Japan's Politicians Leak Details of Loans to China

By IRENE KUNII
Reuters

TOKYO — Maverick Japanese politicians, eager to score political points, are rushing into China with promises of official loans. Meanwhile, angry government officials watch powerlessly from their offices.

On Wednesday, Kiichi Miyazawa, a leading member of the ruling Liberal Democratic Party, told Chinese Premier Li Peng in Beijing that Japan and China could exchange notes on the first tranche of an $5.4 billion loan package to Beijing in October.

One week earlier, a former foreign minister, Hiroshi Mitsuzaka, also visiting Beijing, told Chinese leaders that they could expect to receive the first loan installment in September and another early next year.

Government Disputes the Statements

None of this has been officially announced by the government in Tokyo, which insists that the timing and details have not yet been set and that an official envoy, yet to be appointed, would carry the news formally to Beijing.

"They're given a rundown of our policy plans before they leave, but they're not expected to speak out on behalf of the government," one official commented.

Chief Cabinet Secretary Misoji Sakamoto, commenting on Mr. Miyazawa's pledge in Beijing, said: "We won't be able to stop them [from talking], but I'm going to ask the Foreign Ministry to try and streamline traffic." Mr. Sakamoto is the government's top spokesman.

Legislators' Power Noted

The official said there was little that government officials could do about the unsanctioned comments because of the power wielded by the legislators.

At the Houston summit meeting of the Group Of Seven industrialized nations July 9 to 11, Prime Minister Toshiki Kaifu announced Japan would begin releasing the $5.4 billion in loans covering 1990 to 1995.

The package was frozen for about a year to protest Beijing's brutal suppression of a pro-democracy movement in June 1989.

But the other summit nations – the United States, Canada, Britain, France, West Germany, and Italy – declined to lift sanctions against China.

"Japan has just got the summit nations to agree to our loan resumption, but we're not much further along than that," said an official in the ministry's China section. "The resumption plan is under study, and it will take some time."

THE PHILIPPINES

The Philippines is considering options to ease foreign debt payments so that the money can be diverted to rebuilding the country, devastated by last week's earthquake, but President Corazon Aquino wants any action to be agreed upon in advance by creditors, a spokesman said Wednesday.

Any move should not be unilateral, a presidential spokesman, Adolfo Azcuna, told reporters. — **Reuters**

ENGLAND

The debt rating of London-based **Standard Chartered Bank** has been downgraded by the rating agency **Moody's Investors Service.**

Long-term deposits and senior debt were reduced from A1 to A2, and subordinated debt from A3 to Baa2. About $2 billion is affected. — **EMMA**

UNITED STATES

London-based Morgan Grenfell, the merchant bank unit of **Deutsche Bank,** is to set up a joint company with the New York firm of **Gleacher & Co.** to specialize in international mergers and acquisitions as well as corporate advice.

The arrangement will allow Morgan Grenfell to handle U.S. deals that were previously beyond its scope because of poor representation, the company said. — **EMMA**

JAPAN

First Wachovia Corp. announced Thursday that two of its primary banks, First National Bank of Atlanta and Wachovia Bank and Trust Co., have received authorization from Japan's Ministry of Finance to establish a representative office in Tokyo. The office is expected to open early in 1991.

John G. Medlin Jr., chief executive officer of First Wachovia, said the Tokyo office would assist First Wachovia customers doing business with Japan as well as Japanese companies investing in the United States.

"The growth of Japanese direct investment in the United States, particularly in the Southeast, and the trading activities of our domestic customers with Japan have provided First Wachovia attractive business, which will be enhanced by the new office," Mr. Medlin said.

European Media Monitor and Analysis is a Brussels-based news service that provides abstracts from the European financial and business press.

U.S. Banks Retreat from Global Ambitions

Continued from *page 1*

international bandwagon, now the reverse is true."

The latest casualty is Chase Manhattan Corp., one of the most ardent proponents of full-service global banking in the 1980s. The bank last month announced it was slashing operations overseas to reduce costs.

Chase did not provide details, but analysts predicted the cutbacks would fall heavily on Chase's corporate finance operations overseas, especially out of London, where profits have been slim over the past few years.

Regionals Are Challengers

The international downsizing of U.S. money-center banks is part of a broader restructuring aimed at focusing on their home markets, where many face a growing challenge from better-capitalized and more profitable regional banks.

BankAmerica Corp. and Wells Fargo & Co., for example, focus mainly on retail banking in California, while Chemical Banking Corp. has emphasized building its consumer business and and middle-market lending.

"With the steady march toward interstate banking, American banks have to look much more closely at their home market," said John Kriz, a securities analyst with Moody's Investors Service.

Commercial Operations Go

Most big U.S. banks began their overseas retreat in the mid-1980s, when they began selling or closing their overseas commercial operations.

Bankers Trust Co. and J.P. Morgan & Co. led the way, when they both eliminated their commercial lending operations in the early 1980s. The moves were followed to varying degrees by Chemical, BankAmerica, Manufacturers Hanover Trust Co., Wells Fargo, First Chicago Corp. and Continental Bank Corp.

The single exception to the trend is Citicorp, which continues to expand overseas.

Earnings a Problem

The overseas retreat is reflected in U.S. bank earnings.

Almost all major U.S. banks posted massive losses on their international operations last year. For Chase, the loss ran to $943 million; Manufacturers Hanover, $919 million; Chemical, $615 million; BankAmerica, $477 million; and Citicorp, $467 million.

Peter Rona, who will resign Aug. 3 as president of IBJ Schroder Bank and Trust Co. to set up his own consulting company, believes that capital shortages and inefficiencies in U.S. banking are constraining U.S. banks activities overseas and may ultimately reduce American banks to a relatively insignificant role abroad.

> **"U.S. financial firms, particularly banks, have not fared well in today's sophisticated global environment."**
>
> **Rep. John LaFalce**
> *Democrat of New York*

Unusual Situation

"It would be historically unprecedented for a large capital-importing nation to at the same time support a growing international banking industry," Mr. Rona said.

As U.S. banks reduced their commercial banking activities, many have chosen to concentrate on investment banking in the three major capital markets – New York, Tokyo, and London. But even that strategy has run into problems.

In London, Chase, Security Pacific Corp., and Citicorp have closed various market-making operations in government securities, equities, and Eurobonds. In Tokyo, Citicorp and Security Pacific have cut back operations in Japanese equities.

Misjudgment Noted

Although banks say they are only selectively eliminating their securities-related operations, the cutbacks show that many seriously misjudged the cost and complexities of launching a global investment network.

"There is an unmistakable – and disturbing – trend. U.S. financial firms, particularly banks, have not fared well in today's sophisticated global environment and are playing a diminished role in world markets," Congressman John La Falce, D-N.Y., told the Bankers Association convention.

"It is ironic that, as the market becomes more global, U.S. financial institutions are becoming more national in their orientation."

Mr. La Falce is chairman of the House task force on the international competitiveness of U.S. financial institutions.

"While there will be some dislocations short-term, long-term I believe the current restructuring of American banking will result in a better-organized and more profitable industry in the U.S.," said Moody's Mr. Kriz.

John Evans in London contributed to this article.

Reed Warns of World Capital Crunch

MEXICO CITY – Radical political and economic reforms in Eastern Europe are likely to cause a global shortage of the investment capital needed to satisfy growing demands for prosperity and development, said Citicorp's chairman and chief executive officer, John S. Reed.

The fall of the Berlin Wall and the remaking of Europe and the Soviet Union have added 425 million people to the millions in the developing world already competing for a higher standard of living, Mr. Reed said this week at a luncheon meeting of the American Chamber of Commerce.

"You need $40 trillion of capital to support the desires of those people," he said. "It certainly says to you that we are going to be capital short."

Mr. Reed said the rise of democratic governments in Latin America has led Washington to consider closer trade and investment ties. He cited a proposed free-trade agreement between the United States and Mexico.

Mr. Reed, who led the committee that negotiated a key debt-reduction accord with Mexico last year, dismissed its $93 billion debt as "not an issue." But he predicted that investors who took their capital abroad during the 1980s debt crisis will not bring it back to Mexico soon. — **Reuters**

Bill Would End State Curbs on Branches

Continued from page 1

called the legislation both "radical" and "overdue."

'New Era' Foreseen

"This will help usher in a new era in U.S. banking," Mr. Schumer said.

To be sure, interstate banking is already at an advanced stage. Many states already have adopted reciprocal interstate banking laws.

Consequently, a federal mandate for interstate banking would most benefit large banks that have been excluded from certain regions, said banking experts.

One implication, these observers said, is that the legislation, if it becomes law, would spur quicker consolidation of the banking industry by allowing a free flow of banking activity – by both branching and by acquisition – across state lines.

In addition, the banks would find it less costly to branch across state lines than to buy a bank or charter a new one, which would promote efficiency in an already cost-conscious banking system, said the bills' sponsors.

But banking lobbyists also warned the measures would be perceived as threatening to many states keen on controlling the pace of change of banking within their borders.

The legislation comes at a time when Federal Reserve Chairman Alan Greenspan, Treasury Secretary Nicholas F. Brady, and Securities and Exchange Commission Chairman Richard C. Breeden all have indicated that structural changes must be made in the banking industry. Mr. Greenspan and Mr. Breeden have voiced "conceptual support" for full interstate banking, Mr. Dodd said.

Major Provisions Listed

The main provisions of the Dodd and Schumer bills, which would apply both to banks and savings institutions, would:

- Authorize the Federal Reserve to approve applications by bank holding companies to acquire out-of-state banks, in effect repealing the Douglas Amendment to the Bank Holding Company Act of 1956. That measure gave states the right to decide whether to allow holding companies to acquire banks within their boundaries.
- Permit interstate branch banking as of Jan. 1, 1994. Individual states could exempt themselves by passing a law to that effect before Dec. 31, 1993.
- Delay until Jan. 1, 1993, "de novo" entry by banks into other states. The delay would give states time to prepare for these new entrants without delaying full interstate banking.

Politics Are Sensitive

The proposed repeal of the Douglas Amendment makes the measure "politically charged" because it "directly challenges a state's right" to oversee financial institutions within its borders, said Richard M. Whiting, general counsel for the Association of Bank Holding Companies.

Full interstate banking would speed up consolidation in the industry and put control of regional assets in the hands of a limited number of major players, suggested Edward E. Furash, president of the Washington-based management consulting firm Furash & Co.

That, in turn, would mean trouble for small local banks, said Stephen J. Verdier, senior legislative counsel for the Independent Bankers Association of America. "You lose any semblance or hint that a bank might have local control," Mr. Verdier said. Large regional banks would have little interest in local lending, he contended.

But this was disputed by Mr. Furash, who believes that interstate banking – while creating large players in a region – will spawn "boutique" banks that put a premium on service.

Mr. Gerhardstein writes for the Medill News Service.

Rep. Charles E. Schumer
Democrat of New York

Sen. Christopher Dodd
Democrat of Connecticut

Investments In Latin America Seen Surging

By LINDA CORMAN

WASHINGTON — Foreign direct investment in Latin America, which fell off severely in the mid-1980s, is surging, the Institute of International Finance said.

After ranging between $3 billion and $4 billion a year from 1983 through 1986, foreign direct investment will probably rise to about $9 billion a year in 1990 and 1991, according to a study by the research organization that represents about 180 commercial banks and other lenders. The 1990 level would represent a 40% increase over last year.

"The trend is in the right direction. It needs to be accelerated," said Horst Schulmann, managing director of the institute.

Mr. Schulmann attributed the expected rise to a wave of privatizations of state enterprises across the continent – concentrated in Argentina, Brazil, and Mexico. As an example, he cited the recent sale of Argentina's airline to a group of international investors.

The resurgence of foreign investment follows a 1989 trough resulting from the limitations imposed by many Latin American countries on debt-for-equity swaps, Mr. Schulmann said. □

Chase Promotes Hunter

NEW YORK — Chase Manhattan Corp. said Robert Hunter, national financial services executive, has been promoted to executive vice president of Chase Manhattan Bank. Mr. Hunter, 46, will oversee some of Chase's fastest-growing businesses, including private banking, upscale consumer lending, and investment services, the bank said. — **Reuters**

American Banker's Fourth Annual Technology Survey

Get essential information on the changing dynamics of bank technology

American Banker has conducted an extensive survey of senior-level executives responsible for operations at more than 300 commercial banks and financial institutions. This Special Report features candid opinions, important statistical data and revealing analyses, to keep you on top of the banking industry's technological pulse.

Examine management issues, budget and allocation questions, and emerging technologies, such as expert systems and image processing. You can take a look at where banks buy their hardware and get a preview of the latest bank telecommunications systems.

- **How satisfied are your peers with current technology and vendors?**
- **What do they foresee as future opportunities?**
- **What influences spending and purchasing decisions in operations and technology?**
- **What are the strategic objectives behind investing in new technology?**
- **How involved are chief executives in their banks' technology strategies?**
- **With the consolidation in the industry, what major technology areas are being merged?**

Get the answers to these and many other questions in this fascinating chronicle of bank technology.

You're looking at the difference between our end-of-day pricing service and theirs.

It's called a responsive customer service team.

At Muller Data, our customers tell us we have the "most professional" service in the industry. They say we're friendly and helpful. That we try harder, and do things right the first time.

Answers, fast.
Our records say we answer more than 80 percent of your questions while you're still on the phone. So instead of promises to "get back" to you, we give you answers and solutions – on the spot. When we do have to call you back, we give you a time, and treat it like an important commitment. Because to us, it is.

Accurate data.
Of course, we start with accurate, comprehensive data for more than 750,000 issues, including listed and OTC equities, commodity and financial futures, CMOs, MBSs and UITs – *plus* the full universe of more than one million municipal bonds, corporate fixed-income securities, government instruments, and 80,000 Canadian and overseas equities and bonds.

Can we show you?
We'd like to show you just how accurate, timely and responsive a securities pricing service can be. For more information, write Muller Data Corporation, 161 William St., New York, New York 10038, or call toll-free: 1-800-US-MULLER.

U.S. May Require Freddie Mac, Fannie Mae to Earn Triple-A Ratings

REUTERS

WASHINGTON — Budget negotiators are weighing a proposal that would require the Federal Home Loan Mortgage Corp., the Federal National Mortgage Association, and other government-sponsored enterprises to obtain triple-A credit ratings, according to congressional and industry officials.

The discussions have upset Freddie Mac and Fannie Mae officials, who argue that the issue should not be settled in secret budget talks between administration officials and congressional leaders.

"I am really concerned about what would be the implications of those proposals," said Leland Brendsel, president and chief executive officer of Freddie Mac.

Crisis Mentality Cited

In testimony Thursday before the House Banking subcommittee on housing and urban development, Mr. Brendsel said requiring a triple-A rating from agencies outside the control of the government would raise the costs of home ownership.

It "appears to be an extreme standard of capital adequacy, since no other domestic lending institutions are currently rated triple-A by two rating agencies."

> **"No other domestic lending institutions are rated triple-A by two rating agencies."**
>
> **Leland Brendsel**
> *Federal Home Loan Bank Board*

Mr. Bredsel gave support to efforts to reduce the risk to taxpayers from government-backed enterprises, but argued that the implications of some of the proposals should be discussed more thoroughly.

"I don't think it should be done in the crisis atmosphere of the budget summit," he said. "It would be a mistake for Congress to react in haste to these doomsday scenarios without understanding the implications of changing our current way of doing business on the mortgage marketplace nationwide."

He warned the committee that the federal government's "crisis mentality" spawned the savings and loan crisis, and said that the same mentality, now applied to his agency, could undermine the availability of housing and mortgages.

He also said the administration's proposed capital and operating requirements ignore Freddie Mac's key role in the housing market.

"Freddie Mac must balance two competing goals – to serve our housing mission while protecting the federal government from risks arising from our operations," he said. "We've helped one in eight American families achieve home ownership. Our record of unbroken profitability is the result of never straying from prudent business practices."

Mortgage Interest Could Rise

James A. Johnson, vice chairman of Fannie Mae, called the rating requirement suggested by the Treasury and Office of Management and Budget irresponsible. He said acceptance of these standards could result in "significant disruption of the housing and mortgage finance markets and the general economy."

Mr. Johnson warned of a potential rise in mortgage interest rates, a drop in the supply of mortgage credit, an increase in the federal government's costs in the S&L bailout, and a worsening of "recessionary tendencies of the economy."

> **"Does that mean rating agencies will have the ability to say you're going to have to cut out low-income lending to obtain a triple-A rating?"**
>
> **David Jeffers**
> *Federal National Mortgage Association*

Mortgage availability would fall, he said, if excessive capital requirements require Fannie Mae and Freddie Mac to shrink or shut down major parts of their operations.

Fannie Mae vice president David Jeffers said the rating proposal could jeopardize the company's low- and moderate-income financing projects. "There is no question that certain types of low income lending are inherently risky," Mr. Jeffers said.

"We have problems with relegating [public policy issues] to a private rating agency," he added. "Does that mean rating agencies will have the ability to say you're going to have to cut out low-income lending in order to obtain a triple-A rating?"

The drastic measures proposed for Freddie Mac and Fannie are a direct result of the ongoing budget crisis. The savings and loan bailout, which will cost taxpayers an estimated $300 billion over the next 30 years, has prompted the administration and lawmakers to seek ways to curb the government's contingent, or off-budget, liabilities.

Fannie Mae, Freddie Mac, and other contingent liabilities, including student and small-business loan guarantees, home mortgage insurance, and farm credit programs, expose the government to $6 trillion of potential liabilities, according to government data. □

Banking Coverage Where It Counts
WASHINGTON MONDAY

Executive Help Wanted

Debit Product Managers

Visa U.S.A. is seeking banking professionals to lead the continued development of Visa Debit Card and ATM/Direct Debit POS products and services.

Technology and innovation have made Visa the largest, most widely recognized financial payments systems in the world. We do more than enhance existing products and services. We focus on new opportunities as well.

You'll not only manage existing products, you'll contribute to the implementation of new programs and services. Your priorities will include analyzing their feasibility and profitability, developing product marketing materials, participating in marketing support activities, establishing product management tracking/reporting requirements, interfacing with operational and systems areas, and overseeing product plans.

Product management positions are now available.

Visa Debit Card ATM/Direct Debit POS

Qualifications include 5+ years' experience in financial services with recent experience in product management. For Visa Debit Card, knowledge of retail bank operations and communication-based products is highly desirable. For ATM/Direct Debit POS, background in EFT/ATM products and services is needed. Excellent communication skills, both verbal and written, are essential, along with marketing support and project management skills.

VISA offers an excellent compensation package including comprehensive benefits. For immediate consideration, please send your resume to: VISA U.S.A., Dept. CR/7/24/AR, PO Box 8999, San Francisco, CA 94128. For other VISA opportunities, please call our JOB INFORMATION LINE (415) 378-8299. We are an equal opportunity employer.

VISA

We're everywhere you want to be.

Sales

NATIONAL ACCOUNT EXECUTIVE

Electronic Banking, a division of First Bank System has created two new National Account Executive positions.

Responsibilities include:

- Selling to specific industry groups such as airlines, hotels, car rental companies and retail
- Develop and negotiate business proposals and agreements
- Develop and maintain relationships with national accounts for credit card processing
- Analyze the target industries to determine potential opportunity and risk

Qualified candidates must have a BA degree with 5-7 years of experience in sales, customer service, marketing, or finance related backgrounds within the travel and entertainment or retail industries. An MBA would be a plus.

First Bank System offers a competitive salary, generous flexible benefits package and is located in its downtown Minneapolis offices. For confidential consideration, please send your resume and salary requirements to: Bruce Jochims, FIRST BANK SYSTEM, Human Resources, MPFW-0003, 120 South Sixth Street, Minneapolis, MN 55480.

First Bank System

Norwest Agrees to Buy United Banks

Continued from page 1

holding companies would be one of the biggest ever in banking, creating the nation's 20th largest. Norwest, an eight-state superregional based in Minneapolis, now ranks 30th, with $26.8 billion in assets. United, which owns 40 banks in Colorado and is the state's largest, ranks 81st, with $6.3 billion in assets.

Norwest said it expects the acquisition would boost earnings by less than 1% in 1991 and boost earnings in 1992.

Analysts said Norwest was paying a fair price, provided that United credit problems do not worsen and Colorado's depressed economy begins to rebound.

Ben B. Crabtree, vice president of research at Dain Bosworth Inc. said that if Norwest can get United Banks' loan-loss provision down to 1% of total loans from 1.25% and trim 20% from noninterest expense, it could add as much as $60 million to pretax earnings.

Extensive Due Diligence

Norwest chief executive Lloyd P. Johnson said more than 300 staff members spent a total of 17,000 hours over the past two weeks engaged in due diligent review of United Banks' loans.

"We reviewed 100% of the real estate owned, 92% of the commercial real estate loans, 92% of the commercial loans, every loan over $100,000, and sampled the rest, including consumer credits," Mr. Johnson said in a telephone interview from United Banks' Denver office. "We have a very experienced due diligence group."

Mr. Johnson said the company had also done an extensive study of the Colorado economy, which he said appears to be improving. He cited the state's unemployment figures, which have

Over 300 Norwest staffers spent a total of 17,000 hours on due diligence.

improved to 5.2% in March 1990 from 6.4% in 1988 and compare favorably with the national rate of 5.3%.

In addition, he pointed to Denver's continued population growth and cited large public works projects including a new airport and a convention center. He declined to comment on cost issues.

Dilution Estimates Questioned

Using the acquisition of First Interstate of Wisconsin earlier this year as an example, William W. McGinnis, analyst for Blunt Ellis & Lowei Inc., said Norwest's dilution predictions could be conservative.

They [Norwest] went in and cleaned up that organization last year," said Mr. McGinnis. While First Interstate was in better shape than United Banks, Norwest cleaned up the loan portfolio, reduced staff, and restructured the company's investment portfolio, he said.

Under the agreement, each share of United common stock will be exchanged for 1.22 shares of Norwest common. Based on a 30-day average of Norwest's stock price before the discussions were announced on July 10, the deal would be valued at $440 million.

United Banks would be the largest acquisition attempted by the $26.8 billion-asset Norwest. It has an agreement to buy First Minnesota Savings Bank, a healthy thrift which had $3.2 billion in assets at the time of the announcement earlier this year. Its recently completed acquisition of First Interstate of Wisconsin Corp. added $2 billion in assets.

After the announcement of talks between the two companies earlier this month, the debt of the Minneapolis-based bankholding company was placed on Standard & Poor's CreditWatch list, with negative implications. The rating agency also listed Denver-based United Banks for possible upgrade. □

Citing $10 Million in Fees, FDIC Goes After Equimark

By BILL ATKINSON

WASHINGTON — The Federal Deposit Insurance Corp. is seeking reimbursement for $10 million in charges that Equimark racked up in the nine months it was managing Nationwest Bancshares Corp.

The agency has begun a review of Equimark's expenses during the time it managed San Antonio-based National Bancshares. FDIC spokesman Alan Whitney declined to discuss the charges being investigated, but he said the examination will include relocation, travel, lodging, and data processing costs.

The FDIC inquiry is the latest in a string of bad news to hit Pittsburgh-based Equimark since May, when it was unable to complete the acquisition of National Bancshares operations from the FDIC. The FDIC inquiry was first reported by *The Wall Street Journal* on Thursday.

That same day, the $3.5 billion-asset Equimark reported a loss of $15.5 million for the second quarter, compared with net income of $4 million in the 1989 period.

The loss, which had been anticipated, was partially offset by a net gain of $14.3 million from the sale of Equimark's credit card operation. □

The FDIC inquiry is the latest in a string of bad news to hit Pittsburgh-based Equimark.

In a written statement by Equimark's general counsel, Libby G. Fishman, the company said it received a letter from the FDIC requesting "additional information and supporting documentation for those expenses."

"The corporation will review this request and respond accordingly," the letter stated.

Auction Notices

IN A written statement by Equimark's general counsel, Libby G. Fishman, the company said it received a letter from the FDIC requesting "additional information and supporting documentation for those expenses."

"The corporation will review this request and respond accordingly," the letter stated.

The FDIC inquiry is the latest in a string of bad news to hit Pittsburgh-based Equimark.

The letter said it was Equimark's standard business practice to consider itemized invoices and supporting-expense documentation to National Bancshares.

The flap over expenses comes at a critical time for Alan S. Fellheimer, chairman of Equimark, who is reported to be under intense pressure from directors. After the National Bancshares deal fell through, the company slimmed down its senior management. Among the senior executives to resign were Judith Fellheimer, the chairman's wife and vice chairman of the Equimark subsidiary. □

DEALS
Mary Kay May Seek Funds To Repurchase Some Debt

By WILLIAM GOODWIN

Mary Kay Corp. said it is talking to its existing bank group and other potential funding sources about financing the repurchase of a "major portion" of its publicly traded debt.

The bank group, led by Bank of New York Corp., includes Banque Paribas and AmeriTrust Corp.

A Mary Kay spokesman would not say exactly how much the company intends to repurchase of the $172 million principal amount of the 15% discount debentures. He said the negotiations with the banks are in the early stages.

The public debt was issued to help finance the 1985 leveraged buyout of Mary Kay.

"They feel like they've earned better terms than the original LBO terms," the Mary Kay spokesman said. The company hopes to complete the refinancing by late fall, he added.

Mary Kay is not seeking to refinance its existing bank debt, but covenants would probably need to be amended if the company obtains new bank financing for the repurchase of the public debt, the spokesman said.

Mary Kay has $123 million of bank debt outstanding. A "significant portion" of that amount relates to the purchase of Avon Products Inc. stock over the past two years.

The Avon stake, which represents a $70 million investment, is held indirectly by Mary Kay through its 23% interest in Chartwell Associates LP, which in turn owns 26% of Avon.

Chartwell's other general partners are the Fisher Brothers of New York and Gordon Getty.

Most of Mary Kay's LBO-related bank debt has been repaid. It now represents only about a third of the total bank debt, according to the company's spokesman.

Mary Kay has hired First Boston Corp. as financial adviser on the refinancing.

Deals in Progress

TRUMP UPDATE: Donald Trump's bankers extended a $20 million bridge loan until Aug. 3 to give themselves time to complete documentation on the five-year balloon package for the developer.

The 30-day bridge loan was set to expire Thursday.

The banks agreed last month to loan Mr. Trump an additional $65 million to see him through a cash-flow crisis and avert a possible bankruptcy filing.

The banks also agreed to defer interest payments on about $850 million of Mr. Trump's $2 billion of bank debt. The $20 million bridge loan allowed Mr. Trump to make a bond payment.

The principal Trump banks are units of Citicorp, Bankers Trust New York Corp., Chase Manhattan Corp., and Manufacturers Hanover Corp. □

Economists Doubt Rally in Bonds
Inflation Fear and High Rates Abroad Seen as Barriers

By RICH MILLER
Reuters

WASHINGTON — The Bush administration could be in for a surprise if it expects that an agreement to cut the federal budget deficit will trigger a bond market rally that pushes down interest rates.

Nagging inflation worries in the United States and higher interest rates overseas will probably prevent that from happening, economists said this week.

"It's conceivable that a budget package will do no more than keep long rates from rising," said David Jones, chief economist at Aubrey G. Lanston & Co.

Agreement Sought

Congressional leaders have been huddling daily with administration officials in an effort to reach an agreement to cut savings and raise revenues to offset next year's budget deficit, currently projected at about $169 billion. Although U.S. bond prices might spurt in a knee-jerk reaction to news of an agreement, economists' fundamentals probably will prevent a major advance from developing, several economists said.

That is bad news for the administration, which is counting on a drop in interest rates to spur the economy and offset the recessionary impact of a cut in the budget deficit.

"We believe that a major move in interest rates will occur if there is a credible, serious deficit-reduction deal that is enforceable," Michael Boskin, chairman of the White House Council of Economic Advisors, said earlier this month.

Competition Noted

But private economists are not so sure. They said that the competition worldwide for scarce global savings limits the chances of a big drop in U.S. bond yields, no matter what happens to the budget.

Morgan Stanley & Co.'s chief economist, John Rashas, calculates that a $50 billion cut in the U.S. budget deficit would move global savings by a mere 0.2%.

That would translate into a drop of only about a quarter point in long-term U.S. interest

> **"We believe that a major move in interest rates will occur if there is a credible, serious deficit-reduction deal that is enforceable."**
> **Michael Boskin**
> *Council of Economic Advisers*

rates, hardly the major move the administration is looking for.

Both administration and congressional budget negotiators already have decided against cutting the deficit in the fiscal year starting Oct. 1 by more than $50 billion out of fears that would throw the already sluggish economy into a recession.

Vow from Greenspan

Federal Reserve Board Chairman Alan Greenspan assured Congress that the central bank would try to keep the eight-year economic expansion going if the deficit is reduced.

"The Federal Reserve will act, as it has in the past, to endeavor to keep the economic expansion on track," Mr. Greenspan said.

If the Fed tries to ignore the markets and aggressively push down short-term interest rates, economists warned that long-term rates are unlikely to follow suit. Instead, they said, the yield curve is likely to steepen as short rates fall and long yields hold steady or even rise.

"Although a budget-driven trading rally could push yields slightly lower, the balance of risks in the bond market is shifting toward somewhat higher yields," said Salomon Brothers economist Richard Berner. He said inflation-wary investors are worried because the U.S. central bank seems to have shifted its priorities from fighting inflation to avoiding recession.

The Fed eases monetary policy a notch this month and Greenspan said it was ready to act again if a credit squeeze threatened to throw the economy off course. That left investors wondering whether the central bank was caving in to political pressure for lower short-term interest rates now and thus risking higher inflation in the long run.

The Bush administration has stepped up pressure on the Fed to lower interest rates because of fears the economy may slip into recession ahead of congressional elections in November.

Strategies Are Varied

Economists said the Fed looks to be easing its credit grip just as Japan and West Germany appear about to tighten theirs. Japanese interest rates are already headed higher and West Germany's omnipresent expert rates in West Germany to follow suit as its monetary union with East Germany stokes up demand.

That will tend to push the dollar lower, which Mr. Greenspan sees to take advantage of higher short-term rates there, and U.S. inflation higher as import prices here rise.

"High overseas interest rates and a weaker U.S. dollar will reinforce the updrift" in bond yields, Salomon's Mr. Berner said.

Economists said the Fed could help the administration's desire for lower rates and the bond market's push for higher yields.

"We obviously will be focusing very closely on how the markets respond, and how the markets evaluate the [budget] package," Mr. Greenspan said. At the end of the day, it's the credit markets which count."

But economists said he may have trouble convincing the administration of that. □

Earnings Dip 96% at Bank of Boston As Regional Economy Takes Its Toll

Continued from page 2

beginning of second quarter.

"The continued weakness in the regional real estate market has led to a reappraisal of values in our loan portfolio," said William M. Crozier, Jr., chairman of BayBanks Inc., in a prepared statement.

BayBanks reported a loss of $13.8 million for first quarter, and earned 18.8 million in second quarter 1989.

Analysts said they were surprised by the size of the loan loss provision increase, given that the company's nonperforming loans only rose 11% to $265 million from $237 million.

BayBanks reserves for loan losses were $145 million at June 30, or 55% of nonperforming loans.

"Now the reserves are much more in line with those of BayBanks' nonperforming loans," said James Moynihan, an analyst for Advest in Boston. He said that the nonperforming loans would drag on bank earnings for the rest of the year.

"They will have difficulty getting back into the black," said Mr. Moynihan.

Compared to other Boston institutions, BayBanks is a large real estate lender. □

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for 225 banks and thrifts with assets and/or commercial banking firms and the 25 largest publicly traded thrifts as determined by total assets. The tables also include price-earnings ratios, dividend yields, and market capitalizations for each bank stock as well as a percentage of average shares traded daily over the past year.

Data source: SNL SECURITIES, Charlottesville, VA. 804/977-1600, producer of the tables. Research has it Network, Vienna, VA, provides SNL with the daily prices.

Analysts Seeking Better Methods To Size Up Banks

Continued from page 1

cusing on a dividend safety test to help them analyze bank stocks better.

"We were looking for a way to get a handle on the fact that price-earnings ratios and price-book ratios have become less meaningful. We wanted to come up with a different measure," said Charles Cranmer, the Shearson analyst primarily responsible for the new method.

The Shearson system assigns a loss-potential rating to each high-risk aspect of a bank's loan portfolio. Factoring in the earnings stream, the loan loss reserve, and the equity base, the system comes up with a rating that Shearson says helps it judge how well a bank could cover its dividend under financial strain.

New Tools for Bank Analysts

- **The Surprise Index:** Banks' propensity to make bad loans over time
- **Dividend cover ratio & dividend safety quotient:** How likely is a dividend cut?
- **Product line analysis:** Analyze banks more on product competitiveness

Looking at Product Lines

Analysts at Dean Witter Reynolds Inc. say tinkering with current methods is not enough.

Dean Witter analyst Richard Bove said such issues as cash flow and loan portfolio quality get too much attention from bank investors and analysts. They should start thinking more about the competitiveness of product lines, as do analysts of industrial corporations, he said.

'There Aren't Any New Ways'

Not everyone in the analysis community, however, is enthralled with the new techniques and approaches.

"There aren't any new ways. In [slump] periods like this, once an institution gets into trouble, there is a limit on the amount of valid analysis you can do," said Lacy Shockley, an analyst at Smith Barney, Harris Upham & Co.

Track Record a Poor Indicator?

She said a bank's success in avoiding bad loans during the 1980s is no good indicator of its lending officers' skills in today's much tougher environment.

Referring to Dean Witter's approach, she said that analyzing a bank's product lines goes only so far. "You could love Bank of New England's product lines, but that doesn't mean you want to buy the stock," she said.

Dividend Puzzle

Using dividend safety to gauge whether to invest in a stock would be helpful, she said – if one could analyze dividend safety.

But a bank's maintaining or cutting its dividend is often a discretionary, unanalyzable move by the board of directors, Ms. Shockley said.

No Way to Know

Furthermore, she said, in today's unstable environment, even bank management often has no way of knowing how safe the dividend is.

Finally, she said, decisions to maintain a dividend don't necessarily mean a bank's fundamentals are sound.

* * *

THURSDAY'S MARKET

The Dow Jones industrial average was down about 25 points in late afternoon trading, but the performance of major bank stocks was mixed. Several had the strongest day since reports of the industry's mostly feeble earnings in the second quarter.

J.P. Morgan & Co. was up $7.5 cents, to $38. Bankers Trust New York Co. gained $7.5 cents, to $40, and Chase Manhattan Corp. rose 37.5 cents, to $20.12, in midafternoon trading.

But the strongest performance of the day was that of First City Bancorp. of Texas, Houston: It rose $1.25, to $21, regaining some of the ground lost recently in a steep slide.

"I think this stock finally got to a point where all the negatives didn't look so overwhelming," said Frank W. Anderson, the banking analyst at Stephens Inc., Little Rock, Ark.

"Some investors said that at $18 a share, which is 50% of book value, maybe this had been overdone a little."

— Gordon Matthews

CAPITAL

MNC Looking to Banks for Fresh Capital

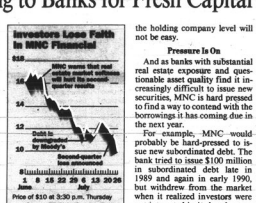
By KELLEY HOLLAND

Shunned by the public capital markets, MNC Financial Inc. has turned to its banking peers for recapitalization.

The Baltimore-based superregional has begun to seek almost $1 billion in new cash infusions, according to sources. Within the next year, the bank has roughly $2.3 billion in maturing short-term debt.

Officials at MNC will not comment on their fund-raising activities. But officials at J.P. Morgan & Co. officials said the bank was arranging a $750 million collateralized credit facility, and MNC's board has reportedly voted to accept a $200 million equity injection from a group led by one of its directors.

Investors Lose Faith in MNC Financial



Positive Signs

So far, the signs are encouraging. Five bank companies – J.P. Morgan, the agent; BankAmerica Corp.; Manufacturers Hanover Corp.; Union Bank of Switzerland; and one other Swiss bank – have reportedly committed to participating in providing the line of credit. However, officials at J.P. Morgan declined to confirm the names of banks participating.

In the secondary market Thursday, MNC's 9⅛% subordinated capital notes were offered at a yield of 14%, up 30 basis points from the 13.7% offering yield Wednesday. "I don't think this is a Bank of New England," said Ann L. Robinson, a vice president at Donaldson, Lufkin & Jenrette. "I think it's pretty solid."

Losses Still Piling Up

But MNC has some distance to go. For one thing, it is losing money. Most recently, the bank reported a $74.7 million loss for the second quarter after adding $233 million to its reserve for possible credit losses.

For another, the lack of profitability is making it next to impossible for MNC to raise new capital in the markets – and that could be a problem, given its high level of short-term liabilities.

At the end of the second quarter, MNC had $1.58 billion in commercial paper outstanding, according to Edward Thompson, a vice president at Thomson BankWatch. And it has more than $800 million in variable-rate notes maturing in the next 12 months.

Liquidity at Banks

To be sure, MNC's subsidiary banks are liquid, benefiting from large deposit bases. In fact, at the end of the second quarter, MNC's loan-to-assets ratio was 56%, down from 68% at the end of 1989.

And MNC has several eminently marketable subsidiaries it could sell, including an asset based financing company and a mortgage subsidiary.

But MNC would prefer to hold onto those assets, and to do so it needs holding company level funds. In today's jittery capital markets, issuing securities at the holding company level will not be easy.

Pressure Is On

And as banks with substantial real estate exposure and questionable asset quality find it increasingly difficult to issue new securities, MNC is hard pressed to find a way to contend with the borrowings it has coming due in the next year.

For example, MNC would probably be hard-pressed to issue new subordinated debt. The bank tried to issue $100 million in subordinated debt late in 1989 and again in early 1990, but withdrew from the market when it realized investors were not interested in its bonds at an acceptable price.

Instead, MNC privately placed $74 million in subordinated debt in Japan. The placement went smoothly – but unfortunately for the rating-sensitive Japanese investors, it was completed just days before Moody's cut MNC's subordinated debt rating to Baa3 from Baa1.

* * *

MARKET MONITOR

Standard & Poor's Corp. lowered its ratings on debt of Security Pacific Corp. on Wednesday, citing the higher risks borne by holding companies than by banks. Security Pacific's senior debt rating was lowered to A-minus from AA and its subordinated debt rating was lowered to A-plus from AA-minus. The preferred stock rating was cut to A from A-plus.

* * *

First Chicago Corp. has priced a $70 million offering of three-year securities backed by credit-card receivables with a coupon of 8.875% and a yield spread of 69.5 basis points over comparable Treasuries. □

Stormy Forecast

U.S. Banks Are Struggling To Find a Role in Japan

By JOHN EVANS

TOKYO — In the land of the rising sun, U.S. banks are encountering some stormy weather.

The reasons aren't hard to find. Hamstrung partly by regulatory constraints at home, U.S. banks here often are pitted against Japanese institutions many times their size.

The high cost of living and stratospheric real estate values in land-hungry Japan keep relentless upward pressure on overhead. Foreigners say the Japanese have been reticent to open their markets.

And over the last several years, U.S. banks also have had to face a special disadvantage: the historic decline of the dollar against the yen.

Putting Strategy First

With strategic considerations paramount, most banks likely will keep paddling to remain afloat in a sea of red ink. But many have able to ignore the bottom line are bailing out, seeking refuge in niches – such as securities dealing and investment management – or curtailing operations and slicing costs to the bone.

Of course, cutting costs only goes so far. The Japanese branches of six leading U.S. banks posted net losses in fiscal 1989, including BankAmerica, First Interstate and ContinentalBank Corp. And at least for the foreseeable future, the pickings in Japan likely will remain painfully thin.

"Out of 82 foreign banks here, no more than 10 will prove successful," said Michael Connors, managing director of Barclays Bank PLC in Tokyo.

Another measure of how tough it is to make money in Japan is the earnings data on the foreign institutions operating here. Despite combined assets of $140 billion, the 82 foreign banks here earned a miserly $1.34 million apiece last year – down from an average of $2.2 million in 1988, according to calculations by KPMG Peat Marwick, the international accounting firm.

Citing one reason for the sagging performance, BankAmerica Corp.'s senior vice president in Japan, Robert Johnson, calculates that between 1985 and 1989, the cost base of American banks here doubled because of the yen's big surge against the greenback. In 1985, the yen traded at about 238 to the dollar. Now, the exchange rate is about 150 to the dollar.

Problem of Access

Foreign bankers also grouse about limited access to the Japanese marketplace. Indeed, U.S. banks control less than 1% of banking assets in Japan, while the Japanese have a 15% share of

Slowing Asset Growth

Japanese Banks Alter U.S. Plans

By SAM ZUCKERMAN

SAN FRANCISCO — Japanese banks hit the United States like a tsunami in the 1980s. But this year, with the Japanese pounded by economic problems at home, the tidal wave is losing force.

"They are reassessing their strategy," said Donald W. Magnusen, executive vice president and capital markets group manager for Portland, Ore.-based U.S. Bancorp. "They seem to be less aggressive in their pricing and less aggressive in their asset building."

The current slowdown is probably no more than a trough until the next swell washes through, bankers and analysts said. In short, the Japanese are here to stay.

But at least in the near-term, they said, Japanese banks will emphasize higher-yielding assets and fee income rather than simply an increase in size.

"We're not very anxious to increase assets. Earnings from nonasset-related businesses are growing faster," said one Japanese banker, citing real estate investments, corporate acquisitions, project finance and trade finance as among the businesses his bank is targeting.

Startling Growth

Even as they slow their asset growth, however, the Japanese are building for the future. According to an internal memo of the Ministry of Finance – a copy of which was obtained by American Banker – 15 Japanese banks are planning to open or upgrade 27 offices in 13 cities across the United States.

Said Anthony Walton, general manager of stateside operations for Australia's Westpac Banking Corp.: "The Japanese have pinpointed the U.S. as an absolute key target market. They are going to be a dominating force in the year 2000."

Among the 15 banks planning to expand their assets here, the memo said, Mitsubishi Bank Ltd. – the world's fourth

largest with $360 billion in assets – has the most ambitious plans. Mitsubishi reportedly is planning to open loan production offices in Atlanta, Philadelphia, Boston, Minneapolis, Detroit, Dallas and St. Louis.

Japanese banking sources said the expansion was intended to broaden the banks' relationship with medium-size businesses in the United States and Japanese subsidiaries around the country. Japanese banks also want a network they can use to do business nationwide as barriers to interstate banking fall.

From 1982 to 1989 Japanese bank assets in this country more than quadrupled to $421 billion – more than 12% of total U.S. banking assets – according to Federal Reserve data. The growth rate exceeded 19% a year.

During the decade, the 15 or so major Japanese city banks

Market Share Rising

Japanese banks' share of total banking assets in the United States

were joined by more than 30 regional banks and trust companies.

By 1989, 41 Japanese banks – from leviathan Dai-Ichi Kangyo Bank Ltd., the world's largest, to the relatively small Tokyo Tomin Bank Ltd. – were operating a total of 198 branches, agencies, subsidiaries, representative offices, and other offices in 14 states and the District of Columbia.

But this year, rising interest rates, a soft yen, volatile stock market conditions at home, and rocky banking conditions here have caused some Japanese banks to downshift – at least temporarily. Thus, while in the fiscal year ended June 1990 the banks will show continued strong expansion as a result of major acquisitions late last year, experts predict Japanese bank-asset growth in the United States could slow to the low single digits in fiscal 1991, the lowest in years.

"Some bank headquarters are thinking seriously about decreasing total assets" in this country, said Juichi Tsuda, who manages the Los Angeles agency of Industrial Bank of Japan (IBJ).

Said a branch manager of a major Japanese bank: "Headquarters is very nervous. They have told branch managers to be prepared to sell assets."

American banks, saddled with poor earnings and portfolios filled with problem loans, are in no position to take advantage of the Japanese retrenchment by aggressively adding assets.

"There is an opportunity, but it's an opportunity that very few [banks] will have the potential to realize," said S. Waite Rawls, vice chairman and international capital markets chief for Chicago-based Continental Bank Corp.

Barrage of Blows

Japanese banks are readjusting in reaction to a series of blows that has hit them just as beefed up capital adequacy regulations of the Bank for International Settlements are being phased in. The BIS' total capital standard of 8% becomes mandatory early in 1993.

Banks in Japan have historically been less profitable than their U.S. or European counterparts, with returns on assets typically under 0.4%. They compensated with high leverage ratios and tremendous capitalization on the Japanese stock market, where price/earnings multiples of 40 or 50 were common.

Now some of those props have disappeared.

A Sea of Problems

The main problems Japanese banks face include:

● Skyrocketing domestic interest rates. Late last year the central bank, the Bank of Japan, fearful of inflation, forced short-term interest rates above 7% – higher than they'd been in years. Though banks had to pay more for funds, interest rates charged to customers moved up more slowly, creating "extreme pressure on margins," said Thomas E. Gove, an analyst with Thomson Bankwatch Inc., owned by the company that publishes American Banker.

● Weakness in the stock market. In the five months that ended in April, the Nikkei average, the Tokyo stock market's main index, plunged nearly 30%. Though prices have partly recovered, banks – among the biggest institutional shareholders – were badly shaken. "We're very nervous about the stock market," said a Japanese banker in California.

Much of the value of Japanese banks' "hidden assets" – unrealized gains on their stock – was wiped out. Under BIS regulations, 45% of those gains count as capital, so the market plunge eliminated large chunks of capital.

Meanwhile, analysts said the recovery in share prices in Tokyo over the last few months had bolstered Japanese banks' capital ratios.

In fact, said Thomas Hanley, banking analyst at New York-based Salomon Brothers Inc., 11 of Japan's 15 biggest banks have already met or surpassed the minimum 8% BIS ratio.

● Falling yen. For the first time in years, the Japanese have had to deal with a weak currency. The yen has dropped about 15% against the dollar in the past year. That has raised the value of dollar-denominated international assets and lowered that of yen-denominated capital, eroding capital-to-asset ratios.

These factors – combined with the possibility that Japan's inflated real estate prices may be due for a correction – are putting tremendous pressure on Japanese banks to raise more money. But under current conditions, it's tough to sell stock.

Japanese banks have been able to raise very little," said David D. Hale, chief economist at Kemper Financial Services Inc. The Japanese government recently announced a plan to let banks sell subordinated notes, but capital raised this way will cost much more than equity.

Thinking the Unthinkable

Short of capital and with no easy way to build it, some Japanese banks find themselves operating for the first time with an asset growth limit.

"Some Japanese banks are intentionally reducing assets worldwide, especially in international business," said Keizo Yoshida, president and chief executive of Sumitomo Bank of California.

"Within the past year, the major change [for Sumitomo Bank's branches and agencies in the United States] is a limit on the increase of the loan portfolio," Mr. Yoshida said. "Ten percent would be the ceiling. In the past, we increased much more."

Problems in the home market, of course, are not the only ones Japanese banks have confronted. In the past year, market conditions in the U.S. have deteriorated, especially in commercial real estate and leveraged transactions where the Japanese have big stakes.

Like their U.S. counterparts, the Japanese are setting tougher standards for real estate and leveraged transaction loans, afid rejecting deals they previously would have jumped at.

"They are reacting to the same problems we're reacting to," said U.S. Bancorp's Mr. Magnusen.

Credit quality problems are increasing at precisely the time when the Japanese are putting more stress on profitability and higher margins.

Bankers' Dilemma

Today, Japanese bankers in this country find are torn between desire for the kinds of profits to be had in highly leveraged transactions and the real estate markets and their concern for credit quality. For most of them, there is no easy way out.

"After leveraged buyouts, they have been trying very hard to find a new way to go," said Sumitomo Bank's Mr. Yoshida. "I don't believe they have found it."

Campeau Shock

The collapse of Robert Campeau's Federated Department Stores buyout was a watershed event for the Japanese. The credits were widely syndicated among city bank and second tier institutions, and buyers were said to be shocked to find themselves holding the bag.

Since then, the Japanese have become "more selective in participating in syndications," said Haruo Moto, a strategic planner at Union Bank, San Francisco, which is 77% owned by Bank of Tokyo.

In the recent $775 million buyout of Saks & Co. by Investcorp., the only Japanese institutions to participate were Bank of Tokyo and Sumitomo Trust & Banking Co. Ltd. Bank of Tokyo bought a $30 million stake and Sumitomo a $25 million, according to sources familiar with the deal.

Caution on Real Estate

The Japanese are not abandoning real estate lending. "We are accustomed to this market. We have expertise," said one Japanese banker.

Nevertheless, pressure from regulators and overbuilding in some markets have forced them, like their U.S. counterparts, to proceed with extra caution. Underwriting is more rigorous. And preference is going to safer credits, such as refinancings of standing properties, over riskier construction loans.

For some Japanese institutions, lending to midsize and smaller U.S. companies has become a more important priority.

Smaller Borrowers Targeted

Bank of Tokyo, Mitsubishi Bank, and Sanwa Bank Ltd., which own commercial banks in California, have traveled farther down this road. Dai-Ichi Kangyo and Fuji Bank Ltd. bought major U.S. leasing companies as a way to enter the middle market. Those and other large subsidiaries or leasing units remain far behind.

All in all, it's an anxious time for Japanese bankers in the United States, though their underlying strength is little diminished.

"Every branch manager has headaches or stomach aches," said a Japanese banker in California. "Banking is much harder now." □

Cracking Japan

Continued from page 1A

American assets.

In recent years, Washington has stepped up pressure on the Japanese to open their markets more quickly. And under an agreement in late June designed to whittle down its trade surplus with the United States, Japan has agreed to a range of reforms, including one that spurs consumer spending by making it easier to borrow on bank credit cards beginning in 1992.

Even so, the pace of reform likely will continue to be slowed by *keiretzu*, a Japanese business practice under which domestic corporations and banks tactily agree to work closely together.

Persistence Likely

Despite these obstacles, strategic commitments and the margins value of having a base in Japan will compel some U.S. banks to keep on trying.

BankAmerica's Mr. Johnson notes that although brutal competition has crimped profitability in Japan, the country represents the second largest source of business in the institution's worldwide network after its home base.

"We have a good branch network in Asia," he says.

"Asia/Pacific is an advantage we have to play."

Other bankers say conditions in Japan dictate tight control of costs and a razor-sharp strategic focus.

Staff Has Been Slashed

Timothy McGinnis, senior vice president and general manager for Chase Manhattan Bank in Japan and Asia, said Chase has been engaged in an 18-month program to reduce costs – a move that has sliced staff from a high of 650 to a current 545.

Chase and other American giants such as Citibank have an advantage over their foreign competitors: They first gained a beachhead in Japan in the period following World War II as military banks for the occupying U.S. forces. That activity proved a solid base for expansion.

Mr. McGinnis points to his bank's role as the major clearing bank for all U.S. dollar transactions generated in Japan. Chase handles 97% of all such clearances in the greenback for both Japanese and foreign banks and has retained leadership in the arena by spending on advanced automation systems for currency settlements.

A Steady Business

"Chase almost acts as a Federal Reserve Bank in Tokyo through our clearing," Mr. McGinnis said. "This type of business is a solid annuity. It provides steady income streams."

To survive in Tokyo, "you have to have strong niches like this," he said.

Another bank with a tight focus is Citicorp's Citibank, the only foreigner attempting to break into Japanese consumer banking. After a four-year battle, Citibank recently won the right to share in the teller-machine network of Japan's 12 money-center banks.

This will give Citibank, which operates nine branches in Japan, access to more than 20,000 cash dispensers throughout the nation beginning in December. Industry watchers say the move is crucial to Citibank's expansion plans.

Changes by Others

Meanwhile, other U.S. banks have significantly realigned their activities in Japan.

Wells Fargo sold its Tokyo branch last year and concluded a business venture with Nikko Securities Ltd., one of Japan's Big Four brokerage houses. In April, the concerns formed Wells Fargo Nikko Investment Advisers to handle the vast investment flows between the U.S. and Japan.

Separately, the San Francisco bank entered an arrangement with Asian megabank Hongkong and Shanghai Banking Corp. Plans call for Hongkong Bank to service Wells Fargo clients through its 1,500-branch network.

Continental, in shedding most of its staff in Japan, is looking toward specialized services. Says Timothy Wood, the bank's general manager in Tokyo: "We have made the decision to discard high-volume, low-value-added services." □

1989 Highlights of the year

The ordinary and extraordinary shareholders' meetings of Banca Popolare di Milano, were held on 28th April 1990 and chaired by Prof. Avv. Piero Schlesinger (1,476 shareholders were present). During the extraordinary meeting, a number of changes to the Bank's Statutes were approved. Its Report and Accounts for the year ended 31st December 1989 (the 124th since the Bank's establishment) were approved by an overwhelming majority during the ordinary meeting.

As far as banking services are concerned, the positive results for the year show:

Customer deposits	**ITL 12,040.1 billion**	**+17.6%**
Total deposits (including banks)	**ITL 20,425.2 billion**	**+20.4%**
Funds administered (total deposits & securities held for banks and customers)	**ITL 35,598.3 billion**	**+18.4%**
Loans and advances	**ITL 8,084.5 billion**	**+12.4%**

During 1989, the notable increase in the Bank's operations continued in parallel with a widespread expansion to the territory it serves which resulted from the consolidation of Banca Popolare di Apricena (with 25 branches, mostly in Puglia). This expansion followed a similar merger with Banca Popolare di Bologna e Ferrara which took place in 1988.

The Bank also strengthened its international presence with the opening of the London Branch, situated in the heart of the City of London, and with the relocation of the New York Branch to new and more prestigious offices.

The first part of an increase to the share capital of the Bank was conducted very satisfactorily, producing an inflow of ITL 134 billion. To this amount, must be added ITL 66 billion resulting from the conversion into shares of warrants issued in 1989.

As a result of the increase in share capital and the allocation to reserves approved during the shareholders' meeting, Banca Popolare di Milano's net worth increased to ITL 1,247.5 billion (+20.5%).

A rise in income coupled with profits derived from the sale of minority participations (in particular the sale of the Bank's shareholding in Nuovo Banco Ambrosiano), produced an increase in the Bank's internal cashflow.

In fact, after having provided for extraordinary losses realised during the year (of which ITL 90.9 billion related to Bipiemme Leasing), a profit before tax of ITL 283.5 billion was recorded. After the deduction of taxes, a 32.1% jump in net profit to ITL 168 billion was achieved.

The shareholders' meeting, while retaining ITL 77 billion for the Bank's reserves, also approved the distribution of ITL 66.5 billion from profits to pay a dividend of ITL 460 per share to the 144.6 million shares in issue (as against the ITL 525 distributed to each of the issued 104.3 million shares in the previous year).

Case Studies

Footholds in the U.S. Come in Varied Shapes

Aggressive Japanese banks have established a substantial presence in the U.S., some by creating and expanding independent branch networks and others through link-ups with American institutions. Some have set up shop primarily to serve Japanese companies operating here, while others are going head-to-head with their U.S. counterparts, providing a wide array of products and services.

The following case studies spotlight the U.S. activities of three Japanese banks.

One focuses on the strategic alliance between Mitsui Taiyo Kobe Bank and Los Angeles-based Security Pacific Corp., a relationship that likely will create significant opportunities for both sides.

Another offers a progress report on giant Dai-Ichi Kangyo Bank's thrust into the middle market with its acquisition from Manufacturers Hanover Corp. of CIT Group, a leasing company with 59 offices in 25 states.

The section wraps up with an exploration of Tokai Bank's commitment to service, a stance that prompted the bank to follow one of its customers, Toyota Motor Corp., halfway around the world and set up a representative office in Lexington, Ky.

Tokai Bank

Following A Customer Overseas

In the highly competitive banking industry, customer service is the buzzword of the moment.

But would an American bank follow one of its customers thousands of miles to set up a branch in a small city in Japan, Britain or Germany?

That is exactly what Tokai Bank Ltd. did in 1986 when it opened a representative office in Lexington, Ky., near a plant owned by its largest customer, Toyota Motor Corp.

The bank's principal reason for being in Kentucky is to serve Japanese companies, including its client Toyota.

At first glance, the office seems simply a reflection of the bank's long-standing service commitment to Toyota. But the Lexington office also is an example of Tokai's nose for business, at home or abroad.

Serving Globally

"Tokai Bank seeks to serve our customers worldwide, not just in Japan," said Ukio Sakai, deputy general manager of Tokai's regional headquarters in New York City.

"The main reason [for the Lexington office] is to serve the Japanese corporations, including of course Toyota. But there are also many related parts providers, many in the form of joint ventures in that area, and other companies too."

Among the joint ventures serviced by the Tokai office are American Brake Industry Corp., a venture between General Motors Corp. and Akebono Brake; Central Manufacturing Co., between Kelsey-Hayes Co., Chuo Seiki and Toyota Tsusho; and MHK Associated Spring Suspension Components Inc., between Toyota, Hitachi Automotive Products USA Inc., Mazak Corp. – a part of Yamazaki Mazak – and Topy Corp.

The office acts as Tokai's eyes and ears in the Lexington area, said assistant vice president Shigeyoshi Kuribayashi.

Approvals in New York

The office "can't provide loans on its own, just solicit loans," Mr. Kuribayashi said. According to Mr. Sakai, 90% of the loans solicited by the office can be approved in New York.

"The office reports weekly," Mr. Kuribayashi said. "And on some topics where we want to know as early as possible, like plans to expand operations where there may be funding needs, they make a separate report."

Asked if the offices also serve as an early warning system for problems in the foreign branches of a client company, Mr. Kuribayashi chuckled. "I think that's a good idea. We will have to add it to our strategy."

Four Offices Are Agencies

Tokai, which has its world headquarters in Nagoya, Japan, also has four branches as agency offices in the United States, in New York, Chicago, Los Angeles, and Atlanta. Agency offices can make loans but cannot take deposits. The offices range in size from 200 employees in the New York office to 14 at the newest office, in Atlanta.

In addition to the Lexington office, Tokai has four other representative offices here, in Dallas, Minneapolis, San Francisco, and Columbus, Ohio.

They usually have about five employees, of whom one or two are Japanese, Tokai officials said. The San Francisco, Minneapolis, and Columbus offices were just opened in April.

"Columbus itself is not a big city, but it has great opportunity for us, because there are lots of big corporations, around 40 Fortune 500 companies. Minneapolis has the same thing, 27 Fortune 500 companies." □

Mitsui Taiyo Kobe

American Flavor In Its Alliance With Security

Under a Japanese business practice known as *keiretsu*, it is not uncommon for companies to buy a small piece of one another as a way of obtaining referrals and preferential treatment.

But Mitsui Taiyo Kobe Bank has given this strategy a decidedly American spin. In May the bank – the world's second largest, with assets of $402 billion – purchased a 5% equity interest in Security Pacific Financial Services System Inc., San Diego-based unit of $86 billion Security Pacific Corp.

The sale further cemented the relationship between the two Pacific Rim giants. Before that deal in May, they had shared private banking services. And other crossover deals are in the work, including Security Pacific's pending acquisition of 20% of Los Angeles-based Mitsui Manufacturers Bank, a $1.5 billion-asset middle-market subsidiary of Mitsui Taiyo.

Opportunities Created

But most important, the strategic alliance probably will mean substantial opportunities for both sides.

In line with the recent agreement, Security Pacific will get the opportunity to service Mitsui bank customers in North America. The Security Pacific unit is targeting $300 million in extra business by the end of 1993.

And under the pending acquisition, Mitsui Manufacturers is looking to expand its share of the middle market.

Services Expanded

"We expect to grow in our segment of the middle market and to be able to present more services to our client base," says Jerry W. Johnston, a former Security Pacific executive vice president who became Mitsui Manufacturers' president and chief operating officer following an acquisition agreement in November 1989. For Mitsui Manufacturers, the middle market means companies with revenues of under $100 million.

Security Pacific Financial Services, with $14 billion in assets of its own, provides a range of consumer and commercial financing and leasing services. Not included in the deal with Mitsui Taiyo were the unit's insurance, venture capital, and international operations. All three fell outside the Japanese bank's primary interest of providing financial-service products for its American customers.

The unit's acquisition marked the culmination of almost 20 years of interaction between Richard J. Flamson 3d, chairman and chief executive officer of Security Pacific, and Kenichi Kamiya, his counterpart at Mitsui Taiyo Kobe Bank. The pair met when Mr. Kamiya ran Mitsui's North American operation in New York and Mr. Flamson headed Security Pacific's international department.

Message to the Market

Aside from the obvious desire to strengthen their business ties across the Pacific, Security Pacific gained strategic advantages from the sale.

According to Nicholas B. Binkley, president and chief operating officer of Security Pacific Financial Services, the selling price of $85 million represented 15 times operating earnings, or 2.5 times higher than Security Pacific Corp.'s price-earnings ratio at the time of the sale.

"We had been disappointed in the stock market's ability to understand the value of Security Pacific Corp.," Mr. Binkley said.

"We're a major regional institution as well as a money-center bank and a big player in the world's capital markets. As a hybrid, we were confusing the analysts. By selling a small piece of Security Pacific for what we considered a very attractive price, we were trying to get the market to read our value more clearly."

Adding Value to Lending

With the transaction, Security Pacific also is aiming to add value to commercial lending Mitsui provides to Japanese manufacturers of high-technology equipment, such as copiers and printing presses.

These companies market their goods through dealers in the United States, Mr. Binkley said. What Security Pacific will add, he said, is a financial package that the dealers can rely on when selling those goods.

"We have specialized programs and a nationwide delivery system for that business and an understanding [of the U.S. market] that the Japanese don't have or can't buy," he said. □

Shimon-Craig Van Collie is a financial writer based in Oakland, Calif.

The strategic alliance probably will mean substantial opportunities for both sides.

Dai-Ichi Kangyo

CIT Deal Marks Foray Into Middle Market

Even among the deliberative Japanese, Dai-Ichi Kangyo Bank has a reputation of being extremely cautious.

So its decision to plunk down $1.4 billion last September for control of a unit of Manufacturers HanoverCorp. and a small percentage of the troubled bank's stock initially may have appeared out of character.

In fact, however, there were none but prudent reasons for the investment, the largest so far by a Japanese bank in a U.S. financial entity.

"We have a very high potential business chance in the middle- market area" with the acquisition, said Shigeki Toma, a senior vice president at DKB, the world's largest bank with assets of $312 billion. "But because of limited resources in the United States we could not enter into this market by ourselves."

A Major Stake

Dai-Ichi paid $1.28 billion for a 60% stake in CIT Group – a leasing company with 59 offices in 25 states – and roughly $149 million for 4.9% of Manufacturers Hanover's shares.

Manufacturers Hanover relinquished control of CIT to help raise desperately needed capital and vastly improve its financial standing.

For Dai-Ichi, the CIT franchise provides the Japanese megabank both an instant presence in U.S. wholesale banking and in the increasingly attractive lease-finance business, and a ready-made nationwide branch network able to service the U.S. needs of Japanese corporate clients.

A Complete Service

Through CIT, DKB can help a Japanese customer develop a strategy for the American market and even recommend a city and project site. The unit can also finance construction and arrange the purchase or lease of equipment such as automobiles and aircraft.

And if the financial requirements of a certain customer are too large for CIT alone, the subsidiary can call upon DKB.

In 1989, CIT earned $126 million on assets of $10.1 billion. Results were little changed from the year before, when CIT earned $120 million on assets of $9.3 billion.

In 1987, DKB had attempted to build middle-market share on its own with $200 million purchase of a portion of the loan portfolio of U.S. Trust Corp., a New York-based trust bank. But Dai-Ichi quickly realized that the costs of starting from scratch were prohibitive. With little assurance that the effort would reach fruition, the bank was unwilling to assume the huge expense of hiring and training employees to staff new offices.

DKB had already decided that buying into the U.S. middle market would be less expensive and more efficient when Hanover approached the Japanese bank with an offer to sell CIT.

Meanwhile, DKB said, if the opportunity arises, it would consider investment in other Hanover operations.

For now, however, DKB, Hanover and CIT are still getting acquainted. DKB has not visibly altered the CIT corporate hierarchy, nor is that in its plans. Chief executive Albert R. Gamper Jr. still presides, reporting to Yuko Oana, DKB's senior managing director for international planning, who in September will take over as chairman of CIT and Dai-Ichi Kangyo Bank of California.

Some Japanese Involved

The Japanese bank has sent 10 of its executives to work in CIT's administration and back-office operations. The highest-ranking DKB official involved in CIT's day-to-day operations is senior executive vice president Takasuke Kaneko.

"What they got for their money," James K. McDermott, head of research at New York-based Keefe, Bruyette & Woods, said of the deal, "is a very high-quality middle-market lender. CIT has a very high name recognition in the marketplace and I think the Japanese made a very wise investment." □

Japanese Bankers in U.S. Take a Fresh Approach

By JAMES R. KRAUS

As Japanese banks plan their next moves in the U.S. and struggle to overcome mounting difficulties at home, they are increasingly looking to several key players to provide leadership and direction. The following profiles offer both a glimpse of Japanese strategies here and abroad, and a look at the people behind them.

Stateside, several Japanese have already made their mark. For example, Osamu "Sam" Yamada of Bank of California, has broken with Japanese management practices to run things American-style.

In Japan, meanwhile, the mantle of leadership is being taken up by an eclectic group of senior executives. One of these, Yoh Kurosawa, the newly appointed president of Industrial Bank of Japan and a lover of German choir music, is jockeying to position his bank as the Japanese financial markets prepare for deregulation.

Long-Term Credit Bank

CEO Picks Up On American Ways

In 1985, Koji Hirao of Long Term Credit Bank told a corporate finance seminar in Washington that "white knights, poison pills, golden parachutes, and other colorful terms of M & A are all Greek to the Japanese business community."

Peggy Turbett

KOJI HIRAO: *Back in 1985, "no one believed we would play such a role."*

But Mr. Hirao, general manager of the bank's New York branch, has learned to speak Greek, or the American banking equivalent.

He has also propelled Long Term Credit Bank in the United States away from its traditional role as a wholesale lender and into mergers and acquisitions, project finance, leasing, and other fast-developing businesses.

He Spotted the Trends

Mr. Hirao, now 60, spotted the trends early on.

"We set our strategic plan for international banking about seven or eight years ago, and we started earlier than anyone else," he says.

"We felt that Japan was going to produce large capital surpluses and that the bank would be able to advise Japanese companies or financial institutions on making investments in the U.S."

To capture this business, in 1984 Mr. Hirao set up a Tokyo-based merchant banking group with units focusing on Tokyo and international capital markets, international corporate finance, mergers and acquisitions, project finance, and aircraft and real estate finance.

He applied the same merchant-banking philosophy to the United States after noticing in the mid-1980s that direct investment in manufacturing and real estate was beginning to replace Japanese purchases of U.S. securities.

Alliances in United States

In 1985 the bank struck a critical alliance with New York-based Peers & Co., the investment banking boutique, to expand mergers and acquisitions activity.

In June 1988 Long Term Credit Bank acquired Greenwich Capital Markets Inc., the Connecticut-based U.S. primary dealer.

And late last year the bank moved again by setting up LTCB-MAS, a joint venture with Miller, Anderson & Sherrerd of a Bala Cynwyd, Pa., a fund manager with a portfolio of some $20 billion worth of equities.

Philanthropic Investments

Mr. Hirao has also stepped up Long Term Credit Bank's contributions to U.S. academic institutions and research projects.

The bank has contributed a $1 million scholarship fund to the University of Pennsylvania's Wharton School and $500,000 to set up a chair of political economy at New York University. Long Term Credit Bank also participated in a $250,000 donation for a pilot project for the magnetic-levitation train being developed by Pittsburgh.

The contributions have a certain measure of self-interest. Academic endowments help raise the bank's profile and cement good relations with the future U.S. business elite, while contributions to research lay the groundwork for industrial projects in which the bank is likely to become involved.

We felt that Japan was going to produce large capital surpluses and that the bank would be able to advise Japanese companies . . . on making investments in the U.S.

Koji Hirao
Long Term Credit Bank

Strategy Paid Off

In business, Mr. Hirao's strategy has paid off handsomely. In the 12 months that ended June 30, 1989, assets rose 24% to $10.5 billion, making Long Term Credit Bank the 11th-biggest foreign bank in the United States. Its $6.5 billion in syndications made it third among foreign banks in this country in lead managing syndicated corporate loans, according to *Loan Pricing Report*.

Long Term Credit was also second among Japanese banks in Japan-U.S. mergers and acquisitions, with 14 deals worth $580 million. Worldwide, the bank ranked first in mergers and acquisitions, with $2.55 billion worth of deals.

Back in 1985, Mr. Hirao says, "no one believed we would play such a role." □

Mitsui Taiyo Kobe Bank

Strategist Expects Merger to Flower

Peggy Turbett

MIKIHIKO BANNO *is wary of "quick decisions and quick profits."*

Mikihiko Banno, general manager in the United States of Mitsui Taiyo Kobe Bank, likes to point to the pink cherry blossom logo on his business card.

One blossom is open, symbolizing the present. The other is a bud that is still closed.

"That," he says, "is the future."

Man in the Spotlight

As the man named to carry out the April merger between the U.S. operations of Mitsui Bank and Taiyo Kobe Bank, Mr. Banno's job is to make that bud unfold.

Others will be watching closely to see just how he succeeds. They will also be watching to see whether the megamerger, which on April 1 this year created the world's second-largest bank, offers any lessons to other banks considering similar moves.

A Simple Equation

For Mr. Banno, the logic of the merger is simple.

"The merger doubled our capabilities, doubled our manpower and gives us far more assets to work with," Mr. Banno said.

Size, he adds, is important to Mitsui Taiyo Kobe, a bank that wants to be able to offer every banking service it can to everyone who asks for it.

Analysts say such a strategy can only work for a very large bank with big resources. Mitsui Taiyo Kobe is counting on the merger to provide the needed clout.

U.S. Shift Near Completion

The merger linked Mitsui, one of the oldest names in banking in Japan, with Taiyo Kobe, a relative upstart created after a merger of Taiyo Bank and the Bank of Kobe in 1973.

Combining the two operations has just begun in Japan. But in the United States, where Mitsui Taiyo Kobe now has a combined $20 billion in assets and is the 10th-largest foreign bank, the blending is virtually complete.

Despite the Japanese bank's fondness for size, Mitsui Taiyo Kobe's assets are unlikely to grow quickly, Mr. Banno said.

New Capital Requirements

For one thing, new international capital requirements oblige banks to increase their capital in proportion to their assets. This, he said, will not always be possible.

Secondly, Mr. Banno's plan is to move into more-profitable fee-based businesses, such as mergers and acquisitions, trust banking, and investment advisory services.

Third, the bank is developing its real estate investment services for Japanese property buyers, many of whom are closely studying hotels, condominiums and offices being sold off in the wake of the savings and loan crisis.

Strategic Alliance

On the West Coast, where Mitsui Taiyo Kobe has only a small presence, the bank has struck a strategic alliance with Security Pacific Corp., selling the U.S. bank a 20% stake in Mitsui Manufacturers, its California subsidiary, in a bid to gain support for expansion into lending to small and medium-size companies.

Mr. Banno's plan is to move into more-profitable fee-based businesses, such as mergers and acquisitions, trust banking, and investment advisory services.

"The arrangement gives us expertise. Security Pacific is far better equipped to do business in the U.S. than we are," Mr. Banno said.

But probably the last thing on his mind is making a fast buck, said the 54-year-old executive.

"We like to move deliberately. Quick decisions and quick profits can be dangerous. You risk getting your hands burned," he said. □

Bank of California

Exec Eases Ties To Tokyo Parent

If you want to be successful in Japan, you have to do things the Japanese way. If you want to succeed in America, do things the American way," says Osamu "Sam" Yamada, the 60-year chairman, president and chief executive of Bank of California. Mr. Yamada practices what he preaches. Named to head Bank of California after he helped engineer its acquisition by Mitsubishi Bank in 1984, Mr. Yamada laid down his terms.

He would run things on his own without having to shuttle back and forth to Tokyo to get approval for every loan and he would run Bank of California as an American bank.

A Quick Decision

"Most Japanese banks depend on Tokyo's decision. Sometimes they have to wait a week; sometimes a month. We decide today and move tomorrow," Mr. Yamada says.

One of a new breed of internationally minded Japanese bankers, Mr. Yamada first came to the United States in 1978 to head Mitsubishi Bank's New York Branch. In 1982, he returned to Tokyo as general manager of the bank's international planning division.

Named head of Bank of California in 1974, he decided to take the bank out of retail banking, where it did not have enough branches to compete with the big California banks, and focus instead on lending to small and medium-size corporations, trust banking, trade finance, and correspondent banking.

Who Knows the Owner?

Contrary to Japanese management practices, Mr. Yamada also gave Bank of California executives broad leeway to develop business as they see fit, played up the bank's California roots, played down its links to Mitsubishi, and emphasized doing business with U.S. companies rather than Japanese ones.

"A lot of small and medium-size companies don't even know we are owned by a Japanese bank," Mr. Yamada said.

Unlike other Japanese banks, where a high proportion of executives are sent over from Japan, only seven out of Bank of California's 3,700 employees are Japanese. Only two of the nine members of the bank's policy making committee are Japanese. All Japanese are required to use only English, even on their lunch breaks.

The strategy appears to be working and profits have been climbing steadily.

State's Sixth Largest Bank

In 1984, Bank of California had $3.6 billion in assets and posted $20.5 million in losses.

Last year, after merging in 1988 with Mitsubishi Bank of California to create the state's sixth-largest bank with $6.9 billion in assets, the bank earned $64 million, giving a 0.66% return on assets.

Assets are now at $7.5 billion and climbing. By 1991, Mr. Yamada says, Bank of California will have $10 billion in assets and a 1.00% return on assets.

Much of the growth in assets will come by providing bigger loans to bigger companies, Mr. Yamada said.

Analysts do not track Bank of California since it is not listed but say that the bank still has a way to go to establish itself in the California market.

"Bank of California has been a bank that's sort of been in limbo. It's not a small community bank and it's not a big bank. I can't really figure out what their market is," said Alan Hoeffler, an analyst with Alan Hoeffler & Co. in Palo Alto.

A Different Style

But they added that Mr. Yamada's views on doing business the American way do set him apart from other Japanese bankers who cluster together socially, rely on Tokyo for instructions, and spend only a few years here before going home.

"It's his claim to fame. He's kind of a turnaround from other Japanese bankers who like to do things Japanese style," said another analyst.

Sometimes, though, even Mr. Yamada goes too far. When he showed up in jogging shoes at the bank one morning, security guards politely but firmly refused to allow him in until he changed. □

Executives Navigate Shifting Currents in Japan

By JOHN EVANS

Citicorp in Japan

CEO to Reap Gains Of ATM Accord

Masamoto Yashiro, a former Exxon executive who heads Citibank's consumer bank operations in Japan, last month hit the financial services equivalent of an oil gusher.

After a protracted, four-year campaign – most of which Mr. Yashiro was not on hand to oversee – the U.S. bank clinched an agreement late in June with Japan's big 12 money-center banks for access to their network of 20,000 automated teller machines.

That deal represents a major advance in Citibank's plans to establish a consumer banking presence in Japan, part of its global retail network. It has already established 700 branches in Europe.

In Japan, where Citibank has nine branches, the long-term target is to have as many as 50 by the mid to late 1990s, opening them at the rate of four to five a year. Currently, Citibank has only 20 ATM machines in Japan, but it will be plugged into the main national network by December.

Mr. Yashiro, 61, who joined Citibank in early 1989 after a 30-year marketing career with Exxon that culminated in the presidency of its Japanese affiliate, is under no illusion about the problems of building a presence in Japan.

It's "one of the most difficult markets in the world," he said, with soaring real estate prices making retail facilities extremely costly, and staff costs that can prove equally prohibitive.

Masamoto Yashiro

In fact, Citibank made a few false starts before he was recruited. That included its attempt in 1987 to buy a small and troubled regional bank, the Heiwa Sogo Bank. If Citicorp, attracted by the bank's branch network, had clinched the deal, it would have marked the first-ever acquisition of a Japanese bank by a foreign company. Instead, Sumitomo Bank Ltd. outbid Citicorp in a brief takeover tussle.

Mr. Yashiro's charge from Citicorp officials is along those lines: Find a way for Citibank to expand further into Japan's consumer banking. The acquisition route has now been discarded. Japanese bank stocks sell on price-earnings multiples of 40 to 50, putting them out of the reach of virtually every foreign company.

For the Japanese executive, the answer was clear – a step-by-step approach, recognizing that the bank has to start as a "niche player," building its branch presence in Japan bit by bit each year. Mr. Yashiro believes that Citibank can prosper in Japan, "where other large U.S. banks have had less success," because of a couple of key factors.

First is the sheer size of Citibank and its ability to "import" successfully financial products and services from its activities elsewhere. Then there's a consumer perception that the bank's size and ability to offer innovative services are advantages in a competitive Japanese market.

As an example of innovative offerings, Mr. Yashiro points to its multiple-currency account, called Multi-money, which originated in the bank's Hong Kong subsidiary. The Japan team

Mr. Yashiro is under no illusion about the problems of building a presence in Japan.

modified the account to fit local needs, with the version in Tokyo offering customers a depositary choice of six currencies plus gold.

Given the difficulties of reaching Japan's 120 million people without a broad branch network, Citibank is also pushing telephone banking, which is popular in Japan. Electronic links such as phone banking and ATMs ease the pressure to create physical branches, and some observers in Tokyo say Citibank is eyeing another strategy to avoid the hefty investment costs required for branches.

In a cooperative arrangement with Mitsubishi Bank Ltd. last month, Citibank agreed to rent nearly half of the total office space of the Japanese bank's branch in Osaka, Western Japan. Mitsubishi, Japan's fourth-largest bank, has also offered space in as many as 10 other branches, insiders say, a proposal Citibank is currently considering. Tokyo officials insist that no decision has been made.

In exchange, Citibank may help Mitsubishi expand in the United States, insiders say.

While Citibank has never disclosed the likely costs of trying to establish a 30-branch network in prime areas, U.S. bankers in Tokyo say that, relatively speaking, expenditures anywhere under $50 million a year would be "peanuts."

Mr. Yashiro insists, however, that Citibank is taking the long view of its consumer business. He stresses that there will be "consistent execution" and commitment to its expansion in Japan, which will help the bank "in its effort to create a global consumer bank." □

Industrial Bank of Japan

Banker's Passions: Stocks and Brahms

By almost any standard, Yoh Kurosawa, the newly appointed president of Industrial Bank of Japan Ltd., is an unusual banker.

Deputy president of IBJ since 1984, he has become an outspoken expert on Latin American debt problems. He's a lover of German choir music and a noted wit. Mr. Kurosawa is also an avid tennis player. His favorite racket is a gift from Hans Androsch, Austria's former minister of finance, and Mr. Kurosawa spends up to three hours at a clip out on the courts with high-profile opponents such as Alexander Haig, former U.S. Secretary of State.

Mr. Kurosawa is hoping he can transpose this endurance and drive into the banking world as his institution prepares itself for a major transition. In Japan, banks are maneuvering to develop securities powers as Article 65, a banking law modeled on America's own Glass-Steagall Act, is dismantled.

Similarity Is Historical

The similarity of the two banking laws – both of which strictly delineate the powers of banks and those of securities concerns – is not coincidental.

Yoh Kurosawa

U.S. authorities regulated the Japanese banking system in this manner during the period of occupation following World War II in an effort to stamp out the old military-industrial complex.

Learning About Jokes

Turning to a lighter memory of the U.S., Mr. Kurosawa recalls his stint at Harvard Business School in the 1950s.

"What Harvard taught me was a sense of humor and how to argue and debate," he recalls. "At first, I just couldn't understand American humor and had to ask friends after classes what the jokes were about."

The IBJ president has since honed his humorous talents to a keen and even biting edge – unusual in Japan, where politeness and the dislike of causing offense are deeply ingrained in the national character.

Industry watchers say Mr. Kurosawa's elevation to the presidency of IBJ in a recent management reshuffle underscores how IBJ and other banks are preparing for ferocious turf wars as Article 65 is dismantled. The changes were not expected until next year, but Kanoo Nakamura, who moved from president to chairman, said the IBJ board decided to speed up the timetable.

Under IBJ's new lineup, Kisaburo Ikeura, the former chairman, will remain on the board as an adviser and Hideo Ishihara, managing director, becomes deputy president.

Gaining securities powers is especially important for IBJ, Mr. Kurosawa says. It's the biggest of Japan's three specialist long-term credit banks, institutions that traditionally have been wholesale-oriented with virtually no consumer banking capabilities. IBJ operates with 23 branches in Japan.

A Link to Securities

In prewar Japan, IBJ was a banking powerhouse with huge influence, including close links with Japan's 200 largest corporations and a major interest in Nikko Securities Ltd., one of Japan's Big Four securities houses. IBJ still has extensive corporate relationships and has invested much in the coming securities battle in Japan.

These powers are regarded within the bank as an essential complement to its existing activities. Its London-based securities arm, IBJ International Ltd., is one of the major forces in international securities markets like Eurobonds. Its operations are part of a strategy to develop knowhow and global distribution for the time when the parent bank gains securities powers in Tokyo.

Like U.S. banks such as J.P. Morgan & Co., Bankers Trust New York Corp., and Citicorp, IBJ has taken advantage of London's completely deregulated system to build securities capabilities despite being barred from such activities at home.

In the United States, the closest approximation to IBJ, which ranks seventh in the world with $260 billion in assets, is Morgan, which Mr. Kurosawa much admires.

View of Morgan

"I've got lots of respect for J.P. Morgan and what [chairman] Dennis Weatherstone is doing," Mr. Kurosawa says, commenting on the New York bank's drive to add major securities operations to its traditional wholesale banking capabilities.

The banker said he has set 1993 as the year for IBJ to become a true universal bank, dealing freely in securities in Tokyo, New York, London, and other financial centers. IBJ also plans to exercise trust bank powers by then, when Japan's is expected to dismantle the remaining barriers.

The implementation of these powers will no doubt mark the pinnacle of Mr. Kurosawa's long career.

After that, the banker presumably will have time for some of his other interests, including choral music by Brahms and other composers. □

Bank of Tokyo

Chief Calls Tune For U.S. Unit

Want to know what Bank of Tokyo is up to in the United States? Ask one architect of the institution's master plan, Deputy President Tomatsu Yamaguchi.

The bank – the largest foreign bank here with $50 billion in U.S. assets and, overall, in the top 20 among all holding companies – plans even more expansion, Mr. Yamaguchi said. At least in the short term, that means bigger operations in California, New England, Atlanta, and Illinois, he said.

No Retail Base

Observers in Japan say the expected activity is an attempt to counterbalance the lack of a retail banking base at home, a major source of low-cost funding for Japanese institutions.

In fact, the industry in Japan lately has been abuzz with speculation that Bank of Tokyo will eventually be forced to merge with a Japanese partner.

Mr. Yamaguchi, a seasoned manager who returned to Tokyo last year after heading the bank's New York office, insists a merger is not in the offing. But he allows that the United States is a crucial element in the bank's game plan.

For example, he said, Bank of Tokyo was elated in June when it acquired Bank of New England Corp.'s leasing group. This added close to $1 billion to its total assets, which, at around $228 billion globally, make it the world's 19th biggest banking company.

T. Yamaguchi

Said Mr. Yamaguchi: "The leasing acquisition was important for us. The leasing business is very closely connected with the investment banking so, without leasing capability, we couldn't expect to offer a 100% service to our [U.S.] customers."

At the same time, he said, the Boston-based company was a valuable target because of its middle-market and international business profiles.

"Japanese banks, including our own, are trying to expand our business relationships with middle-size corporate customers," Mr. Yamaguchi said. A similar motive was behind Bank of Tokyo's acquisition of Union Bank of California two years ago, he said.

Currently, Bank of Tokyo's asset mix in the United States comprises about $20 billion on the West Coast and $30 billion on the East Coast. □

Securities Barriers in Japan Are Eroding

Competitors Fear Banks' Power

By BRIAN ROBINS
Special to the American Banker

It may,be at least two years before Tokyo enacts significant reform in the segmented Japanese financial system, paving the way for the nation's biggest commercial banks to gain entry to the securities business. Even so, a consensus is beginning to emerge about likely changes to Article 65 – roughly Japan's equivalent of the U.S. Glass-Steagall Act.

Financial experts say Japan's Ministry of Finance eventually will allow the wholly owned subsidiaries of banks and securities companies entry into each other's protected turf. The subsidiaries, they say, would be separated from their parent companies by firewalls, which would insulate the banking entities from any losses at the securities units, and vice versa.

Japan's finance ministry appears to be slowing deregulation to protect smaller institutions.

The addition of securities powers could give Japan's biggest banks virtually unlimited sway over Japanese financial markets – threatening to shove aside the U.S. and European banks that have been historically placing securities in the hands of Japanese institutional investors.

For U.S. and other foreign banks in Tokyo, an ending of the Article 65 divisions would be a double-edged sword. The U.S. and the European Community are pressing Japan to open its financial system to foreigners, eliminating barriers such as the securities-banking separation.

But gaining those freedoms could unleash Japan's behemoth banks – the top 10, by assets, are the world's largest banks – to dominate both banking and securities.

Indeed, foreign bankers in Japan fear that the Japanese banks, which have set up primary dealerships for government bonds in the United States, would zero in on such business domestically.

No wonder a senior British banker in Tokyo, only half-jokingly, "Long may Article 65 remain."

In recent months, the finance ministry has received from advisory committees a series of reports on deregulation. The most recent report, from the pro-securities Industry Financial Systems Research Council, recommended that banks be permitted to underwrite commercial paper but not be allowed to enter the equity underwriting sector or the direct trading of securities.

Until the most recent report, securities houses had firmly rejected any reform proposals because, industry watchers say, banks stood to gain the most. By contrast, banks have appeared more willing to permit securities houses into their back yard – though most would limit them to the wholesale market.

Japanese bankers generally believe that deregulation will enable them to compete more effectively in the international arena. Toru Kusukawa, deputy president of Fuji Bank Ltd., recently advanced that idea at a hearing of the U.S. Senate Banking Committee.

"As long as Japan and the U.S. have a policy separating banking and securities businesses," Mr. Kusukawa said, "it will become increasingly difficult for banks in either country to compete on an equal basis with European banks, which conduct universal banking."

There are signs that the finance ministry agrees with this argument, but it appears to be placing a premium on protecting smaller institutions, even if that means slowing deregulation.

Despite the securities houses' intransigence about sharing their market, all of the bigger banks already have equity links with small securities firms. And the banks are in the process of bolstering these houses either through capital injections or by transferring skilled staff to them.

In trust banking, deregulation is expected to proceed quickly, given the fact that trust banks have operations, such as pension fund management, that have allowed them to develop some expertise in the securities area. Moreover, Japanese regulators seem to think that these institutions will not be unfairly hurt by new rivals, having already been exposed to competition through the growth of investment advisory companies.

But one unhappy group in this deregulation effort may be the long-term trust banks.

The long-term credit banks want unrestricted ability to underwrite equities, thus restoring a privilege that was taken away when the universal Japanese banking system was dismantled after World War II. □

Regionals May Not Be Ready for Rate Decontrol

Their Home Franchises Have Long Been Insulated by Government

By BRIAN ROBINS
Special to the American Banker

For generations, Japan's regional banks have profited from their tight grip over highly insulated home-market franchises.

As reforms proceed, however, the regionals – smaller, local banks which have until now focused mainly on consumer lending and lending to small and medium sized corporations – may find themselves without the capital or expertise to expand. That's one reason why Japan's Ministry of Finance is resisting U.S. pressure to deregulate domestic interest rates on bank deposits.

While interest ceilings on deposits of more than 10 million yen (about $65,000) have been abolished, Japan fears that much of its banking industry could be dangerously exposed if smaller deposits, on which the regionals heavily depend, are similarly deregulated.

Prosperity and Control

Some regional banks' prosperity has been linked directly to interest-rate regulation, which imposes ceilings on deposit accounts. Deposit rates as low as 2.5% are being offered by banks at a time when Japan has an official discount rate of 5.25% – meaning that depositors effectively represent a source of reduced-price funding (and a strong economic stimulus) for the regionals.

Still, many industry watchers are questioning the future for most regionals under Japan's evolving financial system. Just as in the United States, Japan could see a significant depletion of smaller banks in the coming decade, primarily through mergers and acquisitions initiated by the big Tokyo banks.

But while consolidation in the United States has been spurred largely by interstate banking, Japan's merger wave will be based on intensifying competition in a system long grown soft from heavy regulatory protection and a lack of competition.

Regionals Seen Losing

"There is little doubt that the regional banks will be the big losers in the shift toward deregulation," one bank analyst said. "There are some impressive operators in this area, but the majority are surprisingly unsophisticated."

Some bankers and analysts suggest that Japan has too many banks, especially smaller banks. But officials at the Ministry of Finance bristle at that notion.

"That argument just does not make sense," a senior ministry official said. "Per capita, Japan already has fewer banks than the U.S. And to opt for further consolidation is not necessarily in the best interests of the financial and capital markets."

Many industry watchers are questioning the future for most regionals under Japan's evolving financial system.

Tight regulation and fierce regional loyalties have ensured regional banks substantial clout inside their geographic home bases. But recently, some larger city banks, such as Sanwa Bank and Mitsubishi Bank, have pressured the finance ministry to permit greater competition between banks over their charges for fund transfers.

More Pressure on Regionals

In Japan, the minimum cost per transaction is $4, but with increased competition, that amount likely would drop. Most likely to encounter problems under such a scenario would be regional banks, many of which have relatively high cost structures.

Most regional banks reported flat profit performances for fiscal 1989, which ended in March, with little optimism for the near term.

Even so – and despite open talk among major Tokyo banks about the need for acquisitions – substantial consolidation isn't expected any time soon. Given the strong regional loyalties in the financial sector, pursuing mergers in Japan has proved remarkably difficult, except among small savings cooperatives.

And there are strong regional players whose success – often based largely on the cheap funding they get from the low, regulated deposit rates – would make them expensive acquisition targets.

Yamaguchi Bank, a $27 billion-asset institution based in the Hiroshima area of southern Japan, has a capital adequacy ratio of more than 11%, ranking it among the highest of any bank in Japan. But regionals like Yamaguchi have almost 60% of their deposits in controlled accounts, and the proportion is almost 70% at smaller regionals.

With interest rate deregulation looming, Yamaguchi is moving quickly to introduce automated teller machines and other electronic systems to remain competitive. And the bank has some time: It should be three years before interest rates are completely decontrolled, according to the finance ministry.

U.S. Backs Decontrol

The United States, which complains that such interest rate regulation helps protect Japanese banks, would like such controls to disappear in the next year.

Other healthy regional banks, such as Tokyo Sowa Bank, Hyogo Bank, and Chiba Bank, are similarly upgrading systems in preparation for intensifying competition and further deregulation. □

Question and Answer

Real Estate Worries Hit Japan

Across the United States, headlines are proclaiming a slump in real estate and a collapse of earnings at many banks that lent heavily to developers.

Could the same troubles strike Japan, where the world's largest banks have vast holdings of some of the world's most expensive real estate? These portfolios, as in the United States, appreciated dramatically during the 1980s, and represent a risk for the 1990s.

The American Banker's Brian Sullivan posed this question to Hiromi Tokuda, one of Japan's leading bankers. Mr. Tokuda is president of the leading banking organization in Japan, the Institute for Financial Affairs Inc., known as the Kinzai. He has worked for the Ministry of Finance, and served as an insurance regulator, a regional tax commissioner, a banking regulator, and a commercial banker, and is currently chairman of the board of councilors of the Nomura Research Institute.

In a wide-ranging question-and-answer session, Mr. Tokuda outlined the dangers faced by Japanese banks in the real estate market, and why he believes regulators there – unlike their counterparts in the United States – will handle the situation before it gets out of control.

HIROMI TOKUDA, *says Japanese regulators would handle any real estate problems before they reached the crisis stage.*

AMERICAN BANKER: Do you think Japanese banks will soon face real estate troubles similar to those encountered by their counterparts in the United States?

TOKUDA: Prices in the Japanese real estate market have increased rapidly. But we do not expect prices to drop as sharply as in the United States.

The price of land is determined by two factors: productivity per area and interest rates. Based on these factors, the current price of Japanese real estate is probably only twice as much as it should be.

AB: When have land prices in Japan risen sharply, and what have been the causes?

TOKUDA: We have experienced two large rises in land prices.

One time, the rise was triggered by a jump in oil prices in 1973. But what has triggered the second increase, which is still going on, seems to have been advances of the foreign financial institutions into the Tokyo markets. There is a short supply of office space in Tokyo and increased demand has put upward pressure on prices.

The first time, land prices went up dramatically in all areas of Japan. But the second rise is a little bit different because this time we are experiencing the sharp rise of land prices particularly in the metropolitan areas such as Tokyo and Osaka.

Since the first of the year, the government has been making every effort to suppress prices in Japan. However, the government action this time is a little bit too late: It just wasn't able to keep up with the sharp increase in land prices.

AB: Historically speaking, what have regulators done to prevent rising land prices and keep banks from being hurt in the real estate markets?

TOKUDA: The first sharp rise in land prices was triggered because there was too much money in the market, and the banks were lending too much money to businesses.

At the time, I was in charge of the banking bureau of the Ministry of Finance, and we took a forceful administrative position to depress price increases.

We issued notifications to the banks that the growth rate of loans related to real estate should not exceed the growth rate of the aggregate of loans in a specific bank. Because of these measures, Japanese banks managed to decrease the number of real estate-related loans.

As a result, we didn't see too many nonperforming loans.

AB: What suggestions have you made about the recent increase in real estate prices?

TOKUDA: In *Nikkei Shimbun*, the Japanese economic newspaper, I expressed my concerns about both the sharp increases in land prices and the need to suppress real estate-related loans.

But this time, there is a loophole to this policy. We have to realize that so-called nonbank banks are very powerful in Japan. The real estate allocated to nonbank banks for the past three years accounts for 30% of total real estate loans. So even if you try to suppress real estate loans from the banks . . . nonbanking institutions may be able to lend money.

Thus, the Ministry of Finance finally tightened regulations over nonbank banks last spring.

AB: Is the Ministry of Finance strong enough to force changes in policy quickly enough to avert major real estate losses if prices drop? In the United States, regulators have struggled to prevent such losses in both the banking and thrift industries.

TOKUDA: There is a striking difference between the Japanese banking structure and the status of the S&L industry in the United States. I think that most of the S&L crisis in California resulted from California regulatory authorities' misconduct. There is an incredible level of misconduct in California.

To change policy [in the United States] requires some legislation. It requires some legal action. But in Japan, because of the Ministry of Finance, we just make a change by issuing a notification to the banks. □

Overhauling the Image of the Bank

By JAMES H. DOWLING
Special to American Banker

At one time, the American public equated banks with safety and stability. In the industry's halcyon days, a bank was a place where a 16-year-old girl could go to start an account with the contents of her piggy bank.

But in recent years, changes in the banking world have transformed that perception. The era of leveraged buyouts, savings and loan failures, and a wave of mergers and buyouts of retail banking establishments have led the public to adopt a far less trusting, more critical posture.

A Key Challenge

Japanese banks in the U.S. often are subject to the same scrutiny, and thus face a key challenge. As they continue to assume a higher profile here through making acquisitions and diversifying services, it is imperative that they define and manage both their corporate image, bringing their practices in line with expectations of the American market.

In an age of increasing globalization, banks – like other corporations – have tended to diversify their services. Some have thrived, while others have been swallowed by rivals. These days, the institutions that remain often are not familiar local names, and in many American cities the bank on the corner might well be German or Japanese.

But to the public, few foreign banks have strong individual identities.

Importance of Credibility

For banks, as for other corporations, image-making in the United States today is commonly defined as constituency relations. A typical list of constituents might include customers, employees, the local community, and the many guardians of the public trust, such as consumer groups and local, state, and federal regulators.

In the United States, a bank, like any other business, is expected to declare, "We are what we say we are," and then match actions to the words. And these actions must go far beyond the products and services that businesses ordinarily provide.

Americans expect businesses, financial institutions included, to act as good corporate citizens. In fact, banks, insurance companies, and other financial services organizations tend to be leaders in corporate community involvement.

But Japanese banks are in a somewhat different position in the United States.

Until recently, their principal product has been inexpensive money lent to other financial institutions as support for large financial transactions. They have rarely been the lead bank in a transaction; they have been secondary or tertiary lenders. This has been a very lucrative but largely anonymous business.

But because of increased public awareness of strong Japanese presence in the U.S. financial community, it is no longer possible for Japanese banks to remain inconspicuous sources of cheap money.

Meanwhile, the higher their profile, the more acute their need to cultivate a distinctive image.

A recent study by Greenwich Associates measured the perceptions of banks by other institutions within the banking industry. Most Japanese banks scored very low.

At home, each Japanese bank has a distinctive reputation; one may be known primarily for retail banking services, another for project financing. That same distinctiveness needs to be transferred and tailored to the American market.

That does not necessarily mean changing what the bank does. It means identifying the constituencies it most wants to reach, and then targeting them for special communication, for example by means of internal publications such as annual reports. □

PUBLIC PERCEPTION *of banking has changed substantially, according to James H. Dowling.*

Mr. Dowling is president and chief executive officer of Burson-Marsteller.

A Rocky Road to Hiring Foreign Talent

By GEORGE HOLZBERGER and JOHN D. PLATTE
Special to the American Banker

While Japanese businesses have been fast to globalize their products, marketing strategies, and distribution systems, they have not globalized their workforces as quickly.

Historically, the Japanese have been less sophisticated about Western human resource procedures than they have been about operations and marketing.

Yet things may be changing. On balance, the Japanese financial institutions we work with today are becoming much more savvy about issues involved in attracting, motivating, and retaining exceptional local executives.

Frustrating Experience

Recruiting Westerners for Japanese banks has always been an interesting experience; it is also frequently frustrating.

There are three issues that most often become stumbling blocks to recruiting American talent:

- Career path.
- Compensation, including stock options, bonus, and perks.
- Hours.

Looking at career path first, it may seem fairly obvious that Westerners have different expectations when it comes to their work and careers. Generally, the American executive's world view is driven by individual achievement and rapid career movement.

The Japanese, on the other hand, are traditionally driven more by collective achievement and hire managers for lifetime careers with slower career advancement.

Both perceptions and patterns are changing.

American baby boomers are growing more accustomed to lateral moves and some Japanese are breaking with tradition and deciding to leave a job with one company for another. Yet these differences remain impediments to Americans thinking about working for a Japanese bank.

The major obstacle in terms of career path is the American employee's perception regarding the rotation of Japanese expatriate managers. Most Japanese expatriate managers are still sent to a post in the U.S. for a period of three to five years. When it comes time for a top-level Japanese divisional manager to return home, Americans under him who feel they have earned their stripes would naturally hope to be promoted.

While the chances of this happening may be increasing, the reality is that few Japanese banks will hold out the possibility of a senior level promotion as a carrot to attract or motivate a highly qualified American executive.

Recruiting Difficult

However, following the lead of Japanese industrial companies, many Japanese financial institutions have aggressive plans to reduce their expatriate staffs and increase the number of Americans in top management.

But they continue to be stymied in recruiting efforts.

Nevertheless, there are a few notable examples of Americans leading American operations of Japanese financial institutions and of Americans being recruited at a senior level to build a major part of the company's business.

Among them are Max Chapman, the new cochairman of Nomura Securities Co.'s U.S. operations; John Copenhaver, managing director-swaps at Sumitomo Bank Capital Markets; and David Schwartz, vice president and head trader, swaps, for Mitsubishi Bank (New York).

Today, when recruiters start an assignment for a Japanese bank, the base compensation parameters are not as restrictive as they once were. Yet they are still all over the lot.

Also, most Japanese banks do not offer executive stock options, a standard form of incentive pay in many American firms, nor do most Japanese banks pay large bonuses.

Precedents Being Set

With a few Americans now leading U.S. operations or divisions of Japanese financial companies, precedents are being set in terms of higher compensation. Americans at the helm are communicating directly to Japanese leadership in Tokyo about bonuses tied to individual and company performance and about stock options, perks, and the difficulties of retaining superior talent.

While the Japanese are sometimes uncomfortable with such direct communication, they are changing the ways they operate.

Another major impediment to recruiting top American talent to Japanese banks has to do with a different perspective on work and commitment, or subservience to their jobs and their company's goals: Not only is the time difference a problem for Americans working in New York who deal with Japanese working in Tokyo, but the Japanese generally work much longer hours than Americans.

RECRUITERS *John D. Platte, top, and George Holzberger see Japanese using more savvy in recruiting and retaining Western executives.*

Western executives expect to balance their careers with family, recreation, and civic involvements, while the Japanese and their families accept long commutes and endless business dinners, evenings and weekends at work as part of a normal lifestyle and career.

Americans frequently complain about late-night decision-making. Some actually perceive this practice as a way to continue making decisions behind Americans' backs.

Delay Misinterpreted

When there are significant delays in getting feedback about candidates, we run the risk of losing the interest of the best candidates, who may think the client is not committed to hiring someone for the position.

In our experience there are some specialized areas into which it is easier to recruit Americans. Generally these are product or transaction areas such as swaps, asset securitization, mergers and acquisitions, real estate, and other areas with a specific focus that need highly regarded American expertise to get the Japanese off the ground.

A Shift in Function

Japanese banks are addressing unique cultural aspects of the human resources and personnel function more aggressively. Jack Benton, head of human resources for the Bank of Tokyo's U.S. operations, Paul Frank at Industrial Bank of Japan, and Frank Lynch at Long-Term Credit Bank are examples of an aggressive new generation of American human resource executives working for Japanese companies. □

Mr. Platte is a managing director of Russell Reynolds Associates Inc., an executive recruiting concern based in New York. George Holzberger, an executive director with Reynolds, specializes in recruiting for Asian financial services companies.

THE PERFECT FIT

Whatever your Size and Needs.

It's not just major multinationals that are expanding globally. Many of Japan's most dynamic enterprises developing operations overseas are small and medium-sized companies. And that is where Shoko Chukin comes in. We have unsurpassed experience in assisting such companies in Japan, from financing to information, management advice, and introductions to appropriate partners. In short, we do all—and much more—expected of Japan's preeminent, government-affiliated bank dedicated to smaller enterprises. So, for help in liaising with this thriving sector, come to Shoko Chukin—your perfect partner.

U.S. Employees of Japan Banks Often in the Dark

By GEORGE C. FIFIELD and T. LEE POMEROY
Special to the American Banker

The effectiveness of the local management teams of Japanese companies and the performance of the U.S. subsidiaries are affected by three issues: development of the local senior management team; broadening of the decision-making process, and strengthening of the human resource management function.

The issues were identified in a survey of 32 Japanese companies by Egon Zehnder International with the University of Michigan. While the issues are relevant to all Japanese companies, the report did point out significant differences among the individual subsidiaries.

To test the applicability of the overall conclusions to the banking industry, the researchers approached several high-ranking executives of Japanese banks in the United States.

Each individual was asked to comment on performance objectives and the bank's formal performance appraisal system; participation in decision making, and professional development and career opportunities.

The broad survey reported that American executives in most Japanese banks have only a limited knowledge of their performance objectives and usually receive no one-on-one review of their performance. In Japan, there is little formal feedback, therefore few Japanese superiors in the United States provide written reviews or meet with subordinates to discuss ratings.

Ellen Michelfelder, executive vice president of the Bank of California (a subsidiary of Mitsubishi Bank) and one of nine executive vice presidents reporting to the chief operating officer, indicated her experience with the bank was very different.

A Different Perspective

"I am judged on my performance and on my contribution to the success of the bank," she asserted. "Performance is emphasized here; it is recognized, measured, and rewarded. People who do not perform and contribute do not last."

Another American, a senior vice president at a Japanese bank in New York, said performance objectives were unclear, but gave his Japanese employer credit for recognizing this as a problem and giving him responsibility for mapping out this previously uncharted territory.

"There is no feedback here in terms of performance, though," he said. "When it's bonus time, you just find an envelope on your desk; there is no explanation."

According to a top American executive at another New York-based Japanese bank, performance objectives are defined, but they are not spelled out the way they are in American institutions: "A good portion of the problem is related to communication and understanding the nuances. Japanese are not as direct as Americans."

A One-Way Situation

In the words of one veteran American executive: "I have been with this company for 15 years and have had only one evaluation. I have been advised of my performance in informal ways, but I always must take the initiative. I get criticism from the Japanese, but I am never told, 'You have done well.' "

Howard Hawkins, a vice president of the Industrial Bank of Japan in Los Angeles, said: "Objectives here are very clearly stated; I know what is expected of me."

Mr. Hawkins also observed that there was an annual performance review between an employee and his immediate supervisor in a private session.

The survey concluded that no clear pattern exists. In some companies, Americans exercise strong responsibilities and substantial authority; in others, they function within narrowly defined roles. □

Mr. Fifield and Mr. Pomeroy are principals of Egon Zehnder International, a global executive search firm.

Innovations Help Meet Personnel Needs

By MAY KYOKO MUKUDA and ALLAN BIRD
Special to the American Banker

The dramatic rise in Japanese foreign direct investment during the 1980s has brought enormous pressure to bear on the international human-resource management capabilities of Japanese multinational corporations.

One result has been experimentation with an innovative strategy of hiring foreign managerial trainees, bringing them back to Japan, treating them like standard Japanese employees, and then, two to three years down the road, sending them on international assignments, many back to their home countries.

As they moved into the 1980s, most Japanese multinationals relied on a highly centralized system that concentrated control of international operations in Japan and relied on Japanese sent from the head office to manage foreign subsidiaries. This was possible because internationally active companies were predominantly exporters with subsidiaries acting as sales offices.

Role Was as Liaison

Japanese expatriate managers sent abroad during this period found themselves serving in a liaison position where their primary role was to interpret parent company policies for local managers whose responsibilities were, in turn, to implement those policies.

However, as the multinationals moved more of their manufacturing facilities offshore, and as far-flung production operations began to require higher levels of coordination among subsidiaries, they found their cadre of international managers inadequate in both number and capabilities.

In many ways, the international staffing difficulties that multinationals are experiencing derive directly from the very strategies and techniques that have purportedly made Japanese companies so successful. Practices appropriate to the domestic labor force and widely accepted within Japan are not flexible enough for application to international operations.

Fast Growth Changes Needs

Rapid growth and success have imposed constraints that may make it particularly difficult for multinationals to effectively staff foreign operations. The development of an internal labor market makes it difficult to bring in new staff on the basis of immediate need or to retain them over time.

The inflexibility of the traditional Japanese human resource development approach is brought into sharp focus when the employees hired are host-country nationals working in foreign subsidiaries.

Being non-Japanese, local people are clearly outsiders working at the geographic and organizational fringes of the company. They are not exposed to large doses of the unique company philosophy.

They have also missed the intensive socialization of going through new-employee orientation – living in company dorms and attending parent company social events. Moreover, few local people are fluent in Japanese, restricting their access to the benefits of a traditional Japanese socialization strategy.

Not Family Members

Consequently, they view themselves and are viewed by their Japanese counterparts not as members of the family but as hired hands to work in the subsidiary, never the parent company.

Not surprisingly, many multinationals have experienced high levels of turnover.

Simultaneously, the multinationals have inadvertently been exploring the limits of a large Japanese expatriate cadre. Japanese expatriates have suffered a barrage of criticisms.

The three most common: slow decision making; the inability of Japanese staff to respond quickly to the local business environment; and nationality, race, or gender discrimination.

A Different Approach

In the early 1980s, a number of Japanese companies began experimenting with a new approach to human resource development in their international operations. They sought to develop a cadre of foreign managers who would be capable of correcting the shortcomings of the Japanese expatriate staff and yet possess many of the characteristics that headquarters felt were missing in the local staff.

They identified five specific characteristics to be sought after and developed within this new corps of managers:

- Loyalty to headquarters and the parent company.
- Familiarity with the operating style of headquarters.
- Effective international skills in the foreign subsidiary.
- Sound functional skills in marketing, finance, operations, management, etc.
- Proficiency in Japanese.

The approach to developing a cadre of foreign managers within the international division consisted of four steps: overseas recruitment by the parent company; bringing the new foreign recruit to the head office for training and initial assignment; assignment to the international division within the head office; and assignment back to home country or to a third country.

Starting with Students

To identify and attract foreigners, personnel managers in the parent company began by contacting business students in the United States and Europe.

Compensation and benefit packages are loosely tailored to match those of Japanese employees of similar age and educational background.

Once hired, new recruits are brought to Japan for training and initial assignment. In some cases, they may even go through new-employee training of a few days to a few months.

At the close of the training phase, initial assignment is made, usually to some position within the international division. The initial assignment is also frequently the time during which a foreign employee makes the acquaintance of senior executives within the company.

After two or three years, the foreign employee is then considered for assignment overseas, either as part of a project team or for an extended stay. Assignment can be either as a Japanese expatriate or as a local manager.

Under the traditional approach to international staff development, hiring needs of the subsidiary unit are the primary consideration. The new approach focuses on the long-term international staffing needs of the parent company.

Not surprisingly, differences can be found in the type of training that foreign personnel receive at headquarters.

As noted earlier, under the traditional approach, training tends to be for one week to two months. The content of curriculum includes a general understanding of the parent company and its global operations.

More detailed instruction is provided regarding how the host country subsidiary fits into the overall global plan. The nature of the visit itself is one of making contacts, not establishing relationships.

By contrast, under the new approach, headquarters training and experience is of significantly longer duration – from two to four years. Instruction is frequently administered through a formal training course or through on-the-job training and job rotation.

Moreover, foreign staff assimilate substantially more detailed information about the parent company and its operations.

Finally, the nature of the stay at headquarters is that of building relationships with mentors and key managers.

The new approach to developing foreign managers for the international division offers a number of advantages over the more traditional approach. Foreign hires recruited straight from colleges and business schools enter the company uncontaminated by extensive experience and exposure to work in the host country.

Hiring foreigners directly from college offers a second advantage. Because they are still quite young, many are willing to work within the Japanese system of slow promotions in exchange for job security and the opportunity to journey down less-traveled paths. □

Cultures Clash on Pay

BY BRYAN DUNN
Special to the American Banker

Pay for performance is not an expression heard around many Japanese banks – even today. In fact, if there is a message, it is "pay for loyalty," with a little "pay what you have to" thrown in.

This flies in the face of every tenet of effective Western compensation philosophy. Yet the Japanese banks have been able to attract and retain legions of American employees.

The top fifteen Japanese banks (excluding subsidiaries) in the United States employ 9,000 people, the vast majority of whom are American. However, it's only been in the past few years that a handful of those Americans played any significant management role.

In fact, many would argue that even in what are ostensibly management jobs they have limited control over such key decisions as hiring, firing, and compensation.

Japanese banks, unlike most other foreign banks in the United States, have their nationals filling all significant management roles.

Even when there are Americans in key positions, they rely heavily on their Japanese "shadows" to get decisions made – in Japan, at the other end of a fax machine.

A Different Tradition

Pay decisions, like others, are based on comfortable, familiar Japanese traditions. That includes heavy reliance base salary determined by tenure; large semiannual bonuses paid to all employees as the same percentage of salary, and vague discussions about pay and performance.

Still uncomfortable and unfamiliar to Japanese managers are:

- Pay distinctions based on performance.
- The concept that different jobs at the same organizational level have different worth.
- The idea that incentives (long- or short-term) have a role in changing behavior.
- Candid performance and pay discussions with employees.

Harmony Is Goal

The Japanese strive for harmony, uniformity, and consistency. Pay programs that differentiate among employees are anathema to Japanese managers.

In considering Japanese compensation policies, it is safe to ignore the legendary salaries paid to a select few with unique technical specialties who were "bought" at what the market would bear in the 1980s – when the market would bear a lot.

In fact, the Japanese have been accused of being niggardly in their pay practices.

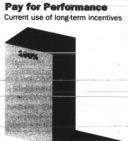
They have also tended to create broad classes of employee – administration, operations, banking – and to limit differentials within or across those classes except for tenure and experience. While Americans and Europeans have spent millions of dollars developing sophisticated job evaluation systems, the Japanese have relied on a simple program that avoids distinctions rather than promoting them.

Western Procedure

Most U.S. and many European banks devote considerable attention to the process by which salaries are adjusted each year.

- First, performance appraisals are prepared and reviewed with each employee.
- Then, managers put forward salary increase recommendations on the basis of a merit-increase grid that considers performance and employees' level in their salary grade (strong performers who are low in their grade get the largest increases).

Pay for Performance
Current use of long-term incentives



SOURCE: TOWERS PERRIN GROUP SURVEY

- These proposals are reviewed for internal consistency and equity – to ensure that the best performers get the biggest raise.
- Finally, managers tell each employee what raise has been approved.

Japanese Pay Adjustments

The Japanese are not comfortable with such individual performance reviews, often have no formally graded salary structure, and do not easily make pay distinctions based on performance. For them, the process of adjusting pay is much more like a union cost-of-living increase. Truly performance-based incentive systems are a rarity in Japanese banks.

However, as astute business people, the Japanese recognize that sometimes they have to do as the "natives" do. For example, U.S. subsidiaries of Japanese banks provide essentially American-style incentive compensation for employees who work in such areas as foreign exchange trading and investment banking. But even in these areas, a recent survey showed, the bonus portion of compensation is significantly less than in American banks.

This all relates to the fact that the Japanese find it hard to understand that someone could or would work harder or smarter simply for more money. In the Japanese view, people naturally work their best, because that is their obligation or out of a sense of honor or gratitude – but never just for more money. The implication that someone would work better to obtain a reward is considered an insult.

Long-term Incentives

Also, the use of long-term incentives is philosophically "foreign" to Japanese managers. Stock options and other forms of long-term incentives common in the United States simply do not exist in Japan.

Nor do they among Japanese banks in the United States. A recent survey by TPF&C, a Towers Perrin company, of long-term incentive practices by the U.S. subsidiaries of foreign institutions showed that none of the Japanese banks had such devices.

Thirty-five percent of the other foreign banks did – as do all the top 25 U.S. banks.

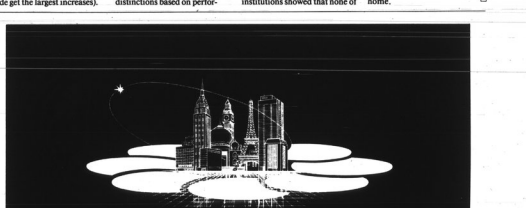
Change Is Slow

In the past few years, a number of the big Japanese banks have hired accomplished Americans to serve as the chief human resources officers. They have been mandated to Americanize the banks, starting with compensation.

The changes have begun. In the past year, a number of incentive bonus programs have been instituted, job evaluation programs have been studied, and the performance appraisal element of the merit review process has been tried.

But progress has been slow and frustrating. It will probably continue to be so as long as the Japanese banks fill most management positions with expatriates and rotate them home. □

BRYAN DUNN *says Japan's banks resist Western pay practices.*



Saitama Bank.
A sound banking system matched to new banking needs.

Trade financing? Syndicated loans? International securities? In these and other areas of international banking Saitama Bank has established its capability and credibility with you. For over 40 years we've built our solid base and sound banking system in the Tokyo metropolitan area, Japan's vigorous economic center.

Saitama Bank is fast-growing and forward-looking: Change-oriented.Positive. And assertive — as seen in our electronic banking technology. Grow together with Saitama Bank — sound, experienced and flexible in matching its services to new banking needs.

The Japanese bank that helps you grow

Adjusting to Regulators as Adversaries

By KAREN D. SHAW
Special to American Banker

A writer once described America and England as two countries separated by a common language. Had he been a banker, he would have said the same thing about American and Japanese banking – they're separated by a common structure.

The framework of Japanese banking was established by Americans after World War II, echoing the system they knew. However, that structure was superimposed on Japanese traditions and culture, and by now Japanese and American banking are quite different. Unless Japanese bankers are sensitive to these differences, their success in this market will be limited.

At home, Japanese bankers explore new products with Finance Ministry officials and then either change them to meet government concerns or negotiate differences away. In return, the industry is protected from unwanted competition and, whenever possible, from market volatility.

An Unexpected Adversary

When they enter the U.S. market, Japanese bankers bring the same expectations of a friendly, interactive regulatory environment. Lulled by the structural similarities between the U.S. and Japanese systems, they are generally unprepared for the adversarial relationship between business and government that is a hallmark of American capitalism.

The key to long-term success for Japanese banks in the U.S. market will be the ability to adapt their strategic view of bank regulation to the significant differences in the United States.

Perhaps the most critical difference between the U.S. and Japanese financial systems – and the one that will prove of prime strategic importance in the early 1990s – is the existence of an explicit federal safety net spread beneath insured banks. No other nation has so extensive (and expensive!) a deposit insurance system.

Both domestic and foreign bankers long ignored the deposit insurance system, which had been a silent element of a stable banking system. This quiet, of course, was shattered by the thrift crisis, which turned a spotlight on the true dimensions of the government's obligations for bank and thrift activities.

Insurance Is the Driver

As a result, the deposit insurance issue now drives all questions of bank regulation, and what one will be key to any proposals to revise the structure of bank powers.

Deposit insurance issues are critical, not only to an understanding of the structure of the U.S. financial system, but also – on a more immediate level – to the effective operation of a correspondent banking network in the United States.

Japanese banks must understand the meaning of government enforcement actions.

Extrapolating from their home-country experience, Japanese bankers generally view enforcement actions as a positive expression of government concern. They read the literal language of the regulatory order and, in many cases, have inferred that it means the government will take responsibility for the bank's future.

Differing Views

In Japan, this would mean the government would not let the bank disgrace itself further.

In the United States, an enforcement order has a very different meaning. It is a warning to other sailors to steer clear.

It should also be a sharp reminder to other banks of the new enforcement powers granted bank and thrift regulators under the Financial Institutions Reform, Recovery, and Enforcement Act.

Another marked difference between the U.S. and Japanese banking systems is the importance of the state regulatory framework in the United States.

A Preference for States

Anachronisms in U.S. banking law that predate passage of the International Banking Act in 1978 led many foreign banks to choose state charters. This was done to avoid geographic and other restrictions.

While foreign banks now operate in the same nationwide legal environment as domestic institutions, the state charters that are a legacy of the pre-1978 days may have renewed value.

A majority of states permit their banks broader powers than those authorized under federal law. The new Delaware business statute, for example, follows a less-public-step change in that state's laws that permitted banks there to underwrite and deal in a full range of securities.

California banks can underwrite mutual funds as well as insurance, and also develop real estate. It is critical to note that the vast majority of these state-authorized services can prove substantial sources of fee-based income, since they authorize agency or underwriting activities not otherwise permissible.

Japanese Are Cautious

American banks are moving aggressively to capitalize on opportunities available to state-chartered institutions, but Japanese banks still view these state powers as vaguely illegitimate.

This means that a source of potentially significant revenue is being ignored – revenue that will prove particularly critical as asset quality worries and increased funding costs diminish the profitability of traditional lending.

State charters may be particularly critical if the proposed federal barriers to trade in financial services are enacted into law later this year. The Senate Banking Committee has approved a measure called the Fair Trade in Financial Services Act. It is likely to end up attached to a "must pass" bill that will get through Congress later this year.

The bill would give federal bank and securities regulators increased authority to deny applications from companies based in countries that block "effective market access" to U.S. competitors. As approved by the Senate Banking Committee, existing operations would enjoy a limited grandfather status, protecting them from an arbitrary exercise of this new power.

State-chartered banks would not be subjected to this standard. But growing tension between the United States and Japan over trade in financial services could force regulators to use this power, particularly for new entrants or for applications that would result in a significant expansion by a major Japanese bank or securities company.

Congressional action on this measure is unlikely until late this year. Even then, it will take months for the Administration to present Congress with a list of countries potentially subject to the measure's sanctions.

This gives Japanese as well as other Asian institutions a window of opportunity to expand their activities and open state affiliates that could provide a safe haven from future federal restraint.

One of the most frequently-overlooked issues affecting the future of foreign banks in the United States is the question of community commitment. Mandatory community investment is alien to Japanese institutions. It could prove the most significant deterrent to expanded Japanese market share, should their banks fail to meet the new, far more stringent rules.

Barriers Are Changed

Before 1978, foreign banks could operate without the interstate banking barriers restricting U.S. institutions. Since then, the same rules governing U.S. banks have been applied, although some states continue to wall themselves off from any foreign bank entry. □

Regionals Are Playing Follow-the-Client

By BRUCE ARONSON
Special to the American Banker

When considering the topic of "Japanese banks," we tend to focus on the activities of a small number of Japan's largest and most famous banking institutions.

Within the past few years, however, a far greater number of Japan's regional banks have established offices in the United States. The increasing presence is beginning to draw greater attention to this lesser-known group of financial institutions.

The opening on June 5 of the New York representative office of the Toho Bank Ltd. brought to 43 the number of Japanese regional banks to establish a New York presence. This number consists of 34 out of a total of 64 traditional regional banks and nine former "sogo," or mutual, banks.

A change in Japanese law in February 1989 permitted the mutual banks to apply for conversion to commercial banks and 66 of the 68 sogo banks have completed this process. Thus the ranks of the Japanese regional banks have recently swelled to 130 institutions.

The 43 offices of Japanese regional banks in New York consist of 20 branches and 23 representative offices, with five banks now in the process of upgrading their representative offices to branch status. As recently as 1986, there were only three such branches in New York. In addition to New York, there are two agencies and one branch of regional banks in Los Angeles.

There are a number of reasons why the Japanese regional banks were eager to establish offices overseas. With the internationalization of the Japanese economy extending to the regional level in the early 1980s, the corporate customers of these regional banks began to expand overseas.

In addition, with the globalization of the world economy and the gradual liberalization of Japanese regulations governing activities of financial institutions, Japanese regional banks gradually accumulated substantial overseas assets.

Dollar-denominated assets consisted primarily of securities such as U.S. treasuries, highly rated corporate bonds, and participations in large syndicated loans to U.S. borrowers. As these assets increased, there was a corresponding increase in the necessity of gaining experience and training personnel in international operations and establishing offices in overseas markets.

The Japanese government's approval of the gradual overseas expansion of regional banks occurs within the context of the significant liberalization of Japan's financial markets over the past several years. Ironically, it was U.S. pressure on Japan to open its financial markets to U.S. banks that provided a strong impetus for this financial liberalization.

The Japanese government acts as a gatekeeper in permitting a steady stream, but not a flood, of overseas expansion by regional banks. The primary regulator of Japan's banking industry is the Ministry of Finance, which must grant preliminary approval before any Japanese bank can make an ap-

See next page

UNFRIENDLY *regulators in the United States are a surprise to the Japanese, says Karen D. Shaw.*

Continued from page 16A

plication overseas for a representative office or branch.

Such approvals are granted for overseas offices in June and December. In the case of overseas offices of regional banks, the ministry has required the establishment of a representative office as a first step, with eventual upgrading to branch status.

Continued close scrutiny by Japan's ministry ensures that any regional bank approved for an overseas office is fully qualified. For a branch, this now includes satisfactory capital ratios under the risk-based standard defined by the Bank for International Settlements.

As a result, all such ministry-approved banks have been successful in being licensed as branches by the State of New York. No Japanese regional banks have attempted to apply for federal branch licenses.

Despite some friction in the financial area between Japan and the federal government, New York and other states have consistently maintained policies of encouraging participation in local financial markets by sound foreign banking institutions. The success of this policy is reflected in the continuing and increasing prominence of New York as the world's leading financial center.

Several years ago, the Japanese regional banks would have preferred to open their first overseas branch in London. However, partly because of the entry of Japanese regional banks and other foreign banks, New York has gained prominence over London as the leading international center for the sale of participations in loan syndications and other activities.

Given the same choice of locations today, Japanese regional bankers view New York as the more attractive financial center.

Participations Are Focus

The strategy for a regional bank branch operating in New York is straightforward, and centers on expanding the types of U.S.-oriented operations conducted in Japan. The main loan activities consist of buying participations in syndicated loans from U.S. money-center banks and Japanese city banks. They also engage in direct loans to U.S. affiliates of their Japanese customers.

On the investment side, they purchase securities (primarily government and top-rated corporate bonds) for the U.S. investment banks and to some extent from Japanese securities companies.

With their main income derived from participations in syndicated loans and investment securities, a newly established New York branch of a Japanese regional bank would generally plan on turning a profit in the fourth or fifth year of operation.

On the funding side, New York branches of Japanese regional banks obtain funds on the open market and also through the private placement of certificates of deposit with institutional investors (typically U.S. affiliates of Japanese institutional investors, who are familiar with the regional banks).

The Japanese regional banks have generally been welcomed by the U.S. financial community. The reason is that they are valuable customers, and do not compete with U.S. banks. The purchase of participations in syndicated loans from U.S. money-center banks provides a substantial portion of the depth of the New York market that makes large syndicated loans possible.

Japanese regional banks also purchase securities from U.S. investment banks, and in addition utilize U.S. banks for clearing and custody services. There is intense competition among large U.S. and Japanese banks to provide these services to incoming Japanese regional banks.

As indicated, for example, by the increased attendance at recent receptions for New York openings of Japanese regional bank offices, the banks are no longer considered simply as a novelty with unpronounceable names. Rather, it is clear that the U.S. financial community views the Japanese banks as representing a real business opportunity.

Many U.S. commercial banks and investment banks have established or strengthened Japan desks to target these customers.

Although Japanese regional bankers hope to eventually provide direct loans to U.S. corporations, it is highly unlikely that they will be in a position to do so in the foreseeable future. Rather, they will continue to purchase participations in syndicated loans.

Assets Are Limited

The expansion of the regional banks' U.S. operations will proceed on a step-by-step basis, in keeping with the conservative nature of the institutions. New activities in the United States would include areas such as the establishment of U.S. leasing affiliates and, further down the road, trust subsidiaries.

They obviously have a long road ahead in the United States, as the combined assets of all the New York branches of the regional banks would not approach the assets of a single New York branch of a Mitsubishi or Sanwa.

The expansion of Japanese regional banks in the United States is likely to continue, given the benefit derived by the banks and their substantial contribution to the local economy of New York.

The pace and form of expansion, however, is changing. Over the last year or two, the number of regional banks upgrading their New York representative offices to branch status has increased, while the number of new representative offices has declined significantly. □

GLOBAL VIEW *is new for Japan's regionals, Bruce Aronson writes.*

New Edition!

Bank for bank, fact for fact, page for page – the best Bank Directory value available anywhere.

The Rand McNally Bankers Directory gives you the most accurate, complete, up-to-date facts – far more for the dollar than any other. It's as simple as that. And in these fast-paced, competitive times, you just can't settle for less.

- **EVERY U.S.** and virtually every foreign bank and branch – and, only Rand McNally updates all domestic and international data every six months.
- **NEW** *Guide To Holding Companies* lists all multi-bank and major unitary-bank holding companies in the U.S. Plus, state, national, and "Top 200" summaries.
- **UNIQUE** *Financial Services Guide* highlights what 1,500 banks (and some of their competitors) are offering.
- **EXCLUSIVE** *Buyers' Guide* shows where banks can get what they need.
- **COMPLETE** reference sections feature maps, national and state performance summaries, regulatory details, and more.

The latest Rand McNally directory makes it easier than ever to sell to banks, buy from them, transfer funds with them – do business with them in any way. And, you've got our 30-Day Guarantee.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports wherever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliated in which ownership exceeds 50%. **Total deposits** are funds due depositors, banks (including central banks), and national, state, and local governments. *Note:* Banks that did not provide current data are excluded from the listing. **Date of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989, Sept. 30, 1989, and March 31, 1990. Canadian bank data are for fiscal yearend Oct. 31, 1989; and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Wherever possible, the New York cable rate is used, and this is the rate for most banks' figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. (a)—A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. (q)—A subsidiary of Compagnie Financiere de Paribas, Paris, a financial holding company. (s)—Consolidated data. (t)—Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. (u)—Data are not consolidated for affiliates more than 50% owned. (w)—Bank is owned by another bank, which does not consolidate. **Total deposits** in U.S. dollars for the 1988 figures are based on revised asset total for 1988. (§)—Restated to reflect changes in consolidation for 1988 or 1989. (¶)—Rank that did not previously appear in the Top 500. "Gain or loss" portion of total deposits was estimated by American Banker.

Compiled by American Banker, Copyright 1990.

The Top 500 Banks in the World

U.S. and overseas banks ranked by deposits on Dec. 31, 1989 or nearest fiscal yearend

Rank 12/89	Rank 12/88	Bank	Country	Deposits 12/31/89 (U.S. Dollars)	Exchange Rate (U.S. Dollars)	Deposits 12/31/88 (Banker's Currency)	Deposits 12/31/89 (U.S. Dollars)	Rank 1989	Gain or Loss

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports wherever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliated in which ownership exceeds 50%. **Total deposits** are funds due depositors, banks (including central banks), and national, state, and local governments. *Note:* Banks that did not provide current data are excluded from the

The Top 500 Banks in the World

U.S. and overseas banks ranked by deposits on Dec. 31, 1989 or nearest fiscal year end

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports wherever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Total deposits** are funds due depositors, banks (including central banks), and national, state, and local governments. **Note:** Banks that did not provide current data are excluded from the listing. **Date of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989. Sept. 30, 1989, and March 31, 1990. Cane dian bank data are for fiscal yearend Oct. 31, 1989; and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(s)**— A subsidiary of Compagnie Financiere de Paribas. Paris, a financial holding company. **(st)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate totals below. **(u)**— Data are not consolidated. **(y)**— Restated to reflect changes in consolidation in 1988. **(z)**— Restated to reflect changes in consolidation in 1989.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports wherever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Total deposits** are funds due depositors, banks (including central banks), and national, state, and local governments. **Note:** Banks that did not provide current data are excluded from the listing. **Date of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989, Sept. 30, 1989, and March 31, 1990. Canadian bank data are for fiscal yearend Oct. 31, 1989; and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(g)**— A subsidiary of Compagnie Financiere de Paribas, Paris, a financial holding company. **(h)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate totals below. **(u)**— Data are not consolidated. **(w)**— Restated to reflect changes in consolidation in 1989.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50% **Total deposits** are funds due depositors, banks (including central banks), and national, state, and local governments. **Note:** Banks that did not provide current data are **excluded** from the listing. **Date of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989, Sept. 30, 1989, and March 31, 1990. Canadian bank data are for fiscal yearend Oct. 31, 1989; and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's deposits. See "Foreign Currency Exchange Used and Exchange Rate Comparisons" for key to currency abbreviations. **(b)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(g)**— A subsidiary of Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the 500 banks. **(u)**— Banks are not consolidated for affiliates more than 50% owned. **(v)**— Bank is owned by another bank which does not consolidate subsidiaries. **(z)**— Bank's deposits are based on revised asset total for 1988. **(§)**— Restated to reflect changes in consolidation in 1989.

Compiled by American Banker, Copyright 1990.

Top 500 Banks: Total Deposits

Dollar amounts in billions

	Number Of Banks 12/31/89	Total Deposits 12/31/89	Number Of Banks 12/31/88	Total Deposits 12/31/88	Deposit Growth 12/89
U.S. Banks	108	$ 1,351.6	107	$ 1,347.4	+0.31
Foreign Banks	392	12,213.8	393	11,489.2	+6.31
Top 500 Banks	500	13,565.4	500	12,836.6	+5.68

To avoid double counting, deposits for banks owned by other banks in the top 500 are excluded.

Addendum to Tabulation

Data for some banks were received after American Banker's July 12th deadline for inclusion in today's listing. These banks appear below with the 1989 ranks they would have had if all the data were received earlier. (Dollar amounts in Millions)

Deposit Rank 12/89	Name of Bank	Total Deposits 12/31/89	Total Deposits 12/31/88	Deposit Growth 12/89
109	State Bank of India, Bombay†	32,889	31,099	102
167	Cassa di Risparmio di Torino, Italy*	15,407	13,466	206
219	Credit du Nord, Paris, France*	13,070	13,885	292
273	Bank Rakyat Indonesia, Jakarta	3,887	2,949	718
857	Hessische Landesbank Int'l, Luxembourg	2,273	1,901	942

(*)—Data are for the fiscal yearend March 31, 1990. (†)— Data were received too late for this bank to be placed on the Asset Rank Addendum list published yesterday. Its assets were $20,411 million at yearend 1988. It would have ranked 163d. In 1989, the bank had $16,671 million in assets and ranked 204th. (‡)— A subsidiary of Compagnie Financiere de Paribas, Paris.

Lenders Seeking Payment If Loan Becomes HLT

By STEVEN LIPIN

The $1 billion in bank financing lined up for Kansas Gas and Electric Co.'s bid for Kansas City Power & Light Co. was significant for the banking community because it was the first hostile takeover financed by banks in many months, and, at the same time, avoided the tag of highly leveraged transaction.

But the bank facility – led by First Chicago Corp. and Westpac Banking Corp. – is important for another reason: It is the largest loan to date that has included language protecting lenders if the loans are ever classified as HLTs.

Even as leveraged lending picks up from its lows, a growing number of lenders are including the protective "event risk" language that ensures banks some kind of extra com-

ANALYSIS: *Follow-up on the news*

pensation if the loans slip into the classification.

"We're trying to make it a standard clause," said one money-center banker. "It doesn't make a difference who the borrower is."

Standard Language on the Way

No less than several banks have included the language, and bankers said many new non-HLT loans will include the provisions. Eventually, bankers said, it could be standard operating language for deals that at the margin are not HLTs but could fall into that category.

"Lenders are calling the shots to a much greater degree," said Dennis Amato, senior vice president at Continental Bank. "The concern is if a loan becomes an HLT, that banks get paid for it."

Limited Capital for HLTs

Bankers note that regulatory and shareholder pressure has limited the amount of capital devoted to HLTs. But if loans are reclassified either because of additional leveraging or because regulators deem the loans HLTs after origination, banks want to be rewarded for the increased risk.

"It's a typical market response to a new regulatory constraint," said Christopher L. Snyder, president of Loan Pricing Corp.

While no formal agreement has been developed for the new loans, a number of common themes have emerged:

● Step-up pricing. The interest rates on the Kansas Gas loans increase 50 basis points if the loan becomes an HLT. In a $300 million loan for Mark IV Industries by Continental Bank and

BIRTH OF A BAILOUT: Banking, politics, and the economy felt the aftereffects of the law President Bush signed last August.

Despite Flaws, Slow Start, Bailout Is Picking Up Steam

By ROBERT M. GARSSON
First of a Series

WASHINGTON — When President Bush walked into the Rose Garden on a sun-filled day last Aug. 9, the world seemed bright with promise. He was about to sign a bank savings and loan bill that not only would make huge sums of money avail-

The Thrift Bailout Law

able for costly cleanup, but would also bring authentic reform to an industry long accustomed to lax supervision and phony accounting.

That heady moment proved short-lived, however, as the Bush administration hit the ground crawling in the days that followed. The first eight months of the bailout were characterized by bureaucratic infighting and little action in dealing with the hundreds of insolvent institutions that dotted the financial landscape.

Size of Problem Unanticipated

Today, as the Financial Institutions Reform, Recovery, and Enforcement Act nears its anniversary, the bailout appears to have been overtaken by cash shortages, political bickering, and a growing realization that the thrift problem was much deeper than anyone ever imagined.

Yet for all the law's apparent flaws, many observers believe that its reform elements are working exactly as intended and that the cleanup, despite its

Visa Is Firing New Volley At American Express Card

By YVETTE D. KANTROW

NEW YORK – Having spent millions to persuade consumers to choose its card, Visa U.S.A. is opening another front in its war with American Express Co.

On Wednesday, Visa will begin a mass-market campaign attacking the rates that merchants pay for what it sarcastically calls the "privilege" of accepting American Express cards.

If a merchant's customers are paying with American Express cards, the ad states, "call 800-Visa-511, and we'll show you how to turn a bigger profit."

Wheel of Comparison

Respondents will receive a Visa "profit-improvement calculator," which is a cardboard wheel they can use to compare what they spend on American Express transactions with what they spend on Visa transactions.

"We want to remind merchants that they pay more for American Express, and hopefully they will show a preference for Visa," a spokesman for the bank card association said. The ad is scheduled to run in *The Wall Street Journal, Business Week, Time, Forbes,* and other business and trade publications.

To accept credit cards, merchants typically pay their banks or other service providers fees, known as discounts. These discounts are a percentage of each credit card sale and vary by the retailer's industry and sales

Avantor, We Hardly Knew Ya

By KENNETH CLINE

ATLANTA — Last fall, when Citizens and Southern Corp. and Sovran Financial Corp. announced plans to merge, they proudly revealed the name for the joint company: Avantor Financial Corp.

The doubts started to set in during the ensuing months, as the companies' top executives got an earful of snickers and criticism from employees, customers, journalists, and investors.

"Nobody told us that Avantor is a wonderful name," said Dennis C. Bottorff, president and chief operating officer of Sovran, which is based in Norfolk, Va.

During a meeting with analysts this year in Atlanta,

James C. Grant Engineers PC Network for Royal Bank

By JEANNE IIDA

James C. Grant, chief technologist at Royal Bank of Canada, is a hard-driving engineer who has encouraged the development of what he calls hybrid bankers – technologists who are also businessmen.

His vision has helped make the Canadian bank one of the top business performers in North America.

With the largest branch network in North America, Royal Bank is now engaged in an ambitious project that is rivaled in scope only by those of one or two U.S. banks. It plans to install 15,000 personal computers in its 1,560 branches by year-end and redesign those branches to create a sales-oriented environment.

Mr. Grant is well-suited for the mission. He spent spent four and a half years heading retail operations of the bank before becoming senior vice president of operations in October 1984 and executive vice president of systems and technology in February 1987.

James C. Grant

A winner in 1989 of the prestigious information management award from Carnegie Mellon University, Mr. Grant is a hands-on manager who draws innovative ideas from his staff, then pushes hard for those ideas with top management.

"He doesn't just sit in a mahogany office," said Kenneth Morrison, vice president of technology and distribution in corporate banking at the Royal Bank, which is based in Toronto.

"He's a gentleman demanding respect," said Frank Lablans, vice president of retirement income services at Royal Bank. At the same time, "he's aggressive, he likes new directions and new things – he's a go-getter."

Several years ago, Mr. Grant designed a weeklong course on the benefits of technology that all of the banks' top 200 employees, including the chairman, attended.

The cross-fertilization of technology and traditional banking talent has led to some changes at the bank. Many of its top executives in retail banking, corporate banking and credit card services are now systems people who requested transfers.

When he headed the retail unit, Mr. Grant positioned the area for its rapid growth of the past few years through a shrewd use of technology and keen sense of the banking and investment habits of consumers.

Sophisticated Systems that U.S. Banks Lack

Royal Bank's share of the Canadian retail market has grown over the past four years to 25.5% from 23.75%. The bank offers network services such as electronic data interchange to large corporate customers and has had integrated customer profile information for years. Most U.S. banks are just beginning to build such systems.

"Jim's been a key player in the bank's success," said Mr. Lablans.

When asked about his private life, Mr. Grant jokes, "What private life?" but concedes he is an avid squash player who makes time for three to five games a week.

Born in Nova Scotia, Mr. Grant has an electrical engineering degree from St. Francis Xavier College there. For five years he worked as an air traffic controller, "keeping planes from bumping into each other over the North Atlantic." □

NEWS *briefs*

First Union's Florida Chief To Oversee Credit Policy

JACKSONVILLE, Fla. — Billy J. Walker, chairman and chief executive officer of First Union National Bank of Florida, said he is taking on additional responsibility as chairman of the credit policy committee. He said the move reflects a growing commitment to commercial lending following the company's acquisition by First Union Corp. of Charlotte, N.C.

Mr. Walker, who is also a vice chairman of the $38 billion-asset parent, is preparing to step down as Florida CEO next March.

Pacific First of Seattle To Sell Utah Branches

TORONTO — Royal Trustco said its subsidiary, Pacific First Financial Corp. of Seattle, will sell its 17 Utah branches to First Security Corp. of Salt Lake City, Utah, for $3.25 million. The sale is subject to regulatory approval.

Pacific First acquired the Utah operations in June when it acquired American Savings and Loan of Oregon. But Royal Trustco President Michael Cornellissen said that Utah was "not in line with our strategy to focus on the West Coast."

Through Pacific First, Royal Trust operates 163 branches in four states. . .

Synovus to Buy Fairbanco

COLUMBUS, Ga. — Synovus Financial Corp. signed a letter of intent to acquire Fairbanco Holding Co. Inc., parent of the $68 million-asset Fairburn (Ga.) Banking Co. Terms were not disclosed.

The $2.7 billion-asset Synovus owns 14 banks in three Southeastern states. □

FDIC to Appeal Texas Decision

Seeks to Vindicate Handling of 12 Bank Closings

By BILL ATKINSON

WASHINGTON — The Federal Deposit Insurance Corp. will appeal a recent court ruling that the agency overstepped its authority in declaring 12 subsidiaries of Texas American Bancshares insolvent, a senior FDIC legal official said.

The agency is trying to recover from a stunning defeat in June when U.S. District Judge Barefoot Sanders awarded Fort Worth-based Texas American $5 million in damages.

Illegal Seizure Is Claimed

Texas American sued the FDIC about a year ago, shortly after its 24 subsidiary banks were declared insolvent. Judge G. Clark, the FDIC's senior litigation counsel, said Friday an appeal should be filed within the next two weeks.

Texas American argued that 12 of the banks were solvent and should not have been seized. The FDIC claimed that the 12 healthy banks would have become insolvent if the agency took Texas American's flagship bank in Fort Worth.

After declaring all 24 banks insolvent, the FDIC sold them as a package to an investor group that offered to pump money into the network.

Further Lawsuits Pending

The case is complex and could affect the FDIC's procedures in closing solvent subsidiaries of troubled holding companies.

In addition to Texas American, the FDIC is wrestling with a $70 million suit filed by Dallas-based MCorp that alleges that the FDIC overstepped its bounds by shutting profitable units when the main bank failed. The suit is still pending.

Judge Sanders, presiding over the U.S. District Court for the Northern District of Texas, Dallas, ruled that the solvent banks were not treated equally as other creditors, and ruled in favor of Texas American.

Alfred J.T. Byrne, the FDIC's recently appointed general counsel, called the decision "a setback, and an important one," back that we need to address forthright and carefully." □

Bank Panel Hears of Ailing Student Loan Guarantors

Reuters

WASHINGTON — U.S. Education Under Secretary Ted Sanders told the Senate Banking Committee on Friday that five to seven student loan guarantee agencies besides the ailing Higher Education Assistance Foundation are in a weakened condition.

HEAF, Overland Park, Kan., which is one of the nation's largest guarantors of student loans, faces serious financial problems because of higher default rates, and the Department of Education is negotiating for its takeover.

Mr. Sanders said the department is in intensive negotiations with one or more entities interested in assuming HEAF's obligations. He told the committee the maximum cost to the U.S. taxpayers of a takeover of HEAF would be $100 million.

Sallie Mae Solution

One possible solution would be for the Student Loan Marketing Association to become the guarantor of HEAF loans originated under the guaranteed student loan program. After *The Wall Street Journal* reported last Friday that Sallie Mae had bid to take over HEAF's assets, the agency issued a statement confirming only that the Education Department had invited proposals to resolve HEAF's difficulties.

A decision on HEAF's future should be made "in the near term," Mr. Sanders said in a subsequent interview. He declined to be more specific.

Committee Chairman Donald Riegle, D-Mich., argued that "once again it appears the federal government has explicitly or implicitly guaranteed risks stemming from the behavior of financial institutions over which it has little or no control."

Default Rate Soared

Mr. Riegle, at the start of the hearing on HEAF and Sallie Mae, said there was no adequate mechanism for the federal government to require sufficient capital or to step in more directly in the event of insolvency of privately run student loan guarantors. The Senate panel learned that the default rate on student loans grew 352% from 1983 to 1989, from $441 million to $2 billion.

Louis Gerhardstein of the Medill News Service contributed to this article.

Correction

A listing of the largest banks in Japan (July 26, page 24A) contained incorrect data for Sumitomo Bank Ltd., Osaka. Sumitomo had assets of $364.2 billion on Dec. 31, 1989, to rank as the second-largest in Japan and the world. Dai-Ichi Kangyo Bank, Tokyo, was the largest with $403.4 billion. Both banks were listed correctly in the ranking of the world's 50 largest banks, which began on page 14A.

TECHNOLOGY/OPERATIONS NEWS

Software Gives Banks Way To Generate More EDI Fees

By JEANNE IIDA

NEW YORK — GE Information Services is introducing software today that gives banks an opportunity to generate additional fee income from customers making corporate-to-corporate electronic payments.

The software, called Merge, will allow banks to offer an account reconciliation service to corporations that make payments through electronic data interchange, or EDI.

The product could help alleviate bankers' concerns that their opportunities for fee income are limited in EDI.

A Divided Function

Financial EDI is the payments portion of the EDI trading cycle, in which trade documents are exchanged among business partners by computer. Financial EDI consists of two parts – the payment itself and the remittance information used for accounting.

Corporations using financial EDI often choose to send the payment through their bank over the Automated Clearing House system and the data over a value-added network. By separating the data, corporations can get advance notice of payments.

This splintering of the transaction has caused bankers to be concerned that they will play only a minor role in the emerging market for EDI services.

Information Is Integrated

With the GE software, corporations will still send remittance information over a value-added network. But the bank will be able to pull the dollars and data information together at the end of the cycle, presenting a single document to the bank.

"Corporations want to look to their banks to do reconciliation for them; they don't want to have to look at it themselves," said Mary L. Burchette, product manager at the GE information unit in Rockville, Md.

She added that the software "doesn't change the ability of banks to send remittance information for those corporations that decide to split the dollars and the data. But it does allow them to get back a piece of that."

Time-Consuming Process

Reconciliation can be time-consuming because payments and remittance information do not always correspond. A corporation may pay for several invoices in a single lump sum.

"Corporations want to look to their banks to do reconciliation for them."
Mary L. Burchette
GE Information Services

First Interstate Bank of California and Bank America Corp.'s Seafirst subsidiary, Seattle, are the first companies to use an earlier GE product, called BPS Central, that allows banks to offer electronic payment instruction services.

"Customers want their banks to be flexible," said Katherine Claypool, vice president and manager of product management in the financial technologies division at Seafirst. "If my customer wants me to be able to reconcile, I want to do that.

"I'm interested in how do I make my service more attractive," she added. Seafirst plans to announce a financial EDI service by October.

The license fee for Merge is $20,000 for the first copy. □

Banks Tap into Satellite Savings

But Price Discounts Keep Phone Lines in Service

By RICHARD LAYNE

NEW YORK — Increased use of satellite communications may pay dividends even for banks that sidestep the technology and stick with phone company services.

Two banks with a large presence in Florida, Barnett Banks Inc. and First Union Corp., have elected to use satellite communications instead of phone lines to communicate with their multistate branches. The switch will save them millions of dollars in expenses and remove some technological impediments to the introduction of new products and services.

But sensing the potential magnitude of the satellite competition, some phone companies are reportedly cutting prices on their services. Ensuing price wars will create opportunities for banks who stick with traditional phone-company suppliers, observers say.

Satellite Plan Abandoned

One major bank has abandoned a plan to use satellites called VSATs (very small aperture terminals) for sending data between headquarters and branches because of price reductions guaranteed by its phone suppliers.

Atlanta-based Citizens and Southern Corp. earlier this year installed two VSATs, each about three feet in diameter, on its data center and on a nearby branch. As originally envisioned, the satellites would have provided inexpensive links with the bank's 517 branches in several southern states.

But installing two small satellite dishes was enough to gain sizable price cuts from the phone companies, which would be squeezed out or bypassed by the new technology, the C&S executives said.

"Phone companies tend to respond better when you mention the "B" word – bypass," said a manager at C&S who asked not to be identified.

"Land lines were slightly cheaper than satellite," said Henry Garcia, C&S senior vice president. C&S spent $30 million on voice and data communications for its branches in 1989. In calculating savings, C&S also considered the high initial costs in purchasing satellite dishes for its extensive branch network.

"Satellites offer flexibility and price protection that you can't get in a current terrestrial-based network."
William T. Howe
Barnett Computing

The company, which last October acquired the bank, has switched the last regulatory hurdle to merge with Sovran Financial Corp., would not disclose which communications companies it is negotiating with for price cuts. Sovran has not announced any satellite plans, and C&S declined to discuss whether the two banks' branches would be connected through a single data network.

The Benefits of Satellites

Industry observers report a significant drop in the cost of leased, private lines. "We've seen an 80% drop in prices in the past few years from some communications companies," said Daniel Briere, a telecommunications specialist with TeleChoice Inc., Manchester, Conn.

Even with that drop, Mr. Briere said satellite communications are more attractive for some companies. "In a lot of instances, VSATs are becoming the ideal type of leased line replacements," he said. "If you are transmitting to 200 sites, the cost of leased lines can be incredible."

First Union was the first bank to adopt satellite communications for its network of branches. The bank began to install satellites three years ago and estimates the savings from the satellite network at $5 million through 1992. The bank plans to complete its 800-branch network by August 1.

Barnett began installing satellite dishes in its 564-branch network in April and now has 50 VSATs in Florida and Georgia. The bank said that using satellites will save as much as 20% annually on its telecommunications budget, which totaled $300 million in 1989.

Like Barnett and First Union, C&S originally had reasons besides cost savings for shifting to satellite communications. One advantage was said that satellites have more flexibility than phone lines.

With satellites, a bank can significantly increase the amount of data transmitted easily to branches. This speed allows a retail service to be introduced in branches or at automated teller machines quickly, because data processing and communications support are readily available.

"Satellites offer flexibility and price protection that you can't get in a current terrestrial-based network," said William T. Howe, president of Barnett Computing Co., a unit of the bank holding company.

Because Barnett owns its satellite dishes, its costs are more predictable than with leased lines, he said. □

COMMENT/*By Paul Nadler*

Banking Industry Follows In the Railroads' Tracks

To get a picture of what is happening to financial institutions today, just look at the main line of the old New York Central Railroad as it wends its way up to Albany from New York City.

Though the roadbed is wide enough for the four tracks that trains used to keep busy, now there are only two – and for a while, part of the route was served by just one track!

Downscaling Needed

In sum, the railroad had too much invested in capital facilities for today's needs, so major downscaling was needed to avoid substantial losses.

Looking at the communities that have far too many bank and thrift offices – many of them large, expensive structures that devoured a lot of capital – one has to conclude that banking, too, must downsize. And though it is much easier to rip up rails than to find other uses for structures built as banks, finding those uses is part of the prize for rationalizing bank and thrift operations and making them prosper again.

The reduction in the number of bank and thrift offices started with the merger-and-acquisition movement of the late 1980s. Now, the sale of troubled thrifts and banks to more profitable ones will undoubtedly speed up the process.

Looking at Who Failed

There is another way that the trend in railroads gives lessons for banking. This involves analysis of which organizations have failed.

As a graduate student in history, this writer became the world's leading expert on the abandoned railroads of Wisconsin. (I can claim the title because I am the only person who ever studied them.)

For my work, I had to examine every railroad in Wisconsin that had ever been abandoned – and there were lots of them. I found that though railroad building had started in the 1820s, every railroad ever abandoned in Wisconsin had been chartered and built after 1890.

In other words, the builders of the first 70 years had been an economic need. But those who got into financial trouble had entered the field late, hoping to profit by generating new needs – or from the financing process, without regard to what the railroad would earn once completed.

Fast Growth Presaged Failure

Similarly, the vast majority of the banks and thrifts that have recently gotten into trouble grew from small shops into large institutions in the 1980s, under conditions that gave them virtually unlimited access to deposits and considerable freedom in their use.

As the president of a surviving thrift said of competition that had gone the Resolution Trust Corp. route: "They were growing more in one year during the 1980s than we had grown in 100 years!"

Many Closings Ahead

Just as railroads have abandoned entire lines (giving the nation the opportunity to acquire a huge network of hiking and biking paths) and have downsized trackage on the lines still running, banking is likely to see a continued mergers and acquisitions and the closing of a tremendous number of branches.

Those branches cost a fortune to operate, and they are not needed in an era of automated teller machines, automatic borrowing through lines of credit and home equity loans, and centralized lending operations in headquarters.

Extensive Layoffs

And it is not just bank buildings that will have to be rationalized, although that will do a lot to reduce noncredit expenses. As banks try to boost profitability, the number of employees being laid off is staggering.

The chief executive of one major bank told a bank analyst friend of mine, for example, that the merger he has in mind could save his bank $300 million a year!

It is doubtful that banking will ever again need as many people as it employed as recently as a year ago.

To resist the trend would be folly, the kind lampooned in a 19th century satire in which candlemakers petition to force people to close their blinds in the daytime so more candles will be used.

Banking will rationalize itself into fewer and fewer companies. Some will be small, some medium-size, and some large – but far fewer will be redundant, as many have been up to now.

In banking and 'thrift operations as in railroads, our economy appears unable or unwilling to support excess capacity. A healthy, rationalized financial system is far superior to one that tries to do all things for all people, inside and outside the bank, but whose survival is in jeopardy every day. □

"SOUND OFF"

Securities and Exchange Commission Chairman Richard C. Breeden recently suggested to Congress that the government should consider selling deposit insurance to consumers at a market rate. Mr. Breeden said such a system would allow each depositor to choose what level of insurance he or she desired and could help cut the deficit. The *American Banker*'s Chicago bureau chief, Nanine Alexander, asked the following question:

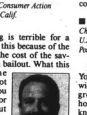
***Q** What is the political viability of such a proposal among legislators, with the public, and within the banking community?*

■ **Michael Heffer**
Senior staff
San Francisco Consumer Action
San Francisco, Calif.

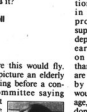
The timing is terrible for a proposal like this because of the publicity of the cost of the savings and loan bailout. What this says to the public is: not only will you have to pay for the bailout, but you will have to pay directly for insurance. It's similar to the 25-cent surcharge on deposits (a proposal abandoned by the Bush administration last year). Only this would be worse because people are in a state of shock.

An important concern of ours would be how this would affect consumers of different income levels. Would low-income consumers be priced out of insurance coverage because they couldn't afford it?

■ **John Mitchell**
Chief economist
U.S. Bancorp.
Portland, Ore.



I'm not sure this would fly. You can just picture an elderly widow appearing before a congressional committee saying how she didn't know that she had to get insurance on her life savings. That's one of the problems with a separate transaction notion.



I like the idea of lowering the amount that's covered, because not many families have $100,000. What we're supposed to try to do is to protect the family savings. This proposal would presumably affect higher income individuals, those with assets above the insurance limits. And we can also look at making it more difficult to broker deposits.

One thing that's good about the impulse behind the proposal is that you want to give people incentives to pay attention to where they put their money.

■ **Larry A. Frieder**
Professor of banking and finance
Florida A & M University
Tallahassee, Fla.

You'd get a public outcry whether you charge consumers for insurance or if you reduce it.

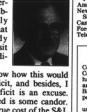
There are some assumptions implied in Breeden's proposal. He supposes that depositors are earning more on accounts than they should and that savers are benefiting inappropriately by the current system. I wouldn't suggest lower coverage, but something should be done about multiple accounts. One solution would be to have separate deposit accounts that the banks would only be able to invest in safe securities like Treasury bills.

The insurance system as it exists isn't rational. The public perception is that the insurance system is endangered, that we have losses greater than the insurance fund. There is concern that the insurance system would break down and the taxpayer will end up picking up the tab.

I can't see the banks supporting such a proposal. It tends to increase the amount of government involvement in the operation of commercial banks. The Breeden proposal would increase the bureaucracy, restructuring it in a more problematic fashion. I think banks would find such a system impractical to implement.

■ **Holmes Foster**
Chief executive officer
Banks of Iowa
Des Moines, Iowa

From the industry standpoint, such a proposal drives money out of the bank to nonbank entities that are not insured. I think that does the public a disservice. The public probably isn't aware that they already pay for deposit insurance indirectly.



I don't know how this would help the deficit, and besides, I think the deficit is an excuse. What we need is some candor. What is the true cost of the S&L bailout? Where is the accounting? Is it going to pay off depositors, is it the expense of regulation?

And don't blame this all on fraud. The thrift industry was vulnerable to deregulation. The regulators were warned and they ignored it. The Federal Home Loan Bank Board encouraged a lot of these problems when they began to reach for ways to help thrifts avoid the interest rate squeeze. □

COMMENT/*By Henry A. Hubschman and Jesse M. Caplan*

A Voice of Reason on Lender Liability

Henry A. Hubschman

Jesse M. Caplan

The 1980s was a decade in which commercial litigation exploded, at least in part as a result of novel legal theories that imposed civil liability and openended financial exposure on commercial institutions where no similar theories of legal liability previously existed.

Among the lawsuits of choice in the 1980s were those characterized as "lender liability" actions. Lender liability in its simplest form involves a lawsuit brought by a borrower, generally against an institutional lender, to recoup damages suffered, for example, as a result of the lender's calling the borrower's loan or exercising other restrictive clauses in the loan agreement.

A review of the legal and factual bases for these suits reveals that the courts often have applied legal and economic theories with questionable validity to impose new obligations on lenders.

A Coherent Framework

Fortunately, in the midst of this wilderness a voice of reason now offers a coherent theoretical framework based on sound economic principles to help the courts restore a measure of certainty to lender-borrower relationships, and, it is to be hoped, promote a more efficient financing structure beneficial both to lenders and borrowers.

In a recent article in the Yale Law Journal, "The Economics of Lender Liability," Professor Daniel Fischel, director of the University of Chicago's center for law and economics, observes that in each of two highly publicized lender liability cases, the court effectively rewrote the loan agreement negotiated between the lender and borrower.

In both State National Bank of El Paso v. Farah Manufacturing Co. Inc. (an $18.9 million verdict against the bank), and KMC Co. Inc. v. Irving Trust Co. (a $7.5 million verdict against the bank), the court looked beyond the contract itself to impose vaguely defined and economically unjustifiable rights and duties between the parties.

As Prof. Fischel observes, the basis for these and other similar court decisions is a fundamental misunderstanding of basic economic principles that govern the efficient conduct of lender-borrower relationships.

The Hidden Contract

In his article, Prof. Fischel demonstrates that strict/ct contract clauses enabling the lender to call an outstanding loan, or otherwise curtail the actions of a borrower, are in reality mutually agreed-upon mechanisms that provide the lender with protection against outside events and borrower misbehavior, and the borrower with its needed financing at a reasonable rate of interest.

While every lender must at the outset assess the probability of default (and the likely recovery in the event of default), the lender's ability to make accurate assessments is severely limited by two factors: outside (or exogenous) events, such as dramatic changes in market or industry conditions; and debtor misbehavior, such as the withdrawal of assets from the company and risky investments.

According to Prof. Fischel, these two factors are closely related in that as "exogenous events adversely affect the borrower, the probability of debtor misbehavior increases," primarily because the borrower has less of its own and more of the lender's funds at risk.

Because of the potential for borrower misbehavior, which experience shows increases with a "troubled" borrower, a lender will ordinarily demand greater compensation (a higher rate of interest) from such a borrower in exchange for the loan.

Prof. Fischel correctly observes, however, that to "decrease the amount of compensation demanded, borrowers will attempt to allay lenders' concerns by agreeing to various monitoring and bonding mechanisms," including various types of loan covenants limiting the discretion of the borrower.

While "these covenants undoubtedly restrict borrower discretion, they are the result of arm's-length negotiations between companies in a competitive credit market and under such circumstances, both the lender and borrower benefit.

Specifically, the lender benefits because the bonding mechanisms "protect the lender from increased default risk resulting from debtor misbehavior and/or exogenous events," while the borrower benefits "because the compensation lenders demand for bearing default risk is reduced."

This is not to suggest that the lender-borrower relationship should never be limited by re-

DON'T FIND OUT THE HARD WAY.

Compliance Examinations Update

Last year, over 55,000 banks were declared in violation of regulations. Not deliberate malfeasance, but simply overlooked technicalities–costing hours of documentation time and a fortune in penalties.

Are you in complete compliance with all of the legislation and regulation pertaining to your financial institution?

The fact is, you may never know until it's too late. Unless you protect yourself.

Compliance Examinations Update For Financial Institutions is exactly the kind of "early warning system" you need to assist in rapid, safe, cost-efficient compliance. Our editors regularly search out what regulators are looking for–and what they're finding–as well as the very latest developments in legislation. Twice a month, this dependable service gives you practical, on-going guidance on how to detect and resolve these complex problems in your operations–

before they become violations.

The next twelve months will see thousands of banks cited or sued for failing to comply with Federal consumer protection laws. Make sure you're not one of them with *Compliance Examinations Update.*

Take advantage of this special opportunity to receive *Compliance Examinations Update* FREE for 30 days. Call now–and start protecting yourself today!

COMMUNITY RELATIONS

Activists Say NCNB Ignores Low-Income Sector in Texas

By KENNETH CLINE

ATLANTA — Citing the liberal tax breaks that NCNB Corp. received when it entered Texas, community activists are contending that the North Carolina company has not done enough for low-income consumers in its newest market.

The Texas chapter of the Association of Community Organizations for Reform Now recently issued a study in conjunction with the Southern Finance Project of Charlotte, N.C., showing that less than one-half of 1% of NCNB's mortgage originations in major Texas markets went to low-income neighborhoods last year. Only $945,000 of $190 million in mortgages originated in Austin, Dallas-Houston, and San Antonio were for people living in low-income census tracts, the groups charged.

NCNB was the largest institution and the only commercial bank mentioned in the study, which also criticized the practices of First Gibraltar Bank, Houston; Guaranty Federal Savings Bank, Dallas; American Federal Savings Bank, Dallas; Franklin Federal Bancorp, Austin; and Houston-based United Savings of Texas.

Acorn followed up the study with testimony at a June 23 hearing of the House Banking Committee in Austin. Ernest Brown, a member of the Texas Acorn board, commented on "the skillful manner in which NCNB has used public resources to expand its franchise in the Lone Star State."

The Acorn study estimated that NCNB received nearly $4 billion in federal assistance while buying up failed banks and thrifts in Texas, including $2.8 billion in tax benefits from the First Republic Bank deal. Considering this federal assistance, Acorn argued, NCNB has not done enough for low-income communities in Texas.

Catherine Bessant, NCNB's director of community investment, said, "Our performance is not as bad as this study indicates."

The Acorn study only sampled major urban markets, according to Ms. Bessant. Last year, NCNB made $636 million in home loans across the state, she said, with $16 million, or 2.5%, devoted to low-income neighborhoods. "We see our focus as being a statewide market."

Ms. Bessant also said that last year NCNB began developing new products and marketing programs for low-income customers that are now beginning to come on the market. So far this year, she said, NCNB has made $21 million in home loans to low-income customers, or 7% of its Texas total.

Ms. Bessant added that NCNB "has not felt a significant amount of pressure from [Acorn's] study," despite the congressional hearing.

A House Banking Committee spokesman in Washington confirmed that NCNB has not been singled out for special attention. "I don't think the concentration is on NCNB at the moment," the spokesman said. "Community reinvestment concerns with this committee have been broad-based."

Acorn, meanwhile, intends to lobby Congress to force financial institutions that buy failed banks and thrifts to have community reinvestment plans ready before they close the deal, said Elizabeth Wolff, Acorn's head organizer in Texas.

Shawmut to Offer Fixed Loans to Poor

Shawmut National Corp. said last week it would offer a fixed-rate mortgage to complement its adjustable-rate product for low-income homebuyers in Boston.

Both products carry below-market rates.

The fixed-rate, 30-year mortgage will be priced a half percentage point below current rates and will carry no points. It will become available on Sept. 17.

Shawmut has been offering an adjustable-rate mortgage since early March. The interest rate is fixed for five years at 1% below the market rate. At the end of the fifth year, the rate adjusts annually, but not more than 1%. Over the life of the loan, the rate will not increase more than 4%.

"We've recognized that no single mortgage product could meet the needs of all local residents," said Shawmut Bank president John P. Hamill.

"Our adjustable-rate mortgage product is sensitive to the issue of long-range affordability, but we know that an ARM is not for everyone," Mr. Hamill said. "For some low-income families, a fixed rate may offer more stability and security."

The mortgage offerings are part of an $8 million commitment that Shawmut made in January.

Buyers of homes and condominiums may apply for both loans at Boston branches of Shawmut Bank and the Provident Institution for Savings, and at Shawmut Mortgage Co.

CoreStates Grant To Aid Minority Bank

CoreStates Financial Corp. said it plans to make a $250,000 grant to a coalition that will use the funding to purchase common stock in the minority-controlled United Bank of Philadelphia.

Once certain conditions are met, the Urban Coalition will proceed with the stock purchase. CoreStates is the parent of Philadelphia National Bank and First Pennsylvania Bank. □

Visa Fires a Volley at American Express

Continued from *page 1*

volume.

Discount fees for Visa transactions typically range from 2% to 4%; for American Express transactions, they range from 2.5% to 5%.

Visa has long attacked American Express in both its consumer and trade advertising. Officials at American Express see the latest campaign as just another example of what a spokesman called "frustration marketing."

"It tells us very clearly that, at merchants and cardholders alike, we are everywhere. Visa wants to be," the American Express spokesman said, referring to Visa's current slogan, "It's everywhere you want to be."

Rates No Secret

"Our discount rates are not a secret," he continued. "And we have not raised our rates in over 13 years."

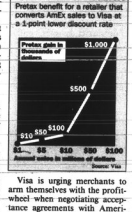
Discount rates are heavily influenced by interchange fees – the charges that banks pay each other to settle credit card transactions. Interchange fees are set by MasterCard International and Visa and typically increase each year.

Visa recently announced plans to increase some of its interchange fees by 20% to 25% as of April 1991. Bradford Morgan, a Visa executive vice president, said that while that will cause an increase in discount rates, Visa's rates will remain below those charged by American Express.

According to Mr. Morgan, Visa does not expect the campaign to persuade merchants to sever relationships with American Express. Rather, the association hopes retailers will show a preference for Visa, and demonstrate it by removing American Express signs from their counters and training salespeople to ask for the Visa card.

Visa's Pitch to Retailers

Prize: benefit for a retailer that converts AmEx sales to Visa at a 1-point lower discount rate



Visa is urging merchants to arm themselves with the profits-to-wheel when negotiating acceptance agreements with American Express.

"There is a conception among merchants that they have to accept American Express and that they have to pay whatever American Express has been charging," Mr. Morgan said.

American Express has long dealt directly with the merchant community, while MasterCard and Visa have relied on their member banks to sell their services to merchants. As a result, Mr. Morgan said, many retailers believe that to reach upscale consumers, they must accept American Express.

The campaign includes data showing that Visa reaches more affluent households than American Express. American Express has half as many cardholders with household incomes over $50,000 as Visa does, according to the ad.

But American Express says its cardholders are bigger spenders than Visa's. American Express cardholders charge an average of $3,000 each year, while Visa's charge $1,700, the American Express spokesman said.

Approach Called Flippant

"It's sort of flippant for Visa to tell retailers not to accept American Express," he said.

American Express has reported increases in the number of merchants that accept its card. As of June 30, 1990, 3.1 million merchants worldwide took the card, 14% more than did so a year earlier. The company does not disclose how many of those merchants are in the United States.

At the end of 1989, eight million locations accepted MasterCard worldwide, up from 7.2 million in 1988. Visa also reported that eight million locations accepted its card worldwide as of the end of 1989, an increase from 6.6 million a year earlier. □

Bank One Texas Opts for Gas Station ATMs

By STEVE KLINKERMAN

DALLAS — In an unusual expansion strategy, Bank One Texas has struck an agreement to place 350 automated teller machines in Diamond Shamrock gas stations across the state.

The arrangement is a departure from most existing automated teller machine networks in Texas, which were established by bank and thrift consortiums and tend to be concentrated at supermarkets and convenience stores such as 7-Eleven.

Bank One Texas, owned by Banc One Corp., Columbus, Ohio, is at somewhat of a competitive disadvantage in Texas. It operates 120 branch offices, less than half the banking locations held by rival NCNB Texas' National Bank.

High Visibility

In establishing the network of teller machines, Bank One Texas hopes to bolster its market presence as well as earn transaction fees.

By the time the installations are completed in mid-1991, the bank will have almost 400 automated teller machines in Texas outside its branches.

Under terms of the deal, Diamond Shamrock will supply floor space for the machines at its sites, most of which include small convenience stores. Bank One Texas will install and operate the machines, provide cash-vault services to each site, and pay vending fees.

According to Alfred Domonick Jr., executive vice president of the Texas bank, the institution also gains the right to place its logo on the major signs at each of the 350 Diamond Shamrock sites it will serve. □

Accounting regs change all the time. So does your book. 1-800-456-2340.

Now you can keep up to date with all the accounting and auditing changes from the Federal Reserve Board, OCC, SEC, AICPA and FASB. And know exactly how each one affects your bank. Quickly and easily with a timely new service from Sheshunoff Information Services Inc.

And it's under $6.00 a week. Less than you'd pay someone just to clip and file information from other sources.

We read, analyze, and summarize every accounting pronouncement and auditing standard from every agency as they happen. Then we send it to you in an easy-to-read format. We even review the implications and give you examples of how each release affects your bank.

And you get it in days, not weeks. So you can take steps right away. And instead of hoping you're meeting every pronouncement and standard, you'll know you are.

We'll start you off with reviews of all the accounting pronouncements and auditing standards in force. So you can quickly get up to speed. And you'll never risk missing a release you need to see.

Your subscription to the Bank Accounting & Auditing Service is just $295. And you've got our 30-Day Guarantee.

To get the Sheshunoff team of research and advisory experts working for you, just call 1-800-456-2340 today.

Cleanup Liability Has U.S. Worried, Too

Hundreds of Properties Held by RTC and FDIC Could Be Affected

By LOUIS GERHARDSTEIN
Special to the American Banker

WASHINGTON — Though much debate on environmental liability has focused on the effect on lenders, apparently the federal government, too, is looking for ways to avoid being stuck with the cost of cleaning up contaminated properties — those it has inherited from failed banks and thrifts.

According to the Federal Deposit Insurance Corp. and the Resolution Trust Corp., a recent decision by the U.S. Court of Appeals for the 11th Circuit has expanded the scope of liability so that "any person in the property's chain of title following contamination may be potentially held liable."

Steven A. Seelig
FDIC

For about 50 FDIC properties, cleanup costs may exceed value by a factor of three, Mr. Seelig says.

Agencies Back Garn Bill

Representatives of both agencies recently appeared before the Senate Banking Committee to endorse a proposal by Sen. Jake Garn, R-Utah, that would limit a bank's liability for cleaning up property on which it has foreclosed.

Under the 1980 Superfund law, which empowers the Environmental Protection Agency to sue the owners of hazardous waste dumps, banks are liable for the entire cleanup cost related to a contaminated property. Sen. Garn's proposal would limit bank liability to the market value of the property after cleanup, a Garn aide said.

Sen. Garn has collected 19 cosponsors, but it is uncertain that the 101st Congress, which has less than seven weeks left, can consider the bill.

In the House, Rep. John J. LaFalce, D-N.Y., has collected 263 signatures for a similar bill he has introduced.

Claims Against U.S. Could Rise

Because federal laws require the FDIC and the RTC to liquidate assets of failed thrifts and banks in receivership, environmental claims against the government could increase as more FDIC and RTC property is foreclosed, the FDIC said.

The agency says it has identified among its holdings about 270 properties, valued at $365 million, that pose potential environmental problems. For about 50, cleanup costs may exceed value by a factor of three, said Steven A. Seelig, director of the FDIC's division of liquidation.

400 Problem Properties

Assets held by the FDIC for liquidation now total about $26 billion.

The RTC says its regional offices have identified 300 properties among its holdings with such problems as asbestos, storage tanks above or below ground, and hazardous waste or trash buried in landfill.

The liability problems of the FDIC and the RTC are strongly linked to those of private banks, said John J. Byrne, senior counsel for the American Bankers Association. Consequently, Mr. Byrne discounted the possibility that the federal agencies may try to "carve" themselves out of the liability chain without also protecting the private institutions.

Mr. Gerhardstein writes for the Medill News Service.

The Fallout: Curtailed Lending

WASHINGTON — Adding to an already dry credit climate, potential liability for environmental cleanup has prompted banks to curtail loans to certain kinds of businesses, according to the American Bankers Association.

Community banks are steering clear of loans to small businesses "most frequently associated with environmental pollution," according to a recent poll of the ABA's Community Bankers Council.

"Holding lenders liable for cleanup costs caused by their borrowers' misdeeds is having a tremendous negative effect on commercial lenders who use real estate as collateral," said Charles M. Mitschow, regional president of Marine Midland Bank, Buffalo.

Businesses that Are Shunned

Testifying for the ABA last week before the Senate Banking Committee, Mr. Mitschow said the businesses most typically affected by banks' reluctance to make loans on environmental grounds include gas stations, dry cleaners, auto repair shops, printing shops, pest control companies, and farms that use pesticides.

Even if the lender is not directly responsible for cleanup costs, "such liability creates credit risks by reducing the borrower's ability to repay the bank and by impairing the value of the collateral," said Mr. Mitschow, a former member of the ABA's small-business banking committee.

Even if a bank decides not to foreclose, the contaminated property collateral will generally decline in value and make it tougher for the owner to repay his loan to the bank, said bankers.

THE WEEK *ahead*

MONDAY, JULY 30

Funding needs for the Resolution Trust Corp. are being addressed at a House Banking Committee hearing on the thrift liquidation agency. Treasury Secretary Nicholas F. Brady and RTC Chairman L. William Seidman will testify. 202-225-4247. In the afternoon, the RTC task force, chaired by Rep. Bruce Vento, D-Minn., meets to review the RTC plan to accelerate the sale of insolvent S&Ls.

Restructuring the S&L industry is the focus of a hearing by the Senate Judiciary antitrust, monopolies, and business rights subcommittee, chaired by Sen. Howard Metzenbaum, D-Ohio. 202-224-5225.

TUESDAY, JULY 31

Restructuring the financial services industry is the topic of a hearing by the Senate Banking Committee. Witnesses include FDIC Chairman Seidman and Comptroller of the Currency Robert L. Clarke. 202-224-7391.

Single-family home sales figures for June are released by the Commerce Department.

WEDNESDAY, AUGUST 1

Bank and thrift fraud is discussed at a hearing of the Senate Banking Committee. 202-224-7391.

International trends of U.S. nonbank financial institutions are discussed at a hearing of the House Banking international competitiveness task force, chaired by Rep. John LaFalce, D-N.Y. 202-225-4247.

THURSDAY, AUGUST 2

Fannie Mae's and Freddie Mac's financial condition is explored in a hearing on "government-sponsored enterprises" by the Senate Banking Committee. The Federal National Mortgage Association and the Federal Home Loan Mortgage Corp. are among the enterprises now under pressure to increase their capital levels and improve their credit ratings. 202-224-7391.

Japan's banking system is assessed in a second day of hearings by the House Banking international competitiveness task force.

Lender liability and environmental issues are discussed in a hearing of the House Energy and Commerce transportation and hazardous materials subcommittee. 202-225-2927.

Regulatory impediments to the development of affordable housing are discussed in a hearing of the House Banking policy research and insurance subcommittee. 202-225-4247.

FRIDAY, AUGUST 3

No significant events are scheduled. □

INSIDE *the treasury*

Bush's Pick for Study of Deposit Insurance

The latest arrival to Washington's financial policymaking circle – and one likely to have some significant impact on the restructuring of the banking system – is that of Jerome H. Powell.

Mr. Powell, an investment banker and lawyer, is President Bush's choice to be assistant secretary of the Treasury for domestic finance. If confirmed by the Senate, Mr. Powell would oversee much of the department's forthcoming study of financial institutions and deposit insurance.

The White House announced last week that it intended to nominate Mr. Powell, who has been a full-time consultant at the Treasury since May. Mr. Powell, 37, would replace David W. Mullins, who became a Federal Reserve Board governor at that time.

Role in Deposit Insurance Study

As the assistant secretary for domestic finance, Mr. Powell would oversee the department's debt operations, a Treasury study of how to encourage corporations and investors to think longer term, as well as the financial institutions and deposit insurance study.

Three deputy assistant secretaries – John Dugan for financial institutions, Michael Basham for federal financing, and French Hill for corporate finance – would report to him.

Since May, Mr. Powell has been bringing himself up to par on Treasury issues, said a department spokesman. As a consultant he is barred from taking part in policymaking, the spokesman said.

The Brady Connection

Before joining the Treasury, Mr. Powell was senior vice president in investment banking at Dillon, Read & Co. in New York, where Treasury Secretary Nicholas F. Brady worked before coming to Washington. Former colleagues of Mr. Powell at the firm declined to comment on his nomination, saying they did not want to influence the confirmation process.

While observers speculated that Mr. Powell was chosen because he had worked with Mr. Brady at Dillon Read, Mr. Powell was not a member of the Brady Commission, which studied the 1987 stock market crash and from which Mr. Brady has drawn other Dillon Read associates to the Treasury.

Before joining Dillon Read in 1984, Mr. Powell was a lawyer for the firms of Werbel & McMillin (1983-84) and Davis Polk & Wardwell (1981-83). In 1979-80, he clerked for Judge E.A. van Graafeiland of the U.S. Court of Appeals for the Second Circuit and in 1975-76, was a legislative assistant for former Sen. Richard Schweiker, R-Pa.

Mr. Powell received a J.D. in 1979 from Georgetown University Law Center and a B.A. in 1975 from Princeton University. Mr. Powell did not return phone calls, and a Treasury spokesman said he would not speak to the press until after he was confirmed.

Another Possible Opening

While the administration takes steps to replace Mr. Mullins, another post may be opening up at Treasury.

Under Secretary Robert Glauber, testifying last week before a House task force on the competitiveness of U.S. banks overseas, mentioned that his two-year leave from his tenured post as professor of finance at the Harvard Business School will end in January.

"I haven't discussed extending it," Mr. Glauber reportedly told the task force. He was responding to questions as to when Treasury expected to finish the deposit insurance study he is overseeing.

A Treasury spokesman said that Mr. Glauber had not decided to leave but that it was a "definite possibility." Mr. Glauber would have to give up his tenured post if he does not return in January. The desire to hold on to that position would prompt his leaving Treasury, not any displeasure with his job, the spokesperson said.

Mr. Glauber, 50, joined Treasury as a consultant in November 1988 and was appointed and confirmed as under secretary the next May. — **Linda Corman**

Consulting and Software for the Financial Industry

Imagine for a moment this is you and the wire is the Bank Secrecy Act. Can we interest you in a net?

Complying with the Treasury Department's amendments to the Bank Secrecy Act is no small feat. It's not easy meeting the new rules on maintaining detailed identification records when a customer purchases financial instruments such as cashier's checks and money orders. And failing to do so can mean severe financial penalties. Which is something no bank can afford.

They're both very smart reasons for using the T4500 Official Items Disburser. Its exclusive software prompts each employee to log in all the required information before allowing a check to be issued (so you won't have to worry about employee mistakes). And since our document design is virtually tamper-proof, you also won't have to worry about checks being altered once they leave the bank. If you're still working without a financial safety net, call Standard Register at 1-800-543-9598. Because what's hanging in the balance is too important to ignore.

Standard Register.

S&L Bailout Picks Up Steam After Slow Start

Continued from *page 1*

painfully slow start, is finally on track.

"FIRREA has imposed healthy living on thrifts," said Jonathan Gray, a thrift industry analayst for Sanford C. Bernstein & Co.

In particular, he said, it has established sensible accounting, capital, and regulatory standards for the industry, and it has taken savings associations out of high-risk businesses and forced them to concentrate on home lending.

Checkered History

"The history of the industry is that it makes money on financing homes and loses money on everything else," Mr. Gray said.

Bert Ely, an Alexandria, Va.-based analyst, believes the Resolution Trust Corp., the agency created to oversee the cleanup, reached a turning point on April 12 when its oversight board approved a new plan to begin disposing of failed thrifts rapidly.

Now, said Mr. Ely, "the next two years are absolutely critical. If they maintain the pace, they can dispose of the banking segment – the deposits and good assets. They will still have a pool of bad assets, but at least they can make a start."

For the RTC to forge ahead, however, it will need a fresh infusion of cash.

Cleanup Cost Escalates

The cost of the bailout is proving higher than projected last year, and the agency will run out of money as early as the next cal-

Lawmakers sense voters are looking for someone to blame.

endar quarter if it maintains its present pace. Funding for the bailout is likely to play a major role in the budget summit between the White House and Congress.

In the meantime, Mr. Ely worries that too many people are giving up on the RTC too quickly and ignoring the real progress the agency has made.

The agency's image is likely to continue to deteriorate in the next few weeks as a spate of anniversary stories appear. Mr. Ely believes most will be highly critical.

Industry Tarnished

The savings and loan industry's image has also deteriorated. Lawmakers routinely denounce "S&L kingpins" with the vehemence once reserved for drug lords or organized crime chieftains, and bankers and S&L executives alike fear that the ugly mood could lead to punishing legislation. Already, Congress is on the verge of passing a bill that would set life sentences for some types of S&L crime.

If lawmakers are in an angry mood, it is probably because they sense voters are looking for someone to blame for the burgeoning cost of the bailout.

"It comes up in every town meeting, every single forum," said Rep. Floyd Flake, D-N.Y. "It comes up more than any issue I remember, and the com-

"The profitable commercial banks are heavy in credit cards and consumer loans."

Patrick Forte

"It [the bailout] comes up more than any issue I remember, and the comments are always negative."

Rep. Floyd Flake
New York Democrat

ments are always negative. The taxpayers are fed up with having to pay for it."

"The escalating cost just boggles the mind," added Rep. Carroll Hubbard, D-Ky.

For the 2,500 thrifts that have thus far survived the bailout, life has never been more difficult.

Some industry leaders argue that the bailout law dooms the industry by limiting investment alternatives and hiking already brutal deposit insurance premiums. "It's hard to think of anyone east of the Mississippi, over $3 billion in assets, that has a chance to be a survivor, unless they are owned by a commercial or industrial parent," said Patrick Forte, president of the Association of Thrift Holding Companies.

"The profitable commercial are heavy in credit cards and consumer loans," he said. "And that isn't available to thrifts anymore. It's very troubling."

The bailout law has clearly changed the way savings institutions do business, both for better and for worse, according to S&L executives.

"It has eliminated the weak competitors, and that has had a healthy effect," said Robert Adelizzi, president and chief executive officer of HomeFed Corp., San Diego. As a result, "there certainly has been a moderation of the rates we have to offer" to pull in deposits, he added.

But Mr. Adelizzi believes the ill effects of the law far outweigh the benefits, at least for the industry's survivors. In particular, he said, the bill set draconian limits on the industry's ability to invest directly in real estate development.

The bill requires thrifts to divest real estate development activities – a business that in the past has accounted for more than a quarter of HomeFed's profits – by 1994. "And it punishes us every step of the way," said Mr. Adelizzi, noting that institutions are required to take charges against capital each year it takes to exist the business.

And the timing could hardly be worse, coming as it has on the heels of a softening real estate market. "It's just very hard to get out of that business in this real estate market," said David Sullivan, president and chief executive officer of Mechanics and Farmers Savings Bank, Bridgeport, Conn.

But it is the cleanup, estimated to cost $125 billion in present-value terms, that has generated the most heated controversy.

Results Slow in Coming

The size of the problem is proving larger than anticipated, and the solutions that once seemed so simple – letting the Federal Deposit Insurance Corp. dispose of the mountain of bad assets with relentless efficiency it applied to insolvent banks – has not yet worked.

Despite the flurry of activity at the RTC since April, Atlanta lawyer John Aldridge worries that "very little has been done to deal with the tumor – the defaulted commercial loans."

Most of the agency's deals so far have involved the sale of a deposit base plus good assets – one- to four-family mortgages, for example, that are current on their payment. But it is the bad assets, repossessed real estate and and nonperforming commercial real estate loans; that the RTC was created to deal with.

What the RTC needs now, Mr. Aldridge said, is a victory, a big victory that would show the world it can dispose of assets in blocks of $250 million to $500 million at a clip.

"But even if they hit a home run, if they knocked one out of the park and were able to do 10 deals of $500 million each, what about the next $395 billion of assets? People just don't realize the magnitude of the problem."

RTC Adds to Problems

While the RTC's problems have been compounded by the softening real estate markets in once strong regional economies such as that of New England, it appears that the thrift law and the RTC itself have exacerbated the problems in commercial real estate.

"It's certainly had an impact on the market," said Joseph E. Robert, president of J.E. Robert Cos.. "When you are driving along at 65 miles an hour and you break suddenly with people behind you, there are going to be accidents."

Mr. Robert said that the bailout law is not the cause of the downturn in the real estate markets, but that it has deepened the problem. Tough new capital rules, for example, have forced thrifts to slim down. "A vast amount of real estate has been put on the market all at once, and that has had a depressing effect" on values, he said.

The RTC has also been hurt, Mr. Aldridge said, by the reluctance of some investors to jump into what they fear will prove a "political fishbowl," in which participants are scrutinized closely through the process of partisan politics.

Many investors believe the same properties will still be available years from now, when values have fallen still further and the RTC is feeling increased pressure to unload assets; even at bargain-basement prices.

Outside the thrift industry, the bailout law has had a considerable impact. Commercial banks, for example, have been subjected to higher deposit insurance premiums. This is one major reason that Kenneth Guenther, executive vice president of the Independent Bankers Association of America, believes the negative effects of the bill outweigh its positive attributes.

Also worrisome, he said, is the highly charged political atmosphere that is building as the cost of the bailout rises.

Many investors believe RTC properties will be available later at cheaper prices.

"This attitude of 'Don't let it happen again' is leading to a tightening of the regulatory screws," Mr. Guenther said.

But the fallout from the bailout is affecting the entire political process, said James Butera, a Washington-based lawyer and thrift lobbyist. "It has created regional tensions, class tensions, and tensions between Republicans and Democrats," he said.

Thus, lawmakers in the Northeast are angry that their constituents are paying taxes to bail out institutions in the Southwest. Rep. Joseph P. Kennedy 2d, D-Mass. has introduced a bill that would create new taxes on the wealthy to pay for the bailout. And almost daily, lawmakers stand up on the floors of the House and Senate to point fingers at the other party for its role in bringing on the crisis.

In the end, it is on the progress of the bailout that the thrift law ultimately will be judged.

The RTC "has made a hell of a lot more progress than most of us think," said Mr. Robert of J.E. Robert Cos. Realistically, he added, the agency faces a problem that will take seven to 10 years to work out. "Look how long it took to work out the REITs," he said, referring to the real estate investment trusts that started to go bust in the 1970s. □

RTC Offers $973 Million In Mortgages

By RICHARD CHANG
Staff Reporter

The Resolution Trust Corp. is requesting bids on $973 million of fixed-rate mortgages as it launches a pilot project to sell $10 billion of performing loans seized from insolvent thrifts.

Richard Reed, assistant director of marketing in the RTC's Eastern regional office in Atlanta, said in an interview that the office sent out bid packages at the end of last week to 417 potential investors.

The 417 include secondary-market agencies, investment banks, commercial banks, thrifts, and mortgage companies.

Sales to Start Aug. 22

The loans, seized from seven thrifts, will be sold in separate packages on consecutive days beginning Aug. 22. Many of the loans are expected to be repackaged into mortgage-backed securities.

Winning bidders will gain the right to service the loans – collecting and distributing monthly payments – for a fee.

The loans will be the first sold with RTC representations and warranties. These were issued earlier but are being revised to satisfy reservations by the Federal National Mortgage Association and Federal Home Loan Mortgage Corp.

The biggest issue is whether Fannie Mae and Freddie Mac will accept the representations and warranties, Mr. Reed said.

Fannie Mae and Freddie Mac are likely to offer higher prices for the loans than individual Wall Street firms, since the agencies' securities carry an implicit government guarantee and can command higher prices, analysts said.

The revised representations and warranties will issued by Aug. 12, Mr. Reed said. "We anticipate very aggressive bids as the loans are good, clean, performing."

Unlike loans sold previously by the RTC, every loan in this sale has been reviewed by outside firms since April. "We will be using full data on the portfolios plus computer tapes that will show not only financial information, but also loan documentation and deficiencies that have resulted from our due-diligence work," Mr. Reed said.

Winning contracts will be selected on the day of the bidding. Subsequent sales will be made as loans become available.

19 Thrifts in Program

Holdings of 19 thrifts are now in the pilot program. These include the seven institutions in the current sale: City Federal Savings and Loan Association, Birmingham, Ala.; Commonwealth Federal Savings and Loan Association, Fort Lauderdale, Fla.; Duval Federal Savings Association, Jacksonville, Fla.; Security Homestead Association, New Orleans; Unifirst Savings, Jackson, Miss; Horizon Financial, Southampton, Pa., and Baltimore Federal Savings and Loan Association. □

COMMENT

Lender Liability: Voice of Reason

Continued from *page 5*

straints on the lender. But as Prof. Fischel argues, the focus of the courts' analyses in lender liability cases should be on the issue of lender misbehavior.

According to Prof. Fischel, lender misbehavior occurs only when a lender behaves opportunistically to extract concessions from the borrower not previously agreed to by the parties.

One of the main problems with recent lender liability decisions is that the courts have held that lenders opportunistically extracted concessions from the borrower – even though their actions were agreed upon by the parties and authorized by the underlying loan agreement. In these situations, the courts have granted borrowers additional rights and imposed upon lenders additional duties not previously negotiated between the parties.

Defining "Good Faith"

The purported justification for imposing these additional rights and duties generally is a

"The court effectively rewrote the loan agreement negotiated between the lender and borrower."

finding that the lender violated its "duty of good faith," a deceptively simple concept.

Notably, although the Uniform Commercial Code imposes a duty of good faith on all contracts, as Prof. Fischel points out, "no consensus exists on precisely what the duty of good faith means."

Prof. Fischel offers a definition of the duty of good faith anchored firmly in basic economic principles relevant to the lender-borrower relationship. The duty of good faith should be "equivalent to a prohibition of opportunistic behavior."

In Prof. Fischel's words, "lenders are entitled to the benefit of their bargain but are precluded from using contractual terms as a pretense for extracting benefits for which they have not bargained."

According to Prof. Fischel's approach, a lender would not be liable simply because it exercised a bonding mechanism – even a severely restrictive bonding mechanism – which impacted adversely on the borrower (like calling a loan). Instead, a lender would be liable only if it exercised the bonding mechanism to extract from the borrower a benefit for which the lender had not originally bargained.

Unfortunately, as Prof. Fischel concedes, "distinguishing opportunistic from non-opportunistic behavior can be very complicated if not impossible." In any event, in many of the lender liability decisions to date, the court imposed liability on a lender simply because the lender exercised its rights under the bonding mechanism.

As a result, Prof. Fischel observes that rather than "deterring opportunistic behavior by lenders, [the] courts simply eviscerated bonding mechanisms that benefit both borrowers and lenders."

Fiduciary Duties

The need to have courts begin analyzing lender liability cases with due regard to the economic principles underlying the lender-borrower relationship is especially urgent because, as Prof. Fischel points out, some courts have held that lenders owe a quasi-fiduciary duty to their borrowers.

Fiduciary duties impose substantial obligations, as they customarily govern agency relationships – where one party agrees to act on behalf of the other. By applying fiduciary principles in the typical lender liability context, the courts effectively have ignored the economic principles upon which loan transactions are predicated.

Furthermore, borrowers filing lender-liability actions typically demand, and are awarded, huge actual damages based on claimed lost profits that are not economically justifiable.

Prof. Fischel argues that it is fundamentally inconsistent, in most cases, for a borrower to claim on the one hand that it was unable to obtain an alternate source of credit, while on the other hand arguing for huge damages to make up for lost profits.

The duty to mitigate losses, and the failure of many borrowers to do so (or, more tellingly, even to be able to do so), demonstrates the lack of economic justification in routinely awarding borrowers damages based upon lost profits.

"No consensus exists on precisely what the duty of good faith means."

Daniel Fischel
University of Chicago

Finally, Prof. Fischel observes that while a huge damage award based on lost profits actually provides a borrower with a windfall, such windfalls actually negatively impact all other lenders and borrowers.

Lenders will inevitably attempt to minimize the risk of borrower misbehavior and huge damage awards by increasing the costs of borrowing or by refusing to extend credit at all. As a result, Prof. Fischel notes that "society as a whole will suffer because valuable investment opportunities are lost."

Prof. Fischel's article is perhaps more a series of observations based on sound economic principles than a voice in the wilderness. Nonetheless, courts faced with lender liability suits would be well advised to give due regard to the basic economic principles underlying the lender-borrower relationship. □

We'd like to shed some light on commercial banking law.

Commercial banking law. You've got to comply with it–but first, you've got to understand it.

Bank Officer's Handbook of Commercial Banking Law sheds light on this very complex and often confusing aspect of banking.

Combining historical banking material with recent changes in UCC codes and consumer protection statutes, the **Handbook** offers quick answers to the legal questions that arise in your day-to-day operations. It's an excellent overview of all commercial banking law in one comprehensive volume–concise, readable, and well-organized.

And when you require further information, special footnotes lead you to specific sources of in-depth detail on the subject.

If you're a bank officer in a supervisory or decision-making position, you can't afford to be in the dark about commercial banking law. Get your copy of the **Handbook** today.

Call now and try **Bank Officer's Handbook of Commercial Banking Law**–FREE for 30 days.

Rabobank of Netherlands Returning to E. Germany

NEW YORK — **Rabobank Nederland,** the large Dutch agricultural lending bank, is returning to East Germany after a 45-year absence.

The bank announced this month that it would resume banking services in East Germany by opening a Leipzig office.

The office will be opened by Rabobank's West German subsidiary ADCA-Bank AG, which now has offices in Hamburg, Dusseldorf, Frankfurt, and Munich.

ADCA-Bank had headquarters in Leipzig until 1945, when the bank was seized by Soviet occupation forces.

ADCA-Bank, established in 1856, had some 160 offices in Germany at the end of World War II.

Most of the office were in areas that became part of the German Democratic Republic.

Rabobank officials at the bank's headquarters in Utrecht, Holland, said that Rabobank's agribusiness finance experience and banking ties with Dutch businesses combined ADCA-Bank AG's historical connection to the German market will enable ADCA-Bank to take advantage of the opportunities created by the German monetary and economic union.

The Rabobank Group, triple-A rated by both major credit rating agencies, ranks among the world's 50 largest banks.

ADCA-Bank had total assets of $14.-billion at the end of 1989.

In the United States, Rabobank has been a lender to agribusiness since 1981. — **James R. Kraus**

AUSTRALIA

The release of June's current-account figures, showing a sizable downturn in Australia's imports, drew opposite reactions Friday from the private sector and the government.

Will Bailey, chief executive of **Australia and New Zealand Banking** Group Ltd., called in Adelaide for easing of monetary policy, while a government official in Melbourne was skeptical about the desirability of easing.

Mr. Bailey said that, although the unadjusted deficit of $1.58 billion was at the high end of expectations, the 14% drop in imports was healthy.

"These figures are supportive of the argument that we can start to see some sort of easing [of monetary policy] take place," he said.

However, Australian Treasurer Paul Keating said in Melbourne that monetary policy would not be eased if it risked rekindling demand that would affect the downward trend in the deficit in current account.

"While the government is conscious of the pressures of a firm monetary policy, we cannot risk rekindling demand in a way which would threaten the downward trend in the current account and inflation," Mr. Keating told the Irish/Australian chamber of commerce. — **Reuters**

JAPAN

The Ministry of Finance is considering liberalizing interest rates on Japanese demand deposits in two stages, an official said.

It may first set a minimum deposit on which banks will be allowed to pay unregulated interest at their discretion, and then wait to see the effects on the banking industry before entirely abolishing interest rate regulations, he said.

The ministry has asked for discussions on the issue by an advisory panel, which is expected to submit a schedule for deregulation in early 1991, the official said. Rates are unregulated on term deposits of one million yen (about $6,500) and over. — **Reuters**

The president of the now-merged Mitsui Bank Ltd., Kenichi Suematsu, apologized to the Finance Ministry on Friday for the bank's secret compensations for customer losses, a bank spokesman said.

A spokesman for **Mitsui Taiyo Kobe** Bank Ltd., the result of a merger between Mitsui Bank and Taiyo Kobe Bank Ltd. in April, confirmed that Mitsui Bank covered various client losses after the 1987 Black Monday share market crash.

Finance Minister Ryutaro Hashimoto told a news conference Friday morning that the ministry had been informed about the incident and that the bank had punished the employees involved. — **Reuters**

WEST GERMANY

A consortium of West German banks led by Deutsche Bank is to arrange a $300 million loan to Hungary to help the country with short-term liquidity problems. The loan will be 90% guaranteed by the West German government and will take the form of a revolving credit running at 12 months at "normal terms."

Hungary, the most indebted of the Eastern European countries in per capita external debt, recently saw its bond issues downgraded below investment grade. Analysts said the West German loan's having to be guaranteed by Bonn showed that Hungary would continue to have problems raising money from banks. — **EMMA**

Hong Kong Group Investing in U.S.

Acquiring Half of the Buyer of Columbia Junk Bonds

By JAMES R. KRAUS

NEW YORK — Hong Kong billionaire Li Ka-Shing will invest $150 million to acquire a 50% stake in a New York-based investment company that is purchasing $3 billion in junk bonds and preferred stock from Columbia Savings and Loan Association, Beverly Hills, Calif.

Cheung Kong (Holdings) Ltd., Hutchison Whampoa Ltd., and a third company controlled by Mr. Li will buy half of the partnership in Gordon America L.P.

Cheung Kong, a real-estate giant, and Hutchison Whampoa, one of Hong Kong's major trading houses, will each own 20% of Gordon America. A company owned by Mr. Li's family will acquire 10%.

"We look at this investment as a window into corporate America and into further investment opportunities."
Li Ka-shing
Hong Kong investor

Stake in Investment Bank

Hutchison Whampoa already has a stake in Gordon Investment Corp., a Toronto-based investment bank set up in 1987.

Gordon America is still awaiting approval from the Office of Thrift Supervision to acquire the $3 billion portfolio from Columbia.

Under a deal announced last week, Gordon would pay $300 million cash and $2.7 billion in promissory notes bearing 10.5% interest.

Columbia, the $8.2 billion asset Beverly Hills-based thrift, is said to have the largest junk bond portfolio held by a U.S. savings and loan.

Columbia moved to dismantle its portfolio after it posted heavy losses following a plunge in junk bond prices last year.

Thomas I.A. Allen, a partner with Gordon Capital in Toronto, said Gordon Capital plans to hold the junk bond portfolio as a long-term investment.

Mr. Allen added that Gordon Capital would not make other U.S. investments until it has first "digested" the Columbia portfolio.

However, Richard Li, Mr. Li's son and managing director of Hutchison's corporate fund management committee, described the move as diversification out of investments in Hong Kong.

"We look at this investment as a window into corporate America and into further investment opportunities," Mr. Li told told reporters in Hong Kong Friday.

According to Mr. Li, the junk bond portfolio that will be acquired from Columbia includes about 300 securities issued by 175 companies. The securities bear yields of 14% to 18%. □

Protracted Loan Problems Seen in Britain

Britain's big banks are following their U.S. counterparts and running into growing problems with their domestic loan portfolios.

At a press conference in London on Friday, Lloyds Bank chairman Sir Jeremy Morse said domestic loan problems were likely to continue into next year, abating only if British interest rates ease.

Lloyds is the first major bank to report its first-half earnings. The bank reported Friday a sharp rise in pretax profits for the first half of the year but increased its loan charges to $344.7 million, up sharply from $109 million in 1989 first half.

"We're not in crisis conditions but there is certainly a trend toward asset deterioration."
David Andrews
IBCA Ltd.

A Virtual Recession

Lloyds officials said that Britain's economy was now virtually in recession as a result of slowdowns in the construction and housing industries.

Brian Pitman, Lloyds' chief executive, said high interest rates and a slowdown in consumer spending would continue to weaken earnings at small and medium-size companies as well as large, listed companies.

Most of Lloyds' first-half provisions against loan losses were for loans to publicly traded companies. Executives declined to name any of their borrowers that had run into financial difficulties.

Other major British banks are due to release their first-half results this week.

More Provisions Likely

However, several large British banks, such as Midland Bank PLC, have already indicated that they may have to increase loan loss provisions for their domestic portfolios following a downturn in real estate prices and a general slowdown in the British economy.

"We're not in crisis conditions but there is certainly a trend toward asset deterioration. We expect provisions against domestic loan losses to rise," said David Andrews, a director with IBCA Ltd., the London-based credit rating agency.

The rise in loan loss provisions follows a 25%-a-year surge in bank lending in Britain between February 1986 and February 1989.

The rise includes a 500% surge in real estate-related lending between 1984 and 1989 that has been hit hard by bankruptcies among developers.

Mr. Andrews predicted more bankruptcies unless high British interest rates came down but added that a decline in rates is not likely to come soon. — **James R. Kraus**

Executive Help Wanted

Debit Product Managers

Visa U.S.A. is seeking banking professionals to lead the continued development of Visa Debit Card and ATM/Direct Debit POS products and services.

Technology and innovation have made Visa the largest, most widely-recognized financial payments systems in the world. We do more than enhance existing products and services. We focus on new opportunities as well.

You'll not only manage existing products, you'll contribute to the implementation of new programs and services. Your priorities will include analyzing their feasibility and profitability, developing product marketing materials, participating in marketing support activities, establishing product management tracking/reporting requirements, interfacing with operational and systems areas, and overseeing product plans.

Product management positions are now available:

Visa Debit Card ATM/Direct Debit POS

Qualifications include 5+ years' experience in financial services with recent experience in product management. For Visa Debit Card, knowledge of retail bank operations and transaction-based products is highly desirable. For ATM/Direct Debit POS, background in EFT/ATM products and services is needed. Excellent communication skills, both verbal and written, are essential, along with marketing support and project management skills.

VISA offers an excellent compensation package including comprehensive benefits. For immediate consideration, please send your resume to: VISA U.S.A., Dept. CR/77/24/AB, P.O. Box 8999, San Francisco, CA 94128. For other VISA opportunities, please call our JOB INFORMATION LINE (415) 378-8299. We are an equal opportunity employer.

Avantor: The Rise and Rejection of a Name Transplant

Continued from page 1

C&S's headquarters city, Mr. Bottorff and other top Avantor brass gamely sat through the laughter that followed one questioner's observation that Avantor sounds like "a brand of Italian shoe."

Finally, last week, the plug was pulled on Avantor, and a new name — "C&S/Sovran Corp." — was announced.

The decision is likely to fuel an industry debate about the exotic new names many banks have adopted in recent years, such as Synovus, Alerion, Crestar, and Altus. Some critics complain that such names are too artificial to inspire loyalty from customers or employees.

"In the industry today, given the mergers and loan situation, and given the concerns for safety and soundness in general at regional banks, if you have as strong reputation as C&S and Sovran, you need to stay with that identity and not change it," said a chastened Mr. Bottorff.

He agreed that fancy monikers may be of some value in turnaround situations, where a bank's former name is considered a liability. But he added, "I think people should be very careful today about adopting the new exotic names for these institutions that have a tradition of safety and soundness."

Over 1,000 New Names

More than 1,000 banks and thrifts have changed their names during the past two years, mostly as a result of mergers and acquisitions or turnaround campaigns.

The new names have become increasingly exotic. For example, in New Orleans, American Bank & Trust Co. became Premier Bank; "alerion" means "heraldic eagle" in French.

The best of the names in some ways touch on or relate to ideas or concepts we've heard before, something that customers use in some way. Avantor did none of that," said Steve Rivkin of Riv-kin Associates. The firm, based in Midland Park, N.J., names banks and services for financial institutions.

Edwin F. Lefkowith, president of Lefkowith Inc. in New York, says bank names should retain enough "real name content" to win over dubious customers.

"The moment you're required to explain it, you're obviously on thin ice," Mr. Lefkowith said. His firm has developed new names for AmSouth Bancorp., Birmingham; Crestar Financial Corp., Richmond, and Team Bank, Dallas, among others.

The Avantor name, described as an amalgam of the Italian for "forward" and Nordic "tor" ("high place"), was created by Denver-based Clenn Monigle & Associates, which had developed the Sovran name in 1983 when the merger of Virginia National Corp. and First & Merchants Bancorp, Richmond.

Mr. Monigle's company also fashioned the new monikers for Sovran and for Synovus Financial Corp. in Columbus, Ga., and Altus Bank in Mobile, Ala.

Creator Not Surprised

Mr. Monigle on Friday played down the decision to yank Avantor.

It "is not a surprising turn of events," since C&S/Sovran officials had changed their criterion from a "corporate" to a "brand" name" to one that incorporates their successful franchises, he said.

"This is an occurrence that frequently happens," Mr. Monigle said. "Management gets to a point where they're extremely hesitant to turn lose time-honored name franchises."

As previous press coverage made clear, the top four officers of C&S/Sovran Corp. decided to adopt the name Avantor shortly before the merger was announced last Sept. 26.

Some industry experts believe that should have waited longer.

"It was untimely to try to solve such a complicated problem during the throes of merger communications. The fact that Avantor had such a very short life didn't surprise me," Mr. Lefkowith said.

Industry experts estimate that changing names will cost $300,000 to $300,000 in the idea.

'Sounds Like "Star Trek"'

Avantor clearly never caught on with investors or analysts. "It sounds like something out of 'Star Trek,' as opposed to a bank," said Henry E. Coffey Jr., banking analyst with J.C. Bradford & Co. in Nashville. "I'm not the only one who's more than pleased at the new name."

"I don't have a clearcut definitive reason to explain the aversion Wall Street had to Avantor, but we did," said Anthony R. Davis, with Wheat First Securities Inc. in Richmond.

Mr. Monigle, who developed Avantor name, defends his creation from such critics. "The whole analyst world detests change."

'Everyone Is an Expert'

"Everyone in the world thinks they're a name expert, and they just love to take potshots" at names like Avantor, Mr. Monigle said. "We always expect the hubbub."

But the hubbub was heard at C&S/Sovran. As part of the transition planning for the merger, a team was assembled to develop policy on corporate identity. About a month ago, the team presented five options, which included keeping the Avantor name, ditching it, and various compromises between those extremes, Mr. Bottorff said.

On July 17, both the C&S and Sovran boards voted to change Avantor in favor of C&S/Sovran Corp.

According to Mr. Bottorff, a shift in strategy for the merged company – from a decentralized to a more consolidated entity – played a role, as did cost considerations. It would have been very expensive to promote the Avantor name, but C&S/Sovran is already familiar to the public, Mr. Bottorff said.

"C&S and Sovran are names that investors, customers and members," said Mr. Coffey of J.C. Bradford. "They have fond memories of both companies." □

Bank Call Notice

Consolidated Report of Condition of

BANKAMERICA TRUST COMPANY OF NEW YORK

of 280 Park Ave., N.Y., New York and Foreign and Domestic Subsidiaries, a member of the Federal Reserve System, at the close of business June 30, 1990, published in accordance with a call made by the Federal Reserve Bank of this District pursuant to the provisions of the Federal Reserve Act.

ABA Attacks Downgrade of Postal Service

By JEANNE IDDA

NEW YORK — The American Bankers Association blasted the Postal Service for its announcement late Thursday that it will go ahead with plans to downgrade delivery standards on first-class mail.

The agency's action runs counter to a recommendation made earlier Thursday by the Postal Rate Commission. The panel advised the Postal Service to drop its plan to redraw the geographical boundaries for overnight, two-day, and three-day service.

In its ruling, the commission also criticized the post office for not estimating the costs of the program to customers.

The End of Next Day Delivery

The action's immediate result is that some mail that has been delivered the next day will take a day longer. The Postal Service planned to make that service shift last weekend.

Postmaster General Anthony Frank said the post office would first change delivery standards for first-class mail.

"This area of business are fully revised, bankers will receive much of their mail a day later than they do today. Bankers are the largest single users of first-class mail service.

"This is a blatant disregard for the distinguished panel appointed by the president to look after the welfare of the mailing public," said Richard M. Nelson, vice president of Wachovia Bank and Trust Co., and a member of the ABA group following the commission. □

Armacost Takes Post at Investment Company

SAN FRANICSO — Samuel H. Armacost, a former president and chief executive officer of BankAmerica Corp., has become a general partner in the investment company Weiss Peck & Greer.

Since leaving BankAmerica in 1986, Mr. Armacost had worked with Merrill Lynch Capital Markets, most recently as a managing director. He said he served on the investment committee of a BankAmerica-Weiss Peck & Greer joint venture in the venture capital field in the 1970s.

Weiss Peck & Greer also specializes in investment management and management buyouts. The company has offices in Chicago, New York, San Francisco, and Palo Alto, Calif. Mr. Armacost will be based in San Francisco. □

Florida Federal Announces Provision of $36.3 Million; Student Loans Cited

ST. PETERSBURG, Fla. — Florida Federal Savings Bank said it plans to take a $36.3 million loan-loss provision for its fiscal fourth quarter, which ended June 30.

The provision will include $17.5 million for loans and associated costs related to the resolution of legal claims relating to student loans problems.

Florida Federal said that for fiscal years 1989 and 1990, it will have recorded a total of $54.3 million in student loan-loss provisions. It said when the fourth-quarter provision is officially recorded, it will eliminate remaining shareholders' equity, which was $1.3 million on March 31.

Florida Federal said court-ordered restitution and fines on the student loan matter and a civil settlement agreement for additional restitution and release from further civil claims have amounted to $20.2 million.

At yearend 1989, Florida Federal was the fifth-largest thrift in the state, with $2.6 billion in deposits.

The company said the Office of Thrift Supervision, following regularly scheduled examination, required it to increase general reserves. As of June 30, nonperforming assets totaled $140 million, down from $188 million a year earlier.

Florida Federal said it expects to report results for the fourth quarter and year in late September.

The company also said it hopes to avoid the court-ordered resolution program announced by federal regulators on July 10, which is designed to arrange the sale or recapitalization of undercapitalized thrifts.

It said it is "encouraged" by the continued interest of investors who may infuse capital into Florida Federal if an acceptable agreement can be reached with regulators. — Reuters

Japanese Banker Joins Drive to Aid Homeless

LOS ANGELES — Yutaro Hayashi, chairman and chief executive officer of Mitsui Manufacturers Bank, has joined the leadership group of the Union Rescue Mission's Second Century Campaign to aid homeless people.

Mr. Hayashi said he was the first top executive of a Japanese-owned company to join the campaign, which has raised $10 million of its $14 million goal. He is actively soliciting the support of others in the Japanese community. □

DEALS

Language Hedges Possible HLT Exposure

Continued from page 1.

Security Pacific National Bank that had a number of new features, the pricing also increased by 50 basis points.

● Fees. In both the Mark IV credit and a $30 million loan by NCNB Texas to Zale Corp., the fees increase if the loan is reclassified as an HLT. The Mark IV fees increase marginally, while those on the Zale loan jump 75 basis points.

● Security liens. Like the Kansas Gas deal, many non-HLT loans are unsecured. Some new language includes so-called springing liens, bankers said. Those change the terms to secure the loans with assets or stock of the company.

● Restructuring loans. In one of the first two deals of this type, a $72.5 million package led by Manufacturers Hanover Trust Co. for Envirosource Inc., the language stated that if the loan is reclassified as highly leveraged, "the company and the banks shall commence negotiations in good faith on the extent to which fees, interest rates, and/or margins should be increased to reflect the then current market requirements for HLTs."

● Terminating loans. In at least one deal, the loan is terminated if it is classified as an HLT, one banker confirmed. He did not disclose the name of the company, and said that course of action is not likely to become widespread.

● Interest rate protection. In the Mark IV credit, the company must hedge additional amount of the loan through interest rate protection if it becomes an HLT.

The tougher covenants have not gone over well with borrowers, bankers said, because of the increased cost and the need to renegotiate terms.

"It's a very sensitive topic for borrowers," said one banker.

But because the balance of power has shifted in banking from borrowers to lenders as capital becomes scarce, "borrowers have to be more accommodative," said a Japanese banker. "Because of the power shift, borrowers may have to accept everything."

One borrower who was persuaded to include the loan provisions said his banker "was very adamant" about the language. "But we weren't crazy about the idea."

A number of bankers noted that the public debt markets have begun to devise ways of protecting investments by including so-called event-risk covenants. They said the new HLT language is akin to the puts, coupon step-ups, and other protections found in recent issues.

In fact, many agreements have had a form of event-risk covenant for some time: The language calls for a higher interest rate on loans if the credit rating drops or the leverage ratios change.

But one banker whose institution is adding the new covenants said the loans noted that the rating provision is not foolproof.

"A company could be an investment-grade company but classified as an HLT," he said. "And sometimes you can't get ratings step-ups all the time."

Avoiding Overexposure

Regulatory scrutiny of banks' HLT portfolios could be a driving force behind the new loan provisions, analysts say. Banks are skittish about increasing their overall HLT exposure and have to be compensated for any increase.

"Banks don't want to go out on a limb," said Fay Wong, a vice president at Fitch Investors Service.

What could trigger a loan that is not an HLT to be put into the HLT classification? The most likely scenarios are a releverage or a regulatory review of loans that leads to a reclassification.

While many loans do include limitations on additional leverage, a strategic acquisition, for example, could make sense from a corporate viewpoint but tip the company's debt into a highly leveraged category.

Bankers noted that regulators could look at an acquisition facility – Kansas Gas, for instance – and determine that the initial capital structure is not explicitly that of an HLT.

Even if a leverage ratio is less than 75%, "a bank or bank holding company is considered to be involved in a highly leveraged transaction when credit is extended or an investment is made in a business where the financing transaction involves the buyout, acquisition, or recapitalization of an existing business," regulators wrote. □

JPS Textile Recapitalizing, But Process Proves Costly

By STEVEN LIPIN

As part of a new $325 million bank facility, JPS Textile Inc. has amended its existing credit agreement for the recapitalization of the company.

But the company is paying top dollar for the restructuring funds, which will go toward buying back the company's high-yield bonds. JPS is paying a high fee of 350 basis points up front for its $325 million in bank financing for the purchase of the company's junk bond, a clear signal that the price of leveraged money is up.

RJR Deal Set Pattern

After RJR Nabisco Inc.'s banks charged between 350 and 400 basis points for the $2.25 billion in new loans, the fees of other deals have begun to jump.

JPS, a Greenville, S.C.-based maker of carpeting and apparel for automobiles and homes, is considering the $325 million in high-yield bonds and preferred stock at a significant discount to face value as a part of a recapitalization.

Manufacturers Hanover Trust Co. has provided the company with a commitment letter for the $325 million to buy the loans back.

As part of the new facility, banks amended the existing $160 million bank package to loosen covenants that the company was close to violating, a company spokesman said.

Compliance Held Narrow

When Moody's Investors Service downgraded the company's debt, it said JPS "only stayed in compliance with financial covenants by a slim margin in 1989, and interest expense was significantly higher than anticipated."

Since that time, the company's operations have suffered, noted William Mendenhall, a Moody's analyst. "Its three businesses –apparel, autos, and housing – are all in a cyclical decline," he said.

Analysts said the recapitalization was brought on by the fact that the company was overleveraged and was poised to violate its net worth and interest-coverage covenants of its existing $120 million bank line.

Without relief, the move will significantly reduce the indebtedness of JPS, although exposure by banks would increase. □

Bank Loan Discourages Hostile Takeover of Bankers' Clients

Even as banks led by Westpac Bank Corp. and First Chicago Corp. finance a $31 billion hostile takeover attempt by Kansas Gas and Electric Co. for Kansas City Power & Light Co., some banks are becoming sensitive to funding hostile deals of potential clients.

A $300 million loan for Mark IV Industries Inc. has broken new ground in accommodating banks, bankers concerned about hostile takeovers, and signaling the shifting balance of power between lenders and borrowers.

In the groundbreaking covenant, if Mark IV attempts a hostile takeover of any client of any of the syndicate banks, banks can put the loan back to Mark IV and exit the facility. The loan was arranged by Continental Bank and Security Pacific National Bank.

While provisions prohibiting banks from participating in a hostile takeover attempt is not a new phenomenon, it has become more common, Loan Pricing Corp. noted that this is one of first agreements to specifically prohibit the reverse.

Some observers found the tough language of the loan agreement odd since Mark IV, an Amherst-New York-based conglomerate of small manufacturing companies, has grown predominantly through acquisitions and divestures.

Bankers told of the covenant said that it could put the company in a precarious situation because member banks could be very large, and the client list could cover a wide swath of companies.

Officials at Mark IV, Continental and Security Pacific did not return calls for comment. — Steven Lipin

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and for 25 largest publicly traded thrifts as measured by the market value of all common shares outstanding. The minimum size for inclusion in the market value group is over $650.0 mil. and for thrifts $121.45 mil.) 52 Wk Hi Lo: the moving average high and low prices for the last 52 weeks. PE: price earnings ratio. It is the current stock price divided by the trailing four-quarter earnings per share adjusted for latest announced earnings. Mkt. to book: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Bank Value is adjusted for announced earnings and dividends. Div.: The price at which the stock last traded. If no trades for the day, the latest bid. 4P Bank and Thrift Indexes: A weighted average of the top 250 banks in market value and the top 50 thrifts in market value, respectively. Highlights show largest percent gainers/losses in price; and two volume indicators most shares traded and dollar volume as a percentage of average shares traded daily over the past year.

Data source: BIRL Securities, Cincinnati, O., 513-621-1600, produced the tables. Financial News Network, Vienna, VA, provides SNL with the daily prices.

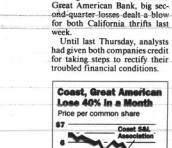
In California, 2 Thrifts Take Beating in July

By FRED VOGELSTEIN

Though banking analysts have not been high on Coast Savings Financial Inc. and Great American Bank, big second-quarter losses dealt a blow for both California thrifts last week.

Until last Thursday, analysts had given both companies credit for taking steps to rectify their troubled financial conditions.



With the announcement of their losses and mounting concern about the stability of the California real estate market, analysts are now finding more reasons to question their viability than praise their restructuring efforts. Each thrift's stock has fallen roughly 40% since the beginning of the month.

A Changing View

Few analysts put the risk of Coast's demise in the same category as Great American's, but they cited a cause for concern. Just three months ago, some said Coast was a good stock for bottom-fishers.

While nonperforming assets declined more than expected, Coast's ratio of tangible capital to tangible assets fell dangerously near the legal limit of 1.5%, said Bruce Harting, an analyst with Salomon Brothers Inc. The ratio declined to 1.6% from 1.84%, he said.

Mr. Harting said he is also concerned because Coast's reserves for problem loans are at 17%, below the 24% average for thrifts.

Moody's Cuts Rating

On Thursday, Coast reported a loss of $28.7 million, or $1.89 a share, for the second quarter. The news prompted Moody's Investors Service on Friday to downgrade the rating on the thrift's subordinated debt to B3 from Ba3.

Great American, which two weeks ago agreed to sell most of its California branches and loans to Wells Fargo & Co., has been discussed as a seizure candidate since regulators said it must raise $350 million.

With most of its California business gone, Great American's survival depends on a quick turnaround in the Arizona economy, analysts say. It is becoming increasingly clear that won't happen, they say.

Great American, which also reported results on Thursday, said nonperforming assets rose to $1.8 billion and it lost $107.9 million, or $4.49 a share.

Shares in Great American were trading late Friday at $1.75, unchanged for the day but down $1.50 for the month.

Coast's shares were trading at $3.25, down 75 cents for the day and $3.375 for the month.

* * *

FRIDAY'S MARKET

The Dow Jones industrial average was down 22 points near the close Friday. Among bank stocks, a wave of short selling drove shares of PNC Financial Corp. and Fleet/Norstar Financial Corp. sharply lower.

Meanwhile, mounting concerns about real estate in California pushed beleaguered HomeFed Corp. shares down almost 20%. The stock was off $2.625 to $10.25 in late afternoon action.

The selloff pushed PNC, Fleet, and HomeFed to 52-week lows by late afternoon. Most other bank stocks also traded lower.

"The rumor was that PNC and Fleet ... were being swarmed over by shorts," said Nancy Bush, an analyst at Brown Brothers Harriman Inc.

PNC was off $1.125 to $28.125, and Fleet was off $1.25 to $16.375.

James Moynihan, an analyst at Advest Group Inc., said there were rumors that regulators from the Office of the Comptroller of the Currency were revisiting Fleet. The Providence, R.I.-based company reported a huge increase in nonperforming assets at the end of the first quarter, following a regulatory exam. □

CAPITAL

Banc One Plans $300 Million Bond Issue

By KELLEY HOLLAND

Seeking to refill its war chest for future acquisitions, Banc One Corp. is in the process of increasing its capital base by over $600 million.

The superregional bank, based in Columbus, Ohio, has filed a shelf registration to issue $300 million in new bonds, and it recently completed a common stock offering that raised over $300 million.

"We should have Tier 2 to balance out our Tier 1," said Richard D. Lodge, senior vice president and head of funds management. Under new risk-based capital guidelines, Tier 2 capital can account for up to half a bank's regulatory capital.

Timing Depends on Market

Banc One will probably be in the market before the end of the year, he said. But the specific timing "will be a function of what the market does."

Underwriters for the offering have not been named. Banc One last issued debt about a year ago.

Clearly, the bank has a pressing need for capital. Banc One finished the first quarter with an average equity-to-assets ratio of 8.64%, by the end of the second, the ratio had risen to 8.74%.

But the bank has grown rapidly through a series of acquisitions, the lastest of which was its purchase of Texas branches of the former MCorp. And to secure regulatory approval for new acquisitions, Banc One needs to maintain capital ratios well above the required minimums.

"It's more war chest money," Mr. Lodge said.

Analysts generally applaud Banc One's acquisition strategy. The bank is run by "very smart people," said Virginia A. Adair, an analyst at Merrill Lynch Capital Markets. Banc One will probably continue to make acquisitions, he said, and probably in the Midwest, too, she said. "It's prudent to have the capital available to take the opportunities when you see them."

When it does come to market, Banc One will join an elite group. Bank bond investors are demanding painfully high yields on bonds of all but the strongest institutions, and only banks with strong capital ratios can tap the market at reasonable prices.

MARKET MONITOR

BankAmerica Corp. priced $125 million in subordinated debt in a deal lead managed by Merrill Lynch Capital Markets. The 9.7% bonds, due in 2000, were priced 130 basis points over comparable Treasuries. In the secondary market, BankAmerica's bonds were freed to trade Friday morning and were bid at 135 basis points over Treasuries.

* * *

First Chicago Corp. has issued $100 million in 10-year subordinated notes at a spread of 165 basis points over comparable Treasuries. Salomon Brothers Inc. was lead manager on the deal.

* * *

Signet Banking Corp. ratings were lowered by Standard & Poor's Corp., which cited the concentration of the Richmond-based bank in commercial real estate and construction loans. Signet's senior debt rating was lowered to BBB-plus from A-minus, and its subordinated debt rating was lowered to BBB from BBB-plus. Ratings on the subsidiary banks' certificate of deposit and LOC-backed issues were lowered to A-minus/A2 from A/A1.

The rating agency also lowered ratings on debt of Bay-Banks Inc. because of continued weakness in New England real estate. BayBanks' senior debt rating dropped to BB-plus from BBB-minus, and the ratings of its subsidiary bank's certificates of deposit dropped to BBB-minus/A3 from BBB/A2.

* * *

Bank of Boston Corp. was downgraded by Moody's Investors Service on grounds of disappointing second quarter earnings and continuing asset quality pressures.

Bank of Boston's senior debt rating was lowered to Ba2 from Ba1, and its subordinated debt rating to B1 from Ba3. The subsidiary banks' ratings on long term LOC-backed obligations were lowered to Ba1 from Baa3; on short-term LOC-backed obligations to Not Prime from Prime-3, and on short-term deposits to Prime-2 from Prime-2.

"We are obviously disappointed with the Moody's downgrade," said Bank of Boston's chief financial officer, Peter J. Manning. "We are continuing to aggressively attack our credit issues."

* * *

Discount window borrowings at the Richmond Federal Reserve on July 25 were up 65%, to $365 million, compared with the level a week earlier, according to a Federal Reserve official. □

EXPLOSIVE ECONOMIES

Superior and immediate information on developments is your only armor against the ups and downs on financing action in debtor nations.

Learn about actions being considered before they reach the general press with **LDC Debt Report,** an American Banker • Bond Buyer newsletter.

Regular features include:

- Up-to-date lists of secondary market bid and offer prices.
- Sovereign bond prices.
- Detailed calendar of conferences held around the world on debt and Latin America.

With the incorporation of Latin American Markets, formerly published by the Financial Times, you now get detailed, concise analysis of the latest business and political developments in Latin America.

Will Congress Let Banks Hike Deposit Fees?

By SANFORD ROSE

Banks are on a collision course with Congress over the question of realistic pricing of deposit services. A growing number of regional and even money-center institutions are discovering to their surprise and chagrin that they are losing money on basic consumer non-interest-checking accounts and that the only way to turn this situation around is by raising fees by some extensive amount.

Such an action is bound to arouse the ire of populist-minded legislators. Given the prevailing mood of Congress, which is profoundly antibank, the populists may be able to persuade many of their colleagues to take actions that will impede the rationalization of deposit-fee structures.

Comment

Sadly, banks have only recently discovered that they are losing money on consumer non-interest checking. The conventional wisdom in the industry is that these accounts either are good earners or at worst breakeven products. But this notion is based in large part on the failure to take into account the full extent of direct and indirect costs.

Thus, branch managers have generally been of the opinion that they are making good money because their gross margins for outstrip direct branch costs. Now these managers and their superiors are beginning to realize that margins fall considerably short of total applicable expenses – both direct branch and nonbranch and all indirect.

Determining the Credit

The profitability of deposits is determined by first calculating what is called an earnings credit. That is, the branches raise deposits which are then sold to the bank's treasury department for resale to the lending units. And the branches are paid a transfer rate based on a yield or cost curve for wholesale monies, for which retail deposits substitute.

A short-maturity deposit will obviously earn the short-term wholesale-funds cost minus the direct interest cost of the deposit. And a long-term deposit will of course earn the long-term rate on wholesale funds minus its direct interest cost.

Since demand deposits bear no interest cost and most consumer deposits are effectively long-term funds – i.e., they are not likely to migrate into interest-sensitive accounts in the short-run – these balances generally earn the full transfer rate for.

S&L Law Is Reshaping Marketplace

Banks Taking Business Away from Thrift Industry

By STEVE KLINKERMAN and SAM ZUCKERMAN
Second of a Series

In New Orleans, Oak Tree Savings Bank is being forced to shed $1 billion worth of real estate subsidiaries.

In Atlanta, capital-starved Fulton Federal Savings Bank is awaiting federal takeover.

In California, Wells Fargo & Co is acquiring 130 thrift branches and dramatically increasing its mortgage originations.

Across the nation, the thrift-bailout law is changing how banks and thrifts do business. The year since the law's passage has brought some of the most far-reaching changes seen in the nation's banking system in the past half century.

Those changes amount to what California's banking superintendent, James E. Gilleran, calls "the demise of the thrift industry" as it has been known.

Less Able to Compete

Amid the tumult, the outlines of a reshaped lending and deposit-taking industry are emerging. Although there are some notable exceptions, thrifts generally are losing market share to banks. The thrifts are more focused on mortgage lending. And in many instances, they are less able to compete.

"It's going to take a long time for managers and institutions to adapt," said Michael Wilson, deputy director of research for the U.S. League of Savings Insti-

Bankers Seem Skittish on Buyout As Aug. 9 Deadline Nears on UAL

By WILLIAM GOODWIN

Citicorp and Chase Manhattan Corp. representatives stayed away last week from a meeting on possible bank financing for the union-led buyout of UAL Corp., raising speculation that the two banks have joined Chemical Banking Corp. in balking at the $4.38 billion deal.

Sources said Citicorp has in fact withdrawn from the bank group – at least for the time being – though it was not immediately clear why. A Citicorp spokeswoman declined to comment.

These rumblings come at a time when a spokesman for the union group said it is close to finding an outside investor, which could draw skittish banks back into the deal.

Equity Is Sticking Point

Chemical told the other banks on Friday that it was pulling out because the union group had failed to attract an outside equity investor, a source said. For that reason, Chemical did not attend the Friday meeting of bankers.

Citicorp and Chase Manhattan Corp. also canceled out of the meeting, leaving only Bankers Trust New York Corp. and Manufacturers Hanover Corp.

Hanover Lures Carol Parry Back to Banking Industry

By FRANKLIN SMITH

Carol Parry – a onetime social worker, personnel consultant, and Chemical Banking Corp. executive – is returning to the financial services industry as a senior vice president of Manufacturers Hanover Corp. in New York.

She is taking charge of a middle-market business unit in Manufacturers Hanover Trust Co.'s regional banking group.

Ms. Parry, 49, was a senior vice president and director of private banking at Chemical. She left Chemical last year to become a partner of Personnel Corporation of America, a human resources consulting firm based in Norwalk, Conn. There she combined her training in social work with banking and management skills.

She left the Connecticut company last October to form her own consulting firm.

At Manufacturers Hanover, Ms. Parry will be responsible for relationships in the Tristate New York metropolitan area with small and midsize businesses whose annual sales range from $3 million to $40 million. Some 450 people in the business banking unit will report to Ms. Parry.

"I like consulting and being on my own, but I miss the banking side," Ms. Parry said in an interview. "I like the middle market – and the job fits my talent."

Carol Parry

Edward D. Miller, the Manufacturers Hanover vice chairman who oversees the regional banking group, called her "a great competitor" and said, "We are delighted she is now on our side."

'A Good Match for My Talent'

Her appointment signals the importance Manufacturers Hanover is placing in the increasingly competitive middle of the corporate market. "Carol's broad experience, strategic outlook, and dynamic style will help us to become even more aggressive in this important marketplace," Mr. Miller said in a statement.

"It's a business I'm very comfortable in running," Ms. Parry said. "The job is a good match for my talent."

Depth of Background

Ms. Parry brings 25 years of management experience – in the financial services industry, in the public sector, and as a management consultant at McKinsey & Co. From 1978 to 1989, she was one of the architects of Chemical Bank's successful middle-market and small-business strategy.

She was one of the first women to attain the rank of senior vice president at Chemical Bank, in 1981.

Prior to joining Chemical, Ms. Parry held high positions at social service agencies in New York.

A graduate of Tufts University, Ms. Parry has a master's degree in social work from the University of Connecticut. She attended the advanced management program at Harvard Business School.

NEWS *briefs*

Governors Call for Probe Of Crisis in Thrift Industry

MOBILE, Ala. — A panel representing state governors approved a call for the Bush administration to set up an independent commission to investigate the crisis in the savings and loan industry and suggest ways to keep it from hurting other financial institutions.

Over the objections of Republicans, the National Governors Association executive committee passed a statement proposed by Democrats calling for an impartial panel to "examine the root causes and impacts of the crisis" and to come up with ways to "decisively stop the drain on taxpayer money." — Reuters

New Jersey Shuts Down Ten Building and Loans

TRENTON — New Jersey Banking Commissioner Jeff Connor on Monday closed the state's 10 remaining uninsured building and loan associations, as required by a 1987 law.

State law required Mr. Connor to close by Monday savings institutions lacking federal deposit insurance. He named a conservator to oversee the closings.

The 10 institutions have aggregate assets of nearly $8 million, the state's more than 280 state and federal financial institutions have assets totalling more than $160 billion.

Merchants National Says It'll Buy Palmer Bancorp

INDIANAPOLIS — Merchants National Corporation announced that it has agreed to acquire Palmer Bancorp Inc.

The agreement provides for a purchase price of $122.75 per share and is subject to approval.

Palmer Bancorp is also permitted to pay to shareholders a semiannual dividend of $2.40 per share, prorated to the closing, which is anticipated to occur during the first quarter of next year.

Palmer Bancorp, whose principal subsidiary is Palmer American National Bank, had total assets of approximately $185 million on June 30. □

Seidman Says Bailout Could Cost $200 Billion Plus Interest

By DEBRA COPE

WASHINGTON — Acknowledging that the highest cost estimates for the thrift bailout are realistic, the chairman of the Resolution Trust Corp. said Monday he expected the savings and loan crisis to cost taxpayers between $175 billion and $200 billion, excluding interest costs.

The estimates by the chairman, L. William Seidman, are virtually double the bailout costs of between $90 billion and $130 billion recently publicized by the Treasury Department. Mr. Seidman made his estimates to reporters following a Congressional hearing.

Interest Swells Total

If interest costs over the next decade are added to the Seidman numbers, the S&L costs soar to more than $500 billion and confirm that the highest estimates yet by thrift-industry observers of the bailout have now been endorsed as accurate by the RTC.

In wide-ranging testimony, Mr. Seidman, who also chairs the Federal Deposit Insurance Corp., told the House Banking Committee that the FDIC's Bank Insurance Fund ratio of assets to reserves is at a historically low level, and said "there is considerable stress in the system" as commercial banks absorb new real estate woes and continue to struggle with Third World debt problems.

However, he said he did not think it would be appropriate to say that the problems faced by commercial banks would lead to another crisis like the savings and loan crisis.

Faster Sales Ahead

In a bid to counter criticism of the RTC's track record in selling distressed assets of failed thrifts, Mr. Seidman said he would unveil on Wednesday a stepped-up strategy to move through its burgeoning inventory.

Dubbed "Operation Cleanup," the next phase of the thrift

L. William Seidman
FDIC Chairman

rescue effort will combine a wide range of strategies to "make selling the primary business of the RTC," Mr. Seidman said in a recent telephone interview.

The regulator also said the RTC would need up to $100 billion in the fiscal year beginning Oct. 1 to cover S&L losses and the RTC's short-term financing of the rescue program. The RTC will be out of working capital funds shortly after Oct. 1, and its pool of money to cover deposit insurance losses would run dry after Jan. 1, 1991, he said.

Options Explained

Deputy Treasury Secretary Robert Glauber, testifying beside Mr. Seidman, said Congress must fund the shortfall before it adjourns this year. He laid out three options, including provide the RTC "permanent, indefinite authority to complete the job of resolving failed thrifts." The government has incurred the obligation to make good on deposits, so it has no choice but to provide this funding, he said.

Alternatively, Mr. Glauber said, Congress could provide enough funds to cover the RTC's needs for fiscal year 1991 or a shorter period. An appropriation of $5 billion plus increased borrowing authority would enable to the RTC to continue its work without interruption through January, he said. □

Fed Files Appeal To Preserve A Key Doctrine

By LINDA CORMAN

WASHINGTON — The Federal Reserve Board is going to the mat to defend its 18-year-old "source of strength" doctrine, holding that the Fed may order bank holding companies to draw on their assets to bolster sickly affiliates.

The Fed has asked an appeals court to reconsider a decision, reached in May in the so-called MCorp case, that rejected the source-of-strength doctrine. The Fed argues that it needs this doctrine to insure the safety and soundness of the bank holding companies it oversees.

MCorp Chose Bankruptcy

The MCorp case originated two years ago when the Fed sought to have $400 million in assets from the Dallas-based bank holding company transferred to ailing bank subsidiaries. MCorp refused and subsequently filed for bankruptcy. When the Fed pressed its claim, a federal district court in Houston ruled that the central bank could not invoke its source-of-strength doctrine in the midst of a bankruptcy proceeding.

On appeal, a three-judge panel of the Fifth Circuit Court of Appeals in New Orleans not only upheld the district court's decision but rejected the source-of-strength doctrine altogether.

In its motion, filed in late June, the Fed argued that the panel's decision invalidated a long-standing and critically important regulatory policy for safeguarding the stability of banking institutions. "The 'source of strength' doctrine is the Federal Reserve Board's principal means of ensuring that bank holding companies maintain the capital adequacy of their subsidiary banks. It is an enforcement tool of vital importance to bank safety."

However, some banking experts now argue that the source-

TECHNOLOGY/OPERATIONS NEWS

Streamlining Telecommunications

Trend Is Toward Using Fewer Carriers, Poll Shows

By KAREN GULLO

Because of increased competition and advanced technologies, telecommunications providers are reducing prices and offering volume discounts.

Taking advantage of the cost-saving opportunities, many institutions are relying on just one or two service providers, according to the *American Banker*'s 1990 technology survey. Thirty-five percent of the bankers surveyed said they use a single provider, and 29% use two.

Trans Data Corp., the newspaper's research affiliate in Wayne, Pa., gathered the data by questioning operations and technology executives of 333 banks with at least $75 million in deposits.

Bigger Banks Use More Carriers

The larger the bank and the greater its geographical reach, the more likely it is to use multiple communications carriers.

Thirty-eight percent of banks with $2 billion or more in deposits report using four or more providers; only 5% of banks that size use one company. Conversely, 37% of banks with assets of $100 million to $250 million report using a single company; 12% use four or more.

Using a single supplier for telecommunications services has several advantages, according to bankers. It promotes consistency across the bank in telephone services and concentrates the management and servicing of a network.

"We want to deal with a single vendor," said Lawrence K. Dorf, executive vice president in charge of telecommunications at Security Pacific Automation Co., a subsidiary of Security Pacific Corp.

The Los Angeles-based banking company is implementing a communications system that will provide high-speed links for its California branches and eventually its locations around the world.

Although Security Pacific now uses leased-line service from several vendors for voice and data communications, Mr. Dorf said the plan is to use one vendor that can provide connectivity to networks in other parts of the country and the world.

Price Incentives

Telecommunications companies are offering price incentives to consolidate their suppliers.

Large banks are more aggressive in merging networks than small banks.

Carriers such as American Telephone & Telegraph Co. offer volume discounts to companies that sign long-term contracts for customized data and telecommunications services. Several banking companies, including Chemical Banking Corp., Citicorp, and First Chicago Corp., are taking advantage of these offerings.

When banks merge, they often consolidate their data centers. But banks are also choosing to consolidate their voice and data networks. A whopping 70% of banks that have merged in the past two years are merging data communications networks, the survey found. Another 20% plan to merge networks by 1991.

Half the surveyed banks that are merging operations are merging phone networks, too; 20% say they plan to do so next year.

Large banks are more aggressive in merging communications networks than small banks, according to the survey. Seventy percent of the banks with assets of $2 billion or more said they are merging networks, while only 25% of banks with assets of $75 million to $100 million are doing the same.

SunTrust Banks Inc., Atlanta, a $30 billion-asset superregional, is consolidating five networks for 750 branch locations in three states. The networks support ATMs, teller automation, branch data entry, trust processing and branch operations. The bank plans to merge the five networks into one with 15 hub locations.

"We went through three big mergers, and we've reduced our costs through consolidation," said Thomas Vaughn, SunTrust's telecommunications chief. "Now we're seeing ourselves stabilizing costs. That's what we think our charge should be."

Merging Voice, Data Systems

SunTrust merged the voice and data communications departments of the bank a few years ago. "By merging the two functions you cut some of the reporting out, and have one decision-making process. It also saves money on staff," Mr. Vaughn said.

The *American Banker* survey showed that 26% of banks have consolidated voice and data communications or plan to do so. This is true of most with more than $750 million in deposits, but of only 17% of the smaller banks.

Many banks are switching from private networks – using phone company lines dedicated to the bank – to virtual networks. In a virtual network, the telephone company allocates part of its public network to the bank.

The motivation is reduced maintenance costs. With mergers and acquisitions, banks found themselves saddled with their own mini-telephone companies. Extra staff was needed to maintain and service the network. With a virtual network, the carrier takes control of system maintenance.

Huntington National Bank, Columbus, Ohio, is installing a virtual network that is expected to improve transmission quality and be easier to maintain. The bank's old network was a patchwork of private lines, and some branches were unable to complete one out of every four call attempts.

The virtual network, from AT&T, solves that problem. New locations can be added more quickly and easily because the phone company uses its existing phone lines instead of installing new ones.

Virtual networking is in use at 32% of the banks with deposits of $2 billion or more. Small and midsize banks were much less apt to use the technology.

Larger banks are also experimenting with a technology known as ISDN, or integrated services digital network. ISDN merges voice and data communications on the same phone line.

Twenty-nine percent of the banks with assets of $2 billion or more and 22% between $750 million and $2 billion are using ISDN. □

Home Loan Bank In Seattle Signs Pact with EDS

By RICHARD LAYNE

The Federal Home Loan Bank of Seattle has signed a contract to have EDS Corp. supply check processing services, which could eventually incorporate imaging technology.

Under terms of the five-year contract, Dallas-based EDS will operate the bank's processing centers in Seattle and Salt Lake City and supply services to the bank's member institutions. EDS item processing centers in Oakland and San Diego will do the actual check processing.

"The decision to contract out for the processing was made to bring to the table a long-range quality of service that exceeded our own, at a cost that was competitive to our customers," said Jeffrey Bell, senior vice president of the Home Loan bank.

The bank has assets of $10 billion and is one of 12 regional institutions established to promote mortgage lending and support savings and loans.

Icing on the Cake

The Seattle bank did not specifically list imaging among the checks in its contract. But EDS plans to make imaging available through its service bureaus next year.

EDS is the first data processing service company to announce that it will supply image processing.

Savings Expected

Image processing of checks is a technology that has only recently become available commercially. The technology, adopted by a handful of banks so far, promises considerable savings in operating costs.

According to a study by Trans Data Corp., an affiliate of the *American Banker*, only 13% of banks plan to install imaging systems for check processing by 1992. □

COMMENT/ *By Kenneth H. Thomas*

How Directors Can Improve CRA Compliance Ratings

Your next Community Reinvestment Act compliance examination may not only be the toughest but also the most important. What board members do or don't do before that exam can make a difference between a favorable and unfavorable rating.

The next exam is likely to be your toughest because the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 – the thrift-bailout law – has put new teeth into the 1977 reinvestment act. This has resulted in a revised method of examination consisting of five performance categories for the original 12 Community Reinvestment Act assessment factors.

Ratings Will Be Public

Why will your next exam be your most important? The bail-out law also mandates that, for the first time, the ratings from all CRA exams commencing on or after July 1, 1990, be made public. Your bank will be given one of four ratings: outstanding, satisfactory, needs improvement, or substantial noncompliance.

Even if no branching or merging is planned, the board should shoot for one of the two highest "favorable" ratings. A publicly disclosed "unfavorable" rating can have adverse side effects, not only in the public relations area but also more serious ones if the rating is misconstrued as an evaluation of safety and soundness.

Room for Improvement

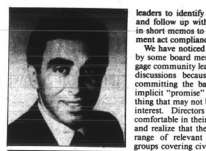
We have reviewed Community Reinvestment Act statements and policies and made follow-up presentations before several bank and thrift boards during the last few months. We have found there is always room for improvement, even in the most conscientious boards. And, at the other extreme, where little to no Reinvestment Act concern exists, we have found that even a modest commitment can go a long way.

It is never too late to start, even if little or nothing has been done by the board on the Community Reinvestment Act to date.

Information Available

What can the board do to improve your bank's rating? The most important first step is for board members to understand the reinvestment act basics – what is and is not required. The following publications available from the Federal Deposit Insurance Corp.'s office of consumer affairs (800-424-5488) should be in the hands of all bank directors: "Final Uniform Interagency CRA Guidelines," revised "CRA Examination Procedures," and "Expanded CRA Questions and Answers."

Probably the greatest deficiency at the board level that we have noted is a lack of meaningful involvement in key reinvestment act issues. The rubber-stamp approval of management's statement and policy is not enough.



"Even a modest commitment can go a long way. It is never too late to start."

Areas of Board Concern

The board must become legitimately involved in at least three areas:

• Delineation and modification as necessary of the Community Reinvestment Act local community. The use of a county or metropolitan area as the CRA community is often not appropriate for a community bank and may in fact be a source of examiner criticism.

Deposit and loan sample plottings or a ZIP code printout may suggest a smaller local area as being appropriate. The relatively expensive procedure of "geocoding" files by census tract, although preferred when available, may not be necessary in many cases.

Talking to the Community

• Board members should talk regularly to local community leaders to identify credit needs and follow up with suggestions in short memos to the reinvestment act compliance officer.

We have noticed a reluctance by some board members to engage community leaders in such discussions because they fear committing the bank to some implicit "promise" to do something that may not be in its best interest. Directors should be comfortable in their discussions and realize that there is a wide range of relevant community groups covering civic, religious, small-business, and real estate interests.

Innovation Needed

• Developing new and innovative methods for meeting local community credit needs, especially unmet ones in low-income and moderate-income areas. Directors may clip an article or pick up a brochure on a new credit product at another bank and attach it to a short memo to the Community Reinvestment Act compliance officer, with a suggestion or related idea appropriate for the bank's local community. The focus may even be on modifying one of the bank's existing loan products to make it more responsive to identified credit needs.

Documentation Is Vital

All such board efforts must be documented in board minutes and the compliance officer's file as appropriate.

Every board meeting should have a "CRA Compliance Update" section developed in concert with the compliance officer, where there is a discussion of a specific aspect of the Community Reinvestment Act statement or policy, or on one of the above areas.

Keep in mind the advice of one Community Reinvestment Act examiner to whom we spoke: "If it wasn't documented, it wasn't done!" □

CRIME BLOTTER/ *By Tom Leander*

Bank Liable in Attack on Teller

A jury verdict in Tacoma, Wash., last week may cause bank managements all over the country to wonder whether they are providing enough security for employees on bank premises.

The jury in Pierce County, Washington, awarded $3.4 million to Ingrid Brassinga, a teller at a branch of the former United Bank, a savings bank. Ms. Brassinga's throat was slashed in the bank parking lot by an assailant who ran off with her purse and was never captured. As a result of the attack, Ms. Brassinga sustained brain damage from loss of blood.

At the civil trial, it was learned that employees had complained to the bank about crime in the vicinity of their branch. The bank responded to these complaints by releasing a memo with suggestions including that employees walk in pairs.

Ms. Brassinga's lawyer argued that the attack would not have occurred if bank managers had hired a security guard and listened to employees' concerns.

The jury decided that the memo containing helpful suggestions did not absolve the bank from responsibility for Ms. Brassinga's attack.

United changed its name to Security Pacific Savings Bank on Dec. 30, 1988.

Indictment for Bribery

A grand jury in Salt Lake City has indicted a local businessman and his wife on charges of attempted bribery of a bank officer.

According to the indictment, the bribe was offered to the banker in May for him to lend money to an admitted fraud artist who had already been convicted of selling falsified shares in a gold mining operation.

The indictment charges James and Maxine Hutchinson with offering money and services to H. Paul Matthews, an employee of Zions Bank in Provo, Utah, if Mr. Matthews "would cause" the bank to make a loan to Jerome C. Gatto.

According to the indictment, Mr. Hutchinson tried to bribe the loan officer once and Mrs. Hutchinson offered him money on two occasions.

Mr. Gatto was convicted in 1987 of selling shares in two California gold mines that he said he owned. One of the mines was not producing, and Mr. Gatto did not own the other.

He was sentenced in a California federal court to seven years in prison for securities fraud. Currently, Mr. Gatto is on parole and managing a Salt Lake City social club, prosecutors said.

The Hutchinsons could not be reached for comment.

Best-Laid Plans Gang Agley

Tyrone McGraw, a 29-year-old carpet technician from Pomona, Calif., hatched a plot last February to kidnap the manager of the Newhall Savings office in Palmdale, Calif., after recarpeting the premises.

A U.S. district court jury last week found Mr. McGraw guilty of attempted bank robbery and kidnapping. For his bungled crime, Mr. McGraw faces 15 years to life in an uncarpeted prison cell.

Mr. McGraw's accomplice was a fellow carpet technician, 29-year-old Brian Simms. Mr. Simms pleaded guilty to the same charges and faces 12 years in prison.

The two were plying their trade at the Newhall branch when they decided to the pull off the crime, Mr. Simms testified. They stormed the Palmdale home of the Newhall branch manager, holding the manager and her husband at gunpoint.

After 36 hours, they forced the manager to open the branch. As she entered, she pulled a silent alarm, alerting police. The lawmen arrived shortly thereafter to arrest Mr. McGraw and Mr. Simms.

Reassurances from Sununu

White House Chief of Staff John Sununu tried to reassure the nation's governors on Sunday that federal action is forthcoming to prosecute those responsible for the savings and loan disaster.

Mr. Sununu also promised leaders of the National Governors Association that the federal government is working to close the worst thrift associations.

The association's nine-member executive committee adopted a position Sunday calling for the creation of a commission to study the cause and impact of the multi-billion-dollar savings and loan debacle.

"Realistically, the President and Congress aren't going to convene a commission to oversee what they are doing – but they probably should," said Gov. James Blanchard of Michigan. □

WHY WE MANAGE MORE ISSUES OF PREFERRED STOCK FOR BANKS THAN ANY OTHER FIRM.

When it comes to choosing a managing underwriter for new issues of preferred stock, a majority of banking companies have shown a preference for Lehman Brothers.

In the past five years, we've managed 60% of all preferred stock issued by banking companies. And lead-managed 42% of all bank preferred offerings, more than any other investment banking firm.

The key elements to the successful issuance of preferred equity are structuring and distribution. Our Financial Services Investment Banking professionals can lead you through the complex maze of regulatory, accounting and tax issues you may encounter in structuring an issue.

Our unequaled institutional and retail distribution networks allow us to distribute to the broadest base of investors and hence achieve optimum pricing for our clients.

All of which is why Lehman Brothers handles more issues, for more banking clients, than any other firm.

CREDIT UNIONS

Hungarians Take a Cue From Polish Movement

By ELLEN MEMMELAAR

Hungary is following the lead of Poland in bringing a credit union movement to Eastern Europe.

A delegation from Hungary recently spent time in the United States as part of a worldwide tour, and a conference is scheduled next week in Budapest to discuss the future of credit unions.

Meanwhile, the Polish movement is gaining momentum. Poland hopes to establish 12 credit unions by yearend and could have more than 20 in two years, said Peter Marion, director of technical programs for the World Council of Credit Unions. The group, based in Madison, Wis., is working with both countries to support the cooperative approach to financial institutions.

Change Is Coming More Slowly to Hungary

Hungary has been moving more slowly than Poland to make the changes necessary for a free-market economy. "Hungary is taking a planned approach to economic reforms," said Dale Magers, project development coordinator at the World Council. "The Polish government just jumped in with both feet."

> **"Hungary is taking a planned approach. The Polish government just jumped in with both feet."**
>
> **Dale Magers**
> *World Council of Credit Unions*

When the Communist regime was overthrown in Hungary last year, four of the country's six major banks were directly controlled by the government, and the other two were operated by foreign interests, said Mr. Magers.

Instead of doing business with the banks, many citizens used a cooperative, of which there are 260 across the country. These cooperatives, which resemble credit unions in a number of ways, have two million members and $180 billion in domestic and foreign assets, he said.

At the conference next week, credit union representatives and Hungarian officials will discuss the role that credit unions will play in the country over the next several years, Mr. Magers said.

The gathering follows a trip to the United States in June by members of the Hungarian government, the National Federation of Savings and Credit Cooperatives, the National Federation of Agricultural Cooperatives and Producers, and the Cooperative Research Institute and Foundation.

They visited the Credit Union National Association headquarters in Madison as well as credit unions in Wisconsin and Illinois. The group also visited credit union organizations in Canada, Ireland, and Korea.

A group from Poland made similar rounds in November.

Team Will Analyze Economic, Political Climate

The World Council will assemble a technical team to work with the Hungarian group to conduct a detailed analysis of the current economic and political conditions that pertain to savings and credit union development. The group will also help prepare a long-term development program, according to a spokesman for the trade association.

Hungary's activities closely resemble those of Poland in establishing credit unions. In June, a technical team of 12 credit union specialists from Ireland, Canada, and the United States went to Poland to meet with government officials, finance experts, church officials, and sociologists.

Five-Year Plan to Start Up Credit Unions

The work resulted in a five-year plan for the Polish credit union movement and the establishment of a foundation that will help finance the start-up of credit unions across the country. The trip and research were partly funded by a grant from the U.S. Congress.

Poland has about 10,000 government-controlled cooperative organizations and a central bank, Polska Kasa Opieki SA, which does relatively little consumer business.

Many Poles have used the shoebox method of saving because the institutions did not pay interest on savings accounts. No interest was paid on loans, either.

"With credit unions, it's going to be a brave new world on both interest and savings," Mr. Marion said.

Democratic Structure of Groups Has Appeal

Other obstacles in Poland include inflation and daily changes in laws governing corporate activity.

U.S. credit union executives continue to hold informal talks with other countries in Eastern Europe. Credit unions are attractive to these governments in transition because of their democratic structure. Unlike bank customers, the members of a credit union elect their own board members and executives.

Also, credit unions aid the movement of these countries toward free-market economies by requiring only minimal amount of government intervention. □

Team Effort on Debit Cards in Supermarkets

By YVETTE D. KANTROW

NEW YORK – The Most automated teller machine network is teaming up with Deluxe Data Systems to bring debit card services to supermarkets in the Middle Atlantic region.

The two companies will work together to promote the Edge, Deluxe Data's electronic payment system for supermarkets. Regional stores that install the Edge can accept the Most ATM card for payment and instantly authorize customers' checks.

A Deal of Mutual Benefit

"We've each been doing our own thing in point-of-sale," said Richard G. Lyons, senior vice president of Internet Inc., the Reston, Va.-based company that operates Most. "But neither one of us has had the success we believe we could have if we worked together when dealing with the retailer."

> **"We've each been doing our own thing in point-of-sale."**
>
> **Richard G. Lyons**
> *Internet*

Most, which represents 425 financial institutions, is the nation's fourth-largest ATM network. Deluxe, based in Brown Deer, Wis., is one of the largest third-party providers of electronic funds transfer services.

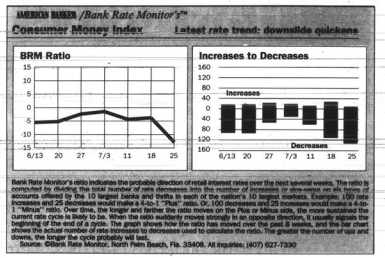
The two companies are looking for supermarkets for tesuing. Under the marketing agreement, Deluxe can offer supermarkets Most's 14 million cardholders as a built-in customer base.

The system provides an array of optional payment services, including credit card acceptance, frequent-shopper programs, and off-line debit card programs.

New Five-year Contract

Most has relied on Deluxe Data for terminal driving and other services since 1983. It signed a new five-year contract with Deluxe three months ago.

Most also recently signed an agreement with Visa U.S.A. Most's banks have the option of working with Deluxe or Visa, but "Visa doesn't have a full-blown supermarket product yet," Mr. Lyons said. □



BT Tymnet Is

Electronic Transaction Services

BT Tymnet offers the broadest array of Electronic Draft Capture (EDC) and other Point-of-Sales transaction services in the industry. Quality BT Tymnet services enable banks to provide merchants with innovative, highly competitive and profitable solutions. Full service capabilities include: a wide range of connectivity, state-of-the-art card and check support and reliable performance worldwide. Just call our toll-free number for complete details.

Portfolio Theory Touted as Way to Reduce Lenders' Risk

By ANDREW REINBACH

Banks can help manage their commercial mortgage portfolio risks by taking a page from modern portfolio theory, according to academics and real estate managers at pension funds who have applied the theory.

And it's not just the private sector that's interested in the new methods of assessing real estate values. The Office of the Comptroller of the Currency also says there's value in the new forms of analysis.

"We've thought that it can apply to real estate," said Stephen M. Cross, the office's director for industry and financial analysis, who is responsible for monitoring and analyzing the condition of banks.

"With securities, these principles are employed routinely. There's no reason to believe that they can't be employed on a loan portfolio, or that the banks wouldn't benefit."

Banks have been reluctant to use the technique, though, relying more on their own credit analysis rather than esoteric models.

A New Way of Assessing Risk

Modern portfolio theory compares corporate performance to risk in a diversified portfolio of assets. It attempts to create a level-playing field from which to compare investment alternatives.

The Comptroller's office in its effort to identify banks with problem loan portfolios, has developed and applied a computer program that employs several aspects of modern portfolio analysis, according to Mr. Cross.

Real estate practitioners expressed support for the idea. "It was the absence of portfolio management that produced the real estate situation we're in now," said James R. DeLisle, a senior vice president with Equitable Real Estate Investment Management Inc., Atlanta.

Adjusting Investment Strategy

How did this analysis – used widely in the stock, options, and bond markets – filter into real estate?

Real estate portfolio managers saw their returns fall in the past few years as the overhang of new real estate swamped the market. An index that measures the performance of institutional portfolios dropped from an 8.7% return in 1986 to 3.7% in 1989, according to Frank Russell Co., publisher of the index. Returns started falling in 1987, and clients of the commingled real estate funds started withdrawing their funds.

The result was waves of selling at the commingled funds of Prudential Insurance Co., the Rreef Funds, Equitable Life Assurance, and Aetna – right into the markets that caused the poor performance figures.

James R. DeLisle
Equitable Real Estate

The insurance companies responded by hiring modern portfolio theory practitioners from other institutions – including universities. They moved into powerful positions once they'd completed in-depth studies of the real estate portfolios.

Prudential Insurance Co., for instance, hired Charles H. Wurtzebach from the University of Texas in 1986. Eventually, he designed an investment strategy of real estate equity funds worth about $12 billion.

Many major pension fund advisers now consider such people necessary for real estate portfolio managers hoping to attract pension fund money. These portfolio theoreticians advocate a statistically based approach to creating a systematic model for portfolio diversification.

The Old-Fashioned Way

However, even though many banks' mortgage portfolios are troubled, banks have taken few such steps – aside from traditional, seat-of-the-pants diversification by property type and developer. And they don't see much reason to.

"I don't see the value of measuring risk or calculating the likelihood of defaults," said John M. Fulton, senior vice president of real estate at Society National Bank, Cleveland. "In theory it may work, but if we don't feel comfortable with our knowledge and the market we're in, we shouldn't be in business."

Society National lends by property type allocation goals, said Mr. Fulton, and manages the portfolio by increasing lending to areas that fall short of those goals.

It saw total nonperforming loans grow from $203.8 million in the second quarter of 1989 to $212 million in the second quarter of 1990. Society doesn't break out its commercial real estate loans from other commercial loans.

Pension fund managers don't think much of the typical bank's unsystematic approach to portfolio management. "Up till now, any way to manage risk has been considered zippo by banks," said Susan Hudson-Wilson, a vice president at Boston-based Aldrich, Eastman & Waltsch, a pension fund adviser. "They're missing a big way to play."

Diversifying the Portfolio

Real estate – and by extension, mortgages – has two sorts of risk: interest rate and default, says Roger Ibbottson, professor of finance at Yale University.

Banks, he said, routinely use duration theory – the measurement of how long it will take to get half your money back – to hedge their interest rate risk by matching maturities of assets and liabilities. In practice, banks use interest rate swaps and straddles to accomplish this, he said.

Default risk is tougher to manage, and for this reason, real estate executives favor various diversification strategies, including diversification by property type, developer, geography and economy.

Believers say fully diversified portfolios create less volatile and more predictable returns than investment portfolios concentrated in a single region or industry. Such a strategy, say experts, makes the portfolio vulnerable to economic downturns in any of those areas.

Diversifying according to the portfolio's exposure to economic activities is the area most pension funds managers feel is most helpful in avoiding portfolio volatility. They say it will work even for local banks lending on a purely regional level.

"What a bank has to do is very carefully analyze all the sorts of economics within its region, and compare and contrast them," said Ms. Hudson-Wilson. "Every region has enough regional diversity within it to take advantage of diversification."

But experts are working along more esoteric lines, which would be of great value to banks. "It would be of value to use options theory as one way to approach a mortgage portfolio where there's some danger of default," said Fischer Black, the father of options theory and a Goldman, Sachs & Co. partner. "The way to think about it is as a portfolio of options."

Another Option

Sheridan Titman and Walter Torous, professors at UCLA's Anderson Graduate School of Management, published a paper on this subject in the June 1989 issue of "The Journal of Finance."

With this approach, the roles of lender and property owner are reversed for analytical purposes. According to the theory, although the lender merely holds a lien on a property, the lender is really the owner, since it put up the money for the property.

The property owner, in this instance, is actually the holder of an option to continue owning the property – in essence, holder of a series of puts and calls. As long the periodic payments are made, the owner's calls are exercised. But if the value of a property becomes less than the cost of carrying it, the incentive to default, or exercise the put, grows.

Properties can be plugged into this model by employing statistics on debt coverage and loan-to-value ratio. As cash flows fall and values fall relative to the loan, the risk of default can be quantified, experts say.

Each mortgage could then be analyzed for its default risks and priced accordingly. On the portfolio level those risks, expressed in options theory, could be added up to create a risk profile for the entire portfolio.

New mortgages could then be analyzed in terms of how those risk characteristics affect the portfolio, as well as how the mortgage could be designed to fit the portfolio risk targets.

"I would use this model as a benchmark," said coauthor Walter Torous. "Good judgment and experience can't be substituted for with this model. But it would force bankers to think about a model and allows systematic categorization. That would allow them to more effectively utilize their experience and judgement."

This sort of analysis, said Mr. DeLisle, could then be used as another diversification element. "You manage with diversification, and underwrite and quantify it with options theory," he said. "The options help you with the problem of puts, and the quantification helps you manage." □

DEALMAKERS

Safety First Urged for Construction Loans

By ANDREW REINBACH

Ralph Carestio, NCNB National Bank's corporate executive vice president for real estate, tells a story to explain how banks and real estate fell together into today's mess.

"A banker and a developer would sit down together, and the developer's thinking: 'Ralph here sees 500 deals a week; if he thinks I've got a good deal, it must be good.'

"Meanwhile, the banker is thinking: 'George here has been building in this area for twenty years; he's always made money. If I don't lend him the money for it, someone else will.'"

The fable "is a lot closer to the truth than a lot of us would like to believe," Mr. Carestio said.

Ralph Carestio
NCNB National Bank

Bad Results

In the overheated, competitive lending environment of the 1980s, that sort of decision-making process seemed almost unavoidable. But it had bad results.

"We all had a tendency to rely on the track record of a developer and say, 'These guys can pull it off,'" Mr. Carestio said. "But when all was said and done, the numbers tell you what happened."

Bankers will have to abandon that kind of thinking, he said.

He sees an immediate future of "very traditional takeout deals with an insurance company waiting in the wings and where there's no credit or occupancy risk, only construction risk."

$100 Million for IBM

Mr. Carestio, 46, used one of his recent loans to illustrate what he means. It's a $100 million construction loan, which will become a permanent loan at the end of development, for a research-and-development building being built in Austin, Tex., by International Business Machines Corp.

The loan is a traditional drawn-down construction loan with an interest rate that floats about 175 basis points over the NCNB certificate of deposit, which currently offers 7.9% for one year for a $100,000 certificate.

IBM has elected not to swap into a fixed-rate loan – for the time being.

"I expect they'll let it float until they've built out and they like the interest rates available," Mr. Carestio said.

In this case, the IBM lease substitutes for an insurance company mortgage commitment. The building, now about a month into construction, is already leased to IBM for 15 years, with an option for another 25 years. This gives NCNB 10 years of cash flow beyond the cost of the mortgage.

'I Like to Know I'm Being Paid'

"We wanted the lease to be long enough to market the paper," Mr. Carestio said. "We haven't sold it yet, but we probably will."

Loans such as this appeal to him today, he said. "All of us took more entrepreneurial risk in the 1980s than we should have," he said. "These days, I like to know I'm being paid."

"A good real estate lender has got to be a bit cynical and a good poker player," he said. "You need to be detached and analytical. You don't need to be pointing fingers at good guys and bad guys, but you have to be tough-minded." □

BANK ON IT.

The 1991 Banker's Diary and Guide.
A personalized planning tool that not only keeps track of your business activities—it becomes part of them.

Don't start 1991 without your most important business associate. The *1991 Banker's Diary and Guide*.

Impressive. The *Diary and Guide* has been specially prepared by *Banker's Magazine* and Warren, Gorham & Lamont with attention to the smallest detail...a genuine fine-grain leather cover...gilt-edged pages... personalized with the recipient's name, company name, or company logo embossed on the cover in 23-karat gold.

Practical. The *Diary and Guide* will help you organize your business, set appointments, and save time throughout 1991. At a single glance, you can plan for the week at hand, or from month to month.

Intelligent. A uniquely-functional desk reference for bankers, the *Diary and Guide* was designed with your information needs in mind. You'll find important bank reference material—facts, figures, charts, sources, checklists—including:

- Annual compound interest annuity table
- Treasury bill yield computations
- Tax-exempt yields and taxable equivalent yields
- Bond and security glossary
- Income tax rate table
- And much more!

Ideal. As a gift for your clients. Your staff. Or even as a treat for yourself. It's a convenient reference and planning tool to use—and depend on—daily.

The *1991 Banker's Diary and Guide*—plan on it. For more information, call:

INDEX *of top stories*

The following is a selective index, arranged by subject, of the top stories in *American Banker* last week. The date of appearance precedes each item. This column was compiled by Matt Barthel.

COMMENTARY

7/23 A powerful few set the stage for the S&L debacle, writes Paul Nadler. *Page 4*

7/24 The idea that banks should be asked to raise still more equity capital – an idea floated by Fed Chairman Alan Greenspan during recent congressional hearings – has to be considered one of the most palpably absurd notions to come down the pike in recent memory, says Sanford Rose. *Page 1*

7/24 Thrifts have a role to play in the revival of the real estate industry, says Barry J. Zadworny. *Page 4*

7/25 Legislation is needed to give lenders protection from unfair liability under the Superfund law, write Alfred Pollard and Thomas Greco. *Page 4*

7/26 Party squabbles over who is to blame for the savings and loan crisis are only diverting attention from the S&L cleanup, writes William M. Isaac. *Page 4*

7/27 Mortgage securities have fundamental value at current levels of yield spreads to Treasuries, according to Joseph C. Hu. *Page 4*

COMMERCIAL REAL ESTATE

7/23 Donald Trump's crumbling real estate empire will be examined Aug. 9 at a hearing called by House Banking Committee Chairman Henry B. Gonzalez, who said aggressive oversight is needed now to ensure that banks do not go the way of the thrift industry. *Page 2*

7/24 Swapping distressed junk bonds for some of the issuer's real estate is a new technique that has caught the eye of some banks looking to capitalize on the weaknesses of high-yield bond issuers. *Page 10*

COMMUNITY RELATIONS

7/23 Is the requirement that banks provide credit to poor communities headed for a collision with tougher regulatory exams? *Page 1*

COMPETITION / BANK

7/27 Moving to lift the remaining geographic restrictions on U.S. banks and speed the industry's consolidation, two key legislators introduced bills to allow full interstate banking and branching by 1994. *Page 1*

7/27 Having spent decades expanding their overseas operations, America's big banks are heading into the 1990s dismantling them. *Page 1*

7/27 Japanese banks in the U.S. are shifting gears to emphasize earnings from businesses whose assets are not related. Meanwhile, most U.S. banks in Japan are treading water in a choppy sea. *Page 14*

COMPETITION / NONBANK

7/26 Firewalls, the regulations that are meant to insulate banks from the problems of their nonbank affiliates, may not be necessary after all. *Page 1*

CONSUMER SERVICES

7/23 In the search for lucrative markets, more banks are aggressively pursuing the personal accounts of top executives and professionals. *Page 6*

7/24 Bank of Hawaii gives its customers the benefit of the doubt. Anyone with a checking account in "satisfactory" order is considered qualified to carry the bank's debit card. *Page 8*

7/25 Another battle over insurance powers for commercial banks is shaping up – this time in Pennsylvania. *Page 8*

7/26 Mutual funds are far more profitable for a bank than certificates of deposit, according to a study by a Boston-based consulting firm. *Page 8*

7/27 A construction loan controls system is being touted as a boon for newly cautious lenders. *Page 8*

DEPOSIT INSURANCE

7/25 Sunday morning interview programs – and the media in general – are confronting what could be a most damaging issue to bankers: the health of the Federal Deposit Insurance Corp. *Page 1*

EARNINGS

7/23 CalFed Inc. became the second California thrift in three days to report a large loss stemming from problem commercial realty loans, heightening concerns that the state's real estate market is headed for trouble. *Page 1*

7/26 The 2,505 savings institutions that remain operating in the private sector lost $271 million in the first three months of 1990, the Office of Thrift Supervision reported. *Page 1*

7/27 Norwest Corp. said that it had agreed to acquire United Banks of Colorado Inc. in a stock swap valued at about $440 million. *Page 1*

7/27 Bank of Boston Corp. announced that its second-quarter profits plummeted 96% from the year-earlier level to $4 million. *Page 2*

FINANCE

7/23 RJR Nabisco's bank group reoffered at least $1.4 billion of the new $2.25 billion credit to the secondary market, indicating that the big banks would like to lay off much of the new loan. *Page 14*

7/24 In a setback to the Bank of New England's efforts to raise much-needed capital, Fleet/-Norstar Financial Group said it had withdrawn from negotiations to purchase the company's Maine National Bank unit. *Page 1*

7/24 Major bank and thrift stocks retreated sharply as the Dow Jones industrial average plummeted over 100 points before closing down 56.44 points. *Page 1*

7/24 Westpac Banking Corp. and First National Bank of Chicago committed $1 billion to finance an unsolicited $27-a-share offer by Kansas City Power & Light Co. for Kansas Gas and Electric Co. *Page 22*

7/25 Insiders at Valley National Corp. apparently believe the sun is about to shine again on the Phoenix bank. Top officials there spent $700,000 to buy a large number of its shares in recent months, coinciding with a rise in the company's stock

Ex-Noriega Banker Guilty In Money Laundering Plot

By TOM LEANDER

Amjad Awan, the former assistant director in Miami of the Latin American division of Bank of Credit and Commerce International and a former personal banker to Manuel Noriega, was convicted Sunday of a scheme to launder $32 million in drug profits.

Mr. Awan, who worked for BCCI in Miami, once served as personal banker for the ousted Panamanian leader. Mr. Awan was convicted of conspiracy and 14 counts of money laundering.

Five others were also convicted in the case, including Mr. Awan's former lawyer John Hume, who said Sunday he will file an appeal.

Through its London office, BCCI released a statement Sunday saying, "BCCI is sympathetic to the families if its former employees. It is important to note that the evidence presented in the trial by the U.S. government established conclusively that the offenses charged were contrary to the expressed written policies of BCCI."

The bank's statement also noted that the government introduced evidence in the seven-month trial that the money laundering transactions were not known to BCCI's senior management or to its board of directors.

BCCI Subsidiaries Pleaded Guilty

Two BCCI subsidiaries pleaded guilty to money laundering charges in January and forfeited $15 million to the government, the largest penalty ever assessed against a bank.

The conspiracy charge carries a maximum penalty of five years in prison, and each money laundering count carries a maximum penalty of 20 years in prison. Mark Jackowski, the assistant U.S. attorney who prosecuted the case, said it is likely each defendant will spend at least 10 years in prison. All six defendants were taken to the Hillsborough County Jail to await sentencing.

The bankers were arrested Oct. 6, 1988, at a bogus bachelor party staged by the U.S. Customs service to lure the bankers to Tampa. They were accused in a $32 million money laundering scheme staged by customs agents during a two-year sting operation.

... by country

PERU

Peru's new president, Alberto Fujimori, announced over the weekend a bank holiday for Monday and today but said savers need not be alarmed.

"Rest assured that this will not affect savings in any way," said Mr. Fujimori, who was inaugurated on Saturday.

He said economy minister Juan Carlos Hurtado Miller would make the government's first major economic announcements sometime this week. Bankers and businessmen have expected Mr. Hurtado Miller to announce a big devaluation of the currency and a rise in oil prices. — **Reuters**

SWEDEN

Manufacturers Hanover Corp. said it would close its Swedish subsidiary, Manufacturers Hanover Bank Sverige, in Stockholm.

"The implementation of this action, which is in line with the recently announced strategic redirection and restructuring program of [our] wholesale global businesses, will take place over several months," Manufacturers Hanover said in a statement. — **Reuters**

SPAIN

Spain's largest banking group, **Banco Bilbao Vizcaya,** announced first-half net profits of $487 million, up 12.9% from the period last year. The bank's results were affected by government-imposed credit ceilings and a tax clampdown on onepayment life policies. But the bank said that restructuring in the first half meant growth would not be affected by such factors.

Margins had also been squeezed by the introduction of the high-interest accounts known as *supercuentas*, part of a bank war going on in Spain.

Meanwhile, **Banco Central,** Spain's No. 2 bank, reported that pretax profits rose by 18%, to $277 million, in the first half. Banco Central is one of the few banks that has not introduced *supercuentas*. — **EMMA**

SOVIET UNION

The time is right for the Soviet Union to join the International Monetary Fund, Foreign Minister Eduard Shevardnadze said Saturday.

"Our country regards its membership in the IMF as a logical continuation of its policy of wider involvement in global economic cooperation," Mr. Shevardnadze told IMF Managing Director Michel Camdessus, according to Tass, the official Soviet news agency.

Mr. Shevardnadze said the absence of the Soviet Union "undermines the universal character of this organization."

He told Mr. Camdessus that Moscow had considered joining as long ago as 1945, and had ignored warnings that remaining outside the agency would isolate the country.

Mr. Camdessus responded positively to Mr. Shevardnadze's proposal for talks, Tass said. — **Reuters**

Tokai Building U.S. Swap Team

Adds Clout by Hiring a Top Trader from Chemical

By JAMES R. KRAUS

NEW YORK — In a bid to strengthen its corporate finance and treasury management operations, Tokai Bank Ltd.'s New York branch has hired John Shane from Chemical Banking Corp. as vice president in charge of the bank's swap team.

Mr. Shane, 30, was cohead since 1987 of Chemical Bank's trading desk for pricing and hedging U.S. dollar interest rates. He was recruited by Tokai in Tokyo, where from April to July he helped set up Chemical Bank's options operation.

Further Growth Planned

Eiichi Kimata, general manager of the New York branch, said Tokai was planning to add another two or three swap experts to the 12 in place.

"Lending is getting more complicated and needs to be supported [with swaps]. In order to develop our business, we need to build up our activity in derivatives," Mr. Kimata said.

Mr. Shane is only the latest of several senior executives recruited by Tokai from other banks. Earlier this year, the bank

> **"We're moving from being a user of swaps to being a provider."**
>
> **Roger Livesy**
> *Tokai International*

hired Joseph Geraghty from Swiss Bank Corp. to oversee corporate finance and William Bernstein from Drexel Burnham Lambert to head public finance.

Source of Profits

Like other Japanese banks, Tokai is turning to swaps and other so-called "derivative" products in an effort to strengthen profits.

Swaps permit a borrower to exchange either the currency or interest rate paid on a loan or bond for another currency or interest rate.

Swaps were first used around 10 years ago but have grown increasingly widespread as borrowers have turned to capital markets around the world for the cheapest funding.

The bank's London securities unit, Tokai International Ltd., is also planning to strengthen its activities in derivatives.

In a major catch, Tokai International said last week that it had hired Kaveh Alamouti, former vice chairman at Salomon Brothers Inc. in London, to head various Tokai operations.

Roger Livesy, deputy manager of Tokai International in London, said that he planned to recruit more professionals, but he declined to say how many.

"We're moving from being a user of swaps to being a provider," Mr. Livesy said.

"We will have a heavyweight team in place over the next few months," he added. □

Earnings Strong at 2 Top German Banks

By JAMES R. KRAUS

Buoyant economic growth in West Germany has bolstered first-half operating earnings at two of the largest West German banks.

Dresdner Bank AG, West Germany's second-largest bank, with $145.6 billion in assets, reported Monday that pretax first-half group operating profits rose 8.9% to $586 million.

On Friday, Commerzbank AG, the country's third-largest bank, with $113 billion in assets, announced a 17.5% rise in partial group operating profits, to $373.6 million.

"Partial" operating profits exclude profits and losses in trading for the banks' own accounts and provisions for loan losses.

Further Gains Expected

The two banks said they expect to post improved earnings for the remainder of the year.

To keep pace with growing business, Commerzbank increased its capital by $64 million, to $4 billion.

Dresdner does not plan to increase its capital; because the bank's existing shareholder equity will let it increase business 25% in the next two years, said Dresdner's chairman, Wolfgang Roeller.

"These banks are in such good shape, it's almost embarrassing. The basic message the results send out is one of solid growth that is likely to continue for the whole of the year," said Rodney S. Schwartz, a director with Lehman Brothers International in London.

Sources of Improvement

Analysts attributed the rise in earnings at both banks to increased lending, higher commissions, and greater cost control.

Group net commission earnings rose 10.6% and net interest and dividend income 10.9% at Commerzbank, while general operating expenses rose only 4.9%. Dresdner bank did not break down its results.

Despite the optimistic outlook for both banks, analysts said that interest income at West German banks is coming under pressure as interest rates rise.

Possible Pressure on Spreads

"If interest rates continue to rise, spreads will come under pressure and writedowns on securities [held by the banks] could be quite heavy," said Alison Homer, a director with IBCA Ltd. in London.

"Demand for loans is quite strong but results [for 1990] will be adversely affected by the rise in interest rates," Mr. Schwartz said.

West German interest rates have been rising steadily in response to greater demand for credit. This, in turn, has contributed to a weakness in the value of securities already traded.

As so-called "universal banks," Dresdner and Commerzbank trade in as well as underwrite securities. □

Diet of Reform Thinned S&L Ranks, But Superstars Thrive

Continued from page 1

tutions.

Partly because of the thrift rescue law and partly because of the financial crisis that led to its enactment, a number of forces have battered the thrift industry:

• Restrictions on lending and investment activities have caused thrifts to shed enormous quantities of assets, including real estate investments and risky commercial loans. More than $14 billion of junk bonds ultimately will be unloaded.

• Higher capital standards have constrained loan growth at thrifts. In many cases, institutions have been forced to shrink. The thrift law further spurred industry contraction by providing funds to close 207 institutions. Most of their deposits wound up in commercial banks.

• Deposit insurance is much more expensive. And thrifts get less dividend income from the stock of the 12 district Federal Home Loan banks, which were forced to help pay for thrift closings. Both factors have crimped thrift profits.

• Capital formation has slowed dramatically. According to Securities Data Co., only $1.8 billion of debt and equity was sold in public markets by thrifts during the first half of 1990. That is a whopping 64% decline from the $4.9 billion of financing sold during the same period in 1989.

• Banks are invading thrift industry turf. U.S. banks are snapping up the majority of failed thrifts sold by the Resolution Trust Corp. And according to the U.S. Department of Housing and Urban Development, banks now regularly outpace thrifts in mortgage originations.

On the brighter side, the RTC rescues have helped bring down deposit interest rates in a number of markets, widening lending margins.

Changes in Texas, California

But overall, the thrift reform law has diminished the competitive prowess of the U.S. thrift industry. "It has been very considerably reduced," said Henry Peltz, a thrift analyst with Keefe, Bruyette & Woods Inc.

Nowhere are the thrift rescue's effects more evident than in Texas and California, two of the nation's largest lending markets.

In Texas, surviving thrifts and many of those rescued under the Southwest Plan are reeling from new capital requirements and lending restrictions. They are abandoning growth plans and instead are looking for ways to shrink.

Banks Jump at Opportunity

"No capital is available, other than in federally assisted transactions, so a lot of institutions are downsizing," said Tom King, president of the Texas Savings and Loan League.

In response, banks are roaring into Texas thrift territory. Over the past year, banks have snapped up 19 Texas savings and loans sold by the RTC. In one instance, Bank One Texas gained $2.7 billion of deposits and tripled the number of branches it operates in the Dallas-Fort Worth area when it bought the failed Bright Banc Savings Association.

At the same time, big Texas banks are carving out chunks of the state's mortgage lending market. NCNB Texas National Bank, for example, more than quadrupled its volume of mortgage originations in 1989.

Big Thrifts Expanding

"We are deploying resources into a market that the savings and loans are exiting," said Timothy Hartman, chairman of NCNB Texas, in a recent interview.

The only big thrifts expanding in Texas are the most solidly capitalized institutions created under the Southwest Plan, including First Gibraltar Bank and United Savings Association. Roughly six dozen failing thrifts still are awaiting rescue.

In California, which holds almost a third of the nation's thrift assets, the industry has steadily lost ground since passage of the thrift reform law.

Deposits Slip

During the year that ended last Dec. 31, the number of California thrifts fell from 193 to 179. Total assets fell 6.5%, to $369.6 billion.

Since then, the RTC has sold or liquidated 19 thrifts. Fifteen others are under RTC control. Awaiting resolution are major institutions such as the $9.6 billion-asset Imperial Savings Association and the $4.7 billion-asset Santa Barbara Savings & Loan Association.

From June 1989 to June 1990, total thrift deposits in the Golden State slipped from $274.3 billion to $264.6 billion. Deposit market share dropped 3.6 percentage points, to 52.1%, according to the Federal Reserve Bank of San Francisco.

Those figures do not include recent thrift takeovers by banks. In addition to the $6.4 billion of deposits and 130 branches that Wells is buying from the ailing Great American Bank, San Diego, Security Pacific Corp. acquired $5 billion of deposits and 83 branches from the failed Gibraltar Savings of Simi Valley, Calif.

At the same time, California banks are pushing into the state's mortgage lending market. Bank of America, First Interstate Bancorp, Security Pacific and Wells Fargo have expanded their mortgage portfolios at double-digit rates over the past year — Wells alone increased its originations by 52%.

The thrift rescue law — the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 — "was a massive change for us," said Scott A. McAfee, residential real-estate manager for Security Pacific National Bank. "With the new capital rules, banks were put on an equal footing with thrifts. Mortgages are now a business banks can compete in."

Superstars Thrive

Still, California has a number of successful thrifts capable of going toe to toe with any bank in the state.

These superstars include Home Savings of America, Great Western Bank, and First Nationwide Bank. The giant thrifts are well capitalized and profitable. And they remain among the state's leaders in mortgage originations.

But the thrift reform law has affected even these healthy institutions. They are paying higher premiums for deposit insurance. And they have seen dividends on Home Loan Bank stock decline.

"Our earnings would be better were it not for the higher premiums and dividend reductions," said Herb Sandler, cochief executive of Golden West Financial Corp., Oakland.

A Lone Survivor

In other markets, the passage of the thrift reform law hastened a virtual industry extinction.

In Arizona, all but one of the big thrifts has been seized by the government. And observers say the lone survivor, a subsidiary of Great Western Savings Bank, probably will meet the same fate.

Together holding more than $20 billion of assets, the Arizona thrifts "have been blown off the landscape," said a Phoenix investment banker, Robert W. Stallings.

Most of the failed Arizona thrifts will be absorbed by banks, experts predict. Already, Bank of America Corp. has acquired the 62-branch franchise of Western Savings & Loan Association, Phoenix.

If there is one category of thrifts that has fared best under the reform law, it is the institutions that never strayed from traditional mortgage lending and which managed to generate earnings and substantial capital in the process.

In Oklahoma City, for example, Local American Bank already has 73% of its loans tied up in mortgages and is reporting steady profits.

"We are a traditional savings company," said its chief executive officer, Edward Townsend. "The thrift law's impact on our business has been transparent."

But the majority of the nation's thrifts are still struggling to conform with the law.

In New Orleans, for example, Oak Tree Savings Bank fell out of compliance with capital standards four weeks ago. Because of the reform law, Oak Tree no longer could count a portion of its subsidiary investments as capital. So the thrift is selling at least 11 real estate units that together employ 4,500 people.

"They hung a 'For Sale' sign around my neck and put a gun to my head," said Jerry Barton, chairman of Oak Tree.

The law demands high portfolio concentrations of mortgage assets. And the risk-based capital standards agreed upon by international banking authorities have put additional pressure on thrifts to focus on mortgage loans.

"We're going to concentrate on residential lending because of the capital requirements," said Ray Martin, chairman and chief executive of Los Angeles-based Coast Savings Financial.

In hundreds of other cases, however, thrifts will never get to the point of revising lending strategies. They cannot meet the higher capital standards imposed by the reform law and are in danger of failing.

In Atlanta, for example, Fulton Federal raised $85 million of financing from public markets in the spring of 1989 but hasn't raised a penny since the reform law was passed.

'For Us . . . a Disaster'

In obeying the law's demand to write off goodwill, which was counted as capital, Fulton Federal fell out of compliance with the law's higher capital standards. Now the thrift is helpless to fend off federal takeover.

"The capital markets are no longer open to thrifts in our situation," said spokesman James Wallace. "For us, the thrift law has been a disaster." □

Fed Fights to Preserve Key Doctrine

Continued from page 2

of-strength doctrine is of limited importance to the Fed since adoption of the cross-guarantee provisions of the 1989 thrift-bailout legislation.

Mark A. Weiss, a partner in the Washington law firm of Covington & Burling, said those provisions allow the Federal Deposit Insurance Corp. to assess healthy bank subsidiaries of a bank holding company for the bailout costs of its failed bank subsidiaries.

Most assets of a holding company are derived from the assets of its banking subsidiaries, Mr. Weiss pointed out, meaning that these assets are already available to shore up weak subsidiaries. The only power Federal regulators gain from the source-of-strength doctrine is the ability to draw on assets of nonbank subs to bolster weak subsidiaries, Mr. Weiss said.

The Fed claims the appeals court panel made its decision on the basis of inadequate information. The board said the panel decided that enforcing the source-of-strength doctrine would "waste" the holding company's assets, fail to account for the company's separate corporate status, and destroy shareholder rights.

The Fed claims the appeals court had misinterpreted data on the amount of assets the bank holding company had to transfer to shore up its subsidiaries.

Jurisdictional Questions

The Fed claims the Appeals Court overstepped its jurisdiction in invalidating the source-of-strength doctrine, since the lower court had only enjoined the Fed from invoking the doctrine while MCorp was in bankruptcy proceedings.

The Fed also contests the court's jurisdiction, arguing that it had not yet issued a final administrative decision but merely a complaint against MCorp.

Howard W. Coyne – a partner in Arnold & Porter, which represents MCorp – said the appeals panel was right to strip the Fed of its source-of-strength doctrine. Mr. Coyne pointed out that Congress expressly denied this power to the Fed in the 1989 thrift-bailout law, and the courts should not grant what Congress has withheld.

In its motion, however, the Fed cited the bailout legislation as upholding its source-of-strength doctrine. □

Will Congress Let Banks Hike Checking Deposit Fees?

Continued from page 1

say, two-to-three-year monies.

After calculating the appropriate earnings credit, the bank determines overall profitability by of course adding fees and subtracting the costs of account administration. Whether the resulting number is positive or negative depends to a considerable degree on the average size of balances.

The noninterest costs of administering checking accounts are essentially fixed. Customers with high-balance accounts don't generally write more checks than those with low balances. They just write larger ones. Therefore, profitability tends to vary directly with account size.

But average balance size is often so low that banks cannot cover their handling costs. Booz-Allen & Hamilton found that, at a more or less typical Southeast regional institution, average balance size was only about $500.

Since the transfer rate on this account – averaged over a five-year period to offset the effect of sharp interest rate changes, either up or down – amounted to 9%, the average credit self-evidently totaled $45. But the full noninterest expenses of administration amounted to around $200 – again a typical figure.

> **"Small balance sizes condemn banks to losses on consumer checking."**

Losing 3%

Thus, an earnings gap of $155 had to bridged with fees. Those actually levied by this bank raised the gross margin – earnings credit plus fees – to approximately $185. So the bank still ended up losing about $15 per account, which worked out to some 3% of deposit liabilities.

This loss, it turned out, was higher than on any other deposit product, from CDs to IRAs, while just about breaking even on money-fund and brokerage and statement savings. About the only consumer account it managed to make reasonable money on was passbook savings.)

While the bank knew that it wasn't getting rich on basic checking, it nonetheless entertained the illusion that, at the very least, it was breaking even. Of course its branch managers felt that they were making a lot of money because direct branch costs per account – basically teller and platform expenses – were only about $95.

Adding in other direct costs – e.g., advertising, check processing, and statement generation – raised expenses to some $155. Thus inclusive of all direct costs, the account was profitable, to the tune of $30.

Killed by the Indirect

What made it unprofitable were the indirect costs, which the institution characteristically underestimated. These, Booz-Allen discovered, totaled about $45, including about $20 for regional branch administration and another $25 for corporate overhead – e.g., auditors and the costs of covering the salaries of those in the chairman's office.

> **"Because of low average balance size and inadequate fees, banks may be losing between 3 and 4 cents per dollar on consumer checking accounts."**

In order to at least break even on consumer demand deposits, the bank will have to take in about $1.5 in additional fees. Considering that its fee structure is already somewhat elevated, this may prove a rather formidable task.

Other banks are in a similar fix. Although some have average balance levels considerably higher than $500, they may still be losing money. For example, at one New York institution with a fair-sized branch network, the average balance size is $1,000; but the bank's earnings come to a *negative* 3.8% of liabilities, reports Booz-Allen.

An Anemic Fee Level

The amount of the earnings credit on the account is of course higher at this bank than at the Southeast regional, but so are expenses, totaling about $215. The bank's basic problem is a very low level of fees, stemming in all likelihood from an imperfect analysis of costs.

Whether the bank can raise its fees sufficiently is problematic. It depends on whether its larger New York competitors, some of which are also losing money on basic checking, understand their plight.

And it also depends quite crucially on whether Congress will countenance the rather hefty fee hikes that will be required in virtually every city – money-center and nonmoney-center – in order to cover fully loaded costs and also provide banks with acceptable profits on basic consumer checking accounts. □

Hundreds of cases involving the Uniform Commercial Code are decided in the courts *every month*! Keeping up with on-going litigation requires hundreds of hours work...unless you have Quinn's monthly Uniform Commercial Code Law Letter at hand.

Each month, Uniform Commercial Code Law Letter reviews the state and federal cases with the greatest impact and the most far-reaching changes, covering all the important elements of each case. Giving you the information you–or your clients–need to stay on top of changing UCC law, the Letter's comprehensive coverage includes:

- Analysis of the major points in each case, with clear definitions of positions and arguments of both sides
- Discussion of the factors that went into the decision and how it fits within the UCC framework
- Precise, practical commentary on a decision's impact on business governed by the Code and how you can adapt.

Written by Thomas M. Quinn, a nationally recognized authority on the UCC who is often cited in court opinion, Uniform Commercial Code Law Letter also contains a "Consumer Credit Report," which keeps you up-to-date on such critical issues as:

- Truth in Lending
- Fair Credit Billing Act
- Electronic Funds Transfer Act
- FTC Credit Practice Rules
- Fair Debt Collection Practices Act

With a subscription to Uniform Commercial Code Law Letter, you'll get monthly advice from a UCC expert who will give you jargon-free analysis, useful planning guidance, and help you and your clients stay in compliance with the UCC. And you'll save a lot of valuable time. Subscribe now.

Iowa Bank Buys Back Shares

DES MOINES — Banks of Iowa Inc. said it has completed the previously announced repurchase of its Class B shares owned by First Bank System Inc., Minneapolis. The repurchase followed the June 21 termination of an agreement for First Bank System to acquire Banks of Iowa pursuant to changes in interstate banking laws.

Executive Help Wanted

Debit Product Managers

Visa U.S.A. is seeking banking professionals to lead the continued development of Visa Debit Card and ATM/Direct Debit POS products and services.

Technology and innovation have made Visa the largest, most widely recognized financial payments systems in the world. We do more than enhance existing products and services. We focus on new opportunities as well.

You'll not only manage existing products, you'll contribute to the implementation of new programs and services. Your priorities will include analyzing their feasibility and profitability, developing product marketing materials, participating in marketing support activities, establishing product management tracking/reporting requirements, interfacing with operational and systems areas, and overseeing product plans.

Product management positions are now available.

Visa Debit Card ATM/Direct Debit POS

Qualifications include 5+ years' experience in financial services with recent experience in product management. For Visa Debit Card, knowledge of retail bank operations and transaction-based products is highly desirable. For ATM/Direct Debit POS, background in EFT/ATM products and services is needed. Excellent communication skills, both verbal and written, are essential, along with marketing support and project management skills.

VISA offers an excellent compensation package including comprehensive benefits. For immediate consideration, please send your resume to: VISA U.S.A., Dept. CR/7/24/AB, P.O. Box 8999, San Francisco, CA 94128. For other VISA opportunities, please call our JOB INFORMATION LINE (415) 578-8299. We are an equal opportunity employer.

VISA

We're everywhere you want to be.

Loan Quality Separated Winners from Losers in Quarter

Continued from page 1

forming loans and weak wholesale banking fees.

Profits fell from the year-earlier period at seven of the 10 largest U.S. banks. But it was loan quality – not consumer earnings, which can be skewed by one-time charges and gains – that truly separated the winners from the losers.

Only a few banks managed to pare their nonperforming or performing loans or to shelter themselves against future surprises by buoying their reserves.

Nowhere was victory more apparent, analysts said, than at BankAmerica Corp., which at the end of the quarter climbed past Chase Manhattan Corp. to become the second-largest bank company in the nation. The San Francisco-based bank actually pared its portfolio of nonaccrual loans to $3.1 billion at the end of the second quarter from $4 billion at the end of the first.

While charging off $580 million of nonperforming loans, BankAmerica also managed to add $210 million to its reserve against possible losses and still report $267 million of earnings. That was down 10% from the year-earlier period, but excluding a special gain recorded last year from payments on some Brazilian debt that had been on nonaccrual status, the bank's profit increased 2.6% year.

"At BofA we saw solid fundamentals from top to bottom," said Brent Erensel, a Donaldson, Lufkin & Jenrette Inc. analyst.

Morgan Misses Pitfalls

Another winner was J.P. Morgan & Co., which appears to have avoided most of the real estate and highly leveraged loan traps that snared many banks.

Morgan's nonaccrual loans fell 19% from the end of the first quarter to $876 million, largely through chargeoffs, sales, and swaps of Third World debt. Excluding loans to Third World countries, the nation's fifth-largest bank company's nonperforming portfolio to $147 million from $154 million during the quarter.

On the reverse side, Morgan showed strength by reporting the second quarter in a row and rebounded somewhat from its first-quarter setback in the revenues derived from corporate finance. Morgan's $207 million of earnings, buoyed by $234 million from trading, was virtually unchanged from the $206 million it earned a year ago.

Trading profits and a conservative approach to recognizing credit problems also were the profits for Bankers Trust New York Corp. Bankers' gains in trading bonds, currencies, and swaps were $243 million, up $50 million from the first quarter and down just $29 million from the company's sunning trading gains in the first quarter.

Sizable Chargeoff on LDC Loans

Bankers Trust charged off a sizable $157 million of loans – all but $28 million to Third World nations – and recognized $179 million of nonrefinancing country loans as nonperforming. Its reserves of $415 million for loans exceeding Third World borrowers covers 2.4% of all such loans.

"It looked like a fairly typical BT quarter – good market-sensitive revenue coupled with maintenance of excellent asset quality credentials, at least relatively speaking," said James McDermott, an analyst at Keefe, Bruyette & Woods Inc.

Ironically, both Morgan and Bankers Trust – major rivals in wholesale and investment banking – won praise for flexing their muscles in trading, an area once derided by analysts as too volatile to offer comfort to investors. In the current environment, it seems, such concerns are fading.

Meanwhile, giants such as Citicorp and Chase continued to disappoint many investors.

Frustration at Citicorp

Nowhere was frustration more deeply expressed than at Citicorp, where internal expenses soared 15%, credit quality sharply deteriorated, and reserve coverage continued at levels deemed minimal by most analysts. The only big revenue gains were seen in the vaunted consumer bank, which rose 17% from the year-earlier quarter to $266 million. Overall, Citicorp reported net income of $248 million, down 37.2%.

The nation's largest bank company added $904 million to its $4.9 billion portfolio of nonperforming assets, numbers that exclude loans to lesser-developed countries. (Nonperforming Third World assets dropped $652 million because of the 20% writeoff of Brazilian loans mandated for all banks by regulators.)

Real estate loans made up 30% of Citicorp's total loans in nonperformers, and Citicorp executives – like several of their counterparts – at least relatively speaking," said James McDermott, an analyst at Keefe, Bruyette & Woods Inc.

Data Sources: Mid-year 1990 earnings releases from the nation's top banking companies. Net income is income after taxes and minority interest, but before preferred dividends, extraordinary items, and other significant transactions. Data also excluded is income from discontinued operations. Unless otherwise noted, net income for the second quarter of 1990 and 1990 are as reported in 1990. Total assets for March 31, are as reported in the first quarter 1990 earnings releases. Net income for the first quarter of 1990 may differ from previously reported figures because of restatements. *The credit was $50 million for the second quarter of 1990 and $60 million for the second quarter of 1989. (P)—Excludes $74 million gain on the sale of its consumer finance company subsidiary. (P)— Merger expected to be completed Aug. 31. The pro forma numbers for Citicorp and Avantor Financial Corp., were changed earlier this month.

Compiled by American Banker, Copyright 1990.

New York USO Elects Chemical Bank Officer

NEW YORK - Oliver M. Mendell, senior vice president of Chemical Bank, New York, has been elected president of USO of Metropolitan New York.

USO operates three New York-area centers, two at the JFK International Airport and one in the Times Square. USO, founded in 1941 to promote the well-being of the armed forces, is a nonprofit, nongovernmental organization supported entirely by private donations.

Mr. Mendell also serves on the USO World Board of Governors in Washington. □

Chase's reserve coverage for non-LDC nonperformers is also deemed relatively weak by most analysts at 46%.

NCNC Profit Up 50.2%

NCNB Corp., one of three superregionals to penetrate the ranks of the 10 largest U.S. banks, outperformed its competitors with a 50.2% earnings gain in the second quarter, largely because it recognized $60 million of earnings from its loss-protected Texas subsidiary.

Although loans and income grew, the North Carolina giant also suffered credit quality problems. Nonperforming assets climbed 16% from March 31 to $692 million, or 1.94% of all loans and leases, which virtually grew 19% to $64 million. NCNB, however, added $85 million to its reserves, bringing them to a strong 94.8% of nonperforming loans and 76% of nonperforming assets.

In a prospectus dated last week for a note offering, NCNB said it expects credit problems to continue throughout the year because of a slowdown in the economy and real estate markets in the Carolinas and Florida as well as increased scrutiny from regulators.

Security Pacific Corp. also saw nonperforming assets, which primarily include loans and foreclosed real estate, climb $170 million – or 13.8% – to 1.98% of all assets. The bulk of its problems were related to some leveraged buyout borrowers in London and Australia, though Arizona real estate continued to plague the nation's fourth-largest bank company.

Nonperformers Seen Rising

While analysts continued to be impressed with the Los Angeles-based bank's expense controls and rise in fee and nonfee income, they predicted that nonperforming loans would continue to expand.

Predictability, in fact, is one of two positives that kept the bank stocks from tumbles after results were reported. The other, say analysts, is that share prices have been depressed to a point where it pays to buy the stocks to take advantage of dividend yields.

"The fundamentals remain ugly in the current environment," said Mr. Ernsel of Donaldson Lufkin, "but the valuations currently reflect this. With particular regard to dividend yield, these stocks have never sold this inexpensively." □

Continued from *page 1*

in attendance, according to banking sources familiar with the proceedings.

Chase declined to comment on whether it also withdrew from the bank group. Chase and Citibank led the abortive $6.79 billion UAL stock deal halted last October when they could not obtain sufficient bank financing.

A Concern of All the Banks

All five banks have been concerned, to varying degrees, about the lack of equity in the proposed union buyout, which would require about $4 billion in bank financing.

In the current environment for highly leveraged transactions, banking for an equity component of 40% or more is recent history.

In the case of UAL, banks – at the least – want a layer of financing that is subordinate to the bank debt, sharing the risk with other financing sources.

Investors Sought

The buyout group, led by former Chrysler Corp. vice chairman Gerald Greenwald,* has asked UAL's airframe and engine suppliers, including Boeing Co. and General Electric Co., to invest in the buyout. The group has also discussed sale/leaseback financing with Guinness Peat Aviation and others.

A spokesman for the group confirmed a quote by Mr. Greenwald printed Monday in *The Wall Street Journal*, saying that the group is close to an agreement with the suppliers on some of the necessary financing.

The spokesman refused to comment on the amount of financing, or what form it would take.

Chemical would rejoin the financing effort if the buyout group obtains an outside equity investor, sources said. However, it is unclear whether Chemical would be satisfied with outside financing unless it takes the form of equity.

Chemical decided to pull out because it did not want to be portrayed as supporting a deal lacking an equity component, a banking industry source said.

The five banks agreed earlier this month to lead the financing effort, although no commitments were made and no fees were received.

Indeed, at least some of the banks were uncomfortable with public disclosure of their role, stressing that there was, in fact, no deal yet.

The buyout group has a little over a week left to obtain financing. It may have to seek an extension of the Aug. 9 deadline from UAL's board of directors.

So far, however, the buyout group has not requested an extension, although it is widely expected that the board would grant one. □

ABA Panel Calls For Deficit Plan

By ROBERT TRIGAUX

WASHINGTON — Economists from 12 major banks said that new surges in federal borrowing because of cash demands of the Resolution Trust Corp. make it more urgent than ever that the Bush administration and Congress reach early agreement on a credible program for reducing the federal deficit.

Without such an agreement, long-term interest rates will increase and the economy will flounder, said the economic advisory committee of the American Bankers Association.

Growth Expected in '91

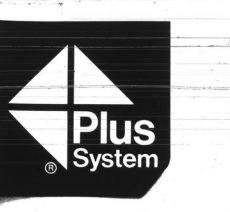
In its semiannual economic review, the committee said growth will remain limited this year but rise in 1991. The group forecast gross national product increases of 1.5% for 1990 and 2.4% in 1991 on a fourth-quarter-to-fourth-quarter basis.

Seeing little likelihood of short-term interest rates easing anytime soon, the committee said the Federal Reserve would remain adamant in pursuing a lower inflation goal but would find it difficult to push inflation below 4%.

'Not a Credit Crunch'

The group also noted the banking industry's caution about commercial real estate lending and whether concerns about credit quality are affecting lending to small and mid-sized businesses. It concluded that lending standards have been tightened primarily due to worry over the slower economy.

"It is credit caution, not a credit crunch," said the panel's chairwoman, Kathleen B. Cooper, chief economist at Security Pacific National Bank, Los Angeles. □



ADD PLUS* TO YOUR CIRRUS* ATMs AND GET AN EXTRA 150 MILLION

Soon **Cirrus*** members will be able to cash in on **Plus System*** customers. Adding the revenue potential of over 150 million **Plus*** cardholders.

So, by adding the **Plus** logo to your ATMs, you will start attracting customers who used to pass you by!

For information, please contact Ron Reed, vice president and general manager, at 303-620-7318. And make the most of your ATMs.

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 75 largest publicly traded thrifts as measured by the market value of all common shares outstanding. (As of March 31, 1990, the market value cutoff for banks was $69.6 mil. and for thrifts $121.45 mil.) **52 Wk Hi Lo:** The moving 52-week high and low prices for the stock. **PE:** Price-earnings ratio. It is the current stock price divided by the trailing four-quarter earnings per share adjusted for stock dividends and earnings. **Mkt. to bk:** Book value of the current day's closing price to the stock's book value per share. Book value per share is the net worth as adjusted for preferred earnings and dividends. **Chg.:** The price at which the stock last traded. If no trades for the day, the bid price is listed. **Chg.:** The change in the closing price from the previous day. Data is based on market value and the top 50 thrifts in market value, respectively. Highlights are largest percentage increases in price; and losses are indicators most shares traded and today's volume as a percentage of average. Based on last 65 trading days.

Data sources: SNL SECURITIES, Charlottesville, VA, 804-977-1600, produced the tables. Financial News Network, Vienna, VA, provides SNL with the daily prices.

Citizens Bancorp	3.99	43,510	173,600

Table described: From the bank and thrift stocks listed above, the five institutions with the largest price gains (**PRICE GAINERS**), price losses, and the five with largest increases in the average volume for the previous week are identified. The percentage change calculated by dividing last week's close by the previous week's close. (**V**)= The multiple of last week's trading volume to the average weekly volume over the previous 13 months.

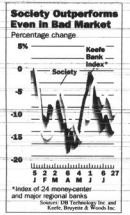
Ohio's Society Looks Attractive To Risk-Averse

By GORDON MATTHEWS

NEW YORK — A year after Society Corp. completed its surprising acquisition of Trustcorp., Toledo, Ohio, the Cleveland superregional banking company has regained some market luster despite the subsequent slide in bank stocks.

Its stock has declined, but not so much as others. Since bank equities began skidding last October, Society shares have fallen 17.8% while the index of 24 major banks maintained by Keefe,



Bruyette & Woods Inc. has tumbled 25.2%.

In midday trading on Monday, Society was priced at $31, unchanged from Friday and off 9% from yearend.

Worries About Earnings

Society's appeal on Wall Street was at a low point on Aug. 4, 1989, when it took over ailing Trustcorp. Society had not been on most lists of possible acquirers, and the market worried about the 10% earnings dilution that might be experienced by shareholders as well as the status of the assets being acquired.

Today, nonperforming assets remain above historic levels at Society, but cost savings and gains in efficiency that should help its earnings in the longer run are beginning to appear.

Society, like a number of other Midwestern banks, now looks attractive to risk-averse investors who are considering bank equities. It has a strong capital position, a relatively low-risk balance sheet, and a good record for maintaining credit quality.

Repurchase Program

The picture brightened for Society's shares in February when it agreed to buy, for $20 million, its adjustable rate preferred stock and a warrant held by Marine Midland Banks Inc.

The move launched a 500,000-share stock repurchase program that has lessened the dilution of the Trustcorp deal. So far, Society has bought back about 4.5% of its shares.

For some analysts, the stock is a buy. Anthony J. Polini of A.G. Edwards & Sons Inc., St. Louis, said the stock price now fully discounts both the Trustcorp acquisition and Society's own lower takeover appeal "but does not necessarily reflect its strong growth potential in earnings and dividends per share over the next three years."

Some Analysts Neutral

Also maintaining a buy recommendation is First Boston Corp.

But some analysts remain cautiously neutral on the stock and the company. "The true operating earnings capacity of Society will not be evident until the fourth quarter of 1990, or later," said Henry C. Dickson of McDonald & Co. Inc., Cleveland.

Also neutral on the stock is Norman Jaffe of Fox-Pitt Kelton Inc., New York, who is "hesitant to give the company the full benefit until management articulates how $25-$30 million of savings from line of business realignment are to be achieved."

Another reason for investor caution is an upcoming regulatory examination of Society.

MONDAY'S MARKET

Major bank and thrift stocks, as well as the rest of the stock market, posted declines on Monday as investors worried that the economy is slipping into a recession. Nearly all bank equities were in the loss column by midafternoon.

The biggest decliners were First City Bancorp., Houston, Texas, off $1.25, to $19.50; Comerica Inc., Detroit, Mich., off $1.75, to $42; and Midlantic Corp., Edison, N.J., off $1, to $11.875; and Shawmut National Corp., Hartford, Conn., off $62.5 cents, to $9.375, on sales of 1.36 million shares.

Analyst said concerns about further weakness in the real estate accounted for most of the declines. □

CAPITAL

MNC's Securitization Costs Could Climb

By KELLEY HOLLAND

Just as its need to securitize assets is growing, MNC Financial Inc. could well find the process more expensive.

In the worst case, MNC's securitization costs could increase as much as 50 basis points because of investor concerns about its credit quality, according to traders and capital market specialists.

That would be especially painful because MNC is an active user of asset securitization as a capital management strategy, having securitized almost $4 billion in the public markets since 1987.

Process Likely to Continue

Higher costs will probably not lead MNC to stop securitizing assets. But the profitability of the strategy will be reduced at the very time MNC most needs to strengthen earnings and generate equity capital internally.

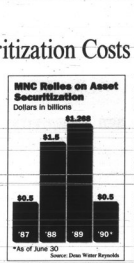
Recent events are going to lead to "a minimal increase in the cost of letters of credit and it will require that we pay more normal rates relative to Treasuries," said Vernon H.C. Wright, senior vice president and chief corporate finance officer at MNC.

"Our yields have been lower, as much as five to 10 basis points lower than the market norms." Traders said there was a five-to-seven points difference.

No Slowing Expected

Mr. Wright said the bank would not necessarily slow the pace of asset sales despite rising costs. "We always look to securitization as an alternative funding source, and we continue to do so," he said. He declined to quantify the increased cost.

MNC was downgraded below investment grade by Moody's Investors Service after it announced a second-quarter loss. Thomson BankWatch reduced



its rating on the bank to C/D in July, after cutting it to B/C in April, one portfolio manager said.

Morgan Arranging Credit

Last week, J.P. Morgan & Co. said it was arranging a $750 million line of credit for the Baltimore, Md.-based bank.

MNC's problems could force it to pay more to continue its asset securitizations, market sources said. The bank will have to pay more to obtain letters of credit, and it may even have to pay an outsider to service its asset-backed deals.

"The cost of securitization is going to go up for MNC," said an investment banker specializing in asset-backed transactions.

MNC's subsidiary, Maryland National Bank, was a pioneer in asset securitization. In the past, MNC has used letters of credit to enhance the credit quality of its public securitizations, and serviced its own deals.

Now, though, MNC may have to pay up for letters of credit from banks wary of insuring MNC assets.

"If the quality of the seller deteriorates, the quality of the servicing may drop and losses may increase," said Scott J. Ulm, a vice president in asset finance at First Boston Corp. "Letter-of-credit providers would be concerned about that."

Indeed, in order to make its asset-backed securities more attractive to investors, MNC may have to pay another bank to service the deals or to stand ready to service the deals if MNC's credit quality deteriorates further, market sources said.

Fees for servicing deals backed by credit card receivables are typically lower than those for servicing deals backed by other assets, but outside servicers can demand payments from 0.25% to 1.5% of the assets being securitized, market sources said.

Mr. Wright said there was no evidence from the market or the ratings agencies that MNC would need a back-up servicing agent.

Admittedly, only very weak institutions typically need to arrange for outside servicing of asset-backed transactions. And specialists in asset-backed securities are divided on whether MNC would need to do so.

But investors are already evincing some concern about the credit quality of the loans underlying MNC's outstanding issues. One trader said yield spreads on MNC's deals were two to three basis points wider in very light trading last week.

* * *

MARKET MONITOR

Capital-strapped Crossland Savings offered to sell about $350 million of adjustable-rate mortgage-backed securities on Friday, market sources said. About 60% of the securities had been sold as of early afternoon, one trader said.

"For a long time, we've been trying to shore up our capital position," said Ramesh Gupta, chief financial officer of Crossland. — **Phil Roosevelt**

Some Banks Opt Not to Travel The PC Route

By JEANNE IIDA

A few leading-edge banks are installing multimillion-dollar networks of personal computers in their branch offices, and many more are considering such outlays.

Proponents of the new approach say PCs can change the way branch personnel work, allowing them to market more effectively. But some bankers contend that branch personnel do not need PCs to cross-sell products.

Traditional systems with a controller supporting scores of dumb terminals "get the same thing accomplished as a PC," said George P. DiNardo, executive vice president and technology chief at Meiton Bank Corp.

ANALYSIS: *Follow-up on the news*

Controller-based systems are more sophisticated than ever before, observers say. And although controllers are expensive, the overall cost of such systems is considerably less than that of a PC network. A system of 10 PCs can cost one and a half to three times that of 10 terminals attached to a controller.

The cost of replacing an entire branch network with PCs can cost a large banking company tens of millions of dollars.

Two leaders in the migration to PCs, BankAmerica Corp. and Royal Bank of Canada, are near completion of personal computer networks. Analysts say each banking company will spend $50 million to $100 million on the project.

Security Pacific Corp. and Banc One Corp. are among the large companies following suit.

Advocates Cite Functionality

The main benefit of PCs is functionality, these advocates argue. Personal computer networks will open a whole range of new opportunities for selling products, they contend, because users have access to graphic, standard spreadsheet, and word processing software.

"Smart banks know you have to put in PCs to give people the functionality to serve customers," said Michael Simmons, executive vice president and chief of technology at Bank of Boston. "It's the coming trend."

During his tenure as technology chief at BankAmerica, Mr. Simmons oversaw the plan to install 21,000 PCs in the branches by early 1991. He is heading a similar effort at Bank of Boston, which has not established a timetable for its project.

Shawmut National Corp. and

Seidman Sees $2 Billion Loss at FDIC

By BILL ATKINSON

WASHINGTON — In the strongest indication to date that the cost of bank failures will rise dramatically, Federal Deposit Insurance Corp. Chairman L. William Seidman said on Tuesday that the bank insurance fund is likely to suffer a net loss of $2 billion this year.

The net decline, to about $11 billion after accounting for interest and premium income, would reflect gross payouts from the insurance fund of about $6 billion. That would be 50% more than the FDIC's $4.1 billion in gross liquidation and insurance losses in 1989 but still below the $7.4 billion it paid out in 1988.

No Specific Predictions

While Mr. Seidman was not specific in his predictions of possible bank failures and their timing, he called the $2 billion loss "a reasonable estimate."

It could be caused by one or more large bank failures or an increase in failures of smaller institutions.

Mr. Seidman said the number of banks on the FDIC's problem list continues to exceed 1,000, where it has hovered since last year. The agency has closed 113

Citicorp Defection Seen Derailing UAL Buyout

By WILLIAM GOODWIN

Citicorp's departure from the bank group leading the financing for the proposed $4.4 billion union-led buyout of UAL Corp. appears to have all but doomed the deal for now, banking sources said Tuesday.

Unless the buyout group can come up with an outside equity investor before its Aug. 9 deadline, the bankers said, it was hard to see how the deal could be completed.

Citicorp and Chemical Banking Corp. both pulled out of the bank group Friday, sources said, because the unions had failed to come up with an equity investor.

It remained unclear Tuesday whether Chase Manhattan Corp. had also balked. Chase, along with Citicorp and Chemical, did not attend a UAL bank meeting Friday.

That would leave only Bankers Trust New York Corp. and Manufacturers Hanover Corp. remaining in what was originally a five-bank group. None of the five banks would comment.

UAL Stock Plunges

A number of UAL's investors, evidently concluding that the deal had hit a major roadblock, bailed out of the stock Tuesday. The company's shares plunged $16.875 following a report in this newspaper that Citicorp and Chase were likely to pull out of the deal. The stock was down as much as $21 before rebounding somewhat late in the day.

UAL Investors Losing Faith

Price per common share

The union group proposed to buy out the airline holding company in March for $201 in cash and securities, looking for roughly $4 billion from the banks. This offer was scaled down from management's aborted $300-a-share bid that failed noisily last March.

Citicorp's departure from the bank group is considered to be

Year-Old Resolution Trust Corp. Is Under Pressure to Move Assets

By DEBRA COPE
Third of a Series

Nobody can say the Resolution Trust Corp. isn't trying.

One year into the massive job of mopping up failed savings and loans, the agency has racked up some impressive achievements: 211 thrifts shut or sold at a cost of $25 billion; 257 lined up in conservatorship; more than $60 billion in 1.7 million deposit accounts protected, and nearly $50 billion of assets transferred to private hands.

The Thrift Bailout Law

When Assets Are Liabilities

In S&L sales, the RTC often gets stuck with bad assets

Assets retained by RTC (46%)

Assets transferred to buyers (54%)

Data from 207 cases resolved through June 30

Source: RTC

But the real work is just beginning. The RTC starts its second year with a mountain of distressed real estate, troubled loans, and other sour assets that totaled $37 billion at the end of June and could ultimately top $100 billion.

Bush administration officials estimate an additional 250 to 550 thrifts could ultimately require aid, bringing total failures into the range of 700 to 1,000. The Office of Thrift Supervision has already earmarked 621 thrifts with $343 billion in assets and $249 billion in deposits that may eventually need assistance.

Moving impaired assets, the residue of S&Ls deemed "resolved" by the RTC, won't be easy – especially in an increas-

BNE Discussing Membership in Home Loan Bank

By TOM LEANDER

Bank of New England Corp. is holding discussions on becoming a member of the Federal Home Loan Bank of Boston, the *American Banker* has learned.

The unusual membership would have attractions for both sides. Bank of New England would gain the ability to borrow at low rates from the district banks, providing another source of liquidity. The Home Loan Bank would gain by far its largest commercial bank member – $23 billion in assets – at a time when many of its thrift constituents are going out of business.

Law Expanded Eligibility

Under the thrift bailout law, membership eligibility in the Federal Home Loan Bank System was expanded to include credit unions and commercial banks that have at least 10% of their assets in residential mortgage loans.

"This is something that more and more commercial banks are

PEOPLE *in the news*

FDIC's General Counsel: 'An Unbridled Optimist'

By BILL ATKINSON

In charge of what has become one of the largest legal departments in the country, Alfred J.T. Byrne jumpstarts himself every morning with coffee and cigarettes.

The newly named general counsel of the Federal Deposit Insurance Corp. needs all of the extra lift he can get. The 46-year-old lawyer oversees 750 attorneys employed by the FDIC and Resolution Trust Corp., the agency responsible for holding and liquidating failed savings and loans. Further, he coordinates about 900 outside law firms working for these agencies, and he oversees the work on an estimated 100,000 pending lawsuits filed either by or against the FDIC and RTC.

"The reason I'm here? I'm probably an unbridled optimist, by choice," said Mr. Byrne, digging another cigarette from his pack.

After six weeks on the job, Mr. Byrne is realizing the magnitude of the task. The agency, for example, cannot keep track of all of its pending cases because its computerized management system was not prepared to handle the crush of suits that came flooding in after the Financial Institutions Reform, Recovery, and Enforcement Act that was signed into law on Aug. 9, 1989.

Mr. Byrne either wants the system upgraded, or a new one installed.

"We will pull out all of the stops to achieve that goal," he said.

He is also looking for ways to slice overhead, especially fees paid to outside law firms that represent the agency. This year the agency expects to pay outside firms $500 million for their work.

In addition, Mr. Byrne wants to hire 350 to 400 new lawyers by 1991 to lighten the load of his overworked troops, who have impressed him: "I considerably underestimated the challenges for the legal division," he admitted.

Alfred J.T. Byrne

Mark Rosen, deputy general counsel at the FDIC, agrees that the task is formidable. He said Mr. Byrne "stepped into a buzz saw. But I think he has a very pragmatic, can-do attitude."

Most recently, Mr. Byrne was a partner in the Washington office of the law firm of Dechert Price & Rhoads. From 1987 to 1989, he was resident partner in the firm's London office. His clients there included major European banks with U.S. lending activities.

Byrne Met All the FDIC's Specs

"We chose him because he was the best qualified to meet our needs," said L. William Seidman, the FDIC's chairman. "We needed someone who had experience with legal administration in terms of running cases and lawyers. We needed someone who was highly respected in the profession, and we needed someone who the White House would approve. He met all of the specs."

Insiders say Mr. Byrne is already logging long hours, typically from 7 a.m. to 7 p.m., six days a week.

"Paper doesn't sit on his desk," said a senior FDIC attorney. "You put something on his desk and it is read. He's not fooling around."

It remains to be seen if Mr. Byrne can keep the pace up, but agency attorneys are hoping the smoke will continue to rise and the coffee to pour. □

NEWS *briefs*

Lincoln Bancorp Decides To Shed Its Tainted Name

ENCINO, Calif. — Lincoln Bancorp, a healthy banking company that had been fighting perceptions that it was associated with the failed Lincoln Savings and Loan Association, changed its name Tuesday to CU Bancorp.

Its subsidiary, Lincoln National Bank, became California United Bank.

CU Bancorp's stock will begin trading Friday on Nasdaq.

Lincoln Bancorp's chief executive officer, John J. Keating, is not related to Charles Keating, chairman of Lincoln Savings, an Irvine, Calif., institution that is in receivership.

Carolina Thrift's Proposal To Sell Assets Is Delayed

RALEIGH, N.C. — First Federal Savings and Loan Association of Raleigh said the Office of Thrift Supervision had delayed a ruling on its restructuring and recapitalization plan pending delivery of more information about a proposed sale of the thrift's nonperforming assets.

"While we had hoped for OTS approval of our capital plan this month, we see this development as a positive sign," said Willard Koss, president of the $580 million-asset First Federal.

The capital plan calls for the sale of bad assets – primarily real estate – to an unaffiliated company. If the plan receives OTS approval, First Federal will engage PaineWebber Inc. on a best-efforts basis to assist in the placement of securities. □

Wall Defends Bluebonnet S&L Sale

Metzenbaum's Allegations Denied in Senate Hearing

By ROBERT M. GARSSON

WASHINGTON — The former top thrift regulator, M. Danny Wall, stoutly defended his handling of the 1988 sale of 15 Texas thrifts to James Faul, telling a Senate panel Tuesday that a lobbyist with ties to then-Vice President George Bush did nothing during his actions.

Mr. Wall also disputed allegations that Mr. Faul put only $1,000 of his own money into a deal that the federal government sweetened with $1.85 billion in subsidies.

'Balance Sheet on the Line'

"He put his entire balance sheet on the line," Mr. Wall told reporters during a break in the Senate subcommittee hearing.

Mr. Wall said Mr. Faul's net worth at the time was about $40 million, and all of that was at risk in the deal to acquire the thrifts that would be merged into Bluebonnet Savings Bank, Dallas.

Organized by Metzenbaum

Tuesday's session was the second round in a series of hearings organized by Sen. Howard Metzenbaum, D-Ohio, on Bluebonnet – one of several such deals concluded just as a number of lucrative tax breaks were set to expire at the end of 1988.

The deals have been widely criticized as too generous to the investors, and the Resolution Trust Corp. may have been wildly

COMMENT/ *By Lowell L. Bryan*

Banking Crisis Is Different And Could Be More Serious

Journalists are already comparing the developing crisis in commercial banking to the savings and loan crisis. "What will this new crisis cost the taxpayers?" they ask.

They miss the point.

The banking crisis has far more serious implications for the economy, and the nation, than simply another taxpayer bailout. What is at risk is the health of the nation's $5.4 trillion economy and the global competitiveness of the United States in years to come.

The savings and loan crisis is a story of unenforced regulation, fraud, political gridlock, and with few exceptions, a decade of neglect by political leaders. The bottom line of this story is grim enough. Best estimates are that it will take $150 to $200 billion in current cash from the taxpayers to achieve an orderly liquidation of insolvent savings and loans.

A Different Story

The banking industry story is substantially different. That industry has about $200 billion in equity capital to absorb losses, while the savings and loan industry has had no tangible capital to speak of over the past decade. The banking industry is about three times the size of the thrift industry and is far more important to the economy.

Banks are the primary source of finance for individuals, small businesses, and midsize companies. Banks provide the payment services (checks and money transfers) for the entire nation.

Money-center banks finance U.S. industries worldwide and represent the nation in the world's global capital markets. Moreover, banks are the Federal Reserve's primary vehicle for implementing monetary policy.

While the nation needs banks, the S&L industry lost its primary reason for existence about 10 years ago with the development and maturity of the mortgage-backed securities market. For the most part, healthy S&Ls are healthy because they act more like commercial banks or mortgage banks than classic thrifts.

A Plague of Loan Losses

There are, of course, some similarities between the savings and loan crisis and the problems developing in the banking industry. In particular, loan losses, in both industries have been massive. Commercial bank loan writeoffs have been over $70 billion during the past four years and are headed higher still; $6.6 billion was charged off in the first quarter of 1990.

In contrast, commercial banks wrote off only $28 billion from 1948 to 1981. If we were to have a recession, commercial bank loan losses would rise dramatically and the bank insurance fund would be under enormous strain.

Regulators have focused on the similarity between S&Ls and banks. No one wants to be held responsible for a repeat of the S&L crisis. Their first impulse has been to toughen lending standards and raise capital requirements.

Such conservative regulation is appropriate for all government-insured depositories, and it should have been started several years ago. In the short term, however, we face a potentially devastating credit crunch, particularly for small businesses, midsize companies, and builders.

Regulators are now aware of these risks. In their public discussions with bankers they have urged them to keep funds flowing to all creditworthy borrowers. The regulators face an unenviable task. They are walking a tightrope between being too strict and not strict enough.

Tougher regulation is not enough. If we want to maintain global economic leadership into the next century, we must remake our banking system to accommodate emerging markets around the world.

Both the savings and loan and banking crises share a common cause. They are both a result of unleashing market forces without fundamentally reforming the regulatory structure. In particular, interest rate ceilings on deposits were removed without consideration of the consequences.

Weak competitors, which were least able to replace their regulatory-based profits, plundered the deposit insurance system to replace this lost income with high-risk assets. In many thrifts, outright frauds were allowed to raise money and funnel it into their own pockets.

Uneconomic Activities Abetted

But the larger problem was that credit flowed into uneconomic activities. In a few years, a mountain of credit was created to finance commercial real estate, condominiums, and takeovers of companies at prices well in excess of the ability of borrowers to finance that debt out of cash flow. Meanwhile, the government was slow to remove failing competitors from the industry.

The result is a fundamental overcapacity that has eroded the profitability of even the best banking competitors. More seri-

See **COMMENT** *page* **12**

"Institutions that take uneconomic risks should be allowed to fail, regardless of size."

Citi Clamps Down, Callen-Style. The memo to 15,000 Citibankers arrived last Friday with an ominous subject line. "We must act," wrote Michael Callen, head of investment and corporate banking in Japan, Europe, and North America. "Our performance versus plan makes that abundantly clear. No one can wave a magic wand and make the marketplace a kinder or gentler place — that's not reality."

But instead of hoisting the ax, Mr. Callen merely outlined eight policies on expense cutting — most of which staff member thought were already in place.

The "new" policies: Prior written approval from senior executives is required for any external hires, for external consultants, for purchases of PCs and mobile phones, and for office conferences; meals among staffers in the same city will no longer be reimbursed; economy class is the rule when flying domestically, and business class may be used only on international flights beyond six hours. Mr. Callen also urged that use of hired cars be limited.

A spokeswoman said that Mr. Callen's intent was to ensure "a more even, across-the board approach to costs." As for the staff cuts? "Everyone is still waiting for the other shoe to fall," said one banker.

Banks in Armor. After almost 20 years, the Federal Reserve Board is letting banks into the armored car business. The Fed last month overturned a ruling by an administrative law judge who said that armored car services are not closely related to banking, so bank holding companies and their subsidiaries cannot run them.

Most banks own armored cars and use them to service automated teller machines and transfer funds among their own offices. But the banks also have excess capacity, which they want to sell to customers, said Richard Whiting, general counsel at the Association of Bank Holding Companies.

For Metrocorp, the small East Moline, Ill., holding company that was the subject of the administrative law judge's ruling, the victory is not so clear. "We still have a relatively big fight on our hands," said Marcus Hobert, general counsel of the $160 million-asset company.

He said the judge, Paul G. Clerman, has been ordered by the Fed to determine whether armored car services meet a second test of "proper incidence" to banking. All the major armored car companies and their trade associations are fighting to prove that they do not, he said.

While the "closely related" decision provides a general imprimatur, the proper incidence qualification is much more bank-specific. Metrocorp will have to show that offering the services won't harm competition locally, violate local branching laws, or affect the safety and soundness of its main subsidiary, Metro Bank, Mr. Hobert said.

Republic in the Pains? It's an open secret that Republic New York Corp., the capital-rich New York bank, wants to buy Florida Federal Savings Bank, the failing St. Petersburg-based thrift.

Officials at neither institution would confirm rumors that have circulated throughout Florida for several weeks. But the *St. Petersburg Times* reported on Tuesday that Republic is pursuing a deal. "We do have an investor with a strong interest in recapitalizing us," a spokeswoman for Florida Federal said Monday, noting that several other potential rescuers dropped out after the company said it would have a negative net worth of about $90 million after adding $36.3 million to its loan loss reserves.

Officials at Lyons, Zomback & Ostrowski, the New York investment bank that represents Florida Federal and also has done deals for Republic, would not comment.

A deal would almost certainly be contingent on the government's pumping at least $90 million into Florida Federal and assuming some problem loans. Republic, controlled by Edmond Safra, would have to add about $135 million of capital to bring the $4.5-billion asset thrift's tangible capital up to the 3% level required by regulators, said Samuel Beebe, an analyst at Williams Securities Group.

Republic, which prides itself on cheap funding that comes from having a large retail deposit rate, in the past three years has purchased the $3 billion-asset Manhattan Savings Bank and the $3 billion-asset Williamsburgh Savings Bank. The 78-branch Florida Federal – despite its involvement in a student loan scandal – would be a natural fit for Republic, analysts said.

Still Hot on Junk. Bankers Trust New York Corp. lost the bidding for Columbia Savings and Loan Association's $3 billion-plus portfolio of junk bonds last week, bank sources confirmed, but picked up an education in the process. "We showed some credit horsepower in evaluating the pieces and presumably picked up some leads," said one banker.

Bankers Trust also is readying a private placement of a junk issue that should be "teed up within the next few weeks," an official said. It would be the first junk issue managed by Bankers Trust since it received permission from the Federal Reserve Board last year to underwrite corporate debt. □

PRIVATE BANKING

Offitbank Is Set to Open – With Help from a Rival

By MAUREEN NEVIN DUFFY
Special to the American Banker

Morris W. Offit is converting his small, closely held investment management firm into a limited-purpose trust company, or private bank. And one of his initial investors is a competitor.

Pitcairn Financial Management Group, a high-end investment firm in Jenkintown, Pa., has put $500,000 in the newly formed Offitbank, New York.

Pitcairn, which is entering private banking through the acquisition of Trustees' Private Bank in Philadelphia, bought the stake in Offitbank on the recommendation of David Lawson, Pitcairn's vice president in charge of small capitalizations. Mr. Lawson said he was impressed by the firm's "ability to leverage its investment management business with private bank services."

As with many other investment houses, "a lot of high-net-worth clients were going elsewhere for their private bank needs, such as collateralized lending," said Mr. Lawson. "I saw Offit Associates' move as the opportunity to recapture that base of business. Furthermore, he's got a pretty big upside to his private bank just by tapping his existing client base."

Offit has some 170 clients, 130 of whom are individuals or families. The rest are corporations, universities, and cultural and religious institutions. Its prime market is families with $10 million net worth.

Expanding Its Services

Because of its beginnings as a small, closely held investment advisory, Offitbank is similar to Pitcairn and to Bessemer Trust Co., New York. Both started with family trusts and branched out into other banking services.

Morris W. Offit

"I guess anyone in the investment business would be a competitor," Mr. Lawson said of Offitbank. But he stressed that the companies have had different investment strategies, Pitcairn being heavily involved in equities and Offit concentrating on fixed-income instruments.

Mr. Offit's fixed-income house concentrates on low-risk treasuries and mortgage-backed bonds, but it also manages some high-yield bonds.

The newly chartered investment management bank will emphasize global investment, Mr. Offit said. With the charter, he hopes to enter relationships with overseas banks of the European or Swiss tradition, which he used as a model for Offitbank.

Mr. Offit said he is even considering sharing ownership with foreign banks.

The charter also paves the way for the company to offer a broader array of services. Instead of directing clients to other banks for lending services, the company can now offer loans with portfolio collateralization, provide custodial services, and can act as a trustee.

"Offitbank also plans to expand its foreign exchange services from individual to corporate clients. "We needed the charter to get access to the interbank market in foreign exchange dealings," Mr. Offit said. Foreign exchange transactions for clients amounted to $2 billion last year. About $600 million of the company's $2.5 billion under management is in global fixed-income products.

Offitbank, which was capitalized at $10 million, does not have Federal Deposit Insurance Corp. coverage, nor is it taking deposits. But Mr. Offit said it would consider both in the future.

Regulators Welcome

The New York State Banking Department approved Mr. Offit's charter application in late July after an 18-month application process.

Mr. Offit, 53, says he put his investment advisory service, Offit Associates Inc., into the arms of state banking regulators without apprehension. "I've always welcomed the prospect of regulatory oversight, because I thought it would make customers even more comfortable," he said. "Clients can walk in our offices any day and take a look at their records."

Before starting his own firm, Mr. Offit was with Julius Baer Securities until 1982. There he was responsible for domestic and international portfolio management. Before that, he spent 12 years with Salomon Brothers Inc. as a partner in charge of investment research, international sales, and trading. He was research head of Mercantile Safe Deposit and Trust Co., Baltimore, until 1968.

Perrin Long, an analyst with Lipper Analytical, New York, said Mr. Offit has had a good record as an investment adviser. "There is a great place for investment management services in today's economy," he said.

Mr. Offit is using the tag line "the investment management bank" on all promotional literature to distinguish the company from its credit-driven competitors.

Customer Service Training Gap Seen

Many Institutions Lack Formal Programs, Survey Finds

By ELLEN MEMMELAAR

NEW YORK — Customer service representatives are gaining in importance as bankers turn to them to aggressively cross-sell products. But many of these key staff members do not receive even basic training.

Only 64% of banks have formal training programs for customer service representatives, according to a survey by the Bank Administration Institute. The same poll showed that 57% of customer service managers consider training a critical issue over the next two years.

Second-Class Programs

Banks are indeed behind the times in training programs, some industry watchers said. They said expenditures for training are of secondary importance, management is often unfamiliar with the sales process, and many bankers attack sales from the wrong side of the desk.

"Banks need to do a better job of understanding the economic benefits of training over time," said Les Dinkin, a Westport, Conn.-based consultant. "It's a different way of doing business."

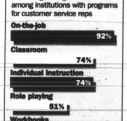
Only 64% of banks have formal training programs for customer service representatives.

Bankers are relying less on rate slashing to attract customers and more on tellers and customer service representatives to generate revenue, observers said. To be effective, the employees must be well versed in cross-selling.

The Art of Cross-Selling

Customer service is the most important aspect of establishing a sales culture, said Robert Hall, president of Action Systems, a Dallas-based consulting firm.

Top Training Methods
Percentage using each method among institutions with programs for customer service reps



Source: Bank Administration Institute

In the first part of his company's employee training program, Mr. Hall takes bankers through steps to understand what service is, its importance to the overall institution, and the specific skills needed to improve service.

Then clients can be trained to cross-sell. For this stage, Mr. Hall teaches customer service representatives about the products and what they should look for in potential customers.

"It is as important to know who not to cross-sell as it is to know who to cross-sell," Mr. Hall said.

Reluctance at the Top

Bankers, however, are reluctant to inject dollars and manpower into such training programs because results are difficult to trace, Mr. Dinkin said.

Other experts cite a problem that begins at the top. Managers who have spent their careers in banking often do not know how to foster a sales culture.

Some managers simply "do not understand how to talk to the customer's needs," said David Bennett, president of Omega Performance Corp., a San Francisco-based consulting firm.

"Bankers tend to talk about the product from the banker's point of view."

Creating a Sales Culture

A sales culture can be fostered only if management is knowledgeable about the sales process and actively encourages it, said James Schneider, a consultant based in Jupiter, Fla. If key people don't understand the process, "their own discomfort will be passed down," he said.

Of the respondents in the Bank Administration Institute study who have formal educational programs for customer representatives, 92% use on-the-job training; classroom and individual training tied for second place, at 74%. These methods get thumbs-up from consultants because they offer individualized training and allow for role-playing.

Self-directed programs using videotapes were reported by 19% of respondents, and 22% used workbooks. Other tools used include computer-based training, audio tapes, books, and manuals. But consultants caution that these self-training methods may only appear to be cost-effective.

57% of customer service managers consider training a critical issue over the next two years.

"Videos are too passive," said Mr. Schneider. "Most programs teach a monkey-see, monkey-do kind of thing. Too often, the scenarios are not relative to the person working."

Mr. Dinkin said videos can effectively convey product knowledge but are less successful when used for sales training. "There needs to be a high level of interactive participation in order to understand and refine sales skills," he said. □

The most important thing about banking is the bottom line.

Here's the bottom line.

AT&T gives banks a highly cost-effective way to do business.

When it comes to delivering the telecommunications services that banks really need in today's market, AT&T is unmatched. And we're going further.

More flexibility and better cost control.

For headquarters to branch, or branch-to-branch communications, the AT&T Software Defined Network (SDN) gives you all the benefits of a private voice network. But with greater flexibility and better cost control, plus the ability to track and monitor call volume.

The hottest technology in banking today.

And what SDN does for voice, our new Software Defined Data Network (SDDN) now does for data. SDDN is a switched data service with dynamic bandwidth allocation that provides the transmission flexibility necessary for image-processing applications, such as signature verification, document processing and check processing.

AT&T is committed to meeting the banking industry's needs.

In 1989, AT&T introduced the Retail Banking Solution, which gives branch banks the tools needed to manage and grow customer relationships effectively. And the AT&T DEFINITY® Communications System helps speed calls to and from customer service centers. So go with AT&T. Because with our innovative services we give your bank the competitive edge. And that's what counts on the bottom line.

Innovation. Another AT&T advantage.

For more information, call your AT&T Account Executive or 1 800 247-1212, Ext. 580.

AT&T The right choice.

© 1990 AT&T
SDDN pending FCC approval.

Traditional Systems Hold Their Own Against PC Challengers

Continued from page 1

Mellon are among the banks that are taking the controller route. Other banking companies, such as units of Citicorp, are using PCs only selectively.

Mellon is completing a major installation of branch automation equipment in 350 branches that relies entirely on controllers and terminals.

The controller-based system is integrated with Mellon's electronic mail network and central customer reference file. It also is programmed to produce preformatted screens – all capabilities typically associated with networks of PCs.

"There are no limitations on a controller-based system for any branch-related activity," said Richard Ellis, manager of product marketing at ISC Bunker Ramo, which sells both PC and controller-based systems. Platform personnel and tellers "can access central information files, they can do computer modeling, they can perform stop payments," Mr. Ellis said.

They can even cross-sell using a controller-based system, but it is a little more difficult than with PCs, he said.

What controller-based systems cannot do is integrate with office automation systems to generate forms, or print out contracts and thank-you letters, Mr. Ellis said. PCs on local area networks "let you expand into customer service applications," he said.

"Smart banks know you have to put in PCs to give people . . . functionality."

Michael Simmons
Bank of Boston

Traditional systems "accomplish the same things as PCs."

George P. DiNardo
Mellon Bank Corp.

ISC Bunker Ramo, which is based in Spokane, Wash., says sales are climbing for both types of system as banks rush to upgrade branch automation. "We see strong growth in both areas, but the growth direction is definitely into PC [local area network] technology," Mr. Ellis said.

Security Beta on PCs

Michael Shryne, vice president of the electronic systems development division at Security Pacific, said his company chose PCs for their long-term promise. "We looked carefully at controller-based solutions in 1989, but we realized that ultimately they would lead us to the same path we're at today – namely, we'd be constrained by [traditional] banking automation.

"In retail banking, you only get a shot at putting in new systems every 10 to 14 years," Mr. Shryne said. "Any decision you make has to be thought through from the point of view of where the technology is headed and will it support the ability to be competitive in three to five years." Security Pacific is in the first phase of a plan to deploy 10,000 PCs in branches by 1992.

Because PCs are based on industry standards and can be easily moved on a network, they will cost less in the long run, some advocates contend.

"Once you have installed the network, you can change what goes on at that workstation merely by loading software differently," said Mr. Simmons of Bank of Boston. Moving plain terminals is more costly, he said.

The banks that are moving to personal computers are focusing on different areas. Royal Bank will install platform PCs first; BankAmerica is focusing on the teller line; and Security Pacific is installing the computers in both areas at once.

Platform People Have Priority

But most bankers say getting PCs into the hands of platform personnel takes top priority because their jobs are more complex than those of tellers.

Security Pacific apparently agrees that the needs of platform personnel are greater than those of tellers. The Los Angeles-based company said it is installing diskless workstations on the teller line because a teller's job is less complex and will change less over time.

Mr. Ellis of ISC Bunker Ramo predicts that diskless workstations – personal computers without their own memory – will take off for the teller line because they are less expensive.

Customers Can View Screens

The changes wrought by PCs will be most dramatic for platform personnel. At Royal Bank, which is the bank closest to completing its PC network, customers and platform staff will be able to view the screen together.

The platform manager, meeting with a customer over a homeowner's loan, will key in the customer's name and call up preformatted fields containing the customer's name, address, telephone number, and other personal information.

Richard Layne contributed to this article.

STRATEGIES: *ATMs* When 2 Languages Aren't Enough

By KAREN GULLO

NEW YORK — A desire to serve customers from ethnic communities – and travelers from around the world – is pushing banks to install automated teller machines that "speak" different languages.

While some banks have bilingual ATMs, Security Pacific Corp. is installing machines that give vocal instructions in several languages.

Security Pacific says it is the first major banking company in the country to combine six language selections on ATMs. Its Security Pacific Bank of Washington installed one of the new machines last month at the Sea-Tac International Airport in Seattle. The machine has capabilities in Chinese, German, Japanese, Korean, Russian, and Spanish.

Citicorp operates multilingual ATMs, but the machines lack the speech capability. Citibank has installed Chinese and Spanish language screen instructions on all its ATMs throughout the United States. ATMs in other countries are equipped with native and other languages.

Voice-Synthesis Capability

The Security Pacific ATM, which is manufactured by NCR Corp., has special software and voice-synthesis capabilities that allow it to "speak" instructions in each of the six languages.

The bank installed the ATM in time for the Goodwill Games in Seattle. Lawrence Campbell, vice president and manager of electronic banking administration and development at Security Pacific, says the multilingual ATM will soon be a business necessity.

"With expanding levels of international trade in this region, there is definitely a need for this service," he said. "Security Pacific's goal is to make the international traveler's transition into our currency culture more smooth and trouble-free."

The ATMs allow access to Visa and Plus ATM network accounts. Screen instructions are available in all the languages except Chinese and Korean, which will be added in about two weeks. Audible instructions in each language will be added by the end of this month.

Security Pacific is also installing ATMs with Spanish-language capabilities at six branches in Washington.

First Interstate Bancorp's First Interstate Bank of Denver installed an ATM with Japanese-language capabilities in April at Teikyo-Loretto Heights University, where 380 Japanese students study English and Western business practices. □

ISSUES: *computer crime* Multiplying Viruses Spawn Growth Market

By RICHARD LAYNE

Computer hackers, viruses, and worms pose a growing threat to the security of corporate information, according to an Ernst & Young survey.

And increased concern about computer crime is creating a $3 billion+a year market for products and services that improve security, according to International Data Corp. About 180 companies in the U.S. market offer services and software to stymie worms and viruses, which can alter or destroy data in a corporation's information systems.

Nearly half of the 285 U.S. businesses that responded to Ernst & Young's survey reported computer system failures in 1988 and 1989 caused by malicious acts of hackers, such as the introduction of viruses. Most of the intrusions cost the companies less than $50,000. But in some cases, computer crime resulted in more than $1 million in damages for a company.

Part of the corporate concern can be traced to the attention computer crime is getting in newspapers.

Mounting Number of Victims

The accounting firm said that nearly 50% of respondents reported losses related to computer crime, up from 35% in a narrower survey of security personnel in 1987. Banks and other financial service companies represented 15% of the respondents in the latest survey.

J.J. "Buck" BloomBecker, director of the National Center for Computer Crime Data in Santa Cruz, Calif., estimates that computer crime costs U.S. businesses about $550 million annually, including thefts committed through unauthorized access to electronic banking systems.

According to the Ernst & Young survey, 71% of companies believe computer-related security risks have increased in their organizations over the past five years.

Increased Media Attention

Part of the corporate concern can be traced to the attention computer crime is getting in mass-market newspapers.

"Companies are more concerned with computer security than at any time in the past," a consultant told the *American Banker* last year, "not only with shielding their networks from outsiders, but also with protecting their data and the privacy of their decision-making from unauthorized company insiders," said William de Gruchy, managing partner of Specialists on Call, Stamford, Conn.

Personal computers hooked to networks that let a user add or alter data stored on other computers contribute to the security problem. Expected growth in the number of PCs in use by corporations would create more opportunities for internal sabotage.

Ernst & Young, in conjunction with International Business Machines Corp., recently invited the press and corporate managers to view a videotape and attend a roundtable discussion on computer crime.

Deloitte & Touche, another accounting firm, is widely credited with pioneering the computer security industry. The firm has 250 corporate clients.

In an updating of Alfred Hitchcock's classic film "To Catch a Thief," reformed computer hackers – computer whiz kids who get their kicks from breaking into corporate and government data bases – offer to break into a client's computer system to demonstrate its weaknesses. The computer-security industry calls these ex-hackers "hackbusters." □

Bank of New England Considers Joining Home Loan Bank

Continued from page 1

going to be looking into seriously," said company spokesman James Dorsey. "It may play into a piece of our strategy."

Mr. Dorsey confirmed that the company was engaging in "on and off" discussions with the district bank, but said an application had not been filed.

Visits to Discount Window

After posting a $1.1 billion loss for 1989 because of bad real estate loans, the bank borrowed heavily from the discount window of the Boston Fed. At one point, the amount exceeded $2 billion.

The discount window provides short-term credit to ease cash shortfalls, but persistent use is frowned upon by the Fed.

Since then, the company has improved liquidity and strengthened its capital position by selling off more than $5 billion in assets. Bank of New England's borrowing rate is 20 times the amount of stock.

Banks are allowed to use short-term advances for any major business purpose, said David Elliott, who oversees membership at the Federal Home Loan Bank of Boston. Long-term advances are for housing finance.

"We have been approached by several large, regional commercial banks," he said, but declined to discuss specific banks.

According to Joseph Slye, a spokesman for the Federal Housing Finance Board in Washington, which oversees the Home Loan Bank system, only 15 small commercial banks have become members so far. A total of 24 applications by commercial banks are pending, he said.

"It would probably be a good move on their part. It would allow them to ease away from the CD market."

Gerard Cassidy
Tucker, Anthony & R.L. Day

The Federal Housing Finance Board stipulates that a commercial bank must be in "such financial condition that advances may be made safely to them."

Analysts said that because Bank of New England does not have an immediate liquidity crisis, it probably would not face a major hurdle meeting the membership requirement.

Analysts said that the company has been searching for a new source of funding since the higher rates it has offered on its CDs will eventually squeeze its net interest margin.

"It would probably be a good move on their part," said Gerard Cassidy, a securities analyst for Tucker, Anthony & R.L. Day in Portland, Me. "It would allow them to ease away from the CD market. This is a way out of that expensive route."

The Federal Housing Finance Board has been lobbying hard in recent months to woo commercial banks into the system at a time when some thrifts have said they want to leave. Some officials have said that the survivial of the home loan bank system hinges on its ability to bring in fresh capital from banks.

Eight thrifts have filed requests with the FDIC to exit the home loan bank system, and regulators fear that many others may soon follow, delivering a body blow to the system's capital. The thrifts wish to cash in their shareholdings and invest their money elsewhere. So far, the FDIC has not responded to the requests. □

"We have been approached by several large, regional commercial banks."

David Elliott
Federal Home Loan Bank, Boston

gland has succeeded in reversing the dramatic outflow of deposits it experienced earlier in the year by offering CDs nationally at rates between 8% and 9%.

No Urgency on Membership

The company has not borrowed from the Fed for five weeks, according to Mr. Dorsey. The improved position has removed the need for an immediate decision on membership in the Home Loan Bank System, he said.

In a memo to the bank's staff three weeks ago, chairman Lawrence K. Fish said that "later this year, I expect we may return to the Fed window."

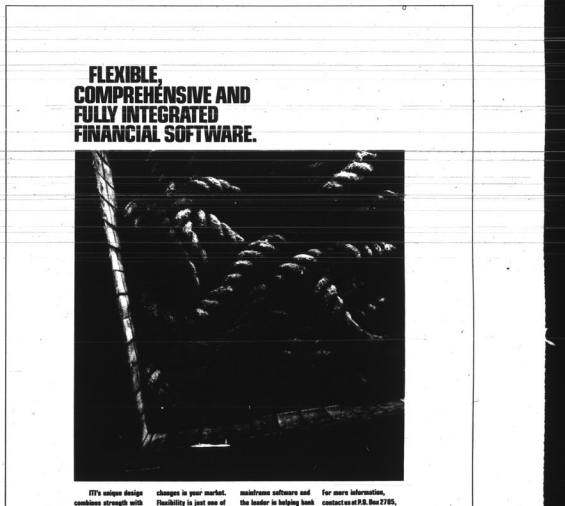
Unlike the Fed, the Home Loan Bank System is set up to lend to its members, presently 3,200. To join, a commercial bank must purchase capital stock equal to at least 1% of its investment in home mortgages. Borrowing limits are determined by the amount of capital stock purchased. The highest

Dekalb Federal to Become Prime Bank

DECATUR, Ga. — DeKalb Federal Savings Bank said it will change its name to Prime Bank effective Oct. 1.

The name corresponds to that of DeKalb's parent, the $585 million-asset Prime Bancshares Inc., the fourth-largest thrift company in the metropolitan Atlanta area.

"Prime Bank better represents who we are," said Darrell D. Pittard, president and chief executive officer of both companies. Most of the thrift's 21 banking locations are outside DeKalb County. □



COMMENT

Continued from page 4

ously, the U.S. credit system has begun to break down.

I believe we should build a new regulatory framework built on the following five principles:

• Government must ensure that our financial markets work effectively and efficiently. This means that regulation should be designed to improve financial disclosure, to ensure that accounting for assets, income, and expenses is accurate, to prevent fraud, to ensure the validity of contracts, and so on.

The government should not use regulation to provide a unfair competitive advantage for a particular institution or class of institutions. Rather, the government should foster open competition that separates the winning, value-added institutions, from the losers.

• Markets work effectively only if they are orderly; bank panics benefit no one. Therefore, government must provide safety nets. Specifically, market makers need access to central bank liquidity in times of crisis (the 1987 stock market crash, for example), the deposits of unsophisticated savers should be insured against loss, and the payment system must be protected.

The regulators "are walking a tightrope between being too strict and not strict enough."

• The government also must work to prevent the market from exploiting anomalies created by the safety nets. One need only look at the S&L mess to see that safety nets create market anomalies. Weak borrowers find weak institutions, which make weak loans.

Therefore, our government must reform the deposit insurance system by a combination of capital requirements, conservative accounting standards, frequent examinations, insurance premiums, and rapid regulatory action to ensure that safety nets are not used to subsidize uneconomic risk taking.

Institutions that take uneconomic risks should be allowed to fail, regardless of size. To do this, the government should preside over the rapid resolution of failing institutions, ensuring that losses from closure and liquidation are borne by private capital rather than at taxpayers' expense.

• Banks should add value or perish. The natural consequence of competition is to separate winners from losers. The capacity of losers must be eliminated from the banking system or the industry will be plagued with such overcapacity that even the best-run institutions will have weak earnings. Without strong earnings, banks will not be able to raise the capital needed to support their lending activities.

• Banks should have the freedom to engage in any financial activity they wish, as long as they can raise the money to do so in the marketplace without relying on safety nets, either directly or through affiliated companies.

"Banks should have the freedom to engage in any financial activity they wish, as long as they can raise the money to do so in the marketplace without relying on safety nets."

This means that barriers must be established to separate activities protected by safety nets from all other activities.

Safety nets should protect only core banking functions, not investors, from market forces. The quid pro quo of allowing banks to engage in nonbanking activities is to allow nonbanks the freedom to own banks.

Regulations Are Obsolete

Many U.S. banking regulations are obsolete. The McFadden Act (which puts prohibitions on interstate branching) is no longer an effective barrier against interstate banking. The Glass-Steagall Act can no longer keep banks out of the securities business.

The Bank Holding Company Act attempts to separate banking from commerce, but it is failing miserably, as evidenced by the success of companies such as General Electric, America Express, and Ford Motor in functions that were formerly regarded as banking.

Such outmoded regulations simply add massive costs to banks, with no public benefits. They also serve as artificial barriers that frustrate natural economic forces.

I believe that by eliminating the capacity of failing institutions, reforming deposit insurance to prevent abuse of safety nets, and unleashing natural economic forces, we can restore the health of our banking industry relatively quickly.

In the process, we can create an industry that provides substantial economic benefit to the nation rather than one that is a drain on taxpayers.

There is no question that the U.S. banking system is in need of a total overhaul. The question is, will we simply muddle through the coming crisis as we have in the past or will we take steps to remake and refine our banking system and ensure our competitiveness in the global economy? □

Comerica Acquires Deposits in Texas

DETROIT — Comerica Bank-Texas has acquired the $124 million of deposits and some of the loans of Continental Bank of Dallas, which regulators closed in July.

The two offices of Continental Bank reopened last Friday as part of Comerica Bank-Texas, bringing its network to 16 locations.

The Texas affiliate of Comerica Inc., Detroit, surpassed $1 billion in assets following the Continental acquisition, which was assisted by the Federal Deposit Insurance Corp., said Charles L. Gummer, president and chief executive officer of Comerica Bank-Texas. □

An interesting thing happens when people think someone else might pick up the tab.

EXECUTIVE *changes*

Hunter Tapped For Chase Post

Robert D. Hunter, national financial services executive for **Chase Manhattan Bank**, New York, has been appointed executive vice president.

Mr. Hunter is responsible for private banking, upscale consumer lending, financing of luxury autos, investment services, home mortgage servicing, and origination and education finance.

Robert D. Hunter

Mr. Hunter, who joined Chase in 1967, has been a national financial services executive since May 1987.

During his career he has been responsible for Chase's business with the electronics and communications industries and has served for more than 10 years in the international division.

Immediately before his present assignment, he was area executive for Europe.

Roberts Joins Mellon Bank

Philip R. Roberts, former chief investment officer for Aetna Life & Casualty Co., is joining **Mellon Bank Corp.'s** trust and investment department as chief investment officer and will head a newly created global asset management division, effective Aug. 13.

As chief investment officer, Mr. Roberts will be responsible for directing the overall investment strategy for two of Mellon's investment management subsidiaries, Mellon Equity Associates and Mellon Bond Associates.

Philip R. Roberts

He will serve as chairman and chief executive officer of Mellon Equity and as chairman of Mellon Bond.

Mr. Roberts also will be responsible for establishing asset management operations in London to expand the global investment capabilities of the Pittsburgh-based corporation.

Albert A. Bittcher has been named executive vice president of Mellon Bank Corp., in charge of the retail bank's newly created market management area.

The head of Commonwealth Bank, the brands of various Mellon Bank units, and two market-managers will report to him.

"Al is a valued member of the retail bank's management team and has made considerable contributions to our success," said Richard A. Gaugh, vice chairman, retail bank. "This move will help the retail bank to approach our markets as a focused, integrated, and responsible organization and will accelerate the development of a common way of doing business among our seven banks."

Albert A. Bittcher

Donald W. Titzel has been named executive vice president in charge of the retail bank's newly created retail support services.

The three core support areas within the retail bank – operations, technology, and business services – will report to Mr. Titzel.

"Don's extensive experience in the Mellon branch systems and as retail market manager will enable Mellon to further develop our back room operations into an area that is highly responsive to the needs of out customers and employees," Mr. Gaugh said.

Donald W. Titzel

Allan R. Dennison has been named market manager at Mellon Bank.

Mr. Dennison will be responsible for branches in southwestern Pennsylvania, the small business loan division, and the custom banking area.

Mitsubishi Bank Names Manager

Mitsubishi Bank Ltd. has named **Yutaka Hasegawa** as senior executive officer of its North American headquarters and director and general manager of its New York branch.

Mr. Hasegawa, formerly general manager, North American administration division, succeeds **Takeshi Tange**, who has been named director and general manager, international planning, at the bank's Tokyo headquarters.

Yutaka Hasegawa

As senior executive of North America, Mr. Hasegawa will be responsible for overseeing the daily conduct of the bank's varied businesses on this continent.

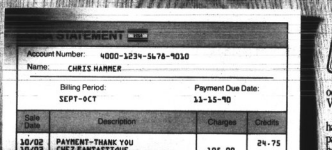
The New York branch, which Mr. Hasegawa will directly manage, is responsible for Mitsubishi's corporate banking and public finance activities in the United States, as well as Treasury operations.

— **Franklin Smith**

SOUTHWEST

First City Bancorp of Texas, Houston, has named **David S. Barnett** as senior vice president and corporate controller. He will be responsible for the corporate accounting function, including tax accounting and accounting for the collecting bank.

Mr. Barnett was previously with First City, Texas-Austin, the holding company's bank unit in Austin, where he served as executive vice president, chief financial officer and manager of the bank's control and operations division. □



OUR TREAT

Not surprisingly, they spend just a little more freely.

Which is precisely what occurs each year in response to the Visa Our Treat® promotion.

We give people the chance of having one of their Visa purchases paid for. And then, during the heaviest shopping period of the year, they go to town.

It's a strategy that could pay off big, considering we'll be giving away $1 million worth of randomly selected transactions between October 1 and December 31, 1990. Meaning some 15,000 cardholders will get a Visa purchase on us.

Whether it's a new bowling ball. Or a trip to Bali.

Either way, you'll win even bigger.

After all, Our Treat has led to record fourth-quarter volumes for two years in a row. And, with proven consumer awareness (plus a major ad campaign in the works), this year promises greater rewards.

For your own program guide and simple statement inserts, simply drive us a call at 1-800-876-5627. And you can put human nature to work for you.

VISA

It's everywhere you want to be.

prizes and non-U.S.-dollar purchases are excluded from entry. Maximum prize in weekly drawings: $75,000. For a complete set of rules, send a stamped, self-addressed envelope to Visa Our Treat Sweepstakes Rules, P.O. Box 8601, Elmhurst, IL 60126-8601. Void where restrictions exist. Residents may omit return postage. Sweepstakes open to all residents of the 50 United States and the District of Columbia 18 years or older except employees and their families of Visa, its advertising and promotional agencies and Visa card issuers. Promotion ends December 31, 1990, or when total prize pool is awarded, whichever occurs first. © Visa U.S.A. Inc. 1990

GLOBAL *dispatches...*

Harris, Bank of Montreal Integrating Global Custody

By RICHARD LAYNE

NEW YORK — To serve investors with international holdings, the Bank of Montreal and its U.S. subsidiary, Harris Trust and Savings Bank, are combining and improving their global custody operations.

The business, which will be called Bank of Montreal Global Custody and will be managed by Harris executives, represents a significant commitment from the banking company. Combined, the international assets of Harris and the Montreal bank total $12 billion, making the entity one of the bigger players in a field led by Chase Manhattan, with $112 billion.

Previously, Bank of Montreal operated a global custody unit in London. Chicago-based Harris offered global custody through a unit of Mitsubishi Bank in California.

Direct Offering Set

Now Harris will offer global custody, or the accounting and record keeping of securities, directly to customers. The bank has purchased custody software from Premier Systems Inc., which is also used by Mitsubishi. The software allows multicurrency reporting, considered a critical element in global custody.

Harris will manage its own network of subcustodian banks worldwide, a service previously supplied by the California bank. By controlling its software and subcustodian network, Harris believes it can offer better service to customers.

"More and more pension plans, insurance companies, and mutual funds are committing a higher percentage of total assets to the international marketplace," said Nancy B. Wolcott, the senior vice president at Harris who will head the combined custody business. "To be a player, you have to dig in and commit."

... *by country*

EASTERN EUROPE

The United States has warned that it may not be able to join a new international bank to fund economic development in Eastern Europe if plans for organizing the institution are not changed, U.S. officials said.

They said the United States and some other major nations were pressing the head of the European Bank for Reconstruction and Development to alter his proposals to centralize power within the presidency.

Unless changes are made, they said the Bush administration could have trouble winning Congressional approval for U.S. participation.

The bank's president-designate, Jacques Attali, has annoyed the U.S. and some other major nations by seeking to concentrate power within himself rather than with a board of directors, U.S. officials said.

They said Mr. Attali's proposal to defer plans for a board of executive directors resident at the bank for two years were unacceptable.

The U.S. is also worried that Mr. Attali's proposal to set up branches throughout Eastern Europe would create an incentive to pump out money. U.S. officials would like to a see a plan for lending first.

UNITED KINGDOM

The **Royal Bank of Scotland Group PLC** said it had exercised an option to raise its shareholding in Spain's **Banco de Santander** to 1.5% from 1%.

Royal Bank of Scotland and Banco de Santander entered into an agreement in 1988 that provided that the Royal Bank would purchase an equity note that, on maturity or on earlier conversion, would convert into shares in Banco de Santander, representing 0.5% of its share capital.

The agreement in 1988 was part of the two banks' alliance for cooperation in Europe.

TAIWAN

The state-run **Chang Hwa Commercial Bank** will open a representative office in Tokyo in August, becoming the first Taiwanese bank to establish a presence in Japan in 40 years, a bank official said.

The official said Chang Hwa would set up the office next month but declined to give the precise date of the opening. "We cannot tell you now, it is too sensitive," he said.

Taiwan's Finance Ministry allowed the Bank of Tokyo in May to set up a representative office in Taipei, making it the first Japanese institution to set up an office in Taiwan since Japan switched diplomatic recognition to China in 1972.

JAPAN

Most of Japan's major banks are likely to raise their short-term lending rates in August, following recent rises in short-term money-market rates, bank officials said.

Major banks here are likely to charge about 7.7% interest on short-term loans to their best customers. They are presently charging about 7.5%, the bankers said. The banks, however, are unlikely to raise their short-term prime rate, which is currently at 7.125%.

Instead, the banks may ask customers to deposit loan proceeds into demand accounts, which bear very low interest, the officials explained.

The by country briefs were supplied by Reuters.

NatWest Bearish Despite Profit Rise

Predicts Tough Second Half as Realty Woes Persist

Reuters

LONDON — National Westminster Bank PLC, the United Kingdom's second-largest bank, faces a hard second half, according to its chairman, Lord Alexander.

"We expect that conditions will remain difficult during the rest of this year," he said in a statement accompanying the bank's first half results.

His was the second bearish statement to be issued by a major U.K. bank in the past few days. Earlier, Lloyds Bank PLC, the U.K.'s fourth-largest, said it that expected real estate problems to persist for at least a year and that Britain's economy was virtually in recession.

Profits Disappoint

NatWest said pretax profits after debt provisions rose to $797 million, from $651 million. This was below market forecasts, but a 15% dividend rise to about 11 cents beat expectations.

The bank's shares rose about 5 cents, to $6.07.

Mr. Alexander said, "These profits are considerably lower than we would have wished. In the current economic conditions in the United Kingdom and the United States, we have needed to make substantial provisions and income growth has slowed."

"There are certain factors from which we take strength," he added. "Our underlying core business is sound. Problem country debt is largely behind us. Our capital base is strong."

The group's total income rose by 7% from the year-earlier level, to $5.16 billion. Net interest

"These profits are considerably lower than we would have wished."

Lord Alexander
National Westminster Bank

income rose by 6%, to $13.1 billion, while noninterest income increased by 8%, to some $1.84 million.

$786 Million Debt Charge

NatWest made total debt charges against profits of $786 million, of which $420 million were specific charges against domestic debt and $355 were against international debt, excluding that from problem countries.

Analysts said a rise in the group's cost-to-income ratio to 69.8% this time from 65.7% in the first half of 1989 was disappointing.

NatWest's Mr. Alexander said this increase reflected the loss of interest income after problem-country debt sales and writeoff of other debt. "The group is continuing to strive for all sensible and effective economies," he said.

Mr. Alexander said high interest rates hit personal and commercial market sectors, but retail savings showed good growth.

Trading Helps Profits

Successful trading by Treasury operations and strong corporate business aided the corporate and banking sector, Mr. Alexander said.

International businesses lost $120 million after $272 million in provisions, compared with a year ago's $9.7 million loss after provisions of $257 million.

Most of the provision this time related to real estate problems in the Northeast United States.

Mr. Alexander said European operations had made increased profit contributions despite difficult market conditions. □

Philippines Aims to Unite Shares in U.S. Bank

By JAMES R. KRAUS

NEW YORK — Philippine National Bank has resubmitted an application to the Federal Reserve Board to acquire Century Bank, a $63.5 million San Francisco-based bank that specializes in trade finance.

Philippine National Bank already holds 20% in Century. Four other state-owned Philippine financial institutions – Development Bank of the Philippines, Land Bank of the Philippines, Government Service Insurance System, and the Philippine Social Security System – each hold 20%.

The application calls for Philippine National Bank to acquire shares held by the other institutions as part of a restructuring of the Philippine banking system.

Philippine National Bank submitted its original application to the Fed two years ago but because of Century's history of losses did not obtain approval.

Manila-based Philippine National had $2.5 billion in assets

The Fed had rejected an earlier bid because of losses by the target bank.

at the end of last year. The bank has an agency in Honolulu, a full branch in New York, and a limited branch in Los Angeles.

Century, originally acquired by the five Philippine institutions from private shareholders in 1981, posted cumulative losses of $5 million between 1981 and 1987. The bank had net earnings of $1.5 million last year and $1.3 million in 1988.

Reason for Resubmission

"We resubmitted the bid because we felt we could demonstrate that Century could be used as an investment vehicle," said Benjamin Palma Gil, the bank's president.

Mr. Gil, 38, who was transferred by the Philippine National Bank from Hong Kong to San Francisco to clean up the bank, has steered Century into trade finance for exporters and importers from among San Francisco's Asian ethnic community.

Mr. Gil said he was hopeful that the Fed application would be approved this time. □

Seidman Predicts $2 Billion Net Loss for FDIC in 1990

Continued from *page 1*

banks to date in 1990; it closed 206 banks in 1989 and 221 in 1988.

In citing the $2 billion net loss estimate, Mr. Seidman confirmed a statement late last month by his deputy, John F. Bovenzi, that the insurance cushion protecting commercial bank deposits is eroding as risks to the banking system mount.

Mr. Bovenzi's "worst-case scenario" fueled speculation that the FDIC might raise the premiums paid by commercial banks, currently 12 cents per $100 of insured deposits. The assessment is already scheduled to rise to 15 cents per $100 next year, and could go higher. The legal limit is now 19.5 cents per $100.

In testimony on Tuesday before the Senate Banking Committee, Mr. Seidman said only that a premium hike is under study. He said he is confident that, despite the expected decline in the FDIC reserve, the fund can handle forseeable problems.

Relative to total insured deposits, the FDIC bank insurance fund ended 1989 at a historical low point of 70 cents per $100 of insured deposits. Mr. Seidman told the Senate panel that the coverage ratio could slip further to between 50 cents and 60 cents by yearend 1990.

Relative to total insured deposits, the FDIC bank insurance fund ended 1989 at a historical low point of 70 cents per $100 of insured deposits.

Insurance on Their Minds

While Mr. Seidman spoke to the banking committee on a number of subjects ranging from the insurance fund and the savings and loan crisis to financial industry services reform, several senators kept coming back to the adequacy of the insurance fund.

"We have been trying to get a clear sense as to what the state of the insurance fund is," said Sen. Donald W. Riegle Jr., D-Mich., chairmas of the banking committee. Mr. Riegle then asked Mr. Seidman to present a picture of where the fund is heading.

"We continue to have over 1,000 problem banks and we continue to have failures in the system," Mr. Seidman said. "Like anyone else, we are not able to predict the future perfectly."

A Likely Candidate

Charles Peabody, a banking analyst with Kidder, Peabody & Co., is convinced that the government is preparing for at least one large bank failure. "Using these assumptions, our candidate for potential failure is Bank of New England," he said in a recently published report.

The Bank of New England Corp.'s principal subsidiary has a weak capital-to-assets ratio of 1.02%.

Bank of New England officials have bristled at speculation about a possible failure, saying the company is on the way to recovery after a $1.1 billion loss last year.

Mr. Riegle asked Mr. Seidman if the FDIC is at the point where it ought to consider increasing the 15% level.

"I think our board will be monitoring that very carefully," Mr. Seidman responded.

"Everything I keep reading suggests that they are moving in that direction of pushing [the insurance premium] up," said Bert Ely, an Alexandria, Va., financial consultant.

Mr. Ely figures that a $2 billion loss, coupled with increased deposit inflows to the banking system as a result of more S&L failures, would mean that the deposit coverage could fall to between 50 and 55 cents for every $100 in deposits. □

Anchor's Turnaround Continues

NEW YORK — Anchor Savings Bank, declaring progress in its turnaround effort, reported net income of $40.9 million for the quarter that ended June 30, up from a loss of $26.9 million a year earlier.

The $9.2 billion-asset thrift, the nation's 22d-largest, does not meet the capital requirements of the thrift-bailout law, with negative tangible capital of $151 million.

But, earlier this year, regulators approved Anchor's plan for achieving compliance within two years through asset sales and other steps.

Chief executive James M. Large Jr., recruited from First Interstate Bancorp last year to lead the turnaround, said the quarterly results "reflect a continuing improvement in Anchor's operating performance."

The Hewlett, N.Y.-based thrift said its core profits, which exclude one-time gains, were $1.9 million for the quarter, up from a loss of $3 million a year earlier. □

Comerica Acquires Deposits in Texas

DETROIT — Comerica Bank-Texas has acquired the $124 million of deposits and some of the loans of Continental Bank of Dallas, which regulators closed last Thursday.

The two offices of Continental Bank reopened last Friday as part of Comerica Bank-Texas, bringing its network to 16 locations.

The Texas affiliate of Comerica Inc., Detroit, surpassed $1 billion in assets following the Continental acquisition, which was assisted by the Federal Deposit Insurance Corp. □

Larger Banks Charge More For Checking

Continued from *page 2*

earlier.

Then, banks under $50 million in assets charged an average of $4.03 a month for regular checking – 9 cents less than in the latest survey. In last year's survey, the largest category of banks charged $5.29 – 27 cents more than the average charge in this year's data.

According to surveyed banks, a regular checking account typically had two to four pricing tiers.

Customers were charged monthly maintenance fees ranging from $4 to $5 unless an account balance of $300 to $500 was maintained during a billing period.

Unlimited free checks, either offered regardless of account balance or when the account balance was above the minimum requirement, was the norm in the survey for regular checking accounts.

When only a limited number of free checks was permissible monthly, the typical range was three to 50 free checks each month, and charges ranged between 17 cents and 24 cents for each additional check written, the survey said. □

New England College Plans Banking Degree

The New England Banking Institute, Boston, has formed an alliance with Bentley College to offer a bachelor's degree focusing on banking.

The agreement enables bankers to obtain a bachelor of science degree in finance with a concentration in bank management. The program is the first of its kind in New England.

Participants can earn an associate's degree from the regional banking institute, which serves 10,000 bank employees a year in its educational programs. Additional courses at Bentley then lead to a bachelor's degree from the Waltham, Mass., college.

Admissions Policy

Though developed for bankers enrolled at the banking institute, those with associates' degrees from other institutions may apply for admission into the joint program.

"This partnership could change the face of banking education in New England," said Peter Madden, president of State Street Bank and Trust Co. and chairman of the institute's senior advisory council. "The goal is to produce graduates who have cross-functional banking skills – who understand all aspects of bank management."

Gregory H. Adamian, president of Bentley, said, "Given the prominence of the banking industry in this region and the Northeast in general, Bentley and NEBI will be filling a real need. What we have begun could become a model nationwide." — **Franklin Smith**

Wall Staunchly Defends 1988 Sale of Bluebonnet Savings

Continued from *page 2*

said Mr. Garn. "He just wants publicity out of this."

At the heart of Mr. Metzenbaum's criticism of Bluebonnet is the disclosure that Mr. Fail was indicted on a securities charge 10 years ago and that his insurance company entered into a plea bargain and paid a fine for insurance fraud.

But the Ohio senator aimed most of his attack at Mr. Thompson, who he said may have earned "an amount in the tens of millions of dollars" for his work on the Bluebonnet deal.

Mr. Wall and others who appeared before the panel said Mr. Thompson had no impact on the decision.

Mr. Metzenbaum has accused the now-defunct Federal Home Loan Bank Board of turning down a competing deal for Bluebonnet Savings that would have saved the government $97 million.

Stuart Root, former director of the Federal Savings and Loan Insurance Corp., said he had never met Mr. Thompson. Mr. Wall said he had met him only three times in 1988; he claims to have met four times with Weston Edwards, the losing bidder.

Mr. Root said that Mr. Edwards' final bid was probably more expensive than Mr. Fail's final bid in late December 1988, even though he came in cheaper than Mr. Fail during an earlier round. Mr. Wall said he has asked the Office of Thrift Supervision, the successor to the Bank Board, to provide estimates of the cost of the two final bids.

George Barclay, president of the Federal Home Loan Bank of Dallas, acknowledged that he wrote a letter to the Bank Board in Washington, following his office's investigation of Mr. Fail, describing the buyer's legal problems but not offering a conclusion.

Second Letter

He wrote a second letter, reflecting his decision "not to object" to the acquisition after Thomas Lykos, the former director of the FSLIC's Southwest plan, asked him to amend the letter to state his position.

Mr. Metzenbaum said it may have been unprecedented for a district bank to fail to state an opinion on a proposed assisted takeover.

'What was your rush?'

That should have been a clear signal to Mr. Wall that something was amiss, he said.

"What was your rush?" he repeatedly asked the former regulator. □

DON'T FIND OUT THE HARD WAY.

Compliance Examinations Update

Last year, over 55,000 banks were declared in violation of regulations. Not deliberate malfeasance, but simply overlooked technicalities–costing hours of documentation time and a fortune in penalties.

Are *you* in complete compliance with all of the legislation and regulation pertaining to your financial institution?

The fact is, you may never know until it's too late. Unless you protect yourself.

Compliance Examinations Update For Financial Institutions is exactly the kind of "early warning system" you need to assist in rapid, safe, cost-efficient compliance. Our editors regularly search out what regulators are looking for–and what they're finding–as well as the very latest developments in legislation. Twice a month, this dependable service gives you practical, on-going guidance on how to detect and resolve these complex problems in your operations–*before* they become violations.

The next twelve months will see thousands of banks cited or sued for failing to comply with Federal consumer protection laws. Make sure you're not one of them with ***Compliance Examinations Update.***

Take advantage of this special opportunity to receive ***Compliance Examinations Update*** FREE for 30 days. Call now–and start protecting yourself today!

RTC, on 1st Birthday, Is Under Pressure to Move Assets

Continued from *page 1*

ingly sluggish U.S. economy. Shunned by acquirers who prefer performing loans, top-notch mortgage securities, and residential real estate, these leftovers present special problems for the RTC. At many government-held thrifts, loan files are missing or in disarray. Payments are coming in irregularly, if at all. Commercial loans, though performing, are not in demand.

The Most Illiquid Remain

In short, much of what still sits in the RTC inventory is the most illiquid of the agency's assets.

Moving the half-built or vacant commercial and residential properties and raw land that make up but a fraction of the inventory may be the hardest part of the job, given the real estate recession that is spreading nationwide. "Who wants a vacant building in an area where there's absolutely no demand for office space?" conceded Stephen Katsanos, a spokesman for the RTC. These properties will have to be sold at a deep discount.

In the face of tremendous pressure to start and maintain an aggressive sales program, the RTC appears to have plenty of nothing to offer an indifferent public. Yet its challenge in the months ahead is to convert these bad assets – Chairman L. William Seidman prefers to call them "opportunity assets" – into cash.

> **"Selling hard-to-move assets is where the rubber hits the road."**
>
> **L. William Seidman**
> *Resolution Trust Corp.*

"They're only about one-sixth of the way through the problem in terms of dollars," said Bert Ely, an Alexandria, Va., consultant. Disposing of assets won't be as quick and easy as moving deposits, "just because of the nature of the assets involved."

Seidman Takes the Offensive

Today, at a scheduled press conference, Mr. Seidman is expected to take the offensive against critics of the RTC's asset-sales efforts by unveiling a stepped-up strategy to plow through its inventory.

The RTC chairman will unveil "Operation Clean-up" – effectively stage 2 of the agency's thrift-rescue effort. It will combine a wide range of techniques to "make selling the primary business of the RTC," Mr. Seidman said in a recent telephone interview.

"We expect to have a sales force with the skills of IBM and the products of a second-hand car lot," he said. For the RTC, "selling hard-to-move assets is where the rubber hits the road."

A national sales director for the RTC will be named as part of the initiative.

Initiatives Under Way

Several efforts to move large volumes of assets have already been set in motion by the RTC:

- Up to $300 million of real estate will go on the block at a nationwide, satellite auction in September.
- Bid..ag begins in November for three $500 million packages of distressed loans and real estate.
- At the RTC's direction, the Office of Thrift Supervision has begun marketing ailing thrifts before they lose their appeal to buyers. Ten to 12 thrifts are expected to be sold under the "accelerated resolution program" by yearend, and more could follow. "We hope we'll get a lot more assets sold this way," Mr. Seidman said.

> **Much of what sits in the RTC inventory is the most illiquid of the agency's financial assets.**

Mr. Seidman emphasized his agency's successes at a House Banking Committee hearing on Monday. "We've sold $50 billion in assets. That puts us in IBM's class," he said.

The RTC said it sold or liquidated assets with a book value of $45.3 billion from 207 thrifts it had resolved as of June 30. However, approximately $10 billion of these assets carried put options, meaning the buyer may return them to the RTC. The RTC kept assets with a book value of $39.4 billion.

Over the next three months, the RTC expects to resolve another 77 thrifts with assets of $48 billion. Based on prior experience, the RTC could end up with about half of these assets.

Breakdown of Assets

Distressed real estate and financial loans make up about half the assets of failed thrifts, Mr. Seidman told the panel. The RTC is selling real estate "50% to 60% of book value. The easy-to-sell assets that make up the balance of the inventory sell for book value, so the RTC's losses on assets total about 25% of book value, he added.

The RTC's receivership holdings, $37 billion at the end of June, include $6 billion in real estate and $31 billion in financial assets, including loans, securities, and junk bonds. □

Take a quick insider's look at your competitors' prices.

There's a secret to successful pricing. And your competitors are holding onto it.

Their current, component price lists for corporate cash management services are essential to the pricing decisions you make. And now you can see them, thanks to Trans Data's relationship with hundreds of the nation's top banks.

Order a customized look at over 25 services.

Our Corporate Pricing Series constantly updates detailed component and bottom-line prices for over 25 cash management services.

These prices are fresh, accurate and itemized. And we deliver them in two unique and useful styles. First, review quarterly price analyses of banks categorized nationally, regionally and by deposit size. For even more perspective, consult the studies' historical records to analyze ongoing trends.

Then, ask Trans Data for a customized comparison of your prices with those of your peer bank groups. We'll even stack your numbers up against those of specific banks you designate. Their identities are concealed, but their numbers will offer a clear, actionable picture of your specific market.

Price more confidently... and profitably.

With the Corporate Pricing Series in your files, you have a head start in setting price and product features for a new offering. You'll simplify the task of spotting and leveraging price advantages. And fine-tune profit margins more confidently.

Developed in a decade of banking research, our connections are priceless. So call us now, before you make another pricing decision. Let Trans Data give you a look at what's going on inside the minds — and price lists — of your competitors.

Research Division, American Banker • Bond Buyer

To: The RTC's Administrators. Re: Some Steps to Consider

By DEBRA COPE

What should the Resolution Trust Corp. do to speed the sale of seized thrift assets?

The American Banker *posed that question to five experts, who said the agency needs to exhibit flexibility, innovation, and a high level of cooperation with investment bankers, institutional investors, and others who have the expertise – and the capital – to make deals work.*

John Oros:
Forge Links with Private Sector

Welding partnerships with private firms is the big challenge ahead for the RTC, said John Oros, partner, Goldman Sachs & Co., New York. "This agency has got to get itself where it is working aggressively rather than reluctantly with the private sector," the investment banker said.

In the coming months, the RTC will focus on improving the financing, representations and warranties, and indemnities it offers asset buyers, and on structuring workable management contracts, he said.

Although the RTC has taken a lot of heat for unloading most assets from the deposits it sells, Mr. Oros has no fundamental quarrel with this. "A guy who buys a shopping center in Texas may not be the guy to buy sophisticated stripped securities. I'm a big fan of this market segmentation."

Still, the name of the game is volume. "One of the major breakthroughs will come when they get to point where they can turn over major chunks of assets," he said.

He called the accelerated resolutions program "exciting" because it will give prospective acquirers more time to look over assets. More assets will move with deposits, and "that's an advantage, because it's another way of moving volume."

If the RTC can be a more flexible negotiator, that should nudge even more assets into private hands, he said.

Bidders wonder whether the RTC will structure accelerated resolution packages so that certain categories of assets can be left at the bidding table, Mr. Oros said. Letting winners refuse a small number of risky, complicated assets – such as loans with environmental risks or participations that present cross-creditor claims – could allow transfers of most of a failed thrift's assets to private hands.

The RTC also needs to entrust to its agents the authority to approve transactions, Mr. Oros said. "The government can supervise the hell out of them after the fact, but it has to let them do deals."

Timothy Hartman:
Renegotiate With Borrowers

As it struggles with a growing asset load, the RTC is missing a chance to ease its burden by renegotiating loans, said Timothy Hartman, chief executive of NCNB Texas, Dallas.

Mr. Hartman predicted innovation will be the hallmark of coming months. "We'll begin to see the RTC pursue more alternatives once they have a data base that allows an investor to appropriately evaluate a loan. Right now that is restricting analysis."

If an original borrower from an insolvent thrift lacks the wherewithal to retire a debt under existing terms, "the taxpayers and the government may be best served by restructuring the loan," Mr. Hartman said.

Debt restructuring could cut the RTC's legal and administrative costs as well as stimulate depressed economies by freeing owners to reprice leasing terms for commercial real estate projects that are now under-occupied. The alternative is to foreclose on the original owner of a project, incur legal costs, and slash the price to find a buyer, he said.

"If the original borrower can't service his debt but still has faith and belief in the project, in many cases he is the best person to carry it forward," according to Mr. Hartman. "Some cash flow is better than no cash flow."

He added that disposing of troubled loans remains a serious problem for the agency, which has so far put relatively few distressed assets up for sale. But he generally gave high marks to the agency, saying observers "have been more critical than I think we should be at this point." Formed less than a year ago, the RTC "has inherited seven to 10 years' worth of problems."

Leonard Simon:
Investors Wary Of Public Wrath

Hostile political and public opinion are dampening the enthusiasm of the very entrepreneurs who are best equipped to take over assets of failed thrifts, said Leonard Simon, chief executive officer, Rochester Community Savings Bank in New York State.

Financial institutions lack the appetite for nonperforming assets because they can't absorb high risk for a chance at a 15% to 16% return. And acquiring sick loans may prompt intense regulatory scrutiny, Mr. Simon said.

That leaves the private sector to purchase assets from the RTC, and these investors need convincing "that they won't be battling Congress forever."

"Congress gets upset when somebody earns a 30% return, although the perceived risk may merit it." The public, too, "has a sense of what should be earned and what's fair," Mr. Simon said. "When things depart from that, it's difficult for people to accept."

Mr. Simon said the RTC "should write the contracts so they have a piece of the upside on everything, and then let the entrepreneurs go to work."

The Office of Thrift Supervision can help tame the RTC's task by aggressively pairing buyers with borderline thrifts before they fail, Mr. Simon said.

Speeding sales of shaky mutual institutions is one option. The RTC said March, in an innovative reading of its supervisory conversion rules, allowed Mr. Simon's Rochester Community to acquire Shadow Lawn Savings Bank, West Long Branch, N.J.

Though tangibly insolvent, Shadow Lawn had goodwill capital, making it solvent under generally accepted accounting principles and thus technically ineligible for the expedited mutual-to-stock conversion procedure. By bending its rule, the OTS kept Shadow Lawn out of conservatorship and preserved its franchise value. "The OTS needs to do a lot more of that," Mr. Simon said.

Paul Horvitz:
Structure Is An Impediment

By setting and meeting ambitious goals, the RTC is demonstrating it can cut deals and resolve cases, but impediments to long-term success are imbedded in the structure of the rescue effort, according to Paul Horvitz, a University of Houston finance professor.

Although the RTC is doing the best it can, involvement by the Oversight Board and the Treasury Department is a hindrance, and second-guessing by Congress is "irresponsible," "demagogic," and the biggest obstacle to getting the job done, Mr. Horvitz said.

> **"It is a bad idea to do all the deals that way."**

He criticized the heavy reliance of RTC officials on deposit assumption and transfer deals. "They are leaving RTC with all of the sour assets, and it is a bad idea to do all the deals that way."

The Southwest plan sales of thrifts by the Federal Savings and Loan Insurance Corp. in 1988, though now reviled, were better for the government than those the RTC is assembling now, Mr. Horvitz asserted.

"They required the new owners to take the bad assets." The government had to provide guarantees against loss, "but at least there was some incentive to dispose of assets," he said.

One good approach, Mr. Horvitz said, would be to invite bidders to browse freely through the RTC's inventory and then negotiate, "rather than going through a seemingly fair auction process."

"The trouble is, the RTC staff doesn't like that responsibility. It opens them up to criticism if somebody gets something too cheap." Given widespread second-guessing of FSLIC's deals, Mr. Horvitz said, "it's not a misplaced concern."

William H. Rivoir:
Prime the Pump With Financing

To get its real estate assets moving, the RTC must prime the pump with seller financing, said William H. Rivoir, Arizona's superintendent of banks.

"The RTC is in a buyer's market, not a seller's market. It must move toward the market, instead of insisting the market move to it," Mr. Rivoir said. To boost its cash position, the RTC

> **"The RTC is in a buyer's market, not a seller's market."**

should sell the loans into the secondary market.

The Oversight Board should consider providing limited government guarantees for the RTC's financing. "I suggest covering the top 25% of the loan against loss. With a 15% down payment and a 25% guarantee, it would have a 60% loan-to-value ratio. Those would be salable."

Expanded seller financing could help the RTC fetch higher prices for its wares, move more assets, and cut its long-term costs. And the range of buyers will be greatly expanded because "you're not limited just to cash-rich bottom fishers," he said.

Mr. Rivoir acknowledged that financing real estate would be costly for the cash-strapped RTC but said the payoff would be greater stability in the real estate market.

The RTC also needs to "sell loans, not just hire asset managers," Mr. Rivoir said. He endorsed the RTC's plan to begin bulk sales of financial assets. This approach is good "not just because it gets liquidity for the RTC, but because it gets the decision-making process out of the government's hand."

"If you have private managers determining whether to foreclose, or restructure, and on what terms, you'll get a better result than having a government-bureaucrat doing it," he said. □

Unicorp to Keep Lincoln Savings Bank

By STEPHEN KLEGE

NEW YORK — Unicorp American Corp. has abandoned an attempt to sell Lincoln Savings Bank, and instead has hired a retail savings and loan specialist to bolster management of the $2.8 billion-asset thrift.

Unicorp American, a unit of the Toronto-based real-estate company Unicorp Canada Corp., paid about $150 million to buy New York-based Lincoln Savings in 1987.

"They couldn't get anywhere near that in today's adverse market for banks," said one analyst, who declined to be quoted by name.

The attempt to sell the thrift unit was sparked by the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, which reduced thrift real estate powers.

The company announced it had hired Jonathan Gabriel, formerly chief operating officer of City Federal Savings Bank, Bedminster, N.J., as its chief retail banking officer. City Federal is now operating under the federal Resolution Trust Corp.

$40 Million Real Estate Sale

Unicorp said last week that it netted $40 million in cash from the real estate transaction. The proceeds were used to repay Unicorp American's senior debt.

Unicorp American also opened a new $24 million revolving credit line with Hees International Bancorp, Toronto, and National Bank of Canada, extending through August, 1991.

Part of Unicorp American's real estate portfolio was sold to newly formed partnerships of Unicorp American and Coscan Development Corp., Toronto, for $33.1 million of cash. The remainder of the real estate was financed with participating mortgages, the company said.

Coscan Development is an affiliate of Hees International, which owns 24.6% of Unicorp Canada.

Second Quarter Losses

Tuesday, Unicorp American announced it had lost $1.2 million, or nine cents a share, in the second quarter, but a spokeswoman said the results did not reflect the spinoff of the real estate assets.

Unicorp American lost $4.4 million in the second quarter last year.

The analyst said the thrift has operated at or near breakeven for the last year, not counting the real estate assets. ☐

COMMENT/MERGERS

Dissident Shareholders Stir Up Hornet's Nest at New York Savings

By REID NAGLE
President
SNL Securities

Shareholder relations at New York Bancorp — a $1.1 billion-asset thrift holding company serving Queens and Nassau counties in New York, took a turn for the worse last week as dissident directors Patrick Malloy and Michael McManus clashed with management about the adequacy of their board representation.

Last January, Mr. Malloy and Mr. McManus won an acrimonious proxy battle by a 57% to 42% margin that placed them on the board of the North Hills, N.Y.-based company.

A few months later, on April 24, Mr. Malloy filed a 13D with the Securities and Exchange Commission indicating a desire to engage "in discussions relating to the business activities," by an entity to be formed by Mr. Malloy, of all the outstanding common stock of the company."

The battle did not end there. For several months, Mr. Malloy and Mr. McManus have complained that management has denied them adequate board representation by prohibiting them from joining or even attending the executive sessions of New York Bancorp's sole insured depository subsidiary, Home Federal Savings Bank.

On July 20, Mr. Malloy and Mr. McManus showed up at Home Federal's trustees' meeting insisting that they be permitted to attend. The trustees refused.

"At the time of its conversion, New York Bancorp had a track record of mediocre earnings but a history of strong asset quality."

Since the conversion, three large investors have appeared at New York Bancorp's doorstep. The first was Nicola Biase, a representative of an Italian and Swiss financial group called Findim. Findim has appeared in numerous other places in the Northeast corridor in recent years: Sag Harbor Savings Bank on Long Island; Cortland Savings in Boston; North York Bancorp., Mattituck, N.Y.; State Bancorp in New City, N.Y.; and most recently, Polifly Financial in Hasbrouck Heights, N.J.

Findim first filed on New York Bancorp stock in March, 1989.

Unless the two sides reach an accord soon, it seems likely that one of the dissident shareholders will propose an opposition slate of directors next January when three board members, including chairman Dreher, are up for re-election. Absent a prolonged court battle, the numbers suggest the dissident faction would have a tough time losing. The three dissident investors, together with all institutional shareholders, control 55% of the outstanding shares.

portedly asked them to leave, the dissidents refused, and the trustees' meeting was adjourned.

New York Bancorp was a mutual institution until February 1989, when it converted to stock ownership by offering $21 million of stock to depositors and the public. The stock has performed well since then, rising from an initial offering price of $6 on high of $13.625 and settling in a range of $11 to $12 in recent weeks.

Strong Asset Quality

At the time of its conversion, New York Bancorp had a track record of mediocre earnings but a history of strong asset quality. Its postconversion performance has remained mediocre, with an average return on assets of 0.38% over the past two years. Perhaps the company's strongest attribute has been its ability to avoid asset quality and interest rate problems.

At March 30, 1990, its ratio of nonperforming assets to total assets stood at 0.41%, one of the best in the Northeast, and its one-year interest rate gap was hovering near zero. Even Mr. Malloy commends management's ability to control balance sheet risk, noting that "in the period of time I've been there, management has made a number of good risk decisions."

In a negative climate for bank and thrift stocks, investors have become increasingly skeptical of asserting their rights as owners.

"Whatever happens in the next six months, corporate life seems destined to change."

Even institutional investors now almost always cast their votes for propositions and board nominees proposed by dissident investors.

Of sixteen recent actual or threatened proxy fights in the thrift industry over the past year, management has won only three times, and never when shareholder proposals will prevail, either as a result of compromise on the part of management or by proxy vote. When that happens, dissidents who have waved the banner of "maximizing shareholder value" will be put to the test of defining and implementing the slogan.

In most instances, maximizing shareholder value can be interpreted as shorthand for selling the company. The prospects for selling New York Bancorp at an attractive price in the near future are dubious, as the stock markets for the stock of potential acquirers and takeover competition from the Resolution Trust Corp. Whether Mr. Malloy himself wants to own the company, which would command a price tag of at least $50 million, is open to question.

For the management of New York Bancorp, events today are an outgrowth of the decision made in 1987 to convert from mutual to stock form. What has happened since is the nightmare that every mutual thrift manager is contemplating conversion wants to avoid.

Nonetheless, Mr. Dreher, when asked whether he would recommend the conversion route to other healthy mutual institutions, responded that he had "no recommendations and no regrets. The charter set up [for New York Bancorp] is appropriate. A charter never works out the way that you say it should."

Further, commenting on the company's financial and stock price performance since going public, Mr. Dehler noted that "this is the quarter we set up when we went public — very few others could do what they said they were going to do." ☐

DEALS

Lin Broadcasting Corp.'s Cellular Financing Package Oversubscribed

By STEVEN LIPIN

Agent banks closed the Lin Broadcasting Corp. bank financing package Tuesday after receiving commitments of $2.4 billion for the $1.75 billion cellular facility.

The Lin financing attracted over 30 lenders to including a sizable number of nonbanks, bankers in the deal said.

The up-front fees were as high as 325 basis points for commitments of $200 million. Interest rates are initially 250 basis points over the London interbank offered rate. The rate falls based on the company's ratio of debt to cash flow.

Companion Loan Falls Short

A companion credit of $350 million for Lin's broadcasting operations raised about $300 million, a banker in the deal. Because this credit fell short of its goal, it will be syndicated in the secondary market through a pooled sell down, the banker said.

The broadcast facility has lower fees – around 137.5 basis points – and a lower interest rate. The broadcast facility was fully underwritten, while the cellular facility was arranged on a best-efforts basis.

The cellular facility is being led by the banking units of Toronto Dominion Corp., Citicorp, and J.P. Morgan & Co. Each of these banks committed $200 million.

Advice from the Market

Lenders advised the company to break out a separate broadcast facility because of the limited demand for cellular bank loans, a banker said.

The broadcast facility has the same agents, but includes Bank of New York Co.

A banker at one of the agents said the larger facility attracted at least 12 new cellular lenders. Investors included Japanese leasing companies, insurance companies, and bank-loan mutual funds.

The banker declined to name the lenders.

Proceeds from the package will be used to cover the cash portion of certain cellular properties of Metromedia Co. □

Citicorp's Departure Makes UAL Buyout Deal Unlikely

Continued from *page 1*

particularly damaging to the new financing effort because Citicorp has been viewed as the bank most keen on seeing the bid succeed. Citibank, along with Chase Manhattan Bank, led last year's failed $6.8 billion bid, and has been seen as wanting to redeem itself.

Citicorp Deemed Vital

One Midwestern banker who had been interested in participating in the general bank syndicate said the deal cannot succeed without Citicorp.

"You could bring in a Japanese bank, but I doubt under these circumstances they'd want to come in," he said.

"It will be rather difficult for us to make any decision [about participating in the deal] before any major American banks make a decision," an official in the Chicago branch of a major Japanese bank said.

The demise of last year's UAL deal marked the end of an era of frenzied dealmaking that symbolized the 1980s.

Sources said Chemical and Citicorp would both rejoin the bank group if their concerns about the need for equity were satisfied.

Unions Say Financing Is Near

A spokesman for the airline's buyout group reiterated on Tuesday a previous statement that the buyout group was "close" to lining up outside financing from airframe and engine suppliers.

As of late Tuesday, the buyout group was still discussing the details of the deficiencies within the bank group.

Sources said Chemical and Citicorp would both rejoin the bank group if their concerns about the need for equity were satisfied.

There had been unconfirmed market rumors that Boeing Co. and General Electric Capital Corp. would together contribute over $500 million of financing in the form of subordinated debt that would be convertible into voting preferred stock of the UAL. A spokesperson for the General Electric unit declined comment, and Boeing could not be reached for comment.

Pessimism Not Universal

Not every banker took a pessimistic view of the bank group's defections. One still actively involved in the proposed UAL buyout stressed Tuesday that the deal is still alive.

"I don't think there is anyone – whether Chemical or anyone else – who's written this thing off," he said.

"We don't think it's over at all," this banker added.

Gerald Greenwald, the former Chrysler Corp. vice chairman who was hired by the unions to lead the buyout, declined through a spokesman to comment on the recent developments.

Stocks of banks linked to the UAL leveraged buyout were off Tuesday in late afternoon trading on the New York Stock Exchange, with Chase Manhattan Corp. falling 75 cents to $18.875, Manufacturers Hanover Corp. falling 87.5 cents to $30.50, and Bankers Trust New York Corp. falling 75 cents to $38.50. Citicorp was unchanged at $20.25. □

One Bancorp Reports Snag With Capital Plan

Reuters

PORTLAND, Maine — One Bancorp is unlikely to satisfy the requirements of its capital plan or restore its flagship subsidiary's capital to required levels within the deadline given by regulators, the thrift-holding company said Tuesday in a statement.

"One Bancorp's ability to continue as a going concern will therefore depend upon the level of progress it can show in meeting the goals of the capital plan and the willingness of its regulators to grant additional holding company additional time."

Lost $3.63 a Share

The statement accompanied One Bancorp's report of a second-quarter loss of $29.8 million, or $3.63 a share, compared with a year-earlier loss of $10.5 million, or $1.28 a share.

For the first six months of 1990, One Bancorp had $12.4 million, $3.6 million less than the year-earlier holding loss a year ago. The 1990 figure included a $29.7 million gain from the retirement of capital notes.

No Offering of Preferred Stock

The $2.2 billion-asset parent of Maine Savings Bank, Portland, also said it has decided against a preferred stock offering, as contemplated in the plan, because of market conditions and its financial condition.

The company said it has not received any acceptable offers for two subsidiaries, Bank of Hartford, Conn., and Southstate Bank for Savings in Massachusetts. It received appraisals indicating the cash market value of Bank of Hartford is $45 million, well below the $55 million assumed in the capital plan. □

House Passes S&L Crime Bill

WASHINGTON — The House overwhelmingly approved a savings and loan crime bill that mandates life terms for some offenses and gives a new criminal commission to investigate the causes of the thrift crisis.

The crime bill was a package that was stripped out from a larger piece of legislation and introduced Monday as a free-standing bill by Rep. Jack Brooks, D-Tex., and Rep. Chalmers Wylie, R-Ohio.

The measure was voted on separately, sources said, because lawmakers wanted a vote on S&L crime before they begin the month-long August recess on Friday. The crime bill will not come up until September.

The bill would also make it a federal crime to impede the process of a federal bank examiner, conceal assets from the Federal Deposit Insurance Corp. □

First Liberty Unit Sells Portfolio

ATLANTA — First Liberty Financial Corp. said its principal subsidiary, Liberty Savings Bank, has agreed to sell its credit card portfolio to the Massachusetts Co., a subsidiary of The Travelers Insurance Companies, Hartford, Connecticut.

First Liberty did not disclose the terms of the transaction. It said it expected to complete the transaction during the first week in August.

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 50 largest publicly traded thrifts as measured by the market value of all common shares outstanding (as of March 31, 1990). Companies whose market value qualified for banks was $659.6 mil. and for thrifts $127.45 mil.) **52 Wk Hi** Lat the moving 52-week high price for the shares. **Lo** Lat the moving 52-week low price. **Name** The current stock price divided by the trailing four-quarter earnings per share. **Pct Yld** The annual announced dividend. **Mkt Bk** Lat the ratio of the current stock price to closing price to the stock's book value, expressed as a percentage. **Cls.** The closing price of the most recent trade. **Chg.** The change in the closing price from the previous day's stock last traded. If no trades for the day, the latest bid. **All Bank Index** The index includes a weighted average of the top 250 banks by market value and the top 50 thrifts in market value, respectively. **Highlights/Lowers** Stocks with the largest gains/losses in price volume indicators most shares traded and today's volume as a percentage of average trading volume for the past 30 days.

Data sources: **SNL Securities,** Charlottesville, VA. 804-977-1600, produced the tables. Financial News Network, Vienna, VA, provides SNL with the daily prices.

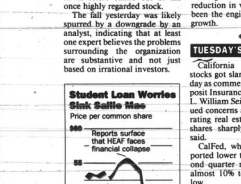
Sallie Mae Shares Decline on News Of a Downgrade

by FRED VOGELSTEIN

Shares of the Student Loan Marketing Association continued to tumble Tuesday, falling $2.25, to $43, by late afternoon as investors bailed out of the once highly regarded stock.

The fall yesterday was likely spurred by a downgrade by an analyst, indicating that at least one expert believes the problems surrounding the organization are substantive and not just based on irrational investors.



"They're not going to be perceived as a risk-free entity anymore," said Lacy Shockley, a securities analyst at Smith Barney, Harris Upham & Co., who changed her recommendation from a "buy" to a "hold."

She said uncertainties about the stability of the student loan system, an expected downturn in loan volume, and new management reduce the attractiveness of the stock.

The shares are off roughly 22% since reports of problems in the system surfaced early last week.

Sallie Mae has been one of analysts' favorite stocks because its special relationship with the government has left it free of credit risk and interest rate risk.

Other analysts have not followed suit in downgrading the stock, however, saying concern about the stock is overblown and not based on fundamentals.

"The stock is in a psychological hurricane and once people step back, they will see it is a great buy," said J. Richard Fredericks, an analyst at Montgomery Securities.

Concern over Sallie Mae and the entire student loan system erupted early last week when it was disclosed that the largest guarantor, the Higher Education Assistance Foundation, was near insolvency.

That was amplified last Friday when Sallie Mae announced it was considering taking over HEAF's debts.

Concern about Sallie Mae stemmed from the fact that it holds nearly $3 billion in HEAF loans and the fact that HEAF owes Sallie Mae $865 million.

Late yesterday, Sallie Mae said it might lend up to an additional $200 million to finance HEAF based on assurances from the U.S. Department of Education as to its continued payment of HEAF's student loan reinsurance claims.

Ms. Shockley said HEAF's debacle will send a chill to banks making student loans, causing a reduction in volume, which has been the engine to Sallie Mae's growth.

TUESDAY'S MARKET

California bank and thrift stocks got slammed again Tuesday as comments by Federal Deposit Insurance Corp. Chairman L. William Seidman and continued concerns about the deteriorating real estate market drove shares sharply lower, analysts said.

CalFed, which last week reported lower than expected second-quarter results, had fallen almost 10% to $10.375, a new low.

Security Pacific Corp., was off $1.375, to $31.50, also a new low. Wells Fargo & Co. fell $2.875, to $69, and First Interstate Bancorp was off $1.50, to $33.625. BankAmerica Corp. was off 75 cents to $24.875.

Mr. Seidman said the FDIC deposit-coverage ratio could shrink by as much as 30% this year.

Richard Bove, an analyst at Dean Witter Reynolds, said he had talked with several large trading funds and suspected they were part of the reason for the fall in California bank and thrift stocks.

Other bank stocks were also lower, with PNC Financial Corp. falling $1.50 to a new low of $26.625 and National City Corp. falling $1 to $34.125 in late afternoon trading. □

Slide in CD Yields May Be Accelerating

By KELLEY HOLLAND

Yields on Treasury securities have fallen dramatically since the beginning of June, but a drop in CD rates has been slow in coming.

In the past week, however, downticks in CD yields have become widespread, and that suggests that declines are about to accelerate, according to Robert Heady, publisher of *Bank Rate Monitor*.

"The market now is probably poised for a stronger resumption of a downslide in interest rates," he said. "We'll possibly see CD rates decreasing half a point by the end of the year."

Lower Cost Would Be Welcome

A decline in CD yields would provide welcome relief to banks. Even high-quality institutions are facing high funding costs in the capital markets.

Annualized yields on certificates of deposits have fallen only three to 11 basis points on average since June 6, according to data provided by *Bank Rate Monitor*. In contrast, yields on Treasuries have dropped 10 to 30 basis points.

Banks change rates on CDs more slowly than traders change rates on Treasury securities, Mr. Heady said. "There typically is a lag factor as banks evaluate the interest rate movements."

But now, they seem to be convinced that interest rates are headed down. Thirteen CD yields were reduced for every one raised in the week ended July 25, Mr. Heady said, the most widespread reduction of rates the market has seen all year.

A decline in rates may be less significant than bankers would like to think, however. Low CD rates generally prevail only when loan demand is slow and that banks have lowered their reliance on CDs, according to Charles M. Lewis, executive vice president and senior funds manager at Fleet National Bank, a subsidiary of Fleet/Norstar Financial Group.

"Generally speaking, most banks today are probably issuing less CDs than they were a year ago because there is less demand," he said.

MARKET MONITOR

Manufacturers Hanover Corp. issued $50 million of mandatory convertible preferred stock in a private placement through lead manager Merrill Lynch Capital Markets. Price talk on the deal was for a dividend of 10%.

At the end of each quarter beginning in September 1994, one eighth of the issue will be redeemed at the par price of $50 a share with new common stock to be issued by Manufacturers Hanover.

The offering will be rated Baa1 by Moody's Investors Service, higher than the Baa3 the agency would assign to a straight preferred issue. It will count as Tier 1 capital.

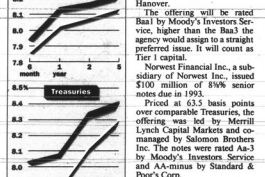
Norwest Financial Inc., a subsidiary of Norwest Inc., issued $100 million of 8¾% senior notes due in 1993.

Priced at 63.5 basis points over comparable Treasuries, the offering was led by Merrill Lynch Capital Markets and comanaged by Salomon Brothers Inc. The notes were rated Aa3 by Moody's Investors Service and AA-minus by Standard & Poor's Corp.

One Bancorp has withdrawn a preferred stock offering and said it has been unable to sell its Connecticut and Massachusetts subsidiaries.

The Portland, Me.-based bank will be unable to preserve any value in its holding company securities unless it can reduce its nonperforming assets and restore the capital of its Maine Savings subsidiary, according to Vincent E. Furry, president and chief executive officer.

Moody's Investors Service assigned a first-time rating of Aa2 to the long-term deposits of American Express Centurion Bank, the issuer of American Express Co.'s Optima card, citing good asset quality and "reasonable" capitalization. □



FINANCIAL TECHNOLOGY UPDATE

The Electronic Forms Workstation is an effective tool for financial institutions. Laser printing technology, form design/processing software, and NCR's Client/Server Architecture combine cost-effectively and eliminate the need for the storage and warehousing of the preprinted forms.

The Electronic Forms Workstation's modularity enables it to be customized at both the forms development and the forms printing locations. Its essential run-time hardware components include NCR's 5067 or 5267 Financial Workstation, a choice of video displays, PC keyboards, and the NCR's 5037 Laser Printer. The NCR 5037 Financial Laser Printer is a high speed laser printer that can produce forms upon demand. Plus, a wide range of graphic features can be incorporated to enhance word-processing and desktop publishing.

NCR introduces a new account services terminal, the NCR 5663. The 5663 complements the functions of the traditional ATM and offers a wide range of account transaction capabilities. It provides full statements, passbook updates, and check re-orders. Plus, transfer of funds, payment of bills, and lists of direct deposits or debits.

The NCR 5663 ensures maximum up-time for 24-hour automated branch use, and it eases integration within existing system and environment.

Color ATMs are chosen by the leaders. Color ATMs? What could color do for me? That was a question commonly asked by people considering color television when black and white was the standard. The transition from black and white technology to color was slow, but would you buy a black and white television today?

As competition increases, financial institutions are turning to technology for solutions to improve and expand their customer services.

Putting Limits On Insurance: Is It Practical?

By LINDA CORMAN

Treasury Secretary Nicholas F. Brady, in otherwise tightlipped testimony on July 25, made a backhanded pitch for one of numerous suggestions on reforming deposit insurance – limit insurance to one $100,000 deposit per person, rather than the current $100,000 per account.

The notion has gained some credence as a way to lower the cost of deposit insurance, but some economists and other industry observers view it as a half-measure, if indeed it is at all practical.

One of the proposal's greatest defects is its administrative complexity. Some observers said that if it were possible to put such a plan into effect, it would be a bureaucratic nightmare at best. At worst, it could launch us further into the age of Big Brother.

Others said it simply impossible to design a computer program to keep track of each depositor's single, insured account.

"No one has come up with a plan that works in the real world," said Dennis Jacobe, director of research for the U.S. League of Savings Institutions.

Questions Galore

To devise a workable plan, many issues first would have to be addressed. For example, is limited to one insured deposit in a lifetime, or would he be able, after collecting on one insured deposit, to have another one after a certain number of years?

Would a person have to designate in advance which of numerous deposits was to be insured? Could one designate a deposit after the institution in which it was placed failed? With whom would one designate such an account?

If spouses had a joint account, could either spouse also have an account in his or her own name?

Even the chairman of the Federal Deposit Insurance Corp., L. William Seidman, concedes the idea of limiting depositors to one insured account – while deserving of study – is easier said than done. It would pose "great administrative problems," he said Tuesday before the Senate Banking Committee.

"It's an administrative nightmare," said Bert Ely of Ely & Co., head of an Alexandria, Va., consulting firm. (Mr. Ely is profiled elsewhere on this page.) "It's an invitation to fiddle to lawyers and consultants like

Bank Stocks Pounded on Credit Fears

By GORDON MATTHEWS

NEW YORK — Major bank stocks — already at an 18-month low — were pounded further in heavy volume on Wednesday as investors seemed to give full rein to their fears about deteriorating credit quality and profitability across the industry.

Analysts ascribed some of the action to pessimistic statements by Federal Deposit Insurance Corp. Chairman L. William Seidman, which helped shift the focus of public attention from the savings and loan industry crisis to the difficulties at banks.

UAL News Starts Slide

The apparent foundering of the latest effort to finance a proposed buyout of UAL Corp. was also a contributing factor, they said, creating apprehension that such lucrative projects for banks are becoming increasing difficult or even impossible to arrange.

Short-sellers, who have built large positions in the shares of some banks, are also suspected by many analysts of having played a big role in sparking the sell-off.

Banks Hit Hard

The largest banks on the West Coast were hit especially hard for the second straight day, spurred by nagging concerns about the slowing of the California economy and the potential impact on its huge real estate market.

Wells Fargo & Co. was off $2.625 to $65.875 at the end of the day's trading, and shares of

RTC's Clearance Sale: $50 Billion by Yearend

By DEBRA COPE

WASHINGTON — Shifting the Resolution Trust Corp.'s thrift-cleanup effort into high gear, RTC Chairman L. William Seidman announced an ambitious plan Wednesday to turn $30 billion of assets over to private managers and sell $50 billion of securities, loans, and real estate by year's end.

"It's the RTC's great fall inventory clearance sale," Mr. Seidman told reporters. "It's taken us a little time to get organized to do the job, but we are organized now."

Most of the planned asset sales – $36 billion – will come off the books of 130 thrifts that

UAL Buyout Faces Tough Hurdle Even if Equity Investor Steps Up

By STEVEN LIPIN

Whether the buyout of UAL Corp. will fly is believed to hinge on an outside equity investment. But even if an investor is found, the union-led deal may still not get off the ground.

News Analysis Assuming that UAL's unions could obtain the $500 million in equity they are reportedly seeking by the Aug. 9 deadline, the $4 billion needed in bank loans would still be very highly leveraged compared with many of the new deals that banks are financing.

If the $500 million investment is found, the deal would still have only 20% in equity. This high degree of leverage casts doubt on the ability of prospective agent banks to resell UAL loans to the rest of the syndication community, according to bankers across the country.

Bankers not involved in the deal said they would be reluctant to join the UAL financing unless equity approaches levels seen on recent deals such as General Instrument Corp., Saks Fifth Avenue, and Sizzler PLC, which each have equity of 40% or more.

In fact, many deals are being deliberately structured with sufficient equity to avoid the regulatory definition of highly lever-

The Vindication of Bert Ely

By STEPHEN KLEEGE
Fourth of a Series

Three years ago, Bert Ely was being dismissed by thrift industry and government officials alike as a publicity-hungry consultant with questionable credentials as a thrift analyst.

The former auditor and bankruptcy examiner had come out of nowhere with seemingly outlandish predictions of the eventual cost of cleaning up the thrift industry.

Today, with his crystal ball having proved more reliable than just about anybody else's, Mr. Ely finds himself as the most quoted expert on the thrift crisis – and with a suddenly enhanced reputation.

The Thrift Bailout Law 1 YEAR LATER

Even the U.S. League of Savings Institutions – which once published an article entitled "Who is Bert Ely?" that questioned his creden-

PEOPLE *in the news*

At Wells, the Hatchet Man Wears a Very Human Face

By TERESA CARSON

Drew Tanzman is an unlikely hatchet man. A 32-year-old surfer who is involved in a summer camp for abused foster children, he is also in charge of putting Wells Fargo & Co.'s stamp on the 130 branches that the San Francisco banking giant is buying from Great American Bank.

In mid-July, Wells announced it had struck a deal to pay $492 million for all 130 California branches of the ailing San Diego thrift. When the deal goes through, Wells' market share position in San Diego will jump from No. 6 to No. 1. Wells senior managers, legendary for their cost cutting, have said they would probably keep about 80% of the branches open. Mr. Tanzman will not say how many jobs might be eliminated.

"We will interview every person and retain the best people," vowed Mr. Tanzman, a senior vice president. "We are going to try really hard to place people in other jobs. We may offer them a different branch or a different position."

Currently manager of Wells' mortgage lending division, which has its headquarters in San Diego, Mr. Tanzman has been through this sort of thing before. When Wells bought Crocker National Corp. in 1986, Mr. Tanzman was dispatched to El Segundo, to a Crocker lending office.

Drew Tanzman

"I had to present the severance package to six of their top eight officers," Mr. Tanzman said. About 150 of the 350 Crocker jobs were lost in the consolidation of Crocker's El Segundo office with a Wells location in Santa Ana.

A Wide Range of Experience

Mr. Tanzman started with Wells in 1981 with a newly minted master's degree in economics from the University of San Diego. His first job was in management sciences – a research and strategic planning area. After stints in consumer credit and managing the Santa Ana loan center, he was tapped to head the mortgage division in 1987. A year later, he was promoted to senior vice president.

Consolidating Great American will be unlike his earlier effort. "The most important thing here is that we retain the Great American customer base," said Mr. Tanzman.

Transition Still Being Planned

So far, the Great American branch transition is still in the planning stage, and the transaction still awaits regulatory approvals. Integration teams are being formed with Wells and Great American managers in five areas: assets, liabilities, personnel, branches, and systems. Mr. Tanzman said he is lucky to have two associates with experience in other Wells acquisitions – Mary Wilkerson, a senior vice president, and Diane Shigagawa, a vice president.

The only action Wells has taken so far is to send Great American employees a "welcome to the family" letter. □

Fed to Delay Action on Proposal For Purchased Servicing Rights

By PHIL ROOSEVELT

NEW YORK — The Federal Deposit Insurance Corp. probably will not act until autumn on its controversial proposal to restrict the amount of purchased mortgage-servicing rights that banks and thrifts can count toward capital, an agency official said.

The proposal, which critics say has contributed to a drop in the prices paid for servicing, was initially slated for action in June. Put forth in January, the FDIC initiative has caused an uproar in the mortgage industry.

"It's a real toughie," Robert Maslowski, assistant director of supervision at the FDIC, said in an interview this week. "There are a lot of important issues that need consideration."

He added: "I would expect it will be a couple of months before we have anything final."

Most Profitable Component

Mortgage servicing, long the most profitable part of mortgage banking, entails funneling monthly payments from borrowers to investors and performing other administrative chores. Servicers can obtain the rights to handle loans either by writing mortgages or through purchases on the secondary market.

The FDIC proposal, aimed at curbing both interest rate and credit risk, would allow the value of purchased servicing rights to count for only 25% of core capital. In the past, thrifts faced no such restrictions and banking regulators generally handled the issue on a case-by-case basis.

Critics say that prices paid for servicing rights have fallen by as much as 20% since the potential rule was unveiled. Other factors, such as the expectation of heavy selling by thrift liquidators, also have hurt prices.

"We're aware that the existence of the proposal may be having some effect on the mar-

Fraud Estimates Vary

GAO Calls Impact 'Significant'

By LOUIS GERHARDSTEIN

WASHINGTON — In a sign that fraud may be in the eye of the beholder, the Senate Banking Committee on Wednesday heard estimates ranging from 3% to 40% of fraud's cost in the failures of banks and savings and loans.

While "fraud has played a significant role" in bank and savings and loan failures, the General Accounting Office cannot document the level, a GAO official testified. The committee is headed by Sen. Donald Riegle, D-Mich.

"No one knows exactly how great the role of fraud has been in the failure of thrifts and banks," said Richard L. Fogel, assistant comptroller general for the GAO, "nor the extent to which it is occurring in open institutions."

Special Counsel

Mr. Fogel said that while the Justice Department is "picking up speed," in its investigations, it has never newly appointed special counsel for criminal matters. Justice fraud could assemble the information necessary to find out how well investigations were going. But Mr. Fogel suggested that ultimately, the special counsel might prove the best authority for determining how much fraud has contributed to bank and S&L failures.

Congress is fixated on assessing just how much fraud has contributed to the S&L crisis. And during this election year, legislators are working to pass a measure that will ensure such fraud is punished severely in the future.

The Senate hearings came a day after the House voted 424 to 4 to pass legislation that would tighten enforcement by authorizing more money to hire additional investigators to pursue for financial institution fraud and increasing prison sentences for individuals convicted of fraud.

Another Hearing Set

A second hearing on fraud is scheduled today with Attorney General Richard Thornburgh and FDIC Chairman L. William Seidman scheduled to testify.

At Wednesday's hearing, Mr. Fogel of the GAO testified that decentralized record-keeping within the Justice Department is hampering efforts to track where money is needed for fraud investigations.

Mr. Fogel declined to estimate fraud's impact on the S&L crisis. He noted in testimony, however, that the Resolution Trust Corp. suspects fraud contributed to 40% of the thrift failures it has investigated. The Federal Deposit Insurance Corp. estimates fraud accounted for 13% to 18% of bank failures, the GAO said.

Counting Insider Abuse

Another estimate of the incidence of fraud, developed by Bert Ely, an thrift consultant, places the fraud factor at only 3%.

With such wide-ranging figures, controversy comes as no surprise. Benton E. Gup, chair of banking at the University of Alabama, told Mr. Riegle that the 3% estimate "grossly understated" the total impact of fraud because it failed to account for "insider abuse."

Mr. Gup projects that fraud should account for as much as a third of all failure costs.

In a phone interview, Mr. Ely said that a lot of what people are calling fraud is not criminal. "Crime didn't cause the S&L crisis. Mismanagement, negligence, naivete, and stupidity also contributed to the final bill, he said, but "because you can't get an indictment on it, it's not criminal."

Mr. Gerhardstein writes for the Medill News Service.

Washington Bancorp. in Chapter 11

By BILL ATKINSON

WASHINGTON — Washington Bancorp., troubled parent of National Bank of Washington, filed Wednesday for protection from creditors under Chapter 11 of the bankruptcy code.

The company listed $61.7 million in total estimated liabilities and estimated it has 78 unsecured creditors, according to documents filed in the U.S. Bankruptcy Court for the District of Columbia.

The company also said its principal banking subsidiary "will be unable to restore its capital to required levels."

According to the filing, Washington Bancorp. could not determine its total assets but estimated its book value at $83.4 million. At the end of the second quarter, Washington Bancorp. listed assets of $1.8 billion.

Default on Paper

Washington Bancorp. faced mounting problems in recent years. In May it defaulted on $25.8 million in maturing commercial paper. In the second quarter it lost $80 million as a result of sour real estate loans, and National Bank of Washington has been borrowing $130 million to $150 million a day from the Fed's discount window – the lender of last resort.

Washington Bancorp.'s creditors include: Mutual of New York Insurance Co., $20.7 million; New York-based Colson Services Corp., $9.2 million; Bethesda, Md.-based George Hyman Construction Co., $4.9 million; and Gen. Brent Scowcroft, President Bush's national security adviser, $268,988.

Other creditors who are listed but whose claims were not disputed in the filing include: Bankers Trust Co., Banco Central de Bolivia, and former director A. Robert Abboud, former chairman of Houston-based First City Bancorp. of Texas. □

American Savings Streamlines Work

Claims 5% Reduction in Expenses

By KAREN GULLO

NEW YORK — Having consolidated back-office operations, a few banks are going one step further and streamlining their work flow to cut costs.

One such institution is American Savings Bank of White Plains, N.Y., which says it has reduced annual operating expenses almost 5% by consolidating and redesigning the work flow in three divisions.

The savings bank, which has $4 billion in assets and specializes in real estate lending in the New York suburbs, recently completed a yearlong restructuring of the work processes in its real estate lending, financial services, and human resources units.

Employee Cuts

As a result, the savings bank has cut $4 million from its operating budget, which totaled $85 million in 1989, American Savings said. Most of the savings can be attributed to reduced labor costs.

"We reduced our head count by 14.5%, or 200 employees, most of which was directly a result of the project," said Robert J. Hughes, executive vice president and chief financial officer.

Mr. Hughes said American Savings expects to cut costs further, including reductions in retail expenditures. Overall, the institution hopes to reduce operating expenses 7% to 10% annually.

The savings bank is just beginning to assess work flow procedures at each of its 39 New York branches, where it plans to streamline and automate operations.

Real Estate Losses

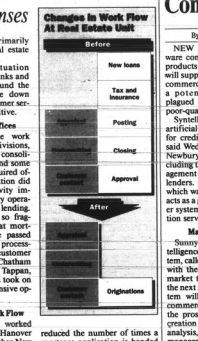
Cutting costs is paramount at American Savings, which reported a $40 million net loss in the second quarter – primarily because of troubled real estate loans.

The institution's situation mirrors that of many banks and savings institutions around the country that must drive down costs and improve customer services to remian competitive.

Consolidation of Offices

Before attacking the work flow in its various divisions, American Savings had consolidated data processing and some operations from 11 acquired offices. But the consolidation did not result in productivity improvements in some key operations, such as real estate lending.

The work flow was so fragmented in the unit that mortgage applications were passed around 27 times during processing, resulting in poor customer service. Working with Chatham Consulting Group, Old Tappan, N.J., American Savings took on a redesign of paper-intensive operations.



Hanover Tackles Work Flow

Chatham also has worked with Manufacturers Hanover Trust Co. and several other New York banks to streamline such functions as check research, adjustments, and customer service. As a result of its efforts, Manufacturers reassigned its work flow and reduced the number of times check investigations were passed around to 2 from 16.

At American Savings, eight units for processing mortgages were reduced to four. Employees were cross-trained so that many steps could be eliminated in the origination process. Mortgage accounting, which operated through the financial services division, was moved into the originations unit, which improved customer service.

As a consequence, the bank reduced the number of times a mortgage application is handled off to 5 from 27, and reduced staff to 26 from 39.

"We took bits and pieces of the process and brought them together where they should be and dramatically changed turnaround times," said Beth Barrett, Chatham's project manager for American Savings.

The most dramatic results were achieved in the real estate division, but Mr. Hughes said similar improvements were made in the financial services and human resources divisions.

"Our four goals were to maximize customer service, achieve maximum employee satisfaction, provide good internal controls, and be as cost efficient as possible," Mr. Hughes said. □

Software Firms to Combine Commercial Loan Products

By RICHARD LAYNE

NEW YORK — Two software companies are combining products to create a system that will support many aspects of the commercial lending procedure – a potential boon to banks plagued by high turnover and poor-quality loans.

Syntelligence Inc., which sells artificial intelligence software for credit analysis and review, said Wednesday it had acquired Newbury & Molinare Inc., including the rights to a task-management system for commercial lenders. The Newbury system, which was introduced in March, acts as a gateway to a bank's other systems and outside information services.

Banks say they need such systems because of the declining quality of their loans.

Marketing Due Soon

Sunnyvale, Calif.-based Syntelligence plans to link its system, called the Lending Advisor, with the Newbury product and market the combination within the next month. The unified system will automate a range of commercial lending activities – the prospecting for clients, the creation of customer files, credit analysis, and the monitoring of management reports.

Syntelligence follows the path taken by several other computer companies, including IBM, that have recently formed alliances to offer systems that cover multiple steps in the lending process.

Most computer companies offer software that supports individual lending activities, such as loan pricing, profitability measurement, and document creation.

As part of the latest agreement, James H. Newbury and Roderick A. Molinare, the acquired company's founders, will serve as consultants to Syntelligence. Terms of the deal were not disclosed, but Syntelligence said it would retain all Newbury's employees.

Industry observers say no big bank has a comprehensive commercial lending system. Some have been working, however, to develop their own systems to tie together numerous software products.

The banks say they need such systems because of the declining quality of their loan portfolios and heavy turnover. One in five commercial lenders leave annually for other jobs. With the current state of automation, management has only limited ways of monitoring the prospecting for clients, the profitability of customers, and the credit analysis process.

"Management control is there, but it is not as efficient or as effective as it could be," said J. David Gibb, senior vice president at Canadian Imperial Bank of Commerce, Toronto. He cited task management as an area in dire need of automation and said his bank was writing software for tracking prospects and producing call reports.

Others at Work

Among the other companies seeking to produce a more comprehensive commercial lending product is BankA, Dallas. The software company sells a product called Power that creates an electronic credit file and automates loan documents. In May, BankA signed an agreement to market an image-processing sys-

COMMENT/ *By Richard M. Whiting*

To Grow, Banks May Need More Flexible Regulation

One of the key characteristics of the American banking system is that it attempts to balance restrictions placed on product and service lines with a certain amount of regulatory flexibility for bankers to expand into new areas.

This scheme exists by Congressional design, which delegates to the federal and state bank regulators (and ultimately to the review of the courts) carefully circumscribed authority to authorize new products and services on a day-to-day basis.

A Matter of Balance

While the tilt of this balance is subject to criticism depending on who is conducting the commentary, it is important from a public policy perspective that banking's regulatory system provide both restrictions and a mechanism for experimentation and adjustment to customer and market demands.

Recent regulatory and judicial developments show that the current system does accommodate some change in bank product and service lines, and that many changes have been significant. This article will describe a few of the more significant of these changes.

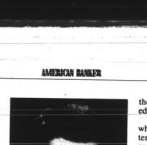
Furthermore, whether the current regulatory system sufficiently encourages change, tolerates more than incremental change, or allows for timely response to the market is a matter of serious dispute.

In this regard, many progressive bankers believe that it is time to reconfigure the system.

The Current System

Generally, American banking organizations are creatures of their charters and the powers enumerated therein. Thus, to a large extent, the product and service lines bankers may offer consumers are fixed — deposits, loans, trust services and related (but limited) insurance, and securities.

By their nature, these powers are relatively static and unresponsive to the marketplace, technological progress, and other forces of change. Fortunately, the current regulatory system also provides alternate sources of authority by which bankers may innovate.



"Many progressive bankers believe that it is time to reconfigure the system."

For national bankers, this authority is found in the so-called "incidental powers" clause of the National Bank Act, which empowers the Comptroller of the Currency to allow activities "convenient or useful" in connection with the performance of an express banking power.

For bank holding company executives, this authority is found in the language of section 4(c)(8) of the Bank Holding Company Act, which empowers the Federal Reserve Board to allow new activities that it finds to be "closely related" to banking.

Finally, all bankers (and especially state bankers) benefit from the multitude of options provided by the dual banking system.

The dual banking system, which the federal banking system blesses both implicitly and explicitly, defers to the right of each of the fifty states to accord their state-chartered institutions the product and service lines they deem appropriate.

(Of course, these state prerogatives are subject to override where state action would be contrary to preempting federal legislation, such as the securities restrictions in the Glass-Steagall Act; the insurance restrictions in Title VI of the 1982 Garn-St. Germain Act, or the safety and soundness concerns expressed in the Federal Deposit Insurance, Federal Reserve, or Bank Holding Company acts.)

Recent Developments

Reacting to proposals by bankers who need increased product and service line authority in order to respond to competition, and in the absence of accommodating federal legislation, bank regulators have utilized their existing authority to allow bankers to innovate.

The Office of the Comptroller of Currency probably has been the most progressive of the federal agencies in this regard. The OCC recently has used the "incidental" powers clause to:

- Allow national bankers to sell fixed-rate annuities.
- Sell variable-rate annuities.
- Issue and sell pass-through mortgage certificates.

See **COMMENT** *page* **10**

The battle with the Postal Service is far from over. The agency is expected to announce proposals on two- and three-day standards, and is once again talking about easing up.

Veteran Warrior Returns to the Fray

Harding de C. Williams, who began work Monday as the new general counsel to the **Association of Thrift Holding Companies,** says his "first priority now is to reread FIRREA," last year's compendious thrift bailout law.

Mr. Williams, 37, has been lawyering around in thrift circles since 1975, when he worked for the National Savings and Loan League, which later merged with National Association of Mutual Savings Banks to form the **National Council of Savings Institutions.**

He was legislative counsel at the National Council until 1988, when he became a private consultant. Since then, he has worked under contract for both the National Council and the Association of Thrift Holding Companies.

At the association, he will be responsible for liaison with the federal agencies that monitor thrift holding companies, primarily the Office of Thrift Supervision.

"Our No. 1 issue is: how to attract capital to the industry and how to increase the value of the charter," Mr. Williams said.

Mr. Williams, a graduate of Middlebury College in Vermont and the University of Michigan Law School, will also deal with securities and accounting issues and will staff the association's law committee.

THE LOBBYSTS

Lenders' Liability: NJ Democrat Fights Any Easing of Law

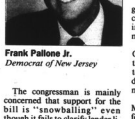
A House Democrat, with the backing of several environmental groups, on Tuesday urged House opposition to a bill that would limit the liability of banks and other lenders for the clean-up of toxic waste on foreclosed properties.

Rep. Frank Pallone Jr., D-N.J., said in a letter to House members that the proposal, offered by **Rep. John LaFalce, D-**N.Y., chairman of the House Small Business Committee, would "excuse" lenders from liability under Superfund legislation. The proposal, Rep. Pallone said, would remove a requirement that banks, before lending on a property, exercise due diligence in determining whether it was polluted.

The banking industry has been heavily lobbying for passage of the LaFalce bill in the House, and similar legislation has been introduced in the Senate.

"I don't see the need to change the law at this point," Rep. Pallone argued at a press conference. "If the banks want to know what they can rely on and can't rely on, the Environmental Protection Agency" should produce better guidelines.

Rep. Pallone, whose home state of New Jersey has 109 Superfund sites, planned to testify against the bill today before the House subcommittee on transportation and hazardous materials.



Frank Pallone Jr.
Democrat of New Jersey

The congressman is mainly concerned that support for the bill is "snowballing" even though it fails to clarify lenders' liability and contains broader-than-necessary exemptions for banks, a Pallone aide said.

A Warning on 'Loopholes'

The New Jersey Department of Environmental Protection, in a letter to Rep. Pallone, warned that the bill would create "loopholes" for banks to obtain property "without assuring compliance with environmental laws."

Rep. LaFalce's bill would grant exemption from liability only when banks aren't responsible for contamination of a property, said **Gary J. Kohn, legislative counsel for the Independent Bankers Association of America.** "It's hardly a blanket exemption," Mr. Kohn said.

None of the 271 cosponsors of Rep. LaFalce's bill have withdrawn their support, said Rep. Pallone.

The similar proposal in the Senate, introduced by **Sen. Jake Garn, R-Utah,** has 19 cosponsors. Rep. Pallone applauded a suggestion by Sen. Garn that the EPA, which opposes the Senate proposal, and the Federal Deposit Insurance Corp., which supports it, meet to discuss their differences.

A Small Victory In Postal Fight

Irving D. Warden, associate general counsel for the American Bankers Association, is finding out that victory is sweet – no matter how big or small.

Last week, the Postal Rate Commission recommended that the Postal Service drop its plan to downgrade nationwide standards for delivery of first-class mail.

Good news for the ABA and Mr. Warden, who had worked for nearly a year against the plan. But . . . despite the Postal Rate Commission's recommendation, the Postal Service decided to go ahead and change the delivery standards.

Some localities that now enjoy overnight delivery will instead receive two-day delivery, a change that could cost bankers and customers millions of dollars a year.

"We were disappointed that it happened," said Mr. Warden, who has been with the ABA for two and a half years.

Despite the quick reversal, the ABA still gained some ground. Along with other mailers, it was successful in delaying for six months the date the proposal will go into effect.

Mr. Warden also said the Postal Service is showing a growing willingness to cooperate with mailers.

'No Doc' Loans Can Be Practical

To The Editor:

I read with interest (at a fixed rate) the column on "no doc" loans in the July 2 *American Banker* ["Making 'No Doc' Loans: Lenders Repeat Past Errors," page 4] and my reaction was, "This proves that Paul Nadler is an impractical college prof instead of a person in the real world."

My firm specializes in fixed-rate loans, which we always immediately sell into the secondary market, and a good percentage of these loans could be referred to as "no docs." After a solid 2½ years of originating these loans – with carefully thought out and applied underwriting criteria – so far so good.

The theory behind a well-conceived "no doc" program is that if there really is 25% in cash being invested in the property, and if the borrower has a well-established and very clean credit history, we can rely on the substantial truthfulness of the information in the application; there is no need for further verification of that information from the employer, the Internal Revenue Service, the bank, or anyone else.

Our objective is to make better, bigger loans to more highly qualified borrowers, and to attract their business by taking the hassle out of the process. We don't charge a nickel extra for the "no doc" loan. We carefully select our appraiser, scrutinize the credit report, and look for real, live cash at the closing table. We analyze the borrower's ability to carry the loan, based on the information with that we are provided, and we make a prudent decision.

The delinquency and foreclosure statistics on these loans are significantly superior to those corresponding to fully documented loans with more lenient credit standards that we have originated.

"We are far more comfortable making a 'no doc' loan with a fixed rate and payment than we are making an adjustable rate mortgage loan."

We are far more comfortable making a "no doc" loan with a fixed rate and payment than we are making an adjustable rate mortgage loan – because if there is a "fudge factor" built into the income reported on the application, at least we don't have potentially increasing rates and payments to which the "fudged" income needs to be applied.

The point is, making a good mortgage loan requires evaluation of a bundle of risks. In the case of a "no doc" loan, there is included in the bundle the risk that the borrower will overstate income.

The prudent lender insists on offsetting that risk with squeaky-clean credit reports, strong appraisals, and real live cash at the closing table. Those who do so make more good loans and will be able to continue to sell them into the secondary market.

Senior vice president
Margaretten & Co.
Perth Amboy, N.J.

Distortion Seen In Community Banking Survey

To the Editor:

The *American Banker* listing of the 100 most profitable community banks in the June 7 edition ["In Profits, the Community Banks Leave Big Competitors in Dust," page 1] is a serious distortion.

Community bank was defined by your newspaper as any independently owned commercial bank having "assets of $50 million to $200 million." Approximately one-half of Texas' 1,300 commercial banks fall below the $50 million level; virtually all of these institutions are independently owned, and all consider themselves community banks.

Approximately one-half of Texas' 1,300 commercial banks fall below the $50 million level.

Why would *American Banker* arbitrarily exclude hundreds of banks across the nation in selecting the top performers? Perhaps it is time that you recognize that many of the nation's quality banks are below your $50 million level but are extremely responsive to their communities.

Robert E. Harris
President
Texas Bankers Association
Austin

Editor's note: The size range was chosen to ensure comparability between banks. Many below $50 million in assets are small-scale businesses with few employees and operating characteristics very different from those of larger community institutions.

With information in the availability of performance data from banks of all sizes, we plan to take a more comprehensive look at community banks next year. We expect to be able to analyze the group in segments, including one for banks with less than $50 million in assets. □

Through the eye of the fiduciary.

When it comes to trust investments, it's Federated's only line of sight.

Your ability to execute your fiduciary responsibility in an ever-changing financial marketplace and complex regulatory climate requires a special vision—and an investment approach aligned with that vision.

That's how we see it.

Many mutual fund companies offer trust departments the same generic funds that they distribute to the general public. Not Federated. Our *MultiTrust*® Systems of investment products and services are designed to meet the focused investment objectives of the fiduciary. They enable assets efficiently, and concentrate on new business development.

Spanning market sectors and maturity ranges, MultiTrust portfolios are managed by teams of experts who apply structured, highly disciplined methodologies to every decision.

We back these investments with value-added services that can make the critical difference in your success.

We'll keep you up to date on regulatory issues.

Provide practical marketing support.

Connect you to user-friendly technology for up-to-the-minute trading, information, and recordkeeping.

And, for the highest level of personal attention, we'll service your account with a regional team of dedicated specialists.

MARKETING/ADVERTISING

MasterCard's Promotion Seen as Harbinger of War

By ELLEN MEMMELAAR

MasterCard's announcement last week that it will offer discounts in conjunction with retailers has set the tone for future combat in the credit card arena, said industry experts.

Elizabeth Belli, vice president of marketing at the Independent Bankers Association of America, said that many current credit card enhancements have no value. "I am glad to see that MasterCard is putting together promotions that are of real value to the customer," she said. "They are really on the ball."

MasterCard's promotion is its biggest effort to date to attract middle-market consumers instead of the upscale market that Visa and American Express continue to court with image advertising. MasterCard announced it would cater to what it terms real people at the association's annual meeting, said Keith Kendrick, senior vice president of marketing.

Research by the card association showed that middle-market consumers prefer promotions with a tangible value, like coupons, over promotions such as sweepstakes, Mr. Kendrick said.

"It fits in perfectly with their strategy," said Donald Auriemma, a New York-based consultant. "It isn't Avis or Marriott or United Airlines, is it?"

"These are the opening salvos in the credit card warfare of the 1990s," said Edward Furash, whose Washington consulting firm is Furash & Co. "The credit card associations are trying to protect their customer base from the invasion of the nonbank issuers." The nonbank competitors that MasterCard and Visa are fighting include the AT&T Universal card, American Express Co., and the Discover card from Sears, Roebuck and Co.

MasterCard's promotion, called MasterValues, will run in the fourth quarter of the year, the busiest card season. Retailers offering discount coupons to cardholders are Montgomery Ward, Musicland/Sam Goody, Toys 'R' Us, K mart, B. Dalton Booksellers, and Casual Corner. Mattel will also provide discounts on its products through Toys 'R' Us and K mart stores.

To participate, consumers will ask for a coupon packet at the sales counter of a store and present the coupons when making a purchase.

Other card issuers have "tangible value" promotions to varying degrees. Discover offers a 1% rebate on purchases. The AT&T Universal card, which was introduced earlier this year and does not carry a fee, includes discounts on telephone services. In certain markets, American Express mails certificates for restaurant discounts to cardholders.

Visa plans to repeat its fourth-quarter promotion called the "Our Treat" sweepstakes. Along with randomly selecting purchases that cardholders do not have to pay for, Visa offered a $1 million grand prize in last year's program. The promotion will be repeated this year without the grand prize, according to a spokesman for the association.

Expectations are rising for MasterCard's promotion. The association has increased its printing projections for statement stuffers to 50 million from 40 million, Mr. Kendrick said.

Luring Customers By ... Buying Old Checks

As the banking industry grapples with overcapacity – too many institutions chasing too few customers – banks are increasingly looking at ways to steal customers from each other.

American National Bank, Jacksonville, Fla., launched an advertising campaign last month designed to lure customers who are unhappy about name changes at their local banks. Since the mid-1980s, **NCNB Corp., First Union Corp.,** and **Citizens and Southern Corp.** have purchased banks in the area. Several thrifts have merged as well.

To encourage people to switch banks, American National is running newspaper advertisements that tell consumers they can open an account by merely mailing in a check from their current bank. American National also offers to buy as many as five old books of checks for $2 apiece.

"We wanted to make the process as easy as we could," said Richard C. Martin, senior vice president. "We make the switch fast and painless."

Mr. Martin declined to release figures but said the campaign has been successful so far.

— **Kenneth Cline**

... And Helping to Pay Balance of Card Debt

Third National Corp. of Nashville is offering up to $200 to customers willing to switch their credit card accounts.

Under the offer, which expires Aug. 31, customers can open a credit card account with Third National, which will pay 5% of their balance up to $200.

Supporting newspaper ads state that several Nashville banks are moving their credit card servicing out of state.

"We don't feel like they can service our customers as well as we can, " said Joseph Hagan, vice president of product management in marketing. Third National is a unit of **SunTrust Banks** Inc., Atlanta.

Adjustables Losing Market Share

Rising Bond Prices Help to Reverse Recent Trend

By PHIL ROOSEVELT

NEW YORK — Adjustable-rate home mortgages, whose popularity increased earlier this year, have been losing ground in recent weeks to fixed-rate models, lenders and analysts say.

The decline has been caused in part by a recent drop in the rates on fixed-rate loans to the psychologically important 10% level.

"Whenever rates on fixed-rate loans get down to that range, you have difficulty getting people to go with an ARM," said Richard S. D'Agostino, executive vice president at Philadelphia-based Beneficial Mutual Savings Bank.

"We're really seeing very little demand for ARMs," he added.

Marketing Implications

The diminished popularity of adjustables holds important implications for the basic marketing and funding strategies of mortgage lenders.

Many banks and thrifts, for example, prefer to hold mainly adjustables on their books. As fixed-rate loans become more popular, these lenders either pull back from the market or originate fixed-rate loans and sell them to investors.

The recent slowdown in adjustables reverses a pickup that began early this year. Adjustables accounted for 32% of all mortgages closed in June, up from 19% in January, according to the Office of Thrift Supervision. In 1988 and early 1989, adjustables dominated the market.

> **"We're really seeing very little demand for ARMs."**
>
> **Richard S. D'Agostino**
> *Beneficial Mutual Savings Bank*

"I'd be surprised if that share went up much more," said Michael Grupe, director of mortgage research for Kidder, Peabody & Co. He, too, cited the increased availability of fixed-rate mortgages at around 10%.

Rates Trending Downward

Mortgage lenders, which often sell their fixed-rate originations, have been able to lower their rates on such loans in recent weeks because of rising bond prices.

Banks, thrifts, and mortgage companies were offering 30-year fixed-rate loans at an average of 10.06% last week, down from the year's high of 10.71% in early May, according to HSH Associates, Butler, N.J.

Early this week, two of the nation's largest mortgage-banking companies – Countrywide Funding Corp. and GMAC Mortgage Co. – said they were offering 30-year fixed-rate loans at 9.625% and 9.5%, respectively.

Lag in Adjustable Rates

Lenders have been slower to drop the initial rates on their adjustable-rate mortgages. These rates, which generally reflect short-term market yields, last week averaged 8.31% for one-year adjustables tied to Treasury yields, down from 8.56% in early May.

Thus, the spread between fixed-rate and adjustable-rate mortgages has fallen to 175 basis points from 215 points in early May. Many market observers believe that a spread of at least 200 points is a prerequisite for adjustables to dominate the market. □

More Banks Offering Low-Cost Accounts

By YVETTE D. KANTROW

NEW YORK — The number of commercial banks offering low-cost basic accounts increased in 1989, according to an American Bankers Association survey.

Fifty-nine percent of the 448 banks that responded to the trade group's survey said they offered consumers a basic/no-frills account in 1989. That is up from 53% in the previous year's survey.

In the latest survey, an additional 6% said they planned to add a basic banking account in 1990.

Basic banking accounts – which offer limited services to consumers at no cost or reduced costs – have become a hot topic among bankers and consumer lobbyists in Washington. Sen. Howard Metzenbaum, D-Ohio, has been pushing for legislation that would require banks to offer such accounts.

The ABA has vowed to defeat any basic banking legislation. The trade group has maintained that most banks offer lifeline services but do not do a good job of informing consumers.

According to its annual survey of retail pricing tendencies, 38% of banks promote their basic banking services.

The survey also revealed that most banks charge maintenance fees to their basic banking customers regardless of account balances. This was especially true at the largest banks.

Seventy-three percent of banks with more than $1 billion in assets said they charged such maintenance fees, compared with 27.4% of banks with assets of less than $50 million. The median monthly charge per account was $2.50 at the largest banks and $2.99 at the smallest.

Another 11.6% of the biggest banks said they charged fees only when minimum balance requirements were unmet. Thirty-seven percent of the smallest banks said they engaged in that practice. For both groups, the median of that monthly charge was $3.50. □

Fed Delays Rule On Servicing

Continued from *page 2*

ket," Mr. Miailovich said. "That's one of the things that's keeping our feet to the fire."

Other Servicing Developments

Elsewhere in the servicing market, Barron Financial Group, Inc., Flint, and an affiliate of the Robert M. Bass Group have joined forces to buy the servicing operations $7.2 billion portfolio of Commonwealth Mortgage of America.

Commonwealth Mortgage – an affiliate of Commonwealth Federal Savings Association, a seized Houston thrift – announced Tuesday that it had accepted an offer from the two investors. Terms, which were not disclosed, are subject to a final agreement.

The buyers are expected to operate Commonwealth separately from both Barron and American Savings Bank, a Stockton, Calif., thrift that the Bass Group purchased in a government-assisted deal in 1988. □

Software Firms Plan to Combine Loan Products

Continued from *page 3*

tem that Mellon Bank Corp. developed to store and retrieve loan documents. The Mellon product is linked to BancA's software, which creates loan documents.

International Business Machines Corp. is marketing a system for lenders called Officers Workbench that combines software packages of three small computer companies, including BankA. Officers Workbench combines financial analysis, customer profitability, and the creation of loan documents.

Some Functions Absent

The combined Syntelligence/Newbury product is not designed to perform all the processing, such as loan pricing and customer and lender profitability, that commercial lenders need. But a lender can access software from other companies through the Newbury product, called the Relationship Management System 500.

The system allows a lender to move easily between data bases, calendars, and call-reporting systems, according to Mr. Newbury, a former senior vice president of First Wachovia Corp. If a lender is interrupted in a task, the system can log his memory when he returns, a key aid to loan officers who must handle a wide variety of requests.

The system helps create electronic files on all customers – one way to prepare for turnover. Managers using the system also can monitor the credit details of each borrower and loan.

Mr. Newbury said a Midwestern banking company has purchased the software, but he declined to identify it.

Canadian Imperial, Bank-America Corp., and Integra Financial Corp. are among the banks using Syntelligence's Lending Advisor for credit analysis. □

House Votes for Overhaul of FHA Mortgage Insurance

Reuters

WASHINGTON — Overcoming opposition from the Bush administration, the House adopted a proposal this week to overhaul the Federal Housing Administration mortgage insurance fund.

The proposal, which passed Tuesday night by 418 to 2, was sponsored by Rep. Bruce Vento, D-Minn., and Rep. Thomas Ridge, R-Pa., as an amendment to a $28 billion housing bill for fiscal 1991. The bill authorizes several programs to improve housing affordability and help low-income families buy homes.

The Vento-Ridge measure would phase out FHA requirements that homebuyers pay a mortgage-insurance fee at settlement equal to 3.8% of the loan.

> **Proponents said the long-term effect would be to strengthen the insurance fund.**

Opposed by White House

Seeking to lower closing costs, Rep. Vento and Rep. Ridge would require homebuyers to pay 1.35% at settlement and 0.6% annually over the life of the loan.

The administration opposes the measure because it does not include reforms to maintain the FHA's financial soundness. But proponents said the long-term effect would be to strengthen the FHA insurance fund.

Administration officials pushed instead for a Senate-passed version of the FHA plan and threatened a veto of the Vento-Ridge amendment unless changes are made during a Senate-House conference.

Rep. Vento said the Senate version would "turn the FHA program on its head" by placing the heaviest burden on those least able to pay.

The Senate bill would require a homebuyer taking out an FHA-insured mortgage to pay two-thirds of the closing costs in cash instead of rolling them into the mortgage. It would also authorize additional insurance premiums for loans made with smaller down payments.

Both the House and Senate bills require the fund to attain a capital ratio of at least 1.25% within 18 months. □

Murray Gains Alumni Post

PROVIDENCE, R.I. — Terrence Murray, chairman and chief executive officer of Fleet/Norstar Financial Group, has been elected to a three-year term as director of the Harvard Alumni Association. Founded in 1840, the association is the official organization for Harvard University graduates. □

If your institution issued a million checks last year, you'd be doing O.K.

If you had issued them using our Official Checks you'd be doing about $650,000 better.

Here's why. With American Express' Official Checks, you earn commissions on 100% of your outstandings. And we reduce your back office labor costs. So altogether, you can earn an average of 65¢ more profit on every check you issue.*

Just think, your funds disbursement items including teller, loan, dividend and expense checks could actually improve your earnings.

Business System Redesign: a Sensible Restructuring Tool

By RAINER PAMULLA
and RUTH SCHINDLER
McKinsey & Co.

Banks have an acute need to raise their market valuations.

If they cannot do so in a substantial way, investors will simply regard their business as unattractive compared with other industries. Their fate then will lie either in massive consolidation, to reap economies of scale, or in yielding parts of their business to other enterprises that can perform the functions more effectively.

It is important to manage for both short- and long-term improvements in value. Just reducing costs by cutting into substance needed for the future will only delay the crisis.

The System Redesign Solution

Business system redesign is our solution to this problem. It brings together bottom-up and top-down thinking in an organization, makes the cost-cutting process reasonable without additional help from consultants after the first round, and energizes rather than drains the banks that use this process.

The banking industry has been among the first and most prodigious users of systems technology. Therefore, it was thought to have some of the best chances for productivity improvements.

The sheer amount of data to be crunched (in maintaining approximately 200 million accounts and 100 billion transactions a year) has propelled banking into a leadership position in the quantity of systems technology used. Yet, until very recently the industry's growing expenditures on computers and software ($12.5 billion in 1989) had not yielded any demonstrable improvement in productivity.

Employment in the banking industry increased steadily from 1960 on, even though investments in technology also grew. It was not until 1986 that head count peaked at 1.56 million employees. By 1989 it had fallen off by about 25,000 – the first decreases ever recorded in this industry.

Focus on Personnel Costs

The key to improving productivity in the short term is to reduce resource use, thereby forcing down costs. About half of all operating expense in banking is for personnel, including benefits. Much of the rest is indirectly related to head count.

The industry's operating expense increased at a compound annual growth rate of 8.2% between 1982 and 1987. It was not until 1988 – one year after the head count began to decrease – that the yearly increase in operating expense was substantially reduced – to 2.5% compound growth rate between 1987 and 1989.

Many institutions have tried to slow their growth or have announced hiring freezes. But few have freed up unproductive resources substantially by rethinking the way the work is done.

For example, Bank of America's turnaround, which included a reduction of head count to less than 60,000 from over 90,000, contributed to a change in its market capitalization – to over $5 billion at the end of 1989 from less than $1 billion at the end of 1987.

> **Until very recently the banking industry's growing expenditures on computers and software ($12.5 billion in 1989) had not yielded any demonstrable improvement in productivity.**

The redesign process, approached thoughtfully, leads to improved working relations and motivation based on the employees' pride to be part of an outstanding organization.

The Traditional AVA Process

Business system redesign grew out of modifications and enhancements to activity value analysis (AVA), a "tried and true" process that has been refined over time to help organizations achieve substantial cost savings. It typically consists of five phases.

• Phase 0: The organization is divided up into AVA units with 20 to 40 participants, led by a unit manager.

• Phase 1: A data base is created; each unit identifies its mission, end products, and activities. Based on estimates of time spent on the activities, a software program assigns the unit's costs to these categories.

• Phase 2: Unit members generate ideas on how to free up resources. Unit managers lead brainstorming sessions aimed at saving 40% of the unit's baseline budget.

• Phase 3: Unit managers present their groups' ideas to a senior management steering committee. This committee decides which ideas should be implemented right away, which should be studied further, and which should be dropped.

• Phase 4: Detailed implementation plans for the "go" ideas are drawn, responsibilities and time frames for the "further study" ideas are defined; and the results of the AVA process are captured for the regular budget process.

Powerful Enhancements

The basic AVA process yields average savings of around 15%. The work has became easier due to the support of well-designed software.

But recently we have introduced powerful enhancements that provide a much improved tool, which we call business system redesign. Following are its main features:

• Snapshot of the work, starting with visual pictograms describing how the work currently gets done.

• Reusability, overcoming the one-shot character of the traditional process.

• Top-down rethinking, freeing up resources through substantial redesign of the way the work is done. It goes far beyond the microefficiencies that are possible without altering basic work flows.

• Activity-based costing to help make important decisions.

• Energizing the corporate culture by propagating a drive to be leading edge, to do the work better than anybody else.

Snapshot of the Work

To improve the work, a thorough understanding is needed of how it is done. Good, easily understandable descriptions of the flow of work are rarely available.

The first step in business system redesign is to have the unit managers draw pictures of what goes on in their units. In all subsequent phases, activities and their associated costs are assigned to this pictogram.

Reusability

Since the snapshots of the work are much easier to revisit than arbitrarily defined lists of activities, the process becomes reusable.

By going back after the redesign and bringing the work-flow pictures up to date, an accurate image of the status quo is created that provides a basis for further improvements.

Top-Down Rethinking

Without input from senior managers, it is difficult to tackle cross-functional issues or achieve wide-angle rethinking of systems and work flows. Since the redesign provides visual images of what goes on in the trenches, it allows senior management to prepare for brainstorming sessions with the objective of recasting the business system in possibly radically new ways.

These sessions typically generate ideas that go far beyond the microefficiencies that each unit manager comes up with in the bottom-up approach. Often, the resulting savings are more than double what they would have been with traditional bottom-up idea generation.

Activity-Based Costing

Since costs are assigned to each of the activities in the pictograms, managers become aware of how much of the budget is eaten up by individual pieces of the work flow.

The outcome of the redesign depends on unwavering top management endorsement throughout the process and the sensibility and judgment of the project team.

The team must have a good grasp of when it makes sense to keep pushing and when it is better to step back. It needs technical expertise to integrate the work at the unit level into a larger perspective and it needs the technical skills – in systems, for example – to help the unit managers understand how their work is supported and where some of the big chunks of costs originate.

Using the New Approach

One major bank holding company used the business system redesign to achieve cost reductions at or above 30%. Ongoing reiterations will add to the savings already identified.

Before the business system redesign, this banking company employed 77 people in customer-service functions and 28 in account administration for a wire-transfer operation. Costs of the two departments totaled about $10 million. Bottom-up ideas alone would have yielded savings of about $1.5 million, largely due to microefficiencies in the handling of correspondence and investigations and in the demand-deposit area.

Senior management moved the two departments into a joint location and eliminated functions by redistributing responsibilities – saving an additional $3 million, mainly by reducing head count.

Business system redesign added about 35 percentage points to the 15% cost savings that would

COST CONTROL: *suggestion boxes*
In Only 4 Months, Virginia Bank's Employees Find $5 Million in Savings

By BETH PISKORA

In search of new ways to cut costs, many institutions look outside to specialists and consultants. But putting a fresh spin on the time-honored suggestion box, Vienna, Va.-based Perpetual Financial Corp. turned inward, tapping the hands-on expertise of its own employees.

"We thought: Who could be better at suggesting improvements that would reduce operating costs and generate income than those who know our business best?" said Perpetual's chairman, Thomas J. Owen.

A Fortune on the Floor

The drive for ideas on cutting costs and raising revenue proved successful. One employee scoured an antique oriental rug in an unoccupied office and suggested that it be sold. The bank nabbed $100,000 on the transaction.

Another staffer recommended that toner cartridges on facsimile machines be refilled rather than replaced. Estimated savings for a year: more than $15,000.

Over a four-month period, 85% of Perpetual's 1,600 employees participated in the program. In all, 349 of the more than 1,000 ideas submitted were approved, saving Perpetual more than $5 million.

Some 47% of the approved suggestions have already been implemented, said Anne Kelly, a Perpetual manager who participated in the program, with the remainder of the suggestions to take effect by the end of the calendar year.

"I was surprised to see how many ideas were extremely well justified, with comprehensive documentation attached," said Hope Quinn, chief financial officer for a subsidiary, Perpetual Mortgage Co., and a member of one evaluation team.

Side Benefits Discovered

Besides saving money, the approach generated other benefits. "It gave employees the chance to team up with people in other areas to gain a better understanding of how the company works," Mr. Owen said.

Added Larry Deiclos, senior vice president for community banking and one of the program's managers: "We encouraged people to form cross-functional teams. Each member could then bring a different expertise to the table."

While many ideas simply streamlined procedures, others were more imaginative. For example, one staffer suggested that Perpetual advertise on the back of automatic teller machine receipts, a notion the bank plans to implement later this year.

In addition, scores of employees focused on printing costs, resulting in the following measures:

• Changing the paper stock on brochures to a lighter, less expensive grade.

• Processing mortgages on single-colored forms instead of two-colored ones.

• Reducing the number of managers who receive in-house financial reports.

• Using computer messages for employee communications rather than newsletters or printed memos.

Tellers recommended that the downtime they experience between the date of hiring and first day of training could be shortened if the bank added training personnel. As a result, a new trainer has been hired and has streamlined procedures and paperwork.

Two other employees suggested auditing of telephone services — to pinpoint and eliminate overcharging — and ordering periodical subscriptions in bulk for the whole corporation. Several staffers proposed that computer terminals be shared. □

As a trust officer, you do a lot more than manage investment portfolios for your customers.

You're busy making asset allocation decisions. Handling the operations. Packaging and marketing your services. And continually providing all the investment options your customers are demanding.

The Trust Business. It's a Service Business.

Well, Fidelity can give you a hand. Consider Fidelity Trust Portfolios. The funds people know, from a name that's respected, and a program that makes sense.

Fidelity really understands the trust business!

As a leading provider of mutual funds to trust departments across the country, Fidelity offers a wide array of funds, including money market, bond, and equity funds.* Allowing instant diversification of product, Fidelity funds may be used as a convenient, inexpensive complement to your common trust funds.

We can help you provide the diversity that many of your trust customers are demanding these days, without adding expensive staff or systems. And spend more of your time and resources on the intangible, yet invaluable, part of your business...

Service.

For more information about Fidelity Trust Portfolios or any other Fidelity products or services for trust departments, call Joseph T. Grause, Jr., Senior Vice President, at 1-800-345-5033, extension 5525. (In Massachusetts, call collect, 617-570-5525.)

System Redesign: A Sensible Tool

Continued from *page 8*

have been the likely outcome of traditional activity value analysis.

The electronic payments department comprised products ranging from automated clearing house to experimental point-of-sale processing functions. The cost base was $8 million, about 75% related to systems and 40% alone to development projects in this area.

It turned out that some of the largest development systems under way did very little to improve the work and could be scrapped. With some adjustments in systems resources, the total cost savings ended up at $3 million. Only about $300,000 would have came from the traditional bottom-up process.

Account Reconciliation

The account-reconciliation function cost about $6 million before the redesign. Bottom-up ideas concentrated on minor tweaking of some existing functions, yielding a total of $700,000.

Some of the work had been set up in the most arcane ways. Synergies between the subproducts were not being captured. Customers had no incentive to provide the original inputs electronically. The top-down process focused on greatly simplifying the way in which the work was done, bringing savings to 35% from the 12% reached by the unit itself. □

COMMENT

Continued from page 4

• Sell and underwrite title insurance.

• Enter into debt cancellation contracts.

• Underwrite municipal bond insurance.

• Provide real estate advisory services.

• Act and receive a fee as a finder for insurance companies.

• Provide vault, lock and ATM services to other institutions.

• Provide messenger services to other institutions.

• Act as principal in unmatched commodity price index swaps.

• Provide execution, clearing and advisory services for customer transactions in agricultural, petroleum and metals futures and options on such futures.

Actions by the Federal Reserve

The Federal Reserve Board, meanwhile, has slowly but steadily has utilized the "closely related" language of section 4(c)(8) to expand the permissible product and service lines for bank holding companies.

In addition to approving certain new activities in the recent past, the Fed also seems to have accelerated the number of proposals designed to facilitate the

"Many U.S. banks do not have the critical mass necessary for R&D expenditures."

delivery of products and services.

In the area of completed actions, the Fed has recently allowed:

• The owning and operating a thrift institution.

• Underwriting and dealing to a limited extent in corporate debt and equity securities.

• Providing armored car services.

• Acting as futures commission merchant with respect to European and Eurodollar futures.

• Leasing property where the lessor relies for its compensation on an estimated residual value of the leased property at the lease expiration of up to 100% of the acquisition cost of the property.

• Acquisition of platinum coins issued by the Canadian and Australian governments solely for distribution purposes.

• Purchasing land and engaging in agricultural activities designed to lessen a community's dependence on a single crop.

• Engaging in private placement and riskless principal activities.

• Acting as principal, originator, broker and advisor in the international markets with respect to interest rate, currency and related swap transactions.

• Engaging in foreign exchange spot, forward, options, futures and options on futures for the organization's own account.

Relaxing Constraints

Also, the Fed has initiated several proposals to relax certain of the existing regulatory constraints that have prevented bank holding companies from realizing maximum efficiency in offering currently permissible products and services.

In this regard, for example, the Fed currently has out for public comment proposals to:

• Extend the expanded leasing activities described above to all bank holding companies.

• Relax the cross marketing, management interlock and asset purchase and sale restrictions currently applicable to the securities activities described above.

• Allow bank holding companies to sell as agent the mutual funds to whom they provide investment advice.

• Allow credit card banks to offer price reductions to deposit customers of affiliated banks.

Historically, the states have been laboratories for experimentation in new bank products and services and they continue to play that role today.

"Regulators must be encouraged to utilize their existing authority to expand the product and service mix that U.S. banking organizations may offer their customers."

It is beyond the scope of this article to explore the regulatory and statutory innovations that have emanated from these 50 diverse jurisdictions.

Suffice to say that they have been many, with enactment by Delaware in May 1990 of broad bank insurance sales and underwriting powers being the most recent and controversial.

The FDIC is not a chartering agency and, therefore, lacks the ability to authorize any product and service lines.

However, flowing from its responsibility to ensure that activities of insured banks are consistent with safety and soundness considerations, the FDIC may require the discontinuance or modification of any product or service. This is not a frequently used power; however, it may be implemented as the FDIC reviews the Delaware insurance activities mentioned above.

Despite existing regulatory mechanisms for change in the current regulatory system, evidence abounds that this flexibility has been insufficient to allow U.S. banking organizations to compete effectively in today's marketplace.

It is a tired statistic that only one U.S. bank (Citibank) remains among the world's top 25 — to the point that Citibank weighs in only at number 24 and, in contrast to nine years ago, no other U.S. bank shows up in such a ranking.

This means that many U.S. banks do not have the critical mass necessary for R&D expenditures, do not have the best opportunities for economies of scale, and have insufficient capital to be lead banks in large commercial loans.

Also, U.S. banks are with-

See COMMENT, next page

The time has come for the top management of the bank, the CEO, to get involved in automation. Top management must face this fact and cannot wish that responsibility onto others. Automation is no longer the intrigue and complexity that it has been for 30 years, and top management must realize that fact. The automation directions, strategies, and decisions must come from bankers, not data processing people. For those CEOs who realize this, the bank can move ahead now. If they won't take the responsibility, then the bank will have to wait until the CEO is willing to become involved.

Automation is no longer decisions in hardware and software, but decisions in the art and science of banking.

COMMENT

Continued from page 10

drawing, not rising to meet competition abroad, especially in Europe. In 1983, Fed member banks operated 166 branches in foreign countries that had $386 billion in assets. By 1988, the number of member bank foreign branches had fallen to 132 and assets were down to $318 billion.

This substantial decline of the U.S. international presence is well-documented. However, the most disturbing indication of the problems of the American banking system is the loss of more and more customers in domestic markets. In 1981, foreign-owned banks controlled approximately 15% percent of the banking assets in the United States. Today that share is now up to 23%, with a concomitant decline in the market share of U.S. banks.

Banks Have Been Hurt

These trends not only reflect, but contribute to the decline of the U.S. banking system. Bank stock prices relative to book values are at dramatic lows; the price of money-center bank stock has declined 17% since the beginning of the year.

Also, dividend yields are higher than interest rates on bank debt. This means that as the cost of capital increases, bank profitability will decline and capital for growth will be harder to obtain. This obviously is not a promising scenario.

In order to begin to restore the franchise value of the U.S. bank-

"Energizing the regulatory process will not completely address the problems in our banking system"

ing organization, the government must take action. At a minimum, federal and state bank regulators must be encouraged to utilize their existing authority to expand the product and service mix that U.S. banking organizations may offer their customers.

New products and services will not only enable commercial bankers to keep and, hopefully, expand their customer base, but also will provide them some diversification to increase their financial stability. Such action can be taken without jeopardizing the safety or soundness of the banking system.

In addition, the regulators should consider streamlining the procedures by which they authorize commercial bankers to enter newly authorized product and service lines. The current procedures are both costly and slow.

For example, it recently took a bank holding company over 3 months and $250,000 in legal, accounting and consulting fees to get a routine leasing proposal through the regulatory process. Such delays and burdens greatly contribute to the cost of doing business and put up hurdles that nonbank competitors do not have to face.

Structural Review

While undoubtedly helpful, energizing the regulatory process will not completely address the problems in our banking system.

Of greater priority should be a comprehensive review of the statutory structure establishing the U.S. financial system. In particular, fundamental laws such as the McFadden Act, the Glass-Steagall Act, the National Bank Act, and the Bank Holding Company Act should be reformed.

With FIRREA-mandated review of the federal deposit insurance system pending, now is the appropriate time for the Congress to undertake reconsideration of the bank regulatory system. □

Ex-President Of Buena Vista Gets 7 Years

By BILL ATKINSON

WASHINGTON — The former president of Buena Vista Bank and Trust Co., Buena Vista, Colo., was sentenced Monday to seven years in federal prison and five years' probation for misapplication of bank funds and making false statements to federal banking regulators, according to the Justice Department.

Roy L. Bowen, 46, was also ordered by Judge Zita L. Weinshienk to pay $90,000 in restitution to the Federal Deposit Insurance Corp.

Guilty On Nine Counts

On May 18, following a two week trial, Mr. Bowen was found guilty on nine counts of a sixteen count indictment. The jury found that while he was president and chairman of the bank, Mr. Bowen made false statements to the FDIC, misapplied loan proceeds and funds belonging to the institution, and made false statements in his personal financial statements to obtain personal loans at banks in Colorado Springs and Denver.

As a result of Mr. Bowen's actions, the bank lost more than $1.3 million and was closed in August 1989, the Justice Department said.

A Flood of Fraud Crimes

The department said that the Federal Bureau of Investigation launched an investigation into Mr. Bowen more than three years ago.

Over the past five years, about 14,500 defendants have been charged with financial fraud crimes of which about 11,000 defendants have been convicted.

304 Have Been Charged

Justice prosecutors have now charged a total of 304 defendants and obtained more than 100 convictions in major savings and loan fraud cases since October 1988, the Justice Department said.

In addition, the FBI has investigations open involving 530 financial institutions. More than 30 of the institutions under investigation are based in Colorado. □

GLOBAL *dispatches...*

Reed Says Brazil's Policy On Debt Strangles Trade

Reuters

SAO PAULO, Brazil — Brazil has lost $3 billion in vital trade and interbank credit lines because of its failure to repay its huge debt, John Reed, Citicorp's chairman and chief executive, said Tuesday.

"This is a normal reaction of bankers" to cut back these lines, Mr. Reed told reporters. "For banks without roots in Brazil, it is easier to cut back these lines."

Citicorp's principal subsidiary, Citibank, has had a Brazilian branch network for 75 years, making it one of Brazil's oldest commercial banks, with deep roots in the nation.

Citicorp Maintains Credit Lines

Citicorp has kept its short-term trade and interbank credit lines unchanged at $630 million since last July, when Brazil began skipping most interest payments on its medium- and long-term private bank debt of $63.2 billion, Antonio Boralli, president of Citibank in Brazil, told reporters.

Brazil has paid interest on the short-term loans because they are essential for financing exports and imports. These lines of credit officially are at $11 billion in trade finance and $3.3 billion in interbank lines, Citibank said.

Smaller banks "are selling their commitments on the New York secondary market," Mr. Boralli said.

Larger banks, especially those with branches in Brazil, are maintaining these critical lines to Brazil, but at a price.

"Eighteen months ago these lines were for a period of 180 days. Now they are for 30 days to a maximum of 60 days," a Citibank trade finance specialist, who asked not to be identified, said following the news conference.

Loans Have Become Costly

The interest gap over interbank rates has risen to as much as 2%, from 1%, he said.

There is increasing pressure on banks to cut these loans because they recently were reclassified by a U.S. regulatory agency as substandard, he said.

Brazil has interest arrears of $6 billion with private banks. The government repeated recently that it would not pay these arrears until it renegotiated a new agreement with the banks.

Brazilian officials also have said they will not renegotiate with private creditors until a pact has been reached with the International Monetary Fund. An IMF mission is now in Brazil to negotiate an economic adjustment program.

Mr. Reed said he would meet today with Ibrahim Eris, head of Brazil's central bank, and was ready to negotiate. — **Reuters**

... by country

JAPAN

Richard C. Breeden, chairman of the U.S. Securities and Exchange Commission, urged Japan to further open up its financial markets.

Speaking at a bankers conference in Tokyo, he said: "For example, there is absolutely no valid reason why U.S. investment management advisers and U.S. mutual fund sponsors should not be fully licensed in Japan for both wholesale and retail sales."

Mr. Breeden, who praised the steps Japan has already taken, urged Japan to follow the U.S. example in deregulating bank deposits and brokerage commissions. He said the U.S. actions have led to a sharp increase in U.S. banks'share of the foreign market, but that the primary beneficiary was the consumer.

PORTUGAL

Investors streamed to the Lisbon stock market this week for the latest stage of Portugal's reprivatization drive: the issue of another 31% of the shares of **Banco Totta e Acores**, a commercial bank.

The operation will transform BTA into the country's largest private bank. It is the fourth-largest of all commercial banks in terms of assets and it is now the first financial institution in which a majority stake is being sold.

Stockbrokers reported strong demand for the issue and said it could match that of the sale of 49% of Banco Totta a year ago, which was 4.5 times oversubscribed.

Now, 7.75 million shares are up for sale and are expected to pull in at least $158 million. The base price is set at $21 a share.

Banco Totta's size and strong growth have made it one of the most popular investor targets in the center-right government's plan launched last year to reverse the nationalizations of the 1974 leftist revolution.

Among those most interested in the sell-off is **Banco Espanol de Credito**, a Spanish bank known as Banesto, which snapped up some 5% of Banco Totta in the last flotation.

Concern about a foreign group dominating the big Portugese bank has prompted the Social Democrat government to retain 20% of equity capital for now, although it says that stake will be sold later.

As with previous privatizations, foreign ownership is limited to 10%.

The by country **briefs were supplied by Reuters.**

Fuji Setting Up NY Headquarters

North American Unit to Have Own Lending Power

By JAMES R. KRAUS

NEW YORK — Emulating three other Japanese banks, Fuji Bank Ltd. is setting up a North American headquarters in New York City and giving local management authority over credit decisions and strategic planning.

The decision will be officially announced by the bank in September but was confirmed by senior Fuji executives in New York this week. Toru Nonoyama, former director and general manager of Fuji's New York branch, has been named head of operations in North America.

"Policymaking must be in the market because the people who are in the market know it best," said Tomohiro Kamio, director and general manager of Fuji Bank's branch in New York.

Others Have Formed Units

Four other Japanese banks — Mitsubishi Bank Ltd., Tokai Bank Ltd., Mitsui Taiyo Kobe Bank Ltd., and Yasuda Trust and Banking Co. Ltd. – have set up North American regional headquarters over the last 18 months.

Fuji's North American headquarters will have two divisions, one for credit policy and the other for strategic planning, branch and agency supervision, project finance, and middle-market business rather than continue building assets.

> **"Policymaking must be in the market because the people . . . in the market know it best."**
>
> **Tomohiro Kamio**
> *Fuji Bank*

Fuji, the world's third-largest bank with $362.5 billion in assets at the end of last year, was seventh-largest foreign bank in the United States in mid-1989, with $30.3 billion in assets.

Mr. Kamio said Fuji's main objective was to develop and expand more profitable and sophisticated operations such as project finance, foreign exchange and securities trading, swaps and middle-market business rather than continue building assets.

"We think that we are a little bit behind U.S. banks" in more sophisticated banking services," he said. "The period when large Japanese banks had a large expansion in assets is over. We're concentrating on maximizing profits rather than inflating assets."

As part of its drive to increase profits, Fuji Bank is targeting the fast-growing project finance market and other fee-based services such as swaps and options.

The bank has quadrupled its lending commitments for project finance in the United States over the last three years to $1.06 billion as of March 31, 1990, from $511 million a year earlier and $249 million in March 1988.

Fuji may also apply to the Federal Reserve Board for authorization to do limited underwriting under Section 20 of the Bank Holding Company Act, Mr. Kamio said.

On Monday, the Federal Reserve Board approved Fuji's application to engage in interest rate and currency swaps through Fuji Capital Markets Corp. in New York. Fuji is also jointly expanding lending and other services to medium-size corporations with Heller International, both in the United States and in other countries. □

Move to Pan-European Banking Seen Stalled

By JAMES R. KRAUS

NEW YORK — Banks aiming to build a pan-European network face tough obstacles and have achieved only limited results, according to a preliminary report by Greenwich Associates, a Connecticut consulting firm.

The report, which cast doubt over the viability of setting up a pan-European network, cited high costs, tough competition from large European domestic banks, and capital constraints as the main obstacles.

Great Aspirations

"Banks have shown a lot of great aspirations, but the real question is whether those aspirations are sustainable," said Timothy Schantz, a principal with Greenwich and coauthor of the report with Berndt Perl.

Several large U.S., West German, French, and British banks have been seeking to expand or strengthen their Europewide operations as the European Community moves to integrate financial markets after 1992.

Citicorp's Plans

Citicorp, for example, plans to increase its branches in Europe to 1,000 from 700 and capture 6% of the Western European consumer banking market. Deutsche Bank has acquired banks in Spain and Italy while Barclays Bank PLC is seeking to acquire a French bank.

Other banks, such as Banco Santander and Royal Bank of Scotland, have set up joint ventures. Banks are also seeking to use their branches in other countries to do business across Europe.

Acquisitions: Fast, Costly

Mr. Schantz said acquisitions are the fastest and most effective way of buying market share but also the most expensive.

Most joint ventures have not been successful while branches face too much competition from solidly entrenched large local banks, he added.

The record of foreign banks in providing domestic services through branches or other offices "has been zero," Mr. Schantz said.

The report also found that many European banks are placing a bigger emphasis on strengthening their domestic market position than on expanding across Europe. □

Limiting the Number of Insured Accounts Seen as Headache

Continued from *page 1*

me."

And at least some bankers are not eager to take on the task.

"We decided to take another route because we felt, from a banker's point of view, they didn't want to police" the per person limit, said John S. Ripley, senior vice president of the Association of Bank Holding Companies. "The idea of tracking accounts seems a staggering job. You would have to match Social Security numbers by computer. There's a Big Brother aspect to this thing."

Deposition Might Flee

Others say the practical problems are surmountable.

"You just need to put more stuff on tax forms – it's a computer programming job," said Edward J. Kane, professor of economics and finance at Ohio State University.

Large Deposits Play a Role

Another oft-cited objection to the proposal is that deposits in small institutions would flee to larger institutions deemed likely to be protected under the "too big to fail" doctrine.

"We feel it would drain deposits from community banks," said Gary J. Kohn, legislative counsel for the Independent

> **"You just need to put more stuff on tax forms – it's a computer programming job."**
>
> **Edward J. Kane**
> *Ohio State University*

Bankers Association of America. "If you had a $100,000 limit and you had lots of kids, that's O.K. But what about the Nebraska widower with a quarter of a million and no relatives? He'll put [his deposit] in a big bank" that the government would want to protect from failure.

Mr. Kohn estimated that 20% of banks' deposit bases may be in accounts of over $100,000. But he said he had no data to back up his estimate.

"That's significant when you're talking about a small bank," he said. "It deprives it of funds to loan locally. Smaller businesses won't be able to get loans. It will cost jobs."

Mr. Ely said that even if the surplus of deposits over $100,000 represented only 5% of a small bank's deposits, that would be significant. – "particularly if it means an inconvenience to customers."

It's Just Not Fair

George Kaufman, professor of finance and economics at Loyola University, said that if funds from smaller to larger institutions would not hurt the economy. But, "from an equity and fairness point of view, it's just not fair." It would not hurt the economy because other lenders would move in to fill the void if deposits were taken out of smaller, local institutions, he said.

On the other hand, all is not solved if the too-big-to-fail doctrine is abandoned. Then, large accounts would be withdrawn from all institutions, warned George Benston, professor of finance at Emory University's business school.

Beyond its practical shortcomings and its impact on smaller banks, observers are debating whether the one-deposit, one-account insurance concept strikes the required balance between providing stability in the system on the one hand, and imposing market discipline on bankers and depositors on the other.

Some, like Mr. Jacobe, say the proposal would accomplish neither goal.

"The average investor can't assess [an institution's] safety," he said. "Analysts can't figure it out. Banks reporting large capital can fail. Rumors about a [strong] institution can send it down. And an institution can fail to get deposits because people don't know about it."

Mr. Ely added that regardless of whether they were able to assess the strength of a bank, depositors generally are not willing to make the research effort.

"Depositors are the most risk-averse creditors you can find," he said, adding that it is easier to take one's deposits elsewhere than to check out a bank's strength.

But Mr. Kaufman contends that the proposal would be at least somewhat effective in imposing market discipline.

"People who say there won't be market discipline don't think of money market funds. Most depository institutions are not covered by a safety net. Somehow it works," he said. Doubters also do not remember history, he said. "Deposit insurance goes back 40 years, while banking goes back 400."

Paul M. Horvitz, professor of banking and finance at the University of Houston, said that while the proposal would provide a measure of market discipline, it would lead to considerable instability.

"When a bank is rumored to be in trouble, depositors would run," he said. But the proposal would impose some discipline: "People wouldn't want $200,000 in two shaky institutions."

Whether it would be enough discipline would not be evident until its trial, said Mr. Horvitz.

James Barth, professor of finance at Auburn University, said discipline would also come indirectly, as large depositors put funds in institutions that would pay higher interest rates to compensate for lack of insurance. As a result, higher interest rates would flag institutions that were troubled enough to pay the higher rates to attract deposits, said Mr. Barth. □

RTC Gears Up for 'Fall Clearance' of $50 Billion in Assets

Continued from *page 1*

the RTC expects to move into receivership in the second half of 1990.

Best Assets to Be Sold

Another $13.7 billion will be trimmed from the RTC's portfolio of assets in thrift receiverships, which stood at $37 billion on June 30. The RTC plans to sell the best assets remaining in this pile of leftovers, including $6.7 billion of performing one- to four-family mortgage loans, $3.3 billion of securities, and $1.6 billion in real estate.

The unveiling Wednesday of Mr. Seidman's "Operation Cleanup" marked a shift in the RTC's emphasis from selling off large numbers of insolvent thrifts to disposing of the huge inventory of assets remaining from the seizures of those failed institutions.

That inventory is expected to grow by more than $40 billion by Dec. 31 as more thrifts in conservatorship are added to the RTC receivership caseload.

Big Trims Expected

The RTC holds $165.3 billion in assets of thrifts seized by the government before June 30. The figure includes the $37 billion receivership portfolio from thrifts it has sold or liquidated, and $138.3 billion in thrifts still awaiting action. The RTC projects it will trim this pile of assets to $115 billion by the end of the year, but the asset inventory will continue to grow with new conservatorships.

Until now, the RTC has relied chiefly on acquirers of failed thrifts' deposits to manage assets they did not want to take on. In consigning assets to professional managers, the RTC will terminate these "caretaker" contracts, said Lamar Kelley, director of the RTC asset and real estate management division.

Some of the likely contenders for asset-management contracts include NCNB Corp., Banc One Corp., Lowell and Associates, Palmieri and Co., and J.E. Robert & Co., Mr. Kelley said. Competitive bids will be solicited from companies on the RTC's 70,000-name list of certified contractors.

Many of the current RTC assets have lost much of their value while in government hands. Holdings in markets where demand is slack are likely to require major price discounts before they are sold.

Contracting Move Praised

Observers Wednesday gave the RTC high marks for initiating an aggressive asset management program. The RTC is already seeking bids on three-year contracts to manage portfolios of assets ranging from $100 million to $2.5 billion, said David Fensterheim, executive director of the Real Estate Capital Recovery Association, a trade group of asset managers.

"Right now, they probably have [solicited] $4 billion" in asset management contracts, the largest of which is the $2.5 billion porfolio of University Savings in Texas, Mr. Fensterheim said. With a $30 billion management potential, "you're going to start seeing major contracts being put out," he said.

Under the RTC's standard asset-management disposition agreement, the asset manager will function as a general contractor, subcontracting with brokerage, property management, and appraisal firms.

Timeliness Encouraged

Setting objectives should encourage the prompt sale of the RTC's assets, said Ben A. Plotkin, first vice president of Ryan, Beck and Co. in Philadelphia.

He said the RTC needs to "enlist the assistance of the healthy portion of the thrift industry in getting those mortgages packaged and sold into the secondary market."

The RTC also said its widely anticipated auction of $300 million in real estate assets will take place Nov. 15.

The agency outlined how much time it will need to rid itself of different types of assets. Investment-grade securities should be sold within three months after a thrift is seized, but raw land could sit on the RTC's books for up to seven years.

"Some of that land is simply holding the earth together," said Mr. Kelley of the RTC.

Securities Available

More than $3 billion of the $3.3 billion in securities earmarked for sale in the rest of this year are mortgage-backed issues, but some junk bonds will move, too, said Elisabeth N. Spector, RTC's director of finance and administration. "I would be surprised if it's not several hundred million [of junk bonds] by the end of the year," she said.

The RTC will divest 75% of its $9 billion midyear inventory of performing one- to four-family residential mortgages, said Vicki Peterson, assistant director for asset marketing.

But only about 20% of the $6.7 billion being offered for sale meet the underwriting criteria of the Federal National Mortgage Association and the Federal Home Loan Mortgage Corp. The other 80%, though current, "have to be worked on to get in shape for sale," she said.

Some Have Bad Ratios

Some of the home loans cannot be sold to the agencies because they were made to facilitate sales of repossessed real estate, or have loan-to-value ratios exceeding of 100%, Ms. Peterson explained.

"We will place what we can with the agencies," referring to Fannie Mae and Freddie Mac, Ms. Peterson said.

Other loans will be pooled into securities that the RTC itself will issue. Still more will be sold as whole loans, with the likeliest buyers being banks, thrifts, insurance companies, and possibly pension funds. "Even though they're not the cream of the crop, there are established avenues to sell them," Ms. Peterson said. □

When you're being watched this closely...

one wrong move can spell disaster.

When it comes to complying with all the federal laws governing commercial and retail banking today, one wrong move can end up costing a fortune–in penalties, fines, even your bank's reputation.

That's why you need a guide you can trust–***Federal Banking Laws***.

Federal Banking Laws examines all the important statutory and regulatory issues you must be aware of–in one comprehensive volume! So you can determine what phases of your operations are affected and how...what the various provisions mean... and, most important, what you can do to plan for the future.

It turns confusion into comprehension.

Quickly. Easily. With practical emphasis on how to ensure compliance and avoid costly penalties.

So you can concentrate on your business–instead of worrying about getting pounced on for non-compliance.

Now you can examine ***Federal Banking Laws*** FREE for 30 days. Call today for your copy and see for how it quickly answers your banking law questions.

What the regulators don't tell you. 1-800-456-2340.

Complying with CRA/HMDA is simple. You post your public notice, keep a public file, and file the required HMDA forms. And you act in the *spirit* of the law and actively support your community.

Now what exactly does that last part mean?

Turns out it's not as simple as it seems. The regulators will grade you on your efforts. And your grade will become available to the public in a few months. So anyone can find out how you're doing in this gray area. And use it to challenge your decisions to branch or enter new businesses.

The only way to prevent this threat is to be sure you have a CRA/HMDA program that complies in spirit, act, and deed with the regs. And while the regulators don't tell you how to do that, we do.

The **Community Reinvestment Act/Home Mortgage Disclosure Act Regulatory Compliance Manual** covers it all in one easy-to-read book.

We show you exactly how to structure a good CRA program, develop community outreach programs that meet community needs, document everything, train your people to comply, and audit your program to be sure it works.

There's also a summary of the regs in plain english, a reprint of the regs for your reference, and a review of an actual program in use now at successful banks.

You can be sure it meets the regulators' standards because it's written by a former OCC field officer. And it's published by Sheshunoff Information Services Inc., the leader in high performance banking information since 1971.

Get your copy and make sure you've got a CRA/HMDA program that no one can challenge. Call 1-800-456-2340 today.

SEC's Breeden Opposes Universal Banking System for United States

Reuters

TOKYO — Securities and Exchange Commission chairman Richard Breeden said he opposes adoption of a universal banking system in the United States, which would allow banks to underwrite and trade securities without having to set up separate subsidiaries.

"I do not believe that universal banking will prove to be acceptable in the U.S., and I don't think it should be tried," he told bankers at a conference in Tokyo.

The Situation in Europe

Under the universal banking framework adopted in West Germany and Switzerland, banks may engage directly in securities dealing and underwriting.

Most of the proposals for U.S. financial reform, including some supported by Mr. Breeden and the Bush administration, would allow banks into the securities industry only through subsidiaries or holding company affiliates.

"Instead of mingling banking and securities activities inside a bank, it would be better to allow a single entity to own separately capitalized bank and securities companies," Mr. Breeden said.

Such a holding company structure would need to include strong and realistic "firewall" provisions, designed to create certain limits in the relationship between banks and nonbank companies under common ownership, he said.

LaWare Echoes Greenspan

Although agreeing that firewalls must be preserved, Federal Reserve Board Governor John P. LaWare, also speaking at the Tokyo banking convention, said that walls could be thinner if higher capital standards and tougher regulation were introduced. Mr. LaWare's comments echoed those of Fed Chairman Alan Greenspan in recent ground-breaking testimony on Capitol Hill.

In both Japan and the United States, banks and securities companies are restricted from engaging in one another's business.

In remarks on "Problems in the U.S. Banking System," Mr. LaWare said reducing deposit insurance coverage would be unworkable because it would introduce new risks to the stability of the banking system and would probably not be politically acceptable.

He further advocated a simplification of what he called the current "contradictory and confusing" system of bank regulatory authorities. □

THE THRIFT BAILOUT LAW: *1 Year Later*

Emerging Costs of Thrift Crisis Have Vindicated Bert Ely

Continued from *page 1*

tials – now grudgingly acknowledges Mr. Ely's prescience.

"I'm not sure if vindicated is the right word, but over the past couple of years he has gained in stature because he has proved to be closer in his numbers than the others," said League spokesman James Grubl.

Indeed, with the thrift-bailout law now a year old, things have come full circle. Whereas chaos have jumped on the bandwagon, projecting the cost of the savings and loan crisis could reach as high as $1 trillion, Mr. Ely is now sounding a note of moderation.

Disincentive Feared

"I think some people are going overboard in this rush to come up with a number," he said recently, echoing criticism that was leveled at him a few years ago. "We're overlooking something very important with this obsession with numbers.

"We should not just throw our hands up in despair," he said. "We should be looking forward, what could we do to save a few billion dollars, or if, we're lucky, $10 billion in the long run."

Minimum size is one inch. Film negative or camara-ready to size. AMERICAN BANKER will typeset without charge.

Blind box numbers provided on request. Charge is $20.00.

Like others interviewed for this article, Mr. Owen said he respected Mr. Ely's intelligence and competence, but sometimes disagreed with his conclusions.

Mr. Owen said he had heard Mr. Ely was conducting research on the state of the thrift insurance fund for a money-center bank in New York. Mr. Owen, considered a maverick himself for his approach to the savings and loan business, chose Mr. Ely over some well-known experts such as William Isaac of the Secure Group and Donald Kaplan of Kaplan, Smith & Co., because Mr. Ely had never worked in the banking or thrift industry. "With no axe to grind, he is a student of deposit insurance," Mr. Owen explained.

Earlier Sources

Mr. Ely, whose Alexandria, Va., firm Ely & Co. consists of himself, a secretary and a research associate, said he first became interested in deposit insurance issues after meeting with George Benston, now an Emory University professor, at a 1980 gathering of free-market economists.

Mr. Ely said it was Eric I. Hemel, former director of policy

"I think Bert is a reasonable person. I don't think he's a bomb thrower."

Thomas J. Owen
Perpetual Financial Corp.

and research for the Bank Board and now an analyst for First Boston Corp., who urged him in 1983 to focus on the Federal Savings and Loan Insurance Corp. in his study of potential problems in deposit insurance.

In 1986, Mr. Ely said, some Federal Home Loan Bank Board economists, who were limited in what they could say publicly, gave him "hell for not getting on the rooftops and shouting" about his findings.

Question of Methodology

Those economists, Daniel Brumbaugh and James Barth, do not recall that conversation, although they do not deny it took place. They do remember being asked by Mr. Ely for information on the methods used in mid-1985 to estimate the insolvency in the industry at $15.8 billion.

"I didn't know who Bert Ely was," said Mr. Barth, who was a visiting scholar at the Bank Board who later served as chief economist. "I don't think most people knew who he was."

Mr. Ely "deserves all sorts of credit" for drawing attention to the problem, Mr. Barth said, but it was Mr. Brumbaugh who first determined that the deposit insurance fund was in trouble.

Different Outcomes

"It's the difference between somebody who developed a vaccine and somebody who sells it," said Mr. Barth, now a professor at Auburn University. He added that Mr. Ely has received favorable publicity, while Mr. Brumbaugh lost his job for going public with his findings.

Although not well known to the public, Mr. Brumbaugh not only preceded Mr. Ely in identifying FSLIC's insolvency, but produced higher estimates of the problem, according statistics provided Congress by the Bank Board in 1989.

Now at Stanford University, Mr. Brumbaugh would say only that he was "pressured" to resign his position as deputy economist at the Bank Board because of his work in 1985.

A Feel for Insolvency

"A lot of what they published was essential to what I did," Mr. Ely said. But he also said his years as a consultant for manufacturing, distribution, and service businesses, specializing in bankruptcy, gave him a "sixth sense for insolvency."

From 1986 through mid 1988, Mr. Ely's estimates of the cost continued to rise, approaching $70 billion. He became the nemesis of M. Danny Wall, then the chairman of the Bank Board, who was called repeatedly before an increasingly concerned congress to defend the agency's estimate of $20 billion to $30 billion.

Finally, in late 1988, with a new administration firmly in place, the official estimate of the cost of the savings and loan crisis ratcheted into line with Mr. Ely's, at more than $50 billion.

His Name in the Papers

As the thrift crisis moved onto the front pages of the nation's general-interest newspapers, Mr. Ely's ability to capsulize complex financial problems in everyday language helped make his name ubiquitous in press accounts of the Bush administration's first big initiative.

Since the beginning of 1989, Mr. Ely has been mentioned in 49 articles in *The New York Times* and in 33 articles in the *Wall Street Journal*, for example.

This newspaper has mentioned Mr. Ely in 27 articles in the period. That is not quite as many as the 129 articles mentioning Charles H. Keating Jr., one of the best-known figures in the S&L scandals, but it is about 50% more than the 74 articles mentioning John S. Reed, chairman of the nation's largest banking company, Citicorp.

Interviews with Mr. Ely for this article were interrupted twice by calls from other reporters. Mr. Ely estimated he spends about 20 hours of his 70-to-75-hour work week talking to reporters. "There are a lot of anniversary stories in the works right now," he said.

Mr. Ely's acceptance by the Fourth Estate has not been universal, however. *National Mortgage News* has avoided quoting him, in part because "there was no way of knowing whose axe he was chopping wood with," according to the publication's editor, Stan Strachan.

Mr. Ely, who holds a 1964 bachelor's degree in economics from Case Western University and an 1968 master's from Harvard Business School, continues to be viewed with a degree of skepticism in academia as well. Some economists privately say they view him as more of a huckster than a scholar because of a tendency to adjust data for maximum effect, as when he hedged his first estimate of the costs.

Clients Not Identified

Mr. Ely has contributed to such skepticism by declining to identify his clients. He acknowledged that he had worked for Municipal Financial Consultants because Mr. Owen disclosed it first. Mr. Ely told a U.S. League publication, *Savings Institutions*, in 1987, that he had "no more than five" savings and loan clients.

Mr. Ely has received modest fees for articles and speeches. He said, however, that he has not tried to profit directly from his work on deposit insurance. "This has been a labor of dismay. I didn't expect to get a lot of business from savings and loans."

Still, he concedes that the exposure "hasn't hurt" his business, in which a quarter to a third of his revenue comes from fees for delivering speeches. The publicity also probably has helped him gain work as an expert witness for eight savings and loans, he said.

Speeches to State Groups

He has delivered speeches to about 20 state bankers associations, among other trade groups, he added.

Ely & Co. has worked as a consultant to banks, trade associations, and members of the investment community such as mutual fund managers, he said.

"My focus right from 1981 has been deposit insurance," he said. It is "the underlying problem to all our problems."

Mr. Ely often repeats Franklin D. Roosevelt's warning that federal deposit insurance "put a premium on unsound banking in the future," and advocates replacing federal deposit insurance with a private system of 100% cross-guarantees.

In Mr. Ely's proposed system, the Federal guarantee would remain in place as a backup to assure depositors' confidence, but the equity and earnings of the banking system would replace today's taxpayer-supported insurance funds.

Premiums According to Risk

At the same time," he said in recent testimony to the senate committee on Banking, Housing and Urban Affairs, "guarantees of banks will charge risk-sensitive premiums."

Not only does Mr. Ely advocate such a system, he believes it is inevitable.

"This whole thing has been playing out pretty much as I thought it would," he said, arguing that it takes a crisis to force people to consider fundamental changes. "The FSLIC is the weak link in the system." □

Morgan Seen Playing Dual Role in Sale of Low-Tech IBM Businesses

By JED HOROWITZ

J.P. Morgan & Co. is expected to play multiple roles in the proposed sale of a majority interest in typewriter and other low-technology businesses of International Business Machines Corp.to Clayton & Dubilier, the leveraged-buyout firm.

Morgan, along with Shearson Lehman Brothers, is advising IBM on the purchase, according to a spokesman for the computer giant.

Morgan Guaranty Trust Co., along with Bankers Trust Co. and Manufacturers Hanover Trust Co., also is expected to lead the senior debt financing for Clayton & Dubilier's buyout, according to a well-placed bank source.

Clayton & Dubilier may pay as much as $2.5 billion for its majority stake in IBM's typewriter, keyboard, intermediate and personal printers, and supplies business in the United States, according to bankers and analysts who follow IBM. The amount of senior debt needed has not been determined.

Morgan officials did not return calls for comment on their role in both sides of the transaction.

Era of Expanded Relationships

Peter Goodson, a partner at Clayton & Dubilier, said it would be wrong to assume that the 12-year-old firm would rely primarily on the small group of money-center banks that have financed most of its 15 prior acquisitions.

"We are in a new era of era with expanded relationships," he said. "We have a lot of banks that want to do this. Heretofore we haven't had any relationships with Japan."

Sources noted that several Japanese banks joined the $1.2 billion buyout fund raised last year by Clayton & Dubilier. About $1.1 billion of that remains uncommitted, a Reuters dispatch quoted chairman Marcin Dubilier as saying.

Banks believed to have invested at least $20 million in the fund include Dai-Ichi Kangyo Bank, Sumitomo Bank, and Sanwa Bank. Other limited partners include First Chicago Corp., Security Pacific Corp., Bankers Trust, and Manufacturers Hanover, a source said.

The information products businesses that IBM may sell had 1989 revenues of about $2.4 billion, estimated Don Young, an analyst at Sanford C. Bernstein & Co. Though recent takeovers in such low-technology businesses have been priced below annual revenues, the IBM units are likely to bring a premium because they are leaders in most categories, he said. However, he said it remains unclear whether Clayton & Dubilier would buy all of the businesses.

Officials at the buyout firm and at IBM would not comment on a price, saying they have not yet concluded a definitive agreement or decided how much of a minority stake IBM will maintain. The deal is expected to close in the fourth quarter, according to the IBM spokesman.

William Glowkowin contributed to this report.

Plus System

ADD PLUS® TO YOUR CIRRUS® ATMs AND GET AN EXTRA 150 MILLION

Soon Cirrus® members will be able to cash in on Plus System® customers. Adding the revenue potential of over 150 million Plus® cardholders.

So, by adding the Plus logo to your ATMs, you will start attracting customers who used to pass you by!

For information, please contact Ron Reed, vice president and general manager, at 303-620-7315. And make the most of your ATMs.

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the market value of all common shares outstanding as of March 30, 1990, the market value cutoff for banks was $69.6 mn and for thrifts $121.45 mn.) **52 Wk Hi** are the highest 52-week high and low prices for the stock. PE the price-earnings ratio is the current stock price divided by the trailing four-quarter earnings per share adjusted for latest announced earnings. **Mkt. to book** is the ratio of the stock's closing price to the stock's book value, expressed as a percentage. **Chg.** value is adjusted for announced earnings and dividends. **Chg.** is the change from the stock's last traded. If no trade on the day, it is the last available bid. **Bold** Thrift Indices: A weighted average of the top 250 banks in market value and the top 50 thrifts in market value, respectively. Highlights show largest percent gainers/losers in price; and two volume indicators: most shares traded and most shares traded as a percentage of average shares traded daily over the past year.

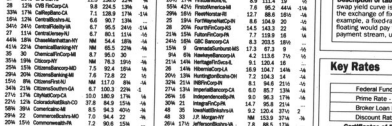
Libor Swap Yield Curve — Wednesday, August 1, 1990



Data source: Manufacturers Hanover Trust Co., New York

Description of table: For lenders and borrowers in the interest rate swap market, the LIBOR swap yield curve is the benchmark interest rate used by active participants when arranging the exchange of fixed- and floating-rate cash flow streams of different maturities. For example, a fixed-rate lender holding a one-year fixed-rate loan and wishing to swap into floating would pay the one year rate at the end of a year in exchange for a floating-rate payment stream, usually 3-month LIBOR, paid and reset quarterly.

Bank Stocks Pounded on Credit Fears

Continued from *page 1*

the San Francisco banking company have eroded 20% in the past two weeks.

At the same time, Security Pacific Corp. was off $1 to $30.625, and BankAmerica Corp. declined 75 cents to $24 while First Interstate Bancorp. declined 75 cents to $32.25.

Among money center institutions, shares of Citicorp, the nation's largest banking firm, sank below the psychologically important $20 price level, where they have hovered for some weeks. The stock was off 75 cents to $19.375 at the end of trading on volume of over 2.5 million shares.

Citicorp, Bank Group Underperform Market
Percentage change in stock prices

Source: DB Technology Inc.

Citicorp has fallen more than 30% since yearend. Meanwhile, the *American Banker* index of the 225 largest publicly traded banks has declined 14%, and this week fell below its value level at the end of 1988.

The heaviest volume was in Chase Manhattan Corp., which declined 25 cents to $18.875. Over 2.9 million shares had changed hands.

Superregional banks, once the darlings of investors, were also clobbered. NCNB Corp., Charlotte, N.C., fell $1 to $34.625. Banc One Corp., Columbus, Ohio, was off $1.125 to $27; and Barnett Banks Inc., Jacksonville, Fla., declined 87.5 cents to $29.75.

Riding Out the Storm

"In financial services, you can't get portfolio managers to buy anything right now. They are using financial services stocks as a source of funds for other investments," said Virginia A. Adair, a banking analyst for Merrill Lynch Capital Markets Group.

Mr. Seidman helped set the tone for the market with his statement to the Senate on Tuesday that the bank deposit insurance fund is likely to lose $2 billion in 1990, which would be the third straight yearly loss.

Following his testimony on Capitol Hill, Mr. Seidman also discussed the problems faced by banks in appearances on the Public Broadcasting System's "McNeil-Lehrer News Hour" and later on the ABC Television program "Nightline."

Bank Solvency Questioned

Also appearing Tuesday on "Nightline" was Stanford University economist R. Dan Brumbaugh, who asserted that six major banks — including five New York money center institutions — could be seen as insolvent if their assets were valued at market levels.

He identified them as Citicorp, Chase Manhattan Corp., Chemical Banking Corp., Manufacturers Hanover Corp., Bankers Trust New York Corp., and San Francisco's BankAmerica. Mr. Seidman called the contention "preposterous."

Mr. Brumbaugh, a former economist for the Federal Home Loan Bank Board, is among a group of economists hired by the House Banking Committee to study the health of the FDIC. He has charged that the FDIC is insolvent and has been reluctant to provide the researchers with data about itself or banks.

"I think that is part of what is hitting the stocks today," George M. Salem, the principal banking analyst for Prudential-Bache Securities Inc., remarked on the sudden intensity of press attention on banks.

Western Thrifts Hurting

Meanwhile, in California, he noted, "some of the thrifts are reporting real, which is rubbing off on the banks."

Two of the big three thrift institutions were off on Wednesday. Great Western Financial Corp. was off 12.5 cents to $15.375, and H.F. Ahmanson & Co. was off 75 cents to $19.

Analyst Dean Wetherell described Wednesday's market as "facing a tidal wave," but he described concerns about the capital positions and dividend- paying capacities of major banks as being much overdone. □

Economists Expecting Fed to Ease Again

By KELLEY HOLLAND

Economists rarely see eye to eye on anything, but a number of them are now united in predicting a drop in interest rates.

Concerns about lending activity, a downturn in economic indicators, and low growth in the money supply are all pointing to expectations of further easing by the Fed following a move of 25 basis points in July, they said.

Federal Reserve Chairman Alan Greenspan has given several reasons for easing, including slow money-supply growth, the prospect of a federal budget agreement, and overall weakness in the economy, according to William C. Dudley, senior economist at Goldman, Sachs & Co. "We would not be at all surprised to see the Fed ease again."

The federal funds rate could fall from about 8% to 7% in the next year, economists said.

Lending Activity Down

"The credit situation is part of the economic situation," said Neil M. Soss, chief economist at First Boston Corp. "The credit situation is holding GNP lower than it ought to be, and the Fed recognizes that."

Mr. Soss said easing could push the funds rate by the end of the year and to 7% by the end of the first quarter of 1991.

Lending activity has declined dramatically in the first half of the year as bankers have grown worried about meeting capital standards. Mr. Greenspan cited the slowdown as a reason for the 25 basis point decline in the fed funds rate engineered in July.

But bankers like Mr. Greenspan will have to ease rates further if he hopes to stimulate new lending. "Twenty-five basis points isn't going to do anything at all," said an official in the treasury department of a money center bank. He predicted that an additional easing of 50 to 100 basis points would be needed if lending activity is to increase.

Treasury Yields Heading Down

In any case, a credit crunch is only a symptom of broad based weakness in the economy, according to Charles Lieberman, a managing director in financial markets research at Manufacturers Hanover Securities.

"The Fed is going to have to ease some more. The economy is quite clearly weak," he said. Economic indicators are also pointing to the need for easier credit. The National Association of Purchasing Managers Index of 47.4% released Wednesday broke a three-month trend of increases. An index below 50% suggests a decline in new orders and the prospect of slow production growth; the consensus expectation was for an index of 50% to 50.5%.

At least one economist thinks easing could take place as soon as Friday if other economic indicators, nonfarm payroll employment, and the unemployment rate come in far below expectations. "Probably some statistic and weak money supply growth will prompt the next move, possibly Friday," said Mr. Soss.

But further easing could also take place around the next meeting of the Federal Open Market Committee August 21.

Repositioning Under Way

Some banks are already changing the mix in their investment portfolios to benefit from an anticipated easing, according to Otto Lowe, an assistant vice president at First Boston Corp.

"There were several large buyers of short term CMOs in the second quarter," Mr. Lowe said. The banks' aggregate purchases were around $5 billion, he added.

At Manufacturers Hanover, the bank's clear view that interest rates are headed down has led to some repositioning, Mr. Lieberman said. "We have taken some steps to benefit from that – for example, buying longer term mortgages and financing with shorter term liabilities."

The Treasury bond market rallied Wednesday and yields fell on news of the lower than expected purchasing managers' report.

* * *

MARKET MONITOR

First Chicago Corp.'s subordinated notes, issued last week at a yield spread of 165 basis points over Treasuries, were freed to trade Wednesday by lead manager Salomon Brothers Inc:

Market sources said the securities would probably trade to a spread of at least 180 basis points over Treasuries, however, roughly the level where First Chicago's outstanding subordinated debt was trading before the latest offering.

Chemical Banking Corp. has filed a shelf registration to issue up to $750 million in debt securities and warrants to purchase debt securities. Proceeds will be used for general corporate purposes, including investments in subsidiaries and the refinancing of debt. □

Even with Equity, Loan Buyers Skeptical About UAL

Continued from *page 1*

began in sharp contrast with the UAL buyout proposal.

And because UAL's union group was unable to bring a foreign bank into the "club" – it was reportedly looking for at least one Japanese bank and one European bank – the ability to syndicate the loan worldwide has been hampered, bankers say.

Prospective agent banks thus run the risk of getting stuck with $500 million commitments that they are unable to lay off on the secondary market. This is problematic for many banks because of regulatory and shareholder pressure to limit portfolios of loans to HLTs.

"I told them not to bother us on this one," said a key lender to many large leveraged deals.

"As a buyer, we wouldn't be excited about a deal with 20% equity when you could buy into strong deals with 40% equity," said one secondary market participant. "I expect we'll be called on, and it depends on how much of a cushion is built into the deal. But the deal has left a bad taste in my mouth."

Five banks had agreed to help arrange financing for the $201-a-share, $4.4 billion deal for an employee-led buyout of the parent of United Airlines, although they made no commitments. Among investors rumored to be considering equity or subordinated-debt investments are General Electric Capital Corp. and Boeing Co.

Of the five banks – banking units of Manufacturers Hanover Corp., Bankers Trust New York Corp., Citicorp, Chase Manhattan Corp., and Chemical Banking Corp. –, three have dropped out, at least temporarily.

Mr. Leveraged Buyout Boy Hanover and Bankers Trust to continue working on the deal points up several differences among the original five banks.

The two remaining money-center banks "seem to have a better capital situation" than the other three banks, observed Richard Bove, a bank analyst at Dean Witter Reynolds & Co.

For that reason, the three banks that withdrew were probably more concerned than the others about holding unwanted UAL buyout loans.

"If they weren't concerned about that internally, certainly the Fed is," Mr. Bove said, adding that he would rather see all five banks walk away.

"There seems to be a chronic inability on the part of banks in the United States to lend to large corporations and walk away with a profit," Mr. Bove said.

"They don't know how to price; they don't know how to underwrite – they've demonstrated that in spades over the past five years."

Agent banks would be expected to commit $500 million each. If the group can arrange a club financing including foreign banks, one lender said, "The syndicate risk is much less and you could create a bandwagon effect."

But so far, the union-led group and the banks still working on the deal have been able to bring in a foreign bank. Now that domestic banks have begun to drop out, the chances are less likely.

While the trio of banks on the sidelines – Chase, Citicorp, and Chemical – are reportedly concerned over the lack of equity, other banks believe the skittishness in the syndicate bank market could have been a contributing factor.

Defection Risk Haunts Buyers Of Card Loans

By YVETTE D. KANTROW

The recent surge in sales of credit card portfolios is beginning to create some fallout for purchasers.

As more credit card accounts change hands, consumers are increasingly complaining that the new owners of their MasterCard or Visa card are raising the interest rates and annual fees.

In some areas, negative publicity has dogged the acquirers, and consumer advocates are keeping a close eye on the activity. As a result, banks are increasingly concerned about retaining the cardholder accounts for which they paid so dearly.

ANALYSIS: *Follow-up on the news*

Most bankers who have purchased and repriced portfolios say attrition has been minimal. But Steven Szekely, a vice president at Payment Systems Inc. in Tampa, Fla., said banks keep their attrition rates close to the vest after an acquisition. "There is a potential for damaging a bank's reputation if it doesn't work out," he said.

Some banks say they are taking extra steps to keep new cardholders on board. These measures include increasing lines of credit and emphasizing other service enhancements.

"When you purchase a portfolio, it is natural to be concerned about attrition," said Robert F. Hammer, chairman of R.K. Hammer, a Newbury Park, Calif.-based investment bank that specializes in card portfolio sales. "Just by notifying people that [an account] has been sold makes people ask, 'Do I really need this card?'"

In 1989, about $6.6 billion worth of credit card receivables changed hands, with institutions like Associates Corp., Citicorp, and Chase Manhattan Corp., gobbling up a large percentage of outstandings.

Sales Continue Apace

According to Mr. Hammer, the breakneck pace of portfolio sales is continuing this year. More than $3.3 billion in card loans have been sold since January. The average price paid for such loans are high, typically hovering at about 20% of total outstandings.

Chase Manhattan usually raises the fees and rates of purchased accounts to bring them in line with its overall portfolio, said David J. Cornell, chief financial officer in charge of direct response banking.

"We have tended to implement a number of changes, but we are not changing the mix in their investment portfolios to benefit from an anticipated easing, according to Otto Lowe, an assistant vice president at First Boston Corp.

"There were several large buyers of short term CMOs in the second quarter," Mr. Lowe said. The banks' aggregate purchases were around $5 billion, he added.

At Manufacturers Hanover, the bank's clear view that interest rates are headed down has led to some repositioning, Mr. Lieberman said. "We have taken some steps to benefit from that – for example, buying longer term mortgages and financing with shorter term liabilities."

The Treasury bond market rallied Wednesday and yields fell on news of the lower than expected purchasing managers' report.

Fed Sets 3% Minimum For Capital

By LINDA CORMAN

WASHINGTON — Setting a long-standing and controversial issue, the Federal Reserve Board on Thursday ruled that bank holding companies and state member banks must maintain equity capital equal to 3% of assets.

The requirement supplements impending rules that specify capital levels based on the riskiness of a bank's assets. Under Thursday's new rule, no matter how safe the assets of a bank are deemed, it must have a minimum of 3% equity.

The final regulations do not differ substantially from the Fed's proposed rules issued in December.

The American Bankers Association immediately announced its dissatisfaction with them.

Elements of Tier 1

The 3% minimum can consist of so-called Tier 1 capital. For bank holding companies, that consists of common equity, minority interests in equity accounts of consolidated subsidiaries, and qualifying perpetual preferred stock. For state member banks, Tier 1 capital will consist of common equity, minority interests in equity accounts of consolidated subsidiaries, and qualifying perpetual preferred stock, less goodwill.

The Comptroller's office appointed a retired banker, William S. Ogden, as conservator of National Bank of Washington. Mr. Ogden will manage the day-to-day affairs of the bank and work closely with the Federal Deposit Insurance Corp. to facilitate a sale.

New Regulatory Power Speeds Seizure in DC

By BILL ATKINSON

WASHINGTON — Using new authority to seize banks before they become insolvent, federal regulators took control of National Bank of Washington and began to seek a buyer for the $1.6 billion-asset institution.

The seizure by the Office of the Comptroller of the Currency took place Wednesday night, just hours after the bank's parent, Washington Bancorp., filed for Chapter 11 bankruptcy protection.

Washington Bancorp., which suffered losses from a downturn in commercial real estate markets, had been grappling in recent years with management problems and power struggles among directors. The holding company was trying to sell National Bank of Washington, the fourth-largest bank in the nation's capital, for almost two years.

The Comptroller's office appointed a retired banker, William S. Ogden, as conservator of National Bank of Washington. Mr. Ogden will manage the day-to-day affairs of the bank and work closely with the Federal Deposit Insurance Corp. to facilitate a sale.

See **NEW** page 17

Back in the Saddle

William S. Ogden, the former Continental Bank chairman appointed to oversee National Bank of Washington, is no stranger to troubled banks. See article on page 17.

In placing the bank under conservatorship while it still retained some capital, the Comptroller's office took advantage of powers granted by the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 to seize a failing bank before it becomes technically insolvent. The bank has $23 million in cap-

Banks Act to Freeze Kuwait Assets; Oil-Price Hike Boosts Some Stocks

By JAMES R. KRAUS

NEW YORK — A White House order to freeze the U.S. holdings of Iraq and Kuwait sent banks scrambling Thursday, while the rise in oil prices spurred by Mideast tensions helped boost the stock of some energy lenders.

The freeze order, following Iraq's invasion of Kuwait, surprised major U.S. banks, which immediately began trying to identify assets owned by the two governments. By afternoon, it became clear they faced little financial exposure but might have problems complying with the order.

Meanwhile, the stocks of some banks in the oil patch increased modestly in a declining market as investors tried to assess the economic impact of turmoil in the oil-rich Middle East. (see Stocks, page 20).

In France and Britain, orders

Bitter Medicine: The Side Effects Of Reform Law

By ROBERT TRIGAUX
Last of a Series

WASHINGTON — From the threat of higher taxes to a national credit contraction, the thrift-bailout law of last August has spawned a host of unintended consequences that banking experts warn could severely influence the financial services industry well into the 1990s.

They say the law has reached far beyond its mandate of paying for the closing of hundreds of insolvent savings and loans: It now is considered a threat to the viability of the entire industry.

From their perspective, analysts say, the Financial Institutions Reform, Recovery, and Enforcement Act – or FIRREA – appears grossly misnamed.

To be sure, the bailout law appears to be on track in meeting many of its goals, including set-

First Chicago's Jurgensen: CFO with Diverse Strengths

By NANINE ALEXANDER

William G. Jurgensen, First Chicago Corp.'s new chief financial officer, is not just a number cruncher.

He said his diversified experience -- "I've worked both the left and right sides of the bank balance sheet" -- prepared him for a key senior management role at the nation's 12th-largest holding company.

"It's given me the opportunity to see the business from lots of different vantage points, which I think is a strength," Mr. Jurgensen said in a recent telephone interview.

William G. Jurgensen

Mr. Jurgensen, 39, joined First Chicago last month from Minneapolis-based Norwest Corp. He was executive vice president of the company's lead bank, Norwest Bank Minnesota, where he was responsible for several relationship-management divisions, operations, and cash management.

As chief financial officer, Mr. Jurgensen will oversee asset and liability management as well as the units that handle accounting, taxes, the treasury, insurance, and financial administration.

Mr. Jurgensen said it is too early to have mapped out his objectives, and he acknowledged some impatience with the process of getting to know a $50 billion-asset banking company, which is about twice the size of Norwest. Coming meetings on strategy and profit-planning should help speed the get-acquainted phase, which may also be eased by similarities between Norwest's and First Chicago's business lines.

Stronger Commitment to Wholesale Banking

There are differences between the companies, of course, and Mr. Jurgensen said one attraction was the Chicago company's stronger commitment to wholesale banking through its global corporate bank.

Mr. Jurgensen holds both undergraduate and graduate degrees in business from Creighton University in Omaha, Neb., and said banking was not his first career choice. Part-time work in investment banking during his senior collegiate year persuaded him to forgo law school in favor of business. When he joined Norwest, he saw the bank as a place to learn about a variety of businesses before selecting a career path.

Spent 17 Years at Norwest

Starting as a commercial loan officer at Norwest's Omaha subsidiary in 1973, Mr. Jurgensen held various positions in corporate lending as well as in trading and investments. In his last position he was in charge of one of Norwest's corporate middle-market departments that provide banking products and services to commercial real estate, communications, insurance, and technology companies.

Reflecting on his 17 years at Norwest, Mr. Jurgensen said he was fortunate to have been helped by several good bosses in corporate banking and securities management.

Initial calls to reach Mr. Jurgensen found him on a fishing trip with his 15-year-old son to a remote lake in Canada. He still commutes to Minneapolis on weekends but said his wife and son will join him in Chicago by the end of the summer. Mr. Jurgensen and his wife also have an 18-year-old daughter in college. □

Seidman Says He Remains Unsure About When He Will Leave FDIC

Reuters

WASHINGTON — Federal Deposit Insurance Corp. Chairman L. William Seidman said Thursday he remained unsure of when he would leave his post as head of the agency and the Resolution Trust Corp.

Mr. Seidman told the Senate Banking Committee that he had decided he does not want to be reappointed when his term expires in October 1991.

States a Goal

"I've made no decision on when I will leave," said Mr. Seidman, who has often been more open about the cost of the savings and loan crisis than the administration would like.

"I want to leave with the feeling that I have the RTC up and running," Mr. Seidman said.

He went on to say that he was an appointee of the Reagan administration and that he thought it was important to have someone with whom the Treasury Department feels comfortable.

Lists Achievements

In prepared testimony, Mr. Seidman said the FDIC and RTC were investigating 1,300 institutions for fraudulent activity and have filed more than 500 lawsuits against former directors, officers, and other professionals. They recovered $100 million in the first quarter of 1990 alone, and the total for all of 1990 is nearing $300 million.

Mr. Seidman urged the banking committee to include in a proposed antifraud bill a measure that would prohibit or limit troubled banks and thrifts from providing golden parachutes for their directors and officers. □

Latino Groups Lobby to Save S&L

Entreat Bush to Bar Takeover of California Thrift

By SAM ZUCKERMAN

SAN FRANCISCO — A coalition of eight Latino groups is publicly appealing to President Bush to protect what they say is the nation's largest Hispanic-owned thrift from regulatory sanctions that could lead to a federal takeover.

In a full-page advertisement in the California edition of *The New York Times* on July 31, the groups warned that Pan American Savings Bank, San Mateo, "is in danger of being crushed by the weight of rules intended for giant speculators."

The $322 million-asset Pan American is not specifically named in the ad, which refers to "four nation's largest Hispanic-owned S&L." But officials of the San Francisco-based Latino Issues Forum, which is coordinating the campaign, said Pan American is the thrift in question.

The forum consists of several advocacy groups, including the League of United Latin American Citizens, Mexican-American Political Association, and Latin Business Association.

'An Endangered Species'

Their ad claims that minority financial institutions around the country have become an endangered species because of arbitrary bureaucratic regulatory enforcement. The text urges Mr. Bush to "step in and help preserve" Pan American.

The thrift is "moderately out of compliance" with capital rules imposed by last year's thrift-bailout law, said William

Pan American Savings is "moderately out of compliance" with capital rules, its president said.

B. Stevenson, the institution's president. But the thrift's relations with federal regulators are good, he said, and there is little likelihood of a takeover soon.

At the end of 1989, Pan American surpassed requirements for tangible and core capital, but had risk-based capital amounting to 5.21% of assets, less than the 6% required by law, according to the thrift's data.

Capital Plan Rejected

Pan American's initial plan for raising capital, based on selling new stock, was rejected by the Office of Thrift Supervision, forcing the thrift to prepare an amended plan, Mr. Stevenson said.

Pan American earned $130,000 in 1989 and lost $220,000 in the first half of 1990.

The OTS issued a statement that it was unable to discuss the specifics of the Pan American case. But the agency said it strives "to preserve the minority ownership of thrift institutions whenever possible, subject to existing laws and regulations."

Hispanics own about 73% of Pan American's stock and account for seven-of-its-nine board members. The thrift was founded in the early 1970s to provide commercial and residential mortgages to Latin American and other minority communities in the San Francisco area.

Latino Forum officials said that Liberty Savings and Loan Association, based near Los Angeles, is the only other Hispanic-owned thrift in California.

The group said it is not asking that minority thrifts be exempted from capital rules that regulators put a priority on preserving minority-owned institutions.

"This is beyond the bands of [OTS district director] Mike Patriarca," said Latino Forum staff attorney Edith Adame. "This is a call for President Bush to look at it from a policy point of view." □

Norwest Bullish on Earnings Despite Loss Provisions

By ALISON REA
Reuters

NEW YORK — Despite increased provisions for loan losses, Norwest Corp. is on track to meet analysts' expectations of earnings of $2.75 a share in 1990, chairman Lloyd Johnson said in an interview.

"We are comfortable" with that consensus estimate, Mr. Johnson said, even though Norwest made "heavy" loan-loss provisions in the first half of the year and expects "some pretty heavy provisions" in the second half, Mr. Johnson said.

Norwest earned $237 million, or $2.50 a share, in 1989. Its net for the first six months was $130.4 million, or $1.33 a share. Its loan-loss provision was $114 million in the first half, against $75.6 million a year ago.

Minneapolis-based Norwest last month agreed to buy United Banks of Colorado Inc. in a transaction expected to close in early 1991. No other major acquisitions are planned for at least a year, Mr. Johnson said.

He said it was too soon to predict 1991 profits, but United Banks will cut Norwest's 1991 earnings per share by 2 cents, but will add 4 cents in 1992 and 8 cents in 1993. Tax benefits will be a big factor.

Mr. Johnson expects tax benefits from United, such as loan

MasterCard Completes Its All-Fiber Net

By KAREN GULLO

NEW YORK — MasterCard International recently completed an upgrade to fiber optic cable for Banknet, its network for electronic funds transfer and credit card authorization.

The fiber optic network will improve the network's reliability for MasterCard member banks and reduce the risk of a network failure, said Philip P. Verdi, executive vice president of electronic services.

A Total of 13 Nodes

"It virtually eliminates network downtime," said Mr. Verdi. "Even through network uptime right now is already 99.9%, this upgrade means there's even less of a chance of a node going down. One node could take an entire geographical area of out service."

Banknet now has 13 nodes that connect more than 29,000 MasterCard member institutions worldwide. In the upgrade, MasterCard consolidated two Banknet nodes, which were in upper and lower Manhattan, into a single node in upstate New York, in Lake Success. The node serves eight northeastern states, a high-volume area.

Two Nodes in NYC Replaced

The new node, using fiber optic cable, replaces individual copper telephone lines that transmitted packets of data, including authorization requests, settlements, and point-of-sale information, to and from the two nodes in New York City. The fiber optic cables, called T-1 lines, carry much more information than the copper wires, said Mr. Verdi.

"The fiber gives you the capability of handling significantly more traffic," said Mr. Verdi. "It can transmit the data of many members while automatically rerouting traffic if there is an error on the line."

AT&T Is the Supplier

The Banknet fiber optic upgrade reduces the number of circuits that must be available for information to enter the network and enables Banknet to combine as many as 24 members on a single line.

The T-1 lines are supplied by American Telephone & Telegraph Co. The T-1 line allows a company to send the equivalent of 24 voice and data lines over a single fiber optic cable. □

Fed Cancels Its Contract For Fast Currency Sorter

By JEANNE IIDA

NEW YORK — The Federal Reserve Bank System and Recognition Equipment Inc. agreed Thursday to terminate a contract for currency-sorting equipment after five months of negotiations.

The action is expected to delay installation of high-speed currency sorters, which would reduce costs and improve the efficiency of Fed operations.

The Fed said it is evaluating equipment from another vendor, but declined to say which one. Dallas-based Recognition Equipment said no U.S.-based company offers similar high-speed, high-volume currency sorting equipment.

As part of the agreement, Recognition will refund a $4.1 million advance payment for the systems to the Fed.

Equipment Line Cancelled

The contract termination is also a serious blow to Recognition Equipment. Because of the Fed's cancellation, Recognition Equipment has discontinued development of second-generation currency processing equipment.

The Fed uses currency processing equipment to take money in from Federal Reserve banks, count it, ensure it is fit for recirculation, and check for counterfeit bills. The equipment then sorts and packages the currency into bundles.

Recognition Equipment has been the primary contractor for currency processing equipment for the Fed. It has more than 100 currency-sorting systems based on older technology installed at Fed banks.

Contract Default

The new system, called an Automated Currency Processing System, is faster and more accurate than the older systems and requires less manual intervention.

Earlier this year, The Cleveland Fed installed the equipment from Recognition Equipment and began testing it for the system as a whole.

On March 9, the Fed issued Recognition Equipment with a notice of default on the contract.

Neither the Fed nor Recognition Equipment disclosed the source of the dispute. At the time the notice was issued, Recognition Equipment said it believed the Fed's action was inappropriate and would resist any termination of the contract.

The Fed would not say how long it might take before it signs a contract with another vendor or can install high-speed equipment.

11% Layoffs

For the quarter ended June 30, Recognition Equipment posted a net loss of $9.3 million, with $7 million attributed to the Fed cancellation.

Troy, Mich., Group Inc., a Manhattan-based buyout group, owns a minority stake in Recognition and attempted a leveraged buyout of the company last year. After the financing collapsed, the company began a major restructuring in October. Since then, the company has laid off 11% of its work force of 2,500.

Recognition Equipment plans to focus on document image processing and sell all unrelated subsidiaries. It will shed the currency business unit, which handles currency sorting equipment, and European subsidiaries, according to Jenny Haynes, a company spokeswoman. □

Innovation Urged in Fighting ATM Crime

By RICHARD LAYNE

NEW YORK — As bankers and network operators grapple with concerns about safety at automated teller machines, a criminologist is recommending that they approach it in a new way.

Bankers need to look at ATMs as convenience stores for money, because the same types of crimes occur at ATMs and convenience stores, said Robert Figlio, a criminologist at the University of Pennsylvania's Wharton School.

"Wherever there are people and property, there is a crime risk," Mr. Figlio told those attending a recent safety conference sponsored by the NCR Corp., a manufacturer of teller machines.

Recommendations Made

At the Dayton, Ohio, conference, Mr. Figlio recommended a series of measures to improve ATM security and to help prepare bankers for possible litigation arising from attacks. He said banks must provide adequate security staff, educate consumers about security, and document security procedures.

Studies by the Electronic Funds Transfer Association show that service persons working alone are attacked at ATMs more than teams. Also, customers attacked at ATMs are usually alone.

Barry Schreiber, a consultant for the Bank Administration Institute and the Electronic Funds Transfer Association recommended servicing by teams of two or more people.

Cameras No Deterrent

Video cameras are generally ineffective in deterring crime, said Mr. Schreiber. They do help, however, in apprehending suspects and providing evidence for prosecutors.

Crime experts who spoke at the seminar emphasized that ATMs inherently create a number of law-making bodies appear to agree.

California, never a laggard in social trends, is moving toward regulating ATM sites and security. In San Jose, the police department can veto the installation of an ATM at a site determined to be risky. Santa Barbara does not allow ATMs in historic buildings.

Guidelines on Lighting

A city ordinance in Los Angeles sets lighting levels for ATM sites. Legislation is pending to establish guidelines for ATM lighting throughout the state.

Chicago has adopted ordinances that establish minimum lighting levels and provide for the closing of an ATM after dark if the site has had numerous crimes. □

Solvency Opinions Coming Under Fire

The much-chronicled travails of Mr. Trump, Mr. Campeau, and others represent the tip of the iceberg of too many highly leveraged transactions that closed during the go-go 80s.

The collapse of some of these overleveraged companies puts into question the adequacy of the solvency opinions that lenders sought when they made the loans.

Banks and other creditors need to protect those positions because third parties, including trustees in bankruptcy, have the right to recover the value of any property improperly removed from the bankrupt debtor's estate if they can establish that a "fraudulent conveyance" has taken place.

Fraudulent-conveyance legislation at both the federal and state levels has the potential to strip a senior lender of its seniority position in bankruptcy if the LBO transaction in which the loan was made is deemed to have been a fraudulent conveyance.

The Legal Definition

A fraudulent conveyance of the LBO corporation occurs if, when the deal was done:

- The fair market-value of its liabilities exceeded its total assets.
- The then existing fair salable value of those assets was less than the amounts required to pay probable liabilities on maturing debt.
- The company would be unable to realize on its assets and pay its debts and other liabilities, including its identified contingent liabilities as they matured in the normal course of business.
- The company was engaged in a business or transaction for which it had unreasonably little capital.

Bankers and others have sought to avoid fraudulent-conveyance problems by hiring experts before the deal closed to determine whether the LBO company ran afoul of the four fraudulent-conveyance tests just described.

The purpose of this article is to suggest to bankers and their counsel a series of criteria by which courts are likely to measure the defensibility of the due diligence and financial analyses that undergird solvency opinions.

Due Diligence

One of the grounds for testing the defensibility of the solvency opinions will be the adequacy of the due diligence investigation of the opinion renderer.

A defensible due diligence usually takes into consideration some or all of the following:

- The company's history, state of incorporation, and the principal milestones in its corporate life.
- The manner in which new products or services were created.
- If the target was a manufacturer, the nature of the raw materials used, criticality of supply, supplier dependence, the manufacturing process, adequacy of plant and equipment, lease and mortgage terms, and so on.
- The current and prospective labor situation.
- Sales; marketing, and competition.
- Corporate management, including management depth.
- The company's plans for the future and the ability of management to realize such plans.
- The company's historical, current, and projected financial statements.

> **"One of the grounds for testing . . . solvency opinions will be the adequacy of due diligence."**

Going to the Site

On-site inspections and discussions with the functional heads of the business are also appropriate, as is a review of documents by or about the company.

These include the company's certificate of incorporation, bylaws, minutes of directors' meetings, existing loan agreements, plans and projections, union contracts, pension plans, major contracts with suppliers and customers, memorandums and accompanying financials associated with the LBO, the prospectus and plan of merger, SEC filings of publicly held comparative companies, environmental impact studies, and consultants' reports.

A documentary review of conditions in the general economy and the subject company's industry at the valuation date is typical. These data include material from government sources, relevant trade magazines, and other public sources.

Ways to Measure Solvency

Generally, the solvency opinion giver uses two principal methods to arrive at its conclusions: comparative company analysis and single-company analysis.

Comparative company analysis looks at the financial performance of the subject company versus that of an array of companies. Measures include price to earnings- or price-to-cash-flow multiples, market to book value

FUNNY MONEY / *By Tom Leander*

Cash Returns to Crime Scene

Bank robbers, many criminologists believe, return to the scene of the crime. Successful businessman Delbert Dunmire has added a new twist to the old compulsion.

An armed Mr. Dunmire, desperate to cover gambling debts, robbed the former Abilene Commercial Bank of $2,216 in

James R. Jones

TURNABOUT: Ex-bank robber returns the money he stole – with interest.

1958. He was caught almost immediately after the heist, served time in federal prison, and was paroled in 1960.

Mr. Dunmire returned triumphantly to Abilene, Kan., last weekend – carrying a leather bag filled with $55,000 in $5, $10, and $100 bills. He handed out the money to people at a ceremony that was held to honor him for donating $50,000 toward the city's new band shell.

Mr. Dunmire estimated that the $2,216 he took from the bank in that long-ago episode would be worth $55,000, adjusted for inflation and counting accrued interest.

Mr. Dunmire now owns Growth Industries Inc., Kansas City, Mo., a manufacturer of aircraft parts. The former bank robber has expressed an interest in purchasing the building that housed the now-defunct Abilene Commercial Bank.

* * *

Music to Neil Bush's Ears?

What did Roseanne Barr's screeching, spitting, crotch-grabbing rendition of the Star Spangled Banner have to do with the savings and loan crisis?

According to Ms. Barr's husband, Tom Arnold, it took a little of the heat off President Bush, whose son, Neil, was a director at the failed Silverado Banking, Savings and Loan Association.

Ms. Barr has said she's sorry for the firestorm she stirred up with her lackluster rendition of the anthem last week at a San Diego Padres game.

President Bush was quoted as calling Ms. Barr's singing "disgraceful," Mr. Arnold noted. "I think the President should thank Roseanne. She took the spotlight off his son taxes and his son's savings and loan scandal."

* * *

They Have the Experience

Washington thrift lawyer Thomas Vartanian has the ideal candidates for the tough job of managing property acquired from failed thrifts by the Resolution Trust Corp.: thrift executives and bankers.

"We've been representing several dozen prospective Resolution Trust Corp. contractors, and it dawned on us that the real expertise in managing assets lies in banks and thrifts," said Mr. Vartanian, of Fried Frank Harris Shriver & Jacobson.

He said the proliferation of bad assets has spawned a new industry, the so-called "workout specialists." But a mere handful of its practitioners can claim any background in handling the massive load of fractured real estate loans under RTC control.

At the same time, he said, the regulators are discouraging commercial real estate lending, leaving entire divisions of many financial institutions twiddling their thumbs.

* * *

Heads Are on the Line

It may be remembered as the nuttiest executive incentive drive yet cooked up by a bank. If Investors Savings Bank, Richmond, meets its goal of bringing in 50,000 new checking accounts this year, its executives have promised that they will wear Investor's logo – a cuddly squirrel – shaved onto their heads.

The idea was hatched on June 7, at the company's annual meeting, according to a report in the *Richmond Times/Dispatch*.

Richmond Newspapers

NUTTY: Bank executives in Virginia will get squirrel cuts if new-accounts goal is met.

Warner L. Hunt Jr., president and chief operating officer of Investors Financial Corp., was extolling the virtues of Investor's checking account.

Marketing director John Wilkes interrupted the president's spiel. Mr. Wilkes pointed out an employee who, as a lark to prepare for the meeting, had gotten a crew-cut with the squirrel logo inscribed on the back of his head.

"If we get to 50,000, will you get your hair cut like that?" he challenged the boss.

With some vociferous encouragement from the crowd, Mr. Hunt agreed. "The room just went nuts," he told *Times/Dispatch* reporter Marla Osborn. □

Lending problems stop here.

Sheshunoff™
High Performance Banking

Your lending area is the part of your bank most likely to get you in trouble. Maybe it already has, whether or not you know it.

We have your solutions.

You can choose from our professional publications, like the Sheshunoff™ *Self-Paced Loan Documentation Training, The Loan Management System, The Guide to Commercial Lending Law,* or *Financial Statement Analysis Software*. Each one has the strength of our years of hands-on experience behind it. And like all Sheshunoff tools and services, they recognize that every bank is different and requires its own unique solutions.

If you need more first-hand help, our staff of senior professionals can come to your bank, find the source of your problems, and give you concrete, realistic methods to deal with them safely and efficiently. We can even find problems that are just waiting to happen. So you can fix them before they do any damage.

Whether you use our information tools or our people, we never try to hand you a boilerplate answer.

We just bring all our years of experience helping banks around the country, and insights from our ongoing communication with banks of all types and sizes, to everything we do for you. So you get proven approaches that really work, tailored to your specific strengths and weaknesses.

Best of all, we've been around since 1971, and we'll still be here next week, next month, and next year. So you'll always be able to call us if you have a problem or a question.

For more information on our professional publications for lenders, call 1-800-456-2340. To find out how our senior consulting staff can help you, in complete confidence and without obligation, call Bill Meredith at (512) 472-2244.

1-800-456-2340.

SMALL BUSINESS

Business Cards Could Tap A Growing Credit Market

By LAURYN FRANZONI
Special to the American Banker

Bank card associations say businesses with fewer than 100 employees and revenues of less than $10 million represent the hottest potential credit market since the one tapped with "gold" cards a few years ago.

Some 20% of small businesses (defined as having $1 million to $10 million in annual revenue) are using some business card product and 30% more would like to, said banking consultant Art Lucey of Alexander Lucey & Co., Denver.

"Typically, banks have offered those cards only to larger accounts," Mr. Lucey said. "Just like lockboxes and sweep accounts, these products are dropping down to small businesses."

"Many small businesses are still using a lot of cash and checks," said Stephen Schapp, senior vice president for product development at Visa U.S.A., San Francisco. "I think there is a fabulous opportunity for them to use plastic and gain the management controls."

The New Business Card

While the Visa Gold card has been the company's fastest growing product, Mr. Schapp believes banks are looking to the future. The next big product is the business card, he said, with a potential market of 15 million cards, versus 30 million for gold cards.

"The market is looking for a product," said Keith Kendrick, MasterCard senior vice president of marketing. "We've estimated it can cost a company $50 to generate the paperwork required by a purchase-order system to purchase a box of pencils. The card doesn't require that."

Among the advantages of MasterCard's BusinessCard, he said, are widespread merchant acceptance, management reports designed to meet small business needs, and the ability to set credit lines on each corporate card. MasterCard provides MasterCoverage (liability protection for up to $15,000 of unauthorized charges) to businesses with ten or more cards. In addition, MasterCard is the only card issuer to offer primary rental insurance, Mr. Kendrick said.

MasterCard, which introduced its corporate card four years ago, expects to have 500,000 cards outstanding by yearend and to double its dollar transaction volumes of 1989. Visa, which introduced its business card in 1988, declined to reveal the number of cards outstanding.

Doubt Cast on Growth Market

Market analyst Anne Morgan Moore, president of Synergistics Corp., Atlanta, casts some doubt on industry projections. In a recent survey of small businesses, Synergistics determined that the market was saturated. Defining corporate cards as those provided to employees for their use and guaranteed by the company, Ms. Moore reports that 25% of small companies have some kind of corporate card and few others expressed interest.

"We don't foresee a lot of growth without special features to drive demand," she said. One way to drive demand, she noted, is to offer differentiating services. Although AT&T's Universal card prohibits use for business purposes, a card offering the same 10% discount on long-distance calling might spark business demand, she said.

American Express Offers One Card For All

American Express offers one card for all sizes of businesses. In addition to its regular services, businesses with fewer than 100 employees receive quarterly management reports organized by expense categories. They also get small business disability insurance, which protects individual cardholders with lump sum benefits of $10,000 to $50,000. Other perks are hotel discounts, a leasing program for company cars, and a that allows purchases from American Express catalogs with set monthly payments and no interest charges.

"During the 1980s, we saw tremendous growth in the small-business economy and the shift toward smaller firms," said James Firestone, executive vice president of small-business services for American Express. "Because of their lack of staff infrastructure, one of their greatest challenges is getting information and services."

To date, American Express Co. has been the most popular travel and entertainment card for businesses.

Visa Upgrades System Support

In mid-July, Visa announced major upgrades to its management information system that supports the business card. The software provides enhanced information tracking, including airline reports on frequently traveled routes, spending reports within seven company-selected categories, international spending reports, and annual recap reports for any 12-month period.

Travel and entertainment expenses are reported by user, department, expense category, and geographic region. In addition, the face of the card can be modified to include the company name and logo. Issuing banks may choose to offer revolving credit lines.

Visa believes smaller companies will benefit from the additional expense control and selective limits on individual credit lines as well as selective access to ATMs for cash.

Ms. Franzoni is a freelance banking reporter based in Springfield, Mo.

Card Loan Buyers Face Risk of Defections

Continued from page 1

ment Chase's terms on the majority of accounts we have bought," he said. Chase completed five major portfolio acquisitions in 1989.

When consumers receive notice that their accounts have been sold, they can accept the new owner's terms by continuing to use their card. Or they can pay off any outstanding balances – under the terms dictated by the cardholder agreement they had with the selling bank – and close the account.

Activists Taking Notes

Consumer advocates, long interested in the rates and fees that bank cards carry, have been keeping their eye on the increase in portfolio sales, concerned about decreased competition in the bank card industry. Now they are beginning to notice the rate hikes that many consumers experience when a large bank acquires the credit card business of a smaller one.

"It's become a common issue [among consumers]," said Arnold Baker, a researcher at the Consumer Resource Institute, a Mill Valley, Calif., company that advises consumers on credit card deals. "Some people are irate, while others say that's just the way it goes."

Consumer advocates have been keeping their eye on the increase in portfolio sales.

Mr. Cornell admits that Chase Manhattan does experience some "adverse reaction" from new customers when it reprices accounts. People will typically call in and complain, which gives the bank an opportunity to persuade cardholders to stay on board. Customer service representatives are trained to stress the benefits that Chase offers, such as purchase protection insurance.

"We have a fair amount of success retaining them," Mr. Cornell said.

Trouble Spots

Chase caught some flak in Minnesota when it began repricing some of the accounts it purchased last May from Michigan National Corp. More recently, it received negative publicity in Massachusetts when it raised the interest rates on the 675,000 credit cards it bought from Bank of Boston.

Some local banks are responding to the rash of card sales with heavy marketing techniques. They are playing up their hometown roots – as well as their lower prices – when competing against national issuers that have bought their way into the market.

BayBanks Inc., Boston, is trying to capitalize on Chase's rate hikes as it vies for a larger piece of the state's credit card market.

"We are aware that many local consumers have been told that their rates are going to go up," said James M. Cosman, executive vice president of BayBanks Credit Corp. "We are asking people to compare and save."

Citicorp, the country's largest issuer, also increased its presence in BayBanks market by purchasing Bank of New England's portfolio. The banking company has said that that portfolio but could in the future.

Bank of New York generally does not reprice the accounts it acquires, in hopes of keeping attrition rates low. "As long as you inform the customers that the account will be treated as it has been, you can retain them as customers," said Robert H. Burke, a BanK of New York senior vice president. □

Home Sales Rebound; Condos, Co-ops Hold Steady

WASHINGTON — Sales of new homes rebounded in June, and sales of condominium and cooperatives held steady during the quarter ended in June, according to two industry groups.

Sales of new homes rose 8% in June to a seasonally adjusted annual rate of 581,000, the National Association of Home Builders reported. The increase follows a slide of more than a year.

"This is the first glimmer of good news we've seen in months, "said Martin Perlman, president of the builders group.

"Interest rates are declining, and consumers seem more eager to take advantage of some real bargains in both the new and resale housing market."

In the quarter ended June 30, sales of existing condominiums and cooperatives climbed 0.3% over the previous quarter, according to the National Association of Realtors.

The steady activity, especially in high-priced areas like the Northeast, indicate a continued reliance on this type of housing for first-time and lower-income purchasers, the Realtors said.

The association recorded a seasonally adjusted annual sales rate of 355,000 condominiums and cooperatives for the quarter, down 4.6% from the second quarter of 1989.

For new homes, sales picked up 36% in the Northeast and 13.6% in the South. Sales fell 4.3% in the Midwest and 5.8% in the West.

"It's too soon to tell whether the dramatic increase in sales in the Northeast means that the slump in that region has bottomed out," Mr. Perlman said.

The recent decline in interest rates has helped bring some buyers back into the market, Mr. Perlman said. Interest rates on fixed-rate mortgages peaked at 11% in late April and since then have fallen to about 10.25%.

The typical American family can still purchase a median-priced resale home, according to a measure of housing affordability compiled by the National Association of Realtors.

The affordability index stood at 102.8 in June, down from 104.7 in May but still above the 100 threshold. The latest reading means that the median family income of $34,250 was 102.8% of the income needed to qualify for 80% conventional financing of the median-priced home, $97,500. □

COMMENT

Continued from page 4

ratio, and premiums for control.

Single-company analysis considers the company in terms of elements such as the net present value of future cash flows and the fair market value of assets and liabilities. The adequacy of these analyses and the defensibility of the conclusions drawn from them will be important in determining a bank's right to rely.

In comparative company analysis, the battle may be expected to focus on how well the solvency opinion giver:

- Chose its comparatives.
- Compared the subject company's financial performance with that of other firms.
- Derived defensible multiples of price to earnings, price to cash flow, market to book value and control premiums from the comparatives.
- Gave appropriate recognition to breakup or segment values of divisions or subsidiaries that could be sold if the price exceeds used to pay down LBO debt.

In single-company analysis questions are likely to come on any fair market value balance sheet and in the discounted cash flow analysis.

"In single-company analysis, questions are likely to come on any fair market value balance sheet and in the discounted cash flow analysis."

Issues in Focus

Questions on the fair market value balance sheet may focus on the following issues:

- Was cash on the balance sheet discounted for elements like compensating balances?
- Were marketable securities appropriately marked up or down?
- Had an aging schedule for receivables been examined?
- What recognition was given to contingent liabilities?
- Were affirmative and negative covenants in existing loan agreements reviewed to determine whether acceleration provisions might reasonably be expected to come into play?
- Were appropriate adjustments made to reflect the future fair market value of lease obligations or debt securities whose terms might vary from terms appropriate at the time of the opinion?

The solvency opinion giver's discounted cash flow analysis may be questioned in terms of the reasonableness of the calculations of the projected net free cash flows, the choice of an appropriate discount rate, and the "terminal" or "residual" value multiple.

Solvency opinions are usually subject to a series of assumptions and limitations that may include the following:

- The projections were prepared on a reasonable basis and reflected the best currently available estimates of future operations and results for the business.
- The opinion giver had been furnished with a statement of financial changes in the company since the date of the most recent financials with an update to a current date.
- The opinion giver's reliance on the company data supplied to it and on publicly available data (in each case without independent verification).
- A representation that the opinion was based on then existing economic, market, and other conditions evaluated at the date of the opinion.
- A disclaimer that the sales price in any actual future transaction would equal the fair market value or present fair salable value estimate resulting from the analysis.
- A limitation on the use of the opinion.

A banker's right to rely on a solvency opinion will be determined by a number of factors, including the reputation and experience of the opinion giver, the extent and quality of its due diligence, the rigor of its analytical effort and the application of these elements to the laws of fraudulent conveyance. □

PrimeBank Purchased By First of America

KALAMAZOO, Mich. — First of America Bank Corp. said it has completed the acquisition of PrimeBank, a $427 million-asset thrift based in Grand Rapids, Mich.

The transaction was announced in November 1989. The $13 billion-asset First of America, the second-largest banking company in Michigan, paid $30 for each of PrimeBank's 1.08 million outstanding shares, or about $32.3 million.

PrimeBank operates 13 branches in Grand Rapids and six other Michigan cities. First of America has 37 banking subsidiaries with 400 offices in Michigan, Illinois, and Indiana. □

Koppel Apologizes To Bank for Promo

ABC "Nightline" host Ted Koppel apologized on the air Tuesday night for "scaring the pants out of depositors" at Key Bank of Western New York.

Earlier in the evening, during a commercial alerting viewers to a "Nightline" program about bank failures, ABC displayed footage of a Key Bank of Western New York sign.

Referring to the commercial, Mr. Koppel told his viewers: "I was talking about failing banks, while the picture you showed you was of a perfectly healthy institution."

The show featured FDIC chairman L. William Seidman and Stanford University economist R. Dan Brumbaugh squaring off about the health of the deposit insurance system and the nation's largest banks.

We'd like to shed some light on commercial banking law.

Commercial banking law. You've got to comply with it–but first, you've got to understand it.

Bank Officer's Handbook of Commercial Banking Law sheds light on this very complex and often confusing aspect of banking.

Combining historical banking material with recent changes in UCC codes and consumer protection statutes, the **Handbook** offers quick answers to the legal questions that arise in your day-to-day operations. It's an excellent overview of all commercial banking law in one comprehensive volume–concise, readable, and well-organized. And when you require further information, special footnotes lead you to specific sources of in-depth detail on the subject.

If you're a bank officer in a supervisory or decision-making position, you can't afford to be in the dark about commercial banking law. Get your copy of the **Handbook** today.

Call now and try **Bank Officer's Handbook of Commercial Banking Law**–FREE for 30 days.

Mild-Mannered Mastermind of Servicing-Rights Sales

RTC's Mahaney Picking Up the Pace of Liquidation

By PHIL ROOSEVELT

NEW YORK — Call him the government's secret servicing agent.

In the year since the Resolution Trust Corp. began cleaning up the nation's failed thrifts, Edward Mahaney, a soft-spoken career civil servant, has emerged as the agency's point man on disposing of huge amounts of mortgage servicing rights.

"He's been calling the shots on what gets sold and when," says one servicing expert who has dealt extensively with the RTC. "He's Mr. Go or No-Go."

Yet, many bidders never meet Mr. Mahaney and some never hear of him. He keeps a low profile.

"I'm well behind the scenes," Mr. Mahaney acknowledged in an early morning phone interview.

A Bulging Portfolio

So far, the RTC has sold the rights to service about $20 billion of mortgages, leaving it with a staggering portfolio of $135 billion. The rights — entitling holders to earn fees by funneling monthly payments from borrowers to investors — are held by both seized thrifts and their mortgage units.

Now, armed with a year's experience and some new protections for investors, the RTC is planning to pick up the pace markedly.

"I think we will have all of what we now hold sold and transferred by the end of next June," Mr. Mahaney said. Already, he added, investors have signed letters of intent to purchase $24 billion of the portfolio and another $30 billion is being marketed.

The selling, sure to have ripple effects throughout the market for servicing rights, will put pressure on prices. After all, the $135 billion of servicing to be sold is more than double the size of Citicorp's industry-leading portfolio.

Industry Will Change

Ultimately, the sale of the rights will change the face of the mortgage banking industry, drawing new companies to the field and eliminating a number of inveterate contenders. Servicing units of Continental Bank, Miami, and Empire of America Federal Savings Bank, Buffalo, are among the latest to be put on the auction block.

Mr. Mahaney, 40, may seem an unlikely candidate to carry out this ambitious project. Described by one mortgage professional as "a rotund little Irishman who's just nice as heck," he bears the unassuming title of assistant director of conservatorship operations.

Before joining the RTC, he spent a steady 18 years at the Federal Deposit Insurance Corp., the last four in the agency's management information systems group. When not working, he says, he is usually tooling around suburban Washington with his wife, Jean, their 11-year-old son, Joe, and 9-year-old daughter, Karen.

Behind this gentle facade, however, resides a seasoned liquidator. From 1974 through 1980, Mr. Mahaney was was an FDIC liquidator assigned to the New York area's Franklin National Bank, whose failure was then the largest bank failure in American history. In 1982, he put in a tour a duty at Penn Square Bank, Oklahoma City, shortly after its spectacular collapse.

Eager to Sign Up

When the RTC was formed last year, Mr. Mahaney could hardly resist the temptation to sign up.

"I noticed the type of people who were joining," he recalls. "They were people I respected a lot, and it sounded exciting."

Though new to the arcane business of servicing, Mr. Mahaney has proved to be a quick study and an effective manager, according to people who have worked with him.

"He's a person who gets things done," said Ralph Yearwood, a vice president at Smith Barney, Harris Upham & Co. "He's able to cut through the bureaucracy and facilitate good transactions."

Louise Kraft

"I think we will have all of what we now hold sold . . . by the end of next June."
Edward Mahaney

Mortgage Banker Approves

Warren Lasko, executive vice president of the Mortgage Bankers Association of America, said, "I've heard very good things about him; he's been very responsive to us."

Smith Barney and the servicing brokerage of Hamilton Carter & Smith Associates have been advising the RTC on the servicing project. An elaborate network of more than dozen brokerage companies have been helping to stage the actual auctions.

Mr. Mahaney generally takes a hands-off approach to the auctioning. "I usually get involved only when there's a major issue to be addressed in the negotiations," he said.

Eye on the Big Picture

He also works on long-term, big-picture matters — and his ideas are indeed big.

For example, he recently disclosed that he was considering offering the servicing portfolios of several thrifts as single packages as large as $25 billion. A buyer, if one emerged, would instantly become one of the nation's top five servicers.

Mr. Mahaney now gives that project only a fifty-fifty chance of getting off the ground, saying he has become more cautious as he feels out potential buyers. He says that some investors, in fact, interested in buying such a package. But he has yet to see if they will pay enough to make the effort worthwhile.

Protections Expanded

Overall, the selling effort got a big boost about a month ago, when the RTC agreed to expand the protections it offers to buyers of servicing. The agency is now prepared to offer what amounts to the industry norm for such representations and warranties, Mr. Mahaney said.

Within 60 days, he added, he RTC plans to hire an outside concern, probably a mortgage insurance company, to administer claims under the protection program.

As a result of the expanded reps and warranties, the RTC is attracting more bidders and higher prices, Mr. Mahaney said. He expects prices to average about 1.5% of the related loan amount in the coming months, up from 1.2% before the change.

Banks, Thrifts Shy Away

But many of the bidders are companies other than banks and thrifts. Those institutions institutions have long dominated the servicing business, they have been discouraged from buying this year by a pending regulation that would limit the amount of servicing rights that can be counted toward capital.

"Until that's resolved, thrifts and banks aren't going to be active participants," Mr. Mahaney said.

Part of the RTC's motivation for hastening the selling is pressure from the secondary-market agencies. Understandably, they are eager to see transferred to the private sector the servicing rights related to loans they have purchased or securitized.

However, Mr. Mahaney says that he is taking care not to sell rights so quickly as to seriously hurt market prices.

"We don't want to depress prices," he said. "If depressing prices wasn't a problem, we'd put it all on the market today." □

Key Interest Rates

	Week's average 7/27/90	Week's change from 7/20/90	Year ago 7/28/89
30-year fixed-rate mortgage	10.08	10.06	9.95
1-year adjustable-rate mortgage	8.31	8.32	8.67

Rates are based on a weekly survey of 2,000 lending institutions nationwide. The averages reflect rates for a range of loans.

TALKING *markets*

College Towns, State Capitals Resist Slump

Everyone's heard of the housing booms in Seattle and Las Vegas – but York, Pa.?

"York, Pa., exemplifies a smaller market that has increased home building volume while its regional neighbors were suffering," says a special report by *U.S. Housing Markets*, a publication of Lomas Mortgage USA. "Charlotte, Va., is another small gem in the East."

College Towns and Capitals

In all, the newly released report singles out 33 markets – mainly small and midsized – that are resisting the housing slump. Many turn out to be college towns or state capitals.

Nationwide, residential construction has declined steadily since the third quarter of 1986 – matching the length of slumps that occurred from 1973 to 1975 and from 1979 to 1982.

Midwest Success Stories

"And yet," says the report, "there are those who could legitimately ask, 'What housing recession?' "

Examples of this abound in the Midwest, partly reflecting the resurgence of the Rust Belt in the late 1980s.

In Indiana, the Gary-Hammond area saw its residential activity nearly triple from 1985 through 1989. In the first five months of this year, the market's issuance of single-family building permits was up 25%.

"This northwest corner of Indiana has its own industrial and commercial base and is also gaining importance as an affordable commuter market," the report said. Similar growth in permit increase was posted in Des Moines, Iowa.

"Slump Resistant" Markets

While some major parts of the California market are cooling, the report cited solid residential construction growth in Bakersfield, Stockton, and Modesto.

In the East, Charlottesville, Va., has posted a regional decline that began in 1986. Last year, the market added more than 1,100 units, up from less than 1,100 a year in 1985 and 1986.

Sharp Jump in Construction

In York, Pa., home builders turned out 235 new units a month during the past two years, up from 175 in the mid-1980s.

Among other "slump-resistant markets" cited by *U.S. Housing Markets*: Joliet and Aurora-Elgin, Ill.; Olympia and Bellingham, Wash.; Boise, Idaho; Buffalo-Niagara Falls, N.Y.; Medford, Salem, and Eugene-Springfield, Ore.; Grand Rapids, Mich.; Iowa City-Cedar Rapids, Iowa; Knoxville, Tenn.; Lincoln, Neb.; Louisville, Ken.; Madison, Wis.; Naples and Tallahassee, Fla.; and Youngstown-Warren, Ohio.

Wide Range, Diverse Causes

"Although we see the U.S. housing statistics sliding from quarter to quarter and year to year, a more penetrating look at the numbers exposes a remarkably wide range of regional and local housing industry conditions," the report says.

The range, in turn, reflects differences between the current national housing downturn and past ones, the report said.

While the housing recession of the early 1980s was caused by high interest rates, "the causes of the current slump are diverse," the report said. "Among them are demographics, taxation, regulation, financing difficulties, single-industry and single-region recessions – and even some consumer psychology."

— Phil Roosevelt

ATTENTION! BANKERS & REGULATORS

You are all painfully aware, of the need to identify professionally qualified appraisers since the emergence of the great Thrift debacle. As you know, beginning July 1, 1991, appraisers will have to be either licensed or certified by the state. More than ever, regulators and lenders must rely on designated members of recognized organizations such as The Society of Real Estate Appraisers. The above listings are being published to serve as a handy reference for you when in need of qualified appraisers. This list will appear in American Banker every four weeks, so keep it close at hand until the next one arrives. We are confident that this list will expand so as to be more useful to you. For a complete list of Society of Real Estate Appraisers designated members, call (800) 331-7732.

London Currency Traders Seeking Corporate Clients

By KEN FERRIS
Reuters

LONDON — A slowdown of turnover on the London foreign exchange market has prompted banks to look for a niche in their efforts to maintain profits, dealers said.

"Niche players are picking their market. For some it means being strong on forex and developing derivatives. Others who haven't got the resources are pulling back," said Roger Steare, a director with Jonathan Wren, a recruitment specialist.

Banks are also focusing on corporate business rather than trading for their own accounts. The latter has been the main casualty of the lack of volatility, because trendless markets provide few trading opportunities.

Solid Base Sought

"There's a much greater perception that you need a solid corporate base for your operation and not just punting here and there," said David Clark, head of treasury at Midland Bank PLC.

The pressures to pick up corporate business have always existed, but they have grown with the slowdown in average daily turnover.

"There has been this idea that the [bank's] treasury department is a mainstream earner. The pressure to earn money from forex has increased because profits from corporate finance and equities aren't there any more," said David Deakin at Nikko Bank.

However, traders cannot always meet the expectations of senior management, some of whose members are looking for income of up to 10 times expenditure from each currency dealer.

A More Patient Strategy

Sluggishness in the interbank market has added to the attractions of strategic trading, which involves taking positions for longer periods to squeeze profits out of a currency even if it is moving only very slowly in one direction.

"More and more banks are looking at strategic trading, which basically means taking a position you want rather than on the back of a customer order," said Allan Chase, head of strategic trading at National Westminster Bank in London.

Dealers said strategic trading reduces brokerage costs – positions are held for longer, so there is less in-and-out trading.

The change in trading emphasis is reflected in the rising volume of trading on cross rates such as sterling/mark and yen/mark, which have provided trading opportunities.

Business More Balanced

"There's a more even spread of business between currencies now," said Midland Bank's Mr. Clark.

The need to carve out a profitable niche has also led to a surge in trading of futures, options, forward rate agreements, and other derivatives which are off-balance-sheet.

"Banks are trying to create their own niche maybe on the back of their domestic currency. Strategic trading is also on the rise along with dealing in off-balance-sheet instruments," said one executive recruitment consultant in London.

Mr. Steare of Jonathan Wren says a growing emphasis on the derivatives market will continue. "People are finding the markets where they are most likely to make money and concentrating resources there."

The focus on strategic trading and derivatives has led to an increase in demand for well-educated traders who are able to switch between markets and instruments.

Nevertheless, traders believe jobbing will remain the bread and butter activity in the foreign exchange markets and should reestablish itself when increased volatility returns to enliven currency trading in the major exchange rates, traders say.

... by country

AUSTRALIA

Bank of New Zealand Ltd. will cut its Australian prime rate to 17.75%, from 18.75%, effective Aug. 7, a spokesman said Wednesday in Sydney.

The bank is the first to cut its prime following the central bank's announcement that it would seek a one-point cut.

Treasurer Paul Keating said earlier that he expected commercial banks to follow the Reserve Bank's lead very quickly.

HUNGARY

The World Bank said Wednesday that it had approved its first Eurodollar bond issue under its expanded cofinancing operations program – a partially guaranteed, fixed-rate Eurobond for Hungary's State Development Institute.

But bank sources said that the United States abstained from the vote approving the transaction, apparently out of concern that such operations could have a negative effect on the bank's credit rating.

The $200 million 10-year bond issue will be used to support three World Bank-supported projects in Hungary that will cost a total of $1.3 billion, the bank said.

The by country **briefs were supplied by Reuters.**

Banks Scramble to Seize Assets

Continued from *page 1*

freezing Kuwaiti and Iraqi assets were also issued, while the Japanese and West German governments indicated they were planning similar moves.

The freeze on Kuwaiti assets was said to be at the request of the Kuwait government.

Bankers in New York said banks had sharply reduced transactions with Iraq over the past few years because of that country's deteriorating economic situation.

U.S. banks have virtually no loans outstanding to either Iraq or Kuwait. As of March 1990, Iraqi borrowers owed U.S. banks $112 million and Kuwaiti borrowers owed $834 million.

Enforcement Complex

Problems could arise in enforcing the freeze. John F. Lee, president of the New York Clearing House said, "The order was drafted hurriedly, and it's not as precise as we'd like it to be. We're asking for clarification through the Federal Reserve Bank of New York."

Mr. Lee said the order left a "gray area that makes us act at our peril." The order says the banks should freeze government assets, but there are many large businesses in Iraq and Kuwait run by the same people who run the government.

"It's difficult to tell what hat the emir is wearing" – whether a business is actually government-owned, he added.

Over the last decade, the U.S. government has frozen Iranian, Libyan, and Panamanian government assets held by banks, prompting banks to complain that they were being put at competitive disadvantage because foreign governments did not adopt similar sanctions.

"The unhappiness that was felt by banks about being used as an arm of U.S. foreign policy when a freeze was imposed on Iran does not apply here," said one banker.

One source at a large New York bank, citing economic analysts, said Kuwait had between $30 billion and $35 billion in the United States in real estate and business investments, securities holdings, and deposits. The source was unable to provide a breakdown of the assets.

$800 Million on Deposit

Informed sources also estimated that Iraq's central bank has about $800 million on deposit with the Federal Reserve Bank of New York.

The U.S. presidential order froze all trade, transport, and financial transactions with Iraq but allowed them to continue with Kuwait.

Bankers and lawyers said the main impact of the freeze would be felt in trade-related and financial trasactions with Iraq such as foreign exchange, funds transfers, and letters of credit.

Legal experts said that the freeze order would not prevent banks from confirming letters of credit for exports or imports already under way with Iraq but would halt all new transactions.

The order could also affect some $1 billion in export guarantees issued by the Commodities Credit Corp., a U.S. government insurance agency, for export credits issued by the Atlanta branch of Italy's Banco Nazionale del Lavoro. It could also block some $2.1 billion in credit facilities the same branch issued to Iraq's central bank.

The Italian bank has been the subject of federal and state regulators for nearly a year for irregularities in the way the credits were issued.

Correspondent Affected

The freeze also affects correspondent banking accounts. Bank of New York, Chase Manhattan Corp., and the Federal Reserve Bank of New York are the three U.S. correspondent banks for the central bank of Iraq here.

Bank of New York, Chase and BankAmerican Corp are also U.S. correspondent banks for Rafidain Bank, a state-owned Iraqi bank.

A Chase spokesman was unable to provide any information on Iraqi funds deposited here and spokesmen at other banks could not be reached. □

American Express Wins Branch in Poland

By JAMES R. KRAUS

NEW YORK — The Polish Ministry of Finance has granted American Express Bank Ltd., the international private banking arm of American Express, a limited branch license in Poland to provide travel-related services.

The branch is expected to open in Warsaw before the end of the year and will issue credit cards and travelers checks and provide foreign exchange and money transfers.

American Express is now putting together a management team for the Warsaw branch but has not yet named anyone to head the operation.

Service to Tourists

Lamont Godwin, first vice president at American Express Bank, said the Warsaw branch would mainly serve incoming tourists. He added that the Ministry of Finance's authorization gives American Express the option of expanding its services in Poland in the future.

American Express already has travel-related offices in Moscow and Budapest and recently obtained authorization to issue cards in Czechoslovakia.

The bank has also applied to the East German Ministry of Finance for authorization to reopen an office in East Berlin which was closed during World War II.

No Deposits or Loans

Mr. Godwin said that the Polish and other Eastern European offices would not take deposits or provide commercial loans.

"It's not the most attractive market for commercial lending," Mr. Godwin.

"Most [foreign] banks are attracted to it by investment banking possibilities or mattress-money deposits," he added.

Bankers and analysts believe that as much as $12 billion in hard-currency hoardings is held by private individuals in Poland.

Four major Western banks, including Citicorp, have reportedly applied to the Polish Ministry of Finance for a banking license.

Representatives of BankAmerica Corp. and Bankers Trust Corp. were also said to be in Warsaw.

A spokesman for Bankers Trust was unable to comment on the report. A BankAmerica spokesman could not be reached. □

THE THRIFT BAILOUT LAW: *1 Year Later*

Bitter Medicine: Unintended Side Effects of Reform Law

Continued from *page 1*

ting higher thrift accounting, capital, and regulatory standards and cutting S&Ls off from high-risk businesses. But for every short-term problem the law was intended to resolve, analysts and consultants believe it may be creating many more unintended obstacles for both thrifts and banks in the years ahead.

Among the problems most often cited are aggravation of weaknesses in the commercial banking industry, worsening of the severe plunge in U.S. commercial real estate through the creation of the Resolution Trust Corp., and depression of the already sluggish economy by forc-

"FIRREA will be viewed as a stopgap, marking an end of an era of neglect."

Lowell Bryan *McKinsey & Co.*

ing a cutback in the availability of credit from banks and thrifts alike. In addition, observers note, the rapid takeover of thrifts by the government and the heavy publicity about fraud in the S&L industry is undermining public confidence in both thrifts and banks.

"Overall, FIRREA will reduce consumer confidence in the banking system and deposit insurance reform will not help, particularly if it reduces coverage," said banking consultant Edward E. Furash, president of Furash & Co. One effect will be that competition for deposits by banks and money-market funds will intensify, he said.

Sidestepping the Blame

Politically, the staggering costs of the S&L cleanup have helped polarize Democrats and Republicans anxious to avoid the public's blame for the nation's biggest financial disaster. That divisiveness will hurt the chances of timely passage of major legislation to reform deposit insurance and the basic structure of banking. Many observers say these reforms are critical for U.S. depository institutions in the years ahead.

"If we are financial historians looking back at FIRREA, it will be viewed as a stopgap, marking an end of an era of neglect," said Lowell Bryan, head of bank consulting for McKinsey & Co. in New York. "It was clearly an inadequate solution to the broader problems to deposit insurance reform."

Industry Contraction Forced

Rather than preserve a smaller, healthy thrift industry, the law appears likely to force surviving S&Ls facing new limits on their activities to consolidate with commercial banks, analysts said. "The law has caused a faster than anticipated contraction of the thrift industry," said one observer. "It is not a framework for how to help the living, surviving thrifts."

"The momentum from FIRREA is heading toward a merger of the thrift and banking industries," Mr. Bryan predicted. "Thrifts don't want the charter anymore."

The law's higher capital requirements for thrifts has spurred regulators to consider

"FIRREA will reduce consumer confidence in the banking system."

Edward E. Furash *Furash & Co.*

"Some . . . real estate problems can be traced to the law's impact."

Robert H. Dugger *American Bankers Association*

requiring both banks and thrifts to ante up more and more capital to protect the federal insurance funds. One result is that capital-rich institutions, such as Banc One Corp. of Ohio or NCNB Corp. of North Carolina, will get stronger while capital-deficient institutions grow weaker, analysts suggested.

Hostile Capital Markets

"More capital is wonderful unless you are a banker who has to raise it," said McKinsey's Mr. Bryan. Most banks will face hostile capital markets until legislation addresses new limits on deposit insurance and the activities of banks, he said.

"Unfettered demand for capital will cause the banking industry to become uncompetitive with foreign banks and nonbank financial companies," Mr. Furash said.

The law is also widely viewed as a major contributor to the sharp credit contraction by banks and thrifts in the past year, particularly through limits imposed on loans to one borrower.

Real Estate Repercussions

"Some significant part of the banking industry's real estate problems can be traced to the law's impact on thrift-industry lending in the real estate area," said Robert H. Dugger, chief economist of the American Bankers Association.

The credit squeeze has served to aggravate the slowdown in economic growth in regions such as the Northeast, that are dependent on high real estate development activity.

The thrift bailout also will prove the driving force behind federal tax policy for years, observers said. Higher taxes will be required, they said, well beyond those anticipated to cover the reform act's $50 billion expense. Indeed, in only a year's time, the estimated cost of the bailout has nearly tripled to about $130 billion, excluding interest.

Footing the Bill

That means substantial tax increases – increases Mr. Furash thinks could fall heavily on banks. "The public will fail to distinguish between banks and thrifts in deciding who will pay for this debacle," he said.

Finally, the tough enforcement penalties in the thrift-bailout law will discourage top talent from joining banks and thrifts as managers or directors, analysts say.

"Firms established a witch-hunt atmosphere, so it will be hard to attract top talent," said Warren Heller, director of research for Veribanc.

Mr. Furash added that the costs of having directors, consultants and accountants will keep rising. The law's increased threat of regulatory enforcement actions, he explained, will cause directors and officers liability insurance costs to rise.

Avoid all these negative effects, there is one positive for commercial banks: The reform act enabled banks to acquire thrifts and, in the process, pick up market share. The problem, one analyst noted, is that so many banks are struggling with their own difficulties that they can't take advantage of the opportunity. □

Market Demand Seen as Strong For Mortgage Paper Held by U.S.

Reuters

NEW YORK — Large U.S. government sales of mortgage-backed securities, seen last year as a market threat, are gradually being welcomed as demand for these safe investments outgrows supply, Wall Street sources said.

Mortgage debt prices slumped last year as the Resolution Trust Corp., which is disposing of the assets of failed thrifts, sold an estimated $45 billion of mortgage issues. But sales have been scattered in 1990, and traders eagerly await bigger lots.

"People are looking forward to more RTC sales," one trader said. "There's a dearth of product."

Mortgages Look Safe

Amid a wave of corporate bond downgrades, "people look at mortgages as a good credit bet," one analyst said.

Mortgage pass-through securities issued by the Federal National Mortgage Association and Federal Home Loan Mortgage Corp. are seen as carrying an implicit government guarantee. Government National Mortgage Association pass-throughs carry explicit government backing.

By July 1989, the prospect of big RTC sales depressed mortgage debt prices. Yields on current coupon pass-throughs surged to 160 basis points over 10-year U.S. Treasuries from 120 basis points in March 1989.

Sluggish home sales this year have resulted in a lack of mortgages used to create pass-through securities.

Pass-throughs are the raw material for multiclass real estate mortgage investment conduit (Remic) securities tailored to specific investors.

Yield spreads on current coupon pass-throughs have dropped to about 120 basis points as dealers have scrambled for Remic collateral. "RTC sales give dealers some product to structure Remics with," one dealer noted.

A $973 million whole-loan RTC sale this month and a bulk sale two weeks later are not expected to affect market sentiment.

The RTC sale won't have much of an impact, even though most of the loans are expected to be securitized, a trader said.

Gloomy forecasts remain, but many more analysts now believe yield spreads will be steady or shrink even further.

"RTC liquidations aren't going to come anywhere near" the $45 billion sold last year, said Joseph Hu, senior vice president of Nomura Securities International. Mr. Hu expects spreads to tighten to 100 basis points by yearend as RTC's mortgage issue holdings fell to $22 billion on May 31.

First Boston Corp. estimates that troubled thrifts and the RTC held $237 billion in residential mortgage assets at yearend 1989. Of these, $85 billion were mortgage issues.

Mostly some of these assets will be sold into the secondary market," First Boston said in a report. "In many cases, the most generic assets will not reach the secondary market as the RTC transfers them directly to acquirers in the sale of failed institutions."

"Mortgage securities are easiest to value, so they tend to be sold with as S&L's liability base," said Alden Toevs, managing vice president of First Manhattan Consulting Group.

This contrasts with the RTC's policy last year of rapidly reducing a thrift's assets by selling mortgage issues in the secondary market before finding a buyer for the thrift. Mr. Toevs noted the sales were orderly and not as disruptive as feared. "Yield spreads can't narrow dramatically. Maybe they can [tighten] 10 basis points and then stabilize," he said. □

Ryan Defends Bailout Figures

WASHINGTON — T. Timothy Ryan, director of the Office of Thrift Supervision, in a television interview this week stood by the government's estimate that taxpayers would pay $90 billion to $130 billion to bail out collapsed thrifts.

Speaking on a CBS News program, Mr. Ryan held to that range rather than the $175 billion to $200 billion cited Monday by L. William Seidman, chairman of the Federal Deposit Insurance Corp. With interest, the final bill would top $500 billion, Mr. Seidman added.

Mr. Ryan conceded that the cost of the cleanup was "a moving target" and could change as a result of "macroeconomic factors and real estate values." If those values stabilize, the tally would be at the $90 billion end of the estimate, he said; if not, the price tag would approach $130 billion.

Government officials are "aggressively trying to do the best job we can," said Mr. Ryan, whose agency regulates federally chartered savings institutions.

He said he expects criticism as the savings and loan crisis becomes a hotter political issue. "It's not the easiest job," he said.

Banc One Texas Sues Developer

HOUSTON — Banc One Texas, seeking repayment of a $12.4 million loan, has filed a $32 million lawsuit against a real estate developer.

In papers filed in federal court here, the Banc One Corp. subsidiary alleged that the developer, John Rogers, failed to repay a loan while leading a "jet-set lifestyle" and put his assets in a trust to avoid his bank obligation.

Mr. Rogers is said to be personally liable for $4 million of the loan, which is also secured by stock in two corporations.

The bank asserted that Mr. Rogers has said he cannot repay the loan – even though he supports a "lavish lifestyle" with the proceeds of a trust, controlled by his wife, that has more than $22 million of his assets.

The developer's yearend 1989 financial statement showed a negative net worth of $711,109, but he still has use of a 140-foot yacht and resort residences in Maine and Florida, Bank One said. — Reuters

Have an important Legal Notice? Call Gail Edwards at 212/943-5716

You're looking at the difference between our end-of-day pricing service and theirs.

It's called a responsive customer service team.

At Muller Data, our customers tell us we have the "most professional" service in the industry. They say we're friendly and helpful. That we try harder, and do things right the first time.

Answers, fast.
Our records say we answer more than 80 percent of your questions while you're still on the phone. So instead of promises to "get back" to you, we give you answers and solutions – on the spot. When we do have to call you back, we give you a time, and treat it like an important commitment. Because to us, it is.

Accurate data.
Of course, we start with accurate, comprehensive data for more than 750,000 issues, including listed and OTC equities, commodity and financial futures, CMOs, MBSs and UITs – *plus* the full universe of more than one million municipal bonds, corporate fixed-income securities, government instruments, and 80,000 Canadian and overseas equities and bonds.

Can we show you?
We'd like to show you just how accurate, timely and responsive a securities pricing service can be. For more information, write Muller Data Corporation, 161 William St., New York, New York 10038, or call toll-free: 1-800-US-MULLER.

2% Rise in Bank-Qualified Bond Issues; Transport Leads Way

By KENNETH J. HICKS
The Bond Buyer

Issuance of new bank-qualified bonds inched up 2% in the first half of 1990, to $4.71 billion from $4.62 billion a year ago, as higher bond sales for transportation and miscellaneous projects offset broad declines, according to figures compiled by IDD Information Services/PSA Municipal Database.

Bank-qualified bonds, created by the Tax Reform Act of 1986, are the only municipal bonds that commercial banks can buy and deduct 80% of the carrying cost. The bonds can be sold only by municipalities that reasonably expect to issue less than $10 million of the bonds each year.

Transportation Bonds Up 70%

Bank-qualified bonds for transportation projects jumped 70%, to $196 million from $115 million in the first six months of 1989. Airport issues accounted for all of the gain, soaring to $91 million from $1 million.

The catchall "other" heading for miscellaneous projects was the only other category with a significant increase. Its bank-qualified volume rose 16%, to $1.09 billion from $946 million.

Utilities Off 20%

Bank-qualified issuance declined for all other purposes. Education, accounting for nearly half of the first-half volume, slipped 3%, from $2.32 billion to $2.26 billion. Issuance for utilities, the second-largest category, fell more than 20%, from $823 million to $656 million.

Health care dropped 21%, from $86 million to $68 million; housing declined 91%, from $10 million to $900,000; and solid waste and pollution control fell 58%, from $2 million to $840,000.

Education, accounting for nearly half of the first-half volume, slipped 3%, from $2.32 billion to $2.26 billion.

Harris Trust on Top

Harris Trust & Savings Bank in Chicago was the top senior manager for bank-qualified debt in the first half, underwriting 48 issues valued at $165 million. Fleet/Norstar Securities Inc. was second, underwriting 43 sales for $153 million. Next was Lehman Brothers with $148 million, and Prudential-Bache Securities Inc. with $143 million.

New-money issues rose 10%, to $3.97 billion from $3.6 billion last year. That made up for a 27% drop in advanced refundings, from $1.02 billion to $745 million.

State Sales Nearly Triple

Municipal governments such as cities, counties, and school districts continued to account for more than 90% of the bank-qualified volume. They issued $4.31 billion in the first half, up 2% from $4.25 billion the year before. Local authorities sold $245 million, up 9% from $225 million the previous year.

State authorities sold $48 million, nearly triple their $17 million volume the previous year. But state government sales declined 42%, from $12 million to $7 million, and public colleges and universities reduced their sales 19%, from $116 million to $94 million.

Bank-qualified debt sold through competitive bidding rose 6%, to $3.08 billion, or 65% of the volume. That offset a 3% decrease in negotiated issues, to $1.62 billion, and a 66% drop in private placements, to $15 million. □

Norwest Profit Is On Target, Chairman Says

Continued from *page 2*

chargeoffs, to strengthen earnings by at least $40 million in 1991 and $20 million in 1992. Tax benefits both years could go as high as $85 million, he added.

Declining Provisions Seen

Mr. Johnson said he expected United Bank's loan loss provision as a percentage of total loans to be 1.50% in 1991, 1.25% in 1992, and 0.75% in 1993. He also projected cost savings of $31.6 million in 1991, $43 million in 1992, and $53 million in 1993 attributable to the merger, as well as revenue gains from selling Norwest's products through United branches.

Rising loan-loss provisions at Norwest this year have been motivated by real estate-related problems. But real estate markets in Norwest's upper Midwest territory have not deteriorated to the extent that they have in Texas, Colorado or the Northeast, Mr. Johnson said.

"There is no area that is immune to real estate problems, but they are not that bad here," he said. "We do not expect real estate here to worsen."

He also said there was no credit crunch in his region. And he saw Colorado's economy making a slow turnaround from its recession.

Colorado experienced overbuilding in the early 1980s after its oil-based economy was hurt by falling oil prices.

"Every indication we've gotten is that the economy and real estate problems have bottomed out, and we expect a slow, gradual turnaround," Mr. Johnson said. "Our timing is good. Colorado fits beautifully with our strategy for moving west across the top of the U.S."

Minnesota-based Norwest will be the 20th-largest U.S. bank after merging with United. In 1991 it will be in Indiana, Illinois, Wyoming, Arizona, Montana, Nebraska, the Dakotas, Wisconsin, Colorado, Iowa, and Minnesota. □

CHECK MATE.

Brady on Bank Checks: **The only treatise that guides you through the legal complexities of bank checks under the UCC.**

Since 1915, ***Brady on Bank Checks*** has been the standard of the industry. The source that bankers and attorneys rely on to show them how to spot check problems before they happen.

Brady on Bank Checks is the only resource that covers every legality of checks and commercial paper, with emphasis on the Uniform Commercial Code. This convenient, comprehensive volume provides legal guidance on everything from issuance, transfer, collection, and payment of checks to the return of unpaid checks, kiting, bank liability, forgery and alterations. Recent developments like wire transfers, encoded checks, and electronic transfers of funds are also covered exhaustively.

Bank officers or bank attorneys will find that ***Brady on Bank Checks*** provides expert advice in those daily situations that call for quick decisions, including whether or not to pay a particular check, whether to open or reject an account, whether to investigate "suspicious" activity, and much more!

A time-saving subject index and table of Code citations guide you quickly to the information you need, and up-to-date supplements discuss cases, state Code variations, and recent court decisions that may bear on your decision.

Written to help you anticipate future problems—and solve current ones—***Brady on Bank Checks*** gives you answers to the critical questions and solutions to the costly problems that can arise. ***Brady on Bank Checks*** is a must for anyone involved in bank check transactions!

Make your winning move. Send for your copy now.

Examine it FREE for 30 days!

New Power Flexed in DC Seizure

Continued from page 1

ital, equal to 1.4% of total assets.

The national bank regulator used its early-intervention power only once before, seizing the Albuquerque-based Southwest National Bank last April.

Conservator in Upbeat Mood

In a press conference Thursday, Mr. Ogden expressed optimism that the banks can be sold quickly.

"I hope my stay is a rather short one – I expect it will be," he said. "It is not a failed bank. I think it is an attractive franchise."

The sale will be conducted by the FDIC's operations and assistance transaction branch, which is part of the division of supervision, said Alan Whitney, an FDIC spokesman.

Mr. Ogden said the FDIC has not hired an outside investment analyst to facilitate the sale. In the past the agency has used Smith Barney, Harris Upham & Co. Inc.

Mixed Reviews from Industry

On Thursday, industry reviews were mixed on whether National Bank of Washington could be sold in a short time, but some contend there are buyers in the market.

Arnold G. Danielson, a Rockville, Md.-based banking consultant, said the bank could be attractive to any of Virginia's three large commercial banking companies – Signet Banking Corp. and Crestar Financial Corp., both of Richmond, or Norfolk-based Sovran Financial Corp.

Any of them may want to expand their metropolitan-area presence and consolidate their power to compete with Washington-based institutions.

"I think it will go fairly fast, Mr. Danielson said. "The people who want it know they want it and they can put the stuff together fast."

> **"I hope my stay is a rather short one – I expect it will be. It is not a failed bank. I think it is an attractive franchise."**

> *National Bank of Washington*

But over the past two years, a number of potential acquirers have poked around NBW's books without making a deal, including Pittsburgh-based Equimark Corp. Other interested buyers included individual investors and there were reports of foreign interest.

John Bailey, a bank analyst with Ferris, Baker Watts Inc., Washington, contends the real estate problems that surfaced at the end of the second quarter could be the tip-of an iceberg of difficulties.

NBW was hit with an $80 million second-quarter loss stemming mainly from real estate loans, and earlier this spring the holding company had liquidity problems and was unable to pay off its maturing commercial paper.

NBW in recent months has been borrowing heavily – as much as $150 million daily – from its trader-of last resort, the Federal Reserve Bank of Richmond's discount window.

A High-Risk Portfolio

Mr. Bailey said about 82% of the bank's loans are "high-risk," or commercial loans, commercial construction loans, foreign loans, and commercial mortgages. The average bank in the area has 43% high-risk loans.

"Somebody is going to want a lot of guarantees on those assets," Mr. Bailey said.

An acquirer may also face a labor-relations headache. At yearend 1989, the bank had 935 employees, of which 380 were represented by unions.

National Bank of Washington was owned at one time by the United Mine Workers of America.

"Only some kind of bargain price deal is going to have to be sale," said Edward Furash, president of Furash & Co., a Washington-based financial consulting firm. "It is a very, very difficult dilemma that the FDIC faces."

Some Likely Candidates

Anthony Davila, a bank analyst at Richmond-based Wheat, First Butcher & Singer, acknowledged there are likely candidates in CoreStates Financial Corp., PNC Financial Corp., and NCNB Corp., but he added that overall, banks as acquirers are hurting.

"I don't think that degree of offensiveness is being thought about," he said. "People are trying to keep their cars on the road and not take an excursion." □

Fed Issues Final Guidelines For Banks' Capital Ratios

Continued from page 3

the banks, it includes common equity, minority interests in equity accounts of consolidated subsidiaries, and qualifying noncumulative perpetual preferred stock, less goodwill.

Banks that are not top-rated according to regulators' "Camel" ratings must meet leverage ratios of at least 100 basis points above the 3% standard.

The Fed's rules require holding companies and state member banks to meet the current minimum risk-based-to-asset ratios of 5.5% primary capital and 6% total capital through the end of 1990. Alternatively, they may pass muster by meeting the 7.25% risk-based capital standard.

Two Standards to Meet

At the end of 1990, the 5.5% primary capital and 6% total capital ratios will be dropped. Banking organizations will then have to meet both the 7.25% risk based capital standard and the new tier I leverage ratio.

In issuing its final guidelines, the Fed emphasized that they were minimums. Banks that were not top-rated would have to meet tougher standards. In particular, banks not rated 1, the best under the five-point Camel system, would have to meet higher leverage standards.

The Camel rating is based on a bank's capital, assets, management, earnings, and liquidity.

The Fed's rating is based on a bank's capital, assets, management, earnings, and liquidity.

Ogden Returns to Battle At Bank of Washington

By ROBERT M. GARSON

WASHINGTON — William S. Ogden, who was placed in charge of National Bank of Washington after it was seized by regulators, is no stranger to troubled banks – or to abrupt career turns.

In 1984, the Federal Deposit Insurance Corp. tapped the former Chase Manhattan Bank vice chairman to help resuscitate Continental Illinois National Bank & Trust Co., which had just been the beneficiary of an FDIC-engineered bailout.

But Mr. Ogden quietly lost out in a power struggle with Continental chairman John E. Swearingen, and left after three stormy years.

Since 1987 he has been out of the business world, devoting much of that time tending to the recovery of his son, who suffered a broken neck in a boating accident.

Drawing On Experience

In an interview Thursday, Mr. Ogden, 62, said he would draw on his Continental experience at NBW.

"The issues here aren't any different" Mr. Ogden said, comparing the $1.2 billion NBW to the much larger Continental. "It's just the order of magnitude."

His role will be different as well, since he will be running the show in Washington, at least until a buyer can be found for NBW. "I would hope my stay here would be rather short," Mr. Ogden said Thursday. "I expect it will be.

Reassuring Depositors

Mr. Ogden, who was approached by the Office of the Comptroller of the Currency on Wednesday about managing NBW, said his role as conservator will be "to reassure depositors the bank is still in business, to reassure employees," and to protect the institution's assets.

He is regarded as a smart, tough-minded manager who can be difficult to work with.

"Bill is a very bright guy who knows the banking business inside and out," said former FDIC Chairman William Isaac. "I suspect he can be very tough to work with, especially if you don't know what you're doing."

Conflict at Continental

Mr. Ogden was best known as an international banker, and late in his career at Chase he organized what was renamed Continental Illinois National Bank & Trust Co., which had just been the beneficiary of an FDIC-engineered bailout.

But Mr. Ogden quietly lost out in a power struggle with Continental chairman John E. Swearingen, and left after three stormy years.

Since 1987 he has been out of the business world, devoting much of that time tending to the recovery of his son, who suffered a broken neck in a boating accident.

Drawing On Experience

In an interview Thursday, Mr. Ogden, 62, said he would draw on his Continental experience at NBW.

"The issues here aren't any different" Mr. Ogden said, comparing the $1.2 billion NBW to the much larger Continental. "It's just the order of magnitude."

His role will be different as well, since he will be running the show in Washington, at least until a buyer can be found for NBW. "I would hope my stay here would be rather short," Mr. Ogden said Thursday. "I expect it will be.

Reassuring Depositors

Mr. Ogden, who was approached by the Office of the Comptroller of the Currency on Wednesday about managing NBW, said his role as conservator will be "to reassure depositors the bank is still in business, to reassure employees," and to protect the institution's assets.

He is regarded as a smart, tough-minded manager who can be difficult to work with.

"Bill is a very bright guy who knows the banking business inside and out," said former FDIC Chairman William Isaac. "I suspect he can be very tough to work with, especially if you don't know what you're doing."

Conflict at Continental

Mr. Ogden was best known as an international banker, and late in his career at Chase he organized what was renamed Continental Illinois National Bank & Trust Co., which had just been the beneficiary of an FDIC-engineered bailout.

It led to the formation of the lassitude of International Finance, a research group concerned with cross-border lending issues, particularly involving Third World debt.

He left Chase in 1983, after 31 years at the bank, when Thomas G. Labrecque was named president.

Mr. Isaac tapped him for the Continental job a year later, in large part, he said, because he needed a someone with strong credentials internationally.

Because the FDIC also wanted to recruit Mr. Swearingen, a former chairman of Standard Oil Co. of Indiana who was well known in the Chicago business community, a power-sharing arrangement had to be worked out in Manathan, round-the-clock negotiations" with the former Chase vice chairman.

Eventually, it was agreed Mr. Ogden would run the bank and Mr. Swearingen the holding company, but the arrangement collapsed six months later.

"There was a major confrontation between Bill and John," said Mr. Isaac. "I went out to Chicago and met secretly with them and three or four members of the Continental board at the airport Hilton."

Ultimately, he said, Mr. Ogden agreed to accept a subordinate role. He stayed for three years, Mr. Isaac noted, and "by then, Continental was out of the woods." □

Torchmark Said Near to Financing for 2d Bid on American General

By WILLIAM GOODWIN

Torchmark Corp. is close to an agreement with lenders on bank financing for a possible new bid for American General Corp. of Houston, sources close to Torchmark said.

The Birmingham, Ala., insurance company is in talks with about half a dozen banks on obtaining roughly $2 billion in loans.

'Financing Is Available'

The prospective lenders are said to include the banking units of Citicorp, Manufacturers Hanover Corp., and Bankers Trust New York Corp.

"I think we'll have something put together with the banks in the next couple of days," a source said, adding that there will probably be four lead banks.

William Graves, executive vice president of Torchmark, declined to comment on the bank talks except to say, "I think you can say that financing is available."

According to a source close to the company, Torchmark will not seek actual commitment letters at this time, but "we'll have something in writing."

Asked to be more specific, he said the written document would be akin to a "financial engagement letter."

An official in the insurance lending group of a bank said to be in talks with Torchmark questioned how close the company really was to an agreement. But the official did not dismiss the possibility of an imminent agreement of some sort.

'Strong Interest'

Earlier this year, Torchmark withdrew a surprise $50-a-share bid for American General in favor of a proxy fight. Torchmark's actions prompted American General to put itself up for sale in early May through an auction process that was expected to take at least several months.

In a statement two weeks ago on the company's quarterly earnings, American General chairman Harold Hooks said he was "pleased with the strong interest expressed by both domestic and international prospective buyers."

Aside from Torchmark, market sources initially speculated that Axa-Midi Assurances of France could be interested in American General.

Torchmark originally offered equal amounts of cash and stock for American General in its entirety. Like that bid, any new offer would be likely to consist of a combination of stock and cash but probably would exclude American General's consumer division, which Torchmark doesn't want.

The division's book value is said to exceed $1 billion.

American General is seeking to sell the company in one piece, but would be prepared to sell it in parts, if necessary.

A few of Torchmark's prospective lenders are said to be sitting on the fence right now, waiting to see the final fee structure, a source close to Torchmark said.

He declined to discuss the fees in detail but said they will be,"a lot closer to normal corporate lending standards than to LBO standards."

"This is an investment-grade credit," not a highly leveraged transaction, he added.

One possible stumbling block to a new Torchmark bid is that the company has balked at signing a confidentiality agreement with American General. □

Bankers Trust Wins Some Breathing Space for MorningStar Foods

By JED HOROWITZ

Bankers Trust New York Corp., which is laboring to remove the albatross of MorningStar Foods from around its neck, has persuaded senior lenders...to give the Dallas-based dairy company some breathing room.

Bankers Trust's securities subsidiary announced a plan 10 months ago to underwrite $150 million of senior junk notes for MorningStar, jockeying to become the first commercial bank to manage a junk deal.

The market. Instead of underwriting MorningStar, BT Securities officials have spent much of the past year struggling to help the dairy food processor avoid bankruptcy. Bankers Trust owns 20% of equity in the company.

Credit Agreement Modified

On Thursday, MorningStar said it had convinced senior lenders to modify their credit agreement so that the company can make an interest payment to holders of $150 million of its 13% subordinated debt. A default on the payment, which was due Wednesday, would likely have triggered bankruptcy, analysts said.

MorningStar, which is attempting to revive itself by selling its fluid milk operations, still must pay off its senior debt with a big balloon payment next June.

Bankers Trust, according to sources, played a key advisory role in the latest developments.

MorningStar, which was formed in 1988 as a spinoff of troubled Southland Corp., owes about $130 million of senior debt to a bank group led by Continental Bank. At least three lenders – Bonnet Resources (which holds the bad assets of MCorp), ABQ Savings Bank of Albuquerque, and National Bank of Alaska – refused to budge on liberalizing terms of the loan pact, sources said. The three held almost 18% of the senior debt.

Crisis Averted

The bankruptcy crisis was averted early this week when Bankers Trust arranged for a unit of Amsterdam's Nederlandsche Middenstandsbank to buy out the three holdouts, a MorningStar source said.

Ironically, the MCorp unit is a ward of the Federal Deposit Insurance Corp. and RTC of the Resolution Trust Corp., which took over their deficient parents. The Alaska bank bought a small piece of the MCorp loan.

"The government is not interested in long-term solutions," said one source involved in the negotiations. "They are interested only in cash and they will do anything to get paid out."

MorningStar, which is attempting to revive itself by selling its fluid milk operations, still must pay off its senior debt with a big balloon payment next June. But its banking agreed to a slower amortization schedule that requires payment of just $5 million a quarter.

Lenders in the bank group besides Continental and the Dutch bank are: Banque Paribas, Credit Agricole, First Interstate Bank, First Bank Minneapolis, Societe Voriteme du Sud, Bank of Nova Scotia, Long-Term Credit Bank of Japan, Hibernia National Bank, Canadian Imperial Bank of Commerce, and National Australia Bank.

MorningStar's temporary reprieve from lenders came on the heels of a decision late Monday by Jackson National Life Insurance Co. to withdraw from a commitment to inject $60 million of new financing in the company. When Jackson pulled out, so did a group of other banks that Bankers Trust had lined up to bail out the principal holdouts. It was then that the Dutch bank agreed to take on the three banks' debt at a substantial discount, according to sources. □

BT Tymnet is

Electronic Transaction Services

BT Tymnet offers the broadest array of Electronic Draft Capture (EDC) and other Point-of-Sales transaction services in the industry. Quality BT Tymnet services enable banks to provide merchants with innovative, highly competitive and profitable solutions. Full service capabilities include: a wide range of connectivity, state-of-the-art card authorization and check support and reliable performance worldwide. Just call our toll-free number for complete details.

BT Tymnet: Global Network Services™ Network Management Systems, Globenet™ Messaging Services, 800-Net™, LAN Connectivity Services and much more.

RTC to Sell $1 Billion in Securities

NEW YORK — The Resolution Trust Corp. plans to sell $1 billion of securities backed by residential mortgage loans seized from insolvent thrifts by late August or early September, said Geraldine Rigby, the agency's deputy director of capital markets.

"We are commingling homogeneous assets from seven institutions" under conservatorship, she said. "We have not decided on the structure. We are still aggregating the assets."

Greenwich Capital Markets Inc. is adviser on the securitization project, which the RTC views as a demonstration.

Analysts said the offering is likely to carry higher yields than the mortgage issues with which investors are familiar. "People are now reaching for yield and the issue is likely to do very well," an investment banker said.

Meeting Demand

Market observers said the RTC issue would help meet demand for mortgage-backed securities that has been pent up because of to weak housing demand and slow sales by the RTC.

Thrifts under RTC conservatorship had $22.1 billion in mortgage-backed securities as of March 31. Since March, the RTC has sold off $6 billion of mortgage securities. — Reuters

Bank Stock Table Explained: The table lists in alphabetical order each bank and thrift traded on the NASDAQ system and certain commercial banking firms and the 25 largest publicly traded thrifts as determined by the market value of all common stock outstanding. (As of March 30, 1990, the market value cutoff for banks was $85 million, and for thrifts it was $8.96 million.) The listing includes 52-week high and low prices for the stock, PE, the price-earnings ratio, the current stock price divided by the latest reported per-share earnings per share adjusted for latest announced earnings, Mkt. to bk, the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Bank **value** is adjusted for the latest reported earnings and dividends. The price at which the stock last traded. If no trade for the day, the latest bid. **NM** Bank has a negative earnings per share. **Chg.** The change in the closing price from the previous day. The top 50 thrifts in market value, respectively. **Highlights** and **Lowlights** are based on percentage changes in the price of the stock between the previous week and today's volume as a percentage of average shares traded over the past 90 days.

Data sources: **SNL SECURITIES,** Charlottesville, VA, 804-977-1600; Interactive Data Corporation, Data Resources Network, Vienna, VA, provides 254, with the daily prices.

Oil Banks Rise on War News

By GORDON MATTHEWS

NEW YORK — A number of banks viewed as energy lenders bucked the downtrend in financial services stocks Thursday, rising modestly as the markets tried to assess the economic impact of turmoil in the oil-rich Middle East.

Bankers and analysts said a sustained increase in oil prices could help the energy region and its banks, but a temporary blip is unlikely to spur much economic activity.

Last week, the Organization of Petroleum Exporting Countries agreed last week to increase the price of oil from $18 a barrel to $21 a barrel, the first rise in four years. While that was not as, 15,000 new jobs were are created.

That prospect may have helped the recently beleaguered shares of Houston's First City tally a 75-cent increase to $19.375, in brisk trading. Meanwhile, Hibernia gained 25 cents, to $14.375, and Premier Bancorp., Baton Rouge, La., appreciated 12.5 cents, to $3.75.

Another impact could be inflationary pressures, which in turn could force interest rates higher, analysts noted.

"The major impact on bank stock prices would be concern about higher interest rates and inflation" caused by higher oil and gasoline prices, said Frank W. Anderson, banking analyst at Stephens Inc. in Little Rock, Ark.

He said most Southwest banks have unloaded most of their oil-related loans and therefore stand to benefit from the invasion only if it raises prices high enough to spark new demand for oil-related loans.

However, First City and Hibernia could prove exceptions to his theory, he said. First City has made some oil loans recently that will be psychologically added by the fact that it is based in Houston, the oil capital of the country.

He said Louisiana is so dependent on the oil business that Hibernia might improve even with a slight rise in the price of oil.

The Colorado Mystery

However, Benjamin Crabtree, a banking analyst in Dain, Bosworth & Co., Minneapolis, said he thought the potential improvement for banks that have a history of oil-related business was overwhelmed by the potential problems from inflation and increased interest rates.

"There is any kind of impact, it will be positive," he said.

Analysts were unsure why banks in Colorado, usually sensitive to energy-related developments, did not also show some strength in response to events.

Instead they were weak. Affiliated Bancshares of Colorado, Denver, fell 87.5 cents, to $11.125; Colorado National Bankshares, Denver, was off 62.5 cents, to $14.50; and United Banks of Colorado, Denver, was off 50 cents, to $22.50.

Norwest Bancorp., Minneapolis, which recently agreed to acquire United Banks, was also a decliner. It fell 25 cents, to $19.25.

Banc One off 25 Cents

Prices rose and then receded in active trading for the four large banks that entered Texas in the wake of the economic debacle caused by the fall in energy prices in the mid 1980s. Banc One Corp., Columbus, Ohio, was off 25 cents, to $26.75, while NCNB Corp., Charlotte, N.C., fell 25 cents, to $34.625. Chemical Banking Corp. was off 75 cents to close at $21.25, while First Interstate Bancorp fell 25 cents, to $32.

In contrast, the stock market plummeted in reaction to the developments - the Dow Jones industrial average declined 37.87 points, or 1.31% by late in the day — and banking stocks fell with it. J.P. Morgan & Co., New York, dropped $1.50, to $35.62, and Wells Fargo & Co., San Francisco, fell $2, to $63.875.

Energy bankers following the Middle East situation said the effect of an oil price hike would be muted unless sustained. Gary Wright, executive vice president for energy lending, at Texas Commerce Bank, Houston, said recent events in the Middle East involving the Organization of Petroleum Exporting Countries have "certainly have shifted us to a higher price scenario for oil."

A Waiting Game

But a temporary spike in prices would not be enough to prompt increased exploration and loan demand. What is required, he said, is stability at higher price levels. "That will have to come together before we can predict increased exploration," Mr. Wright said.

From a lender's perspective, he said, it still is a waiting game. If the new price hold, that will change the psychology of energy exploration companies, doing capital spending, and "that will drive loan demand."

Any such demand probably won't show up until early 1991, the executive said.

Mr. Wright also noted that there would be losers as well as winners in a sustained oil price rise. He said Dain, Bosworth & Co., Minneapolis, said he thought the revenue improvement for banks that have a history of oil-related business would be overwhelmed by the potential problems from inflation and increased interest rates.

"There is any kind of impact, it will be positive," he said.

Analysts were unsure why banks of

The High Road Is Costing RTC Time and Money

By STEVE KLINKERMAN

The price of avoiding political controversy in thrift rescues is exceedingly high and getting higher.

Experts say that message came through loud and clear last week, when the Resolution Trust Corp. revealed that it was running out of cash and was stuck with $37 billion of assets left over from 207 thrift rescues.

The RTC's predicament stems from a thrift sales spree that largely avoided the touchwork of selling problem assets.

The RTC says it will speed the disposal of those assets, selling $13 billion of the $37 billion total by yearend.

ANALYSIS: *Follow-up on the news*

But a priority of avoiding criticism may delay that effort, experts say, just as it has prevented the RTC from selling bad assets along with the good during rescue transactions.

"There is a question as to whether the government has the ability to dispose of these assets in a timely and cost-effective manner," said consultant William Ferguson.

'RTC May Be Maximizing Cost'

By avoiding the more sophisticated and controversial techniques previously used by regulators to sell the entirety of a failed institution's assets, Mr. Ferguson said, "the RTC may be maximizing the ultimate cost to the taxpayer."

Ironically, it was L. William Seidman, chairman of the Federal Deposit Insurance Corp. and of the RTC, who first began speaking out on this issue in 1988.

Worried that the FDIC was locking up all of its cash in problem assets left over from previous bank rescues, Mr. Seidman began devising rescue deals wherein buyers of a failed bank took all of the institutions' assets.

"It is very clear that assets lose value as they are moved out of banks and into a liquidation mode," Mr. Seidman said in a May 1988 interview. Over three years, the FDIC transferred almost $20 billion of distressed assets to buyers of big Texas banks that had failed.

FDIC Eased the Way

How was it done? First, acquirers got FDIC assistance equal to the amount of depositor funds lost through devaluation of problem assets such as raw land, vacant office buildings, and defaulted loans. Acquirers agreed to manage and sell the as-

FIXING THE HOLES: HomeFed's Robert F. Adelizzi has a perilous task ahead of him.

HomeFed's Fall From Grace

By TERESA CARSON

SAN DIEGO — Just a year ago, HomeFed Corp. was a darling of savings and loan investors. Enviously capitalized, it boasted strong earnings, the top market share in California's rich San Diego County, and a highly respected management team.

But suddenly, chairman and chief executive Robert F. Adelizzi is fighting for the survival of his thrift. Stung by a sudden increase in bad real estate loans, Mr. Adelizzi may not have much time to get his house back into order.

HomeFed's stock has plunged from $47.50 to $10 in the past 12 months, including a $23 drop in just the past eight weeks. The thrift holding company is now vulnerable to a takeover "either voluntarily or at the behest of the regulators," according to Eric I. Hemel, a prominent

EPA to Revise Rules On Lender Liability In Toxic Cleanups

By DEBRA COPE

WASHINGTON — Moving to resolve a thorny legal controversy, the Environmental Protection Agency said it plans to revise the Superfund rules by yearend to clarify lenders' liability for cleaning up toxic wastes on foreclosed properties.

The intention to revise the rules marks a significant policy shift for the federal agency. It previously contended that the regulations adequately defined when lenders were responsible for repairing environmental damages on properties seized after loans went into default.

But court decisions in recent years left many bankers uncertain about their exposure to unforeseen environmental costs resulting from borrowers' actions or negligence. Meanwhile, Congress is moving rapidly to pass legislation sought by banking interests to limit their environmental liability.

The EPA now wants to step in with its own proposal, less sweeping than the congressional bills but viewed by the agency as a major concession and compromise.

The regulatory initiative, unveiled in a congressional hearing last Thursday, won plaudits from advocates of lender-liability reform. But these sources said broader legislative initiatives, rather than regulatory changes, may still be needed to ease lenders' fears.

"The train has probably gone too far down the track for them to stop it with a rule," said Charles Mitschow, regional president of Marine Midland Bank, Buffalo, a unit of Hongkong and Shanghai Banking Corp.

A federal appeals court in Atlanta has already ruled that banks, because of their financial control, effectively own and operate foreclosed properties, and therefore are liable for cleanup costs. Mr. Mitschow said, "I don't know how they're

Fears of Turmoil in Middle East Plunge Bank Shares to New Lows

By GORDON MATTHEWS

NEW YORK — The stock market sold off sharply on Friday amid fears about the economic impact of turmoil in the Middle East, helping to push bank and thrift stocks to new lows at the end of their worst trading week of the year.

The rout in bank stocks spread to even the well-regarded banks that had held up fairly well until last week.

The *American Banker* index of the 225 largest publicly traded bank stocks fell 7% last week. The index stands an astonishing 30% below the high reached last Oct. 9, before financial services equities began their long and steep slide.

Brand-New Threat

Now, in addition to existing worries about credit quality, bank stocks seem further threatened by the ramifications of Iraq's invasion of Kuwait and by the signs that the U.S. economy is teetering on the brink of recession.

Bear Market For Bank Equities

Banks Choose Cautious Route In Iraqi Freeze

By JEANNE IIDA

NEW YORK — Responding to an unclear presidential decree on Thursday, banks froze assets and asked questions later about accounts linked to the Kuwaiti and Iraqi governments.

As the bankers talked with lawyers and the Treasury Department to interpret the directive, they released accounts that had been cleared.

Observers said the action was prudent under the circumstances but could leave banks open to lawsuits from individuals whose accounts were unnecessarily frozen.

Meanwhile, bankers and Treasury officials said Iraq's threat to freeze payments to U.S. lenders will cause little harm. (See related story on page 12).

To avoid alienating customers whose transactions were being

Daniel Evans, Nominee, Is Waiting for His Turn

By DEBRA COPE

WASHINGTON — Back home in Indiana, they call him "Dan's friend Dan."

He is Daniel F. Evans Jr., Vice President Quayle's long-time confidant and campaign manager, and President Bush's nominee to be

Daniel F. Evans

the first chairman of the five-member Federal Housing Finance Board. The oversight agency was created by the Financial Institutions Reform, Recovery, and Enforcement Act of 1989.

Since 1976, Mr. Evans has presided over a string of victorious Republican campaigns in Indiana, engineering Dan Quayle's rise from the House to the Senate and then to the vice presidency and putting in a stint as cochairman of the George Bush for President Committee in 1988.

The 41-year-old attorney is a consummate political insider. Probably any job on the Vice President's staff was his for the asking. So why take the small, obscure, fledgling agency that regulates the 12 Federal Home Loan banks?

Praise for Home Loan Banks

In a telephone interview, Mr. Evans cited the job's "relevance to one of the major financial problems of our time."

"This is the one part of the savings and loan system that worked. The insurance function failed. The regulatory function failed. But the banking function succeeded," he said. "The Federal Home Loan banks have never had to liquidate a security or an advance in their history."

Mr. Evans knows his way around the bank system. He has been a board member of the Federal Home Loan Bank of Indianapolis since 1987 and its chairman since January 1989. Gregarious and witty, he is known and liked by officials at most of the institutions he has been tapped to oversee.

"We are fortunate to have a nominee who understands what the [Home Loan Bank] system is," said James Crona, chairman of the Federal Home Loan Bank of San Francisco. Under the now defunct Federal Home Loan Bank Board, the banks were often run by people who came to their jobs with little knowledge of the system.

Mr. Evans' nomination has been languishing before the Senate Banking Committee since May. The administration wants a part-time board to oversee the Federal Home Loan banks, while key Democrats seek a full-time panel. That leaves the board's interim chairman and lone member, Housing and Urban Development Secretary Jack Kemp, to call the shots.

Roots in Indianapolis

Mr. Evans says, "I'm not available full time." A partner with the Indianapolis firm of Baker and Daniels, he has a busy corporate practice. And with a young family in Indianapolis, he is not about to pull up stakes to move to Washington. He and his wife, Marilyn, have two boys and two girls, ages 4 to 12.

Associates say Mr. Evans feels thwarted by the political spat, but he remains philosophical.

"Frankly, the length of time that has elapsed is not great in legislative terms," he said. "My frustration is not with the confirmation process but with the desire to move ahead at a time of real crisis."

The wait hasn't spoiled his summer. Recently, heading for a vacation at his summer home in Pentwater, Mich., he said he would leave his worries at dockside as he stepped aboard his 29-foot sloop. "I'll be four miles from shore, where it's never hot." □

Banc One Completes Deal For an Investment Bank

COLUMBUS, Ohio — Banc One Corp. formally completed its affiliation with Meuse, Rinker, Chapman, Endres & Brooks, an investment banking firm with headquarters in Columbus and offices in Dallas and Cleveland.

The unit was renamed Banc One Capital Corp. David R. Meuse will be continuing as chairman and chief executive officer.

Banc One Capital specializes in serving clients with complex problems in areas of public, structured, and corporate finance, real estate, and financial institutions. Founded in 1981, the former Meuse, Rinker has underwritten more than $4 billion of new issues and trades fixed-income securities in the secondary market.

Commercial Paper Shrinks

NEW YORK — The Federal Reserve Bank of New York reported that commercial paper outstanding in the United States fell $1.66 billion in June to a seasonally adjusted $537.02 billion.

It was the third consecutive monthly decline, fueled primarily by cutbacks in directly placed paper from commercial banks, savings banks, mortgage banks, and some other financial entities. □

BNE Loses $33 Million in Quarter

Asset Sales Cut Deficit, but Loan Quality Deteriorates

By TOM LEANDER

BOSTON — The troubled Bank of New England Corp. announced Friday that it lost $33 million in the second quarter as the company's asset quality continued to deteriorate.

The loss, roughly in line with expectations, was not seen as a decisive sign of whether the bank would be able to rebound from the staggering $1.1 billion loss it posted last year mainly because of bad real estate loans.

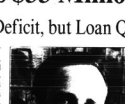
"There were no positive surprises," said Kristina Andersson of Kidder Peabody & Co.in New York. "But things were not overwhelmingly negative."

$91 Million in Gains

The loss, following a $46.6 million first-quarter deficit, was held down by $91 million in one-time gains from the sale of assets.

In the first quarter, the company's fire sale of assets yielded a nonrecurring gain of $170 million that offset its losses. According to a senior company official, the asset sales are virtually complete.

The company made a $59 million provision for loan and real estate losses, compared with a $151 million provision in the first quarter.



Lawrence K. Fish
Bank of New England

"This quarter's loss is not unexpected because of the continued sluggishness in the region's economy, the softness of the real estate market, and lower net interest income," Lawrence K. Fish, the company chairman and chief executive officer, said.

Bank of New England's stock closed unchanged at $2.625 on the New York Stock Exchange while the Dow was dropping by $4.95 points.

The company said it had no plans to sell its Maine National Bank unit. "We don't believe in today's market we can get fair value," the official said. But the official said it was currently seeking a buyer for its Rhode Island unit.

Some Lenders Stop Issuing Student Loans

By LOUIS GERHARDSTEIN

WASHINGTON — Several private lenders have stopped disbursing student loans guaranteed by the Higher Education Assistance Fund "pending a resolution" of problems facing the financially troubled agency, Stephen C. Bikken, vice president of Citicorp's student loan business, said Friday.

"Any handling of the HEAF situation that does not allay existing lender fears regarding the reliability of guarantees [on student loans] could severely undermine the program," Mr. Bikken, speaking on behalf of Consumer Bankers Association, told the Senate Labor and Human Resources Committee on education, arts, and humanities.

Citicorp a Key Lender

Citicorp's Citibank is one of the largest lenders in the student loan market, with $2.2 billion in loans outstanding.

Mr. Bikken did not elaborate on the identities of other banks that may have curtailed lending in the wake of HEAF's recently disclosed problems.

HEAF's troubles stem from rising default rates on its loans. Officials of the Overland Park, Kan., guarantor attributed the high defaults to the fact that it is required to make loans to all students, including those of trade schools, which account for most of the recent troubles.

Hazard Is Noted

If HEAF guarantees fail to be fully honored, Mr. Bikken said,

Corrections

The Federal Deposit Insurance Corp. is the agency studying whether to restrict the value of mortgage-servicing rights that banks and thrifts can count toward capital. The headline of an Aug. 2 article on page 2 misidentified the agency.

■

A July 31 article ("S&L Law Is Reshaping Marketplace," page 1) incorrectly described as troubled an Arizona subsidiary of Great Western Bank, Los Angeles. The Arizona unit whose health is questioned by experts is a Tucson-based subsidiary of Great American Bank, San Diego.

TECHNOLOGY/OPERATIONS NEWS

C&S/Sovran to Outsource Card Processing Operation

By KAREN GULLO

NEW YORK — The merged entity C&S/Sovran Corp. will turn over processing of its large bank-card operation to a third party.

Officials of the banking companies said last week that they had signed a letter of intent with Total System Services Inc., Atlanta, for such processing services. After receiving Federal Reserve Board approval two weeks ago, Citizens and Southern Corp. and Sovran Financial Corp. plan to complete their merger by the end of the month.

Bank executives said the move to Total Systems was motivated by cost savings and the company will probably turn over certain other processing operations to outside firms.

"There would have to be a big investment to continue in-house processing."

W. Robert Flowers
Citizens and Southern Corp.

Selective Outsourcing

"We are in the process of developing an overall technology structure for the merged bank, and some operations call for turning them over to a third party," said Henry T. Garcia, senior vice president at C&S, Atlanta. "We're not going to outsource everything."

Sovran and C&S have been working for the past year to form a single bank-card system. The new system's structure has been in place since late spring and involves 700 employees at Sovran's Norfolk, Va., headquarters performing collection, credit analysis, customer-services, and merchant-services tasks.

Until now, each banking company has done card processing in-house. The combined banking company will have a credit card portfolio of $1.2 billion, with 1.6 million accounts and 45,000 merchants.

Limits on Capacity

"We were concerned with the capacity of our own systems" to handle the processing of the merged bank-card program, said W. Robert Flowers, senior vice president at C&S. "We more than doubled our size, and there would have to be a big investment to continue in-house processing, so we think we're better served to go outside."

Mr. Flowers declined to say how much the bank expects to save by using Total Systems. The company will do settlement, accounting, and processing of statements for C&S/Sovran.

Some other processing jobs, such as credit card authorizations, might eventually be handed to an outside firm, Mr. Flowers said. "By and large we think the rest of the operations will stay in house," he said.

Economies of Small Scale

Bankers and analysts have said recently that outsourcing arrangements, which can help banks cut technology costs, are less beneficial for larger banks than for smaller ones.

Many small and midsize banks have turned to outsourcing – which bankers say can shave 20% to 50% off technology costs – but no large bank has signed such a contract.

C&S/Sovran, which will become the largest bank merger ever, will have $47 billion in assets to rank 12th nationwide. □

Wide Net Cast over Kuwait, Iraq Accounts

Continued from *page* **1**

held up, bankers said they were working quickly to get down their lists of accounts in question. Custody, funds transfer, and trade financing personnel were scrambling into Friday afternoon to determine what constituted an "government-controlled entity and what did not.

"With certain institutions, it's clear they are government owned, but one might be 10% owned, another 30% owned," said David L. Hinds, senior vice president of international money transfer at Bankers Trust Co.

Talking with lawyers and the Treasury Department, Bankers Trust came up with a list of 12 names on Thursday morning that was being gradually trimmed. "We don't know what it will ultimately sort down to," Mr. Hinds said.

The Treasury department informed Bankers Trust of three names that "they claim to be influential in terms of the Kuwaiti government," officials said. The bank expected to have a complete list by the close of business Friday or Monday.

"The most prudent way for banks to approach that problem is to be conservative in trying to identify the accounts and then peel away from that universe," said a Washington lawyer who requested anonymity. "There are negative implications of not freezing an account that should be frozen."

Possible Lawsuits

Observers raised the possibility, however, of lawsuits by Iraqi and Kuwaiti nationals unable to access their funds. But "it would be a tough suit to win," the lawyer said. "This is a valid exercise of authority by the U.S."

Bank managers put in long hours reviewing accounts and meeting with heads of custody, trade financing, and other areas. "This kind of thing is costly. It chews up a lot of management time," said Mr. Hinds, who was in meetings much of Thursday and early Friday morning.

At the New York Clearing House, president John F. Lee spent an anxious Thursday hoping he had made the right decision in blocking the payments of the two Kuwaiti banks on Chips – the Commercial Bank of Kuwait and the National Bank of Kuwait. There are no Iraqi banks on Chips.

On Friday, he was informed by the Treasury Department

"This kind of thing is costly. It chews up a lot of management time."

David L. Hinds
Bankers Trust Co.

that he had interpreted the decree correctly. On Thursday "I was acting at my peril, and today I'm all clear," Mr. Lee said. "Now we're just waiting for the other shoe to drop," he said, as Chips officials followed velopments along the Kuwait border with Saudi Arabia.

Breaking Off Contact

Mr. Hinds of Bankers Trust began his Thursday with a 5:30 a.m. phone call notifying him of the decree.

The operations crew at Bankers Trust sprang into action, and by 6 a.m., the bank had arranged not to bring up its money-transfer systems. The bank did not establish communications with Chips – the Clearing House Interbank Payments System – or Fed Wire, as it normally would.

Instead, the bank reviewed its accounts, separated out the 12 that it thought might fall under the decree, and reestablished contact with the payments systems at about 9:30 a.m., Mr. Hinds said.

Unlike Bankers Trust, most banks logged onto Chips as usual, according to Mr. Lee.

Once Bankers Trust had compiled the list of names, blocking transactions by those entities was relatively easy.

The actual blocking is straightforward and conducted through software controls.

Bankers Trust's money-transfer system, which runs 23 hours a day, was modified so that no payment could go out and no credits could come into the secured accounts. As items were received for the accounts in question they were sent to a separate file for individual review.

"All the work involved in other areas got deferred," said a banker at a money-center bank who asked not to be named. "We had emergency meetings yesterday that went on for hours and hours," he said Friday.

A money-center bank that uses software "switches" turned those automatic switches off for the accounts it deemed affected by the decree, said a spokesman who ask that the institution not be named.

The switches allow payments within certain parameters to be executed and released to Chips and Fed Wire automatically.

Transactions and accounts with the switches off were handled manually. Payment items and accounts were put in a holding queue and frozen.

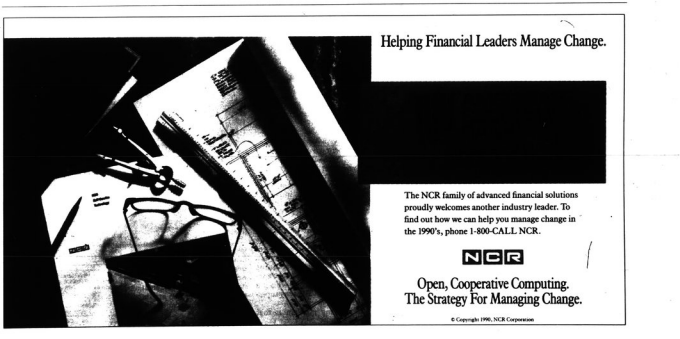
Credit Operations Affected

Besides funds transfers, custody and letter of credit operations were affected. Letters of credit which required payment from a government-controlled account could not be executed.

Custody operations had to sift through accounts that might be held under the names of brokers instead of the owners.

"We had numerous meetings to ensure that all departments that had [the targeted] accounts were aware of what they had to do," a money-center banker Hinds said.

By Friday, bank operations that were reeling on Thursday began to recover. "The panic button" was off, he said. □



COMMENT / By Paul Nadler

New Risks Add to Problems Of Struggling Institutions

There was a time when all a bank officer had to worry about was the ability of his borrowers to pay back their loans. Interest rates were stable, operations were simple, competition was minimal, and banking was a good field to be in.

This peaceful scenario was first challenged by the increased volatility of interest rates, dating back to the Vietnam war. Interest rates have risen so rapidly at times in the past two decades that some banks have been brought to their knees by interest rate risk. Rising interest rates have had more of an impact on the value of their bonds than the traditional cause of trouble, credit risk.

Triple-A Trouble

The best example is First Pennsylvania Bank, which required a federal bailout after it got into difficulty with its holdings of triple-A-rated government bonds.

Mr. Nadler is an *American Banker* contributing editor and professor of finance at the Rutgers University Graduate School of Management.

Interest rate risk, or so-called money risk, can kill you as rapidly as credit risk if your bonds are long enough, as First Pennsylvania learned. The perils of money risk were later learned by a number of other banks and thrifts that did not practice gap management and thus did not prepare for rapid rate swings.

As if money risk and credit risk were not enough of a problem, there are two other types of risk that can be just as dangerous to the health of a bank. These are covariant risk and a new problem that can be termed career risk.

Covariant Risk

Covariant risk simply means that a problem in one area can spill over and affect other sectors of the banking market that were thought to be immune to the problem.

I visited the top officers of a major bank in the Texas Panhandle just when the Oil Patch loan problems were at their worst. This bank had been hurt, like all other banks in the area, by the inability of its customers to repay their debts.

But the president said to me: "We saw what was coming. We knew that Oil Patch loans and agricultural loans would be trouble, so we didn't make many of them. Rather, we lent to mom-and-pop stores and auto dealers. We made bank stock loans and developed consumer credit, which we thought would be far more secure.

"But when oil and agriculture went down, the mom-and-pop stores closed, the auto dealers couldn't sell cars, the local bank failed, and the consumer couldn't repay his debts. We were just as badly hurt as if we had gone directly into oil and agricultural loans with the rest of the banks."

The conclusion: If we are to protect banks from covariant risk, we have to let them expand geographically and diversify out of a dependence on local industry.

It is ironic that with the failure of so many banks and thrifts, lawmakers are turning against allowing diversification in an effort to enhance bank safety. But it would seem that allowing geographic diversification would lead to stronger, rather than weaker banks, because they would be able to overcome the covariant risk problem.

Career risk means that a great many bankers and other financial people are worried about their professional futures as they see so many companies in financial and nonfinancial, lay off staggering numbers of employees. The response of these bankers and corporate treasurers can be summed up simply: Don't rock the boat. Don't take any steps that could lead top management to question your judgment.

Avoiding Blame Is the Game

Those who have been around banking for a while have long recognized what new entrants into the field find hard to accept: The key to bank performance is "ego" and "cover your rump." In essence, the way to survive and thrive in this or any other industry is to try to get credit for all that goes well and avoid blame for failures.

The result has been a cautious

"SOUND OFF"

Secretary of Labor Elizabeth Dole introduced a "glass-ceiling initiative" last week, citing studies that show women and minorities making up 30% or more of middle management in big corporations but less than 1% of top management. In a recent *Business Week* cover story on companies that provide the best opportunities for women, Security Pacific was the only banking company cited. The *American Banker*'s Beth Piskora asked the following question:

Q *Are banks doing enough to promote women, particularly in middle and senior management?*

■ Kathleen J. Burke
Executive vice president
Director of human resources
Security Pacific Corp.
Los Angeles, Calif.

In general, especially in commercial banks, there has been a high percentage of women in the lower and middle ranks. So it doesn't require a major cultural change to bring women into the top ranks. What it does require is a conscious effort on the part of top management.

I believe that's why we were cited in the *Business Week* article. We have taken a very systematic approach to identifying high-potential employees. "Mentoring" is one step we've taken, which we believe allows for more visibility for women and minorities.

Another thing we've done is clearly identify the career path and the track that leads to the executive suite. We meet frequently with all aspiring applicants and clearly communicate strengths and weaknesses, so there are no surprises.

We also have a range of benefit services. We offer maternity and paternity leave. We see ourselves as "family friendly," but not necessarily catering to women.

Banks have to realize that we're not only in a competitive mode for customers, we're competing for employees as well. Banks that choose to ignore women won't be able to recruit and retain the best people.

■ Hugh L. McColl Jr.
Chairman
NCNB Corp.
Charlotte, N.C.

If my associates are forced to choose between work and family – and family wins out – NCNB is robbed of one of its most vital resources: experienced people.

That's the chief reason we've expanded from basic maternity benefits to a child-care reimbursement fund, extended maternity and paternity leaves, adoption leave, childcare referral service, and flexible work schedules.

Implementing programs like the ones we have are costly. But the rewards come in intangible areas – such as turnover, morale, and productivity.

■ Polly DiGiovacchino
Vice president
Chemical Bank New Jersey
Princeton

The real problem is that women are still concentrated in the lower-paying jobs. There are probably pockets where the financial community is adequately addressing women's promotability, but there's still a lot of work to be done. Maybe some top management could get into a mentor relationship with women who show high potential.

Also, banks need to establish goals for promotability and communicate them in regularly held employee reviews.

Of course, we must do more in the way of flex time, elder care, child care, and job sharing, all of which allow women to continue to work productively.

■ Robert L. McCormick
Chief executive officer
Stillwater National Bank & Trust
Stillwater, Okla.

The main thing is that banks are missing an important talent if they're overlooking women as a source for the workforce.

I can't speak for the industry in general, but in our bank we are definitely using the talents of women. My internal auditor is a woman, my human-resource manager is a woman, I have a senior vice-president who's a woman – almost all of my supervisors are women.

In fact, my problem is that I've got to learn how to recruit more men, just to keep some balance.

■ Joan E. Spero
Senior vice president/treasurer
American Express Co.
New York City

Businesses have to make a concentrated effort to judge people on their merits, not sex.

We need to create an environment that nurtures talented women. Women must have access to training. They have to get into the right meetings, the right task forces. They must be given the right opportunities in management.

I'm convinced that if we just created such an environment, the cream would rise to the top. We don't have to use quotas.

It's in the self-interest of businesses today to take advantage of the limited talent pool. You're not going to be competitive if you don't have the people, and if you don't have the women you're missing out on some of the best people.

■ A. J. King
Vice president
Valley Bank of Kalispell
Kalispell, Mont.

There may be a perception that banks aren't "women-friendly," but I don't know that we're not. There are a lot of banks with women officers, vice presidents, and the like.

I expect we would see a lot more regulation if banks were not promoting women. As it is, we have enough regulation to bury an elephant; any more would be very unhealthy for the industry.

REQUIRED READING

A Debate on the Solvency of U.S. Banking

The ABC News "Nightline" program of Tuesday, July 31, carried a report in which Stanford University economist R. Dan Brumbaugh said: "I believe that the following banks are very close to true insolvency: Chase, Chemical, Manufacturers Hanover, Bankers Trust, and even Citibank and Bank of America."

That assertion led to the following exchange among Nightline moderator Ted Koppel, Federal Deposit Insurance Corp. Chairman L. William Seidman, and Mr. Brumbaugh. The transcript was furnished by ABC News.

KOPPEL: Mr. Seidman, if there is a commodity that is almost as important to banks as money, it's got to be confidence. We've Just heard Mr. Brumbaugh tick off the names of perhaps the biggest banks in the United States and suggest they're effectively on the verge of being in big trouble. What do you say?

SEIDMAN: Well, I think it's irresponsible. It's shouting fire in a crowded theater. And I'd be much more concerned about it, except Mr. Brumbaugh's been saying things like this for the last three or four years, ever since I got into this job.

KOPPEL: Well, if he's been saying it about things like the S&Ls, he may even have been right.

SEIDMAN: No, he worked for the FSLIC [the defunct Federal Savings & Loan Insurance Corp.], so he could have said it there. I don't remember him saying it while he worked for FSLIC. But I'm talking about banking. He's been making these same kinds of charges ever since I took this job. He testified before Congress two years ago in the same way. We had to correct his numbers because he double-counted a lot of the institutions.

And just as I think that every citizen has a right to say what they believe, I just believe he's wrong and there are a lot of reasons he's wrong. He's wrong because the auditors are looking at these banks, we are looking at these banks, the Comptroller's looking at banks, and a much more importantly, the market is looking at these banks. And they know and they say the banks aren't broke, or they wouldn't be buying and selling their stocks.

KOPPEL: Well, you raise an interesting question, and let me put it to Mr. Brumbaugh for a minute. How does the average consumer know whether a bank is in good shape or bad? I walk into the offices of Bank of America, or Citibank, or Chase Manhattan, I've got no way of knowing whether that bank's on the verge of bankruptcy or whether it has $20 billion in the till.

BRUMBAUGH: And it doesn't really matter. As long as there's deposit insurance under the current system, any consumer or depositor in particular need not worry one iota because those deposits are guaranteed by the federal government. And therefore we have no problem with runs, whatsoever.

KOPPEL: If there's enough money in FDIC to cover all the bank's failures.

BRUMBAUGH: No, the full faith and credit of the United States

COMMENT

Continued from *page 4*

or negative attitude in cases where the upside of taking risks does not outweigh the downside. Why have so many operations officers limited themselves to top-name computer hardware even if a secondary name might offer features more applicable to the bank? Because if the second-ary equipment fails to do the job, the officer's career is on the line. But if it is the top name that fails, he has the excuse: "It's not my fault; I bought the best." In sum, buying the name helps avoid career risk.

How does this affect banking today?

Business Flows to Top Banks

Look at the choice of the corporate cash manager in today's environment. He sees that the "too big to fail" doctrine protects him if he sticks to using top banks and that he subjects himself to possible career risk if he uses midsize banks, whose demise would not be so assiduously fought by federal officials.

Buying the top name helps avoid career risk.

He hears about possible "haircuts" on the value of deposits to help the FDIC meet its costs if a bank does need federal assistance. And he decides, "If my account is subject to a 10% haircut, my job my be subject to a 100% haircut. So I'll stick with the strongest."

The corporate treasurer also sees that some banks may have a tough time meeting loan demands in these days of stiff bank examinations and stricter capital requirements. So, to avoid career risk, he forms a relationship with a top bank, thereby making the strong stronger at the expense of the rest of the industry.

One cannot blame the financial professional for trying to avoid career risk. But it is one more factor that bankers must understand as they look at the future of the industry and try to determine where their own organization fits in. □

government now stands behind the bank insurance fund, as well as it does the savings association insurance fund, so that's not a worry whatsoever for depositors. The real worry is for taxpayers.

Let me go back and say that when I was the deputy chief economist at the Federal Home Loan Bank Board, a colleague of mine, Jim Barth, and I first estimated in 1985 that the FSLIC was insolvent. We stated this. It was denied by the then-chairman of the Federal Home Loan Bank Board, the chairman of the Banking committee in the Senate denied it, the ranking Republican member denied it. And I'm very used to public officials like Mr. Seidman saying the sorts of things that they're saying.

The fact of the matter is that when we started writing our papers on the bank insurance fund in 1988, the Federal Deposit Insurance Corporation fund was $18 billion. Your [new report mentioned] that it is $13 billion. Well, Mr. Seidman and his deputy announced recently that it's likely to go down another $2 billion this year, down to $11 billion. That's a decline of 40% since I started doing my work, and I think it reflects the kind of deterioration that I've been talking about the entire time.

To say that these banks "are all insolvent is just preposterous."
L. William Seidman
Chairman, FDIC

KOPPEL: Mr. Seidman, when I made reference to confidence being almost as important a commodity as money to banks, what I was really suggesting is that a man in your position almost has a fiduciary responsibility to the public to give the impression that, you know, things are okay with the banks, because if you do anything other than that, you may create such a crisis of confidence that the thought will become father to the deed.

SEIDMAN: No, I think we have a fiduciary responsibility to tell the truth as we know it. This is an open system that we live in. Thousands of people are looking at these institutions, and no one is going to be fooled for long. So our job is to tell the people the truth, and that's what we try to do.

Now, we are very careful not to try to create an atmosphere of panic, obviously, but we tell the truth as we see it, and I've said many times when I think this fund is no longer able to handle banks that fail, I'll be the first one to go to Congress and say we need more money.

KOPPEL: And do you think that is likely to happen? You suggested in your testimony before Congress today that this was not the best of all systems.

SEIDMAN: Well, I think that we take too much risk, we as taxpayers take too much risk. I think our deposit insurance system is too expensive – the S&L debacle proves that – and I think we need to make some changes. And I think we ought to do that promptly. But at the present time, our fund can handle what we see ahead as the likely failures. So I just want to make it very clear that when we can't handle that, we'll let you know.

KOPPEL: You are as familiar as anyone with the banks that Mr. Brumbaugh ticked off before. I don't recall all of them, but we're talking about the half-dozen biggest banks in the United States. You're telling me they're in no trouble.

SEIDMAN: Well, I'm telling you that when those banks are in trouble, it will be reported. It will be reported by their management, by their auditors, by the regulators and by the marketplace. And obviously, bank stocks are down, so clearly they're not doing as well as they were. But to say that they're all insolvent is just preposterous.

KOPPEL: Well, I don't think Mr. Brumbaugh said they were all insolvent, but you were suggesting, Mr. Brumbaugh, that they might very soon be?

BRUMBAUGH: Well, I think they reflect the deterioration in the worst part of the banking community at the moment, and I think that they parallel the deterioration in those institutions which are at or near insolvency. Their net worth has declined precipitously and dramatically over the last 10 years. Their earnings are anemic and worse.

They're paying dividends out of net worth, which reduces the buffer to the FDIC. They have huge portfolios of very high-risk assets, primarily commercial real estate, large components of

"Accounting techniques in this country cover up true insolvency."
R. Dan Brumbaugh
Stanford University

construction loans, loans that are very similar to junk bonds in the form of loans to highly leveraged transactions for takeovers, and they have LDC debt which as yet has not been reserved for or written off nearly adequately.

KOPPEL: LDC, you mean less developed countries?

BRUMBAUGH: Right, loans to lesser developed countries. As a result of that, their net worth is greatly depleted. And let me tell you why, contrary to what Mr. Seidman indicates, why thousands of institutions can be in trouble with a lot of people watching. It's because the accounting method that we use in this country covers up true market insolvency when these institutions get to the end of the rope, and that's exactly what happened with the savings and loan crisis, and it's happening all over again with commercial banks.

In my opinion, the total losses that are embedded in those banks that are insolvent, which I think may very well include some of those that I mentioned earlier, are so great that the bank insurance fund is not going to be able to handle it, and taxpayer dollars are going to be necessary.

SEIDMAN: I think Mr. Brumbaugh is bobbing and weaving here a little bit. If he's saying

See next page

Complying with the Treasury Department's amendments to the Bank Secrecy Act is no small feat. It's not easy meeting the new rules on maintaining detailed identification records when a customer purchases financial instruments such as cashier's checks and money orders. And failing to do so can mean severe financial penalties. Which is something no bank can afford.

They're both very smart reasons for using the T4500 Official Items Disburser. Its exclusive software prompts each employee to log in all the required information before allowing a check to be issued (so you won't have to worry about employee mistakes). And since our document design is virtually tamper-proof, you also won't have to worry about checks being altered once they leave the bank. If you're still working without a financial safety net, call Standard Register at 1-800-543-9598. Because what's hanging in the balance is too important to ignore.

Continued from *page 6*

that these banks are having some problems now with Latin American loans, with real estate loans and so forth, the answer is clearly: they are. And clearly the market has reflected it.

Many of these banks are 50% of what they were some time ago. So no one is saying that there aren't some banks that are having some problems. That's an entirely different thing from saying that they're all insolvent or they're all at or near insolvency and that they're going to go broke and cause a tremendous problem in the system. That simply isn't the case at the moment.

I think I would agree with him if he says there's some problems there, but to jump from that to the conclusion that everything is going to fall apart and it's going to cost the taxpayer a huge amount of money. . . . I think the evidence is not there for that.

KOPPEL: Let me ask you what may be, as much as anything else, a psychological question. If a Chase Manhattan, if a Bank of America goes broke, the impact on the rest of the banking community is going to be devastating, isn't it?

SEIDMAN: Well, it'll have to be handled by our safety net. That's why we have always, when large institutions have failed, backed them up so that they didn't have an effect on the whole stability of the system. We would do the same with any large institution that failed.

KOPPEL: But today, in your testimony before the Senate, you were suggesting you really didn't like the idea of every investor being able to have a number of accounts that are all insured for up to $100,000 each. You're suggesting each depositor, $100,000, that's it. So basically, you're talking about removing that safety net.

SEIDMAN: Well, no, I'm simply drawing the safety net in so it's a less expensive net but still provides stability.

KOPPEL: Well, if I'm up there on that tightrope, and you're making that net smaller and smaller; no matter how you describe it, I think you're pulling the net away from me. If I've got $500,000 to deposit and you're only willing to insure $100,000 of that, that's a lot of net gone away.

"Many of these banks are 50% of what they were some time ago."
L. William Seidman
Chairman, FDIC

SEIDMAN: I suspect you put – well, first place, anything like that would be done over time, but secondly, you would probably, if you felt concerned, put the money in government bonds or something else if you didn't feel your bank was safe. I don't think much of that will take place, but the important thing to remember is no dramatic changes are going to be made. Anything that will be done will be done over a period where people can adjust to it.

BRUMBAUGH: See, that's the problem. The dramatic changes are already occurring in the dramatic deterioration at the banks. The major banks that I talked about are at or near insolvency. In addition to that, there are 460 banks with $42 billion that have had losses in each year since 1986. They have $42 billion in assets. Those institutions are going to exhaust their net worth on an accounting basis this year. There are another $30 billion in assets at institutions that have had negative net income for the last two years.

I'm not bobbing and weaving at all. I'm saying flat out that the $11 billion that are going to be left in the deposit insurance fund is inadequate to close all insolvent banks and that taxpayer dollars are going to be needed to do it, because of these sorts of things. And by the way, I should state that most economists do not believe that if these banks have to be closed, the repercussions are going to be anywhere near as significant as Mr. Seidman states.

In fact, it's part of what I think is a cover-up when Mr. Seidman says, in essence, that we're going to keep big banks open even if they're insolvent.

"460 banks with $42 billion . . . have had losses in each year since 1986."
R. Dan Brumbaugh
Stanford University

KOPPEL: Mr. Seidman.

SEIDMAN: Well, it's hard to begin, because we're off on a wholly different argument now. But what I am saying is that we will maintain the stability in the banking system and we will do what is necessary to see that that safety is in our system.

KOPPEL: The one word that has not been addressed yet, and it's one of those inflammatory words that I think you need to address, is cover-up.

SEIDMAN: Well, I don't like to get into calling people liars, cover-ups, sensationalists and so forth. I don't think that helps this argument. If Mr. Brumbaugh thinks that I am dishonest, he has a right to that opinion. I think that it is unwise to argue on those grounds. It's typical professorial-type attack. And I just think it doesn't help the arguments at all.

BRUMBAUGH: Let me state in Mr. Seidman's behalf that I think he's a very honorable man, and to the contrary, the responsibility for the banks is shared by himself and a number of other agencies. And I think that, for example, by comparison to the thrift regulators who would never come in a situation like this and debate their critics, Mr. Seidman shows real courage to do so. And I do not attack his personal honesty whatsoever.

It's not a cover-up in the sense of Watergate. It's a cover-up in the sense that, for example, the accounting techniques in this country cover up true insolvency when it occurs. It's being done systematically in the thrifts and it's being done now. It's not a personal attack on Mr. Seidman at all, it's part of the system failing us. □

COMMUNITY RELATIONS

BankAmerica Reaches Out With Fixed-Rate Mortgages

By YVETTE D. KANTROW

NEW YORK – Bank of America expanded its affordable home lending program last week to include fixed-rate loans, thanks to an agreement reached with the Federal National Mortgage Association.

The bank's program is considered unusual because it targets borrowers who live in designated low-income tracts and ZIP code areas, thereby serving to revitalize low-income communities. Under the latest initiative, the bank will sell to Fannie Mae up to $250 million in fixed-rate loans made to citizens in low-income communities.

In expanding on its adjustable-rate loan program, the unit of San Francisco-based BankAmerica Corp. is underscoring the importance it places on compliance with the Community Reinvestment Act.

"Mergermania [in California] is generating heightened interest in fulfilling CRA requirements," said Robert L. Gnaidza, a member of the San Francisco-based Greenlining Coalition, one of California's principal CRA advocacy groups. Community groups have mounted vigorous challenges to bank merger applications across the country on the grounds that the institutions failed to comply with the law.

"A number of lenders are also recognizing that California is a gold mine, but a multicultural gold mine," Mr. Gnaidza said.

Moves by Other Big Lenders

Security Pacific Corp., Los Angeles, said in the spring it will spend $2.4 billion on "community involvement" activities over the next 10 years – the largest dollar commitment to a CRA program to date. Its move was quickly followed by a $1 billion pledge from Wells Fargo Bank, San Francisco.

Bank of America has been criticized because it has not set a long-term CRA investment goal. But its Neighborhood Advantage lending program, which was rolled out in May, has won praise from community groups for targeting areas by ZIP code and census tract.

"It's a good idea – it's a very good idea," Mr. Gnaidza said.

Importance of Fixed-Rate Mortgages

Many other low-income lending efforts are not aimed at specific communities, explained Mr. Gnaidza, and, as a result, borrowers tend to be at the higher end of the low-income bracket. Fixed-rate mortgages are considered important for borrowers who want the assurance that their monthly loan payment will not change.

The $250 million program represents Fannie Mae's largest single commitment for lower-income areas in the country.

"It's the first geographically targeted lending program in the West, and that does make it unique," said Tom Marder, a spokesman for Fannie Mae. "We're happy that we helped them do the deal." □

Ahmanson Originations Up 42%

Thrift Defies Market Trends with Home Loan Blitz

By PHIL ROOSEVELT

NEW YORK — The thrift industry may be pulling back from the mortgage market, but don't tell H.F. Ahmanson & Co.

The Los Angeles-based parent of Home Savings of America, the nation's largest thrift, saw its home mortgage originations hit $6.9 billion in the first half of 1990 – up an eye-popping 42% from the year-earlier period.

Leader in Mortgages

The total made Ahmanson the largest originator in the country, according to *Inside Mortgage Finance*, a newsletter. Fleet/Norstar Financial Group was second, followed by Great Western Financial Corp.

Citicorp, the top mortgage maker after all of 1989, slid to No. 4 in the first six months of this year, according to an estimate by the newsletter. Citicorp, which discloses originations only at yearend, declined to comment.

Ahmanson's gain, up from third place in 1989, comes as the thrift industry as whole has been losing ground in mortgages. Insolvent and capital-short thrifts have been pulling back from the market and commercial banks have been storming in.

Thrifts' originations plunged 19% in the first quarter while banks' volume rose 44%, according to the most recent data from the Department of Housing and Urban Development.

Ahmanson's first-half gain is especially notable because it comes as the housing market in California and elsewhere is slowing. Most major thrifts in California reported declines for the period.

No-Points Lending

Richard H. Deihl, chairman and chief executive of Ahmanson, attributed the gain to hefty deposit increases, a big push to win homeowner refinancings, and the popularity of a new no-points loan.

"I really don't care about bragging rights," he said of the ranking. "But I do think that if we have money to loan, we should loan it."

Heavy marketing of the no-points loan has raised eyebrows among rivals, who claim the lender will prove unprofitable if borrowers pay off their loans early.

But Ahmanson maintains it is well protected: borrowers pay a slightly higher interest rate for the loan and face a penalty of 1.5% if they repay within three years.

"We've heard people say we're crazy and shouldn't be doing the loan," Mr. Deihl said. "But that's primarily because they haven't looked at it carefully."

Top Mortgage Originators
Dollars in billions

	Last '90	Prior '90	'89 mark
Home Savings of America	$6.9	$11.0	3
Fleet/Norstar Financial Group	$6.7	$8.7	4
Great Western Financial Corp.	$5.5	$11.1	2
Citicorp	$5.0*	$12.3	1
BankAmerica Corp.	$3.7	$4.4	9

*Estimate
Originations are defined as 1- to 4-family residential loans closed in lender's name, excluding wholesale purchases.
Source: Inside Mortgage Finance

Rising Deposits

Meanwhile, Ahmanson continues to be a big prompter of refinancings, targeting people who want to convert their home equity into cash. That reduces the company's dependency on home sales.

Some mortgage executives say that such refinancings are risky loans, particularly as home-price appreciation slows. Mr. Deihl, however, says Ahmanson has found refinancings to be of similar credit quality to loans for home purchases.

"We think we understand what is involved in safe lending," he said.

The company clearly has been helped by rising deposits. In what Mr. Deihl calls a flight to quality by depositors jittery about the thrift industry, Ahmanson's deposits jumped by a record $2.4 billion in the first half.

Beverly Hills-based Great Western saw its volume fall to $5.5 billion in the first six months of this year. The company said the volume drop reflects efforts to ensure credit quality as the market cools.

"In this market, we're not that concerned about being No. 1 in originations volume," said E.S. Lyons, Great Western's manager of mortgage banking. □

RTC Checking for Overcharges

NEW YORK — The Resolution Trust Corp. is checking for possible overcharges in failed thrifts' adjustable-rate mortgage loans estimated to have cost borrowers billions of dollars, RTC Chairman L. William Seidman said in a July 31 letter to Senate Banking Committee Chairman Donald Riegle, D-Mich.

"We have asked our regional offices to investigate the issue," Mr. Seidman wrote.

"To the extent that errors in the calculation of interest rates on adjustable-rate mortgages are an industrywide problem, errors are bound to crop up at RTC thrifts."

The letter from Mr. Seidman came in response to Mr. Riegle's request for estimate on the RTC's liability for loan overcharges.

Consultant Sparked Study

John Geddes, an Indiana-based computer consultant whose study of adjustable loans prompted the action, has estimated that borrowers were overcharged $8 billion on loans taken out at thrifts since 1979.

Appraisers Fighting Back Against New Fed Restrictions

By LINDA CORMAN

WASHINGTON — The appraisal industry, caught off guard by a successful campaign by bankers and real estate agents to influence Congress, is mounting real estate appraisals, has counterattacked – apparently effectively.

The counterattack, deploying the well-connected Washington law firm Manatt, Phelps & Phillips, has prompted the Federal Reserve Board to rethink rules it issued last month dictating when certified appraisers must be used in real estate transactions.

Other agencies mandated to issue rules for the same purpose have also been hesitating over their decisions, and a congressional subcommittee has been called on-again, off-again congressional hearings to reopen the issue.

Another volley in the counterattack was launched last Tuesday when Manatt, Phelps, on behalf of the American Institute of Real Estate Appraisers and the Society of Real Estate Appraisers, filed a petition asking that the Fed reconsider its rules.

Prodding the Fed

To guard against banks' making overly risky real estate loans, the 1989 thrift reform bill mandated that the Fed and other bank regulators revise their rules on the use of appraisers in real estate transactions.

In its decision, the Fed set $100,000 as the cutoff or "de minimis" point for real estate transactions; for bigger ones, certified appraisers.

Certified appraisers must meet federally mandated educational and testing requirements, while licensed appraisers must comply with varying, less demanding standards set by individual states.

Robert J. Kabel, a partner in Manatt, Phelps, said that since the Fed issued its final rules he and colleagues have been on the hustings encouraging other agencies not to follow the Fed's lead, and prodding the Fed to reconsider.

Proponents and opponents say there are signs the appraisers are making a dent. "We think active reconsideration is going on," said Mr. Kabel.

"It [the de minimis level] is in trouble across the board," concurred Kenneth A. Guenther, executive vice president of the Independent Bankers Association of America.

Battling the Minimum Value

The appraisal industry has been particularly taken aback by the $100,000 cutoff point, since in a draft proposal issued in February the Fed, along with several other agencies, set $15,000 as the de minimis value.

"They came out with final regulations and didn't give us a chance to comment on them," said A. Scruggs Love, president of the real estate appraisers institute. "What is happening is original- ly we thought were very good recommendations. We feel they succumbed to the pressure of the community banks."

"It's the wrong message to give to community bankers . . . that qualified appraisers are not important. That was not the intent of Congress. Their action cut the legs out from under the

Rep. Doug Barnard
Democrat of Georgia

appraisal reform."

As grounds for requesting a review, the appraisers are arguing that there was no provision for a de minimis standard in the Financial Institutions Reform, Recovery, and Enforcement Act. "We concurred with the $15,000 [in the draft proposal] because it was clearly de minimis," said Mr. Kabel.

House Hearing Postponed

Since the lobbyists swung into reaction, a subcommittee of the House Government Operations Committee had planned a hearing to review the rules.

That hearing of the subcommittee on commerce, consumer, and monetary affairs was postponed indefinitely because subcommittee chairman Doug Barnard Jr., Ga., was summoned to Fed was taking the committee's concerns to heart, said Jeffrey A. Marer, counsel for the subcommittee.

But just in case the committee's qualms slip the Fed's mind, Mr. Barnard last week planned to send the second in a series of letters to Fed Chairman Alan Greenspan appealing for a review of the agency's rules.

Kenneth A. Guenther
IBAA

The first letter, sent in late June after the Fed approved its final rules, said the Fed's rules did not fulfill Congress' intent in calling for new appraisal guidelines in its thrift bailout bill.

"If all the bank regulatory agencies adopt the Federal Reserve Board's rules, this would mean that millions of residential mortgage loan transactions will not be accompanied by any appraisal and the vast majority of all mortgage transactions will be appraised by licensed and not by certified appraisers," the letter said.

"It was never the intent of Congress that potentially half of all residential mortgage transactions be exempt from the [appraisal] requirements" of the thrift bailout law, the letter said.

The IBAA claims the subcommittee decided to revisit the issue after being prodded by the appraisers. Mr. Tassey, however, says Mr. Barnard made the decision independent of the appraisal lobby.

The IBAA objects to the requirements that certified appraisers be required for most real estate transactions. The association claims certified appraisers are too costly and are not available in many rural areas.

A Disagreement on Standards

The appraisal industry's lobbying has further thrown into question the final rules of all the regulators, many of which have issued their rules following the Fed's late June action.

The Federal Deposit Insurance Corp. and the Resolution Trust Corp. decided on a final $100,000 de minimis standard for residential transactions. The National Credit Union Association has come in at $50,000. The Office of Thrift Supervision favors a $15,000 limit, but in its submission of approval to the Treasury, it has left the de minimis standard blank.

An OTS spokesman said so many numbers are being batted around because agencies that the OTS wanted to signal its willingness to negotiate with the rest to come up with a common standard. The Office of the Comptroller of the Currency is expected to follow the Fed's lead.

Observers are not predicting what the regulators will finally agree upon or whether they will agree.

Never a shrinking violet, Manatt, Phelps may follow up its petition to the Fed with similar appeals to the other agencies, said Mr. Kabel. □

THE WEEK *ahead*

MONDAY, AUGUST 6

James Fail, who purchased 15 insolvent savings and loans from the government with little of his own money, continues to be the subject of hearings led by Sen. Howard Metzenbaum. 202-224-5225.

Productivity and cost figures for the second quarter are released by the Labor Department.

Congress officially is in recess until just after Labor Day.

TUESDAY, AUGUST 7

The House Banking Committee holds a hearing at the State Capitol in Sacramento, Calif., on deposit insurance coverage for plans that operate under section 457 of the tax code. 202-225-4247.

The National Credit Union Administration releases its budget plans for fiscal 1991. 202-682-9650.

Consumer credit figures for June are released by the Federal Reserve Board.

WEDNESDAY, AUGUST 8

The Federal Reserve Board releases the beige book, the Fed staff's assessment of the economy and monetary policy. 202-452-3000.

The House Banking Committee holds a hearing on real estate settlements and procedures, focusing on computerized loan origination systems. 202-225-4247.

Treasury Secretary Nicholas F. Brady addresses the National Press Club in a luncheon speech. 202-662-7500.

THURSDAY, AUGUST 9

Donald Trump's troubled real estate empire – and banks that lend to it – are scrutinized in a hearing before the House Banking Committee. Comptroller of the Currency Robert L. Clarke, Federal Reserve Board Chairman Alan Greenspan, and executives from major New York banks are testifying. 202-225-4247.

FRIDAY, AUGUST 10

Producer price figures for July are announced by the Labor Department.

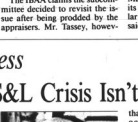
Garn Insists S&L Crisis Isn't His Fault



Sen. Jake Garn
Republican of Utah

Sen. Jake Garn, R-Utah, thinks he has taken a bum rap for the sweeping financial-reform legislation known as the Garn-St Germain Act, shepherded through Congress in 1982 by him and former House Banking Committee Chairman Fernand St Germain.

Last week, while questioning Federal Deposit Insurance Corp. Chairman L. William Seidman on banking issues, Sen. Garn washed his hands of the thrift crisis.

"If I would have known what was going to happen, I would have not . . . put my name on the bill," Sen. Garn told Mr. Seidman.

The Garn-St Germain Act changed the industry radically by giving thrifts powers to invest up to 40% of their assets in non-residential mortgage loans, and offer money-market funds free of an interest rate ceiling, insured up to $100,000.

The Utah senator is known for bravery as well as good political connections. He was helped M. Danny Wall become chairman of the Federal Home Loan Bank Board and he traveled on the space shuttle.

Sen. Garn claimed federal laws have been used as the "scapegoat" for the thrift crisis.

"It is clear that federal law was not the [cause] of the problem," Sen. Garn said. "Deregulation is . . . the major cause of the problem."

Blame It on Regulators. Though the debate continues to rage over whether there is a credit crunch, Sen. Chrisopher Dodd, D-Conn., needs no convincing that a serious contraction has occurred in his state and throughout New England.

Much of the problem can be traced to "overreaction by the regulators to the disastrous regulatory failure in the S&L crisis," he said last month.

Sen. Dodd said July 16 that he has been in close touch with the regulator of national banks, Comptroller of the Currency Robert L. Clarke, in recent months and has seen positive signs that the regulatory crackdown is easing.

"This change must be communicated to the examiners in the trenches who have to make decisions on a day-to-day basis," he emphasized.

"If they properly understand their role in helping New England readjust – and if Fed Chairman Greenspan follows through on his commitment to ease monetary policy to bring down interest rates – then Connecticut, New England, and other areas of the country that are experiencing similar problems will come through them more rapidly and with renewed vigor." — Bill Atkinson

Taking High Road on Asset Sales Costs RTC Time, Money

Continued from page 1

sets. In exchange, they often got protection from further losses on the assets, management fees, and cash incentives for quick sales.

Not one of the 207 rescues completed by the RTC as of June 30 was structured in this way.

The reason, experts say, is that the sophisticated asset transfer techniques got a horrible reputation in Congress because they were misused by the defunct Federal Home Loan Bank Board in Texas thrift rescues.

Sen. Howard Metzenbaum, the Ohio Democrat, has made national headlines in recent weeks with his investigation of Bluebonnet Savings Bank. The Dallas thrift was formed in a 1988 Bank Board rescue.

The Bank Board's extravagant assistance package made Bluebonnet the most profitable thrift in the nation last year, and was characterized by Sen. Metzenbaum as an "abomination."

Profit Incentive Seen Needed

This, then, is the heart of the RTC's problem: If it wants thrift acquirers to take all the bad assets along with the good, the agency must provide a substantial profit incentive that compensates acquirers for the risk they assume.

Ironically, L. William Seidman addressed this issue in 1988.

The RTC could sell the bad assets at deep discounts – say, 40 cents on the dollar – or it could provide some sort of guarantees on the assets. Either way, experts say, Congress will howl and the RTC will suffer.

"The RTC does not want to come in for the same criticism being piled on the Bank Board, whose deals look too generous," said Richard Fitzgerald, the former chief counsel for the Office of the comptroller of the currency.

It is sad, Mr. Fitzgerald said, because "keeping the bad assets really does compound the RTC's problems and eventually leads to higher costs."

Tradeoff Slows Sales

But now that the agency is headed down the road of maximizing public acceptance at the expense of maximizing results, experts say, it is hard to see how the agency can significantly accelerate the sale of bad assets.

"With the kind of scrutiny the RTC is under, the agency can't afford to take shortcuts," said Gene McQuown, Southwest regional director for J.E. Robert Cos. "They would just get brutalized."

In Dallas, RTC senior contracts specialist Janie Thomas said that it may take up to 240 days to select a manager for a pool of problem assets left over from a rescue.

Before the agency can negotiate a contract, she said, it first must inventory and appraise the assets. At institutions where most employees are gone and files are in cardboard boxes, the agency is incapable of performing the reviews itself and so must hire private contractors to do the work. The evaluations can take up to 120 days, she said.

An additional 120 days usually will pass while the asset management contracts are put out for bid, Ms. Thomas said. "It's a long way through it right now, making good, defensible selections of contractors who meet the highest standards of fitness and integrity. But we will perfect the process."

The sophisticated asset transfer techniques got a horrible reputation in Congress because they were misused by the Bank Board in Texas thrift rescues.

Lawmakers Blamed

If lawmakers don't like the looming RTC liquidity crisis brought about by the retention of bad assets, if they don't like the idea of locking up tens of billions of dollars worth of assets for months while the RTC finds perfectly defensible ways of letting asset management contracts, well then lawmakers can thank themselves, said Richard Knepper, Dallas-based chairman of the financial institutions section at Jones, Day, Reavis & Pogue.

"The RTC can't make a move without somebody in Congress taking a shot at them," he said. "It's like being in a giant fishbowl where people not only look at you, but they line up along the sides, take harpoons, and start throwing them at you."

That is primarily why $37 billion of problem assets are sitting unsold, observers say, and it is one reason why the cost of the thrift cleanup is rising.

"The guts of these supposedly resolved institutions are still sitting out there," said Thomas Brooks, the former general counsel for the FDIC. "That is the core problem, and it has not been resolved." □

Both Parties Hope to Capitalize on Fallout from S&L Crisis

By MICHAEL GELB
Reuters

WASHINGTON — Disputes over who is most to blame for the thrift crisis are making their way into political discourse, with consultants and leaders in both parties taking offensive as well as defensive positions.

"The crisis was caused by Democrats, originally under Jimmy Carter's administration, and was aggravated by the Democratic leaders in Congress who were in bed, politically, with the crooked S&L operators," Republican party spokesman Charles Black said in a recent interview.

The Republicans followed that broadside with a newspaper advertisement picturing former Democratic House leaders Jim Wright and Tony Coelho, who had close ties to savings and loan industry officials. The ad denounced them as "the guys who let the S&L problem explode into a $325 billion national crisis."

Taking Aim at Bush

But Democrats may make hay from a possible government lawsuit against President Bush's son Neil for alleged misconduct when he was on the board of a failed Colorado thrift.

Democrats also say former President Reagan, acting on the recommendations of a task force chaired by then Vice President Bush, created the problem by easing government regulation of the thrift industry.

Democratic leaders scoff at the efforts to blame them.

"I hope this is the last time we see this kind of garbage," Massachusetts Gov. Michael Dukakis, the 1988 Democratic presidential nominee, said of the Republican assaults. "We had enough of it in 1988," he added, referring to a campaign widely viewed as the nastiest in memory.

Political analysts say the panic may be premature. They see little evidence that the thrift crisis will affect the November elections, in which all 435 House seats and one-third of the 100 Senate seats are at stake.

While taxpayers will ultimately shoulder the cost of the ballout, they have not felt any direct pain and it is hard to point to a single culprit.

Public Ire Rising

Bill Lacy, a consultant who once ran Ronald Reagan's White House political office, said he senses rising public anger over the fiasco. But, he added, "in the context of all the other problems, it's not at the top of the list."

Mr. Lacy said recent polls in Iowa, Nebraska, and Idaho, where he is advising Republican candidates, show the thrift crisis lagging behind the budget deficit, crime, and drug abuse in voters' minds.

While taxpayers will ultimately shoulder the cost of the bailout – estimated as high as $500 billion – they have not felt any direct pain, and it is hard to point to a single culprit.

So Far, Few Are Hurting

"The public is ticked off, but you don't have large numbers of people whose money is tied up or been taken away. Nobody has had to write out a check for $2,000 to pay for this," said independent political analyst Norman Ornstein.

He said the federal government's pledge to protect deposits helped create the crisis by eliminating the risks from speculative investments made by poor or dishonest S&L managers, but it also limits the political costs.

"Deposit insurance was a license to steal, but the victims were protected," he added.

Many Guilty Parties

Mr. Lacy said the problem is so complicated – attributable to such diverse factors as fraud, bad management, and unfavorable economic trends – that voters don't know whom to blame.

The President's party generally gets the blame for what happens on his watch.

But other analysts say voters will ultimately lump the thrift crisis – which has greatly added to the federal budget deficit – with overall concern about the economy and take their wrath out at the polls.

Early indications are that this would be bad for the Republicans, because the President's party generally gets the blame for all that happens on his watch.

"Historically, major economic scandals, even if caused by both parties, will be blamed on the White House," said, Republican analyst Kevin Phillips, the author of a recent book charging that Reagan administration policies further enriched the wealthy.

One recent opinion survey supported Mr. Phillips' theory that the President's party will take the heat. In a *Washington Post*-ABC News poll, 49% said either the Bush or the Reagan administration deserved most of the blame for the crisis. Another 10% blamed Republicans in Congress, and just 12% pointed the finger at congressional Democrats. □

Brazil Is Criticized on Sale Of Gold in Parallel Market

By BILL HIERONYMUS
Reuters

SAO PAULO, Brazil — Brazil's central bank is financing capital flight by selling its gold reserves to artificially reduce parallel market rates for dollars, Citicorp's chairman and chief executive officer, John S. Reed, said here last week.

"They, the Central Bank, could continue for a good time" in selling gold, Ricardo Eichenwald, director of Sao Paulo dealer Ourinvest, said. Ourinvest, which has a data-sharing pact with Gold Fields Mineral Services Ltd., estimates that the central bank has sold between 140 and 150 metric tons of gold this year.

This estimate is in line with one provided on July 10 by Emilio Garofalo, director of transactions with foreign exchange reserves for the central bank.

130 Million Tons Traded

From February through June, the central bank has bought 130 tons of gold domestically and resold it internationally, Mr. Garofalo said last month.

Brazil's central bank has had a lot of arbitrage in gold under the administration of President Fernando Collor de Mello because of heavy buying last year by Brazilians, Mr. Garofalo said.

"These people now are selling off their gold" for other assets such as cruzeiros, futures contracts in foreign exchange, and other investments, he said.

The effect of the active role of the central bank has been to dampen the quotations in the technically illegal parallel market for dollars, also known locally by the single English word "black."

Basis for Pricing

The gold market and the illegal parallel market for dollars are interrelated because international gold prices are translated into local currency using the quotations of the informal market.

"The comment in the market is that there will be an unification of the rates," the director of the foreign exchange department for a larger Brazilian bank told Reuters.

The banker, who asked not to be identified, agreed with Reed's assertion that forcing the evel of the parallel dollar down finances capital flight. "At 80 cruzeiros, the dollar is very cheap" for someone wanting to buy them and deposit them abroad, he said.

... *by country*

WEST GERMANY

First-half partial group operating profits rose 17.8% at **Deutsche Bank** AG to $1.38 billion, the West German bank reported last week.

The results include for the first time profits from Morgan Grenfell, the British investment bank acquired by Deutsche Bank last year, but exclude trading profits for Deutsche Bank's own account.

Like other West German banks, Deutsche Bank releases net earnings only for the full year. Results were broadly in line with a 17.5% rise in partial first half operating earnings at **Commerzbank** AG, and nearly double an 8.9% increase at **Dresdner Bank** AG.

The bank, West Germany's largest $202.6 billion in assets as of the end of last year, said that its business continued to expand but that tight interest margins were cutting into earnings.

Parent bank operating profits, bolstered by international earnings, also rose 17.8%, to $930 million, Deutsche Bank reported. — **James R. Kraus**

THE PHILIPPINES

The U.S. Export-Import Bank approved an initial loan of $170 million to the Philippines for earthquake rehabilitation efforts, the finance department here said.

The money would be used to finance capital goods and services needed after the tremor, measuring 7.7 on the Richter scale, struck the country on July 16, it said in a statement.

The loan would guarantee borrowings made by the Philippine government from U.S. Commercial banks at interest rates close to those paid by the U.S. Government and carries a repayment period of 10 years, the statement added. — **Reuters**

UNITED KINGDOM

Several parties have expressed serious interest in buying British and Commonwealth Merchant Bank, the wholly owned unit of collapsed financial services group **British and Commonwealth Holdings PLC**.

The group's joint administrator told reporters that some of the interested parties were from overseas.

He said creditors had approved the administrator's sale. — **Reuters**

SWITZERLAND

The Swiss Justice Ministry has frozen bank accounts connected with a suspect in a U.S. savings and loan fraud case, a spokeswoman said Friday.

She said the case involved Tom Billman, former owner of the now-defunct Community Savings and Loan in Maryland, who is being sought by U.S. authorities.

The spokeswoman could not say how much money was involved. — **Reuters**

Iraq Retaliation Threat Called Weak

Little Effect Seen from Freeze on Payments to U.S.

Reuters

Iraq, the world's third-largest creditor nation as a result of massive wartime borrowings in the 1980s, will cause little harm to U.S. lenders with its threat to freeze payments, U.S. Treasury officials and banking experts said last week.

In apparent retaliation for President Bush's order freezing Iraqi assets and property because of the country's invasion of Kuwait, Iraq will withhold debt payments to the United States, the Qatari News Agency reported.

Treasury officials and bankers said the debt payments had been routinely missed by Iraq for some time. Sources have identified Iraqi debts of about $800 million to U.S. commercial banks and government agencies.

Little Impact Expected

The Iraqi holdout is expected to have little impact on the cash flow of U.S. government lending agencies, a Treasury official said. And U.S. commercial banks, with cumulative outstanding loans to Iraq of $575 million as of March 1990, have not been paid full interest or principal in years, a banker said.

> **"I don't think this freeze is that big a deal, given Iraq has not been servicing much."**
>
> **Sharif Ghalib**
> *Institute for International Finance*

"I don't think this freeze is that big a deal, given Iraq has not been servicing much," said Sharif Ghalib, the director of the Africa/Middle East department at the Institute for International Finance. The Washington-based institute, created and largely funded by international commercial banks, tracks lending to countries.

The Treasury official said Iraq owes $200 million to the U.S. Export/Import Bank and that $22 million is owed in the form of agricultural loans to other U.S. government agencies.

Loans Not Current

Iraq has largely ignored servicing those loans, the official said.

The bulk of Iraq's debt, estimated at between $72 billion and $80 billion and placing it behind the United States and Brazil on the list of the world's biggest debtors, is owed to Kuwait and Saudi Arabia.

The Treasury official said about $42 billion is owed to Saudi Arabia and Kuwait alone, and it was expected that much, if not all, would not be repaid – even before Thursday's military developments in the Gulf. Another $8 billion to $9 billion is owed to eastern bloc countries, primarily the Soviet Union, according to the Treasury official.

Most Debt War-Related

"The Iraqi debt to those that really expect to get repaid is only about $40 billion," the official said, noting that according to

Barclays Posts Lackluster Earnings for Half

By JAMES R. KRAUS

Barclays Bank PLC is the latest large British bank to report weak earnings as it struggled with high interest rates, lower lending margins, and increases in loan loss provisions.

Barclays, Britain's largest bank, said first-half net earnings rose 48% to $736 million. However, most of the increase in net profits came from the sale of its 32% stake in Yorkshire Bank for $321 million.

Operating income remained almost flat at $1.1 billion after being hit hard by $827 million in loan loss provisions, poor results from securities trading, and rising interest rates in Britain.

Investment Banking Down

Net profits for Barclays de Zoete Wedd, Barclays' investment banking arm, fell by a third to $77.7 million, while domestic loan loss provisions rose almost sixfold to $451 million.

Nearly $180 million in provisions were for loans to British & Commonwealth, a financial service group now being dismantled.

Barclays chairman Sir John Quinton declined to make any prediction for second-half results.

Forecast Held Difficult

"With the increasing uncertainty of the marketplace in which we operate, it is clearly unusually difficult to predict what lies ahead of us," Mr. Quinton said in a statement.

However, Mr. Quinton told analysts in London that the bank had more than enough capital to continue expanding and was contemplating an acquisition in life insurance.

"Results [at Barclays] were disappointing but no more disappointing than at the other British clearing banks. Margins are falling, loan losses are rising, and costs are not coming down," said Rodney Schwartz, a partner with Lehman Brothers International in London.

Analysts declined to predict what earnings might look like for Barclays for the second half but suggested that earnings for all British banks may deteriorate.

Earlier, other major British banks reported similarly disappointing results in the wake of sharply higher provisions against domestic loan losses.

On Thursday, Midland Bank PLC stunned analysts when it reported net first-half earnings of $16.6 million.

The results were better than the $708 million in net losses for the first half last year but still well below what analysts were expecting in light of their forecasts of more than $160 million for the full year.

Midland's poor performance followed loan loss provisions of $555 million, of which $432 million for domestic loans. The bank also announced plans to lay off 4,000 people in an effort to restore profit margins. □

HomeFed's Amazing Fall from Grace Is a Test for Adelizzi

Continued from page 1

thrift analyst.

HomeFed's rapid fall from grace seems to have stunned Mr. Adelizzi as much as industry observers.

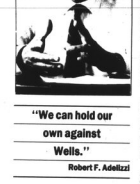
When the thrift-bailout law was passed a year ago, HomeFed was considered among the elite, well-capitalized California thrifts positioned to take advantage of the expected upheaval in the state. HomeFed was expected not only to survive the thrift crisis, but also to flourish in a consolidating market that would witness the sale of such institutions as Gibraltar Savings, Lincoln Savings and Loan Association, and Imperial Corp. of America.

'A Big Challenge'

Now Mr. Adelizzi finds himself in the position of trying to make sure he is not forced into a sale. His own job is clearly at stake. "We face a big challenge," he acknowledged in an interview.

HomeFed, which posted a $108 million second-quarter loss, is staggering under a huge burden of bad loans. Nonperforming assets soared to $708 million, or 3.7% of loans, at June 30. That is more than double the $321 million of just six months earlier.

These woes come at a time when Wells Fargo & Co., San



"We can hold our own against Wells."

Robert F. Adelizzi

Francisco, is about to vault to the top market position in San Diego.

Wells has agreed to buy 130 branches from ailing Great American Bank. When those are combined with Wells' own operations in San Diego, the Bay Area banking giant will have a dominant position in San Diego County.

California's big financial institutions have long coveted the San Diego market that Wells is pursuing. With HomeFed's market capitalization having dropped, to $200 million as against $1 billion a year ago, the company just might be a bargain.

List of Likely Suitors

Joseph A. Jolson, an analyst with Montgomery Securities, lists HomeFed's likely suitors as: Wells; Security Pacific Corp., Los Angeles; BankAmerica Corp., San Francisco; Citicorp, New York; Great Western Financial Corp., Beverly Hills; H.F. Ahmanson & Co., Los Angeles; and Golden West Financial Corp., Oakland.

HomeFed's problems could be its only real defense. "Past evidence indicates that buyers don't want to become embroiled in someone else's real estate problems," said Nancy Spady, an analyst with Morgan Stanley & Co., New York.

And for the first time, Mr. Adelizzi may have to worry about HomeFed's capital accounts. HomeFed still meets thrift capital requirements – it has 3.68% tangible, 4.46% core, and 6.84% risk-based – and a planned retooling of the loan portfolio will also help. But continued loan losses could strain that compliance, Mr. Adelizzi says: "I am fully confident that we will always meet the capital criteria."

Mr. Adelizzi is moving in the right direction to repair the damage, although some say perhaps too slowly and just maybe not far enough.

Sixty-three percent of the problem loans are out of state, although they make up only 14% of the real estate portfolio. Florida has the largest chunk of non-California problems, at $173 million or 25% of the nonperforming assets.

The second-largest chunk is in Arizona and totals $45 million. Other problems lurk in Georgia, North Carolina, Pennsylvania, and elsewhere. HomeFed has branches only in California but made the disastrous bid for geographic diversification through a handful of regional lending offices.

Some are distressed that HomeFed seemed to take so long to recognize the severity of its problems. The slumping real estate markets – especially outside California, where most of HomeFed's problems are – have been alarming bankers nationwide for months.

"Clearly they were behind the curve on the problems," said Gary Gordon, an analyst at PaineWebber Inc. "The fact that they were doing a loan review at this point is somewhat troubling."

John J. Roach, HomeFed's chief operating officer for real estate, explained that the out-of-state markets "were moving very rapidly. And we have rather shallow exposure there. We were watching individual loans."

Mr. Adelizzi is shutting down the lending outside California. Working down the nonperforming loans is HomeFed's No. 1 priority.

He is also drastically curtailing construction, commercial real estate, and land and development loans – reorienting the thrift more toward single-family home lending. Many thrifts are making this shift because of higher capital required for other types of real estate lending under the Financial Institutions Reform, Recovery, and Enforcement Act.

Lending Emphasis Is Shifted

HomeFed has traditionally done more commercial real estate and construction lending in its $14 billion real estate loan portfolio than most thrifts. Construction lending is about 11% of loans, income properties – including apartments and commercial properties – about 28% of loans. Mr. Roach says loans on single-family homes will grow from about 54% to about 65% or 75% of the portfolio.

HomeFed is also tightening its lending criteria, for example, requiring developers to put more equity into a project, says Mr. Roach. In addition, Mr. Roach is putting in place an "enhanced" early warning and follow-up system for problem credits.

HomeFed set aside the $234 million second-quarter provision, bringing the loan loss reserve to $338 million, or nearly half the level of nonperforming loans. Mr. Adelizzi will not say whether this is the last hit for HomeFed, but he does say, "We have done the best we can of estimating adequate reserve levels."

Some analysts are not so sure. "We see no concrete reason to believe that current loss reserves are sufficient," said Mr. Hemel, who is with First Boston Corp.

Mr. Adelizzi has experience in working down problem loans, although some of it may be a little dusty. "I started in this business 28 years ago at HomeFed, working on problem assets," the 55-year-old CEO said.

The former Marine captain and Dartmouth football star has always been active in the industry and a respected executive.

"He is an outstanding manager," said HomeFed director Owen W. Strange, partner at the Los Angeles law firm of Booth, Mitchell & Strange. Neither Mr. Strange nor the other directors would discuss HomeFed's difficulties. Mr. Strange cited several shareholder lawsuits as the reason.

'Pragmatic Guy'

Colleagues characterize Adelizzi as someone who deals with the realities of the business world. "He is a very pragmatic guy," said Robert B. Thompson, president of Western Federal Savings and Loan Association, Marina del Rey, who was on the board of the California League of Savings Institutions with Mr. Adelizzi.

And Mr. Adelizzi is used to having dirt under his fingernails. The son of a dentist in the blue-collar Italian neighborhood of south Philadelphia, he saved money for school by working as a brick mason's helper, carrying hod and cleaning up.

HomeFed's management and Mr. Adelizzi have a lot of personal currency. First Boston's Mr. Hemel added a highly unusual "personal note" to his rather damning report on HomeFed. "We should let our readers know that on a personal basis, we like the management of HomeFed tremendously and that we want the company to both survive and succeed."

'We Can Hold Our Own'

Mr. Adelizzi professes not to be overly concerned about the new threat from Wells entry in the San Diego markets. "We can hold our own against Wells," says the CEO. The man charged with reigning HomeFed's No. 1 market share is 47-year-old James E. Stutz, chief operating officer of consumer banking.

Mr. Stutz does not anticipate a big change in marketing strategy and does not want to compete with Wells or anyone on price. He says HomeFed will spend an undisclosed additional amount on marketing next year and will aim to continue to provide better service than Wells.

But PaineWebber's Mr. Gordon says HomeFed may have to rein in expenses and shrink its statewide reach if it expects to remain a competitor. "Going forward they may have to downsize and shrink corporate expenses. They should protect and build market share where they are strong and pull out of areas where they are weak." This will be even more important as HomeFed redirects lending to less risky – and less profitable – home mortgage loans.

Mr. Adelizzi likens the thrift industry's situation to his days in the Marine Corps. During the 11th week of a 12-week training program, the officer in charge was ordered to diminish his troop's ranks by 25%. The officer instructed the young Marines to march until a quarter of them collapsed. "It was survival of the fittest. And that is the way I look at this [savings and loan bailout] system. It is a forced march."

If Mr. Adelizzi and Home Fed survive this march, it will not happen without Mr. Adelizzi getting muddied and exhausted. □

"Clearly they were behind the curve on the problems."

Gary Gordon
PaineWebber Inc.

"We see no concrete reason to believe that current loss reserves are sufficient."

Threat by Iraq On Debt in U.S. Seen Harmless

Continued from page 12

Treasury figures, Iraq had a debt of only $3 billion in 1983 and that the massive military buildup during the Iran-Iraq war accounted for the heavy borrowing.

In Bonn, the West German government said it would freeze all Kuwaiti assets in West Germany to prevent Iraq from seizing them. Government sources also said all government guarantees on exports to Kuwait would also be suspended.

The announcement followed similar actions by the United States, Britain, France, Japan, and Belgium. Those countries were later joined by the Netherlands and Norway.

Global Holdings Large

The Kuwait Investment Office and other Kuwaiti investors have large holdings in several big West German companies, including a 14% stake in Daimler-Benz AG and a 20% participation in chemical group Hoechst AG.

In London, the *Financial Times* reported that Kuwait owns 15% of Midland Bank and 9.8% of British Petroleum. In the United States, it is said to have extensive holdings of major U.S. companies, but below the 5% reporting threshold. It owns Santa Fe International Corp., which is involved in oil-field engineering services and does its own exploration and development. It has revenues of some $1 billion a year.

Corporate Holdings

Kuwait also controls 20% of Metallgesellschaft AG, and a Kuwaiti investor is thought to own 10% of ASKO Deutsche Kaufhaus AG.

In Hong Kong, the government said it was consulting with Britain on whether to freeze Kuwaiti assets in the colony, a government spokesman said.

Although no immediate estimate of Kuwaiti investments in the British colony was available, market sources said they were thought to be substantial.

In a press release from London, the Kuwait Bank of Kuwait said it is a private-sector bank and not owned by the Kuwait government. Thus, the release said, it is not affected by the freeze on Kuwaiti assets.

Mohammed Abdul Mohsin al-Kharafi, chairman of the bank, said its branches in London, New York, Singapore, and Bahrain continued to function as effectively as possible. □

Bank in Kentucky Is Sold

NASHVILLE, Tenn. — First American Corp. said it has completed the sale of First American Bank, Ashland, Ky., to Pikeville National Corp. for $18.7 million.

First American said the sale of its $190 million-asset subsidiary to the Pikeville, Ky., company will result in a pretax gain of about $4 million, or 12 cents a share. — **Reuters**

BNE Loses $33 Million in Quarter

Continued from page 2

to $2.78 billion. The rise was less than the 10% increase that most analysts had expected.

The company's nonperforming loans actually decreased by $20 million, to $2.23 billion. But a senior bank official who spoke on the condition of anonymity cautioned "about being overly optimistic about that" figure.

He said the decline was attributable to the shifting of some nonperforming loans to other real estate owned and the renegotiating of others. Net repossessed real estate increased by 30%, or $1276 million, to $550 million.

The ailing company's capital ratio worsened to 1.46%, against 1.65% on March 31. A senior company official acknowledged that the company had a "very thin capital base" and said plans would be unveiled soon to boost that level. He did not give specifics.

Under a cease-and-desist order imposed in March, the company was required to reach 3% ratio of equity to capital by March 31. The regulators have not penalized the company for failing to comply.

Meanwhile bank officials said that the company's CD campaign continued to bring in new retail deposits and improve the banks' liquidity position, but the company's net interest margin was squeezed to 2.31% at June 30 from 2.54% at March 31, partially because of the high rates it has paid out on CDs. Nonperforming loans are also pinching the margin, a bank official said. □

"This quarter's loss is not unexpected because of the continued sluggishness in the region's economy, the softness of the real estate market, and lower net interest income."

Executive Help Wanted

Deputy Comptroller for Economic Analysis and Strategic Planning
The Office of the Comptroller of the Currency, Washington, D.C.

The OCC is seeking to fill this executive position. The Deputy Comptroller is responsible for directing the analysis of major policy issues affecting the commercial banking system; presenting recommendations via studies, briefing papers and the preparation of congressional testimony; and coordinating the strategic planning activities of the OCC. Applicants must have the following.

- Experience managing multiple projects and activities simultaneously.
- Demonstrated ability to establish and achieve program objectives and performance goals.
- Demonstrated ability to promote program goals effectively and persuasively.
- Comprehensive knowledge of economics and finance and the impact of financial and banking developments on local, regional and national economies.
- Comprehensive knowledge of trends and current developments in the financial services industry and of regulatory issues and policies.

Salary is $92,600 per annum (subject to periodic adjustments). Applicants should submit a brief description of how they meet each of the above criteria and a current "Personal Qualifications Statement" (SF-171) to:
Office of the Comptroller of the Currency
Washington Personnel Office
490 L'Enfant Plaza
Washington, D.C. 20219
Interested candidates may obtain a copy of the Job Announcement (#EM:90:403) and an SF-171 by calling 202-447-1617. Completed applications must be received in our office by August 24, 1990.

Some Lenders Stop Issuing Student Loans Amid Crisis

Early this week, the department plans to release regulations permitting emergency revocation of the loan eligibility of schools where there have been serious abuses, Mr. Cavazos said. He also noted that just 20

Continued from page 2

"virtually all lenders" would stop doing business with five or six other guarantee agencies that the Department of Education has said are being "closely watched."

In addition, the reserve funds of the weaker guarantors would immediately see a "sharp decline," and private lenders would take measures to limit their exposure to loans guaranteed by any single agency, Mr. Bilkin said.

Also appearing before the subcommittee, Secretary of Education Lauro F. Cavazos reiterated his department's view that HEAF's difficulties would not be allowed to affect the ability of banks to make student loans or the ability of guarantors to insure those loans. He said there was "no need for a federal bailout of guarantee agencies in general or HEAF in particular."

There is "no need for a federal bailout of guarantee agencies."
Lauro F. Cavazos
Secretary of education

of the 2,140 proprietary, or trade, schools in the student loan program were responsible for 25% of all defaults among such schools.

In a news conference after the Senate hearing, HEAF chairman Richard C. Hawk said the default rate of proprietary vocational trade schools is three to four times the rate on loans made to students at four-year colleges and universities. But HEAF's efforts to reduce trade-school guarantees "have been thwarted" by federal regulations, Mr. Hawk said.

Trade-school loans make up 31% of the agency's portfolio, he added, and half the loans in guaranteed in that area were exacted to default.

Mr. Cavanaugh writes for the Medill News Service.

Toxic-Cleanup Liability Rules to Be Revised

Continued from page 1

going to reverse that with a rule-making.

In testimony before the House Energy and Commerce Committee, EPA Assistant Administrator James M. Strock said the agency would prefer to remedy the problem through a rule-making. But "the administration would not oppose legislation that is necessary to get on the lender liability issue," he said.

An EPA official, speaking on background, said the agency believes an administrative interpretation of the Superfund law will be binding on third-party lawsuits.

EPA will present the outlines of a rule to Congress by Sept. 15, and it believes it will provide courts with a basis for determining whether or not a bank is liable under the Superfund law. The rulemaking procedure would be completed by the end of 1990.

Safe-Harbor Provisions

The Superfund law currently provides two safe harbors from lender liability — one called the "secured creditor exemption" and the "innocent landowner defense" — but judicial interpretation has created confusion about their applicability, bankers say.

An EPA official said the rulemaking will clarify the secured-creditor exemption and define precisely when a lender becomes "a participating owner or operator" of a site and thus incurs hazardous-waste liability.

The rule will also guide lenders on what constitutes due diligence, or the investigatory steps a titleholder must take to claim protection from liability under Superfund's "innocent landowner" provision.

"We want it to be something a lender can do, understand, and be just as clear about as if it were a termite inspection," this official said.

The Fleet Factors Precedent

In a precedent-setting decision handed down in May, the 11th Circuit Court of Appeals in Atlanta said a unit of Fleet/Norstar Financial Group Inc., Providence, R.I., was liable for $375,000 in cleanup costs because it was in a position to influence hazardous-waste producing practices of a printing company to which it made an $800,000 loan.

The ruling in what has become known as the Fleet Factors case, and several lower-court decisions that preceded it, troubles lenders "because we have had to tighten up our policies to the point where we have had to refuse to loan to some companies that we would otherwise consider great credit risks," said Duane Gillilland, president and chief executive officer, Farmers Savings Bank, Northwood, Ohio.

Potential Problem for RTC

The Resolution Trust Corp. is also worried by potential clean-up liability. RTC chairman L. William Seidman recently said the agency holds 300 properties that could present hazardous waste problems.

"This thing is extremely serious for the RTC, because they take back literally a billion dollars' worth of real estate, and have to go to the expense of cleaning that up," Mr. Lillibridge said.

He said his bank has assembled an "undesirable loans" list and would not lend to businesses with high environmental risks. Among those affected, he said, are "refiners, chemical plants, auto-body repair shops, funeral homes, furniture strippers, and any business with underground storage tanks, and any other that may be a site for dumping and storage of hazardous material — including farms."

The Case for Legislation

William A. Brower, Fleet/Norstar's senior counsel, said he was encouraged by EPA's announcement, but believes legislation is still needed.

Even if EPA deals with lender liability through rulemaking, "there are still items that could be open to interpretation," Mr. Brower said. For instance, "if you have a court or judge who believes this is a widespread problem that has to be taken care of, perhaps they would interpret it somewhat differently.

"It's been the judgment in the courts that has held the banks to be owner-operators," Mr. Brower said. "We need legislative relief in the form of something that would make it clear that wasn't the intent of the original legislation." Fleet will appeal its case to the Supreme Court in the next few weeks, he added. □

Executive Help Wanted

Assistant Counsel

Build a dynamic future with one of the nation's most progressive and successful financial services organizations – UJB Financial.

We're currently seeking an Assistant Counsel to provide us with legal advice in lending and compliance matters in our Princeton, NJ Headquarters.

AMERICAN BANKER

NOW DOING BANK JOBS DAILY!!!

DEALS
Citibank Was 1st to Pull Ripcord on UAL Buyout Group, Sources Say

By WILLIAM GOODWIN

Citicorp, considered the unofficial leader of the five banks that had been backing the proposed $4.4 billion buyout of UAL Corp., led the withdrawal of three of those banks, sources said.

"There was one bank that was clearly the leader" on the pullout, a source with knowledge of the bank group said, referring to Citicorp. A Citibank spokeswoman declined to comment.

The reasons for Citibank's departure, moreover, did not necessarily relate specifically to the deal itself, this source indicated.

Even if the union-led buyout group is able to pull an equity investor out of its hat, this scenario suggests, Citibank still might stay out of the deal.

Cause for Cold Feet

Analysts have criticized Citicorp for being underexposed against possible loan losses. For that reason, the banking giant may have gotten cold feet about UAL, which carries the burden of being perceived as a "tainted" deal.

UAL's stock price went into a tailspin last week after it was disclosed that Citicorp, Chase Manhattan Corp., and Chemical Banking Corp. had pulled out of the bank group backing the proposed union buyout. Only Bankers Trust New York Corp. and Manufacturers Hanover Corp. are left in the group.

By Friday afternoon, UAL's stock price had lost much of its buyout premium, reflecting market pessimism about the unions' ability to come up with financing by the Aug. 9 deadline set by the UAL board.

Stormy Week for UAL Stock

Market sources said that, absent the buyout, UAL's stock would trade at around $100 to $110 per share. Near Friday's close the stock was trading at $122.75. For the week, the stock lost a total of about $40.

A spokesman for the buyout group said Friday that the unions were continuing to work toward meeting the deadline and had not sought an extension.

As of late Friday, the buyout group apparently had still not lined up the outside investment that is crucial to success of the deal. Gerald Greenwald, the former Chrysler Corp. vice chairman leading the union buyout effort, may have contributed to last week's freefall in UAL's stock price.

On Monday, Mr. Greenwald was quoted by *The Wall Street Journal* as saying the buyout group was "close" to an agreement on financing with UAL's outside suppliers.

Market sources said Mr. Greenwald created an expectation that an agreement on outside financing would soon be forthcoming. As each day passed last week with no substantive announcement, UAL investors became increasingly unnerved.

Airline stocks in general also got battered Friday by the spike in oil prices, following Iraq's invasion of Kuwait.

Commitments Not Impossible

It is still possible that the buyout group could obtain financing commitments from banks in time to meet, this Thursday's deadline.

Moreover, UAL's board likely would agree to extend the deadline for a day or so, a source close to the board said.

A request for a longer extension, though, would face tougher sledding.

"There has got to be a compelling case to be made this one time will do us some good, but that the deal is going to close," the source close to the UAL board said. □

RTC Resolves Hotel Dilemma

By STEPHEN KLEGE

Despite fear of hotel deals on the part of most lenders, the Resolution Trust Corp. is expected to get 100 cents on the dollar on the refinancing of a hotel that was sold by an S&L it seized last year.

The agency, created by Congress to dispose of the assets of insolvent thrifts, found itself in a dilemma after it seized Colonial Liberty Savings and Loan Association, Pittsburgh.

In 1985, when the law allowed tax-exempt financing for some commercial projects, the thrift provided a letter of credit to secure a tax-exempt $3.2 million bond issue due in 2015. The proceeds went to finance the development of a successful Hampton Inn in the suburbs of Pittsburgh.

Hotel Properties Stigmatized

But the RTC was forbidden by law from extending the letter, which expired July 2. And no lender could be found that was willing to take on a hotel property, even a profitable one, said Myles Harrington, vice president of Russell, Rea & Zappala, Pittsburgh.

The RTC paid off the letter of credit and extended a two-year loan to the developer to allow time to get refinancing. □

Data Base Table Explained The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banks and the 50 largest thrifts. The largest banks and thrifts are measured by the market value of their outstanding common stock (as of March 30, 1990). Prices are under 100 for stocks selling $66.6 and, for thrifts $12¼.45 and $0.98 50 for the moving 52-week high and low prices for the stocks. PE, the price/earnings ratio, it is the current stock price divided by the trailing four-quarter earnings per share adjusted for latest announced earnings. Mkt. bk. book: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Book value is adjusted for announced earnings and dividends. Chg.: The price at which the stock last traded. If no trades for the day, the bid is used. **All Bank and Thrift Indices:** A weighted average of the top 250 banks in market value and the top 50 thrifts in market value, respectively. Highlights show largest percent gainers/losses in price; and low volume indicators must shares traded and today's volume as a percentage of average shares traded daily over the past year.

Data sources: SNL SECURITIES, Charlottesville, VA. 804/977-1600, prices and volume; Rand McNally, Thomson News Network, Vienna, VA, provides SNL with the daily prices.

Fears Drop Bank Shares to New Lows

Continued from page 1

ment rate in June jumped to 5.5% of the work force, the biggest increase in two years. The Dow Jones industrial average was off 54.95, or 1.9%.

"There was some idea that if the market experienced a correction, bank stocks might hold steady because of the bad times they have already had," said Virginia A. Adair, a banking industry analyst for Merrill Lynch Capital Markets.

"But the things the market is correcting for – rising long-term interest rates and inflationary expectations with the economy

Weak Takes Toll On Major Banks

seemingly slipping in recession at the same time – are particularly unfavorable for banks," she said.

Top Banks Take Hit

All sectors of the bank stock group retreated on Friday, with some of the industry's best-known names and most conservative institutions being hit the hardest.

For instance, State Street Boston Corp. plummeted $1.375 to $35.625, and Republic New York Corp. was off $1.25 to $47.75, while First Wachovia Corp., Winston-Salem, N.C., was off 37.5 cents to $39.375.

"This has to be investors liquidating portfolio positions because they don't want to be in the bank sector any longer" and maybe cutting back on stocks generally, said Felice M. Gelman, a banking industry analyst for Dillon, Reade & Co.

Ms. Gelman said she wished that everyone who wants to be out of the bank stocks was in fact out of them, since the stocks might then enjoy a recovery without having it cut short by further selling.

"But I don't believe that's the case," she said, "and so I don't think we will have anything like a V-shape performance, even if we do have a rally off the bottom."

Among the New York money-center institutions, J.P. Morgan & Co. fell $1.375 to $33.875, before rebounding to gain 12.5 cents to $35.375. Citicorp was off 25 cents to $18.75, registering a fall of 9% for the week.

Meanwhile, on the West Coast, Wells Fargo & Co. plunged $1.50 to $62. Shares of the highly regarded San Francisco superregional declined 15% last week and have fallen almost 25% in the past two weeks on worries that the California economy and real estate market are softening.

Others Followed Suit

Other California banks were also hurt. Security Pacific Corp., Los Angeles, was down 62.5 cents to $30, while First Interstate Bancorp., Los Angeles, was off 75 cents to $31.25, and Bank-America Corp. was off 87.5 cents to $22.375.

Premier superregional banks elsewhere that were once among the high-fliers on Wall Street, also took major lumps. NCNB Corp., Charlotte, N.C., was off 75 cents to $33.875 and gave up 5.5% of its value last week. Banc One Corp., Columbus, Ohio, gained $1 to $27.75.

Major midwestern banks, which had previously escaped the worst of the slide in bank equities because of conservative credit cultures and stable economy in the region, experienced a very rough ride.

Chicago's Northern Trust Co. was off 75 cents to $27, and Cleveland's National City Corp. was $1 to $34. NBD Bancorp, Detroit, was off $1.25 to $29.875, and Fifth Third Bancorp, Cincinnati, was off 87.5 cents to $29.625.

Elsewhere in the market, Laurence and Preston Tisch have raised their stake in Bank of Boston Corp to 8.9%, or 6,490,020 common shares. The Tisches said in a Securities and Exchange Commission filing that they bought 1.004 million shares on Aug. 1 and Aug. 2 for $9.875 and $10 a share.

The investment group purchased 4.7 million shares at the end of 1989 at an average of $20.11 per share. □

CAPITAL

Market Climate Helps Rich to Get Richer

By KELLEY HOLLAND

As banks find it more difficult to raise capital, the gap between the haves and the have-nots is growing wider by the day.

The haves – those banks with adequate capital and stable asset quality – can issue debt, place commercial paper, and attract consumer deposits at relatively low rates. And to the extent banks issue securities that boost their capital ratios, they improve the odds of having any acquisition plans approved by regulators.

The have-nots – banks short on capital or those with deteriorating asset quality – are unable to issue securities in the public markets at acceptable prices, and they must offer painfully high yields to attract deposits. Asset growth of any size is painful for them.

"It's really name by name," said Andrew J. Cooley, a managing director in Merrill Lynch Capital Markets. "It's a situation-specific market."

Weak Banks Face Resistance

With investors increasingly concerned about asset quality, weak banks are facing stronger and stronger resistance in the capital markets as they search for ways to raise new capital.

"The weak are 'floundering,'" Mr. Cooley said. "Until they can demonstrate stability and reasonable prosperity, the market isn't going to lend them any money."

The difference in market access is also making it harder for a bank to recover once it gets in trouble with asset quality or capital adequacy.

"If you have to go in [to the debt market] at 325 basis points over Treasuries, it's a self-fulfilling prophecy," said one bank treasurer. "You've just made the strong stronger and the weak weaker."

The ability to fund themselves in the capital markets gives strong banks the ability to grow more rapidly than weaker institutions.

"Capital-rich banks will be able to do Resolution Trust Corp. deals," said Matthew J. Grayson, a vice president in capital markets at Salomon Brothers Inc.

Public security issuance by all banks ground to a near standstill in the first quarter of 1990 as investors grew increasingly concerned about banks' asset quality. Banks issued less than $1.3 billion in debt and equity, compared with nearly $7.3 billion in the first quarter of 1989, according to Securities Data Co.

Bank security issuance has been slowly increasing, but it is not cheap – and it is almost impossible for many banks.

To cite one dramatic example, Bank of New England Corp. issued subordinated debt with a 9.875% coupon in September 1989. That debt has traded at less than 20 cents on the dollar in recent weeks.

But spreads are also wider on the debt of stronger banks. Chase Manhattan Corp.'s subordinated debt was trading at yields about 200 basis points over Treasuries during the second quarter, but it is now bid at about 260 basis points.

Since the beginning of June, only adequately capitalized banks whose condition is seen as stable or improving have been in the market. Domestic banks have included Bankers Trust New York Corp., Banc One Corp., Northern Trust Co., BankAmerica Corp., Republic New York Corp., Manufacturers Hanover Corp., Bancorp Hawaii, First Hawaiian Inc., NCNB Corp. and First Chicago Corp.

First Interstate Bancorp. was in the market in March and April for both stock and debt, but the price it paid on both instances was much higher than other banks tapping the market.

First Interstate's stock price dropped nearly $20 a share between the time it announced plans to issue stock and the time the offering was priced, and its subordinated debt issue was priced at 375 basis points over Treasuries, a much wider spread than the 105 to 170 basis points that other large banks have had to pay.

The only New England bank to tap the capital markets since late last year has been the well-regarded Fleet/Norstar Financial Group, which issued $150 million in senior notes.

Bankers and analysts alike worry that the gap between haves and have-nots will remain wide. "The banks that have been downgraded below investment grade, you're not going to see in the market for a while," said Richard R. Pannone, treasurer of Fleet. □

Higher Capital May Impair Bank Safety

By SANFORD ROSE

By persistently demanding that banks operate with ever higher ratios of capital to assets, the regulators may end up doing a disservice to the industry, to the country, and to themselves. Higher capital ratios may under certain circumstances increase rather than decrease the risk profile of banking institutions.

In theory this isn't supposed to happen. The greater the owner's stake in the business, the more prudent he is supposed to be. Unfortunately, theories don't always work out in practice.

Comment

As noted in a previous comment, it makes little sense to ask banks to raise capital-asset ratios by increasing the numerator – i.e., by selling additional shares.

Why, pray tell, should we encourage the expansion of an already overcrowded industry whose marginal revenues are likely to fall short of the marginal cost of the capital we raised? That course of action is unsound from the viewpoint of both the individual firm and society as a whole.

In practice, faced with the need to lift capital-asset ratios, most banks will choose to shrink by paring assets rather than down liabilities. What will be the impact of this maneuver on the safety of banks?

Two Steps Up, One Step Down

By definition, retrenchment will raise the book value of the capital-asset ratio. But the relevant question is what will happen to that ratio in market-value terms. That is, the regulators should be concerned with whether the market value of capital ends up as a larger or smaller fraction of the market value of bank assets.

Retrenchment should raise this market-value ratio, but by less than the increase in book-value terms. That's because the per-share value of bank capital should fall, for at least two reasons. First, as banks substitute equity for debt, their taxes will rise. Interest on debt is tax deductible, while dividends are not. Thus, higher capital-asset ratios will tend to reduce after-tax profitability, lowering per-share values.

The second reason for falling per-share values has to do with deposit insurance. Bank shares include a premium for what is called the deposit-insurance subsidy. That is, by failing to graduate deposit-insurance

MNC to Place $180 Million Of Preferred

By KELLEY HOLLAND

In its first move to boost capital and liquidity since disappointing second-quarter results prompted funding difficulties, MNC Financial Inc. said on Monday that it will privately place $180 million of preferred stock with an already powerful member of its board of directors.

"The sale of the preferred shares represents a significant step in the company's efforts to strengthen its capital position," said Alan F. Hobbie III Jr., president and chief executive officer, in a prepared statement.

Line of Credit is Works

The announcement confirms earlier reports that MNC was seeking an equity infusion of about $200 million. In addition, the company is also known to be putting together a $750 million line of credit with J.P. Morgan & Co.

The move, which does not necessarily reopen the capital market for the Baltimore-based company, could increase company director Alfred Lerner's ownership of MNC equity to 23%, analysts said.

"He was the dominant shareholder before. This makes him

Firstar of Wisconsin To Buy Banks of Iowa

By NANINE ALEXANDER

Banks of Iowa Inc., which recently canceled a nine-year-old agreement to merge into First Bank System Inc. of Minneapolis, said Monday that it would instead be acquired by Firstar Corp.

Milwaukee-based Firstar Corp. agreed to pay about $219 million in stock, about 20% below the price First Bank System agreed to pay before its own earnings problems scotched the deal.

First Deal Under New Law

The Firstar acquisition would be the first allowed under an interstate banking law passed by the Iowa legislature earlier this year and taking effect next Jan. 1. Banks of Iowa would become a wholly owned subsidiary called Firstar Corp. of Iowa, part of a five-state superregional with $11 billion in assets.

With Banks of Iowa's assets added, Firstar would rise about seven places from its yearend 1989 rank of 62d among bank holding companies. It is already the largest in Wisconsin.

Value is $75.60 a Share

The definitive agreement, announced Monday after what company officials said were several months of negotiations, calls for Firstar to exchange 2.7 of its shares for each of Banks of Iowa 2.9 million outstanding shares. Based on Firstar's $28 price at last Friday's close, the transaction would have an indicated value of $75.60 for each Banks of Iowa share.

By contrast, First Bank System's uncommunicated stakeout agreement called for an eventual purchase price equal to one and

Nuclear Industry Promises to Be A Hot Source of Trust Business

By RICHARD LAYNE

NEW YORK — Regulatory changes governing the nuclear power industry have created a potential pool of $100 billion in trust assets, the equivalent of new trust business in recent memory.

In keeping with two-year-old federal regulations, corporations that own nuclear power plants had to establish trust funds by July 27 for dismantling those plants. The initial funding of the accounts is small, but the guaranteed annual growth and staggering potential have had bankers scrambling for the business.

"All of a sudden," nuclear decommissioning trusts have become the "new, large market," said Richard L. Decter, vice president at Harris Trust and Savings Bank, Chicago.

Four Clear Winners

Four banks have emerged as the early winners in the battle for these trusts accounts, according to trust bankers. They are Harris Trust, Mellon Bank, Bankers Trust New York Co., and State Street Bank and Trust Co., Boston.

Initial Winners

Banks capturing big share of nuclear cleanup trusts

	Number of trusts	Trusts' assets ($ in billions)
Mellon	11	$310
Bankers Trust	4	$150

Source: Bank experts

The trusts are mandated by Congress to ensure that funds will be available to clean up nuclear power plants when their 40-year licenses expire. The Nuclear Regulatory Commission reports that 60 utility companies have 114 nuclear plants in operation, with more being added yearly.

$1 Billion to Be Added Yearly

The Edison Electric Research Institute in Washington said utilities have so far put $2 billion in what are termed nuclear

Middle-Market Relationships Face a Threat

By WILLIAM GOODWIN

At a time when banks are at least paying lip service to relationship banking, their interest in securitization could endanger the relationships that have always driven middle-market lending.

"Certainly, there's going to be a lot more securitization of middle-market loans in the next five years," said John Leahy, senior vice president in charge of middle-market lending in the Northeast at Chase Manhattan Corp.

Since the mid-1980s, banks have been securitizing everything from credit card receivables to recreational-vehicle loans, to highly leveraged transactions. Securitization allows banks to remove these assets from their balance sheets, thereby improving financial ratios and cutting capital requirements.

Middle-market borrowers are generally defined as companies with annual sales of $5 million to $250 million. According to

Fed Loses Ardent Supporter Of Holding Company Format

By LINDA CORMAN

While packing boxes last Friday, his last day as vice chairman of the Federal Reserve Board, Manuel H. Johnson reiterated a long-held view on banking structure that appears to have put him at odds with the majority at the Fed.

Mr. Johnson, 41, predicted that without him, the Fed may move away from the bank holding company structure that he has advocated toward a less restrictive structure for financial institutions – the universal bank.

"You could argue that I held things in place... on the holding company structure," Mr. Johnson said in a phone interview. He conceded that after his departure, "Maybe there will be a tendency to go toward a universal bank." But he maintained that "there is so much you can do" with the Glass-Steagall Act, which prohibits banks from engaging in securities activities.

Manuel H. Johnson Louise Kraft

The universal concept, common in Europe, allows financial institutions to engage in a full range of financial activities. Banks do not have to seal off these activities in separate subsidiaries as they do in the U.S.

One of Mr. Johnson's final votes, after four and a half years as a Fed governor was a dissent on a proposal to liberalize rules guiding the activities of American banks overseas. In his comment on the proposal, Mr. Johnson said that the Federal Reserve Board's Regulation K (which would allow U.S. banks greater latitude in underwriting securities and investing overseas) should not be allowed without the thick firewalls already in place between the domestic bank and nonbank affiliates of holding companies. Such firewalls are not imposed for U.S. banks operating overseas.

In Defense of Firewalls

When asked about Fed Chairman Alan Greenspan's recent suggestion that the Fed might abandon its longstanding insistence on impermeable firewalls, Mr. Johnson defended the concept and underscored his abiding belief in the holding company structure.

"On this issue, my views haven't really changed," said Mr. Johnson. "We have such a large safety net that exposes taxpayers to such cost. I don't feel it is appropriate to expose the safety net to a broader base of activities.

"I realize international pressures are moving in the other direction... The universal bank has momentum. If you are going to a universal bank, you need strong capital requirements and strong supervision. But my preference would be to maintain very thick firewalls in the holding company structure."

While stressing that he had found the Fed a "very stimulating environment," Mr. Johnson admitted to leaving with a sense of relief. After 10 years in the public sector (six years at the Treasury before joining the Fed), Mr. Johnson will accept a newly endowed chair in economics and become director of a new global market studies center at George Mason University. He will also continue working with the G-7 Council, a not-for-profit group that he co-founded to study international financial and economic coordination. □

Fail Defends Deal for Bluebonnet

Asserts He and His Companies Put Up $70 Million

By ROBERT M. GARSSON

WASHINGTON — James M. Fail defended himself Monday against charges that he misled regulators about his past and his cash resources in order to acquire Bluebonnet Savings Bank at the end of 1988.

Mr. Fail, who owned a number of insurance companies before entering the banking and thrift fields by buying failed institutions, said he had not taken from Bluebonnet either a salary or $20 million in dividends he was entitled to. He also contended that he had helped in the thrift industry bailout by restoring Bluebonnet to profitability.

The Bluebonnet deal is one of a number completed in December 1988, and Sen. Howard Metzenbaum, D-Ohio, has made it the centerpiece of his investigation into the government-sponsored restructuring of the savings and loan industry.

Qualifications Challenged

In particular, he has charged that Mr. Fail, after four and a half years as a federal governor was a dissent on a proposal to liberalize rules guiding the activities of American banks overseas. In his comment on the proposal, Mr. Johnson said that the Federal Reserve Board's Regulation K (which would allow U.S. banks greater latitude in underwriting securities and investing overseas) should not be allowed without the thick firewalls already in place between the domestic bank and nonbank affiliates of holding companies. Such firewalls are not imposed for U.S. banks operating overseas.

In December 1989 ballot law requires the government to analyze whether the 1988 deals can be undone. Sen. Arlen Specter, R-Pa., pushed Mr. Fail to say during his Judiciary subcommittee testimony whether he would agree to relinquish the thrift.

Mr. Fail said the decision was not his alone, but warned that it would be costly for the government to rescind the deal.

Higher Cost Seen

"If the federal government were to renege on the contract with Bluebonnet, Bluebonnet, it could cost the American taxpayers $600 million over and above the government's current obligations to Bluebonnet," Mr. Fail said.

"Serious people, aware of these facts, could hardly propose renegotiation or repudiation of this transaction," he said.

Mr. Fail told the panel that allegations that he put up only $1,000 of his own money in return for $1.85 billion in federal assistance "is the most absurd statement I have heard."

"I put all of my resources, all the insurance companies I own," into the deal, Mr. Fail said.

Mr. Fail said he borrowed $35 million and had an insurance company he controlled, Mutual Security Life Insurance Co., put up an additional $35 million.

But under questioning, he conceded that he did not have the $70 million required under the terms of the agreement in the bank at the time the deal was closed on Dec. 22. At least $10 million was not put in until later the next year, he said.

"If I have a commitment, I would represent that I have the cash," he said in response to a series of questions from Sen.

Comptroller's Office Plans to Review First American's Commercial Loans

By KENNETH CLINE

ATLANTA — Indicating their concern over credit quality standards at First American Corp., federal regulators plan to examine the Nashville-based company's commercial loan portfolio in the fall.

Analysts expect First American, on its own in anticipation of the scrutiny, to classify more loans as nonperforming in the third quarter.

A Rough First Quarter

The action by the Office of the Comptroller of the Currency follows a targeted exam of First American's real estate portfolio earlier in the year that led to a first quarter increase of 222% in its loan-loss provisions to $94.4 million.

"When [the regulators] left after completing the real estate exams, they said they would come back later in the year and examine the commercial loan portfolio. We view it as a normal examination," said Neil Cunningham, First American's executive vice president for public affairs.

Robert Ahrens, the district administrator for the comptroller's Atlanta office, described the coming examination at First American as part of the agency's normal exam philosophy," which involves continued scrutiny of an institution's portfolio "until all areas of public concern have been met."

Annual Profits Down 86%

Caught in the downturn of Nashville's real estate market, the $7 billion-asset First American established $116.7 million to its loan-loss reserve in 1989, driving the annual profit down to $4.2 million, 86% lower than in 1988. President and chief operating officer Andrew G. Higgins resigned at the end of July 1989.

Three weeks after announcing a 1990 first-quarter loss of $44.8

Discover Flies with SEC For Card Pass-Throughs

CHICAGO — Discover Receivables Financing Corp., the financing vehicle for Sears, Roebuck and Co.'s Discover card, said it filed a registration statement with the Securities and Exchange Commission for $500 million of Discover Card Trust 1990 C credit account pass-through certificates. The underwriting syndicate will be managed by Dean Witter Reynolds Inc. and Salomon Brothers Inc.

GE Capital Completes LeaseAmerica Acquisition

STAMFORD, Conn. — GE Capital Corp. said it completed the purchase of 100% of the capital stock of LeaseAmerica, which specializes in lease financing for dealers of office equipment and health care products.

LeaseAmerica is to become part of GE Capital's $59 billion-asset vendor equipment financing unit. The purchase price was not disclosed.

Rates Dip on Home Loans

WASHINGTON — The average interest rate for a 30-year fixed-rate mortgage was 9.84% last week, down from 9.98% the previous week, the Federal Home Loan Mortgage Corp. said. The average adjustable-rate mortgage was 8.38%, down from 8.41%.

Lenders charged an average of 1.9% in fees and points on fixed-rate loans, down from 2% a week before. Fees and points on adjustable loans fell to 2% from 2.1%. □

Mellon Ready to Automate Its Branches Without PCs

By JEANNE IIDA

NEW YORK — Bucking the trend toward personal computers at retail branches, Mellon Bank Corp. is close to completing a branch automation system that relies on "dumb" terminals.

Mellon said the project, which was started in 1986 and will be finished in mid-1991, will give its branch personnel all the functionality of a PC system at a far lower cost.

Mellon's project to put controllers and terminals in 350 branches flies in the face of a movement by many leading-edge banks, such as BankAmerica Corp., to install powerful personal computers in branches. Banks installing PCs say the machines are more flexible and will produce long-term benefits by giving staff members greater access to information.

"The average branch doesn't need a PC."
Richard Gallarno
Mellon Bank Corp.

Same Information Available

PCs would have added $10,000 to $15,000 to per-branch installation costs, Mellon said, and its staff can obtain the same information with the new system, which is supplied by ISC Bunker Ramo.

"The average branch doesn't need a PC," said Richard Gallarno, vice president of retail project development at Mellon.

Branch personnel do not usually need access to applications such as spreadsheets that can be accessed on PCs but not on dumb terminals, he said.

Although PC costs have fallen since Mellon decided to go with a controller-based system, "we have no regrets" about the decision, Mr. Gallarno said.

Cross-Selling Potential

Cross-selling is possible on Mellon's system because of software developed by the bank company that uses "what-if" calculations to help customer service representatives and customers identify products they need.

By 1991, the bank expects to have an expert system in place that customers can use at the point of sale for choosing among products.

Branch staff using the dumb terminals can access customer information from a central file, and they can communicate with other branches because the controllers are tied into the corporate-wide electronic mail network. The link to E-mail has eliminated the need for fax machines at Mellon's Pittsburgh headquarters. Information such as new loan data is sent from terminal to terminal via E-mail, instead of paper.

Mellon plans to put PCs in selected areas and allow them to act both as terminals and as stand-alone PCs. PCs might be installed in Mellon's small-business centers, where customer service representatives do sophisticated loan tracking. □

Hanover Forming New Data System

Software Promises to Cut Costs and Speed Delivery

By RICHARD LAYNE

NEW YORK — In an attempt to cut operating expenses and provide information faster, the wholesale banking unit of Manufacturers Hanover Trust Co. is creating flexible pools of information, called relational data bases, to support its five businesses.

GeoServe, the one-year-old wholesale banking unit, is in the vanguard of companies turning to this data base technology, which makes it easier to access and compile information on customers and products.

Last week, the bank's cash management group converted its account information system to a relational data base – a first for treasury services at any bank.

Robert Paul Molay

Richard Matteis
Manufacturers Hanover

Two Years of Work

Joyce A. Healy, senior vice president of GeoServe, said the cash management system, which took two years and $5 million to build, was designed to give customers an updated, consolidated balance report through the day.

"This is where the business is going," Ms. Healy said. "This isn't a business where you send your paper in. It's processed overnight, and we tell you what happened."

She said the move to a relational data base puts the bank a step ahead of the competition by providing customers with a single report containing transaction information from offices around the world as well as New York.

With the technology, 90% of all transactions appear in the data base within an hour, she said.

Transactions done through the bank's Delaware unit, which handles controlled disbursements, are reported as soon as they are executed, instead of hours later. European positions are reported as much as 45 minutes earlier than previously possible, giving corporate treasurers the chance to buy funds earlier in the day at cheaper rates.

Manufacturers Hanover's project is in keeping with a trend among major banks to create single systems or pools of information and transactions to encompass many lines of business. As customers increase their treasury and investment activities abroad, banks are working to supply them with a snapshot of their positions and exposures around the world. These single, complex systems are a technical version of a relationship manager.

"This is a tool for knowing the total picture for a customer and the profitability of a customer," said Richard Mattei, executive vice president and general manager of GeoServe.

Action in Other Areas

Along with cash management, the other GeoServe businesses are expected to pour their customer and profitability information into relational data bases.

The funds transfer group plans to complete its relational data base this year. Global custody and safekeeping will follow next year. The remaining two businesses – corporate and institutional trust, and trade services – have not yet expressed a need for the move, said Lawrence Pinsky, senior vice president.

If all businesses are on the same system design, the data bases could pass information back and forth easily. In essence, GeoServe is working to create a single, giant data base that is easier to update than numerous small data bases.

A common architecture may enable the bank to be more competitive by offering products at a lower price. It also may help the bank sell additional services to existing clients.

Staff Cuts Seen

By using one type of data base architecture, GeoServe can reduce some of its technology staff and cut expenses.

Mr. Pinsky estimates savings in the millions of dollars from using the relational data base management system, called DB2, from International Business Machines Corp.

Because relational data bases are easy to program, the bank expects to reduce the number of programmers. It also will not need multiple teams of technicians to ensure that all data bases are updated at the same time. □

COMMENT/ *By Sanford Rose*

Higher Capital May Impair Bank Safety

Continued from *page 1*

charges according to bank riskiness, the government in effect subsidizes the bank shareholder, and this subsidy is embedded in the stock price. Any increase in the owner's capital stake in the bank tends to reduce the value of the subsidy, thereby lowering the worth of individual shares.

Nevertheless, these tax and deposit-insurance consequences are what economists call second-order effects. By reducing per-share values, they limit the gains in capital-asset ratios in market-value terms. But they do not nullify these gains.

A Disturbing Proviso

An increase in capital-asset ratios, whether achieved by raising additional capital or by paring assets, will probably raise the amount of market-value capital backing each dollar of assets. Provided the risk profile of assets remains unchanged, the capital cushion protecting the deposit-insurance fund will become somewhat more adequate than it was previously.

But the proviso is terribly important. If, in the process of retrenching, banks increase the risk profile of assets, the additional capital cushion may prove insufficient, and the effort to raise capital-asset ratios may end up being counterproductive.

A case can be made that asset shrinkage is in fact apt to increase the riskiness of bank assets. When banks retrench, they probably do so by eliminating those assets whose profit per unit of required capital is lowest.

Since capital requirements are not at present graduated according to the true riskiness of loan assets, banks earn less per dollar of required capital on low-spread, low-risk commercial loans made to national companies than they do on, say, credit extended to local middle-market firms.

Therefore, if pressed to retrench, banks are most likely to purge relatively high-grade commercial credits from their portfolios. And although not exactly loaded with such loans, banks still hold a measurable chunk of the business. As these sounder commercial credits are eliminated, the average probability of loan defaults will rise.

But the effects of asset retrenchment will extend beyond that of increasing expected losses. The true riskiness of the loan portfolio depends on the correlation or covariance of asset returns, which measures the likelihood that a given economic disturbance will result in a simultaneity of customer defaults.

Down with Interdependence!

The evidence shows that most large as well as small banks have highly concentrated loan portfolios. They lend to predominantly local borrowers, most of whom tend to be vulnerable to the same regional economic shocks.

Otherwise put, the customer populations of most banks exhibit high positive loss correlations. Borrower business fortunes are closely interdependent, whereas, from the banks' viewpoints, these business fortunes should be as independent of each other as possible.

In order to lower loss correlations, banks should *increase*, not *decrease*, their lending to nation-wide firms. That's because while loss correlations are in most cases strongly positive within given regions, they are much less positive, and may even be negative, across regions.

Disproportionate Drop in Risk

A study of the 50 largest banks in the country done some years ago found that these institutions could have greatly improved their asset-efficiency ratios – defined as returns minus average losses divided by a measure of loss volatility (standard deviation) – by substituting a hypothetical pool of loans made to all nationwide companies for a large fraction of their existing, and mostly local, business credits.

"Rising capital ratios will force banks to opt out of national credits, to their detriment."

Although spreads would have fallen, asset-efficiency ratios would have risen because the decline in risk, as measured by the loss volatility, was greater percentagewise than the drop in returns. The reason for the sharp decline in risk was that the loss correlations between the loans in the nationwide pool and the loans in the banks' existing portfolios were lower than those within these portfolios.

In other words, the factors that produced clusters of local losses did not affect, to nearly the same degree, the fortunes of the national firms, reaffirming that banks can materially reduce the threat of loss simultaneity by lending across regional lines. But if banks curb interregional lending – if they in effect turn completely away from the national firm – they obviously circumscribe their diversification opportunities and increase their risks.

More Failures Likely

Yet because lending to national firms is generally a low-spread activity, that is precisely what will probably happen when capital requirements are increased.

As a result, asset shrinkage will not only raise the mean probability of loan defaults, it will also increase their variance. When times turn bad in a particular region, its banks will experience a higher percentage of portfolio losses than would have been the case had they remained active in the national loan market.

Therefore an indirect, but nonetheless very real, consequence of higher capital-asset ratios is likely to be more rather than fewer bank failures. And while capital cushions, expressed in both book- and market-value terms, will rise, they will probably not rise sufficiently to protect the deposit-insurance fund from the increased threats to its integrity. □

CRIME BLOTTER/ *By Tom Leander*

Trust Officer Violated Trust

"What I did was my own fault," a fallen trust officer told the judge as he was sentenced in Milwaukee federal court last week.

"I was in a dream world," added Dale Phillips, 44, formerly of Associated Kellogg Bank in Green Bay, Wis. Mr. Phillips was convicted of embezzling $1.5 million from trust accounts and spending the money on luxury items – including a $350,000 house, a $100,000 sailboat, and expensive cars.

Judge Thomas Curran gave Mr. Phillips the maximum penalty of 51 months in prison. The stiff sentence was partly to punish the the former trust officer for reneging on a promise he made in May, when he was convicted, to sell off his ill-gotten assets to make restitution to the bank.

Defense attorney Gerald Boyle, arguing for a lighter sentence, sought to portray Mr. Phillips as a "Walter Mitty" character who led a fantasy life of luxury, while his actual salary at the bank was $30,000 a year.

Mr. Phillips avoided detection while skimming off the money over five years, prosecutors explained, because most of his clients were elderly and did not keep a close eye on their trust accounts.

In-Law Gets into the Act

The long arm of the law reached out last week to a money launderer's mother-in-law, who was charged with threatening a customs agent who helped convict her son-in-law.

Gloria Parra De Espinosa is the mother-in-law of money launderer Akbar A. Bilgrami, one of five former bank officers convicted last week of laundering illicit drug profits at the Bank of Credit and Commerce International, Tampa.

After the verdicts were read on July 28, Ms. Espinosa allegedly grabbed U.S. customs agent Gregory Cook, who participated in a two-year sting that netted Mr. Bilgrami and the others, and said: "You did a good job, agent – your children will pay for this."

Ms. Espinosa, 54, is a Panama national who earned a doctorate in psychology in the United States. Both her husband and her ex-husband signed a $250,000 bond to obtain her release.

Robert Polli, an attorney for Ms. Espinosa, said the remark was not a genuine threat, but rather the "emotional outburst of a distraught mother."

The trial in Tampa drew international attention because one of the convicted bank employees was Amjad Awan, the former personal banker to deposed Panamanian strongman Manuel Noriega. The money-laundering ring was broken via an intricate, cart momentarily to pick up the money, which he handed over to a teller inside the bank.

Only later, according to Detective Ernest Ursitti of the Lake View police, did the employee notice that $50,000 had been removed from his cart while he was picking up the singles.

Detective Ursitti said a witness provided a description of the man who dropped the bills, but no arrests have been made. □

More Troubles for Spiegel

The screws appear to be tightening on former Columbia Savings and Loan chief executive Thomas Spiegel. Last month, the Office of Thrift Supervision accused Mr. Spiegel of squandering $19 million of Columbia's money on such frivolous items as corporate jets, condominiums, and expensive free concert tickets for friends.

Mr. Spiegel resigned as Columbia's chief executive in December, after losses in the thrift's large junk-bond portfolio left it teetering on the brink of seizure by regulators. Next, the OTS filed a civil complaint against Mr. Spiegel, seeking to recover the $19 million along with $5 million in fines.

In the latest development, Mr. Spiegel's lawyers last week said that the OTS is ready to add new charges to the original complaint, involving expenditures for Mr. Spiegel's private security staff.

Variation on an Old Trick

A ruse that usually works well for pickpockets tricked an armored-car employee out of $50,000 last Thursday outside La-Salle Bank Lake View, in Chicago.

The employee was making a routine delivery to tellers, pushing a cart loaded with cash into the bank branch, when he noticed a stack of $1 bills on the sidewalk.

The employee, whose name was not revealed by police, rose to the bait. He left his

BALANCING ACT.

BANK COMPENSATION AND BENEFITS MANUAL

Staffing is your second biggest expense. To make it pay, you need to balance competitive compensation and benefits that attract (and keep) good people on the one hand, and your bank's profitability on the other.

That means knowing what each person's job is and what it's worth to the bank. And that's just the beginning.

You can count on the new Sheshunoff™ *Bank Compensation & Benefits* manual to give you everything you need to design, implement, support, and maintain a compensation and benefits program that helps your bank keep up-to-date with market and legal changes and meet its goals. Because whether your personnel policies are formal or informal, they need to be planned and consistent to motivate your people and protect you from disgruntled employees.

The clear instructions and recommendations encourage you to consider your bank's style, culture, structure, history, market, products, and operating methods. So you've got your bank's unique aspects in mind as you develop job descriptions and policies for salary administration and performance measurement, measure job worth, design and organize your benefits and management incentive programs, communicate with your employees, create useful forms to document your programs, and *control salary costs through budget planning.*

For more information, or to get your own copy of *Bank Compensation & Benefits* call 1-800-456-2340.

CREDIT UNIONS

Fee Revision Plan Would Favor Smaller Institutions

By BILL ATKINSON

WASHINGTON — Small and large credit unions are squaring off over a proposal by the **National Credit Union Administration** to restructure its fee scale.

The plan would shift more of the responsibility for examinations, charters, supervision, and similar services to larger credit unions.

The change is designed to appease small institutions, which have complained that they have been saddled with the brunt of the payments. Eighty-seven percent of credit unions have less than $20 million in assets, and the average size of a credit union is $13 million.

Robert E. Loftus, director of public and congressional affairs for NCUA, said, "The system is way out of whack. It is extremely unfair to small credit unions."

Tiered Assessments Under Study

The proposal, to move to a two-tier system for operating fees, was announced late last month at an NCUA board meeting in Nashville. Separately, the agency is scheduled to meet today to reveal its fiscal 1991 budget, which is expected to be higher than in 1990 and could spell an increase in fees across the board.

The regulator's decision on the plan is not expected until October, but some credit unions have already dashed off responses.

L.L. De Carlo, president of Marine Corps West Federal Credit Union at Camp Pendleton, Calif., said he read the proposal with "dismay" and "indignation," according to a letter he sent the NCUA.

Mr. De Carlo said examiners are telling him to cut expenses, and at the same time plan to raise Marine Corps' operating fees by as much as 48%.

"It's very difficult to maintain morale when a credit unions pays 20% to 30% below market for manpower, then is forced to pay $12,000 more for an intangible expense item," he said: "For $12,000 I could hire another teller."

But Kent Treadwell, president of OKC Thrift Federal Credit Union in Oklahoma City, said the restructuring is a long time coming. "It's about time the big boys paid their fair share," he said.

Reductions Would Go to Smaller Institutions

Under the existing fee structure, credit unions are divided into 14 brackets by asset size. Institutions with assets of less than $50,000 do not pay a fee. Credit unions with $50,000 to $100,000 in assets pay an average of $2.41 for every $1,000 in assets. Credit unions with assets of more than $1.5 billion pay 7 cents per $1,000 in assets.

If the plan is implemented, payments by credit unions with $50,000 to $100,000 in assets would be reduced to $1.31 for every $1,000 in assets. Credit unions with assets of more than $1.5 billion would have higher payments, nearly 10 cents per $1,000 in deposits.

The proposal is structured so that federal credit unions with up to $250 million in assets would pay 29 cents for every $1,000 of assets. Larger institutions would pay $73,396 plus nearly 8 cents for every $1,000.

No fee would be collected from federal credit unions with assets under $50,000. □

Cirrus Application May Spur Suit

Valley Says It Will Fight to Charge Transaction Fees

By YVETTE D. KANTROW

NEW YORK – A Las Vegas bank's application to accept automated teller machine cards bearing the Cirrus logo could touch off another round of lawsuits in an ATM industry already jittery over antitrust litigation.

Valley Bank of Nevada – which last year filed a lawsuit against Plus System Inc. alleging price-fixing – is seeking permission to accept ATM cards issued by banks in the Cirrus network. It filed the application with Cirrus System Inc. after that national network said it would share ATMs with Plus, the national system to which Valley belongs.

Valley officials have expressed some concern that the application will be denied because of the bank's policy of charging customers of other banks each time they use its machines. If the application is rejected, Valley executives say, they may take Cirrus to court.

"We would be facing a very difficult business situation, and we would most likely move to protect our rights," said Jon A. Joseph, executive vice president and general counsel for Valley Bank. "If [the pricing policy] is the basis for not letting us in, then there is going to be a problem."

Valley, which has made a big business out of placing ATMs in and around Nevada's tourist attractions, took Plus to court over the issue of levying surcharges on customers of other banks – a practice prohibited by Cirrus.

Cirrus will discuss the Valley application, along with requests from several other Plus members, that want to accept Cirrus cards, at a board meeting Aug. 14, according to G. Henry Mundt 3d, senior vice president for the Downers Grove, Ill.-based network.

"We don't really talk about specific applications," Mr. Mundt said. "The issue of surcharges is one that will have to be addressed."

Valley sued Plus in April 1989 after the network denied two requests for permission to impose surcharges. But in July 1989, Nevada passed a law essentially allowing banks to levy surcharges on electronic banking transactions by cardholders of other banks.

The $2 billion-asset bank is charging customers of other Plus member banks $1 each time they obtain cash from Valley's

If the pricing policy is the basis for not letting us in, "then there is going to be a problem."

Jon A. Joseph
Valley Bank of Nevada

machines in airports, casinos, and hotels. It began levying the surcharge in September after the U.S. District Court for Southern Nevada upheld the constitutionality of the state statute.

Plus, a Denver-based affiliate of Visa U.S.A., is appealing that court's decision. Oral arguments were heard by the U.S. Court of Appeals for the Ninth Circuit in March.

If Valley is allowed to accept Cirrus cards, it would charge customers of Cirrus member banks the same $1 fee it levies on Plus member customers, Mr. Joseph said.

"We would be complying with our state law," he said.

The agreement between Cirrus and Plus to share ATMs beginning Aug. 20 could be the source of other legal wranglings. Fourteen state attorneys general are now examining the impact of the sharing plan on other participants in the ATM market.

Competitors Moving In

According to Mr. Joseph, the Valley request has caused controversy at Cirrus. "We've heard there has been serious concern about surcharging and about Valley Bank's acceptance," he said. "If we are turned down because of surcharging, it's discriminatory."

First Interstate Bancorp, a Cirrus member whose Nevada ATMs compete with Valley's, has already received permission to accept cards bearing the Plus logo.

"We would have a serious business detriment if they were allowed to accept Plus, and we can't take Cirrus," Mr. Joseph said. □

States Review Cirrus, Plus Plan

NEW YORK – As the Cirrus and Plus networks prepare to begin sharing automated teller machines on Aug. 20, 14 state attorneys general are still discussing a possible challenge to the sharing agreement.

The attorneys general quashed a joint effort by MasterCard International and Visa U.S.A. to develop the Entree debit card system. They are scheduled to meet Wednesday to discuss their inquiry into Cirrus and Plus ATM sharing, according to Lloyd Constantine, chief of the New York State antitrust bureau.

The group has been conferring with executives from Cirrus, Plus, and some regional ATM networks to determine the impact of the sharing plan on the rest of the electronic banking industry, Mr. Constantine said.

The inquiry is a direct result of the Entree antitrust lawsuit, settled in May. The settlement, which called for Entree plans to be abandoned, contained a provision specifically preserving the states' right to challenge Cirrus and Plus duality if they conclude it is anticompetitive.

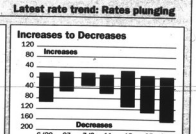
AMERICAN BANKER /*Bank Rate Monitor's*™

Consumer Money Index — **Latest rate trend: Rates plunging**



Bank Rate Monitor's ratio indicates the probable direction of retail interest rates over the next several weeks. The ratio is computed by dividing the total number of rate decreases into the number of increases or vice-versa on six types of accounts offered by the 10 largest banks and thrifts in each of the nation's 10 largest markets. Example: 100 rate increases and 25 decreases would make a 4-to-1 "Plus" ratio. Or, 100 decreases and 25 increases would make a 4-to-1 "Minus" ratio. Over time, the longer and farther the ratio moves on the Plus or Minus side, the more sustained the current rate cycle is likely to be. When the ratio suddenly moves strongly in an opposite direction, it signals the beginning of the end of a cycle. The graph shows how the ratio has moved over the past few weeks, and the bar chart shows the actual number of rate increases to decreases used to calculate the ratio. The greater the number of ups and downs, the longer the cycle probably will last.

EXECUTIVE *changes*

Buckeye Picks Thomas as CEO

Michael H. Thomas has been named chairman and chief executive officer of **Buckeye Financial Corp.**, Columbus, Ohio.

Mr. Thomas succeeds **Michael J. McMennamin**, who resigned to become president and chief operating officer of **Banc One**, Columbus.

Mr. Thomas, executive vice president of JMAC Inc., an investment firm, has been a director of Buckeye Financial since 1988.

Robert W. Strouse has been named president and managing officer of Buckeye's principal subsidiary, Buckeye Federal Savings & Loan Association. Mr. Strouse had been Buckeye's chief legal counsel.

Buckeye said the management changes won't affect its pending merger with **Banc One's National Bank**, Columbus, which is expected to be completed this fall.

Shawmut Names Vice Chairmen

Eileen S. Kraus and **James S. Dailey** have been appointed vice chairmen of Connecticut National Bank, Hartford, a subsidiary of **Shawmut National Corp.**, a superregional bank holding company with headquarters in Hartford and Boston.

Ms. Kraus, who was also elected a director of Connecticut National Bank, oversees consumer banking and marketing for the corporation. Mr. Dailey joins the organization as head of all real estate activities.

Ms. Kraus and Mr. Dailey join James A. Daley, Russell H. Knisel, and Jasper W. Morgan Jr. as vice chairmen.

Mr. Dailey joined Shawmut from his position as president of the Inverness Group, a real estate investment/management company in California.

In his newly created post, Mr. Dailey will oversee all of the corporation's real estate activities and report to **Gunnar S. Overstrom**, president and chief operating officer of Shawmut National Corp. Mr. Dailey will relocate to Connecticut.

In addition, the holding company said its lead banks, Connecticut National Bank and Shawmut National Bank, have named eight senior vice presidents.

They are: **John Leary, Eugene Marinelli, Robert Prendergast, John Spear, Thomas Theurkauf, Steven Turner, Raymond Coppens,** and **Joseph Sullivan.**

Mr. Leary will establish and manage an independent real estate appraisal department to assist the lending and asset-management divisions in obtaining and interpreting real estate market information. He will serve as chief appraisal officer of Shawmut National Corp. Mr. Leary was a principal in his own appraisal firm, John J. Leary and Co. Inc.

Mr. Coppens is manager of applications systems development in Boston and is responsible for all Boston-based applications development. Massachusetts bank mergers, and consumer banking support.

Mr. Marinelli has been promoted to manager of the New Haven commercial office of Connecticut National Bank, with responsibility for New Haven area commercial lending activities.

Mr. Prendergast is director of credit administration for the commercial real estate division of Shawmut National Corp. Mr. Spear is manager of retail distribution management and is responsible for Shawmut National's retail delivery network planning, ATM program, and teleservicing.

Mr. Sullivan is group manager of mutual funds. Mr. Theurkauf is director of investor relations for Shawmut National Corp.

Mr. Turner is manager of funds management. He is responsible for all Shawmut National funding activities and for managing the interest rate risk management process.

— **Franklin Smith**

State Street Promotes Darr

James J. Darr, vice president of **State Street Bank & Trust Co.,** Boston, has been named head of its public funds division, a leading provider of custody and other investment-related services to the pension funds of many state and local governments.

James J. Darr

He succeeds J.D. Nelson, who has left State Street to establish a minority-owned investment management firm.

Mr. Darr has been director of public affairs for the bank since 1987, a position involving press and legislative relations, education, community reinvestment, housing, and many other issues concerning the Boston community.

In his new position, Mr. Darr will manage both the marketing and operations activities of the division, whose sole function is serving public funds.

"He brings a superb combination of experience and skills to this key position, having run a public sector organization himself and knowing well many of the issues and concerns that public funds feel strongly about," said William F. Gundy, executive vice president of the bank's institutional investor service area.

Mr. Darr previously was executive director of the Boston Private Industry Council, a public-private partnership addressing issues of education, economic development, and employment. He has been involved with different levels of government for a number of years.

"I see my new position as a challenge in some way because we are a leader in the business, and [there is] a lot of competition," Mr. Darr said. "There is little similarity in the job and my previous position with the Private Industry Council, because it's like being an entrepreneur."

Bank of New England Corp., Boston, has named senior vice president **Susan Clark** to head the company's correspondent banking business in New England.

If your institution issued a million checks last year, you'd be doing O.K.

If you had issued them using our Official Checks you'd be doing about $650,000 better.

Here's why. With American Express® Official Checks, you earn commissions on 100% of your outstandings. And we reduce your back office labor costs. So altogether, you can earn an average of 66¢ more profit on every check you issue*

Just think, your funds disbursement items including teller, loan, dividend and expense checks could actually improve your earnings.

Nonperformers, Foreclosures Take Toll at Biggest Banks

By ANDREW REINBACH

The bottom fell out of the real estate portfolios of the nation's 10 largest banks in the first half of the year as the big banks racked up massive nonperforming loans, according to *American Banker*'s tabulation of reported data for the two quarters.

Most of the punishment on nonperforming loans was sustained by Chase Manhattan Corp. and Citicorp.

Foreclosed real estate at the 10 biggest banks grew 74.1%, or $1.312 billion. Nonperforming real estate loans rose 29.5%, or $1.265 billion, and real estate chargeoffs grew 47.9%, or $149.68 million. Overall real estate loans fell only 3%.

Underscoring the seriousness of how real estate is affecting these banks, general loan-loss reserves rose 7.24%, or $637.7, during the first six months of 1990, compared with the same period in 1989. Most banks attributed much of that rise to real estate loan problems.

And things are likely to get worse before they get better. Analysts believe the writeoffs and figures for nonperformers will worsen toward yearend.

'A Throwaway Year'

"As we head into the fourth quarter, the message for bank readers will be to throw in the kitchen sink," said Thomas H. Hanley, chief bank analyst at Salomon Brothers Inc. "It's a throwaway year anyway."

Even relative optimists concede that things will get worse. "I think the bank results are in a deceleration phase," said Robert B. Albertson, vice president at Goldman, Sachs & Co. "The move is slowing, but the numbers will certainly go up more."

Results for the period were mixed across the country. Generally, New York banks did worse, and California banks did better.

Citicorp and Chase Manhattan together saw real estate chargeoffs grow 440.9%, or $97 million; foreclosed real estate loans grew 261%, or $85.1 million; and nonperforming real estate loans grew 67.77%, or $1.167 billion. Overall, real estate loans grew only an estimated 6.88%.

Overall Results Skewed

These losses were so steep that they skewed the overall results of the eight other banks in the top 10. When Chase and Citicorp's results are subtracted from those totals, the improvement in performance is dramatic: Foreclosed real estate rose only 2.29%, or $98.49 million, instead of 29.5%, or $1.312 billion; nonperforming real estate loans grew 16.86%, or 52.689 million, instead of 47.9%, or $1.265 billion; and chargeoffs grew 26.07%, or $52.689 million, instead of 74.1%, or $149.68 million.

Most analysts managed the best performance in the country: Nonperforming real estate loans and foreclosed real estate both fell – the latter by 103%, or $195 million – on rising loan volume. Chargeoffs were unavailable, and bank officials would not comment on the results.

On an individual basis, Chase's real estate loan portfolio put in the worst performance. Real estate chargeoffs rose 950%, from $2 million to $21 million, while foreclosed real estate grew 251%, or $355 million, and nonperforming real estate loans grew 124.9%, or $176 million, even though real estate loan growth was flat. Chase would not divulge the size of its total real estate loan portfolio.

Citicorp's chargeoffs grew 309%, or $78 million, while foreclosed real estate rose 232.8%, or $496 million, and nonperforming real estate loans grew 392%, or $451 million, against real estate loan growth of 10.9%, or $1.3 billion. Citicorp and Chase declined to comment.

[1]Estimated by Moody's Investors Service [2]Estimated by Kidder, Peabody & Co. [3]Yearend 1989 [4]Yearend 1989
Source: Banks

As dismal as these figures are, they may get worse at the two money-center banks, according to Charles W. Peabody, vice president of Kidder, Peabody & Co.

"To the extent that Chase and Citi have exposure to California, they may not be at their peak, though we've probably seen most of the worst," he said. Mr. Peabody said he expects California's real estate market to worsen toward yearend.

Other observers expect this result to be unavoidable as the West Coast market softens.

Because California is lagging the real estate problems of the rest of the country, the numbers haven't surfaced yet. But they should," said Mara Hilderman, a senior analyst at Moody's Investor's Service Inc. in New York.

Cooling in California

Moody's recently released a study of the California real estate market that predicted a further cooling off, but probably no Northeast-like problems or Texas-type crash.

But other analysts think California may be facing more problems than that.

"If the real estate recession surfaces in California, the numbers will probably look like New York's," said Mr. Peabody of Kidder.

Some California bankers feel that some downturn is unavoidable.

"I would hope that our reserves reflect our expectations of losses," said Robert Greene, chief credit officer of First Interstate Bank, Los Angeles.

After Chase and Citicorp, the worst results appeared at NCNB Corp., Charlotte, N.C. Chargeoffs at the bank rose 81.1%, or $40.12 million; foreclosed real estate grew 175%, or $89.66 million; and nonperforming real estate loans grew 92.28%, or $122.75 million, against real estate loan growth of only 0.59%, or $46 million.

Ralph Carestio, executive vice president of NCNB, said that the bank's numbers reflected commercial and industrial loans secured by real estate that went bad, as well as small real estate loans, rather than larger, more typical commercial real estate lending.

"If you look at the end of the second quarter, we had one of the cleaner commercial real estate portfolios," he said.

When NCNB took over First Republic Bank in 1988, it inherited a $9 billion real estate loan portfolio that NCNB immediately wrote down to $6 billion – $5.5 billion of which it handed to the Federal Deposit Insurance Corp.. It was allowed to do this as part of its deal with the FDIC.

"We've worked very hard in the first part of the year to recognize our problems and reserve for them," he said. "We don't think we're in for any surprises. But I sure have had more fun in this business than I've had in the past year or so."

Among the New York banks, only J.P. Morgan, and possibly Chemical Bank, reported positive results. Both Manufacturer's Hanover Trust Co. and Bankers Trust New York Corp. reported rising amounts of all real estate categories, although not in the same league as Chase and Citicorp.

Bankers Trust had only modest rises in problems, but officials did not comment on its

DEALMAKERS
For Morgan Stanley Unit, Slump Creates Wealth of Opportunities

By ANDREW REINBACH

William S. Bahrenburg Jr. has found happiness in today's troubled real estate market.

"It's a good time to be an intermediary," said Mr. Bahrenburg, the chairman of Morgan Stanley Realty Inc. "I've never seen quite the buying opportunities I'm seeing now."

Those buying opportunities translated into $12 billion of transactions in the past 12 months, worth an estimated $180 million in fees for his company, a unit of Morgan Stanley & Co.

Mr. Bahrenburg says his unit has 75 transactions under contract so far this year, and closed deals totaling over $4 billion. The deals currently in progress include the piecemeal sale of the nationwide portfolio of Boston-based developer Cabot, Cabot & Forbes, which he said was worth over $2.5 billion.

Hostile Climate for Banks

Buying opportunities for one side, of course, mean disasters for the other side, and for banks the current real estate climate is anything but an opportunity.

"It's the best or the worst of times, depending on your point of view," Mr. Bahrenburg said. "For banks, the biggest area of growth in real estate employment will be in dispositions groups, and the acquisition of property management subsidiaries to handle their foreclosed properties."

"Banks will continue to be a source of product, not capital – and some of that product won't

William S. Bahrenburg Jr.
Morgan Stanley Realty

be so hot, so they'll try more and more to move into our interest diary business," he added. "I'd do the same thing if I were in their shoes."

As an industry, said Mr. Bahrenburg, banks will have to solve their current real estate problems before they become active players in the business again.

"They'll have to get rid of their hangover before they can start partying again," he said. "They spent the '80s leveraging their portfolios, and in the '90s they'll be de-leveraging them."

A Search for Funding

Mr. Bahrenburg predicted banks will be searching for alternative refinancing sources, as the bullet loans made two-to-five years ago mature.

That search, said Mr. Bahrenburg, will become 50% of his Morgan Stanley Realty's business over the next few years.

Typical of this was the $67 million sale of the Hyatt Grand Champions Hotel in Palm Desert, Calif., which closed in June.

The hotel was built as a joint venture of Primerica Corp. and Gibraltar Bank FSB, but Primerica wanted to remove it from its balance sheet. The problem was how to sell a hotel with highly seasonal cash flow in a market uninterested in the property type in general.

The solution? Sell it to Manauko Inc., one of the seven Japanese syndicators that have become a major factor in the midsized acquisitions business in the U.S.

Manuko, said Mr. Bahrenburg, was able to make a handsome, undisclosed profit by retailing the tax benefits of the hotel to Japanese and other Asian investors. □

Realty Recession? Maybe Not Quite

By GLENN SOMERVILLE
Reuters

WASHINGTON — Real estate was an early victim of the current economic slowdown, ending years of booming profits for builders and homeowners.

Sales have slumped, construction has slowed, and hundreds of thrifts that once provided most mortgages have gone under, many because of reckless lending for speculative property developments.

But the housing industry resists the idea that it is leading the rest of the economy into a recession, after 7½ years of growth, and insists that conditions are much different than in the last slump, in 1981-82.

Some 21.3% of suburban office space across the United States was vacant in the first quarter.

Statistical Backup

Mark Obrinsky, senior economist for the Federal National Mortgage Association, or Fannie Mae, reels off statistics to make the point.

"In 1981 we were at 16% plus for fixed [mortgage] rates, and we're at under 10% now," he says. "Sales of new homes were averaging 412,000 a year in 1981-82, and they're at 581,000 now."

"It's a low level, but it's not a recession-era level."

Nevertheless, the slide is serious. Just a few years ago, builders built with abandon, buyers eagerly snapped up homes, and homeowners saw the value of their houses skyrocket.

Though the construction of houses, apartments, and office buildings accounts for no more than 5% of the nation's $4 trillion economy, the entire real estate industry is much larger.

Indeed, the National Association of Realtors says the industry makes up 24% of the economy if remodeling, sales, legal advice, financing, renting, and managing are included.

One-Family Homes Lead Field

The industry has also been slipping in an uneven pattern, with single-family homes healthier than the remainder.

"There's no question that the multifamily sector is in a classic recession, down to or below all the cycles of the postwar period, including the deepest ones in 1981-82 and in 1975," says Dave Seiders, chief economist with the National Association of Home Builders. "Single-family building has about hit bottom and should start to come up."

In commercial real estate, massive overbuilding in the early 1980s, when tax-shelter rule breaks unbalanced the market, says Dick Peach, senior economist for the Mortgage Bankers Association of America.

Some 21.3% of suburban office space across the United States was vacant in the first quarter. "The future for this sector looks pretty bleak for some years to come," Mr. Peach says.

Despite the thrifts' problems and the tightening of credit standards by the nation's banks, analysts say there is an ample supply of mortgage credit for homebuyers and builders.

"There is no credit crunch," says Mr. Obrinsky of Fannie Mae.

Mr. Peach says: "We've seen a tremendous drop in the thrift industry's market share [of mortgage lending] with no noticeable impact on consumers' ability to get a loan."

He added, "The savings and loan collapse, had it happened in the 1960s or early 1970s, would have had a devastating impact."

But as much as 65% of financing for single-family homes now comes from pools of capital derived through mortgage-backed securities.

Recession Looms Closer

The slide in GNP growth to an anemic 1.2% annual rate in the second quarter of this year from 1.7% in the first quarter, has brought the specter of a recession closer.

If housing does not lead the way into recession, it would surely follow, analysts say. The industry is acutely aware how close it is to a business drop.

"We think it's going to be close, but we're still betting 'no' on a recession," says Mr. Seiders. "But if consumer confidence weakens any more, that'll do it." □

Comptroller General Backs House Measure on Auditors

Reuters

WASHINGTON — Comptroller General Charles Bowsher has urged passage of legislation to toughen responsibilities of outside auditors of a company's financial statement.

Lax auditing standards helped allow the thrift industry to spiral out of control before regulators or Congress knew they faced a multibillion-dollar crisis, Mr. Bowsher told the House subcommittee on telecommunications and finance last week.

He said strict standards could help avert similar crises that he fears might arise among defense contractors, in the insurance industry, and in company pension funds.

Broader Role for Auditors

The house panel is considering legislation that would require certified public accountants to examine a company's internal control mechanisms and would require auditors to assess a company's prospects for remaining solvent over the next fiscal year. The legislation would also oblige auditors to inform the Securities and Exchange Commission of illegalities that are not rectified promptly.

"We must act today to avoid another disaster tomorrow. That has we want to work not against but with the accounting profession to see that another savings and loan crisis does not occur," said subcommittee Chairman Timothy Wirth, D-Mass.

Another proposal would require auditors to evaluate whether banking companies are complying with federal regulations.

Lawsuits Escalate

The Federal Deposit Insurance Corp. has brought 21 legal actions against accounting firms, most of them Big Six firms, seeking $1.5 billion for alleged misdeeds in their audits of federally insured thrifts, the agency informed the subcommittee.

Faced with such massive lawsuits, the American Institute for Certified Public Accounts agreed last week to allow its member firms, now organized as partnerships, to form corporations that would limit liability.

SEC Offers Compromise

James Doty, general counsel of the Securities and Exchange Commission, told the subcommittee members that his agency has not taken a formal position on the auditing proposals but would be pleased to work with Congress to "maximize investor protection without imposing excessive cost on our financial reporting system." □

FDIC Closes 2 Banks in Southwest

DALLAS — Bank One, Texas said it assumed all the deposits and certain other liabilities of United Bank of Waco after the latter was closed last Thursday night by the Office of the Comptroller of the Currency.

Bank One did not acquire United Bank's loan portfolio but has an option to purchase selected loans and other assets from the Federal Deposit Insurance Corp., which acting as receiver.

The six offices of United Bank in Waco, Commerce, Mesquite, and Port Arthur reopened Friday as offices of the Texas subsidiary of Bank One Corp, Columbus, Ohio. Of those cities, the $13 billion-asset Bank One had previously been represented only in Port Arthur.

In another southwestern bank, American Bank & Trust Co. of Baton Rouge, La., also was closed Thursday by the Federal Deposit Insurance Corp. The Hancock Bank of Louisiana, a subsidiary of Gulfport, Miss.-based Hancock Holding Co., assumed American's $300 million in deposits while acquiring certain loans and other assets. □

This announcement appears as a matter of record only.

Regulators to Review First American's Commercial Loans

Continued from page 2

million, First American announced the resignation of Kenneth L. Roberts, its chairman, chief executive, and president. He was replaced by vice chairman James F. Smith Jr.

On July 19, First American announced second quarter earnings of $9.3 million, or 41 cents a share, up 190% from the $3.2 million, or 14 cents a share, in second quarter 1989.

This year's second quarter benefited from an after-tax gain of $21.3 million resulting from the sale of First American's credit card receivables to Delaware-based MBNA America Bank, a subsidiary of MNC Financial Inc., Baltimore.

Troubles in Eagles

The targeted examinations of real estate portfolios in national banks of the Southeast, launched by the Comptroller in January, have now revealed First American and Miami-based Southeast Banking Corp. as the most troubled large banks in the region.

"It's probably not very hard to figure out that we'd spend more time supervising those two institutions than the rest of them," said Mr. Ahrens of the Comptroller's Office.

Analysts say First American continues to be hampered by Nashville's real estate recession.

After reporting cumulative losses of $92.8 million in the last three quarters, Southeast announced late last month that it would operate under supervisory agreements with the Comptroller's office and the Federal Reserve Bank of Atlanta.

Those agreements call for Southeast to boost its capital by about $10 million at yearend and strengthen its real estate lending, credit review, and reserve policies.

Analysts say First American continues to be hampered by Nashville's real estate recession, but enjoys a stronger capital position and better reserve coverage than Southeast Bank.

Where Southeast Bank maintains an equity to assets ratio of 4.4%, the comparable figure at First American is 5.56%. First American's $160.2 million loan loss reserve now covers 101% of its nonperforming assets, compared to 45% at Southeast Bank.

The concerns about First American come mainly from that [Nashville] market," said Susan R. Leaders, banking analyst with the Robinson-Humphrey Co. in Atlanta. "When a market is that troubled, it just doesn't go through your real estate portfolio. . . it's funneled through your entire portfolio."

Ms. Leadem said she expects First American to identify more problem loans in anticipation of the fall examination by the Comptroller's Office. □

Real Estate Woes Take a Big Toll At Top 10 Banks

Continued from page 8

results.

Hanover's chargeoffs fell from $39 million to $17 million, but its nonperforming real estate loans rose 157%, or $126 million, and foreclosed real estate grew 45.8%, or $77 million, versus real estate loan growth of only $342 million.

Robert Moritz, a vice president at Manufacturers Hanover, said that nonperforming real estate rose because of one bad credit – a $153 million loan to Donald Trump – and that the rise in foreclosures was the result of aggressive portfolio management.

"We've put into place a process in which we realistically access problems as they arise," he said. "I won't guarantee that we won't have real estate problems in the future, but we've taken hold of our problems and acted accordingly.

Morgan, which posted the best real estate balance sheet, also had the smallest portfolio.

"It's never an easy job to dispose of properties that the market understands are in bank ownership," he said.

Mr. Greene of First Interstate has a similar attitude toward foreclosures. "We view foreclosed real estate as a pathway to resolution," said Mr. Greene. "If you own that property now, you can go out and sell it, and you don't have the problems of an unwilling or uncooperative owner."

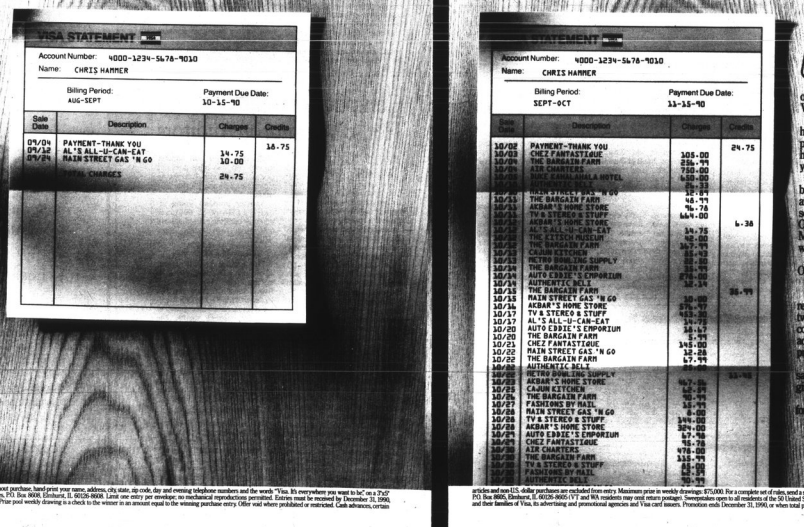
First Interstate's nonperforming real estate loans fell by about 50%, or $500.8 million, while foreclosed real estate soared 293%, or $74.05 million, as of June 30.

Morgan's Small Portfolio

J.P. Morgan, which posted the best real estate balance sheet among the top 10 banks, also had the smallest real estate portfolio – a mere $928.8 million in outstanding loans – and the smallest portfolio of foreclosed real estate at $256,000.

Morgan is mainly a real estate adviser, not a lender, said Jackson Tai, the bank's managing director in charge of real estate. It arranged over $4 billion in real estate transactions in the past year. □

An interesting thing happens when people think someone else might pick up the tab.



NO PURCHASE NECESSARY. To enter without purchase, hand-print your name, address, city, state, zip code, day and evening telephone numbers and the words "Visa. It's everywhere you want to be" on a 3"x5" card and mail to: Visa Our Treat Sweepstakes, P.O. Box 8600, Elmhurst, IL 60126-8600. Limit one entry per envelope; no mechanical reproductions permitted. Entries must be received by December 31, 1990, or before total weekly prize pool is awarded. Prize pool weekly drawing is a check to the winner in an amount equal to the winning purchase entry. Nuclear Power Industry Is Hot Source of Trust Business

Continued from page 1

decommissioning trusts. The institute said $1 billion more will be invested by yearend. Required contributions will bring in at least another $1 billion in assets yearly. By 2008, the nuclear trusts will have $100 billion in assets, the NRC estimates.

The trusts are attractive not only because of their potential size, but also because no money can be withdrawn until the 40-year licenses for the plants expire. Until the licenses run out, utility companies must continue to put money into the trust.

"The real impact is they have to set aside large amounts of money every year," said Mr. Deeter. "It's a steady stream of assets." As of last week's deadline, Harris said it had gained $275 million in assets from nine nuclear trust accounts, about the same as a medium-size pension fund. Two of the trust accounts cover big California nuclear plants and could be worth nearly $1 billion apiece in 20 years.

Utilities with older plants must make fairly large trust contributions now; contributions for new plants will be small initially.

Oldest Plant Still Operating

The Nuclear Regulatory Commission estimates that it will cost $165 million to clean up the average plant, but costs vary greatly by size. The oldest nuclear plant is the Yankee Row plant near Pittsfield, Mass., which was licensed in 1960 and is still operating.

Utility companies with older plants must make fairly large trust contributions now, while contributions for new plants will be relatively small initially.

"These assets are expected to grow dramatically," said Carter Reynolds, senior vice president of Bankers Trust, which now has four nuclear trust accounts with a combined $150 million in assets. Ms. Reynolds said its trusts will grow tenfold over the remaining life of the plants, roughly 20 years.

So far, Mellon's 11 nuclear trusts represent $310 million in assets, said Timothy F. Keaney, Mellon vice president.

State Street did not return phone calls or answer inquiries about the size of its nuclear trust business.

Fee Growth Seen

The nuclear decommissioning trust accounts are generating only limited fees at this time, say bankers. The average account size – about $30 million – and regulations limit tax-credit investment to safe securities such as municipal bonds.

"For now, their contribution to our profitability is small," said Mr. Keaney of Mellon, which has opened twice as many decommissioning trust accounts as employee-benefit accounts in the past year. "But in five years, we expect it to be significant."

When the accounts grow, some trusts will require five investment managers and sophisticated monitoring of performance. As a master trustee overseeing the investments of these funds, Mellon expects its service fees to increase commensurately.

Karen Adams, a vice president at Meljon, said that only half of the 60 corporations that set up trusts looked for a national trust bank. The balance elected to open trust accounts with their local banks, in some cases for political reasons.

But some of these utilities may switch trust providers, she said, because small banks may not be able to supply the monitoring and investment managers required. Complex back-office systems, typically present in big master trust banks, are needed to do the job. □

Bluebonnet Deal Defended by Fail

Continued from page 2

Metzenbaum.

Bankers Life, an insurance Company he dealt with, "gave me $25 million at the closing and said they would be responsible for the other $10 million under certain circumstances."

On key details, including the date on which Bankers Life committed to fund the deal, Mr. Fail was hazy. For example, Mr. Fail said he was not sure if newspaper reports that Bluebonnet received $275 million last year are true.

He also told the panel he probably did not look over a statement he signed that represented that he had not been the subject of civil or criminal actions.

A 1976 Alabama indictment against Mr. Fail was dismissed with the stipulation that it could not be brought again, but the insurance company he owned was convicted of fraud and Mr. Fail agreed not to underwrite or sell insurance in the state again.

But Mr. Fail said that some details might have been overlooked in the rush to get the deal done by the end of the year.

Mr. Fail said it was not until Dec. 9 that the Federal Home Loan Bank Board, the now-defunct thrift regulatory agency, told him he was once again considered a serious bidder for the group of Texas thrifts. After a week of negotiations, he said, the Bank Board gave him a Dec. 28 closing date.

That date was moved up to Dec. 22. After a week of frantic work, he arrived at the Bank Board offices to close. "The biggest pile of documents I have ever seen in all my life." □

INTERNATIONAL NEWS

SPECIAL REPORT: CRISIS IN THE PERSIAN GULF

First Chicago Halts, Then Pays, $111 Million to Kuwait Bank

By JOHN EVANS

LONDON — Amid broad confusion among banks over the terms of the worldwide freeze on Kuwait's assets, First National Bank of Chicago first blocked and then released Monday a payment of $111 million to a Kuwaiti bank.

The on-off freeze demonstrates the difficulties American and other banks are having in interpreting the orders from their respective governments blocking payments involving Kuwait assets, actions designed to protect the Gulf state's assets after the invasion by Iraq, say bankers in London.

Guidelines Coming

The U.S. Treasury and the Bank of England are working to produce detailed guidelines for banks in order to further clarify the way the freeze works, a spokeswoman for the respective agencies said.

First Chicago, through its London-based settlement organization the First Chicago Clearing Center Ltd., Thursday blocked proceeds of $111 million owed to the United Bank of Kuwait from the sale of certificates of deposits.

That payment was released Monday by First Chicago, apparently after it clarified the terms of the U.S. freeze order on Kuwaiti assets and UBK's status, according to UBK general manager Christopher Keen.

A spokesman for First Chicago, citing client confidentiality, declined to comment.

Mr. Keen explained that his bank, which has assets of $4.25 billion, is in a special position that effectively gives it immunity from both the U.S. and British freeze orders. It is incorporated in Britain rather than Kuwait and is owned by Kuwaiti private-sector interests, including other Kuwaiti banks and institutional investors, rather than the Kuwait government, Mr. Keen said.

The U.S. executive order on Kuwait applies to "all property and interests in the property of the Government of Kuwait . . . its agencies, instrumentalities and controlled entities and the Central Bank of Kuwait that are in the United States [or] come under the control of United States persons, including their overseas branches."

But Mr. Keen said that while his bank is in a special position, a major issue to be clarified is the "extra-territoriality" of the U.S. order and whether it applies comprehensively to U.S. bank branches in Britain.

Normally, these are subject to British law, including the terms of the new U.K. freeze.

However, U.S. bankers say privately that while they are awaiting further clarification of the freeze orders from Washington, they are treating the order as applying worldwide.

Mr. Keen declared: "It's a shame that the legal effect of way the U.S. freeze works is not clearer to people in U.S. bank branches abroad."

In Washington, a U.S. Treasury spokeswoman said that work is going on to prepare detailed guidelines and operating procedures for banks and other institutions.

In London, a Bank of England spokeswoman declined to comment specifically on the UBK case, but confirmed that any bank operating a branch in Britain usually is subject to U.K. law, including the new freeze order.

"The Bank is still working to issue detailed instructions."

Separately, National Bank of Kuwait, the Gulf state's largest bank, with $13.25 billion in assets, released a statement declaring that its chairman and senior managers are now operating out of its London offices.

The bank said that, as a private-sector rather than government institution, it not affected by the U.S. and British action.

Banking System in Persian Gulf Under Strain as Liquidity Drops

By ERIC HALL
Reuters

DUBAI, United Arab Emirates — Banking in the Persian Gulf is already showing signs of strain because of the Iraqi invasion of Kuwait, bankers here say.

Many banks face defaults on Kuwaiti payments, and lenders are being scared out of the system.

Bankers said the squeeze in the interbank market was particularly tight in Bahrain. Some of the smaller Bahraini banks, branches of Kuwaiti banks, and banks with large amounts of capital from Kuwait are getting desperate for funds.

Nobody Is Lending

"The funds are there," a Saudi-based dealer said. "It's just that nobody wants to lend them any. They are down to relying on personal relationships with institutions outside the Gulf. We hear the Japanese are not lending and not taking money."

Some dealers said larger banks were also feeling the pinch.

"They say they are not, but then why do they keep calling me up looking for quotes every 15 minutes?" asked another Saudi bank dealer.

He said dollar interbank rates for lending to such banks were being gradually racked up.

"They call and I'll offer 8, 7⅞, Next time I'll offer them 8⅛, 7⅞; next time 8⅛, 8," he said.

'A Degree of Panic'

"By putting up rates, banks are saying they are not willing to deal until we see what happens. There is a degree of panic in the market," said a European bank manager in the United Arab Emirates.

Dealers in Saudi Arabia, by far the biggest Gulf economy, said there was no liquidity shortage in the kingdom and recent slowness in the economy had led to a larger-than-normal seasonal cash buildup.

Bankers were watching for responses to the crisis from the Kuwait banks in areas now controlled by Iraq.

Government Bank Silent

Bankers contacted said they had heard nothing from the National Bank of Kuwait but some private Kuwaiti banks had started telexing creditors to make their positions clear.

A National Bank of Kuwait spokesman in Bahrain declined to comment.

Money rates climb as institutions seek cash infusions.

Bahrain's large regional offshore banking center is particularly vulnerable to economic shocks like the Iraqi invasion because the tiny island economy has no deep domestic depositor base on banks can draw.

"It's all money market-based, so as Kuwaiti defaults start to work through, we have a kind of gradual bleeding effect which could eventually cause a hemorrhage," said a Bahrain banker.

Withdrawals Discouraged

All around the Gulf, to discourage withdrawals, financial institutions were quoting very wide spreads on foreign exchange deals in Gulf currencies on deals for individuals, mainly buyers of dollars and sterling.

In the United Arab Emirates, dollar bills became scarce as depositors, especially expatriates from the Indian sub-continent, withdrew money.

"We have around 5% of people wanting to break deposits and that is rising. In the long term, that money will not come back and we are talking about a shortage of investment funds in the Gulf," a banker said.

Bankers predicted that in the long run small Gulf banks and branches of non-Gulf banks would be the biggest losers in the current crisis because of their thin deposit bases. □

Treasury Clarifies Details of Asset Freeze

By JAMES B. KRAUS

NEW YORK — The Treasury moved Monday to identify Kuwaiti banks subject to the presidential order blocking Kuwaiti government-owned accounts, naming 10 banks government-owned institutions.

In a letter to the Federal Reserve Bank of New York, the Treasury's Office of Foreign Assets Control granted 16 other banks temporary exemption from the freeze pending clarification of their ownership by Aug. 18.

The presidential order, issued last Thursday after the Iraqi invasion of Kuwait, allows payments into Kuwaiti or Iraqi government-owned accounts but bars any transfer of funds out of them.

Special Office in Charge

The Office of Foreign Assets Control is responsible for implementing the presidential order, which is intended to prevent Iraq from seizing or using Kuwaiti assets.

On Friday, the Treasury moved to assist Kuwait-owned companies in this country by authorizing U.S. financial institutions to accept deposits and clear checks written on the blocked accounts of Kuwaiti firms in the United States provided the firms register with Office of Foreign Assets Control's Blocked Assets Section.

The authorization also requires banks to ensure that the company has registered and to ensure that no funds are transferred to the Iraqi government.

Some Flexibility

Two other Treasury licenses authorize banks and investment companies managing Kuwaiti government-owned portfolios to manage and reinvest Kuwait funds and allow all foreign exchange transactions on behalf of the Kuwait government entered into before Aug. 2 to be completed provided payment is made into blocked Kuwaiti government accounts.

A fourth order authorized payments for Iraqi or Kuwaiti

See **KUWAIT** *page* **17**

Status of Kuwaiti Banks

The U.S. Treasury Department has put Kuwaiti banks into four categories. Each is affected differently by the freeze.

Category I. Blocked entities owned by the Kuwait government: Bank of Kuwait and Middle East; Burgan Bank; Central Bank of Kuwait; Credit de Berques; Kuwait Finance House; Savings and Credit Bank.

Category II. Banks not to be considered blocked entities: Bahrain Middle East Bank; Banco Atlantico; Dao Heng Bank; Gulf International; Kuwait and Bahrain Bank; Kuwait French Bank; Kuwait Real Estate Bank; National Bank of Kuwait; Swiss Kuwaiti Bank; UBAF Arab American Bank; United Bank of Kuwait.

Category III. Banks in which Kuwait and another government have substantial ownership. Their status is under review, but individual transactions are being licensed. The banks are: Arab-African International Bank; Arab Banking Corp.; Arab-Hellenic Bank; Arab Turkish Bank; Banco Arabe Espanol.

Category IV. Banks over which Kuwait has substantial control because of loans or other transactions are blocked: Al-Ahlie Bank of Kuwait; Commercial Bank of Kuwait; Industrial Bank of Kuwait; Gulf Bank. □

INDEX *of top stories*

The following is a selective index, arranged by subject, of the top stories in *American Banker* last week. The date of appearance precedes each item. This column was compiled by Matt Barthel.

COMMERCIAL REAL ESTATE

7/31 Modern portfolio theory is beginning to play a role in the management of banks' commercial property loans. The Comptroller's office is also interested in new ways of assessing real estate values. *Page 8*

COMPETITION—BANK

8/1 A few leading-edge banks are installing multimillion-dollar networks of personal computers in their branch offices, and many more are considering such outlays. *Page 1*

CONSUMER SERVICES

7/30 Activists say NCNB has not done enough for low-income consumers in Texas, in view of all the tax breaks it received to move into that market. *Page 6*

7/30 Having spent millions to persuade consumers to choose its card, Visa U.S.A. is opening another front in war with American Express Co. *Page 1*

7/31 A growing number of regional and even money-center institutions are discovering to their surprise and delight that they are losing money on basic consumer noninterest-checking accounts and that the only way to turn this situation around is by raising fees by some extensive amount. *Page 1*

7/31 The Most ATM network is teaming up with Deluxe Data Systems to bring debit card services to supermarkets in the Middle Atlantic states. *Page 6*

8/1 The bigger the bank, the greater the likelihood that it charges above the average for a regular retail checking account, according to an ABA survey of 648 commercial banks. *Page 2*

8/1 Many customer-service representatives, who have a key role in cross-selling bank products, do not receive even basic training. *Page 8*

8/2 Adjustable-rate home mortgages have been losing ground in recent weeks to fixed-rate loans, lenders and analysts say. *Page 6*

8/3 Bank card associations say businesses with fewer than 100 employees and revenues of less than $10 million may represent the hottest new credit market. *Page 6*

8/3 The recent surge in sales of credit card portfolios is beginning to create some fallout for purchasers. *Page 1*

CREDIT CARDS
POINT OF SALE

7/30 Having spent millions to persuade consumers to choose its card, Visa U.S.A. is opening another front in its war with American Express Co. *Page 1*

8/3 The recent surge in sales of credit card portfolios is beginning to create some fallout for purchasers. *Page 1*

DEPOSIT INSURANCE

8/2 Treasury Secretary Nicholas F. Brady, in otherwise tightlipped testimony on July 25, made a backhanded pitch for one of numerous suggestions on reforming deposit insurance — limit insurance to one $100,000 deposit per person, rather than the current $100,000 per account. *Page 1*

EARNINGS

7/31 Second-quarter results for most of the nation's largest banks were about as bad as Wall Street had expected — an outcome curiously welcomed by bank stock investors. In today's climate, they said, the avoidance of catastrophe is cause for mild celebration. *Page 1*

FINANCE

7/30 The $1 billion in bank financing lined up for Kansas Gas and Electric Co.'s bid for Kansas City Power & Light Co. was significant for the banking community because it was the first hostile takeover financed by banks in many months, and at the same time it avoided the tag of a highly leveraged transactions. *Page 1*

7/31 Citicorp and Chase Manhattan Corp. representatives stayed away last week from a meeting on possible bank financing for the union-led buyout of UAL Corp., raising speculation that the two banks have joined Chemical Banking Corp. in balking at the $4.38 billion deal. *Page 1*

7/31 Second-quarter results for most of the nation's largest banks were about as bad as Wall Street had expected — an outcome curiously welcomed by bank stock investors. In today's climate, they said, the avoidance of catastrophe is cause for mild celebration. *Page 1*

8/1 Sallie Mae shares fell $2.25 points by late afternoon Tuesday as investors bailed out of the once highly regarded stock. *Page 24*

8/2 Major bank stocks — already at an 18-month low — were pounded further in heavy volume as investors seemed to give full rein to their fears about deteriorating credit quality and prof-

Managing corporate assets doesn't have to be a risky business.

Special Discount Offer– SAVE 15%!

Corporate Investments Manual and Corporate Cash Management Handbook

Corporate Cash Management Handbook and Corporate Investments Manual can take some of the hard work–and a lot of the risk–out of managing your corporate assets. Used together, or separately, the Manual and the Handbook are powerful no-nonsense, working tools you'll use every day.

Corporate Cash Management Handbook provides proven tools and techniques that will help you boost corporate profits, reduce interest costs, increase income, strengthen liquidity, and much more! The Handbook will show you how to:

- Take full advantage of EFTs and EDI
- Forecast funds, receipts, balances and disbursements
- Tap sources of liquidity buried in your firm's capital structure
- Extend float for better disbursement control

Corporate Cash Management Handbook–*the working* tool designed to help you build an efficient cash management system for concentrating funds, accelerating collections, and maximizing the funds of your firm.

Corporate Investments Manual is the first investment guide written specifically for the corporate financial officer. It covers everything from the operational procedures of a single trade to overall portfolio management.

Giving you the tools you need to understand and analyze securities, regulations, operational techniques, and determine which investment is best for your firm, Corporate Investments Manual offers expert guidance on:

- Choosing a reputable securities dealer
- Purchasing "registered" securities
- Reconciling risk versus return
- Evaluating credit quality
- Developing investment policies and guidelines

The 600-plus page Corporate Investments Manual shows you how to avoid many of the common pitfalls of investing...it's more than just a guide to investing–*it's a guide to smart, profitable investing!*

Take advantage of a special opportunity: review either, or both, books FREE for 30 days–without obligation. Keep one and pay just $98. Better yet, for a limited time only, review both and save 15%!

itability across the industry. *Page 1*

8/2 Whether the buyout of UAL Corp. will fly is believed to hinge on an outside equity investment. But even if an investor is found, the union-led deal may still not get off the ground. *Page 1*

8/3 Torchmark Corp. is close to an agreement with banks on financing for a possible new bid for American General Corp., sources close to Torchmark said. *Page 10*

HOME MORTGAGES

8/2 Adjustable-rate home mortgages have been losing ground in recent weeks to fixed-rate loans, lenders and analysts say. *Page 6*

8/3 Edward Mahaney has ambitious plans to auction the RTC's current inventory of mortgage servicing rights by the end of next June. *Page 8*

INTERNATIONAL

7/30 A Hong Kong billionaire will acquire a 50% stake in a New York investment company that is purchasing $3 billion in junk bonds and preferred stock from Columbia Savings and Loan Association. *Page 14*

7/31 Tokai Bank's New York branch has hired John Shane from Chemical to head its swap team, in a bid to strengthen its corporate finance and treasury management operations. *Page 12*

8/1 National Westminster, Britain's No. 2 bank, faces a major fee-reaching changes seen in the nation's banking system in the past half-century. *Page 1*

7/31 L. William Seidman said he expects the thrift crisis to cost taxpayers $175 billion to $200 billion, excluding interest costs – double what the Treasury recently estimated. *Page 2*

7/31 The Fed is going to the mat to defend its 18-year-old "source of strength" doctrine, under which bank holding companies may be ordered to draw on their assets to bolster sickly banking community. *Page 1*

LEGISLATION / REGULATION

7/30 The FDIC will appeal a recent court ruling that the agency overstepped its authority in declaring 12 subsidiaries of Texas American Bancshares insolvent. *Page 2*

7/30 The environmental-liability debate has focused on lenders, but apparently the federal government is also looking for ways to avoid having to pay for the cleanup of properties it has inherited from failed banks and thrifts. *Page 8*

7/30 As the Financial Institutions Reform, Recovery, and Enforcement Act nears its anniversary, the bailout appears to have been overtaken by cash shortages, political bickering, and a growing realization that the thrift problem was much deeper than anyone ever imagined. *Page 1*

7/31 Across the nation, the thrift-bailout law is changing how banks and thrifts do business. The year since the law's passage has brought some of the most far-reaching changes seen in the nation's banking system in the past half-century. *Page 1*

7/31 L. William Seidman said he expects the thrift crisis to cost taxpayers $175 billion to $200 billion, excluding interest costs – double what the Treasury recently estimated. *Page 2*

7/31 The Fed is going to the mat to defend its 18-year-old "source of strength" doctrine, under which bank holding companies may be ordered to draw on their assets to bolster sickly banking community. *Page 1*

8/1 In the strongest indication to date that the cost of bank failures will rise dramatically, Federal Deposit Insurance Corp. Chairman L. William Seidman said that the bank insurance fund is likely to suffer a net loss of $2 billion this year. *Page 1*

8/1 The RTC starts its second year with a mountain of distressed real estate, troubled loans, and other sour assets that totaled $37 billion at the end of June and could ultimately top $100 billion. *Page 1*

8/1 M. Danny Wall defended his handling of the 1988 sale of 15 Texas thrifts to James Pate. He told a Senate panel that a lobbyist with ties to then Vice President Bush did not influence his decision. *Page 2*

8/2 Treasury Secretary Nicholas F. Brady, in otherwise tightlipped testimony on July 25, made a backhanded pitch for one of numerous suggestions on reforming deposit insurance – limit insurance to one $100,000 deposit per person, rather than the current $100,000 per account. *Page 1*

8/2 Shifting the Resolution Trust Corp.'s thrift-cleanup effort into high gear, RTC Chairman L. William Seidman announced an ambitious plan to turn $30 billion in assets over to private managers and to sell $50 billion of loans, securities, and real estate by year's end. *Page 1*

8/2 Sen. Donald Riegle's Banking Committee heard widely varying estimates on the cost of fraud in thrift failures. *Page 2*

8/2 Washington Bancorp., the troubled parent of National Bank of Washington, filed Wednesday for protection from creditors under Chapter 11 of the bankruptcy code. *Page 2*

8/3 Settling a long-standing and controversial issue, the Federal Reserve Board ruled that bank holding companies and state member banks must maintain equity capital equal to 3% of assets. *Page 1*

8/3 Using new authority to seize banks before they become insolvent, federal regulators took control of National Bank of Washington and began to seek a buyer for the $1.6 billion-asset institution. *Page 1*

MANAGEMENT / HUMAN RESOURCES

8/2 To lift market valuations, banks are advised by consultant at McKinsey & Co. to use the "business system redesign" when cutting costs. *Page 8*

8/3 From the threat of higher taxes to a national credit contraction, the thrift-bailout law of last August has spawned a host of unintended consequences that banking experts warn could severely influence the financial services industry well into the 1990s. *Page 1*

MARKETING

7/30 Having spent millions to persuade consumers to choose its card, Visa U.S.A. is opening another front in its war with American Express Co. *Page 1*

MERGERS / ACQUISITIONS

7/30 The $1 billion in bank financing lined up for Kansas Gas and Electric Co.'s bid for Kansas City Power & Light Co. was significant for the banking community because it was the first hostile takeover financed by banks in many months, and at the same time it avoided the tag of a highly leveraged transactions. *Page 1*

7/31 Citicorp and Chase Manhattan Corp. representatives stayed away last week from a meeting on possible bank financing for the union-led buyout of UAL Corp., raising speculation that the two banks have joined Chemical Banking Corp. in balking at the $4.38 bid-for-all. *Page 1*

8/1 Citicorp's departure from the bank group leading the financing for the proposed $4.6 billion union-led buyout of UAL Corp. appears to have all but doomed the deal for now, banking sources said. *Page 1*

8/1 Bank of New England Corp. is holding discussions on becoming a member of the Federal Home Loan Bank of Boston. *Page 1*

PEOPLE

7/30 James C. Grant, chief technologist at Royal Bank of Canada, has encouraged the development of what he calls hybrid bankers: technologists who are also businessmen. *Page 2*

7/31 Carol Parry is returning to the banking industry as head of a middle-market lending unit at Manufacturers Hanover. Page 2

8/2 Bert Ely, once dismissed by thrift industry and government officials alike as a publicity-hungry consultant with questionable credentials as a thrift analyst, now finds himself with a suddenly improved reputation. *Page 1*

TECHNOLOGY

7/30 Increased use of satellite communications may pay dividends even for banks that sidestep the technology and stick with phone company services. *Page 3*

7/31 Telecommunications providers are reducing prices and offering volume discounts because of increased competi-

Bankers Seem Skittish on Buyout As Aug. 9 Deadline Nears on UAL

By WILLIAM GOODWIN

Citicorp and Chase Manhattan Corp. representatives stayed away last week from a meeting on possible bank financing for the union-led buyout of UAL Corp., raising speculation that the two banks have joined Chemical Banking Corp. in balking at the $4.38 bid-for-all.

Sources said Citicorp has in fact withdrawn from the bank group – at least for the time being – though it was not immediately clear why. A Citicorp spokeswoman declined to comment.

These rumblings come at a time when a spokesman for the union group said it is close to finding an outside investor, which could draw skittish banks back into the deal.

Equity Is Sticking Point

Chemical told the other banks on Friday that it was pulling out because the union group had failed to attract an outside equity investor, a source said. For its part, Chemical did not attend the Friday meeting of bankers.

Citicorp and Chase Manhattan Corp. also canceled out of the meeting, leaving only Bankers Trust New York Corp. and Manufacturers Hanover Corp.

See UAL *page* 18

this newspaper that Citicorp and Chase were likely to pull out of the union group because it was drawn as $21 before rebounding somewhat late in the day.

The union group had hoped to buy out the airline holding company in March for $201 in cash and securities, looking for banks. This offer was scaled down from management's aborted $300-a-share bid that failed noisily last October.

Citicorp's departure from the bank group is considered to be

Executive Help Wanted

Deputy Comptroller for Economic Analysis and Strategic Planning
The Office of the Comptroller of the Currency, Washington, D.C.

The OCC is seeking to fill this executive position. The Deputy Comptroller is responsible for directing the analysis of major policy issues affecting the commercial banking system; presenting recommendations via studies, briefings and the preparation of congressional testimony; and coordinating the strategic planning activities of the OCC. Applicants must have the following.

- **Experience managing multiple projects and activities simultaneously.**
- **Demonstrated ability to establish and achieve program objectives and performance goals.**
- **Demonstrated ability to promote program goals effectively and persuasively.**
- **Comprehensive knowledge of economics and finance and the impact of financial and banking developments on local, regional and national economies.**
- **Comprehensive knowledge of trends and current developments in the financial services industry and of regulatory issues and policies.**

Salary is $92,600 per annum (plus geographical pay differential). Applicants should submit a brief description of how they meet each of the above criteria and a current "Personal Qualifications Statement" (SF-171) to:

Office of the Comptroller of the Currency
Washington Personnel Office
490 L'Enfant Plaza
Washington, D.C. 20219

Interested candidates may obtain a copy of the Job Announcement (#EM-90-03) and an SF-171 by calling 202-447-1617. Completed applications must be received in our office by August 24, 1990.

Executive Help Wanted

Be a major player in the age of information.

Instant access to information is the winning edge in today's business arena. To help companies compete in world markets, we operate sophisticated information networks that cover more than 85 countries and span the globe with a single keystroke.

We need professionals who can make the rules instead of following them in providing fresh solutions to today's technical problems — and tomorrow's. If you're comfortable with decision makers in the financial community, consider one of these excellent opportunities.

EASTERN REGION MANAGER, BANKING
New York, NY

We need a take-charge managerial professional who can maintain high level client relationships in key accounts while directing the overall sales and service efforts in the region. You'll be responsible for the development, implementation and measurement of the region's geographic analysis, sales plans, and account selling strategies. You'll need sound knowledge of the financial community with a proven track record (seven to ten years) of conceptual sales in the information services/software solutions industry. Superior interpersonal and sales development skills are essential.

NEW BUSINESS DEVELOPMENT MANAGER, BANKING
Atlanta, GA

If you can truly understand a business's needs and successfully outline a partnership between senior executives and GE Information Services, you're the person for this position. To manage our new business effort, you'll need extensive knowledge of banking/financial institutions in the Southeast and demonstrated ability in high technology conceptual sales. A minimum of five to seven years direct experience is required.

APPLICATIONS DEVELOPER
New York, NY

Business savvy and excellent communication skills are essential to provide pre- and post-technical sales support to clients. A B.S./B.A. as well as five plus years of banking applications development with IBM, MVS, COBOL, CICS, and FORTRAN are also required. Mainframe and PC development are preferable.

If your future is in information services, your company should be GE. Generous compensation and exceptional benefits are just the beginning. Send your resume with salary requirements to: GE Information Services, Dept. RCAB-8/7, 401 North Washington Street, Rockville, MD 20850.

Kuwait Asset Freeze Clarified by Treasury

Continued from page 12

oil shipped before Aug. 2 provided the transaction is reported to OFAC's Blocked Assets Section and paid into a blocked account.

The Treasury licenses and listings appeared to help to clear up some of the legal uncertainties surrounding the freeze.

"There aren't a whole lot of laws on the potential liabilities in this area, but I think that any court is going to taken into account a large measure of good faith," said one senior bank legal adviser.

Despite the Treasury's clarifications, bankers said considerable confusions remained over what sort of transactions can be carried out and on whose behalf.

DEALS

Securitization of Loans Poses Threat to Middle-Market Relationships

Continued from page 1

one industry estimate, there are some $420 billion of middle-market loans outstanding.

Middle-market loans represent one of the last frontiers for securitization. But because middle-market loans are not standardized like auto and other types of loans, packaging them is difficult.

Against the Grain

What's more, securitization goes against the grain of relationship banking.

"It's the last bastion where long-term relationships count," said James McCormick, president of First Manhattan Consulting Group.

"Customers, generally speaking, don't like it," said William Turner, group executive for middle-market lending at Chemical Banking Corp.

"They don't consider their loans to be pieces of paper that are market instruments," added Joseph Adamko, executive vice president in charge of middle-market lending at Manufacturers Hanover Corp.

Limitation on Flexibility

Bankers generally agreed that securitization would limit their flexibility in dealing with customers if their loans need to be restructured or rewritten. While securitization experts argue that those problems can be overcome, they acknowledge that customer opposition is a problem.

> **"It's the last bastion where long-term relationships count."**
>
> **James McCormick**
> *First Manhattan Consulting Group*

"It's a major stumbling block," said a securitization expert at Citicorp.

Still, even at Chemical, where middle-market lending is a core business, the bank would consider securitizing these loans if it made economic sense, Mr. Turner said.

For now, Mr. Turner, as well as other bankers and experts, said the problems and costs associated with securitizing middle-market loans outweigh the benefits. Interest-rates on middle-market loans vary, but are far less than those on credit card debt, home-equity loans, and car loans.

"The spread might not be there," said Stuart Windt, a senior managing director and chairman of the asset and liability policy committee at Marine Midland Bank.

"I'm just not so sure that we can justify taking these things off the balance sheet," he added.

Marine Takes a Look

Despite the skepticism, though, Mr. Windt said Marine Midland will take a close look at securitizing these loans.

Right now, the unit of Hongkong and Shanghai Banking Corp. is focusing on the possibility of securitizing home-equity loans. Middle-market loans will come under scrutiny later this year, Mr. Windt said.

Other banks are also taking a close look at securitizing middle-market loans. Bankers of Wiliams, a partner at Boston Consulting Group, said he has talked with several major bank clients in recent weeks about securitizing these loans.

Problems of Scale

It is difficult for any one money-center bank to originate enough middle-market loans volume outside of its own territory to make securitization feasible. One answer to this problem is for money-center banks to form alliances with regional banks, whereby middle-market loans originated by regionals would be securitized and distributed by the money-center banks.

Mr. Williams said a few alliances are already in place, though he declined to identify the banks involved.

A Pooling System

Union Bank of Switzerland, meanwhile, is developing a way for regional banks to pool their middle-market loans for securitization. "Right now, we're actively discussing it with banks in the United States," said Peter Haidorfer, the bank's first vice president and head of asset securitization.

Union Bank of Switzerland would structure a nationally diversified pool of loans from banks across the country. The loans would be sold to a special-purpose corporation, which, in turn, would sell commercial paper backed by the loans. The commercial paper probably would have an A1-P1 rating, Mr. Haidorfer said.

The Swiss bank has developed a statistical model that allows it to use an actuarial approach to pooling middle-market loans, according to Mr. Haidorfer.

Mr. Haidorfer and Marine Midland's said that securitization could be structured in a way to preserve the flexibility of the bank-er-customer relationship.

For example, the banks could pledge more loans than required to back the securities issued to investors. In that way, loans that needed to be rewritten or restructured could be pulled from the asset pool and replaced with other loans.

The Citibank official said middle-market borrowers oppose securitization largely because they are unfamiliar with the process, and that the resistance will fade in time. □

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the market value of all common shares outstanding (As of March 30, 1990, the market value cutoff for banks was $69.6 mil. and for thrifts $121.45 mil.) 52 Wk Hi: Lo: the moving 52-week high and low prices for the shares. PE: the price-earnings ratio; it is the current stock price divided by the trailing four-quarter earnings per share adjusted for latest announced earnings. Mkt. Bk %: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Cls.: the stock's closing price. Chg.: the change in closing price from the previous day. Footnotes: nn: stock not traded on the day; nt: stock not traded; F: no trades for the day; ns: stock not traded and has no price. Indexes: A weighted average of the top 250 banks in market value and the top 50 thrifts in market value, respectively. Highlights show major movements in the banking stocks and two-year indicators most shares traded and today's volume as a percentage of average shares traded daily over the past year.

Data source: SNL SECURITIES, Charlottesville, VA 804/977-1600, produced the tables. Financial News Network, Vienna, VA, provides SNL with the daily prices.

Firstar Buying Banks of Iowa

Continued from page 1

one-half times Banks of Iowa's book value of $63.50 a share, or $95.25. That accord was abandoned as it became clear that First Bank's problems made it unlikely that regulators would approve a merger.

In late trading Monday, Banks of Iowa shares fell 50 cents, to $67.50. Firstar was down 25 cents, to $27.75.

Firstar's profitability has been strong and its stock has performed better than that of most other banks.

Its shares have declined only 1.3% in value from their level a year ago, while the the *American Banker* index of 225 bank stocks has tumbled 23% in the period.

Analysts called the Firstar offer fair, while the First Bank bid was seen as inflated by Banks of Iowa's unusually high primary capital ratio of 9.6% at the end of the second quarter.

"I don't think anyone thought that [the First Bank offer] was at an appropriate price," said Steven R. Schroll, managing director of research for Piper Jaffray & Hopwood Inc., Minneapolis. Mr. Schroll said the Firstar offer was based on Banks of Iowa maintaining a more reasonable capital ratio of 6%.

John H. Hendee Jr., chairman of the $8.5 billion-asset Firstar, called the acquisition "a natural, both in terms of the geographical fit.

The acquisition will make Firstar more difficult to be taken over. Wisconsin does not have a national trigger date for interstate banking, so the only banks that could take it over are regional banks. Most of those are busy with other acquisitions and analysts speculate that Firstar could now more easily grow into a strong superregional.

The companies expect to complete the transaction in the first half of next year, pending regulatory approvals.

Upon completion, James R. Lang, president of First Wisconsin National Bank of Madison, would become president and chief executive of Firstar Corp. of Iowa. He would replace Banks of Iowa chairman Holmes Foster, 63, whose retirement had been put on hold earlier this year. Mr Foster had been looking for a successor.

Some Analysts Still Cool

While Firstar has been outperforming much of the industry, a familiar fly in the ointment – real estate – still keeps some analysts from recommending the stock. The difficulties are with foreclosed properties from older loans. Firstar's portfolio of "other real estate owned" seems stuck at an uncomfortably high level.

Gordon Matthews in New York contributed to this article.

Bank, Thrift Shares Plunge

By GORDON MATTHEWS

Major bank and thrift stocks fell sharply again on Monday as heavy across-the-board selling continued in the stock market.

The Dow Jones industrial average incurred heavy losses as investor fear intensified that Iraq's invasion of Kuwait would have severe inflationary repercussions. Near the close the Dow was down 89.9, or 3.2%, with 234 million shares trading hands on the New York Stock Exchange.

As on Friday, stocks of some of the nation's best-regarded banks were hurt the most, which some analysts interpreted as a signal that the long, deep slide in bank stocks could be nearing an end.

In mid-afternoon trading, CoreStates Financial Corp., Philadelphia, was off $1.75 to $34; Republic New York Corp. was off $1.50 to $46.25; U.S. Bancorp., Portland, Ore., was off $1.25 to $24.375; and State Street Boston Corp. was off $1.75 to $33.875.

"It's possible that some investors are finally clearing the decks on bank stocks," said one analyst.

Western banks, including Wells Fargo & Co. and Security Pacific Corp., were also off sharply again on Monday.

Market professionals attributed the weakness in the West to concerns that sluggish real estate and other business conditions that have hobbled the Northeast are spreading to California.

Nancy A. Bush, a banking analyst at Brown Brothers Harriman, said stock prices of major western banks have fallen 18% thus far in the third quarter.

CAPITAL

MNC to Place Preferred Stock with Director

Continued from page 1

the 800-pound gorilla." said Nancy A. Bush, an assistant manager at Brown Brothers Harriman.

The sale of preferred stock will raise MNC's capital, which fell when the bank reported a second-quarter loss of $74.7 million. It also will improve liquidity at the holding company level, which was impaired in July when Moody's Investors Service Inc. lowered MNC's commercial paper from P-3 to Not Prime. The downgrade makes it extremely difficult for MNC to roll over its outstanding commercial paper.

When the preferred stock is issued, MNC's total capital ratio will increase to 8.81% using the 1992 standards, compared with 8.07% at the end of the second quarter, according to Peter L. Gartman, chief financial officer.

In for at Least Half

At least half the preferred stock is being sold to Mr. Lerner, already the owner of 8.9% of MNC's common equity. Other directors can subscribe for up to 50% of the issue.

If Mr. Lerner, the former chairman at Equitable Bancorp, takes the full 100%, his ownership stake would increase to 23%. Taking just half the preferred stock issue would give him a 16% share.

A spokesman for MNC declined to comment on Mr. Lerner's intentions, but the insurance company executive has a history of sizable investments in banks. He owned 31.5% of the outstanding stock and 75% of the voting stock of Equitable Bancorp when MNC bought that bank in July 1989, and he was an active shareholder there.

"I wonder whether his ability to control Equitable makes him want to exercise the same amount of control over MNC," one analyst said.

Recalling Mr. Lerner's tenure at Equitable and his rise to the chairmanship, one analyst said, "I think this makes MNC more vulnerable to whatever his thoughts on [the sale of the company] may be."

The preferred stock issue is just one of a series of actions the bank is taking to boost holding company liquidity, market sources said. For example, it is now using bank funding for the holding period on loans issued by its mortgage company, instead of the holding company funding it used to use.

And it is participating out to its bank subsidiaries certain loans made by its nonbank subsidiaries. Finally, MNC is selling long-term securities out of the holding company's investment portfolio, sources said.

The preferred stock placement improves the prospects for J.P. Morgan's attempts to assemble a line of credit. A spokesman for Morgan declined to comment on how close the bank was to lining up participants. He said, however, that "this is more capital in, and that's what was talked about the the prospective lenders, so I think it's good."

MNC Builds Liquidity

Action	Status
$180 million preferred stock placement	Agreement in principle
$750 million line of credit	Being arranged
Sale of investment securities	Under way
Using bank funding for nonbank activities	Under way

Source: American Banker

When the preferred stock is issued, MNC's capital ratio will rise to 8.81%.

Investors Are Question Mark

Although MNC has moved aggressively to preserve holding company liquidity, it remains to be seen whether the actions will pass muster with investors. If they are unwilling to buy debt of MNC, the Baltimore-based bank may be hard pressed to maintain the liquidity it is building now.

"It seems the plans are in place for them to raise liquidity," said David S. Penn, an analyst at Legg Mason Inc. "The question is whether the market will accept it."

One analyst said MNC's decision to issue the preferred stock could be a warning flag about the marketability of its assets.

"That they chose to have this sort of dilution instead of selling off the assets implies the assets may not be as salable as we had hoped," the analyst said.

And even the sale of preferred stock does not fix MNC's underlying problem, according to Laurie Raskovic, an assistant vice president at Moody's Investors Service. "We view [the preferred stock placement] as a benefit to the debtholders," she said. But "while it enforces the capital base, MNC still needs time to work through the real estate problems."

The preferred stock placement is expected to be completed during the fall. The stock, which has voting rights equal to those on MNC's common, will carry a dividend of 12%, and each share will be convertible into common at a price of $10.75 a share. MNC's stock was trading Monday at $8.50 a share. □

SEMINAR 1

INNOVATIVE CUSTOMER SERVICE AND SALES TECHNIQUES FOR THE NINETIES

July 16, 1990 • The Vista Hotel • New York City
September 10, 1990 • The Vista Hotel • New York City
September 17, 1990 • Century Plaza Hotel • Los Angeles

As the banking environment becomes more competetive, industry leaders view improved customer service as a sollution to retaining market share. But how can your bank achieve such improved service? And as importantly, can quality service be transalated into sales? The seminar will address the pressing need for improved customer service and how to implement a service program in your bank. It will also focus on the next step... profiting from quality service through innovative sales techniques, state-of-the-art technology and sales incentives. The industry leaders will address the issue of the nineties...achieving competitive advantage by making your company customer and sales-oriented.

9:00 KEYNOTE SPEECH: EFFECTIVE CUSTOMER SERVICE...THE KEY TO PROFITIBILITY IN THE 90'S
- Profiting from customer service in an age of transition
- A banker's perspective on past successes and failures... and innovations for the future
- A case study in improving service and sales

Thomas Jacob, *Senior Vice President,* Chemical Bank (NY)
Thomas Jacob, *Senior Vice President,* Chemical Bank (NY)
Joan Miszak, *Senior Vice President,* California Federal Bank (LA)

9:45 TURNING SERVICE INTO SALES...ACHIEVING BOTTOM LINE RESULTS FROM QUALITY SERVICE AND SALES TECHNIQUES
- Creating a competitive advantage through customer service
- Improving service...and controlling costs

John A. Goodman, *President,* Techn. Assistance Research Program (NY)
John A. Goodman, *President,* TARP (NY)
Marty Wikoff, *President,* Management Performance Systems (LA)
- The need for effective salesmanship
- Sales techniques for the 90's

Dr. Nancy O'brien, *Marketing Consultant,* Sales Development Assoc. and Dr. Bankers Industry Group, ASTD (NY)
Dr. Nancy O'brien, *Marketing Consultant,* Sales Development Assoc. and Dr. Bankers Industry Group, ASTD (NY)
Shirly Ward, *Vice President,* Bank of America (LA)

10:45 CREATING A SALES CULTURE...A STEP BY STEP APPROACH
- How to implement your new strategy through out the corporation
- How to build a corporate culture based on customer service
- Defining and targeting your customer

Dr. A. Lorri Manasse, *President,* The Cortland Group (NY)
Dr. A. Lorri Manasse, *President,* The Cortland Group (NY)
Dr. A. Lorri Manasse, *President,* The Cortland Group (LA)

11:30 COFFEE BREAK

11:45 ACHIEVING A TECHNOLOGICAL ADVANTAGE...THE ROLE OF TECHNOLOGY IN IMPROVING CUSTOMER SERVICE AND SALES
- Using innovative technology to cross-sell
- How to implement state-of-the art systems to improve service and increase sales

Dr. Michael Harden, *Sales Manager,* Citicorp Information Resources (NY)
Frank Martire, *Chairman,* Citicorp Information Resources (NY)
Charles J. Buchta, *Executive Vice President,* First Interstate Bank (LA)

12:30 HOW TO REMOVE MIDDLE-MEN FROM THE BANKING TRANSACTION...FROM THE BOARDROOM TO THE MAILROOM
- Skills to implement to reduce costs while improving quality of service
- Removing obstacles to the sale

Nicholas Papanikolaw, *Vice President,* Manufacturers Hanover (NY, NY, LA)
John J. Campi, *Managing Director,* Chatham Consulting Group (NY, NY, LA)

1:00 LUNCH WORKSHOP OPPORTUNITIES FOR THE 90'S IN RETAIL AND WHOLESALE BANKING...HOW TO IMPROVE PROFITIBILITY THROUGH SALES AND SERVICE
- Innovative techniques and training methods... a roundtable discussion

Chairperson:
Charlotte Pollard, *Vice President,* Chase Manhattan Bank (NY)
Charlotte Pollard, *Vice President,* Chase Manhattan Bank (NY)
Pamela O'Shea, *Vice President,* City National Bank (LA)

2:45 THE AMERICAN EXPRESS EXAMPLE...A CUSTOMER SERVICE SUCCESS
- A case study in implementing quality service
- Lessons for banks and thrifts

Laura Gross, *Director,* American Express (NY)
Bruce Grieve, *Vice President,* American Express (NY)
Laura Stevens, *Vice Present,* American Express (LA)

3:30 A CASE STUDY IN IMPROVING SALES...THE CHASE TRAINING PROGRAM
- Teaching selling skills
- How to implement a training program

Claire Schopler, *Vice President Training,* Chemical Bank (NY)
Claire Schopler, *Vice President Training,* Chemical Bank (NY)
Claire Schopler, *Vice President Training,* Chemical Bank (LA)

4:15 THE KEY TO IMPROVING SALES...MEASURING YOUR CUSTOMER SERVICE
- Judging the quality of service at your bank
- Learning from the best...what techniques do the leading bank use to measure service
- How to determine your bank's effectiveness

Jeffrey Kutler, *Assistant Managing Editor,* American Banker (NY)
Jeffrey Kutler, *Assistant Managing Editor,* American Banker (NY)
Douglas Smith, *Managing Director,* BEI Golembe (LA)

5:00 THE ROLE OF SALES INCENTIVES...WHAT WORKS AND WHAT DOESN'T
- How to use worker compensation to increase sales
- Improving service without increasing costs

William Casey, *Principal,* Paris, Casey Inc. (NY)
William Casey, *Principal,* Paris, Casey Inc. (NY)
Matt Walgon, *Senior Consultant,* Sibson and Co. (LA)

6:00 END OF SEMINAR

SEMINAR 2

THE NUTS & BOLTS OF COMMERCIAL LENDING & LOAN PRICING

July 17, 1990 • The Vista Hotel • New York City
September 11, 1990 • The Vista Hotel • New York City
September 18, 1990 • Century Plaza Hotel • Los Angeles

The battle for commercial loan profitability promises trying times for large corporate and middle market lenders. Over the past two decades, the risk in banks lending portfolios has steadily increased. This is not a function of uncontrolled risk-taking, but rather of the banks' necessary response to the need to find assets which will provide acceptable levels of risk-adjusted return. The events of the past few years have shown that many banks, however, have been unable to effectively control the level of risk that they have taken. Unacceptably high levels of loss have taken place in many banks due to a combination of poor pricing, excessive concentration and the failure to understand the level of risk in a specific loan. Furthermore, new competitors are entering the marketplace scrambling for territory and sparking intense new battles for turf. This seminar reviews how leading-edge banks are beginning to develop new sets of techniques that will geve them a competitive edge in the marketplace for controlling their level of loss, and achieving low-risk diversified portfolios:

8:45 CHAIRMAN'S OPENING REMARKS
William T. Gregor, *Partner,* The MAC Group (NY,LA)

RE-ENGINEERING FROM A CUSTOMER POINT OF VIEW

9:00 KEYNOTE ADDRESS: WHAT RECIPE SHOULD YOU USE TO TURN AROUND YOUR COMMERCIAL LENDING BUSINESS?...A CONSULTANT'S & A BANKER'S VIEWPOINT
William T. Gregor, *Partner,* The MAC Group (NY,LA)
Peter Offermann, *Managing Director,* Bankers Trust (NY)

Vjay C. Popat, *Principle,* Booz Allen & Hamilton (NY,LA)
Edward A. McNally, *Senior V.P.,* National Westminister, USA (NY,LA)
Frank Abraham, *Chief Credit Officer,* Security Pacific National Bank (LA)

11:00 COFFEE BREAK

11:15 PRESTO CHANGO...CONVERTING UNPROFITABLE CUSTOMERS INTO PROFITBLE ONES...USING THE EMERGING SECONDARY MARKET TO YOUR ADVANTAGE
- Where Will The Secondary Market Work & For What Kind Of Loans?
- How Will The Secondary Market Affect Your Ability To Price?
- Secondary Markets & Loan Sales...What Are The Elements Necessary For Success?

David E. Fisher, *Vice President,* Loan Pricing Corp. (NY,LA)

12:15 LUNCH BREAK

RE-ENGINEERING THE PRICING PROCESS

1:30 ARE YOU GETTING THE BANG FOR YOUR BUCK?...DEVELOPING A TARGETED PRICING STRATEGY TO ADEQUATELY PRICE FOR RISK
- What Are The Key Components Of Pricing?
- What Prices Are Banks Actually Getting On Commercial Loans?
- How To Set Strategic Pricing Goals For Your Portfolio
- Do Banks Price Adequately For Risk?

Christopher L. Snyder, *President,* Loan Pricing Corp. (NY,LA)

2:15 A CREDIT BASED APPROACH TO ALIGNING RISK & RETURN IN A C&I LOAN PORTFOLIO
- How To Analyze The Relationship Between Credit Risk & Pricing
- Testing The Adequacy Of The Existing Credit Risk Assessment System
- Refining The Existing Credit Risk System To Serve As A Basis For Commercial Loan Pricing Scenarios

Constance Kennealy, *Partner.* Zeta Services Inc. (NY,LA)

3:00 COFFEE BREAK

RE-ENGINEERING THE CREDIT PROCESS

3:15 EMERGING NEW TECHNIQUES FOR CONTROLING LOSSES & MANAGING THE PORTFOLIO
- Buttoned-up Credit Procedures...Ensuring Repayment After The Loan Is Made
- Pricing To Recapture Expected Losses
- Diversification As A Tool In Portfolio Management
- Giving Your Problem Loans A Workout...Security Pacific's Workout & Recovery Strategy

Jonathan F. Moynihan, *Managing VP,* First Manhattan Consulting Group (NY,LA)
Gerald L. Coelho, *First VP,* Security Pacific National Bank (LA)

4:00 ARE BANKS LENDING TO LBO's TO CHEAPLY?...THE FUTURE OF HIGHLY LEVERAGED TRANSACTIONS
Mark G. Solow, *Managing Director,* Manufacturers Hanover Trust (NY)
Hugh T. Kemper, *Managing Director,* Morgan Guaranty (NY)
Leland S. Prussia, *Vice Chairman,* Capitalcorp., Inc. (LA)

4:45 COMMERCIAL LOAN SECURITIZATION...A STEP BY STEP APPROACH TO SECURITIZING PERFORMING LOANS
Marshall V. Davidson, *Managing Director,* Kidder Peabody (NY,LA)
Robert M. Okabe, *Vice President,* Kidder Peabody (NY,LA)
Clifford Griep, *Managing Director,* Standard & Poors (NY,LA)

5:30 END OF SEMINAR

SEMINAR 3

EFFECTIVE COST MANAGEMENT

July 18, 1990 • The Vista Hotel • New York City
September 12, 1990 • The Vista Hotel • New York City
September 19, 1990 • Century Plaza Hotel • Los Angeles

9:00 CHAIRMAN'S OPENING REMARKS
Patrick J. Leemputte, *Partner,* Price Waterhouse (NY, LA)

9:15 ACHIEVING COMPETITIVE ADVANTAGE THROUGH COST LEADERSHIP

The 1980's showed that cost leadership is a critical success element in all restructured industries. As the pace of restructuring in banking accelerates, winners will emerge based on competitive cost position and related strategic focus. Global finance will come to be dominated by firms obsessed with the twin pursuits of profitability and productivity.

This session concentrates on managing the key noninterest cost drivers of bank performance: 1) business scope and geographic reach, 2) size of workforce and compensation practices, 3) technology spending and investment, and 4) corporate real estate portfolio management.

Charles H. Nobs, *Senior VP,* Bankers Trust Company (NY)
Charles H. Nobs, *Senior VP,* Bankers Trust Company (NY)
Eleni Isteriodis, *Senior VP,* Bankers Trust Company (LA)

10:00 KEYS TO WINNING THE PRODUCTIVITY RACE

If superior expense control is essential to surviving the merger decade, then how is it accomplished?

This session addresses three key issues for banks concerned about expense control: 1) How good is the bank now and where is the potential for greater frustration? Analysis based on business mix can identify bloated budgets and problem areas; 2) What kind of programs work to bring expense and cost control? Experience shows what are the do's and dont's of crafting a program to reduce staff areas, lines of business, branches, operations and systems; 3) What does it take to stay on top? A "coherent organization" and quantitative performance measures can be keys to sustaining a cost effective culture.

11:00 STORIES FROM THE FRONT: HOW MELLON BANK'S COST CONTROLS HAVE LED TO NEW BUSINESS OPPORTUNITIES AND LOWER EXPENSES

Mellon Bank has experienced a great deal of cost cutting in the past decade. Mellon's expertise in this area has shown that you can actually turn a cost center into a profit with the appropriate resources and strategy.

In this session, you will learn how Mellon effectively downsized into a better performing bank. This dedication to cost leadership has helped Mellon develop it's technologies and data processing to the point where these strengths have led to new business opportunities.

Janet Hartung, *Senior Vice President,* Mellon Bank (NY)
Janet Hartung, *Senior Vice President,* Mellon Bank (NY)
Janet Hartung, *Senior Vice President,* Mellon Bank (LA)

12:00 LUNCH BREAK

1:15 HOW TECHNOLOGY CAN HELP YOUR BANK CUT COSTS WHILE IMPROVING PERFORMANCE

Commercial banks and financial institutions are wholeheartedly embracing information technology (IT) as a way to achieve competitive advantage. But, while bank IT costs have skyrocketed, banks are cautious to crow about their success. Instead, they suffer from exponential growth in computer spending with almost no impact on their bottom line or market share.

In this session, you will learn how to begin to think about, structure and approach the IT problem in your organization. Learn what technology can do to help control costs and what it cannot do. Analyze how to cut the rising costs of your own IT infrastructure. Most important, begin to understand how you can approach IT complexity without being overwhelmed.

Charles F. Kalmbach, Jr., *Senior Manager*
Price Waterhouse (NY)
Charles F. Kalmbach, Jr., *Senior Manager*
Price Waterhouse (NY)
Charles F. Kalmbach, Jr., *Senior Manager*
Price Waterhouse (LA)

2:15 ELIMINATING EXPENSE THROUGH ACQUISITIONS

If banks merge to achieve economies of scale then why do most mergers fail to meet their expectations? As bank mergers continue to increase, minimizing costs during the integration process has become essential.

While banks of different sizes and market niches will have different merger goals, there is a proper discipline to mergers that will minimize the consolidation process. This session will look at past mergers to critique successful mergers as well as failures. In particular, where can the economies be achieved?... in back office operations/overhead, retail or wholesale operations, data processing and technology or duplication of staff responsibilities. This session provides a framework to minimize the costs of the merger.

Harry H. Tatonis, *Principal,* Booz, Allen & Hamilton Inc. (NY)
Harry H. Tatonis, *Principal,* Booz, Allen & Hamilton Inc. (NY)

3:15 MONITORING THE DOWNSIZING EFFORT THROUGH EFFECTIVE HUMAN RESOURCES MANAGEMENT

- How to retain top performers and employee commitment
- What to cut?...What to keep?...How to do it?

Peter J. Doria, *Senior VP,* Right Associates (NY)
Peter J. Doria, *Senior VP,* Right Associates (NY)
Peter J. Doria, *Senior VP,* Right Associates (LA)

4:15 MEASURING THE IMPACT OF COST ON PROFIT PERFORMANCE AND SHAREHOLDER VALUE...THE ANALYST'S PERSPECTIVE

How does a bank's cost performance effect stock price? In this session, learn how analysts objectively view cost cutting practices and how profit performance is related to effective expense practices and how it effects stock price. What banks have made the right moves and what strategies were responsible for improved profit performance.

5:00 END OF SEMINAR

SEMINAR 4

BANK AND CROSS-INDUSTRY ACQUISITIONS OF THRIFT INSTITUTIONS & SHOULD THRIFTS BE CONVERTING TO BANKS?

July 19, 1990 • The Vista Hotel • New York City
September 13, 1990 • The Vista Hotel • New York City
September 20, 1990 • The Century Plaza Hotel • Los Angeles
September 25, 1990 • The Ritz Carlton • Atlanta
October 9, 1990 • The Ritz Carlton • Chicago

FIRREA has opened the doors to bank acquisitions of thrift institutions and thrift institution conversions to banks. However, it is not altogether clear what this new regulatory flexibility means and whether banks and thrifts should take advantage of these new options. This one day intensive program for bank, thrift, and other business executives, attorneys and consultants focuses on the mechanics and regulatory procedures involved in bank and non-bank acquisitions of thrifts, as well as how and whether thrifts should convert to banks.

9:15 CHAIRMAN'S OPENING REMARKS
Eric Luse, *Partner,* Brownstein Zeidman and Schomer

9:30 SHOULD A THRIFT CONVERT TO A BANK?
- What Are The Advantages And Disadvantages
- A Review Of The Bank And Thrift Charters

Eric Luse, *Partner,* Brownstein Zeidman and Schomer (NY,AT,LA,CH)
Trent Feldman, *Partner,* Kaplan Smith & Associates (AT,LA)
Edward T. Lutz, *Principal,* Lyons Zomback & Ostrowski (NY,CH)

10:00 REGULATORY HURDLES AND CONSIDERATIONS INVOLVED IN CONVERTING A THRIFT TO A BANK...HOW CAN IT BE DONE & WHAT IS PERMISSIBLE?

5:30 END OF SEMINAR

SEMINAR 5

ASSET/LIABILITY MANAGEMENT

July 20, 1990 • The Vista Hotel • New York City

September 14, 1990 • The Vista Hotel • New York City

September 21, 1990 • Century Plaza Hotel • Los Angeles

9:00 CHAIRMAN'S OPENING REMARKS
Sanford Rose, *Editor, Journal of* Retail Banking
Senior Columnist, American Banker

9:15 INTEREST RATE RISK MANAGEMENT
The management of interest rate risk is fundamental to sound banking practice. Banks can experience earnings, liquidity, and capital adequacy problems, if management is poorly run.
This session will deal with a number of fundamental rules in managing interest rate risk as well as develop an integrated risk management project. You will understand how risk is measured, as well as, what tools are used to measure risk. Learn how to incorporate these tools to increase bank profitability.
Ronald D. Reading, *Vice President,* First Manhattan Consulting Group

10:30 COFFEE BREAK FOR SPEAKERS AND GUESTS

10:45 LIQUIDITY
This session learn to understand what liquidity is. Where you can get it. How much it costs, and how much it is worth. Finally, learn to understand how to measure and manage liquidity.
Peter G. Mantilla, *Vice President,* Bank of New York (NY)
Richard Lasderman, *Vice President,* Bank of America (LA)

11:45 THE USES OF DURATION IN ASSET LIABILITY MANAGEMENT
Technological and analytical developments in the 1990's will significantly enhance the ability to deal with risk. The methodology, tools, and implementation approach provide a more rigorous assessment of market risk.
The specific focus will be to contrast the duration approach with a new approach called risk measurement unit approach. The risk measurement unit approach captures both volatility and non-parallel shifts in the yield curve.
Sanford Rose, *Editor,* Journal of Retail Banking
Senior Columnist, American Banker
Robert M. Mark, *Managing Director,* Manufacturers Hanover Trust

12:30 LUNCH BREAK FOR SPEAKERS AND GUESTS

1:30 OFFICE OF THE COMPTROLLER OF THE CURRENCY AND THE NEW EXAMINATION GUIDELINES
"The OCC has alerted all bankers that they must prudently manage, measure and limit risk, and that enough capital be available to support exposure to such risk."
This session will discuss the OCC's policy on interest rate risk and how active the Office of Thrift Supervision is. The different topics which will be discussed include: risk matrix, gap reports, simulation, and duration.
Jennifer Johnson, *Developer and Administrator,* OCC

2:30 SECURITIZATION...WHEN AND HOW TO USE IT.
- Being able to securitize your own product
- Opening a secondary market
- The 144 Rule with regards to Private Placement

To Be Announced

3:30 LOWER COST OF MARKET AND THE INVESTMENT PORTFOLIO
1990 will be a year when your accounting department must be able to deal effectively with the new AICPA requirements on accounting for debt securities held as assets. A new standard expected to be issued by the AICPA with the support of the SEC and the FASB will require market value determination. The new standard will require allocating security investments among investment portfolio, held for sale, and trading account.
This session will help you understand the new requirements and the techniques required to successfully implement them.
Raymond Perry, *Partner,* Deloitte & Touche

4:30 ASSET LIABILITY MANAGEMENT INTO THE 1990'S.
This session will outline recent advances in the 1) measuring of embedded option risks, 2) measuring volatility risk exposure, 3) measuring index and credit spread risks, 4) integrating value decisions into the management process, 5) integrating risk-based capital guidelines into the risk management process.
Alden Toevs, *Principal,* Morgan Stanley & Co.

5:30 END OF SEMINAR

AMERICAN BANKER

VOL. CLV NO. 154 — Wednesday, August 8, 1990 — 155th year

OCC Stirs Debate On Banks' Role In Mutual Funds

By ROBERT M. GARSSON

WASHINGTON — A proposal by the Office of the Comptroller of the Currency to relax some restrictions on trust departments' investment accounts appears likely to smooth the entry of commercial banks into the coveted mutual fund business.

But as eagerly as some bankers are awaiting a decision on whether they can more broadly market the collective investment funds, others fear the Comptroller's office may be about to open a Pandora's box of political and legal problems that might better be postponed to another, less turbulent time.

"I wonder if it was really necessary for the Comptroller to go so far out on this issue," said Brian Smith, a banking lawyer and former general counsel to the Comptroller.

"A lot of members of Congress are really ripped over the S&L crisis," Mr. Smith said. The Comptroller's rule "raises the specter of one more brick out of the Glass-Steagall wall, and Congress is not going to be all that receptive."

ANALYSIS: *Follow-up on the news*

While the proposals include several "housekeeping" technicalities that Mr. Smith considers desirable, he said the Comptroller's proposal goes out on a limb by seeking to permit trust banks to operate and advertise their investment accounts much like the more widely available mutual funds.

It is generally assumed that the Investment Company Institute, which represents the mutual fund industry, will sue if the proposal is approved. But a number of state bankers' associations – primarily trade groups representing community institutions – also object.

On Capitol Hill, Rep. Edward J. Markey, D-Mass., chairman of the influential House subcommittee on telecommunications and finance, has already scheduled hearings on the proposal.

Lawmakers Express Concern

In comment letters addressed to the Comptroller, a number of powerful lawmakers expressed concern about the proposal, including House Banking Committee Chairman Henry B. Gonzalez, D-Tex., and House Energy and Commerce Committee Chairman John D. Dingell, D-Mich.

The proposal, which has been kicking around the Comptroller's office since 1981, includes a number of long-sought changes

SPECIAL REPORT: THE OIL CRISIS HITS HOME

Banks Weigh Impact of Costlier Oil

Credit Crunch Seen Worsening; Rate Cut Unlikely Soon

By ROBERT TRIGAUX

Rising oil prices are likely to worsen a perceived credit crunch and further depress bank earnings, according to industry experts.

"To the extent the Iraqi invasion of Kuwait intensifies the recession we are into, it means more loan losses for banks," said David Cates, a bank analyst with Ferguson & Co. and one of a growing number who believe the economy has already fallen into recession.

"The banking outlook is one of caution," added Robert H. Dugger, chief economist for the American Bankers Association. "Every bank CEO is trying to sort out how the new situation is going to play out in their market."

Further contraction of credit by banks means that more borrowers will become marginal risks, and thus be rejected for loans because of tighter standards, said banking experts. "Marginal borrowers will come in all sizes and flavors" as banks tighten credit, said Mr. Dugger. "There are large companies in the process of restructuring, small companies trying to expand in the face of a slowing economy, households with one of the breadwinners out of a job, and there are individuals new to the job market that can't quite get a foothold."

Iraq's Kuwait Strike Blasts Hope Of Revival in U.S. Loan Demand

By JED HOROWITZ

NEW YORK — Just when corporate bankers were sensing that deals were reappearing and lending spigots might open again, the crisis in the Middle East has put hopes of a loan revival on hold.

Bankers and economists said the short-term effect of Iraq's invasion of Kuwait will be to prompt borrowers and lenders to defer business decisions and stay as liquid as possible.

Waiting for Clearer View

"The impulse is to shorten up on maturities, stay liquid, be cautious, and wait until the smoke clears," said Jerry L. Jordan, chief economist at First Interstate Bancorp. "Everybody pays down their debt if they can, pays off bank lines, and avoids the bond market."

The inflationary potential of a long-term rise in oil prices could, however, temporarily spur lending, some bankers said. Borrowers – from real-estate developers to corporate acquirers – might rush in to capture rates before they accelerate.

On the other hand, the Mideast crisis could push an economy already tilting toward stag-

Consumer Confidence Is Shaken

By SAM ZUCKERMAN and TERESA CARSON

The turmoil in the Middle East, the rapid rise in oil prices, and sharp declines in stock and bond prices have added new elements of danger to an already soft consumer lending market.

Before Iraqi tanks moved into Kuwait, the U.S. economy faced twin threats of higher inflation and slow or no growth. Bankers in many parts of the country said that consumers had reacted by gradually cutting demand for credit.

"There was a growing lack of consumer confidence even before this," said Robert D. Sznewajs, executive vice president of Valley National Bank, Phoenix.

Consumer credit figures re-

Oil Price Rise Helps Some LDCs

By JAMES R. KRAUS

NEW YORK — The sharp rise in oil prices since Iraq invaded Kuwait has strengthened economic prospects for oil-producing developing countries, but the crisis could have severe implications for Brazil.

A sustained rise in oil prices will increase revenues for Mexico, Venezuela, Ecuador, and Colombia, and reduce their need for additional bank borrowings, bankers and analysts said Tuesday. However, they predicted that the price of oil would not reach a level high enough to allow for a full repayment of their loans to creditor banks.

"Just because oil reaches $27 a barrel doesn't mean that it's going to stay there," said one banker.

Problem for Brazil

Bankers said the Kuwait crisis could make it increasingly difficult for them to collect their loans from Brazil. Brazil producesabout 500,000 barrels oil a day for its own use and imports a further 300,000 barrels, about half of it from Iraq. The country has agreed to go along with U.S. economic sanctions against Iraq.

"Brazil's most immediate concern is how to make up that gap," said one banker in New York.

Chile and Argentina are not major importers of oil and are therefore unlikely to suffer from the rise in oil prices, bankers said.

The Largest Borrower

Brazil owed U.S. banks $16.3 billion at yearend and has not paid any interest on the $10 billion in medium-term and long-

PEOPLE *in the news*

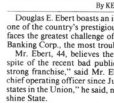
Southeast's Ebert Facing Tough Task as Helmsman

By KENNETH CLINE

Douglas E. Ebert boasts an impressive resume from his 22 years at one of the country's prestigious money-center banks. But he clearly faces the greatest challenge of his career at Miami-based Southeast Banking Corp., the most troubled large bank in the region.

Mr. Ebert, 44, believes the opportunity outweighs the risk. "In spite of the recent bad publicity, the bank still has an incredibly strong franchise," said Mr. Ebert, Southeast Bank's president and chief operating officer since July 20. "Florida is one of the strongest states in the Union," he said, noting continued migration to the Sunshine State.

Humbled by real estate woes and other problem credits, the $15.8 billion-asset Southeast lost a total of $92.8 million in the last three quarters. But Mr. Ebert remains undaunted. "I've got a strong belief that the problems are solvable, and not dissimilar to those afflicting other banks in the country," he said.



Douglas E. Ebert

Mr. Ebert, who has been day-to-day control of the bank and the holding company, said he has not yet worked out a detailed recovery plan. Strategically, he said he intends to follow the direction plotted by chairman and chief executive officer Charles J. Zwick and the Southeast board.

That strategy, as described by Mr. Ebert, is emphasize commercial lending to companies with sales up to $500 million, increase business in the retail network with more effective cross-selling, promote private banking services, and continue to expand international business with primary orientation to Latin America and the Caribbean.

Mr. Ebert's ability to implement this plan should be helped by his vast experience at Manufacturers Hanover Corp. He was responsible for management of all investment banking activities worldwide as sector executive vice president from 1985 to 1990; general manager of the international division, 1980 to 1985; and senior vice president and deputy general manager of branch banking in New York, 1976 to 1980. He held various positions in the national corporate and correspondent banking division before 1976.

"There aren't many areas he doesn't have some good, in-depth knowledge of," said Paul H. Dimmick, president of Manufacturers Hanover Securities Corp.

Role at Hanover Noted

Mr. Dimmick, who worked under Mr. Ebert in the investment banking sector, described his former boss as "a good, solid man," with "insight coming as much from experience as from theory."

"Some people have suggested his management style is a little abrupt," Mr. Dimmick added, "but I personally can't say that I've seen that. I always thought he dealt with me in a very professional, fair manner."

Mr. Ebert will need a fair amount of diplomacy to survive at Southeast Bank, which has been tightly controlled by Mr. Zwick. Mr. Ebert's predecessor as president and heir-apparent, John E. Porta, resigned in March.

Under the current structure, Mr. Zwick is to address broader questions of strategy, government relations, and customer development. Mr. Zwick, 64, is scheduled to retire in July 1993. □

Bank of NY to Close Primary Dealer

Reuters

NEW YORK — The Bank of New York Co. said on Tuesday that it is closing BNY Securities Inc., its primary dealer of U.S. government securities, because of unsatisfactory profits.

"The decision was made because current market conditions are not giving us the returns we were looking for," said Michael Pascale, director of public and investor relations for $49 billion-asset Bank of New York.

Of about 40 people in trading and back-office functions at BNY Securities, 17 will be laid off and the remainder absorbed in other areas, Mr. Pascale said.

Mr. Pascale said the dealership made money in 1989 and in the second quarter of this year, but he declined to give figures.

Bank of New York inherited the dealership in its takeover of Irving Trust Co. in December 1988. Six weeks ago it closed down its small U.S. Treasuries trading operation in London.

Third Bank to Exit This Year

Bank of New York's departure from government securities marks the third exit from the field this year and reduces the number of primary dealers to 41. They reached a peak of 46 in late 1988.

The other two closings involved affiliates of foreign banks: Westpac Pollock Government Securities Inc., a subsidiary of Westpac Banking Corp. of Australia, which closed in June; and Midland Montagu Securities Inc., a unit of Midland Bank of London, which closed in July. Midland Montagu was one of three British-owned dealers to close within a year. □

Fed Loses Appeal in MCorp Case

By LINDA CORMAN

WASHINGTON — The Federal Reserve Board's "source of strength" doctrine, which says bank holding companies must provide capital to troubled subsidiaries, suffered another legal blow this week in the Fifth Circuit Court of Appeals in New Orleans.

The court on Monday denied the Fed's petition to rehear an earlier decision that struck down the "source of strength" principle. Both a lower federal court and the appeals court had ruled that the Fed did not have authority to order MCorp, the Dallas-based holding company, to provide $400 million in capital to ailing subsidiaries.

The decisions have left a pall of uncertainty around a key aspect of Federal Reserve regulatory policy. The central bank's next step is likely to be an appeal to the Supreme Court.

"This is a big blow to the Fed," Richard M. Whiting, general counsel of the Association of Bank Holding Companies, said of the latest defeat. "They've operated as if they've had this authority for over 20 years."

He said the Fed has "used the doctrine as if it were grounded in the law, and has used it to jawbone to get holding companies to move assets around. It's going to be more difficult" to continue to invoke the "source of strength" reasoning.

"It's almost theological," said H. Rodgin Cohen, partner in the New York law firm of Sullivan & Cromwell. "They [the Federal Reserve] do regard it as a cornerstone of their regulatory policy."

Mr. Cohen and others predicted that a Supreme Court appeal was imminent. But legal experts said the Fed might have difficulty persuading the solicitor general, the government's lawyer who argues

Scandal in Atlanta: Secret Loans to Iraq

Former Officer of Banca Nazionale del Lavoro Tells the Inside Story

By KENNETH CLINE

ATLANTA — Once evening it happened – as Paul von Wedel had long known it would. A knock on his door around 5:30 p.m. on Aug. 6, 1989, brought him face to face with an FBI agent and a representative of the Federal Reserve Bank of Atlanta.

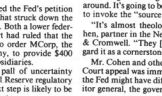
They wanted to talk about his work at the Atlanta branch of Italy's Banca Nazionale del Lavoro.

Mr. von Wedel, a Lavoro vice president, invited the men into his living room. After taking down some routine information – name, age, and height – the FBI agent came to the point. "He asked me point-blank: 'Do you know anything about a 'gray book'?"

Almost relieved that the matter was finally coming out in the open, Mr. von Wedel acknowledged his role in the biggest scandal ever to hit a foreign bank operating in the U.S.

"I said 'Yeah' and went into the whole thing," he recalled.

Within weeks, $91 billion-asset Lavoro would reveal that its Atlanta branch had made nearly $3 billion in unauthorized loans to Iraq over several years. The revelation triggered civil and criminal investigations by both U.S. and Italian authorities. Rep. Henry B. Gonzalez, chairman of the House Banking Committee, plans to conduct hearings into the Lavoro scandal next month, an aide said.



Christopher P. Drogoul

By September 1989, the bank's chairman and managing director had resigned, and nine Atlanta branch employees, including Mr. Wedel, had been fired.

Two of those employees now tell the inside story from the 20th-floor Lavoro office in Atlanta's Peachtree Center.

Mr. von Wedel, one of Lavoro's top officers in Atlanta, and another branch employee, who wishes to remain unidentified, explain how they became involved in the scandal, dubbed "Iraqgate" in Italy.

Former branch manager Christopher P. Drogoul, another key figure, declined to be interviewed despite repeated phone calls.

Secret Loans to Iraq

Nearly $1 billion worth of the secret transactions comprised agricultural exports to Iraq financed by Lavoro-Atlanta under a U.S. government-guaran-

Another Blow for Jack Henry: Chief Executive Officer Quits

By RICHARD LAYNE

NEW YORK — Jack Henry & Associates, a software company that is transforming after calling off merger talks last month, was rocked last week by the resignation of its chief executive.

Colin McAllister quit as CEO after a two-year tenure marked by what some observers called questionable business decisions. Jack Henry president Jerry D. Hall immediately assumed chief executive duties.

During Mr. McAllister's tenure, Jack Henry became entangled in a lawsuit with a major vendor, attempted a short-lived diversification into financial services, and failed to consummate a promising merger deal.

Observers attributed those actions to the company's founder and chairman, John H. Henry. Mr. McAllister could not be reached for comment.

Monett, Mo.-based Jack Henry has 600 banking customers and is the biggest provider of integrated banking software for midrange computers from International Business Machines Corp.

Despite reporting $10 million in 1989 revenue, the company may have difficulty attracting clients and lenders because of its troubles, observers said.

Jack Henry, which originally sold software for IBM computers, abruptly switched to a chief competitor, Unisys Corp. The development deal with Unisys fell apart and Unisys defaulted on its payments, forcing Jack Henry to write off $1.2 billion last year. Jack Henry has since reverted to IBM and has a lawsuit pending against Unisys.

Two years ago, Jack Henry bought a San Antonio, Tex., securities brokerage. It sold the business less than a year later to its original owners.

Last month, Jack Henry canceled merger talks with Peerless Systems Inc., which also sells banking software for IBM midrange computers. □

Nynex Letter-of-Credit Software

By JEANNE IIDA

NEW YORK — Nynex Co. has added software that automates back-office processing for letters of credit to its line of wholesale banking products.

Disc Inc., a Nynex subsidiary with 300 banking customers, acquired the software last month from World Banking Systems, La Jolla, Calif.

Price/Performance Praised

The software, available since 1986, is being marketed as Disc WorldNet and runs on a local-area network.

"The price/performance is very strong," said Ralph S. Rino, vice president of international banking for First Security Bank of Utah, which installed the software 2½ years ago.

The bank eliminated three staff positions, including a Swift operator. The software generates messages over the Swift international banking network.

Kapiti, Security Pacific Bank, and other companies offer similar software for letters of credit. The Nynex product starts at $25,000.

Instructions Automated

The software automates issuance instructions and notice to the confirming bank. It also has interfaces to the exporters' bank and all negotiating information.

Banks can provide a stripped-down version of the Disc software to retail customers, allowing them to transfer applications electronically to the bank. Banks also can generate fee income by providing workstations to other banks involved in the trade cycle. □

PCs Raise Crime Risk, Experts Say

Security Measures Urged for Both Machines and Data

By KAREN GULLO

Earlier this year, BankAmerica Corp. fell victim to thieves. The criminals weren't after money, though. They were after personal computers.

In a two-week period, seven branches were robbed of PCs that had just been installed as part of a project to incorporate 18,000 PCs into the branch network. The banking company had a similar problem at its corporate headquarters in San Francisco, with two computers disappearing each week, according to a source close to the bank.

Alarm System Installed

The branch break-ins appear to have been the work of one group, and BankAmerica officials say there have been no subsequent thefts. At its headquarters, the bank has installed an alarm system.

But the crime rash underscores the importance of security – for both machines and data – as many large banks replace terminal-based branch automation systems with PCs and install the costly machines for other purposes.

Security has long been a concern for ATM and electronic funds transfer networks. In the past, computer crime has been less of a problem for banks than for other industries, surveys show. But the more banks rely on PCs, the greater their risk of falling victim to computer crime and theft, security experts say.

"While the perception of computer crime is high, action is not," said Gregory W. Therkelsen, national director of information security services at Ernst & Young, an accounting and consulting firm.

"It's become an agenda item, but banks are not taking focused actions," Mr. Therkelsen said. "In a branch automation project involving PCs, 95% of the time you won't find a security person assigned to the project."

Data Remained Intact

BankAmerica says security is a key element of its branch-automation project. The integrity of the bank's data was not compromised by the theft, officials said, because the computers did not contain software that would allow users to gain access to other computer files.

For physical security, experts recommend alarm systems and devices that allow the computers to be bolted to desks and locked when not in use.

For data security, they recommend encrypting data and authenticating transactions, especially for electronic funds transfer. They also say only authorized software disks and electronic files should be used on personal computers, since viruses can be transmitted from infected software programs and spread from computer to computer.

PC Installation is the top priority for technology investment among bankers.

PC Expenditures

PC installation is the top priority for technology investment among bankers, according to the *American Banker*'s 1990 technology survey. Fifty-five percent of senior operations and technology executives identified PCs as the area where they will concentrate investments over the next five years.

Several large companies, including Security Pacific Corp., Royal Bank of Canada, and Banc One Corp. are now installing thousands of PCs in branches and bank offices or have plans to do so over the next few years.

The proponents of these branch systems say PC networks are more powerful and functional than controller-based branch automation systems, giving officers easy access to customer information in data bases. In other areas of the bank, PCs are taking over much of the processing that was once done on mainframes.

Computer Hot Squads

Some savvy banks have installed a computer security officer and programs for preventing computer hackers, viruses, and worms from entering their PC networks and destroying information.

Royal Bank, which is installing 13,000 PCs in its branches, has formed a six-person team to develop a program for securing corporate information. George Oliver, manager of information delivery technologies, said the team is working with cryptography products that scrambles data as it is distributed to PCs.

"Security is a major issue that is being dealt with in phases," he said.

Henry T. Garcia, a senior vice president at Citizens and Southern Corp., said the bank has an aggressive security program to accompany its campaign to install PCs in 1,000 branches.

The Atlanta banking company uses a platform automation system that includes security features, which it plans to combine with the security software installed on a teller system at Sovran Financial Corp. C&S and Sovran are scheduled to merge at the end of the month.

Little concrete information is available about the impact of computer crime on banks.

COMMENT / By John O. Smith

ATM 'Duality' Will Open New Doors for the Banks

For consumers and financial institutions, ATM duality is an idea whose time has come.

ATM duality offers the opportunity to double the number of U.S. ATMs most consumers can use, because ATM owners will be able to display both the Cirrus and Plus logos. This opens up a variety of new marketing and income-producing opportunities for financial institutions that issue cards and acquire ATM transactions.

Before deciding how to take advantage of these opportunities, though, it is important to be clear about what duality will entail for financial institutions – whether they are Cirrus and Plus network members or among those that have yet to join a national network.

Two Logos on Display

There has been some confusion about duality, so a definition is in order.

Duality in the context of Cirrus and Plus means terminal duality – that is, ATMs displaying the logos of the competing Plus and Cirrus networks. Duality does not apply to cards; only ATMs will display both logos.

Also, duality will not be automatic. It is scheduled to begin on Aug. 20, but will not happen with the flick of a switch. Instead, financial institutions must decide for themselves whether to take advantage of duality, then take the necessary steps to implement it.

Duality is not reciprocity. Cirrus cardholders cannot automatically use Plus ATMs, and Plus cardholders cannot use Cirrus ATMs. Cardholders can still use only ATMs that display the same mark that is on their cards. However, as a result of duality, many ATMs will display both Cirrus and Plus logos.

Systems Are Not Merging

Duality is not a merger of Cirrus and Plus. Issuers will not be issuing both Cirrus and Plus cards. Cirrus and Plus will remain distinct networks, with different operating rules, marketing approaches, and strategic philosophies. So the Cirrus and Plus brands will continue to compete with each other.

Finally, the Aug. 20 starting date for duality pertains only to the United States. The Cirrus board has also approved duality for Mexico, Venezuela, Spain, Hong Kong, the Philippines, Singapore, and Thailand. Of these countries, only Mexico has live Cirrus ATMs today.

Mr. Smith is president of Cirrus System Inc., Downers Grove, Ill.

"Duality is a case where what is good for consumers is also good for financial institutions."

Duality between Plus and Cirrus enables issuers to offer their cardholders greater convenience and it allows financial institutions to acquire transactions for both networks, adding millions of cardholders to the base of those who can use their ATMs.

The impetus for duality today is the industry's desire to serve consumers' changing needs. According to the May 1 edition of *Bank Network News*, regional and national networks are already seeing record transaction volume growth in 1990, with projections showing that annual electronic funds transfer volume could reach 6.4 billion this year, a 20% increase over 1989.

It is clear that consumers are comfortable with ATMs and are using them more than ever. While Cirrus and Plus ATMs already cover the United States, duality is the next logical step because it provides still greater consumer convenience by giving cardholders access to potentially twice the number of ATMs they may now use.

For example, as Plus members join Cirrus and put Cirrus logos on their ATMs this year, the number of ATMs that Cirrus cardholders may use will expand to more than 50,000.

Accustomed to Convenience

Also, regional network ATM coverage is now so pervasive that cardholders are accustomed to accessing most, if not all, ATMs in their local markets. It is perfectly reasonable for cardholders to want this same convenience when they travel.

Duality will give traveling cardholders the same kind of near-universal access they enjoy at home. For example, Cirrus cardholders can now get cash at 54 airports, but with duality that number will grow to as many as 87 – or virtually every significant airport in the nation.

Duality is a case where what is good for consumers is also good for financial institutions. That is because duality will give consumers even more confidence that they will find an ATM when they need one.

That comfort level will cause cardholders to rely on ATMs even more for their banking needs. Time and again, the experience of regional networks has shown that when access to ATMs becomes universal in a

First Chicago Digs In. Though no outside bidders are discernible, First Chicago Corp. has quietly beefed up its antitakeover defenses. The banking company eliminated an exception to its poison pill, according to a recent filing with the Securities and Exchange Commission.

The exception would have allowed a hostile bidder who bought 80% of the bank's common stock through an all-cash tender offer to proceed unimpeded. First Chicago also dropped a referendum procedure that conditionally allowed stockholders to redeem rights issued under the poison pill without approval of the board of directors.

Analysts said they knew of no reason for the nation's 12th-largest bank holding company to be hunkering down now. Before bank stocks began their extended nose dive this year, however, rumors had circulated that Wells Fargo & Co. might attack First Chicago, one analyst said.

Almost no U.S. institutions today are in a position to raid the Chicago bank, although foreign bank companies remain a threat.

First Chicago officials did not return calls for comment on their revised defenses.

BT Shops in Chile. Bankers Trust New York Corp. is celebrating the opening this month of a shopping mall in a suburb of Santiago, the capital of Chile.

The company owns about 20% of the project, principal investor is Falabella, Chile's largest department store, according to a government-sponsored trade company. The mall – which includes two big department stores and 140 small shops – would be worth about $30 million if the investment group convinces a movie theater chain and a hospital to settle on surrounding land owned by the group of developers, a Bankers Trust official said.

The banking company did not disclose the dollar amount of its investment but said it did not involve a debt-for-equity swap. "We used our own funds in Chile, including dividends from other investments," said Jean Winslow, a banker based in Santiago.

Morgan Rides the Pampas. The Argentine subsidiary of J.P. Morgan & Co. has bought 10% of a $26.5 million bank holding company that is being offered in underwrote for Acindar, Argentina's biggest private steel producer. (It sold 2.6% of the issue to a Morgan subsidiary in London to comply with regulatory restrictions on equity investments.)

A Morgan banker in Buenos Aires said Acindar is the only Argentine company to have publicly issued equity in the past decade. Morgan, he added, was lead manager on three of the company's four issues.

Sally, GMAC Team Up. Wall Street is about to muscle into the mortgage servicing market that has traditionally been dominated by banks and thrifts.

Salomon Brothers Inc. has teamed up with GMAC Mortgage Corp., a General Motors Corp. affiliate and the nation's third-largest mortgage company, "to explore opportunities" in the battered market for mortgage servicing rights, according to a source familiar with the effort.

The two, which are said to have asked secondary market agencies for accreditation as official servicers, would buy the rights to process mortgage payments while GMAC would do the actual work, the source said.

Spokesmen for Salomon Brothers and GMAC declined to comment. Mortgage servicing involves funneling monthly payments from borrowers to lender banks and investors in mortgage-backed securities.

Salomon, long active in many areas of mortgage finance, may be the first of several Wall Street firms to join the bargain hunt. "I've heard of a lot of Wall Street guys talking about this kind of thing," said a servicing professional. **— Phil Roosevelt**

Texas Tax Tactic. Chemical Banking Corp. is seeking Federal Reserve Board approval to form a Delaware-based bank holding company that would acquire the stock of the 21 banks in its Texas Commerce Bancshares subsidiary.

The proposed Texas Commerce Equity Holdings would owe less Texas franchise tax than Texas Commerce and its subsidiaries now must pay. Last year, the holding company paid the state more than $8 million for income received from capital allocated to Texas, a bank official said.

The proposed Delaware company would initially be capitalized at $1.1 billion, equal to 100% of Texas Commerce's stock holdings in its Texas banks. Its sole purpose would be to hold and redistribute equity to the Texas banks and provide funds to meet Texas Commerce's funding obligations. □

The most important thing about banking is the bottom line.

Here's the bottom line.

AT&T gives banks a highly cost-effective way to do business.

When it comes to delivering the telecommunications services that banks really need in today's market, AT&T is unmatched. And we're going further.

More flexibility and better cost control.

For headquarters to branch, or branch-to-branch communications, the AT&T Software Defined Network (SDN) gives you all the benefits of a private voice network. But with greater flexibility and better cost control, plus the ability to track and monitor call volume.

The hottest technology in banking today.

And what SDN does for voice, our new Software Defined Data Network (SDDN) now does for data. SDDN is a switched data service with dynamic bandwidth allocation that provides the transmission flexibility necessary for image-processing applications, such as signature verification, document processing and check processing.

AT&T is committed to meeting the banking industry's needs.

In 1989, AT&T introduced the Retail Banking Solution, which gives branch banks the tools needed to manage and grow customer relationships effectively. And the AT&T DEFINITY® Communications System helps speed calls to and from customer service centers. So go with AT&T. Because with our innovative services we give your bank the competitive edge. And that's what counts on the bottom line.

Innovation. Another AT&T advantage.

For more information, call your AT&T Account Executive or 1 800 247-1212, Ext. 580.

AT&T
The right choice.

PRIVATE BANKING

Disclosure Forms Adapted To Stricter Loan Criteria

By MAUREEN MEVIN DUFFY
Special to the American Banker

Sensing that this is a good time to tighten loan underwriting procedures, many private banks are revising their financial disclosure forms.

Some are adopting Robert Morris Associates' new Personal Financial Statement, which stresses cash flow versus balance sheet data, and others are extracting key elements from it.

The national association of bank loan and credit officers first publicized the four-page form in March. In the three subsequent months, it has generated more than 600 phone calls and sold 100,000 copies, according to Ned Miller, director of the group's lending and finance division.

Rosemary O'Malley Laphen, executive vice president who heads Philadelphia-based private banking and trust for Philadelphia National Bank/First Pennsylvania Bank and who helped design the form, said, "I think it will become a standard form for banks, given the economic times we're in. Everybody is very careful to tighten their underwriting standards."

Ms. Laphen's bank started using the four-page form in May as a tool for the relationship managers, and the reaction has been mostly positive. "However, it would be naive to say it was welcomed by the customer," she said. "Most affluent clients are not accustomed to providing the amount of detailed information we're now requesting." Consequently, the bank presents the form only when private bank clients want to borrow.

> **"Everybody is very careful to tighten their underwriting standards."**
>
> **Rosemary Laphen**
> *Philadelphia National Bank*

The standard Robert Morris Associates form, based on input from about 50 private banks nationwide and steered by a committee chaired by James W. McKeighan 3d, president of Commerce Bank, Philadelphia, is intended to help lending officers make credit decisions and assess the soundness of loan guarantors.

It asks: What type of stocks are owned – blue chips or start-up ventures? How marketable are the securities? How successful is the investor? Who owns the securities?

Real estate queries cover the purchase year and price in addition to current market value, so the banker can better judge the asset. Interest rates and monthly payments are included as a cash flow indicator.

The form also asks how to contact the client's lawyer, accountant, and investment and insurance advisers. "Those sources would be consulted to get a better understanding and analysis of the credit request," said Daniel H. Chapman, chief executive officer of Northern Trust Bank of Texas and chairman of the American Bankers Association's private banking committee. "The omission of a name from one of these categories might also indicate a cross-sell opportunity for the bank."

The emphasis on cash flow is a welcome addition, Mr. Chapman said. Balance sheet numbers can be widely interpreted. "But cash that comes in and goes out is another value entirely," he said. "Also, real estate can be valued very differently in different regions.

"The fact that it looks like we're headed for a recession and given the well-known problems of lenders throughout the country, they will be more cautious. There will be more attention to asset management, but that doesn't lessen the need for a financial statement."

Clients Might Balk at Added Demands

One problem with revising financial forms is a reluctance by consumers to provide all the information. "You may require four pages of information, and your competition may ask for very little," said Ms. Laphen, whose bank asks clients to supply not one but two years' income and expense information. By making the RMA form an industry standard, that problem can be erased.

Mr. McKeighan's committee anticipated some reluctance from clients because of the form's length. "But that has not been the case," he said. "Most people housed in private banking have accountants fill out the forms. So it's not the struggle it might have been."

Another reason, he said, is that clients understand current market conditions.

Form Is No Hassle for the Affluent

In one case, Ms. Laphen said, a custodial client with "many millions in the bank" asked to extend his relationship to include a substantial line of credit and was asked to complete the form. "He said, 'No problem.' He had his accountant fill out the forms."

Maribeth S. Rahe, group executive of the personal and private banking group, at Harris Trust and Savings Bank, based her Chicago bank's form on the RMA model. "For the most part, there has been, no resistance," Ms. Rahe said. "Affluent clients usually have this information at hand."

Ms. Duffy is a freelance banking reporter based in New York.

Crisis Could Deepen Recession

Economic Downturn Eroding Consumer Confidence

Continued from *page 1*

leased Tuesday by the Federal Reserve bear this out. The Fed reported that growth slowed in consumer installment loans outstanding in June, the latest for which figures are available.

Now, with the prospect of an oil shock staring Americans in the face and long interest rates rocketing upward, bankers are wondering if consumers will pull in their horns even further. And they worry whether customers who do take out loans will be able to pay them back.

Bankers may be inclined to sacrifice growth for quality. Under current circumstances, "It's better to live with lower volume," said Kathleen B. Cooper, chief economist for Security Pacific Corp., Los Angeles.

Most bankers expressed a cautious approach and said it was too early to predict changes in lending policy. "It remains to be seen whether events in the Mid-

> **Immediately after the . . . invasion, long U.S. Treasury bonds climbed, to 8.80% from 8.30%.**

dle East will have any lasting effects," said Michael J. McMennamin, president of Bank One, Columbus.

But by threatening to make a recession deeper, inflation more rapid, and interest rates higher, bankers and economists say the Middle East crisis could yet knock the retail loan market for a loop.

If energy prices continue to rise, "some of the spendable income of consumers will be sapped," warned Ms. Cooper of Security Pacific. "That could mean that consumers would be less willing to take on debt."

With the housing market slumping and new uncertainties over energy prices hovering over the markets, the outlook for consumer borrowing is bleak, some analysts said.

"I think we will see over the next couple of quarters the rate of growth [of consumer credit] declining," said Robert Dugger, chief economist for the American Bankers Association. "There's a number of reasons for that, not least of which is the decline in consumer confidence. That decline began before the Mideast crisis."

On Tuesday, the Federal Reserve reported that consumer installment credit outstanding grew an anemic 0.8% in June. Hammered by a slump in auto purchases, installment credit outstanding inched up $463 million, compared with a $3.7 billion increase in May.

"It's another indication that consumers are retrenching," said Sung Won Sohn, chief economist for Norwest Corp., Minneapolis. "Most of the increase was from revolving credit. Consumers are having difficulty financially, so they are relying on credit cards to buy things."

"It's a reflection of the weakness in the auto sector," said Stuart Hoffman, chief economist for PNC Financial Corp. "But consumer borrowing has been bouncing around a lot lately."

Auto loans fell by $1.6 billion in June, compared with a nearly-flat May. Credit card borrowing grew by only $1.3 billion, versus a $3.2 billion rise the month before.

Interest Rates Could Soar

If long-term rates continue to rise as they have since the Kuwait invasion, "the first area that will be belted really hard will be mortgages," said Robert K. Heady, publisher of *Bank Rate Monitor*. "I don't expect to see auto rates, credit cards, and personal loans affected that much."

Immediately after the Kuwait invasion, long U.S. Treasury bonds climbed, to 8.80% from 8.30% a week earlier. "The market went bananas," said Lyle Gramley, chief economist with the Mortgage Bankers Association.

By Tuesday, mortgage lenders reported that fixed-rate loans were priced from 10.1% to 10.375%, up from under 10% on Friday. Initial rates on adjustable-rate mortgages were unchanged, experts said, because ARMs don't have to beat the long-bond rate to attract buyers on the secondary market.

But the picture for consumer credit other than mortgages could still worsen, perhaps dramatically, bankers said.

Prospect of Recession

The unanswered question is how much will oil price increases and a possible military crisis affect economic growth. Nothing would reduce loan demand faster than a deep recession, bankers stressed.

"When industries start laying off people, that would affect consumer demand," said Harry R. Sisk, senior vice president and consumer lending chief for Union Bank, San Francisco. "I'm not concerned about it otherwise."

With the inflation and economic growth outlook still hanging in the balance, many bankers had begun to tighten credit standards before the invasion.

> **Consumer installment credit outstanding grew an anemic 0.8% in June.**

"Banks were already keenly watching their delinquencies," said Joe D. Belew, president of the Consumer Bankers Association. "More attention is being paid to credit quality."

The prospects then are for a period in which both banks and their retail customers will behave much more conservatively than the go-go period of the late 1980s.

Consumers are likely to want less credit and have a harder time getting it when they apply.

Robert M. Garsson in Washington and Stephen Kluge in New York contributed to this article.

Tangled Web of Deception Led to Scandal in Atlanta

Continued from *page 2*

teed program. The larger, and more controversial part, involved four secret credit facilities, totaling $2.1 billion, that the Atlanta office signed with Iraq between February 1988 and spring 1989.

The branch issued various letters of credit based on these credit facilities to finance the export of industrial equipment, most of which was used to construct the Badush Dam near Mosul.

Accounting requirements related to the Iraqi exposure forced Lavoro to report a $391 million loss in 1989, compared with profits of $84 million in 1988.

In January, bank officials met with an Iraqi delegation in Geneva and agreed to honor the credit commitments in return for Iraqi pledges to repay the loans using two-thirds of the proceeds to buy Italian-made equipment.

But all bets are off now, following Iraq's Aug. 2 invasion of Kuwait. And Moody's Investors Service said Tuesday in London that the West's freeze of Iraqi and Kuwaiti assets may increase Lavoro's losses on its large exposure to Iraq resulting from the trade-finance transactions booked at its Atlanta branch.

Continuing Consequences

In addition to several civil suits filed in the matter, a grand jury was convened in Atlanta late last year to consider possible criminal indictments. Mr. von Wedel has spent a year cooperating with federal prosecutors led by Assistant U.S. Attorney Gale McKenzie.

He said he consented to this interview to rebut press accounts that portray his recent affair to Iraqi arms procurement activities, particularly Iraq's well-publicized missile program.

"I want the world to know that Atlanta-Lavoro had nothing to do with it," he said.

For Mr. von Wedel, the saga began on Feb. 17, 1988. Early that morning he flew to Baghdad, the Iraqi capital, on Royal Jordanian Airlines with Mr. Drogoul, then first vice president and manager of the Atlanta branch.

The Red Carpet

The two men were met at the airport by Sadik Taha, director general of the Iraqi central bank, who saw to it that they received VIP treatment: no customs check, immediate baggage clearance, and limousine transportation to the government-owned Al Rashid Hotel – one of the city's best.

After the two Lavoro officers checked into their rooms, Mr. Taha began telling them in English about the busy day they had ahead of them, working out "the contract agreement." A puzzled Mr. von Wedel took Mr. Drogoul aside.

"I looked at Chris and said: 'What's he talking about?'

"Chris said: 'I'll explain it after Taha leaves.' "

Hidden Agenda

It was only at that point, according to Mr. von Wedel, that he learned the true reason for their trip. The Atlanta branch's top two officers were there to sign an agreement committing Lavoro to a $200 million, five-year credit facility for Iraq that would help fund construction of the Badush Dam.

Mr. von Wedel's account of this transaction cannot be corroborated. A civil suit Lavoro filed against Mr. Drogoul and Mr. von Wedel last fall refers to "a series of unauthorized credit, facilities and loan agreements" concluded with Iraq.

Mr. von Wedel said he believed the purpose of the Bagh-

Lavoro's Secret Loans to Iraq Helped Build Badush Dam

Continued from page 7

dad trip was to reduce, not augment, the bank's lending to Iraq, which was then engaged in a desperate war with Iran.

Mr. von Wedel recalled being told by Mr. Drogoul: "Don't worry about it. It's just a small thing to help them out because the war is ending. When the war is over, we'll have the whole country of Iraq" as a Lavoro customer.

Reputation for Intensity

Mr. Drogoul was then 38 years old, blond and slender. His reputation for intense drive and ambition was already established in Atlanta's international banking community.

A former colleague at Barclays Bank, where he worked from 1973 to 1981, remembered Mr. Drogoul as "a very bright, innovative guy," but also "somebody who needed to be kept on a tight rein."

Mr. von Wedel worked closely with Mr. Drogoul for seven years at Lavoro. He offers a similar assessment.

"Chris was an excellent accounts officer, but he's not a person [Lavoro] should have had at the top. Chris was not a negotiator – you could talk him into doing anything."

Paul von Wedel has spent a year cooperating with federal prosecutors.

Born in New Jersey of a French father and a German mother, Mr. Drogoul joined Lavoro's Atlanta office in 1981 and rose to branch manager three years later.

A Turnaround to His Credit

Inheriting a money-losing operation, he used his expertise in trade finance to turn the Atlanta office into one of Lavoro's most productive overseas branches. It made $11 million in profits from 1984 to 1988.

Mr. Drogoul's success was due, in part, to aggressive participation in a program operated by the federal Commodity Credit Corp., which promotes U.S. agricultural exports by guaranteeing letters of credit issued by international banks.

Through its Atlanta office, Lavoro mostly financed grain shipments to Eastern Europe, the Far East, and the Middle East – including oil-rich Iraq.

So eager was Mr. Drogoul to grab a larger share of the Iraqi Commodity Credit Corp. business at the expense of other international banks, Mr. von Wedel said, that he exceeded his authority in extending the credits.

Authority Overstepped?

The bank's civil suit against Mr. Drogoul and Mr. von Wedel claims "the loan agreements and credit facilities negotiated and executed by defendants were outside the scope of their actual or apparent authority to act on behalf of [Lavoro] or [Lavoro's] Atlanta agency."

By the end of 1985, the Atlanta office had reached the $150 million exposure limit set by the bank, according to Mr. von Wedel.

In fiscal years 1986 and 1987, Mr. von Wedel said, Mr. Drogoul signed Iraq-related Commodity Credit Corp. contracts on his own authority, although he told Mr. von Wedel and other branch employees that he had received oral authorization from a top official in Rome in November 1985.

Mr. Drogoul delayed seeking written approval until March 1986, partly because he tended to procrastinate and partly because the Italian government became embroiled in a dispute with Iraq over the sale of warships.

A telex message finally arrived from Rome in March 1986, denying approval. Mr. Drogoul and his staff found themselves out on a limb.

The Atlanta branch's top two officers signed an agreement committing Lavoro to a $200 million, five-year credit facility that would help Iraq fund construction of the Badush Dam.

By February 1988, when Mr. Drogoul and Mr. von Wedel arrived in Baghdad, the Atlanta office had contracted for $900 million in Commodity Credit Corp. commitments to Iraq, according to Mr. von Wedel.

To hide these commitments from their superiors in Rome, they devised the "gray book" scheme.

"It's not really a book per se," Mr. von Wedel explained, "but a program in the computer [in Atlanta] that we could only access from our own offices. We called it 'gray' because it was semi-approved."

Mr. von Wedel said he knew that U.S. banking rules required the Commodity Credit Corp. credits to be included in the quarterly financial reports that Lavoro-Atlanta – like all other foreign-bank agencies in the United States – sends to the Federal Reserve. He learned the ropes of trade finance in 19 years with Chemical Bank in New York and eight years with Atlanta-based Citizens and Southern Corp.

Lavoro-Atlanta should also have reported the profits from those transactions – $3.5 million, in all – to the Internal Revenue Service instead of hiding them in the gray book, he said.

But the Atlanta employees believed time was on their side. Principal on the Commodity

We helped Dollar and conquer.

What do you call a bank that's everything you see here? Profitable.

Dollar Dry Dock's new idea, to become a one-stop financial center, is made possible by networking from NYNEX.

The concept revolves around over 1,000 teller terminals and ATMs, on-line via NYNEX Digipath Digital Service from New York Telephone. Data lines are hubbed to our Central Office, then routed to the bank's mainframes via a high-speed T1 link.

NYNEX was also a one-stop shop for Dollar Dry Dock. The bank uses TRU SYSTEM telemanagement software from our Telco Research subsidiary. They use the NYNEX INTELLIPATH II Digital Centrex Service from New York Telephone. And they got their Datastar telephone systems from NYNEX Business Information Systems Company. As you'd expect, we take responsibility for ongoing maintenance and support.

NYNEX would like to work with you, too. We offer everything from communications and information systems to the services of New England Telephone, New York Telephone, NYNEX Business Information Systems Company, Telco Research, and the other NYNEX companies. Call us at 1 800 535-1535.

Once you've discovered the answer is NYNEX, you won't have to keep shopping around.

Need to communicate? Need to compute? The answer is

Drogoul Remembered as 'Very Bright, Innovative Guy'

Continued from page 8

Credit Corp. credits was paid down at regular intervals, so that Lavoro would have been reimbursed for all the gray book credits by next month.

Seeking Absolution

"What the plans always were up to that point," Mr. von Wedel said, "was to go to Rome and say: 'Father, I have sinned. This is what we did. Everything is paid off, and we have a couple of million dollars in earnings.'

"In typical Italian fashion, they would have said: 'Don't do it no more. You're a bad boy – but take the earnings.'"

This plan was derailed – ultimately leading the FBI to Mr. von Wedel's door – by the $200 million loan deal that he and Mr. Drogoul signed in Baghdad on Feb. 22, 1988.

This agreement and three subsequent ones allowed Iraq to buy various types of machinery and tool-making equipment from European and U.S. companies in order to construct the Badush Dam and several other industrial facilities, such as a petrochemical complex. Along with interest payments, Lavoro received commissions on the letters of credit it issued to companies exporting the equipment to Iraq.

Like the Commodity Credit Corp. transactions, the four loan facilities were kept hidden in a computer file. Related paper files were maintained by only a few people in the office, including Mr. Drogoul, Mr. von Wedel said.

Christoper Drogoul used his expertise in trade finance to turn the Atlanta office into one of Lavoro's most productive overseas branches.

Most of the letters of credit, on the other hand, showed up on the bank's books with Central Bank of Iraq deposits classified as collateral against them. The central bank maintained $40 million on deposit at the branch from early 1989 on, according to Mr. von Wedel.

After the scandal broke in August 1989, news reports persistently linked the four unauthorized loans to an Iraqi arms-procurement network operating in Europe. Some of the loot-making equipment appeared to be just as useful in military as in civilian applications.

Despite intensive investigations in both Europe and the United States, none of the companies receiving letters of credit from Atlanta's Lavoro office have been charged with violating arms-control laws.

But Mr. von Wedel said the loan agreement deeply worried him, coming as it did on top of the "gray book" Commodity Credit Corp. loans. Mr. Drogoul's personal lending limit was only $1 million for secured loans, and $500,000 for unsecured credits.

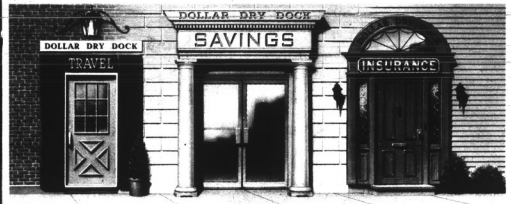
Wartime Confusion in Iraq

In an effort to sabotage the loan agreement, Mr. von Wedel said he typed the English translation of the agreement into a computer at the Iraqi central bank on the, day of signing in such a way that the central bank's secretary accidentally erased most of it.

An hour before the signing ceremony, with the Iraqis running around in a near-panic, Mr. Drogoul asked Mr. von Wedel to type the last page only, with a clause saying the terms would be confirmed later by telex from Atlanta.

"So I typed it up and came back into this room with all these people there," Mr. von Wedel said. "You have to remember: It was wartime – and everybody had guns and everything.

Dry Dock divide



"Chris [Drogoul] was not a negotiator – you could talk him into doing anything."
Paul von Wedel

"It was like a cocktail party at a terrorists' convention: camouflage uniforms, guns, mustaches. I was scared stiff. So I wound up signing the stupid thing. I just kept saying, 'Get me to my plane.'"

Fear: A Powerful Motivator

Mr. von Wedel, 52, is the son of a New York printer who worked his way up in banking without a college education. He owns up to the fact that he was wrong to sign the agreement that eventually destroyed his career. But fear, he says, is a powerful motivator.

"I would have signed a confession of war crimes if they would have let me go," he said. The two men returned to their hotel and caught the 4:30 a.m. flight to Amman, Jordan, where Mr. Drogoul planned to stay a few days on business related to the Commodity Credit Corp.

Mr. von Wedel said he continued home and later discovered that Mr. Drogoul had returned to Iraq to complete the contract.

Iraqis Come to Georgia

For the second loan agreement, signed Oct. 8, 1988, the Iraqis came to Atlanta.

Mr. Taha came to the United States periodically to seek medical treatment for a heart problem. When he stopped in Atlanta to meet with Mr. Drogoul, he was accompanied by Raja Hassan Ali, general director of the Iraqi ministry of industry and military production.

Mr. von Wedel recalled being in his office about 6 p.m. that

See GRAY next page

'Gray Book' Hid Lavoro's Loan Commitments to Iraq

Continued from *page 9*

evening when Mr. Drogoul's secretary walked in to show him the second agreement, for $150 million. Mr. von Wedel scurried over to Mr. Drogoul's office, demanding to know: "What the hell is this?"

Mr. Drogoul referred to the delicate state of Mr. Taha's health, describing the head of Iraq's central bank as "our only big supporter in Iraq." In the event of Mr. Taha's death, he pointed out, "we have no guarantees of getting paid."

Again, Mr. von Wedel acquiesced: "I signed, with assurances from everyone that that was it," he says.

Mr. Taha died this year, July 6, in a London hospital.

As the volume of Iraqi business surged, Mr. von Wedel and others in the office became more concerned.

"It really tore the branch apart," Mr. von Wedel said. "Everybody was pulling in different directions. There was a lot of dissension, a lot of tension, a lot of arguments."

Some of the machinery and tool-making equipment ordered by the Iraqis appeared to be just as useful in military as in civilian applications.

Mr. von Wedel and the other former branch employee both believe it was a disgruntled Atlanta employee who finally blew the whistle to the FBI on the secret loan agreements.

Complicity

Mr. von Wedel periodically threatened to quit, but he and the other officers and staff generally went along with the secret transactions. Although some of the later loan agreements came as a surprise, they knew about the "gray book," for example, the former employee said.

Most were people in their late 20s or early 30s who had never worked with any bank other than Lavoro. Mr. Drogoul was a popular boss whom they believed to enjoy the full support of his superiors in Rome.

Since other Lavoro branches around the world routinely referred Iraq-related business to Atlanta, the employees believed that Rome was generally aware of their activities.

They were were also becoming overconfident. Each year, federal and state auditors, as well as a team from Lavoro's Rome headquarters, showed up to examine the books, but never discovered the "gray book" credits or questioned the Iraq-related transactions that were available for scrutiny.

During one such visit from the Lavoro auditors, Mr. von Wedel said, Mr. Drogoul came into his office, shut the door and fell on his knees from laughter, exclaiming, "I can't believe the charmed life I'm leading!"

"It's hard to be on the outside and understand why we did it," said the other former employee. "But you do it for four years, no problems, nobody gets caught, the auditors come by, . . . What the heck? Why worry about it?

"It's a job, after all. You don't want to look like you're trying to be a problem."

Back to the Well

In February 1989, Mr. von Wedel and Mr. Drogoul had a major falling out. Mr. von Wedel discovered that Mr. Drogoul, on his own, had gone to Washington in December to sign a third loan agreement with the Iraqis for $650 million.

Mr. von Wedel, just returning from a trip to London, was confronted by the office manager, who was angry with him for changing interest rates on letters of credit processed under the loan agreements.

The first two loan agreements had been set at 50 basis points and 25 basis points over the London interbank offered rate, respectively. Mr. von Wedel had been putting those rates on the letters of credit coming into the office.

So eager was Mr. Drogoul to grab a larger share of the Iraqi Commodity Credit Corp. business, Mr. von Wedel said, that he exceeded his authority in extending the credits.

Now, he learned, Mr. Drogoul had arranged the third agreement at 6.25 basis points over Libor, throwing off all the accounting.

At that point, Mr. von Wedel said, he told his boss that he refused to have anything more to do with the Iraqi loans.

Only after the scandal became public did investigators uncover Mr. Drogoul's fourth and final loan agreement with Iraq, for $1.1 billion. It was signed at about this time, probably in London.

Mr. von Wedel, who has seen a copy of the agreement, estimated that $300 million to $400 million was actually disbursed before the FBI moved in.

Accounting Discrepancies

The former branch employee said he, too, discovered the third agreement through accounting discrepancies and did not learn about the fourth until the fall of 1989.

The fourth agreement stayed hidden because the Central Bank of Iraq never sent telex re-

quests to Lavoro-Atlanta, as it had on the first three loans, indicating the intended use of the money. The contract called for loan proceeds to be sent directly to various European banks in the name of the Iraqi bank, according to Mr. von Wedel.

Not knowing about the fourth agreement, but angry over the third, Mr. von Wedel agreed to make a second trip to Baghdad on April 24, 1989. He said he went with Mr. Drogoul, at the latter's request, to see how the loan proceeds were being used, specifically the Badush Dam project.

"I knew it was going to be a sales job on me not to make any more waves," Mr. von Wedel said.

An Ostentatious Welcome

Arriving at the airport around 10 p.m., the two men got an ostentatious welcome from Mr. Ali, the arms minister.

"It was embarrassing at the time," Mr. von Wedel recalled. "All of a sudden, bodyguards push people aside and take us off the plane."

Again, they stayed at the Al-Rashid, which was filled with military men from all over the world. The Iraqis were holding an international arms exhibition that week.

The next day, the two Atlantans were flown to Mosul in a French Falcon jet provided by the central bank. From there, they were driven to the dam site, about half an hour away.

"It was like a cocktail party at a terrorists' convention: camouflage uniforms, guns, mustaches. I was scared stiff."

Paul von Wedel

"We took pictures and had lunch out there. We saw where all the money went, so it was helpful," Mr. von Wedel said.

A Big Letter of Credit

On the flight back to Baghdad an Iraqi lawyer on the plane told Mr. von Wedel that Mr. Drogoul was negotiating a $150 million letter of credit with General Motors Corp. under the third loan agreement. This turned out to be the largest single letter of credit involving Iraq that was handled by Lavoro's Atlanta office.

The deal was a tremendous coup for Mr. Drogoul, who was under pressure from Rome to win more business from multinational corporations. Mr. von Wedel said he and Mr. Drogoul wrapped up the deal in meetings with GM officials in Baghdad and, the following week, in Washington.

Fringe Benefits

Mr. Drogoul's dealings with Iraq seemed on the verge of producing other benefits for Lavoro. In May, according to Mr. von Wedel, Mouneim Rashid, director general of the Central Bank of Iraq, visited Atlanta and promised that his bank would switch its U.S. dollar clearing account to Lavoro from J.P. Morgan & Co. at yearend.

By Mr. von Wedel's estimate, this clearing business could have brought the Atlanta office up to $500 million in average daily balances in addition to the $40 million the central bank had deposited the previous year in a collateral escrow account.

Sunday, April 30, was their last day in Baghdad. The two men met with Ahmad Al-Dulaimi, undersecretary of the ministry of industry and military production.

For the second loan agreement, signed Oct. 8, 1988, the Iraqis came to Atlanta.

As Mr. von Wedel recalled the conversation, Mr. Al-Dulaimi said, "Look, Chris, the bank project is getting down to where we really have to act. We're coming down to the wire now, and we need something in writing."

Ulterior Motive Surfaces

As they were returning to their hotel to change clothes for the flight back to Atlanta, Mr. von Wedel quizzed Mr. Drogoul about Mr. Al-Dulaimi's remark.

"Chris said that, in 1992, when all their debt and everything is paid, they [the Iraqis] want to buy or start a couple of banks, one in London and one in the United States.

"He said, 'I've been promised to be president of the bank, or very high up there, and most people [in Lavoro's Atlanta office] are going to have jobs when they open the bank.'"

Mr. von Wedel said this was the only indication Mr. Drogoul ever gave of some ulterior motive for increasing Lavoro's exposure to Iraq. He suspects that the Iraqis planned to use funds from the mysterious fourth loan agreement to establish their overseas bank, but admits he has no proof of that.

Theodore H. Lackland, Mr. Drogoul's Atlanta attorney, declined to comment on Mr. von Wedel's story about the Iraqi bank except to say: "Some of these allegations are new. We're reviewing them in detail."

Short-Lived Optimism

Mr. von Wedel remembered feeling optimistic on the flight home, believing the GM deal was the Atlanta office's final Iraqi project. He was also preparing to retire from the bank, which had announced the preceding October that a large co-

See FBI *next page*

FBI Raid Ended the Party at Banca Lavoro's Atlanta Branch

Continued from *page 11*

tingent from the Atlanta office, including Mr. Drogoul, would be moved to Chicago.

Mr. von Wedel had no intention of leaving Atlanta. He planned to wait around long enough to collect his six months' severance pay — about $50,000 — in case the Atlanta office closed permanently.

The move to Chicago was scuttled because too many branch employees refused to leave Atlanta. Mr. von Wedel began organizing a private business venture with his wife, planning to resign in August 1989.

At about the same hour on Aug. 4 that Mr. von Wedel was receiving his first visit from the FBI, the receptionist at Lavoro's Peachtree Street office opened the door to a man who had just rung the buzzer.

The former employee recalled seeing a crowd of men immediately appear from around the corner and push their way into the office, identifying themselves as FBI agents.

Sweeping through the corridors, the operatives gathered the branch workers into a conference room, where they grilled them for the next four hours about the "gray book" and other aspects of the unauthorized loans to Iraq.

"They had to have been tipped off, because they knew things that only four to five people in the branch knew," the former employee said.

Mr. Drogoul was vacationing in France at the home of his father, a metals industry consultant.

Home to Face the Music

Mr. von Wedel said he called Mr. Drogoul that night to tell him of the FBI raid. A seemingly unperturbed Mr. Drogoul returned to the Atlanta office Aug. 8. He stopped in New York, en route, to confer with Lavoro's North American officials.

By that time, the Atlanta office was packed with some 40 investigators from the FBI, Federal Reserve, and Georgia banking department. Even the federal Commerce and Agriculture departments would contribute representatives during the ensuing weeks.

Among the Lavoro officials on hand to greet the returning Mr. Drogoul was Umberto d'Addosio, a general vice president based in Rome.

Summary Dismissal

To Mr. Drogoul's apparent surprise, Mr. d'Addosio dismissed him as branch manager, effective immediately. The bank fired him, Mr. von Wedel, and seven others last September.

When Mr. Drogoul left the office after his dismissal by Mr. d'Addosio, Mr. von Wedel joined him in the elevator. Mr. von Wedel recalled it as one of the few times he ever saw Mr. Drogoul lose his composure.

FBI operatives swept through the corridors, gathering the branch workers into a conference room, where they were grilled for the next four hours.

"Chris [had] actually thought he was coming back to be manager of the office again," Mr. von Wedel said.

"He seemed to think it wasn't so serious. When he left the office that day, he looked white as a ghost."

Bribery Verdict Is Not Guilty

CINCINNATI — A Florida real estate developer was acquitted in U.S. District Court of conspiracy to bribe a Cincinnati law firm to secure a $1 million loan from a savings and loan.

Prosecutors had charged Leonard Pelullo with wiring $145,000 to a law firm in Cincinnati that handled the trust account of David Friedman, an official with the now defunct Savings One Association in Gahanna, Ohio.

The prosecution tried to convince jurors that the funds transfer was an illegal kickback to secure a $1 million loan from Savings One.

Mr. Pelullo contended the payment was legitimate repayment of interest on a loan.

Jurors deliberated for two hours before rejecting all five counts of conspiracy to bribe.

Illinois Bank Is Acquired

DETROIT — Manufacturers National Corp. has completed the acquisition of State Bank of Lake Zurich, Ill., for $24 million in a combination of cash and stock. The $1.6 billion-asset Manufacturers announced its agreement to buy the $165 million-asset Illinois institution in February. □

Block of Shares Sold In Massachusetts S&L

REUTERS

WASHINGTON — Harris Associates LP, a Chicago investment firm, sold 35,000 shares in Peoples Bancorp of Worcester, lowering its holdings to 127,800 shares, or 4.8% of the thrift company's common stock outstanding.

In a filing with the Securities and Exchange Commission, Harris said it sold the shares between June 29 and July 27 for $17 to $17.82 each.

The Harris group gave no reason for the sales. It usually holds shares for investment purposes.

Separately, Peoples Bancorp announced that its subsidiary, Peoples Savings Bank, had entered a definitive agreement to sell $15 million in deposits and certain assets of two offices in Williamstown, Mass., to First Agricultural Bank. Peoples acquired those branches in its April 1989 regulatory-assisted takeover of First Service Bank for Savings, Leominster, Mass.

Also, in a more recent acquisition of $300 million in deposits from a failed thrift, Peoples said it would retain four of the five offices it inherited from the Federal Deposit Insurance Corp. in the July 6 closing of Milford Savings Bank. □

Digital's approach to systems integration begins with this critical first step.

digital™

When we walk in to learn about your business problem, we at Digital don't walk in with preconceived ideas. Or slick B school answers up our sleeves. Instead, we walk in with open minds. And we roll up our sleeves. To work with you to find the answer. Together.

Only by talking long and hard with your people, can we understand all the things that make your business—and your culture—unique. And only then can we design technology that will fit the way your processes and your people really work. Only then can we create systems that embody your company's goals and dreams. And only then will you have a solution that's going to work in real life. Not just in theory.

When you work with Digital, you're not working with consultants who have only studied systems integration in textbooks. You're working with experts who have solved real-life problems, for real-life clients, many times before. In fact, we have over 40,000 experienced professionals—with expertise in everything from financial services to manufacturing, telecommunications to government—to help you with the complex task of systems integration. Anywhere in the world. And we have a 20-year heritage of helping companies like yours get their systems—and their people—working together.

To learn more about Digital's unique approach to systems integration, just roll up your sleeves, and write to Digital Equipment Corporation, 129 Parker Street, K29, Maynard, MA 01754-2198.

COMMENT

Continued from *page 4*

market, previous nonusers begin using ATMs and existing cardholders use their cards more.

In short, consumer awareness of increased access leads to even more ATM transactions, which can translate into more profits for participating financial institutions.

Currently, 80% of Cirrus issuers charge for Cirrus activity; with increased transaction activity, these members will earn additional fee income. Duality also makes ATM banking more convenient, so cardholders will increase their overall reliance on ATMs for their basic banking needs. Institutions that charge cardholders for transactions, therefore, earn greater transaction income.

Acquirers Get Two Card Bases

For acquiring institutions, duality means accepting transactions from two enormous card bases instead of just one. By acquiring transactions for Cirrus/MasterCard's 275 million cards and Plus' 150 million cards, acquirers will see more transactions coming through their existing ATMs.

Obviously, because twice as many cardholders can use an acquirer's ATM, significantly more opportunities exist for that ATM to be used. Each time a cardholder uses a "foreign" ATM (one not owned by his bank), the ATM owner receives an interchange fee.

Since duality opens a bank's ATMs to millions of additional cardholders, it creates the opportunity for significant new interchange income. And by driving more transactions through existing ATMs, the per-transaction cost of operating the ATM program decreases.

A Winning Strategy

What duality amounts to, then, is an excellent business strategy for financial institutions and networks. Duality allows the national ATM networks to better serve their members by providing opportunities to increase ATM-related income and to enhance cardholder services. Duality enables regional networks to provide a new service to their members: a gateway to the nationals.

Duality changes the ATM environment for all financial institutions. Those that do not provide access to a broad array of ATMs nationwide will not be able to offer their customers the level of service they expect, nor will they be able to capitalize on duality's income-making opportunities. Thus, such institutions face significant competitive disadvantages.

. For institutions that are ready to capitalize on the strategic benefits of duality between Cirrus and Plus, implementation is relatively painless. Certain operational procedures have been standardized to simplify members' participation. The two networks are also developing a gateway as one means of facilitating switching between networks.

However, this gateway is not the only mechanism for switching; institutions will be able to develop direct links to the Cirrus and Plus switches or use third-party services – whatever option is best for their business. □

Thornburgh Attacks Plan to Change Bar's Ethics Rules

By GEOFFREY A. CAMPBELL
The Bond Buyer

CHICAGO — U.S. Attorney General Richard Thornburgh has warned that savings and loan criminals might receive a "get out of jail free" card if defense lawyers succeed in their efforts to change the American Bar Association's rules of professional conduct.

"The defense bar, with ABA sponsorship, is attempting to use rules of professional conduct to stymie criminal investigations and prosecutions," Mr. Thornburgh said.

He added that the proposed changes "could adversely impact upon the prosecution of drug traffickers, organized crime, and white-collar criminals."

Mr. Thornburgh made his remarks at a news conference following a speech he gave to the American Bar Association convention.

Limitation Sought

He took particular aim at a proposal by the bar group's criminal justice section that would restrict the government's ability to seize a lawyer's fees when the money was obtained through criminal activity. Currently, prosecutors can seize a lawyer's fees unless the lawyer can demonstrate that he was unaware the money was illegally acquired.

If the ABA proposal is adopted, it would be considered unethical for the government to take such a step.

In addition, Mr. Thornburgh said, a newly enacted bar association rule – which makes it unethical to subpoena lawyers without first getting judicial approval to question them about criminal defendants they are representing – also will hamper efforts to incarcerate white-collar criminals.

Contacts Would Be Curbed

Mr. Thornburgh attacked another proposal that would expand the ethics rule by prohibiting prosecutors from directly contacting people who are represented by a lawyer.

Mr. Thornburgh last year issued a memorandum stating that the rule against contacting represented parties does not prohibit law enforcement officials from contacting targets of criminal investigations.

That memorandum was strongly rebuked by members of the bar group's governing House of Delegates at its February meeting in Los Angeles.

The time has come for the top management of the bank, the CEO, to get involved in automation. Top management must face this fact and cannot wish that responsibility onto others.

Automation is no longer the intrigue and complexity that it has been for 30 years, and top management must realize that fact. The automation directions, strategies, and decisions must come from bankers, not data processing people. For those CEOs who realize this, the bank can move ahead now. If they won't take the responsibility, then the bank will have to wait until the CEO is willing to become involved.

Automation is no longer decisions in hardware and software, but decisions in the art and science of banking.

Connecticut Bancorp Board Picks Woelflein

Kevin G. Woelflein, president of U.S. Capital Investments Co., a Greenwich, Conn. bank advisory firm, has been elected chairman of the board of Connecticut Bancorp Inc. and Norwalk Bank, Norwalk, Conn.

He succeeds **Frank J. Cooke,** who is retiring as chairman but will continue as a director of the holding company and the bank.

Mr. Woelflein's association with the company began in 1988, when he was retained in an advisory capacity to plan and execute a $2 million public rights offering of the company's common stock and warrants. The offering was successfully completed in June 1989. Since that time he has continued to assist the company on issues related to its capital planning and investment community relations.

Mr. Woelflein is an experienced commercial banker, having spent many years with First National Bank of Chicago as a lending officer and having been founding vice president and general manager of its Tokyo branch and founding president of its subsidiary UBAF Bank in New York. He was also president of American Security Bank, Washington, D.C.

MIDWEST

Commerce Bank of Kansas City said **Cleo G. Simmonds** and **Craig W. Huntley** have become vice presidents in the bank's investment management and trust services division. Mr. Simmonds currently manages the activities of the bank's personal trust portfolio managers. Mr. Huntley is manager of corporate trust marketing for the division.

MIDDLE ATLANTIC

Gavin Anderson Doremus & Co., New York, has named **Catherine Cummings** and **Kim Freeman** senior vice presidents.

Both are group directors. Ms. Cummings directs business-to-business marketing, and Ms. Freeman directs marketing communications at the firm.

American Express Bank Ltd., New York, has named **Suzan T. Picariello** senior vice president and region head, consumer financial services group, for its Latin American and Caribbean region.

As head of the Latin American unit she will oversee all consumer financial service businesses, which offer lending, deposit-taking, and insurance products to consumers and small businesses.

Ms. Picariello previously was assistant general counsel for American Express Travel Related Services Co.

Bryn Mawr Bank Corp., Bryn Mawr, Pa., has named **Thomas M. Petro** president of its newly formed subsidiary, Profit Research Consulting Inc.

The subsidiary specializes in the development and implementation of cost accounting and profitability measurement systems for financial institutions, with the goal of assisting client institutions in focusing on their individual marketplace.

Mr. Petro was formerly manager of the financial services division of Management Science Associates Inc., an international marketing research and software development firm.

Sandler O'Neill & Partners, New York, has hired **Mark Gabriel** as an associate director. He will market fixed-income products to insurance companies.

Mr. Gabriel previously served as first vice president with Prudential Bache Securities.

North Fork Bancorp Inc., Greenport, N.Y., has appointed **Christine L. Kurman** vice president and director of training. **Mary Lou Arsane** has been appointed assistant vice president of marketing.

Ensign Bank, New York, has named **Robin Wachenfeld** first vice president/senior lending officer.

Ms. Wachenfeld will have overall responsibility for all lending departments, which include commercial real estate, commercial banking, and finance and consumer lending.

In conjunction with **Alan E. Master,** president and chief executive officer, she will direct all related policies and practices, which in turn set the loan objectives of the company.

Previously, she was first vice president in charge of credit policy and asset quality control.

Appointed also were **Dubravka Bijon** as vice president and director of marketing; **Maria Castellano** as assistant vice president, human resources; **Michael Cocchiola** as assistant vice president, loan servicing, and **Maryann Maisano** as assistant vice president, consumer banking operations.

IBJ Schroder Bank & Trust Co., New York, announced that **James P. Casey,** trust division, **Mark H. Manski,** credit division, and **Ronald M. Winters** of corporate banking have been appointed senior vice presidents.

Nancy R. Besse of trust, **Maria A. Brown** of human resources, **Ronald C. Dinehart** of auditing, **Marianne J. Grasing** of private banking, and **W. Bradford Hatry** of banking services have been named vice presidents.

New assistant vice presidents are **Raymond J. Liszewski, Frederick C. Reynolds, Camilla M. Sammartino,** and **Deborah D. Tangen.**

IBJ Schroder Leasing Co. has appointed **Lisa M. Renshaw** a senior president and **Michael D. Ogus** an assistant vice president.

European American Bank, New York, has named **Patrick B. Dennehy** senior vice president, transaction processing, in the bank's operations and systems department, and **Stephen C. Winspeare** senior vice president, asset recovery, in the project finance department.

A weekly feature

Switzerland's Union Bank Exporting Trust System to U.S.

By RICHARD LAYNE

Union Bank of Switzerland, one of the largest banks in the world, is making inroads in the private trust market in the United States.

In the past year, the Swiss bank has opened marketing offices for private banking and trust services in Los Angeles and San Francisco to exploit the affluent California market, moving in alongside newcomers such as Bankers Trust New York Corp., Northern Trust Corp., Boston Safe Deposit and Trust Co., and Citicorp.

Its private bankers will be in Houston by yearend and will move into Chicago afterward.

Measuring Gains Is Key

The keystone of the bank's marketing plan is a sophisticated back-office system to measure the performance of its customer's investment portfolios.

The multicurrency accounting portion was installed earlier this year, and the final element is expected to be in place by yearend.

The back-office system is considered more complex and more advanced than any other available to private customers. Only a handful of banks offers similar monitoring of globally invested portfolios and then only to large institutional and corporate trust clients.

The system is necessary to help keep track of the rather high percentage of foreign securities in the portfolios of its wealthy clients. Keeping with its global nature, Union Bank seeks customers with at least $50 million in assets and an international bent.

Measurement Is Vital

"It is the only way to measure the portfolio performance without cheating the client," said Hanspeter Lochmeier, Union Bank senior vice president, of the multicurrency tracking system.

The bank has attracted $1.2 billion in assets under management, making it a medium-size private trust provider. Mr. Lochmeier, who is overseeing personal trust activities in the United States, predicts 25% to 30% growth a year. "This is one of our fastest-growing markets," he said.

For a bank with its headquarters in the European crossroads of Zurich – where ATMs can dole out funds in five currencies – an emphasis on global investment is to be expected.

High Starting Point

U.S. customers wishing to diversify their portfolios internationally must be willing to commit $5 million to foreign-issued securities. That percentage of foreign investment is high for private trusts and comparable to the investment position of the biggest pension funds and mutual funds.

Mr. Lochmeier predicted that foreign investment, which now represents 10% of a client's portfolio, will account for 15% to 20% of portfolios in four years.

The bank is looking beyond the East Coast to areas where it sees prospects for outsiders.

Good Area for Trust

The West Coast is one fertile area for national providers of trust services. According to the California State Banking Department, total trust assets under management at yearend were $493.1 billion, up from about $350 billion a year earlier.

The Midwest, where Union Bank plans to open a Chicago office, has only one strong bank in private banking, Mr. Lochmeier said.

Peggy Turbett

MEASURING PERFORMANCE: Hanspeter Lochmeier of Union Bank says its software gives clients a superior reading.

Bankers say that Europeans are willing to place faith in their bankers, but U.S. investors want to see records of everything. That cultural difference means that U.S. investors with global portfolios need sophisticated record keeping and performance information.

Union Bank already had a multicurrency reporting system for its Swiss clients. But different regulatory and tax requirements made it impossible to boom created fortunes a decade ago, Union Bank sees an opening. Wealthy individuals may seek to switch their trust accounts to a bank with the best possible ratings from Moody's Investors Service and Standard & Poor's Corp., Mr. Lochmeier said.

"This is one of our advantages," he said of the downgrades experienced by many U.S. banks this year.

simply install that system in the United States.

Two years ago, the bank installed a trust accounting system, using software form Financial Technologies Inc., in its home office.

Project Begun in 1989

In 1989, Union Bank and Financial Technologies began modifying that system, developing software for multicurrency accounting and securities clearance. This year, that system began operation, serving both U.S. clients and foreign clients who use the New York office for service.

Now the bank is completing the final step, adding to the multicurrency system the ability to measure the performance of portfolios with domestic and foreign assets.

"I am not aware of anybody else who could make a similar claim," said Thomas R. Abraham, a trust systems specialist with Andersen Consulting in New York. "Other systems are put together with bubble gum and baling wire – they can deliver multicurrency performance but only after a great deal of manual effort."

Improvement in Reporting

Union Bank's previous system reported all transactions as if they were in dollars, even if they were not. A transaction of 8,000 marks came out simply as 8,000. With the new system, Union will be able to tell its clients the value of their portfolio in U.S. dollars.

The system factors in two critical elements.

First is the security's performance – did it go up or down? Second is the fluctuation of the currency in which the security was purchased against the U.S. dollar. □

STRATEGIES

High Cost of Technology Is Raising Questions for Global Private Banking

By RICHARD LAYNE

As private trust banking spreads across national borders, so does the technological support.

Several foreign institutions, including Union Bank of Switzerland, are delving into the U.S. market for private banking. Among U.S. banks, Citicorp is openly pursuing a strategy of offering private banking and trust services around the world.

But Thomas R. Abraham, a trust specialist with Andersen Consulting in New York, contends that "no one has a network that is sufficient to support private trust operations around the world."

A truly international service, he says, must be able to provide information for any customer, anywhere.

Citicorp aims to supply that information to U.S. private banking clients when they travel abroad. That requires international communications networks tied to customer information files and transactions processing systems.

The catch? Private trust services are geared to a small subset of each country's population. Even with international horizons, few people have $50 million in assets – the minimum that Union Bank seeks.

Mr. Abraham questions how much a bank can invest in technology to support so small a market.

Private trust areas may look instead to share support systems with other areas. But the concept has at least one potential drawback: Wealthy individuals may be treated like a small company buying an expensive service. □

ISSUES: *debit cards*

Store Use of Debit Cards Seen About to Soar

By JEANNE IIDA

Fueled by industry alliances, the use of debit card terminals in supermarkets and other retail stores is poised to take off, according to a study by Frost & Sullivan Ltd., a New York-based research company.

The report projects that the U.S. market for debit-card terminals will grow to $81 million in 1994 from $31.6 million in 1989.

The volume of point-of-sale debit card transactions – while small – is growing faster than other forms of debit card use, including ATM transactions.

Transactions on the Rise

The total monthly volume of debit card transactions in supermarkets – where the majority of transactions take place – doubled from 1987 to 1988, according to the Electronic Funds Transfer Association. Such transactions amounted to nearly 5,000 a month in 1988, against 2,500 a month in 1987, the group said.

Alliances such as one formed this summer between the Most network, an ATM network owned by Internet Inc., and Deluxe Data Systems, are crucial to future growth, according to the Frost & Sullivan report. The two companies are looking for supermarkets in the Middle Atlantic states to join in a test of debit card services.

Such alliances may help to reduce problems over fee structures that have hobbled some efforts. In the past, the major parties to a debit card network – banks, value-added networks, and vendors – have been unable to agree on how fees should be allocated.

The major markets will continue to be supermarkets, gas stations, and convenience stores.

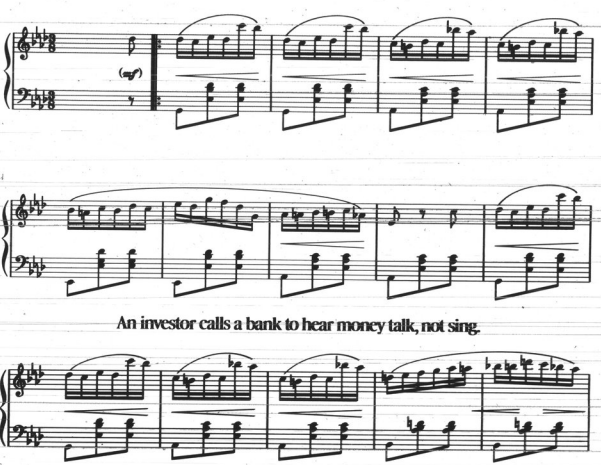
About 30 vendors are sellers of EFT/POS terminals, from computer makers such as International Business Machines Corp. and NCR Corp., to specialized companies such as Verifone.

Most terminals can handle credit card transactions as well as debits. Buyers should ensure that the terminals are compatible with any existing computer systems that track customers and inventory.

Cost of Compatibility

That compatibility does result in higher cost. The price of a single terminal can range from several hundred dollars to several thousand dollars, depending on the degree to which it is integrated with other computer systems.

Retired people often do not use ATMs because they consider a visit to their bank branch to be a social call, the report found, but they do use POS terminals in supermarkets □



Being put on hold for three minutes of Chopin's Waltz in A♭ is enough to make anyone see red. And a bank can't afford to make its customers angry.

That's why Norstar Bank, N.A. invested in the new AT&T DEFINITY® Communications System. Now, by handling calls efficiently, they save time and frustration for their customers. And because the system helps them maximize their ETN network, the bank has also saved $300,000 this year alone. Not only is the system's modular architecture technically advanced to speed traffic handling, but it can grow with every advance. Plus, as a member of the System 75/85 Users Group, Norstar can share knowledge with other users that will not only enhance their voice network and simplify features, but also give them input into AT&T product development for the future. That makes the AT&T DEFINITY System worth banking on. And does wonders for their customers' listening pleasure. For details, call your AT&T Account Executive or 1 800 247-1212, Ext. 361. In Canada, call 1 800 387-6100.

Barclays, Midland to Sell Consumer Financing Units

By JOHN EVANS

LONDON — Barclays PLC and Midland Bank PLC are divesting part of their consumer finance operations and analysts say the disposals would give foreign banks the opportunity to build their business presences in Britain.

The disposals could potentially raise as much as $1.3 billion for their owners, which are struggling with a big jump in domestic loan losses in the weakening British economy.

The major sale is planned by Midland, which has put its Forward Trust Group on the auction block to raise capital. Estimates of the price tag for the unit, the third-largest British asset-based finance house range between $750 million and $925 million. Forward Trust has assets of $7.75 billion and net assets of $560 million. The unit does corporate leasing and factoring as well as installment finance and auto loans.

Barclays, meantime, said it was actively considering offers for Mercantile Credit, the consumer finance part of its Mercantile Finance Group. This operation, which could be worth about $375 million, has net assets of $275 million.

Competition in Retail Finance

The parent bank and Mercantile Credit increasingly compete in the British retail finance marketplace, a Barclays official explained. The sale is part of the bank's long-term strategy of reviewing noncore activities, he added.

Midland said Forward Trust does not represent a core activity and the sale will strengthen its capital position.

Like other big British banks, Midland has announced that earnings have been cut by a sharp rise in bad debts at home.

Midland's first-half 1990 pretax earnings totaled $66.5 million, well below analysts' expectations. Barclays earnings were virtually static in the half at $1.1 billion.

According to Peter Toeman, analyst at brokerage firm UBS Phillips & Drew, the two businesses represent "attractive franchises" for foreign banks seeking to build in Britain, particularly those from the Continent eying broader operations across the community.

... by country

JAPAN

The Export-Import Bank of Japan said Monday that it had agreed to make an untied $200 million loan to Hungary's central bank, the National Bank of Hungary.

The loan, running for about 15 years, will be a cofinancing with a World Bank Structural Adjustment Loan. Interest rates will be based on Japan's long-term prime rate of 7.9%, an Ex-Im Bank spokesman said.

It follows a pledge by Prime Minister Toshiki Kaifu made during a visit to Europe in January to give financial support to Hungary and Poland, together with the World Bank, totaling $1.95 billion, the Ex-Im Bank said.

The World Bank will provide $950 million and Japan $1 billion. The loan will be used for imports but will not be restricted to imports from Japan.

WEST GERMANY

West German banks will put their investors and shareholders first when it comes to large scale investment in East Germany, disappointing people who had hoped for huge private-sector funding for the east.

West German banks say they have already been active in East Germany, opening branches, offering loans, and taking on staff.

"Conditions in East Germany are very difficult," said Manfred Walther, a member of the Dresdner Bank board. "But despite that, banks are ready to extend credits to companies."

The banks stress that they must take account of the interests of their shareholders and investors when offering East German loans. They say they face legal restrictions when offering unsecured credits.

Many troubled East German companies are desperate for funds to pay wages and meet delivery costs. They and some West German officials say the West German banks have been too cautious with their funds.

SOVIET UNION

The Soviet Union could get credits of up to $12 billion over three years to help its economic reforms if it joins the International Monetary Fund, a Soviet banking official said in a Moscow newspaper Sunday.

Viktor Rakov, chief currency expert at the central state bank Gosbank, told Izvestia that IMF membership could also bring discipline to the economy as it switched to a market system.

Mr. Rakov, who took part in talks with IMF head Michel Camdessus last week, said Moscow would probably have to transfer about $1.1 billion to the IMF if it joined.

"Contrary to false statements, however, the U.S.S.R.'s entry into the IMF would not automatically mean a net outlay of foreign currency," he said.

Our payments "would in principle give us the right over the course of three years to receive various credits worth $10 to $12 billion," Mr. Rakov said.

The by country briefs were supplied by Reuters.

U.K. Freeze Stymies U.S. Branches

By JOHN EVANS

LONDON — Branches of U.S. banks in the United Kingdom are caught in the middle of conflicting instructions on the Kuwaiti asset freeze from the U.S. Treasury and the Bank of England.

The Bank of England, releasing detailed instructions here Tuesday on how the freeze will operate, made it clear that U.S. and other foreign banks with London branches will have to comply fully with the new British financial restrictions.

Under the U.S.'s own freeze, however, American banks must apply the specific regulations issued by the U.S. Treasury to their branches worldwide, including their London units.

Britain departs from the United States in the way it has frozen the assets of the two Arab nations. Under the United Kingdom's measures, all "residents" in those nations, including banks and corporate entities, are affected.

Clarification Due

In the case of Kuwait, the United States restricts the freeze to the Kuwait government and its agencies, although the Treasury is expected shortly to clarify its orders.

The Bank of England's new instructions are considered as a set of pathfinder measures for much of the international banking community, reflecting London's key role as worldwide banking center, with more than 500 foreign banks and securities houses represented.

A senior Bank of England official confirmed that any foreign banks operating in the United Kingdom are "subject to our regulations." In the case of American banks, he acknowledged that, under Washington's regulations, "the branches of U.S. banks overseas are, in U.S. eyes, subject to U.S. law."

Consultations Possible

This will "raise complications" in operating the freeze and consultations are being considered to clarify the position, the official said.

Unlike the U.S., Britain is not seeking "extraterritoriality" for its freeze and is "explicitly excluding the overseas branches of U.K. banks" from the measure although these would not be used as a "pass-through" to evade the regulations, he added.

Because of the urgency in responding to the decision of Western governments to operate a freeze, protecting investments held by Kuwaitis from Iraqi seizure, there has been no time for detailed international coordination on the freeze, the British central bank official noted.

Position Upheld

The British position on international banking law was in effect upheld last year when the High Courts in London ruled that Bankers Trust New York Corp. should pay over sums owed to the Libyan Arab Foreign Bank, which had been frozen under U.S. sanctions against Col. Khaddafi regime in 1988.

Under the new British regulations, meantime, a branch of any business in Kuwait or Iraq will be treated as if it were a corporate body resident in those countries.

This means that major Kuwaiti enterprises operating in Britain, such as the National Bank of Kuwait, the Kuwait Investment Office and Kuwait Petroleum Corp. have been declared as Kuwaiti residents, subject to the freeze.

National Bank of Kuwait, which has offices in New York and London, was among the banks listed by the U.S. Treasury Department as not subject to the freeze.

However, consultations will take place with these companies to allow them to conduct as much commercial business as possible, as long as the funds involved remain within Britain, the Bank of England announced.

Bank deposits and gold accounts of Kuwait and Iraqi residents held in Britain should now be designated as accounts of those two countries and frozen.

Oil Price Rise a Help in Easing LDC Debt

Continued from *page 1*

term debts since March 1989. The country is the largest sovereign borrower from U.S. banks.

U.S. regulators ordered U.S. banks last month to write down 20% of their loans to Brazil because of poor prospects for repayment.

Among U.S. banks, Citicorp has the highest exposure and lowest reserves against Brazilian loans. At yearend, Brazil owed Citicorp $3.9 billion; Bank-America Corp., $2.65 billion; Chase Manhattan Corp., $2.3 billion; Manufacturers Hanover Corp., $2 billion; and Chemical Banking Corp., $1.5 billion.

"The overall picture [of the Kuwait crisis] remains mixed. Mexico and Venezuela will be beneficiaries, but it could aggravate the already worrisome conditions for Brazil," said James McDermott, executive vice president at Keefe, Bruyette & Woods Inc. in New York.

A silver lining in the cloud hanging over debtor countries that do not produce oil is the general rise in prices for commodities such as metals and agricultural products on which many developing countries depend. Prices of such commodities rose sharply after the oil crises of 1973 and 1979 and have already begun moving upward again, bankers said.

Bankers added interest rates would also play a key role in determining the future debt burdens of Third World countries but declined to make any forecast.

"I think [Federal Reserve Board Governor Allan] Greenspan is caught between a rock and a hard place. Obviously, what's happening is inflationary if he lets interest rates stay in place. But if he raises them, he'll bring us into a recession," said one banker.

The ongoing uncertainty over the impact of the oil-price rise on debtor countries was reflected in trading in Third World debt on the secondary market, where little trading occurred Tuesday.

Mexico and Venezuela each export about 1.5 million barrels of oil a day. For every $1 rise in the price of oil, economists have calculated, Mexico and Venezuela gain $500 million in additional annual revenues.

Based on the latest rise in prices to $27 a barrel from $21 last week, that means that each country will gain $3 billion in extra revenues if the price rise holds. □

Comptroller Stirs Debate on Mutual Fund Role for Banks

Continued from *page 1*

that Mr. Smith characterized as uncontroversial.

The proposal would eliminate two "10% rules." They govern the amount of a fund that can be invested in a single issue and the portion of a fund that can be owned by a single investor. The OCC has also proposed eliminating a requirement that a bank's board of directors be required to pass on every change in the fund's rules.

The most controversial aspect of the Comptroller's proposal is the recommendation that the agency relax restrictions on the advertising and pricing of bank collective investment funds.

Tailored for the Wealthy

Trust banks' collective investment funds resemble mutual funds. However, the rules governing the way they are structured, priced, and marketed effectively limit their availability to the wealthy.

The Comptroller seeks to permit banks to advertise performance of their funds, much as the mutual fund industry does now.

Trust banks' collective investment funds resemble mutual funds.

It would also permit banks to charge management fees for running the funds. Banks are now permitted to levy a general charge on a trust relationship, but not specific fees for investment management.

James D. McLaughlin, the American Bankers Association's chief agency lobbyist, said the proposal's reach is modest and is not "a back door to mutual funds."

Essentially, he said, banks would be able to advertise the funds "within the context of offering fiduciary services."

The Investment Company Institute and other critics contend that once banks begin advertising their funds, the "one-paragraph trust" – a fiduciary arrangement that could be implemented with a brief form-letter agreement – will emerge.

Mr. Smith said the one-paragraph trust is a bit far-fetched, but a sturdy, two-page mini-trust might develop. Even so, Mr. Smith believes it is unlikely that banks would offer such trusts except as part of a broader fiduciary relationship.

He said the minitrust rule, which developed when he was at the OCC, has been used by only a handful of banks.

"We asked why that was so, and they told us the cost of administration was high," said Mr. Smith, who is now with the Washington firm of Stroock & Stroock & Lavan. Even though the minitrusts were intended to be executed on standard forms, they ended up "invariably involving lawyers, and lawyers don't like standardized agreements."

The Investment Company Institute has also argued that a significant question of competitive equity is involved. Securities and Exchange Commission Chairman Richard Breeden recently said banks that take advantage of the proposed advertising rules would be required to register their collective investment funds with the SEC.

But that means banks would be bound by only two of the four laws that govern mutual funds, said Matthew Fink, the ICI's general counsel. They would not be required to register under either the Investment Company Act or the Investment Advisory Act, he said.

The Comptroller seeks to permit banks to advertise performance of their funds, much as the mutual fund industry does now.

A One-Way Street

Moreover, while banks would be permitted to move into the mutual fund business, the link between the two industries would be one-way only. Mutual funds still would not be permitted to take insured deposits, he noted.

The ICI also believes the Comptroller's proposal lacks appropriate firewalls, or safeguards, to insulate affiliated banks from investment losses.

"If they get into this, they should do it through a separate affiliate," Mr. Fink said. "The Comptroller would let them do it through the bank.

In the end, the OCC rules may help the mutual fund industry, argues A. Michael Lipper, president of Lipper Analytical Services Inc., New York.

"What the banks are going to do is legitimize mutual funds" in the eyes of consumers who might now not be willing to trust their nest eggs to a Dreyfus or a Fidelity Group. Eventually, he said, "banks will lose part of their business" to the mutual fund companies. □

Who's the second largest branch automation company in the U.S.?

Carolina 1st Bancshares In Pact for Savings Bank

CHARLOTTE, N.C. — Carolina First Bancshares Inc., Lincolnton, N.C., said it has signed a letter of intent to acquire Cabarrus Savings Bank Inc., Concord, N.C., pending a definitive agreement and shareholder and regulatory approvals.

"This is a logical extension of our efforts to serve the northern suburbs of the greater Charlotte market," said Mark Boyd, chairman of Carolina First, a $135 million-asset commercial bank holding company. The addition of Cabarrus would expand its assets to $235 million. □

Now, the BANCPEN Branch Data is as close as the keyboard of your Personal Computer

The BANCPEN Branch Data is now available in a ready-to-use format for use with the IBM Personal Computer or any other IBM compatible machine with a minimum of two disk drives and 256K RAM.

The latest data on all bank and savings institution branches and credit unions is built into our special program to make your PC your fastest, most complete market information source available. Data for the last five reporting years is given for each branch location, including dollar volumes for total deposits and all other deposit categories reported.

Bancpen provides the data by state in a ready-to-use format. The Bancpen program will give you the market share data you want by city, county, zip code, or let you create your own market down to census tract or trade area. It also calculates growth rates for each individual branch over the last five years. Plus, a special projection feature weights this past performance information so you can forecast deposit and market share data for the next five years.

Put the Bancpen Reports on your PC. Use it whenever—and as often—and as long as you need to. It costs less than on-line systems, is more convenient, and no programming time is involved.

For more information call or write:

Woman, Minority Urged for Fed Slot

Reuters

WASHINGTON — Rep. Henry Gonzalez, chairman of the House Banking Committee, has called on President Bush to nominate a woman or member of a minority group to replace Manuel Johnson on the Federal Reserve Board.

"With rare exceptions through the years, the Federal Reserve Board has been dominated by white males," said Rep. Gonzalez, D-Tex. "It is time for the Federal Reserve to join the 20th century."

Two blacks and two women, including current member Martha Seger, have served on the board since it was created in 1913, the congressman said in a prepared statement. Mr. Johnson stepped down as Fed vice chairman effective Monday. □

Court Rebuffs Stahl In Apple Bancorp Bid

Reuters

NEW YORK — Apple Bancorp said the Delaware Chancery Court denied Stanley Stahl's motion seeking to force Apple to hold its 1990 annual meeting by Sept. 14.

Mr. Stahl, a New York real estate investor, has been maneuvering for some time to gain control of the banking company, parent of the $3.8 billion-asset Apple Bank for Savings.

In the course of a hearing, the Delaware court said the annual meeting should be held no later than Oct. 1, and it said Mr. Stahl could not bring a claim under Section 211 of the Delaware General Corporation law to compel the holding of an annual meeting before Sept. 15. □

Security Pacific Unit Plans to Aid Red Cross

SEATTLE — Security Pacific Bancorp. Northwest said its international division will cash unused foreign currencies at the Seattle-Tacoma International Airport and donate the proceeds to the American Red Cross.

In a program similar to those operating in other international gateway cities, travelers will be invited to deposit spare currency in Red Cross "Global Change" containers at the Seattle airport and in several branches of the Security Pacific Corp. subsidiary.

The bank will take the small amounts of currency, which are not readily converted by individual travelers, and trade them for dollars for Red Cross disaster relief programs. □

Fed Loss in MCorp Case Casts Regulatory Pall

Continued from page 2

federal cases, to allow the case to go to the high court. Nor is it clear that the Supreme Court would agree to hear the case on its merits

Besides seeking a Supreme Court review, the Fed has several alternative courses of action.

Mr. Whiting pointed out that in rejecting the Fed holding-company doctrine, the appeals court did allow some "wiggle room" to continue to exert a similar authority. A footnote in the decision said the Fed may make approvals of applications conditional on a holding company's agreeing to maintain its subsidiary banks in "some degree of financial soundness."

"If the holding company can't strengthen the bank, the Fed can limit the ability of the bank to strengthen the holding company."

H. Rodgin Cohen
Sullivan & Cromwell

The Fed may also seek recourse in Congress. Howard N. Cayne, a partner of Arnold & Porter, the firm that represents MCorp, said Congress made clear in passing its thrift bailout legislation that it did not intend to give the Fed the authority it claims in the source-of-strength doctrine. But the Fed could try to persuade Congress to change its view, he said.

Some progress in that direction has already been made in a provision of the crime bill now being considered by House subcommittees. That provision would require bank and thrift holding companies to meet the capital needs of affiliates even if they attempted to use bankruptcy procedures as a defense against regulators.

If the Fed gives up its doctrine, it still has means of trying to ensure the soundness of the bank subsidiaries of bank holding companies, observers said.

The Fed could become more restrictive in permitting acquisitions of nonbank subsidiaries, investments in nonbank subsidiaries, and payouts of dividends to the holding company by subsidiaries, said Mr. Cohen.

"If the holding company can't strengthen the bank, the Fed can limit the ability of the bank to strengthen the holding company," said Mr. Cohen. But that could add to the troubles of an already beleaguered industry, he added. □

Bankers Seem Skittish on Buyout As Aug. 9 Deadline Nears on UAL
By WILLIAM GOODWIN
Citicorp and Chase Manhattan Corp. representatives stayed away last week from a meeting on possible bank financing for the union-led buyout of UAL Corp., raising speculation that the two banks have joined Chemical Banking Corp. in balking at the $4.38 billion deal.
Sources said Citicorp has in fact withdrawn from the bank group – at least for the time being – though it was not immediately clear why. A Citicorp spokeswoman declined to comment.
These rumblings come at a time when a spokesman for the union group said it is close to finding an outside investor, which could draw skittish banks back into the deal.
Equity Is Sticking Point
Chemical told the other banks on Friday that it was pulling out because the union group had failed to attract an outside equity investor, a source said. For that reason, Chemical did not attend the Friday meeting of bankers.
Citicorp and Chase Manhattan Corp. also canceled out of the meeting, leaving only Bankers Trust New York Corp. and Manufacturers Hanover Corp.

Some Sectors of Oil Industry May Become Eager Borrowers

Continued from *page 1*

nation into a full-fledged recession.

"Clearly, an economy that is growing at a rate of 1% to 1½% is not going to produce boom times for loan demand," said Keith Johnson, codirector of economic research at Morgan Guaranty Trust Co., banking subsidiary of J.P. Morgan & Co.

Impact Hard to Gauge

"To the extent that [the Iraq invasion] has an effect, it will of course make things worse, but it is too early to tell how big the effect is going to be," Mr. Johnson said. "If oil prices reach $50 [a barrel], it would cause recessions all over the place."

"You've got an inflationary prospect looking strong, and at the same time, short-term rates are down," said Roger Widmann, head of corporate finance at the flagship bank subsidiary of Chemical Banking Corp. "We may be getting into a position of short-term stasis."

"Inflation actually helps the [leveraged buyout] business, because you're paying back borrowed money with cheap money."
Dominick Balone
Manufacturers Hanover Corp.

Some dealmakers were more optimistic; they pointed to the positive impact of inflationary pressures.

Help for Big Debtors

"Inflation actually helps the [leveraged buyout] business because you're paying back borrowed money with cheap money," said Dominick Balone, a managing director in the acquisition finance unit of Manufacturers Hanover Corp.'s banking subsidiary.

"Inflation can have a very positive effective for some banking sectors as borrowers finance acquisitions. But on the recession side, there is already substantial inventory built up at many manufacturers," said James W. Warren 3d, senior executive vice president at First Florida Banks and president-elect of Robert Morris Associates. "It's a mixed bag."

Few bankers or economists were willing to predict the political crisis' long-term effects on bank lending because of uncertainty about the situation and its ultimate effect on the price of oil.

'Modest Dampening'

"Iraq pushes the economy very close to recession, but I think the lending climate will be only marginally worse," said Mickey Levy, chief economist at First Fidelity Bancorp. "You might have a modest dampening impact in that people will expect the economy to be weaker, meaning there will be less demand for loans and banks will continue to be careful about who they lend to."

Even lenders to the oil sector were cautious about predicting the effects of the Iraqi invasion.

A political psychology affecting the market may make some oil producers eager to expand, said James Murray, a vice president in the petroleum and mining division at the lead banking subsidiary of First Chicago Corp. Banks will generally be eager to lend to oil companies, he said, though no real need exists for more production.

"There is surplus oil in the world today, and the production capacity can absorb [the boycott of] Kuwait and Iraq for some period of time."
James Murray
First Chicago Corp.

"There is surplus oil in the world today, and the production capacity can absorb Kuwait and Iraq for some period of time," Mr. Murray said. Lenders must guard against overoptimistic capital projections by borrowers, he added.

Bankers in the energy sector also will not shy from lending to refiners, who can quickly pass on their higher costs to consumers, Mr. Murray said. Refiners generally borrow short-term, for no longer than three months, and are now operating on strong margins.

On the other hand, few bankers are expected to answer phone calls from oil-sector service companies that lease drilling equipment to oil and gas exploration firms, Mr. Murray said. "They will probably beef up their borrowing through equity placements, not through banks," he said.

First Florida's Mr. Warren agreed that some banks will profit from a miniboom in the oil and gas industry. He also raised the possibility that the Mideast crisis could revive the defense industry, but he cautioned that many bankers retain fresh memories of getting burned on loans to the energy sector in the mid-1980s. They also are feeling pressure from regulators to monitor carefully their lending portfolios. □

COMMENT/MERGERS

Merger-Conversion a Profitable Way to Acquire Healthy Mutual Thrift

By JAMES MARKS
Publisher
SNL Securities

If you could buy a car, then take the cash you just paid, put it in the trunk, and drive away with both car and cash, you wouldn't think twice about doing it.

And if you can understand how attractive such a transaction would be, you can understand why a merger-conversion of a mutual thrift institution is the most attractive acquisition vehicle available for expansion-minded banks and thrifts.

What is a merger-conversion?

A Two-Step Deal

It involves a mutual thrift institution's converting to the stock form of ownership and simultaneously merging with an acquirer. These two steps are required because a mutual is – at least theoretically – owned by its depositors; management and directors are trustees for the owner-depositors.

Without the conversion, depositors' ownership is not expressed in any tangible form that can be exchanged or bought. So merger-conversion is the only means for a healthy mutual thrift to be acquired by or merged with another institution.

In practice, merger-conversions are most often accomplished by combining the two steps. The acquiring institution (instead of the acquired mutual) makes a stock offering under which the mutual's depositors and management can buy shares of the acquiring institution, usually at the current market price.

Merger-conversions are very attractive economically to acquirers, so much so that the only question is why more banks and thrifts aren't using this vehicle.

Acquirer Benefits 3 Ways

The benefits to an acquirer are clear.

- First, no cash outlay is required. The proceeds that would go to the sellers in a normal transaction are retained in the acquired thrift's or the acquiring company's capital account – you just put the money in the trunk and drive away!
- Second, the acquirer's capital base grows by the amount of capital possessed by the acquired thrift plus the proceeds of the stock offering.
- Third, because the stock offering is usually at the prevailing market price and the gross proceeds are usually about the same as the thrift's equity, the deal is almost always antidilutive to existing shareholders' equity.

And for managements bent on growth through acquisition; "antidilutive" is the magic word that generates immediate shareholder and director enthusiasm for a proposed acquisition.

BB&T's Expansion Vehicle

Some insights on merger-conversions come from John Davis, vice president in charge of financial planning and acquisitions at BB&T Financial Corp., a $4.8 billion-asset bank holding company based in Wilson, N.C. BB&T, primarily a small business and middle-market lender, is expanding into new markets in North Carolina through acquisition of healthy thrifts.

The benefits are less clear for the depositor-owners of acquired mutual institutions.

The company has announced five thrift acquisitions in the past year, two of which have been merger-conversions.

"When we first looked at merger-conversions, the economics behind the transaction appeared almost too good to be true," Mr. Davis said. "In the first year, our Gate City deal should provide 4% [per share] earnings appreciation. With Albemarle Savings & Loan, we are looking at 1% to 2% appreciation."

Mr. Davis also said BB&T has entered new markets by starting de novo banks and by acquiring banks and healthy stock thrifts. "Based on what we are projecting," he said, "the merger-conversions are the ones that are antidilutive. . . . It's very rare that you get the opportunity to make an acquisition like that."

Incentives for Managers

While acquirers like BB&T get immediate benefits in the form of greater earnings and book value per share, the benefits are less clear for the mutual institution's depositor-owners. They can buy stock but usually not at a discount, so they can claim no premium.

But since mutuals are controlled by management, the more relevant question is: What incentive does the manager of a healthy thrift have to give up control of his institution?

Last year's Financial Institutions Reform, Recovery, and Enforcement Act provided one incentive.

An undercapitalized mutual thrift, even with strong core earnings, has limited options for compliance with the new law's capital requirements. For example, conversion to stock ownership would be very difficult, given substantial will be the antidilutive effects.

Thrift Hasn't Its Tea Leaves Read

There is a limit, however. If the thrift were too large in comparison with the acquiring bank, the merged institution's shares would be seen as a thrift stock, not a bank stock, and would most likely trade at the lower price-to-book levels the market assigns to thrift stocks.

Similarly, the impact on the market value of the acquiring company would directly reflect its pricing multiples. The higher the price-to-book and price-to-earnings ratios at which the acquiror trades, the greater will be the market value benefit of a merger-conversion. ☐

COMMENT/MERGERS

Continued from page 26

on the market's current skepticism toward thrift stocks.

Earnings an Bargaining Chip

The same is true of any type of convertible debt offering.

So the thrift manager is left with the choice of selling his most profitable operations and downsizing to shrink into compliance or of searching out the most cooperative merger partner. If he does the latter, his choice value as evidenced by healthy core earnings can be used as a bargaining chip to negotiate some degree of independence, favorable compensation, or job guarantees.

For healthy, well-capitalized mutual thrifts, which have been the targets of most merger-conversions to date, the incentive comes from the ability to negotiate an acquisition with the most favorable merger partner.

Going public involves a raft of unknowns relating to stock price performance and corporate independence, whereas a merger-conversion offers the certainties of a partnership negotiated on favorable terms.

Realizing Conversion Discount

Both the acquiring shareholders and management of an acquired mutual would realize more immediate benefits in a merger-conversion that took greater advantage of the inherent conversion discount. Most such deals have involved a large bank's acquiring a much smaller thrift.

But if the acquiror were only slightly larger than the acquired mutual, shareholders and management would all maximize the combination's value.

Assume, for example, that Acquiring Bank has $200 million in assets, $15 million in equity, and 3 million shares outstanding trading at $5, or 100% of book value. It is contemplating a merger-conversion with Mutual Federal, a thrift with $100 million in assets and $7 million in equity. It issues 1.4 million shares at a price of $5 to the depositors and management of Mutual Federal.

A 'Model' Deal

On a pro forma basis, Acquiring Bank would then have $300 million in assets, $29 million in equity, and 4.4 million shares outstanding. The pro forma book value per share, then, would have increased from $5 to $6.59. If the shares continued to trade at book value, that would yield a 32% gain for Acquiring Bank's shareholders, 1.4 million of whom of Mutual Federal who bought stock in the offering and Mutual Federal managers who got stock options and restricted stock as part of their compensation package.

Assuming net income before the merger of $2 million at Acquiring Bank and $1 million at Mutual Federal and a pro forma net at the merged institution of $3.7 million, earnings per share would rise from 66 cents before the deal to 84 cents afterward.

As this example highlights, a merger-conversion's favorable impact on book value, market value, and earnings per share can be significant. Moreover, the larger the acquired thrift relative to the acquiror, the more

Executive Help Wanted

Be a major player in the age of information.

Instant access to information is the winning edge in today's business arena. To help companies compete in world markets, we operate international information networks that cover more than 85 countries and span the globe with a single keystroke.

We need professionals who can make the rules instead of following them in providing fresh solutions to today's technical problems — and tomorrow's. If you're comfortable with decision makers in the financial community, consider one of these excellent opportunities.

EASTERN REGION MANAGER, BANKING
New York, NY

We need a take-charge managerial professional who can maintain high level client relationships in key accounts while directing the overall sales and service efforts in the region. You'll be responsible for the development, implementation and management of the region's geographic analysis, sales plans, and account selling strategies. You'll need sound knowledge of the financial community with a proven track record (seven to ten years) of conceptual sales in the information services/software solutions industry. Superior interpersonal and sales development skills are essential.

NEW BUSINESS DEVELOPMENT MANAGER, BANKING
Atlanta, GA

If you can truly understand a business's needs and successfully outline a partnership between senior executives and GE Information Services, you're on target for this position. To manage our new business effort, you'll need extensive knowledge of banking/financial institutions in the Southeast and demonstrated ability in high technology conceptual sales. A minimum of five to seven years direct experience is required.

APPLICATIONS DEVELOPER
New York, NY

Business savvy and excellent communication skills are essential to provide pre- and post-technical sales support to clients. A B.S./B.A. as well as five plus years of banking applications development with IBM, MVS, COBOL, CICS, and FORTRAN are also required. Mainframe and PC development are preferable.

If your future is in information services, your company should be GE. Generous compensation and extensive benefits are just the beginning. Send your resume with salary requirements to: GE Information Services, Dept. RCAB-8/7, 401 North Washington Street, Rockville, MD 20850.

UAL Unions to Cite Mideast Crisis in Formal Request for More Time

By WILLIAM GOODWIN

Using the Middle East crisis as its main justification, the union group seeking to purchase UAL Corp. will ask the company's board for another 30 to 90 days to obtain financing, a banking source familiar with the situation said.

The spike in oil prices resulting from Iraq's invasion of Kuwait means higher jet fuel costs for airlines. In addition, the runup in oil prices has raised concerns that the U.S. economy will be hit with a double whammy of inflation and recession.

That's particularly bad news for companies in cyclical industries, such as airlines. UAL's stock was down $8.50 to $101.50 a share in vigorous late-afternoon trading on Tuesday.

Commitment Deadline Looms

The deadline for lining up financing commitments that is making $4.4 billion proposed buyout is Thursday.

A spokesman for the buyout group declined to comment on the expected extension request, except to say there will be "some kind of communication" with the board when it meets today.

To demonstrate that it is making progress in its financing efforts, the buyout group is also expected to point to the participation of Security Pacific Corp. in the lead-bank group.

The California bank holding company at first denied a report Tuesday in *The Wall Street Journal* that it had joined Bank-America, New York Corp. and Manufacturers Hanover Corp. in the lead-bank group.

Security Pacific officials later acknowledged through a spokeswoman that they have been in discussions with the buyout group and the two New York banks remaining in what was originally a group of five money-center banks.

"We are still talking with them," the Security Pacific spokeswoman said, declining to elaborate.

The earlier withdrawal of Citicorp, Chase Manhattan Corp., and Chemical Banking Corp. from the bank group appeared to all but doom the unions' financing efforts even before Iraq invaded Kuwait late last week.

Restructured Bid Ousted

Last week, a source close to the board said that the buyout group would need a "compelling" reason for an extension of more than just a day or so.

While the Mideast crisis may provide such a compelling reason, it was viewed by some bankers as the final nail in the coffin of the UAL buyout proposal, at least as it is currently formulated.

Rumors of a restructured buyout bid have been rampant.

Coniston Partners, meanwhile, has talked to the buyout group in recent weeks about its willingness to consider an ongoing equity participation in the parent of United Airlines, but no substantive negotiations have taken place. Coniston holds 11.8% of UAL. □

Series SM-2020-A Cusip No. 313586 R 43
Callable on or after August 10, 1995
Price 98.875%

The debentures of August 10, 1994 and the debentures of August 10, 2020 are redeemable on or after August 10, 1992 and August 10, 1995, respectively, in whole or in part, at the option of the Corporation, at the following redemption prices (plus accrued interest): The redemption price of the debentures of August 10, 1994 will be 100% of the principal amount redeemed plus accrued interest thereon to the date of redemption, and the redemption price of the debentures of August 10, 2020 initially will be 104% of the principal amount redeemed plus accrued interest on the principal amount redeemed. The redemption price of the debentures of August 10, 2020 will decrease annually on each August 10, commencing August 10, 1996 through August 10, 2005, to 100% of the principal amount redeemed. See the Corporation's information statement dated August 6, 1990 relating to those debentures. The amount payable for any redemptions on or after August 10, 2015 and at maturity will be equal to 100% of the then outstanding principal balance, plus accrued interest.

The debentures are the obligations of the Federal National Mortgage Association, a corporation organized and existing under the laws of the United States, and are issued under the authority contained in Section 304(b) of the Federal National Mortgage Association Charter Act (12 U.S.C. 1716 et seq.).

The debentures, together with any interest thereon, are not guaranteed by the United States and do not constitute a debt or obligation of the United States or of any agency or instrumentality thereof other than Fannie Mae.

This offering is made by the Federal National Mortgage Association through its Senior Vice President-Finance and Treasurer with the assistance of a nationwide Selling Group of recognized dealers in securities.
Copies of the Prospectus may be obtained in those States in which they may lawfully offer these debentures.
There will be no definitive securities obtained.

Hanover Seen Getting Piece of Pie In Privatization of U.K. Utilities

By JOHN EVANS

LONDON — Manufacturers Hanover Trust Co. has plunged itself into a high-powered scramble for loan business in Britain, according to reports here.

The banking unit of Manufacturers Hanover Corp. is being included in the syndicate-style dollar financings that the electricity agencies are arranging as part of their privatizations, the sources said.

Hanover has already won two mandates to arrange financing for the East Midlands electricity agency, the source said, becoming the only American bank to get on Britain's own big banks, which are dominating the new financing for U.K. electric companies.

The total financings, in the form of standby credits, will range up to $9.25 billion, bankers said. Under the Thatcher administration's strategy to reduce government involvement in the economy, the state-run electricity industry is being broken up into 12 regional agencies, whose stock will be sold to investors this November, making this as privately owned utilities similar to the U.S. industry.

Details of the East Midlands financings are not known, as the announcement has yet to disclose the full scale of the funds it will inject into the agencies to prepare them for privatization. But the transaction is expected to range near $900 million.

Hanover's Repertoire Cited

In London, a spokesman for Hanover declined to comment on the loan. Well-placed bankers said that the Manufacturers Hanover bank's historic expertise in financing American utility business helped give it an edge in winning the British deal.

Hanover is also one of the banks competing for the plum deal — the likely $1.3 billion standby to be raised by National Grid Co., the national electricity distributor.

This Pricing Expected

Bankers say that the terms of the various standbys are likely to prove alike, with a fee of 12.5 basis points over the London interbank offered rate. The actual lure is the relationship that will be forged with the agencies that follow the primary business as well as long-term growth financing for new generating capacity, funding that many generate interest rates of up to 100 basis points over Libor.

Meantime, Hanover and Bankers Trust New York Corp. are acting as advisers to East Midland in the financing of a new power station.

This marks Hanover's involvement in the privatization of British privatizations. Last year it helped put finance in place worth $4.25 billion for three British water companies that were privatized by Thatcher government control and transformed into private utilities. □

CalFed Buying Empire Branches and Deposits

LOS ANGELES — CalFed Inc. announced Tuesday that it would buy $265 million in deposits and 13 branches of Empire Federal Savings Bank, Buffalo. Terms of the deal were not disclosed.

CalFed plans to consolidate 10 of the offices into its existing branches. These offices will not remain open. When the deal is completed, CalFed will have 141 branches, the majority in southern California.

The transaction, subject to regulatory approval, is effective Sept. 7.

CalFed last month bought Fidelity Federal Savings for $75 million in deposits. Empire, which has $8 billion in deposits, has been under the control of the Resolution Trust Corp. since early this year.

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms, and the 75 largest publicly traded thrifts as measured by the market value of all common shares outstanding (as of March 30, 1990, the market value cutoff was $68.9 mil. and for thrifts $121.45 mil.) 52 Wk Hi: the money 52 week high and low business for the stock. PE: the price/earnings ratio. Mkt Bk %: THE CURRENT STOCK PRICE DIVIDED by the trailing four-quarter earnings per share adjusted for latest announced earnings. Mkt. Bk: book: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Mkt Value: the value of all announced earnings and dividends. Chg.: The price at which the stock last traded. If no trades for the day, the latest bid. **Bid Ask and Thrift Indices:** A weighted average of the top 250 banks in terms of asset size and the top 50 thrifts in terms of asset size.

Highlights show largest percent gainers and losers among all and some indicators most shares traded and today's volume as a percentage of average shares traded (daily avg.)

Data source: SNL SECURITIES, Charlottesville, VA 804-977-1600, produced the tables. Financial News Network, Vienna, VA, provides DW, with the daily prices.

Will Economy Slip on an Oil Slick?

Continued from page 1

While economists have said interest rates must fall to buoy struggling financial markets and for the U.S to avoid a serious economic downturn, they said Tuesday that they do not expect any immediate easing of monetary policy by the Federal Reserve.

"The Fed is being constrained by concerns about inflation from the runup in oil prices," said Darwin Beck, a Fed watcher with First Boston Corp. in New York. He predicted the central bank would not move to lower the current 8% federal funds rate, a benchmark short-term interest rate, until the Federal Open Market Committee convenes to assess the economy on Aug. 21.

"The economic numbers of the last two weeks seem to scream for a Fed easing," argued Donald J. Fine, chief market analyst for Chase Manhattan Bank. "Obvious risk of recession has increased, but nothing has happened yet. Possibly the turmoil in the Middle East has created a delay."

Regional Variations

In considering how the crisis in the Middle East would affect regions within the U.S., analysts see mixed results.

Banks in Texas and other Oil Patch states, for instance, are seen as beneficiaries of higher petroleum prices. Analysts indicate that a barrel of oil is likely to trade in the $30 range this week, nearly 50% above the price before last week's Iraqi invasion. At the least, such price hikes should help jump start the oil-dependent regional economies that have recently begun to perk up.

"It will prove a plus for Texas," said Mr. Cates. "Banks in the oil patch are starting to recover, anyway, and I think higher oil prices will help that." But he questioned whether the positive effects would extend to the region's real estate markets, given the overhang from government properties held by the Resolution Trust Corp.

The big regional loser may prove to be New England, which already is under serious economic strain. Its dependence on heating oil, and the arrival of cold weather in the fall, could sap what little strength remains in the region, analysts noted.

"We are an oil-dependent region, and we get no direct incentives from the [price] rise as would, say, the Southwest," Lynn Brown, an economist at the Federal Reserve Bank of Boston.

"Texas bankers are feeling a little better and New England bankers are a little more worried," said the ABA's Mr. Dugger. "Everyone else is somewhere in between."

Stocks Fall Further

Some of the regional impact could be gauged in Tuesday's bank stock trading. Already hard hit by the worries about real estate slump, many were dragged down to new lows by the news from the Middle East and concerns about the likely

Robert H. Dugger
American Bankers Association

impact of higher oil prices on the United States.

For northeastern banks, the effect was not clear in the latest stock prices since they were already at or near 52-week lows.

"Perhaps it will force further dividend cuts [by New England banks] beyond what we've seen so far," said James Moynihan, an analyst for Advest in Boston.

Reason for Optimism

Several bankers noted that one silver lining may emerge from the bad news: The Iraqi invasion may cause Congress to reconsider budget cuts in military spending. Massachusetts and Connecticut have suffered recently from heavy layoffs in defense-related businesses.

But Tuesday's concern about banks was discernable in the apparent decisions of some institutional money managers to reduce their holdings in even the best-regarded banks, such as First Wachovia Corp., Winston-Salem, N.C.; CoreStates Financial Corp., Philadelphia; and NBD Bancorp., Detroit. Investors once again began concentrating on the domestic energy sector. Shares of First City Bancorporation of Texas, Houston, and Hibernia Corp., New Orleans, went up this week as most others fell.

"For the Iraq conflict to have any impact, oil prices would have to stay high for between 12 and 18 months," said Tucker Hart Adams, chief economist for Comerica of Colorado. "Exploration companies aren't going to base major investment decisions on what happens over a few months."

In the meantime, higher oil prices likely would hurt the delicate Southwest economy.

"We would feel some pain if there was a national recession," said Robert Harris, president of the Texas Bankers Association.

"Fundamentally, it is a question of whether we are looking at a spot phenomenon, or whether we are looking at something that will have a profound effect for months and years to come," said William Arnold, executive vice president for international banking at First City.

If the Middle East outlook remains bleak, one analyst said, the U.S. banking industry could see a revival of the inflow of "hot-dollar" deposits that swelled balance sheets in the 1970s. Mark Alpert of Bear, Stearns & Co. in New York wondered whether this is good or bad news for U.S. banks.

"If money comes back to the banking system – and there may be more now than before – where does the money get recycled?," he asked. "The last time, banks lent it to Latin America. It depends on what they do with it," he said.

Worries over Middle East tensions have also spilled over into banks' funding decisions. Funding managers point out that while the Treasury yield curve has steepened at long maturities, it is relatively unchanged in the two- to five-year range.

Gordon Matthews, Tom Leander, and Paul Vogelzang in New York, and Steve Klinkerman in Dallas contributed to this story.

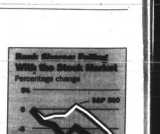
Banks Outdo Broader Market In Correction



By GORDON MATTHEWS

NEW YORK — Shares of some major banks outperformed the market on Tuesday, rebounding modestly off recent lows while most other stocks continued to slide on investor nervousness about the latest upheaval in the Middle East.

"These stock have been beaten down so far recently that they surely must deserve at least a technical bounce," said J. Richard Fredericks, the banking industry analyst for Montgomery Securities Inc., San Francisco.

In late afternoon trading, shares of NCNB Corp., Charlotte, N.C., gained $1.375 to $33.875, while the stock of Wells Fargo & Co., San Francisco, was up $1 to $61.375. Wells, hurt by fears of weakness in California real estate despite its gains in profitability, has been among the most heavily sold bank stocks since mid-July. Its shares have declined about 25% in that period.

Other West Coast banks also won back a bit of the substantial ground they have recently lost. Among the best gainers was Security Pacific Corp., Los Angeles, up $1.25 to $30.125.

In the money-center category, New York's Citicorp, the nation's largest banking company, gained 37.5 cents to $18.875. Chase Manhattan Corp., another beleaguered stock recently, gained 50 cents to $17.875.

Chemical Gets Energy Boost

But the best gainer among the money-centers was Chemical New York Corp., up $1 to $22.375. One analyst attributed the rise to investor awareness that Chemical is in position to take advantage of a recovery in the domestic energy industry through its ownership of Texas Commerce Bank, Houston.

Other banking companies operating in areas that could benefit from a hike in oil prices also posted gains in the wake of Iraq's occupation of Kuwait last week.

The biggest gainer besides Chemical was First City Bancorporation of Texas, Houston, whose shares appreciated 87.5 cents to $20.25.

Also posting gains on the anticipation of a local energy industry revival were the three major banking companies in Colorado. Affiliated Bankshares of Colorado, Denver, was up 50 cents to $11.125 and Colorado National Bankshares, Denver, was up 50 cents to $14.875.

United Banks of Colorado, Denver, was up 75 cents to $19.625. It recently agreed to be acquired by Norwest Corp., Minneapolis, which was up $7.5 cents to $18.75.

But not all major banks made progress on Tuesday. Highly regarded First Wachovia Corp., Winston-Salem, N.C., was off $1 to $37.75; Republic New York Corp. was off 75 cents to $45.50; and State Street Boston Corp., fell 37.5 cents to $32.75. □

FINANCIAL TECHNOLOGY UPDATE

The NCR Financial Tower Thrift System with Starcom interface automates a range of teller and platform services to improve handling of deposits, window posting, new account processing and loan processing.

The Financial Plus+ teller platform from Systems Concepts, Inc. and the Cross Sell Manager™ platform application are combined with the NCR 5067/5267 Financial Workstations and interfaced via a Local Branch Network (LBN) through an NCR TMX Tower branch processor to the NCR data center. This combination delivers the versatility and flexibility to speed transaction processing and reduce long service lines…which allows for more concentration on customer satisfaction.

You can save valuable branch space by integrating NCR's 5680 and 5084 through the wall ATMs and the 5285 Business Night Depository. The result is one footprint rather than two. Commercial cardholders can deposit bags and receive a receipt that verifies the location, date, time, and amount deposited…a valuable service to help you increase your commercial account base.

The NCR 5682 is the next step in self-service. Account service transactions are integrated to the platform via the NCR 5682. Your customers can perform a wide range of financial transactions without the assistance of a customer service representative. Plus, unequaled custom graphics and VGA videodisc capabilities attract customers and promote services.

On the platform side, valuable information is gathered increasing your ability to track account needs. Cost and time is saved for both customers and branch personnel. As competition increases, financial institutions are turning to integration technology for solutions to improving and expanding their levels of customer services.

Fed Is Stymied As Survey Shows A Recession

By ROBERT TRIGAUX

The Federal Reserve's latest report on regional economic conditions, released on Wednesday, provided more evidence that much of the U.S. is entering a recession. But the new data did not change the consensus that instability in the Middle East will prevent the Fed from cutting short-term interest rates – at least for a couple of weeks.

The volatile credit markets this week clearly have focused on the Mideast and its implications for the economy and credit policy. "We are in a political market," one trader noted. Analysts said the inflation from rising oil prices is likely to stymie quick rate relief by the Fed. The Fed's so-called beige book, a survey of the 12 regional Federal Reserve System banks, indicated that the nation's already sluggish economy continues to grow, but that the pace was slow or had slackened recently. The Fed surveys since early this year have been reporting slower growth.

"Several districts report that the pace of commercial loan growth has recently slowed, and some indicate that its levels are below those of a year ago," the beige book said. Consumer lending also slackened a bit in most districts, the survey said. But it cited pockets of strength in credit card and home equity lending.

If there is any relief in sight from lower rates, economists suggested, it is not likely to occur sooner than Aug. 21, when the Fed's Open Market Committee next meets to assess monetary policy. Other analysts said the Fed would not act to influence rates until the Middle East crisis instability subsided.

Report Prepared Before Crisis

The beige book report was prepared by the Federal Reserve Bank of Atlanta to provide regional data for the Aug. 21 FOMC meeting, and was based on conditions up to July 27 – before the Middle East crisis sent oil prices soaring.

The Fed is in a pickle, said economist David Jones of Aubrey G. Lanston, because domestic conditions present a compelling case for lower interest rates. Indeed, U.S. Treasury Secretary Nicholas Brady on Wednesday raised the political pressure on the Fed to ease rates, saying he hopes for and expects lower interest rates. In remarks to the National Press Club, Mr. Brady said the recent oil price

Younger Executives Gain In a Shake-Up at Chemical

By JED HOROWITZ

NEW YORK — Chemical Banking Corp. realigned its senior management structure on Wednesday, giving a younger generation of executives clear mandates for directing the bank's four major business sectors.

The nation's sixth-largest bank company formed a six-person office of the chairman to run the $75 billion-asset institution, replacing a 15-person management committee.

Chemical's chairman, 54-year-old Walter V. Shipley, said he did not intend to set up a succession race, but bank insiders said that at least some members of the group are in a clear position to establish themselves as contenders for the top spot.

William B. Harrison

William H. Turner

Three New Vice Chairmen

The senior group of executives includes three new vice chairmen of Chemical Bank – William H. Turner, 50, who adds a thriving retail branch system to his profitable middle-market banking domain; William B. Harrison, 47, who appends capital markets and funding activities to his world-wide corporate and investment banking responsibilities; and Edward A. O'Neal Jr., 46, the bank's former retail branch chief who now oversees technology, operations, and transaction services.

Rounding out the committee are Marc J. Shapiro, 43, who continues as president and chief executive officer of Texas Commerce Bancshares; Robert J. Callander, 59, who ascends from his vice chairman's post to the vacant position of president; and Mr. Shipley, who has headed Chemical since, 1983.

A Vice Chairman Retiring

Chemical also announced that Richard S. Simmons, who joined in 1985 as a vice chairman of the holding company after serving since 1957 as its chief outside counsel, will retire on Oct. 15. His responsibilities for

Government Loses Case On Goodwill Writedowns

By ROBERT M. GARSSON

WASHINGTON — The government has lost the first round of a legal battle that could force it to repay billions of dollars to thrifts that are complying with an accounting provision in the 1989 bailout law.

In a case challenging the requirement to remove supervisory goodwill from thrift capital accounts by 1994, a U.S. Claims Court judge ruled that the bailout law violated a preexisting contract allowing the write-down of goodwill over a 35-year period.

The decision affected only the Minnesota company that brought the case on behalf of a thrift subsidiary that was seized by the government last May. But if the ruling is upheld, it could bear out the warnings of thrift-industry leaders and their allies in Congress who said the bailout law's tougher treatment of supervisory goodwill could expose the federal government to hundreds of lawsuits and billions of

Dealers Shun U.S. Bank Debt In U.K. Market

By JOHN EVANS

LONDON — Amid worries overseas about the health of U.S. banking, at least four U.S. dealers halted all trading here in the subordinated debt and floating-rate notes of U.S. banks issued in the international bond markets, London-based sources said.

The trading halt, which occurred Monday, was instigated by London-based U.S. investment concerns that make markets in the Eurobonds.

Influences Are Broad

Sources said no single event caused the halt, noting in the $5 billion market, which had been dwindling. The Middle East crisis, however, increased concerns of a recession in the United States that could further impair the U.S. banking industry.

While the trading of bank debt both in the United States and London has slowed, the move suggests that most U.S. banks are being shunned in the international capital markets. Not

Comerica, U S West Linkup Will Let Cardholders Charge Phone Calls

By YVETTE D. KANTROW

NEW YORK — In yet another bond between the bank card and telephone industries, Comerica Inc. and U S West Inc. have struck a deal that could allow all MasterCard and Visa cards to be used as calling cards.

The agreement will enable dozens of long-distance and local telephone companies to accept bank cards, regardless of issuer, as a form of payment. And unlike the AT&T Universal card project and others, consumers will not have to obtain new bank cards.

Convenience Cited

"It's convenient because [cardholders] won't have to fill out an application, order a new bank card, or obtain a new personal identification number to be able to use the service," said Paul Steger, a vice president at Detroit-based Comerica.

Under the agreement, Comerica will provide bank card merchant processing services to U S West Service Link, a Minneapolis-based company that offers calling card verification to long-distance and local telephone carriers nationwide.

Comerica's participation will make it possible for U S West to add credit card authorization to the services it provides its phone-company clients. Any of those clients, if it chooses to join the program, can accept any MasterCard or Visa card for payment of telephone charges.

"What the agreement does is provide long-distance groups and local phone companies with an easy way for them to allow their customers to use their Visa or MasterCards," Mr. Steger said.

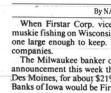
Firstar's Fitzsimonds Nets A 'Keeper' in Banks of Iowa

By NANINE ALEXANDER

When Firstar Corp. vice chairman Roger L. Fitzsimonds goes muskie fishing on Wisconsin's inland lakes, he says it's hard to catch one large enough to keep. He has a lot more success buying bank companies.

The Milwaukee banker oversaw negotiations leading to Firstar's announcement this week that it would acquire Banks of Iowa Inc., Des Moines, for about $219 million in stock. The $2.5 billion-asset Banks of Iowa would be Firstar's largest acquisition to date, increasing its asset size by 30%, to $11 billion.



Roger L. Fitzsimonds

Mr. Fitzsimonds, 52, is generally credited with turning Firstar into a healthy banking company: It earned a 1.11% return on assets last year, compared to a meager 0.68% ROA in 1984. His efforts will be formally rewarded in January, when he is expected to succeed John H. Hendee Jr. as Firstar chairman.

The trim, six-foot-plus executive has spent virtually his entire professional career at Firstar, starting out as a management trainee in 1964 at First Wisconsin National Bank of Milwaukee. He subsequently held a variety of posts, including president of a subsidiary bank in Green Bay and manager of such areas as retail banking, personnel, public relations, real estate, and finance.

He was named president and chief operating officer of the holding company in 1987 and vice chairman last January.

Milwaukee Native Enjoys Outdoor Sports

A graduate of the University of Wisconsin-Milwaukee, Mr. Fitzsimonds served five years in the Army Reserves, rising to captain. The Milwaukee native and his wife have two children and one grandchild. In addition to fishing, he enjoys tennis, snow-skiing, and golf.

Frequently described as a free-wheeling dealer unafraid to make the hard calls, Mr. Fitzsimonds said the cornerstone of Firstar strategy is the customer. "It's more difficult [for competitors] to attack relationships," he said. Firstar, for example, doesn't mail unsolicited charge cards to potential customers.

Merger to Enable Savings on Bank-Office Expense

Appearing before analysts in Chicago, Mr. Fitzsimonds said cost savings after the Banks of Iowa acquisition are planned in the data processing and other back-office functions. The bank also projects increased revenue in charge cards and trust services.

Mr. Fitzsimonds said Firstar prefers to acquire bank companies that are profitable and have good growth potential.

Firstar is expected to complete its acquisition of Banks of Iowa in the first half of 1991. □

Brazil, Philippines Called Vulnerable in Gulf Crisis

BUENOS AIRES — Citicorp chairman John S. Reed said that among indebted lesser-developed countries, Brazil and the Philippines would be the most vulnerable as a result of the Gulf crisis because they import a great deal of oil.

If the turmoil continues and oil prices rise to $30 a barrel, Brazil's energy expenses could rise by $2 billion a year, Mr. Reed estimated. To a lesser degree, he said, the Philippines would also be affected, while Argentina, Colombia, and Indonesia would obviously benefit from higher oil prices."

While on a routine trip to Latin America, Mr. Reed said, "We have a branch in Kuwait and a very large bank in Saudi Arabia and our assets have been frozen, so there are many normal banking transactions that have been paralyzed."

Bank One Texas to Buy 400 ATMs from Diebold

CANTON, Ohio — Diebold Inc. said Bank One Texas, a unit of Banc One Corp., is purchasing 400 automated teller machines primarily for installation in Diamond Shamrock convenience stores in Texas.

Bank One will install more than 350 Diebold Modular Delivery System 1060 compact cash dispensers in Diamond Shamrock-owned stores, while the other 1060s will be used off the premises. The multimillion-dollar order also includes pedestals, signage towers, and video surveillance cameras.

Installation will begin in San Antonio in September with replacement of 84 machines formerly owned by a thrift.

Problem Loans Take Toll in South

Real Estate Woes Also Erode Profits

By KENNETH CLINE

ATLANTA — Concerns over credit quality and slumping real estate markets overshadowed the earnings of Southeastern banks in the second quarter, as nonperforming assets continued to rise and loan growth remained sluggish.

Particularly hard hit were banks with real estate portfolios concentrated in Washington, Maryland, and northern Virginia. Signet Banking Corp., Richmond, reported a 90% decline in net income to $2.9 million. Earnings at Norfolk-based Sovran Financial Corp. were down 66% to $22.1 million, and at Crestar Financial Corp., Richmond, they were off 65% to $9 million.

Problems in Florida

Florida was another problem area. Miami-based Southeast Banking Corp. reported $22 million in red ink, its third consecutive quarterly loss. Net income at Barnett Banks Inc., Jacksonville, fell 9% to $58.5 million.

"The banks that held up the best have been the larger North Carolina and Atlanta-based banks," said John Mason, an analyst with Interstate/Johnson Lane in Atlanta.

First Virginia Corp., Winston-Salem, N.C., continued its outstanding record by reporting earnings of $75.2 million, up nearly 11% from the previous year. First Wachovia's nonperforming assets ratio of 0.74% remains far away the lowest of any Southeastern superregional.

Boosted by the full incorporation of Texas earnings, Charlotte, N.C.-based NCNB Corp. posted a 30% gain in net income, to $137.4 million. First Union Corp., also of Charlotte, managed a respectable 5.7% gain, to $77.9 million.

At the 35 Southeastern and

Court Opens Door to S&L Claims Against Epic's Mortgage Insurers

By STEPHEN KLEGGE

NEW YORK — Thrifts that were burned in the 1985 collapse of Equity Programs Investment Corp. are entitled to claims against two mortgage insurance companies that had refused to pay, an appeals court ruled this week.

The ruling by the Fourth U.S. Circuit Court of Appeals in Richmond was a victory for institutions that bought mortgage-backed securities from Equity Programs, better known as Epic. It defaulted in August 1985 on $1.4 billion of debt backed by mortgages on some 20,000 homes, many of them in Texas.

Court Faults Insurers

The court said Foremost Guarantee Corp., Madison, Wis., since bought by General Electric Mortgage Insurance Co., Raleigh, N.C., and United Guarantee Residential Insurance Co., Greensboro, N.C., had "closed their eyes to the obvious" in relying on oral statements by Epic.

GEMIC is not liable for EPIC claims, said Jeanette Bernay, a spokeswoman. The claims revert back to Foremost Corp., which sold the insurance unit to GE, she said.

While most of the Epic claims were covered by mortgage insurance, United Guaranty and Foremost tried to rescind coverage by claiming the insurance was procured fraudulently. A spokesman for United Guaranty said it provided the insurance shortly before the Epic default, and would not have done so had the true condition of the loans been known.

Avenues of Appeal

He said no decision had been reached on whether to appeal the ruling. The insurance companies' options include a petition to the Supreme Court or to the circuit court for a rehearing.

The appeals court reversed a

TECHNOLOGY/OPERATIONS NEWS

Difficult Computer Choice: OS/2 or Unix?

By JEANNE IIDA

NEW YORK — Banks moving to install personal computers in their branches face the prickly decision of choosing software for basic computer functions.

The choice centers on operating systems, which are the backbone for transaction processing systems. One option is OS/2, a new system offered by International Business Machines Corp. and a small group of other vendors. The other is Unix, which is generic software available from a wide variety of vendors.

If banks choose Unix, they get a proven technology that is less expensive and more flexible than OS/2.

The decision, which carries some risks, will determine how branches integrate with the bank's administrative systems and how quickly.

Relative Strengths

If banks choose Unix, they get a proven technology that is less expensive and more flexible than OS/2. They also find it easier to integrate many types of technologies, including PCs and "dumb" terminals, in the same branch system.

The IBM alternative is more expensive because the memory and software for OS/2 is available from a tightly controlled group of suppliers.

In the long term, however, OS/2 may prove better suited for distributing processing power so that each computer system does not do for which it is best equipped.

Although the links to OS/2 are limited today, IBM plans to develop software that will make it easy for OS/2 users to get information from any IBM computer. Communication with other parts of bank operations would then be easier, since banks already have large networks of IBM computers outside the branches.

"I think that right now more people want to be on OS/2," said Michael Ehrenberg, director of systems and technology planning at ISC Bunker Ramo, Spokane, Wash. Though more banks have Unix, "there is a trend toward OS/2," he said.

The Pull of Big Blue

One banking company moving in that direction is Security Pacific Corp., a Los Angeles-based bank will install OS/2 for the 10,000-PC network it expects to have in place by mid-1992.

"We really believe in OS/2 and DOS, and we believe they will be coupled in the branch," said Michael Smyrse, vice president of the electronic systems development division at Security Pacific.

Banks that are installing Unix-based systems, including Comerica and Integra Financial Corp., say that are eager to get processing power into the hands of branch personnel as quickly as possible.

"We made this decision a while back, when OS/2 wasn't even on the horizon," said John W. White, vice president and manager of branch automation at Integra, Pittsburgh. "We were looking for flexibility in equipment and software, and for open systems."

Even if Integra were making its decision today, Mr. White said it would choose Unix. The system it selected, from ISC Bunker Ramo, can be used with any type of network and with other new technologies, such as image processing systems, he said.

"Banks that believe that they must integrate imaging, text, voice and graphics into the customer service delivery sooner rather than later are choosing Unix," said William Storts, a banking consultant with Andersen Consulting in Columbus, Ohio. "Having applications such as imaging [and] voice are extremely difficult on a non-Unix platform."

"OS/2 is a good product, but it's really new," said Mr. Ehrenberg. Banks installing OS/2 today may have trouble giving people access to data bases and to communications capabilities, he said.

IBM plans to develop software that will make it easy for OS/2 users to get information from any IBM computer.

But that will change as more vendors unveil products for the OS/2 environment. ISC Bunker Ramo plans to introduce an OS/2 branch automation system later this year.

The driving reason for installing OS/2: "IBM is telling you that that's the right operating system" to work in an IBM environment, said Mr. Ehrenberg. Put that factor "ahead of cost and how solid and proven the technology is," he said, and "you'll choose OS/2." □

Software to Detect Kiting Is Adapted for Use on PCs

By KAREN GULLO

NEW YORK — Computrol Inc. has modified its software to detect check-kiting schemes so that it runs on personal computers.

The Kiting Detection System, or KDS, previously ran only on mainframe computers. The new version was designed to accommodate community banks that do not have large mainframes and larger banks that prefer to download files to PCs.

Kiting is a fairly common method of check fraud that costs the banking industry tens of millions of dollars each year. In such schemes, a depositor with accounts in two or more banks uses the float period to attempt to cash checks that are not backed by sufficient funds. Eventually, one of the banks is stuck with a worthless check.

System Much Less Costly

Computrol's PC-based system costs a fraction of what its mainframe counterpart does. It is priced from $1,500 to $3,000 and can be used in conjunction with the mainframe version as well as by itself.

Like the mainframe version, which costs $15,000, the PC model analyzes checking accounts and compares account activity against 12 parameters.

Federal regulations taking effect Sept. 1 that shorten the time banks can hold deposited checks may increase interest in the system, said Robert E. Parks, president of Computrol. "Many bankers fear this [regulation] will provide an even greater opportunity for fraud by skillful manipulators who can exploit the system," he said.

Only Product Available

Bankers say KDS is the only software product available that automates the process of kite detection. The mainframe version is installed at almost 1,000 banks across the country, and users credit it with saving them millions of dollars.

"We caught a kiter on the first day that we tested the product," said David F. Nicholson, assistant vice president and manager of account processing and bank operation compliance at Northeastern Bank of Pennsylvania. The PNC Financial Corp. affiliate installed the mainframe-based program this spring.

Mr. Nicholson said the system analyzes the frequency of deposits and withdrawals, the time deposits stay in accounts, the amounts of deposits and withdrawals, and related information. The system then produces a list of suspect accounts, which the bank investigates.

"The typical kite involves three banks," said Mr. Nicholson. "The one we caught in the first week cost the third bank in the scheme $48,000."

Before using KDS, the bank relied on employees handling overdrafts and return items to identify suspicious activity.

No Big Change Expected

Mr. Nicholson expects minimal impact from new check-hold rules. "I'm knocking on wood right now, but we're not anticipating any great change," he said.

George Webster, vice president of loss control/fraud investigations at First National Bank of Florida, Tampa, said, his bank has been using KDS for five years and has saved $7 million to $10 million. The system helped identify a scheme involving $1.6 million last year.

The system tracks 375,000 demand deposit accounts and turns up 1,600 to 2,200 suspect accounts each month. Mr. Webster says further analysis exposes 45 kite schemes a month. □

Greenspan on Bank Reform: Faulty Logic or Bad Tactics?

Federal Reserve Chairman Alan Greenspan's testimony last month before the Senate Banking Committee on the need for deposit insurance reform and other restructuring was disappointing.

The $200 billion savings and loan debacle was the equivalent of a head-on collision at 90 miles per hour. Surveying the wreckage, Chairman Greenspan seemed to conclude that perhaps the cars could use a tune-up.

A Good Beginning

The testimony started off well enough:

"The safety net – deposit insurance, as well as the discount window – has so lowered the risks perceived by depositors as to make them relatively indifferent to the soundness [of banks and thrifts]. . . . Government assurances of the liquidity and availability of deposits have enabled some banks with declining capital ratios to fund riskier asset portfolios at a lower cost and on a much larger scale, *with government regulations and supervision, rather than market processes, the major constraint on risk-taking* [emphasis added].

"As a result, more resources have been allocated to finance risky projects than would have been dictated by economic efficiency."

Almost inexplicably, much of what followed these opening pearls of wisdom was inconsistent with Mr. Greenspan's diagnosis of the problem.

Another Study?

His testimony suggested that we "study" limiting the use of multiple accounts and passthrough insurance (that is, brokered deposits), which "have been used at times to thwart or abuse the purpose of deposit insurance protection."

Six years have elapsed since the Federal Deposit Insurance Corp. and Federal Savings and Loan Insurance Corp. literally begged the Reagan administration, Congress, and the Federal Reserve to support their efforts to curb this abuse. Meanwhile, tens of billions of dollars have been dumped down the drain.

Surely, we can move beyond the study stage and eliminate deposit insurance coverage on brokered funds: If not now, when?

Confusion on Uninsured Funds

The next portion of the testimony deals with deposits in excess of the $100,000 limit. I am reluctant to admit it, but I have read the following sentences more than a dozen times, and I'm still not sure I understand them:

"Thus, while deposits in excess of the insurance limit should not be protected by the safety net at any bank, reforms designed to rely mainly on market discipline by uninsured depositors raise serious stability concerns. Public policy, therefore, should rely on other means as the primary mechanism to induce prudent bank policies."

The sentences appear to be saying we shouldn't protect deposits over the $100,000 limit at any bank but neither should we impose a loss on them because it might be destabilizing. That's pretty confusing stuff, even by Washington standards.

Relying on Regulation

Much of the rest of the testimony espouses the view that we really ought to rely more heavily on the supervisory system, including increased capital requirements.

Let me see if I've got this straight. The existence of the safety net has destroyed market discipline, enabling banks and thrifts to engage in excessive risk-taking, which government regulation and supervision have not been able to control effectively, so the solution is more government regulation and supervision. Hmmm . . .

The testimony concludes by focusing on the need to broaden the permissible range of activities for banking organizations. Here the chairman is generally on more solid ground.

Impediments' Removal Sought

He calls for interstate branch banking, an issue Federal Reserve chairmen have traditionally ducked. He states that the Federal Reserve supports repeal of the Glass-Steagall Act's separation of commercial and investment banking.

He says that "high and thick firewalls" are costly and unnecessary to protect insured banks and, instead, we should rely on good supervision and restrictions on intracompany funding.

Rejecting functional regulation (endorsed by the Bush Task Group), Mr. Greenspan states twice that "some agency" (I wonder which one) should be responsible for "oversight of the entire organization."

Despite its superb beginning and generally good ending, the testimony leaves much to be desired in between. I have struggled to make sense of it and have come up with a theory. Mr. Greenspan recognizes that the safety net is a big problem that must be fixed, but he is hesitant to do anything about it in the

THE LOBBYISTS

Bankers Hoping Bill On Check Cashing Quiets Metzenbaum

Rep. Doug Barnard, D-Ga., has introduced a bill that would let the Postal Service cash government checks, and the banking industry couldn't be happier.

"We support it," said Steve Verdier, House lobbyist for the **Independent Bankers Association of America.** "It's a good alternative to the Metzenbaum amendment."

Sen. Howard Metzenbaum, D-Ohio, has proposed legislation that would require banks and thrifts to cash government checks for noncustomers, and the banking industry appears willing to fight to the last lobbyist against the measure.

"We're getting mixed signals about whether Metzenbaum is going to continue working on this or go on to something else," said **Joseph Belew,** president of the **Consumer Bankers Association** of America.

Joseph Belew

"But we would be interested in [the Barnard bill] regardless of what Metzenbaum does," he added. "It would be a good thing for banks if it passes."

The Consumer Bankers Association has already endorsed the Postal Service alternative, and Mr. Belew said he expects its organization to work actively for the measure.

For Equal Coverage Of Pension Accounts

The **National Council of Savings Institutions** was one of a handful of financial trade groups on the warpath last week seeking Congressional passage of legislation for equal treatment in deposit insurance of private- and public-employee benefit plans.

The council's members stand to lose substantial deposits if the issue cannot be resolved.

The furor stems from a recent ruling by the Federal Deposit Insurance Corp. that, after Jan. 29, 1992, state and municipal employees, who must use "457 plans" for their deferred-compensation pension accounts, will not be eligible for the same insurance protection enjoyed by private-sector workers.

If Congress does not rectify this ruling, the council argues, funds from 457 plans could not be deposited in banks and other insured financial institutions after the 1992 deadline.

Why? Most states require that deposits of state funds be 100% collateralized to the extent that they are not covered by federal insurance. And most financial institutions do not have the liquidity to set aside collateral for 100% of 457-plan money in excess of $100,000.

A bill, H.R. 5008, was introduced in response to the FDIC ruling to equalize insurance treatment between participants in 457 plans and those in 401(k) plans.

Credit Unions Want Consumer Bill Aired

The **National Association of Federal Credit Unions** is urging Senate Banking Committee members to hold public hearings on a bill calling for the National Credit Union Administration to set up a consumer compliance program.

The bill, known as the Fair Lending Enforcement Act, is sponsored by **Sen. Alan Dixon,** D-Ill., and was marked up July 17. In part, it calls for the agency that charters and regulates federal credit unions to set up a consumer program.

The bill would also require the agency to form groups of consumer compliance examiners who would scrutinize all federally insured credit unions.

Alan Dixon

The trade group said several points have gone unheard by the public: whether a bill is needed, its impact on the regulator's operating budget, and the ultimate cost to credit unions.

"We never had a chance to talk about it and get our word in. That to us is pretty important," said **Patrick H. Keefe,** a spokesman for the trade group, which represents 750 mostly large federal credit unions. "We have contacted all of the members of the Senate Banking Committee and told them we think this needs to be subject to public hearings before it goes any further."

Insurers Fight on 2 Fronts

Though Congress is beginning its August recess, pressure remains great on the insurance industry to fight legislation that would dismantle the McCarran-Ferguson Act, a law that largely shields the industry from federal oversight. The lobbying effort is draining insurers' resources just as commercial banks are advancing on several fronts into the insurance business.

Agency Dividend Lid Urged

Adding its concern to the growing worry over capital levels at the **Federal National Mortgage Association** and the **Federal Home Loan Mortgage Corp.,** the U.S. **League of Savings Institutions** recently called for limiting dividends the government-chartered agencies pay until adequate capital levels are reached. Among other recommendations to the Department of Housing and Urban Development from league director of research **Dennis Jacobe:** Audit the agencies' books and financial transactions and require them to submit capital plans for HUD approval, report on loans and guarantees by the level of borrowers' income, and meet risk-based capital standards applied to other financial institutions.

Isaac's Ideas on Insurance Reform Seen Biased Toward Large Banks

To The Editor

In two recent *American Banker* commentaries (on June 14 and July 5), former FDIC Chairman Bill Isaac addressed the issue of deposit insurance reform.

The large U.S. banks represented by Isaac's Secura Group would find little reason to quarrel with the part of the quid pro quo Mr. Isaac proposes for them.

By taking a close look at what Mr. Isaac really said in these two articles, it becomes clear he is attempting to sell the reader the suggestion that it is the domestic and international giants of the banking industry that are really getting the "short end of the stick" under present conditions. Can you believe it?

Introductory Points

While his June 14 article did little more than "unveil" the ABA's "flawed plan" proposal, whereby all bank and thrift depositors would take an 11% loss on deposits in excess of $100,000 in the case of a failure, additionally, there are two pre-

COMMENT

Fed Chairman Urged To Adopt New Tactic

Continued from *page 4*

near term due to turmoil in the financial system.

Desire to Buy Time

This would explain why he is able to articulate so clearly the moral hazards presented by the safety net but cannot bring himself to advocate anything to fix it. Instead, he proposes to buy time by falling back on strengthened supervision.

Two very serious flaws exist in this approach. First, some people might mistake his interim solution for a long-term one and, real reform is never going to have a better chance of adoption than now, after the industry's biggest financial scandal.

The climate is particularly propitious as well, considering that the American Bankers Association has recently endorsed the 1988 recommendation of the Bush Task Group that deposits in excess of the $100,000 limit at a failed institution be subjected to a mandatory "haircut."

An Alternative Tactic

If the reforms' timing, as opposed to its substance, is Mr. Greenspan's principal concern, he should support prompt enactment of the ABA plan with delayed effective date, perhaps several years hence.

This would give regulators and bankers an opportunity to prepare for a new day in which the markets are permitted to assist the regulators in controlling excessive risk-taking.

I hope my theory that the chairman is concerned primarily about timing is correct; otherwise, much of what he has to say makes no sense. And if my theory is correct, I hope he will reconsider his tactics. □

lusive points in it that should be noted because of their bearing on points he makes in his July 5 article.

First, he asks the question: "If the United States adopts a plan explicitly providing for large depositor discipline, won't that place U.S. banks at a competitive disadvantage vis a vis major banks elsewhere?"

He follows with the question: "What will be done with respect to foreign deposits, against which deposit insurance premiums are not assessed but which have *always* (italics added) been protected when a large bank has failed?"

Now obviously, these are part and parcel of the same issue and it boils down to the fact that there has been free coverage on their foreign deposits and for profit reasons they want, desperately, to keep it that way. Who wouldn't?

Moving on to the July 5 article, we find Mr. Isaac agonizing that Morgan Guaranty would have suffered a seven-fold increase in deposit insurance costs had it been assessed its fair share of FDIC premiums under the 1988 proposed premium revisal. This preferential treatment constitutes a free ride for Morgan and it has never even been considered an option for the vast majority of the commercial banks or savings institutions.

After first having asked the rhetorical question in his June 14 article as to whether the lack of such total and all-inclusive insurance coverage would result in U.S. banks being placed at a "competitive disadvantage," Mr. Isaac, in his July 5 article, shifts into reverse, as it were, by saying: "Morgan could argue persuasively that it would rather see the deposit insurance system, from which it derives only marginal benefit, abolished rather than absorb a tax increase of that magnitude."

End of 'Preferential' Status

The "tax" increase he refers to would, of course, eliminate the preferential treatment now afforded Morgan, putting its cost per deposit dollar of coverage on a par with most other U.S. banks.

Finally, Mr. Isaac make s the point that "abolition of deposit insurance would have a far greater negative impact on small banks than on large banks."

Mr. Isaac suggests the "11% haircut" would accrue to the advantage of the "smaller bank depositors" instead of the "large bank depositors," and thus would serve as a quid pro quo for the continued exclusion of foreign deposits from the FDIC's assessment base.

I was, upon reading and then rereading this suggestion, reminded of a sales pitch for Florida swampland.

Norbert A. McCrady
Eden Prairie, Minn.

Mr. McCrady, a consultant, was formerly executive vice president of the Independent Bankers of Minnesota and a director of the Independent Bankers Association of America.

How to profit from 1,347 of your competitors

Proven methods for selling mutual funds

Working with 1,347 banks and S&Ls has taught MFS a lot about selling mutual funds. So have our 66 years of experience since we started the mutual fund industry. Now we've put it all together in a free training package called *Partners in Profit.* The kit is filled with simple, inexpensive training methods guaranteed to get results. Step-by-step, we'll take you through four major selling opportunities.

1 HOW TO BUILD A SUCCESSFUL INVESTMENT BUSINESS AT THE BRANCH.
2 WORKING THE BOOK: SIX APPROACHES TO GUARANTEE FUTURE BUSINESS.
3 SEMINARS: HOW TO MAKE THEM WORK FOR YOU.
4 SALES IDEAS: HOW TO HELP YOUR CUSTOMERS AVOID INVESTORS' SEVEN MOST COMMON MISTAKES.

MFS, with $26 billion under management for 1.7 million investors, is a name you and your customers can count on for investment performance, service and commitment to the banking industry. We have a dedicated team of professionals available for on-site referral training (last year alone, they conducted 1,107 sessions using our acclaimed 12-minute video entitled "Banking and Investing: Today's Team").

Isn't it time you started a partnership with our Banking Industry Marketing Department?

EXECUTIVE *changes*

Gurley to Join First Security As President

Lloyd G. Gurley is leaving his position as senior vice president and city executive for Wachovia Bank & Trust Co. in Durham, N.C., to become president and administrative officer of **First Security Financial Corp.** and its principal subsidiary, Security Bank & Trust Co., Salisbury.

He will assume the presidency Aug. 20 from **J.G. Rutledge 3d**, who will continue as chairman and chief executive officer of both the bank and the holding company.

Mr. Gurley's duties with Wachovia included supervision of its banking offices in the Durham area. **David Jolley**, senior vice president in the corporate banking department of Wachovia in Raleigh will replace Mr. Gurley in Durham.

Lloyd G. Gurley

Mr. Gurley graduated from Clemson University in 1961, at which time he became associated with Wachovia Bank and Trust Co. in Asheville.

Mr. Gurley graduated from the Graduate School of Banking of the South at Louisiana State University in 1971 and from the executive program at the University of North Carolina at Chapel Hill in 1983.

NEW ENGLAND

Fleet Bank-NH, Nashua, N.H., a subsidiary of **Fleet/Norstar Financial Group**, Providence, R.I., said **H. E. "Buzz" Harrington Jr.** is retiring as chairman and chief executive officer in September. He retires after a banking career spanning 33 years with the same institution.

Directors of the bank named **Dean T. Holt** president and chief executive officer, effective Sept. 4.

"After 33 rewarding years with the bank," Mr. Harrington said, "I feel the change will be a new opportunity for me, as I look forward to pursuing many interests, both personal and in the community. I've always had tremendous pride in our organization. What I will miss most will be the people who have worked with me and supported me throughout the years."

First Constitution Financial Corp. said **John J. Crawford** has been elected president and chief executive officer of both the company and its subsidiary, First Constitution Bank, New Haven.

Mr. Crawford has been serving in these capacities on a temporary basis for four months; his predecessor, **Walter R. Miller, Jr.**, relinquished the responsibilities in early April.

"The board concluded that Mr. Crawford has demonstrated superior management and leadership abilities in a period of challenging business conditions," said Robert F. Carney, chairman of the board.

"Actively involved in all aspects of management, he has displayed a fine ability to bring together the seemingly diverse interests of bank customers, shareholders and financial professionals, employees, regulators and community leaders."

Mr. Crawford, 45, previously was a partner in the financial consulting firms of Sachem Consulting and Holt Wexler Crawford & Merchant. A board member at First Constitution since March 1989, he will also continue to serve as chairman of the board of Ansonia Derby Water Co.

MIDWEST

Michigan League of Savings Institutions, Lansing, has elected **David L. Hatfield** as league chairman for 1990-91. Mr. Hatfield is chairman of the board and president of Fidelity Federal Savings & Loan Association in Kalamazoo.

Mr. Hatfield succeeds **Gordon L. Grevengoed**, president and chief executive officer of Ottawa Savings Bank, Holland.

Elected first vice chairman of the league was **William H. Glencorse**, chairman of the board and chief executive officer of First Federal Savings & Loan Association of Lenawee County, Adrian.

The new second vice chairman is **Charles B. Cook**, president of Marshall Savings Bank. **Donald F. Wall**, Lansing, is president of the league.

Newly elected directors of the league are **Garry G. Carley**, executive vice president of Standard Federal Bank, Troy, and **Gene Harling**, chairman of the board, First Federal of Michigan, Detroit.

Harris Trust and Savings Bank, Chicago, said that **Jon S. Brightman**, senior vice president, has been named head of the trust department.

Mr. Brightman succeeds **Richard C. Caldwell**, who has joined **PNC Financial Corp.** as executive vice president and senior trust officer based at Provident National Bank, Philadelphia.

Jon S. Brightman

Mr. Brightman previously served as head of Harris' institutional trust group, responsible for trust services to pension and profit sharing clients, including securities lending activities, investment consulting, and participant record keeping services.

In his new post, he is responsible for these institutional trust services as well as corporate trust services, trust operations, and trust systems.

Banc One Corp., Columbus, Ohio, said **Joseph D. Barnette, Jr.** has been elected president and chief executive of Banc One Indiana Corp., a unit of the holding company.

Mr. Barnette continues as president and CEO of Bank One, Indianapolis, a unit of Banc One Indiana Corp.

In addition, **Michael J. McMennamin** has been elected president and chief operating of-

See **EXECUTIVE** *next page*

Complying with the Treasury Department's amendments to the Bank Secrecy Act is no small feat. It's not easy meeting the new rules on maintaining detailed identification records when a customer purchases financial instruments such as cashier's checks and money orders. And failing to do so can mean severe financial penalties. Which is something no bank can afford.

They're both very smart reasons for using the T4500 Official Items Disburser. Its exclusive software prompts each employee to log in all the required information before allowing a check to be issued (so you won't have to worry about employee mistakes). And since our document design is virtually tamper-proof, you also won't have to worry about checks being altered once they leave the bank. If you're still working without a financial safety net, call Standard Register at 1-800-543-9598. Because what's hanging in the balance is too important to ignore.

Standard Register

ficer of Bank One, Columbus.

William M. Bennett, who has been president and chief executive officer of the Columbus bank since January 1988, will continue as CEO and has assumed the title of chairman of the bank.

Mr. McMennamin formerly was chairman and CEO of Buckeye Financial Corp. and its subsidiary, Buckeye Federal Savings and Loan.

Standard Federal Bank, Troy, Mich., has elected **Joseph E. Krul** senior vice president and chief financial officer; **Clayton J. Trible, Jr.** senior vice president and treasurer, and **Frederick A. Bartel** vice president and assistant treasurer.

MIDDLE ATLANTIC

Chase Manhattan Bank, New York, announced the following new vice presidents:

David Arzi, international individual; **Michael F. Bagnell**, corporate operations & systems; **Jose A. Barral**, private banking international; **James Barras**, administrative services; **Marianne Berry**, direct response; **Pat Billings**, international individual, and **Cheryl A. Black**, real estate finance.

Also promoted to vice president were **Crescenza M. Carome**, corporate operations & systems; **Anthony J. Clalone**, global securities services; **Carol P. Clancy**, corporate controller; **Patricia M. Coglianese** and **Susan Johnson DePre**, corporate operations & systems; **Anthony DoCampo**, global securities services; **Mark Dyer**, Chase info-serve international; **Albert T. Ghelarducci**, individual bank; **Jane Gustafson**, administrative services, and **Natalie H. Holaender**, direct response.

Also **Thomas D. Hurlbrink**, personal financial services; **Gerald J. Iacouzzi**, administrative services; **Madan Inamdar** and **Bette Kettner**, corporate operations & systems; **Maurice Krisel**, corporate controller; **Kenneth Lee**, institutional bank; **Katherine Lee**, international individual; **Arnold MacDonald**, administrative services, **Timothy McCausland**, global securities services; **Don Nickburg**, institutional bank; **Robert G. Novellano**, global securities services; **Richard E. Patasnik**, personal financial services, and **Jonathan Powers**, corporate operations & systems.

And **John R. Sorice**, North America corporate finance; **R. Andrew Stiefvater**, domestic institutional; **James Sutton**, administrative services; **Robert Taglin**, direct response; **Richard P. Vincent**, metropolitan community bank; **Robert A. Wiederecht**, direct response, and **Marianne Yorke**, administrative services.

New **Jersey Council of Savings Institutions**, West Orange, N.J., has elected **Thomas H. van Arsdale** as chairman of the council. He is president and chief executive officer of the Dime Savings Bank of New Jersey, Somerset.

Mr. van Arsdale previously served as vice chairman and treasurer of the council. He succeeds **Wendell T. Breithaupt**, president and chief executive officer of the Trenton Savings Bank in Trenton.

Leonard S. Gudelski, president and chief executive officer of Hudson City Savings Bank, Paramus, will serve as the council's first vice chairman.

Assuming the duties of second vice chairman and treasurer is **Clyde C. Britt**, president and chief executive officer of the Jersey Bank for Savings, Montvale, a new financial entity that opened in January 1989.

Elected to the board were **Ronald L. Tobia**, president and chairman of the board, Family First Federal Savings Bank, Clifton; **Anthony M. Aquino Jr.**, chairman and chief executive officer, Morris Savings Bank, Morristown; Mr. Britt; **Leo J. Rogers Jr.**, acting chief executive officer, **Howard Savings Bank**, Newark, and **Paul C. Rotondi**, president and chief executive officer, Washington Savings Bank, Hoboken.

First Savings Bank, Perth Amboy, N.J., said **Joanne Barbara** has joined the thrift as vice president, human resources. She was formerly personnel manager with Gill & Duffus in New York.

American Express Travel Related Services Co., New York, a unit of **American Express Co.**, has named **Robin Renn** senior vice president of strategic planning. She will be responsible for integrating and coordinating the strategic planning activities of TRS.

SOUTHEAST

Georgia League of Savings Institutions, Atlanta, said **J. Wandell Shiver** is the newly elected chairman of the statewide organization for the coming year. He is president of First Federal Savings Bank of Bainbridge.

Mr. Shiver succeeds **W.T. Ramsey**, president of Griffin Federal Savings Bank, who has served as the league's chief elected officer during the past year.

Also, **Don B. Stout** of Georgia Federal Bank, Atlanta was elected vice chairman; **Grady Perry, Jr.** of Atlanta was elected president, and **Alpha A. Fowler Jr.** of Douglas Federal Savings Bank, Douglasville was elected treasurer.

Directors elected to serve terms of two years on the 12 member board of the organization include **Henry S. Bishop**, First Georgia Savings Bank of Brunswick; **Reginald Birchman**, Allatoona Federal Savings Bank of Acworth; **Hardin C. Byars**, Citizens Federal Savings and Loan Association of Rome; **P. Michael Evans**, First Savings Bank of Thomson; **Wilbur G. Kurtz 3d**, Decatur Federal Savings and Loan Association of Decatur; **Grant P. Mahan**, Cherokee Federal Savings Bank of Canton, and **Alvin R. Tuten Jr.**, Baxley Federal Savings and Loan Association of Baxley.

SouthTrust Mortgage Corp., a unit of **SouthTrust Corp.**, Birmingham, Ala., has named **S. Lee Higginbam** vice president, servicing, and promoted **Flora J. Waid** to vice president, warehousing/shipping.

MARKETING/ADVERTISING

Boatmen's Asks Customers For Ideas on New Products

By LAURYN FRANZONI
Special to the American Banker

Most banks use market research to develop products and services and then use media to sell them. Boatmen's Bancshares Inc., St. Louis, has turned that formula upside down.

After running an aggressive campaign for two years to bolster its name recognition and image in Missouri, Illinois, and Tennessee, Boatmen's is asking people through the media what, exactly, they want in a bank.

The latest campaign began with 10 days of anonymous newspaper ads in St. Louis. Each ad was designed like a coupon for consumers, to "send the bank a statement," without identifying the bank. Readers could write down ideas or comments on the supplied blank or call a toll-free number where operators told them they had reached the Consumer Banking Study Line.

Callers who inquired were told that Boatmen's was sponsoring the project. Operators further explained that the bank was planning a new range of services and wanted consumer comments.

Now, in the second leg of the St. Louis effort, Boatmen's has attached its name to a full-fledged television, radio, print, outdoor, and point-of-purchase campaign, again asking for suggestions from customers and noncustomers. Comments are reviewed by a group of employees and managers who respond to the individual within 24 hours, said Boatmen's senior vice president Larry D. Bayliss.

> **"We did get about 100 comedians who wanted us to put a bank in the backyard."**
>
> **Larry D. Bayliss**
> *Boatmen's Bancshares Inc.*

Ideas delivered through bank suggestion boxes, telephone calls, and the mail, he said, have ranged from extending banking hours and express lanes to building at new locations. Each comment is circulated throughout the bank for review.

The campaign follows market surveys that contacted about 4,000 individuals. "We realized we had hit on an idea," Mr. Bayliss said. "We asked all of these people what they thought of banking, and this became a great way to extend it to everybody.

"We sincerely thought people would tell us what they want from a bank, and they are" doing so.

"Of course, we did get about 100 comedians who wanted us to put a bank in the backyard or at the end of their street, or who wanted a hot tub, free money, those kinds of things," Mr. Bayliss added.

Customers' Responses Prompted New Relationship Account

The most common consumer request in the St. Louis market has been for a more meaningful tie between accounts.

After a review of the number of relationships customers have with the bank, Boatmen's structured a relationship account for people who use a savings account, checking account, and Boatmen's MasterCard. Those customers are now eligible for discounts on auto loans and reduced rates on safe deposit boxes, and the bank is exploring other ways to solidify the relationships.

Service improvements, in areas such as telephone inquiries, have also been instituted on the advice of customers. Mr. Bayliss is guarding the campaign's full statistical results but claimed it has netted new customers.

Precampaign Research Found Desire for Responsiveness

Research before the campaign began indicated that Boatmen's was the most dominant retail bank in Missouri but noted that "individual customers wanted their bank to be responsive to them," Mr. Bayliss said.

When the campaign was begun in St. Louis, Boatmen's expected that its second part, carrying the bank's name, would produce the most responses. But the initial teaser ads elicited strong response rates, the bank said.

The campaign now is in its early stage in Memphis; Springfield, Mo.; and some Illinois markets.

Funny Ads Tested in Kansas City Market

Boatmen's has assets of more than $15 billion in its banking operations and $42 billion in trust. It operates a network at 150 Missouri sites and 50 more in its tristate area.

The St. Louis company is testing a variation of the campaign in the competitive Kansas City market, where several other bank holding companies are headquartered and Boatmen's is considered more of an outsider. Its funny ads about bad banking experiences have not matched the response rate of the suggestion campaign, insiders said.

This has been the largest media campaign in Boatmen's history, Mr. Bayliss said, and the company plans to build on it for the foreseeable future. TBWA Kerlick Switzer & Johnson, St. Louis, handles advertising for the banking company.

Ms. Franzoni is a freelance banking reporter based in Springfield, Mo.

Other Companies Entered the Field Earlier

Continued from page 1

Service Link declined for competitive reasons to reveal the telecommunications companies with which it does business. But she said the list includes the "largest long-distance providers other than AT&T."

MCI Communications Corp. and U S Sprint are AT&T's major long-distance competitors. Pay-telephone providers, operator services providers, and oth-issuers are claiming some successes of their own in limiting inroads by the AT&T card.

Cardholders who rely on a telephone company that employs U S West for its billing needs will be able to pay for calls by running their Visa or MasterCard through magnetic readers found on some pay phones. Or they can give their card numbers to phone operators and wait a few seconds for authorization.

Credit Card Calling

"The bottom line is that consumers can now charge calls to their credit cards," the spokeswoman said.

U S West Service Link is a subsidiary of U S West Communications – an Englewood, Colo.-based regional Bell company formed after the 1984 breakup of American Telephone & Telegraph Co.

Comerica and U S West began testing the project last month. They are now promoting the service to telephone companies that do business with U S West.

The U S West deal is the latest in a series to permit general-purpose credit cards to function as calling cards.

Recent AT&T Product

AT&T's Universal card, which combines an AT&T calling card with either a MasterCard or Visa card, was launched only five months ago. Similar arrangements include U S Sprint's affinity marketing program with the banking subsidiary of State Street Boston Corp. and a relationship between People's Bank, Bridgeport, Conn., and Southern New England Telephone Co.

In addition, Visa U.S.A. and MasterCard International have teamed up with MCI Communications to let member banks enhance their credit cards. The programs, known as Visaphone and MasterPhone, let MCI customers charge long-distance calls to their Visa and MasterCard accounts.

Citicorp, the nation's largest bank card issuer, has joined the Visaphone program and plans to align itself with the MasterCard version soon. Once a bank agrees to participate in Visaphone or Masterphone, its cardholders must enroll in the programs by phone or mail.

Noting Competitors

"This program puts us in direct competition with the Visaphone and Masterphone programs that Visa and MasterCard are piloting," said Mr. Steger of Comerica. The associations' programs with MCI Communications make it unlikely that MCI will take advantage of the Comerica-U S West service, he said.

A spokesman for Visa in San Mateo, Calif., said the association would need more details on the Comerica program before it could comment. MasterCard International said it could not comment before press time. □

AT&T Universal Card Finds Success and Hot Competition

By YVETTE D. KANTROW

NEW YORK — Though observers have proclaimed the AT&T Universal card an unabashed success, bank card issuers are claiming some successes of their own in limiting inroads by the AT&T card.

Citicorp led an industry effort that forced AT&T to discontinue a print advertisement for the card, according to Richard J. Srednicki, general manager of bank cards for Citicorp.

AT&T Ad Pulled

Referring to payphones where consumers can charge calls, the ad said the AT&T card was accepted at 200 million more locations than other MasterCard and Visa cards.

"We reacted fairly strongly against that," Mr. Srednicki said. "When you sign up with [MasterCard and Visa] you get the assurance that all cards are accepted equally." MasterCard and Visa are accepted at more than 7 million locations worldwide.

Citicorp complained to MasterCard and Visa about the ad's content, Mr. Srednicki said, and AT&T pulled the ad.

A spokesman for AT&T Universal Card Services Corp. in Basking Ridge, N.J., confirmed that the print ad was replaced after one week in March.

"We replaced some of the ads for creative reasons," he said. "We thought others were creatively superior to ones that were running earlier.

"I'm not discounting that someone took offense to the ad," he continued, "but no formal complaints were made."

Recruitment Battle

AT&T has also received glowing reviews for its initial issuance after a splashy introductory campaign. The communications company recently said one million cards were issued in the first 78 days.

But Citicorp signed up 1.2 million domestic cardholders during that time, Mr. Srednicki said. Citicorp has 27 million MasterCard, Visa, and Diners Club cards outstanding in the U.S.

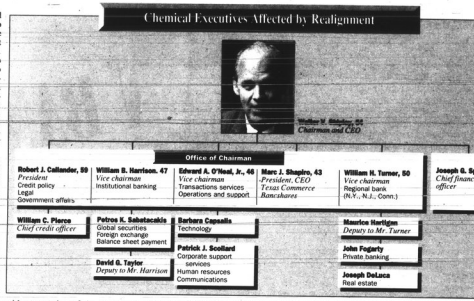
Younger Executives Advance in a Shake-Up at Chemical

Continued from page 1

legal and government affairs will transfer to Mr. Callander, who will focus on oversight of the company's risk management and Third World debt activities.

Mr. Callander's elevation to president "makes very clear who the No. 2 person in the organization is," Mr. Shipley said in a telephone interview. The president's post at Chemical has been vacant since Thomas Johnson left last December to become president and chairman-designate of Manufacturers Hanover Corp.

Mr. Shipley, noting his age, said that anyone handicapping a run to replace him was in for a long race. "I place a very high priority on a big complex company like this having a great deal of teamwork at the top," he said.



The Real Powers

But bank insiders said the real power below Mr. Shipley now lies with the new vice chairmen and with Mr. Shapiro. Together, they have functional control of the company's chief businesses – New York regional banking for retail and middle market customers; Texas regional banking; institutional banking; and technology.

Mr. Turner, a 28-year Chemical veteran and former head of its Middle East and Africa group, appears to be a clear winner in the realignment. By appending Chemical's retail branch network in New York, New Jersey, and Connecticut into his middle-market unit, he has responsibility for the most profitable part of the institution.

Mr. Harrison, the head of institutional banking, corporate finance, and correspondent banking, also expands his territory with assumption of the bank's capital markets, balance sheet, and trading activities. He has been with the bank since 1967.

Some Clout Diminished

Mr. O'Neal, who was considered a protege of Mr. Johnson, lost much of his clout by giving up the retail network in New York. However, a bank spokesman said he continues to run the company's credit card, mortgage, and dealer and consumer finance businesses. Mr. O'Neal, who joined Chemical in 1969, also inherits Mr. Turner's financial services division, which offers cash management and other noncredit services to Chemical customers.

Texas Commerce's Mr. Shapiro has been considered a comer ever since Chemical purchased the once-troubled bank in 1987. Texas Commerce climbed into the black over the past 12 months, and has reduced its nonperforming assets for eight consecutive quarters.

Chemical's stock was trading at $23.50, up $1, in afternoon trading on the New York Stock Exchange Wednesday. Analysts attributed the rise to increases in oil prices that should benefit Texas Commerce rather than to the announcement of a new management structure.

If Mr. Shapiro's shepherding of the Texas franchise has made him a contender, Chemical's troubled real-estate lending area has made an apparent also-ran of Maurice H. Hartigan, a former member of the management committee.

Under the new alignment, Mr. Hartigan has relinquished control of the realty group to become a deputy to Mr. Turner at the regional bank. One of his lieutenants, Joseph DeLuca, will manage the real estate area. At June 30, Chemical reported almost $5 billion of foreclosed property and leases.

Petros K. Sabatacakis, another member of the now-defunct management committee, continues to oversee balance-sheet management and capital markets activities, but adds oversight of securities sales and trading and foreign exchange. He now reports to Mr. Harrison instead of to Mr. Simmons.

Role as Deputy

David G. Taylor, a former member of the management committee who had run securities and foreign exchange sales and trading, was named Mr. Harrison's deputy. □

COST CONTROL
Consultant Helps Pinpoint Ways to Improve Executive Efficiency

By JEFFREY MARSHALL

Some forward-thinking banks are trying to cut costs by measuring and enhancing the productivity of their officers.

The costs of operations such as item processing or statement reconciliation are relatively easy to track. But an officer's inefficiency and the expenses that result are tougher to gauge.

Nonetheless, First American Bank of Georgia is trying to do just that. It recently concluded a pilot project aimed at getting more out of its senior staff.

A Twofold Approach

The $2 billion-asset bank, a unit of the $12 billion-asset First American Bankshares of Washington, D.C., worked with productivity consultant RKM to identify potential cost savings. First American asked the Atlanta-based firm to pinpoint areas with room for improvement, including commercial lending and trust operations.

"Their approach here was twofold," recalled Mark Boison, senior vice president and manager of corporate banking at First American. "They did some traditional consulting, where they talked with people and tried to pull out ideas. The other theme was to analyze what was almost a time-and-motion study, where you have officers fill out daily work sheets that classified what they were doing into categories."

The latter approach enabled First American to identify management activities that could be more efficiently performed by support staff. Ideally, the goal was to assign tasks such as hunting for misplaced paperwork, copying documents, typing, and other clerical work to secretaries rather than high-priced executives.

The goal was to assign such tasks as hunting for misplaced paperwork, copying documents, and typing to secretaries rather than high-priced executives.

Time-Trimming Ideas

The activities of 12 commercial lending officers and their administrative assistants were tracked over several days, Mr. Boison said. RKM analyzed the data and formulated some 30 time-trimming ideas.

"The majority of those were applicable, but there were some we weren't comfortable with," Mr. Boison said.

In an effort to save traveling time, for example, First American was advised to assign loan officers by geographic area, a suggestion Mr. Boison said wasn't workable.

But the analysis did turn up several ideas the bank has put into service. He noted that customer research is delegated to administrative assistants more often, and that the credit department is more frequently asked for help in processing customer financial statements.

The program also pushed First American to change some management procedures.

For instance, loan officers now dictate notes from their customer calls into dictating machines, Mr. Boison said, an approach that promises to cut down the time it takes to draft reports. Previously, he said, the officers wrote on legal pads when reconstructing their calls, an inefficient, time-consuming process.

The analysis also prompted the bank to reevaluate its use of technology, Mr. Boison said. For example, because of suggestions about First American's inefficient use of personal computers, the corporate banking department will install computers and printers to replace typewriters, he said.

"We expect to get enormous efficiency" from the switch, Mr. Boison added. He declined to project the total savings the computerization will generate, but he said he expects them to be considerable.

Top-Down Efficiency

RKM president Thomas Karson looks at it this way: If a banker earning $75,000 spends 30% of his time on nonproductive work, he will cost the company 30% more on an annual basis.

Efficient officers also set a good example for their subordinates, Mr. Karson said. Improving productivity at the top inevitably has a positive effect throughout an organization.

"Banks operate from a top-down management system," he said. "The line staff is apt to emulate the productivity level of their superiors." □

COMMENT / By George Freibert

Bankers Have Some Leeway To Manage Examinations

Arguments about the appropriate level of government supervision and intervention in banking have raged since the early days of the nation.

Debate over the existence and role of the first Bank of the United States and the second Bank of United States was an early demonstration of controversial nature of bank supervision. Those government-controlled banks had supervisory and disciplinary roles reaching into the private banking sector.

Supervision Welcomed

Both banks arose during times when there were banking problems and the public wanted increased federal supervision. Both banks ceased operations when strong private sector institutions objected to their interference and control of the banking system.

An analogy exists today as the pendulum of bank supervision again swings to the right. The events of the 1980s have caused a more conservative outlook among regulators and many bankers.

In recent months much has been written concerning the severity and alleged arbitrary nature of some examinations. The focus of the current controversy is the examiners' treatment of real estate lending and some business loans.

Current examiner reaction to the events of the late 1980s was presaged elsewhere in the country during the early 1980s.

For example, in Kentucky and Tennessee, the failure of the Butcher banking chain caused a couple of dozen banks in Tennessee to be closed and to severe losses at other institutions in both states.

Participation Loans

The vehicle commonly used by the Butchers to siphon off large sums from their affiliated banks was the participation loan, a legitimate vehicle for welling off portions of loans. However, many of the Butcher participations were subject to severe criticism by examiners who exposed the loan participation shell game in early 1983.

An immediate result of this abuse of the loan participation was intense scrutiny by examiners of all such loans, particularly those acquired by downstream purchasers. The Penn Square and Continental Illinois failures, which followed the Butcher episode, were also notable for their poorly investigated and underwritten participations. Examiners who may have routinely "passed" participation loans before these problems, began to closely scrutinize all participation loans.

Similarly, before the problems of the Southwest, real estate and oil-based credits were among the best in the West, and until recently New England real estate was thought to be bullet proof.

The difference between institutions that survive or even prosper during difficult times and those that suffer mightily or fail is the difference in management. Management is the single most important factor in the success of every financial institution, and inadequate or poorly focused management is almost always the cause of failure.

Regulators have also come to recognize the quality of management is the most crucial factor in the safe and sound operation of a financial institution. To a great degree, regulators now grade management on the quality of the institution's policies, procedures, and control systems as well as on the financial condition and performance of the institution.

Many bankers believe that no matter what they do to prepare, they are essentially at the mercy of arbitrary examiners. Not so. There is a great deal the banker can do to manage and, in some cases, benefit from the examination process.

How to Manage Examinations

Since the regulatory experience begins with the examination and is largely based on its outcome, it is logical to explore ways to control the examination process for the purpose of minimizing its inherent criticisms.

The first step is preparing for the examination process. The banker must understand the examination from a regulatory point of view. The best place to begin that analysis is with the last report of examination.

Senior management and the board of directors should be thoroughly familiar with the contents of the last regulatory report of examination and any correspondence between the institution and the regulator since then.

Violations of law and regulations, adverse asset classifications, concentrations of assets, assets listed for special mention, and technical exceptions should be reviewed by appropriate committees or bank personnel, so these areas are corrected or strengthened where possible.

Document Corrective Actions

Corrective actions taken by individuals or committees should be thoroughly documented in board or committee minutes, internal memoranda, or through correspondence with the appropriate regulatory authority.

Failure to provide meaningful

See HOW next page

As a trust officer, you do a lot more than manage investment portfolios for your customers.

You're busy making asset allocation decisions. Handling the operations. Packaging and marketing your services. And continually providing all the investment options your customers are demanding.

The Trust Business. It's a Service Business.

Well, Fidelity can give you a hand. Consider Fidelity Trust Portfolios. The funds people know, from a name that's respected, and a program that makes sense.

Fidelity really understands the trust business!

As a leading provider of mutual funds to trust departments across the country, Fidelity offers a wide array of funds, including money market, bond, and equity funds.* Allowing instant diversification of product, Fidelity funds may be used as a convenient, inexpensive complement to your common trust funds.

We can help you provide the diversity that many of your trust customers are demanding these days, without adding expensive staff or systems. And spend more of your time and resources on the intangible, yet invaluable, part of your business...

Service.

COMMENT
How to Weather Regulatory Exam

Continued from page 11

follow-up on past examination criticisms is a clear signal to regulators that management is not concerned with regulatory criticism, is unable to affect correction, or does not understand the criticism. All of these reflect poorly on management.

Simply stated, if an institution has deficiencies listed in its previous examination report that have not been corrected to the greatest extent possible, management can expect little forbearance at subsequent examinations regarding those criticisms or new ones.

There is no excuse for failure to correct "objective" criticisms, such as missing or inadequate file documentation, sloppy record keeping, outdated policies, many types of violations, and untested disaster recovery systems.

Subjective criticisms, such as classified loans, some alleged violations, and inadequate capital, may be subject to best-effort correction. However, it should be evident to examining personnel

"Until recently, New England real estate was thought to be bullet proof."

that every effort has been made to correct these criticisms or that a good-faith effort has been made to show that the criticism is unwarranted.

Serious Criticisms

Several areas within the examination report are particularly important. Beyond the scheduling of asset classifications, violations, technical deficiencies, and other items that are listed in the report, the examiner, through his summary comments and conclusions, advises management and the board of directors of his major concerns regarding the financial institution.

Several matters that may be treated in the examiner's comments and conclusions merit the immediate and serious concern of management and the board. They include:

- Statements questioning the ability or depth of management;
- Excessive (meaning almost any) violations of law or regulations regarding insiders or other questionable insider conduct;
- A large column of classified assets in comparison to the capital structure and reserves of the bank;
- Repeat violations of any nature;
- An unwarranted amount of loans or other assets outside the institution's normal trade area;
- Serious liquidity problems;
- Inadequate capital.

For example, a report of examination that calls for a management study is a clear indication that regulators are not satisfied with some facet of the institution's management. Insider violations are the most egregious types of abuse from a regulatory standpoint.

After addressing examination concerns and becoming familiar with the report of examination, it is important that the staff of your institution have a basic understanding of the examination process.

A positive attitude toward the examination should be encouraged. A negative attitude evidenced by senior management will be reflected throughout the staff and probably in the report of examination itself.

Be sure your staff members understand the limits of their knowledge. It is important that bank personnel recognize examiner inquiries about matters that are not within their area of expertise. Such inquiries should be directed to personnel familiar with that particular area. Staff members must never guess or make statements if they are not sure.

"Many bankers believe that no matter what they do to prepare, they are essentially at the mercy of arbitrary examiners. Not so."

The most important aspect of every bank examination is the loan review. Therefore, the quality of loans and the documentation of loan files is of paramount importance. Credit files should be in proper order, arranged to facilitate review, and pleasing to look at, if possible.

The loan file should be sufficiently informative that an examiner/analyst can make a reasonable judgment regarding the loan or line of credit from the file itself. Officer comment sheets are especially helpful, particularly for problem loans.

The best-prepared portfolios are governed by strict, well-enforced policies and monitored up by a competent and independent loan review function. Many institutions retain experienced loan review firms either to conduct periodic reviews or to monitor the institution's internal review system.

The institution's book of minutes will also be studied in detail. Minute books should be thorough and well written, with sufficient detail to show that the board is exercising reasonable care over the affairs of the institution.

Board meetings of special importance, such as those in which a merger is considered or a proposed regulatory action is reviewed, may call for the attendance of bank counsel or other experienced professionals in the areas under consideration. Board minutes should be especially comprehensive and definitive as to the board actions in these instances.

Minute books should also reflect thorough consideration and review of regulatory reports of examination and other important correspondence with regulators. The reflection of receipt and review of audit reports is equally important.

All general ledger accounts, correspondent bank accounts, and subsidiary ledgers should be up to date, properly reconciled, and organized to facilitate use and review.

Once the examination has

COMMENT
How to Weather Regulatory Exam

Continued from page 12

commenced, 80% to 95% of the outcome will be determined by the bank's financial condition and the quality of its management. There is little that can be done about that after the examination has begun. However, there is a very important 5% to 20% "gray area" in which examiner discretion may be exercised based on nonfinancial data or findings.

It is the banker's mission to manage the examination to ensure that the gray area works in the institution's favor, not against it. Simply stated, the gray area is composed of attitudes, personalities, perceptions and, to some extent, cosmetics.

For example, credit files that are poorly organized, contain outdated documentation, and are difficult to review may cause a more critical examiner review than a file that is organized according to type of documentation, is purged of outdated material, and can be easily understood.

Likewise, if management is confrontational or argumentative, it will be perceived less positively by examiners than a professional and dispassionate statement of the bank's position. These are only two of many potential opportunities to take advantage of the gray area.

Some bankers feel the examination process is simply a tolerated nuisance. For others, however, it is an opportunity for a thorough review of certain aspects of the bank.

Whatever the banker's perspective, the examination process is a career for the examiner. To the skilled and motivated examiner, the examination process is one of discovery and a chance to interact with management to make improvements.

"A negative attitude evidenced by senior management will be reflected throughout the staff, and probably in the report of examination itself."

Examiner Has a Stake

To a great extent, future promotions for the examiner are based on performance in conducting examinations. An examiner's performance in handling problem situations is an especially important factor in promotions within the regulatory agency. Thus, there is often a strong incentive to find problems.

Regional officials of the Federal Deposit Insurance Corp., the Office of the Comptroller of the Currency, the Federal Reserve, state commissioners, and other supervisory personnel have discouraged the negative approach to the examination process. But it does exist among some field personnel, and it can prejudice the outcome of examinations.

It is the banker's challenge to recognize this attitude and deal with it effectively. Being prepared for the examination goes a long way in defusing a potentially negative attitude.

The product of the examination process is the report of examination, and it is the single most important regulatory tool. The report is the regulator's primary source of information about the bank.

Other sources of information, including periodic reports and correspondence, are viewed as less reliable for regulatory purposes because they are generated by bank management and may be less objective and less comprehensive than the report of examination.

Since each examination report is relied upon until at least the time of the next examination, it is all the more important that the information in that report reflect as favorably as possible on the bank.

Documentation Is Paramount

It is therefore important that policies and documentation are complete, both at the corporate and at the transactional level. Examiners are documentation oriented; they will rely on a loan officer's written memorandum in a credit file and will give more weight to that memorandum than they will to the same oral comments made by the loan officer during loan discussion.

"Management is the single most important factor in the success of every financial institution."

The same philosophy applies to written policies and procedures. Although an institution may rapidly follow well-defined policies and procedures, if those policies and procedures are not put in writing, they will not be viewed as adequate by examiners. □

Dollar Down in July, Atlanta Fed Reports

NEW YORK — The dollar lost 2.2% of its value during July, as measured against a trade-weighted index of 18 major currencies, the Federal Reserve Bank of Atlanta said.

The Atlanta bank said the dollar index, on a monthly average basis, was 97.76 in July. The decline from 99.92 in June was the largest in any month since January 1989.

The dollar fell 3.4% against a subindex of European currencies and 1.4% versus a Canadian subindex. The dollar dropped 1.9% against a group of Pacific currencies, but only 0.6% against the Pacific subindex excluding Japan.

Cuba Is Seeking to Reopen Discussion of Foreign Debt

By PASCAL FLETCHER
Reuters

HAVANA — Communist-ruled Cuba, starved of hard currency and burdened by an $8 billion foreign debt to the West, says it wants to unblock stalled debt negotiations but cannot repay what it owes without fresh financing for its beleaguered economy.

"We're very interested in normalizing our situation with our creditors," said Raul Amado Blanco, vice president of the National Bank of Cuba, in a recent interview.

Mr. Amado said Cuba was waiting for a response from its Western creditors in the Paris Club about the next meeting to discuss the Caribbean island's convertible-currency debt, which stood at $8 billion at the end of September 1989.

Recent Figure Not Given

The central bank officer declined to give a more recent figure.

He said he expected Cuba to be invited by Paris Club officials for a meeting in early September following the recent handing over of data, delayed for several months, about the Bank on Cuba's economic prospects for 1990.

"At this moment, the ball is in their court," he said.

But Mr. Amado said Cuba, which has not received any significant fresh funds from Western creditors since it suspended principal and interest payments on its debt in 1986, felt it could not change its previously negotiating position.

"We continue to insist that if we have to pay as they are asking us, we have to receive fresh funds and/or new financing," he said.

Attitudes Called Inflexible

Mr. Amado described the position of the Paris Club creditor nations as, "rather inflexible" and said he believed political factors were an important element in this attitude.

"They are saying 'pay and let's see' but 'pay and let's see' in the situation that we have of really tight liquidity is not acceptable," he added.

Cuba's international reserves in convertible currency, described by the central bank as "extremely low," totaled 93.4 million pesos, or $120 million, at the end of September 1989.

"We can't be more flexible. If there are no positive gestures from our creditors, it seems to me it will be very difficult for us to maintain a constructive dialogue," Mr. Amado said.

Spain Is Top Creditor

Spain, currently locked in a dispute with Cuba over refugees at its embassy in Havana, is the island's main creditor.

Mr. Amado said Cuba was also discussing its nonconvertible currency debt with the Soviet Union, its main trading partner and political ally, and with other East European creditors.

Havana is currently negotiating a new economic cooperation agreement with Moscow, which includes talks on Cuba's $24.8 billion debt to the Soviet Union, Mr. Amado said.

... by country

JAPAN

Japan is not considering any immediate change in monetary policy in response to the current crisis in the Persian Gulf and its impact on oil prices, a senior Ministry of Finance official was quoted as saying Wednesday.

"Even though there is a crisis in the Middle East, Japan is much better stocked than during the last oil shock, so there is no reason for panic. There is absolutely no consideration being given to do anything special [with monetary policy]," a Ministry spokesman quoted the official as telling reporters.

Fears higher oil prices would fan inflationary pressures had heightened market fears Japan would raise its discount rate.
— Reuters

WEST GERMANY

The West German capital-account deficit narrowed to a provisional $4.45 billion in June from $7.11 billion in May, the central bank said.

In June 1989, the capital account deficit was $8.54 billion. The May deficit was revised from the $7.29 billion marks reported last month. **— Reuters**

HUNGARY

Hungary has reached an agreement with Japan on a $200 million structural adjustment loan from the Export-Import Bank. The new credit, following on a $200 million World Bank Eurobond issue and a $315 million standby loan from Deutsche Bank, is being seen as a sign of restored confidence in the country's economy. **— EMMA**

ITALY

A judge in Pisa has lifted an order freezing $796.2 million of Italian assets belonging to Lloyds Bank that had been in effect since June. The original sequestration order came after claims for damages from two Italians evolved into a complex story of Philippine promissory notes and food aid to Palestinian refugees. **— EMMA**

Mitsubishi's NY Chief on Mission

Seeks to Solve Cultural Problems to Help Growth

By JAMES R. KRAUS

Yutaka Hasegawa
Mitsubishi Bank

Watching Japanese children socializing only among themselves in a suburban New York City school proved to be an unsettling experience for Yutaka Hasegawa, senior executive officer at Mitsubishi Bank's North American headquarters and general manager of the bank's New York branch.

"It seems that Japanese make an effort to communicate when they are in the minority. But whenever we reach a certain percentage or feel we are in the majority, we stop trying and start sticking to ourselves. I see that happening here, even among Japanese schoolchildren, when they reach a certain proportion of the class," Mr. Hasegawa said.

Mr. Hasegawa, 50, who took over his new position last month, is worried about rising anti-Japanese sentiment and is making better communications between Japanese and Americans a top priority.

Changing the Language

As a start, he ordered that all internal documents at the bank be written in English, and not Japanese as they had been.

Yet, like other Japanese, he finds U.S. banking practices extremely innovative but difficult to deal with.

Take transactional and relationship banking, for example.

"In Japan, we're relationship-oriented. When we talk about relationships, we mean solid relationships – long term. But in the U.S., you go to the other extreme. A big percentage of U.S. corporations are transaction-oriented," Mr. Hasegawa said.

Risks Are Pointed Out

Although transactional banking relationships do prompt U.S. banks to be more innovative and offer corporate customers the lowest price possible, they also entail certain risks.

"The problem is that when there is an economic downturn, corporations don't have anyone to stand behind and support them," Mr. Hasegawa said.

The September collapse of Campeau Corp., the heavily indebted Canadian retail group, was particularly frustrating for Mitsubishi and other Japanese banks that participated in loan syndications to the company.

No Rescuers on Hand

"We looked around and asked who was, or were, the key banks. But there wasn't anybody to organize a rescue," said Mr. Hasegawa.

Mr. Hasegawa's father, Juzaburo Hasegawa, was Dai-Ichi Bank's last president before it merged with Nippon Kangyo Bank in 1971.

His father's godfather, Eiichi Shibusawa, founded Dai-Ichi bank, one of the first commercial banks to be set up in Japan in the 19th century.

Mr. Hasegawa, 50, joined Mitsubishi after college and first came to the United States in 1967.

His concern over the cultural gap has mounted as he moved back and forth between Japan and the United States and watched Japanese banks grow here.

"Five years ago, we were marginal players in U.S. banking. Since then, we've gotten a lot bigger, but we're still doing things the Japanese way," Mr. Hasegawa said.

Changing things will take time and a real solution to the cultural gap will not be found until Mitsubishi has a bicultural staff familiar with both Japanese and American ways, he said. □

Deregulation Seen as Blow to Italian Banks

By JAMES R. KRAUS

NEW YORK — Deregulation in Italy will cut into profits at Italian banks and threaten stability in the country's banking system, according to a recently released report by Moody's Investors Service.

"Italian banks are expected to encounter some difficulty in becoming more effective and competitive in world markets. Deregulation will put downward pressure on the banks' financial fundamentals as margins are eroded and as capital ratios come under pressure," Moody's stated in its report.

However, Moody's added that more difficult conditions would probably not put banks at risk from defaults, especially the large state-owned institutions.

Still Highly Regulated

Italy's banking system is likely to remain one of the most highly regulated in Europe for some time to come, Moody's stated.

That, combined with the slow pace of deregulation, will cushion the impact of change on Italian banks for some time.

In an effort to strengthen Italian banks, the Italian parliament in July authorized state-owned financial institutions to publicly increase their capital, allowed government-owned banks to become joint stock companies, and offered tax incentives for mergers.

However, the new banking law allows the government to retain a 51% stake in its banks.

Most Are Government-Owned

The Italian government owns most of the country's banks, including large institutions such as Banca Commerciale Italian, Credito Italiano, and Banca Nazionale del Lavoro.

The Moody's report criticized the government policy of naming the heads of banks through political patronage as well overstaffing and high overheads at Italian banks. □

Loan Quality, Real Estate Problems Hurt Profits in Southeast

Continued from page 2

Middle Atlantic banks followed by Richmond-based Wheat, First Securities Inc., earnings per share were down 38%, on average, from a year ago. Even more disturbing, assets classified as nonperforming have increased 32.2% since the end of the first quarter.

Wheat First analyst Anthony R. Davis said nonperformers for these 35 banks have now reached a 13-year high, with the group average at 1.46% of total assets. The comparable ratio for 1977 was 1.5%, which came at a time when many Southern states were mired in a severe real estate recession.

Mr. Davis said the situation today was much better than in the mid-1970s, in part because the recent wave of targeted real estate exams conducted by the Office of the Comptroller of the Currency has forced the banks to build reserves in anticipation of trouble. For Wheat First's 35 banks, reserves now cover about 80% of problem assets, compared with 60% in 1977.

"The banks' propensity to deal with the issue up front is better this cycle," Mr. Davis said. "We have a bottoming or firming of real estate markets in many places. On the other hand, we've really put in a lot of insulation going forward to deal with it."

Most large Southeastern banks underwent OCC examinations in the first quarter and took huge loan-loss provisions, with the result that their second-quarter earnings look good by comparison. Barnett's results were down 9% from the year before, but up 277% from the meager earnings of $15.5 million reported in the first quarter.

Weakening real estate markets in the Washington area played a major role in the poor results from Virginia banks.

Atlanta-based Citizens and Southern Corp. posted net income of $57.7 million, down 1% from the second quarter of 1989 but up 39% from this year's first quarter.

Sovran, Signet, and Crestar, on the other hand, did not complete their OCC exams until the second quarter, which partially accounts for their poor results. Sovran, for example, was forced to increase its second-quarter loan-loss provision by $66.8 million to $264.7, a 33% surge from the first quarter.

At Crestar, the loan-loss provision grew by $29.3 million, or 268%, and at Signet by $26.9 million, or 29%.

Weakening real estate markets in the Washington area played a major role in the poor results from Virginia banks. After a recent survey of the region's commercial and residential real estate, Shearson Lehman Hutton Inc. advised investors to be cautious of Signet, Crestar, and even the well-regarded Sovran.

"As the real estate economy weakens in Virginia, even Sovran may have some difficulty avoiding further credit quality problems," wrote analyst Katherine Hensel, noting Sovran's 13% loan exposure to real estate construction and 6% exposure to commercial mortgages.

In Florida, real estate problems are particularly evident at Southeast Banking, which has run up cumulative losses of $92.8 million in the past three quarters. After its second-quarter loss of $21.8 million, the Miami-based company announced an agreement with federal regulators to boost its capital by about $10 million at yearend and to strengthen its real estate lending, credit review, and reserve policies.

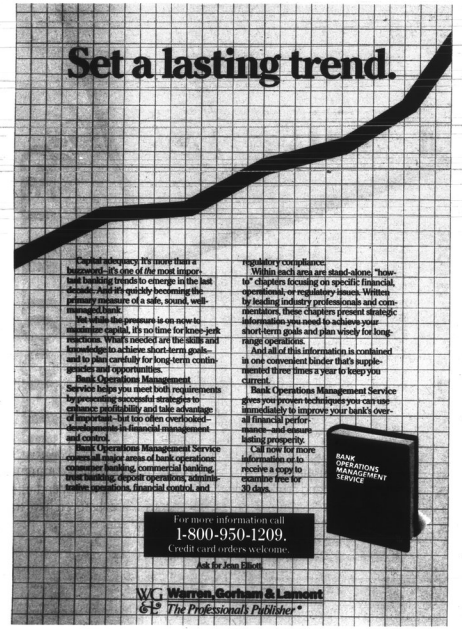
"There isn't any question that Florida real estate markets are soft," said Timothy G. Rayl, an analyst with Williams Securities Group Inc. in Tampa. "Southeast Bank managed to find some of the worst loans in the worst markets. In Barnett's case, they cover the whole state and therefore, sooner or later, any softness is going to impact them."

Trouble on I-95

Mr. Rayl identified the Interstate 95 corridor from Palm Beach south to Miami as the state's most troubled real estate market. Most of Barnett's $34 million in second-quarter chargeoffs came from this part of South Florida, and Southeast Bank is headquartered there.

Looking ahead to the rest of the year, Gerard J. O'Meara Jr. of the Robinson-Humphrey Co., said he expects quarterly loan-loss provisioning in the Southeast to be above normal levels. But otherwise, the Atlanta-based analyst said, the region's banks may have survived the worst that the regulators could throw at them.

"For the most part, earnings power has not been impaired directly" by the Comptroller's office exams, Mr. O'Meara said. "Significant additions to reserves can be characterized as one-time events." □



Liberty National Wins Bid for Retrial

LOUISVILLE — Liberty National Bancorp said the Fayette Circuit Court granted a motion for a new trial in a case involving its principal subsidiary, Liberty National Bank and Trust Co., and real estate developer Archie Donaldson.

On Aug. 28, 1989, Liberty lost a jury trial that resulted in a $7 million interest judgment against it. The bank said another verdict offset the jury award by about $2.8 million.

The company said it believes it will be successful in any retrial but did not elaborate.

— Reuters

If you don't know who your market is, how can you show you're meeting its credit needs?

You will be examined for CRA compliance, no question about it. And the first thing the regulators will look for is a map delineating your local community — just check item #4 of the OCC's January 12, 1990 Banking Bulletin.

It's one of the few things about the CRA that you can act on with certainty.

If you don't take this first step, you're going to have a tough time convincing your regulator that you're trying to comply with the CRA requirements. We can help make sure you do it right.

The *Sheshunoff™ CRA Market Definition Service* will give you maps that meet CRA standards. And we'll supply demographic information designed to show you who your market is — by age, income, and ethnic background. There's even data on home ownership, deposits and investments, and growth trends. So you can establish and evaluate credit and community development programs for your local markets that make sense.

Best of all, as CRA compliance becomes more standardized and specific, we'll continue to help you conform.

We've been helping banks stay profitable and in compliance since 1971. So we know how to help you start meeting the minimum standards without spending a penny more than you have to.

Take step one. To get your maps and reports today, call us.

Government Loses Case on Treatment of S&Ls' Goodwill

Continued from page 1

dollars in claims.

Citing data for the 2,505 surviving thrifts in the private sector, an Office of Thrift Supervision spokesman said they have $12.4 billion of goodwill on their books. Almost all is supervisory goodwill, an intangible balance-sheet item that regulators allowed some thrifts to accumulate as they acquired insolvent institutions in the 1980s.

The supervisory goodwill, representing the insolvent institution's negative net worth, received lenient treatment from federal regulators seeking an inexpensive way to deal with insolvent institutions.

In a little-noticed but potentially far-reaching decision handed down July 27, U.S. Claims Court Judge Loren A. Smith in Washington said the lenient treatment of goodwill permitted by the Federal Home Loan Bank Board in the 1980s could not be undone by the Financial Institutions Reform, Recovery, and Enforcement Act of 1989.

Impact on Bailout Cost

"The government faces very serious, retroactive money damages that will add significantly to the cost of the bailout," said Michael Carvin, a lawyer at Shaw, Pittman, Potts & Trowbridge, which represented Winstar Corp. of Windom, Minn., in the Claims Court case.

The judge said that the government effectively entered into a contract when it agreed to permit institutions that acquired sick thrifts to amortize the resulting goodwill over a long period of time.

Congress remains free to change the regulatory treatment of supervisory goodwill, Mr. Smith said. But he added, "the government may be compelled to pay for the results of its actions, especially when in so doing the government actually is paying because it received a benefit."

Mr. Smith asked lawyers for the government and the thrift holding company to submit additional briefs "which are necessary to determine liability."

If the judge awards money damages to Winstar Corp., the government is likely to appeal.

Winstar, the parent of the failed United Federal Savings and Loan Association, did not specify the damages it expects. But Mr. Carvin indicated the owners of the holding company would seek at least the $2 million-plus interest and other damages.

Judge Loren A. Smith said the lenient treatment of goodwill permitted by the Bank Board could not be undone by the reform act.

The case is one of a number of lawsuits involving supervisory goodwill, which thrifts are required to phase out of their capital calculations by the end of 1994.

Groundbreaking Case

The Winstar case was the first to be brought in U.S. Claims Court, a specialized body that hears claims against the government.

When the thrift-bailout law was under consideration, the amount of supervisory goodwill was estimated to be $25 billion or more. How much the government might ultimately be expected to compensate thrifts is not known.

Mutually owned thrifts, for example, have no equity owners. While the managers of a surviving mutual might seek damages that could be added to the thrift's capital base, a thrift already in conservatorship might not be able to make a claim, thrift lawyers said.

An OTS spokesman, while stressing that the agency is not a party to the Winstar suit, said he believes the claims court erred in its judgment that a contract was violated.

A Question of Contracts

Judge Smith said the Winstar case involved "a garden-variety question of whether express or implied contract existed." He said the thrift owners relied on memos from the Federal Home Loan Bank Board which promised a long amortization period. They presented "undisputed evidence" that a contract did exist, the judge found.

There is no basis, he added, for the government's position that the memoranda "merely were representations of then-existing regulatory policy.

"Rather, they illustrate the reality that the promise of continued treatment of goodwill as a capital asset that could be amortized over 35 years was a negotiated and critical term of this particular transaction. It was critical because it was clear that without it no purchaser would have engaged in this transaction," he added.

The lawyers for Winstar, Mr. Carvin and Charles J. Cooper, previously fought a separate goodwill case that resulted in a court finding that M. Danny Wall had been unlawfully installed as director of OTS. □

Survey Points to Recession, but Fed Is Stymied

Continued from page 1

rise will impose additional hardships on the U.S. economy but will not result in a recession.

Foreign Pressures Prevail

Nevertheless, the forces of interest and resulting inflationary pressures are forcing the Fed to keep its hands off the economy for now, analysts said. For example, if West Germany and Japan boost rates sharply to offset the inflationary impact of higher oil prices, that could prevent rates from in the U.S. and aggravate any U.S. downturn, they said.

Another consideration, Wells Fargo Bank senior economist Gary Schlossberg suggests, is that the Fed will be eager to avoid validating any future increases in oil prices by easing short-term rates too quickly.

For bank lenders, who in general have been tightening credit and raising loan standards all year, the results of the beige book survey seem clear. In all but the midwestern Fed districts and some pockets of the West, credit remained tight and many banks reported little or no growth in most lending sectors.

Commercial real estate and home construction lending, especially, were stated in the survey as no-growth areas as banks responded to slowing regional economies with tougher credit standards.

Construction Goes Begging

New credit for construction was hard to obtain in many areas, the Fed report said, but the reasons varied from excessive inventories of homes for sale to tougher federal regulation of savings and loan companies that restricted loans to any one borrower.

In the Boston district, representing the struggling New England region, half of the retailers surveyed by the Fed said they had encountered reduced availability of bank credit as a problem. And 60% of manufacturers surveyed in the district described their outlook as "very cautious" and said they expected "tough conditions" lasting into 1991.

In New York, the "glut of homes for sale is said to be the major deterrent to building, even though the shortage of finance for acquisition and construction loans appears to be spreading," according to the beige book.

In the St. Louis district, the Fed reported that credit had slowed significantly from a year earlier in the period from mid-May to mid-July. Total loans at the district's 11 largest banks increased 0.7% over this interval, compared with 2.3% expansion during that two-month period in 1989. □

The Economic Slowdown, By Fed District

Boston: Hardest hit of districts; retailers, manufacturers expect tough conditions through 1991. Half of retailers cite problems of credit availability.

New York: Credit shortage spreads for acquisition and construction loans, while homebuilding slowdown reaches upstate New York. Manhattan office vacancies climbing.

Philadelphia: Most types of bank lending flat; slow growth continues in credit cards and home equity loans. No new commitments for commercial real estate deals.

Cleveland: Consumer spending slump bottomed in May, retailers say. Funds for single-family housing available, but less so for multifamily construction.

Richmond: Loan activity steady since mid-July, but 40% of lenders cite declining quality of loan applicants.

Atlanta: Increasing pessimism among businesspeople. Consumer lending, especially auto loans, down; credit card delinquencies rise.

Chicago: Slower growth, but bankers say overall credit standards are unchanged since start of 1990. Growth in commercial lending below expectations; small builders hurt by thrift one-borrower limits.

St. Louis: Credit growth slowed from mid-May to mid-July. Multifamily construction has largely stopped.

Minneapolis: Labor markets, retail sales, and tourism grow, but signs of slowdown in housing and commercial construction. Agriculture appears strong.

Kansas City: Slightly higher loan demand in July, led by consumer and home equity credits. Moderate overall growth with recent pickup in energy sector.

Dallas: Slow growth, though retail sales outpace the nation. Dry weather frustrating farmers.

San Francisco: Wide variations in loan demand within district. General deterioration in construction and real estate markets except in Las Vegas, Sacramento, parts of Oregon, eastern Washington, Idaho, and Utah.

Fed to Check Oil Before Easing, Smick Says

Reuters

NEW YORK — The Federal Reserve Board is unlikely to ease interest rates until the course of oil prices becomes clearer, but West Germany's economy is showing its heat by the costs of unification with East Germany and by the falling Japanese yen, which could hurt its trade balance.

"Though the Fed may eventually ease, quick action is hardly a near-term possibility for financial markets," said the report, a copy of which was obtained by Reuters here.

The consulting firm said that Iraq's invasion of Kuwait eased the pressure on Fed Chairman Alan Greenspan.

"Don't forget that the Iraqi crisis was no less than a godsend to the Greenspan Fed, which was in the process of being set up by the Bush administration as the 'fall guy' in an economic downturn," the report said. "Now, what could have been a Greenspan recession, if it failed by Greenspan, will be a Saddam Hussein recession."

"What could have been a Greenspan recession . . . will be a Saddam Hussein recession."
Smick Medley International

Smick Medley cited no sources in its report, but in the past the consulting firm's pronouncements on Fed policy have been considered authoritative by dealers on financial markets.

Prospect for German Rates

As for Germany, unification's inflationary potential in influence on trade of Japan's weakening currency could prompt interest rate increases, Smick Medley said.

"Add a worldwide oil price increase, and it is not surprising the Bundesbank, which had been slow in considering a rate hike, is beginning seriously to take another look," the consulting firm said.

Higher interest rates in Germany could attract foreign investment, sapping the already weak dollar. The Bundesbank policymaking council, however, is not scheduled to meet until September. □

Claims Allowed Against Epic's Mortgage Insurers

Continued from page 2

lower-court ruling that favored the insurers, "because papers in the insurers' possession indicated either that the oral representations in question were not true, or were at the least in conflict of the written statements."

Impact on Due Diligence

Christopher Wolf, an attorney for First National Bank of Maryland, Baltimore, which acted as trustee to the thrifts, said the ruling would result in "a heightened level of due diligence by third parties" in financial transactions.

Among the beneficiaries of the ruling is Trustbank Savings, Tysons Corners, Va., formerly Dominion Federal Savings and Loan Association, which said it expects to receive more than $7.8 million.

Also among the thrifts are Meritor Savings Bank, Philadelphia; Silverado Banking, Savings and Loan, Denver; American Savings and Loan Association, Anderson, Ind.; and Home Federal Savings Bank, Xenia, Ohio. □

Executive Help Wanted

Be a major player in the age of information.

Instant access to information is the winning edge in today's business arena. To help companies compete in world markets, we operate sophisticated information networks that cover more than 85 countries and span the globe with a single keystroke.

We need professionals who can make the rules instead of following them in providing fresh solutions to today's technical problems — and tomorrow's. If you're comfortable with decision makers in the financial community, consider one of these excellent opportunities.

EASTERN REGION MANAGER, BANKING
New York, NY

We need a take-charge managerial professional who can maintain high level client relationships in key accounts while directing the overall sales and service efforts in the region. You'll be responsible for the development, implementation and measurement of the region's geographic analysis, sales plans, and account selling strategies. You'll need sound knowledge of the financial community with a proven track record (seven to ten years) of conceptual sales in the information services/software solutions industry. Superior interpersonal and sales development skills are essential.

NEW BUSINESS DEVELOPMENT MANAGER, BANKING
Atlanta, GA

If you can truly understand a business's needs and successfully outline a partnership between senior executives and GE Information Services, you're on target for this position. To manage our new business effort, you'll need extensive knowledge of banking/financial institutions in the Southeast and demonstrated ability in high technology conceptual sales. A minimum of five to seven years direct experience is required.

APPLICATIONS DEVELOPER
New York, NY

Business savvy and excellent communication skills are essential to provide pre- and post-technical sales support to clients. A B.S./B.A. as well as five plus years of banking applications development with IBM, MVS, COBOL, CICS, and FORTRAN are also required. Mainframe and PC development are preferable.

If your future is in information services, your company should be GE. Generous compensation and extensive benefits are just the beginning. Send your resume with salary requirements to: GE Information Services, Dept. RCAB-8/7, 401 North Washington Street, Rockville, MD 20850.

Join One of the Country's Premier Consumer Banking Teams

Do you want to work closely with a team of enthusiastic marketing professionals and senior management? Put your talents to work as part of the country's premier consumer banking teams?

If you have consumer banking experience in product development and product management, you may be the one we're looking for. Central Bank of the South has a rare opening in its marketing department for a Manager of Product Development. We're looking for someone with the proven ability to generate growth in deposits, loans, and fee income through existing consumer products and the development of new ones. . . someone who is comfortable in a high-visibility position and works effectively with senior management.

If you possess these qualities, as well as a graduate degree in business and excellent communication skills— both written and oral — we want to hear from you. As our Manager of Product Development, you would report directly to the Marketing Director and serve as a catalyst between our team of product managers and senior management.

Central is a strong regional bank with offices throughout Alabama and Texas. And we're financially sound, with over $4.8 billion in assets. For the right candidate, we offer a generous compensation package, including excellent salary and relocation expenses. If you're interested in joining one of the country's premier consumer bank marketing teams, contact Jo Lynne Wilson, Employment Officer, at the following address:

Employment Services Division
Central Bank of the South
Post Office Box 10566
Birmingham, Alabama 36296

Be sure to include your salary history along with your resume. All responses will be received in strictest confidence.

PRESIDENT

Our client, the Massachusetts Bankers Association, is a 248 member trade organization representing banks and thrifts throughout the state of Massachusetts.

Reporting to the 28 member Board of Directors, the President will be responsible for the execution of its mission, which is to advance and represent to the fullest the interests of the members, and to effect the full comparability of competitive opportunities.

The President will formulate for the Board's approval all basic policies, programs and services which will further the Association's objectives.

This individual will represent the Association to the member banks, the media, and to state and federal agencies.

Qualified candidates will have a thorough understanding of the key issues affecting banking today.

The successful candidate will possess proven management skills and will have the interpersonal skills necessary to operate effectively with a disparate group of member presidents.

Our client offers an excellent salary and benefits package. For consideration, please forward your resume in confidence (no calls please) to:

DEALS

Trump's Bankers Grant 2d Extension on $20 Million Bridge Financing

By WILLIAM GOODWIN

Donald Trump's lenders have again extended a $20 million bridge loan while they work to complete documentation on a permanent bailout package for the troubled developer, bankers said.

The 30-day bridge loan, originally set to expire July 26, was extended until Aug. 3. The new deadline is this Friday, Aug. 10.

Pending Since June

Bankers said the additional extension was needed because of the complex nature of the transaction, but added that there were no substantive problems threatening the deal.

Mr. Trump's banks, numbering some 80, agreed in June to a bailout plan under which the developer would receive $65 million in new loans, and be allowed to defer interest payments on about $850 million of his existing $2 billion in bank debt.

The new loans are being made by Mr. Trump's four principal banks, plus several of his large New Jersey banks.

The four principal Trump lenders are the banking units of Citicorp, Chase Manhattan Corp., Bankers Trust New York Corp., and Manufacturers Hanover Corp.

The $20 million bridge loan, which will be repaid once the permanent financing is in place, was needed to allow Mr. Trump to meet a bond payment and avert bankruptcy.

A Tough Sell

Members of a loan syndicate led by Chase were among the toughest banks to bring on board the bailout plan. One of the syndicate members — Dresdner Bank of Germany — wound up being the only bank among all of the Trump lenders to reject the bailout package.

Despite the extra time needed on the permanent financing, other members of the Chase-led syndicate said they were not aware of any snags.

"It just took time to put together," one of the bankers said.

Moreover, there is no great sense of urgency now, one source said, because Mr. Trump's next big bond payment is not due until November.

The bailout plan must be approved by the New Jersey Casino Control Commission, which will hold a special hearing on the matter. A hearing date on the Trump Organization's petition seeking approval of the plan hasn't been set yet, but a commission spokeswoman said the plan probably will be considered sometime this month.

The commission Wednesday rejected a request by the Trump Organization to keep the petition sealed until the hearing. A Trump Organization spokesman could not be reached for comment on whether the decision will be appealed. □

RTC to Recover On Bakker Loans

By STEPHEN KLEGE

The Resolution Trust Corp. and several banks and thrifts stand to receive about 96 cents on the dollar on loans to Jim and Tammy Bakker's bankrupt Heritage USA development.

U.S. Bankruptcy Court in Columbia, S.C., recently approved the sale of Heritage, which is situated across the state line from Charlotte, N.C., to Morris Cerullo World Evangelism for $45 million. The Bakkers' Heritage Village Church and Mission Fellowship filed for bankruptcy in June 1987 in the midst of a sex scandal involving Mr. Bakker.

The Bakker organization filed for bankruptcy in 1987 amid a sex scandal.

The Resolution Trust Corp. was listed among the secured creditors as the successor to Sioux Valley Savings, a defunct Iowa thrift.

Also among the creditors was Home Federal Savings and Loan Association of Rock Hill, S.C.

Sale Expected in 4th Quarter

Executive vice president Herman E. Hayes said Home made about 10 loans for a total in excess of $9 million to various residential parties within the complex, including a seven-story condominium.

Home's loans were written down before the acquisition of the thrift this year by United Financial Corp. of Greenwood, S.C. The holding company said it would receive an after-tax gain of $2.3 million, or $1.07 a share, upon closing of the sale to Cerullo, which is expected in the fourth quarter.

Court documents also list Rock Hill National Bank; National City Bank, Minneapolis; and Fairfax Savings, Baltimore, among the secured creditors. □

Bank Stock Table Explained: The table lists in alphabetical order daily closing stock prices for the 225 largest publicly traded commercial banking firms and the 25 largest publicly traded thrifts as measured by the combined total of common shares outstanding (As of March 30, 1990, the market value cutoff for banks was $69.6 mil. and for thrifts $121.45 mil.) 52 Wk Lo: the rising 52-week high and low prices for the stock. PE: the price-earnings ratio: the current closing price divided by the trailing four quarters' earnings per share adjusted for latest announced earnings. Mkt. to bk: the ratio of the current day's closing price to the stock's book value, expressed as a percentage. Book value is adjusted for announced earnings and dividends. Cls: the price at which the stock last traded. If no trades for the day, the latest bid. All Bank and Thrift indexes: a weighted average of the top 200 banks in market value and the top 50 thrifts in market value, respectively. Highlights: the five largest percent gainers/losers in price, and ten volume indicators most shares traded and today's volume as a per centage of average shares traded daily over the past year.

Data source: SNL SECURITIES, Charlottesville, VA. 804/977-1600, produced the tables. Financial News Network, Vienna, VA, provides DML with the daily prices.

Libor Swap Yield Curve — **Wednesday, August 1, 1990**

Data source: Manufacturers Hanover Trust Co., New York

Description of tables: For lenders and borrowers in the interest rate swap market, the LIBOR swap yield curve is the benchmark interest rate used by active participants when arranging the exchange of fixed- and floating-rate cash flow streams of different maturities. For example, a fixed-rate lender holding a one-year fixed-rate loan and wishing to swap into floating would pay the one year rate at the end of a year in exchange for a floating-rate payment stream, usually 3-month LIBOR, paid and reset quarterly.

Dealers Shun U.S. Bank Debt In U.K. Market

Continued from *page 1*

only can virtually no banks issue new securities, but the action by dealers signals that most do not want to take risks by dealing in bonds in the secondary market either.

Investors that want to sell their bank debt will have to use the bond brokerage network in Europe, in which brokers try to match buyers and sellers.

About 20 Banks Involved

The suspension involves securities floated abroad by some 20 large U.S. banks in recent years, including many money-center banks. It does not affect similar securities issued by European banks.

Banks with Euro-Debt Outstanding

- Bank of Boston
- Chase Manhattan
- Chemical Banking
- Manufacturers Hanover
- Security Pacific

Banks that have European tranches outstanding include Bank of Boston Corp., Chase Manhattan Corp., Chemical Banking Corp., Citicorp, and Manufacturers Hanover Corp.

The firms that withdrew from trading with each other earlier this week are Bear Stearns International Ltd., Kidder Peabody Securities Ltd., Morgan Stanley International Ltd., and Merrill Lynch International Ltd., securities sources in London confirmed. The dealers declined comment.

Credit Suisse Stays In

Another market maker, Credit Suisse First Boston Ltd., said it did not participate in the trading suspension.

James Holland, a CSFB vice-president in charge of floating-rate note transactions, said: "It's our policy to maintain liquidity in securities. If other people wish to cease making markets, then that's their decision."

But the CSFB executive acknowledged that its competitors' move effectively had ended professional trading in U.S. bank issues, noting: "If everybody stops, there's not a lot we can do about that."

The firms' decision to quit trading in London follows increasing volatility in U.S. bank issues in the international bond markets in recent months, sparked by ratings downgrades and concerns over real estate and corporate exposures in the nation's banking system, securities sources said.

Many Worries

CSFB's Mr. Holland commented: "Worries have been building for several months and I believe the decision to stop trading among other firms was sparked by worries over the Gulf and the health of U.S. banking."

He added: "If the credit of banks deteriorates further, we will review our own decision on trading."

Other securities sources said fears that higher world oil prices would provoke a recession in the United States, further compounding the bad debt problems of U.S. banking, also played a part.

No Major Shock Felt

Mr. Holland said the trading halt did not come as a major shock in the bond markets. Dealing volumes in U.S. bank issues have been steadily dwindling and intermarket liquidity has already been drying up but "obviously, investors never like to see market makers pull out," he added.

Traders said that among "bombed out" American bank issues in Europe, where investors are particularly nervous over credit quality, is a $125 million Bank of Boston floating-rate note offering, due to mature in 1998. This issue has plunged to a currently indicated 55 versus a quote of 94 at the beginning of the year and a final maturity value of 100.

MARKET MONITOR

Standard & Poor's Corp. has affirmed its top rating for Rural Banking and Finance Corp.'s $200 million in Eurocommercial paper. The rating is based on the guarantee of the New Zealand government. Rural bank is the leading lender to New Zealand's farming industry.

The affirmation comes in the wake of the government's sale of Rural Banking in October 1989 to Fletcher Challenge Ltd., New Zealand's largest private-sector corporation. As part of the sale, the government agreed to guarantee the bank's Eurocommercial paper through Dec. 19, 1991. □

STOCKS

Most Bank Equities Aren't Growing in Value

By GORDON MATTHEWS

NEW YORK — How bad has it been for bank stocks? So bad that none of the country's top 50 banks have higher-priced shares now than a year ago and only a select group of 10 can boast any appreciation at all in the past two years.

During that period, a huge and unprecedented gap has opened between bank equities and most other stocks, according to Montgomery Securities Inc., San Francisco.

In the two years ended Monday, the shares of the 50 largest banks, ranked by assets, fell 24.3% in value while the Standard & Poor's 500 stock index was up 23.3% and the Dow Jones industrial average gained 28.2%.

"We are in uncharted waters when looking at the banks relative to the market," Virginia A. Adair, an analyst for Merrill Lynch Capital Markets Group, noted earlier this week.

Momentum from Larger Market

While bank stocks are down sharply this year, they joined the larger market Wednesday in rebounding from early fears about Iraq's invasion of Kuwait on news of a fallback in oil prices. Still, most banks remain at or near 52-week lows.

"There have been big questions about just what the earnings of banks are and about the quality of [loan] portfolios. Plus, the capital structure of the industry has had to be shored up," said J. Richard Fredericks, the Montgomery banking analyst.

More specifically, he said, banks have suffered from "lack of discipline" in pricing their products and have not adequately controlled expenses.

The performance of bank stocks relative to the S&P 500 index, a barometer of the overall stock market, peaked in 1986 and has been moving downward ever since, according to Mr. Fredericks' statistics.

Few Banks Buck Trend

Only 10 major U.S. banks have higher stock prices now than two years ago

	% increase
BankAmerica Corp.	61.3%
U.S. Bancorp	20.0%
First Wachovia Corp.	19.2%
NBD Bancorp	19.0%
KeyCorp	18.2%
Banc One Corp.	16.3%
NCNB Corp.	12.6%

Concentration an East Coast

Not surprisingly, the 10 worst performers are concentrated along the Eastern Seaboard: three in New England, and three in New Jersey alone.

Troubled Bank of New England Corp., Boston, has performed worst among the top 50 banks, falling 91.2%. Midlantic Corp., Edison, N.J., is next, having dropped 72.4%, followed by Southeast Banking Corp., Miami, which is off 68.6%.

The other New England banks are Shawmut National Corp., Hartford, Conn., off 67.4%, and well-regarded Fleet/Norstar Financial Group, Providence, R.I., off 65.5%. The other New Jersey banks are First Fidelity Corp., Newark, off 64.1%, and UJB Financial Corp., off 52.8%.

In the Capital District

MNC Financial Inc., Baltimore, is off 60.9%, and Signet Banking Corp., Richmond, is off 49.6%. The sole bank west of the Alleghenies on the list is Chicago's Continental Bank Corp., off 52.2%.

A number of banks retook some lost ground on Wednesday, with Wells Fargo & Co., moving up $2 to $63.875 near the close, Security Pacific Corp. gaining 62.5 cents to $30.75, and BankAmerica improving by 87.5 cents.

Among money-center banks, Bankers Trust New York Corp. was up $1.25 to $36.625 and Citicorp appreciated 62.5 cents to $19.375. Among superregionals, Banc One was up $1.25 cents to $28.625 □

AMERICAN BANKER

VOL. CLV NO. 156 Friday, August 10, 1990 155th year

An Equity Swap Is Considered Crucial for BNE

By TOM LEANDER

The $33 million second-quarter loss posted by Bank of New England Corp. did not conclusively signal whether the deeply troubled institution can rebound from staggering real estate loan problems. But it is looking as if the third quarter could be decisive.

By the end of September, the Boston-based company and its subsidiaries will have to increase its razor-thin 1.64% capital ratio, decrease its whopping 13% ratio of nonperforming loans, and convert a significant amount of its $700 million in outstanding debt to equity, thereby avoiding hefty interest payments.

With the $23 billion-asset company's options for raising capital running out and with an absence of operating income, an exchange with bondholders is becoming critically important.

Retiring all outstanding debt would free the company from about $60 million in interest payments a year. Some $28 million is due by Oct. 1. The next payment, $7.1 million, is due next Wednesday.

Need for Agreement Cited

"The holding company has to come to terms with the bondholders," said Gerard Cassidy, a securities analyst for Tucker, Anthony & R.L. Day in Portland, Maine.

"In light of the deepening banking crisis in New England, regulators will be hesitant to approve the interest payments [on the company's bonds]," he added.

A deal to swap all of the company's senior and subordinated debt for cash and securities could possibly increase its capital level to about 3% or 4%, one analyst estimated. Regulators had ordered the company to raise its equity level to 3% by May 31, but to date have not penalized the bank for failing to do so.

Exchange Offer Expected

"We believe an exchange offer for all issues of [Bank of New England's] debt is imminent," said Douglas Kandall, managing director of Balfour, Maclaine Capital Markets Inc., a brokerage house.

"We would regard the absence of an attempt to exchange as a sign of imminent seizure by the regulatory authorities," he said in a recent report.

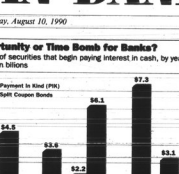
Opportunity or Time Bomb for Banks?

Amount of securities that begin paying interest in cash, by year. Dollars in billions



Source: McCarthy, Crisanti & Maffei, Salomon Bros.

Judgment Day for the Leveraged: Time to Start Paying the Interest

ANALYSIS: *Follow-up on the news*

By STEVEN LIPIN

The day of reckoning is rapidly approaching for many companies that used interest-deferred securities to finance recapitalizations or leveraged buyouts. For banks, that will provide both opportunities and dangers.

As the deadlines approach for billions of dollars in securities to begin paying interest in cash, leveraged companies that are doing well will probably seek to refinance the debt with bank loans, creating a large market for lenders.

But for companies doing poorly, the required payments could sap cash flow, threaten balance sheets, and weaken the position of existing bank loans senior to the debt.

The exotic high-yield securities that defer cash interest are a child of the LBO wave of the '80s. These instruments became popular because they temporarily took some of the pressure off the borrowers. One type, called payment-in-kind securities, enabled payments to made in the form of additional securities. Another type, zero-coupon bonds, deferred any payments for a number of years.

But starting in 1991 and in-

OTS Seeking $40.9 Million In Restitution From Keating

By DEBRA COPE

WASHINGTON — Stepping up its effort to salvage some cash from the ruins of Lincoln Savings and Loan Association, thrift regulators took action on Thursday to obtain $40.9 million in restitution from Charles H. Keating Jr. and five former directors of American Continental Corp., Lincoln's Phoenix-based parent.

T. Timothy Ryan Jr., director of the Office of Thrift Supervision, said the restitution amount is the largest ever sought from a single thrift, though it is dwarfed by the $1.1 billion racketeering claim that the Resolution Trust Corp. has filed against American Continental. The restitution tactic is designed to increase the pressure on Mr. Keating to account for his holdings.

"We are just trying to move on multiple fronts," Mr. Ryan said.

Poor-Mouthing Fails

"Charles Keating Jr. has amassed vast sums at Lincoln's expense, and he now claims he is broke," Carolyn Lieberman,

Analyst Testifies That Banks Need 'Breathing Room'

By ROBERT M. GARSSON

WASHINGTON — The commercial banking industry does not need forbearance from regulators, but it does require "a little breathing room" to adjust to the softening real estate markets, a prominent bank stock analyst told a House panel on Thursday.

But to do that, the agencies would have to build up their corps of examiners to ensure that banks do not simply "roll the dice," to recover from losses on their real estate portfolios, said Charles Cranmer, who follows banks for Shearson Lehman Brothers Inc.

Staffing Problem

"Regulatory agencies are woefully understaffed and are losing good people daily to the private sector," he said. "The cost to taxpayers now of a fully staffed corps of examiners would be more than offset by the money saved in loan losses down the

Analysts Expecting FDIC to Push Premiums Well Above 15 Cents

By BILL ATKINSON

WASHINGTON — Following hints from Federal Deposit Insurance Corp. Chairman L. William Seidman that banks' premiums could go higher than expected next year, several industry analysts now say the industry should expect a substantial increase — perhaps approaching the FDIC's legal limit of 19.5 cents for each $100 of insured deposits.

The FDIC board is expected to consider at its meeting next Tuesday an increase in bank premiums above the rise of 3 cents per $100 of insured deposits slated to take effect next year. The scheduled increase will bring the premium to 15 cents per $100, and the FDIC's total assessment income to $3.75 billion from $3 billion this year.

Maximum Not Expected

Most observers do not expect the premium to hit the 19.5-cent ceiling, but they see an increase well beyond the 15-cent mark as all but certain. Each one-cent increase in the rate adds $250 million to the bank insurance fund, which is expected to need replenishment as banks suffer from a slowing economy.

Under the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, the FDIC can raise the premium as much as 7.5 cents in one year.

But the agency might shy away from adopting the 19.5-cent rate because it would be politically unpalatable, said Bert Ely, president of Ely & Co., a Alexandria, Va.-based financial consulting concern. "If it goes to the final amount, that may raise complaints of gouging," he said.

Mr. Ely expects the FDIC to raise the premium to 18 cents per $100. Then the law would allow another 7.5-cent hike in 1992.

Agreement on Higher Level

Robert Litan, a senior fellow at the Brookings Institution in Washington, also said he would not be surprised if the FDIC board raised the assessment above the slated 15 basis points, but he is hard-pressed to be more exact.

"It is hard to know whether

RTC Loses Its Top Lawyer To Atlanta Private Practice

By BARBARA A. REHM

Rex R. Veal, the Resolution Trust Corp.'s top lawyer, is laying down his guns and going into private practice.

"My staff and I have been through a war for 18 months," Mr. Veal said Thursday, a few hours before the "soldiers" were to throw him a going-away party.

Mr. Veal, 34, is leaving behind the RTC's 60,000 lawsuits and moving to Atlanta to practice law with the firm of Powell, Goldstein, Frazer & Murphy.

Moving Closer to Home

Atlanta is just 100 miles south of Mr. Veal's hometown of Chattanooga, Tenn., and not much farther from Nashville, his wife's hometown. "I want to move back into the private sector and get closer to family ties," he said.

Mr. Veal said he leaves with mixed emotions. He is glad to be ditching the brutal hours and constant criticism of the bailout effort, he said, but will miss the battle and the people.

"A small core of us started in February of '89, and we've followed it on through," he said. "They are family, and I truly will miss this place. It was not a decision that was made easily."

He has "enjoyed tremendously" his work, Mr. Veal said, but "I think it's unfortunate that it is not recognized just how good a staff that we have."

Criticism of Agency Wearing Down Its Employees

John Douglas, Federal Deposit Insurance Corp. general counsel until last December and now in private practice with Alston & Bird in Atlanta, said the unrelenting criticism of the RTC is taking its toll on employees.

"Most of the senior people at the RTC feel that way," Mr. Douglas said. "They've got a hard job to do, and nobody thanks them for it."

Some concern exists that, when L. William Seidman leaves as RTC chairman, as he has said he will, the agency may be crippled as many staff members follow him out the door.

"I wouldn't want to predict the results of his leaving," said Mr. Veal. "The chairman is a one-of-a-kind person. He does in fact make our jobs a lot easier."

Commendation Expected from Oversight Board

At its meeting Tuesday, the RTC Oversight Board plans to take a rare step and commend Mr. Veal for his service.

"No, it's not a regular event," said John Bovenzi, Mr. Seidman's deputy. "But everybody recognizes Rex is responsible for getting 'legal' up and going."

Mr. Veal joined the FDIC's legal department in 1983. Early last year, Mr. Veal and other FDIC staffers began nursing along the nation's sick thrifts. William H. Reid was picked to run the agency's thrift task force, and he picked Mr. Veal as its top lawyer. After last summer's thrift bailout bill was enacted and the RTC established, Mr. Reidle became RTC resolutions director, and Mr. Veal came to the agency as special counsel.

Mr. Roelle and Mr. Veal first worked together in Knoxville, Tenn., where they handled the Butcher bank liquidation.

Three other agency lawyers who switched to thrift work in 1989 with Mr. Veal, and are therefore possible replacements, are Michael E. Tucci, Debra J. Slater, and Nancy J. Schucker. □

Colorado Piques Acquirers' Interest

Some May Emulate Norwest Deal for United Banks

Reuters

Colorado acquisition opportunities have attracted a number of banking companies besides Norwest Corp., which recently announced a deal in the state, but apparently no one else is ready to buy.

Minneapolis-based Norwest recently agreed to buy United Banks of Colorado Inc., the state's largest independent banking organization, with $6.3 billion in assets.

Several other companies told Reuters they would like to own banks in the state. Security Pacific Corp., for example, took an "informal" look at Denver-based United but decided not to bid, a spokesman said.

"We are always on the lookout for opportunities to expand our banking business" but have had no "serious" discussion with anyone at this point, a spokesman for Los Angeles-based Security Pacific said.

"We are looking, but we are not negotiating at this time," said a spokesman for Albany, N.Y.-based KeyCorp. It is eyeing northern Colorado, not Denver, since KeyCorp does not operate in large cities, he said.

San Francisco-based Bank-America Corp. and Utah's First Security Corp. also want to be in Colorado, spokesmen said.

"Our strategy is to be the premier bank in the western" United States, a BankAmerica spokesman said. He would not comment on whether Bank-America had talked to anyone or what bank might interest it.

Analysts said several reasons prompt quick moves to buy banks in Colorado – interstate banking becomes legal there in January; only three big financial companies are left to buy in a state with a growing population and improving economy; and prices, depressed by credit problems, may have hit bottom.

Rising oil prices could aid Colorado's economy and banks, which were deluged with bad loans in the last five or so years as the state went into a recession caused by real-estate overbuilding and falling oil prices.

Colorado's economy is beginning to turn around, Norwest chairman Lloyd P. Johnson re-

Chamber Economist Rips Fed on Recession

By LOUIS GERHARDSTEIN

WASHINGTON — Citing a survey of businesses that showed a deepening national credit crunch, the U.S. Chamber of Commerce's top economist this week blamed the Federal Reserve Board for pushing the economy to the brink of its first recession since 1982.

"By far the greatest responsibility lies at the doorstep of the Federal Reserve Board," Richard W. Rahn said at a press conference Wednesday. "The economy will grind to a virtual standstill during the third quarter of this year and actually contract by 1.4% in the fourth quarter," he predicted.

> **"The economy will grind to a virtual standstill during the third quarter and contract by 1.4% in the fourth quarter."**
>
> **Richard W. Rahn**
> *U.S. Chamber of Commerce*

Inflation Policy Criticized

Mr. Rahn attacked the Fed's anti-inflation policy of keeping interest rates high. While a recession can no longer be avoided, he said, any action by the Fed to turn the economy around should include an increase in bank reserves.

He supported his bleak economic outlook with results of a survey of 8,200 Chamber of Commerce members. One in five respondents said he had trouble obtaining credit when he sought it in the past six months, indicating a credit crunch is taking hold.

Credit seekers in the Northeast were hardest hit; 26% reported trouble getting financing. Nearly one-fourth of respondents from the West and South reported similar problems.

Streamlining by businesses in the Midwest – in response to the last economic downturn – has minimized credit problems in that region, where only 16% reported trouble getting loans. But Mr. Rahn said credit availability is a national problem and "more widespread than previously thought."

Particularly hard hit were small and medium-sized businesses in real estate, construction, communications, or transportation, according to the survey. Of responding companies with 25 or fewer employees, 24% reported difficulty getting credit. One-third of responding real estate businesses said they had credit troubles.

Mr. Rahn added that Iraq's invasion of Kuwait last week "only makes a bad situation worse."

Mr. Gerhardstein writes for Medill News Service.

Thrifts in Conservatorship Lost Less in 1st Quarter

WASHINGTON — The 350 thrifts in Resolution Trust Corp. conservatorship suffered operating losses of $1.4 billion in the first quarter, down from losses of $1.6 billion in the fourth quarter of 1989, the RTC reported.

Total losses fell to $3.1 billion in the first quarter from $6.4 billion in the prior quarter.

By the end of the first quarter, the assets held by thrifts in conservatorship had shrunk 18% to $164 billion. Liabilities were reduced by 11% in the quarter.

American Savings Buyout Of Bank Branches Cleared

HONOLULU — American Savings Bank said it has received approval from the Office of Thrift Supervision to acquire First Nationwide Bank's nine branches and deposits in Hawaii. It expects to complete the transaction by October.

American said it will receive $235 million cash in the transaction, which will be equal to the deposits less a 3.25% premium and deductions not expected to exceed $10 million. — **Reuters**

Fed Approves Sovran As Agent for Securities

WASHINGTON — The Federal Reserve Board said it approved applications by C&S/Sovran Corp. and Sovran Financial Corp., both of Norfolk, Va., to act through a subsidiary as an agent for the private placement of all types of securities and related advisory services, as well as to buy and sell securities for investors.

The activities approved by the Fed also include purchasing and selling mortgage loans for the secondary market, and advising on foreign exchange transactions, mergers and acquisitions and loan syndications. □

RTC Loses Its Top Lawyer To Atlanta Private Practice

By BARBARA A. REHM

Rex R. Veal, the Resolution Trust Corp.'s top lawyer, is laying down his guns and going into private practice.

"My staff and I have been through a war for 18 months," Mr. Veal said Thursday, a few hours before the "soldiers" were to throw him a going-away party.

Mr. Veal, 34, is leaving behind the RTC's 60,000 lawsuits and moving to Atlanta to practice law with the firm of Powell, Goldstein, Frazer & Murphy.

Moving Closer to Home

Atlanta is just 100 miles south of Mr. Veal's hometown of Chattanooga, Tenn., and not much farther from Nashville, his wife's hometown. "I want to move back into the private sector and get closer to family ties," he said.

Mr. Veal said he leaves with mixed emotions. He is glad to be ditching the brutal hours and constant criticism of the bailout effort, he said, but will miss the battle and the people.

"A small core of us started in February of '89, and we've followed it on through," he said. "They are family, and I truly will miss this place. It was not a decision that was made easily."

He has "enjoyed tremendously" his work, Mr. Veal said, but "I think it's unfortunate that it is not recognized just how good a staff that we have."

Criticism of Agency Wearing Down Its Employees

John Douglas, Federal Deposit Insurance Corp. general counsel until last December and now in private practice with Alston & Bird in Atlanta, said the unrelenting criticism of the RTC is taking its toll on employees.

"Most of the senior people at the RTC feel that way," Mr. Douglas said. "They've got a hard job to do, and nobody thanks them for it."

Some concern exists that, when L. William Seidman leaves as RTC chairman, as he has said he will, the agency may be crippled as many staff members follow him out the door.

"I wouldn't want to predict the results of his leaving," said Mr. Veal. "The chairman is a one-of-a-kind person. He does in fact make our jobs a lot easier."

Commendation Expected from Oversight Board

At its meeting Tuesday, the RTC Oversight Board plans to take a rare step and commend Mr. Veal for his service.

"No, it's not a regular event," said John Bierwirth, Mr. Seidman's deputy. "But everybody recognizes Rex is responsible for getting 'legal' up and going."

Mr. Veal joined the FDIC's legal department in 1983. Early last year, Mr. Veal and other FDIC staffers began nursing along the nation's sick thrifts. William H. Roelle was picked to run the agency's thrift task force, and he picked Mr. Veal as its top lawyer. After last summer's thrift bailout bill was enacted and the RTC established, Mr. Roelle became RTC resolutions director, and Mr. Veal came to the agency as special counsel.

Mr. Roelle and Mr. Veal first worked together in Knoxville, Tenn., where they handled the Butcher bank liquidation.

Three other agency lawyers who switched to thrift work in 1989 with Mr. Veal, and are therefore possible replacements, are Michael E. Tucci, Debra J. Slater, and Nancy J. Schucker. □

Colorado Piques Acquirers' Interest

Some May Emulate Norwest Deal for United Banks

Reuters

Colorado acquisition opportunities have attracted a number of banking companies besides Norwest Corp., which recently announced a deal in the state, but apparently no one else is ready to buy.

Minneapolis-based Norwest recently agreed to buy United Banks of Colorado Inc., the state's largest independent banking organization, with $6.3 billion in assets.

"Our strategy is to be the premier bank in the western" United States, a BankAmerica spokesman said. He would not comment on whether BankAmerica had talked to anyone or what bank might interest it.

Analysts said several reasons prompt quick moves to buy banks in Colorado – interstate banking becomes legal there in January; only three big financial companies are left to buy in a state with a growing population and improving economy; and prices, depressed by credit problems, may have hit bottom.

Rising oil prices could aid Colorado's economy and banks, which were deluged with bad loans in the last five or so years as the state went into a recession caused by real estate overbuilding and falling oil prices.

Colorado's economy is beginning to turn around, Norwest chairman Lloyd P. Johnson re-

Chamber Economist Rips Fed on Recession

By LOUIS GERHARDSTEIN

WASHINGTON — Citing a survey of businesses that showed a deepening national credit crunch, the U.S. Chamber of Commerce's top economist this week blamed the Federal Reserve Board for pushing the economy to the brink of its first recession since 1982.

"By far the greatest responsibility lies at the doorstep of the Federal Reserve Board," Richard W. Rahn said at a press conference Wednesday. "The economy will grind to a virtual standstill during the third quarter of this year and actually contract by 1.4% in the fourth quarter," he predicted.

Inflation Policy Criticized

Mr. Rahn attacked the Fed's anti-inflation policy of keeping interest rates high. While a recession can no longer be avoided, he said, any action by the Fed to turn the economy around should include an increase in bank reserves.

> **"The economy will grind to a virtual standstill during the third quarter and contract by 1.4% in the fourth quarter."**
>
> **Richard W. Rahn**
> *U.S. Chamber of Commerce*

He supported his bleak economic outlook with results of a survey of 8,200 Chamber of Commerce members. One in five respondents said he had trouble obtaining credit when he sought it in the past six months, indicating a credit crunch is taking hold.

Credit seekers in the Northeast were hardest hit; 26% reported trouble getting financing. Nearly one-fourth of respondents from the West and South reported similar problems.

Streamlining by businesses in the face of a slowdown to the last economic downturn – has minimized credit problems in that region, where only 16% reported trouble getting loans. But Mr. Rahn said credit availability is a national problem and "more widespread than previously thought."

Particularly hard hit were small and medium-sized businesses in real estate, construction, communications, or transportation, according to the survey. Of responding companies with 25 or fewer employees, 24% reported difficulty getting credit. One-third of responding real estate businesses said they had credit troubles.

Mr. Rahn added that Iraq's invasion of Kuwait last week "only makes a bad situation worse."

Mr. Gerhardstein writes for Medill News Service.

NEWS *briefs*

Thrifts in Conservatorship Lost Less in 1st Quarter

WASHINGTON — The 350 thrifts in Resolution Trust Corp. conservatorship suffered operating losses of $1.4 billion in the first quarter, down from losses of $1.6 billion in the fourth quarter of 1989, the RTC reported.

Total losses fell to $3.1 billion in the first quarter from $6.4 billion in the prior quarter.

By the end of the first quarter, the assets held by thrifts in conservatorship had shrunk 18% to $164 billion. Liabilities were reduced by 11% in the quarter.

American Savings Buyout Of Bank Branches Cleared

HONOLULU — American Savings Bank said it has received approval from the Office of Thrift Supervision to acquire First Nationwide Bank's nine branches and deposits in Hawaii. It expects to complete the transaction by October.

American said it will receive $235 million cash in the transaction, which will be equal to the deposits less a 3.25% premium and deductions not expected to exceed $10 million. — **Reuters**

Fed Approves Sovran As Agent for Securities

WASHINGTON — The Federal Reserve Board said it approved applications by C&S/Sovran Corp. and Sovran Financial Corp., both of Norfolk, Va., to act through a subsidiary as an agent for the private placement of all types of securities and related advisory services, as well as to buy and sell securities for investors.

The activities approved by the Fed also include purchasing and selling mortgage loans for the secondary market, and advising on foreign exchange transactions, mergers and acquisitions and loan syndications. □

Bank of Boston Eases Access To Data for Corporate Clients

By RICHARD LAYNE

NEW YORK — To make account information more readily available to corporate customers, Bank of Boston has created a communications system that provides a single gateway into its computer systems.

The communications link, called Boston Window, was built partly to support the corporate financial services division, which was formed last month. The unit, headed by Susan M. Rugnetta, brings together cash management, coin and currency services, freight management – an important business for the bank – and payroll and payment operations.

The bank, a subsidiary of Bank of Boston Corp., announced Thursday that the Boston Window system, which cost $1.5 million to develop, will be made available at no extra cost to corporate customers within the next 12 months. The bank said 16 corporations, including Boeing Co., are already using the service.

Multiple Connection Paths

At other banks, customers typically have different software diskettes and phone numbers to connect each account with the bank's computers.

But with Boston Window, a customer can dial one phone number to link his personal computer with the bank's computers. His PC screen then displays a list of options, giving him a choice of information on various accounts.

Boston Window allows customers to examine their cash management, freight management, and shareholder services accounts. Customers can also check foreign exchange and money market rates, which are quoted once a day.

The bank plans to expand the service to include asset-based lending and factoring customers.

"From a customer perspective, if you subscribe to multiple services, it is complicated to get electronic information from all of them," said William F. Ray Jr., senior product development manager at the Boston bank.

Competitive Gains

The new service allows Bank of Boston to catch up to competitors and, in some cases, leapfrog them. Because of Boston Win-

> **"It's a tremendous concept – getting information via PC that you would normally have to call up and ask for."**
>
> **Frank W. Libardoni**
> *Grossmans Inc.*

dow's single entry point, the bank also plans to expand the types of electronic information available to customers.

"It's a tremendous concept – getting information via PC that you would normally have to call up and ask for," said Frank W. Libardoni, manager of treasury services at Grossmans Inc., a retailer of lumber and building materials that reports $1 million in annual sales.

Mr. Libardoni was part of the pilot project two years ago but has not yet been approached by the bank to use the new system. As a retailer with unsophisticated investment needs, he said, he may already get sufficient account information through the bank's electronic balance reporting system. □

Upgrades Seen in Trade Finance

Seattle-First Is Installing Mainframe-Based System

By JEANNE IIDA

NEW YORK — Seattle-First National Bank is one of a growing number of banks upgrading systems to take advantage of burgeoning opportunities for low-risk fee income in the trade financing arena.

In trade financing, banks generate the documents for letters of credit, collections, reimbursements, and bankers acceptances that are required to guarantee the settlement of funds among companies trading internationally.

The labor- and paper-intensive operation is typically one of the least automated areas of a bank. Automation is difficult because of low transaction volumes and a high number of exceptions.

Market Explosion

But there has been "an incredible growth in the market" for trade finance systems over the last 18 months, said Timothy P. Dolan, an account executive with Complex Systems Inc., New York.

SeaFirst's main bank unit plans to have its mainframe-based system fully installed by the end of November and expects to be able to reduce its staff by 10 people, or 20%.

The bank, which has offered trade financing services for years, said it needed a single system to make it easier to introduce new products. Previously, it had a multitude of systems based on personal computers and minicomputers.

Demand from Regional Banks

Much of the interest in comprehensive systems for trade finance is coming from regional banks, which traditionally have not been fully automated, Mr. Dolan said.

According to vendors, these banks are automating to compete with money-center and international banks on service and to reduce transaction costs.

Regional banks are revisiting the trade financing market because they can "make profits without having the risks of major exposure to loans," said Thomas Hanson, vice president of sales at Kapiti Inc., in New York.

Smoothing the Path

Kapiti, Complex Systems, and the Business Information Systems unit of Nynex Co. all offer trade financing systems. The systems are expensive, ranging from about $30,000 for a workstation-based system to $500,000 for software that runs on a high-end International Business Machines Corp. mainframe.

SeaFirst, a unit of BankAmerica Corp., is installing trade financing software from Complex Systems that will run on an IBM mainframe. Other banks installing systems are Norwest Minneapolis and First Wisconsin Bank, Milwaukee.

One advantage of the new systems is that they smooth the path to electronic data interchange, in which corporations exchange trade documents in a standard electronic format.

But Mr. Martin cautions that banks must "remain competitive on the pricing side" when they automate. □

A St. Louis Thrift Praises External Data Processor

By KAREN GULLO

NEW YORK — A St. Louis thrift that hit bottom in 1989 is crediting an outsourcing contract with helping get it back in the black.

Community Federal Savings and Loan Association decided to turn over its data processing to M&I Data Services Inc. as part of an overall cost-cutting move after reporting a loss of $298 million last year.

It began moving in phases to M&I's data center, with deposits and consumer loans going early this year, followed by student loans and mortgage origination in spring and early summer. The thrift reduced its programming staff to three people from 90 and sold all its computer equipment.

Community Federal, which has $2 billion in assets, says it will save $2 million a year through the outsourcing contract. So far this year, it has posted $7.1 million in profits.

Gains Deemed Significant

"The $2 million in savings is 8 basis points in assets, which is very significant for our institution," said Alex J. Pollock, president and chief executive officer.

Other thrifts are considering outsourcing for similar reasons, said Joseph Delgadillo, senior vice president of the financial services group at the unit of Marshall & Ilsley Corp., Milwaukee.

Kenneth L. Gould, executive vice president and head of data processing at Community Federal, points to advances in outsourcing in recent years.

"M&I made hundreds of modifications to their systems that are specifically for us," Mr. Gould said. "When you see you can have some flexibility, the service bureau option becomes much more attractive." □

COMMENT/ *By Joseph A. DiNuzzo*

Some Thrifts Converting Into State Savings Banks

Since the enactment of the Financial Institutions Reform, Recovery, and Enforcement Act in August 1989, several federal and state savings associations in states with savings bank statutes have begun to change their charters to state savings bank.

A state-chartered savings bank is a hybrid between a commercial bank and a savings and loan association, with a mixture of commercial banking and thrift lending and investment powers.

Historically they have been insured by the Federal Deposit Insurance Corp. and regulated by the FDIC and the applicable state chartering authority.

The savings-bank charter alternative has become popular, in part, because of the thrift law's elimination of the Federal Savings and Loan Insurance Corp. and the transfer of thrift insurance responsibilities to the FDIC under the Savings Association Insurance Fund.

Mr. DiNuzzo is a partner in the Washington, D.C., law firm Breyer & Zonis, which specializes in representing banks and thrift institutions.

Some states with savings bank statutes require that institutions be insured by the FDIC to be eligible to become savings banks. Because all federally insured thrifts are now insured by the FDIC under SAIF, they may qualify to convert to savings banks under the applicable state statutes.

After conversion, the savings bank is subject to regulation by the state banking authority and, ordinarily, the FDIC.

"The savings-bank charter alternative has become popular, in part, because of the thrift law's elimination of the Federal Savings and Loan Insurance Corp.

Pioneer Federal Savings Bank, a $680 million-asset institution in Lynnwood, Wash., recently received what we believe was the first post-FIRREA approval by the Office of Thrift Supervision of a savings-bank charter conversion.

The conversion was facilitated by the strong capital position of Pioneer and the active cooperation of the state supervisor and his office in reviewing the application.

The supervisor's office and the FDIC conducted a joint examination of Pioneer. Before the regulatory examination, the Pioneer stockholders met and voted to approve the charter conversion.

Other Conversions in Progress

Several other savings associations in the Washington area are in the process of converting to a state savings banks.

Federal law does not prohibit a savings institution from converting to a state-chartered savings bank.

In fact, a provision in the thrift law specifies that the five-year moratorium on conversions from the SAIF to the Bank Insurance Fund shall not be construed to prohibit a savings association from converting to a bank charter if the resulting bank remains a SAIF member.

FDIC Status Is Same

Upon converting to a state-chartered mutual savings bank, the deposit insurance status of the institution does not change. Thus, the eligible deposits held at the institution continue to be insured under SAIF and the institution must continue to pay assessments to the FDIC for SAIF insurance.

The applicable state regulatory authority and, ordinarily, the FDIC become the primary regulators of the institution, replacing the OTS.

Also, the institution may remain a member of the Federal Home Loan Bank System, assuming continued compliance with the qualified thrift investment requirements.

The staffs of the OTS and the FDIC have acknowledged that such conversions are permissible, with the caveat that policy implications would arise if the converting institution has safety and soundness problems.

OTS Application Required

With respect to the termination of its current charter, an institution must file an application with the OTS. No formal conversion-related application must be filed with the FDIC. State and FDIC examinations of the institution, however, usually are required before the final approval of the conversion.

Ordinarily, the applicable state law requires the adoption of the conversion by a majority of the members of the institution's board of directors and approval of the conversion by a majority of the stockholders or members of the institution.

Charter flips to a state savings bank may include the benefits of being regulated and supervised by a regulator in the institution's home state, reduced costs in examination and supervisory fees, and more favorable lending and investment powers.

Charter flips to a state savings bank also do not require an institution to recapture any portion of its bad-debt reserve.

In addition, in situations in which the converting institution is owned by a savings and loan holding company, the conversion process is further simplified because of the ease by which a vote of the stockholders, namely the holding company, may be obtained.

Higher Capital Requirements

One possible disadvantage in converting to a state savings bank is the higher capital requirements imposed by the FDIC. The FDIC presently requires a primary capital ratio of 5.5% and total capital of 6%. These contrast with OTS core and tangible capital requirements of 3% and 1.5% respectively.

The risk-based capital requirements of both the FDIC and the OTS are essentially the same. The FDIC, however, has a two-tiered phase-in of the risk-based capital requirements, unlike the OTS, which has an interim phase-in requirement of 6.4% until Jan. 1, 1991, when the OTS and the FDIC both will enforce the 7.2% requirement.

A Regulatory Test

An additional issue to address in connection with such a charter conversion is whether the FDIC will deem the institution to be a savings bank under the Federal Deposit Insurance Act and thus consider the institution as a state nonmember bank, so as to come within the primary regulatory jurisdiction of the FDIC.

"The advantages in converting may include being regulated and supervised in the institution's home state and more favorable lending and investment powers."

The test under the FDI Act in this respect is whether the applicable state law imposes "special requirements on such banks governing the manner of investing their funds and conducting their business."

If the FDIC determines that the institution does not so qualify, then the institution would continue to be deemed a savings association, and thus would continue to be regulated by the OTS.

Other States Consider Change

Also, New Jersey, Wisconsin, and Illinois, among others, are in the process of considering either savings bank charters or charter conversion provisions.

Charter flips to a state savings bank may not be available or advisable for all savings associations, but those that are eligible for such a conversion should give some thought to the option. □

Rose Wins Jeers, Cheers for Blast At Greenspan Call for More Capital

To the Editor:

I'm surprised that in 1990 a commentary such as Sanford Rose's July 24 article regarding bank capital ["For Shame, Chairman Greenspan!" on page 1] is deemed worthy of printing.

I've been a bank regulator, both state and federal, for 34 years, and I've never seen a bank fail because of too much capital.

I've seen them fail because of inadequate capital, and that's the point: The greater the risk in an institution, the more capital is required.

Time and time again, bankers want to leverage their minimal equity capital to the point that a minor downturn in the economy leaves them with insufficient capital to absorb loan losses.

Safety and Soundness

I also know that when investors and shareholders have adequate investments in a bank they take a special interest in safety and soundness.

Maybe we should go back to requiring shareholders to be subject to a mandatory call for capital contributions in time of need. That way, the taxpayers won't need to have their checkbooks handy.

Thomas K. Desch
Senior Vice President
Federal Reserve Bank
Philadelphia

To the Editor:

As a frequent reader of Sanford Rose's columns in the *American Banker*, I was particularly impressed with the July 24 commentary on Alan Greenspan's proposal for raising bank capital.

As Mr. Rose suggested, its likely effect is to cause bank managements to take yet greater risks in order to achieve the yields necessary to justify and sustain higher capital levels.

This seems to me to be the same mechanism that caused the massive losses in the savings and loan industry – managements, abetted by the easy availability of federally insured funds, seeking higher and higher yields to compensate for mounting losses on earlier risks.

There is, in my view, no way to address this problem within the current system. Your views on Alan Greenspan's approach suggested to me that my own proposal for a privatized deposit insurance system, utilizing the capital of the banking industry, would be of some interest.

Privatization offers a mechanism for introducing the right kind of market discipline into the deposit insurance system and forcing unproductive capital out of the banking industry.

Calls Grow for Ruling on Disputed Citicorp Credit System

By DEBRA COPE

WASHINGTON — A one-stop shopping program that lets homebuyers qualify for mortgages in a real estate broker's office has put Citicorp Mortgage Inc. smack in the middle of a controversy. Now, a powerful congressman is threatening to act if a government agency doesn't resolve the matter soon.

MortgagePower, the Citicorp subsidiary's market link to the customers of real estate brokers, last year accounted for 80% to 85% of the company's $12.3 billion mortgage origination business. It has a 4% market share.

Disguised Kickbacks?

But the computerized loan origination system that lets brokers collect fees for referring borrowers to Citicorp has drawn fire from competitors. Traditional mortgage lenders say the practice disguises kickbacks, referral fees, and other abuses outlawed by the Real Estate Settlement Procedures Act of 1974.

Rep. Henry B. Gonzalez, D-Tex., said at a hearing Wednesday that next year he may introduce a bill on the issue, though he would prefer to see the Department of Housing and Urban Development impose a remedy.

Under mounting pressure from the feuding parties and from Congress, HUD Secretary Jack Kemp has pledged to unveil a regulatory proposal this fall. He made known his intent in an Aug. 2 letter to Rep. Gonzalez, chairman of the House Banking Committee.

The Citicorp unit's four-year-old program violates RESPA's guiding principles by encouraging real estate brokers to steer customers to MortgagePower, without regard to price or service, said Ronnie J. Wynn, president of the Mortgage Bankers Association.

> **"Our concern is that HUD has approved programs that violate these basic consumer protection principles.**
>
> **Ronnie J. Wynn**
> *Mortgage Bankers Association*

The reason MortgagePower succeeds is simple: "Their solicitation shows a real estate broker can make $120,000 a year for about three weeks' work," Mr. Wynn said in an interview. Citicorp Mortgage, he said, claims that prospective members can collect fees of $100 to $1,000 for closing a loan in 15 minutes.

But Leonard N. Druger, Citicorp Mortgage's vice chairman, said his competitors are deliberately muddling the issue.

Fees Called Legitimate

Although RESPA bans referral fees, it does not ban fees charged for legitimate services rendered. Mr. Druger said, for example, the mortgage processing service that some Realtors provide under MortgagePower Plus, a Citicorp program operating in five states, carries a typical charge of $250.

Mr. Druger said MortgagePower's critics are resisting technological advances that increase real estate brokers' role in the mortgage delivery system.

Although Congress amended RESPA in 1983, HUD has issued no rules to enforce the amendments, leaving mortgage lenders in a regulatory vacuum. A proposed rule formally sanctioning MortgagePower has lain at HUD since May 1988.

HUD Opinion Backs Citicorp

The Citicorp subsidiary launched MortgagePower after HUD issued an opinion approving its fee arrangement so long as the charges are revealed to the borrower and permitted by state law. The company has expanded MortgagePower into 36 states, and other big mortgage lenders have followed its lead.

"Citicorp is perfectly legal in what they're doing because of the HUD opinion letters," Mr. Wynn conceded. "Our concern is that HUD has approved programs that violate these basic consumer protection principles."

James Merrion, a Mission Viejo, Calif.-based senior vice president in the Coldwell Banker Residential Group affiliate of Sears, Roebuck and Co., said: "If Congress and HUD don't provide more consistent guidance in the future, the end result will be less competition, less choice, and higher costs for consumers." □

Loan Assembly Strategy Pays Off for Imco

By STEPHEN KLEEGE

Though most mortgage companies are either producers or servicers of loans, Terrance G. Hodel has positioned Imco Realty Services as an assembler.

An assembler does not contact the customer, said Mr. Hodel, who is president of the Santa Rosa, Calif., company. Instead, working through brokers, it guides a mortgage from the post application stage through its sale to investors.

Joining the Top 20

This unusual strategy has helped propel Imco into the top 20 in mortgage originations despite a bias in the secondary market against such "third-party originations."

To be sure, Imco has a network of 24 branches in California, Hawaii, and Texas. But about half its loans come through outside brokers, many of whom are experienced lenders let go by banks and thrifts in recent years' cutbacks.

"Their business is processing [the applications], and we close them," Mr. Hodel said.

Brokered Loans' Quality

The delinquency rates on loans originated by brokers and those originated in-house are about the same, Mr. Hodel said, but the firm must battle the perception among loan buyers that brokered loans are of "inferior quality."

> **When thrifts "stopped offering teaser rates, it was a very big help."**
>
> **Terrance G. Hodel**
> *Imco Realty Services*

"We have not found that to be the case," he said. "But you do have to underwrite, and you do have to know what you're doing." To reassure investors, Imco verifies the proof of employment submitted by the borrower and sometimes does an additional property appraisal.

Mr. Hodel said Imco's strategy stems from the debt load it took on when acquired by a limited partnership from Wells Fargo & Co. in 1985. That financial burden has prompted the firm to sell servicing rights, in contrast to companies with a low cost of capital that find it profitable to buy such rights.

Servicing Portfolio Flat

As a result, Imco's servicing portfolio has remained about $7.7 billion, though it lent $3.4 billion last year, more than double its 1988 total of $1.5 billion. Imco originated $2 billion in loans in the first six months of 1990.

While sales of servicing rights have helped Imco eliminate its high-cost bond debt, the company still has bank debt that prevents it from being competitive with such companies as the mortgage affiliates of General Electric and General Motors as a loan servicer, Mr. Hodel said.

Interest Rate Change

The increase in originations by Imco can be attributed in part to a change in interest rates that tends to favor fixed-rate loans and mortgage companies that sell loans on the secondary market. Mortgage companies have picked up additional market share from thrift institutions that are going out of business or retrenching to meet capital requirements.

"When they stopped offering teaser rates, it was a very big help," Mr. Hodel said, referring to the unprofitable inducements some thrifts offered to entice borrowers to take adjustable-rate loans. □

The $250 Billion Fannie Mae MBS Market. How Can Something So Big Be So Easy To Get Along With?

Actually, by design. Because we tailored our MBS specifically for fixed-income managers who are looking for ways to fine tune their portfolio strategies.

So they're finding liquidity, a market with new issues being offered almost daily. They're also finding variety, with REMICs, Strips and ARM Securities. They are finding size and diversity, in Fannie Majors, the pools that average $100 million, submitted by lenders across the country.

The Friendly Fannie Mae MBS.
• Actual factors on every pool.
• 20-day faster pass throughs.
• Guaranteed timely payment of principal.
• PoolTalk® online system for access to new issues, pool factors, etc.

No wonder they find ours to be the most agreeable MBS.

For more information, just call Bob Sahadi, VP for MBS Investor Marketing at (202) 752-6640. See how friendly an MBS can get.

PoolTalk is a service mark of Fannie Mae.

SMALL BUSINESS

BankAtlantic Offers Sweep Of Balances Over $25,000

By LAURYN FRANZONI
Special to the American Banker

BankAtlantic, Fort Lauderdale, Fla., is offering small-business customers with checking account balances of at least $25,000 the chance to have idle funds swept into an interest-bearing account on a daily basis.

The sweep account is one that many business owners and corporations have said they would like, yet most banks find it difficult to drop balance requirements to a realistic level for the small business.

BankAtlantic says that in the competitive South Florida market it has the lowest minimum balance for such a service. A $1.89 billion asset thrift, BankAtlantic serves small-business customers through 49 branch offices in Broward, Dade, and Palm Beach counties.

Balances Higher Elsewhere

BankAtlantic will transfer funds above the $25,000 minimum to an investment account that is expected to yield an 8% annual return. The service costs $12 a month.

Minimum balances for sweep accounts at other area institutions are $50,000 to $100,000, and monthly fees run at least $145, said John O'Neill, BankAtlantic's executive vice president, in introducing the small-business account.

Bankers point out the possible gains from a sweep account. For example, $75,000 is the difference between BankAtlantic's threshold and that of other banks. If that sum were invested at 8% for a year, a business could add $6,000 to its bottom line.

The service is tied to a checking account. Customers also receive automatic tracking, excess-funds transfer service, and a comprehensive monthly statement of activity.

Many Don't Offer Product

"Most other competing institutions don't offer this type of product, and if they do, you've got to ask for it to get it," the BankAtlantic executive observes.

Leslie N. Masonson, a cash management consultant, agrees it is more profitable for the bank to offer noninterest-bearing accounts or perhaps earnings credits of 3% to 5%.

"On the other hand," he notes, "if the competition in a market has sweep accounts, it is in the bank's best interest to offer as many products as possible." Mr. Masonson is president of Cash Management Resources, Monroe, N.Y., and editor of the monthly newsletter *Cash Management Digest & Analysis*.

Mr. Masonson recommends that banks look carefully at the average daily balances of their small-business customers. "A small business must consider the benefit based on the minimum balances and fees charged. They may continue to be better off investing the idle balances in a money market fund."

Author Says Owners Don't Manage Cash

In a new book titled "Cash, Cash, Cash," author Leslie N. Masonson says most small-business owners do not manage their cash flows.

"They forget that cash, not the goods or services they produce, is the ultimate end product of their business," he asserts. "Without sufficient cash coming through the front door, there is little hope that their businesses will survive."

Mr. Masonson places most of the blame squarely with the business owner but adds that banks have not aggressively marketed their cash management services to smaller companies until recently. Those that have, he says, have not adequately educated their customers.

Small companies have difficulty getting the services they need because bank officers are often inexperienced in handling their needs, he says. "The bank may not offer the gamut of cash management services that are needed, the banks' pricing for these services may be higher than the companies want to pay, and the firm's requests for loans may be too often rejected or not acted upon quickly enough."

Mr. Masonson draws on his experience as vice president and head of Citicorp's treasury management consulting service and his work as a consultant. He says his book provides small businesses and midsize firms with a step-by-step guide on how to manage cash flow more effectively.

SBA Seen Becoming Best Loan Source

Roger Cathey, vice president and SBA loan manager for First American Corp., Nashville, Tenn., says a $500 million increase in the Small Business Administration loan allocation fund is an indication of renewed economic strength.

Last year, the fund was allotted $2.7 billion. The total now tops $3.2 billion. With the stock market reeling from the impact of Iraq's invasion of Kuwait and rising interest rates, bankers say that the SBA may be the best source for loans in coming months.

"Small business has always been this country's primary source of new jobs and economic growth," Mr. Cathey said.

Banks Join Cirrus, Plus Project

ATM Sharing Agreement Will Be Implemented Soon

By YVETTE D. KANTROW

NEW YORK – A handful of the nation's largest banks are poised to accept automated teller machine cards bearing the logos of either Cirrus or Plus when the networks begin sharing ATMs on Aug. 20.

First Wachovia Corp., Manufacturers Hanover Corp., Mellon Bank Corp., Norwest Corp., and SunTrust Banks Inc. are among the members of Cirrus System Inc. that have already received approval to place the Plus logo on their machines, according to D. Dale Browning, president of Plus System Inc. First Interstate Bancorp, another Cirrus bank, announced its intentions to accept Plus cards last week.

"Almost every major Cirrus member has applied to Plus," said Mr. Browning. Six or seven more Cirrus banks should receive approval to accept Plus cards over the next couple of weeks, he said.

Joint Agreement

Cirrus and Plus – the country's two prominent national ATM networks – reached an agreement several months ago to exchange transactions. The arrangement, known as "terminal duality," enables banks that belong to Cirrus or Plus to accept cards bearing either network's logo. It does not permit banks to issue both Cirrus and Plus cards.

The networks' arrangement ultimately could give more than 100 million cardholders access to about 60,000 machines nationwide.

Cirrus is scheduled to review applications on Aug. 14 from Plus members that want to take advantage of duality. The network, based in Downers Grove, Ill., is a wholly owned subsidiary of MasterCard International. Visa U.S.A. owns a small interest in Denver-based Plus.

Antitrust Challenge

Cirrus and Plus are proceeding with the sharing plan even as 14 state attorneys discuss a possible antitrust challenge to the agreement.

"My view is that [the attorneys general] are going to take a position of wait and see," Mr. Browning said. "They found out that banks can't put the competing marks on the same card and that provided them with a sense of comfort."

The attorneys general held a conference call to discuss their inquiry on Wednesday. Joseph Opper, assistant attorney general in the New York State antitrust bureau, said the attorneys hope to deliver a decision to Cirrus and Plus before Aug. 20.

According to Mr. Browning, those who believe the agreement is anticompetitive – including executives at some regional networks – are misinformed. "In fact, sharing terminals will lead to more transaction volume on both the regional and national networks," he said.

Gain in Transactions Doubtful

But whether or not sharing will lead to more ATM volume – and more fee income for banks that own the machines – remains to be seen.

First Wachovia currently owns the only prominent Cirrus bank in North Carolina – Wachovia Bank and Trust Co., and the only major Plus bank in Georgia – First National Bank of Atlanta.

As a result, most Cirrus customers traveling to North Carolina use Wachovia ATMs, while most Plus customers that go to Georgia use First Atlanta's. R. Harrison Marks, a First Wachovia senior vice president, said this pattern will change when other banks in those states begin accepting both Cirrus and Plus cards.

Mr. Marks expects that the Cirrus transactions Wachovia loses will be offset by the Plus transactions it will gain. But he does not expect to net more transactions. □

Consumers Wary of Banks' Entering New Businesses

By YVETTE D. KANTROW

NEW YORK — The well-publicized problems of the banking and thrift industries have soured consumers on allowing banks to enter new businesses, according to a survey by a consumer-research firm.

Two-thirds of the 802 consumers surveyed last month by Synergistics Research Corp. said banks should not get involved in new lines of business, including mutual funds, travel services, and life insurance.

Only one in three respondents said it was a good idea for banks to underwrite life insurance. Of the remaining two-thirds, half said underwriting activities would put both a bank and its depositors at risk.

The findings come at a time when bankers around the country are fighting for expanded insurance powers.

William O. Adcock, chairman of Atlanta-based Synergistics, attributed much of the consumer resistance to reports about the savings and loan bailout and mounting problems in the banking industry.

"There is a lot of concern over safety," Mr. Adcock said. "The consumer is becoming more aware of how much the bailout will cost him personally."

Of those consumers who think banks should underwrite insurance, four out of ten perceive banks as safer institutions than insurance companies due to stricter regulation.

The Synergistics telephone survey defined underwriting as issuing policies, collecting premiums, managing assets, and paying claims.

Mr. Adcock said the survey results should not be interpreted to mean that banks should not become involved in underwriting insurance.

But, he said, given current consumer attitudes, marketing self-written life insurance will be a tremendous marketing task for nation's banks. □

STRATEGIC *dates*

When does that new regulation or law or change in operation go into effect that will affect your segment of the financial services industry? Some of the most important dates and anticipated developments appear below. If you have information that you would like to see included in Strategic Dates, please contact Jane Sandiford at the American Banker, *One State Street Plaza, New York, N.Y. 10004.*

SEPT. 1. 1990

CHECK RULES: On this date, banks and thrifts must abide by the strict check-hold requirements of Regulation CC. Under the law, institutions must make the first $100 of any deposit available for cash withdrawal at the opening of business on the day after the deposit is made. The next $400 of local checks deposited must be available no later than 5 p.m. the next day. Other local checks must be available for withdrawal at the start of the third day, and nonlocal checks must be available on the fifth day.

JAN. 1. 1991

ASSET GROWTH: After this date, the Office of Thrift Supervision will limit the asset growth of all savings associations that do not meet capital standards.

JUNE 1. 1991

SECURED LOANS: Starting today, federal savings associations will not be permitted to exceed limits on loans secured by nonresidential real estate.

JUNE 30. 1991

SUBSIDIARIES AND CAPITAL: On this date, thrifts may count 75% of investments in certain subsidiaries as capital.

JULY 1. 1991

QUALIFIED THRIFT LENDER: Starting today, a savings association will be considered a qualified lender if it is qualified thrift investments equal at least 70% of its assets.

APPRAISALS: After this date, all appraisals in connection with federally related transactions must be performed by state-certified appraisers who have passed a test satisfying requirements established by the Appraisal Foundation, a nonprofit corporation.

AUG. 9. 1991

INSURANCE FUND: This is the last day for some newly insured thrifts to convert to the Bank Insurance Fund, an FDIC agency, without paying exit fees.

JAN. 1. 1992

1% GOODWILL: After this date, qualifying supervisory goodwill amounting to 1% of total assets can be included in core capital, rather than the previous 1.5%.

AUG. 8. 1992

RTC AS CONSERVATOR: All institutions insured by the Federal Savings and Loan Insurance Corp. for which a conservator or receiver was appointed between Jan. 1, 1989, and this date will become the responsibility of the Resolution Trust Corp.

AUG. 9. 1992

FDIC AS RECEIVER: Before this date, the Resolution Trust Corp. is the receiver for any savings association. After this date, the FDIC is appointed receiver. □

SEPT. 30. 1992

THRIFT INVESTMENTS: This is the last date for the use of a 25% figure in actual thrift investment calculation for certain associations. After this date, the applicable figure is 50%. □

JAN. 1. 1993

0.75% GOODWILL: Before this date, supervisory goodwill is allowed to be included in core capital up to 1% of total assets. After this date, the applicable percentage is 0.75%. □

Savings Bank Chief Charged With Bribery

NEW YORK (UPI) — The head of a Queens savings bank and four associates were arrested this week on charges of bribing Internal Revenue Service employees.

IRS Inspector Ronald Fanelli said a two-year investigation, which culminated in a $35,000 payoff to an undercover IRS agent, led to the arrest of Michael Cousin, chairman of the $109 million-asset Cross County Federal Savings Bank, Maspeth, Queens.

Also charged were Max Fodera, a construction foreman for the New York City Department of Environmental Protection and a member of the bank's board; John and Frank Parlante, and John Parlante's wife, Joan.

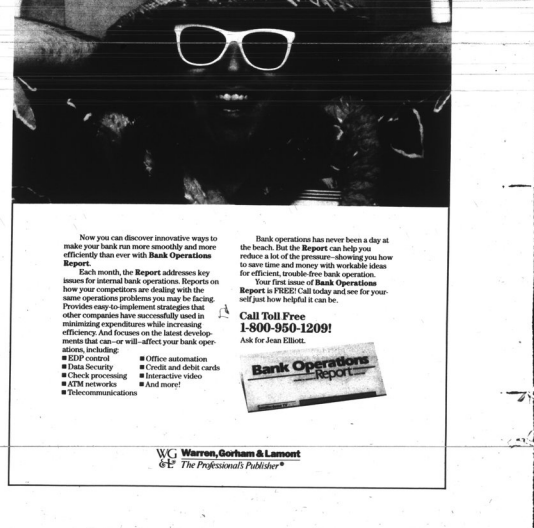
Joseph Lamonica, assistant regional inspector of the IRS internal security division, said the Parlantes own Cobra Gunskin Manufacturing Co., a Queens-based supplier of law enforcement equipment.

He said the five suspects were charged with breaking federal bribery laws with payoffs to IRS employees. The suspects were arraigned at U.S. District Court in Brooklyn. □

1st Federal, Michigan, Raises Loss Provision

PONTIAC, Mich. — First Federal Bancorp Inc. said that as a result of a review of certain loans and real estate in the portfolio of its First Federal Savings Bank and Trust, it increased the reserve for possible loan losses by about $8 million in the fourth fiscal quarter, which ended June 30.

Quarterly and full-year results were not yet available. It also said the U.S. Court of Appeals in Cincinnati extended until Aug. 10 a temporary restraining order preventing the Office of Thrift Supervision from appointing a conservator for the bank unit. **— Reuters**



Now you can discover innovative ways to make your bank more convenient and more efficient than ever with **Bank Operations Report**.

Each month, the **Report** addresses key issues for internal bank operations. Reports on how your competitors are dealing with the same operations problems you may be facing. Provides easy-to-implement strategies that other companies have successfully used in minimizing expenditures while increasing efficiency. And focuses on the latest developments that can–or will–affect your bank operations, including:

- EDP control
- Data Security
- Check processing
- ATM networks
- Telecommunications
- Office automation
- Credit and debit cards
- Interactive video
- And more!

Bank operations has never been a day at the beach. But the **Report** can help you more accurately and more reduce a lot of the pressure–showing you how to save time and money with workable ideas for efficient, trouble-free bank operations.

Your first issue of **Bank Operations Report** is FREE! Call today and see for yourself just how helpful it can be.

Persian Gulf Turmoil Hits Bahrain Banks' Ratings

By JOHN EVANS

LONDON — Capital Intelligence, a specialist Middle East bank rating agency, has downgraded the ratings of a number of banks operating in Bahrain, the Persian Gulf's main international banking center, in the wake of Iraq's invasion of Kuwait.

Bahrain-based banks, as well as other financial institutions in the region, are being hit by a tough liquidity squeeze as their Western and Japanese counterparts outside the area either stop or sharply curtail bank-to-bank lending, according to bankers.

In addition, local customers of Arab banks across the Gulf are compounding the liquidity drought by withdrawing funds heavily, either to send overseas or to convert their local currencies into "safe-haven" targets such as the U.S. dollar.

"Large outflows are taking place into Switzerland," according to Ramin Habibi, chief analyst for Capital Intelligence, based in Limassol, Cyprus.

Bahrain's banking system is being hit particularly hard, amid a big switch of time deposits elsewhere, because the tiny island at the northern end of the Gulf has few large depositors and depends on funds from outside.

Investors Victims

Iraq crisis prompts downgrade of Bahrain banks

	New rating

United Gulf Bank	BB

Source: Capital Intelligence

Kuwaiti Ratings Suspended

Capital Intelligence has meantime suspended its ratings for all Kuwaiti banks in the wake of the Iraqi invasion.

But the agency has taken action on some of the region's banks. For example, it is maintaining ratings on banks in Oman, the state at the mouth of the Gulf relatively distant from the tensions and an economy to a degree "insulated" from the rest of the region's business.

In its downgrading of a number of Bahrain-based banks, the agency chiefly cites "the high reliance of the local economy on Saudi-related business." □

Argentina to Press Privatization

Move Will Aid Debt Repayment, Central Bank Chief Says

By KUNIO INOUE
Reuters

TOKYO — Argentina will try harder to privatize state-owned companies to improve its finances and help pay its commercial bank debt, says Javier Gonzalez Fraga, president of Argentina's central bank.

"Privatizations are necessary for our economic programs to be successful. And they are our major tool in the process of debt reduction," he said in a recent interview near the end of three days of talks with government and business leaders here.

Privatization will help Argentina cut public spending, collect more taxes, and attract more investment, he said.

"It will also improve the chances of the Argentine government servicing its debt in the coming months," Mr. Gonzalez said. Argentina, which is grappling with about $66 billion in foreign debt, has proposed a package of economic measures last March to combat hyperinflation. The package featured privatization, structural reforms and deregulation.
