments do not define banks, but market opportunities and approaches – particularly since some larger banks will have different strategies against each of these three markets and may operate in all three.

Let's look at these market segments and the unique factors of each that translate into strategy. We will also look at how each business strategy suggests effective human resources strategy.

Market Segments

The local market is characterized by smaller companies ($1 million to $50 million in revenues) with customers who are driven by stable relationships and basic lending needs. Competing in this market segment typically requires a concentrated geographic presence, a credit culture, relationship-based lending, and controlled risk.

Margins are good, but the business is people- and time-intensive – meaning that costs can quickly erode profits. Appropriate strategy for pursuing local accounts typically hinges on stable relationship lending supported by intense local calling efforts and a strong branch and credit service network.

In contrast, the national market's typical clients are $100 million to $300 million in revenue, and may be characterized by HLTs, off-balance-sheet finance, or other value-added services. Because this market segment consists of comparatively few highly profitable deals, a branch presence is largely irrelevant and deals are typically pursued by a small staff of experts in specific locations.

This market is characterized by a "deal" culture, a capital-markets capacity, and a high tolerance for risk. Fees (and margins) are high, as is the price of the expertise required and the risks to be managed.

Servicing such a market calls for highly focused rather than broad calling, a primary emphasis on specialized fee-based services (with credit services secondary), and superior capability in risk assessment.

Regional market segments fall somewhere between the two ends of this middle-market spectrum. Banks may focus regionally more toward local relationship markets or toward national "deal" markets.

In our experience, the most successful regional market players focus primarily on the $5 million to $75 million companies (the core middle market) while doing the higher-end deals as a smaller part of their business.

Strategy at the regional level often requires the ability to combine elements of local and national markets – relationship lending with some corporate finance, local calling with centralized specialized services, and strong credit services with some fee-based corporate-finance products and services. The integration of these often determines ultimate success.

Recruiting Profile

What kind of human resources profiles do these strategies dictate?

Local banks must concentrate on growing local talent. Close customer contact and strong community standing are essential to business development and credit control at this level.

Typically, account officers are recruited from local colleges at local pay rates. Success in the local market does not demand Harvard MBA calling officers; in fact, such a profile could be a disadvantage.

Banks operating in a national market need to recruit undergraduates from the top business schools and/or second-tier MBAs, and they need to offer pay competitive at that higher level. Since corporate-finance-related skills are critical, national-market banks pursue midcareer hires from the top end of the regional banks, other national banks, and investment banks. A willingness to relocate should characterize most of these hires, since they must go where the "deals" are, and upward mobility will typically requires transfers among small offices in various geographies.

A regional-market bank's hiring profile would lean more toward the local level (to capitalize on the local branch presence and smaller to midsize companies) with some aspects of the national market. Typically, successful regionals recruit a mix of local BAs and MBAs as well as midcareer hires possessing specialized skills.

A key factor in linking human resources strategy to business strategy is using the competitive environment to advantage in designing programs.

The integration of these contributes to successful retention. For regional-market banks both paths may be open, but crossovers between the larger local-market effort and the smaller, specialized effort typically become an issue because of the different pay, experience, and training of the individuals.

Compensation

Compensation must both reward and motivate the behaviors key to realizing strategy within these different markets, and compensation cost must be related to the differences in the markets. This is where banks sometimes go wrong.

At the local level, pay should compete primarily with the going local market. Since individuals have less impact on a given deal, and more on the sum total of relationships established over a long period of time, pay vehicles must reflect this.

Typically, salary is emphasis on credit usually required in the local segment. Exceptions to this are where the selling process has been split out and leveraged sales incentives exist for those officers who strictly sell, or where sound account- and product-profitability systems, with risk adjustments, are in place.

National-market banks must compete with the top end of the market and must largely compete nationally. Pay is driven by the ability to do the deal, and all too often by internal comparisons with the corporate-lending or corporate-finance units.

To compete for and fully utilize these specialized skills, incentives are a key leverage point for pay. Essential is the potential for significant upside opportunity when performance contributes directly to the bottom-line result.

An often-neglected corollary – that pay declines steeply when profits drop – is equally important. Incentives recognize and reward risks inherent in the mode of operations and the control of those risks.

Regional-market banks, on the other hand, emphasize incentives with variable opportunity and leverage for different market segments and different business mixes.

Competitive Environment

A key factor in linking human resources strategy to business strategy is using the competitive environment to advantage in designing programs. For example, local-market banks compete best on local presence, sustained relationships, and service for basic credit needs. This competitive environment demands career-oriented people.

For regional markets, the major human resources challenge is to meld the relationship-driven local-market culture with the deal-driven transaction culture. It is difficult to retain top performers and equip them with credit and relationship skills as well as the more advanced finance abilities.

As accounts begin to grow in

RICHARD P. SEMLER
Associate Practice Leader, Financial Services
Sibson & Co.

Richard P. Semler specializes in linking business strategy to human resources issues within the financial services industry, with particular emphasis on executive and incentive compensation and organizational strategy.

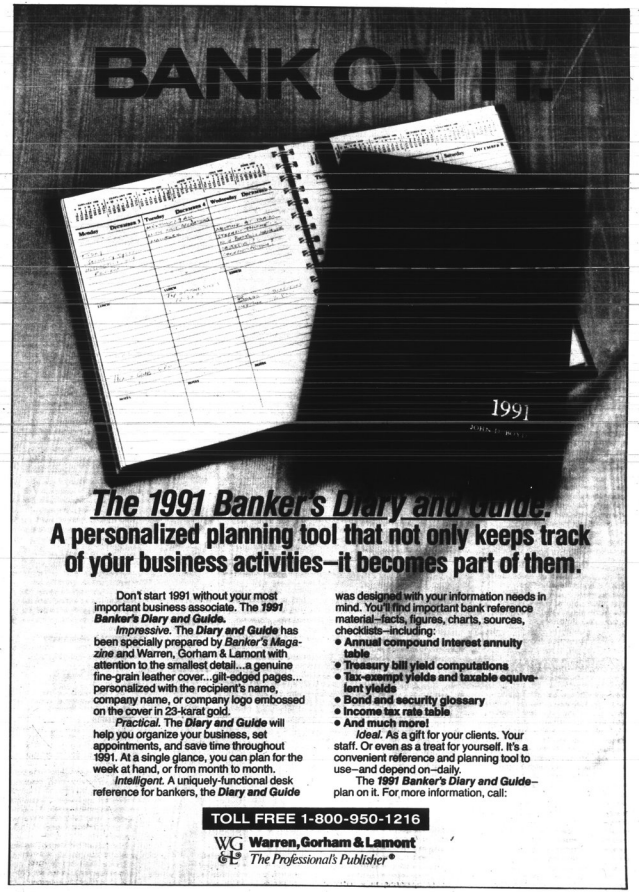
He has assisted in developing human resources and compensation programs for middle-market lending at a variety of large and midsize banks on both coasts.

Mr. Semler focuses on all areas of financial services, where he develops programs to support diverse strategies in large and small commercial, investment, and savings banks, insurance and brokerage companies.

Prior to joining Sibson, Mr. Semler was director of financial services consulting for the Hay Group, based in Los Angeles. His corporate career includes six years as a Citicorp vice president, heading worldwide corporate and executive compensation and U.S. regional human resources.

He has managed compensation and human resources functions in both the manufacturing and insurance industries, including Continental Insurance and MONY.

Mr. Semler is a frequent speaker on issues relating to the financial services industry, human resources management, and compensation planning. His speaking engagements have included the American Program Bureau, the American Bankers Association, and various professional organizations on both coasts.



3 Simple Steps Can Help Improve Service Without Raising Costs

By James J. Juliano

Customer service, productivity, and cost containment are a greater concern than employees, say senior-level bank managers in a recent survey conducted in New York by Chatham Consulting Group.

These managers, all employed by major banking institutions throughout the United States, rated "process" – which includes service, productivity, and costs – above employee training, employees' contribution to the bottom line, and organization of work. In fact, employees were ranked last, also behind increasing revenue and introducing new products.

Therein lies the problem.

Too many times we invest in procedures and programs, only to forget the most vital element – the institution's employees. The only way to improve service while reducing costs – the only way to increase revenues significantly over the long haul – is to have a well trained and highly motivated staff working efficiently.

In the past, attempts to create improvements through employee programs have often failed. Efforts such as industrial engineering, time management, and reward programs have ultimately been unsuccessful because they were unfocused. These programs centered on the speed of the individual, when they should have centered on the handling of the work itself.

Our survey listed 10 issues, ranked in order of importance. They were then grouped into the categories of process, work, and people – illustrating bankers' managerial priorities.

The manger's priority should not be a new procedure, policy, or plan. Rather, the manager should focus on the staff needed to put the new program into practice. The following steps can help increase service without raising costs.

Three Steps to Cutting Costs And Improving Service

First, examine the organization in depth. Look at who is doing the work. Second, streamline the work process. Observe how the work is being done. Third, make certain the staff is well trained to perform its new work processes.

At a major savings bank with branches throughout the New York metropolitan area, our mission was to improve profitability and customer service at the bank's headquarters. Our approach can be illustrated by looking at two functions that were streamlined: processing mortgage payments and processing mortgage applications.

During the assessment period, we discovered that mailed mortgage payments had to pass through both the real estate and finance divisions. The responsibility was so split that one department was receiving the payment and completing the ticket, while another division was posting the payment. In the consulting business it's called process fragmentation.

When a customer sent in an amount different from that on the preprinted ticket, the two divisions didn't know what to do. They wound up discussing the problem at length, since there was no set policy for this matter – even though it arose frequently. In addition, it was astounding to discover that this simple transaction typically involved up to four clerical persons and four supervisors.

In the mortgage-applications division, the fragmentation was so great that there were 27 handoffs – 27 handling transactions – between the application and the closing. If a customer had a question about his/her application, or merely wanted a progress report, the bank was often unable to give a satisfactory answer. Often it was even unable to find the paperwork.

Rooting Out Inefficiencies

In short, because too many units were involved in providing service, less service was being provided. Because the work flow was organized inefficiently, the same task was being done over and over.

In examining the process, the first inefficiency noticed was that the two departments working on the loan documents were six floors apart, which meant that both areas

Because too many units were involved in providing service, less service was being provided. Because the work flow was organized inefficiently, the same task was being done over and over.

were spending a good part of every day riding the elevator. Step one, then, involved moving the operations people to the lending floor. Productivity began to improve at once.

In fact, almost immediately we saw that people were beginning to run out of work, because they had recaptured all of that time previously spent listening to the Muzak in the elevator.

Ultimately, we used the individual workstation approach here as well – merging these two functions together. One person was given the whole loan processing effort for a specific part of the world. The workers adjusted quickly and happily to this reallocation of effort.

The most amazing aspect of the new system was a truly remarkable change in worker attitude – something that can only be explained by pride in work.

ward recorded savings by the bank of $1 million by January 1990, with anticipated savings of $2.5 million by June 1990.

In another instance, we were called into the international loan-operations department of one of America's major banks. The goal again was to create a solid and profitable service environment while cutting costs.

Before, we had always seen clerical workers referring to "the bank's customers." Now we began to see them speaking of "my customers." They were speaking with genuine pride and concern.

These people were proud because they were in control of – there's that word again – the process.

Yet, when we introduce our cross-training approach to some managers, we hear the same objection: "But clerks always say, 'your idea just won't work. I'll bet only 50% of this department's employees can be cross-trained successfully ."

Our response to that is: "Good. If 50% can be cross-trained successfully, then you won't need the other 50%." Given the growing shortage of skilled labor, such streamlining of effort is going to become essential – there simply will not be enough people to fill all the jobs.

While the single-workstation solution is far from the only one we propose when handed the mission of making businesses more productive, it is an important one, because it:

- Reduces costs, as required by current pressures to keep overhead down.
- Helps to solve problems created by today's shortage of skilled personnel.
- Creates improved service since fewer people are involved in a transaction.

Of course, the larger solution to procedural problems in business is careful implementation of a three-step approach – examining the organization, streamlining the process, and implementing and training the workers in that process.

When those three steps are successfully completed, workers are motivated and happy. And management is well on its way to its goal of service improvements and cost decreases. □

JAMES J. JULIANO
Principal
Chatham Consulting Group

James J. Juliano is principal and cofounder of Chatham Consulting Group. He is responsible for the firm's consulting services.

Prior to forming Chatham in 1985, Mr. Juliano held senior-level operations positions at J. Aron & Co., a division of Goldman, Sachs & Co., including director of administration and chief of staff, reporting directly to the managing partners.

From 1974 to 1982, Mr. Juliano specialized in operations at Citicorp. Mr. Juliano held department-head/vice-president positions in operations and finance at Citibank.

In 1979, he cofounded Citicorp's Operations Consulting Services with John Campi. The management-consulting subsidiary provided customer banks with guidance on how to improve productivity.

Mr. Juliano graduated from the State University of New York at Stony Brook in 1970 with a BA in German. He learned the consulting business when he joined Brooks International Corp., Westwood, N.J., first as a consultant and then as a project supervisor.

Mr. Juliano is a member of the advisory board of Harriman College of Management and Policy at Stony Brook. He frequently lectures on productivity at meetings of the American Bankers Association and the American Society for Performance Improvement.

Middle Market

Continued from page 16

size, they will also begin to require more sophisticated products and services, and the same individual can seldom handle both.

The very large banks typically compete in all markets (more or less successfully). They may compete as locals or regionals in their home markets, and also with other nationally oriented banks or the investment banks, both in and out of their home markets.

To be successful, they need different human resources strategies for each market. A critical challenge for a large bank is to measure the contributions of different people to transactions and to relationships. Once measured, pay – particularly incentives – must be structured to deliver awards that differentiate for performance, reward for controlling risk, and are competitive with regional, national, and investment bank challengers as appropriate.

The bottom line: Success in middle-market lending demands a careful analysis of who the competitors are, what the customers need, and what present and future skills will keep those customers coming back.

The next step is to align recruiting efforts, selection methods, career opportunities, and pay with business strategy. The aim is to attract, motivate, and retain individuals with the know-how and ability to secure and sustain middle-market account relationships at a profitable level.

It's a tough world in middle-market lending. But the competitor with the best business and human resources strategy will usually have the best returns, because capacity, skills, and costs are grounded in reality.

Executive Compensation in the '90s: Focus on Shareholder Value

By Rose Marie Orens

Fierce competition and wide-spread consolidations will characterize banking in the 1990s.

Overcapacity will result from the entry of foreign banks, non-bank financial firms, and consumer-oriented finance companies into areas traditionally held by banks. This will cause banks to vie for quality borrowers and deposits.

As industry restructuring continues, megamergers are likely. Banks with the highest market to book values will have tremendous opportunities to grow and reap future profits.

Banks that manage for shareholder value will survive. Others will decline or disappear.

Shareholder Value

Executive reward systems are a key factor in achieving desired growth. As traditional approaches are reexamined, executive compensation programs may need to be reshaped to build in shareholder value.

Short-term incentives will drive shareholder value creation by extending these incentives from senior management through to the functional and business-unit levels and by selecting performance measures and rewards that accurately reflect profitability and are meaningful to all participants.

Long-term incentives, which will also be extended further into the organization, will stress commitment and align management and shareholder interests by encouraging management to own and hold stock. All of this means more pay at risk.

What constitutes shareholder value? Shareholders receive value from share price appreciation and dividend payments.

Theoretically, if executives are given stock options with opportunity to buy shares at a fixed price over time) and dividend equivalents, this should align management and shareholder interests. Unfortunately, it's not that simple.

We have learned that executives' interest in stock options vacillates with overall market conditions. When stock market performance was poor in the 1970s, executives realized that since they had no real control over external market forces, incentive programs should focus on more meaningful internal indices of performance.

Thus, performance plans (contingent awards of cash or stock based on three- to five-year internal goals) grew in popularity. When the Dow Jones hit record highs in the early and mid-1980s, executives were more willing to accept risk and once again favored stock options.

Following the crash of 1987 – and, in financial institutions, the specific problems of LDC debt, bad real estate loans, overcapacity, and the turmoil in the thrift industry – executives are again becoming averse to risk and are looking for safer incentive arrangements, often in the form of restricted stock awards and megagrants of stock options.

Problems with Stock Grants

The problem with restricted stock awards and mega-option grants is that they can reduce the risk associated with lackluster performance. Restricted stock, which is an outright gift of stock for which the executive must simply remain with the company, can be highly profitable to an executive even though over time the stock price increases only modestly or even declines over the vesting period. And the stock pays dividends, as well.

If the size of the option grant is large enough, even small increases in stock price (i.e., no greater than a risk-free rate of return on a passbook savings account) can deliver significant wealth to an executive. We should also note that performance plans that pay out in cash are also problematic in that management can be rewarded for results that are not reflected in shareholder gains.

Compensation plan designers have also been creative in ways that have encouraged executives not to own stock but at the same time to reap benefits from stock-price increases. Stock-appreciation rights, which are typically offered in tandem with options, allow executives to take the appreciation in stock price instead of exercising (i.e., buying) the shares under option with their own money.

Another arrangement, the "cashless exercise" of options, permits an executive to finance the purchase of shares through a margin account with a broker. This also results in cash for the executive but not shares, since under a cashless exercise, a significant portion of the exercised shares are almost always sold immediately to pay for the exercise costs and the taxes due.

In actual practice, executives typically sell all the exercised shares and pocket the cash. In addition, by eliminating preferential tax treatment for long-term capital gains, recent changes in tax laws have further eroded the incentive to hold on to shares once exercised.

Thus, as we enter the 1990s, many long-term incentive plans in banks attempt to target stock-price appreciation – thereby aligning shareholder and executive interests – but are not successful at building a long-term commitment through significant stock ownership.

Challenges for the '90s

In the 1990s, senior management and compensation planners will need to reestablish the link between the elements that contribute to upward stock movement and executive reward systems. Only through direct ownership can the organization ensure that management's actions will parallel shareholder interests.

This will best be done by creating a combination of truly long-term incentive plans balanced by some shorter-term opportunities.

The first step is to emphasize the "long term." While a stock option has always been viewed as a long-term incentive because the term of the option can last as long as 10 years, institutions have in fact so reduced the vesting period for options (25% or 33% a year is typical) that they have become in fact short-term incentives.

In some cases, options vest immediately. A short vesting period encourages executives to focus on the short term and enables them to take advantage of short swings in stock price or, even worse, to exercise and sell the options and depart without leaving anything on the table.

Some attribute these shorter exercise periods to legislation aimed at capping the windfall gains executives can potentially receive from a change of control (golden parachutes). Under these regulations, accelerated vesting of long-term incentives may be subject to additional taxation while already vested shares will not.

Nonetheless, the shorter vesting periods we see today clearly contribute to the thinking that "there's always more where those came from." In order to emphasize the long-term focus of these programs, exercise periods will need once again to be longer.

Restrictions on Awards

To encourage ownership further, banks may also want to attach restrictions on exercised stock, a trend we are beginning to see in the large manufacturing companies. For example, any shares delivered beyond the purchase price may be in the form of restricted shares. Or executives may be encouraged to hold their shares by granting them restricted stock opportunities along with options.

An executive could be offered a share of restricted stock for every three option shares exercised. The restricted stock would vest in three years provided the optioned shares are still held.

Added Requirements

In addition to attempts to encourage more direct ownership, added performance requirements may also be built into long-term incentive programs in a variety of ways. Particularly where large or "megatype" awards are being made, some companies have added a feature that calls for increasing the exercise price of stock options

ROSE MARIE ORENS
Senior Manager
Peat Marwick

Rose Marie Orens is a senior manager in Peat Marwick's New York management consulting department's performance and compensation management practice.

She has worked extensively in the areas of executive compensation, sales compensation and salary management in a wide variety of companies with specific concentration in the financial services industry.

Ms. Orens' extensive involvement with financial service firms has included the design of short- and long-term incentive programs for investment banks, mortgage banks, commercial banks and thrifts, including the selection of appropriate performance measures, eligibility, size and type of awards, and review of key accounting and tax implications.

She has also specialized in the design of functional incentive plans that cover distinct business groups such as commercial lenders, private bankers, traders, investment professionals and staff.

Peat Marwick's practice focuses on identifying the key business strategies and objectives that need to be reinforced in compensation planning to ensure that compensation is appropriately linked to business results as well as competitive practices.

Ms. Orens received a BA from Boston University and an MBA from New York University Graduate School of Business Administration. She is a faculty member of the American Compensation Association and teaches the Certification II Executive Compensation Program.

She is a frequent speaker and has been quoted in the press on topics in the executive-compensation field. Ms. Orens currently teaches a graduate course in executive compensation, short- and long-term plan design, at the New School for Social Research graduate program in New York City.

She has also coauthored an article entitled "A Case for Considering Performance Shares If Your Strategy Calls for Stock Grants" which appeared in Compensation & Benefits Review, and an article on "Strategic Compensation" which appeared in Mortgage Banking Magazine.

Shareholder

Continued from preceding page

to ensure that shareholders are receiving a minimum return on their investment before executives can participate in any appreciation.

This approach may appeal to banks in which stock prices are depressed and management may feel uncomfortable granting options at such depressed prices.

As bank managements attempt to build more risk into these programs, other devices and modifications to traditional long-term incentives may become popular. These may include adding performance criteria to the option exercise or to the vesting of restricted shares.

We will also see features added to existing plans to encourage ownership, such as qualified stock purchase plans, stock-for-stock exchanges, reload arrangements for stock surrendered through stock-for-stock exchanges, dividend equivalents, and the payment of short-term incentives in the form of stock or restricted shares.

Reeducation Needed

As senior management and human resource professionals in the banking industry come to realize that "ownership" encourages long-term thinking and maximizes shareholder value, they may have to reeducate executives as to their specific roles in achieving business objectives.

This will entail reviewing the bank's philosophy on share ownership and revising the performance measures currently used in all the bank's short-term and long-term incentives. This would include incentives for corporate as well as for the various business units.

> Many long-term incentive plans in banks attempt to target stock-price-appreciation but are not successful at building a long-term commitment through significant stock ownership.

While traditional management incentive plans are often based on accounting earnings or EPS, measures of cash flow and return on capital may be better indicators of value creation. At the business-unit level, line-of-business profitability analyses will identify the true contributors and allow management to compensate them accordingly.

In conclusion, while shareholders and boards of directors recognize that management talent does not come cheaply, they are coming to demand results for these levels of pay.

The challenge for the 1990s will be to build programs that deliver shareholder gains and thereby create a true sense of partnership between management and shareholders. Value-based incentives and stock ownership are the key vehicles to get there.

AMERICAN BANKER *Proudly Announces*

THE ONLY INDUSTRY SOURCEBOOK THAT MATTERS...

Banking On Top Bankers-1990

THE INDEX FOR THE 90'S

WHAT EXACTLY IS BANKING ON TOP BANKERS?

IT IS A 6"BY 9" BOUND SOURCEBOOK THAT GIVES YOU THE TOP 1000 BANKING PROFESSIONALS AT YOUR FINGERTIPS. THE BOOK IS COMPRISED OF THESE INDUSTRY LEADERS' CAREER HIGHLIGHTS, BIOGRAPHICAL INFORMATION, PHOTOGRAPH, ADDRESS, PHONE NUMBER AND OTHER ESSENTIAL INFORMATION.

THE THREE "EASY TO USE" SECTIONS INCLUDE:

I. TOP BANKERS BY PROFESSION

• BANKING ELITE • TOP BANK ANALYSTS • TOP STATE REGULATORS • • BANKERS TO WATCH • TOP BANK LEGISLATORS • TOP BANK LAWYERS • • TOP INVESTMENT BANKERS • TOP FEDERAL REGULATORS • • TOP BANK CONSULTANTS •

II. TOP BANKERS BY AREA OF EXPERTISE

• ASSET SECURITIZATION • COMPLIANCE • FIRRE ACT • RETAIL BANKING • • BALANCE SHEET MANAGEMENT • CORPORATE RESTRUCTURING • • INTERNATIONAL BANKING • THRIFT SURVIVIAL • CAPITAL GUIDELINES • • COST CUTTING • MORTGAGE-BACKED SECURITIES • TECHNOLOGY • • COMMERCIAL LENDING • ESOP'S • BANK RESTRUCTURING •

III. LISTINGS

• TOP COMMERCIAL BANKS • TOP INTERNATIONAL BANKS • • TOP THRIFTS • TOP COMMUNITY BANKS • STATE BANKING ASSOCIATIONS •

WHY SHOULD YOU ORDER A COPY?

BECAUSE WE HAVE DONE ALL OF YOUR RESEARCH FOR YOU. SO NOW YOU DON'T HAVE TO SPEND COUNTLESS DOLLARS FINDING LEADING BANKING PROFESSIONALS TO ANSWER YOUR QUESTIONS. ALSO, NO OTHER SOURCEBOOK GIVES TO YOU THE TOP BANKING PROFESSIONALS BY AREA OF EXPERTISE AND SUBJECT CATEGORY.

SO ORDER **BANKING ON TOP BANKERS** TODAY. THE SOURCEBOOK THAT IS "CHOCK FULL OF INFORMATION, NOT CHOCK FULL OF AD'S".

TO ORDER OR TO FIND OUT MORE INFORMATION: CALL US AT (212) 943-2221 OR MAIL IN THE BELOW ORDER FORM. PURCHASE MORE THAN 1 BOOK AND RECEIVE A 20% DISCOUNT.

For Shame, Chairman Greenspan!

By SANFORD ROSE

The idea that banks should be asked to raise still more equity capital – an idea floated by Fed Chairman Alan Greenspan during recent congressional hearings – has to be considered one of the most palpably absurd notions to come down the pike in recent memory.

It is of course true that equity functions as a sort of insurance deductible, reducing the residual risk of loss to the Federal Deposit Insurance Corp. So it is natural for regulators to clamor for as much equity as they can get.

But the regulators should understand that there is a close connection between safety and profitability, and that in the long run unprofitable banks pose the greatest danger to the insurance fund.

Comment

It makes sense to ask banks to raise capital only if that capital can be employed at a suitable rate of return. Some banks claim that they don't want to raise equity because their stocks sell at a discount to book values. But that is not a very good reason. If the rate of return on incremental business opportunities promises to exceed the cost of the new equity, then the capital should be raised, regardless of the bank's current market-to-book ratio.

But there's the rub. Many bank stocks have sold and some still sell at a discount to book values because these banks' average returns fall short of the opportunity cost of shareholders' equity. And what is true on average is even truer at the margin.

Paucity of Opportunities

There just aren't enough new opportunities to invest capital funds and monies leveraged thereon in good-earning assets, defined as assets that yield a risk-adjusted, match-funded return on equity of at least between 13% and 15%, a range that approximates the cost of equity in many bank businesses. [That cost reflects (1) the return on riskless assets, (2) the excess return over the riskless rate demanded by equity investors, and (3) the individual riskiness of the business in question.]

Since suitable rates of return are unavailable, any incremental capital that may be acquired will be invested suboptimally, with the result that the market value of bank equity will fall further, encouraging managements eventually to embark on much riskier strategies in an effort to

Tax Breaks Seen Giving NCNB An Unfair Edge in Texas Market

By STEVE KLINKERMAN

DALLAS — Outrage is growing in Congress and around the country about the tax subsidies granted to buyers of failed thrifts. But the biggest giveaway of all may have involved a commercial bank.

NCNB Corp. of Charlotte will probably avoid paying some $950 million in taxes over five years as part of a 1988 agreement to take 40 failed First RepublicBank Corp. banks off the hands of the federal government.

The potential size of the tax breaks was known when NCNB acquired the Texas units. But now that the subsidies are kicking in, some competitors have started contending that NCNB has been given an unfair advantage – and is using it to trample its rivals.

With its profits largely shielded from taxes, NCNB has become a Texas bully, paying higher rates for deposits, charging lower rates for loans, and bidding more for acquisitions, these critics contend.

Predatory Pricing Cited

"The government has created a monster," says Chris Willis-ton, president of the 900-member Texas Independent Bankers Association. "The tax breaks allow NCNB to engage in predatory pricing, and it is having

Fleet Drops Bid to Buy Maine Bank From BNE

By TOM LEANDER

NEW YORK — In a setback to Bank of New England's efforts to raise much-needed capital, Fleet/Norstar Financial Group said Monday it had withdrawn from negotiations to acquire the company's Maine National Bank unit.

Fleet declined to disclose the reasons for dropping its bid, but analysts said negotiations were terminated after the company refused to pay more than the unit's $62 million book value. However, Fleet officials left open the possibility that negotiations could be reopened.

"To conclude that negotiations could not be revived is wrong," said Robert Lougee, Fleet's investor relations officer.

Stock Not Affected

A Bank of New England spokesman was not immediately available for comment. The company's stock closed Monday at $2.25, unchanged.

Boston-based Bank of New England is actively trying to sell assets, including its Maine and Rhode Island units, to raise cap-

Sharp Retreat In Stock Prices Of Major Banks

By GORDON MATTHEWS and FRED VOGELSTEIN

NEW YORK — Major bank and thrift stocks retreated sharply on Monday as the Dow Jones industrial average plummeted over 100 points before closing down 56.44 points.

The broader market fell on weak second quarter earnings by many corporations and concern that interest rates are unlikely to fall further, sending some bank stocks down to new 52-week lows.

In the financial-services sector, declines were paced by the three big government-sponsored enterprises: the Student Loan Marketing Association, the Federal Home Loan Mortgage Corp. and the Federal National Mortgage Association.

Bank and thrift issues did not perform as badly as other stocks, partly because they now trade at only 50% of the overall market on a price-earnings basis and have less room to decline.

But most were off between 50

Under Scrutiny from Regulators, Southeast Banking to Boost Capital

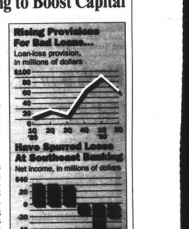
By KENNETH CLINE

ATLANTA — Southeast Banking Corp., the second-largest holding company in Florida, said it had reached agreements with the Office of the Comptroller of the Currency and the Federal Reserve Bank of Atlanta to boost its capital by about $10 million at yearend and to strengthen its real estate lending, credit review, and reserve policies.

Milder Agreements

The agreements are not as stringent as the cease-and-desist orders that regulators use in enforcement actions, and the $15.8 billion-asset company is not expected to have difficulty raising the required capital. But it does face closer regulatory scrutiny as it prepares to usher in a new generation of top management.

Along with the announcement of the regulatory agreement late last week, the Miami-based company said that a former Manufacturers Hanover Corp. sector executive, Douglas E. Ebert, will be its new president and chief operating officer. Mr. Ebert, 44, will be No. 2 to



Charles J. Zwick, 64, at both Southeast Banking Corp. and Southeast Bank of Miami, the

PEOPLE *in the news*

Lane of NCNB Texas Seeks To Win Hearts and Minds

By STEVE KLINKERMAN

Robert Lane has put on his white hat and is out to convince the Lone Star State that NCNB Texas National Bank is one of the good guys.

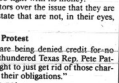
Recently named president of NCNB Texas, Mr. Lane has joined in a corporate crusade to win over the disgruntled Texans who are convinced that the bank has been too tight with its money.

So upset are certain Texas legislators over the issue that they are proposing to tax big banks in the state that are not, in their eyes, making enough loans.

Thunderous Protest

"Instance after instance, people are being denied credit for no good reason, and I blame NCNB," thundered Texas Rep. Pete Patterson in a recent interview. "We ought to just get rid of those characters if they are not going to fulfill their obligations."

A native Texan, Mr. Lane, 52, is not daunted by the emotional outpourings of his fellow citizens. He points with pride to the 8% increase in gross loans recorded by the bank during the 15 months that ended March 31.



Robert Lane

"We've done a good job of lending money, but we don't get credit for it," said Mr. Lane. To spread his message, the executive has begun accepting speaking invitations in the state.

Wooing fellow Texans is only one of the big jobs facing Mr. Lane, who succeeded Kenneth Lewis as president of the bank. The institution, the largest in Texas, has been on a buying spree and has not yet consolidated its acquisitions, which include University Savings Association, Houston, and the failed banks formerly owned by National Bancshares Corp. of Texas, San Antonio.

By November, Mr. Lane wants all 250 of the bank's Texas branches to be operating on a common computer system. Once installed, the statewide system will shave the bank's annual operating expenses by $130 million, Mr. Lane estimated.

Much Training Required

Aside from the technical challenges involved, the conversions entail much employee training, said Mr. Lane. So he is exhorting branch managers to stress customer service during the transition.

"I've been in almost all of our outlying offices, and I have telephone relationships with most of our managers," said Mr. Lane. "You have to keep people's confidence up."

Mr. Lane's ascension to the No. 2 position at the giant Texas bank marks a new career high for the executive, who survived the Texas banking crisis with remarkable aplomb.

He was placed in charge of InterFirst Corp.'s Austin division after that company swallowed First Bancorp Inc., which he led.

After RepublicBank Corp. swallowed the ailing InterFirst, Mr. Lane was named director of general banking for the merged entity. After First Republic failed and was acquired by NCNB , Mr. Lane became group executive vice president in Texas.

"He survived the problems at InterFirst and First Republic and went on to win one of the top posts in the Texas banking industry," said Frank Anderson, a senior analyst with Stephens Inc., a brokerage house in Little Rock, Ark. □

NEWS *briefs*

Equifax to Buy Telecredit

ATLANTA — Equifax Inc. said had it entered into a definitive agreement to acquire Telecredit Inc., a Los Angeles-based payment services company.

The deal has been unanimously approved by both boards of directors and is expected to be consummated by the fall.

Second Quarter Mergers Up 12% from Year Ago

SCHAUMBURG, Ill. — The W.T. Grimm & Co., a unit of Merrill Lynch Business Brokerage and Valuation, said mergers and acquisitions announced in the 1990 second quarter rose 7% to 626 from 584 in the 1990 first quarter and 12% from 561 in the 1989 second quarter.

The second quarter volume, which included the $4.4 billion employee-led bid for UAL Corp., did not offset the 3% dip for the 1990 first half to 1,210 from 1,246 a year earlier.

Advisory Firm Converting To Limited-Purpose Trust

NEW YORK — Offit Associates Inc., a New York investment advisory firm with $2.5 billion of assets under management, said it has received state banking department approval to convert to a limited-purposed trust company.

Morris W. Offit, 53, chief executive of Offitbank, said it would operate like a European private bank. He said he knew of no registered investment adviser that has converted to an investment management bank. While providing trust services to clients, Offitbank will maintain its emphasis on portfolio management. □

Meritor Posts $136 Million Loss

Crossland Had $40 Million of Red Ink for Quarter

By STEPHEN KLEEGE

Meritor Savings Bank said Monday that continued downsizing and restructuring actions led to a loss of $136.8 million, or $3.90 a share, in the second quarter.

Philadelphia-based Meritor had earned $21.2 million, or 61 cents a share, in the second quarter of 1989.

Meritor said some of the latest red ink came from the sale of 54 branches to Mellon Bank, Pittsburgh, and related restructuring. The combination created a net loss of $74.5 million, Meritor said.

The restructuring expenses included a $171.9 million writeoff of goodwill and the loss of $54.7 million from closing out some interest rate swap and floor contracts, Meritor said.

Crossland Loss

Meritor is the latest of several major thrifts to report quarterly losses.

Another large Northeastern thrift, Crossland Savings of Brooklyn, N.Y., had a net loss of $40 million, or $3.64 a share, for the quarter just ended. The thrift charged $50 million to write down real estate assets to net realizable value.

Crossland had net income of $3.8 million – and a per share loss of 47 cents – a year earlier. It had $12.7 billion in assets on June 30, down from $15.4 billion a year earlier.

Sizable losses were also reported last week by two of the largest California-based thrifts, CalFed Inc. and HomeFed Corp.

Meritor Retrenching

Meritor is in the midst of a retrenchment that began about two years ago when Roger Hillas of PNC Financial Corp. replaced Frederick Hammer as chairman. Mr. Hammer had led Meritor, formerly known as the Philadelphia Saving Fund Society, through an expansion into new regions and lines of business in the early 1980s.

Built-In Losses

"We've been laboring with a built-in loss of $3 million a month representing the cost of securities, $2 million for the amortization of goodwill, and $1 million for excess real estate," Mr. Hillas said.

Mellon paid a $355 million premium for the deposits of 54 Meritor/PSFS offices; the proceeds were used help pay for Meritor's writedowns.

Assets Were Slashed

The sale of branches reduced Meritor's assets by about $5 billion, to $6.9 billion.

"This quarter showed management taking great whacks at the things which bother everybody," said Roger G. Powell, analyst for Alex. Brown & Sons.

Earnings Flat at Bankers Trust

By JED HOROWITZ

NEW YORK — Bankers Trust New York Corp. reported earnings of $174 million in the second quarter, a sum virtually level with its year-earlier profit but 12% better its stellar first-quarter result.

Trading profits remained high, and corporate-finance fees showed signs of a rebound. But the $57 billion-asset company, the nation's ninth-largest banking company, also shared in the credit woes that many of its money-center competitors revealed in earnings reports last week.

Strength Despite Adversity

Bankers Trust's portfolio of foreclosed real estate and other nonperforming assets rose 83% from the end of the first quarter to $119 million. Also, $179 million of its loans to real-estate developers, highly leveraged borrowers, and other non-Third World debtors were more than 90 days past due.

Analysts Impressed

Analysts nevertheless were impressed. Bankers Trust stock closed at $39.50, down 37.5 cents in trading on the New York Stock Exchange on Monday, a day in which the Dow Jones industrial average dropped 56 points.

"Their quarter was one of the more notably strong ones in a very difficult environment," said Arthur Soter, a money-center bank analyst at Morgan Stanley & Co.

"Clearly there is pressure on their asset quality, but the num-

TECHNOLOGY/OPERATIONS NEWS

Interest in High Speed Link Revs Up, Clearing House Says

By JEANNE IIDA

NEW YORK — The New York Automated Clearing House Association says interest is heating up in its high-speed telecommunications link, which it says can reduce bank operating expenses and improve flexibility.

Fleet/Norstar Financial Group Inc., Providence, R.I., is the most recent addition to the service, which has been available for two years. Fleet installed the high-speed line in March, becoming the fourth banking company with such capabilities. The clearing house said it expects other banks to follow soon.

The clearing house provides software, but banks must contract with their local telephone company for the service. That service, with a speed of 56 kilobits per second, has just recently become available throughout the New York area.

A Way to Free Up Lines

Along with cost incentives, banks may view the service as a way to free up overtaxed phone lines. Many banks are finding their telephone lines tied up for hours with incoming transactions because of the New York ACH's move this spring to an all-electronic system. All participants now must be able to receive transmissions electronically.

"Since we went all-electronic banks are on the phones much longer than they used to be," said a Clearing House official.

The New York ACH is one of the few all-electronic ACH systems in the country. Others are the Fed in Arizona and the system run by Visa U.S.A. in some 21 states.

Processing Speeded

Fleet/Norstar said the high-speed link has reduced the time it takes to process Social Security and other payments at the end of the month. It now processes an average of 135,000 government Social Security payments in 45 minutes instead of five hours.

Fleet previously used a slower service – 9.6 kilobits per second – that is still used by most members of the clearing house.

"At the end of the month, [the slower service] was killing us," said David Dube, vice president in charge of computer operations at Fleet/Norstar Service Corp., the processing subsidiary of Fleet/Norstar Bank, Providence, R.I.

Funds Available Quickly

Mr. Dube said the new telecommunications service had helped the flow of government

The bank company finds the high-speed link especially useful when government payments pour in.

transactions, which come at the end of the month. With the old service, funds might not be deposited in customers' direct-deposit accounts until late the following day.

"With the service, "items that need to be available immediately will drop in DDA and savings accounts the same night," said Mr. Dube.

Banks are also saving money by switching to the higher-speed service.

A bank would pay about 86 cents to transfer 10,000 records – a relatively large file – with the high-speed line. To send the same file by 9.6-kilobyte service would cost $5.61, according to the clearing house. □

Speech Recognition Making Gains

Banks Start to Use Systems to Help Their Executives

By RICHARD LAYNE

NEW YORK — Speech-recognition technology, once reserved for science fiction, is finding its way into major banks both in the United States and abroad.

The technology promises to bypass keyboards, allowing high-level managers to speak into their personal computers, order up data bases, and dictate memos. Banking companies, including Security Pacific Corp., are now using such systems as home-banking aids and as super secretaries, and they are exploring other uses.

While speech-recognition systems have been available commercially since the mid-1980s, the initial products could understand only 100 words – and only if spoken slowly.

Improvements in Technology

But the technology has made quantum leaps recently. Dragon Systems Inc., a leading provider of voice recognition technology for personal computers, introduced a system in March that can understand 30,000 words – a smaller vocabulary than found in Shakespeare's collected works.

Dragon, a 30-person computer company in Newtown, Mass., has a contract to supply the system, called DragonDictate-30K, to International Business Machines Corp.

Janet Baker, president of Dragon, said the technology's most common financial application was to accelerate transactions, particularly equity and currency trades. "Doing them by voice is faster than otherwise," she said. "It's better than writing it down and having someone else key it in. The cost of delaying information is high."

With so much of a bank's business taking place electronically, commanding a computer through speech can streamline operations and give executives easy access to computerized information.

"Speech recognition could be significant for banks," said Craig Atkinson, vice president of Manufacturers Hanover Corp. and head of a group that explores emerging technologies. The New York bank is studying the technology for potential use in the bank.

Banks in the United States, Europe, and Japan have already begun to use the technology, according to Ms. Baker. The vice

> **"It's better than having someone else key it in. The cost of delaying information is high."**
>
> **Janet Baker**
> *Dragon Systems Inc.*

chairman and executive vice president at Security Pacific Corp. have recently installed speech-recognition systems in their offices to take dictation and help them use personal computers, a company spokesman said. Citicorp is also reportedly experimenting with the technology.

Potential Untapped

"Speech recognition is not used in any big way in financial services at this point," said Charles W. McDonough, an emerging technologies specialist with Andersen Consulting in Detroit. "But it has promise."

In Japan, consumers can do banking from home via the phone. A Dragon system recognizes simple words and digits, Ms. Baker said, allowing consumers to inquire about their balances and transfer funds with just the spoken words.

At least one U.S. bank is assembling management reports using the technology, said Ms. Baker, who declined to identify the bank.

Translation Is Aided

Two banks, she said, also use the technology to translate documents faster. Translators rarely type. Typically, they dictate their translation to a secretary or into a recorder. The translation is later typed in a computer. With speech recognition technology, a translator can dictate his English translation directly into the computer.

The adoption of speech recognition systems has been hampered in the past by limited vocabularies, by their inability to understand natural speech, and by their inability to understand the speech of several people.

The Dragon system, which consists of software and a special voice processing apparatus, is capable of understanding 30 to 40 words each minute, a pace slower than normal speech but faster than older models. Users learn to pause for a split second between each word.

The spoken word immediately pops up on the screen, along with other words that sound similar. If the first word is not correct, but the third word is, a speaker can select the correct word by saying "choose 3."

Ms. Baker reports that her adolescent son uses a speech-recognition system to produce assigned reports for teachers.

Ms. Baker describes the system as capable of understanding the speech of anyone who uses it. □

COMMENT/*By Barry J. Zadworny*

Thrift Industry Should Not Be Written Out of the Script

Is there any good news about the thrift industry?

Ever since the beginning of the year, and even before that, considerable ink has been given to the problem of the regulators and the regulated.

The articles read like soap operas. Every day an "exciting" development takes place. The thrift crisis seems to offer more drama than "Dallas."

The stage for the thrift industry "soaps" is set in Washington, rather than Southfork or Television City, Calif.

With each passing day, there is some new revelation or statistic that sends shock waves across an already embattled industry. Taxpayers and members of Congress are wondering if there will be any letup. The scripts seem to suggest that the problem will not go away.

Is the Industry Needed?

One question facing the writers of future installments is how much the cleanup will cost the taxpayers. Down the road, attention will shift to whether the thrift industry is needed at all.

Later episodes will zero in on the question of states' rights – that is, whether the states should still have a voice in regulatory matters through the dual banking system.

There is room in this country for a thrift industry. There always will be. The Federal Deposit Insurance Corp. will ask for weak players to leave the field, but the remaining institutions will survive and make important contributions to the housing market.

Tradition Will Continue

Just as in the days of our parents and grandparents, the remaining thrifts will provide a menu of mortgage financing plans to the public.

Americans need to be able to "comparison shop" for their mortgage financing. Being limited to a single financial entity would not help.

Housing Sector Needs Help

I hope that the Bush administration and Congress will not lose sight of the contributions that thrifts have made to the housing market.

Housing is a vital economic indicator. If Americans are denied access to affordable credit or their choice of lenders is trimmed, the real estate market will continue to stagnate.

Housing sales simply are not moving in most areas of the country. Real estate agents worry about whether there will be light at the end of the tunnel within the next 12 months.

When that light arrives – and it eventually will – the real estate industry will need the thrift industry. Doing away with thrifts would only delay the recovery of real estate.

Focus on Mortgages

Thrifts that stuck with home lending managed to stay healthy and keep their names off the FDIC's list of sick institutions. When the FDIC is finished with the shakeout of weak players, the remaining thrift institutions

"It makes little sense for a healthy thrift to pay twice as much for FDIC insurance as a healthy commercial bank."

should concentrate their energies in the mortgage marketplace.

In short, thrifts must return to and stick with the basics that have served them well for more than a century.

The States Are Losing

On the question of the dual banking system, a different script is being written.

Sadly, the states are losing their regulatory authority, and it is apparent that this trend will continue.

I have used the word "sadly" because for many years I have believed that states are better qualified to deal with such issues as branching and mergers than a regulator based in Washington.

Generally, state regulators knew more about the officers and directors running a particular thrift and about the economics and demographics in its market.

Nevertheless, it appears that the thrift bailout law has permanently changed the dual banking system.

There is no retreating to the system we used to know.

The FDIC has a legislative mandate to preserve the safety of its deposit insurance fund. The agency must take swift action, with or without the support of the state regulator, to intervene in any situation that poses a threat to its insurance fund.

Give Parity to Healthy S&Ls

But if the remaining, healthy players are to survive and aid in the recovery of the real estate market, Congress, with the support of the FDIC, should acquiesce to one important regulatory change:

The present inequity in the calculation of FDIC deposit insurance premiums should be eliminated.

It makes little sense for a healthy thrift to pay twice as much for FDIC insurance as a healthy commercial bank with the same level of deposits.

Level the Playing Field

There are many fine people connected with the thrift industry, and they should not be written out of future scripts. Chrysler Corp. came back, and so can the thrift industry.

The playing field has to be made level, and healthy thrifts should not have to pay double for their FDIC deposit insurance. □

CRIME BLOTTER/*By Tom Leander*

Fraud Counts in S&L Buyout

The owner of a California construction company was indicted last week on charges of misleading regulators in his 1986 takeover of Bishop Savings and Loan, Santa Monica, Calif.

Michael R. Goland, 42, is accused of supplying false information about the sources of $1.5 million used for the buyout. In the picture that Mr. Goland allegedly painted for regulators, the money came from a group of 10 investors.

The indictment claims that Mr. Goland deliberately overstated the personal assets of this group, hoping to get quick regulatory approval for the deal.

Actually, a large part of this money – $900,000 – was lent secretly to Mr. Goland by California state Sen. Alan E. Robbins, who later acknowledged that he had received campaign contributions from Mr. Goland.

Mr. Robbins is not under indictment and has cooperated with federal authorities in the investigation of Mr. Goland, according to Assistant U.S. Attorney George Newhouse in Santa Monica.

Mr. Robbins was "not made aware of the details of what he was doing," in his loan to Mr. Goland, Mr. Newhouse said.

The straw group of investors was assembled by Mr. Goland and a codefendant, Clifford A. Sherwood, the indictment charges. At the time of the takeover, Mr. Sherwood was a top executive of Mr. Goland's Balboa Construction Co., Chatsworth, Calif.

Because Mr. Goland was in financial difficulty at the time, he allegedly presumed that the Federal Home Loan Bank Board and the Federal Savings and Loan Insurance Corp. would not approve his application.

He acquired a controlling 56.5% interest in Viking Savings in December 1986. The thrift was subsequently sold to Westside Savings and Loan Association in 1988.

Neither Mr. Goland nor his attorney could be reached for comment.

High Flier Gets 20 Years

The book was closed last week on a highly visible prosecution for S&L fraud at North America Savings and Loan Association, Santa Ana, Calif.

Janet Faye McKinzie, a business manager and consultant to the thrift's former president, was sentenced to 20 years in prison following her conviction on 22 counts of fraud, conspiracy, and racketeering.

Ms. McKinzie was also ordered to make restitution of $14 million. She was the first savings and loan insider to be convicted under the Racketeer Influenced and Corrupt Organizations Act, which allows the government to sue for treble damages. Ms. McKinzie could have been sentenced to a maximum of 175 years in prison under RICO.

Ms. McKinzie worked under the thrift's owner, Duayne Christensen, who died in a car accident shortly before the regulators moved in. Prosecutors charged that the pair used bogus deposit accounts, falsified records, and forged signatures to defraud the S&L, then used the money to buy such items as a pair of Rolls Royce automobiles, an $18,500 antique letter opener, and a $500 gold paper clip.

Regulators seized North America Savings in 1987, following its loss of $8.9 million in the first 11 months of 1986. An investigation uncovered evidence of fraud. The collapse cost taxpayers $120 million.

Trainer Sues Bank of America

A Los Angeles racehorse trainer has sued Bank of America in connection with an alleged scheme in which as much as $2 million may have been embezzled from the state's payroll account.

Charles Whittingham's suit in Superior Court in Pasadena claims that the Bank-America Corp. unit negligently cashed checks made out to fictitious employees of the stable, according to a report in the *Los Angeles Times*.

According to Richard Craigo, the trainer's attorney, Bank of America maintained a payroll service for the stable during the years the phony checks were written. The bank cashed checks without properly verifying the names of the payees, the suit claims. The bank has declined comment on the suit.

Police suspect that an insider at the Whittingham stables was responsible for the scam, which employs over 100 workers. There have been no arrests to date.

Ex-Citibank Aides Convicted

Two former Citibank officials have been convicted of evading income tax for four years and of filing fraudulent withholding certificates, federal prosecutors said.

A federal jury in Manhattan returned guilty verdicts last Wednesday against John Dipetto, 40, a former vice president of the Citicorp unit, and his wife, Michele, 38, a former assistant vice president. They each face maximum sentences of 20 years in prison and $850,000 in fines on four counts of tax evasion.

The couple was convicted of evading about $180,000 in income taxes from 1983 through 1986 by failing to file returns or pay taxes.

Sentencing is scheduled for Sept. 19 before U.S. District Judge John Cannella. □

Plus, Cirrus Making Transactions In Greater Volume than Reported

To the Editor:

I think Speer & Associates fed you some specious data and spurious conclusions in the June 19 article and passed them off as fact ["Cirrus, Plus Report Gaining in ATM Wars," page 1].

According to Speer, in 1990 Plus and Cirrus together will do 60 million transactions, and as a result of tremendous gains over the next several years, by 1993 our transaction volume will reach 10% of the total ATM transactions interchanged.

Cirrus alone did 59 million transactions in 1989, and Plus claimed a similar number. This year, Plus and Cirrus will probably do 200 million transactions, or about 14% of total interchange volume. We're already way ahead of Speer's prediction.

Since we were created in the early 1980s, Cirrus and Plus have played an important part in electronic funds transfer. To imply that our transaction volumes have been disappointing because they aren't as large as some regional systems is a real lack of understanding about the ATM business.

The founders and members of Cirrus and Plus never expected the nationals' volumes to equal more than a small fraction of total ATM usage. This is because banking – whether at a branch or an ATM – is primarily a local activity. However, travelers turn to Plus and Cirrus for the nearly half a million times a day.

Just as Speer researchers are wrong about volume, they also draw the wrong conclusions about how various factors affect volume. Network consolidation is not fueling the volume growth of Plus and Cirrus. As smaller networks or independents become part of large regionals, Cirrus and Plus often lose transactions. National volume is further siphoned off by interregional switching agreements.

Even with consolidation and subswitching, Cirrus and Plus volumes continue to set records. In May, for example, Cirrus cardholders did 7.6 million transactions. That is because the more consumers use ATMs, the more likely they are to use them again. And that trend will continue to boost all ATM transaction volume to greater heights.

G. Henry Mundt 3d
Senior vice president and general manager
Cirrus System Inc.
Downers Grove, Ill.

Editor's Note: Speer & Associates, the source of the study reported in the article, does not dispute Mr. Mundt's numerical corrections. Speer said because Cirrus and Plus did not respond to its requests for information, it estimated volume for both. The higher volume figures underline the conclusion that the national networks are increasing their impact on the ATM market.

Banks Diluting Their Identity In ATM Deals

To the Editor:

I'm surprised that *American Banker* published another article June 19 on automated teller machines ["Cirrus, Plus Seen Gaining in ATM Wars," page 1] without providing perspective on what these developments mean for U.S. banks.

Although some consultants and newsletter writers have forged successful careers out of reporting and analyzing every twist and turn on the ATM front, it seems that issues such as the quality and cost of electronic services and the ability of banks to profitably offer them have gotten short shrift.

The Cirrus and Plus situation raises the most questions, as it seems to be the most outlandish. Can anyone explain why this nonsensical brand-name battle continues? Although questions arise on the use of any brand-name identity, banks' practice of placing a competitor's logo on its cards and ATMs continues to take the cake. Is there still confusion between providing electronic switching services and expanding a customer's cards and ATMs?

As Harvard Professor Michael Porter recently said, the challenge for banks is to find a unique position and image. Visa versus MasterCard, Cirrus versus Plus, and all dominant network brandings make this wellnigh impossible.

Banks should be demanding a cooperation that will quickly provide interchange that is proprietary yet universally acceptable bank card. It's crucial to individual bank survival.

Joseph E. Wallace
Chicago, Ill.

Editor's note: Mr. Wallace, a financial consultant, has proposed that banks adopt a universal service mark, "System B," to avoid the multiplicity of shared logos on ATM cards.

Pa. Thrift Would Consider a Sale

JOHNSTOWN, Pa. — Johnstown Savings Bank said it will consider sale of the thrift as a way to enhance stockholder value.

The $273 million-asset thrift, which reported a small profit in the second quarter after losing money a year earlier, said it could give no assurance that an acquisition offer would be forthcoming or that the price would be fair to stockholders.

Johnstown Savings earned $152,000, or 8 cents, a share in the quarter ended June 30, after it lost $718,000, or 37 cents a share, in last year's second quarter. Its assets declined 7% in the 12 months, and the thrift recently announced a plan to cut its 100-person work force by eight.

Patrick J. Coyne, president and chief executive officer, said the thrift is continuing in a "back-to-basics" mode of operation at is five branches. □

IN THE 1990s, OUR CUSTOMERS HAVE A NEW KIND OF COMPETITION. WE'RE HELPING THEM MEASURE UP.

Our customers are Main Street financial institutions. Independent. Locally owned. Often with assets under $1 billion. They used to compete just against each other. But now, they're up against the vast resources of financial center megabanks and brokerages.

Until this year, we were the Financial Services Group of First Financial Management Corporation, pioneers in EFT and ATM products. Custom data processing and transaction solutions. Electronic delivery platforms.

In January, we changed our name to Basis, because we're building the foundation of a new way for our customers to compete – a financial services information network for Main Street financial institutions. A network that eventually will link them to resources that are better than the big guys have. Custom products. Databases. Marketing information. We're giving our customers the capabilities to compete. The leadership to win. So they can stand taller than anybody. That's the basis of Basis.

The Economist in Greenspan Must Be Chafing and Cringing

Continued from *page 1*

repair shareholder fortunes. If the past is any guide to the future, these strategies will spawn devastating losses.

Thus, as has occurred in the thrift industry, capital levels that are initially set too high may in the end turn out to be too low. And the regulatory effort to build insurance deductibles may ultimately create the need for far larger deductibles than can conceivably be provided.

A Review of Rationalizations

That banks lack suitably profitable outlets for capital is apparent from a review of the rationalizations offered by managers for current investment strategies. For example, many bankers are still enamored of mortgage-backed securities.

Why? Say some bankers quite baldly: "We get yields of 125 to 140 basis points over Treasuries."

But what about the cost of the prepayment option? After allowing for that cost and the cost of match-funding the security, the yield is very much lower and, if at all positive, may not be high enough to provide an acceptable return on even the reduced amount of capital required by regulators for mortgage assets.

The banker's answer to this type of inquiry usually runs as follows: "Who takes into account the cost of the option? Interest rates are not about to fall by more than 150 basis points. And if they don't, the options on those current-coupon securities won't get exercised."

Fudging the Analysis

In other words, the paucity of bona fide investment opportunities has encouraged bankers to fudge the analysis of those that may not be so terribly good. Bankers are content to bet against the possibility of falling interest rates in order to justify the employment of deposit and capital funds that otherwise could not be employed.

Consider also why so many banks are investing heavily in asset-backed securities like credit-card and auto-loan paper. The average lives of such investments range from two to five years, and their yields from between 8.75% and 9.5%. If match-funded at, say, three years, the spread between the asset yield and the liability cost would be scant and certainly not sufficient to earn a 13% return on Tier 1 capital.

But who is match-funding, scoff many bankers? Compared to the cost of federal funds, they maintain, the yields on asset-backeds are certainly attractive.

Gape Undeniably Negative

Now it is true that bankers can justify a liability-sensitive mismatch if it is designed to offset an asset-sensitive gap in another part of the portfolio (although, in reality, the profitability of each investment should be measured as if the bank intended to match-fund it, regardless of whether that in fact happens). But it is also true that many consultants and industry observers are reporting that banks whose overall gaps cannot possibly be anything but negative nevertheless continue to short-fund auto and credit-card paper.

Once again the almost frenetic search for investment outlets is encouraging bankers to bet – this time against rising rather than falling rates. In other words, if the numbers don't work using *prudent investment criteria*, surely they will work if we allow for sufficient imprudence.

Lacking enough profitable outlets for their money, banks should be shrinking, not expanding. But most are not, for the simple reason that they are stuck with too much capital which the regulators won't let them dividend back or pay out to their shareholders, who almost certainly can employ the money more profitably than can the banks.

Under such circumstances, isn't it a bit foolish to ask for still more capital? Surely Mr. Greenspan understands that risk-adjusted spreads in most bank, and certainly thrift, businesses are not large enough to adequately compensate shareholders, which is of course the basic reason depository-institution stocks trade at such low multiples. So why does he suggest that banks turn to the investment community for still more equity?

As noted, this is a standard regulatory demand. But Mr. Greenspan is an economist as well as a regulator. And the economist must chafe and cringe at what the regulator feels compelled to advocate. □

Kennedy Unveils S&L Tax Plan

WASHINGTON — Rep. Joseph Kennedy, D-Mass., has announced a 30-year, $300 million package of surtaxes for the wealthiest individuals and corporations to help bail out the savings and loan industry.

Rep. Kennedy introduced a bill to put a 7.5% surtax on interest, dividends, and capital gains received by individuals with annual incomes greater than $100,000. The surtax would be 5% on corporations earning over $75,000 annually.

Rep. Kennedy said at a news conference that the two taxes would raise $19 billion a year, relieving "the poor and working people" who, in his view, bear a disproportionate burden of taxes.

The proposal is likely to face stiff opposition from the White House. President Bush has said he wants to cut the capital gains tax and has only reluctantly agreed to consider some revenue increases as part of a deficit reduction package.

— Reuters

Our Mission Is To Create Value For You.

Here's What That Means And Why It Matters.

We measure value by our ability to help you achieve success with your customers. To accomplish this end, we need to provide you with complete, innovative solutions that increase customer service while improving your operational productivity.

These solutions have been developed under an NCR strategy called Open, Cooperative Computing. The cornerstone of this strategy is an open architecture, based on industry standards, that allows you to integrate the NCR products you need for success today… while assuring an open, multi-vendor environment that protects your investment for the future.

For example, our open Financial Tower System has revolutionized teller and platform productivity. Our Integrated Retail Delivery Systems will bring a new perspective to customer service… and branch performance. NCR Self-Service Systems will give your customers more depth in the services they can perform themselves. In addition, NCR Imaging Systems for Item and Document Management will provide you with powerful productivity weapons to use in the competitive decade of the '90s.

Open, Cooperative Computing is a strategy that will reshape the future of financial technology. The full benefits of this strategy can give you and your people transparent access to the enterprise-wide resources needed to effectively manage your growth into the next century. If you would like to learn more about the company that can create value for you and your customers, phone 1-800-CALL NCR and ask for the "Open, Cooperative Computing" brochure.

Fleet Drops Bid to Acquire a Bank of New England Unit

Continued from *page 1*

ital and refocus the company. Its company's capital ratio was 1.65% at March 31, well below the regulatory minimum.

The collapse of negotiations with Fleet "continues to put more pressure on Bank of New England's] capital base," said Kristina Andersson, an analyst for Kidder Peabody & Co. in New York.

Worries Reflected

Analysts also said that Fleet's reluctance to enter into the deal signifies a deepening worry about the New England economy at Fleet and elsewhere.

"You'd think that Fleet would be among the best players in this deal, and they looked at it and don't like it. It shows they're still skeptical or wary of the local economy," said Ms. Andersson of Kidder Peabody.

Fleet emerged last month as the leading bidder to acquire the $1 billion asset Maine National Bank, which would have made it the largest banking company in New England with $37.5 billion in assets. It now ranks second to Bank of Boston Corp., which has $37.2 billion in assets.

Bank of Ireland, through its First New Hampshire Corp. subsidiary, is understood to have backed away from negotiations last month to acquire Maine National. Bank of Ireland and Fleet were the only two banks said by sources to be in the bidding.

Analysts said Bank of New England was unrealistic to expect to sell its Maine unit above book value.

"We're looking at a fire sale here," said James Moynihan, an analyst for Advest in Boston. "Certainly no buyer is going to pay a premium." He added that acquisition prices have dropped dramatically since last year, giving any buyer an incentive to wait.

Unit Called a Good Buy

Maine National remains a good buy, analysts said. Maine National, which had 6.42% equity-to-assets ratio at the end of first quarter, is reported to be the healthiest unit in the Bank of New England franchise, despite the worsening of the Maine economy.

Analysts said another bidder could surface to acquire Maine National, most likely from the Northeast or Middle Atlantic states. Maine's laws allow banks from any region in the country to enter state.

"In this environment, it pays to wait," said James J. McDermott Jr., an analyst for Keefe, Bruyette & Woods Inc. in New York.

Jed Horowitz in New York contributed to this article.

Southeast Agrees To Boost Capital By $10 Million

Continued from *page 1*

state's largest commercial bank.

Analysts had been expecting some kind of regulatory action at Southeast. The bank has run up cumulative losses of $92.8 million in the past three quarters and is expected to be unprofitable for the year because of problems with its real estate, indirect automobile, and credit card loan portfolios.

"Given their capital position and the weak banking environment in Florida and nationwide, they needed to be closely monitored by a regulatory body," said Richard S. Grolenwski, banking analyst with Goldman, Sachs & Co. in New York.

Need to Boost Tier 1

Southeast's agreement with the Comptroller's office requires that its flagship subsidiary, Southeast Bank, boost its ratio of Tier 1 capital to risk-weighted assets from the current 4.22% to 4.25%, or about $10 million.

Southeast also agreed to review and strengthen such areas as real estate lending, credit review, reserve methodology, and related management functions. The bank also agreed to keep the Comptroller's office informed of its dividend plans.

The agreement "recognizes [Southeast's] commitment to correct deficiencies," said Robert V. Ahrens, district administrator for the Comptroller's office in Atlanta.

At the holding company level, Southeast also reached a memorandum of understanding with the Federal Reserve covering the same areas.

"There are different grades of regulatory constraints, and these are at the lesser end," said Kathryn H. Bissette, banking analyst with Interstate/Johnson Lane in Atlanta. "But certainly, it reaffirms the company is going through some difficult times."

Southeast would seem to have little trouble boosting its capital by $10 million at yearend because it expects to earn about $20 million before taxes in the third quarter from the sale of its mortgage-servicing company to Sears Mortgage Corp. It is also planning to securitize about $160 million in credit card receivables, analysts say.

"But capital is affected by what you earn or lose," Ms. Bissette said, pointing out that a big surge in nonperforming assets later this year could depress Southeast's profitability even further. "The [capital] gap is minimal right now, but you still have another half of the year to go," she said.

Southeast has been without a president since John Porta resigned on March 30, shortly before the company reported a $56.8 million first-quarter loss following an examination of its real estate loans by the Comptroller's office. The new president, Mr. Ebert, has a reputation among analysts as a "nose-to-the-grindstone, tough personality," as one put it.

Observers are intrigued by Mr. Ebert's investment banking experience, since they view Southeast as a prime acquisition candidate. □

CREDIT UNIONS

Regulator Urges the Industry To Keep Own House in Order

By ELLEN MEMMELAAR

Roger Jepsen, chairman of the National Credit Union Administration, challenged credit union executives at an industry conference last week to manage risks lest they be subject to new regulations.

* In the text of a speech to the National Association of Federal Credit Unions, Mr. Jepsen pointed to three areas of concern: construction lending, certain mortgage derivative products, and the corporate credit union structure.

Mr. Jepsen said regulation was possible in those areas if credit unions do not take precautions and regulate themselves, said Susan Nelowet, executive assistant to the chairman.

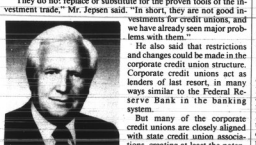
"Although deregulation has been around for a while, we remain in a time of transition," Mr. Jepsen said at the opening of the association's 23d annual conference in Nashville.

Troubleshooting Termed Crucial

"We must continue to develop and maintain expertise in spotting trouble before it grows," he said. "We must remain adept at guiding credit unions around pitfalls."

The NCUA is "taking a serious look" at prohibiting certain types of investments, including derivative or "strip" investments, such as interest-only and principal-only mortgage securities, he said.

"They do not replace or substitute for the proven tools of the investment trade," Mr. Jepsen said. "In short, they are not good investments for credit unions, and we have already seen major problems with them."



"We remain in a time of transition."

Roger Jepsen
National Credit Union Administration

He also said that restrictions and changes could be made in the corporate credit union structure. Corporate credit unions act as lenders of last resort, in many ways similar to the Federal Reserve Bank in the banking system.

But many of the corporate credit unions are closely aligned with state credit union associations, creating at least the potential for conflicts of interest. In California, the president of the state's credit union league, Christopher Stewart, was recently removed as president of the Western Corporate Federal Credit Union. The action effectively separates the league from the corporate credit union.

Corporate credit unions "remain a potential trouble spot for credit unions, politically as much as financially," said Mr. Jepsen. "We also recognize the problems inherent in the system and will do everything we can to stay on top of them."

The close relationship between the thrift industry and its former regulator, the Federal Home Loan Bank Board, has been criticized as contributing to the S&L crisis. The Bank Board ran the Federal Home Loan Bank System, which provided funds to thrifts.

Need for Outsiders Cited

The Credit Union National Association has a big role in the corporate credit union structure, said Mark Clark, public affairs counsel for Callahan & Associates, a Washington-based consulting firm. The trade association is especially key, he said, in the governance of the U.S. Central Corporate Credit Union, which is the top corporate credit union.

"No one says that they shouldn't, but more outsiders should be involved in the direction of it," Mr. Clark said.

"We certainly agree with Jepsen's statement that the corporate system is in good shape [financially]," said Jerry Karbon, a spokesman for the CUNA, which is based in Madison, Wis. But corporate credit unions could be troublesome politically, he said.

Some Real Estate Lending Causes Concern

The other area of concern that Mr. Jepsen described was speculative construction lending.

"The risk inherent in such lending is too great to be ignored," he said. "A few credit unions could cause a great deal of damage to the entire credit union movement."

Residential mortgage lending continues to be no problem, Mr. Jepsen said.

Jepsen Defends Tough Regulatory Stance

In other remarks, Mr. Jepsen defended the NCUA against accusations that it has been too tough a regulator. Comments about strict regulation are a sign that "you've noticed something is different now," he said.

"We're really not in the business of regulating as much as we're in the business of supervising," he said. "Call it aggressive supervision if you like, but it's the price exacted by deregulation." □

Debit Cards Seen in New Light

Bank of Hawaii Treating Them More Like Checks

By YVETTE D. KANTROW

NEW YORK – Bank of Hawaii has faith in its customers.

Many institutions across the country are aggressively pushing debit cards, allowing customers to use their automated teller machine cards to pay for goods and services. But most of these banks allow only their most creditworthy clients to carry the "plastic checks."

'Satisfactory' Is Good Enough

Bank of Hawaii is taking a more liberal approach. Anyone with a Bank of Hawaii checking account in "satisfactory" order is considered qualified to carry its debit card, according to Peter Drewliner, vice president of electronic financial services.

"If we feel confident giving you a check, we feel confident giving you a card," Mr. Drewliner said. "We wanted to look at this product in a different way."

The Honolulu-based bank recently got in touch with 70,000 consumers, or half its checking account customers, to offer them Access cards, which are part of the Visa Debit program.

The strategy is considerably different than that of other institutions enrolled in MasterDebit and Visa Debit – the country's two major debit card programs. Because the systems are off-line, there is a delay in the movement of funds from consumer to retailer when a purchase is made, meaning sufficient funds may not be available to cover the debit.

First National Bank of Chicago, Fleet National Bank, and National Bank of Detroit are among the big banks that issue debit cards only to their most creditworthy customers.

Program Called a 'Stretch'

"It took some stretching for us to do this," Mr. Drewliner said of Bank of Hawaii's program. "It's an attempt to look at a product the way customers do."

According to Mr. Drewliner, market research helped Bank of Hawaii realize that most consumers truly consider debit

Customers want to use the cards to pay for items they usually buy with cash and checks.

cards to be plastic checks. Customers want to use the cards to pay for items they usually buy with cash and checks.

Consumers do not not see debit cards as credit vehicles that allow them to delay payments, Mr. Drewliner said. Most customers said they would not use debit cards in place of credit cards.

These findings made it easier for Bank of Hawaii to ease the credit requirements associated with debit cards. While many institutions rely on their credit card departments to determine who should receive debit cards, Bank of Hawaii moved that function into the retail deposit department.

"We didn't feel comfortable taking a credit approach," Mr. Drewliner said.

Both MasterDebit and Visa Debit are becoming increasingly popular among the nation's banks. By putting their logos on bank ATM cards, MasterCard International and Visa International are essentially creating international "accepted" debit cards.

Financial institutions in the United States have issued nearly 200 million ATM cards to their customers – about equal to the number of domestic MasterCard and Visa credit cards. The potential market for debit cards is usually considered smaller because it is not known how many ATM cardholders are creditworthy enough to carry them. But if more institutions followed Bank of Hawaii's approach, the market would be vast.

Bank of Hawaii has been aligned with Visa Debit since the mid-1970s. But it only recently began to market the service aggressively.

The bank is offering the card free for the first 12 months. After that, it will charge a $12 annual fee.

"In the Seventies, this was a product before its time," Mr. Drewliner said. "But the latest research showed this is a product customers wanted." □

American Express Unit Posts Second Quarter Gain

NEW YORK – Citing growth in its charge card and travelers check businesses, American Express Travel Related Services Co. said earnings rose 16% in the second quarter.

The unit of American Express Co. posted net income of $249 million, up from $214 million in the year-earlier period.

Worldwide charge volume hit $28 billion during the quarter, up 11% from a year earlier. The number of American Express green, gold, and Optima cards outstanding worldwide grew 7.8% to 36 million. The numbers rose 7% in the United States and 10% abroad.

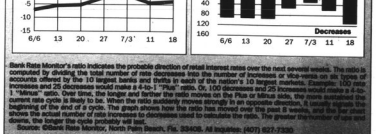
The company said 3.1 million service establishments now accept American Express cards, 14% more than a year earlier.

Sales of travelers check, including those issued by joint venture companies in Britain and France, totaled $6.6 billion in the quarter. The value of travelers checks outstanding averaged $4.4 billion, 4.6% more than a year earlier.

Despite the gains by the travel unit, American Express reported flat earnings for the quarter, largely because of declines by Shearson Lehman Hutton. □

AMERICAN BANKER /Bank Rate Monitor's™

Consumer Money Index — **Latest rate trend: Momentum downward**



Bank Rate Monitor's ratio indicates the probable direction of retail interest rates over the next several weeks. The ratio is computed by dividing the total number of rate decreases into the number of increases or vice-versa on six types of accounts offered by the 10 largest banks and thrifts in each of the nation's 10 largest markets. Example: 100 rate increases and 25 decreases would make a 4-to-1 "Plus" ratio. Or, 100 decreases and 25 increases would make a 4-to-1 "Minus" ratio. Over time, the longer and farther the ratio moves on the Plus or Minus side, the more imminent the current rate cycle is likely to be. When the ratio succeeds moves strongly in an opposite direction, it usually signals the beginning or the end of a cycle. The graph shows how the ratio has moved over the past 8 weeks, and the bar chart shows the actual number of rate increases to decreases used to calculate the ratio. The greater the number of rate changes, the longer the cycle probably will last.

Flat Earnings Reported by Bankers Trust for 2d Quarter

Continued from page 2

bers are still holding up better than most. The standout characteristics would include the performance of their global trading and risk management business."

After spurring the company to a $198 million profit in the first quarter, its second-best period ever, earnings from trading bonds, swaps, and currencies fell by $29 million in the April-June sale $243 million, 25% higher than in the year-earlier period. Foreign-exchange profits, however, fell 66% from the 1989 quarter.

Corporate finance fees strengthened slightly to $80 million, up 10% from the first quarter, but down 16% from the second quarter of 1989. Trust and custodian fees rose 13% from the previous year's $96 million to $108 million.

Interest Revenue Down

Balancing the good news was a decline in net interest revenue – primarily because of lower interest payments from Brazil, Argentina, and other Third World nations – and a rise in noninterest expenses.

The expenses jumped 11% from the year-earlier quarter to $492 million, reflecting a 7% increase in salaries and bonuses to compensate for the healthy trading results. Bankers Trust also took an $8 million charge in the quarter for a restructuring of its corporate finance department, which involved 75 layoffs and projected annual savings of more than $10 million.

Bankers Trust now has a reserve of about $1.9 billion, covering about 72% of its total refinancing-country loans.

The company continued reducing its exposure to Third World debt, charging off $129 million of loans and selling or swapping $347 million of the debt for $137 million.

Bankers Trust now has a reserve of about $1.9 billion, covering about 72% of its total refinancing-country loans. It also reallocated $100 million from its Third World reserve to cover its troubled credits in other areas of the bank.

Bankers Trust charged off $28 million of loans in the first quarter, including $15 million to highly leveraged borrowers. Some analysts had expected larger chargeoffs to reflect regulatory examinations of the leveraged credits during the quarter.

On the other hand, the bank put $101 million of loans secured by real estate on a cash basis, a number that does not include its unsecured loans to developer Donald Trump. Bankers Trust, like most other large Trump lenders, is believed to have put its more than $100 million of Trump loans on a nonperforming basis.

Cash-Basis Loans Rise

The bank added $179 million of cash-basis loans during the quarter, bringing its total of such loans to $772 million exclusive of Third World debt. Loans to highly-leveraged borrowers make up $221 million of the total, followed by $219 million of secured real estate loans.

Bankers Trust said it considers 2.4% of all its nonrefinancing country loans to be covered by its reserves. □

Losses at Meritor And Crossland For 2d Quarter

Continued from page 2

Baltimore. He said the loss exceeded his expectation, partially because of an increase in nonperforming real estate loans and participations in highly leveraged transactions.

Meritor's net loss for the first six months of 1990 was $166 million, or $4.73 a share. The loss for all of 1989 was $9 million, or 26 cents.

Quarterly Results 'O.K.'

On an operating basis, Mr. Powell said, the quarterly results were "O.K." The company reported net interest income of $22.4 million for the quarter, off from $45.1 million in the comparable period a year earlier.

Crossland recorded net interest income of $35.4 million before loan-loss provisions; the figure was $61.5 million in the second quarter of 1989. The decline is attributable to Crossland's effort to boost capital ration by shrinking and to the increase in delinquent loans, the company said.

Takeover Rumor Rejected

Senior vice president Peter J. Cunningham, a spokesman for Crossland, dismissed as "misleading" a published report that analysts believe Crossland is headed for federal takeover.

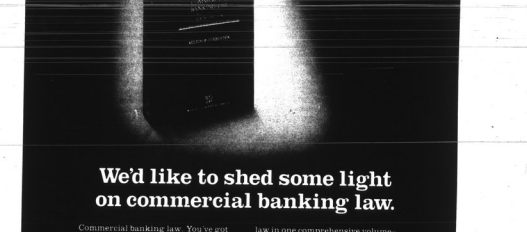
He said the thrift, which with $14.1 billion of assets was the 13th largest in the nation at year-end 1989, intends to meet its regulatory capital requirements by converting $363 million of preferred stock to common stock.

Capital Rule Cited

New capital requirements do not allow banks and thrifts to count preferred stock toward regulatory capital.

This year, Crossland terminated a plan to sell a controlling interest to Coast-to-Coast Financial Corp., Chicago, for $150 million.

In afternoon trading Monday, Meritor's stock price was unchanged at $2.125 per share. Crossland, at $1.125, was off 12.5 cents. □



We'd like to shed some light on commercial banking law.

Commercial banking law. You've got to comply with it–but first, you've got to understand it.

Bank Officer's Handbook of Commercial Banking Law sheds light on this very complex and often confusing aspect of banking.

Combining historical banking material with recent changes in UCC codes and consumer protection statutes, the **Handbook** offers quick answers to the legal questions that arise in your day-to-day operations. It's an excellent overview of all commercial banking law in one comprehensive volume–concise, readable, and well-organized. And when you require further information, special footnotes lead you to specific sources of in-depth detail on the subject.

If you're a bank officer in a supervisory or decision-making position, you can't afford to be in the dark about commercial banking law. Get your copy of the **Handbook** today!

Banks Looking to Swap Junk Bonds for Issuers' Properties

By ANDREW REINBACH

A new financial restructuring technique has caught the eye of some banks looking to capitalize on the financial weaknesses of high-yield bond issuers: swapping distressed high-yield bonds for some of the issuer's real estate.

J.P. Morgan & Co. expects to act as an intermediary in these new deals. NCNB Corp. is also looking at the market as a possible new business, although any decision is at least a year away.

The swap allows companies to reduce their interest costs by taking advantage of the difference between the book and market values of their real estate. That assumes companies can absorb the tax consequences of any capital gains.

Similar to Debt-for-Equity

These transactions are a natural outgrowth of the leveraged 1980s, say bankers, who compare the idea to the debt-for-equity swaps that arose from the business of lending to lesser-developed countries. As cash flow slows and debt burdens become onerous, companies are looking for a way out.

Since many of the issuers of junk debt own significant property portfolios, it makes financial sense to look at those holdings as a way to pay down their debt without selling off cash-generating assets such as operating companies.

The potential market for these deals is quite large. The size of the junk bond market is about $210 billion.

Bank Role Is Built In

Banks will be involved in these transactions, even if they choose not to use an advisor. This is because, in the actual swap, the debt issuer must surrender unencumbered title to the debt holder. As a result, these transactions will create substantial mortgage activity, including mortgage satisfactions and new mortgages, as debt is transferred from the affected properties.

Whether it is mortgage origination or an advisory role, some banks have looked at the idea and liked the opportunities.

"There is client interest in these deals, and we have looked at and are considering doing such transactions," said Paul Finn, a J.P. Morgan vice president in the real estate department. "They make sense, and real estate lends itself to it."

No Working Group

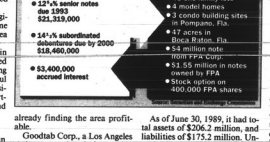
Mr. Finn said that Morgan has no organized working group targeted to this area. Instead, he said, his 35-person group is essentially looking for a target of opportunity by bringing the idea up with clients.

"I don't think that from our perspective we would need to set up a special group," he said. "We know there are people who are interested, and would welcome an offer. So we continue to probe."

When a transaction is conducted, said Mr. Finn, J.P. Morgan would probably use at least two of its units: Morgan Guaranty Trust Co. for the real estate side of the deal, and J.P. Morgan Securities Inc. for the bond side. He suggested that most banks capable of handling these deals would do the same.

Fees would be typical for real estate transactions, said Mr. Finn. "Size would be a determining factor, but if you wanted to choose a number, 100 basis points would not be inappropriate," he said.

While Morgan is looking to get its feet wet, other firms are already finding the area profitable.



Goodtab Is Active

To date, about $250 million in the face value of high-yield debt has been swapped, with another $250 million under negotiation, according to data provided by Goodtab. All of these transactions have been negotiated by Robert N. Goodman, principal of Goodtab. Among the debtor firms involved have been Lin Colinas Corp., U.S. Home Corp., Horn & Hardart Co., and FPA Corp.

FPA Corp., a homebuilder based in Huntington Valley, Pa., owned substantial assets that were either undeveloped or under development, and had a high amount of debt on its balance sheet.

As of June 30, 1989, it had total assets of $206.2 million, and liabilities of $175.2 million. Unsold units and land held for development or sale totaled $151.8 million, while debt of all sorts, including mortgages as well as junk, totaled $149.6 million. Much of the land and property was on otherwise developed projects – country clubs and resorts.

"We had a big problem, and good assets that were unproductive in our hands," said Benjamin D. Goldman, FPA's executive vice president. "We didn't have the capital to develop them the way we'd have liked, nor did we have the capital to hold onto them."

Shareholder Interested

But FPA did have a 22.5% shareholder that also held $43.18 million in face value in two classes of high-yield debt and accrued interest – First Executive Life Insurance Co., based in Los Angeles. So in November 1989, FPA asked First Executive if it was interested in swapping some real estate for some debt.

Next came six months of tough, head-banging negotiations.

"The negotiations with First Executive were a very difficult and interesting transaction," said Mr. Goldman.

Eventually, FPA gave First Executive assets it valued at about $50 million, and took a pretax loss of $10.7 million.

Package Assembled

First Executive managed in this way to get clear of what it considered a bad situation, according to Fred Carr, First Executive's chairman. "Our concerns were obviously the long-term viability of the company, and we wanted to be able to liquidate before the year 2000. This way, we thought it would allow us to be out of the bonds earlier," he said, adding that First Executive intended to develop the properties and sell them off within the next ten years.

Mr. Carr said he expected to do more of these deals, on a case-by-case basis.

Morgan has yet to complete a swap, according to Mr. Finn. And Ralph Caresio, corporate executive vice president of NCNB, said his bank was looking at this type deal along with others to build its fee-related real estate activities.

But it does not expect to decide on whether to enter the area for at least a year, because it is still digesting the effects of NCNB's takeover of First Republic Bancorp in Texas last year. "Where we are in 1990, we shouldn't be really innovative," he said.

But while Morgan is hoping to act as an intermediary in such deals, and NCNB is mulling it over, not all bankers see much in the idea.

"I can see a lot of this being done, but I can't see Wells doing it," said Fredrick W. Petri, executive vice president of Wells Fargo Bank, San Francisco. □

DEALMAKERS

Regulatory Caution Seen Paralyzing the Resolution Trust's Activities

By ANDREW REINBACH

Patrick Oxford, a lawyer who specializes in dealing with the Resolution Trust Corp., is worried.

"The S&L crisis is feeding on itself," he said. "The regulators are being very conservative in evaluating real estate portfolios, so there's almost no financing available for real estate."

Described as Troubleshooter

"Most of the real estate deals that are being done today are for RTC assets," he said. "And if there is no financing for RTC assets, you're reducing the size of the market for RTC assets, which drives down prices for them, which causes regulators to be more cautious."

Mr. Oxford, a partner in the Houston-based law firm of Bracewell and Patterson, knows firsthand the problems with the bureaucracy; he makes his living as a troubleshooter for clients trying to do business with the RTC. And Mr. Oxford says that people at the RTC are almost paralyzed by political considerations.

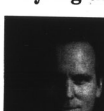
Sees a Bureaucratic Tangle

"The magnitude of the problem and fear of retributive hindsight is clearly making them very cautious, and that caution is costing taxpayers a lot of money," he said.

As an example of the contortions some institutions have gone through in dealing with this cautious environment, Mr. Oxford cited his recent creation of a new company to help a client acquire assets from the RTC. The client was a thrift that had been created through a supervisory merger and was being audited by Congress.

This thrift couldn't acquire assets from the RTC until it successfully completed the audit, so Mr. Oxford created a "little sister" institution, managed by personnel from the "big sister."

Once that audit was over, the plan was to merge the little sister with her older sibling. Mr. Oxford made sure that, from a legal point of view, the two institutions were totally separate, so that the little sister had government approval to acquire assets in the expectation of the ultimate merger.



Patrick Oxford
Bracewell and Patterson

Letting the Buyer Choose

The only way out of the spiral, said Mr. Oxford, is to allow the RTC to finance its own deals with some sort of equity "kicker" that will give the government participation in any profits made by bidders, and to allow bidders to choose which properties they want to buy – the opposite of announced RTC policy.

"Buyers should be able to cherry-pick their deals," he said. "They know who they plan to sell to when they bid, so the government has to let them do their deals, so that the RTC deals can be done in the first place. I just don't think that making buyers bid on bulk packages will work."

Mr. Oxford said these packages suffer from the same flaw as the package deals of whole thrifts made by M. Danny Wall when he was chairman of the Federal Home Loan Bank Board.

Criticism of the RTC

Bulk sales, he said, are bureaucratically attractive to the government but have plenty of political downside. "FSLIC put together packages of thrifts in 1988 that were difficult for investors to see as attractive, so FSLIC put in incentives that are exactly what are being complained about today."

Mr. Oxford also criticized the RTC's reliance on appraisals to set property prices. "If the government doesn't have a clear idea of the value of what they own by now, they never will." □

SHESHUNOFF SOFTWARE TAKES COMMANDS.

1-800-456-2340

Sheshunoff...application software can make life easier in all parts of your bank. CEOs and CFOs can get a better handle on financial planning and budgeting, commercial loan officers can improve your portfolio by automating financial statement analysis, your safe deposit operation can become more efficient and profitable, and all your regulatory reporting can be done faster, easier and more accurately.

Banks throughout the country have counted on us to help them become more efficient and profitable since 1971. All our software is specially designed to help you make this happen in your bank.

- Call Report Software Service
- Financial Statement Analysis
- Bank Financial Planning & Budgeting
- Safe Deposit Operations
- other regulatory software services

We wrote the book on bank performance, and we've applied that same attention to detail to every piece of software we develop. It's all designed to be easy-to-use, even if you've never used a PC before. And each program comes with a clearly written User's Manual.

Best of all, behind every piece of Sheshunoff software is a staff of helpful, knowledgeable people. They're happy to answer any questions you might have, from how to install your PC to how to handle complex transactions. They'll even let you examine any program without obligation for 30 days.

To make your operations work better in every part of your bank, give our software a few simple commands. Call for your Sheshunoff application software today. 1-800-456-2340.

INDEX *of top stories*

The following is a selective index, arranged by subject, of the top stories in *American Banker* last week. The date of appearance precedes each item. This column was compiled by Matt Barthel.

COMMENTARY

7/16 The press can be counted on to ignore the good news in banking, says Paul Nadler. *Page 4*

7/17 Lacking a full understanding of both direct and indirect costs, banks often misprice their products, says Sanford Rose. *Page 4*

7/18 Hazardous waste poses a threat not only to the environment but also to banks, which could be held liable for cleaning up messes they didn't create, warns Brian W. Smith. *Page 4*

7/19 The fed's recent easing represents no lessening of its effort to limit inflation, writes Stephen H. Axilrod. *Page 4*

7/20 Regulators have mandated higher capital levels but are not easing the way for banks to meet them, writes Donald S. Rice. *Page 4*

COMMERCIAL REAL ESTATE

7/17 Bankers and real estate appraisers are nearing a showdown over rules established by the Federal Reserve Board to govern the use of certified appraisers in mortgage transactions. *Page 1*

7/17 While most banks are regretting the big plunge into commercial real estate lending in the late 1980s, insurance companies are beginning to stick a toe back in the water. *Page 16*

7/18 Citicorp reported that its second quarter profits fell 38% to $248 million, reflecting a continuing strain from badly performing real estate loans and weak deal activity. *Page 1*

7/20 HomeFed Corp.'s stock plunged 25% after the San Diego thrift company announced an unexpectedly large increase in bad real estate loans. The fallout spread to other California banks with real estate exposure. *Page 1*

7/20 Washington Bancorp.'s ability to continue operating is "in doubt" because of mounting losses from bad real estate loans, said John J. Mason, the recently appointed chairman. *Page 1*

COMMUNITY RELATIONS

7/16 Regulators have surprised some foreign-owned banks by cracking down on Community Reinvestment Act compliance. *Page 6*

CONSUMER SERVICES

7/16 Economists expect consumers to be cautious borrowers in the months ahead, despite an unanticipated increase in consumer credit. *Page 6*

7/17 MasterCard says it faces fierce fights against fraud, especially in the Far East, despite last year's decrease in fraud as a portion of transaction volume. *Page 14*

7/17 Closings of military bases and cuts in defense spending could put the squeeze on credit unions associated with the armed services. *Page 14*

7/18 Visa International said first quarter sales of its travelers checks were well ahead of projections, which had been termed optimistic by many in the industry. *Page 6*

7/19 Coverdell & Co., Atlanta, has developed a program that will allow Delaware banks to market their own insurance products without heavy back-office investment. *Page 6*

7/20 Comfed Bancorp, a troubled New England housing lender, is offering a government-insured mortgage with a low down payment. The Low Down is aimed at first-time homebuyers who feel locked out of the market. *Page 6*

7/20 Richard C. Breeden, chairman of the Securities and Exchange Commission, told Congress that the government should consider selling deposit insurance to consumers at a market rate. *Page 1*

EARNINGS

7/17 Chase Manhattan Corp. reported that its second quarter profits plummeted 62%, to $52 million, because of problem real estate loans. The numbers intensified speculation that the banking company will be forced to cut or eliminate its quarterly dividend. *Page 1*

7/18 Faster economic growth and slower growth in problem assets helped superregional bank companies outshine their money-center counterparts in the second quarter. *Page 1*

7/18 Citicorp reported that its second quarter profits fell 38%, to $248 million, reflecting a continuing strain from badly performing real estate loans and weak deal activity. *Page 1*

7/19 A spate of disappointing figures on second quarter earnings sent the yields on bank debt rising, continuing their upward trend of the preceding two weeks. *Page 1*

7/19 First Interstate Bancorp profits fell 8% in the second quarter. PNC Financial's fell 13%. Fleet/Norstar's 33%. Continental Bank Corp. lost $57 million. *Page 2*

7/20 Washington Bancorp.'s ability to continue operating is "in doubt" because of mounting losses from bad real estate loans, said the company's recently appointed chairman. *Page 1*

DEPOSIT INSURANCE

7/17 L. William Seidman said the Bank Insurance Fund could face more losses next year if the nation is thrown into a long and one of their strongest days in months as news of credit easing by the Federal Reserve Bank overshadowed its statements about the prospects for increased capital ratios. *Page 20*

7/16 Barely two weeks after announcing a $50 million restructuring chargeoff for the second quarter, Continental Bank Corp. said it would nearly double its domestic nonperforming loans, to $455 million. *Page 1*

7/17 Chase Manhattan Corp. reported that its second quarter profits plummeted 62%, to $52 million, because of problem real estate loans, intensifying speculation the banking company will be forced to cut or eliminate its quarterly dividend. *Page 1*

7/17 Highly leveraged lending is back. While the spigot is not wide open, a trickle of deals

Not sure precisely how they spend just a little more freely.

Which is precisely what occurs each year in response to the Visa Our Treat® promotion.

We give people the chance of having one of their Visa purchases paid for. And then, during the heaviest shopping period of the year, they go to town.

It's a strategy that could pay off big, considering we'll be giving away $1 million worth of randomly selected transactions between October 1 and December 31, 1990.

Meaning some 15,000 cardholders will get a free ride.

Whether it's a new bowling ball. Or a trip to Bali.

Either way, you'll win even bigger.

After all, Our Treat has led to record fourth-quarter volumes for Visa. And it's now. And, with such consumer awareness (plus a range of advantages in the words they use), promises greater rewards.

For your own program guide and simple statement sheet to help you get started, call 1-800-676-0888. And put human nature to work for you.

VISA

NO PURCHASE NECESSARY. To enter without purchase, hand-print your name, address, city, state, zip code, day and evening telephone numbers and the words "Visa. It's everywhere you want to be." on a 3"x5" card and mail to: Visa Our Treat Sweepstakes, P.O. Box 8608, Elmhurst, IL 60126-8608. Limit one entry per envelope; no mechanical reproductions permitted. Entries must be received by December 31, 1990, or before total weekly prize pool is awarded. Prize pool weekly drawing is a check to the winner in an amount equal to the winning purchase entry. Offer void where prohibited or restricted. Cash advances, certain articles and non-U.S.-dollar purchases are excluded from entry. Maximum prize in weekly drawings: $75,000. For a complete set of rules, send a stamped, self-addressed envelope to Visa Our Treat Sweepstakes Rules P.O. Box 8608, Elmhurst, IL 60126-8601. VT and WA residents may omit return postage. Sweepstakes open to all residents of the 50 United States and the District of Columbia 18 years or older except employees and their families of Visa, its advertising and promotional agencies and Visa card issuers. Promotion ends December 31, 1990, or when total prize pool is awarded, whichever occurs first. © Visa U.S.A. Inc. 1990

Philippines Planning Debt Swap

MANILA – The Philippines hopes to resume its debt-to-equity conversion program by September under revised rules, Central Bank Governor Jose Cuisia said.

Cuisia told reporters that the Monetary Board, the Bank's policy-making body, has approved using auctions and has let a ceiling of $300 million of debt purchased in a year.

Cuisia declined to give details, saying the changes were approved only in principle and will be presented next week to the Joint Executive-Legislative Foreign Debt Council for review and approval.

A debt-to-equity swap is one of the measures used by the government to help reduce its external debt while luring foreign investors into the country.

Debt conversion was introduced in 1986 but suspended in 1988 after it was blamed for fueling inflation.

Meanwhile, Speaker of the Congress Ramon Mitra said the destruction caused by last week's earthquake could strengthen the government's hand in negotiations with foreign creditors.

He said the earthquake, in which around 1,000 people died, was a tragedy for the country but could help by creating a sense of crisis in which political factionalism was forgotten.

In a speech prepared for delivery at the opening of the new session of Congress on Monday afternoon and released in advance, Mitra said the Philippines must prove "to a poor and impatient people" that democracy can work.

Mitra said the disaster could help the heavily indebted Philippines with its foreign and domestic creditors.

"Last week's tragedy should also strengthen the case we've been trying to make for a little more sympathy and understanding from our creditor banks, whose debt papers we've religiously met up to this moment," he said.

Mitra did not endorse moves in Congress either to impose a two-year moratorium on repayments of the country's $26.6 billion foreign debt, or to put a ceiling on debt servicing of 15% of the previous year's merchandise exports. — **Reuters**

U.S. Bankers Cool to Mexico's Plan

Restrictions on Privatization Called Too Limiting

By JAMES R. KRAUS

NEW YORK — U.S. bankers are giving thumbs down to Mexico's program to privatize state-owned banks.

Bankers cited as reasons for their lack of interest the Mexican government's restriction on foreign ownership of the banks to 30%; Mexico's unwillingness to allow banks to swap its debt for equity in the banks; and the uncertain financial condition of major Mexican banks.

"Response has been underwhelming. We're certainly not jumping all over the place to bid on one of those banks," said one senior banker in New York.

The Mexican government announced last week that it would begin to sell state-owned banks as soon as Mexico's Chamber of Deputies approved a bill allowing the privatization.

The privatization will start with four small banks in about a month, Minister of Finance Pedro Aspe said last week.

Congressional debate on a bill to privatize the banks began two weeks ago.

The bill would reprivatize most of the nation's 18 banks nationalized in 1982 amid a foreign debt crisis and a plunge in oil prices.

However, a Chamber of Deputies committee gave foreign investors a setback by adding tighter curbs on foreign investment to a presidential bill that would privatize the banks.

Other Restrictions

According to a Reuter report, the amendment by the Chamber of Deputies' Treasury and Public Credit Commission would bar foreigners who live in Mexico from holding voting shares, which will account for at least 51% of the stock.

Foreigners would also be excluded from being director general of any Mexican bank. The aim of that ban is "assuring plainly that the control and management of the multiple banks stay in the hands of Mexicans alone," the amendment says.

Restrictions Criticized

Foreign banks are barred under Mexican law from opening branches. Several expressed interest in the privatization program when it was announced several months ago.

But bankers and analysts have criticized terms of the privatization as too restrictive. □

NatWest Loss Soars to $106 Million; Real Estate Problems Are Blamed

By JAMES R. KRAUS

NEW YORK — Beset with problem real estate loans, National Westminster Bank's U.S. unit said it had lost $106.3 million in the second quarter, up from $24 million in the first.

The second quarter loss follows a $147.6 million provision for possible loan losses and a $30 million reserve for losses on other assets related to real estate.

In a statement, chairman and chief executive William T. Knowles said the bank considers reserves for nonperforming assets to be adequate. However, National Westminster Bancorp is continuing to monitor its loan portfolio to ensure that reserves "appropriately reflect changing market conditions," he said.

National Westminster Bancorp is the $21 billion-asset U.S. holding company for Britain's National Westminster Bank PLC and is the second-largest foreign-owned bank holding company in the United States.

The U.S. holding company's three main operating units are National Westminster Bank USA, National Westminster Bank NJ, and First National Bank of Central Jersey.

National Westminster Bank NJ, formerly First Jersey National Corp., was acquired in February 1988, and First National Bank in August 1988.

Analysts said they do not expect losses related to real estate to deter National Westminster from continuing to build a U.S. regional banking franchise.

The loss follows a $147.6 million provision for possible loan losses.

"They have a very strong parent company which is able to support them through a difficult environment and has a long-term commitment to its investment," said Gregory Root, president of Thomson Bankwatch Inc., an *American Banker* affiliate. He estimated that real estate lending accounts for 12% to 13% of National Westminster's U.S. loan portfolio. □

Bank of Tokyo Names Head of N. American Investment Banking

NEW YORK — To expand securities-related business in the United States, Bank of Tokyo has named Yoji Anzai as executive vice president in charge of investment banking at its North American headquarters.

Mr. Anzai, who will supervise the growing investment banking operations at Bank of Tokyo in New York and Union Bank in California, has also been given responsibility for operations of BOT Financial Corp., including BancNewEngland Leasing Group, acquired from Bank of New England last month for $500 million, the Japanese bank said Monday.

Bank of Tokyo ranked in mid-1989 as the largest foreign bank in the United States; assets here totaled $47.2 billion.

Japanese banking sources said Mr. Anzai, 49, has unofficially run New York operations related to investment banking for months. He was previously general manager of the financial services department in Tokyo.

In a statement Monday, Kenji Yoshizawa, the bank's resident deputy president, said Mr. Anzai will focus on expansion of fee-generating businesses.

* Midday quotes in the New York market

Source: Reuters, Ashley & Pearce Inc., New York

Coming in the July 26th issue of American Banker. . .

Are banks missing out on global marketing opportunities?

There is no denying that the world is changing. But are U.S. banks changing along with it?

On July 26th, *American Banker* will take a look at whether U.S. banks are taking advantage of the latest opportunities to compete globally. Or, are they isolating themselves and missing out?

You'll get answers to questions like these:

Are U.S. banks handicapped in the global market because of the layers of regulation, high costs of raising capital and domestic real estate problems?

Where do banks get demographic information and how do they measure demographic changes around the world?

What is the latest technology used to help with international marketing strategies and demographics?

What are the ethnic markets banks are missing? And what type of services are most useful for these groups?

How do world environmental concerns affect corporate marketing strategies?

With this special report from *American Banker*, you'll be able to identify changing international markets and figure out if there really is a global opportunity for you and, if so, how you can best capitalize on it.

Tax Breaks Seen Giving NCNB an Unfair Edge in Texas

Continued from page 1

anticompetitive effects in Texas."

Questions about the propriety of NCNB's tax advantage are surfacing at a time when Congress is scrutinizing the generosity of tax subsidies doled out under the controversial Southwest plan, a series of 15 Texas thrift rescues. But the tax breaks given to NCNB were almost twice as generous.

And, in a twist previously unreported, the Federal Deposit Insurance Corp. avoided paying $634 million in taxes stemming from the First Republic rescue – effectively giving a subsidy to the banking industry and bringing the U.S. Treasury's tax shortfall to $1.6 billion.

"To the extent that tax dollars were used in this rescue, we the citizens are losers," says Paul Horvitz, a professor of banking and finance at the University of Houston.

> **"The tax breaks allow NCNB to engage in predatory pricing, and it is having anticompetitive effects in Texas."**
>
> **Chris Williston**
> *Texas Independent Bankers*

The magnitude of NCNB's windfall was highlighted just last week when the company reported that 34% of the $137.4 million it earned in the second quarter was derived from tax breaks, most of which stemmed from the First Republic transactions.

NCNB freely admits that it regularly offers the highest deposit rates of any big bank in the state. Texans have taken notice: Over the 15 months ended March 31, NCNB Texas ballooned its deposit base by 25% to $25.5 billion – a $5 billion increase.

Generous Bidder

The company offered $50 million more than its nearest rival to win the bidding for National Bancshares Corporation of Texas, San Antonio, and $60 million more than its nearest rival to win the bidding for University Savings Association, Houston.

"NCNB never should have gotten those tax breaks," says James Sexton, a consultant with Bracewell & Patterson, Austin, and a former director of bank supervision for the FDIC.

"It is inexcusable that this deal slipped through the bureaucracy." Mr. Sexton left the FDIC before the NCNB deal was negotiated.

FDIC Chairman L. William Seidman declined comment on whether the tax breaks were overly generous.

NCNB: 'No Special Advantage'

Timothy Hartman, chairman of NCNB Texas, says the tax breaks helped the company raise the $1.7 billion needed to recapitalize the First Republic banks.

> **"The perception of being able to earn a tax-free return in the future is what enabled us to sell capital and make this thing into a good deal."**
>
> **Timothy Hartman**
> *NCNB Texas*

"The perception of being able to earn a tax-free return in the future is what enabled us to sell capital and make this thing into a good deal," he says.

Mr. Hartman further argues that almost all Texas banks have tax breaks stemming from previous losses. That being the case, he says, NCNB Texas does not have any special advantage.

Less Income to Shelter

However, the big Texas banks that still have operating-loss carryforwards are the ones that did not fail and get federal rescues. These institutions – including Texas Commerce Bancshares Inc. and First Interstate Bank of Texas – are at a disadvantage because their troubled balance sheets are yielding comparatively less income that could be sheltered from taxation, critics of the NCNB deal argue.

The other big Texas banks that got rescues – including First City Bancorporation of Texas, Banc One Corp.'s Bank One Texas, and Team Bank – did not get the stockpile of tax breaks granted to NCNB.

That leaves NCNB Texas, the largest institution in the state, as the only top competitor with a clean balance sheet and substantial tax breaks.

Effect on Competitiveness

"This has had an enormous effect on NCNB's ability to compete in Texas," says James Marino, a senior vice president with the Secura Group, a Washington-based bank consulting firm.

NCNB acquired the First Republic banks in November 1988, four months after they were seized by the FDIC. Under the terms of the deal, NCNB acquired 121 branches, $20 billion of deposits and $11.5 billion of performing loans.

In exchange, the company was allowed to shield $2.8 billion in income from taxes. The breaks stemmed from operating losses and loan writedowns recorded by the First Republic banks during the 15 months before they failed.

Unexpected IRS Ruling

To the astonishment of tax lawyers, the Internal Revenue Service determined that depositors – not shareholders – would own the banks when they failed. The banks essentially would become depositor-owned mutual savings associations, the IRS decided, and therefore NCNB's acquisitions would roughly resemble stock conversions.

The ruling allowed NCNB Texas to claim tax-loss carryforwards generated by the First Republic Banks. Without the decision, the tax breaks would have gone to First Republic shareholders or have been extinguished altogether.

"The substance of the ruling was amazing," says Thomas Dwyer, a tax lawyer with Arnold & Porter, Washington. "There are a lot of tax lawyers who have no idea how the IRS arrived at that interpretation."

In a separate ruling, the IRS allowed NCNB to use the First Republic tax breaks to shield its entire seven-state operations from taxation.

A Lucrative Scenario

Barring an unforeseen downturn, NCNB will easily earn more than $2.8 billion over the next five years. At the maximum tax rate of 34%, the company can avoid paying $950 million in taxes on the profits.

During the 18 months ended June 30, the company used its First Republic subsidies to avoid $177 million of taxes.

"I can't think of a more lucrative deal that has been made in the banking industry," says Frank Anderson, a senior analyst with Stephens Inc., a brokerage in Little Rock, Ark.

A Boon to the Insurer

The IRS ruling also was a boon to the FDIC. The agency was obliged to eliminate the $1.8 billion capital deficit of the 40 failed banks when NCNB took them over. But tax laws required NCNB to treat that assistance as taxable income, meaning that NCNB owed the IRS $634 million.

The new owner could not be expected to pay that tax, since the assistance was made necessary by First Republic's losses. So the FDIC had to provide $634 million in additional assistance to make up the difference.

The FDIC was able to escape that obligation by using some of First Republic's tax-loss carryforwards, Mr. Hartman says. The banking industry was the ul-

> **"This has had an enormous effect on NCNB's ability to compete in Texas."**
>
> **James Marino**
> *The Secura Group*

timate beneficiary, since it funds the FDIC.

Benefit to Banking Industry

"Obviously, the tax rebates accrued to the benefit of the banking industry, and that's not the way the system is supposed to work," says Robert McIntyre, director of Citizens For Tax Justice, a Washington-based lobbying group.

An IRS spokesman declined to comment. However, an agency official familiar with the matter admits that the agency broke with legal precedent in granting the ruling that allowed NCNB and the FDIC to benefit from the First Republic tax breaks.

"It's not perfect analysis," the official says.

Interagency Cooperation

Speaking on condition of anonymity, the IRS official further stated that the agency had rushed its ruling – rendered only three weeks after it was requested – as a favor to the FDIC. "All of us who work for a government agency have some inclination to respond to requests that are delaying another agency's work," the official says.

A number of experts praise the IRS for expediting its work so that the FDIC could complete a major bank rescue. But in extending the favor of a rushed decision to the FDIC, experts said, the IRS created the appearance that the ruling itself was made as a favor to the FDIC.

"I would expect the IRS to look to the letter of the law and not accommodate a sister agency," says Bert Ely, the consultant in Alexandria, Va.

Mr. Seidman said the FDIC played no part in obtaining the IRS ruling.

> **Even critics of the tax breaks applaud NCNB's initiative in asking for the ruling, saying the company had every right to seek legitimate avenues to enhance its $1.7 billion investment in the First Republic banks.**

In Defense of the Deal

Mr. Hartman, the NCNB executive who negotiated the IRS ruling, insists his company obtained the tax breaks fair and square.

"This was a straightforward, real up-front transaction and there is nothing about it that is uncertain or clandestine," he says.

Even critics of the tax breaks applaud NCNB's initiative in asking for the ruling, saying the company had every right to seek legitimate avenues to enhance its $1.7 billion investment in the First Republic banks.

But critics say the arrangement, aside from the questionable substance of the ruling, may have skewed the bidding for First Republic. The three finalists were First Republic's management, NCNB, and Wells Fargo & Co. Each had differing assistance requests, and each had plans to capture varying portions of the tax breaks.

FDIC Protects Itself

In evaluating the attractiveness of each bid, the FDIC apparently considered which proposal posed the least cost to the insurance fund.

But since taxpayers were being dragged into the transaction, experts say, the FDIC at least should have evaluated the bids on the basis of their cost to the government. As it stands, no one knows whether NCNB would have won the bidding under that criterion.

"Somebody at the FDIC dropped the ball," says Mr. Marino.

Mr. Seidman declines to discuss how the First Republic bids were evaluated.

What surprises some observers is that Congress has remained relatively silent on the First Republic transaction. After all, observers argue, the defunct Federal Home Loan Bank Board was reviled for giving away $1.3 billion of tax breaks during five Texas thrift rescues made under the Southwest plan.

The five acquirers in the deals gained $1 of tax breaks for every $18 of assets gained during their December 1988 deals. By contrast, in November of the same year, NCNB got $1 of tax breaks for every $11 of assets acquired.

Washington Looks Askance

Lawmakers decried the Southwest plan deals from the moment they were enacted and eventually ordered federal audits so they could learn the true cost of the transactions.

"Whether it is a bank rescue or a thrift rescue, the American taxpayer should know what the cost is to the government, not just the insurer," says James Barth, the former chief economist with the Office of Thrift Supervision.

However, it appears the First Republic rescue will go unchallenged by lawmakers, who have been overwhelmed by the thrift crisis.

Response From Congress

"The FDIC appears to have given away the store on this deal, but we can't do a heck of a lot about it," says one aide to the House Banking Committee.

Though mute, lawmakers did send a message about the First Republic deal when they fashioned the thrift reform law last summer.

In establishing guidelines on tax treatments for failing institutions, the House Ways and Means Committee made it clear that IRS was never to repeat its ruling on First Republic.

"While no inference should be drawn as to the correctness of this ruling under prior law, the committee intends it to be clear that such a transaction would not qualify for tax-free reorganization treatment following the enactment of this bill. The committee further intends this position to be included in the regulations or other administrative guidance issued by the Treasury Department."

But closing off the spigot of tax dollars for future deals does little to correct what experts perceive as a serious competitive inequity, especially in Texas.

"There is no doubt that NCNB has a significant competitive advantage because of the tax breaks," says Mr. Anderson. ☐

COMING SOON

Top Numbers 1990 Update

More timely than ever before, the new Top Numbers 1990 Update from *American Banker* gives you exclusive updated industry rankings as published over the first half of 1990.

Track your competition

The largest commercial banks, bank holding companies, international banks, thrifts and mortgage companies — they're all here. Ranked six ways from Sunday as only *American Banker* could do it.

Track your own performance

It's an indispensable guide you can use to track your own or your competition's performance.

And, not only does Top Numbers 1990 Update detail in charts and graphs how you and your competitors ranked last year, but it also lets you track changes from previous years.

Free to subscribers

American Banker subscribers automatically receive this valuable report FREE! It's one of the many benefits to an already valuable subscription.

How to order

For your own copy, simply fill out and return the coupon provided. Or use the numbers listed below to call us toll-free or send us your order by fax.

American Banker's guarantee

If, for any reason, you are not completely satisfied with Top Numbers 1990 Update, simply return it within thirty days for a prompt refund or credit. No questions asked.

For fastest service
To get your copy of *Top Numbers 1990 Update*, simply:
➤ **Phone toll-free: (800) 367-3989**

INDEX *of top stories*

Continued from *page 13*

chairman of the Securities and Exchange Commission, told Congress that the government should consider selling deposit insurance to consumers at a market rate. *Page 1*

7/20 The Resolution Trust Corp. will devote its energies in the next few months to selling or liquidating 77 institutions with total assets of $48 billion. *Page 1*

MANAGEMENT/ HUMAN RESOURCES

7/18 In announcing this month that it was reorganizing its consumer and commercial operations along functional rather than geographic lines, NCNB Corp. indicated that it was grappling with a dilemma faced by other superregional banks: How much autonomy should they grant managers at the state and local levels? *Page 1*

7/19 Edward Furash, head of a Washington consulting firm, says bankers should return to "Camelot:" capital, assets, management, earnings, and liquidity. *Page 14*

MARKET FORCES

7/16 When Federal Reserve Board Chairman Alan Greenspan tipped his hand on interest rate policy in his congressional testimony on, he gave Fed watchers and other tea-leaf readers new questions to ponder. *Page 1*

7/16 For the first time in seven months, the Federal Reserve on moved to reduce interest rates, pushing the federal funds rate down a quarter point, to 8%. *Page 1*

7/19 The tightening of bank credit that prompted the Fed to reduce short-term interest rates is likely to continue and may lead to further easing by the central bank, Chairman Alan Greenspan said. *Page 1*

MERGERS/ ACQUISITIONS

7/18 Wells Fargo & Co. announced that it will buy 130 branches from ailing Great American Bank in San Diego. *Page 1*

PEOPLE

7/16 After two years at the Federal Reserve Board, John P. LaWare is emerging as the central bank's key player in bank regulatory issues. *Page 1*

REGIONAL BANKING

7/18 In a bold move to expand its reach in Southern California, Wells Fargo & Co. announced that it will buy 130 branches from the ailing Great American Bank in San Diego. *Page 1*

7/18 Faster economic growth and slower growth in problem assets helped superregional bank companies outshine their money-center counterparts in the second quarter. *Page 1*

7/20 HomeFed Corp.'s stock plunged 25% after the San Diego thrift company announced an unexpectedly large increase in bad real estate loans. The fallout spread to other California banks with real estate exposure. *Page 1*

TECHNOLOGY

7/16 Manufacturers Hanover and several other banks plan to introduce telephonelike devices over the next year to boost their home banking programs. *Page 3*

7/17 A handful of money-center banks are making big investments in disaster recovery with the aim of dramatically reducing the amount of time it would take them to restore operations in case of a system failure. *Page 1*

7/17 The Co-operative Bank of Great Britain is installing a credit card management system from First Bankcard in an attempt to reduce bad debts and enhance productivity. *Page 3*

7/18 Security Pacific is installing a $10 million system to help its capital markets area manage risk and package new products. *Page 3*

7/18 Gene Bedell, head of a joint venture between IBM and First Boston to sell financial software and computer-aided software engineering, advises banks to proceed cautiously with Case technology. *Page 10*

7/19 Some victories against planned postal increases are forecast by the American Bankers Association. *Page 3*

7/20 Small and midsize banks report big telecommunications savings from the use of a high-speed digital technology known as T-1. Until recently, only money-centers and superregionals could afford it. *Page 3*

THRIFTS

7/16 The Office of Thrift Supervision has backed down from a policy requiring significantly higher capital at thrifts that service pools of mortgages guaranteed by the Department of Veterans Affairs. *Page 1*

7/16 T. Timothy Ryan and the Office of Thrift Supervision are coming under fire for not providing timely data on the status of the nation's S&Ls. *Page 8*

7/18 The Senate Banking Committee narrowly rejected a proposal to give banks and thrifts a partial reprieve from tighter check-clearing schedules that take effect on Sept. 1. *Page 1*

7/19 The House Democratic leadership rallied behind legislation that would stiffen penalties for bank-related crimes and establish a national commission to investigate what caused the savings and loan crisis. *Page 1*

7/20 HomeFed Corp.'s stock plunged 25% after the San Diego thrift company announced an unexpectedly large increase in bad real estate loans. The fallout spread to other California banks with real estate exposure. *Page 1*

7/20 The Resolution Trust Corp. will devote its energies in the next few months to selling or liquidating 77 institutions with total assets of $48 billion. *Page 1*

TRUSTS AND ESTATES

7/19 Growth in trust income and assets at large U.S. banks bounced back last year after sputtering in 1988. The data indicate that the leading institutions are succeeding in their search for profits from the once sleepy function. *Page 1* □

Executive Help Wanted

RETAIL BANK EXECUTIVE

Billion dollar New England bank must revitalize relationships with retail customers. Service is the foundation of profitable market share. We'll do a lot better, now and into the future, with a leader whose vision and integrity build focus, intensity, sustained team effort and results.

We'll find a line management winner who:

- Lives customer relationships in small cities and little ... not just in the urban/up-scale centers.
- Knows all forms of deposit and retail credit lines of service, cold . . . commercial credit, a plus.
- Makes marketing principles work, even when population and media availability put per exposure costs out of sight.
- Appreciates values of key staff areas like marketing, financial planning, HR.
- Has a college degree . . . maybe MBA or Stonier too . . .
- Has a stable personal life . . . our work is tough enough without any extra baggage.
- Probably runs one of the retail or community banking regions in a bank many times our size.
- Manages the game and the score by inspiring the players.
- Is looking ahead for the right show to run.

Salary, incentives, benefits, challenge and career opportunity. Please send a detailed resume, to be held in confidence, now.

Sales

NATIONAL ACCOUNT EXECUTIVE

Electronic Banking, a division of First Bank System has created two new National Account Executive positions.

Responsibilities include:

- Selling to specific industry groups such as airlines, hotels, car rental companies and retail
- Develop and negotiate business proposals and agreements
- Develop and manage relationships with national accounts for credit card processing
- Analyze the target industries to determine potential opportunity and risk.

Qualified candidates must have a BA degree with 5-7 years of related experience in customer service, marketing, or finance related backgrounds within the travel and entertainment or retail industries. An MBA would be a plus.

First Bank System offers a competitive salary, a generous flexible benefits package and is located in its downtown Minneapolis offices. For confidential consideration, please send your resume and salary requirements to: **Bruce Jochims, FIRST BANK SYSTEM, Human Resources, MPFW-0503, 120 South Sixth Street, Minneapolis, MN 55480.**

First Bank System

Affirmative Action/Equal Opportunity Employer

Asset/Liability Director

Innovative, medium-sized Mid-Atlantic regional bank holding company seeks Director of Asset/Liability Management Analysis, reporting to the SVP-Treasurer. Responsibilities include managing several analysts and working closely with senior management at the holding company and affiliate bank levels to develop and implement strategies to improve interest rate risk management and product pricing.

The ideal candidate will have 7-10 years of banking/financial analysis experience, including at least 3 years at a major regional bank working with interest rate risk simulation models and asset/liability management processes involving transfer pricing systems, complex investments and off-balance-sheet instruments. A good working knowledge of bank balance sheet/income statement dynamics is also necessary.

We offer a competitive salary commensurate with experience, plus an excellent benefits package. Qualified applicants should send a resume to: BOX #434, c/o American Banker, 1 State Street Plaza, New York, New York 10004.

You're looking at the difference between our end-of-day pricing service and theirs.

It's called a responsive customer service team.

At Muller Data, our customers tell us we have the "most professional" service in the industry. They say we're friendly and helpful. That we try harder, and do things right the first time.

Answers, fast.
Our records say we answer more than 80 percent of your questions while you're still on the phone. So instead of promises to "get back" to you, we give you answers and solutions – on the spot. When we do have to call you back, we give you a time, and treat it like an important commitment. Because to us, it is.

Accurate data.
Of course, we start with accurate, comprehensive data for more than 750,000 issues, including listed and OTC equities, commodity and financial futures, CMOs, MBSs and UITs – *plus* the full universe of more than one million municipal bonds, corporate fixed-income securities, government instruments, and 80,000 Canadian and overseas equities and bonds.

Can we show you?
We'd like to show you just how accurate, timely and responsive a securities pricing service can be. For more information, write Muller Data Corporation, 161 William St., New York, New York 10038, or call toll-free: 1-800-US-MULLER.

FINANCE

DEALS

Westpac and First Chicago Commit $1 Billion to Utility Buyout Bid

By WILLIAM GOODWIN

Westpac Banking Corp. and First National Bank of Chicago committed $1 billion to finance Monday's unsolicited $27-a-share offer by Kansas City Power & Light Co. for Kansas Gas and Electric Co.

The unsecured credit facility comprises a $700 million acquisition bridge loan and a $300 million revolver, both maturing in three years.

In keeping with language in a number of recent bank loan agreements, the credit pact provides that the pricing of the loans will rise if the underlying transaction is determined to be highly leveraged. If the loan were to be designated an HLT, pricing would rise by 50 basis points.

The deal, however, has "none of the characteristics" of an HLT, said an official at Donaldson, Lufkin & Jenrette Securities Corp., Kansas City Power & Light's adviser on the takeover. He declined to elaborate on the company's capitalization.

Pricing 'On the Cheap Side'

The loan is priced at the prime rate for the first year, according to a tender offer document filed Monday with the Securities and Exchange Commission. Pricing rises in stages during the second and third years, topping out at prime plus 50 basis points.

"That's on the cheap side," said an official in the utility lending group of a bank not involved in the deal.

He added that Westpac has a big appetite for assets, while First Chicago has been doing a lot of deals cheaply to build its volume and relationships.

Westpac and the First Chicago Corp. unit both have previous banking relationships with Kansas City Power & Light, and no strong ties to the target.

Indeed, Westpac has not done any business with Kansas Gas and Electric, while First Chicago has had only limited dealings with the Wichita-based utility.

"I don't really consider them our bankers," said Kansas Gas and Electric treasurer, William Whitmer, referring to First Chicago. He said Citicorp and Bankers Trust New York Corp. were the company's lead banks.

Mr. Whitmer declined to comment on the unsolicited bid, or to discuss the company's possible responses or alternatives.

Westpac and First Chicago declined to comment on their policies concerning loans used to finance hostile takeovers.

"Our banking relationships with our clients are paramount, but we do judge every situation on its own merits," a Westpac spokeswoman said.

Pricing Options

Kansas City Power & Light also has the option of pricing the loans at the London interbank offered rate, or the CD rate.

In the case of the former, the loan initially would be priced at Libor plus 37.5 basis points, and then rise in stages to Libor plus 125 basis points.

Kansas City Power & Light agreed to pay a commitment fee of 15 basis points a year on the average daily unused portion of the bridge loan and revolver.

The loan agreement also provides for an arrangement fee of 5 basis points, and a syndication fee of 30 basis points.

The breakdown of each bank's commitment under the agreement was not given. Syndication of the bank loans was said to be in the early stages.

Kansas City Power & Light is offering to buy all outstanding common shares of Kansas Gas and Electric for $27 each in cash.

The bidder is also offering to buy Kansas Gas and Electric's 4.5% preferred stock at $110 a share, the 4.32% preferred at $101.64 a share, and the 4.28% preferred at $101 a share.

The common stock offer, totaling $857 million, represents a 37% premium over the market price on July 20, Kansas City Power & Light said.

The company said it had expressed interest to Kansas Gas and Electric about a possible business combination "on a number of occasions over the past two years," and would still prefer a negotiated deal.

The Missouri utility also hinted in a letter to the target company's chairman that it might be prepared to sweeten the bid, if warranted, after a review of nonpublic information. □

Douglas Elliman-Gibbons & Ives is proud to announce the creation of its Bankers Assurance Division specializing in asset and property management for financial institutions.

GAF Refinancing Draws Strong Interest

By ANGELA WILSON
Asset Sales Report

Scores of lenders attended last week's bank meeting for a refinancing for GAF Corp.

Agents and underwriters on the $800 million refinancing are Chase Manhattan Bank, Bank of New York, Banque Paribas, and Bank of New York.

A cogent said representatives from 50 or 60 banks attended the bank meeting. They heard Samuel Heyman, GAF's chairman and chief executive, and other senior executives, present the company to the potential lenders.

GAF plans to use the debt to retire $50 million in increasingrate notes and what remains of the $885 million in bank debt used to take the company private last year. Calls to the company were not returned.

Lenders will receive a commitment fee of 75 basis points for $15 million, 100 basis points for $25 million, and 125 basis points for commitments of $30 million. The financing is an amortizing term loan with final maturity in eight years.

Although this credit is better priced than last year's bridge loan, one lender in that facility believes the new credit is clearly superior to the bridge facility.

The new credit is secured by all of GAF's operating assets.

"Sure [the bridge] is a better loan if you want a bridge with no identified source of repayment," he said, but the new credit is secured by all of GAF's operating assets.

The new facility is also more attractive, as there will be no leverage discount: GAF will get the London interbank offered rate plus 250 basis points or the prime rate plus 150 basis points, whether or not its earnings-to-interest coverage ratio increases. Often lenders reduce the interest rate if this ratio decreases.

GAF's ratio of earnings before interest and taxes to total interest expense is 1.5-to-1. Its ratio of earnings before interest and taxes to cash expenses is 1.8-to-1.

Lenders are expected to step up to participate in the financing. "It's looking good to me," said one lender who participated in the bridge facility, "and we're all hungry for assets."

Another agent banker said that *Asset Sales Report* is one of the already starting to come in, in addition to those of the underwriters." He declined, though, to specify the dollar amount or the number of lenders committed to the deal.

Commitment letters are due from banks by July 31.

Top Court Review of Liability Sought

Fleet Hopes Justices Will Hear Superfund Dispute

By STEPHEN KLEGGE

The Supreme Court will be asked to overturn a controversial Circuit Court decision in the Fleet Factory Corp. case that vastly expanded the boundaries of lender liability for environmental damages.

But the high court is considered unlikely to consider the issue, at least for the time being.

Fleet/Norstar Financial Group, Providence, contends that a decision earlier this year by the 11th Circuit Court rendered meaningless an exemption for lenders in the "Superfund" law, which provides for cleanup of environmental contamination.

The Circuit Court last week denied a request to review a decision by two of its judges in the Fleet case.

Lender liability attorney Edward F. Mannino of Philadelphia termed the Circuit Court decision "totally out in left field" compared to the body of law on the issue.

But he said the Supreme Court is unlikely to hear the case because the justices "like to have a conflict in the circuit" and the 11th Circuit is the only one to consider the issue to date.

"I think that other courts will not follow [the precedent in] Fleet Factors," he said. "If the other courts should follow below it, the Supreme Court will reverse it – or Congress will reverse it."

The Circuit Court last week denied a request to review a decision by two of its judges in the Fleet case.

Fleet general counsel William Brower acknowledged the high court is unlikely to hear the case, given that it chooses to hear only a small percentage of cases brought to it. But he added that Fleet still has the option of a jury trial on the facts of the case in Federal District Court in Atlanta.

At stake is liability for the $375,000 cleanup of the Swainsboro Print Works plant. Fleet loaned the now-defunct company $800,000. The Circuit Court held that Fleet Factors could be held liable because it was in a position to influence the management of environmental problems by a borrower (Swainsboro Printworks Inc.), which has since gone out of business.

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking and thrift holding firms ranked by asset size, as measured by the market value of all common shares outstanding. The 52-week high and low prices are adjusted for stock splits and dividends of 5% or more. Pfd is for preferred stock. Mkt to bk is the closing price as a percentage of the most recently reported book value, expressed as a percentage. Book value is adjusted for announced earnings and dividends. Chg. The price change in the stock last traded. If no trades for the day, the latest bid. **All Bank and Thrift Indexes:** Composite stock price indexes for the 250 banks in market value and the top 50 thrifts in market value, respectively. **AB Bank Index:** The largest commercial banks in market value and volume indicators most shares traded and today's volume as a percentage of average shares traded over the past 13 weeks.

Data source: SNL SECURITIES, Charlottesville, VA. 804/977-1600, processed the tables. Financial News Network, Vienna, VA, provides 24h, with the daily prices.

CAPITAL

Barnett to Offer Preferred Issue To Fund Growth

by KELLEY HOLLAND

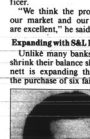
The securities of southeastern banks have been beaten up lately in the capital markets, but Barnett Banks Inc. is unfazed.

The Jacksonville, Fla.-based bank company is planning to issue a new type of preferred stock to help finance its expansion plans, according to Stephen A. Hansel, senior executive vice president and chief financial officer.

"We think the prospects for our market and our company are excellent," he said.

Expanding with S&L Purchases

Unlike many banks trying to shrink their balance sheets, Barnett is expanding through the purchase of six failed thrifts



Stephen Hansel
Barnett Banks Inc.

this year. The bank is holding on to assets, including a credit card portfolio of about $900 million that is ripe for securitization. And loan growth averaged 15% in the second quarter of the year.

New deposits are providing part of the funding for the expansion. But Barnett is also turning to the capital markets, probably during the current quarter, for an offering of contractually exchangeable preferred stock.

The stock carries a fixed rate – identical to the preferred stock that counts as Tier 1 capital – except that it is exchanged at some fixed future date for another form of cash that will count as Tier 1 capital, according to John McVeigh, product manager for preferred stock at First Boston Corp.

Mr. Hansel is hopeful the novel structure of the preferred stock offering will appeal to some institutional investors, as well as the retail investors who are the biggest buyers of fixed-rate preferred. He believes that the the added demand could enable Barnett to keep its funding costs low. First Boston will probably be lead manager on the offering.

The automatic exchange feature creates a sort of synthetic sinking fund that enables insurance companies to hold the preferred stock without having to mark it to market.

"Insurance institutions can participate in the high-yielding fixed-rate preferred market without having to mark to market," Mr. McVeigh of First Boston said. He declined to comment on the Barnett deal.

Mr. McVeigh was hopeful that the new type of preferred issues, which have been discussed with several banks, would allow banks to raise Tier 1 capital at a lower cost than that available in the common stock or retail preferred stock market.

If it were not expanding, Barnett could easily avoid raising new capital in the markets because its deposit funding base is so large. Jumbo certificates of deposit fund just 14.6% of its earning assets, and other deposits fund 83%. "We're just a country bank in terms of how we fund ourselves," Mr. Hansel said.

Although deposits are sufficient to fund part of Barnett's expansion, new securities issues will be needed to finance the rest of the growth.

The market's negativism on southeastern banks would hurt Barnett if it tried to issue new debt or common stock, Mr. Hansel conceded. That is why the unusual structure of the preferred offering, shaped as it is to draw a larger than usual pool of investors, makes sense.

On Monday, Barnett's stock was trading at $31.75, a scant 1⅝ premium to the second-quarter book value of $27.52 a share.

MARKET MONITOR

NCNB Corp. is marketing a new subordinated debt issue, market sources said. Price talk on the $200 million 25-year noncallable offering is for a yield of 160 to 165 basis points over long-term Treasuries. Merrill Lynch Capital Markets is the lead manager.

On Monday, Standard & Poor's Corp. affirmed the single-A rating on NCNB's senior debt. □

STOCKS

Prices of Major Bank Shares Fall Sharply

Continued from *page 1*

cents and $1.50, causing several to hit new 52-week lows: Citicorp, which fell 50 cents to $20.625; Chase Manhattan Corp., which fell 37.5 cents to $19.875; First Chicago Corp., which fell 25 cents to $26.875; and First City Bancorp, which fell $1.25 to $19.625.

Volume in Chase and Citicorp was heavy with investors trading 2.1 million shares of Chase and 1.6 million shares of Citicorp. BankAmerica traded 1.7 million shares, falling 87.5 cents to $25.50.

"The concern in banking stocks is that weaker-priced banking institutions will participate in the downside of the market, but then not join in the upside if there is a recovery," noted Frank W. Anderson, banking industry analyst at Stephens Inc., Little Rock, Ark.

Sallie Mae, whose stock is widely recommended by investment professionals, fell $4.625 to $49.375 on news that a major guarantor of loans in the federal government's student aid program is encountering financial problems.

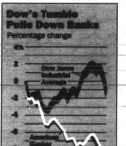
Share prices of the government-sponsored secondary mortgage market agencies slipped in sympathy. The stock of Freddie Mac slid $3.25 to $76.625 and shares of Fannie Mae fell $1.625.

Big Movement in Wells Fargo

The biggest movement among banks, as usual, belonged to Wells Fargo & Co., which fell $1.50 to $74. The San Francisco company's stock registered larger swings than other bank equities because the price of its stock is double or more the prices of other bank shares.

Major price erosion was experienced by other well-regarded bank stocks, as well. NBD Bancorp., Detroit, fell $1.25 to $31.375; U.S. Bancorp., Portland, Ore., fell $1 to $28.25; Republic New York Corp., New York, declined $1 to $49.25; and Northern Trust Corp., Chicago, fell $1 to $28.75.

Analysts said these movements were attributable to the fall in the overall market. "These are the bank stocks that have held up better than others over the past six months and consequently have more space to decline with all other stocks today," said one analyst.



Among money-center banks, the largest price decline was posted by Chemical Banking Corp., New York, which fell $1.25 to $31.375. J.P. Morgan & Co. fell 50 cents to $36.875.

Analysts said that concern about the quality of student loans nationwide helped drive these stocks down as they are the most exposed if problems with the $50 billion in student loans outstanding become systemic.

Stock in Citicorp was possibly further impacted by a downgrade from a "buy" to a "neutral" from Merrill Lynch & Co., according to analysts who said Citicorp's management reorganization announced Friday was not as broad reaching as they had expected.

Impact on Regionals

Among major regional banks in the Middle Atlantic states, Wilmington Trust Co., Wilmington, Del., was off $1 to $41 and Riggs National Corp., Washington, D.C., was off $1 to $13.50. Dauphin Deposit Corp., Harrisburg, Pa., was also off $1, to $30 in mid-afternoon trading.

The story was much the same among major thrift institutions. Great Western Corp., Los Angeles, the nation's largest savings company, was off $1 to $16.25, while H.F. Ahmanson & Co., Los Angeles, parent of Home Savings of America, was off 75 cents to $19.625.

Well-regarded Golden West Financial Corp., Oakland, Calif., declined $1.12 to $28.75 while HomeFed Corp., San Diego – the thrift stock that has suffered the heaviest price decline recently – slipped another 62.5 cents to $13.75.

Broader Market Picture

Analysts said the broader market was reacting to lower-than-expected earnings at McDonald's Corp., program trading, and renewed concern that interest rates might not fall soon.

Dennis Jarrett, a market analyst at Kidder Peabody & Co., said options-generated selling pressure from Friday afternoon continued Monday.

Because many of the options expiring Friday were to buy shares, Mr. Jarrett said institutions tried to sell. □

Health of FDIC Being Exposed To the Spotlight

By BILL ATKINSON

As barometers of the political mood, the Sunday morning television interview programs have latched onto banking industry issues with a vengeance.

The programs have turned a spotlight on the savings and loan crisis and the impact of declining real estate markets, both tarnishing the image of bankers.

But now the interview shows — and the media in general — are confronting what could be the most damaging issue of all: the health of the Federal Deposit Insurance Corp.

Whereas the thrift debacle affected only one segment of the financial industry, and real estate problems have been viewed as regional, the FDIC insures virtually every depository institution in the country.

ANALYSIS: *Follow-up on the news*

Washington lawmakers, among others, are beginning to wonder if the crisis that led to the demise of the Federal Savings and Loan Insurance Corp. may repeat itself in the FDIC's much bigger commercial bank fund.

Two Kinds of Worry

Bankers worry that they may be assessed higher premiums to replenish the bank insurance fund, but consumers may feel a very different kind of alarm about the safety of their deposits.

On July 15, at least four major news programs discussed banking and thrift-related issues, with the FDIC question moving to the forefront.

FDIC Chairman L. William Seidman made comments that members of the general public might have found most startling. He acknowledged that the $13 billion fund that insures deposits at more than 13,000 commercial banks is under "considerable stress" and could be hurt in the event of a long recession.

Worst-Case Scenario

Several days before Mr. Seidman made his appearance on "CBS News" "Face The Nation," a senior FDIC official said before a group of savings and loan executives that the bank insurance fund could lose as much as $2 billion in a worst-case scenario. And last Wednesday, Mr. Seidman returned to an NBC morning news program to say, "If we had a long and deep recession, [the bank insurance] fund might not be able to handle it."

Industry observers say that in the wake of bad loans to developing countries, in real estate,

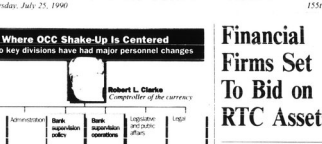
Where OCC Shake-Up Is Centered
Two key divisions have had major personnel changes



Source: Office of the Comptroller

Doubts, Pressure, Shake-Up Lead To Brain Drain from Comptroller

By BILL ATKINSON

WASHINGTON — The Office of the Comptroller of the Currency tossed the banking industry on its ear this year with a series of tough real estate exams. But meanwhile, the agency has been undergoing a shake-up of its own.

Since last fall, four senior staff members have left the regulatory unit, and a fifth plans to leave. Meanwhile, four other top regulators have been reassigned to lesser posts.

Key Divisions Affected

The changes have all occurred in the agency's two key divisions: bank supervision policy, which sets exam policies and schedules, and bank supervision operations, which conducts the exams.

The brain drain seems to have resulted from low morale among senior staff members who felt their recommendations were ignored and from recent reorganization that has unsettled employees.

Whatever the reasons, the changes, coming when the agency is being criticized for overzealous examinations, have raised questions about its stability and its capacity to do its job in particularly troubled times.

Chief's Tenure in Doubt

Further clouding the picture is the fact that Robert L. Clarke's five-year term as comptroller ends in December and his reap-

Financial Firms Set To Bid on RTC Assets

By DEBRA COPE

WASHINGTON — Several major financial institutions are preparing bids for $500 million blocks of assets held by the Resolution Trust Corp., sources said Tuesday.

The expected bidders include Shearson Lehman Hutton Inc., Merrill Lynch & Co., Goldman, Sachs & Co., the Federal National Mortgage Association, the J.E. Robert Companies, an investment group led by former Treasury secretary William Simon, and NCNB Corp.

They are said to be seeking the sour loans and other government-seized assets for their own accounts or for resale in the form of securitized or whole-loan packages.

Moving Assets to Private Sector

The bulk transactions have been designed by the RTC to move assets faster off its books and into the private sector. The first three bulk asset packages will be assembled for bidding in late November and the sales closed in early 1991.

Under a plan outlined by RTC staff members Tuesday at an open board meeting, the

Private Market Placements Up, Participants Say

By WILLIAM GOODWIN

Despite earlier predictions of a sharp dropoff in private-placement volume, activity has picked up considerably in the past month, according to market participants.

They cite a combination of factors, including the so-called credit crunch, a dip in interest rates, and the demise of the public high-yield bond market.

"We've seen a lot of increased activity from companies that are nervous about banks pulling their [short-term credit] lines," said Maleyne Syracuse, vice president in charge of private placements at Bankers Trust New York Corp.

In addition, a number of highly leveraged transactions are now being refinanced in the private-placement market.

"That has definitely helped pick up" the market, said Robert Szymczak, manager of data

Greenspan Vows Fed Is Continuing Inflation Fight Despite Cut in Rates

By LINDA CORMAN

WASHINGTON — In an effort to convince skeptical markets that he had not give up the fight against inflation, Federal Reserve Board Chairman Alan Greenspan on Tuesday reiterated that the July 13 easing of short-term interest rates was forced by recent signs of overly restrictive lending practices by banks.

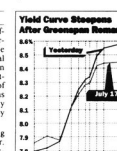
"We have not done anything to alter our policy path," Mr. Greenspan told a House Banking subcommittee. It was his second congressional appearance in successive weeks to present his semiannual report on monetary policy targets.

Further Cuts Called Unlikely

In testimony last week to the Senate Banking Committee, Mr. Greenspan said further interest rate cuts were unlikely unless necessary to counteract excessively tight bank credit. (For excerpts from that testimony, see page 5.)

Analysts said the Fed chair-

Yield Curve Steepens After Greenspan Remarks



man's remarks on Tuesday were meant to lessen confusion and address credibility problems in the financial markets since the Fed dropped the federal funds rate from 8.25% to 8.0%. Fed watchers, citing a lack of economic data to justify a lowering of rates at that time, suggested

PEOPLE *in the news*

Washington Bancorp. Chief In Urgent Quest for Capital

By BILL ATKINSON

John J. Mason, chairman and chief executive officer of the troubled Washington Bancorp., is a man in search of capital.

The second-largest shareholder of Washington Bancorp., Mr. Mason became chairman less than two months ago as maneuvers began to pull the $1.8-billion banking company from the brink of failure.

Like any good manager, he boils the challenge down to a narrow, focused task.

"Our strategy is very clear, and that is capital adequacy," he said in a recent interview.

That may prove quite an understatement, for the problems he faces are formidable at a time when the economy of the nation's capital is slowing.

Washington Bancorp., the parent of National Bank of Washington, lost $80 million in the second quarter alone and defaulted in early May on $25.8 million in maturing commercial paper. The bank continues to borrow heavily from the Federal Reserve's discount window – the lender of last resort – to the tune of $130 million to $150 million a day.

"I'm here in the middle of the ocean holding on," said Mr. Mason. "I am trying to manage a very difficult situation. I am not looking for a job; I am not looking for a feather in my cap. I'm a businessman. My livelihood is not dependent on working at this institution."

"I'm here in the middle of the ocean holding on. I am trying to manage a very difficult situation."
John J. Mason
Washington Bancorp

Mr. Mason, 51, is highly regarded in Washington for his knowledge of both real estate and banking. He currently runs a Washington-based real estate investment company, and was vice chairman of NS&T Bank, a profitable institution acquired in the mid-1980s by Crestar Bank in Washington.

He charges that Washington Bancorp.'s performance waned during the previous administration of former Chairman Luther H. Hodges Jr. Under Mr. Hodges's leadership, the bank lost millions in loans from Wards to Latin American countries and to directors. There was also an attempt to oust Mr. Hodges because of the bank's poor performance, but he resigned voluntarily on Jan. 31.

Mr. Mason said the bank lacked internal controls, and he criticizes the institution's use of commercial paper, or short-term money, to fund long-term mortgages – akin to the strategy that sent the thrift industry crashing.

Mr. Mason appears to be a chief executive who will not mince words. At least one bank holder, Alan Patricof of Avalon, Inc., has openly stated this month that the future prospects for the banks continued operations are "in doubt." The source, a former executive there, thought the announcement was a move to put the bank in the worst light possible, so creditors would resign themselves to taking deep cuts on their investments.

"I am not part of a diabolical plan to screw the creditors," Mr. Mason said. "To suggest that I would play that sort of game is a little like playing Russian roulette. It is a little far-fetched."

Despite the heavy burden, Mr. Mason thinks there is plenty of value in the 181-year-old bank, which was once owned by the United Mine Workers and helped finance the Washington Monument.

"Moving forward there is still a very good franchise," he said. We have 130,000 to 140,000 depositors. I don't think it should fail. I think it is a worthwhile institution to save." □

BB&T Financial to Acquire Albemarle Savings & Loan

WILSON, N.C. — BB&T Financial Corp. will acquire Albemarle Savings and Loan Association and operate it as a separate, savings bank subsidiary, said John A. Allison IV, chairman and chief executive officer of BB&T.

To complete the deal, Albemarle will have to convert from the mutual to the stock form of ownership, and obtain approval from depositors as well as state and federal thrift regulators.

Albemarle, based in Elizabeth City, N.C., has $91 million in assets and 13.6% of the deposits in its home county.

Pa. Bank Opts Out of Law

PERKASIE, Pa. — Independence Bancorp became the latest Pennsylvania financial institution to exempt itself from a state antitakeover law. Its board opted out of two of the three provisions of Act 36, including one that limits the voting rights of shareholders who acquire 20% or more of the stock.

The $2.6 billion-asset Independence followed Mellon Bank Corp., PNC Financial Corp., and other Pennsylvania-based companies to opt out of part of the law. □

Thornburgh Backs Life Sentences

Supports Senate Bill on Financial Institution Crime

By ROBERT M. GARSSON

WASHINGTON — The Bush administration supports increased penalties for financial institution crimes, including the life sentences a Senate bill would impose for the most serious offenses by "savings and loan kingpins," Attorney General Dick Thornburgh said Tuesday.

"A life sentence might have some effect" on deterring future crimes against thrifts, Mr. Thornburgh told a Senate Judiciary Committee hearing.

Call for Commission Opposed

While praising the penalties specified in a Senate bill, Mr. Thornburgh condemned parts of a companion measure that cleared the House Judiciary Committee Monday afternoon. In particular, he said in a written statement to the Senate panel, a provision creating a national commission to study the S&L crisis could interfere with current enforcement efforts.

With Congress moving quickly to finish work on a crime bill that will include a section dealing with savings and loan crime, Mr. Thornburgh's comments on penalties underscored the gettough attitude that is setting in as public anger grows over the cost of the taxpayer-financed S&L bailout.

In particular, members of Congress are sensitive to the charge that "S&L crooks" are not being prosecuted.

Fraud, Criminality Cited

Mr. Thornburgh told the Senate committee that as many as 30% of the failures in the S&L industry may have been the result of some form of fraud and criminality. Other estimates, he noted, are much higher.

But S&L industry analyst Bert Ely, called such claims "hogwash." In a paper released this week, Mr. Ely said that actual cases of fraud or criminality may cost $5 billion, or about 3% of the bailout on a present-value basis.

Most of the cost, he said, is attributable to interest expense, while price deflation, bad lending and real estate deterioration account for the second largest chunk. About $25 billion, or 17% of the total, comes from the federal government's failure to begin the cleanup in 1983, he said.

Office of Thrift Supervision Director T. Timothy Ryan said this week that he had seen Mr. Ely's analysis but had not had time to evaluate it independently.

In testimony scheduled for delivery Tuesday, Mr. Ryan said the few recent cases in which stiff penalties have been imposed on individuals convicted of crimes against thrifts are the exception rather than the rule.

A more typical case, he said, is the penalty imposed on Robert LeRoy Mikkelsen, who was convicted of misapplying funds at Baldwin County Savings and Loan, Robertsdale, Ala., where he was vice president.

Although the Baldwin County thrift lost over $2 million as a result, Mr. Mikkelsen was sentenced to a year of unsupervised probation, with no requirement to make restitution to the thrift.

Mr. Thornburgh also highlighted the difficulty that prosecutors have encountered in persuading judges to order restitution.

In 1988 and 1989, for example, a total of $8.9 million was awarded in cases brought by the Dallas Bank Fraud task force, Mr. Thornburgh said. Of that total, $23,700 has been paid.

Of the $2.5 million awarded this year, $50 has been paid.

Mr. Ryan's scheduled appearance, along with that of Deputy Treasury Secretary John Robson and Federal Deposit Insurance Corp. Chairman L. William Seidman, was postponed indefinitely.

"Whether bank robbers steal with a pistol or with a pencil, they should serve hard time."
Sen. Joseph R. Biden
Democrat of Delaware

Abuses Spreading Nationwide

Mr. Seidman's written testimony, which was made available by the Judiciary Committee Tuesday, noted that S&L abuses – once seen primarily in the Southwest and in Southern California, are beginning to turn up in the Northeast and in Florida.

Judiciary Committee Chairman Joseph R. Biden Jr., D-Del., lamented the small number of S&L prosecutions and what he said were overly lenient sentences.

In 1989, he said, the average prison term for an S&L offender was only 1.9 years. By contrast, he said, "the average bank robber was sentenced to serve 9.4 years behind bars – almost five times what an S&L crook received.

"Whether bank robbers steal their loot with a pistol or with a pencil – either way they should serve hard time," Mr. Biden added. □

First City Deal Furthers Citicorp's Processing Aims

By RICHARD LAYNE

NEW YORK — With the acquisition last week of the merchant processing contracts of First City Bancorporation of Texas , Citicorp is at least temporarily realizing its long-standing goal of becoming the biggest processor for both consumer cards and merchant sales drafts.

Citicorp, which has aggressively snapped up such businesses, has tripled its sales draft volume in the past three years. With the addition of First City's $700 million in business, Citicorp's merchant portfolio tops $18.4 billion.

For First City, which has processed sales drafts for 14,000 merchants, the sale completes its withdrawal from the cardprocessing business. The bank sold its profitable consumer card business to Bank of New York in March 1990.

Marketing Role Retained

The sale price for its merchant business was not disclosed. Under an agreement with Citicorp, the Texas bank will continue to market the business.

In a business dominated by a few companies, Citicorp is the biggest processor of consumer cards, with $25 billion in outstandings in the U.S. in 1989. The card giant considers the merchant business, which is not as profitable, complementary.

In 1989, he said, the average prison term for an S&L offender was only 1.9 years. By contrast, he said, "the average bank robber was sentenced to serve 9.4 years behind bars – almost five times what an S&L crook received.

"Whether bank robbers steal their loot with a pistol or with a pencil – either way they should serve hard time," Mr. Biden added. □

by yearend.

"One of our goals is to be No. 1," said Mr. Weber, who added that acquiring portfolios is a fast way to grow. He said that the bank has targeted the Midwest and the Southeast as attractive, expanding markets.

Industry observers said Citicorp has grown aggressively in the past year, taking contracts for Melville Corp., Ames, and Avis Corp. away from other big processors. Citicorp also bought the processing business of First Chicago Corp. earlier this year.

Whether Citicorp will be the top merchant processor at yearend remains to be seen. National Processing was the leader, with $18.1 billion in merchant drafts at the end of 1989, followed by Citicorp with $17.7 billion, and Nabanco at $14.8 billion, according to *The Nilson Report*, an industry newsletter.

Neither of Citicorp's top competitors have announced major additions to their portfolios this year. But both companies are said to be pursuing acquisitions.

David Robertson of *The Nilson Report*, said Citicorp, National Processing Co., and Nabanco will all break the $20 billion mark this year.

Large Volumes Needed

First City had an average-size merchant portfolion, but processing requires continuous investment in software and hardware.

"A strong merchant business is important to promoting the well-being of the card business," said Bruce M. Weber, president of Card Acceptance Services, the merchant card processing arm of Citicorp.

Portfolio Expected to Grow

Citicorp, which processed only $7.5 billion in merchant sales drafts in 1987, expects that portfolio to swell to $22.5 billion by the end of 1990, followed by banks tens of thousands of dollars annually, participants in the project said.

Morgan Absent from Test

Morgan Stanley, which was scheduled to take part in the test and switch to Swift-2 last month, dropped out of the project. Morgan could not be reached for comment.

One source said Morgan had decided not to participate in the trial because of problems with a systems vendor.

36 Banks Worldwide in Test

Thirty-six banks in six countries have migrated to Swift-2, which is designed to handle unlimited message volume. The system is expected to replace Swift-1 completely by May 1992. About 100 banks will begin migrating to the new system in September.

Swift-2 is expected to pave the way for banks to offer financial electronic data interchange services to corporations trading overseas.

Users said Swift-1 is inflexible and forces banks to receive messages in an unvarying sequence. On Swift-2, they can choose what type of messages they want to see first.

Stop-Gap Measures Needed

The upgrade has been in the works since 1981 and is running three years behind schedule. The original network was designed to process 350,000 transactions a day and can handle the current load, which recently hit 1.4 million, only because of stop-gap measures to increase capacity.

The network is operated by the Society for Worldwide Interbank Financial Telecommunication, a Brussels-based consortium of 1,600 banks in 71 countries.

One of the early users of Swift-2, Huntington National Bank, Columbus, Ohio, said it would save at least $40,000 a year with Swift-2 because it now needs only one person instead of two to manually check and enter incoming letters of credit. Staff requirements will also be reduced in other areas, such as payments, according to Charles McGuire, vice president and manager of international operations at Huntington.

Most Anticipate Savings

Some other banks say savings will come when all banks are using Swift-2. "There's potential to save money down the road, but the major capabilities of Swift-2 are limited until everyone's on it," said Michael Sipe, manager of international communications at First Bank System Inc., Minneapolis.

He said eventually Swift-2 will allow banks to cut down on message costs by sending longer messages than they can now. Today long messages have to be broken down and sent in several parts.

Huntington, which sends about 300 Swift messages a day and receives about 250, is creating software to allow those messages to initiate payments on Fed Wire. The bank makes 50 to 60 payments a day via Fed Wire.

Retrieval Feature

Another benefit of the Swift-2 system is the ability to retrieve messages sent up to 90 days ago, said Mr. Sipe of First Bank.

If a customer asks to see a letter of credit sent two and a half weeks ago, a bank using Swift-1 has to pay as much as $100 to retrieve a record of that message.

Absorbing Fees

Sometimes banks pass such fees on to the customer, but often they absorb the cost. The decision depends on the type of relationship with the customer, said Mr. McGuire of Huntington Bank.

Along with Huntington, U.S. banks already using Swift-2 are First National Bank of Maryland; First Bank National Association, Minneapolis; Manufacturers Hanover Trust Co., New York; Riggs National Bank of Washington; and the New York branches of National Australia Bank Ltd. and União de Bancos Brasileiros in Sao Paulo. □

Swift-2 Users Hail Network Upgrade

U.S. Participants Report Enhanced Service, Savings

By JEANNE IIDA

NEW YORK — The seven U.S. banks that are using the Swift-2 network, the long-delayed upgrade to the international interbank messaging network, are reporting service improvements and some early cost savings.

Swift-2 allows banks to automate their procedures so that a Swift message generates a payment without human intervention. Such automation can save

About 100 banks will begin migrating to the new system in September.

COMMENT/*By Alfred Pollard and Thomas Greco*

Congress Must Correct Superfund Law

The Comprehensive Environmental Response, Compensation, and Liability Act, commonly known as Superfund, was enacted in 1980 in the wake of several well-publicized discoveries of hazardous waste sites, such as the Love Canal area in New York and the Hooker Chemical facility in Montague, Mich.

The law was designed as a comprehensive scheme for addressing environmental hazards. In addition to creating a means to promptly and effectively respond to the release of hazardous substances, Congress developed an elaborate framework of liability that imposes cleanup costs on those parties responsible for causing the contamination.

Superfund, as applied by the courts, imposes strict joint and several liability for the costs of responding to a release or threatened release of hazardous substances and for the harm to natural resources caused by such release [42 USC 9607(a)].

Mr. Pollard is senior vice president of Security Pacific Corp. in Washington, D.C., and Mr. Greco is associate general counsel for the American Bankers Association. Washington. Charles Lerlow of Cleary, Gottlieb, Steen & Hamilton also contributed to this article.

"No showing of fault is required, and one person may be made to pay for the entire cleanup even if there were other responsible parties involved."

No showing of fault is required, and one person may be made to pay for the entire cleanup even if there were other responsible parties involved. The latter concept has the effect of forcing a single responsible party to attempt to recover from others who were also involved.

Liability Under Superfund

Liability is based on three elements:

- A release has occurred or is threatened.
- Response costs were incurred (that is, costs to investigate, remove, or otherwise deal with the hazardous substances).
- The person involved falls into one or more of four categories of responsible parties outlined in the law (specifically, a current owner or operator of a facility; a former owner or operator of a facility at the time of disposal of a hazardous substance; a person who arranges for transport, treatment, or disposal of hazardous substances; or the transporter of hazardous substances).

Defenses Under Superfund

The Superfund law specifies three limited defenses to liability:

Under 42 USC 9607 (b)(3), a person is relieved from liability if a discharge was caused by an act of God, an act of war, or "an act or omission of a third party." For the third party defense to apply, the "third party" cannot be an "employee or agent of the defendant" or someone whose act or omission occurs in connection with a contractual arrangement.

Under the Superfund Amendments and Reauthorization Act of 1986, a contractual relationship is defined in 42 USC 9601 (35)(A)as include "land contracts, deeds, or other instruments transferring title or possession."

When a land contract is involved, however, a defendant is entitled to assert an "innocent landowner" defense in certain narrowly drawn circumstances.

To prevail, a defendant must establish two elements:

- That the property was acquired after the hazardous substance was placed there and at "the time the defendant acquired the facility the defendant did not know and had no reason to know that any hazardous substance which is the subject of the release . . . was disposed of on, in, or at the facility."
- That at the time of acquisition of the property, the defendant had undertaken "all appropriate inquiry into the previous ownership and use of the property consistent with good commercial or customary practice in an effort to minimize liability." See 42 USC 9601 (35)(B).

To establish whether the owner undertook "all appropriate inquiry," the law requires courts to "take into account any specialized knowledge or experience on the part of the defendant, the relationship of the purchase price to the value of the property if uncontaminated, commonly known or reasonably ascertainable information about the property, the obviousness of the presence or likely presence of contamination at the property, and the ability to detect such contamination by appropriate inspection."

The law also provides that an owner who "by any act or omission caused or contributed to the

GRAPEVINE/*By Jed Horowitz*

Citi Compensates. Although Citicorp did not mention the word "bonuses" last week in describing its reconfigured investment and commercial banking sector, some insiders expect to be compensated according to new criteria.

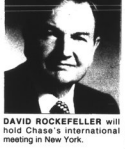
"Intangibles such as better customer morale and increased market share didn't used to count because everything was calculated by profit-center earnings," one banker said. "Bonusable events now seem to include other longer-term things. This is something that [chairman John] Reed has been saying a lot internally."

Citicorp hinted as much when saying it will no longer calculate profit-center earnings for each of its 50-odd businesses in the sector. Instead it will emphasize performance measures that stress revenues, market share, and "tier position" – customers' evaluation of Citicorp as their first, second, or third-choice bank. In the past, tier position was calculated for issuers but not for investors.

* * *

CRA Relief Fees. A satellite industry is emerging to help banks cope with their Community Reinvestment Act obligations. The latest manifestation: A Virginia company that plans to offer guarantees on certain loans to borrowers in poor communities.

"Banks have not been able to fulfill the new requirements because they usually require substandard loans," said Lee Fishman, president of Allstate Financial Corp., a NASDAQ-listed company with a net worth of $8 million that specializes in factoring and financing of "nonbankable" young companies.



DAVID ROCKEFELLER will hold Chase's international meeting in New York.

Allstate, which is not related to the insurance giant, expects to charge a fee of 5% to 10% of the loan it agrees to guarantee. It will also monitor the borrower's collateral for a service fee of about 1.5% of the value of the borrower's receivables.

Mr. Fishman, who said he became aware of banks' CRA quandaries as a board member of Megabank in Miami, expects to sell his first guarantee within a week to a bank in the Washington area. He said he is talking with Crestar, Riggs National Bank, Maryland National Bank, among others. Allstate, which owns Receivable Financing Corp. in New York, has a 3A-2 Dunn & Bradstreet rating, the third highest for a firm its size, Mr. Fishman said.

* * *

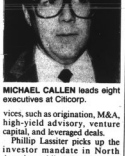
At Home Abroad with Chase. Chase Manhattan Corp. signaled its new emphasis on thrift last week when it said that its international advisory committee – chaired by David Rockefeller and "counseled" by Henry Kissinger – would meet in New York rather than overseas. (*The New York Times*, which broke the story, did not say how much the bank expects to save by flying in and housing, in low-priced Manhattan, the committee's far-flung members from 17 nations.)

Chase chairman Willard Butcher was battered at the bank's annual meeting by an investor who wanted to know why the bank had flown its 22 directors and their spouses for a meeting in Italy and Germany last year. Mr. Butcher, who said the trip cost over $1 million, justified it as a way to educate the board about Chase's plans for expansion in Europe after the 1992 economic unification. Chase has since drastically cut those plans.

* * *

The Citi Lineup. In attempting to eliminate the bureaucratic structure of its global finance sector, Citicorp is harking back to the old division between investment and commercial bankers. The new lineup of eight executives for the sector head Michael Callen is being divided into customer men who sell to investors (investment banking/capital markets/distribution) and issuer men. They ostensibly have no administrative responsibilities, such as hiring, but will cultivate specialties such as cost cutting.

Ernst Brutsche, who chairs the sector's foreign exchange and derivative products committee, is focusing on selling to investors in Europe. Jeffrey Grandy oversees European issuer services, such as origination, M&A, high-yield advisory, venture capital, and leveraged deals.



MICHAEL CALLEN leads eight executives at Citicorp.

Phillip Lassiter picks up the investor mandate in North America, while Robert Welch oversees North American corporate borrowers. Todd Slotkin is responsible for specialized finance and advisory activities in the United States and Canada.

Responsibilities for capital markets activities and sales of securitized products – considered customer activities – go to Rodney Ballek in North America and Peter Burnim in Europe. □

Credit May, Indeed, Be Getting Too Tight

Mr. Greenspan testified July 18 before the Senate Banking Committee about the Federal Reserve Board's semiannual report to Congress on monetary policy. The following is an excerpt.

When I came before this committee in February, I characterized the economy as poised for continued moderate expansion in 1990, and, in large measure, developments so far this year appear to have borne that statement out. Real GNP grew at a 2% annual rate in the first quarter, and indicators of economic activity for the second quarter suggest a further rise, though perhaps at a somewhat slower rate.

On the distinctly positive side, exports have shown solid gains, buoyed by expanding markets abroad. The impetus from international trade has been important in the pickup in industrial production this year.

Consumers Pulling Back

In contrast, the news coming from the household sector in recent months has had a softer cast to it. Consumers appear to have pulled back a bit, as the slower overall pace of expansion and the more pronounced weakness in certain parts of the country – especially the Northeast – seem to have taken some toll on confidence in the economic outlook.

"The likelihood of a near-term recession seems low."

Moreover, having accumulated large stocks of automobiles and other consumer durables earlier in the expansion, consumers could be more selective about when to purchase replacements. Sales of new homes also have weakened.

Economy Still Growing

There are other pluses and minuses. Overall, however, the economy still appears to be growing, and the likelihood of a near-term downturn seems low, in part because businesses have been working hard to keep their inventories in line with sales trends.

Although output overall grew rather modestly over the first half, the unemployment rate remained at its lowest level in almost 20 years.

Inflation Slips Back

The core rate of inflation in consumer prices, proxied by abstracting from movements in food and energy prices, picked up sharply in the first half but has moderated in recent months. This moderation has been concentrated in the prices of goods, perhaps reflecting the ebbing of capacity pressures in a number of industries, while service price inflation has shown little sign of abating.

In 1990, Federal Reserve policy has continued to be directed at sustaining the economic expansion while making progress toward price stability.

Ultimately, the two go hand in hand: A stable price level sets the stage for the economy to operate at its peak efficiency, while high inflation inevitably sows the seeds of recession and wrenching readjustment.

Risks Seemed Balanced

In the short run, however, the risks of inflation, on the one hand, and of an economic downturn, on the other, must be weighed in the policymaking process.

The Federal Reserve saw those risks as about evenly balanced over the first half of the year and made no adjustments in monetary policy.

Throughout this period, which has been marked by dramatic changes in the flow of funds through depository institutions, the Federal Reserve has been paying particularly close attention to conditions in credit markets.

Evidence Accumulates

Evidence of a tightening of terms and reduced availability of credit has gradually accumulated, to the point where it became apparent in recent days that some action by the monetary authority was warranted.

A number of indicators have been pointing in this direction, including the behavior of the monetary aggregates. Growth in M2, for example, which stalled out in the spring, has failed to strengthen materially, suggesting that the degree of financial restraint in train might be greater than anticipated or than appropriate.

This restraint is a function of developments in the credit markets, independent of monetary policy. The recent decline in the federal funds rate to 9% as a consequence of . . . [Fed] action to ease slightly the pressures in reserve markets represents an effort to offset the effects of greater stringency in credit markets.

Market Interest Seesaw

Other market interest rates generally rose early in 1990, as it became apparent that the economy was not as weak as many had thought. Long-term yields were most affected, increasing a full percentage point by early May. Subsequently, however, signs of a softening of activity prompted a reversal of much of that runup.

Throughout this period, rates on Treasury bills have remained somewhat higher than usual relative to those on private instruments, probably in part reflecting the large amount of bill issuance necessary to fund working capital for the Resolution

Trust Corp.

The run-up in market interest rates early in the year was one factor behind the sharp slowing in money growth over the first half of 1990. M2, which had been running close to the top of its target range in February, posted no net increase between March and June. This weakness, which moved the aggregate close to the bottom of its range, was too abrupt to be accounted for fully by the rise in market rates, however.

Another of the factors at work was the restructuring of financial flows.

One aspect of this restructuring was the closing of insolvent thrifts by the RTC and sale of their deposit bases. Although the RTC's activities do not directly affect M2, the availability of huge blocks of deposits to the remaining thrifts and banks lessened their need to raise rates to draw in funds.

In combination with the more cautious attitude depositories have exhibited toward expanding their balance sheets, the deposit transfers contributed to an unusual degree of inertia in the pricing of retail deposits. Households responded to the relatively low returns on deposits by looking elsewhere, as suggested by heavy flows into stock and bond mutual funds and sizable noncompetitive tenders at Treasury auctions.

Nevertheless, while the movements in yield spreads can account for a good share of the slump in M2 growth, a portion of it still requires explanation.

The cause for the meager growth this year in the broader monetary aggregate, M3, is clearer: The RTC closed down a very large number of S&Ls, taking many of those institutions' assets onto the government's balance sheet and thereby effectively reducing the overall funding needs of the depository system. In addition, increased loan losses and the phasing-in of tighter capital requirements circumscribed the expansion of credit at many other thrifts and banks.

M3 Stalls Out

With depository credit growth limited, M3 – which contains much of the associated funding – essentially stalled. By June, M3 growth was well below the 2½% lower bound of the target range the Federal Open Market Committee had set in February.

That range had itself been reduced a full percentage point from the target provisionally set last July in recognition of the potential effects of the ongoing contraction of the thrift industry.

Lacking historical experience with a financial restructuring like the current one, however, it was unclear exactly how the flows would end up being redirected through the financial system and, in particular, how much of the thrift lending would be picked up by commercial banks.

While the economy more broadly is about where we expected it to be, the configuration of the financial system is somewhat different, leading to less M3 growth than had been anticipated.

Credit Conditions

The weakness in the monetary aggregates in part signals a change in the behavior of depos-

"I would not call this change a 'credit crunch' . . . but I can well appreciate that my view may be perceived as a semantic nicety by a borrower who today is suddenly unable to get a loan on the terms formerly available."

itory institutions, with potential for affecting overall credit provision.

The conservative pricing of retail and wholesale deposits represents one aspect of their efforts to widen profit margins. In light of concerns about their capital positions, banks and thrifts also have reined in lending activity and imposed stiffer terms on loans.

Is It a Crunch?

The change in credit supply conditions may have significant implications for borrowing, spending, and policy.

I would not call this change a "credit crunch," as those words connote a contraction of lending on a major scale, with many borrowers effectively shut out of credit markets, regardless of their qualifications. We are not seeing symptoms of that kind of widespread, classic crunch, as in the past when deposit rate ceilings or usury ceilings limited the market's ability to adjust and forced cutoffs of credit.

But I can well appreciate that my view on this topic may be perceived as a semantic nicety by a borrower who today is suddenly unable to get a loan on the terms formerly available.

To the borrower, it makes little difference why the lender is pulling back or how pervasive the change in credit conditions is.

Verdict Isn't In

From a policymaker's perspective, however, it is essential to sort the issues out. This means discerning the breadth and depth of the shift in credit conditions, its causes, its effects, and the extent to which it may ultimately be a desirable development.

Clearly, the verdict is not yet in on the current episode; in economics we are seldom able to make a definitive diagnosis until well after the fact, but to do our job we must hazard some answers.

Lenders More Selective

First, what do we observe? The evidence on this score continues to grow; numerous reports indicate that depository institutions and other lenders have become more selective in extending credit.

In addition, Federal Reserve surveys of large banks support this sense that terms have been tightened in particular parts of the country and on certain types of loans. Especially hard-hit have been financings for mergers and leveraged buyouts, commercial real estate, and construction and development.

There also is evidence that small and medium-size companies, as well as the poorer-quality credits among the larger firms, have faced some tightening of credit availability.

The change in credit conditions has taken various forms, including tougher standards for credit approval, higher collateral requirements, and increases in interest rates. And, in some cases, loans have been simply unavailable.

Even investment-grade corporations appear to be facing slightly higher costs in accessing bank credit facilities. At the same time, a huge widening of spreads on less-than-invest-

How they spend it is their business.

Last year, American businesses spent over $100 billion for hotels, meals and airline travel.

Plus billions more for entertainment, supplies and unexpected emergencies. From fixing a fax in Detroit to fixing a flat in Quebec.

The best way to tap into this enormous market is with the Visa® Business Card program.

Cardholders already rate Visa as their number one bankcard, both overall and for business T & E. And the Visa family of cards consistently gets the highest response on solicitations.

With this proven selling power, the business card program will be both easy to sell and lucrative to offer.

The best program for you is also the best one for your customers. They get the advantage of over 284,000 Visa member branches and 44,000 ATMs in 38 countries. Which gives them unequaled access to money all over the world.

Whether it's for a cafe in Paris, a cafeteria in Paducah or just the neighborhood deli.

Your customers also have the advantage of a su-

REQUIRED READING

Continued from page 6

ment-grade bonds has effectively shut down that market to most new issues.

Some Sectors Little Affected

But on a number of other types of credit, changes in price and nonprice terms appear to have been relatively minor. For example, the rates on residential mortgages, consumer loans, and the debt of investment-grade corporations have remained about in their usual alignment with other market interest rates.

Because these credits may trade on securities markets and thereby access a broad range of investors, the interest of banks and thrifts in holding the obligations in portfolio has little, if any, effect on the cost to borrowers.

These obligations account for a major share of the credit extended in the economy, and hence the slowing of depository credit and the sluggish behavior of the monetary aggregates, while indicative of some tightening of credit, likely overstate the impact of the depositories' behavior on economic activity.

Restraint Is Partly Cyclical

No doubt a sizable portion of lenders' increased reluctance to commit funds for certain purposes reflects a natural and healthy reaction to a slowdown in growth as the economy moves closer to capacity constraints.

Prospects for continued strong production and sales increases fade, and the odds rise that some borrowers will prove unable to meet their obligations.

Paying for Excesses of 1980s

But there is more to it than that. Through one avenue or another, the change in credit standards has its roots in part in the excesses of the 1980s. The weaker credits extended during that decade have come home to roost, and in so doing have impinged to varying degrees on the current availability of credit.

Perhaps the clearest example is the real estate sector and its principal lender, the thrift industry. Those S&Ls that were the freest with their funds exist no longer, having been closed by the RTC, and the remaining S&Ls face tighter regulations constraining their lending.

The resulting void has been filled quite effectively for home mortgage borrowers, with highly developed secondary markets drawing funds in from elsewhere. For these borrowers, the shrinkage of the thrift industry does not represent a significant decline in intermediation services.

But many other clients of thrifts, whose debt is less easily securitized, have been hard-pressed to find alternative sources of funds. Moreover, lax lending standards by both thrifts and banks contributed to overbuilding in commercial real estate, which has added to problems for lenders to this industry.

Incentives to Conserve Capital

Rising capital requirements for banks and thrifts have interacted with large losses on soured loans and the financial market's distaste for providing additional capital to the institutions taking these losses. This interaction has resulted in strong incentives for

"When you go from excess credit creation to normal, it can feel like a tightening."

depository institutions to conserve capital. Their efforts to build larger capital cushions, in turn, have been manifest in a somewhat more cautious approach to lending, as well as a stepped-up effort to sell off assets by, for example, securitizing loans.

Partly as a result of tighter credit conditions, the growth of credit, as measured by the change in the debt of domestic nonfinancial sectors, has come down into closer alignment with the expansion of nominal GNP. This process, which reflects a somewhat more cautious approach on the part of borrowers as well, is not an aberrant restrictive phase in the life of the financial system, but rather a return to what had been the norm prior to the 1990s.

To be sure, when you go from excess credit creation to normal, it can feel like a tightening. And in that sense credit conditions have tightened.

In addition, however, depository institutions appear more ready to be lending with greater caution in general. As a result, even creditworthy borrowers may have to look harder for a loan, put up more collateral, or pay a somewhat higher spread.

Benefits and Costs

For the nation as a whole, the tightening of credit standards will leave the financial system on a sounder footing and contribute to economic stability in the long run.

Nevertheless, in the here and now, the tightening is beginning to have very real, unwelcome effects. Diminished credit availability can constrain firms' spending, for example, limiting more of them to internally generated funds.

It is difficult to discern the dividing line between lending standards that are still healthy and those that are so restrictive as to be inconsistent with the borrower's status and the best interests of the lender in the long run. In recent weeks, however, we may have slipped over that line.

'Slight' Restraint on Economy

Such developments can, and do, occur independently of central bank actions, and can have important influences on spending and output. Thus the Federal Reserve must remain alert to the possibility that an adjustment to its posture in reserve markets might be needed to maintain stable overall financial conditions.

As best we can judge, the change in credit conditions currently is exerting a slight additional degree of restraint on the economy.

The process of credit restraint may not have reached completion, and some of its effects may not yet have been felt; hence it will require continued scrutiny. However, the tightening should eventually unwind as displaced borrowers find alternative sources of funds and as the banking system rebuilds its capital.

Implications for Fed Policy

This restraint has implications for monetary policy at present, and the ongoing restructuring of the financial system has implications for the conduct of policy over the foreseeable future.

It is clear that the financial restructuring will affect the channels through which policy actions are transmitted ultimately to economic growth and inflation; some will be diminished and others augmented.

In these circumstances, the Federal Reserve has emphasized a flexible approach to policymaking, which includes attention to a wide range of economic and financial indicators. □

PRIVATE BANKING

Where Clients Are Scarce, Net Worth Isn't Everything

By MAUREEN NEVIN DUFFY
Special to the American Banker

Private banking does nicely where there is a large population of wealthy people. But what about where there are few? One Australian institution believes it has found the answer.

"For the traditional private bank, Australia would represent a very poor opportunity," said Paul Clitheroe, director of IPAC Securities, a Sydney-based financial planner that operates a private banking service in partnership with Lloyds Bank NZA Ltd.

Australia "simply does not have large numbers of high-net-worth individuals," Mr. Clitheroe said. Furthermore, "many of those who do fit into this category have a great percentage of their wealth in illiquid assets, principally real estate, property."

So IPAC and Lloyds decided to set their sights on "high-income rather than high-net-worth individuals," Mr. Clitheroe said.

"There is a significant, growing, and underserviced market for a private banking operation focusing on individuals with high income levels rather than high asset levels."

IPAC's research showed that in its potential market this segment contained nearly 87,000 people with incomes of $50,000 to $100,000 in U.S. dollars and 12,000 people with incomes of at least $100,000.

> **"There is an underserviced market for individuals with high income levels rather than high asset levels."**
>
> **Paul Clitheroe**
> *IPAC Securities*

As its target group, IPAC chose people earning $80,000 or more. Most work for Australia's top 100 companies; IPAC aimed its marketing campaign toward these executives.

This market wanted advice that was fee-based, independent, professional, and backed by a sound parent company, research showed. IPAC and Lloyds developed products including an executive's personal business plan for a fee of $2,000 to $3,000.

"In the first year of our joint operation, five major Australian corporations appointed us to assist their senior executives in the management of their personal finances," Mr. Clitheroe said.

The marketing contact was made through the personnel director or human resources manager. The only advertising expense has been for production of a marketing brochure.

Some observers see a trend in private banking to incorporate clients without extremely high net worth. Another Australian private bank, ANZ Grindlays Bank, a subsidiary of ANZ Banking Group Ltd., Melbourne, accepts clients with $50,000 to deposit. At ANZ the price of entry is also affected by where clients want funds kept; a U.S. account does not require so large a minimum deposit as one in Geneva.

Tapping the Expatriate Market

The largest trust company in Canada is providing a package of services aimed at people living outside of their home country.

Royal Trust Bank says services such as its Globally Yours are a growing business and a sound way to lure high-income executives.

The bank finds potential Globally Yours clients through its corporate financial services division and its Royal Le Page Relocation Services. Contacts are also made through branch manager referrals. Officers visit interested companies to inform executives and staff.

In most cases, financial arrangements should be started months before executives move out of the country, experts say. The return should similarly be planned well in advance.

Most Globally Yours clients are from Canada. But the company plans to broaden its market to include executives from the United States, according to Trevor Wynn, the program's director on Jersey in the Channel Islands. Expatriate services account for most of that office's business.

"Expat business is on the increase," Mr. Wynn said. "In order to cope with the global marketplace, corporations need experienced managers who can be anywhere in the world. They must have more people positioned in order to compete."

Globally Yours services are paid for by the client's corporation or by the client on an hourly rate or a flat fee basis. Services include tax and financial advice and multicurrency checking accounts. A full range of private bank products, including asset management, is also available. But small accounts make some sophisticated products, such as portfolio management, too pricey to be practical.

The Jersey office also handles mundane services, including paying clients' bills and insurance premiums – and some truly extraordinary requests. "If your roof falls off the house back in Canada, you're not going to come all the way back from the Ural Mountains to fix it," Mr. Wynn said. "The private banker will see to it."

Insurance Battle Brewing in Pa.

Pending Bill Would Allow Banks to Sell Coverage

By A. JOSEPH NEWMAN JR.
Special to the American Banker

PHILADELPHIA — Another battle, this time in Pennsylvania, is shaping up over whether commercial banks should be permitted to sell insurance.

The battle lines are forming around legislation that was introduced in the Pennsylvania House of Representatives in June, a few days before members went home for the summer.

"I like it. It's a good bill," said James R. Biery, the Pennsylvania Bankers Association's vice president of government affairs.

"We're opposed to it," countered Frederick Russell, senior vice president of the Professional Insurance Agents Association of Pennsylvania, Maryland, and Delaware. That lobbying group recently lost a fight in the Delaware legislature, which passed a bill permitting state-chartered banks to underwrite and sell insurance nationwide.

Action Unlikely This Year

Both sides agree that the Pennsylvania proposal is not likely to go far this year. Lawmakers return to work after Labor Day, but the fall elections leave little time for consideration before adjournment in November.

The stage is thus being set for a fight next year, when the bill's chief sponsor, state Rep. Allen G. Kukovich of Westmoreland County, a Democratic leader, plans to reintroduce it.

The bill would amend the Insurance Department Act to permit banks, trust companies, and bank holding companies to be licensed to sell insurance as brokers or agents.

Tie-ins to other bank products would be banned. Banks could sell insurance for the first five years only through brokers or agents already licensed by the department – a condition similar to one in a pending legislative proposal in Illinois.

> **"There's no way that legislation can prevent coercion."**
>
> **Frederick Russell**
> *Professional Insurance Agents Assn.*

Bankers' Support Expected

The government affairs policy committee of the Pennsylvania Bankers Association is expected to back the proposal at a meeting July 31, Mr. Biery said. He added that the association had no role in writing the bill.

The five-year transition period could be "a little long," Mr. Biery said. The period could be shortened and other changes made next year when the bill is reintroduced.

Rep. Kukovich said his original bill was designed "to get the discussion going." He plans to hear bankers association officials' views at a meeting this summer.

The degree of the bankers' interest, he said, will determine "how high a priority" he puts on it next year. Rep. Kukovich is chairman of the House Democratic Policy Committee, but he said the bill does not have the formal backing of the administration of Gov. Robert Casey, also a Democrat.

Meanwhile, the Pennsylvania Bankers Association will poll members this fall to determine their degree of support for various new bank powers including insurance, real estate brokerage, and securities.

Benefits for Buyers

Rep. Kukovich conceded that his bill contains "an element of regional" against the insurance industry. But he added that more competition would benefit insurance buyers.

Mr. Russell, who said he represents 1,900 insurance agencies with 13,000 people in Pennsylvania, promised that bankers would see "a lot of fur flying" on the bank insurance issue. His association is urging agents to write and visit legislators in a preemptive lobbying strike.

"There's no way that legislation can prevent coercion, expressed or implied, of [a bank's] debtors to buy insurance," Mr. Russell said. "People who need credit will do what they think a lender wants them to do, whether the lender wants them to or not." □

Discover Card Earns $24.4 Million in 2d Quarter

By ELLEN MEMMELAAR

The Discover Card from Sears, Roebuck and Co. continues to solidify its position in the credit card industry, contributing $24.4 million in second-quarter earnings to its retailing parent company.

Discover's profits represent a 47% increase over the $16.6 million earned in the period last year. Though earnings are down from the first quarter of this year, when profits were $35.4 million, the slippage can be attributed to seasonal considerations, said Douglas Fairweather, a Sears spokesman.

Earnings Meet Expectations

"We are very pleased," Mr. Fairweather said. "It's meeting our expectations." He declined to project Discover's earnings for the third quarter or the year.

But if the trends of the first and second quarters continue, Discover could show a profit of $120 million for 1990.

For 1989, the card posted $80.2 million in profits, up from $18.9 million in 1988.

Nine quarters of continuous profits have affirmed Discover's staying power in a market dominated by American Express, MasterCard, and Visa.

At the end of 1989, Discover had 32.8 million cards outstanding, up 20% from the previous year. Overall, Sears reported a decline in second-quarter earnings, reflecting declines in its Allstate Insurance Group and its Merchandise Group. □

Greenspan Says Fed Hasn't Backed Down on Inflation Fight

Continued from *page 1*

the central bank was going soft on efforts to curb inflation.

Mr. Greenspan testified on July 18 that the quarter-point drop was to "mesh with a very restrictive bank lending. The "dividing line" between healthy lending standards and those that are too restrictive is hard to discern, Mr. Greenspan said. "In recent weeks, we may have slipped over that line."

The Markets Weigh In

Markets responded to the Greenspan testimony of July 18 with a steeper yield curve, reflecting rising long-term rates relative to short-term rates on Treasury securities.

Short-term Treasury rates were up in Tuesday's market. The three-month Treasury bill was trading at a yield of 7.78% Tuesday afternoon, compared with 7.71% on Monday. The yield on the benchmark 30-year bond rose from 8.56% to 8.58%.

Lenders Called Reluctant

Some market participants were disappointed on Tuesday when Mr. Greenspan chose not to elaborate on his earlier comments on credit tightness. He added only that the lack of credit was due to a reluctance of lenders rather than overzealous regulators.

> **The easing appeared to be a softening by the Fed in its stand against inflation.**

"He knows he failed at the first Humphrey-Hawkins performance," said Robert A. Brusca, chief economist of Nikko Securities Co., referring to the law that mandates the Fed chairman's semiannual reports to Congress. "He was trying to go out and improve" his performance.

The markets did not react negatively to the Fed's easing of interest rates just before Mr. Greenspan's first testimony, said Mr. Brusca. The market responded negatively because it did not find credible the chairman's explanation that the Fed was responding to a credit tightening.

Perceived as Political Move

"What the market didn't like is that he said [the easing] was due to a credit crunch, which he said didn't exist two weeks ago," said Mr. Brusca. The market concluded that Mr. Greenspan was giving in to political pressures to respond to signs of a weak economy and lighten up on its inflation fight.

> **The market concluded that Mr. Greenspan was giving in to political pressures to respond to signs of a weak economy and lighten up on its inflation fight.**

"Gary Schlossberg, vice president and chief economist of Wells Fargo Bank, San Francisco, agreed that the market had responded negatively because it did not believe the chairman's contention that it was motivated by a credit crunch.

"It may be true that the credit squeeze may have caused the Fed to ease, but the evidence is really sketchy," said Mr. Schlossberg. "His evidence is not in published numbers."

Paul DeNoon, money market analyst at Manufacturers Hanover Securities Corp., predicted that the markets would not be reassured by Mr. Greenspan's latest statements. As a result, he said, the Fed would probably be unable to ease credit without producing further negative results in the market.

To ease again, the Fed chairman would have to be able to point to both further significant signs of a credit crunch and a weakening economy, Mr. DeNoon said.

Traders said Mr. Greenspan had largely preempted further market reaction on Tuesday after hefty price swings on testimony last week when he left open the prospect for further easing in response to tight credit. □

Sale of Deposits Set By Co-operative Bank

ACTON, Mass. — The Co-operative Bank of Concord, Mass., said it has agreed to sell the $15 million of deposits in its Cohasset office to a nearby facility of South Shore Bank, Quincy.

The transfer, which is expected to take place later this year after regulatory approvals, will bring South Shore Bank's Cohasset office up to $33 million in deposits.

The Co-operative Bank, with $677 million in assets, is based in Acton and operates 14 retail offices. South Shore Bank had $1.1 billion in assets at yearend 1989. — **Reuters**

More Banks Charge for ATM Network Use

By JEANNE IIDA

In an attempt to offset the costs of running networks of automated teller machines, banks are increasingly charging their customers for transactions made on shared networks, according to a study by the Bank Administration Institute.

A small and apparently shrinking number of banks also charge for transactions made on the bank's own ATMs. The institute based its findings on a survey of ATM use at 168 financial institutions in 1989.

Mature Service

The percentage of banks charging transaction fees rose about 15% in 1989. "ATMs are now a mature service," said Bruce Davis, director of operations and technology at BAI, Rolling Meadows, Ill. "Marketers are now looking at it as a product where fees can be charged."

One factor contributing to the increases is that service charges do not appear to dissuade consumers from using ATMs. "Consumers' demand to use the machines is not related to price," said Jack Benton, president of Benton International, Los Angeles, which tracks ATM usage.

Differentiating Networks

Of the banks surveyed, 77% charged fees for transactions made on national networks; 69% charged for regional network transactions.

However, the study showed the start of a trend to move away from service charges performed on banks' own machines. Only 14.3% of the banks charged for such "on-us" transactions, down from 18.1% in 1988.

The decline in proprietary fees could represent a reallocation of fees, according to the BAI. "Some banks may have instituted charges and then backed off," said Mr. Davis. "Others may have gone to a pricing differential to motivate customers to use [banks'] own ATMs."

Regional Variations

Noshir Kathok, senior vice president with Benton International, said the number of banks charging for proprietary transactions varies by region. "In California and on the West Coast, banks have been charging for proprietary transactions for some time, but in the East it hasn't been that," he said.

Banks that charged for check processing often instituted lower fees for ATM transactions to encourage customers to move to electronic transactions. Now some of these banks may be dropping those charges in response to competitive pressures, Mr. Kathok said.

Fees Source of Revenue

Valley Bank, Las Vegas, does not believe in charging its customers for ATM transactions. The bank charges noncustomers $1 for each nonproprietary transaction. "We have 210 ATMs – half of them in casinos," said Paul Stowell, a Valley spokesman. "We see [the service fees] as a revenue opportunity, but we will not charge our own customers."

Service fees of all types, whether proprietary or nonproprietary, tend to be tied to such things as the customer's balance, Mr. Kathok said.

In what may indicate the future direction of similar studies, Mr. Kathok said his firm has found data that indicates a different type of consumer is drawn to using an ATM card in a supermarket than is drawn to using an ATM machine in a bank branch.

"You find the people who like to use [point-of-sale] cards are often older people, who like to go into a bank branch and talk to a teller, but who don't want to carry a lot of cash around," Mr. Kathok said. □

Security Pacific Boosts Efforts to Link Branches

By SHIMON-CRAIG VAN COLLIE
Special to the American Banker

Long a technology powerhouse, Security Pacific Corp. has stepped up efforts to knit together its far-flung branch network.

"The pace of our major projects is at an all-time high, and the amount we have invested in them is greater than ever before," said Dale Terrell, executive vice president of Security Pacific Automation Co., the bank corporation's information systems unit. "We're creating savings by reducing costs and increasing quality."

The automation company is the driving force in the bank's effort to consolidate loan systems and centralize customer service, data-center automation, branch communications, and image processing operations. The unit has saved its $85.1 billion-asset parent about $150 million in reduced labor costs.

Leader in Automation

"They're a good operation with good numbers," said Robert Albertson, vice president of Goldman, Sachs & Co., New York. "To date, not many big banks have been able to create a common system over a broad geography, but they're definitely a leader in that area."

SPAC was formed in 1988 partly to create a common set of application, product, and delivery systems and to consolidate operations in consumer loan accounting, commercial loans, demand and time deposits, and delivery systems. By yearend, the unit will have completed the loan portion of the program, having melded 15 systems for loan originations, consumer and commercial loans, and collections into one system.

"That's the model we're following for all of our systems," Mr. Terrell said. "Our target date to convert the deposit system in California is early 1991. The other stages should be completed in 1992."

A Place for PCs

The bank has similar plans for electronic delivery systems. The information systems unit is now piloting a branch delivery program to replace existing teller and platform terminals with personal computer and local-area networks, or LANs.

Mr. Terrell expects the pilot to show that PCs can coexist with older terminals, allowing the changeover to be gradual. This transition strategy will also enable Security Pacific to install the PC/LAN configuration at newly acquired banks and plug them into the central system.

PCs and LANs are already being used to consolidate the gains made by centralizing such branch functions as ATM deposits and night deposits. The information unit claims the configuration has facilitated a 15% saving in labor and added quality control for data coming out of its product and accounting systems.

In addition, the configuration has enabled the unit to unify workstations for back-office tasks such as general ledger and cash clearing. Traditionally, such areas were independently staffed, but now they are part of a generic system that can distribute work loads more evenly.

"We're moving data to where the workers are, instead of building systems that access data from a central computer," Mr. Terrell said.

The information unit has also bolstered the retail bank's 24-hour customer service area. Up to 60 transactions can now be handled by phone, relieving the workload at branches and allowing for extended banking hours and cross-selling.

"We're creating savings by reducing costs and increasing quality."
Dale Terrell
Security Pacific Corp.

At the same time, the unit has reduced its primary data centers from five to two – one in Seattle and one in Brea, Calif. – thus generating an additional estimated saving of $5 million a year.

Robots Added to Banks

Further gains are being made in automation within the centers. For example, robots load and remove cartridge tapes for production runs. IBM computers at the bank's satellite data centers are being run from the primary centers without human intervention. Internal bank memos are being transmitted electronically rather than printed, and wherever possible, internal reports are being doubled up on the same piece of paper. As a result, the use of certain types of paper has dropped 30% to 40%.

Security Pacific's communication network, completed in March, complements the effort. The network consists of 17 major nodes linked by 51 proprietary communication lines that run along the West Coast and east to New York. It has enabled the unit to trim expenses to a third of the total before integration, said Laurence Dorf, executive vice president for SPAC's network and computer services.

The lines are part of a so-called T1 system, a digital cable capable of simultaneously transmitting 24 communications, thereby reducing the number of lines required.

Next, Security Pacific will hook up branches with a Uniform Access Network, including ATMs, teller terminals, alarm systems, voice, and other functions. In the future, the network also is expected to support image processing, delivering documents electronically.

Big Financial Companies Prepare to Bid on RTC Assets

Continued from *page 1*

agency will take 70% to 90% of the profits from bulk sales of sour loans and other financial assets seized from failed thrifts.

But the deals for the $500 million asset blocks will be structured "so there is an incentive for the purchaser to sell assets and maximize recovery, and not just liquidate them," said RTC spokesman Stephen Katsanos. The RTC will provide up to $2 billion in financing to facilitate the first bulk sales from its $37 billion receivership portfolio, he added.

Interest Expressed Early

Even though the first bids are not due until November, the plan already is drawing interest from Wall Street, investment groups, and other asset managers, according to sources familiar with the bidding process.

By retaining the lion's share of the profits on bulk sales, the RTC can protect itself from the financial and political consequences of having sold the assets too cheaply, said Joseph F. Robert Jr., chairman and chief executive of one potential bidder, Alexandria, Va.-based J.E. Robert Cos.

Following a bulk sale, the RTC would receive the larger proportion of profits until the buyer's debt is repaid. Then any additional profits would accrue primarily to the bidder, according to the agency.

The RTC said Tuesday it would offer seller financing on bulk sales for up to five years, and possibly longer, for 85% of the purchase price. And it said it could be flexible with winning bidders by negotiating the contents of the package of assets, possibly substituting undesired assets or indemnifying the acquirer.

One observer said the shared collection arrangement outlined by the RTC raised some questions about whether the thrift-resolution agency is actually transferring risk to investors.

"Is this a clear-cut sale of assets, or is it a back-door financing scheme?" asked Bert Ely, an Alexandria, Va., consultant. "If you have a genuine transfer of risk, then the bulk of the initial return goes to the investor, who actually assumes the risk. The seller should only get the extraordinary returns," he said.

But Mr. Robert disagreed. "It's not unusual for a seller to share in the upside as part and parcel of providing financing," he said. "That meets the traditional definition of a sale."

Fine-Tuning Expected

A spokeswoman for the RTC Oversight Board said it will monitor the transactions and review them upon completion, with an eye toward fine-tuning the program. The Oversight Board wants to ensure that the RTC avoids long-term entanglements with borrowers.

"The RTC can sell loans off to the secondary market. We want them to be considering those options," the spokeswoman said.

The RTC bulk sales, which will consist both of bank and real estate property, will be offered to bidders in two forms. The first, a structured transaction, will include performing and nonperforming loans and property assembled in bulk by the RTC. Due diligence on such sales will be allowed.

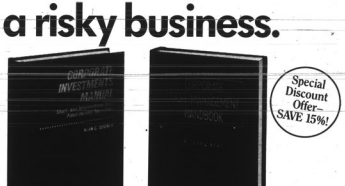
The second, or expedited, transaction, known as a pool purchase, would be sold without due diligence by the bidders, but would include warranties to return unwanted properties for a certain period of time.

In addition, the RTC is exploring co-fiduciary transactions, in which it would transfer a block of assets to a trust controlled by an acquirer. The acquirer would securitize the assets by issuing bonds to institutional investors and then advance the proceeds to the RTC, pumping needed cash into the RTC.

Under this approach, bonds could be issued for 50% or more of the estimated realizable value of those assets, Mr. Robert said.

"If the RTC is able to take back secondary financing behind the bondholders, that should entitle the RTC to the lion's share of liquidation proceeds once the bonds are defeased," he said. □

Managing corporate assets doesn't have to be a risky business.



Special Discount Offer– SAVE 15%!

Corporate Investments Manual and Corporate Cash Management Handbook

Corporate Cash Management Handbook and Corporate Investments Manual can take some of the hard work–and a lot of the risk–out of managing your corporate assets. Used together, or separately, the Manual and the Handbook are powerful no-nonsense, working tools you'll use every day.

Corporate Cash Management Handbook provides proven tools and techniques that will help you boost corporate profits, reduce interest costs, increase income, strengthen liquidity, and much more! The Handbook will show you how to:

- Take full advantage of EFTs and EDI
- Forecast funds, receipts, balances and disbursements
- Tap sources of liquidity buried in your firm's capital structure
- Extend float for better disbursement control

Corporate Cash Management Handbook–the *working* tool designed to help you build an efficient cash management system for concentrating funds, accelerating collections, and maximizing the funds of your firm.

Corporate Investments Manual is the first investment guide written specifically for the corporate financial officer. It covers everything from the operational procedures of a single trade to overall portfolio management.

Giving you the tools you need to understand *and* analyze securities, regulations, operational techniques, and determine which investment is best for your firm, Corporate Investments Manual offers expert guidance on:

- Choosing a reputable securities dealer
- Purchasing "registered" securities
- Reconciling risk versus return
- Evaluating credit quality
- Developing investment policies and guidelines

The 600-plus page Corporate Investments Manual shows you how to avoid many of the common pitfalls of investing...it's more than just a guide to investing–it's a guide to *smart, profitable* investing!

Take advantage of a special opportunity: review either, or both, books FREE for 30 days–without obligation. Keep one and pay just $98. Better yet, for a limited time only, receive both and save 15%!

Student Loans Still Guaranteed, Cavazos Says

WASHINGTON — U.S. Education Secretary Lauro Cavazos said that student loans guaranteed by the financially troubled Higher Education Assistance Foundation would remain guaranteed and that the foundation's default problems do not threaten the integrity of the national student loan program.

Mr. Cavazos said at a news conference that a department task force is now reviewing the foundation's operations at its St. Paul headquarters. After the examination, he said, a decision would be made about what to do if the foundation does not survive.

Mr. Cavazos' comments followed reports that the agency faces possible bankruptcy if it does not merge with another loan guarantor. Under Secretary Ted Sanders said that a merger is not a "preconditive action," adding, "We are exploring various options."

The other choices, he said, include the termination of the foundation as a guarantor and the formation of a new guarantor agency.

Mr. Sanders said the agency's troubles will not lead to a long string of failures in such guarantee agencies.

"This situation will not affect the ability of students to obtain loans, of lenders to make those loans, or of guarantors to insure those loans," Mr. Cavazos said.

"While HEAF's problems are serious to that organization, they do not threaten the integrity of the nationwide guaranteed student loan program or the loans now guaranteed by HEAF. Loans now guaranteed by HEAF will continue to be guaranteed," he said. — **Reuters**

EXECUTIVE *changes*

Eda To Manage The NY Branch Of Sanwa Bank

Japan's Sanwa Bank Ltd. has named **Minoru Eda,** managing director, as general manager of its New York branch. The bank's head office is in Osaka.

He succeeds **Takeo Sakai,** who is returning to Tokyo to become deputy head of the bank's international division.

Mr. Eda, who turns 54 Friday, formerly served as general manager of Sanwa's Nihonbashi branch in Japan. He has extensive experience in domestic and international banking and previously served in the United States as a loan officer at Sanwa's New York branch from 1965 to 1969.

His top priority is to develop Sanwa's U.S. investment banking activities such as mergers and acquisitions as well as capital markets and securities operations, the bank said in a statement.

Minoru Eda

Sanwa, the world's 35th largest bank and the 6th largest foreign bank in the United States with $28 billion in U.S. assets, is already engaged in a broad range of operations.

The bank has a retail banking subsidiary in California, does wholesale banking and trust banking, runs a U.S. primary dealership, and has a leasing company and seven U.S. branches.

Bankers Group Elects Johnson

Gary E. Johnson, president of Community Bank of Arizona in Wickenburg, is the newly elected president of the **Western Independent Bankers,** a regional trade association representing more than 300 independent community banks in the Western United States.

Gary E. Johnson

Mr. Johnson succeeds R. Blair Hawkes, president of Ireland Bank in Malad City, Idaho.

Elected vice president of the group was **John G. Rebelo Jr.,** president of Peninsula Bank of San Diego.

The new secretary/treasurer is **Lawrence S.L. Ching,** president of Liberty Bank in Honolulu.

Mr. Johnson began his banking career 26 years ago in Michigan. He was founding CEO of Community Bank of Arizona, which opened in 1978. He became a director of the bankers' group in 1985 and has served as chairman of its government relations committee. In addition, he is president of the Arizona Bankers Association and is a past president of the Wickenburg Chamber of Commerce.

Howard Savings Bank, Livingston, N.J., said it has named **William P. Tuggle 3d** its new chairman and chief executive officer.

Mr. Tuggle currently serves as a director, president, and chief executive officer of First Fidelity Bank, New Jersey, and as a director and senior executive vice president of First Fidelity Bancorp. The appointment is subject to FDIC approval.

The appointment of Mr. Tuggle ends months of searching for a new chairman. Donald F. McCormick resigned as chairman and CEO on Jan. 29 after the thrift reported a large fourth-quarter loss stemming from real estate problems.

Frank T. Reilly, chairman of the search committee of the Howard's board of directors, said Leo J. Rogers Jr., president of the Howard and acting chief executive officer since Jan. 29, had declined to be considered for the position. Mr. Reilly is a retired chairman and CEO of Brooks Brothers.

Mr. Tuggle , 57, said he was "delighted" to be joining the Howard. He added, "The Howard has a long tradition of responding to the banking and credit needs of New Jersey. I look forward to working with the Howard's many fine employees and its board of directors in meeting the challenges of today and the future."

Mr. Tuggle said that he was concluding his 26-year association with First Fidelity and its predecessors "with a great sense of pride in the organization and with a positive feeling for First Fidelity's future.

— **Franklin Smith**

NEW ENGLAND

Bank of Boston Corp., Boston, has named **Betty L. Francis** comptroller. She was formerly with the Boston Five Bancorp, where she was treasurer.

Richard J. DeKaser has been named senior economist at Bank of Boston. He was previously with Data Resources Inc., Lexington, Mass., where he was senior associate in the U.S. industry information service area.

Tolland Bank, Vernon, Conn., has elected **David H. Gonci** vice president/controller and director of strategic planning.

Mr. Gonci formerly was senior vice president and treasurer of BancNew England Mortgage Co., the residential mortgage affiliate of Connecticut Bank & Trust Co.

Bank of Hartford, Conn., has appointed **Mark B. Shaw** vice president-bank operations.

MIDWEST

Society National Bank, an affiliate of **Society Corp.,** Cleveland, said **Michael R. Greer,** senior vice president, has been named manager of its commercial banking division operations in western Cuyahoga and Lorain counties.

Robert J. Tracy, senior vice president, has been named head of the bank's commercial banking operations for its Cleveland, Cuyahoga East, Lake East, and Ashtabula districts.

See **EXECUTIVE** *next page*

The time has come for the top management of the bank, the CEO, to get involved in automation. Top management must face this fact and cannot wish that responsibility onto others.

Automation is no longer the intrigue and complexity that it has been for 30 years, and top management must realize that fact. The automation directions, strategies, and decisions must come from bankers, not data processing people. For those CEOs who realize this, the bank can move ahead now. If they won't take the responsibility, then the bank will have to wait until the CEO is willing to become involved.

Automation is no longer decisions in hardware and software, but decisions in the art and science of banking.

EXECUTIVE *changes*

Continued from *page* **12**

Human Resource Management Systems Inc., Glenview, Ill., said **Peter B. Thompson,** a former assistant vice president with the First National Bank of Chicago, has joined the consulting firm.

Mr. Thompson will be a senior partner in the firm's consulting division, strategic human resources practice.

Bank of Chicago, a unit of **Banco of Chicago Bancorp Inc.,** has named **Ronald E. Fack** to president from executive vice president/acting president. **Charles B. Hall** has been named executive president. Mr. Fack succeeds **William Peterson,** who resigned in January.

First Colonial Bankshares Corp., Chicago, said **William G. Hoskins** has been named chairman of First Colonial Bank of Lake County, Vernon Hills. He will continue to serve as president of the bank. In conjunction with the move, **Ed Werdell** has been named executive vice president.

MIDDLE ATLANTIC

United Intelligence Inc., New York, has appointed **Michael Ognibene** director of marketing and business development. He previously was vice president and manager of money market institutional sales for Swiss Bank Corp.'s New York branch.

Citizens Bank of Maryland, Laurel, has announced the appointments of **Paul W. Hughes Jr.** vice president, systems and programming; **Barbara J. Drew** vice president, real estate; **Jon R. Allen, Michael A. Cibak,** and **C. Bayne Northern** as vice presidents and regional branch supervisors; and **Ashton T. Poole,** vice president loan operations.

Canadian Imperial Bank of Commerce, New York, said **David V. Dunn** has joined the bank as a vice president. He is responsible for managing the precious metal department, which services precious metals producers, consumers, and corporate investors for Canadian Imperial in the United States.

Mr. Dunn previously was a vice president of precious metal sales and trading at Shearson Lehman in New York.

Norstar Bank, Melville, N.Y., a subsidiary of **Fleet/Norstar Financial Group Inc.,** Providence, R.I., has named **Andrew J. Adams** vice president and marketing officer of international trade services in the corporate banking division.

MasterCard International, New York, has appointed **John A. Almash** senior vice president. He will oversee the market research and information services functions for all MasterCard regions worldwide.

KeyCorp, Albany, announces management changes at Key Banks.

In New York State, **Albert F. Kilts** has been named senior vice president for Key Banks shares of New York, and **Kevin P. Riley** has succeeded Mr. Kilts as senior vice president and chief financial officer for Key Bank of Eastern New York. In the West, **Albert V. Legge** has been named senior vice president and chief officer for Key Bank of Oregon, Portland, and **Robert W. Nye** has been designated senior vice president and chief financial officer for Oregon-based Key Mortgage Funding Inc.

Morgan Stanley Group Inc., New York, has named **Philip A. Lacovara** general counsel and secretary of the group and as a managing director and member of the management committee of Morgan Stanley & Co. Inc.

He formerly was with General Electric Co. as vice president and senior counsel for litigation and legal policy.

Bankers Trust Co., New York, said **Jeffrey M. Walters** has been been named head of Bankers Trust, Midwest.

In this position, he is responsible for coordinating and overseeing all of the bank's product groups in the Chicago office, including merchant banking, corporate finance, structured finance, the private bank, BT Commercial Corporation, global operating and information services, and global markets. Walters is also head of the Midwest corporate finance group, which works with corporate senior managements to develop transaction opportunities.

According to Ralph L. MacDonald Jr., managing director and head of the corporate finance department and a member of the bank's management committee, "Our local strengths in business development and execution are critical to our expansion of business in the Midwest.

Mr. Walters was previously vice president and head of merchant banking for the Midwest.

Bank of Bermuda (New York) Ltd. has appointed **Donald J. Danilek** senior vice president responsible for the newly formed private banking/personal trust division.

The parent bank, the Bank of Bermuda Ltd., has concentrated on personal trust and private banking business for more than half a century from the head office in Bermuda and through its foreign subsidiaries in Europe and the Far East.

"The addition of Mr. Danilek to the staff and the creation of the new division in New York will enable the Bank of Bermuda to offer a broad range of personal trust and private banking services to U.S. residents with international trust needs and/or international investment requirements," said Edgar C. Felton, president of The Bank of Bermuda (New York). "The bank will also be better positioned to service the U.S. fiduciary requirements of overseas clients."

Mr. Danilek previously was managing director of Bank of Liechtenstein Trust Co.

SOUTHEAST

New East Bancorp, Raleigh, N.C., has appointed **C. Phillips Kraemer** executive vice president of administration for the holding company. He previously was chairman, president, and chief executive officer for Independent Banks of Virginia in Norfolk. — **Franklin Smith**

2 German Banks Take Lead On $3.1 Billion Soviet Loan

Reuters

FRANKFURT — Deutsche Bank and Dresdner Bank are jointly leading the bank consortium that will lend up to $3.1 billion to the Soviet Foreign Trade Bank, Deutsche Bank said.

The budget committee of West Germany's parliament agreed Tuesday to guarantee the 12-year loan to the Soviet Union.

Deutsche Bank said that the Soviet Union would use the credit for economic, industrial, and technical cooperation, in line with President Mikhail Gorbachev's plan to restructure the Soviet economy.

Manfred Carstens, state secretary of the West German finance ministry, told reporters in Bonn that the loan was a very necessary short-term emergency measure.

A Deutsche Bank spokesman said the two lead banks had not yet completed formation of the consortium. He declined to say how many banks would participate, but said there would be "broad participation."

... by country

JAPAN

Japanese institutional investors such as life insurance companies will soon be able to make subordinated loans to banks, a new form of financing in Japan, the ministry of finance said in Tokyo.

Lenders in a subordinated loan agreement have a lower claim to repayment in the event of the borrower's bankruptcy.

Subordinated debt will help banks meet capital adequacy requirements set by the Bank for International Settlements, the ministry of finance said.

Worries that the new loans could compete for investor funds have hurt yen bond prices recently, but most analysts expect the long-term negative impact to be limited. — **TFW**

Kiru Credit Union, the second-biggest credit union in the Osaka region, will merge with Kawasaki Credit Union, also based in Osaka.

The merger, which is planned to be complete by April 1991, responds to strong incursions into retail banking banking by Osaka's larger financial institutions.

The two institutions combined held about $5 billion in savings as of March. — **TFW**

GUYANA

The World Bank said Guyana fully cleared the arrears on its World Bank loans last week, making it eligible for more World Bank disbursements.

Guyana paid $55.3 million, about half for overdue interest and other charges and the rest for principal.

Guyana was the first of nine countries that have missed payments to resume full servicing of its debt, World Bank president Barber Conable said in Washington.

Guyana had been missing payments since Dec. 1, 1986.

— **Reuters**

BELGIUM

Visa International's ATM network has expanded to Belgium, the 40th country to join the program.

Visa said in San Francisco that the Belgian ATM networks, Bancontact , and Mister Cash, add 500 cash-dispensing locations to Visa's worldwide network of 52,187 machines, already the world's largest.

CHILE

MasterCard and **Cirrus** cardholders can now get cash 24 hours a day from 12 automated teller machines linked to their networks in Santiago and other major cities in Chile.

The on-line ATMs, dispensing Chilean pesos, have been installed by Bancard SA, Chile's only MasterCard issuer.

Bancard plans to increase its number of cash-dispensing ATMs to 90 by 1992. The new arrangement gives Bancard's 200,000 MasterCard holders in Chile access to MasterCard ATMs throughout the world.

The ATMs are the first in South America that allow MasterCard and Cirrus cardholders to withdraw cash.

Cirrus and Mastercard plan to link ATMS in Venezuela to their networks by the end of July and ATMS in Argentina, Columbia, and the Dominican Republic by yearend.

The networks plan to have ATMS on line in 22 countries by yearend. Currently the service is available in the United States, Canada, Japan, Mexico, France and Chile. — **James R. Kraus**

AUSTRALIA

Moody's Investors Service assigned a Prime-1 short-term deposit rating to Bankers Trust Australia Ltd., a licensed Australian bank and a fully owned subsidiary of **Bankers Trust New York** Corp.

The rating was based on the unit's solid capital position and total risk exposure, Moody's said in Sydney.

The bank's commercial loan exposure is small, and its major credit concern is counterparty risk related to its money-market and foreign-exchange business, Moody's said.

The credit management system is comprehensive and asset quality remains high, Moody's added. — **Reuters**

Bank of Ireland to Open Boston Bank

By JAMES R. KRAUS

NEW YORK — Bank of Ireland said Tuesday it planned to start a new bank in Boston in an effort to expand its franchise in New England.

The new institution, First National Bank of Massachusetts, will have $8 million in capital provided through First NH Banks Inc., Bank of Ireland's main U.S. operating unit, based in Manchester, N.H. The Boston bank is expected to be operating by the end of the year.

Irish Population Targeted

Officials at Bank of Ireland and First NH said that the Boston bank would emphasize its Irish links and target the large Irish community in eastern Massachusetts as well as corporate and trade-related business.

They said that more than 40% of the population of eastern Massachusetts is of Irish origin and that the community offers Bank of Ireland a natural starting point.

"We think we'll be well received," said Ray Schwedhelm, senior vice president and director of marketing for First NH.

Base for Expansion

Officials added that Bank of Ireland would also use its Boston unit to either acquire or open other offices in eastern Massachusetts.

"It's well known that we don't plan to just stick in New Hampshire. We see ourselves as moving into Massachusetts in the longer term and this is a start," said Michael Hillin, director of investor relations at the Bank of Ireland in Dublin.

Bank of Ireland and First NH have jointly applied to the Massachusetts Division of Banks for authorization to set up a state-chartered bank.

Entry Is Recent

Bank of Ireland, Ireland's second-biggest bank with $21 billion in assets, in 1988 acquired First NH, a holding company for six New Hampshire banks and First Maine Bank of Portland.

The Irish bank also hopes to expand in the Portland area. The bank this month studied acquiring Maine National Bank from Bank of New England, but decided against making an offer because of the Portland unit's real estate-related problems.

"We were asked to look at Maine National. We looked at the bank and quickly made up our minds that we weren't interested," Mr. Hillin said.

Maine Takeover Shunned

Bank of Ireland has already grown more cautious about expanding in New England after running into problems with real estate lending at First NH.

The $2.8 billion-asset holding company lost $4.7 million for the fiscal year ended March 31 and will next month announce further real-estate related losses for the quarter ended June 30, Mr. Hillin said.

Officials said that they viewed the current economic downturn in New England as cyclical and predicted that the New England economy was likely to turn around again in two years.

Real Estate Still a Problem

"The big problem is real estate and it's a matter of getting things under control," Mr. Hillin said.

Bank of Ireland will also use the Boston bank for building up its business in the United States in areas such as trade finance and correspondent banking.

To strengthen its trade related business, the Irish bank is installing an export-import matching data system at First NH.

The proprietary system, developed with several other banks, automatically matches exporters and importers of the same product worldwide. □

Banks Say Poland Can Pay Back Loans

By PAUL KELASH
LDC Debt Report

Poland's bank advisory committee sent Warsaw a positive assessment of the Solidarity government's ability to pay back its $9 billion in outstanding commercial bank debt.

The bank advisory committee recently met in London to complete its own review of Poland's economic future after members of its economic subcommittee had visited Washington and Warsaw to go over Poland's economic data.

"There was a broad-based consensus that it would be useful for them to know what our conclusions were. Obviously we expect they can pay more," said a member of the bank advisory committee, which is headed by Barclays Bank.

Parallel Deals Sought

Most of Poland's $40 billion in external debt is owed to governments, and banks appear resolved to hold out for nothing any debt reduction plan without "compatible" reduction through the Paris Club, an ad hoc group of countries to which Poland owes money.

"Any solution without the Paris Club would be next to useless," said a banker.

But another banker who attended the meetings said the Poles could easily deduce from the banks' economic plan what banks are willing to accept as a discount in any negotiation: "slightly more than 25%."

Other bankers denied that any discount could be found in the economic forecast because "the numbers could all change if the Paris Club [accepts debt reduction]," one banker said.

In meetings last month with banks, the Polish delegation, headed by chief debt negotiator Jan Krzysztof Bielecki, Banks have avoided the trap that ensnared thrifts – depending on short-term borrowings to make long-term loans – and banks' growth rates have been much more moderate.

"Borrowing short to lend long

Conservator Upheld for Michigan Thrift

PONTIAC, Mich. — First Federal Bancorp said a federal district court has denied its request for a preliminary injunction to prevent the Office of Thrift Supervision from appointing a conservator or receiver for the company's First Federal Savings Bank and Trust subsidiary.

The Pontiac-based holding company said the court did continue a temporary restraining order already in effect against the OTS action until July 27, to give First Federal a chance to file an appeal with the federal appeals court in Cincinnati. □

Health of the FDIC Is Being Exposed to Media Spotlight

Continued from *page 1*

and in highly leveraged transactions, the public is beginning to expect worse to come.

"People are madly looking around to find the next problem," said Bert Ely, an Alexandria, Va.-based financial consultant. "I think it is a widely perceived problem."

A Perception Problem

Thomas Bloom, former chief accountant with the Federal Home Loan Bank System and now a partner at Kenneth Leventhal & Co., a real estate accounting and consulting concern, said the attention being given to banking industry problems was beginning to feed on itself.

"I don't think Bill Seidman was saying the sky is falling, but it is kind of an unstable environment," Mr. Bloom said. "With real estate as bad as it turned out to be, it is adding that little extra bit to the pressure cooker."

"I don't think Bill Seidman was saying the sky is falling, but it is kind of an unstable environment."
Thomas Bloom
Kenneth Leventhal & Co.

In the eyes of some analysts, the pressure cooker has already begun to heat up, especially on Capitol Hill.

Two weeks ago, the Senate voted 99 to 1 in favor of an amendment to a crime bill that sets stringent penalties for S&L and bank executives who break the law.

"The witch hunt is on," said Karen Shaw, president of Institute for Strategy Development, a Washington-based consulting firm. "We are going to see son of FSLIC – the general mood of let's get the FDIC – on the political front."

Banks' problems are much different than those suffered by the S&Ls, Ms. Shaw and other industry leaders contend. Banks have avoided the trap that ensnared thrifts – depending on short-term borrowings to make long-term loans – and banks' growth rates have been much more moderate.

"Borrowing short to lend long really creamed the [thrift] industry," Mr. Ely said.

Crisis Not Close

In 1981 and 1982, the S&L industry lost a combined $8.2 billion. Mr. Ely said. For the commercial banking industry to have a comparably dismal year, it would have to lose $22 billion, he noted.

"The banking industry isn't coming close to losing that kind of money, 90% of the banks are making money," Mr. Ely said. In 1989, FDIC-insured banks had aggregate net income of $16 billion, down 34% from the 1988 level as many of the largest banks added to reserves for developing-country loans.

Furthermore, the FDIC is dealing head-on with its problems, Mr. Ely said, and has not swept them under the rug as the Federal Savings and Loan Insurance Corp. was accused of doing.

"The FDIC, as far as we can tell, is not engaged in masking over the problems," Mr. Ely said.

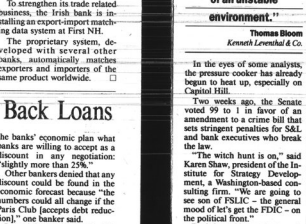
But R. Dan Brumbaugh, a senior research scholar at Stanford University's Center for Economic Policy Research, who was one of the first to trumpet the problems in the S&L industry, disagrees. He charges that the FDIC has been covering up the true magnitude of the banking industry's problems.

"We have been in [a banking crisis] since 1987, and we are now just beginning to realize it," he said. "The people are basically in the dark of what I consider to be the 100% probability that taxpayer dollars are going to be needed for the closure of commercial banks unless there is a miraculous recovery in the economy."

"The people are basically in the dark of what I consider to be the 100% probability that taxpayer dollars are going to be needed for the closure of commercial banks."
R. Dan Brumbaugh
Stanford University

The acknowledgement that the FDIC fund could lose as much as $2 billion by yearend is evidence that problems among banks are growing, Mr. Brumbaugh said.

"You can see the change in the political tenor in the last couple of months," he said. "That deterioration in confidence is the kind of admission of trouble one gets belatedly from the regulatory apparatus." □



EMERGE WITH WORKABLE SOLUTIONS.

When you read **The Banking Law Journal**, you'll come away with practical answers to your most frustrating banking law problems.

That's because the **Journal** is written by successful practitioners who have confronted the same problems you face today–and emerged with workable solutions. A tradition of first-rate professional guidance that's been maintained for over 100 years.

Six times a year, you can read it and get new ideas, opinions, and techniques for dealing with the latest developments in banking law:

- Movements toward the repeal of the Glass-Steagall Act
- Effects of Regulation CC (Expedited Funds Availability Act) on check/payment processing procedures
- FIRREA
- Environmental liability
- Bank taxation
- CRA
- And more!

Each issue of the **Journal** offers insight on cases and legislation affecting everything from bank operations and services to more specialized areas such as bankruptcy, EFTs, and Truth-in-Lending.

Read it and emerge with a new perspective on how to solve banking law problems.

The time to try it is now–send in the coupon below or call toll free 1-800-950-1216 and we'll rush you the latest issue of **The Banking Law Journal** ABSOLUTELY FREE. Put its solutions to work for you.

Doubts, Shake-Up Lead to Brain Drain at the Comptroller's

Continued from page 1

pointment is uncertain.

Mr. Clarke denied that the changes have made his office less effective. "To suggest that [the agency] is in turmoil is certainly not accurate," he said in an interview.

Mr. Clarke said that the defections resulted from better opportunities being presented to talented and experienced staff members. The internal changes, he said, stemmed mostly from requests for transfers.

Changes Called Unusual

But almost 20 former and current members of the comptroller's staff interviewed for this article said the number of changes is unusually high — for the Comptroller's office or other agencies.

The office is in the midst of disarray that has sapped morale and cost it some of its top regulators, they said.

"It is a slow bleed of experienced and talented people," said a former employee.

Another said: "Clearly, you don't have this type of turmoil at the other agencies."

Most of the people interviewed — including former employees who still maintain business relationships with the agency — spoke on the condition that they not be identified.

Transfer of Top Aide

The highest-ranking official involved in the shake-up so far is Robert J. Herrmann, who suddenly announced last month that he was giving up the top job at the division of bank supervision policy to take a lower-ranking position as deputy comptroller of the central district in Chicago.

The division sets policy or rules for 4,200 national banks; for example, it determines when a bank is insolvent, how often banks should be examined, and what steps should be used in an examination.

A 28-year veteran of the agency, Mr. Herrmann was in a prestigious but highly intense position. Sources familiar with the situation said senior agency officials felt that he did not make decisions fast enough.

Shortly before he announced the move, Mr. Herrmann was blasted on Capitol Hill by Sen. Alan Dixon, D-Ill., chairman of the subcommittee of the Senate Banking Committee. The senator read a scorching resignation letter by Ronald E. Wienk, special assistant for fair lending in compliance management unit under Mr. Herrmann. The letter attacked the agency's "vacuous management of bank compliance policy."

Mr. Herrmann's Explanation

In a recent interview, Mr. Herrmann denied that performance was an issue in his moving. He said he made the move to be closer to his family and to work more closely with banks, something he likes to do.

Two months before Mr. Herrmann's announcement, Dean E. Miller, deputy comptroller for compliance, in a unit under Mr. Herrmann, was shifted to the lower-ranking position of senior adviser for fiduciary responsibilities. He was replaced by Ronald A. Lindhart.

Leaving This Month

In addition, Malcolm P. Northam, deputy director of investment securities, will leave the agency this month. A 21-year veteran, Mr. Northam said he is leaving to start his own consulting firm.

And there are reports that Owen Carney, who has more than 20 years with the agency and is the director of investment securities, may soon leave. Mr. Carney was on vacation and could not be reached for comment.

Unsettling Changes

Meanwhile, changes have also rattled the division of bank supervision operations, which implements the agency's policies and oversees some of the nation's largest banks.

Four of the division's directors have moved to lower ranking positions.

Four officials have resigned this year:

• John Campbell, 16-year veteran, resigned as director of multinational and regional bank analysis to take a job with Price Waterhouse in Washington.

• Michael L. LaRusso, 23-year veteran, quit as senior national bank examiner in New York to take a job with First Fidelity Bancorp., Lawrenceville, N.J., as senior vice president in charge of audit and policy development.

• Stephen M. Lane, 17-year veteran, left as national bank examiner to take a job with the Secura Group, a Washington-based policy and consulting firm.

• David H. Scott, who replaced Mr. Campbell, left to take a job at the World Bank.

• Emory W. Rushton, head of multinational banking, was named last September to be primary liaison to the Resolution Trust Corp. Many saw the move as a step down; Mr. Rushton said he viewed it as a promotion. "I had been in multinational for several years, I was looking for a change," he said.

In addition, at least one change appeared to be connected with the real estate exams in the Northeast. In January, Thomas W. Taylor, deputy comptroller for the agency's Northeast district, was pulled to the Washington headquarters of the Comptroller's office after New England's real estate market exploded and platoons of examiners — many from the Southwest — were sent in to clean up the mess.

Mr. Taylor was replaced by Karen J. Wilson, a deputy comptroller in Chicago.

A Complex Agency

The Comptroller's office a complex agency to manage. It has a staff of 3,290, including more than 2,400 examiners in 120 locations around the country and in London. It is split into six districts that cover banking institutions across the county, including the nation's largest banks.

Aides reporting directly to Mr. Clarke include a special advisor, five senior deputy comptrollers, and a chief counsel. Below that level are 17 deputy comptrollers and more than 50 directors.

Several years ago, many of the agency's top officials were lured away at the same time by lucrative offers from Federal Home Loan Bank Board and private firms.

'Tired of Fighting'

But one source at the agency said the current changes are different. "People aren't leaving for more money – they are tired of fighting battles," he said. "The OCC gives you no reason to stay."

The result is that the agency is scrambling to fill top positions with less experienced people, former employees say.

Restructuring Surprised Some

The restructuring which surprised some insiders, who were initially told no changes were afoot.

The reorganization kicked into full gear last October in St. Louis, where more than 240 managers met to discuss the agency's direction. The goal was to streamline the agency by cutting out layers of management.

The division of bank supervision operations has already been restructured; some people were shifted into other divisions and others moved to district operations. The restructuring of the division of bank supervision policy, which was under Mr. Herrmann, is still under way.

Morale is low, several sources said. "It can't get much lower," one said. "It is self-destructing. Many of the good people are looking [for jobs] or to go back to a district."

Mr. Clarke acknowledged that the restructuring has caused some turnover.

Process Is Defended

"Anytime you go through any sort of reorganization . . . it can create uncertainty and anxiety," he said. But he cautions that the reorganization is not "grandiose," but simply a "check up."

Dana H. Cook, a former special adviser to Mr. Clarke who left in February 1989 and is now partner and national director of financial institution capital markets at KPMG Peat Marwick, contends that if the agency is unsettled it is a result of the uncertainty surrounding Mr. Clarke's future with it.

"Treasury needs to decide about what they are going to do with the leader," Mr. Cook said. "People are going to be unsettled until Treasury" decides. □

The BANCPEN® Branch Report...ready-to-use in Lotus 1-2-3™ file format!

No conversion necessary • just slip the floppy diskette into your PC and it's ready to go.

The BANCPEN Reports, in print-out form and on 3½ or 5¼ inch diskettes for personal computer use, are used by decision makers in over 1,500 of the country's leading banks. One of the most popular is the BANCPEN Branch Report in a ready-to-use Lotus .WKS file format.

The BANCPEN Branch Report is the only branch report formatted to Lotus on 3½ or 5¼ inch diskettes for immediate access to a five-year history of all commercial bank, savings and loan, mutual savings bank branches, and credit unions in the state or states you select—with no conversion needed. Branch data covered includes all reported categories for each institution, including:

- Total Deposits
- Total Deposits of Individuals, Partnerships & Corporations (IPC)
- Public Deposits

Your BANCPEN Branch Report diskette can be prepared for Lotus 1-2-3™, Lotus Symphony™, DBase II™, and any other popular spreadsheet program. FDIC Data, including five-year histories through 1989, is now available at $995 per state. For a sample diskette, use the coupon below, or call (417) 866-5053 for samples or a price quote on multi-state orders.

COMMENT

Law Needed to Protect Lenders from Superfund Excesses

Continued from page 4

release" is not eligible for the defense.

A Pressing Issue

Liability under Superfund is one of the most pressing issues for all businessmen and particularly lenders. Financial institutions are concerned with the law as holders of security interests or as fiduciaries for trusts and estates.

Typically, a lender might extend credit and take a security interest in property of 15 or 30years. The law's definition of "owner or operator" specifically excludes one who "without participating in the management of the facility . . . holds indicia of ownership primarily to protect his security interest in the vessel or facility."

"Lenders are now less certain what actions would be appropriate to assure that no liability is incurred."

Several court cases have explored the extent to which loan foreclosure and loan management activities short of foreclosure can make lenders subject to Superfund liability despite this security interest exclusion. The cases include U.S. v. Fleet Factors Corp., F.2d, No. 89-8094 (11th Cir. May 23, 1990); U.S. v. Mirabile, 15 Envt'l L. Rep. 20994 (E.D. Pa. 1985); U.S. v. Maryland Bank & Trust Co., 632 F.Supp. 573 (D.Md. 1986), and Guidice v. BFG Electroplating and Manufacturing Co., 1989 U.S. Dist. Lexis 14, 042 (W.D. Pa. 1989).

The courts have addressed applicability of the security interest exclusion when a bank takes title to the secured property upon foreclosure. In Mirabile, the court found that a lender who held title for a brief period after foreclosure without participating in the management of the property was not an "owner or operator." More recently, however, Maryland Bank & Trust Co. and Guidice decided that lenders who foreclose and take title to property lose the security interest exclusion.

Loan Management Activities

The courts also have found that certain loan management activities short of foreclosure can be considered as "participating in the management" of the facility, making the lenders an "operator" not protected by the security interest exclusion.

Decisions by federal district courts in the Mirabile and Guidice cases generally found that participation in day-to-day operational and management decisions could subject a lender to Superfund liability, but mere financial oversight, collection activity, and advice would not.

Significantly, the recent appellate court decision in Fleet Factors rejected this delineation and prescribed a broader and less well defined basis for liability on the part of the lender.

The court said: "It is not necessary for the secured creditor actually to involve itself in the day-to-day operations of the facility in order to be liable. . . . Rather, a secured creditor will be liable if its involvement with the management of the facility is sufficiently broad to support the inference that it could affect hazardous waste disposal decisions if it so chose."

The court recognized that its interpretation was a "narrow construction" of the security interest exemption and that under its decision "there is a clear risk that innocent borrowers will find it difficult to obtain credit."

"To reduce these risks, lenders are requiring environmental audits (which can run up to $50,000 on a $100,000 loan) and, in some cases, simply not providing credit for certain lines of business."

The court's ruling in Fleet Factors is at once broad and vague. The result is that lenders are now less certain what actions would be appropriate to assure that no liability is incurred. The court's only guidance was to say that "a secured creditor can become involved in occasional and discrete financial decisions relating to the protection of its security interest without incurring liability."

The Fleet Factors decision significantly strengthens the trend in the courts to pare away the security interest exemption and create problems for financial institutions both as creditors and fiduciaries.

The Misdeeds of Borrowers

Borrower misdeeds create potential liability for creditors, and this affects lending policies. The creditor not only incurs the risk of losing a loan and collateral but also faces the potential of having made a small loan and owing much greater sums for a cleanup.

To reduce these risks, lenders are requiring environmental audits (which can run up to $50,000 on a $100,000 loan) and, in some cases, simply not providing credit for certain lines of business, particularly small and midsize firms.

Foreclosure becomes more difficult and places a financial institution (or a government agency) in a unique position. Foreclosure may now require an expensive audit, which may result in walking away from collateral. Existing portfolios become suspect.

Fiduciaries are placed in an unfair position. Trustees have no specific knowledge of a property that is subject to a trust. Thus, when becoming an executor to an estate, a manager of pension fund assets (which may include title to a building or property) or a bond indenturer (who represents the bondholders and may need to foreclose), a fiduciary can be placed in a perilous position. This is particularly difficult where a fiduciary's duty may mandate a foreclose against the best judgment of the trustee in the face of Superfund.

Federal Agencies Note Problem

Government entities, including those vested with cleaning up the savings and loan crisis, have acknowledged a problem. The Resolution Trust Corp., the Small Business Administration, and every government body that extends credit or guarantees against real property are potentially liable.

Superfund liability is not simply a problem for financial institutions. Small businesses, homebuilders, farmers, and others are confronted with unusual new requirements, higher transactional costs, and uncertainty.

No sound public policy exists for holding creditors liable for customer actions. Giving a very narrow interpretation to the security interest exception does not reflect congressional intent. Liability in the recent court cases under Superfund is created after the fact and imposed on an innocent third party; this has no deterrent effect on hazardous discharges.

Unintended Effect

The law is being used as a trap, not as originally enacted. The EPA and state environmental agencies have overstepped their mandate in their eagerness to pull in all possible deep pockets. Portions of the law need to be returned to their original effect – to exempt innocent parties.

Recent nonlegislative solutions have focused on the requirements for meeting the innocent landowner defense. For example, the EPA has issued guidelines, but these go no further than to offer general advice and to caution that environmental assessments will be made case by case [EPA, "Guidance on Landowner Liability under Section 107(a)(1) of CERCLA . . ." June 6, 1989].

Under the auspices of the American Society of Testing and Materials, the lending, leasing, homebuilding, realty, government, and environmental testing communities are working to develop standards for appropriate environmental due diligence in commercial real estate transactions.

These standards would establish a benchmark necessary to satisfy the innocent landowner defense. This effort should help solve part of the problem.

Nothing short of legislative action, however, will resolve the current uncertainty faced by lenders, fiduciaries, and governmental entities that have an interest in real property.

Bills Address the Problem

Two bills have been introduced to address the problem:

H.R. 4494 (Congressman LaFalce) excludes from liability lending institutions that gain control of a facility pursuant to a security interest. Fiduciaries who have legal title for purposes of administering an estate or trust or who do not have legal title but do operate or manage a facility are exempted.

Similarly, indenture trustees, individual fiduciaries, lenders who hold leases subject to federal or state banking law, and federal and state government agencies that make loans on the security of any facility (including economic and industrial development agencies) are eligible for exemption. No protection is provided under the bill for otherwise exempted parties who in fact cause or threaten to cause a toxic release.

S. 2827 (Senator Garn) would amend the Federal Deposit Insurance Act and the Federal Credit Union Act to limit federal and state cleanup liability of depository institutions and mortgage lenders who foreclose on real property or of those who hold real property in a fiduciary capacity. The federal financial institution agencies would also be protected from liability.

No exemption flows to a party who actually causes a release or threatened release from the property. The bill also limits the exemption if the institution has benefited by remedial action of the government to the extent of the actual benefit conferred.

Finally, in order to ensure due diligence by institutions, S. 2827 requires the federal financial institution regulators to ensure that depository institutions develop and implement procedures to evaluate environmental risks that may arise from lending and fiduciary activities.

Modifications Are Likely

It is very likely that these legislative proposals will be modified as the process evolves. The Garn and LaFalce bills are obviously different in scope and do not solve all problems.

For example, as noted in the Garn bill, prudent banks will still want to perform some level of environmental audit on real property during loan origination. Should there be some legislative standard for the type of audit necessary? What actions may lenders take to monitor their loans without "participating in the management of a facility," the problem raised most recently in the Fleet Factors case?

Under the LaFalce bill, the question of preempting "mini-Superfund" – state laws that would impose waste cleanup costs on lenders – remains. If state laws are not specifically addressed, then lenders could continue to be exposed to cleanup liability even if the difficulties presented by the federal law are remedied.

Too Wide a Net

The original goal of Superfund – to remove hazardous substances from the environment – is one that everyone supports. The current interpretation of the law's liability provisions, however, cast a much wider net than was ever envisioned by Congress. Lenders, fiduciaries, and government entities – typically innocent parties – are faced with potential liability that is out of proportion to their involvement with contaminated property.

The impact that such liability has on economic development and governmental policy in other areas (such as the S&L bailout) was never considered by Congress. Judicial narrowing of Superfund's protection for lenders has led to unforeseen consequences that will only be corrected by congressional action. □

Executive Help Wanted

Debit Product Managers

Visa U.S.A. is seeking banking professionals to lead the continued development of Visa Debit Card and ATM/Direct Debit POS products and services.

Technology and innovation have made Visa the largest, most widely recognized financial payments systems in the world. We do more than enhance existing products and services. We focus on new opportunities as well.

You'll not only manage existing products, you'll contribute to the implementation of new programs and services. Your priorities will include analyzing their feasibility and profitability, developing product marketing materials, participating in marketing support activities, establishing product management tracking/reporting requirements, interfacing with operational and systems areas, and overseeing product plans.

Product management positions are now available.

Visa Debit Card ATM/Direct Debit POS

Qualifications include 5+ years' experience in financial services with recent experience in product management. For Visa Debit Card, knowledge of retail banking operations and transaction-based products is highly desirable. For ATM/Direct Debit POS, background in EFT/ATM products and services is needed. Excellent communication skills, both verbal and written, are essential, along with marketing support and project management skills.

VISA offers an excellent compensation package including comprehensive benefits. For immediate consideration, please send your resume to: VISA U.S.A., Dept. CR/72A1AB, P.O. Box 8999, San Francisco, CA 94128. For other VISA opportunities, please call our JOB INFORMATION LINE (415) 378-8299. We are an equal opportunity employer.

VISA

We're everywhere you want to be.

RETAIL BANK EXECUTIVE

Billion dollar New England bank must revitalize relationships with retail customers. Service is the foundation of profitable market share. We'll do a lot better, now and into the future, with a leader whose vision and integrity build focus, intensity, sustained team effort and results.

We'll find a line management winner who:

- Lives customer relationships in small cities and little towns. . . not just in the urban/up-scale centers.
- Knows all forms of deposit and retail credit lines of service, cold . . . commercial credit, a plus.
- Makes marketing principles work, even when population and media availability put per exposure costs out of sight.
- Appreciates values of key staff areas like marketing, financial planning, HR.
- Has a college degree . . . maybe MBA or Stonier too.
- Has a stable personal life . . . our work is tough enough without any extra baggage.
- Probably runs one of the retail or community banking regions in a bank many times our size.
- Manages the game and the score by inspiring the players.
- Is looking ahead for the right show to run.

Salary, incentives, benefits, challenge and career opportunity. Please send a detailed resume, to be held in confidence, now.

Last week's column identified the 10 most active acquirers of banks in the 18 months ended June 30, 1990, and discussed the strategies of companies focused on the Texas market. This column examines the strategies of four companies whose recent expansion has taken place partially or exclusively outside of Texas.

Three of the companies – Security Pacific Corp., Banc One Corp., and Comerica Inc. – have made acquisitions of both healthy institutions and government-assisted depositories. The fourth, Union Planters Corp., has concentrated exclusively on acquiring small banks.

While the acquisition strategies of these four companies have more differences than similarities, the companies have in common an ability to outperform their peers and, in the process, attract the capital required for growth.

SECURITY PACIFIC

Security Pacific's acquisition style could be described as both flexible and opportunistic. Its nine announced acquisitions, all in six Western states, have displayed a willingness to seize opportunities in a variety of forms.

Three involved the acquisition of healthy subsidiary banks. One involved the interstate acquisition of a healthy savings and loan. The remainder of the transactions were negotiated with the government – three with Resolution Trust Corp. and two with the Federal Deposit Insurance Corp.

Terry Strucca, senior vice president of corporate planning, noted that "the pendulum is swung" away from private transactions and in favor of deals negotiated with the RTC and FDIC.

Stock Has Weakened

On top of the shifting economics of bank acquisitions, Mr. Peruca added that the decline in Security Pacific's stock price, from a high of $54.50 on July 31, 1989, to $35 recently, makes a stock acquisition of a healthy company far less likely today than it was just a few months ago.

With a reduced appetite for private-sector transactions, Security Pacific has turned its attention to the RTC and, to a lesser extent, the FDIC.

Won Bid for Gibraltar

In the second quarter, the company was the winning bidder for Gibraltar Savings, a failed thrift with $3.6 billion of core deposits in California and Washington. Security Pacific paid a premium of 4.02% of core deposits.

Capital constraints and asset quality pressures would appear to be the major factors potentially limiting Security Pacific's expansion plans. For the second quarter, Security Pacific's nonperforming assets rose 7.4% reaching 1.98% of assets. Similarly, its equity-to-assets ratio at June 30 stood at 5.21%, somewhat below the 5.89% average for all superregionals.

So far, Security Pacific has taken advantage of the ability to do a "liability-to-liability swap" offered by most RTC deals, placing higher-cost borrowings such as commercial paper with Gibraltar's deposit base.

Easy on the Balance Sheet

That tactic will enable Security Pacific to absorb this and other large thrifts without expanding its balance sheet on a dollar-for-dollar basis.

As for its future acquisition strategy, Mr. Strucca is expected to bid in most, if not all, the big RTC auctions in the West. It is likely to bid for Meridian, scheduled to go on the block this quarter.

The other logical targets that would help fill Security Pacific's market area include Imperial Savings of San Diego, Santa Barbara Savings, and Ben Franklin Savings of Oregon.

COMERICA

Why would $12 billion bank holding company based in Detroit concentrate its acquisition program in California and Texas?

According to Comerica, the reason has to do with "liquidity." Spokesman Randy Boileau says that the Michigan markets "generate more funds than [Comerica] can profitably deploy," leading the bank to look elsewhere to export the lending specialties it has developed.

Comerica has four primary lines of business: middle-market lending, trust services, commercial banking, and consumer banking. The company has targeted California and Texas as markets ideally suited to those businesses.

Separate Strategies

Comerica's dual-market expansion has required distinct strategies for each market.

In California, Comerica has announced two acquisitions of healthy banks in the past nine months – Plaza Commerce in San Jose and InBanschares in City of Industry, east of Los Angeles. Both institutions emphasize commercial lending and commercial real estate and construction lending.

Comerica's expansion into the pricey California market-place will not come cheaply. Plaza Commerce will cost 295% of book value, to be paid in stock, while InBanschares will cost 216% of book value. Both deals are expected to close in January 1991, the earliest date permitted by California's interstate banking law.

Using the Government

The other side of Comerica's split personality is reflected in its expansion into Texas.

Including its recent entry into the Lone Star State in the fall of 1988, Comerica has completed six acquisitions, five with the FDIC and one with the RTC. It now boasts 14 branches and assets of $910 million in this Texas banking network.

Comerica's expansion will continue to emphasize the Texas and California markets, in that order, if the current unbalanced pricing relationship between private and public-sector deals prevails.

An Ironic Possibility

If California's economy and real estate markets contract, Comerica might find itself in the ironic and somewhat embarrassing position of having its Michigan and Texas franchises outperform its California units.

To date, California has held together reasonably well, but a real estate downturn could play havoc with the sizable construction and commercial real estate portfolios of Plaza Commerce and InBanschares.

Some Negative Signs

In two ominous signs of a crack in the California real estate markets, HomeFed of San Diego announced a staggering increase in nonperforming assets and San Jose-based Silicon Valley Bancshares' stock price declined by 24% last week despite an announcement of strong second quarter earnings.

Presumably, Comerica has several months left in which to invoke the "material adverse changes" clause in its agreements with Plaza Commerce and InBanschares.

UNION PLANTERS

Union Planters announced six deals in the 18 months ended June 30 and later canceled two pending deals because of the most unusual of the four companies.

Based in Memphis, Tenn., it seeks small banks in rural communities, strikes a rapport with management, and offers them the opportunity to operate autonomously.

The attraction of autonomy has enabled Union Planters to produce uncommonly cheap deal prices for many of the banks it has acquired. The strategy contrasts sharply with that of Security Pacific, a bank that has demonstrated a willingness to pay top dollar to secure the No. 1 position in its markets.

No Quest for Synergy

Union Planters' strategy of autonomous acquisitions pays little heed to the concept of synergy. Acquired banks keep their own names and operating systems. Of 19 Union Planters affiliate banks, the lead bank services only five others. Asked what savings might be achieved after a deal closes, a company executive had to think for a few moments and then suggested "insurance coverage."

BANC ONE

With 41 acquisitions in the last 10 years, Banc One has mastered the art of consolidation, improving the company's return on assets from 1.23% in 1980 to 1.51% over the last 12 months.

The ability to simultaneously grow through merger and improve performance has given Banc One exceptional access to the capital markets to support its future growth. Just last week the bank completed a $325 million offering of common stock at a price only 13% below the historical high for the stock.

Chairman John B. McCoy's comments on key issues in Banc One's acquisition and business strategy: uniformity of product line; emphasis on efficiency; efficiencies through technology; and a management system that allows for decentralization of decision-making with close monitoring of performance.

Unless it takes an unexpected misstep, Banc One is poised as the model superregional bank of the Nineties. No bank in the country is better poised to take advantage of the opportunities presented by the massive banking consolidation currently under way. □

DEALS
Market Participants See Signs of Revival in Private-Placement Activity

Continued from page 1

products at Loan Pricing Corp.

To be sure, deal flow in the private-placement market is widely expected to be off in the first half of 1990 compared with the same period last year, when $87 billion of new securities were issued.

Joel Glasky, managing director of private-placements at Chase Manhattan Bank, said the first-half decline could be anywhere from 10% to 30%.

Securities Data Co., which tracks new-issue volume in the private-placement market, expects to report figures for the first half of 1990 in about a week, an official there said.

The expected decline in first-half numbers is largely attributed to the falloff in private placements funding employee stock ownership plans. Last year, ESOP paper accounted for an estimated 25% of the $170 billion private-placement market.

In part because of the virtual disappearance of ESOP paper, Neil Powell, president of Shea, Paschall & Powell, predicted just two months ago that market volume could plunge by as much as 40% this year – to around $100 billion.

Based on the current level of activity, Mr. Powell said recently, now says this year "could turn out to be as good as a flat year."

Still, "you can't take one month and extrapolate in this business," said Mr. Glasky at Chase, referring to the recent spurt of activity.

Regulatory Factors

Mr. Powell noted that the private-placement market has also benefited from a regulatory-induced credit crunch.

"There is a fair amount of borrowing transference away from the banking industry into the institutional marketplace," Mr. Powell said.

His firm just completed a private placement for a client who used the proceeds to pay off a loan from a New England bank that had recently been examined by federal regulators.

> **"You can't take one month and extrapolate in this business."**
>
> **Joel Glasky**
> *Chase Manhattan Bank*

Chase's Mr. Glasky and others agreed that the private-placement market is now seeing activity from deals that otherwise would have gone to banks or the public junk-bond market.

"We're doing subordinated-debt deals with equity kickers, and senior-debt deals that didn't use to," Mr. Glasky said.

He added that borrowers are now more willing to issue long-term debt because of the dip in interest rates and the perception that rates won't fall much further.

"We're pretty close to a good low in the market" in terms of interest rates, Mr. Glasky said.

The yield on five-year Treasuries is currently about 8.33%, down from 8.60% two months ago, and the yield on 10-year Treasury securities is 8.52%, down from 8.63% in late May.

Timothy Conway, vice president in charge of private placements at Citicorp, agreed with other experts that a drop in interest rates is probably the biggest factor behind the pickup in the private-placement market.

Bank-Loan Constriction

Although he disagreed with the notion that there is a credit crunch, he conceded that the private-placement market is benefitting from a "slight-tightening" in the bank-loan market.

"Some of our customers that might typically do a deal in the bank market like the private-placement market more attractive," he said.

A lot of existing loans to highly leveraged transactions are also being refinanced in the private-placement market now that the new-issue junk market is closed, participants said.

A notable example is the recent $300 million LBO debt refinancing by Corpo., arranged by Donaldson, Lufkin & Jenrette Inc. At the time of the transaction, the deal was expected to be refinanced in the public junk market.

The refinancing was unusual for a private-placement deal because it included a floating-rate tranche priced similarly to a bank loan, officials at Loan Pricing Corp. pointed out.

The $166 million tranche was priced at 275 basis points over the London interbank offered rate. Fixed rates are more customary in private placement.

Unfavorable Trends at Work

While participants are generally upbeat right now about the private-placement market, some unfavorable trends are at work.

Insurance companies have been big buyers of highly leveraged debt in the private-placement market. But they are expected to cut back their holdings because of new capital requirements adopted by the National Association of Insurance Commissioners.

"With the new NAIC rules, [insurance companies] may become less active in the HLT area," said Susan Mitnick, an analyst at Loan Pricing Corp.

Despite the ballyhoo surrounding adoption of rule 144A this spring by the Securities and Exchange Commission, the rule – aimed at increasing liquidity in the private-placement market – hasn't yet had much impact.

"It's largely a nonevent," said Mr. Conway at Citibank, even though Citibank itself just completed a deal – a $130 million placement for Nova Corp. of Alberta.

"It certainly is a small factor at the moment," said Chase's Mr. Glasky. □

Bank of New York Willing To Refinance Cogenron Debt

By FRED VOGELSTEIN

Cogenron Inc., operator of a large cogeneration plant in Texas, has convinced Bank of New York to refinance its $145 million high-yield bond issue with bank debt.

The company is in negotiations with the high-yield debt holders to determine the exact prices, said Richard Lammers, director of finance at Enron Power Corp., Cogenron's parent owner. However, Mr. Lammers said Cogenron is not certain it will use the Bank of New York credit.

The company would like to be able to buy the bonds back at a discount. He indicated that Cogenron is leaning toward urging at least a portion of the loan. Even if Cogenron bought the bonds back at par, the company's annual interest costs would be lower than the $17.4 million it now pays.

Compelling Argument

"If you look at the current coupon rate on the existing debt and the current bank conditions, it's advisable for us to do it. . . even if we bought the bonds back at par," he said.

The Cogenron deal, while not noted for its size, garnered attention because banks tend to be reluctant to refinance riskier high-yield debt with their own investments. That is particularly true lately, with concerns about asset quality raging.

Bank of New York declined to comment. However, Mr. Lammers said he assumed the reason the bank agreed to the loan was that the plant is now operating profitably and has a strong financial guarantor in Enron. The other owner is Dominion Resources, the holding company for Virginia Power Co., Richmond.

Breakdown of Debt

The current high-yield debt, issued at the end of 1985, comprises 11.75% senior notes due Dec. 1, 1994; 12.75% senior subordinated notes due Dec. 1, 1996; and series A, 14.25% cumulative exchangeable preferred stock.

Mr. Lammers said interest costs for the bank loan will be "at market rates," but declined to elaborate. He would give no other details about the terms of the loan, or whether it is a highly leveraged transaction. □

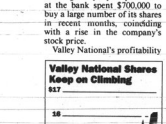
STOCKS

Insiders Show Confidence in Valley National

By GORDON MATTHEWS

NEW YORK — Insiders at Valley National Corp. apparently believe the sun is about to shine again on the Phoenix banking company. Top officials at the bank spent $700,000 to buy a large number of its shares in recent months, coinciding with a rise in the company's stock price.

Valley National's profitability has been impaired over the past two years by the severe downturn in the Arizona real estate market, which began earlier than the difficulties in other areas of the country.



Analysts are divided on whether a recovery has begun in the area, but the price of Valley's shares has clearly been on the rise since directors began acquiring additional stock last spring.

Action in Brief Period

According to Invest/Net Group Inc., which that tracks such activity, seven directors of Valley accumulated 50,000 shares at an average cost of $14 between April 20 and May 2.

At midday on Tuesday, Valley's shares traded at $16.25, up 75 cents on the day and 26.5% ahead of its yearend level.

The largest insider buyer was Robert F.B. Logan, Valley's president, who acquired 25,000 shares. Richard Lehmann, its chairman and chief executive officer, bought 4,000 shares.

Stake Had Been Small

The insider buying has helped adjust a situation that analysts considered a negative: a minimal stake in the company by its senior managers and directors.

Valley's 1990 proxy statement, dated March 15, listed Mr. Lehmann as owner of just 584 shares and Mr. Logan, its president, just 400 shares.

Insiders are differently motivated than other investors, noted Frank W. Anderson, a banking analyst at Stephens Inc., Little Rock, Ark. Tied to the fortunes of a company, they tend to be longer-term oriented, "but we are in a very short-term market right now," he said.

While the first two quarters this year were much improved at Valley, "I think it's still too early to be an aggressive buyer," said Mr. Anderson.

More optimistic is Thomas K. Brown, who thinks Valley is undervalued but acknowledges he is in the minority.

Takeover speculation has also boost the stock. On June 4, its shares stirred to life on takeover speculation after BankAmerica Corp. said it would buy a failed thrift in Arizona, Western Savings and Loan Association, Phoenix.

The move left industry observers wondering if Valley is now the only fully functioning vehicle for a possible Arizona entry by Wells Fargo & Co. The San Francisco superregional is the only big Western bank lacking a presence there.

* * *

TUESDAY'S MARKET

Most bank and thrift stocks declined again on Tuesday as the stock market in general remained indecisive about the direction of the economy.

J.P. Morgan & Co., the nation's premier money-center bank, was off 50 cents, to $36.75 in afternoon trading. Chemical Banking Corp., who price was quoted erroneously in Tuesday's column, was unchanged at $23.75.

Manufacturers Hanover Corp. fell $1.375, to $30.75, but analysts said the weakness was apparently not related to any financial developments.

Shares of Student Loan Marketing Corp. fell $4.875 in early trading but recovered some ground after Education Secretary Lauro F. Cavazos said the integrity of the Guaranteed Student Loan Program was not threatened by the financial problems of a large guarantor.

By the middle of the afternoon, Sallie Mae, as the organization is known, was off only $2.375 at $47.50. □

CAPITAL

Capital-Rich Have Pricing Edge, Study Says

By KELLEY HOLLAND

The new risk-based capital rules are accentuating the differences between the haves and the have-nots in banking by allowing well-capitalized institutions to compete aggressively on pricing, according to a survey released by the American Bankers Association.

And those differences are likely to increase, according to Dennis G. Buchert, a sector executive at Marine Midland Bank and chairman of the American Bankers Association's Corporate Banking Executive Committee.

"Over the long term, I think the cost of capital for banks will ultimately be reflected in an industry-wide repricing" of services, Mr. Buchert said. "If banks are going to continue to grow, they are going to have to reprice services at some point."

Subtle Pricing Changes

Even though almost all of the nation's largest banks already have risk-based capital in excess of the levels to be required in 1992, they have made subtle changes in the way they price their services and allocate their capital, the survey showed.

For one thing, banks with capital in excess of minimum levels can afford to price high-quality individual corporate loans more aggressively. This positions them well to develop relationships with borrowers, which will lead to repeat business that is profitable in the aggregate.

But banks with little extra capital need to price every loan so it is profitable, because their marginal cost of capital would be painfully high in today's hostile markets.

"Banks with less capital have to price at the transaction level, so that at the margin they are profitable, whereas banks with excess capital can rely more on relationship profitability," Mr. Buchert said.

Capital Rules Spur Loan Pricing Changes
Percent of banks adjusting loan pricing to adapt to new capital guidelines

	Small banks	Medium banks	Large banks
Higher rates on all loans	11.8%	38.5%	29.4%
Low rates for low-risk loans and no change on other loans	17.6%	0%	5.9%
High rates for high risk and low rates for low risk	55.9	38.5	41.2

Source: American Bankers Association

Survival of the Fittest

The difference in pricing flexibility between banks with excess capital and those without it is just one more indication of the Darwinian nature of banking today, Mr. Buchert said. Banks from Bank of New England Corp. to Washington Bancorp.have already learned that institutions truly in need of capital must pay top dollar for it – if they can raise it at all.

The ABA study points out that banks with excess capital also have advantages on the lending side of their business. "Those banks that are well ahead of the risk-based capital requirements definitely have the opportunity to turn that into a competitive advantage in terms of pricing services and developing relationships," Mr. Buchert said.

In the study, banks said they would differentiate more between high-quality and low-quality borrowers when pricing loans. On average, 48.4% of banks said they would offer lower rates on low-risk loans and higher rates on high-risk loans. Only 11% said they would lower rates on low-risk loans while leaving rates on high-risk loans unchanged, and just 22% said they would raise rates on all loans.

Turning to Other Methods

Both stock and bond investors are negative on bank securities these days, so banks seeking to boost their capital ratios prefer other methods. Asset securitization is the method of choice, according to the survey. Downsizing the institution came second, followed by slow growth and risk profile restructuring. Selling more stock was the least-favored method.

A total of 377 banks with assets of $1 billion or more were sent questionnaires, and 105 of them responded. Tier 1 and Tier 2 ratios of those banks were not revealed.

* * *

MARKET MONITOR

NCNB Corp.'s $200 million issue of 25-year subordinated bonds was priced on Monday at 166 basis points over comparable Treasuries, with a coupon of 10.2%. The offering, lead-managed by Merrill Lynch Capital Markets and comanaged by Salomon Brothers Inc. and Goldman, Sachs & Co., was all sold on Tuesday. □

FINANCIAL TECHNOLOGY-UPDATE

NCR's Electronic Journal (EJ) automates the audit data collection of ATM operations.
EJ eliminates costly journal printers and supplies in favor of floppy disk storage in the existing disk drive.

EJ simplifies replenishment, speeds customer inquiries, and increases storage capacity of audit data for the ATM.

PC utilities allow bank personnel the ability to browse, search, and store diskette data contents. And the diskette is reusable after the transfer of its contents.

NCR's 5223 Passbook/General Purpose Printer is a compact, light-weight device which has been designed to print on passbooks and most non-continuous documents. It can be used by tellers, either as a dedicated unit or in a multi-user mode. The printer's multi-functional characteristics, its reliability, high speed, and friendly, human interface, make it ideally suited for today's financial and office environments.

The NCR 5367 Financial Workstation is designed to provide an effective price and performance solution for the different functional areas of the branch.

The 5367 Financial Workstation has standard security features like battery back-up for storing totals and protecting sensitive data in the event of a power failure, and it can support multiple peripherals.

Various options enhance the workstation's capability. These options include a high speed NBS/DES Encryptor which protects data files and other sensitive information being transmitted or stored.

The 5367 Financial Workstation can be customized for specific environments and it is based on industry standard components and an open architecture . . . making sure it can meet the growing needs of financial institutions.

Firewalls May Have Outlived Their Usefulness

By LINDA CORMAN

Firewalls, the regulations that are meant to insulate banks from the problems of their non-bank affiliates, may not be necessary after all.

None other than Federal Reserve Board Chairman Alan Greenspan cast doubt on firewalls in a dramatic declaration earlier this month:

"The board has for some time held the view that strong insulating firewalls would both protect banks and taxpayers from the risk of new activities and limit the extension of the safety-net subsidy that would place independent competitors at a disadvantage," Mr. Greenspan testified July 12 before the Senate Banking Committee.

ANALYSIS: *Follow-up on the news*

Recent events, including the demise of the brokerage firm Drexel Burnham Lambert Inc., "have raised serious questions about the ability of firewalls to insulate one unit of a holding company from funding problems of another," Mr. Greenspan said.

According to Fed sources, Mr. Greenspan was troubled by the fact that Drexel drained capital from a healthy subsidiary to meet the parent's commercial-paper obligations, which eventually crippled the entire company. The same problems could imperil subsidiaries of bank holding companies.

According to many observers of the bank-insurance debate, Mr. Greenspan thus has effectively undermined the firewall concept. Regulators and bankers had agreed that the firewalls made it safe for banking companies to enter more risky securities businesses, because the affiliated banks would not be affected by – or have to pay for – an affiliate's collapse.

Stricter Supervision Favored

To be sure, Mr. Greenspan did not recommend a wholesale dismantling of the walls. But he did suggest that if banks are to be granted wider powers – as the Fed has long advocated – higher capital standards and more stringent supervisory control would be more effective than firewall-type insulation.

"It may be more realistic to apply more limited firewalls to the new activities," he said.

In one example of a limited firewall, the Federal Reserve Act currently allows some lending between banks and their non-bank, nonsecurities affiliates. The loans must be collateralized and are limited based on a

Private S&Ls Losing Less, OTS Reports

By DEBRA COPE

WASHINGTON — The 2,505 savings institutions that remain operating in the private sector lost $271 million in the first three months of 1990, the Office of Thrift Supervision reported Wednesday.

The aggregate loss was significantly less than the $900 million that the same 2,505 institutions lost in each of the last two quarters of 1989, but was far worse than their $900 million profit in the first quarter of last year.

If the thrifts not in conservatorship lose money throughout the year at the same pace as in the first quarter, the industry deficit would exceed the $900 million net loss for all of 1989. That figure did not include the performance of institutions placed under government control in 1990, which brought the total loss for 1989 to $6.2 billion.

A Wide Disparity

In its release of industry data, the OTS pointed to a wide disparity in thrifts' profit performance by dividing the industry into four groups based on profitability and survivability. Almost half of the 2,505 private-sector thrifts are considered well-capitalized and profitable, but their profits were not sufficient to bring the entire group into the

Europe's Surging Banks Outpace Japanese, U.S.

By SAM ZUCKERMAN

Forget Europe 1992. In banking, the continent's party has already begun.

Thirty months before Europe's vaunted economic integration, *American Banker's* annual ranking of the world's 100 largest banking companies reveals that European institutions grew much faster than their U.S. and Japanese counterparts in 1989.

Contrast in Assets Growth

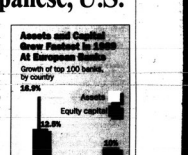
Assets of the top 43 banks based in 10 European countries rose 16.92% in dollar terms last year. The 14 U.S. banks among the top 100 raised assets a moderate 6.57%. (See table, page 27A.)

Only a fraction of the European growth stemmed from currency appreciation. While the assets of French, Italian, and German banks in the top 100 soared 23.07%, 21.34%, and 17.14% respectively, the franc gained only 6.13%, the lira 3.14%, and the deutsche mark 5.38% against the dollar.

Shrinkage in Japan

Assets of Japanese banks, the growth leaders in recent years, actually shrank 0.51%, as measured in U.S. dollars. The decline largely reflected a 16.2% depreciation of the yen against the dollar in 1989.

The reshuffling in the ranks of the top 100 in 1989 reflected a shift in banking power away from Japan and North America



and toward a resurgent Europe – a trend that has picked up steam this year, banking analysts said.

Buildup in Europe

"European banks are probably in a stronger position vis-a-vis the Americans and the Japanese than they have been in a long time," said Gregory A. Root, president of Thomson Bankwatch Inc., an affiliate of *American Banker.*

Though the Japanese held on to the top six spots in worldwide

Many Pennsylvania Banks Forgo State's Antitakeover Protection

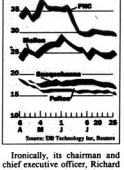
By GORDON MATTHEWS and FRED VOGELSTEIN

Many, but not all, of Pennsylvania's major banking companies have decided to forgo the protection of that state's tough new antitakeover statute. The deadline for opting out of the controversial law is today.

The state's three largest banking companies – PNC Financial Corp. and Mellon Bank Corp. of Pittsburgh and Core States Financial Corp., Philadelphia – have taken the action, although they are seen by many industry analysts as in little danger of hostile takeover.

But so have some midsize Pennsylvania banking firms that could eventually be targets, such as Meridian Bancorp., Reading, and Independence Bancorp., Perkasie.

Among the banking firms that have exercized the option of dropping some coverage of the law is the midsize First Eastern Corp. of Wilkes-Barre.



Ironically, its chairman and chief executive officer, Richard M. Ross Jr., also chairs the Pennsylvania Chamber of Business and Industry, which lobbied forcefully for the law.

Mr. Ross explained that he

Columbia S&L Sells $3 Billion Of Junk Bonds

By TERESA CARSON

LOS ANGELES — Columbia Savings and Loan Association announced Wednesday it sold its junk-bond portfolio to an investor consortium for $3 billion in cash and notes, but analysts predicted regulators would still seize the troubled thrift.

"They are still insolvent. They will still be closed. There is no doubt there," said Jay F. Lustig, director of high-yield securities trading at Drake Capital Securities, Los Angeles.

Premium Is Estimated

Beverly Hills-based Columbia did not disclose the premium paid for the bonds. The bonds had a market value at $2.9 billion at the end of the first quarter, indicating a premium of about $100 million. That would not be enough to eliminate Co-

PEOPLE *in the news*

Fed's Seger Mulls Leaving Because of Mother's Illness

By LINDA CORMAN

Federal Reserve Board Governor Martha R. Seger confirmed Wednesday that she was considering resigning from the central bank because of the failing health of her mother.

She dismissed widespread speculation that she was weighing giving up the seat she has held for more than five years because of rocky relations with Fed staff members.

"Life has not been easy here," Ms. Seger admitted in an interview Wednesday. "I'm not pretending that it has been.

"If [staff friction] were the cause, why wouldn't I have left several years ago? What's changed is other responsibilities."

The 58-year-old governor said she has to assess her personal situation and decide whether she should stay or leave." There are eight years left in her 14-year term. She said she would make a decision by the end of the year.

Martha R. Seger

Some Other Complaints

Sources close to Ms. Seger said she had been complaining more lately about being left out of the Fed's loop on key issues. They said that combined with the governor's personal concern – her ailing mother – Ms. Seger also had begun to express a need to return to the private sector to earn more than the $89,000 paid to Fed board members.

Ms. Seger has been commuting frequently between Arizona and Washington. Earlier in the year, her mother suffered a stroke and she has recently undergone hip replacement surgery.

If Ms. Seger decides to resign – as she first hinted in an interview earlier this week with *The Wall Street Journal* – that will create two open seats on the board. In June, Vice Chairman Manuel Johnson announced his resignation, effective in early August. No replacement has been nominated.

The departure of Ms. Seger, the sole woman on the Fed board, would put significant pressure on the Bush Administration to nominate another woman or a member of a minority in her place, sources said. A woman or a black has held a Fed seat for at least the last 20 years. One source said Security Pacific Corp.'s chief economist, Kathleen Cooper, would be a logical person to succeed Ms. Seger.

Problems of Style

The outspoken Ms. Seger is considered abrasive and a loner by some observers, and Fed insiders suggested that her relations on the board was damaged in large part by her uncompromising nature.

While acknowledging her direct style, others say the governor has been effective, especially in the areas of consumer banking issues and community relations – areas over which she had direct oversight.

Although Ms. Seger consistently voted for easing monetary policy, her absence from the board would not affect the board's monetary direction, economists noted.

"She would be a loss for the banking industry," said Kenneth Guenther, executive vice president of the Independent Bankers Association of America. "The banking industry is in her debt for pointing out regulatory burdens." □

Household Bank to Buy Nine TransOhio Branches

PROSPECT HEIGHTS, Ill. — Household Bank, a unit of Household International Inc., said it signed a definitive agreement to buy nine branches, along with $330 million in deposits, from TransOhio Savings Bank in the Columbus, Ohio, area. The purchase price was not disclosed. Household, based in Cleveland, Ohio, is a unit of TransCapital Financial Corp.

— Reuters

June Home Resale Rate Up

WASHINGTON — Sales of previously owned homes picked up momentum during June as consumers responded to lower mortgage interest rates, the National Association of Realtors said.

The association recorded a seasonally adjusted annual sales rate of 3.34 million existing single-family homes, 1.2% higher than the May revised rate of 3.30 million. The month-to-month rise was the first recorded this year. The June resale rate was 0.3% above the June 1989 pace.

GMAC Second-Quarter, Six-Month Earnings Rise

DETROIT — General Motors Acceptance Corp., the nation's largest finance company, earned a consolidated $302 million from financing, insurance, and mortgage operations in the second quarter. Its six-month net was $638 million. $13 million more than in the 1989 period.

Net income from financing operations amounted to $267 million for the second quarter, up from $224 million in 1989 as borrowing costs in the United States fell. □

Brady Mum on Regulatory Reform

Doesn't Say What Recommendations Are Under Study

By LINDA CORMAN

WASHINGTON — Treasury Secretary Nicholas F. Brady held his cards close to the vest Wednesday in long-delayed testimony before the Senate Banking Committee on reform of the financial regulatory system.

He said it would be several months before the Treasury Department completes its recommendations on reform, as mandated by the Financial Institutions Reform, Recovery, and Enforcement Act of 1989.

While declining to give any preview of the Treasury's conclusions, Mr. Brady did say that he did not "see a rush to lower [deposit] insurance" from the current level of $100,000.

Structure 'Outmoded'

The Treasury secretary also warned that U.S. banks suffered from overlapping and inefficient regulations that cry out for reform.

"The present structure is outmoded," said Mr. Brady.

"We see it as a system that, through ongoing changes in the marketplace, appears to have outgrown its historical regulatory structure," he said.

"The result is overcapacity, layers of regulation, concentration in the riskier parts of traditional commercial lending, uneven product diversification with rules and exceptions that sometimes make little sense, and inefficient limitations on geographical diversification."

Aiming at Yearend Completion

Mr. Brady said the Treasury study of deposit insurance and financial restructuring will be ready by the end of this year. The department is soliciting

> **"The present structure is outmoded."**
>
> **Nicholas F. Brady**
> *Secretary of the Treasury*

comments from the other federal banking and financial regulatory agencies to contribute to its report.

Pressed by Senate Banking Committee Chairman Donald W. Riegle Jr., D-Mich., Mr. Brady agreed that the administration would make it a top priority next year to introduce and pass legislation to restructure the financial industry.

In the face of repeated questions from the Senate panel, Mr. Brady declined to give specific clues to the direction of Treasury's thinking.

Asked about his views on such concepts as firewalls, risk-based premiums, capital standards, and limits on deposit insurance coverage, he repeatedly replied that those were all issues the Treasury was studying.

New Powers Favored

Reinforcing comments earlier this month by Federal Reserve Board Chairman Alan Greenspan, Mr. Brady did say that tough capital standards and heightened supervision should play a role in increasing safety and soundness and in reform efforts.

However, the Treasury secretary said the need to safeguard the safety and soundness of U.S. banks does not preclude the granting of new powers. He noted that studies of banking systems overseas revealed that even though most countries allow broader activities for their banks and have safety nets to prevent financial crises, there is little evidence that their institutions are at greater risk than our own.

In fact, Mr. Brady said wider powers would improve the competitiveness of banks as well as the safety and soundness of U.S. banks. □

U.S. Seeks to Aid Student Loan Guarantor

Reuters

WASHINGTON — The U.S. Department of Education said it was discussing a possible takeover of the troubled Higher Education Assistance Foundation by several smaller guarantors of student loans, and the foundation said it was pursuing solutions of its own to its financial crisis.

Education Department spokeswoman Etta Fielek gave no details of the talks initiated by the agency, but one solution might be takeover by the United Student Aid Fund. The Indianapolis-based fund and the Higher Education Assistance Foundation are the largest agencies guaranteeing student loans.

Ms. Fielek did not identify the other guarantors that might step in, but federal officials Wednesday ruled out a merger of HEAF with the Nebraska Student Loan Program.

HEAF, with $9 billion of guaranteed loans, has been plagued by rising defaults. Its problems have reverberated throughout the student loan structure, setting off a sharp decline in the stock price of the Student Loan Marketing Association, one of HEAF's largest creditors.

The problems were also said to have contributed to declines in some bank stock prices in recent days. Banks make student

Mellon Revamps Its Servicing Area to Boost Revenues

Predicts Fee Business Will Outpace Industry

By RICHARD LAYNE

In a move to squeeze even more profits from its lucrative transaction processing business, Mellon Bank Corp. is restructuring its service unit to sharpen its focus on corporate and institutional clients.

Mellon, a leader in transaction processing services, predicts its fee growth will be in the double digits this year, well outpacing that of the industry.

Servicing fees, including such businesses as trust, cash management, and data processing, may climb as much as 12% to $723 million this year from $646 million in 1989. Such growth would be a dramatic increase from the less than 5% gains than Mellon has realized over the past two years.

"We have a large revenue base in service fees, but if we can consistently run in double-digit growth, we will be doing well," said W. Keith Smith, Mellon vice chairman. Mellon wants a balanced revenue stream from wholesale, retail, and service fees, but Mr. Smith said services are growing at fast; if not faster, than other business areas.

Healthy Growth Expected

Mr. Smith said he expects the service fee growth to accelerate to the "low double digits" in 1990.

"Mellon is trying to do more on the fee side," said Kenneth F. Puglisi, an analyst with Keefe, Bruyette & Woods Inc. "They will concentrate on their strengths."

To achieve its goal, Mellon said earlier this week that it is dividing its service business into two units. Under the restructuring, David L. Johns, executive vice president, will head technology products, which includes cash management and mortgage processing. Allan P. Woods, senior vice president, will head financial institution services, which includes trust accounting services, electronic funds transfer processing, and others.

"We recognize that we have to be more global in thinking and in providing services," said Mr. Smith. "The reorganization will bring more management help to this."

Importance of Service Fees

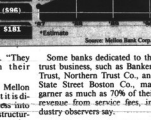
Mellon, which observers say has a robust and extensive service offering, is among a small cadre of superregional banks – including two other Pennsylvania banks – CoreStates Financial Corp. and PNC Financial Corp. – that derive almost 40% of their revenue from service fees. "Mellon's fee component is larger than its peers," said Dennis F. Shea, an analyst with Morgan Stanley & Co.

Mellon Focuses on Fee Income

A breakdown of '89 earnings, in millions of dollars

Service products	$181
Retail banking	$106
Wholesale banking	$83
Other	$27
LDC debt	($90)
Real estate banking	($96)
Total	$181

Overall fee revenues, in millions of dollars



Source: Mellon Bank Corp.

Some banks dedicated to the trust business, such as Bankers Trust, Northern Trust Co., and State Street Boston Co., may garner as much as 70% of their revenue from service fees, industry observers say.

Wall Street Likes Fee Income

Service fee income is low risk and predictable and requires little in the way of equity to meet banking regulations. Banks that derive sizable income from fee-based services tend to be valued higher, say Wall Street analysts.

Mellon's service fees accounted for $646 million in revenue last year, or 51% of the bank's total. Service fees generated $151 million in income, or 38% of profits.

Trust fees alone contributed $280 million in revenue last year. Along with being the largest segment of Mellon's fee business, trust is expected to lead gains in the next few years. Mellon is investing $30 million to expand the capabilities of its trust systems.

Cash Management Lags

Robert M. Tetenbaum, a managing vice president at First Manhattan Consulting Group in New York, said that cash management fees are growing less than 10% annually across the industry, a result of service providers cutting prices in response to competition. Trust is growing at slightly more than 10% a year, he said.

"Double-digit growth is challenging, but not impossible, especially for a bank like Mellon, which has one of the broadest mixes of fee-based businesses among all commercial banks," said Mr. Tetenbaum.

"Mellon Bank has some real advantages and expertise," said Mr. Puglisi of Keefe Bruyette. In a recently published *American Banker* survey of the trust industry, Mellon ranked in the top 10 in both trust income and discretionary assets. □

Visa Expands Clearing House Service in South

By JEANNE IDA

NEW YORK — Visa U.S.A. signed a marketing agreement this week with Southern Financial Exchange that allows Visa to offer automated clearing house services in five additional states.

The pact brings the total number of states where Visa can operate as a provider of ACH services to 21. In February, Visa added Washington and Alaska to its list.

Southern Financial Exchange, a regional ACH association, has over 300 members in Mississippi, Alabama, Arkansas, Louisiana, and Tennessee.

Members of Southern Financial process about 24 million ACH transactions – primarily direct payroll deposits and automated monthly bill payments – each year.

Southern Financial said the pact would help its members reduce costs, build market share, and increase fee income by allowing them to market ACH services based on Visa's system.

Visa Negotiating with Fed

Members will have the option of using Visa's services or those of the Federal Reserve System for processing and settling transactions.

Visa's ACH services are considered technically superior to those offered by many of the Fed's ACH systems. The company is negotiating with the Federal Reserve to allow it to offer ACH services nationwide.

Visa entered the business in 1987 as the ACH processor for members of the Calwestern ACH Association, which represents five western states, including California.

The Visa ACH system is all-electronic, meaning participants must be able to at least receive payments electronically. □

You Take Care of the Forest

Your credit card program can mean a lot to the bottom line of your company. But while you're trying to focus on the big picture, the day-to-day decisions of a credit card operation can tie up large portions of your time.

We'll Take Care of the Trees

At Total System Services, Inc. (TSYS), we take care of those day-to-day credit card operations... freeing you and your personnel to concentrate on the main focus of your business.

So while you're busy mapping your forest, you'll know there's an expert taking care of the trees.

For more information, contact M. Troy Woods, V.P. Marketing, P.O. Box 1755, Columbus, GA 31902-1755, (404) 649-2300.

Casting Blame Only Diverts Attention from S&L Cleanup

It's the silly season in Washington. Democrats are attempting to pin the blame for the S&L disaster on President Bush and the Republicans. The White House has fired a volley to remind the loyal opposition that two can play that game. Both sides, apparently sensing the need for diversion, are now engaged in one-upmanship on criminal prosecutions.

Don't get me wrong: I don't have anything against throwing thieves and other assorted rascals in jail. It needs to be done if only as a deterrent to would-be thieves. But let's not kid ourselves. It may be satisfying to flog the scoundrels, but it won't make the S&L fiasco any less painful to the taxpayers.

Lucky to Break Even

I suspect we'll be lucky if the monetary recoveries from the prosecutions exceed their cost. And to the extent that criminal prosecutions divert attention from the public policy mistakes that are at the root of the S&L crisis, they will be counterproductive.

A potentially more harmful political sideshow is developing with respect to the cleanup program. The Democrats can't finger George Bush for creating the S&L mess, for the simple reason that he was not in power when it arose — unless someone wants to argue that the vice presidency is a power position.

Money Shortage Can Be Cured

Cognizant of the futility of arguing that point, the Democrats are railing against the Bush-designed "cleanup program," contending that it is proceeding at a snail's pace. There is no question the cleanup program has had difficulty getting off the ground and continues to suffer from a shortage of money, staff, and systems. The money shortage can be cured anytime Congress and the administration choose to do so.

It will take time to resolve the staffing and systems problems. If the politicians push the Resolution Trust Corp. into moving faster than is reasonable in disposing of assets, the inevitable result will be massive doses of fraud, abuse, and just plain bad deals.

Public Is Finally Outraged

The politicians are playing these games because the public is finally beginning to comprehend the magnitude of the S&L disaster and is understandably angry. Politicians who had nothing to do with creating the mess are searching for ways to capitalize on it. Politicians whose fingerprints can be found at the scene of the crime are searching for ways to focus attention elsewhere.

We can't let that happen. We need to endeavor to understand the causes of the S&L collapse if we are to avoid its repetition. It is in this spirit that I offer a chronology of the major events leading up to the S&L crisis:

● The Johnson administration pursued a "guns and butter" fiscal policy in the mid-1960s, setting off inflationary pressures. These pressures led to higher and more volatile interest rates that impaired the viability of long-term lenders such as thrifts.

● The Hunt Commission recommended in 1971 that deposit interest rate controls be phased out, that thrifts and other lenders be allowed to offer variable-rate mortgages, and that mutuals be permitted to convert to stock form. The recommendations were ignored. The Federal Reserve Board compounded the situation in 1977 by ruling that bank holding companies may not acquire healthy thrifts.

● Inflation raged during the Carter administration; and the prime rate soared above 21%. Thrifts suffered massive disintermediation and began to hemorrhage red ink because they held long-term, fixed-rate loans.

● Congress belatedly authorized deregulation of interest rates in 1980. A last-minute rider was cut, over the objections of the Federal Deposit Insurance Corp., to raise deposit insurance from $40,000 to $100,000, marking the first time that fully insured deposits were offered without interest rate controls.

● The Reagan administration assumed office in 1981. The Federal Home Loan Bank Board and the Federal Savings and Loan Insurance Corp. were overwhelmed by failing S&Ls. Responding to intense industry and congressional pressures, the bank board lowered capital standards for S&Ls and adopted loss-deferral, appraised equity, and other regulatory accounting techniques to allow insolvent thrifts to continue in operation.

● Congress, with the support of the Reagan administration, in 1982 passed the Garn-St Germain Act, which broadened the investment and lending authorities of S&Ls. The law sanctioned reduced capital standards for thrifts by mandating a net worth investment.

See **SIDESHOW** *next page*

Among the well known companies that have joined the lobbying group are **Lazard Freres, NMB Post Bank,** and **Prudential-Bache.** The new group was created and financed by business, without government assistance, and will complement the work of individual chambers of commerce representing the 12 European Community nations.

Significant investment flows are at stake. The value of two-way trade between the United States and European Community is increased to more than $171 billion in 1989, with U.S. exports to the community exceeding imports by $1.29 billion. According to the U.S. Department of Commerce, direct investment in the United States by the European Community totaled some $235 billion, while U.S. direct investment in the 12 member states of the European Community reached nearly $150 billion by the end of 1989.

— **Louis Gerhardstein, Debra Cope, and Robert Trigaux**

Mr. Isaac was chairman of the Federal Deposit Insurance Corp. from 1981 to 1985. He now heads the Secura Group, a Washington-based consulting firm.

THE LOBBYISTS

Providers Create Legislative Post For Sheryl McGrath

Sheryl Peterson McGrath
American Financial Services Association

The **American Financial Services Association** has named **Sheryl Peterson McGrath** director of legislative affairs, a new position created for Ms. McGrath.

For the past three years she has been an assistant director for legislative affairs, lobbying the House of Representatives for the association, which represents providers of financial services to consumers and small businesses.

Ms. McGrath will coordinate the association's lobbying on Capitol Hill and play an increased role in strategy development and planning, while continuing as the group's liaison to the House. She will report to **Frank Salinger,** director of government affairs.

Her agenda in the next year includes legislation to diversify regulatory oversight of the financial services industry by function rather than by the status of the parent company, and an effort to make it more difficult for consumers to file for bankruptcy, Ms. McGrath said.

The American Financial Services Association also will oppose efforts, now under consideration in the White House-congressional talks on the federal budget deficit, to "kicker" via taxation with current provisions for mortgage interest deduction, Ms. McGrath said.

Ms. McGrath holds a bachelor's degree in government and politics from George Mason University and an MPA in executive legislative and regulatory management from George Washington University.

* * *

Housing Groups Rally To Save Deductions

Housing industry groups are cranking up their grass-roots machinery now that the popular home mortgage interest deduction and other itemized tax breaks are on the table at the budget summit.

No deal has emerged yet, but negotiators from Congress and the Bush administration, rooting through the tax code for ways to boost revenues, are weighing reductions in the value of itemized deductions for the wealthiest taxpayers.

One trade group, the **National Association of Realtors,** isn't taking any chances. In a preemptive strike unleashed on July 13, the Realtors reminded President Bush of a pledge he made, in a speech to the 665,000-member trade group last November, to support both mortgage interest and property tax deductions.

"It would be both imprudent and counterproductive ... to adopt any policy that would limit, either directly or indirectly, the value of the mortgage interest deduction," wrote **Norman D. Flynn,** the group's president.

Congress first curtailed the once-inviolable mortgage interest deduction in 1986, opening the door to further limits.

"Clearly, it's something we're watching very closely," said a **National Association of Home Builders** lobbyist. More than a month ago, the builders alerted their members to prepare for a fight over the mortgage interest deduction. Both groups are urging members to lobby senators and representatives in their districts during the August congressional recess.

certificate program.

● The FDIC issued a study in 1983 calling for significant reforms in the deposit insurance system in order to instill greater depositor discipline in an environment of deregulated interest rates. Congress and the Reagan administration ignored the recommendations.

● Dick Pratt resigned as chairman of the bank board and Ed Gray took office in 1983. About a year later, Gray became concerned about the rapid growth and risky investments in the S&L industry. Much of the growth was fueled by fully insured brokered funds, so the FDIC and FSLIC adopted regulations curtailing deposit insurance on brokered funds.

The money brokers challenged the regulations, and a federal court ruled that the agencies lacked statutory authority. The battle moved to Capitol Hill, but the agencies' position was opposed by the administration and key members of Congress.

● The bank board, over the strenuous objections of the Office of Management and Budget, raised salaries and began to strengthen its examiner force in the mid- 1980s. The bank board, facing stiff opposition from the S&L industry, the administration, and key members of Congress, proposed to limit the investment authority of S&Ls in 1985.

● The administration proposed in 1986 to recapitalize the FSLIC to the tune of $15 billion. The proposal was strongly opposed by the U.S. League of Savings Institutions and was cut back to $5 billion.

● Ed Gray left office in 1987, discredited and under attack by the administration, the industry, and the Hill. Danny Wall became chairman of the bank board and continued to improve the S&L industry's tarnished image. He consistently understated the problems in the industry and maintained that the FSLIC had enough money to handle the problem.

Readers are free to draw whatever conclusions they wish from the above facts. Two conclusions seem obvious to me. First, the S&L crisis is a tragedy that could have been avoided at any of several points if industry and political leaders had exhibited more vision and courage. Second, there is more than ample blame to go around; neither political party has clean hands.

Washington loves moratoriums. I propose a moratorium on political posturing so that we might concentrate our energies on substance. Our first priority must be to clean up the S&L mess at the lowest possible cost to the taxpayers. Our second priority must be to enact the reforms necessary to ensure that a scandal of this magnitude is never repeated.

"The S&L crisis is a tragedy that could have been avoided at any of several points if industry and political leaders had exhibited more vision and courage."

I further propose that any public official who interferes with either objective be run out of town on a rail. □

Fed Approves Sovran Merger With Citizens

WASHINGTON — The Federal Reserve Board has approved the merger of Citizens and Southern Corp., Atlanta, with Sovran Financial Corp., Norfolk, Va.

The Fed said late Tuesday that the combined, superregional company would be the 10th-largest in the commercial banking industry, with $36.8 billion in total deposits. It would rank 12th in assets with $50 billion. Sovran said in an announcement Tuesday.

The merger has been pending since Sept. 26, 1989, and is expected to be completed on Aug. 30.

The companies had filed their application to merge under a new holding company name, Avantor Financial Corp. But in an unexpected turn, they said this week that they would scrap that plan and adopt the name C&S/Sovran Corp.

Change in Priorities

"Last Sunday we talked about separate operating companies. But now we've been involved in a related transition planning process for almost a year, and our priority has clearly changed," said Paul H. Anderson, chairman and chief executive officer of C&S Corp., who will hold the same posts in the merged organization.

"Our focus is on building a strong, unified, thoroughly integrated company," Mr. Brown said. "That's what led to the conclusion that C&S/Sovran is a name that more accurately reflects who we are."

Reaction from customers, employees, and shareholders "reinforced the value of retaining and incorporating into our new name the names under which we have historically operated so successfully," said Albert B. Gornto, chairman and chief executive officer of Sovran and chairman of the C&S/Sovran executive committee. □

Banking Coverage Where It Counts
WASHINGTON MONDAY
Every Week in AMERICAN BANKER.

How to profit from 1,347 of your competitors

Proven methods for selling mutual funds

Working with 1,347 banks and S&Ls has taught MFS a lot about selling mutual funds. So have our 60 years of experience since we started the mutual fund industry.

Now we've put it all together in a free training package called *Partners in Profit.* The kit is filled with simple, inexpensive training methods guaranteed to get results. Step-by-step, we'll take you through four major selling opportunities.

1. HOW TO BUILD A SUCCESSFUL INVESTMENT BUSINESS AT THE BRANCH.
2. WORKING THE BOOK: SIX APPROACHES TO GUARANTEE FUTURE BUSINESS.
3. SEMINARS: HOW TO MAKE THEM WORK FOR YOU.
4. SALES IDEAS: HOW TO HELP YOUR CUSTOMERS AVOID INVESTORS' SEVEN MOST COMMON MISTAKES.

MFS, with $26 billion under management for 1.7 million investors, is a name you and your customers can count on for investment performance, service and commitment to the banking industry. We have a dedicated team of professionals available for on-site referral training (last year alone, they conducted 1,107 sessions using our acclaimed 12-minute video entitled "Banking and Investing: Today's Team").

Isn't it time you started a partnership with our Banking Industry Marketing Department?

MFS
Helping investors manage money since 1924.

REQUIRED READING / By John C. Getzelman

Global Thinking for the Domestic Banker

The following is excerpted from a speech given by Mr. Getzelman to the CityClub Forum on June 14 in Seattle.

When asked to address a topic of special interest to me, I thought immediately of "globalization" – a clumsy word but a good one to describe the many ways, both obvious and subtle, in which borders, boundaries, and restrictive categories are breaking down all over the world.

My theme is how the Pacific Northwest has evolved from a continental outpost to a global crossroads – and how regional institutions such as banks must respond to that evolution, now and in the future. Because one thing is sure about the globalization of the business environment – it is inevitable, it is irreversible, and, if we manage it properly, it is to be welcomed.

The New Domestic Banker

My perspective on this theme is that of a convert. For 25 years, my focus was on places like Singapore, Sao Paulo and Bangkok. Now, I'm a domestic banker, focusing on Eugene and Yakima and Pocatello.

"International trade supports one in six jobs in Seattle, and one in eight in Portland."

But while the emphasis at Security Pacific is on building our Northwest franchise, we have learned that there are no purely domestic businesses today. Today, domestic bankers must be international bankers as well, because our domestic customers have international needs.

The concept of domestic banks serving international needs is especially evident in the booming Northwest economy. This region's growth has outpaced the nation's for the last two years, and will continue to do so, despite some moderation.

Boom Years

In Washington and Oregon, especially, comparison to the national picture is striking: in job gains in the manufacturing, construction, and service sectors; in housing starts; in population growth, and in lending activity. For example, outstanding commercial, consumer and real estate loans at large Washington and Oregon banks grew 18% last year, compared with 8% nationally.

Immigration is booming, and with it, the demand for consumer products and services, as well as for housing and construction workers in the Puget Sound area.

We should see a 5% growth rate in employment in the Northwest this year – somewhat slower than in the last two years of the 1980s, but still twice the national average. And Washington, of course, has a powerful economic engine in Boeing Co.

Boeing is part of the stereotype of the Northwest economy, which has traditionally relied on aerospace, fishing, forest products and agriculture.

But times are changing, and so are stereotypes. The region is diversifying into non-traditional areas such as software, biotechnology, high fashion sportswear, and wineries.

The Pacific Northwest, once an obscure western outpost in the American expansion, is now an important crossroads of the world economy.

One figure that sums up this international linkage is no doubt familiar to you, and that's "one in six" – international trade supports one in six jobs in Seattle, and one in eight in Portland.

Boeing is good example of this reliance on international trade. Forty percent of its sales are abroad, making Boeing the nation's second largest exporter after General Motors. In fact, the largest fleet of Boeing jets in the world is Japan Airlines.

Other major firms in the area, like Paccar and Microsoft, are well aware of the value of international markets – over half of Microsoft's sales are now international. Several traditional resource-based industries depend on international trade.

With the market for bottom-fish exploding over the last few years, Asian nations now purchase one-half of the region's fish harvest. One-fifth of all Northwest apples and one-fourth of Washington's lumber and wood products go abroad.

Pacific Rim countries are important consumers of Northwest raw commodities, but Europe is also a significant market, especially for high value-added products such as processed food, software, and electronics.

Europe's Boeing orders, for example, were worth twice that of Asia last year. By air, London is as close to Seattle as Tokyo is, so from Nike shoes to Microsoft programs to red delicious apples, Northwest exporters are taking a new look at old world.

International Investment

But international trade in not the whole story here. Foreign direct investment is also important. For example, in a single decade, Japanese high-tech firms have become major employers in Oregon: Forty-three Japanese electronics companies are now

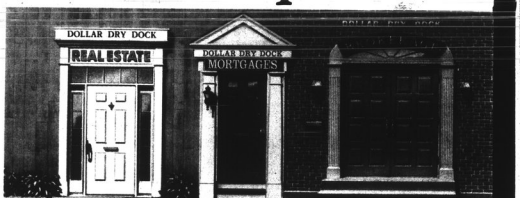
We helped Dollar and conquer.



What do you call a bank that's everything you see here? Profitable.

Dollar Dry Dock's new idea, to become a one-stop financial center, is made possible by networking from NYNEX.*

The concept revolves around over 1,000 teller terminals and ATMs, on-line via NYNEX Digipath* Digital Service from New York Telephone. Data lines are hubbed to our Central Office, then routed to the bank's mainframes via a high-speed T1 link.

NYNEX was also a one-stop shop for Dollar Dry Dock. The bank uses TRU SYSTEM™ telemanagement software from our Telco Research subsidiary. They use the NYNEX INTELLIPATH II* Digital Centrex Service from New York Telephone. And they got their Datastar* telephone systems from NYNEX Business Information Systems Company. As you'd expect, we take responsibility for ongoing maintenance and support.

NYNEX would like to work with you, too. We offer everything from communications and information systems to the services of New England Telephone, New York Telephone, NYNEX Business Information Systems Company, Telco Research, and the other NYNEX companies. Call us at 1 800 535-1535.

Once you've discovered the answer is NYNEX, you won't have to keep shopping around.

Need to communicate? Need to compute? The answer is

Global Thinking Needed at Home

Continued from *page* **6**

diversifying the economy of the Portland area. In Washington, some 40,000 workers owe their jobs to foreign-held businesses.

Japanese acquisitions – like the Daishowa pulp mill in Port Angeles – are often the most visible projects, but investors from Canada, Britain, Sweden and other nations have been just as active.

Behind the Myth

Some people see international investment as negative; but only selectively, they're worried about the Hong Kong owners of the Warwick Hotel but not the Canadian investment in the Four Seasons Olympic or the Dutch pension funds invested in the new Second and Seneca Building. We tend to fear the unfamiliar, but it's a fear that the global economy will not tolerate.

We need to put international investment in perspective. It's still a small fraction of total investment in the United States. In 1987, for example, foreign direct investment affiliates accounted for only 11% of sales. We tend to forget that investment from abroad is less significant in our country than in many others – including Canada; the United Kingdom, Germany, and France.

We also tend to forget the strong American investment presence overseas. On my Asian trip, I was also in Tokyo, where the tallest building near the Imperial Palace is the American Insurance Group Tower.

Besides fresh capital, investment from other parts of the world spurs competition, and speeds the spread of technological advances. In terms of increasing American competitiveness, it's said that one year's worth of international investment in an industry is worth fifty years of antitrust cases.

International investment also signals a vote of confidence in the health, safety, and productivity of the American economy. If international investors begin to spurn U.S. projects in favor of those in Germany or Indonesia – that will be the time to worry.

To me, the truly worrisome issue about international investment is not ownership, but expertise. When Japanese investors bought the Southland Corporation and its 7-Eleven subsidiary, the significance is not that Japan had bought something American.

The significance is that the Japanese may have the management expertise to operate an American concept like convenience stores better than Americans can. That troubles me – and the solution is not Japan-bashing, but some soul-searching about our own management skills.

"The New Pacific would be marketed to buyers and investors as a single region with 5 billion people."

To sum up, investment across national borders is a natural product of the global economy. As we move toward the 21st century, we must learn to be global in scope, whether their headquarters is in Chicago or Tokyo or Toronto. They will employ people of many nationalities, and produce earnings for shareholders all over the world.

The Role of Banking

So how do regional banks support this globalization of the regional economy? In the case of Security Pacific Northwest, by keeping a sharp focus on our Northwest customers and their international needs – and by staying closely linked with our international franchise, which gives us sophisticated capital markets and trade finance products that were not in Rainier's repertoire of services.

Before the 1987 merger with Security Pacific Corp., Rainier Bancorp. had offices in 11 countries outside the United States, with an Asian presence far greater than our relative size among American Now, as Security Pacific Northwest, we have access to Security Pacific Corporation offices and services around the world.

"International investment is now a crucial element in the Northwest's share of the global economy."

The merger was a good fit – two vigorous organizations, both pursuing involvement in the overseas Pacific Rim. The two banks merged their Asian branch networks into Security Pacific Asian Bank, with a mission to focus on trade and commercial banking.

I was involved in the formation of the Asian Bank in California, and I'm proud of that – I took the skills I learned in banking to Asians in Asia, and applied them here in the United States. We're looking to do the same thing here in the Northwest – to serve customers from other countries or other cultures in a way that benefits us both.

Serving the New Clientele

One example is our Hispanic branch in the town of Zillah, near Yakima, which will open this fall. This will be a full-service branch, but it will be located in the El Ranchito tortilla factory, which serves and employs a segment of the hispanic population of the lower Yakima valley.

The branch's brochures and other printed material will be in Spanish, as will the screens on the automated teller machine. The entire customer service staff will be bilingual.

This trend is bound to continue, as domestic banks realize the diversity of their customer base, and the special challenges and opportunities of serving their communities – whether they're

MARKETING/ADVERTISING

Norwest's Milwaukee Entry Adding to the Competition

By NANINE ALEXANDER

Norwest Corp. gave its name last week to the First Interstate Bank of Wisconsin, Kohler. But the newly christened Norwest Wisconsin has a lot of ground to cover. Its deposits total just $421 million in the Milwaukee area, making it an also-ran in the market.

And competition has been heightened since Columbus, Ohio-based Banc One Corp. entered Wisconsin in 1988 with its purchase of Marine Corp. Banc One has been nipping at the heels of the state's second-largest bank holding company, Marshall & Ilsley Corp., and top-ranked Firstar Corp.

Acknowledging that Norwest's presence in Milwaukee is small, just 3% of deposits, Executive Vice President Daniel A. Sakland raised the possibility of further acquisitions in the market.

Consolidation First

For now, Norwest is concentrating on customer retention and name recognition, said Mr. Sakland, who heads community banking for Minnesota, Wisconsin, Indiana, and Illinois. The Wisconsin bank's longtime slogan, "Come to expect the best," has been modified to "Come to expect a change for the best" in radio and print ads to support the name change. With the backing of its Minneapolis-based parent, the Wisconsin unit is planning its first TV campaign for the fall.

The First Interstate acquisition, announced last year, was completed in May after months of legal entanglements – primarily over First Interstate's Indiana banking unit.

Increased competition in the state from Banc One and Norwest has led to more packaged banking products, say observers; but the banks have not reduced prices or raised rates to buy market share.

Building Relationships

John P. Hickey Jr., executive vice president of the retail banking group for Banc One Milwaukee, said the trick is in gaining market share profitably. "We're looking to build relationships, rather than just moving products out the door," he said of Banc One, which is spending about $1 million a year on advertising in the state.

Banc One and Marshall & Ilsley have each gained about $200 million in Milwaukee deposits over the last two years, while Firstar's have dropped about that amount. For Milwaukee and its surrounding counties, Firstar had $3.2 billion in deposits at the end of 1989, followed by Marshall & Ilsley at $2.9 billion and Banc One Wisconsin Corp. at $2.4 billion.

Stephen J. Steiner, first vice president and director of marketing at Firstar, said the decline in deposits reflected reduced funding needs.

The $8.6 billion-asset company has restructured – getting out of lesser-developed country lending and reducing its exposure to commercial real estate – to concentrate on its own back yard, said Chris M. Bauer, president of the company's lead bank.

Advertising Campaign Set

First Wisconsin-Milwaukee is in the process of reorganizing its Milwaukee area and suburban banks into five geographic banking groups. Each will offer basic services that will be tailored to the the needs and wishes of its customer base, he said. Firstar, which is considered an aggressive advertiser, will highlight the changes in local advertisements later this year.

Some observers question whether increased competition will generate any reaction from Marshall & Ilsley. Industry observers and bankers alike said the $7 billion-asset bank does very little advertising. Marshall & Ilsley officials did not return phone calls.

Chicago Targeted For NBD Debit Cards

Two months after First Chicago Corp. launched a debit card program, NBD Bancorp. plans to offer a similar product in the Chicago area, said a bank spokesman.

NBD began offering a debit card in Detroit, its home city, last year and now has about 40,000 holders. A debit card could be rolled out in Chicago by yearend, the company said. Calls to other Chicago-area bankers found that most are waiting to gauge the impact of First Chicago's debit card, introduced two months ago, before offering a competing product.

First Chicago offers the debit card as "part of a better checking account," said Richard C. Hartnack, executive vice president and head of the community banking group.

Citicorp's Citibank has no plans for a debit card in the Chicago area. A spokesman for the bank, which entered Chicago in 1984 with the purchase of First Federal Savings, said the company offers card products on a national basis.

Boatmen's Is Using Customers in Its Ads

Boatmen's Bancshares Inc. of St. Louis is using responses from a poll of 3,000 current and potential customers in its television commercials. The survey asked, "How would you run a bank?" Respondents include one from an elderly customer, who requests more marriage-eligible tellers, and a consumer who complains about polka music when put on hold. □

Funds in Study Beat CDs for Profitability

By ELLEN MEMMELAAR

NEW YORK — Mutual funds are far more profitable for a bank than certificates of deposit, according to a study by Dalbar Financial Services, a Boston-based research firm.

The study, done in conjunction with First Manhattan Consulting Group, found that expenses reduce substantially the profits on CDs. Expenses are not part of the interest rate spread on mutual funds, thus assuring profitability, said Louis Harvey, president of Dalbar.

Gross profits are higher on a CD, but the expenses are also, says Dalbar Financial Services.

A bank's gross profit on a six-month, $10,000 CD is $65, versus $46 for a six-month, $10,000 U.S. Treasury intermediate mutual fund, the study showed. But after operating expenses, overhead, and Federal Deposit Insurance Corp. premium costs, the CD will lose $8 for the financial institution, and the mutual fund will earn $13.31 for an institution, Mr. Harvey said.

Small denominations of mutual funds remain unprofitable, the study found. A $1,000 mutual fund results in a $7.67 loss, compared with a $60.80 loss for a $1,000 CD. While a $100,000 CD will earn $30 for the bank, a $100,000 mutual fund results in a profit of $223.14.

Mr. Harvey noted that mutual funds eliminate interest rate risk, since banks have to pay only what the investment vehicle earns.

"There are situations where a bank can make more money on a mutual fund, but it really depends on the assumptions that you make," said Monroe Haegele, senior vice president at PNC Corp.'s Provident National Bank, Wilmington, Del.

Profitability of mutual funds depends on how much of the money invested is brought in from outside sources, Mr. Haegele said. The less disintermediation, the more profitable that mutual funds are, he said.

Over the past 10 years, mutual fund assets have grown to $1 trillion from $94.5 billion. The number of accounts has grown to 60 million from 10 million in 1980, Mr. Harvey said. □

Corporate Trust and Agency Group

COMMENT/*By Howard L. Lax*

Life Insurance Survey Has Some Good News for Banks

Life insurance products are highly compatible with consumers' savings and investment needs – and with their caution. The large majority of people, however, do not perceive insurance as a savings or investment vehicle.

This is just one of the conclusions from a recently released syndicated research survey by Claritas Corp. on life insurance needs, attitudes, and use.

Marketing Challenge

The challenge for insurance companies and banks with insurance powers is create marketing that essentially redefines how people think about insurance.

More than 5,300 households nationwide participated in the survey. The data also are being used as the basis of a segmentation system for the life insurance market.

Potential Among Underinsured

The industry has been concerned about flat sales in recent years. And though uninsured

Though consumers are satisfied with their life insurance companies, they tend to be more satisfied with their banks.

people always represent a potential market, the survey indicates that there is significant potential among the underinsured.

As many as one-quarter of the survey respondents indicated that they were dissatisfied with the amount of insurance coverage they carry. Another one-third were not satisfied with the amount of coverage that relatives hold.

Consumer Satisfaction

There is also good news for banks trying to sell or get into the insurance market: Though most consumers are satisfied or very satisfied with their life insurance companies, they tend to be still more satisfied with their banks.

Fifty-four percent of respondents indicated that they were very satisfied with their banks; the figure for insurance companies was 40%.

Moreover, 17% respondents with life insurance said they were not very satisfied or not at all satisfied with their insurance companies.

Market Segmentation

In some respects the market for life insurance seems largely undifferentiated; the reasons people buy insurance seem obvious, and whole-life products dominate.

These apparent truisms, however, are open to debate.

In fact, people buy insurance for different reasons. It makes a difference, for example, whether there is a child or a nonworking spouse in the household. And many people think of insurance coverage as a form of saving for retirement or education, or simply as a way to pay for funeral expenses.

This diversity of perspectives has ramifications for marketing. It is easier to market in conformity with how people think than to change their thinking.

How people think about insurance affects receptivity to different marketing messages and helps shape the type and amount of insurance they buy.

Who Buys What

For example, although whole-life plans still are the most typical, term-life policies have distinct appeal to certain market segments. Among investment-oriented buyers – who typically are better educated and more affluent than the average consumer – variable and universal-life plans are appealing. And college graduates age 25 to 44 are somewhat more responsive to buying insurance than the norm.

So the market for life insurance can't be approached as a homogeneous mass market,

Ten percent of respondents said they prefer to buy life insurance without meeting with an agent.

with one-size-fits-all products and marketing.

Agents play a critical role in marketing. Not only do most people buy through them, but those who do tend to have more coverage than people who buy without using an agent. Those who use an agent also tend to buy more types of policies and be more satisfied with their insurance companies.

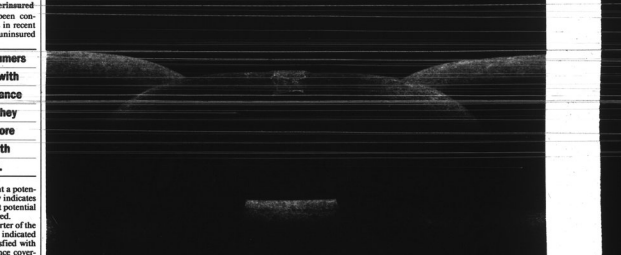
About 15 percent of insured consumers, however, have bought at least one policy in response to a direct mail solicitation. And almost as many have bought insurance in response to telemarketing campaigns, magazine ads, or some other marketing effort not initiated by an agent.

Selling Without Agents

In fact, 10% of respondents indicated that they prefer to buy life insurance without meeting with an agent. And 37% said they would consider buying without an agent.

Selling insurance cost-effectively through the mail not only is viable, it is the best way to reach some markets. Direct-mail sales, however, require even more-target marketing than traditional ways of selling life insurance. □

Mr. Lax is director of marketing for Claritas Corp., a target marketing and research firm based in Alexandria, Va.



No institution today can survive without computer technology. But nothing is so uncertain as the risks associated with technology. Obsolescence. Unmanageable costs. How many institutions can afford to constantly update their technological resources, to retrain their people for each new system? There is an alternative. Instead of buying hardware and software destined to be outdated, you can invest in a responsive, proven team of people. Experts trained not only in technology, but in the ever-changing needs of the financial industry. That team is EDS. When you rely on EDS for your information technology, you harness every aspect of our resources, from our extensive research and development, to our products and services, to our vast pool of highly trained industry professionals. All of which allow you to become more efficient. To control costs. And to concentrate your energies on what's most vital — expanding your markets by offering innovative products and the best possible service.

For 20 years, EDS has served the needs of institutions facing a swiftly evolving environment. The strength of that experience is now ready to help you discover the benefits of such a powerful connection.

Global Thinking for the Domestic Banker

Continued from *page 7*

Hispanic or Vietnamese or Korean.

Since the merger, we have reorganized our International Division, blending the corporation's international network with our own focus on domestic customers.

Security Pacific Northwest serves 300 or so distinctly international customers – but that's "international" quite narrowly defined. In fact we, and every other bank in the Northwest, have thousands of international customers – every domestic customer with a international element in their business, now or in the future.

Breaking Down Borders

When you look at the future of the Northwest's economy, you see an international coming of age. You see Washington's Economic Development Board developing a long-term strategy on positioning the state to compete in the global economy. You see Oregon's economic task force setting a major goal of creating "an international frame of mind" in the state's business and cultural life."

Even more exciting, beyond these state-by-state efforts, is the creation of the Pacific Northwest Economic Partnership of Washington, Oregon, and British Columbia – with Idaho and Alberta showing interest. This coalition is studying cooperative efforts in information sharing, biotechnology, aquaculture, environmental technology, and local economic development.

As these cooperative plans develop, state and even national borders are becoming more permeable in the Pacific Northwest. Historically, this was a single entity – the Oregon Territory. Today, the Canadian-American Free Trade Agreement points us back in that direction.

A recent leadership conference in Vancouver stirred up visions of the "New Pacific" – from Anchorage and Vancouver in the north, to Spokane and Calgary in the east, to Seattle and Portland in the west and south.

The New Pacific would be marketed to buyers and investors as a single region with 5 billion people, vast natural resources and progressive leadership. The booming Seattle economy – and the prominent reputation of Vancouver in Asia – would benefit both metropolitan areas.

An International Vision

What is the role of regional banks in this blurring of boundaries? Are banks too stodgy to keep up with this visionary trend? Since I'm a banker, you know my answer – of course not! At Security Pacific, we are already breaking down borders in our branch operations – as business and economic boundaries are superseding statutory and political boundaries.

It's not only state borders that are blurring – we're crossing national borders as well. Security Pacific Canada has headquarters just north in Vancouver, and offices in Toronto and Montreal – but it's managed from Seattle. This makes banking sense, because of British Columbia's strong Pacific Rim connections, and its many resource-based industries similar to those in Washington and Oregon.

This cross-border management gives us a chance to expand our international trade finance business, and to market to regional industries like fishing and forest products, as well as to serve Asian immigrants on both sides of the U.S.-Canadian border.

"Domestic businesses – and therefore domestic bankers – have to deal with this global diversity of products, investments, and markets."

Educating Bankers

For regional banks, one key to successful international service is educating domestic bankers to think globally. At Security Pacific, for example, we've developed an International Handbook.

It's a sort of short course in international banking, to help our 200 commercial relationship officers understand our international services, to help them spot international banking opportunities, and to keep them posted on issues.

The handbook is supplemented with training sessions, so that our domestic officers can discuss international trade issues with the hardware store owner whose rakes are made in Thailand, or the real estate developer in Bellingham, whose investors are Chinese residents of Canada, or the small software firm in Portland, whose potential customers are in France.

Thinking Globally

Managing Diversity is a program that I'm particularly interested in, because for much of my career I was the "foreign" element on the domestic scene. In Belo Horizante, in Manila, in Hong Kong, I was the one who didn't speak the language, and whose appearance stood out in a crowd. I was the foreigner, and the people I worked with had to make the effort to accommodate me, just I was trying to adjust myself to their culture.

These days we're all making adjustments, internally, in our organizations, and externally in our marketing. We're all learning to make the most of a seamless world – to see that people are not different, but diverse, and that markets are not foreign, but international.

I mentioned that my focus these days is on Yakima and Pocatello, but I also mentioned a recent trip to Thailand. That, I think, is the future of the domestic regional banker – to bring the world home to our customers, and represent our customers to the world – to think globally.

Adapting to New Cultures

How does global thinking translate into global action, for all of us? I'll leave you with two major goals. First, we have to adapt to other cultures, and stop expecting the world to adapt to us. We need to vastly improve the education of our children, in geography, in current affairs, and in languages.

I have a list of foreign language translators in our bank's International Division, from Arabic to Vietnamese, which includes four Chinese dialects, and three Filipino. My point is not that Security Pacific has people who speak these languages – I'm sure that all our respected competitors have the same capabilities. My point is that American schoolchildren should be learning to communicate with the rest of the world – we simply cannot afford to be parochial anymore.

The second goal is that we should learn the lesson that jumps out at us every time we open a newspaper: that the pace of global change is accelerating, and we all have a steep learning curve ahead of us. Not so long ago, Europe '92 was the big economic revolution ahead. Now Europe '92 is old news, and Eastern Europe is the great unknown.

Taiwan used to be the hot spot for manufacturing investment, but now the hot spot is Thailand. Within a few years, I think we'll be seeing Mexico as a major industrial center – and perhaps well be talking about a U.S.-Canada-Mexico Free Trade Agreement.

Most of us – or at least many of us – remember Nikita Krushchev and his threats. Last week, Mikhail Gorbachev came to San Francisco to court West Coast investors! The economic world, along with the political world, is transforming itself in front our eyes. We have to watch carefully, and to anticipate.

Perhaps in the future, domestic banks won't have international divisions, because international services and international awareness will be so well integrated into every function of domestic baking that a separate division won't be necessary.

That's the challenge of global thinking – for bankers and for everyone else in this global crossroads region of the Pacific Northwest. □

Columbia Savings Sells Junk Bond Portfolio for $3 Billion

Continued from *page 1*

lumbia's capital deficit, which stood at $215.6 million at March 31.

The structure of the deal is also controversial. The buyer, Gordon America L.P., will pay Columbia only $300 million in cash, essentially a down payment of 10%. The remaining $2.7 billion will be financed by Columbia in the form of a note with a 10.5% interest rate. The note is secured by the junk bonds.

Market sources say the sale has some recourse provisions, under which Columbia would end up with the bonds if Gordon defaulted on the loan. Gordon would essentially only forfeit the downpayment.

"The good news is they sold the portfolio; the bad news is that it could go back to Columbia," says Mr. Lustig.

Gordon, whose investors include General Electric Capital Corp. and Canadian Imperial Bank of Commerce, also will pay Columbia a facility fee of $50 million on the loan.

Edward G. Harshfield, Columbia's new president and chief executive officer and other Columbia executives were not immediately available for comment.

Thomas I.A. Allen, a Gordon partner, declined to discuss the terms of the deal. But he said that after three months of due diligence, he thinks the investment is a good one for anyone

> **"The good news is they sold the portfolio; the bad news is that it could go back to Columbia."**
>
> **Jay N. Lustig**
> *Drake Capital Securities*

"who believes in the upside of corporate America in the short or medium term."

Better for the RTC

The sale is good news for the Resolution Trust Corp. The RTC already owns $3.7 billion in junk bonds from institutions it has closed; notably Centrust Savings Bank, Miami, and Imperial Corp. of America, San Diego. Sources say the RTC was not eager to take on another big portfolio of junk bonds, many of which are illiquid.

The deal requires corporate and regulatory approval, Columbia's announcement said. The Office of Thrift Supervision in mid-July retained Kidder, Peabody & Co., New York, to help it evaluate the deal.

Gordon America's parent, Gordon Investment Corp., is a merchant bank founded in 1987 and based in Toronto and New York. In addition to Canadian Imperial and General Electric, its principal shareholders include Canada Life Assurance Co.; Hutchinson Whampoa Ltd., Kuwait Investment Office, Hollinger Inc., and Yasuda Trust and Banking Co. Mr. Allen said Gordon has invested more than $1 billion in various enterprises.

The sale of the junk bond portfolio represents a dismantling of the $8.2 billion-asset Columbia, which was once a high-flying thrift that took full advantage of the deregulation of the industry.

Former chairman Thomas Spiegel, who resigned on Dec. 31, 1989, had close ties to Michael Milken, former junk bond guru of Drexel Burnham Lambert Inc. Mr. Spiegel bought many junk bonds for Columbia, funded primarily with wholesale deposits.

> **The once high-flying thrift took full advantage of the deregulation of the industry.**

This strategy seemed to work for awhile. Columbia was once one of the strongest-capitalized and most profitable thrifts in the country. However, with the 1989 plunge in the junk bond markets, the bankruptcy of Drexel, and requirement under the Financial Institutions Reform, Recovery, and Enforcement Act that thrifts sell the junk bonds – and thus mark them to market – Columbia plunged into losses.

Columbia lost $591 million in 1989 and another $293.3 million in the first quarter. Mr. Spiegel has been fighting charges that he used Columbia funds for personal purposes that included an arsenal of 50 firearms, a personal security detail and Columbia-owned condominiums. Mr. Spiegel was not available for comment. □

Low Incomes Seen as Limiting Home Sales

WASHINGTON — Expansion of the housing market will be limited because most American renters cannot afford to buy a home of their own, according to a study by the Joint Center for Housing Studies at Harvard University.

It said 80% of white renters and 96% percent of black renters do not have enough income to raise a 10% down payment.

"They lack the savings and wealth to secure a home, the very asset that has proven to be the best source of wealth accumulation for most Americans," said William Apgar, author of the study, which was sponsored by the Ford Foundation.

In 1970 the average down payment for a house was just over $6,000, but by 1980 the average had climbed above $11,000. It is now just over $9,000.

The study saw no sign of record high rents falling soon for poor renters, almost 30% of whom are at or below the poverty level.

Mr. Apgar said the prospect was especially grim for renters close to the poverty line since low-cost apartments in U.S. cities are being upgraded to attract higher-income tenants.

Reuters

Pittsburgh S&L Chief Dies at 67

Daniel T. Kubasak, 67, chairman, president, and chief executive officer of Great American Federal Savings and Loan Association, Pittsburgh, died July 21 of heart failure in a New York City Hospital.

Kubasak began his career with the First Federal Savings and Loan Association of Homestead in 1940. During his nearly 50 years with the same association, he worked in every department and was named president and chief executive officer in 1973.

Under his leadership, First Federal became Great American Federal in 1975. In 1988, he was elected chairman of the board.

Mr. Kubasak was active in many community organizations and associations, including the Steel Valley Chamber of Commerce, the U.S. League of Savings, the Pennsylvania Association of Savings Institutions, and the Institute of Financial Education. □

Losses Slowing at Privately Owned S&Ls, OTS Reports

Continued from *page 1*

black.

Most of the improvement among the private-sector thrifts in the first quarter was the result of slower bleeding among the least-healthy institutions that are likely to be seized and transferred to the Resolution Trust Corp. The 310 institutions in this classification, which the OTS calls Group 4, lost $874.1 million in the quarter that ended March 31, down from $1.5 billion in the last three months of 1989.

The condition of thrifts on the second-lowest of the four rungs – 311 troubled institutions with poor earnings and low capital – deteriorated in the first quarter. Their losses climbed to $281 million from $100 million three months earlier.

> **"The job of the private sector of the industry is to go out and be as profitable as it can be."**
>
> **T. Timothy Ryan Jr.**
> *Office of Thrift Supervision*

Many of the institutions in this tier, Group 3, will ultimately be transferred to the RTC.

"We knew some were going to slip down, but some with low capital probably have sufficient core earnings to find a marketplace solution to their problems," said William C. Ferguson, an industry analyst, who said some of the uptick in losses is probably attributable to provisions for loan losses.

In a shift from its prior practice, the OTS reported only on the performance of thrifts operating outside government control. Data on losses by the 350 thrifts in conservatorship as of March 31 were not available, making it difficult to make an exact assessment of whether the entire industry's condition has improved.

Good Quarter for Top Tier

The top group of 1,264 well-capitalized thrifts turned in their best performance in a year, earning $692.5 million, up from approximately $500 million in the prior quarter. Their earnings totaled $2.4 billion in 1989.

Net income of 620 thrifts in Group 2, which meet or are near required capital levels, totaled $191.5 million – little changed from $200 million in profit in the last three months of 1989.

"These thrifts are beginning to show signs of consistent profitability," said OTS director T. Timothy Ryan Jr. They posted earnings of $100 million in all of 1989.

Mr. Ryan said he is not yet prepared to assess the future of the thrift industry, which some observers say is obsolescent.

"We can't make judgments based on what we see in this quarter," he said. "We need to wait and see some real trends. I'm neutral and on hold as to what these data really mean," he said.

He defended the decision – reached by Treasury, the RTC, and OTS – to report separately on the condition of thrifts controlled by the government.

"The job of the private sector of the industry is to go out and be as profitable as it can be," Mr. Ryan said. The troubled segment's job is to prepare itself for liquidation, "not to run a vigorous business."

OTS officials said they were unable to delineate the operating and nonoperating losses of the thrift industry because of changes in the reporting system. □

Thrift Profits Vary
First-quarter earnings by industry segment, in millions of dollars

1,264 well-capitalized institutions	$692.5
620 thrifts likely to raise capital	$191.5
311 troubled thrifts with low capital	($280.7)
310 thrifts destined for conservatorship	($874.1)
All 2,505 thrifts not in conservatorship	($270.7)

To crack the tough small business market, you need hard facts.

How are your competitors segmenting and marketing to one of the most profitable markets in banking?

Trans Data knows. And you should, too.

Small businesses think, react and bank unlike any other customers. They have strong ideas about what they deserve. And they have needs other banks are already addressing aggressively.

Trans Data gets you inside cost-effectively.

Three prepared Trans Data studies take a hard look at timely topics. Your competitors' strategies and products. The needs and attitudes of key market segments. In-depth reactions to popular DDA accounts. You'll find insights and projectable results to impact product development, customer service and marketing strategies.

Or focus on your local prospects with a proprietary Trans Data survey. Tailored from a thoroughly-tested model, it's a rapid and economical way to probe your potential small business base.

Gather a year's worth of results in days.

Syndicated studies are obtainable immediately. Proprietary results could be in your hands as soon as two weeks after interviews begin. And all are backed by a decade of rigorous experience in banking research.

For the past year, we've been answering the tough questions about small business you're asking today. If small business banking looks like a big business to you, call now.

Layoff Advice: Do It Fast, Then Help the Survivors Cope

By PHIL ROOSEVELT

When Bank of New England Corp. announced plans in April to cut its staff by 5,600 – one-third of the total – the company wasn't just talking.

Within a day or so, 1,700 workers were given 30-day notices of dismissal, and many others were told that their jobs would be eliminated by the end of the year, company officials say.

"We tried to do it quickly and get it all over with, so people didn't think we were just sort of dribbling out the bad news," says Ralph D. Gordon, director of human resources for the Boston-based holding company.

Similar Cases May Follow

The case of Bank of New England may be extreme, but as the banking industry intensifies its cost cutting, a number of bankers and consultants are advocating swift, decisive action when it comes to layoffs.

"It's not a fun process," Dale Winston, president of Battalia and Associates, a New York-based executive search firm, says of layoffs. "The best thing is just to have it done as quickly as possible."

Lingering uncertainty over who will be cut and when the cuts will occur can sap a staff of its morale, thereby hurting productivity.

Indeed, many experts warn, the uncertainty can drive some of a bank's best-performing employees to leave for more stable situations.

At the very least, some banks that have undergone big staff reductions have found it useful to redouble efforts at internal communication.

Los Angeles-based First Interstate Bancorp publishes special weekly or biweekly newsletters between the announcement and the implementation of staff cuts.

"It's reassuring for employees to see something in writing," says June Jones, a vice president in human resources at First Interstate.

Of course, not all layoff procedures are practical or desirable for all situations.

Some banks, for example, are under so much pressure from stockholders to cut costs that they must announce general plans for layoffs weeks or even months before details are in place. Other banks may be concerned that moving too quickly will result in errors or add to the trauma of layoffs.

What follows are some approaches used by three banking companies that have launched staff reduction programs this year:

BANK OF NEW ENGLAND

This institution, crippled by souring real estate loans, announced its radical plan less than one month after the arrival of a new chairman and chief executive, Lawrence K. Fish.

Rumors about possible layoffs had been rampant since the beginning of the year. "The best you can do is be honest with people and say that just as soon as you're in a position to say something specific, you will," Mr. Gordon says.

Almost immediately after taking office on March 6, Mr. Fish told employees that big cuts were likely. Then, on April 4, he announced the plan to cut one-third of the staff by yearend.

Already, the company had analyzed who would be cut, managers had received training in executing layoffs, and arrangements had been made for outplacement services. Thus, those who were going to be laid off soon knew it.

Job Cutting Gathers Steam

Bank	Number of jobs cut/percentage of total	Date announced
First Fidelity	1,400 20%	March 5
Bank of New England	5,600 33%	April 4
Bankers Trust	75 5% of corporate banking department total	June 19
Harris Bank	320 8%	June 20
Chase Manhattan	3,200 17%	June 21
Continental Bank	900 15%	June 26
First City of Texas	700 30%	July 1
Manufacturers Hanover	1,400 7%	July 17
Citicorp	Unspecified reductions in corporate finance units worldwide	July 18

Why such speed? "I think there's some comfort for the staff to know that it's over," said Mr. Gordon. "It makes the survivors feel better to know that it's out of the way and isn't going to be dragged out."

CONTINENTAL BANK

Most human resources specialists stress the importance of clear and constant communications during a round of layoffs. For Chicago-based Continental Bank Corp. – which recently announced plans to cut 900 jobs, or 13% of its total, to bolster profits – a solid communications mechanism was in place.

Under the company's "key communicator" system, about 300 employees heard from senior management in late March that the company planned to review all product lines with an eye to trimming costs.

Each communicator relayed the information to a group of employees, ranging from 10 to more than 50, either in formal meetings or informally. "The nice part about the system is that it allows for one-on-one communication," said Holly Anderson, Continental's manager of internal communication.

'There's no price tag you can put on this kind of service,' he said.

'There's no price tag you can put on this kind of service," he said.

System Put to Use

The key communicators – a system that was formed about two years ago for disseminating general information – was called upon again in June, shortly before the layoffs were announced.

Between April and now, she says, the majority of people being laid off have been informed, though few details of the cuts have appeared in press accounts.

"As a matter of basic humanity, you want to make sure that people don't read in the newspapers that they're not going to be laid off before they've heard it from you," she says.

AMOSKEAG BANK SHARES

The ramifications of layoffs can linger long after the actual cuts. The employees remaining may well suffer from survivor's syndrome.

"The stress can be very high for the survivors," says Normand St. Amand, director of human resources for Amoskeag Bank Shares Inc., a Manchester, N.H., parent of three banks in that state.

"They can be left wondering from week to week, 'Am I going to be next?' or 'Why am I still here and he or she is gone?'."

While cutting 60 jobs, or 6% of its staff, during the first quarter of this year, Amoskeag relied heavily on the services of an outside company to provide help and counseling for both departing workers and survivors. The company, Resource Management Consultants of Salem, N.H., had been providing an employee assistance program for Amoskeag for about four years.

Calming the Survivors

After the staff cuts, Mr. St. Amand said, many employees felt more comfortable discussing their anxieties with outsiders than with their superiors at Amoskeag.

"There's no price tag you can put on this kind of service," he said.

Resource Management Consultants helped convey to survivors that "it's all right to feel lucky," Mr. St. Amand said. Employees were offered both classes and private counseling.

"The people who stay often don't get a whole lot of attention paid to them," said Jonathan Sheff, president of the Resource Management. But without proper help, he said, "They run around feeling anxious and guilty."

Mr. St. Amand said the care for survivors included some frank talk about the future.

"Once the cuts were made, we couldn't in all honesty sit here and say there would be no further layoffs," he said. "What we said was that the people who are remaining are needed for the job but that if a particular line of business is eliminated, we may also eliminate the jobs." □

Progress in Seafirst Labor Talks

But Bank and Union Say Key Economic Issues Remain

By SAM ZUCKERMAN

SEATTLE — Seafirst Bank and labor officials bargaining for about 4,700 employees have made progress toward an agreement, according to representatives of the two sides.

But Seafirst, a unit of BankAmerica Corp., and the United Food and Commercial Workers both caution that key economic issues have not yet been settled and major hurdles remain before a contract can be signed.

A contract would cover all employees except supervisors, professionals, officers, management trainees, and guards.

A Unique Agreement

The two sides say that such a pact would be the only union agreement covering a major U.S. bank's workers.

Seafirst fought an 11-year legal battle against the union, agreeing to talk only after ordered to do so by a federal appeals court last December. But now, said Seafirst chairman and chief executive Richard E. Cooley, "we are bargaining in good faith."

"We made a proposal," Mr. Cooley noted in an interview. "If [the union] had accepted it, we would have had a contract."

Nancy J. Holland-Young, president of UFCW Local 1439, said: "It's still too early to tell [if an agreement can be reached]. But the early signs are encouraging."

As of mid-July, eight bargaining sessions had been completed. Seven more sessions are scheduled through the end of August.

Both the bank and the union say the talks have been cordial. But neither side is predicting when, or even if, a contract will be concluded.

"We're not on any time line to settle overnight or next week," said Seafirst president Luke S. Helms.

Neither side is predicting when, or even if, a contract will be concluded.

So far, negotiators have reached agreement on such issues as terminations, layoffs, and promotions, according to sources familiar with the talks. But the key economic questions of pay and benefits, as well as union access to the workplace, dues check-off, and grievance and arbitration procedures, have not yet been addressed.

When the more contentious issues come to the table, "the atmosphere could change, but we certainly hope not," said Ms. Young.

Dispute over Salary

The union has proposed a minimum 4% across-the-board increase in pay for all employees, as well as an 8% rise in the pay ranges for different job categories, according to union documents.

Seafirst has proposed to keep its current pay ranges, which tie compensation to performance. The bank will sign a contract only "if it allows us to be competitive," Mr. Helms said.

Sources familiar with the talks say the union is prepared to be flexible on pay and other economic questions.

The bank recognized an independent union as bargaining agent for its workers from 1971 to 1977. When the two sides failed to agree on terms to renew the contract, union members voted to affiliate with the Retail Clerks International Union, which later merged with the UFCW.

In 1979, the National Labor Relations Board ordered Seafirst to negotiate with the clerks union. The bank fought the ruling in court for more than a decade.

Last year, after a series of administrative and judicial rulings, a federal appeals court upheld the NLRB's order to bargain. Seafirst agreed to talks, but also asked the Supreme Court to overturn the lower-court decision. The high court denied the bank's petition. □

Merger Sought For Guarantor In Student Loans

Continued from page 2

loans by state agencies such as HEAF guarantee them.

At its headquarters in Overland Park, Kan., HEAF said that while it is cooperating with the U.S. department, it is also pursuing its own options.

Timing Held Crucial

HEAF said it received a significant number of inquiries. "It is clear to us, and our lenders said, "that the eroding confidence in the strength of our guarantee requires us to move quickly to consummate desirable arrangements."

On Monday, the Nebraska Student Loan Program confirmed it was approached by HEAF about a possible asset transfer agreement, but said those talks were terminated when the education department failed to approve the deal.

Also on Tuesday, U.S. Education Secretary Lauro Cavazos vowed that HEAF-guaranteed loans would remain government-guaranteed, and Sallie Mae said its balance sheet and earnings would not be affected materially even if HEAF did not pay claims on defaulted loans. □

Cost Control

Disciplined Approach to Corporate Real Estate Benefits Bankers Trust

By JEFFREY MARSHALL

Bankers Trust New York Corp. says it is saving as much as $50 million a year over its rivals, without issuing a pink slip or turning employee benefits. How? By careful cost management of its corporate real estate.

Operating at scores of sites in 30 countries around the world, Bankers Trust is constantly reassessing its space needs and leasing out space it is not using. It stresses function and flexibility, preferring to use office sites as is rather than customizing them to accommodate the current occupants, said senior vice president Charles H. Nobs.

Bankers Trust tries to evaluate corporate space each month and do a thorough review each quarter, Mr. Nobs said. It has its own acquisition and leasing staff, which monitors rates in the marketplace on a weekly basis.

Internal Discipline Counts

According to Mr. Nobs' calculations, Bankers Trust's tight management of real estate, combined with internal discipline, saves $30 million to $50 million more per year than its wholesale-oriented bank peers and investment firms.

Mr. Nobs heads the office of corporate operating services that oversees real estate and other services such as security, insurance, and office technology.

"Bank occupancy is typically the second-largest noninterest expense, ranking only behind employee compensation/benefits," he said.

Mr. Nobs said Bankers Trust manages more than $150 million in premise-related expenses annually and has 50 to 75 building-related capital projects under way at any time. The company has three million square feet in the New York metropolitan area and half again that much elsewhere.

Some capital projects might involve new construction, such as Bankers Trust's building in London's Broadgate area, completed in 1989. Other projects might be as simple as renovation of floor space, he said.

Most projects are jointly managed between the affected business line and the corporate services staff. Corporate finance and trading activities are two of about 15 such lines, Mr. Nobs said.

Bankers Trust realized considerable cost savings by moving some corporate offices out of Manhattan five years ago. Today, the bank holds a lease for 385,000 square feet of space at the Harborside complex in Jersey City, an area that houses 1,400 employees.

Arithmetic Tells the Story

Mr. Nobs bases Bankers' savings edge over its competitors on corporate occupancy cost ratios derived from simple arithmetic: comparing corporate occupancy expense, a balance-sheet line item, to the total number of employees.

Proven Ways to Cut Costs Sought for New Column

Bankers are looking everywhere for ways to control their cost of doing business. To provide readers with cost-cutting tips, the *American Banker* has begun a column that will appear Thursdays on the management page.

We invite readers to let us know about methods they have found successful in controlling expenses. Please get in touch with Patricia Stundza, features editor, *American Banker*, One State Street Plaza, New York, N.Y. 10004, phone 212-943-5733 or fax 212-943-2094.

Its competitors spend 40% more for occupancy, and Bankers' average occupancy-cost growth has been running at about 8% annually for the past five years, compared with 13% for its rivals, he maintained.

These comparisons are meaningful only because Bankers in the same basic businesses in most of the same cities, he argued. □

GLOBAL *dispatches...*

Brazil Won't Pay Arrears Before Start of Debt Talks

Reuters

RIO DE JANEIRO — Brazil's chief debt negotiator, Jorio Dauster, reiterated that the government would not pay arrears on its huge foreign debt before the start of negotiations with creditors.

"At this moment the government is not contemplating making any payment of arrears before starting negotiations," Mr. Dauster told a news conference here.

The government announced late Tuesday that an International Monetary Fund team would arrive in Brazil on Aug. 1 to begin a review of the country's economy and to initiate talks on a standby loan agreement.

Mr. Dauster said commercial bank creditors seeking payment of arrears would have to take their place in line behind international agencies and government lenders.

Payment Order Given

"First we are going to fix how much Brazil can pay," he said. "Then there exists a priority, a seniority of whom to pay."

First comes the IMF, Mr. Dauster added, because "whoever doesn't pay the IMF is dead." Next come international agencies such as the World Bank and the Inter-American Development Bank, which "cooperate with Brazil and bring new money."

Third comes the Paris Club of government creditors.

"I will only know what can be paid to [commercial] banks after I know what has been agreed with the other three groups because they are at the head of the queue," Mr. Dauster said.

Sumitomo Plans New York Unit

TOKYO — **Sumitomo Bank** Ltd. will set up a wholly owned subsidiary in New York in mid-1992 to control its fund management, securities, leasing, trust, and capital markets business in the United States.

The controlling unit, as yet unnamed, will be capitalized at $3 million, the Japanese city bank said in a statement.

Sumitomo also said it plans to establish in New York a fund management subsidiary capitalized at $40 million; a securities unit capitalized at $40 million; and a leasing subsidiary capitalized at $240 million. The parent company will directly own 90% of each of the three companies, and its controlling unit the other 10%.

The controlling subsidiary also will own 10% each of Sumitomo's wholly owned Sumitomo Bank Capital Markets Inc. and Sumitomo Bank of New York Trust Co. — **Reuters**

Europe's Banks Lead in Growth

Hard Times Cramp Top Japanese, U.S. Institutions

Continued from *page 1*

bank assets, they failed to repeat the previous year's sweep of the top 10 places.

Dai-Ichi Kangyo Still No. 1

Once again leviathan Dai-Ichi Kangyo Bank Ltd., Tokyo was the world's largest bank, with $403.4 billion in assets.

But two French banks, $242.3 billion-asset Credit Agricole Mutuel and $231.8 billion-asset Banque Nationale de Paris, jumped into seventh and eighth places, respectively, from 11th and 14th.

Citicorp Wins Back No. 10 Spot

Citicorp, the largest U.S. institution, with assets of $227 billion at yearend 1989, regained the No. 10 spot, which it had held two years before.

Other strong gainers included $211 billion-asset Credit Lyonnais, Paris, which moved up five notches to 13th place, and $202.6 billion-asset Deutsche Bank, Frankfurt, up six spots to 16th.

Japan's Banks Take a Beating

Although Japanese banks built assets substantially in yen terms, 1989 was their toughest recent year. They were battered by rising interest rates, declining margins, lower profitability, and a capital shortfall three years before the deadline for meeting the 8% capital standard of the Bank for International Settlements.

Despite these problems, the Japanese had great success in raising capital. *American Banker* calculates that in 1989 the 30 largest Japanese banks boosted shareholder equity 9.97% in dollar terms, despite the fall in the yen.

'Hidden Assets' Deteriorate

A decline in Japanese stock prices this year has added to the banks' woes. The decline wiped out part of their "hidden assets" – unrealized gains on their stock holdings that represent an important part of their capital structure.

Although the Tokyo stock market has recovered much of its losses, the banks got a vivid demonstration of their vulnerability, a lesson that has made them more cautious about expansion.

U.S. banks, meanwhile, have been hobbled by a sluggish economy, poor profitability, rapidly deteriorating credit quality, and a hostile market for raising equity – trends that became visible in 1989 and accelerated this year.

The most ominous sign for U.S. institutions has been how little their capital has increased. In 1989 the equity of the 14 largest U.S. banking companies rose only 3.94%; their top competitors abroad boosted equity 12.8%.

> **"Our banks are basically operating with huge anchors around their necks. No matter how hard they run, they can't stay in place – because everybody else is moving faster."**
>
> **Robert Litan**
> *Brookings Institution*

'Everybody Else Moving Faster'

"Our banks are basically operating with huge anchors around their necks," said Robert Litan, a Brookings Institution banking expert. "No matter how hard they run, they can't stay in place – because everybody else is moving faster."

As a result, most large U.S. banking companies added assets slowly or not at all, and most dropped in rank in the *American Banker* survey.

BankAmerica and Morgan Slip

BankAmerica Corp., once the world's largest banking company, had assets of $97.2 billion at the end of 1989, slipping from the 40th to the 48th spot. J.P. Morgan & Co., with assets of $87.6 billion, dropped five places to 55th. And Security Pacific Corp., with $83.1 billion, slid three notches to 57th.

The only big U.S. gainer was NCNB Corp., with assets of $65.8 billion. NCNB, which absorbed First RepublicBank Corp. in Texas, more than doubled in size, become the world's 75th-largest banking company.

Strength in Europe

Banks in major European countries except Great Britain have benefited from a strong economic climate and healthy banking conditions.

"Generally, [European] banks have had quite good asset quality; lower levels of bankruptcy; quite strong loan growth, and favorable interest rate environments," said Sasha Serafimovski, an analyst with Morgan Stanley International, London.

Consolidation Trend

Much of the asset growth of the continent's largest institutions came from mergers, acquisitions, joint ventures, strategic alliances, and other moves to shore up their home markets and build beachheads elsewhere in preparation for European economic integration and the opening of the Eastern bloc.

In the past year, European banks have tried "to position themselves as major players in a united Europe," said Estela Piscope, an analyst with BHF Securities Corp., New York. "Many of the banks have proceeded to buy up smaller operations across borders."

For example, Banque Nationale de Paris, which increased assets 19.1% in 1989, acquired a 2% stake in Italy's Credito Romagnolo, opened 15 branches in Spain, built a strategic alliance with Germany's Dresdner Bank by exchanging directors, and established a joint venture leasing firm in Greece. In France, BNP bought the 78-branch Banque de Bretagne.

To back up their growth, European banks have added capital fast.

American Banker calculates that in 1989 German banks built equity by 24.71%, French banks by 18.72%, and Italian banks by 12.31%.

However, in the French and Italian cases, equity growth lagged behind the increase in assets. The ability to raise capital will be the most important restraint on banks' further growth in those countries. □

Firewalls Have Outlived Their Usefulness, Greenspan Hints

Continued from *page 1*

bank's capital. They must be made at arm's length and at market rates of interest.

Rigidity of Glass-Steagall

The Glass-Steagall Act prohibits any lending between a bank and its securities affiliates. This prohibition – an impenetrable firewall – is what the Fed is now questioning.

"Independent of regulatory or organizational structure, all of us should understand that the market, the stockholders, and management will think of the bank and any associated units – affiliates or subsidiaries – not as a confederation of businesses, but as an integrated organization," Mr. Greenspan said.

"Recognition of this reality suggests that it is perhaps inefficient, at best, and under conditions of financial distress, ineffective, to try to make integrated businesses behave as if they were a collection of independent firms."

Industry Welcomes Trend

Banking industry officials characterized the Fed's new stance as significant and welcome.

"It's a refreshing insight," said Robert Dugger, chief economist for the American Bankers Association. "The older, strict-firewalls approach is a clear obstacle to efficiency in product and service integration."

"It was a bold statement by Greenspan," said Richard M. Whiting, general counsel for the Association of Bank Holding Companies.

> **"It's a refreshing insight. The older, strict-firewalls approach is a clear obstacle to efficiency in product and service integration."**
>
> **Robert Dugger**
> *American Bankers Association*

"On one hand, it is a positive reaction to the needs of bankers to respond to international and nonbank competition, and on the other hand to respond to critics who have said deregulation led to the S&L crisis. It's mincing it right down the middle. It is a bold and ingenious stroke on Greenspan's part."

Capital Anxieties

While welcoming the Fed's move, several banking industry representatives said the new capital standards that would replace firewalls might be too onerous. In the testimony that covered firewalls, Mr. Greenspan suggested that capital requirements will go still higher than the 8% ratio of capital to risk-based assets that must be in place by the end of 1992.

"We have no idea" what capital levels the industry can handle, said Mr. Dugger. "Some can meet [higher standards] already. Others would find it very difficult to raise [their capital] beyond the new risk-based standards."

"It will be tough for banks to meet new standards," said Melanie L. Fein, a partner at Arnold & Porter and a former Fed lawyer. "We have no triple-A-rated banks in the country. The stocks of regionals are plummeting. It is not a pretty sight."

She said banks will have an easier time raising capital if they can diversify.

Recommendations Forthcoming

The Fed is now drafting recommendations for those higher capital standards, a Fed source said. Those recommendations will probably be made by the time the Treasury issues the results of its study on deposit insurance reform, expected within the next few months.

> **Retiring Vice Chairman Manuel H. Johnson was the Fed's staunchest advocate of firewalls.**

Federal Reserve Board Governor John P. LaWare, declining to discuss specific numbers, said any new capital guidelines would have to be phased in gradually.

Both Mr. Whiting and Mr. Dugger predicted that if the suggested direction were to become formal policy, it would increase the pace of consolidation already under way in the industry.

Some Early Indicators

Although the Fed's new view of firewalls is significant, it did not come out of the blue.

One early clue was a January 1987 speech to the New York State Bankers Association by New York Federal Reserve Bank President E. Gerald Corrigan. Robert Eisenbeis, a professor of banking at the University of North Carolina and a member of the Shadow Financial Regulatory Committee, an independent group that comments on issues before the Fed, said Mr. Corrigan's 1987 proposal to change the regulatory structure included a revisionist look at firewalls.

This past May, Mr. Corrigan, in testimony before the Senate Banking Committee, definitively denounced the efficacy of firewalls. And a week later, in far more circumspect remarks at a Federal Reserve Bank of Chicago conference, Mr. Greenspan himself noted that firewalls offset the advantages of increased powers for banks.

Ms. Fein noted that for years the Fed has said it would reconsider firewalls after it had experi-

Executive Help Wanted

Debit Product Managers

Visa U.S.A. is seeking banking professionals to lead the continued development of Visa Debit Card and ATM/Direct Debit POS products and services.

Technology and innovation have made Visa the largest, most widely recognized financial payments systems in the world. We do more than enhance existing products and services. We focus on new opportunities as well.

You'll not only manage existing products, you'll contribute to the implementation of new programs and services. Your priorities will include analyzing their feasibility and profitability, developing product marketing materials, participating in marketing support activities, establishing product management tracking/reporting requirements, interfacing with operational and systems areas, and overseeing product plans.

Product management positions are now available.

Visa Debit Card ATM/Direct Debit POS

Qualifications include 5+ years' experience in financial services with recent experience in product management. For Visa Debit Card, knowledge of retail banking operations and transaction-based products is highly desirable. For ATM/Direct Debit POS, background in EFT/ATM products and services is needed. Excellent communication skills, both written and written, are essential, along with marketing support and project management skills.

VISA offers an excellent compensation package including comprehensive benefits. For immediate consideration, please send your resume to: VISA U.S.A., Dept. CR/77/2A/AB, P.O. Box 8999, San Francisco, CA 94128. For other VISA opportunities, please call our JOB INFORMATION LINE (415) 378-8299. We are an equal opportunity employer.

VISA

We're everywhere you want to be.

RETAIL BANK EXECUTIVE

Billion dollar New England bank must revitalize relationships with retail customers. Service is the foundation of profitable market share. We'll do a lot better, now and into the future, with a leader whose vision and integrity build focus, intensity, sustained team effort and results.

We'll find a line management winner who:

- Lives customer relationships in small cities and little towns . . . not just in the urban/up-scale centers.
- Knows all forms of deposit and retail credit lines of service, cold . . . consumer credit, a plus.
- Makes marketing principles work, even when population and media availability put per exposure costs out of sight.
- Appreciates values of key staff areas like marketing, financial planning, HR.
- Has a college degree . . . maybe MBA or Stonier too.
- Has a stable personal life . . . our work is tough enough without any extra baggage.
- Probably runs one of the retail or community banking regions in a bank many times our size.
- Manages the game and the score by inspiring the players.
- Is looking ahead for the right show to run.

Salary, incentives, benefits, challenge and career opportunity. Please send a detailed resume, to be held in confidence, now.

Sales

NATIONAL ACCOUNT EXECUTIVE

Electronic Banking, a division of First Bank System has created two new National Account Executive positions.

Responsibilities include:

- Selling to specific industry groups such as airlines, hotels, car rental companies and retail
- Develop and negotiate business proposals and agreements
- Develop and manage relationships with national accounts for credit card processing
- Analyze the target industries to determine potential opportunity and risk.

Qualified candidates must have a BA degree with 5-7 years of related experience in customer service, marketing, or finance related backgrounds within the travel and entertainment or retail industries. An MBA would be a plus.

First Bank System offers a competitive salary, a generous flexible benefits package and is located in its downtown Minneapolis offices. For confidential consideration, please send your resume and salary requirements to: **Bruce Jochims, FIRST BANK SYSTEM, Human Resources, MPFW-0503, 120 South Sixth Street, Minneapolis, MN 55480.**

DEALS

Hanover Commits to Financing for Buyout of Ford Aerospace Division

By STEVEN LIPIN

An investor group led by Loral Corp. has received a commitment from Manufacturers Hanover Corp. to help fund the acquisition of Ford Motor Co.'s aerospace subsidiary, a spokeswoman for Loral confirmed.

She would not disclose the amount of the loan, but it is thought to be in the neighborhood of at least $500 million and perhaps as much as $700 million; one lender said.

The deal is reportedly costing $811 million and the assumption of roughly $500 million in Ford debt," Loral and Shearson Lehman Hutton Inc. are each investing $150 million in the buyout. A representative of Manufacturers Hanover confirmed that the bank was financing the transaction but declined further comment.

Rating Agencies React

The high degree of leverage in the deal has spurred the major rating agencies to put Loral's debt on watch for possible downgrade, although the transaction is structured without recourse to Loral.

Initial estimates suggest that the equity will comprise about 24% of the capitalization of the new entity. While that is not in line with many recent leveraged transactions, Tassos Philippokos, a vice president at Moody's Investors Service, noted that the key ratio will be the coverage of interest expense by cash flow.

"Obviously it will be leveraged," said Mr. Philippakos.

The fact that the company will have no recourse to Loral does not mean that the New York-based manufacturers Hanover would let the company go bankrupt, the Moody's analyst said. Banks will probably take comfort in that fact.

Japanese Caution Is a Factor

One Japanese lender said the deal could be a tougher sell than some other recent deals financed by Manufacturers Hanover - including two deals for Forstmann, Little & Co.- because of the higher degree of leverage and Japanese caution about lending to defense concerns.

"Japanese banks haven't gotten into defense-type industries," he said. "It won't be as easy as General Instrument." Forstmann Little arranged a $1.15 billion package from lenders led by Manufacturers Hanover for the acquisition of the company.

Moody's noted in its release that the "ratings agency's review is focusing on the direct and indirect impact that this transaction will have on the company's cash flow, liquidity, and overall financial flexibility.

Furthermore, Moody's will analyze the prospects of Loral Corp. itself and the new entity, both in effect, in view of the continuing deterioration in the business environment for defense contractors." □

Kansas Utility Denies Reports of a New Credit Pact

By WILLIAM GOODWIN

Kansas City Power & Light Co. denied reports circulating among bankers in the utility industry that it has entered into a $125 million revolving credit pact with Westpac Banking Corp.

Banking sources had said the new credit pact would be replacing an existing Eurocredit facility of approximately the same amount. That Eurocredit facility expires next year.

A spokeswoman for the Missouri utility said there is no agreement with Westpac on a replacement credit, adding that the company is focusing on its effort to acquire Kansas Gas and Electric Co.

An reported, Westpac and First Chicago Corp. together committed $1 billion to finance the unsolicited tender offer.

A Westpac official, meanwhile, would not comment on reports of the separate $125 million revolver.

Kansas City Power & Light apparently discussed a new revolver with Westpac to replace the Eurocredit facility, but then dropped the issue to concentrate on the Kansas Gas offer, according to one source familiar with the situation.

According to reports circulating among utility industry lenders, Westpac had also committed to provide the $125 million revolver, and was in the process of syndicating the loan. □

Philadelphia Fed Survey Shows Manufacturing Off in July

PHILADELPHIA — Manufacturing activity in the Third Federal Reserve District is slipping this month, according to the July "Business Outlook Survey" of the Federal Reserve Bank of Philadelphia.

The widely followed survey of regional economic trends showed that business was down at 29% of companies thismonth, while 16% reported an upturn. The July results, after a relatively level second quarter, suggest a return to the pattern of monthly declines that began in July of last year, according to the bank's research department.

Another Soft Year

With the slower overall pace of business, local firms are entering a second year of soft activity. Although shipments are up from last month, manufacturers are operating at less than full capacity, the Philadelphia Fed said. Backlogs are down, even though orders are coming in at a steady pace.

One-fourth of the surveyed companies are reducing payrolls, while 16% said they are cutting working hours. Consistent with a scenario of slack demand, firms in the Middle Atlantic region plan further reductions in payrolls and working hours this year.

Three Points of View

Looking to the future, executives gave varying forecasts but their comments was that business will stabilize at the current level over the next six months. Respondents were nearly equally divided among those predicting improvement, those anticipating continued decline, and those who expect steady activity between now and January 1991.

Industrial prices in the region remain fairly stable. Two-thirds of the firms polled in the July survey said both input costs and output prices are unchanged from June. But one-third expect price increases for both the goods they purchase and their own products in the next six months. □

Firewalls' Usefulness in Doubt

Continued from page 18

ance with new powers.

"Now bank holding companies have had a lot of experience with underwriting activities and they have acted responsibly and prudently," she said.

Global Competitiveness Factor

Still other factors contributing to the Fed's change in thinking have been the detailed information produced in the last year about foreign bank structures, how the U.S. system makes its banks less competitive internationally, and the lack of evidence that foreign bank structures are more risky, said Mr. Dugger.

Besides an evolution of thinking at the Fed, Vice Chairman Manuel H. Johnson's June announcement that he would resign Aug. 6 may have been a factor. Mr. Johnson was the board's staunchest advocate of firewalls.

And Mr. Greenspan himself may also be coming into his own on issues of bank structure. Some Fed watchers view the Fed chairman as having taken a back seat during the crafting of thrift-reform legislation.

"With Seidman and Clarke fading out and Wall gone, the focus is now narrowing down on Greenspan," said one observer, referring to key bank regulators, FDIC Chairman L. William Seidman, Comptroller of the Currency Robert L. Clarke and former Office of Thrift Supervision director M. Danny Wall. "The Fed may have viewed their relative inactivity [in Fiscal] as something they need to make up for now," by taking the lead in bank-structure reform. □

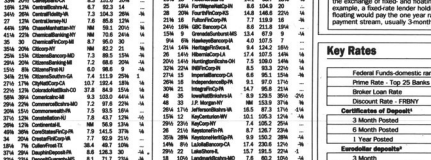
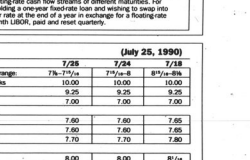
Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded companies having their main offices in the U.S. Banks are ranked by assets as measured by the market value of all common shares outstanding. As of March 31, there were 225 banks in market values of at least $69.6 mil. and for thrifts $121.46 mil.) 52 Wk Hi (or the moving high and low prices for the stock in the past 52 weeks. PE, the price/earnings ratio. It is the current stock price divided by the trailing five-quarter earnings per share. Mkt to bk, the ratio of the current stock price to the book value per share. Cls, the closing price for the stock last traded. If no trades for the day, the latest bid. AB Bank Stock Index: a weighted average of the top 250 banks based on market value and the top 50 AB thrifts. Weighted averages are calculated by the largest percent gainers and losers, but does not use indicators most shares traded and today's volume as a percentage of average shares traded daily over the past year.

Data source: SNL SECURITIES, Charlottesville, VA. 804-977-1600, produced the tables. Financial News Network, Vienna, VA, provides SNL with the daily prices.

Libor Swap Yield Curve





Data source: Manufacturers Hanover Trust Co., New York

Description of table: For lenders and borrowers in the interest rate swap market, the LIBOR swap yield curve is the benchmark interest rate used by active participants when arranging the exchange of fixed- and floating-rate cash flow streams of different maturities. For example, a fixed-rate lender holding a one-year fixed-rate asset and wishing to swap into floating would pay the one year rate at the end of a year in exchange for a floating-rate payment stream, usually 3-month LIBOR, paid and reset quarterly.

Takeover Shield In Pennsylvania Gets Few Takers

Continued from *page 1*

feels that federal regulatory procedures make protection at the state level against takeovers unnecessary for banks.

But that has not stopped several other banking companies on the state from staying under the law. Spokesmen for both Susquehanna Bancshares Lititz, and Fulton Financial Corp., Lancaster, said those banks will not opt out of the law's coverage, but declined further comment.

Many Reasons for Decline

Most Pennsylvania bank stocks have declined since the law was passed in April. But analysts pointed out that more important factors have been influencing bank stocks since then.

Berkeley Robins-Miller, an analyst at Radnor Capital Management, Radnor, Pa., doubted the law would have any impact on bank stocks, regardless of whether banks opt out.

"For me, as an analyst, I'm absolutely indifferent. I don't believe it's quantifiable," said The Pennsylvania measure, enacted in April, is regarded as the toughest of its kind in the country. It has drawn sharp criticism from top institutional shareholders, who have threatened an investment boycott of the state's public companies if they do not exempt themselves.

Most observers consider the law to have less impact on banks than other companies, since the typically long regulatory-approval period for bank acquisitions makes hostile takeovers difficult. And the recent rise in nonperforming assets at many banks has made dealmaking of any sort look unattractive.

"In the context of everything else that's going on with banks, [the Pennsylvania law] gets lost in the shuffle," said Anthony Davis, a banking analyst at Wheat First Securities, Richmond. "However, at some point in the future when people start thinking about interstate banking again, it will make a difference."

John Church, chief investment officer at Glenmede Trust Co., agreed that the anti-takeover provision would probably have less impact on banks than other corporations. However, he said, he feels more comfortable without the law: "I guess I'd rather have free-market forces rule," he said.

Glenmede, with $6 billion in assets under management, owns about 200,000 shares of CoreStates Financial.

Other banking firms have reserved their decisions until the last moment. Directors of Keystone Financial Inc., Harrisburg, and Integra Financial Corp., Titusville, are scheduled to resolve the issue at meetings today.

Available Options

Banks and other companies in the states have had until today to retain or forgo three provisions of the law:

- The disgorgement provision, which requires investors who acquire 20% stakes in a firm in connection with takeover attempts to surrender their profits to the target company.
- The control-share-acquisition provision, which restricts voting rights of investors who acquire 20% or more of a company's shares in relation to takeovers unless a majority of other shareholders approve.

> **"I guess I'd rather have free-market forces rule."**
>
> **John Church**
> *Glenmede Trust Co.*

- The fiduciary-duty provision, which gives directors the express authority to consider the interests of customers, employees and communities – in addition to those of shareholders – in assessing takeover proposals.

Selective Usage

Many Pennsylvania companies, including CoreStates and Meridian – have exempted themselves from the first two provisions, but not from the third. But directors of Dauphin Deposit Corp. adopted a bylaw on Monday exempting the company only from the control-share provision.

The new Pennsylvania law was inspired principally by the failed effort of Canada's Belzberg Group to take over Armstrong World Industries Inc., Lancaster. Armstrong has said it will not opt out of the law.

It has been joined by Aluminum Company of America and PPG Industries Inc. But other big firms in the state, including Westinghouse Electric Corp. and H.J. Heinz Co., have exempted themselves.

CAPITAL

Trim for Rates Doesn't Impress Bankers

By KELLEY HOLLAND

Little if any extra lending will follow the Federal Reserve Board's move this month to lower rates, bankers and analysts say. But some predict that banks with long-term assets could see a marginal rise in earnings.

Fed Chairman Alan Greenspan said the rate cut, engineered in mid-July, was aimed at stimulating new lending. But bankers say larger rate cuts would be necessary for borrowing to pick up.

The 25-basis-point decline in rates is too small to elicit new loans, analysts and bankers said.

Regulators Blamed

"If there is a credit crunch, I think it's to a large extent induced by regulatory policy, not by a 25-basis-point change in interest rates," one analyst said.

"I don't think our loan volume is spurred by a lowering of rates as much as it is by the amount of restructuring activity," said one money-center banker, referring to leveraged buyouts and recapitalizations.

Bankers are not eager to expand their balance sheets, in large part because it could mean having to raise new capital in today's hostile markets. And because they are not eager to make loans, they are less prone to cut rates for new credits. "In the market today, a lot of banks are not lending, so pricing is not so competitive," said one analyst.

Doubtful Help for Borrowers

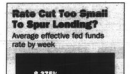
Large corporate loans are often floating rate, so a drop in rates does not necessarily allow borrowers to lock in lower interest costs. That means lower rates will not necessarily spark a measurable increase in loan demand.

"Lending activity is more of a function of the economic environment," said Peter L. Gartman, chief financial officer of MNC Financial Inc. "It's not that much of a rate question."

In any case, banks are too nervous about regulators taking a dim view of the quality of their loans to initiate much lending. "I'm not sure that changing the price of funds is what alters the supply of credit," said one analyst.

Rate Cut Too Small To Spur Lending?

Average effective fed funds rate by week



Source: Babcock Polson Perkins

Some Banks Could Gain

Even so, the cut could help some banks from another angle: Banks with very short term borrowings and large loan portfolios should enjoy a wider net interest margin.

Take MNC Financial, for example. "We are liability sensitive, so we're positively impacted by lower rates," Mr. Gartman said. As the Baltimore-based bank's balance sheet is structured now, a 0.25% decline in rates will add $8 million to the bank's earnings on an annualized basis, he said.

The lower rates are helping other banks with fixed-rate assets as well. Banks with large portfolios of credit card receivables or large investment portfolios filled with long-term bonds will enjoy a slight increase in net interest margin, analysts said.

J.P. Morgan & Co., Bankers Trust New York Corp., Republic New York Corp. and NCNB Corp. stand to benefit from the lower rates because they have large fixed-income investment portfolios, one analyst said.

"NCNB's probably the biggest beneficiary," he said, pointing to the bank's holdings of long-term government mortgage-backed securities. But "J.P. Morgan leaves some footprints that are worth following."

* * *

MARKET MONITOR

First Chicago Corp. has filed a registration statement to issue through a subsidiary $500 million in securities backed by credit card receivables. A management group including FCC Capital Markets Inc. and First Boston Corp. and led by Salomon Brothers Inc. will bring the three-year instruments to market. Price talk is about 70 basis points over comparable Treasuries.

* * *

Bank of San Francisco has completed a common stock offering of 475,000 shares $8.375 a share. The offering was managed by PaineWebber Inc.

* * *

Standard & Poor's Corp. lowered its ratings on Dime Savings Bank of New York, citing declining asset quality and concern about a possible rise in nonperforming assets. The savings bank's medium-term note rating was lowered to BBB-minus from BBB, its commercial paper rating to A3 from A2, and its certificates of deposit to BBB-/A3 from BBB/A2. □

Overview

U.S. Banks May Be Missing Global Opportunities

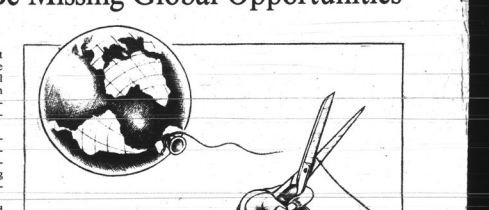
By JEFFREY KUTLER

In the terminology of politics, most bankers in the United States have gone isolationist. They have ample financial justification, including pressures on capital and earnings at home and inadequate returns from their earlier ventures on the international scene.

But some marketing strategists argue that isolationist bankers will miss out on the golden opportunities of a world in ferment. Entire new economies are sprouting in Europe and the developing world. Asian nations other than Japan are becoming economic powerhouses in their own right.

Mobility and migration are turning the U.S. and many other countries into ethnic melting pots, blurring the cultural differences that made some places and markets once seem inhospitable.

A bank that can succeed in Los Angeles or Miami or New York, the theory goes, can realistically consider planting its flag in Bangkok or Sao Paulo or Vienna. And it does not have to limit its sights to high-margin corporate or merchant banking, which have been the preferred avenues of expansion for U.S. banks but still active internationally.



David Gothard

"Not only do I think it's possible" for U.S. banks to consider full-service strategies on a global scale, says advertising executive Gary DePaolo. "I think it's desirable."

Mr. DePaolo, an executive vice president in New York at BBDO Worldwide Inc., the ad agency, typifies a new internationalist school of marketing thought. It holds not only that U.S. financial institutions should consider their reluctance to enter the global arena, but that they are capable of besting their potential European and Asian rivals when the competition gets fully under way.

Banking Isn't Shippable

This sort of thinking would seem radical only in banking. It has long been characteristic of industries that fully embraced multinationalism. Without such thinking, names like Coca-Cola, IBM, Kodak and McDonald's would not have become universal icons, engendering more and lasting revenues among the mass consumer public than do many governments.

Such corporations adopted the multinational marketing principles articulated by Harvard Business School professor Theodore Levitt in a landmark 1983 *Harvard Business Review* article, "The Globalization of Markets."

"Suddenly, no place and nobody is insulated from the alluring attractions of modernity," Mr. Levitt wrote.

"All parts of the world want the most advanced things that the most advanced sectors already have, and no longer will merely the same classes and types of goods and services satisfy them. They also want them in their most advanced states of functionality, reliability, durability, service levels, and price competitiveness."

Technology a Driving Force

Mr. Levitt cited McDonald's, Coca-Cola, and Pepsi-Cola as prime examples of globalized enterprise – having gained consumer loyalty by delivering consistent and desirable quality at reasonable prices. Financial services did not figure specifically in his essay, but technology did. He saw it as the driving force of the globalization and homogenization of markets, which are having a profound effect on financial businesses.

"Unlike a consumer product, financial services cannot simply be manufactured and shipped," said John Bennett, senior vice president of Visa U.S.A. and an architect of one of the few global marketing strategies in the banking industry.

"The services have to be controlled and delivered locally, respecting any social, cultural, and legal differences among countries," he said. Visa's approach was decentralized, with five separate, independent regional corporations that set their own marketing strategies under a common set of technical and design standards.

Visa Is Far Ahead

A joint venture of thousands of banks in almost 200 countries, Visa is far ahead of most individual institutions on the globalization curve. U.S. banks still have to prove they can operate successfully nationwide, let alone worldwide.

But BBDO's Mr. DePaolo and others contend there is room for U.S. banks in the international corporate firmament, if they have the right outlook.

"In financial services," said Mr. DePaolo, "the customer needs are basically the same everywhere – mortgages for housing, other types of loans, deposits, and transaction services. There are obviously going to be some differences in customs and cultures, but we are going to see more and more convergence and an increasing commonality."

An institution that can provide a better-quality service than its competitors will win out, and American institutions have the technology and expertise to deliver world-class quality.

"The key question is when," said Mr. DePaolo, who has worked on multinational advertising for Pepsi-Cola and, currently, Visa. Financial institutions in the U.S. have the wherewithal to get ahead internationally by projecting their desired images through advertising. But "advertising can get too far out in front of an institution's ability to deliver product against it," he warned.

For now, no U.S. bank is in danger of being "too far out in front," globally speaking.

Citicorp, the largest U.S. banking company and parent of Citibank, is the only one explicitly pursuing global leadership in both consumer and corporate businesses. American Express Co., which most bankers regard as a formidable competitor, is doing the same with a more diversified mix of financial services.

Competitive Help

Through their credit card associations – MasterCard and Visa – U.S. banks offer products that help them compete against giants like Citicorp and American Express. Meanwhile, they support international payment systems that have literally shrunk the world, making it almost as easy to deliver a service in Beijing as it is in Boston.

In financial services, these are virtually the only U.S. organizations with any sort of global foundation to build on. Studies by Landor Associates, a San Francisco-based consulting firm that specializes in corporate image and identity programs, have shown that American Express, MasterCard, and Visa are the only U.S. financial-service names that register as high with the general public as Kleenex, McDonald's, or Sears. They have lower standing in Europe and Japan, but at least they have standing.

CONSULTANTS ALAN TAYLOR, *(from left), Kenneth J. Roberts, and banker James Gibson talk about marketing challenges facing banks in the 1990s.*

Roundtable

Credibility Seen Top Marketing Challenge of 1990s

As the decade proceeds, banks will be facing a host of new marketing challenges.

The increasing globalization of financial markets, the demise of planned economies worldwide, the development of new technology to gather demographic information, and changes in advertising techniques and targets are but some of the changes the industry will confront. In addition, U.S. banks must decide whether to keep a tight focus, concentrating on the domestic market, or turn their eyes toward emerging markets in Eastern Europe and on the Pacific Rim.

Business writer Merri Rosenberg spoke with two marketing professionals and a banker in an attempt to size up the industry's plans and strategies.

The participants in this roundtable were: Alan Taylor, senior vice president of Landor Associates, a San Francisco-based consulting firm; Kenneth J. Roberts, a principal of the identity consulting firm Anspach Grossman Portugal, which is based in New York; and James Gibson, vice chairman of Union Bank, San Francisco.

In a wide-ranging question-and-answer session, the participants touched on current approaches to marketing and pitfalls banks might face down the road.

AMERICAN BANKER: What are the greatest marketing challenges that banks and financial services institutions face as we enter the 1990s?

ALAN TAYLOR: If the research that we've done is projectible, the single greatest issue confronting the industry is credibility – trying to improve the esteem and regard in which banks are held by consumers and businesses alike.

JAMES GIBSON: I think Mr. Taylor is right on target. Part of the issue of credibility is our own making, but part isn't. There's a lack of clear identification of the different segments – thrifts, credit unions, banks. It all seems to come out of the same pot, as far as the consumer is concerned. The savings and loans [bailout] will impact on income taxes, and people in general will resent the failures.

KEN ROBERTS: I think we also have to add in the problems with Third World debt as an issue for consumers.

AB: What can bankers do to combat these perceptions?

TAYLOR: Commercial banking must appeal to different constituencies – corporate and retail. The retail segment is best reached through personalized advertising geared towards transactions. But the advertising has to reassure consumers that size doesn't replace ingenuity or customer service.

AB: What role does advertising play, and what kinds of advertising have you found to be most effective?

GIBSON: Some of the TV advertising we've seen in our home market speaks to the issue of international debt. For example, one local institution has run spots saying they lend to Mary and Joe Smith's hardware store on Main Street, in contrast to the big banks' overseas loans.

ROBERTS: I tend to agree with what's been said, but I have to add that the kind of advertising that Mr. Gibson mentioned is potentially disastrous. Bringing up international issues can raise many more doubts than it solves.

By saying "We're safe, we're not a money center, we lend locally" you create strategic problems. That was one of the arguments the superregionals used, and now they're taking a hit as various real estate markets go soft. That kind of advertising undermines confidence in the entire industry.

AB: What steps should a bank take to ensure that branch employees – those who meet face to face with customers – are aware of the advertising message presented to customers and prospects?

TAYLOR: You have to communicate the message to employees. That will surpass the most fabulous advertising.

ROBERTS: I would agree that your own employees have to see and get the message of your own advertising, because they have to sell it.

AB: How can banks tailor their advertising message to specific ethnic groups, the fastest-growing segment of the population?

TAYLOR: Whether you're marketing to the mainstream or to special ethnic groups, your message should be pretty consistent as far as image and identity are concerned.

ROBERTS: I would agree with Alan that the overall message shouldn't change. Besides, most good opportunities for business from ethnic neighborhoods are currently centered in New York or Los Angeles, although there might be some favorable circumstances in Texas.

GIBSON: That's true, but there is a huge concentration of Hispanics in our area, and we must pay attention to that, as well as to areas with Asian concentrations. It has to be addressed, because it's formidable.

AB: Historically, banks have been relatively slow to exploit marketing opportunities. Are there any lessons banks could learn from other industries in the new global environment?

TAYLOR: I'd give a qualified yes to the first statement. Too many Americans remain undereducated about the banking industry. Bank customers can't be expected to know all about the strengths and acumen of financial institutions unless banks tell them.

Are there lessons banks can learn from those outside the industry? Of course, the answer is yes. If we take retail banking as a parity industry where there isn't much difference between you and the guy down the street, the idea is to create a preference, to make your company more memorable, more creative.

For example, take the airlines. By trial and error, they were able to individualize and position themselves for specific target markets.

AB: Have banks been slow to embrace marketing?

ROBERTS: Relative to other industries, banks have been slow. Their early efforts at marketing weren't successful, and some weren't able to accurately read the data they collected.

Moreover, they didn't always listen to customers and were relatively slow to adopt the posture that customers come first. They've been slow to recognize that they're in a parity category, and slow to create a real difference.

GIBSON: Banks have gone through several cycles. At one time, there was a big effort to get people to use automatic teller machines. Now, we've got to get people into branches so that we can talk to them.

At Union Bank, we've launched in-store banking in supermarkets that are open seven days a week. And we market differently to these customers, taking two to three minutes on just a few products.

Ultimately, the idea is to take banking to the people – wherever they are. For the industry, that's a switch. It used to be that banks were concerned with branch locations and getting people to come to them.

AB: Strong links between local banks and large multinational corporations is still a growth trend in this industry. In light of that, how should banks and other financial institutions communicate their identity?

TAYLOR: There'll always be regional banks that have well-established links with a local institution. For example, Mr. Gibson's bank, Union Bank, is owned by the Bank of Tokyo. The trick is to know where big is better.

GIBSON: That's an excellent point. Regarding our link with Bank of Tokyo, we tried to put two cultures together: Union Bank, which is in the middle market, and the Bank of Tokyo, which is a great international tie.

But we still have 165 consumer branches that we want people to know about. We tried to get television ads out to address that issue, but we stopped because they weren't effective. So we switched to print media that we could target toward the consumer middle market as well as the international business community.

AB: Do you make use of the Bank of Tokyo identity?

GIBSON: Only with selected customers. We use it with corporate customers in the Pacific Rim but say nothing about it in advertising in California or in consumer advertising.

TAYLOR: That's an interesting approach and suggests a parallel to the three-tier strategy used by Japanese and European banks.

On one level, advertising will promote expertise in world financing and lending aimed at governments and major financial institutions. Another level is the consumer banking area, where megabanks take advantage of the local banks' identity. In a third area, banks talk about their trading expertise in securitized lending, maximizing assets, and credit swaps.

This trend will enhance the esteem in which financial institutions are held. Two years ago, Landor [Associates] did a study to find out which were the best-regarded financial service entities. All three were credit card companies: American Express, MasterCard, and Visa.

In Japan, meanwhile, five of the best-regarded identities were banks. That's an incredible difference, and it's not just cultural. It touches on how banks have communicated with retail customers.

AB: Have any problems arisen because of the number of top banks that have new identities?

ROBERTS: Yes. There's been a loss of individual personality and ties to a community. As the legislation controlling banks broke down, banks became more remote from the consumer. A similar pattern doesn't exist in Japan.

GIBSON: I just attended a directors meeting of the American Bankers Association, and one guy there had recently completed his third merger in the past 18 months. These name changes are going on throughout the South and on the West Coast. People get to wondering, "Who owns this thing?" But there comes a point at which customers simply cease to care.

TAYLOR: We did a study of users of financial services – restricted to the U.S. and Britain – in which people were invited to make comments on mergers and acquisitions and the co-opting of a bank's identity by a bigger bank. For the most part, the results matched Mr. Gibson's perception.

Consumers usually don't care about who owns the bank. But if it's foreign-owned, that's often perceived as a negative.

GIBSON: Obviously, we deal with this issue every day. The key thing here is to make apparent to the consumer that this is still going to be the place for their business. Ultimately, we are a local bank. We're trying hard to identify with consumers and meet their needs.

AB: Are American banks well positioned for the upcoming consolidation of European markets in 1992?

ROBERTS: American bankers should be better positioned to enter Europe. But because of the lending experiences some banks had there five or six years ago, many money-center banks have withdrawn from Europe. They've scaled down considerably.

TAYLOR: Very few are properly prepared. But if they were, there would be some great opportunities.

For example, Chase is significantly stepping up its efforts in private banking. They're taking the intelligent route of influencing significant individuals, who can in turn influence their companies.

GIBSON: People forget that when the president of any major company goes home, he's a consumer. Inevitably, dealing with him on a personal level will have a trickle-down effect. □

American bankers should be better positioned to enter Europe. But because of the lending experiences some banks had there five or six years ago, many money-center banks . . . have scaled down considerably.

Banks Discover Market In Ethnic Minorities

By ELLEN MEMMELAAR

Coming soon to a bank near you: products and services targeted at specific ethnic groups.

Brought to you by: the industry that has pitched its products at baby boomers, older people, and other demographic segments.

Faced with flagging commercial operations, some banks are looking to boost their earnings with fee income from ethnically oriented products.

Others see such marketing innovations as an effective way to meet requirements now imposed by the Community Reinvestment Act, under which institutions are rated on their ability to meet the credit and banking needs of the nation's minority populations.

Groups Seen Underserved

But virtually all bankers point to the fact that ethnic groups generally are underbanked and underserved.

Ethnic market segmentation seems to be something everyone is pushing, said Alfred Dominick Jr., executive vice president and chief retail officer of Dallas-based Banc One Texas. It is the "hot button," he said.

"I don't think anyone is doing enough here," said James Grant, senior vice president and chief of consumer marketing at First National Bank of Chicago, a subsidiary of First Chicago Corp.

Profit Potential

Though the overall U.S. population is a transition from baby boom to baby bust, ethnic groups are still growing. This makes them one of the few expanding markets in the United States.

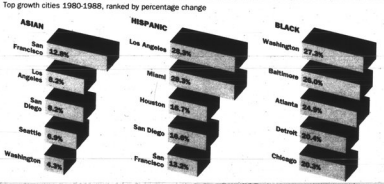
Potentially, they are also among the most profitable, some experts say.

For example, average household income for Asian-Americans is $23,000 a year, well above the national average, $19,900, according to *American Demographics*. Korean-Americans top the Asian-American category.

The figure for Hispanics is a below-average $14,700. But Michael Sullivan, a Charlotte, N.C.-based consultant, notes that 73% of Hispanics own a car and 20% say that they are planning to buy a house within the next year.

Emerging Ethnic Markets

Top growth cities 1980-1988, ranked by percentage change



Source: U.S. Department of Commerce, Bureau of the Census

The number of Asian-Americans rose 65% between 1980 and 1990, according to Census Bureau figures.

Uneven Distribution

The next-highest growth rate was for Hispanics, whose numbers surged 45% during the decade. The Hispanic population could grow an additional 55% by the year 2000, said Alfred Valdez, a consultant in Albuquerque, New Mexico.

But the spread of ethnic groups nationwide is uneven, with many pockets springing up, said Peter Morrison, a senior researcher at the Population Research Center, a division of the Rand Corp.

For example, he said, 74% of all Hispanics are in California, Texas, New York, and Florida, with many in Los Angeles, Miami, and Houston. About 49% of all Asian-Americans are in California, particularly San Francisco, and San Diego, and in Hawaii.

"Many are looking at the marketing potential and realizing that it is becoming a mosaic," Mr. Morrison said.

Focus on Hispanics

Many bank marketers are zeroing in on Hispanics because of the group's size and income and because Spanish-language media – including television stations, newspapers, and magazines – make the group easy to reach, said Les Dinkin, a Westport, Conn., consultant.

A leader in marketing to Hispanics is Dollar Dry Dock Savings Bank of New York. A committee of marketers and other bank employees has designed programs geared toward this group, said Linda Lockhart, vice president of marketing.

Ms. Lockhart said the first step for Dollar Dry Dock has been an attempt to overcome misconceptions that many Hispanics have about banks.

"They see banks as a big black hole that is taking their money," she said. "If they put it into a shoe box, they think that is much more tangible."

Wooing the Market

Dollar Dry Dock has programs designed to show Hispanics how to open and maintain checking accounts, Ms. Lockhart said.

The thrift also provides bilingual transaction slips, automated teller machines with Spanish-language instructions, and bilingual brochures and passbooks. Spanish-language advertisements run in local Hispanic publications.

Dollar Dry Dock also participates in local Hispanic festivals. At the annual New York-Pan American festival, a booth staffed with bank representatives answers questions and talks with passersby about employment opportunities at the bank.

Chicago Campaign

Another institution seeking to focus on Hispanics is First Chicago. It is slated to launch a marketing program in the fall that probably will come up to speed in 1991, officials said.

Literature and advertising are being translated into Spanish, said the bank's Mr. Grant. Spanish-language instructions may also be available on the bank's automated teller machines. Television and radio campaigns are in the works.

At least initially, First Chicago will also publicize the program with a "bankmobile" touring Hispanic neighborhoods.

"We realized that we've got a city of two million people and a ton of them don't speak English," Mr. Grant said.

"I think it's becoming increasingly evident that market share can be influenced by targeted marketing."

Laid-Back Service

Another effective way to reach Hispanics is to adopt a laid-back service style at bank branches, said Barry Deutsch, president of the Deutsch Consulting Corp., Coral Springs, Fla. Mr. Deutsch said market research he did for a Florida-based thrift revealed that Hispanics don't want to be hurried during banking transactions.

Using this information, Mr. Deutsch said, the thrift made several changes. Employees poured coffee for bank clients, and officers readjusted their schedules so they could spend more time with customers.

Asian-Americans also are beginning to draw attention from bank marketers.

One problem with marketing to them is the multiplicity of languages. But in the long run, marketing efforts will probably be rewarded, consultants say.

On average, Asian-Americans have the highest income of any demographic category in the na-

tion, said Michael Sullivan, a consultant based in Charlotte, N.C. In addition, a cultural emphasis on education makes them the most highly educated group, Mr. Sullivan said.

Moreover, parents start saving early for their children's college costs and are therefore excellent candidates for savings products, such as money market accounts or certificates of deposit.

Asian-Americans normally steer clear of investing their funds in equity or bond markets, Mr. Sullivan said. But many own their own businesses and so are excellent candidates for small-business loans.

Targeting an Asian-American subgroup, Peterson Bank in Chicago 10 years ago formed a department dedicated to the needs of Korean customers, said Karen Pearlman, director of marketing.

Banking in Korean

All the department's employees speak Korean, Peterson promotions come in Korean and English, and Pearson was the first bank in the country to install a bilingual Korean-American telephone banking service, Ms. Pearlman said.

Some of the bank's advertising is aimed at Koreans, and Peterson buys spots on a local ca-

Targeting an Asian-American subgroup, Peterson Bank in Chicago formed a department to serve Korean customers.

ble television station that runs blocks of Korean programming, she said.

Korean-speaking customers are avid users of mortgages, business loans, home equity lines of credit and savings plans, said Charles Oh, senior vice president at Peterson.

The bank is especially proud of it Rose Account. It works like a Christmas club and resembles similar programs found in Korea, Ms. Pearlman said. Esentially, it is a forced savings plan that breaks down a total savings goal into monthly installments.

About 99% of the account's customers are Korean, Mr. Oh said.

Other Groups

Other demographic and ethnic groups are bound to attract attention from banks soon, said Mr. Dominick of Banc One Texas. Eventually, bankers "will come to realize that we are ignoring other segments," he said.

After all, he reasoned, "Hispanics aren't the only potentially profitable group reachable through tailored products and directed advertising.

"One could say that the black segment and low- and middle-class segments, too, can be profitable." □

Environmental Banking: The Selling of the Green

By RANDY WELCH

As awareness of environmental concerns grows around the world, bank marketers are linking new campaigns to the "green" theme.

At least a dozen financial institutions are involved in environmental-based marketing campaigns. And as more pick up the cry, some thorny issues are arising, among them fears about possible conflicts of interest among banks that support environmental interest groups.

Passing Fancy?

Bank marketers disagree on whether the budding movement will continue to blossom or go the way of other passing fancies. Another question is whether the trend represents creativity in a time of crisis or simply opportunism.

On the latter issue, bankers involved in "green" programs are of a single mind.

"I think if you just pick something up that can be construed as a marketing ploy instead of an earnest desire to provide a benefit, people will see through that real quickly," says Ernie Malone, marketing manager for BancFlorida Federal Savings Bank, Naples.

Potential Problem

One potential problem for banks is avoiding the conflict of interest that would arise if an interest group funded by the bank later sued a commercial client of the bank. Moreover, simply adopting a green campaign can bring intense scrutiny from skeptics quick to point out the environmental sins of corporate America.

By and large, however, several banks report that their cam-

Continued from page 5A

paigns were not only good for external business but also changed internal operations as employee consciousness about the environment increased. Many say morale was boosted, internal recycling programs were begun (often saving money), use of plastic foam cups ended, and even loan policies were questioned and revised.

Helping to Identify

Strategically, a focused environmental campaign can help identify a bank with its marketing home base. For example, First National Bank of Stuart, Fla., a banking subsidiary of Seacoast Banking Corporation of Florida, has been running an advertising campaign since 1985 that focuses on local concerns such as manatees, sea turtles, and mangrove trees.

Kip Myers, president of the bank's advertising agency, Myers & Associates, says, "We wanted to identify the bank as part of the Treasure Coast [a strip on the Atlantic Coast, north of Palm Beach], rather than a statewide or regional bank."

Injuries to manatees began to receive front-page attention when the ads started running, Mr. Myers says, and reports of suspected turtle egg poaching have increased.

Good for Business

But the environment is not the only winner; the bank has gained considerable name recognition and business from the campaign. The bank now captures about 42% of loans and 36% of deposits in its target marketing area, despite increased competition. Before the campaign started, the bank only got 34%of the loans and deposits in the target area.

On the other side of the state, BancFlorida Federal, with $1.7 billion in assets, received a positive response to credit cards it introduced with a wildlife theme. The bank commissioned wildlife art renderings by two artists – a Florida panther by Richard Evans Younger and a great blue heron by Lee Cable – and then used the art on the card designs for Visa (the panther) and MasterCard (the heron).

Signed limited-edition prints of the artworks were also made available to cardholders for $25, of which $5 was given to the Florida Wildlife Federation. Print sales totaled about $25,000 in the first nine months of the program, according to Mr. Malone. He declined to say how many customers who signed up for the cards.

In other environment-conscious efforts, BancFlorida employees work on a telephone book recycling program and print bank publications on recycled paper. Also, they have banned plastic foam cups and collect aluminum cans for recycling.

'Sound' Banking Practices

At least five banks have run campaigns focusing on cleaning up particular bodies of water – enough, in fact, to give a whole new meaning to the phrase "sound banking practice." They are Puget Sound Bank of Tacoma, Wash; Fleet National Bank of Providence, R.I.; Maryland National Bank; First Constitution Bank of New Haven, Conn.; and Coastal Savings Bank of New London, Conn.

Puget Sound Bank, which has the most extensive of these programs, has played caretaker to its namesake since November 1987. The program began because the bank was expanding into the Seattle market and wanted to increase name recognition as well as build on previous community involvement, said marketing director Don Piercy.

2 Cents Per Transaction

It started with the bank's promise to donate two cents to the Puget Sound Fund for any automated teller machine transaction on its system. Then it added a scenic check series; part of the fee for the checkbooks goes into the fund. Finally, the bank promised to put $5 into the fund for each new checking account.

Today the fund's income stands at a whopping $200,000. ATM usage has doubled since the program began, and many new checking accounts have been opened.

But most important to the bank, 86% of the area residents indicated awareness of the Puget Sound name in a 1989 survey, up from only 27% awareness in 1987. According to another market survey in the area, Puget Sound is now second only to Seattle-based SeaFirst in unassisted recall and is first in aid awareness.

Proceeds from the fund have gone to tree plantings, educational brochures and seminars.

On the East Coast, meanwhile, First Constitution Bank of New Haven and Coastal Savings Bank of New London have embarked on efforts to clean up Long Island Sound.

Earmarked Funds

Coastal has a program that donates 0.1% of its growth in loans and deposits to environmental groups that work to clean up the sound.

"We are located on the Sound, and our marketplace is right on the sound," said advertising manager Elaine Mistretta. "And tourism generates a lot of income in most of our communities. Shortly after our campaign started, medical waste products began washing up on the shore. That brought much more awareness to the general public of the kind of things that might be happening."

First Constitution Bank of New Haven, meanwhile, donates $3 to Nature Conservancy or the Long Island Soundkeeper Fund whenever a new account is opened. Last year the bank raised $50,000, including $34,000 in contributions from First Constitution itself. The campaign includes advertising, events to raise public awareness, and a free recycling tips booklet for customers.

Of course, the greening of bank marketing has its critics, both within the banking community and outside. Some activist groups are adopting a skeptical, "show-me" stance toward corporate America's environmental overtures. And Amory Lovins, vice president and director of the Rocky Mountain Institute, a research and consulting firm in Snowmass, Colo., offers this caveat:

"If you make [marketing] claims, you invite scrutiny of your general environmental record across the board," Mr. Lovins said. "I have advised some very large banks with enormous real estate holdings that were generally not paying attention to the energy, water efficiency and other [environmental] impacts of the property they owned."

Getting a passable environmental report card, Mr. Lovins said, involves "not just one accomplishment for which you have bragging rights but a broadly based, conscientious effort."

The banking arena also has its share of skeptics, among them Providence-based Fleet National Bank. The bank ran a one-time campaign after a 1989 oil spill in Narragansett Bay that raised more than $50 million in certificates of deposit and $50,000 for a group called Save the Bay Inc.

But the management of Fleet, a subsidiary of Fleet/Norstar Financial Group, remains cool toward green marketing.

"The program was all right, but results were not enthusiastically higher than other campaigns have been, and there are no immediate plans to duplicate it," said Fleet's senior product manager Michael Fortin.

Getting a passable environmental report card involves "not just one accomplishment but a broadly based, conscientious effort."

Amory Lovins
Rocky Mountain Institute
Snowmass, Colo.

Maryland National, meanwhile, tested an affinity checking program last year that benefited the Chesapeake Bay Foundation. Daniel Finney, a spokesman for Maryland National, says its credit card subsidiary, though a national leader in affinity card marketing, has found that the response among environmentalist groups isn't significantly higher than that in other affinity groups it targets.

The experiment with affinity checking throughout the Chesapeake Bay Foundation has been discontinued, Mr. Finney says, because the bank found that perhaps half the Foundation members were already affiliated with Maryland National. □

Mr. Welch is a business writer based in Denver.

MANATEE POWER: *The rare mammal on the annual report helps Seacoast Banking Corporation of Florida establish its identity in the community.*

High-Tech Consultants Help with Avalanche of Data

By SHIMON-CRAIG VAN COLLIE

In search of a competitive edge, bank marketers are counting heavily on technology to help them gather information and refine marketing strategies at home and abroad.

"Our goal is to get 100% of our customers' business," said John Blissenbach, senior research manager for Minneapolis-based NorWest Corp., the 11-state, $26.7 billion community banking concern. "There's a tremendous amount of information that we already have, but we're not putting it to best use."

A host of companies are eager to provide solutions to this dilemma. Some specialize in creating software systems for bankers; others are only consultants. But all are working to provide banks with demographic data that can be used to refine strategic focus.

Targeting Is Tightened

With such information in hand, experts say, bank marketers are better equipped to target specific audiences – even individual households – for new or expanded services.

"We can show banks where the customers are, why they're there, how much money they make, their propensity to buy certain products and much more information," said Joseph Nicholson of Atlas Strategic Mapping in San Jose, Calif.

In the international arena, San Francisco-based Bank of America uses technology to focus on businesses, rather than individuals.

"We can show banks where the customers are, why they're there, how much money they make, their propensity to buy certain products and much more."

Joseph Nicholson
Atlas Strategic Mapping Inc.
San Jose, Calif.

"We have fewer customers to keep track of," says Laura Pilz, vice president of marketing and advertising for Bank of America's world banking division. "The challenge we face is accurately marketing our business to our customers."

Toward that end, the bank relies on a data base that lists the business of current customers and identifies opportunities for cross-selling.

Input Is International

Bank of America processes data through a worldwide transaction system, called the International Banking System. Data gathered in IBS is processed into so-called management information systems reports, which in turn are used for marketing.

"From MIS reports," Ms. Pilz said, "we can get a picture of our marketing penetration."

Many software vendors also see opportunities opening in the international market, especially with the formation of economic blocks in Europe and Asia, and the possibility of substantial economic growth in Eastern Europe.

"Foreign banks haven't had to compete for the consumer's attention like American banks have," said Michael Newes of Okra.

But soon, he said, "We'll see French banks vying for consumers in Belgium and Germany, and vice versa. MCIFs will become more attractive to foreign banks with a variety of products that can be sold over time to the same customers."

On the home front, meanwhile, banks are moving to target individual customers. For example, NorWest recently signed on with Customer Insights, a Denver, Colo., software company that takes customer information files, or CIFs, from the bank's data base and links these accounts by household. At that point, the manipulated data base can identify which customers are using any of the bank's services. More importantly, Mr. Blissenbach said, the data base also points out opportunities for cross-selling.

Uses of the Data

CIFs are most useful when they can be broken down to show balance information by account, said Michael Newes, head of marketing and communications for Okra Marketing Corp. in Tampa, Fla. A marketing CIF, or MCIF, can take customer information from different hardware and software applications and combine it into a single data base.

Some software also performs integrated profitability options. Using the Okra system, bank marketers can track the cost factors of different types of accounts – for example, the costs of offering and processing a loan

or a checking account. Using market penetration data, the software also can price services and produce a picture of each household's accounts and total net worth.

Reports generated by the companies that provide MCIFs can be used to conduct direct-mail campaigns. The results then can be tracked and re-entered into the data base for further analysis and updating.

MCIFs must be updated to assure accuracy, marketing consultants say. Toward that end, banks usually are given several options. In some cases, outside companies can act as a service vendor and do the updating. Alternately, they will sell customers a package that can be used within the bank to update the files.

Graphics Are Used

Increasingly, banks also are seeking to translate the data generated by MCIFs into graphic presentations. Some computer mapping companies offer software that replaces time-consuming hand-drawing techniques. The maps are generated by using a spreadsheet software package in conjunction with a personal computer.

"Our goal is to get 100% of our customers' business. There's a tremendous amount of information that we already have, but we're not putting it to best use."

John Blasenbeck
Senior research manager
Norwest Corp.
Minneapolis

"Mapping gives you the ability to analyze spatially," says Joe Nicholson of Atlas Strategic Mapping. "We can put up to 250 layers of data in one geographical area."

In one popular application, banks are using maps to determine strategies for acquisitions or building branches in new locations. Area Locations Systems of Northridge, Calif., has developed a software product called Location Analysis and Network Design, or Land, which runs on IBM-compatible PCs. David Hornbeck, ALS president, says the company's data base currently contains every branch of every bank in California, along with those in Chicago, New York, Washington, D.C., Baltimore, and the state of Nevada.

FDIC Data Are Outdated

"You can get your data from the Federal Deposit Insurance Corp.," Mr. Hornbeck said, "but they're out of date."

The methods used to create ALS's primary data base are decidedly low-tech. Company staffers drive the streets filling out handwritten location evaluations, noting parking, access, egress, and other elements.

Once entered into the ALS data base, the information is ready to be mapped. Clients can then perform demographic analyses to see if an acquisition or a new branch site makes sense.

"The collection of data is relatively unsexy," says Howard L. Lax, director of marketing for the financial services division of Claritas Corp., a marketing research and consulting concern in Washington, D.C.

In determining a marketing strategy for a bank, Claritas compiles census data but also uses other statistics, including motor vehicle registrations and magazine subscriptions. The company compiles this data on a compact disk in the form of a reporting and mapping system compatible with most PCs.

Segmentation Available

The system can interface with other data bases and with market segmentation systems that group people by either their use of financial services or by geographic area.

The use of geographic data bases also could play a major role in banks' compliance with the Community Reinvestment Act, which took effect on July 1. Under one facet of the legislation, the effectiveness of banks in meeting the credit needs of the communities they serve will be assigned a rating. Among the factors that examiners will consider are a the distribution of a bank's loans and its commitment to community development.

"With the geographic component of the CRA," says Valerie Fawzi of Strategic Mapping, "banks have realized that they need a better idea of what's going on." □

Better Marketing Through Mapping
Computer graphics can be used to target demographic groups

Our Mission Is To Create Value For You.

Charles E. Exley, Jr.
Chairman and Chief Executive Officer

David L. Clark
Senior Vice President
Integrated Systems Group

Raymond T. Wallis
Vice President
Financial Systems Division
United States Group

Here's What That Means And Why It Matters.

We measure value by our ability to help you achieve success with your customers. To accomplish this end, we need to provide you with complete, innovative solutions that increase customer service while improving your operational productivity.

These solutions have been developed under an NCR strategy called Open, Cooperative Computing. The cornerstone of this strategy is an open architecture, based on industry standards, that allows you to integrate the NCR products you need for success today... while assuring an open, multi-vendor environment that protects your investment for the future.

For example, our open Financial Tower System has revolutionized teller and platform productivity. Our Integrated Retail Delivery Systems will bring a new perspective to customer service... and branch performance. NCR Self-Service Systems will give your customers more depth in the services they can perform themselves. In addition, NCR Imaging Systems for Item and Document Management will provide you with powerful productivity weapons to use in the competitive decade of the '90s.

Open, Cooperative Computing is a strategy that will reshape the future of financial technology. The full benefits of this strategy can give you and your people transparent access to the enterprise-wide resources needed to effectively manage your growth into the next century. If you would like to learn more about the company that can create value for you and your customers, phone 1-800-CALL NCR and ask for the "Open, Cooperative Computing" brochure.

Focus on International Arena

Psst! Bankers!

Want the lowdown on worldwide markets?

Need to know the legal ramifications of serving international customers?

Thinking about testing the water in Europe, but puzzled about particulars of the 1992 integration of EC markets?

These and other issues are addressed in the following book abstracts, compiled by *American Banker's* Rita Kay Meyer.

The authors sketch blueprints for success in the global marketplace, in the process addressing a myriad of topics – from technology to taxes.

Global Financial Services: Strategies for Building Competitive Strengths in International Commercial and Investment Banking
By Roy C. Smith, Ingo Walter
Harper & Row
New York, 1990

The authors, experts in international finance from the Stern School of Business, New York University, describe methods to assess market share potential and future international growth.

Other topics they address include:

- International commercial banking.
- Project financing.
- Legal dimensions of global commercial banking.
- Eurobonds and other international debt issues.
- International private banking services.

Comparative Economic Systems
By Richard L. Carson
M.E. Sharpe Inc.
New York, 1990

Countries can have an effect on financial markets by adjusting industrial policies, Mr. Carson asserts.

The book includes analyses of:

- Planning in Soviet-type economies and market economies.
- Expansion of the public sector in market economies.
- The organization of foreign trade.
- Small-scale enterprises.

The Competitive Advantage of Nations
By Michael E. Porter
The Free Press
New York, 1990

Mr. Porter tells how companies and governments can tap and extend their nation's advantages in the international arena.

He discusses business strategies and national economic policies in Britain, Denmark, Germany, Italy, Japan, Korea, Singapore, Sweden, Switzerland, and the United States.

Singled out for deeper examination are the German printing press industry, the medical equipment industry in the United States, and the Japanese robotics industry.

The International Businesswoman of the 1990s: A Guide to Success in the Global Marketplace
By Marlene L. Rossman
Praeger
New York, 1990

Ms. Rossman, a specialist in international business and marketing, offers strategies for success in the United States, Canada, Europe, Asia, Latin America, Africa, and the Middle East.

In addition to telling how nine women succeeded in the global marketplace, she points out opportunities for women in businesses of the future ranging from family-owned companies to global conglomerates. □

Limits at Home Hinder U.S. Banks Abroad

By CYNTHIA GLASSMAN
Special to the American Banker

The good news is that U.S. institutions have what it takes to be winners in the global arena – when they are allowed to play.

The bad news is that they are not allowed to play in all the games.

As things now stand, U.S. banks are not positioned to play a major role in overseas competition except as specialty players.

Strengths of U.S. Banks

But the strength of U.S. banks as specialty players is impressive.

U.S. banks have become accustomed to diverse and changing environments. The deregulation of the 1980s created a competitive climate and honed managements' capacity to recognize emerging market needs and bring products to market quickly.

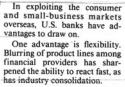
As intrastate and interstate banking barriers have fallen, bank managements have learned to organize their business to serve differing markets. U.S. banks also have exploited opportunities within a changing legal and regulatory framework. They have been at the forefront of developing innovative products tailored to their customers' needs.

In short, they have rapidly developed the key skills to be successful global participants.

Understanding Consumers

Moreover, they understand consumer behavior and how it affects the need for and use of financial products. They have learned the importance of information and technology in managing their consumer and corporate business. This has given them the flexibility to market and merchandise to many customer segments, enter new product and geographic markets, and compete against a variety of financial service providers.

U.S. banks know how to serve the most consumer-oriented society in the world, as well as one of the most entrepreneurial. This knowledge puts them in a strong position to compete for consumer and small-business customers.



In exploiting the consumer and small-business markets overseas, U.S. banks have advantages to draw on.

One advantage is flexibility. Blurring of product lines among financial providers has sharpened the ability to react fast, as has industry consolidation.

U.S. bank managements have the capacity to understand change and its affect on the production and distribution of products and on customers' needs and expectations. U.S. managers also understand the steps and the organization needed to take advantage of change. Most important, they have established processes to manage change.

Another competitive advantage is the degree to which U.S. banks have applied technology to improve efficiency throughout their organizations.

U.S. bank technology is some of the most sophisticated in the world. It has facilitated large networks of automated teller machines, 24-hour banking, nonsite banking, and superior credit card operations. This technological skill is a strong suit in European markets, where there are more branches per capita than in the United States but where ATMs and credit card use are still developing and growing fast.

Prowess in Marketing

Furthermore, U.S. banks have demonstrated marketing prowess. They know how to use public and proprietary information to target customer segments and to develop products. Their ability to understand and market to a heterogeneous customer base will be especially valuable in the integrating European Community. And knowledge of consumer-oriented markets will be an asset in such countries as Japan, where consumerism is new.

Facility with a variety of techniques and technologies to reach their targeted markets will stand U.S. banks in good stead in countries with different communication and media systems. All these strengths at home give the U.S. banks a competitive edge in spotting and acting on changes overseas.

World Leaders

Finally, U.S. banks are reputedly world leaders in a wide range of activities, including:

- Tailoring and merchandising products to meet customers' needs, from simple loan and deposit products for consumers to financial engineering for corporations.
- Pioneering the development of financial instruments and creative financing.
- Managing risk with sophisticated products.
- Creating sales-oriented data bases.
- Creating a sales and service culture.

One of the major strengths U.S. banks can leverage in overseas markets is a fresh assessment – based on product development, production, distribution, research, and marketing skills – of financial service needs and opportunities.

But giving U.S. banks the ammunition they need to be true global competitors means putting "full" back into "full-service banking."

This is the bad news.

Competitive Handicap

U.S. banks ability to compete overseas is handicapped by outdated restrictions on their power to develop and offer a full range of financial products at home.

CYNTHIA GLASSMAN *sees U.S. banks competing overseas only as specialty players.*

Product restrictions, notably on insurance and securities activities, will make it hard for U.S. banking organizations to be broad-based competitors in overseas markets.

Other countries have recognized that banking is only part of a much broader financial services industry. In much of Europe, universal banking, which combines commercial and investment banking activities, is already permitted. Under the single banking license that takes effect in the integrated European Community of 1992, universal banking will be the norm.

Insurance, too, is permitted to bank affiliates in many EC countries. The combination bank-securities-insurance company has become common in the EC, where providers of financial services seek to expand their customer bases, make more effective use of existing distribution systems, and leverage their strengths and expertise.

Japan, too, is in the process of weighing expansion of bank activities. It is likely to eliminate restrictions soon.

Unfortunately, the United States lags behind the rest of the world in recognizing the realities of the global financial services marketplace.

Home Team Advantage

Technically, U.S. banks could build securities and insurance business overseas, where they are not subject to the same restrictions as at home. But that would mean building these businesses outside their home base, without the "home team" advantage. And, without the ability to build critical mass and expertise in their home markets, banks will find it hard to attract such business abroad, especially since banking in major industrialized countries tends to be dominated by a few large well-established institutions. U.S. banks are caught in a "Catch-22," with the result that, in overseas markets for activities such as equity underwriting, they will be competing as underdogs.

They will be further impeded by regulatory burdens that are heavier in the U.S. than overseas, such as non-interest bearing reserves and deposit insurance premiums, which place cost burdens on our banks not faced by most of their foreign competitors. These regulatory burdens make it difficult for our institutions to have consistent and broad-based global strategies.

In conclusion, U.S. banks are strong but limited in the global arena. Because they are used to competition, they can compete well as specialty players capable of making inroads against even dominant competitors. □

HELPING PEOPLE FOR NEARLY A CENTURY

For nearly 100 years, Ashikaga Bank has been motivated by the desire to better the quality of life in the communities it serves. Ashikaga Bank is fulfilling this commitment by providing the professional commercial banking services required by individuals and businesses in these communities, as cost effectively and efficiently as possible. Ashikaga Bank--We're waiting to help you.

A Puzzler for British Banks: What's in a Name?

By JOHN EVANS

Many European banks are able to offer near "one-stop" shopping in consumer banking products. Partly because of recently won securities powers, for example, banks in Britain are allowed to offer a whole range of investment-related services, including mutual funds, pensions, life insurance, and mortgages.

But clinging to every silver lining there's a dark cloud – in this case the problem of how to effectively market such a comprehensive array of products. The issue has sparked a debate in Britain on whether financial concerns would do best to promote themselves or the individual products they create.

Ford Approach or BMW?

Frank Abramson, marketing director of Britain's TSB Bank PLC, describes the conundrum by drawing a parallel with the auto industry. In advertising its products, Ford Motor Corp. chooses to emphasize the name of individual models, such as Taurus or Escort, he said. By contrast, tony German makers including BMW and Daimler-Benz prefer to project an overall image.

Traditionally, Mr. Abramson notes, banks have chosen to use "the BMW approach and publicize the name of the bank rather than individual products."

But that strategy is no longer universal.

Breaking with Tradition

Midland Bank PLC, Britain's third-largest, two years ago broke with tradition, setting a cat among the banking pigeons by launching checking accounts under various brand names.

Since then, Midland has been avidly promoting accounts with names such as "Orchard" and "Meridian."

Increased Competition

Industry watchers say the move was a response to increasing competition in Britain's financial services that has prompted banks to offer higher interest on checking accounts in hopes of attracting more customers.

Last year, Midland also launched First Direct, Britain's first 24-hour telephone banking service, without an effort to link the product with the parent's name.

Most Maintain Tradition

But the majority of British banks, including TSB, haven't followed what some call Midland's "big gamble." Instead, they are following the more conventional approach, marketing themselves and not their products.

"We talk about [products] in the banks, but nobody else does," Mr. Abramson said.

"Consumers will talk about [individual] cars, soap powders, beers," but they don't talk about individual financial services.

New Regulation

Some experts say banks also are choosing the total-marketing approach because of a tough new regulation in Britain that requires all financial-services suppliers to state clearly whether the products they offer are created by the company itself or an outside concern.

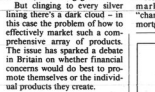
In most cases, banks choose not to spend time and effort marketing products developed by others, marketing professionals say.

But New York-based Chase Manhattan Bank, which has some 200,000 Visa credit card customers in Britain, is bucking the trend.

Chase Bucks the Trend

The bank has established Chase Manhattan Financial Services, an independent service that depends on a team of brokers and account handlers. CMFS helps clients find mortgage loans, insurance policies, and investment vehicles even if the best fit is a product offered by an outside concern.

The service is "rare among major distributors," a Chase spokesman said. □



Lloyds Bank

CORPORATE IDENTITY *for Lloyds Bank is symbolized by its black stallion logo. Some U.K. banks are shifting focus to product names.*

1989
Highlights of the year

The ordinary and extraordinary shareholders' meetings of Banca Popolare di Milano, were held on 28th April 1990 and chaired by Dott. Piero Schlesinger (1,476 shareholders were present). During the extraordinary meeting, a number of changes to the Bank's Statutes were approved. Its Report and Accounts for the year ended 31st December 1989 (the 124th since the Bank's establishment) were approved by an overwhelming majority during the ordinary meeting.

As far as banking services are concerned, the positive results for the year show:

Customer deposits	ITL 12,040.1 billion	+17.6%
Total deposits (including banks)	ITL 20,425.2 billion	+20.4%
Funds administered (total deposits & securities held for banks and customers)	ITL 35,598.3 billion	+18.4%
Loans and advances	ITL 8,084.5 billion	+12.4%

During 1989, the notable increase in the Bank's operations continued in parallel with a widespread expansion to the territory it serves which resulted from the consolidation of Banca Popolare di Apricena (with 25 branches, mostly in Puglia). This expansion followed a similar merger with Banca Popolare di Bologna e Ferrara which took place in 1988.

The Bank also strengthened its international presence with the opening of the London Branch, situated in the heart of the City of London, and with the relocation of the New York Branch to new and more prestigious offices.

The first part of an increase to the share capital of the Bank was conducted very satisfactorily, producing an inflow of ITL 134 billion. To this amount, must be added ITL 66 billion resulting from the conversion into shares of warrants issued in 1989.

As a result of the increase in share capital and the allocation to reserves approved during the shareholders' meeting, Banca Popolare di Milano's net worth increased to ITL 1,247.5 billion (+20.5%).

A rise in income coupled with profits derived from the sale of minority participations (in particular the sale of the Bank's shareholding in Nuovo Banco Ambrosiano), produced an increase in the Bank's internal cashflow.

In fact, after having provided for extraordinary losses realised during the year (of which ITL 90.9 billion related to Bipiemme Leasing), a profit before tax of ITL 283.5 billion was recorded. After the deduction of taxes, a 32.1% jump in net profit to ITL 168 billion was achieved.

The shareholders' meeting, while retaining ITL 77 billion for the Bank's reserves, also approved the distribution of ITL 66.5 billion from profits to pay a dividend of ITL 460 per share to the 144.6 million shares in issue (as against the ITL 525 distributed to each of the issued 104.3 million shares in the previous year).

Cashing In on Visitors from Abroad

By BRAD EDMONDSON

Tourism is booming in the U.S.

International visitors accounted for 11% of our $350 billion travel industry in 1989, up from 7% in 1985, according to the U.S. Travel and Tourism Administration. A full two-thirds of travelers here come from border countries Canada (15.4 million visitors in 1989) and Mexico (9.3 million).

These tourists, and others who cross the border, are proving to be an ever-growing market for U.S. banks. Partly because deposits in U.S. banks are insured up to $100,000 by the Federal Deposit Insurance Corp., individuals, partnerships and corporations based in other countries have $13.8 billion in branches of foreign banks on U.S. soil in 1990, up from $6.4 billion in 1985, according to the Federal Reserve.

Most visitors need to exchange their currency for U.S. dollars. The profit margin for this service is minimal; most banks report that the cost of procuring foreign currency eats up all revenues. However, savvy bank marketers are using currency exchange to "hook" foreigners into other financial services.

"From commercial lending to mortgages for second homes, from currency exchange to savings, foreigners are excellent customers," says Robert M. Gillis, president of chief executive officer of Franklin-Lamoille Bank in St. Albans, Vt.

Canada Border Business

Banks in St. Albans, just 15 miles from the Canadian border, are among those riding the wave of foreign activity. Residents of Quebec, the Canadian province adjacent to Vermont, account for 15% to 20% of the market at local banks.

Canadians are attracted to U.S.-based savings accounts, experts say, partly because their banks don't offer depositors' insurance.

St. Albans' banks are taking advantage of this insurance gap in various ways. Franklin-Lamoille, for example, recently sent a direct-mail piece to residents of Montreal. The mailing mentioned the insurance issue, but also offered a more favorable currency exchange rate to any Canadian purchasing a six-month certificate of deposit.

Cultivating Snowbirds

Florida banks, too, are anxious to cash in on business from our neighbor to the north: An estimated 2.2 million Canadians visited the state in 1989, said Bill Leeder, general manager of the weekly, Auburndale, Fla.-based *Canada News*. Mr. Leeder said some 200,000 to 300,000 of these are "snowbirds," people who come to the state around November – when temperatures begin to drop up North – and leave in April or May.

Many of the Canadian snowbirds are relatively well-to-do, owning second homes in Florida: More than one-quarter of *Canada News* subscribers have annual incomes of more than $40,000 a year, even though three-quarters are retired, Mr. Leeder said. *Canada News* subscribers spend an average of $1,200 a month in the Sunshine State, he said.

Here again, currency exchange is the key to attracting Canadian business. One institution using that approach is Orlando-based SunBank, which advertises itself as "The Bank of Canadians' Choice."

"We advertised in *Canada News* with a coupon that offered Canadians a better currency exchange rate, since money exchange usually provides the initial contact," says Joan Crain, senior market manager. "We hope that they will then put some of those dollars into an account with us."

SunBank has advertised on "Canada Calling," an Orlando-based radio program, sponsored a Canadian Professional Golfers' Association tournament in Brevard County, and underwritten an Orlando-area luncheon appearance by Canadian hockey star Bobby Hull. The bank also donates prizes at meetings of local Canadian organizations in Florida.

The effort seems to be working, Ms. Crain said, with business from Canadians rising significantly.

SunBank is not the only Florida bank that targets Canadians. Florida's largest bank has also noticed this group.

"We have a Snowbird Banking program that they find appealing," says Ben Turnbull, senior vice president for international operations at Barnett Banks in Miami.

The Snowbird Banking program – which also is marketed to visitors from other U.S. states – holds a Florida account open with no service charges while a temporary resident is gone. Barnett also mails monthly statements to the snowbird's northern address.

From South of the Border

Meanwhile, Mexican tourists are also an attractive revenue source for U.S. banks. Many have investments north of the border, and the peso's chronic instability makes saving in the U.S. doubly attractive.

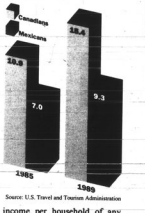
Firm data on Mexican investments in banks here isn't available, partly because of legal considerations. Earlier this year, the U.S. and Mexico agreed to share tax records in an effort to catch tax evaders who stash money abroad.

"This is an extremely sensitive area," says one borderland banker, who asked not to be identified. "If you're a Mexican citizen with a CD in an American bank, now your government can know about it. And a lot of our customers are very, very nervous about that."

Nevertheless, Mexican activity in U.S. banks is increasing. Nowhere is that activity more evident than in Laredo, Tex.

In 1988, the latest year for which statistics are available, the city had the lowest median income per household of any U.S. metropolitan area, less than $14,000. But Laredo is also home to Texas' largest independent bank, International Bank of Commerce (IBC), and an estimated 35% of all legal U.S.-Mexico border traffic passes through the town. As a result, in 1988 Webb County, which contains the Laredo metropolitan area, had more bank assets per resident – $20,000 – than any other Texas county.

Boom in Tourism
Canadian and Mexican visitors, in millions



Source: U.S. Travel and Tourism Administration

Very Profitable

Border banking is a little-understood but profitable niche, says Jerry Schwebel, vice-president of IBC. In 25 years, IBC has become the largest bank with headquarters along the U.S.-Mexico border, with assets totaling $1.6 billion.

Mr. Schwebel scoffs at the notion that the a substantial portion of border banks' deposits come from illegal sources such as drug money or tax evasion.

"Condemning us because we have Mexican depositors is like condemning a Houston-based bank because it has depositors from Houston's suburbs. Our depositors come to the United States on a weekly or daily basis to do their shopping, recreation, and business."

When the new United States-/Mexico tax agreement was announced, "the expectation was disaster," says Schwebel. These expectations were fueled by the Mexican press, which has always been critical of investors who put their money in the United States, he says. "But the impact was not as severe as we had expected," he continues. "Once the Mexican depositors really understood what the new law was about, the vast majority of them realized that they had nothing to fear."

In the long run, a person's citizenship may mean less than their bank affiliation. That's because technological advances will soon make it easier for United States banks to serve foreign visitors. Sunbank's Crain says that some international visitors can already withdraw U.S. dollars from ATMs in Florida and have funds withdrawn from their accounts in Canada. And Citibank, which has offices in 47 countries, is working to give each depositor full access to its services in any office. □

TURN AFRICAN TRADE FINANCE INTO SMOOTH SAILING

UBA

United Bank for Africa
New York

UBA New York is a direct link between the United States and Nigeria, offering expert trade finance services to both the U.S. and African markets.

United Bank for Africa, with headquarters in Lagos and with more than 180 branches, is the leading bank of Nigeria and the African subregion. Its strong ownership structure is based on joint shareholding with a consortium of five major international banks, including Banque Nationale de Paris and Bankers Trust Company.

UBA New York was opened in 1984 to provide banking services for U.S. companies doing business in Africa. Our efficient staff and established operation ensure successful business ventures on both sides of the globe.

TRADE FINANCING: Letters of Credit • Pre-export Financing • Government-sponsored Export Financing • Trust Receipt Financing • Trade Collections • Acceptance Financing
CORRESPONDENT BANKING: Advised Letters of Credit • Confirmation of Letters of Credit • Negotiation of Letters of Credit • Interbank Deposits • Funds Transfer: Domestic and International Paying and Receiving

UBA NEW YORK: A FULL-SERVICE INTERNATIONAL BANK
551 Madison Avenue, New York, NY 10022 (212) 308-7222 FAX (212) 688-0870
Contact: Mr. Ade Coker, General Manager
Grand Cayman Island Branch: Registered address, P.O. Box 694, Georgetown, Grand Cayman Island; Correspondence address, c/o New York Branch
London Representative Office: Plantation House, 1-8 Mincing Lane, London, E.C. 3

Will the Rush to Europe Be Profitable?

By ROBERT N. GOGEL
Special to the American Banker

HERD INSTINCT *of banks is described by Robert N. Gogel.*

The herd instinct, well established among U.S. financial institutions, has now crossed the Atlantic and is running rampant in Europe. Cross-border mergers and acquisitions, as well as the creation of de novo operations – or the rehabilitation of dormant ones, have become the vogue for virtually all European and many U.S. institutions.

The movement is driven in part by the European Community's movement toward economic integration. The central idea most often is to buy some form of foothold.

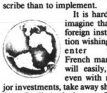
"Bigger is better," "pan-European" and "sensitive to client needs" have become the justifying slogans for these expansion strategies. The slogans are often accompanied by a certain degree of irrational behavior, as can be seen from some of the premiums being paid in the marketplace.

What About Profit?

The notion of profitability rarely enters the discussion. When it does, the "strategic" imperatives often outweigh the notions of profit or return to shareholders.

What makes the arrival of the herd even more surprising is that the banking and insurance industries in each country have existed for many years before the development of the European Community.

The two strategies pursued most commonly are de novo entry and acquisition of a local institution. Both are easier to describe than to implement.



It is hard to imagine that a foreign institution wishing to enter the French market will easily, or even with major investments, take away share from Credit Agricole, one of the real pros in marketing.

Yet the response by many foreign institutions looking at the French market is that they will focus on "certain profitable niches" that the competition overlook. Sorry, local institutions are just not that naive to leave profitable niches to new entrants.

For that foreign entrant to merge successfully or to make a useful acquisition, the challenge is equally difficult. It assumes that cultural, linguistic, and managerial differences will be easily overcome.

New European regulations for financial institutions are essentially completed. In light of these changes, how will American institutions, powerful and eager as they may be, do any better than their European counterparts?

The changes in competitive rules will spur even greater competition, and seriously threaten or even penalize American institutions. In fact, it should be clear by now that all that 1992 will bring – deregulation of markets and a barrier-free Europe – was not designed with U.S. institutions in mind.

Nor does the prospect of the single market hold all the promise some European institutions predict.

Unfortunately, the market for retail and wholesale financial services in Europe, for the most part, is already quite saturated. The wise European financial institutions will strengthen their stronghold in their existing domestic segments.

Setting a Course

The irking question remains, and this is precisely the sticking point: how exactly does a self-respecting and optimistic financial institution get its act together over the next 18 months?

A careful, thoroughly analyzed reaction may prove too slow, but it may also serve to confirm the worth of be better-safe-than-sorry strategies. A swift, pragmatic response, often leading to higher-value returns, may, if rashly conducted and in inadequate circumstances, prove fatal and sink an overly hasty institution before it has had time to cross the Atlantic.

For those already here, the burden of a too-rapid expansion may be managerially impossible to handle. □

Banks Hone Strategies for Eastern Europe

By CHARLES McHUGH La FOLLETTE
Special to the American Banker

As international finance becomes increasingly competitive, money-center banks are finding it essential to have a global presence.

Recent political developments in Eastern Europe make this region the latest battleground in which commercial banks can compete. Many companies react to the opportunities in these countries will provide clues about which banks will win the global marketing challenge of the economic order that follows the cold war.

A Potentially Large Market

Eastern Europe provides markets for three areas of bank business:

▪ Advisory services. Many banks have advised commercial companies interested in joint ventures. Fees in this business have been modest as joint ventures in Eastern Europe have skyrocketed. The Soviet Union has over 1,000 joint ventures with Western firms today; it only had 162 in 1988. Hungary has 600 joint ventures now, but only 150 two years ago. Poland has gone from 26 joint ventures to over 400. Banks have been intimately involved as big corporate accountants like France's Pechiney, Japan's Suzuki, Korea's Daewoo Electronics, the United States' Control Data and Germany's Siemens have lead the surge.

▪ Commercial lending. Commercial lending in Eastern Europe is also a big business. Bank for International Settlements showed a 40% increase in loans to Eastern European countries in the last year – from $5.7 billion of loans in 1988 to $8.3 billion at yearend 1989. Figures will probably grow as market-oriented reforms take hold in these countries.

▪ Retail banking. With a population of 440 million (almost twice the size of the United States) and a combined GNP of $3.5 trillion in 1989 (90% the size of West Germany's) the region could become a lucrative retail market. Though it is premature to address the retail market, several companies are designing strategies to approach it once the region forms a capital base.

Long-Term Strategy

In vying for these three markets, commercial banks will weal their strengths in long-term strategic planning.

The most creative banks are not simply taking a reading of the region's economy or targeting the most export-oriented businesses. Instead, they are laying the groundwork with strategies that emphasize compensating for structural weaknesses in the region.

For instance, West Germany's A.G. Commerzbank is exporting prefabricated bank buildings to East Germany equipped with satellite-accessing telephone lines and facsimile lines. These buildings will give the bank a tremendous competitive advantage over other banks in a region where there are only 15 phones per 100 people (and few of these phones can make international calls).

In addition, banks are looking at ways to train managers in Eastern Europe. Eastern European countries lack both senior level and middle-management personnel.

"There is no history of Western-style banking in the area," explains Francy Oppenheimer, a lawyer specializing in international banking and finance. "Many of the managers currently in place do not know what the basic concepts of banking mean. And they are certainly not informed of the latest management methods." As a result, several banks are thinking about Western-style business schools in Eastern Europe to teach basic business concepts.

Prof. Roman Glowacki, the head of Marketing at the Warsaw School of Management, is setting up an executive education program with the help of U.S. business schools. It is expected to become a key training ground for middle managers in Eastern European banks.

In addition, "some banks are

CHARLES McHUGH La FOLLETTE *predicts battle lines will soon be drawn in Eastern Europe*

Continued from page 15A

bringing in outside consultants to train their newer hires in Eastern Europe," says Paul Ohana, president of the training firm Panel France S.A.

Bringing in top management is an especially difficult problem that banks are addressing.

"Firms are looking for individuals with strong overseas experience and a clear facility with the local language. That's not an easy combination to come by for these areas," says Bill Battalia, president of Battalia & Associates, a leading global executive search firm based in New York. Many banks are recruiting from within their Latin American ranks to fill East European positions, because dealing with Latin America's infrastructure problems tends to be very good training for business in Eastern Europe.

By making these efforts to surmount infrastructure problems, train middle managers, and search for top management, money center banks are demonstrating their commitment to doing business in Eastern Europe.

Rival Marketing Strategies

Money-center banks have split into two opposite groups when it comes to approaching business opportunities in Eastern Europe.

One faction, epitomized by Citicorp, has an attack strategy that concentrates on gaining market share as soon as possible. The other faction, exemplified by Morgan Bank and Chase Manhattan, has a "go slow" approach that emphasizes doing only high-quality transactions and securing strong relationships with key government officials in Eastern Europe.

When we are in a business negotiation with a Westerner . . . we are afraid to lose our shorts in the deal.

Andrzej Wroblewski
Gazeta Bankowa

The aggressive approach emphasizes doing large amounts of deals immediately for two reasons.

• Firstly, the aggressive banks estimate that there may be as much as $200 billion worth of enterprises in Eastern Europe to be sold in the next decade. Solidarity leader Lech Walesa has said that 85% of Polish state enterprises should be sold in the next five years.

• Secondly, the aggressive firms feel that by gaining market share in privatization deals they will get preferential treatment from Eastern European governments as the retail and commercial markets open up. This seems to be borne out by the sentiment of key government officials. "Clearly, those firms which help us in our efforts to privatize will be given priority in other business activities," says Marek Gadomski of Poland's Finance Ministry.

The aggressive approach is largely patterned after the familiar methods of developing business in the West. Companies hunt for deals, negotiate with businesses directly, and seek government approval of the negotiation only at the end.

Going Slowly

In the "go slow" approach, money center banks emphasize not appearing too greedy. In all of their negotiations, these banks place a premium on appearing to give a fair price and a fair deal.

Though this strategy is a staple of the banking profession, it has become increasingly important in Eastern Europe for two reasons.

• Years of indoctrination have made even the most market-oriented Eastern Europeans distrustful of Western bankers. "There is a visceral, unintentional reaction when we are in a business negotiation with a Westerner, and that is that we are afraid to lose our shorts in the deal," says Andrzej Wroblewski of *Gazeta Bankowa*, Poland's leading financial magazine. As a result, a premium is placed on doing business with a bank known for seeking the best deal for all sides.

• In addition, there is great concern throughout Eastern Europe that privatization will rob the inhabitants of the chance to manage their country's best businesses. As a result, Eastern European governments are extremely cautious about the types of deals they will allow. "We simply can't let it seem that we have given anybody too good a deal," says Mr. Wroblewski of *Gazeta Bankowa*. "Banks which can allay the government's fear of unfair deals will clearly get preferential treatment."

Citicorp Deal

The importance of this sensitivity has proved crucial in Hungary recently. There, Citicorp – an aggressive company – completed an asset sale of Apisz, a paper-goods manufacturer. In a deal similar to a Western-style management buyout, Apisz's management bought two-thirds of the company and Citicorp kept an equity interest in the remaining third.

The deal has come under harsh criticism because Hungarians think the company was sold on the cheap. Worse, the managers who bought the business were Communist Party members who had run the enterprise for decades.

"It really looks bad for Citi," says a rival banker who declined to be named. "It makes it look as if they conspired with the bad guys – the Communists – to get a third of the equity of one of Hungary's best assets at a dirt-cheap price." Some believe the episode will damage Citicorp's relationship in Hungary for some time to come.

It is too early to tell which of the two strategies will win out in Eastern Europe, or if banks will be able to solve the structural problems associated with doing business there. Clearly, however, commercial banks are putting a premium on succeeding in this market – and on avoiding the traps that have stunned them before. □

An interesting thing happens when people think someone else might pick up the tab.

OUR TREAT VISA

Not surprisingly, they spend just a little more freely. Which is precisely what occurs each year in response to the Visa Our Treat™ promotion.

We give people the chance of having one of their Visa purchases paid for. And then, during the heaviest shopping period of the year, they go to town.

It's a strategy that could pay off big, considering we'll be giving away $1 million worth of randomly selected transactions between October 1 and December 31, 1990. Meaning some 15,000 cardholders will get a Visa purchase on us.

Whether it's a new bowling ball. Or a trip to Bali.

Either way, you'll win even bigger.

After all, Our Treat has led to record fourth-quarter volumes for two years in a row. And, with proven consumer awareness (plus a major ad campaign in the works), this year promises greater rewards.

For your own program guide and sample statement inserts, simply give us a call at 1-800-876-5652.

And put human nature to work for you.

VISA

It's everywhere you want to be.

NO PURCHASE NECESSARY To enter without purchase, hand print your name, address, city, state, zip code, day and evening telephone numbers and the words "Visa. It's everywhere you want to be" on a 3"x5" card and mail to: Visa Our Treat Sweepstakes, P.O. Box 8608, Elmhurst, IL 60126-8608. Limit one entry per envelope; no mechanical reproductions permitted. Entries must be received by December 31, 1990, or before total weekly prize pool is awarded. Prize pool weekly drawing is a check to the winner in an amount equal to the winning purchase entry. Offer void where prohibited or restricted. Cash advances, certain articles and non-U.S. dollar purchases are excluded from entry. Maximum prize in weekly drawings: $75,000. For a complete set of rules, send a stamped, self-addressed envelope to Visa Our Treat Sweepstakes Rules, P.O. Box 8608, Elmhurst, IL 60126-8608. Void in CA and WA residents may omit return postage). Sweepstakes open to all residents of the 50 United States and the District of Columbia 18 years or older except employees and their families of Visa, its advertising and promotional agencies and Visa card issuers. Promotion ends December 31, 1990, or when total prize pool is awarded, whichever occurs first. © Visa U.S.A. Inc. 1990

Marketing Giant Is No Longer Tethered

By ROBERT P. CADY
Special to the American Banker

Mythological giants have their good side and their bad side. Jack and the Beanstalk's giant was hungry. The genie in the bottle granted three wishes to the lucky finder. Gulliver, a true sleeping giant, was tied up before he could do any damage, but once untied, he proved to be a boon to the Lilliputians.

The concept of using marketing information to improve competitive position is suddenly becoming a hot topic in the executive suite. As in the Gulliver fable, those institutions that have had vision and untied this sleeping giant have found it to be an ally in repelling the invaders.

A Confusing Language

For many senior executives, however, the new marketing information industry is confusing and filled with newspeak. New terms such as geocoding, household segmentation, and the like are unfamiliar. New techniques such as lifestyle analysis (psychographics) add to the confusion.

The upshot of all this is the pressure being brought to the executive decision makers to fund more forms of marketing information services. The first impulse of the traditional balance-sheet banker is to say no, or let's wait and see.

Today, marketing technology and uses of information to support strategy need supporters in high places. Most senior executives in banking still have trouble anointing a marketing executive with the same powers to transform the bank as the DP king.

Cost Analysis Is Tricky

As a result, the allocation of resources is an uphill fight, because marketing does not lend itself to a precise cost analysis or predictive modeling of expenditures.

Executive management is slowly absorbing the new information concepts as they filter through from staff and seniors. This educational process is key to acceptance and eventual adoption of a marketing information philosophy, which we believe is key to the competition during the industry in the 1990s and beyond.

First, what do we mean by information? Second, how are most banks organized to use this information? And third, what does it cost and what can we expect in return? The relevant categories follow:

- Public data.
- Survey data.
- Exchange information.
- Segmentation data.

Public data is perhaps the more mature of all the information categories presented. As the name applies, public data is gotten from the government by a variety of entrepreneurs, massaged in a computer, and sold back to the banks in more palatable formats. By using public data reports, a bank can compare performance in a variety of categories.

Problems with Data

Public data, however, generally does not relate to individual products and are not broken down by local markets. Also, the government is slow-moving and the reports are often received nine months to one year from the time the data is reported.

Survey data is perhaps the second most widely used marketing information after public data. With surveys, we finally arrive in the actual markets working with real customers.

Years ago, survey firms were consulting with local banks that wished proprietary data on a situation in the market. With the passing of time, these companies decided to create a business where they designed the project and sold the results to the banks for an annual retainer.

Many Surveys Available

Gradually, a myriad of surveys began to appear and leadership emerged. Today a bank can spend $5,000 to $10,000 for a specific survey, or well over $100,000 a year if it wishes to take advantage of a firm's bulging survey portfolio.

The best survey, of course, is one the bank designs itself to answer its own needed questions. These can be the most expensive of all, involving consulting expertise, direct mail, or telephone interview techniques.

Survey data is relatively expensive and does not always meet the proprietary needs of a bank. However, the concept is widely established and has gained budget-cutting armor over the years.

Exchange information is a stepchild in the data business. In an exchange, banks who are put off by the error rates of survey data and the expense and the lateness of public data form an exchange.

This group then agrees to a set of definitions for standard prod-

Data Source: The primary source of data is **American Banker's** question-naire to the 1,200 largest banks in the world. Data were checked against annual reports wherever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Total assets** exclude contra accounts and unamortized premiums. **Date of fiscal year:** Data not provided current data are **excluded** from the listing. **Dates of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Austria-lian and New Zealand banks are for June 30, 1989, Sept. 30, 1989 and March 31, 1990. Canadian bank data are for fiscal yearend Oct. 31, 1989, and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Wherever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Ex-change Rates" for rates for countries not listed. **Footnotes:** (a)— A sub-sidiary of Compagnie Financiere de Credit Industriel et Commercial. (b)— A subsidiary Compagnie Financiere de Paribas. Paris, a financial holding com-pany. (c)— Consolidated data. (d)— Figures are included in the consolidat-ed figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top-500 Banks. (e)— Data are unconsolidated figures of affiliates more than 50% owned by the bank. Banks that did not provide consolidated data are excluded from the listing. (f)— Revised to reflect changes in consolidation in 1989. N.A.— Not available.

Data Source: The primary source of data is **American Banker's** question-naire to the 1,200 largest banks in the world. Data were checked against annual reports wherever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Total assets** exclude contra accounts and unamortized premiums. **Date of fiscal year:** Data not provided current data are **excluded** from the listing. **Dates of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Austra-lian and New Zealand banks are for June 30, 1989, Sept. 30, 1989, and March 31, 1990. Canadian bank data are for fiscal yearend Oct. 31, 1989, and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Wherever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Ex-change Rates" for rates for countries not listed. **Footnotes:** (a)— A sub-sidiary of Compagnie Financiere de Credit Industriel et Commercial. (b)— A subsidiary Compagnie Financiere de Paribas. Paris, a financial holding com-pany. (c)— Consolidated data. (d)— Figures are included in the consolidat-ed figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top-500 Banks. (e)— Data are unconsolidated figures of affiliates more than 50% owned by the bank. Banks that did not provide consolidated data are excluded from the listing. (f)— Revised to reflect changes in consolidation in 1989. N.A.— Not available.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports wherever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Total assets** exclude contra accounts and contingent liabilities. **Note:** Banks that did not provide current data are **excluded** from the listing. **Date of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989; Sept. 30, 1988; and March 31, 1990; Canadian bank data are for Oct. 31, 1989, and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is noted in the data. Bank's figures are "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(b)**—A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(m)**—A subsidiary Compagnie Financiere de Paribas. Paris, a financial holding company. **(p)**—Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are unaudited. **(y)**—Data are unconsolidated. **Gain in Rank:** Rank change from another bank's data. Gain does not consider banks that did not provide data. **(+)**— Rank based on revised asset total for 1988. **(=)**— Restated to reflect changes in consolidation in 1989. **N.A.**— Not available.

Compiled by American Banker, Copyright 1990.

Continued from page 17A

ucts such as consumer checking, regular savings, etc., and proceed to exchange data on such accounts once each quarter. An exchange report may show the total checking account balances as of the end of a quarter and also display each participant's share of that total.

Since reports are done quarterly, market-share figures can be defined and change noted for as many products as the exchange participants desire.

A GULLIVER OF MARKETING *"A mouse in the land and a source of power banks can harness,"* says Robert P. Cady.

Fees Are Variable

An exchange participant from a large institution probably pays $5,000 to $8,000 a year for the service plus the subscription internal resources to collecting the data. In addition, the participant may contract for any number of proprietary reports.

Many banks fear an exchange, believing that it gives the competition an advantage. Many institutions, however, gladly hand over their numbers, getting back everyone else's numbers in return. There are generally about 25 active exchanges and more are forming as the fear of competitive intelligence overrides the fear of revealing information.

Segmentation data is information on individuals of like characteristics who tend to operate with similar habits. Marketers get murkier with this kind of marketing information. If you identify a group's buying behavior and that group can be associated, for example, with a high rate of CD purchase, than other individuals with the same characteristics may also be good prospects for a CD.

In the past, standard demographic characteristics were used to find these targets, i.e: age, sex, income, etc.

Segmentation Refined

Today, new techniques have been developed that have revolutionized segmentation. Psychographics is the new buzz word. Psychographics is a new way to look at consumers by researching the performance of groups segmented by age, sex, and earnings. Segmentation scheme became less and less predictive as society changed in the Sixties and Seventies.

Simply put, where you live is a bigger indicator of what you buy than your age or income. Thus the developers of the psychographics approach, divided all of us into groups with catchy names (Furs and Station Wagons, Norma Raeville, etc.), some 40 in all. Once your address is in the computer, your mail begins to change as advertisers now assume they know what you like. Norma Raeville residents are hardly likely prospects for a jumbo CD.

Although designed for direct mailers, the psychographic concepts have now come to banking in the form of data bases and mapping systems packaged into a PC that allows a bank to load in its own customer file and make predictions about various areas of geography in terms of product penetration.

Mr. Cady is a principal and cofounder of Exchange Resources Ltd., which develops marketing technology for the financial industry.

Psychographic products are not cheap, often costing as much as $25,000 for the base software and then more for timely updates. A bank may find itself spending six figures annually.

Then, of course, there are other new terms. "Householding" simply refers to analyzing a customer file and organizing it into households, showing products sold by household.

Next comes geocoding, that is, applying a standard code to the address. Once loaded into a mapping system, this code can be accurately plotted on a map. A household geocoded file, created from a bank's usual vertical files, then becomes a marketing customer information file.

An Effective Tool

An MCIF is probably the best tool a bank can have because it says so much about the customer base. It answers such questions as, what products do we sell best? What segments of the market are our best customers? Are our advertising programs working?

It is fair to say that a bank approaching $1 billion in assets is missing at least if it is not doing a great deal of work to upgrade marketing information systems.

The resources of banks are lower than they have been, and broad, shotgun marketing does not cut it. Banks simply do not have to take a back seat either. The power of the PC, and its low cost, makes a great deal of the marketing technology available to the smaller bank. The flexibility of a smaller institution may give it an edge.

How to Get Started

If you are a CEO asking yourself where to start, consider that all of us intuitively use the best source of marketing information and potential increased profits. It is your customer file. Banks often maintain separate departmental systems so that the checking account information on John Doe exists in a separate place from the credit card information on the Doe family.

Once you "household" your files by customer and product, magic inferences are possible. Decisions can be made on what kind of customer you serve best. Is it really the upscale market as the chairman likes to quote, or are you really best at servicing Beer and Pick-up Trucks?

The marketing information industry in banking is young but growing. MCIF, lifestyle analysis, public data, survey data, locational analysis all have vendor organizations. □

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports wherever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership does not exceed 50%. The consolidation contains accounts and contingent liabilities. **Note:** Banks that did not provide current data are excluded from this ranking. **Date of figures:** Data for most banks are for Dec. 31 1989 and Dec. 31 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989, Sept. 30, 1989, and March 31, 1990. Canadian bank data are for fiscal yearend Oct. 31, 1989. **Exchange rate:** Japanese bank data are for fiscal yearend March 31. 1990. **Exchange rate:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's financials. Some countries exclusively fix their rate. See "Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(b)—** A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(c)—** A subsidiary Compagnie Financiere de Paribas. Paris, a financial holding company. **(m)—** Consolidated data. **(t)—** Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)—** Data are not consolidated. Assets and liabilities of foreign offices are not owned by another bank. **(v)—** Data are for a bank which does not rank in its data. **(y)—** Bank ranked on revised asset total for 1988. **((y))—** Restated to reflect changes in consolidation in 1989. **N.A.—** Not available.

Data Source: American Banker's world bank survey. Data are checked against annual reports wherever possible. Consolidated data, including affiliates in which ownership is 50% or more, are used wherever possible. Data of figures: Data for most banks are for yearend. Exceptions: Data for Japanese banks are as of March 31, 1990; data for banks in the U.K. and Australasia are as of September 30, 1989; and data for Canadian bank data are for fiscal year ended Oct. 31, 1989. **Total assets** exclude contra accounts and contingent liabilities. **Equity Capital** is total shareholders' equity capital which includes the value of common and perpetual preferred stock, surplus, undivided profits, and capital reserves. Minority interest is excluded, wherever possible. **Equity Capital/Assets** is equity capital as a percentage of total assets. **(a)**—On April 1, Mitsui Bank and Taiyo Kobe Bank merged to form Taiyo Kobe Mitsui Bank. **(b)**—Acquired Victoire Leasing Insurance Group in 1989. **(c)**—In March, Amsterdam-Rotterdam Bank and Algemene Bank Nederland began negotiations for a merger. **(d)**—Formed in 1989 by the merger of Nederlandsche Middenstandsbank (Nederland) and Postbank. **(e)**—In Aug. 1989, NCNB consolidated the operations of NCNB Texas National Bank, Dallas. **(f)**—The bank acquired Provinsbanken and Copenhagen Handelsbank in January 1990. The 1989 data are unconsolidated and the 1988 data are consolidated. **(g)**—Data were received too late for bank's inclusion in today's top 100 banks listing. **(h)**—Revised to exclude minority interest. **(i)**—revised. **(j)**—Pro forma data for bank formed in 1989. **(n)**—Bank bank would have been if it had been included.

Are Banks Missing Global Opportunities?

Continued from page 1A

Citicorp/Citibank, Chase Manhattan Corp., and Bank-America Corp. are the only individual banking companies that have even a modicum of nationwide "brand-name power," which Landor set out to measure in 1988 and again this year. They and Chemical Banking Corp. were famous and esteemed enough to show up in Landor's 1988 pan-European survey as well, though well behind the credit card brands.

Europeans Retreat, Too

"That may seem disappointing, but actually the findings are very decisive and encouraging when you put the U.S. banks' 'image power' in the perspective" of the economic unification of the European Community, said Alan Taylor, managing director of Landor's New York office.

"None of the big European institutions that you would expect to be preparing for [the unified market] post-1992 – Barclays, NatWest, Banque Nationale de Paris, Credit Suisse, Deutsche Bank – scored highly in terms of familiarity or esteem" outside their home markets, he said of the Landor study.

In fact, many European banks recently have been pulling in their horns, having to cope with rising costs and nonperforming loans as have their U.S. counterparts. Japanese banks, big enough to gobble up U.S. banks at will, have confined most of their acquisition activity to California, the market they find most compatible with their skills and styles.

"Gone are the days when we would travel abroad, establish a branch, lend substantial sums of money at low margin, and expect to make a profit," John Kerslake, chief executive officer for North America of Barclays Bank, London, told a recent conference in Florida of the Bankers Association for Foreign Trade. Barclays and other big multinational banks have grown increasingly selective about where they go and what they do.

Barclays, for example, has sold its U.S. consumer finance company, which was once seen as the nucleus for a nationwide banking empire.

"We have determined we wish to be a global business, but in certain selected, international markets," particularly Europe, said Mr. Kerslake.

Opening for Americans

With the big U.S. banks already enjoying recognition on a pan-European scale, "they have at least an equal, and perhaps a greater, opportunity than the European locals to establish pan-European and multinational identities," Mr. Taylor said.

But will any U.S. banks make such a move before competitors from other countries steal the initiative?

U.S. financial institutions have the wherewithal to get ahead internationally through advertising. But, advertising can get too far out in front of an institution's ability to deliver product against it.

Gary DePaolo
BBDO Worldwide

Recent studies of banking competition by the General Accounting Office of the U.S. Congress and the Organization for Economic Cooperation and Development found little interest in global expansion among U.S. or foreign banks, particularly on the most visible, retail level.

But French banker Serge Belanger wrote in the July-August 1990 issue of *The Bankers Magazine* that changes in retail marketing are sure to draw forward-thinking bankers into globalization.

"Changing economics, new marketing techniques, and growing individual mobility are facilitating the internationalization of retailing," said Mr. Belanger, executive vice president and general manager of CIC-Union Europeenne in New York. "Consumer banking is responding to these same forces.

"Armed with global marketing strategies as well as new products, and convinced they can obtain economies of scale, [banks with international ambitions] will build and enlarge their consumer banking operations in whatever countries they identify as most promising."

Chase in the Forefront

Mr. Taylor said the big three U.S. banks are clearly in the process of what marketers call positioning, but that Chase Manhattan Corp., building on one of the industry's most venerable names, has excelled.

"Chase has been doing a remarkably good job in expanding its identity worldwide," he said. "Rather than opening myriad branches, Chase is looking to private banking and other avenues. By reaching a more exclusive clientele, it is reaching opinion leaders, and that will have a percolation effect on retail business and on the overall image of the institution."

Chase is also noted for one of the first "world television commercials" in banking: a 1989 ad for European and U.S. consumption showing investment bankers and clients converging on a meeting in Paris.

Citicorp and BankAmerica are "pursuing similar strategies" outside the U.S., "but have not been as focused as Chase," Mr. Taylor said. He expects that focus to sharpen. Citicorp is creating common systems that will make it possible to deliver similar consumer and corporate services in every country. Advertising of that capability is sure to follow; even without global advertising in the Coca-Cola mode, Citicorp claims to do at least some business with 30 million households worldwide.

Regionals Respond

BankAmerica, having recovered from severe earnings problems in the early 1980s and also

Unlike a consumer product, financial services cannot simply be manufactured and shipped. The services have to be controlled and delivered locally.

John Bennett
Visa U.S.A.

moving toward computer-system uniformity, is rebuilding its international network. It is focusing on the Pacific Rim, as are other California-based regional banks attentive to their customers' international connections.

Security Pacific Corp., for example, has an Asian banking unit with 40 offices, said John Getzelman, chairman of its Seattle subsidiary, Security Pacific Bancorp. Northwest.

"While our emphasis is on building the Security Pacific franchise in the Northwest, we are learning that there are no purely domestic businesses today," he told the Bankers Association for Foreign Trade. "Increasingly, domestic bankers must be international bankers as well.

"We have sharpened our focus on our domestic customers, but kept a global vision of their international needs." The Pacific Northwest, he pointed out, is home to Boeing Corp. and Microsoft Corp. and has become a crossroads for international trade.

In a similar vein, Bank of Boston Corp., which has a strong branch banking network in Latin America but is less of a factor in Europe and Asia, has decided to "do a limited number of things very well, in the most efficient manner possible, driven by our customers' needs," said Kevin J. Mulvaney, executive vice president for international.

Many Strategies Discarded

"Our [past] forays brought with them many successes but also a strategic dustbin with discarded overseas consumer, leasing, and other strategies," he said. "Our answer is a very targeted, cost-effective, realistic, but limited strategy."

"Bankers may have become less focused internationally, but the reality is that their constituencies are operating in a global context," said Mr. Taylor of Landor Associates.

"This is true whether you look at the general public, or the high-net-worth private banking customer, the sophisticated investor, or the business executive. They are all making choices of institutions and brands and relationships, and it behooves bankers to pay attention to how they operate in that context." □

Analysts Seek Better Way to Size Up Banks

By FRED VOGELSTEIN

Reacting to one of the worst slumps in bank stocks since the real estate debacle of the early 1970s, a growing number of analysts are rethinking the way they examine banks.

They say the recent spate of large, unexpected changes in bank fundamentals has made their current set of financial tests less effective and some of their predictions no more accurate than weather forecasts.

"It's becoming increasingly clear that credit quality considerations are driving the stocks more than traditional factors like predictions of net interest margin or probability of expansion or takeover," said Raphael Soifer, at Brown Brothers Harriman & Co., New York.

"We felt the only way one can really look at asset quality" is to come up with a new test, Mr. Soifer said.

Fleet/Norstar Shock

Most analysts agree that the changes in fundamentals are consequences of stiff regulatory examinations amid declining real estate values and souring leveraged loans.

Analysts and investors still talk with frustration about reports from Fleet/Norstar Financial Corp., for example, which surprised them in April, after an exam by regulators, by reporting a $600 million increase in problem loans for the first quarter.

"No one quite knows how to think about bank stocks anymore," said Roger Hillas, chairman of Meritor Savings Bank, Philadelphia, and a manager of two regional bank stock funds.

"You think something is doing well, and then the roof caves in."

The Surprise Index

Mr. Soifer said he and his colleagues at Brown Brothers developed their new tool with such examples in mind. Their Surprise Index attempts to gauge how well banks have done over time at avoiding bad loans.

The index is based on two five-year sets of data from 1980 to 1989. It is meant to suggest how likely a bank is to make bad loans or deal well with current problem loans.

"The thinking is that banks with better credit processes will deal with those problems better than others," Mr. Soifer said.

Focusing on Dividend Safety

Analysts at Shearson Lehman Brothers Holdings Inc. are focusing on net interest margin and dividend safety.

2 Bills Seek To End Curbs On Branching

By LOUIS GERHARDSTEIN

WASHINGTON Moving to lift the remaining geographic restrictions on U.S. banks and speed the industry's consolidation, two key legislators introduced bills Thursday to allow full interstate banking and branching by 1994.

Observers said the legislation could prove the most significant affecting interstate expansion since the establishment of regional banking compacts in the early 1980s.

Those reciprocal multistate agreements spurred the creation of a new class of banking company, the superregional.

Tearing Down Walls

Sponsors of the bills introduced Thursday said the measures would tear down "the old, archaic walls between states" and increase the size and international competitiveness of U.S. banks.

"The legislation would relax most current restrictions on interstate banking," said Rep. Charles E. Schumer, D-N.Y., sponsor of the legislation in the House. He said his measure would "allow acquisition of banks by out-of-state holding companies after 1992 and authorize interstate branching after 1993."

Appearing at a Capitol Hill press conference with Sen. Christopher Dodd, D-Conn., who introduced an identical bill in the Senate, Mr. Schumer

Norwest Agrees to Buy United Banks of Denver

By NANINE ALEXANDER

CHICAGO — Norwest Corp. said on Thursday that it had agreed to acquire United Banks of Colorado Inc. in a stock swap valued at about $440 million.

The disclosure came as United announced that it lost $89.7 million in the second quarter, after taking a $95 million provision for problem loans. The Denver company also said it would take a $95 million charge in the second half, relating to problem loans and merger-related expenses.

A Big-Time Merger

Norwest's stock closed Thursday at $19.50, down $7.5 cents. United Banks rose $1.375 to $21.125.

A merger between the two

Student Lenders See No Crisis

By YVETTE D. KANTROW

NEW YORK — The financial woes of a Midwest company that issues guarantees on student loans is another in a series of blows to the government-backed program, but bankers see no cause for alarm.

Lenders and others in the business remain confident that the U.S. Department of Education is acting swiftly to resolve the problems of the Higher Education Assistance Foundation, a nonprofit corporation in Overland Park, Kan.

They say they are heartened by a quick decision made earlier this week by the Department of Education and the Office of Management and Budget to send a team to the foundation's computer facilities in Minnesota to review its financial records.

The foundation is struggling because of high default rates on loans. Its failure could result in losses at banks, which could not recoup from the company when student loans go into default.

Citicorp, the nation's largest

U.S. Banks Retreat from Global Ambitions

By JAMES R. KRAUS

Having spent decades expanding their overseas operations, America's big banks are heading into the 1990s dismantling them.

Tougher capital requirements, mounting credit problems, and heightened competition are forcing U.S. banks to scale back their overseas activities. Increasingly, they will have to rely on correspondent banking relationships for their international transactions.

No More Bandwagon

"Money-centers are coming off a decade of troubles in the international arena," John F. McGillicuddy, chairman of Manufacturers Hanover Corp., told bankers at the annual convention of the Bankers Association for Foreign Trade in April.

"So whereas 20 years ago, everyone was trying to get on the

Departing Schroder Chief Headed for a Homecoming

By JAMES R. KRAUS

When IBJ Schroder Bank & Trust Co. began arranging investment deals in Hungary last year, the bank's president and chief executive downplayed it as "just something we're doing on the side."

Starting next month, Hungarian deals will be more than something on the side for Peter Rona, who is leaving the New York bank to set up in that city an advisory firm specializing in privatizations, joint ventures, and investments in Eastern Europe.

Peter Rona

"I'm not an impulsive man," Mr. Rona said this week. The move "has been like subject of a lot, tot of thought."

Mr. Rona will leave IBJ Schroder next Friday. He will continue to live and work in Manhattan but will be traveling frequently to Eastern Europe for business.

"I wasn't bored at Schroder," he said, "but intellectually, the reconstruction of Eastern Europe is by far and away the most serious and exciting challenge of the next 10 years."

The move represents a homecoming of sorts for the 48-year-old Mr. Rona. Born in Hungary, he was among hundreds of thousands who fled the country in December 1956 after Soviet troops crushed a bloody revolt against Communist rule.

Race to Freedom Recalled

He vividly remembers the street fighting in his Budapest neighborhood and the nighttime crossing over the border into Austria on foot with his mother.

"The border had been plowed up with deep furrows, and it was difficult to run. There was mud everywhere and Russian patrols with dogs. I remember searchlights, flares, and falling into a creek when a Russian patrol approached. Then we ran into Austrian soldiers, and we knew we were across."

After three months in transit camps in Austria, Mr. Rona and his mother settled in Washington.

"Europeans either love the United States or they hate it," he said. "They know it right away, and their feelings don't change. I liked it very much. I found Americans open and generous, and they think big. Europeans are less sincere and genuine, and they can be very petty."

The Prince of Dishwashers

Still, the early years were a hard slog for Mr. Rona. When he was small, his father died. Thereafter, his mother raised him alone.

He spent his teenage years washing dishes and busing tables in restaurants, first to help make ends meet at home, then to help pay his tuition at the University of Pennsylvania in Philadelphia.

The work was menial but strengthened Mr. Rona's attachment to the United States. "People treated me like a prince. They'd say: Here's this kid, he's a refugee," he's working hard, "and he's great. And then they'd add an exclamation point to that."

"It was morally uplifting, and I had this great sense of social support," Mr. Rona said.

After obtaining a law degree from Oxford University, Mr. Rona went to work with the law firm of Arnold & Porter in Washington.

Banking Career Started by Chance

He fell into banking by chance after meeting the man who was then chairman of Schroders PLC London. He invited Mr. Rona to join the bank's U.S. unit, J. Henry Schroder Bank & Trust Co. After Industrial Bank of Japan purchased the U.S. bank, in 1985, Mr. Rona was named president and chief executive.

His fluency in Hungarian, Russian, Italian, and French as well the experience and relationships built up at IBJ Schroder should stand him in good stead when he launches his own company.

He is the latest of several eminent business and political figures who have been fired by the prospect of participating in Eastern Europe's economic restructuring.

"It's amazing how freedom changes people," Mr. Rona said. The Hungarians "have become much more energetic, much more careful, and suddenly developed these proprietary interests. They're much more concerned with ownership than with titles or status." □

NEWS *briefs*

Thrift Cancels Notice on Quitting Home Loan Bank

NEW YORK — American Savings Bank, White Plains, said it had canceled a notice of intent to withdraw from the Federal Home Loan Bank of New York.

The $4.1 billion-asset thrift, which lost $40 million in the second quarter, said it might reinstitute the application.

First Nationwide Financial Announces Record Profit

SAN FRANCISCO — First Nationwide Financial Corp. announced record second-quarter earnings of $41.3 million, up from $3.5 million a year ago.

The six-month figure was $77.2 million, up from $8.4 million. □

Bank of Boston Earnings Plummet

Analysts Not Surprised at 96% Drop in 2d Quarter

By TOM LEANDER

NEW YORK — Beset by problem real estate and highly leveraged transaction loans, Bank of Boston Corp. announced Thursday that its second quarter profits plummeted 96% from the year-earlier level to $4 million.

Meanwhile, BayBanks Inc. said it lost $11.5 million in the second quarter after taking a $63.5 million loan loss provision.

Bank of Boston closed Thursday at $10.875, down 25 cents, and BayBanks closed at $15.50, up $7.5 cents.

'Hardly a Major Surprise'

Bank of Boston's earnings were "lighter than expected, but given the economic climate in New England, hardly a major surprise," said James J. McInerney Jr., an analyst for Keefe, Bruyette, and Woods in New York.

He predicted that regional economic woes would continue to drag on bank earnings for several months.

$200 Million in Chargeoffs

The drop in earnings from the previous year resulted from $200 million in chargeoffs. The figure includes $89 million of chargeoffs on bad real estate loans, $68 million on financing of highly leveraged transactions, and $21 million in loans to lesser-developed countries.

"It looks like they decided it was going to be a big quarter anyway," said Nancy Bush, an analyst for Brown Brothers Harriman in New York, "and decided to go after chargeoffs in a very aggressive way."

Bank of Boston Corp. earnings were also sapped by a $125 million provision for loan losses. The company's reserve for possible credit losses at June 30 was $492 million, or 3.91% of outstanding loans and leases, compared with $967 million or 4% of at March 31. The reserves represented 73% of nonperforming assets as of June 30.

Analysts had expected a rise in nonperforming assets from between $100 million and $200 million. In fact, the chargeoffs caused the company's nonperforming assets to decrease to $1.2 billion from $1.3 billion at March 31.

HLT Financings Decline

On June 30, financings of highly leveraged transactions were $4.2 billion, down from $4.8 billion at March 31. Related nonperforming loans were $281 million at the quarter's end, compared with $236 million at March 31.

Though BayBanks was expected to lose money in the second quarter, analysts said they were surprised by the size of the loss and the loan-loss provision.

The loss reflects the final results of a regulatory exam by the Office of the Comptroller of the Currency, which ended at the

FDIC Order to Continental

By FRED VOGELSTEIN

Just two months after the Federal Deposit Insurance Corp. spurned an offer by Continental Bank Corp. to buy its own shares, the FDIC has asked the Chicago-based bank to pave the way for the sale of its remaining 20% stake.

The sale would mark the final chapter in one of the largest federal bank bailouts in U.S. history.

The FDIC announced Thursday that it has asked Continental to file a shelf registration with the Securities & Exchange Commission to facilitate the sale of its 26% stake.

However, no deal has been reached, the agency said. Neither the bank or the agency would comment on whether one was imminent.

"It's a procedural step that increases our options so that if the opportunity to sell does come along, we've already satisfied the requirements with the SEC," said Alan Whitney, FDIC spokesman. He said the timing in particular" prompted the FDIC announcement now.

While the FDIC downplayed the filing, Continental Bank officials hailed it as the final leg in a six-year saga.

"This is a milestone with both financial and psychological significance for us," Continental chairman Thomas Theobald said in a prepared statement.

Analysts also viewed the filing as a very positive step.

TECHNOLOGY/OPERATIONS NEWS

Bankers Quarrel with Report That Urges 24-Hour Trading

By JEANNE IIDA

NEW YORK — Bankers criticized some of the conclusions of a report published last week by the congressional Office of Technology Assessment that admonishes U.S. stock markets for not taking a more aggressive stance in building systems for 24-hour securities trading.

The report warns that domestic stock markets could be eclipsed by the Japanese and the Europeans and that Congress may need to step in to push exchanges in the right direction.

But bankers involved in trading or global trust and custody maintain that market demand – not the government – should determine how quickly 24-hour markets develop.

"I believe there is public interest in 24-hour trading," said Mark Ayvakuluss, vice president in global custody at Citibank, New York, "but I believe it will take place when the market infrastructure and the players deem it appropriate.

Demand Seen as Slight

"We have the technology, but are people beating down my doors for it? I don't think so," he added.

The congressional report, entitled "Trading Around the Clock," evaluates the effects of information technology on securities markets.

Its authors concluded that only a few markets, such as futures, have been aggressively using the available technology to pursue global trading.

"We argue in our report that there is public interest in the performance of markets, and where there is public interest, the government should get involved," said Vary T. Coates, project director at the OTA.

The OTA criticized a new quote system announced by the New York Stock Exchange. It is "an extremely slow step-by-step movement, with the first two or three steps not aimed at rounding-the-globe trading" but only at reorganizing some of the trades that today go to London traders after the New York markets have closed, said Ms. Coates.

"It's not aimed at facilitating traders in other trade zones at trading 24-hours," she said. Other exchanges are even further behind, she said.

Bankers say that markets will be best served if the industry is left to regulate itself. "Congress has mixed agendas in the long run, though it is well-intentioned," said Willard L. Imhof, vice president at Bankers Trust New York Co. "The industry should address this." □

ABA Lobby Wins on Mail Delivery

The American Bankers Association scored a victory Thursday in one of its lobbying efforts to maintain first-class postage service and contain costs.

The Postal Rate Commission ruled against the U.S. Postal Service's proposal to downgrade first-class delivery service. The Postal Service may appeal the ruling.

The proposed change in standards, which would redefine delivery zones, could cause bankers to receive much of their mail a day later than they do now.

Bankers had argued that the measure and another proposal to increase first-class rates by 20% – which will be decided later this year – could have resulted in their paying more for slower service by early 1991.

The commission agreed with the ABA that the Postal Service's market research did not measure customer preferences accurately. □

Shawmut Shrinking Its Back Office

Some Cost-Cutting Steps Buck Industry Trends

By RICHARD LAYNE

A beleaguered Shawmut National Corp. continues on its cost-cutting course, intent on becoming a low-cost provider of banking services.

The supercregional bank last week posted a 55% decline in second-quarter earnings, and its stock has dropped about 30% since June.

But over the weekend, the $28 billion-asset banking company took the final step in consolidating back-office operations.

Part of a Program

The consolidation is one of several cost-control measures chosen by Shawmut as part of a longstanding plan to improve profitability. Some of these steps, including a low-cost approach to branch automation, buck the trend among its big bank counterparts.

The data-center consolidation, begun when Shawmut Bank in Boston merged with Connecticut National Bank in 1988, is a milestone on the track to running all wholesale and retail business under one set of transaction processing systems. The single set of systems will allow the bank and its 480 branches to be managed as one institution.

When the two banks merged, there were 10 data centers. The banking company now has one center, in Hartford, Conn., and the cost savings are projected at millions of dollars a year.

"Cost consciousness comes forward when you merge two large organizations," said Jay W. Roston, senior vice president. Wall Street analysts say the bank has been one of the best at realizing savings in a merger.

One Set of Systems

Shawmut has made few attempts to differentiate itself based on its technology capabilities, observers say. But Shawmut, which gained multiple systems through 1980s acquisitions, is in the vanguard in developing a single set of systems.

The consolidation of back-office processing follows the consolidation of business lines at the two banks.

Management Simplified

"This puts us into a less complex data processing environment, one that is easier to manage," Mr. Roston said.

Shawmut has completed the retail processing consolidation, according to Mr. Roston, who joined Connecticut National in 1984. By yearend, the asset system will be mostly done, awaiting the consolidation of the commercial lending system is to be completed next year, as are the liability systems.

Industry observers have criticized Shawmut for taking a projected four years to complete consolidation. Observers cite lower struggles between operations executives at the merged banks, a struggle eventually won by the Hartford faction.

All Off the Shelf

Since the acquisition, Shawmut has replaced all the transaction processing systems, relying on commercially available products, Mr. Roston said.

His use of such software is iconoclastic. Other major banks spend millions of dollars buying software to run on mainframes. Those banks frequently spend additional millions modifying and upgrading the software to meet their own way of doing business. When the software company improves its product, the bank cannot simply install the new version.

Mr. Roston refuses to take that approach. He buys and installs software, changing the business's procedure when necessary instead of the software.

Shawmut is nearing completion on its branch automation system, where its approach was at least partly dictated by a concern with costs.

To encourage what he terms a "more consultative sales culture," Mr. Roston is overseeing the installation of computer terminals at the desks of branch officers. At one time, the bank had opted for more expensive personal computers.

Again, he is bucking a trend. A few large retail banks, including BankAmerica, contend that personal computers provide the best way for branch officials to sell services to customers. Even though PCs are more expensive, operators can compose graphics and financial models. □

"This puts us into a less complex data processing environment, one that is easier to manage."

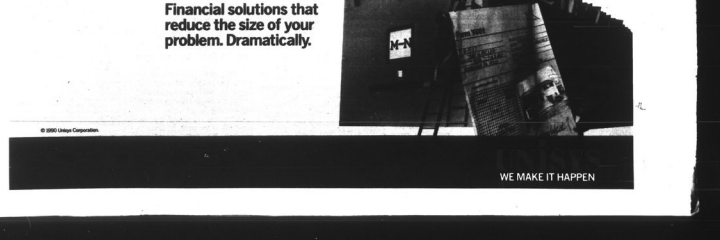
IMAGING. THE END OF THE PAPER CHASE



COMMENT/ *By Joseph C. Hu*

Mortgage-Backed Securities Show Impressive Resiliency

Defying the wide market fear, mortgage-backed securities have performed exceedingly well so far this year versus Treasuries of comparable average lives.

The yield spread between benchmark-coupon GNMAs and the 10-year Treasury has tightened to 118 basis points from 141 basis points at the end of 1989. This tightening was even more impressive in view of the lingering uncertainties caused by pending actions from various federal agencies that could significantly depress prices of mortgage securities.

Further, since early May, the market sentiment has turned more bullish with a 50-basis-point rally in long Treasury yields, and volatility has rebounded to cyclical highs. Both events normally cause mortgage-to-Treasury spreads to widen.

Questions that Investors Ask

Against this background, investors generally ask the following questions:

• At their current yield spreads, are mortgage securities rich to the comparable Treasuries?

• If the present adversary conditions continue, should mortgage securities be sold?

• Even if mortgage securities are rich at current levels of yield spreads, do they continue to have fundamental value? If they do, what sector among them is most attractive?

Belief in Fundamental Value

This article addresses these questions. I continue to believe that, at their current levels of yield spreads to Treasuries, mortgage securities have fundamental value.

While these spreads will no doubt oscillate in the short run, they will continue the tightening trend that started about a year ago.

Any significant widening in yield spreads in the future therefore represents buying opportunity for mortgage securities. The yield spread between benchmark-coupon GNMAs and the 10-year Treasury will narrow further, reaching 100 basis points by the end of this year. In my view, current-coupon passthroughs and certain sequential-pay and companion CMOs present value.

All But Quiet on the MBS Front

In recent weeks, the mortgage-backed securities market has been battered by more than its fair share of bad news. First, there were constant rumors about the liquidation of mortgage securities by the Resolution Trust Corp.

Rarely were the rumors confirmed; even when they were, the amount of rumored liquidation was always grossly exaggerated. The overhang of RTC action has deterred many investors from actively investing in mortgage securities.

Then, there was the growing doubt among investors concerning the continual robustness in the CMO market. The doubt

> **"At their current levels of yield spreads to Treasuries, mortgage securities have fundamental value."**

was caused by a report that was unofficially confirmed by the Office of the Comptroller of the Currency that it will soon issue guidelines restricting commercial banks' investments in exotic CMO securities.

In the past year, commercial banks have been an important factor contributing to tightening mortgage-to-Treasury yield spreads through their investments in CMOs.

Capital Adequacy Revisited

As if things were not bad enough, the Treasury Department and the General Accounting Office recently revisited the issue of capital adequacy at government sponsored enterprises such as Fannie Mae and Freddie Mac.

They openly wondered whether, in order to minimize costs to taxpayers, these enterprises should obtain a top credit rating – otherwise, these enterprises should face termination of government support.

While the concern of capital adequacy is perfectly legitimate, the issue of severing federal government ties to these enterprises has caused some investors to hesitate purchasing securities guaranteed by Fannie Mae and Freddie Mac.

Worse still, in the past two months, the bond market rallied by nearly 50 basis points with Treasury yield volatility rebounding to cyclical highs of recent years. In general, as bearish instruments with mostly negative convexity, mortgage securities usually lag Treasuries in performance in a bullish and volatile environment.

Realizing Relative Value

Despite all the bad news, however, mortgage securities have performed well against Treasuries with comparable average lives. A little more than two months ago, when both the 10-year and 30-year Treasuries were yielding slightly above 9%, the yield spread between the benchmark-coupon GNMA and the 10-year Treasury hovered around 130 basis points.

This spread has actually tightened more than 10 basis points in recent trading sessions. There are at least three fundamental reasons that the relative value of

FUNNY MONEY/ *By Tom Leander*

No Ticket, No Wash

The Bank of England has started rummaging through its musty archives, looking for a paper trail that could lead to a barrel of gold allegedly deposited there 270 years ago by a Ukrainian soldier.

Vladimir Yvorivsky, a member of the Ukraine's new parliament, estimates that the soldier's legacy of gold would have

Mario Bisbali

LEGACY: Did a Ukrainian patriot leave a barrel of gold to his country almost 300 years ago?

grown in value by now to about 16 trillion British pounds – or $29 trillion. The Ukrainian Soviet republic can't find the receipt, but it could use the money.

Pavel Plubotok, a Ukrainian military leader, bequeathed the gold in his will to support a sovereign and independent Ukraine. On a visit to St. Petersburgh to negotiate Ukrainian independence with Czar Peter the Great, Mr. Polubotok was thrown in prison – and died there.

A spokesmen for the Bank of England, as reported by Reuters, issued a dry-as-dust statement last week saying that the bank, too, has been unable to find any record of the alleged deposit – or the treasure itself. "Now we're digging in our archives to see if we can trace the relevant account relationship," the spokesman said.

So far, the Ukrainian parliament has not demanded the return of the gold from the Old Lady of Threadneedle Street, as Britons affectionately call their central bank. But Mr. Yvorivsky told his fellow legislators that he intends to file an official request in the near future.

Mr. Yvorivsky's valuation of the barrel takes into account accrued interest over nearly three centuries. The Bank of England's spokesman, however, characterized the estimate as "fanciful – to say the least."

* * *

Sybil Made Her Do It

Lawyers who represent accused bank robbers may want to consider adding the "Sybil" defense to their arsenal of strategies.

"Sybil," a popular book published in 1974, tells the unhappy story of a woman afflicted with multiple personalities who led many separate lives.

Juanita Maxwell, 34, told a Florida judge that she suffers from the same malady: She robbed a bank when she was actually somebody else.

Ms. Maxwell, of Clearwater, Fla., is accused of robbing two branches of First Florida Bank in 1988. In pretrial hearings, she claimed she was powerless to prevent the bank jobs because they were actually pulled by "Wanda," one of her alternate personalities. She moved for acquittal on grounds of insanity. Pending the judge's decision, the trial begins next week.

"Wanda" and her other personalities have already helped Ms. Maxwell win an acquittal in a 1979 murder case. Pretrial arguments in this case persuaded Circuit Judge R. Grahe Stouffer to allow the jury to hear the unusual insanity defense.

To the prosecutors, it doesn't matter whether Ms. Maxwell knew of the robberies. Their concern is whether "Wanda" knew of the robberies. She held up the two bank branches.

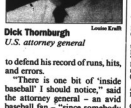
Thornburgh Bunts

Attorney General Dick Thornburgh has been getting the raspberry lately from spectators who say that the Justice Department is not hustling enough in its offensive against fraud in the savings and loan industry.

Mr. Thornburgh came out of the dugout swinging a heavy bat on Wednesday at the National Press Club in Washington, using some of baseball's colorful lingo



Dick Thornburgh *U.S. attorney general*

Louise Kraft

to defend his record of runs, hits, and errors.

"There is one bit of 'inside baseball' I should notice," said the attorney general – an avid baseball fan – "since somebody is clearly throwing right at my head. That is the charge about a 'do-nothing' Justice Department.' "

Much of the alleged fraud in the thrift crisis took place in the mid-1980s. The clock is running out for the Justice Department because the statute of limitations on these cases will soon expire.

The attorney general took his warm-ups by describing criticism as partisan "beanball," played by politicians from both parties looking for votes.

Defending his record, and the slowness of the pace, he said: "A baseball fan will sit through many a dull inning because he understands the game – and the ever-present chance of a game-winning home run or a ninth-inning rally." □

Handy Excuses When Your Boss Asks Why You Didn't Get The Best Deal On Seasoned Loans.

We've Never Sold Seasoned Product To Fannie Mae Before. How Was I To Know Their Price For Seasoned Loan Cash Sales Was Better Than Their Posted Quote For Current Production?

Somehow I Missed That Fannie Mae-Will Negotiate A Guarantee Fee With Us Based On The Seasoning And Quality Of The Package.

I Admit Their Flexibility In Pricing Seasoned ARMs And Almost Any Fixed-Rate Mortgages Caught Me Off Guard. This Will Really Help My Portfolio Restructuring.

The Loans On My Shelf Don't Fit Fannie Mae's Current Underwriting Standards. So I Wasn't Sure They'd Even Look At Them.

I Just Plain Forgot How Much Better Their Price Is For An MBS When We Swap Our Loans And Sell The Security.

Since Most Of Our Seasoned Stuff Is On Non-Standard Documents, I Never Dreamed Fannie Mae Would Accept Them.

I Must Have Overlooked Their PC-Based Delivery And Reporting System. MORNET℠ Makes Our Loan/Pool Delivery And Reporting More Cost- And Time-Efficient. They Can Help Us Stratify Our Loan Portfolio, Too.

I Wasn't Sure They'd Take The Time To Help Smaller Lenders And New Customers Walk Through The Seasoned Loan Transaction.

I've Never Done Business With Fannie Mae Before. I Will Now.

When it comes to seasoned loans, there's simply no excuse for not talking to Fannie Mae. No matter whether you're swapping or selling the loans outright, Fannie Mae has the edge. There is just no excuse for passing up a better deal.

Rate Adjustments Under Scrutiny Amid Report of Overcharges

By STEPHEN KLEGGE

In the wake of a controversial report that thrifts may have overcharged borrowers by as much as $15 billion on adjustable-rate mortgages and other variable-rate loans over the years, federal banking examiners will soon be told to focus on lenders' procedures for rate changes when conducting regularly scheduled compliance reviews.

"This will dovetail nicely with our truth-in-lending review," said Alan J. Dombrow, national bank examiner for the Office of the Comptroller of the Currency.

Mr. Dombrow, who is on a committee of the Federal Financial Institutions Examinations Council that has been looking into the rate-adjustment controversy, has drafted guidelines for the review of adjustable-rate procedures by examiners of banks, thrifts, and credit unions.

Whistle-Blower's Claims

The controversy stems from a report by a former employee of the Federal Savings and Loan Insurance Corp. who studied loans that the agency seized from failed thrifts.

John Geddes, now a private consultant, said he found an error rate of more than 50% among 7,000 variable-rate mortgage and consumer loans he audited while working for the FSLIC's Chicago regional office.

He said the government was ignoring an opportunity to recover revenue from underpriced loans and projected an industry-wide liability that could reach $65 billion if regulators do not deal with overcharging.

Statistics Disputed

Mr. Geddes' statistics have come under heavy fire from the government and the private sector.

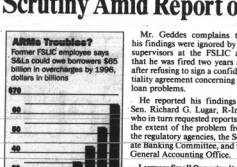
"The scale makes them suspect," said Jonathan Gray, a thrift and mortgage analyst for Sanford Bernstein & Co.

He estimated that the average outstanding balance of adjustable-rate loans since thrifts were permitted to make them in 1982 was in the neighborhood of $100 billion, meaning that extraordinarily large adjustment errors would be required to reach the level asserted by Mr. Geddes. About $380 billion in adjustable-rate loans by thrifts are outstanding today, Mr. Gray said.

Arithmetic Error Suggested

Informed of Mr. Geddes' claims by a reporter, Mr. Gray went so far as to suggest that the consultant might have made a simple arithmetic error such as misplacing a decimal point.

The Federal Deposit Insurance Corp., which now controls the FSLIC portfolio, confirmed that some errors on adjustable-rate loans were made in the Chicago district, but not nearly to



the extent suggested by Mr. Geddes.

"And it doesn't appear you can extrapolate as Mr. Geddes is proposing to," said Allan McCall, assistant director of credit in the liquidation division of the FDIC, who noted no uncorrected adjustable-rate mortgage payment errors outside the Chicago district.

Nevertheless, Mr. McCall said, the agency is now contracting with a servicer who will conduct a further review of the accuracy of the Chicago region loans before taking over the portfolio.

Mr. Geddes complains that his findings were ignored by his supervisors at the FSLIC and that he was fired two years ago after refusing to sign a confidentiality agreement concerning the loan problems.

He reported his findings to Sen. Richard G. Lugar, R-Ind., who in turn requested reports on the extent of the problem from the regulatory agencies, the Senate Banking Committee, and the General Accounting Office.

Lawyers Smell Opportunity

While the issue of accuracy in adjustable-rate mortgage lending is being debated in Washington, it is already attracting the interest of class-action attorneys such as George M. Plews of Indianapolis. He has hired Mr. Geddes as a consultant and expects to file suit next month if a settlement cannot be reached with about 1,000 financial institutions in that state. "There's no reason to believe it's unique to Indiana," Mr. Plews said of the accuracy problem.

"Apparently, the ambulance chasers are onto this," groused James Grohl, a spokesman for the U.S. League of Savings Institutions. He acknowledged that errors are inevitably made and said the trade group holds workshops on rate-setting procedures. But he also challenged Mr. Geddes' statistics as unscientific.

Although Mr. Geddes said he doesn't know if the problem extends beyond the savings and loan industry, Mr. Dombrow's proposed guidelines are intended to be followed by examiners from the Office of Thrift Supervision, the Federal Deposit Insurance Corp., the Federal Reserve Board, and the National Credit Union Association. They would apply to all variable-rate loans, commercial and consumer loans, as well as mortgages, he said.

Mr. Dombrow said examiners would determine how closely an institution's loans followed the loan contract and how well systems performed in arriving at the correct payment.

Inadequate Software Blamed

Mr. Geddes has blamed much of the inaccuracy he found on inadequate data processing software. "I have yet to see a system that can handle a rate change that occurs on a different day [of the month] than the payment day," he said, describing a commonplace situation.

It appears that state contract law would determine whether institutions could recover lost revenue from consumers who were undercharged, Mr. Dombrow said. Supervisors, he said, would order changes in procedure on the basis of their safety and soundness mandate.

"Any consumer loan violation is ultimately a safety and soundness issue, if the issue gets to the courts," he said. □

Woodward Returns to S. Carolina To Head Fleet's Home Loan Area

By PHIL ROOSEVELT

After two years in Rhode Island helping Fleet/Norstar financial Group consolidate its mortgage banking operations, Andrew D. Woodward Jr. has returned home.

Mr. Woodward remains president of the operations, the second largest in the nation after Citicorp's. But, reflecting a new phase in the evolution of the mortgage group, he recently moved his office from the banking company's headquarters in Providence to its mortgage unit in Columbia, S.C., his native state.

Since August 1988, Mr. Woodward has been folding several Fleet/Norstar mortgage units into two main ones: Fleet Real Estate Funding Corp, Columbia, and Fleet Mortgage Corp., Milwaukee. Among the operations consolidated were mortgage companies in New York and New Hampshire and servicing by some banks.

A Matter of Coordination

With that consolidation complete, Mr. Woodward is now focusing on coordinating the activities of the two remaining companies, which together service about $47 billion of loans.

"We're trying to be one company with two big plants," he said in an interview. "There's extensive coordination of activities between the two plants to make sure we're pricing the same and not competing with each other in the same markets."

He added, "It made more sense for me to travel less and be located where at least one of the companies was located." The

SECURITIES

Did OTS Wrongly Seize Franklin? The Wait for Judge's Ruling Begins

By STEPHEN KLEGGE

A challenge to the government's seizure of Franklin Savings Association came to an anticlimactic close last week, with the District Court judge promising a decision in four to five weeks.

The Office of Thrift Supervision placed Franklin in conservatorship on Feb. 16. Many industry observers had considered Franklin a mortgage innovator, and the seizure stunned them. Shareholders led by former Franklin chairman Ernest M. Fleischer filed suit, contending that the action was improper.

Accounting Is Questioned

The case, heard in U.S. District Court in Topeka, Kansas, hinges on accounting issues surrounding what had been a widely respected investment strategy. The $9 billion-asset Franklin Savings rose to fame in the 1980s by investing heavily in mortgage-backed securities and hedging against swings in interest rates.

The Office of Thrift Supervision challenged Franklin's accounting and asserted that the conservatorship was justified because the thrift was being operated in an unsafe and unsound manner.

But lawyers for Mr. Fleischer asked Judge Dale Saffels to rule that the seizure was based on bias by the regulator and that the Resolution Trust Corp., the appointed conservator, has an "incurable conflict of interest" because it controlled institutions on which Franklin had a claim.

Many industry observers had considered Franklin a mortgage innovator.

The court granted Mr. Fleischer a restraining order on March 30 to prevent the thrift from being placed in a receivership.

Chris Pierce, an RTC credit specialist assigned to Franklin, denied a published report that the agency is poised to sell Franklin's residual interests in collateralized mortgage obligations. The long-term plan, however, is to reduce the company's assets. □

BALANCING ACT.

BANK COMPENSATION AND BENEFITS MANUAL

SHERRIE A. SEELEY

Sheshunoff

Sound familiar? Well, it should. Because it takes all of these to make it pay you need to balance competitive compensation and benefits that attract (and keep) good people on the one hand, and your bank's profitability on the other.

That means knowing what each person's job is and what it's worth to the bank. And that's just the beginning.

You can count on the new Sheshunoff™ *Bank Compensation & Benefits* manual to give you everything you need to design, implement, support, and maintain a compensation and benefits program that helps your bank keep up-to-date with market and legal changes and meet its goals. Because whether your personnel policies are formal or informal, they need to be planned and consistent to motivate your people

The clear instructions and recommendations encourage you to consider your bank's style, culture, structure, history, market, products, and operating methods. So you've got your bank's unique aspects in mind as you develop job descriptions and policies for salary administration and performance measurement, measure job worth, design and organize your benefits and management incentive programs, communicate with your employees, create useful forms to document your programs, and *control salary costs through budget planning.*

For more information, or to get your own copy of *Bank Compensation & Benefits* call 1-800-456-2340. **Sheshunoff.** *High Performance Banking*

SMALL BUSINESS

Construction Loan System Touted as Aid for the Wary

By LAURYN FRANZONI
Special to the American Banker

Credit crunches. Regional real estate slumps. Construction loan defaults. Thrift industry struggles. Can anyone still make a construction loan to a group of doctors or a small-business owner who needs more space?

"Smaller banks are seeing a niche as thrifts and large banks pull back," said Sean McCracken, vice president of Data Select Systems, Woodland Hills, Calif., an industry supplier. "But it takes a lot of local knowledge."

"Lending institutions are taking a harder look at deals out there," said B.J. Reed, loan administration and servicing manager for the Huntington Mortgage Co., Columbus, Ohio. "It's not the time to be starting a construction business; the developer has to have a longstanding relationship with the bank."

Ms. Reed said her institution, a subsidiary of Huntington Bancshares Inc., offers commercial adjustable-rate mortgages of up to 15 years through the bank's relationship managers. The new product has been relatively easy to introduce and track because of Huntington's use of a Data Select product known as CLCS.

CLCS, a construction loan controls system, automates construction and commercial mortgage lending. It provides all administrative controls, including disbursement, and gives a line-item breakdown. It also manages amortizations and all necessary loan accounting and participation accounting on projects of almost any size.

Bankers using the system say it has been the key to holding their own in low-end construction lending.

"We wanted to keep everything on one system," said David Matzenbach, office systems manager for the mortgage company, which installed CLCS three years ago. "We wouldn't be able to make the relationship-based construction loans without its support," Mr. Matzenbach said.

Huntington Mortgage services two levels of lending. Loans in its commercial group average $4 million to $5 million. Loans generated through the bank's relationship managers average $250,000 to $500,000. "We're able to work with the smaller relationship borrower because we have all of the information we need at our fingertips," Ms. Reed said.

"The doctor or small-business owner who wants to expand or build a larger building has to go for a commercial loan these days. And those loans are much harder to come by," she said: "The system's permanent loan module allows us to track amortizations of five to 15 years."

Small loans have given many regulators heartburn in recent days. "This month, we've got eight regulators in here along with our internal auditors," Ms. Reed said. "One asked us for a series of detailed reports, and we had them in his hands in 20 minutes. He was surprised. But that's the level of detail and responsiveness that this dedicated construction lending system has given us."

CLCS runs on IBM system 36, AS/400, and personal computer networks. A mainframe system is expected to be introduced in the fall.

County Bank Backs Off Real Estate

Carl Williams is vice president and manager of the construction loan department at County Bank in Santa Barbara, a $1 billion-asset savings bank serving coastal California. Led by a chairman whose business background was in real estate, the thrift aggressively pursued construction lending for more than a decade. At one recent point real estate lending represented as much as 35% of the institution's portfolio.

"Now we're backing off of the major loans," Mr. Williams said. "If it's more than 36 units, we don't do it." County Bank's average construction loan today is $600,000.

As a Data System customer, Mr. Williams said the commercial loan system contributes significantly to the bank's construction lending profitability and results in favorable regulatory reviews.

"It rmnitors every line item from grading to landscaping," he said. "The system also handles all of the monthly interest billings and generates checks" – functions that used to require hours of labor.

Mr. Williams also said the data on the system draw repeat business. In an industry where repeat customers are nearly the only customers, his 50% retention estimates are enviable. "Our best borrowers are repeat customers. They are developers we know, and they know our system, " he said.

"When a developer knows he'll get 24- to 48-hour turnaround on vouchers and that your system allows efficient operation, it's an advantage," he said.

Student Loan Storm Causes Few Alarms

Continued from page 1

student lender – and, to a lesser extent, Chase Manhaltan Corp. and Manufacturers Hanover Corp. – are among the institutions that have made loans guaranteed by the agency. The foundation has guaranteed $9.6 billion worth of the $51 billion now outstanding in the government's student lending program.

"It certainly appears that the Department of Education will work out a solution for everyone involved," a spokesman for Citicorp said. "We're pretty confident things will be worked out."

> **"We don't anticipate material losses resulting from this problem."**
>
> **John E. Dean**
> *Clohan, Adams & Dean*

A Chase spokesman described the bank's exposure to the foundation as minimal; a Hanover spokesman said that bank had very little exposure.

Few Losses Foreseen

"We don't anticipate material losses resulting from this problem," said John E. Dean, a partner with the Washington law firm of Clohan, Adams & Dean and a member of the Consumer Bankers Association's education funding committee. "It would be reckless to speculate what losses could incur, " he added.

"When stuff like this happens, there is a natural sense of: 'Oh, my God.' " said Benjamin A. LeBorys 2d, a senior vice president at the Signet Banking Corp.'s Signet Bank/Maryland, which has no exposure to the agency. "But I know that ultimately these lenders are not in jeopardy."

Still, the problem comes at a time when the student lending business – which has been attractive to many financial institutions because of the government guarantee – is becoming increasingly difficult. Lenders complain of strict regulations, complex servicing requirements, and increasing delinquencies.

"There are now 13,000 lenders in the program but it is not an industry that will allow that to continue," James W. Gatherd, a vice president at Chase Education Finance, said in an interview last week. He predicted that by 1991, the number of lenders that participate in the government sponsored program may be as low as 3,000.

"Instead of everyone feeling warm and fuzzy about how wonderful student lending is, it's just one hit after another," Mr. LeBorys said. "It gets tougher and tougher to stay in the business long-term."

Under the guaranteed student loan programs, banks and thrift institutions make loans to college students with repayment guaranteed by state-related or private nonprofit agencies. These agencies are reinsured by the federal government.

There is continual talk in Washington of narrowing the interest rate spreads that lenders are allowed on federally insured loans. Legislators are also considering requiring lenders to assume more of the risk of the guarantee program.

Delinquencies Mounting

Delinquencies have also been an increasing problem, putting lenders under pressure to crack down on defaulters, raising the loans' servicing costs.

The foundation's woes illustrate a problem inherent in the government's lending program, which represents 50% of all financial aid granted to students today. The program is designed to ensure that all students – regardless of their economic situation – can obtain funds for education. High delinquencies and default rates are therefore inevitable, some bankers say.

> **"HEAF are not the bad guys. They were doing what they were supposed to do."**
>
> **Benjamin A. LeBorys 2d**
> *Signet Bank/Maryland*

"HEAF are not the bad guys," Mr. LeBorys said. "They were doing what they were supposed to do – serve the nation's youth under a government sponsored program." HEAF had guaranteed a large number of trade school loans, which are believed to be riskier than four-year college loans.

Despite some glitches, student lending remains a viable business at many banks.

"Banks are having problems with real estate loans, but they don't stop making them," said Claude Collier, manager of student lending at Barnett Banks Inc., Jacksonville, Florida. "It's the same thing for student loans."

Barnett recently entered the market by purchasing a $90 million guaranteed-student-loan portfolio from Florida National Bank.

Depending on their volume, bankers say they can realize a return on assets of 0.6% to 1.7%, after taxes, on their student loan portfolios. The skyrocketing cost of higher education is expected to keep demand for student loans keen. And by doing business with college students, many bankers say they are forging potentially lucrative relationships with desirable customers early in their careers. □

First Bank System in Pact with JCB

MINNEAPOLIS — First Bank System Inc. said it has signed an agreement to process credit card transactions in the Midwest for JCB International Co., Japan's largest credit card issuer.

First Bank said it will process transactions and settle claims for JCB's 17 million Japanese cardholders in Colorado, Idaho, Illinois, Iowa, Kansas, Minnesota, Missouri, Montana, Nebraska, North Dakota, Oregon, South Dakota, Washington, and Wisconsin.

As of May, the JCB card was accepted by about 250,000 U.S. merchants, up from about 66,000 a year earlier.

JCB, which is owned by a group of Japanese financial companies, has been aggressive in signing up processors in the United States. □

AMERICAN BANKER /Bank Rate Monitor's™

Consumer Money Index — Highest Retail Yields and Jumbo Rates

These are the highest jumbo CD rates and retail CD yields offered on July 25 by the 100 largest banks and thrifts in the nation's 10 largest markets. The star ratings are supplied by Veribanc Inc., of Wakefield, Mass., which evaluates the financial condition of institutions using fourth quarter, 1989, data from federal regulators and assigns (0 power) 3 to 3 power) star to the institutions. Information from Veribanc is believed to be reliable, but the accuracy, adequacy, and completeness of the information is not guaranteed.

COMMENT

Continued from page 4

mortgage securities can still be improved.

1. Subsiding demand for mortgage credit: In recent months, the weakness in the housing sector of the economy has become increasingly obvious. Housing starts in April dropped to the lowest level since 1982.

Waning Demand for Housing

Although mortgage interest rates have declined lately, a significant improvement in housing activity is not expected due to the waning demographic demand for housing. The weakening housing activity will lower the demand for mortgage credit, thus reducing the funding pressure for mortgages in the capital markets.

On the other hand, with the funding pressure on Treasuries mounting due to the widening budget deficit, the mortgage-to-Treasury spreads should tighten further.

2. More stable future prepayments at lower levels: Prepayments in the 1990s are expected to be more stable at lower levels than the 1980s. Prepayments are primarily the result of housing transactions and mortgage refinancings.

As housing activity weakens, prepayments will diminish. Further, with the current mortgage rates at slightly above 10%, newly issued securities should experience much less refinancing-related prepayments than those issued in the first half of the 1980s, when mortgage rates hovered mainly above 12%.

Prepayments Stabilizing

Stable prepayments will reduce the negative convexity that is inherent in mortgage securities, thus lowering their yield premium over Treasuries. As an increasing number of market participants begin to appreciate this prospect in prepayments, yield spreads will tighten.

3. Rising demand for mortgage securities: One exciting development resulting from the much-talked-about phenomenon of aging baby boomers is the improvement in personal savings.

Already, the quarterly savings rate – which decreased miserably during most of the 1980s – has been on the rise since its lowest level in the mid-1987. The pressure is gradually building for fund managers to invest this enlarging reservoir of savings.

Mortgage securities, with their low credit risk and high yields relative to other fixed-income securities, are ideal candidates for long-term investments. In the past year, demand for mortgage securities has risen appreciably.

One convincing example of this increasing appetite is the market's ability to take down huge increases in the supply of mortgage securities. Between last June and December (the latest available information), thrifts sold in net $45 billion worth of mortgage securities. The mortgage-securities market was able to digest this amount with yield spreads to Treasuries widening by only 15 basis points.

> **"One exciting development resulting from the much-talked-about phenomenon of aging baby boomers is the improvement in personal savings."**

Investment Strategies

Given the long-term fundamental value of mortgage-backed securities and the near-term positive market sentiment, purchasing current-coupon pass-throughs appears to be an attractive strategy. If interest rates do continue to decline, investors can simply move down in coupon.

Doing so, they can avoid the price compression (or the high negative convexity) that is inherent in premium coupons. In the meantime, with lower coupons, they can continue to participate in the rally.

Further, investors can supplement the portfolio yield by doing dollar rolls. In the current market, dollar rolls can increase the yield of the current coupon by at least 60 basis points.

If, on the other hand, interest rates rise, the current coupon at least provides a high enough current yield to cushion the price decline. Additionally, in that environment, mortgages resist price declines better than comparable Treasuries.

The current-coupon strategy is particularly attractive in a market environment of a tight trading range. (Most interest rate forecasts call for an 8% yield on long Treasuries by the end of this year. This implies that Treasuries will trade in a narrow range of about 50 basis points.)

By definition, a tight trading range implies relatively low volatility. The cash-flow yield of the current coupon – on an option-adjusted basis with a low volatility assumption – is now among the highest of all coupons.

For CMOs, the relative value really resides in the specific collateral and the unique structure of the bonds. In general, however, sequential-pay CMOs are a better value than PACs (or any other classes with prepayment protection), especially when their yield differential at the pricing speed exceeds 25 to 30 basis points.

If investors believe that there will be inherently more stable prepayments in the future, then the risk of any average-life uncertainty of the sequential-pay classes will be worth taking with respect to the reward of an incremental yield of 25 basis points.

In the same vein, certain companion classes also present value. Stability in prepayments will limit the potential of a wide fluctuation in average lives. For that risk, a reward of 50 basis points or higher in yields over those of PACs is more than reasonable. □

The Trust Business.
It's a Service Business.

As a trust officer, you do a lot more than manage investment portfolios for your customers.

You're busy making asset allocation decisions. Handling the operations. Packaging and marketing your services. And continually providing all the investment options your customers are demanding.

Well, Fidelity can give you a hand. Consider Fidelity Trust Portfolios. The funds people know, from a name that's respected, and a program that makes sense.

Fidelity makes understanding the trust business!

As a leading provider of mutual funds to trust departments across the country, Fidelity offers a wide array of funds, including money market, bond, and equity funds.* Allowing instant diversification of product, Fidelity funds may be used as a convenient, inexpensive complement to your common trust funds.

We can help you provide the diversity that many of your trust customers are demanding these days, without adding expensive staff or systems. And spend more of your time and resources on the intangible, yet invaluable, part of your business...

Service.
